Mr. Victor Horsley, the most recently appointed of the direct representatives of general medical practitioners on the General Medical Council, takes his duties seriously. He furnishes another report to his electorate, alleging that, immediately after the new President had been appointed to the chair he committed a deliberate attack on the rights of individual members of the Council and perpetrated a new and very serious infringement of constitutional government. It would appear that after the November session last year Mr. Horsley commenced a research among the valuable archives of the Council to determine, first, the exact position of many legal questions concerning the practice by medical men of their profession; secondly, the methods according to which the legal work of the Council is conducted; and thirdly, the cost to the Council of such legal work. For several months—that is, up to April 7—he carried out these investigations; visited the office from time to time, inspected such documents as were necessary for the elucidation of different points, the Registrar producing the same when requested. In the course of this work he states that he became aware of certain grave matters, which he communicated without reserve to Sir William Turner, who was then the acting Chairman, and who was elected President on April 5. Upon April 7, Mr. Horsley suddenly received notice from the Registrar that he was instructed by the President to refuse any access to any document or financial paper belonging to the Council unless permission of the Executive Committee or of the Council had previously been obtained. Having ascertained that the Registrar was acting solely under the President's instruction, Mr. Horsley wrote to the President and asked him:—1. By what regulation of the Council or legal enactment he sought to debar him of his right and privilege to inspect the documents of the Council for the purpose of preparing work for the Council's session. 2. Whether he included all documents in his embargo; and 3. Whether he considered that he, like his colleagues, was similarly debarred from inspecting any document unless he had previously obtained the permission of the Executive Committee or Council. Instead of complying with Mr. Horsley's request the President declined to answer any of these questions, and Mr. Horsley states that he is taking steps to remove the hindrance to his work and contends that neither the Medical Acts nor the Standing Orders of the Council confer any such power as that which the President has claimed.

The Bentham Trustees have presented a fine oil portrait of Robert Brown, the celebrated Scottish botanist, to the Museum of the Royal Gardens at Kew.

Mr. Brudenell Carter, Consulting Ophthalmic Surgeon to St. George's Hospital, writes as follows to a contemporary respecting the accuracy of a statement to the effect that hospital surgeons and physicians commonly accept fees from wealthy persons accidentally admitted:—"In London, on account of situation, a large proportion of such accidental admissions come to St. George's Hospital; and, what I know to have been the invariable practice of the late Sir Prescott Hewett with regard to them has also, I believe, been the practice of his colleagues, and, so to speak, the unwritten rule of the institution. Sir Prescott not only refused to accept any kind of pecuniary recompense from such persons on account of services rendered to them during their stay, but he also absolutely refused to continue his attendance upon them as private patients after they were discharged. His reason was his determination to occupy the some position towards the richest as towards the poorest patients in the ward. But then he was wont to say, 'It is not enough for a surgeon to be honest, he must be chivalrous'; and the whole of his professional life was an illustration of the principle thus briefly enunciated."

The Late Sir Richard Quain's Will has been proved. He left personal estate to the value of £116,820.

Gouna.—Dr. Jas. Adam, of West Malling, communicates to the *Lancet* that he has found this drug invaluable in obstetric ulcerations of the mucous membrane when ordinary antiseptics, astringents, and other remedies had produced little or no effect. Gouna is the Hottentot name for a species of *Mesembryanthemum*, and said to be a domestic remedy used by the natives of the South African seaboard for a variety of ailments internally and as a lotion or gargle. Internally it is used in the sore mouth of children during teething, in diphtheria, chronic diarrhœa, scurvy, etc. Externally as a gargle in sore throat, bleeding gums, and ulceration of the throat and lips.

Fatal Mistake by a Dispenser.—The *Lancet* Australian correspondent writes that on March 7, Dr. S. P. Williams, of Fitzroy (a suburb of Melbourne), called at a druggist's shop and asked for a solution of sulphate of morphine for hypodermic injection, and then drove on to see a patient, whom he injected with the solution which had been dispensed. The doctor was in the habit of using morphia, and gave himself an injection also. He then went towards home, but was soon seized with violent convulsions and pain, and recognised that some mistake had occurred and drove to a neighbouring practitioner's house, arriving in a collapsed condition. He was found to be evidently suffering from the effects of atropine, and though he rallied somewhat, died the next morning. His patient was affected with similar symptoms, but not so severely, and fortunately recovered. The mistake arose through the druggist keeping morphia sulphate and atropine sulphate in similar bottles with written labels, and the dispenser who had taken the wrong bottle was committed for trial for manslaughter by the coroner at the inquest.

Pulex Irritans.—The *Lancet*, in replying to a correspondent as to the best way of exterminating the flea pest, points out that as a prevention thorough and systematic cleaning is the first principle. English lavender kept with clothes or in beds has been attended with good results, and paraffin acts similarly, but the smell is disagreeable. If the body be sponged with weak vinegar and water before retiring for the night, the irritation will often be allayed, and the application of sal volatile or salt and water is often remedial. A strong infusion of quassia freely used as a wash is said to cause swarms of fleas to vanish "as if by magic." A little chloroform poured on the clothes over the point of attack soaks through and permanently quiets *Pulex irritans*, and allays the irritation of the bite.

LEGAL INTELLIGENCE.

Calvert's Disinfectants.

The action of F. C. Calvert and Co. *v.* D. Calvert and Co. was heard before Mr. Justice Bigham, on Tuesday last in the Chancery Division of the High Court of Justice. The action was brought for an injunction to restrain the defendant, David Calvert, of Calvert Avenue, Shoreditch, from passing off his goods as and for those of the plaintiff's. The plaintiff's firm was established in 1859 by Mr. F. Crace Calvert, a chemist of Manchester, who introduced the use of carbolic acid as a disinfectant, and their goods were now known all over the world as "Calvert's." The defendant had lately started in business, and plaintiff alleged that he used the word "Calvert" in such a way as to be likely to deceive. For instance, he had copied the words "strongly recommended by the medical profession." During the examination of the first witness his Lordship interposed, and suggested that the parties might very well come to terms. The defendant had a right to trade in his own name so long as he did not pass off his goods as, and for, those of the plaintiff's.—On behalf of the defendant an undertaking was at once offered that he would only trade as "David Calvert," dropping the "and Co."—This undertaking was accepted, and it was arranged that neither party should advertise the fact that an undertaking had been given.—His Lordship made no order in the action.

Mr. Astbury, Q.C., Mr. John Cutler, Q.C., and Mr. Sebastian appeared for the plaintiff. Mr. Eve, Q.C., and Mr. Greenwood represented the defendant.

To Remove the Stains of Picric Acid.—Prieur states that a little lithium carbonate dissolved in water will at once remove the yellow stain of picric acid from the hands when applied with friction. If a pinch of the moistened carbonate be placed upon stains produced by the acid on linen, the colour will be discharged. Now that the acid is being widely used as a dressing for burns, this simple means of removing its stains will be useful.—*Rev. Med. Pharm.*, iv., 365

THE ALCOHOLIC MENSTRUA OF THE NEW B.P.

BY. F. C. J. BIRD.

The table on the opposite page gives the proportions of 56 o.p. spirit, of alcohol 90 p.c. (58o. p.), or of 60 o. p. spirit, and water (both by measure and by weight) required for the production of one gallon or one litre of the weaker alcoholic menstrua of the new Pharmacopœia. No pretension is made to minute scientific accuracy, the quantities being approximate only, but the range of error is well within that of the hydrometers and measuring vessels used in the laboratory. Proof strengths are given to the nearest half degree, avoirdupois weights to the nearest $\frac{1}{8}$ ounce, percentages within ·05, and specific gravities within ·0005 of the calculated figures. The alcohol has been kept rather above the theoretical quantity to compensate for the slight loss of spirit which usually occurs during the manipulation of alcoholic liquids. Considerable heat is developed on mixing alcohol and water, and when it is remembered that the temperature of the liquid may from this cause be raised by as much as 9° C. (16°·2 F.) the advantage of knowing the exact quantities which will, after contraction has taken place, produce a given volume at 15°·5 C. is very evident. In the second division of the table the proportions for mixing by weight to obtain a product of one gallon, or one litre, are indicated. During hot weather, and especially when dealing with a considerable bulk of liquid, it is found simpler, quicker, and more accurate to weigh the spirit and water instead of reducing to 15°·5 C. and measuring, and the method of mixture by weight, as far as the dilution of alcohol is concerned, has much to recommend it, and deserves to be more generally adopted. The 7 and 1 and 2 and 1 mixtures are used in the preparation of Ext. Bellad. Liq. and Liq. Senegæ Conc., respectively, and the 1 and 1 mixture for the adjustment of Tr. Opii.

The gallon quantities, divided by 8, give the proportions necessary for one pint of any of the alcohols, but for odd volumes it is more convenient to take the figures corresponding to the litre. For example, if 17 fl. ozs. of 70 per cent. alcohol are required, it is evident on inspection that 7·777 fl. ozs. of 90 per cent. alcohol and 2·416 fl. ozs. of water produce 10 fl. ozs., and multiplying by 1·7, the proportions for 17 fl. ozs. are found to be 13·22 fl. ozs. of 90 per cent. alcohol, and 4·1 fl. ozs. of water. In a similar manner the proportions for any other quantity may be calculated. All measurements of alcohol or water, for accurate results, must be conducted at 15°·5 C.

Apparent specific gravities of the official diluted alcohols at temperatures from 2° to 25° C. (35° to 77° F.).

24	·8268	·8830	·9070	·9378	·9738	75·2
25	·8259	·8822	·9062	·9371	·9735	77

The figure in the fourth decimal place is not intended to be scientifically accurate, but merely seems to qualify the one preceding it.

So much depends upon accuracy in the prescribed strength of the alcoholic menstrua employed for certain pharmaceutical preparations, that in order to guard against error (especially when the method of mixture by volume has been adopted) it is often advisable to check the specific gravity of a diluted alcohol before use. This may be done either with a proof scale hydrometer or preferably with an instrument graduated to show degrees of specific gravity. Very small hydrometers 5 to 6 inches in length, with scales marked in single division, are now easily obtainable; they are fairly correct to within half a degree, and are the most suitable for the purpose. But before a true reading can be taken the liquid must either be brought to the standard temperature of 15°·5 or a correction made for temperature by observing the temperature and apparent specific gravity at the time of the experiment, and ascertaining the real specific gravity at 15°·5 C. by reference to the following table, which embraces the extremes of temperature likely to be met with in this climate.

Fifty-eight over-proof (more exactly 57·7 to 57·8 o.p.) will probably become the recognised proof strength for 90 per cent. alcohol, just as 56 o.p. was the common expression for the 55·4* o.p. rectified spirit of the 1885 Pharmacopœia. It is a matter for congratulation that "proof spirit" as a standard of alcoholic strength, with its complications of "over" and "under-proof" is now likely to become, pharmaceutically, but a memory of the past. However useful and convenient the proof system may be for the purposes of the British Excise, the simpler and more rational system of volume percentage adopted in the Pharmacopœia must commend itself to everyone as being better adapted to the requirements of pharmacy.

Authorities differ as to the exact percentage of alcohol in alcoholic liquids at given specific gravities, the discrepancy in the tables becoming more marked as the higher figures are reached: The tables by Dr. E. R. Squibb, Otto Hehner, and Dr. T. Stevenson are the most recent, but it is questionable whether any published table is absolutely accurate throughout. The specific gravities, according to Dr. Stevenson, of the B.P. diluted alcohols, were published in the *Pharmaceutical Journal* for April 16, p. 376. These are again given for comparison, side by side with the official specific gravities, Hehner's and Dr. Squibb's figures, with which latter the B.P. gravities are in almost complete agreement.

Per cent. by volume.	Sp. gr. (B.P. 1898).	Sp gr. (Squibb).	Sp. gr. (Stevenson).	Sp. gr. (Hehner)
90	·8340	·8340	·8338	·8339
70	·8900	·8900	·8899	·8898
60	·9135	·9135	·9135	·9131
45	·9436	·9434	·9436	·9436
20	·9760	·9760	·9760	·9762

In the preface to the new Pharmacopœia it is stated that alcohol (90 per cent.) is the name given to a mixture containing, in one hundred volumes, ninety volumes of ethyl hydroxide, and under spirit. rectificatus the further statement is made that the sp. gr. of such a mixture is ·834. The accuracy of this has been called in question, presumably on the ground that Stevenson assigns to 90 per cent. alcohol a sp. gr. of ·8338. But if the official percentage of 85·65 by weight (Squibb and Hehner), or Stevenson's 85 60, be accepted as correct, the true percentage by volume can be ascertained by multiplying either of these percentages by the specific gravity (·834) and dividing the product by the specific gravity of absolute alcohol, which is usually taken as ·7938. Dr. E. R. Squibb, however, in an elaborate and careful series of investigations (*Ephemeris*, May, 1884,) succeeded in obtaining an absolute alcohol of sp. gr. ·7935. On applying the above rule to both the official and Stevenson's percentages by weight, and using Squibb's gravity of ·7935 for absolute alcohol, the percentages by volume for the two values are found to be 90·02 and 89·97 respectively, either of which is within about three-hundredths per cent. of 90. The volume strength of ·834 alcohol as given in the Pharmacopœia is therefore correct and in accordance with the latest determination.

A NEW METHOD FOR THE DETERMINATION OF CASEIN.—Déniges gives the following method for determining casein in milk. 25 C.c. of milk, are mixed with 20 C.c. decinormal potassium mercuric iodide solution and 2 C.c. of acetic acid; the volume is made up to 200 C.c. and the liquid filtered. The mercury left in 100 C.c. of the filtrate is determined by adding 10 C.c. liquid ammonia and 10 C.c. decinormal potassium cyanide solution and titrating with decinormal silver solution until a persistent turbidity results. The quantity of casein corresponding to the decinormal silver solution used up is calculated by means of a table compiled by the author.—*Pharm. Centralh.*, xxxviii., 571.

* According to Dr. Thomas Stevenson s tables.

* In this case absolute alcohol is to be added, not water.

EXTRACTS FROM CONSULAR REPORTS.

The Value of the Olive Oil exported from Jerusalem in 1897 amounted to £3500 against £6050 in 1896.

Colocynth exported from Jerusalem, while increasing in quantity in 1897, was of less value than in 1896, 44,000 lbs. having been shipped in the former year, realising £1000, as compared with 33,335 lbs. value £2500 in 1896.

Nearly all the Asphalt used in France, Consul Hertslet reports, is supplied by the Island of Trinidad.

Demand for "Patent" Medicines and Perfumes.—Consul Cusack-Smith reports that there is a considerable sale for "patent" and other medicines in Samoa, "such as Epsom salts, painkiller, and the like." There is also a good market for a cheaper kind of perfumery, although the products of good English and French makers are to be met with.

The Imports of Castor Seed into Marseilles during the year 1897 show a decrease of 15,000 tons as compared with the previous year, the deficit being accounted for by the short crops in India. The consequence was that prices rose from 25 fr. 50 c. per 100 kilos. in January to 30 fr. 50 c. in September.

Raw Sulphur imported into Marseilles during 1897 amounted to 39,940 tons as against 25,175 tons in 1896.

Chemical and Pharmaceutical Products from Great Britain do not appear to find a good market at Bilbao (Spain), the market being supplied partly from France, but chiefly by Germany. Surgical instruments, syringes, and similar articles sold by chemists and druggists are very largely supplied from Germany. The United Kingdom so far has had the best of the competition for the supply of chemical products used in industries, but Belgium is a close competitor for caustic soda and carbonate of soda, while recently France, Germany, and Belgium have entered the field with Great Britain in the supply of chloride of lime, France running closest in the race.

Indian Opium imported into Pakhoi (China) continues to decrease in quantity year by year, although the falling off during 1897 was very slight, being 17,903 lbs., as against 18,252 lbs. It is chiefly consumed by the wealthy Chinamen in the district, but is gradually being ousted from the market by its Yunnan competitor, which, however, is of inferior quality.

Aniseed Oil and Star Aniseed exported from Pakhoi show a falling off during 1897, due partly to the fact that it was the alternating "bad" year, and partly to the efforts made by the French authorities to attract this branch of trade to Tonkin. The centre of the aniseed collection, reports Acting-Consul Wilkinson, is Lungchow, whence, until 1896, practically the whole amount destined for foreign consumption was conveyed by porters to Pakhoi, and thence by steamer to Hong Kong. During that year the Protectorate of Tonkin imposed an export duty of 50 c. per kilo. on aniseed oil destined elsewhere than to France, where oil of apparently Tonkin origin was admitted free.

Decimal Balances, according to Consul Bernal, are used in almost every business house in Rio Grande do Sul, whether wholesale or retail, and although they are mostly of German manufacture, the Consul is of opinion that there should be a good market for similar balances of British manufacture.

French Cameras, which at one time had the Brazilian market almost to themselves, are now experiencing severe competition from Germany. Dry plates, bromide and other paper, are supplied chiefly from Great Britain. Photograph mounts are imported from Germany.

One of the Largest Drug Distributory Centres in the United States is St. Louis, where a large business is done in chemicals, essential oils, patent and proprietary medicines and druggists' sundries. The amount turned over in 1897 was £5,000,000. The city possesses one of the largest drug establishments in the country. The business is reported to have increased last year from 15 to 20 per cent.

LETTERS TO THE EDITOR.

All Communications for the 'Pharmaceutical Journal' must be Addressed to the Editor, 17, Bloomsbury Square, London, W.C., and not in any case to individuals supposed to be connected with the Editorial Staff; no responsibility can be accepted unless this rule be observed. Communications for the Current Week's Journal should reach the Office not later than Wednesday, but news can be Received by Telegraph until 4 p.m. on Thursday.

The New Pharmacopœia.

Sir,—It is with much regret that I notice what appear to be unnecessary alterations in the formulæ of the tinctures of the new British Pharmacopœia. This is especially noticeable in the cases of tincture of orange and tincture of myrrh. The former is now ordered to be made from fresh peel, and a more unfortunate error could not have been perpetrated, seeing that bitter oranges can only be obtained for about six weeks or two months in the year, as I was informed by a good authority at Covent Garden. A tincture made from the fresh peel has been official since 1874, and was seldom prescribed, so that there was no widespread desire for this change. Again with tincture of myrrh, which is now ordered 1 in 5 instead of 1 in 8. This is essentially a popular remedy, being almost entirely used as a mouth wash, and very rarely prescribed for internal use. It may occasionally be ordered in a gargle, and in that case the weaker tincture would mix better. Doubtless there is some wise and good reason for the change, but it is not obvious, and the alteration is decidedly unfortunate. There will probably be a difficulty sooner or later with the tincture of nux vomica, and I hope that difficulty will not be a serious one, but I have my doubts. As I read the Pharmacopœia, all the ingredients for the ointments are now taken by weight, but as pharmacists have hitherto been accustomed to measure liquids, it would have been better to add a footnote, so as to avoid errors.

London, May 16, 1898. W. Murton Holmes.

Sir,—I observe from your valuable "Synopsis of the 1898 Pharmacopœia," that with the exception of three, viz., ung. chrysarobini, ung. hydrargyri, and ung. picis liquidæ, all the unguenta of the old B.P. have been either deleted or modified by changing the ingredients themselves, the proportions of ingredients, or the methods of preparing. It is most gratifying to find that the B.P. now directs certain ointments, especially boric and carbolic, to be made with paraffinum molle album. This in a small way will enhance the reputation of the book as a "standard and guide." But is the Pharmacopœia meant to be a "standard and guide" only in the dispensing of prescriptions? Surely not. However, it is questionable whether it will be accepted as a guide, in this particular, in ordinary retail. Hitherto it has been customary to supply the yellow or white variety of ointment *ad libitum*. Usually the yellow was supplied probably on account of its relative cheapness. As the public, generally, have thus been taught to expect a yellow boric and yellow carbolic, the pharmacist will continue retailing ung. acidi borici flavum and ung. acidi carbolici flavum until he is pounced upon by the "inspector." In dispensing, the white ointment will henceforth almost certainly always be supplied, and should any pharmacist get himself into trouble by dispensing the yellow, he will only have himself to blame. I observe, also, that, notwithstanding Professor Attfield's note in his famous volume *re* tr. ferri perchloridi, that preparation is still retained.

Bootle, May 17, 1898. Thos. W. White.

Sir,—On looking through the new British Pharmacopœia, 1898, and coming to bismuth oxycarbonate, I am surprised to find that a most important test for impurity is omitted. The B.P. for 1885 was careful to provide against any trace of nitrate by requiring the preparation to be examined with H_2SO_4 and indigo sulphate, and that the colour of the indigo should not be discharged; thereby showing that nitrate was not present. Now, the test is not only neglected, but a nitrate reaction permitted. This is certainly not an advance in chemical science. Our firm, Alfred White and Sons, Castle Street, Saffron Hill, E.C., always makes bismuth oxycarbonate which will answer this requirement

of the older B. P., not only because so directed, but because the bismuth is a truer and better carbonate. Why is this strange change made by those who have drawn up the new book? Is it because of the difficulty of obtaining the purer article? If so, surely this is not a wise or sufficient reason, especially when the proper article can be made. I think there ought to be a return to the better directions of the B.P. of 1885.

London, E.C., May, 18, 1898. A. Dowler White.

Solutions of a Dispensing Problem.

Sir,—The following method appears to me to give very good results on dispensing the ointment referred to by "Aratus Sum." Keep the zinc ointment at a creamy consistency with the aid of a warm mortar; gradually add the glycer. borac., thoroughly incorporating; then add the liq. plumbi, stirring, not too vigorously, until the whole of the liquor is taken up. Set aside to cool. It makes a firm, smooth ointment, as you may judge by the portion I send. I found it required much patience and a little time, as well as a considerable amount of manipulation. I presume it is not necessary to say that the zinc oxide must be finely powdered before attempting to make the ung. zinc. benz.

Lewisham, S.E., May 12, 1898. Graham Bott.

Sir,—In reply to "Aratus Sum" with reference to the following prescription given at the recent Minor examination :—

℞ Glycerin. Borac. ..... ʒiv.
Liq Plumbi .... ʒiv.
Ung. Zinci Benz. .....ad ʒij.
M. ft. ung. Sig. m. d. u.

I find by rubbing the borax and zinc oxide together with the glycerin into a smooth paste, adding the adeps benz., and afterwards the liq. plumbi and aqua (used in preparation of glycerin borac.) previously mixed together, a satisfactory ointment is obtained.

Knowle, Birmingham, May 14, 1898. R. Kathleen Spencer.

Sir,—In response to "Aratus Sum," in your last issue, the ointment is best prepared by heating the glycerin. boracis and the liq. plumbi together first. This facilitates decomposition, a bulky precipitate resulting, then adding the ung. zinci and thoroughly mixing at as low a temperature as possible; when nearly cold run into covered pot while stirring. Prepared in this way the ointment is only slightly granular. A sample is enclosed herewith.

May 14, 1898. (A. E. S. 133/17.)

Sir,—If "Aratus Sum" will make his zinc ointment in a four ounce wide-mouth bottle (fitted with cork), and when the ointment is of the consistence of cream, add the mixed liquids about a drachm at a time, shaking well after each addition, he will find little difficulty in turning out a satisfactory preparation.

Waterloo, Lancs., May 16, 1898. T. S. Hodgson.

Sir,—In answer to your correspondent "Aratus Sum," I have tried the ointment and find it most successful, if made in the following manner :—Allow the ung. zinci benz. to get quite cold, add drop by drop the liq. plumbi and glycerin. borac., previously mixed. This gives a perfectly smooth and elegant preparation. It only requires time and patience.

A. M. C. (133/44).

*** The specimens of ointment sent by our correspondents are smooth and satisfactory products, there being only a slight tendency to separation of water. [Ed. *P.J.*]

A Botanical Experiment.

Sir,—The following experiment may be of interest to lovers of botany, and will partially explain the two colours (mauve and white) found in the cuckoo flower (*Cardamine pratensis*). Two strong plants were carefully removed from the ground and potted. One was allowed to grow in the open and the other placed under cover, the only light allowed being that which passed through an amber coloured glass. In less than three days the bloom under the amber glass had assumed a distinct mauve colour, whilst that left in the open was white, or nearly so.

313, Sydenham Road, S.E. May 16, 1898. A. W. Nunn.

ANSWERS TO QUERIES.

Special Notice.—*Scientific, technical, legal, and general information required by readers of the 'Pharmaceutical Journal' will be furnished by the Editor as far as practicable, but he cannot undertake to reply by post. All communications must be addressed "Editor, 17, Bloomsbury Square, London, W.C.," and must also be authenticated by the names and addresses of senders. Questions on different subjects should be written on separate slips of paper, each of which must bear the sender's initials or pseudonym. Replies will, in all cases, be referred to such initials or pseudonyms, and the registered number added in each instance should be quoted in any subsequent communication on the same subject.*

Botanical.—It is the fasciated scape of *Endymion nutans*. [*Reply to* G. R. J.—10/23.]

Preparations of the New B.P.—The law says nothing on the point, and opinions are divided respecting the matter. See Annotation. [*Reply to* E. F.—10/8.]

Tincture Processes.—You are not of necessity bound to adopt the official processes, so long as the product meets the B.P. requirements. [*Reply to* Chamomile.—10/15.]

Maceration.—You must not add to the bulk of the product unless an addition is distinctly specified. [*Reply to* J. J. A.—10/22.]

Botanical Paper.—The *Journal of Botany*, published monthly (1*s.* 8*d.*), is probably the most suitable paper for your purpose. [*Reply to* E. W. P.—9/34.]

Microscope.—There is a small book called 'Common Objects of the Microscope,' published at 1*s.* That may serve your purpose. We are unable to help you in the other matter, and doubt whether such a remedy can be found. [*Reply to* Inquirer.—10/16.]

Ung. Capsici.—The new preparation is most unsatisfactory; it is not sufficiently firm when set, and the spermaceti tends to crystallise out. [*Reply to* ·880.—10/29.]

Medical.—We cannot advise you in the matter; apply to a medical man. [*Reply to* Anxious.—10/27.]

Changing Box.—There is not the slightest objection to the use of a changing box, provided that it works all right. You do not state what make you intend to use. Of course, above ¼-plate they become very cumbrous and heavy. Write again and let us know which you propose to get. [*Reply to* H.—10/13.]

Combined Toning and Fixing Bath.—There are very grave objections to the use of these baths, because they are so liable to cause sulphur toning. The most satisfactory is undoubtedly the following :—Dissolve 8 ozs. of hypo in 40 ozs. of water, add 1 oz. of potassium sulphocyanide, then add ¼ oz. lead nitrate and ½ oz. alum dissolved in 4 ozs. of water; boil for half-an-hour, allow to cool, and add 5 grs. of chloride of gold. This quantity should tone not more that two and a half sheets of paper, and the prints must be well washed prior to toning. [*Reply to* H. R. B.—9/33.]

Developer.—The formula you send is an adaptation of one of Lainer's. There is not much, if any, advantage in using the ferrocyanide, but you are wrong about the solubility of this salt, for, according to Schiff, 1 part of $K_4Fe(CN)_6 3H_2O$ is soluble in 4·28 parts of water at 15° C. The best formula would be: Hydroquinone, 300 grs.; potassium metabisulphite, 300 grs.; potassium bromide, 150 grs.; caustic potash, 400 grs.; water to 10 ozs. For use, dilute 1 part with 9 parts of water.—[*Reply to* Greig.—10/26.]

Baking Powder.—There are many forms of baking powders, all of which owe their properties to alkaline carbonates and an organic acid, mostly tartaric acid. Some of the cheaper forms in the market contain alum, or "superphosphate" of calcium, instead of tartaric acid, but both these are objectionable ingredients. One or other of the following should suit you :—(1) Cream of tartar, 6; sodium bicarbonate, 3; ground rice, 1. (2) Cream of tartar, 19; tartaric acid, 8; ammonium carbonate, 1; sodium bicarbonate, 17; ground rice, 7. (3) Sodium bicarbonate, 12; tartaric acid, 8; ground rice, 3. [*Reply to* Glasgow.—10/11.]

Botanical.—The leaves sent possess all the histological characters of digitalis. [*Reply to* Macduff.—9/4.]

Blanc-mange Powder.—This is nothing but cornflour sweetened and flavoured, about 5 parts of cornflour to 4 of white sugar. [*Reply to* Glasgow.—10/11.]

Apprenticeship Declaration.—The declaration need not be signed by the actual employer, all that is necessary is to find some suitable person to sign it. [*Reply to* H. J.—9/25.]

Collapsible Tubes.—You can obtain vaseline with 1 per mille of hyd. perchlor. in collapsible tubes from Marshalls, Limited, 27, Red Lion Square, W.C. [*Reply to* F. R. B.—10/5.]

Book of Formulæ for Summer and Winter Beverages.—We know of no work devoted exclusively to such matters. If you will state any particular recipes you require, we may be able to find some suited to your wants. [*Reply to* C. G. S.—9/18.]

Stills for Distilled Water.—You will probably find the patent automatic stills of Morris and Wethered, suitable for your purpose. You can obtain full information concerning them from Llewellyn and James, of Bristol. [*Reply to* Cephalalgic.—9/15.]

Preparation of Ammonium Acetate Solution.—We are glad to hear that we have helped you to solve your problem. Doubtless your inference is correct, and the cause of the coloration is as you state. [*Reply to* T. D.—132/38.]

Metric Equivalents.—The figures given in the Journal are taken from a Board of Trade report published in August last, and therefore superseding all previous equivalents recognised by the Standards Office. The differences you note are due to more careful measurements and comparison of the prototype measures and their official copies. [*Reply to* F. J. Y.—10/7.]

Freezing Machines.—We can only speak from experience of an ammonia freezing plant, which was found to work satisfactorily. It does not require skilled labour; when once installed, intelligent use is all that is needed. Ammonia is generally preferred as the cooling medium. We know of no book devoted specially to the subject; there are articles on the subject in Ure's 'Dictionary of Arts, Manufactures and Mines.' [*Reply to* Mellor.—9/36.]

Custard Powder.—This might be made with a similar basis to egg powder, omitting the tragacanth and increasing the sugar. Flavour with essential oil of bitter almonds or vanilla, or the following will do: Powdered tragacanth, 2 ozs.; cornflour, 18 ozs.; powdered turmeric, ¼ oz.; essential oil of almonds, 30 minims; essence of lemon, 1 drachm; powdered sugar, 2 ozs. Rub the essences well with the sugar, then mix with the other ingredients. [*Reply to* Glasgow.—10/11.]

Ready Means of Distinguishing Between Phenacetine, Antipyrine, and Acetanilide.—Apart from the official chemical tests, which it is needless to reproduce here, you can readily distinguish these bodies by their solubilities in water and melting points. Antipyrin is at once distinguished by being readily soluble in its own weight of water and having a melting point of 113° C. (235°·4 F.). Acetanilide has a melting point close to this, viz., 113°·5 C. (236°·5 F.), but is only soluble to the extent of 1 in 200 of cold water. Phenacetin is also insoluble, but its melting point, 135° C. (275° F.), at once distinguishes it from acetanilide. [*Reply to* Cephalalgic.—9/15.]

Fruit Crystals for Summer Drinks.—You will probably find a general basis of 29 parts of sugar in small crystals, and 1 part of tartaric or citric acid in the same form suitable for the preparation of these articles. A portion of the sugar should first be rubbed down with sufficient concentrated essence of the desired flavour, and the whole suitably coloured. Thus, to make a lemon crystal, use sugar, 29 ounces; citric acid, 1 ounce; terpeneless lemon oil, 30 minims—and if desired, a little saffron to tint. Pineapple, raspberry, strawberry, and other fruit preparations may be prepared in a similar way, using the artificial essences in the requisite proportion to give the desired flavour when diluted. [*Reply to* N. S.—9/32.]

Composition of Powders.—We fail to see what good purpose would be served by analysing powders given to you as a test at an examination, and time is too precious for us to undertake useless tasks. [*Reply to* E. B.—10/9.]

Burra Gokeru or Bara Gokhru.—You will find information regarding the properties of this drug, the fruit of *Pedalium murex*, in the 'Extra Pharmacopœia,' in 'Pharmacographia Indica,' and in Dey's 'Indigenous Drugs of India.' Both the latter works are in the Pharmaceutical Society's Library. [*Reply to* M.—10/25.]

Reyer's Combination Laboratory Bracket.—The device was described in the American *Pharmaceutical Review*. We do not know where the brackets could be obtained over here, but any intelligent blacksmith could make them for you from the figure given. [*Reply to* J. H. T.—9/28.]

Chemical Food.—The B.P.C. formula for this, using 160 instead of 120 grains of calcium carbonate, and substituting 3 ounces of triple orange-flower water for 3 ounces of distilled water in that formula, will give you approximately the preparation you require. [*Reply to* Glasgow.—10/4.]

Books for Elementary Study.—See the article on "The Students' Library" in our Students' Number (Sept. 11, 1897, p. 232). There you will find all the information you require with regard to books. There is a glossary such as you name in John's 'Flowers of the Field,' an excellent book for beginners in field botany. Henslow's 'Dictionary of Botanical Terms' is a work of wider scope. [*Reply to* Ill All.—10/2.]

Preservatives for Soup.—Probably "formalin" in the proportion of 1 in 1000 would be best, as it is harmless in that proportion, whereas opinion is divided as to the harmlessness or otherwise of other preservatives. You should sterilise the soups in the bottles first by placing them in a kettle of cold water up to the neck, and plug the mouth of each with cotton wool, then slowly heat up to the boiling point and keep at that temperature for half an hour; next quickly add the preservative and cork up with sterilised corks at once. [*Reply to* J. H. T.—9/26.]

Spirit to Give a Coloured Flame.—We do not quite know what you would define as a "ghastly" appearance. Probably a little barium chloride added to the spirit or, better still, sprinkled on the flame, would have the desired effect. Even common salt may answer, as it gives—as, of course, you know—an intensely yellow flame, which, in the dark, gives a decidedly ghostly appearance to the complexion. The saffron you refer to would not influence the colour of the flame at all. It was probably only added to tint the solution. [*Reply to* J. H. T.—9/26.]

Egg Powder.—As you are probably aware, many of the so-called egg powders are devoid of any egg, being mere tinted cornflour mixtures. Something on the following lines will give you an "egg" powder closely resembling some commercial articles:—Cornflour, 32; turmeric, 1; sugar, 4; powdered tragacanth, 2. Mix and flavour with vanilla or lemon. If you prefer it, sufficient aqueous extract of saffron may be rubbed with the flour to tint it instead of the turmeric. We do not recommend the sale of such articles, except on the explicit understanding that they contain no eggs. It is obviously incorect, if not illegal, to vend such things under the name. [*Reply to* Glasgow.—10/11.]

INFORMATION WANTED.

Hospital Phenol.—The name of makers of a brand of carbolic acid known as "Hospital Phenol."—10/10.

CORRECTIONS.

B.P. (1898) Formulæ and Processes.—Two correspondents point out an obvious error in the directions for making Injectio Ergotæ Hypodermica, printed in the Journal for April 16, at page 371. The solution should be made up to 150 fluid parts, not 100 parts as stated. This and other corrections have been embodied in the sixth edition of the reprinted synopsis of the B.P. formulæ and processes, which is now ready.

COMMUNICATIONS, LETTERS, etc., have been received from—Messrs. Anning, Barfoot, Blythe, Brentworth, Clarke, Crisford, Duncan, Evans, Greig, Jenkins, Jesper, Jones, Lake, Liveing, Lunan, Mollison, Potter, Sage, Shillinglaw, Spencer, Tocher, White.

Pharmacy and the Allied Sciences.

A REVIEW OF CURRENT WORK.

Meat Extracts. Meat extracts may be roughly divided, according to C. R. Valentine (*Journ. Soc. Arts*, xlvi., 430), into four classes, (1) the original Liebig's extract or its modifications, (2) flavoured or medicated solutions and bouillons, (3) meat jellies, and (4) meat juices. The second class is claimed to have had the addition to the extract of some albuminoids that coagulation and straining have removed, and this class, whilst more of a food, is not so stimulating as the Liebig's extract, because not so condensed. Meat jellies are made by boiling down the gelatinous parts as well as the lean of meat, and then in many cases adding meat extract. Meat juices are made from lean meat by adding an equal weight of water, then squeezing under heavy pressure and freezing out the greater part of the water. An ordinary bullock gives 400 lbs. of lean meat, which yields about 10 lbs. of extract. The Australian meat extract is made from meat which has been cut up into cubes, then extracted by its own weight of water at 175° F. for about twenty minutes. The juice is then strained and concentrated in a vacuum pan until it attains a brown pasty mass, containing from 13 to 16 per cent. of water. Meat extracts should consist of about 16 per cent. of water, 53 per cent. of extractive soluble in alcohol, 13 per cent. extractive insoluble in alcohol, and 18 per cent. or more mineral matter. A good extract should always have an acid reaction, its colour should be a characteristic yellowish-brown and it should have an agreeable meat-like odour and taste. It should be entirely soluble in cold water and should be free from albumin, fat, and gelatin. In the discussion following the reading of the paper, the Chairman (Mr. M. Carteighe) stated that extract of meat by itself was no more a food than alcohol; it required to have something mixed with it which gave more force than the mere stimulating action of the soluble constituents of flesh, which were largely saline matters. There were a number of excellent preparations for that purpose and the results were promising, though he must say that he had found some of the most vaunted preparations of the least value. That might be due to the fact that the necessary amount of fibrinous material to be added had not yet been exactly ascertained.

Modification of Bechi's Test. The following modification of Bechi's test for cottonseed oil, devised by M. Tortelli and R. Ruggeri, is said to be capable of detecting the addition of 1 per cent. of cottonseed oil to olive or other vegetable oils. Fives grammes of the oil are saponified by boiling with alcoholic potash solution, and the alkaline soap solution neutralised with acetic acid. This is then poured in a thin stream, when boiling, with constant agitation, into a warm mixture of 50 C.c. of 10 per cent. lead acetate solution and 250 C.c. of water. The lead soap thus obtained is washed with three successive portions of water of 60 to 70° C, cooled, well drained, then gently boiled in 120 C.c. of ether under a reflux condenser for twenty minutes. After cooling, the ethereal solution is decanted, filtered, and washed twice with 60 C.c. of 10 per cent. HCl and once with more dilute acid, and then with water, the acid washings containing lead chloride being rejected. The ethereal solution is filtered into a small flask and the solvent distilled off. The flask is then washed out with a reagent consisting of 10 C.c. of 90 per cent. alcohol and 1 C.c. of 5 per cent. silver nitrate solution. The mixture is transferred to a test tube, which is plunged into a water bath heated between 70° and 80° C. If the original oil be pure the liquid remains unaltered for fifteen minutes or even for hours. If cottonseed be present, however, even in as small a quantity as 1 per cent., the liquid quickly shows signs of reduction, which becomes more intense in time.—*L'Industria*, through *Union Pharm.*

Sterilised Milk. It is well known that milk is more or less altered in taste and colour by sterilisation. Dr. A. Wroblewski finds from the results of his experiments to ascertain the effect of sterilisation on the chief constituents of milk, such as milk sugar, albumin, and casein, that milk is so far altered by sterilisation that the milk sugar is partly caramelised—a very small amount of lactic acid being also formed—the albumin is coagulated, and the casein partly precipitated, or at least brought into such a condition that it can be readily precipitated by acids. Pasteurisation acts in a similar manner, but to a less extent. It is concluded, however, from a chemical point of view, that milk is not rendered less favourable to digestion by being sterilised.—*Oesterr. Chem. Zeit.*, i., 5.

Iodised Oils. By combining iodine and sodium iodide with a small amount of glycerin, A. Schmitt finds that the solution is readily taken up by oils, and the preparation thus obtained is stable and elegant. It is thus possible to prepare an iodised oil quickly without the application of heat, which in the case of cod-liver oil is a great advantage. The proportions used are sublimed iodine, 1 gramme, sodium iodide, 25 centigrammes, glycerin, 1 to 2 drops. Rub together until dissolved, then add the prescribed amount of cod-liver or other oil.—*Union Pharm.*

Activity of Pancreatin. E. Choay finds that pancreatin prepared according to the official method of the 'Codex' and evaporated at a maximum temperature of 45° C., is markedly inferior in saponifying power to the aqueous extract evaporated *in vacuo* at 38° C., although, if carefully prepared, the official preparation is equally active in proteolytic and in amylolytic power. The saponifying action was determined by the method of Henriot, which consists in allowing the ferment to act upon a solution of monobutyrin of known strength, and then titrating the butyric acid liberated. A commercial specimen of pancreatin examined at the same time was found to be very defective both in proteolytic action, and in its hydrolysing action on starch, not exerting more than half the amylolytic action of the specimens prepared by the author.—*Journ. Pharm. Chim.*, 6 ser., vii., 418.

Persian Opium and Haschish. Bonati states that Persian opium is sent by the growers to market packed in earthenware basins. The dealers mix it with grape syrup and roll it out into sticks which are wrapped into white glazed paper. Opium is often adulterated with the aqueous extract of the capsules and of the seeds of *Ruta silvestris*; fresh poppy petals are also pulped and mixed with it. It is usually smoked in a special pipe, in quantities of 1 to 4·5 grammes (1 miscal) at a time. Haschish is obtained in Persia by rolling the flower stalks and leaves of the hemp for hours vigorously on rough woollen carpets, when the viscid sap adheres to the pile on the carpet. It is scraped off with a knife and rolled into balls or sticks. The carpets are washed with water, the washings being exposed to the sun on china plates and thus evaporated, furnishing a preparation of less value; the best haschish is smoked in a pipe in doses of 0·24 to 1·2 gr. The oil of *Cannabis indica* is a very strong narcotic, a very small dose

mixed with food being sufficient to send a large number of people to sleep for 24 to 72 hours. It is frequently used for criminal purposes, and Dervish fanatics are usually victims to the drug. *Journ. d. Pharm. o. Els. Lother.*, xxv., 25.

Choline and Trigonelline in Strophanthus.

It is apparent from current literature that the various species of *Strophanthus* furnish strophanthin of different composition and different action. Commercial strophanthin is, in the experience of H. Thoms, largely produced from *S. hispidus* seeds instead of from the dearer *S. kombé*, and varies greatly in toxic action. Most strophanthins contain varying amounts of nitrogen. The author has succeeded in separating the nitrogenous bodies by treating the aqueous solution of the glucoside with ammonium sulphate, by which the strophanthin is precipitated. The filtrate of the ammonium sulphate precipitate is found to contain choline and trigonelline.—*Zeit. d. Allg. oest. Apoth. Ver.*, xxxvi., 205.

Volatility of Iron.

H. Pellat finds that metallic iron is capable of giving off traces of volatile matter which affect the photographic plate even when a piece of paper is placed between them; but if an iron ring enclosed in a glass cell be placed in contact with the plate, no image of this is obtained on developing; this shows that the action cannot be due to radiations similar to those discovered by Becquerel with uranium. The effect is attributed by the author to the volatilisation of minute traces of metal, such as by means of delicate electrical processes he has previously shown to occur. The exposure of the plate to the influence of the metal exceeded four months in duration.—*Comptes rend.*, cxxvi., 1338.

Ozone and Artificial Perfumes.

H. Trillat reports on the advantageous employment of ozone applied on the commercial scale in the laboratories of the Société Anglo-Française des Parfums Perfectionés at Courbevoie as an oxidising agent in the production of vanillin from iso-eugenol, anisic aldehyde (aubépine) from anethol, and heliotropine from iso-safrol. On the manufacturing scale each ozoniser used is capable of producing 150 grammes of ozone per hour. The yield of completed products is found, when working with large quantities, to compare favourably with experiments on the small scale, and the cost of production compares favourably with that of other oxidizing agents. The fact that the use of chemicals, and therefore the production of by products, is obviated is also a great advantage in the process.—*Moniteur Scientif.* [4], xii., 351.

Wax Excretion within the Cells.

Professor M. Moebius describes an example of this phenomenon in the case of a species of *Rhus*. In the ripe fruit the wax-cells form a layer in contact with the resin-passages. In these parenchymatous cells the wax forms a thick incrustation on the cell-wall within the cell. The wax is probably a product of the transformation of starch. The wax-cells contain a granular protoplasm and a nucleus, but there is very little starch.—*Ber. Deutsch. Bot. Gesell.*, vol. xv., p. 435.

Physiology of Gentianose.

E. Bourquelot infers that gentianose, the specific sugar of gentian, like sucrose in the beetroot, is split up into assimilable sugars in the course of the growth of the plant by special ferments, which are localised in the growing parts of the plant. A solution of gentianose was without action on Fehling's solution, but the same solution to which a little of the powdered growing parts of *Gentiana acaulis* had been added gave a copious reduction. This species of gentian was used because, at the time of conducting the experiment, the growing parts of *Gentiana lutea* were not available. It was also found that the soluble ferments of *Aspergillus niger* causes the hydrolysis of gentianose, so does invertin, but less rapidly than with saccharose. Emulsin, saliva, and diastase are without action on gentianose.—*Journ. de Pharm.* [6], vii., 369.

Stinkwood as a Fish Poison.

In order to capture fish, Pool states that the natives of Surinam whip the water with the wood of *Lonchocarpus violaceus*, Bth., a papilionaceous tree which contains a substance having a narcotic action on the fish. The wood, which has a disagreeable odour, is called "Nekoe" by the natives, and stinkwood by European settlers.—*Pharm. Centralh.*, xxxix., 282, through *Nederl. J. Jdschr., o. Ph.*, 1798.

Organic Acids and Growth.

From a series of experiments on the action of citric, malic, tartaric, and tannic acids on the growth of pollen tubes, Signor G. Lopriore obtained a uniformly favourable result. There was, however, a variation, according to the species, in the influence of different acids of the same concentration. With solutions varying between 1 : 50,000 and 1 : 60,000, definite results were obtained.—*Bot. Zeitung*, vol. lv., 2te Abtheil., p. 362.

Suppository Making.

F. A. Kerr having found the various existing methods for making suppositories unsatisfactory, has devised another, on which he asks for expressions of opinion. In the case of the following prescription:—

℞ Iodoform	.....	20 grains.
Alc. Ext. Belladonna	.....	4 ,,
Powdered Opium	.....	4 ,,
Cacao Butter	.....	*q.s.*

Mix into fifteen suppositories.

first soften the extract of belladonna with water, then add the powdered opium, and mix to a soft or watery paste. The next step is to incorporate a sufficient quantity of wool-fat, after which the cacao butter is melted and poured on a tile. Now add the iodoform and the mixture containing the extract, thoroughly incorporate, and cool to the consistency of a stiff ointment, using ice if necessary. The mould used is a thin aluminium capsule, which is filled with the mass as if it were a gelatin capsule to be filled with quinine. After filling, the mould is immersed in a basin of hot water sufficiently long to loosen the contents, and the suppository is then emptied into a basin of ice water. It is then finished, and is said to be as solid and to have the medicaments as equally distributed as if it had formed part of a batch of well-made pills.—*Bulletin of Pharmacy*, xii., 220.

New Form of Sieve.

J. F. Strawinski has devised a sieve for pharmaceutical purposes which lessens the liability to contamination of powdered drugs. The body or frame of the sieve is made of brass, tinned on the inner surface, and at the base of the frame is a coarse threading, over which a collar containing the sieve-plate is screwed. On the exterior of the collar are five finger-holds, so that it may be adjusted quite firmly. The sieve-plates are made separately, and in adjusting the apparatus all that is necessary is to place one of the plates, of the desired mesh, in the collar, before attaching the latter to the frame. The model constructed by the author has five sieve-plates, each of the proper mesh for producing the degrees of fineness specified in the U.S. Pharmacopœia. Several points of superiority are claimed by the author for his invention, including durability, less liability to contamination, and compactness.—*Am. Journ. Pharm.*, lxx., 268.

AN EXAMINATION OF COMMERCIAL SAMPLES OF BENZOIN AND GUAIACUM RESIN.*

BY J. EVANS.

A short time ago, Mr. Dunlop read a paper at a meeting of the British Pharmaceutical Conference, in which he showed that the benzoin of commerce contained a large quantity (up to 30 per cent.) of substances insoluble in spirit, and suggested that cognisance should be taken of this fact in the official description of benzoin. As Mr. Dunlop gave no indication of the actual quality of the benzoins he examined, beyond merely the trade designation, it was suggested to me by Professor Greenish that it would be desirable to obtain from different wholesale houses and elsewhere, samples of benzoin of good quality, and ascertain the proportion of residue left when the sample was treated with spirit and also the amount of ash yielded by the residue, as the official description and tests for benzoin should be designed so as to exclude inferior qualities, but should not be so stringent as to make it impossible to procure benzoin answering the official tests. Acting upon Professor Greenish's suggestion, several samples of both benzoin and guaiacum resin were procured from the leading London drug houses, and also from the Society's Museum, through the kindness of Mr. Holmes. The results obtained will, I hope, be not altogether uninteresting to members of this Association.

In the first place I will discuss benzoin. The B.P. describes benzoin as a balsamic resin obtained from *Styrax benzoin*. It occurs in masses composed of loosely agglutinated tears, or more generally the tears are closely compacted together by a deep amber-brown, reddish-brown, or greyish-brown translucent substance. In some specimens the tears are an inch or more in length, and when first broken they have an opaque milk-white appearance, so that the masses then present an almond-like character; while in other specimens the white substance is very small in amount, and the masses when broken resemble reddish-brown granite. The Pharmacopœia further states that it is soluble in spirit, but no mention whatever is made of the presence of foreign impurities, which exist in the commercial drug to a large extent, as will be seen from the results obtained. Again, in the German, Austrian, and United States Pharmacopœias, there is no mention of the presence of impurities insoluble in spirit. In the French 'Codex,' there is a short note to the effect that all inferior samples containing débris, etc., should be rejected. The 'Pharmacographia' states that benzoin is distinguished as of two kinds, Siam and Sumatra. Each kind occurs in various degrees of purity and under considerable differences of appearance. In Siam benzoin there is always present a certain admixture of fragments of bark, wood, and other accidental impurities. The Sumatra benzoin, when of good quality, consists of numerous opaque tears set in a greyish-brown resin and mixed with fragments of wood and bark. When of inferior quality, the white tears are wanting and the proportion of impurities is greater, some samples having been seen consisting almost wholly of bark. In comparing the Siam and Sumatra varieties, the 'Pharmacographia' states that the Sumatra benzoin is weaker and less agreeable in odour, and generally contains more impurities than the Siam drug. The 'National Dispensatory' mentions that, with the exception of impurities, consisting of fragments of bark, wood, etc., benzoin should dissolve in five times its weight of alcohol.

Although the presence of impurities is noted by most authors, yet the extent to which such an impurity may occur is not defined. I examined nine samples, one Penang, two Siam, and six samples of best gum benzoin. On submitting these six last mentioned to Professor Greenish and Mr. Holmes for inspection, four of the samples were described as good commercial Sumatra, and the other two as seconds. I will describe as briefly as possible the process employed in assaying the samples. The whole sample was first powdered and passed through a No. 20 sieve. The powder was then thoroughly mixed, and 25 grammes of each sample were macerated in successive quantities of spirit, the spirituous solutions being passed through a previously weighed filter paper. The residue on the filter paper was thoroughly washed with more spirit until that which passed through contained no trace of dissolved matter. It was then dried in a hot-air oven, and after allowing it to cool in a desiccator it was weighed. The processes of drying and allowing to cool in a desiccator were repeated several times until a constant weight was obtained. This, minus the weight of the filter paper, gave the weight of insoluble matter present. The residue was then ignited in a weighed platinum dish, and after allowing it to cool in a desiccator it was weighed. This weight, minus the weights of the platinum dish and of the ash left by the filter paper, gave the amount of ash present in the residue. My results may be briefly summarised as follows:—

Sample.	Description.	Percentage of Insoluble Matter.	Percentage of Ash Yielded by the Insoluble Matter.
A	Good commercial Sumatra	8·54	4·8
B	,, ,, ,,	10·25	4·2
C	,, ,, ,,	9·45	4·9
D	,, ,, ,,	7·13	3·9
E	Seconds	10·67	6·1
F	,,	10·16	5·4
G	Very fine Block Siam	1·3	20·1
H	Commercial Siam of good quality	2·48	11·9
I	Penang	6·17	6·6

From this table it will be seen that the four samples of commercial Sumatra of good quality contain from 7·1 to 10·2 per cent. of impurities insoluble in spirit, consisting, as shown, by the small percentage of ash, mainly of organic matter, probably bits of bark, wood, etc., judging from the appearance of the residue. Even the two samples sent as best gum benzoin, but judged to be of second quality, contained not much more impurity insoluble in spirit, viz., 10·6 and 10·6 per cent. The residue in these two samples also consisted mainly of fragments of bark and wood. The two samples of Siam benzoin (G and H) contained much less impurity insoluble in spirit, viz., 1·3 and 2·4 per cent., but the percentage of ash in these two samples is much higher, viz., 20·1 and 11·9. The Penang, which is a variety of Sumatra benzoin, occupies an intermediate position between the Sumatra and Siam varieties. At the present time it would be difficult to obtain Sumatra benzoin with much less than 10 per cent. of impurities insoluble in spirit, but there appears to be no reason why, with greater care in the collection of the drug, Sumatra benzoin should not be placed on the market in a much purer condition. These figures differ considerably from those of Mr. Dunlop (*P.J* [4], v., pp. 140, 141), but it must be remembered that the six samples of Sumatra were all bought as the best gum benzoin, and four of them were judged by experts to answer that description, the other two being judged to be of somewhat inferior quality. Much benzoin is imported containing more impurities, but it must be remembered that such benzoin is not fit for making official preparations. The conclusions to be drawn from these results are:—

1. That commercial samples of benzoin contain a large percentage of matter insoluble in spirit, in the form of bits of bark wood, and inorganic impurities.

* Read before the School of Pharmacy Students' Association.

2. That a standard should be fixed in the B.P. for the amount of matter insoluble in spirit.

3. That the standard for such impurity should not in any case exceed 10 per cent.

4. That Siam benzoin, which contains the least amount of impurities insoluble in alcohol, should be used in all the official preparations.

Turning now to the guaiacum resin, six samples were assayed. Samples A, B, C, and D were judged by experts to be good block guaiacum resin; Sample E, fine tear; Sample F, seconds. The B.P. describes guaiacum resin as obtained from the stem of *Guaiacum officinale* or of *Guaiacum sanctum* by natural exudation, by incision or by heat. It occurs in roundish or somewhat oval tears, or more commonly in large masses containing fragments of wood, bark, and other impurities. I may here give a brief account of the method of extracting the resin by means of heat. A log of wood is supported in a horizontal position above the ground by means of two upright bars. Each end of the log is then set on fire and a large incision having been previously made in the middle, the melted resin runs out therefrom in considerable abundance. The resin is chiefly collected from *Guaiacum officinale*, which yields a greater proportion than *Guaiacum sanctum*. The 'Pharmacographia' states that guaiacum resin is sometimes imported in a very foul condition and largely contaminated with impurities arising from a careless method of collection. The 'United States Dispensatory' mentions that alcohol dissolves all the resin with the exception of impurities. The 'National Dispensatory' states that sometimes guaiacum resin is very impure and contains as much as 16 per cent. of wood, bark, etc.

In a note on guaiacum resin, by F. L. Smith, of Wolverhampton (*P. J.* [4], iv., pp. 101, 102), the author states that he examined the residue left by commercial guaiacum resin in making the tincture. The results he obtained were as follows:—Percentage of residue 15·7. Percentage of ash on incineration 3·36. The author further stated that the residue appeared to be fragments of wood and bark. As I have mentioned before, six samples were examined and the process employed in assaying them was precisely similar to that described in the case of benzoin. My results may be tabulated thus:—

Sample.	Description.	Percentage of Matter Insoluble in Spirit.	Percentage of Ash Yielded by the Residue.
A.....	Good block resin	2·59	56 2
B.....	,, ,, ,,	7·66	18·0
C	,, ,, ,,	7·89	23·1
D.....	,, ,, ,,	10·60	18·7
E.....	Fine tear	1·54	11·5
F.....	Seconds	9·00	20·2

From these results it will be seen that the four samples of good block guaiacum resin contain from 2·9 to 10 per cent. of impurity insoluble in spirit, and the amount of ash left by the residues on incineration varies greatly, the residue of sample A yielding as much as 56 2 per cent. of ash. Sample E, which was described as fine tear, contains much less impurity insoluble in spirit, viz., 1·54 per cent. Sample F, which was described as seconds, contains 9 per cent. of insoluble matter, 20 per cent. of which is inorganic. Finding that the amount of impurity, in the form of fragments of wood, bark, etc., varies so much in different samples of guaiacum resin, a note should be made in the Pharmacopœia of the limit of such impurities. Judging from the results obtained, the amount of impurity insoluble in alcohol should not exceed 7 5 per cent., but there is no reason why it should not be as low as 5 per cent. From the table it will be observed that the fine tear contains the least amount of impurity, and so should be used in making the official preparations. In conclusion, I may state that I am indebted to Professor Greenish for permission to use the Pharmacy Laboratory of the Pharmaceutical Society, where I carried out my investigations.

L'ASSISTANCE PUBLIQUE, OF PARIS, AND ITS INTERNES EN PHARMACIE.*

BY A. SERÉE.

Pharmacist of the First Class, ex Interne of the Paris Hospitals.

General Description of Work.

Among the philanthropic undertakings instituted by the City of Paris, with a view to the assuagement of human misery, the work of L'Assistance Publique occupies the front rank. Everyone in the immense city of Paris who is suffering, hungry, deserted, sick, or indigent comes and applies to it in his trouble, and it—in the semblance of a mighty Sister of Mercy—smooths away the misery, and, as far as it is possible, heals his wounds.

The Assistance Publique directs the operations of the hospitals, almshouses, and asylums; it administers outdoor relief in the people's own homes by means of the Bureaux de Bienfaisance and L'Assistance Médicale, and it cares for the orphans and waifs and strays. Its influence is exerted annually over more than half a million souls, and the yearly expenditure necessitates the disbursement of about thirty-eight million francs. This sum of money is partly provided by the liberality of generous donors, the balance being made up by subventions from the City authorities.

General Organisation.

The Assistance Publique is worked by a Director, assisted by a Board of Management composed of thirty-five members chosen from among the important personages of the civic and medical circles of Paris.

The greater part of the food stuffs and other stores necessary to the operations of the Assistance Publique are prepared or housed in the General Stores, which consist of the provision, bakery, wine and spirit, butchers and central stores, and the Central Pharmacy of the Hospitals.

Pharmaceutical Organisation.

As a pharmacist, it is this latter portion of the service which shall now occupy my attention.

The Central Pharmacy of the Hospitals has its buildings and warehouses situated in Paris itself at the Quai de la Tournelle. From there it is that the medicines, either simple or compound, all ready prepared, as well as chemicals, syrups, tinctures, extracts, and powders are despatched to the hospitals or almshouses in the city or those situated farther out in the suburbs. In each hospital (there are about twelve or fifteen, almost all within the city boundary) there is a pharmacy, the head of which is a chief pharmacist, having at his command several "Internes en Pharmacie," five to nine in number, according to the importance of the hospital.

The "Internes en Pharmacie."

These "Internes en Pharmacie" are entrusted with the final preparation or dispensing of the various medicines in the form of potions, pills, mixtures, etc., ordered for the use of the sick inmates by the chief physicians. The title "Interne en Pharmacie," much sought after by the majority of students, in consequence of the advantages it carries with it (advantages at the same time pecuniary and honorific), is only bestowed after having passed several very stiff examinations, into the details of which it will be worth our while to enter.

Examinations for Admission.

The examinations are four in number, and require about two months' time, more or less, according to the number of students presenting themselves. There are forty or fifty places to be filled yearly, for which some 150 or 200 candidates offer themselves in competition, so that it is truly a case of "many called but few chosen."

First Examination.

The candidates, who must be at least twenty years of age, and not more than twenty-seven, are called upon in the first examination

* Translated from the French by Harold Wyatt, jun., and read before the Liverpool Chemists' Association.

to recognise various materia medica specimens of botanical origin, medicinal plants, leaves, roots, rhizomes, barks, seeds, flowers, resins, etc. Twenty specimens are arranged on twenty plates on a table in the public Examination Hall, and six or seven examiners, nearly all of whom are professors of the School of Pharmacy, or chief pharmacists to the hospitals, conduct the examination. The candidates, divided into parties of ten in each, are shut up in adjacent rooms, and are admitted into the Examination Hall one by one, being made to defile past the twenty plates and name, if they can, the specimens, giving the French name, Latin name, and botanical order of each. Ten minutes exactly are allowed each candidate for the recognition of these twenty substances. A name wrongly given counts as two bad marks, and each plant not recognised as one bad mark. If the candidate has not recognised at least fifteen specimens, or if he has wrongly named more than two or three, he is eliminated, and cannot present himself for the subsequent examinations. Often a third or fourth part of the aspirants are thus weeded out as the result of this first examination.

Second Examination.

The second examination is to some extent a repetition of the first, but with the difference that the twenty specimens for recognition are compound galenicals, such as pill masses, tinctures, simple and compound, syrups, powders, and extracts, as well as some chemical substances. Ten minutes are also allowed for this portion of the trial, at least fifteen specimens having to be correctly named or the candidate is plucked, and the field of battle again strewn with the corpses of the slain, which may not be resuscitated until the next year's trial.

Third Examination.

The third examination is oral. The candidates, still in groups of ten in separate rooms, are led forth one at a time and shut up in a small room without books or notes of any kind and with only a chair, table, and a small sheet of paper to distract their attention. On the paper are written two questions, one on pharmacy, the other on chemistry. The questions are really the titles of two substances or subjects about which the candidate has to lecture the examiners. After being shut up and left to his meditations in this room for ten minutes by the clock, during which time he is supposed to mentally develop his discourse, the candidate is ushered by an attendant into the public hall, where he mounts a rostrum, and for ten minutes must expatiate upon his subjects as eloquently and as learnedly as he can. For instance, the subjects may be castor oil and chloroform, about which he has to tell all he knows, and so much the worse for him if at the end of ten minutes he has not managed to bring out the chief points of interest and the more important facts chemically and pharmaceutically relating to these bodies. Marks are given by the examiners to the candidate according to the amount of erudition shown, and also to the eloquence brought into requisition.

This third examination is not eliminatory.

Fourth Examination.

The fourth examination is written. All the candidates (by this time generally reduced to one half the original number) assemble in the amphitheatre, and seated at desks and armed with pen, ink and paper, await their questions, which they draw in turn out of a basket placed on a central table. The questions, three in number, are on chemistry, natural history, and pharmacy ; for example :—

No. 1, Chemistry. "Write an essay on Sulphides."

No. 2, Natural History. "Write an essay on Leeches."

No. 3, Pharmacy. "Write an essay on the Distilled Waters."

It lies then with each competitor to write to the full extent of his knowledge on each of these three subjects, to speak of the leeches' suckers, their eleven stomachs, three jaws, each with sixty microscopical V-shaped teeth, etc. The contest is almost as to who shall write quickest and cover the most paper. Four hours are conceded for the development of these three questions, at the end of which time one has to give in one's work, pack up, and move out. If the truth must be told, it must be confessed that many candidates go out before the end of the allotted time, having only managed to cover a few meagre pages of foolscap. As for them their fortune is easily told—they will remain at the gate of Paradise! The next and subsequent days the authors of the various theses read their scientific and pharmaceutical literature in public before the assembled examiners, who award the marks. The good and bad marks obtained in the four trials are calculated, and the places awarded accordingly. Then, at a special convocation, the successful students are proclaimed "Internes en Pharmacie" in order of merit, and receive each one a "carte d'interne," which the proud and happy recipient piously guards as does the triumphant soldier who sees shining on his breast the medal which his courage and bravery have obtained for him.

Duties of Internes.

We have seen how the title of "Interne" may be won ; let us now glance at the duties which pertain to the office. Each morning about seven or eight o'clock the doctor's rounds take place, at which time each "interne" must report himself to his medical chief, who, with his "interne en médecine" accompaning him, as well as several medical students and even doctors desirous of attending the chief's lectures, begins his visiting round of the patients' cots. He stops longer at the interesting cases, examines, sounds, and questions and prescribes this or that medicine. The interne en pharmacie, note-book in hand, writes down the doctor's orders, and when the medical visit terminates, hastens back to the pharmacy, where he rapidly dispenses the potions, pills, and other medicines ordered. The bottles, provided with numbers corresponding with those of the patients' beds, are carried to the wards by the male attendants or the sisters. At eleven or twelve noon all work is finished ; then comes "lunch."

The internes leaving the pharmacy assemble in their own private dining-room, which in common with the pharmacy, "salle de garde" and bedrooms, is generally in a building somewhat removed from that occupied by the patients. Their cook, whom they pay out of their own pocket, has prepared for them, also at their own expense, an appetising spread. They eat, drink, make merry and engage in animated converse, and what with a constant stream of jokes and wine running in unison, gaiety reigns supreme and the poor patients, their pains and misery, are forgotten. They talk politics, literature, fine art, philosophy, even socialism. At that happy age of twenty summers at what does one hesitate? "Homo sum, et nihil humanum a me alienum puto!" But time goes on, the afternoon arrives, they leave the table and the hospital, for every afternoon the internes are free, with the exception of the one on duty, who must not quit the premises. An electric bell connects him with the pharmacy, and he must be ready day and night to execute any urgent prescriptions delivered to him by the "Interne en Médecine." The "internes" are on duty according to the roster. In the afternoon some attend the lectures of the School of Pharmacy, others visit the Botanical Gardens or the Library, and others again do none of these, but drink beer and smoke their pipes in the "Brasseries." There are a few who shut themselves up at home, surrounded by their favourite books, and read hard ("potassent ferme") for future examinations. In the evening there is dinner about seven o'clock, after which more conversation, philosophical, scientific, or otherwise. When the finances are flourishing a visit may be paid to the theatre, concert, or to the boulevards, the rich often paying for the poor, and as each student passes through alternations of opulence and poverty, according to whether he is more or less removed from the time of his receipt of the paternal remittance, there springs up a kind of collective republic, one paying for the other, each in his turn. Neither the German Karl Marx, nor the Frenchman Jaurès, nor the English socialists themselves have as yet been able to establish similar practical socialism in modern society.

But as the date of the examinations at the School of Pharmacy draws near, pleasure and feasting are banished, at any rate, by the real students. These latter shut themselves up in their dens, and until early morning struggle manfully with their chemistry. They soon believe themselves serious rivals of Berthelot or Attfield. In botany they would pit themselves against the great Linnæus himself, and would have discovered Attwood's machine during their course of physics if he had not saved them the trouble by forestalling them, and they fall asleep pondering upon the invention of a motor for a navigable balloon !

Happy age that ! and happy the life of an Interne en Pharmacie ! His emolument is scanty—only forty francs a month and lodging—but his hope and faith in the future are immense. He knows not the disenchantments of life nor the deceptions experienced at a riper age. A free good fellowship—a lasting friendship—grows up between these seven or eight youths living together day by day in close association, having the same tastes, the same occupations, and the same hopes. Perfect equality exists between them. What more can be desired than this to be really happy ?

As a result this good fellowship begun during the Internat endures for a life-time, and it is a red letter day for each one when these "ex internes" meet in after life. All cherish a happy remembrance of the years passed in the Internat. Happy years of a happy youth gone never to return!

THE ANALYSIS OF SALTS.

The Third Group.

Separation of the Metals of Group III.

As mentioned in the last article (see last vol. p. 318) the precipitate obtained on adding ammonia may contain the hydrates of iron (ferric), chromium, and aluminium. When these are collected, washed, and dried, they lose water and are converted into oxides, Fe_2O_3, Al_2O_3, Cr_2O_3. The dried oxides are fused with sodium carbonate and potassium nitrate (or chlorate). The iron oxide is unaffected by this treatment, and remains as an insoluble reddish-brown powder. The aluminum oxide combines with the alkali to form a soluble potassium aluminate—

$$Al_2O_3 + K_2CO_3 = 2KAlO_2 + CO_2.$$

The chromic oxide also unites with the alkali in presence of oxidising agents, like KNO_3 or $KClO_3$, to form yellow potassium chromate, $K_2CrO_4 = K_2OCrO_3$.

$$\text{(i.)}\ Cr_2O_3 + 3O = 2CrO_3.$$
$$\text{(ii.)}\ CrO_3 + K_2CO_3 = K_2CrO_4 + CO_2.$$

The fused mass is, therefore, boiled with water, any ferric oxide filtered out, and the filtrate divided into two parts. One part is examined for chromium by adding an excess of ammonium chloride. This decomposes the potassium aluminate—the reaction being hastened by warming—and a precipitate of hydrated aluminium oxide, $Al_2O_3{\cdot}2H_2O$ or $Al_2O(OH)_4$, is produced. This oxyhydrate is rather denser than the gelatinous normal aluminium hydrate, Al_26HO, precipitated by addition of ammonium hydrate to solutions of ordinary aluminium salts.

$$2KAlO_2 + 2NH_4Cl = Al_2O_3 + 2KCl + 2NH_3 + H_2O.$$

A relatively large amount of ammonium chloride is required for this reaction, because a considerable quantity of potassium carbonate has been used in the formation of the aluminate by fusion, and the excess of K_2CO_3 uses up ammonium chloride—

$$K_2CO_3 + 2NH_4Cl = 2KCl + (NH_4)_2CO_3.$$

Instead of adding ammonium chloride, one can add hydrochloric acid until a distinctly acid reaction is obtained after warming. This decomposes the aluminate, forming aluminium and potassium chlorides—

$$2KAlO_2 + 8HCl = Al_2Cl_6 + 2KCl + 4H_2O.$$

By now adding ammonia a gelatinous precipitate of aluminium hydrate is obtained—

$$Al_2Cl_6 + 6NH_4HO = Al_26HO + 6NH_4Cl.$$

The portion of the fluid reserved for the detection of chromium will be yellow from the presence of potassium chromate if this element be present. Confirmation of this is obtained by adding acetic acid to a faint acid reaction to convert the excess of alkaline carbonate to acetate, and then solution of lead acetate: a yellow precipitate of lead chromate will be obtained—

$$K_2CrO_4 + Pb2C_2H_3O_2 = PbCrO_4 + 2KC_2H_3O_2.$$

It is necessary to convert the carbonate of potassium into acetate before adding the lead solution, otherwise a white precipitate of lead carbonate will be obtained. If manganese be present in the original solution the fused mass obtained by heating the group precipitate with alkaline carbonate and nitrate will be green from the formation of potassium manganate. For although the manganous hydrate precipitated by ammonia is soluble in excess of this reagent, particularly in presence of ammonium salts (like the hydrates of zinc, nickel, and cobalt), during the heating and filtration (after addition of ammonia) to separate the hydrates of iron, aluminium, and chromium, some of the manganous salt becomes oxidised to mangano-manganic oxide, Mn_2O_3, which, being insoluble in ammonia, is precipitated along with the iron, aluminum, and chromium. When this precipitate is dried and fused with alkaline carbonate and nitrate, the manganese oxide (compare Cr_2O_3) is oxidised to green potassium manganate, $K_2MnO_4(K_2O,MnO_3)$, which dissolves in water and interferes with the reactions for the detection of aluminium and chromium. If a green solution is obtained here, the alkaline solution before acidifying is heated and treated drop by drop with alcohol until the green colour is just removed. The manganate is reduced by the alcohol, aldehyde being formed, and the manganese is re-precipitated as Mn_2O_3.

$$2(K_2O{\cdot}MnO_3) + 3C_2H_6O =$$
$$4KOH + Mn_2O_3 + 3C_2H_4O + H_2O.$$

The brown precipitate of Mn_2O_3 should be filtered out and the filtrate tested as described for aluminium and chromium.

Fourth Group.

To the alkaline filtrate from the third group precipitate, ammonium sulphydrate is added. This precipitates zinc, manganese, nickel, and cobalt as sulphides, these being insoluble in water or alkali. If we suppose these four metals to be present as chlorides, and let M stand for Zn, Mn, Co, or Ni, the following equation represents the reaction:—

$$MCl_2 + (NH_4)_2S = MS + 2NH_4Cl.$$

They were not precipitated by sulphuretted hydrogen, because this reagent was applied in presence of free hydrochloric acid. Addition of great excess of ammonium sulphydrate should be avoided, because nickel sulphide dissolves to some extent under these conditions. When this occurs the filtrate is brownish-black. If a black filtrate is obtained it must be boiled to remove the excess of ammonium sulphide when the black nickel sulphide is usually deposited. If, after boiling, the filtrate is not colourless, add hydrochloric acid until a faint acid reaction is obtained, and boil again. This should effect the entire removal of nickel.

Separation of the Metals of Group IV.

The separation of these four sulphides may be effected in several different ways. The simplest method is perhaps to treat then with *cold dilute* hydrochloric acid, which dissolves MnS and ZnS, forming the corresponding chlorides, $MnCl_2$ and $ZnCl_2$. Shake the mixture for some time—*without warming*—and then filter—the filtrate contains the manganese and zinc chlorides, while the black sulphides of nickel and cobalt remain on the filter. Note that NiS and CoS are not precipitated by sulphuretted hydrogen from solutions of nickel and cobalt salts in presence of free hydrochloric acid. When precipitated from alkaline solutions, however, they do not re-dissolve in *cold dilute* HCl, but if the acid be strong, or *hot* dilute acid be employed, they do dissolve. The filtrate containing the manganese and zinc is now well boiled to remove every trace of sulphuretted hydrogen formed by the solution of the sulphides—

$$MnS + 2HCl = MnCl_2 + H_2S.$$
$$ZnS + 2HCl = ZnCl_2 + H_2S.$$

The fluid thus freed from H_2S is now *cooled*, and then caustic potash in excess is added. The zinc hydroxide first produced dissolves in the excess of KOH, forming a soluble zincate of potassium—

$$\text{(i.)}\ ZnCl_2 + 2KOH = Zn(OH)_2 + 2KCl.$$
$$\text{(ii.)}\ Zn(OH)_2 + 2KOH = K_2ZnO_2 + 2H_2O.$$
$$(ZnO,H_2O)\quad (K_2O,H_2O)\quad (K_2O,ZnO).$$

The manganous hydroxide is precipitated, being insoluble in the excess of potassium hydroxide, but quickly absorbing oxygen becomes converted chiefly into brown mangano-manganic oxide, Mn_2O_3. This precipitate must be filtered off and tested by confirmatory reactions for manganese, *e.g.*, fusion on platinum with potassium carbonate and nitrate to form green potassium manganate. Ammonium sulphide is added to the alkaline filtrate containing the zinc. This precipitates zinc sulphide, since ZnS is insoluble in alkali. Zinc and manganese may also be separated by taking advantage of the solubility of MnS and insolubility of ZnS in acetic acid. This may be utilised in two ways:—Either the precipitated sulphides are treated with acetic acid, or H_2S is passed through the solution containing the two metals in presence of free acetic acid (not hydrochloric acid, which prevents the precipitation of both MnS and ZnS).

The separation of the nickel and cobalt sulphides is somewhat difficult, owing to the close resemblance between the proper-

ties of the corresponding salts of these two metals. Indication of the presence of nickel will probably have been obtained by the partial solubility of NiS in ammonium sulphide. The presence of cobalt may also be shown by heating a small portion of the sulphides with the borax bead. The blue colour produced by cobalt compounds completely masks the relatively weaker red-brown tint communicated to the bead by nickel. Their separation is most simply effected by means of the insoluble double nitrite of potassium and cobalt. The sulphides are dissolved to chlorides by boiling with strong hydrochloric acid. Addition of a few drops of nitric acid (forming aqua regia) hastens the solution. Since free hydrochloric acid prevents the precipitation of the double nitrite, caustic potash is added to alkaline reaction, and then excess of acetic acid. The necessity for this free acetic acid will be seen subsequently. A large excess of solid potassium nitrite is now added so as to saturate the fluid. The mixture is warmed and then set aside for *at least* an hour. Under these conditions any cobalt present is precipitated as $Co(NO_2)_3$, $3KNO_2$, a yellow somewhat crystalline precipitate, forming slowly. This compound is very sparingly soluble in water, and practically insoluble in presence of excess of KNO_2. Note that the cobalt has become trivalent, for the double nitrite contains cobalt*ic* nitrite, $Co(NO_2)_3$. If we add KNO_2 to a neutral cobalt solution a double cobalt*ous* compound, $Co(NO_2)_2 2KNO_2$ is obtained. In presence of excess of potassium nitrite and free acetic acid, which yield free nitrous acid—

$$KNO_2 + HC_2H_3O_2 = KC_2H_3O_2 + HNO_2$$

the cobalt*ous* compound is oxidised to cobalt*ic* at the expense of this nitrous acid, which is thereby reduced to nitric oxide—

$$2HNO_2 = H_2O + 2NO + O.$$

Nickel does not form an analogous compound, and will be found in the filtrate from the potassium cobaltic nitrite. From this it may be precipitated as nickel sulphide by heating with ammonium sulphide. Any black precipitate so obtained must be tested in the borax bead. Another method for the separation of nickel and cobalt depends upon the behaviour of their cyanides in presence of potassium cyanide. Cobalt also here passes into the cobalt*ic* state and forms a cobalticyanide—analogous to ferricyanide—of potassium, in which the cobalt becomes a part of the acidulous radicle and does not respond to the ordinary tests, while nickel does not undergo this change. This method is not so satisfactory or simple as the one already described.

Fifth Group.

The filtrate from the fourth group is concentrated and the fifth group (barium, strontium, and calcium) precipitated as carbonates by addition of ammonium carbonate. Magnesium carbonate, although insoluble in water, is not precipitated here on account of the formation of soluble double magnesium-ammonium compounds, as already mentioned. The exact separation of the fifth group requires care for its successful performance, for the following reason: when ammonium carbonate is added, the following reaction takes place, M standing for any one of the three metals Ba, Ca, or Sr—

$$MCl_2 + (NH_4)_2CO_3 = MCO_3 + 2NH_4Cl.$$

If the mixture be boiled the reaction is partly reversed, particularly in presence of large excess of ammonium salts, and this latter condition always occurs at this stage of analysis, because of the previous use of ammonium salts for the separation of the preceding groups. This reversed reaction is exhibited, for example, by calcium carbonate—

$$CaCO_3 + 2NH_4Cl = CaCl_2 + (NH_4)_2CO_3.$$

The liquid after addition of ammonium carbonate should be, therefore, only slightly warmed to promote the aggregation of the precipitated carbonates into a sandy crystalline condition, so as to render their separation and washing easy, but *not boiled*. If the mixture be boiled, a portion of the precipitated carbonates undergoes the reverse reaction already mentioned. The barium, strontium, or calcium chloride so formed, being soluble, will go into the filtrate and will form a precipitate and be mistaken for magnesium when sodium phosphate is added for the detection of that metal.

Separation of the Metals of Group V.

The carbonates of barium, strontium, and calcium are now dissolved in acetic acid, acetates of the metals being formed and carbon dioxide evolved.

$$MCO_3 + 2HC_2H_3O_2 = M(C_2H_3O_2)_2 + H_2O + CO_2.$$

Barium is separated as chromate by addition of (neutral) potassium chromate—

$$Ba2(C_2H_3O_2) + K_2CrO_4 = BaCrO_4 + 2KC_2H_3O_2,$$

barium chromate being insoluble in water or acetic acid. Strontium chromate is only slightly soluble in water, but more easily in presence of the excess of acetic acid used in dissolving the carbonates, while calcium chromate is easily soluble in water only. Strontium and calcium will, therefore, be found in the filtrate from the yellow barium chromate. The exact separation of these two metals is rather tedious, but a simple method sufficient for most purposes is as follows. To a *small portion* of the filtrate some saturated solution of calcium sulphate is added, and the mixture set aside for some time. If strontium be present a precipitate of $SrSO_4$ will be obtained, since it is much less soluble (1 in 7000) than $CaSO_4$ (1 in about 400).

$$Sr(C_2H_3O_2)_2 + CaSO_4 = SrSO_4 + Ca(C_2H_3O_2)_2.$$

In this case the reserved portion of the filtrate is treated with dilute sulphuric acid and set aside to allow the complete deposition of the strontium sulphate.

$$Sr(C_2H_3O_2)_2 + H_2SO_4 = SrSO_4 + 2HC_2H_3O_2.$$

This precipitate will include some calcium sulphate if the quantity of calcium salt present amounts to enough to reach the limit of solubility of the calcium sulphate.

$$Ca(C_2H_3O_2)_2 + H_2SO_4 = CaSO_4 + 2HC_2H_3O_2.$$

In any case, however, *all* the calcium sulphate does not come down on account of its slight solubility in water, and sufficient will always be found in the filtrate from the strontium precipitate to yield a precipitate of calcium oxalate on the addition of ammonium oxalate, since calcium oxalate is practically quite insoluble in water or acetic acid.

$$CaSO_4 + (NH_4)_2C_2O_4 = CaC_2O_4 + (NH_4)_2SO_4.$$

Sixth Group.

The filtrate from the fifth group contains now only salts of magnesium, potassium, sodium, and ammonium. Since the group precipitants added in the course of analysis have been ammonium compounds, the presence of ammonia must be determined by examination of the original substance. This filtrate is divided into two portions, one larger than the other. To the smaller portion sodium phosphate is added. If magnesium be present a *crystalline* precipitate of ammonio-magnesium phosphate is obtained.

$$MgCl_2 + Na_2HPO_4 + NH_4HO = MgNH_4PO_4 + 2NaCl + H_2O.$$

Since this compound is much less soluble in water containing free ammonia, some solution of ammonia is added. The precipitate appears in dilute solutions only on standing and any small precipitate obtained, not distinctly crystalline, should be viewed with suspicion, since it may be due to traces of calcium, etc., not completely precipitated in the previous group. The larger portion of the filtrate is evaporated to dryness and ignited to remove the ammonium salts, since these form also an insoluble double chloride with platinum perchloride. The ignited residue, therefore, may contain magnesium (whose presence is determined by examination of the other portion) potassium and sodium. It is dissolved in the least possible quantity of water, the solution placed in a watch-glass, acidulated with hydrochloric acid, and platinum perchloride added. A yellow precipitate of double chloride of platinum and potassium, $K_2PtCl_4 = 2KCl.PtCl_4$, is obtained if potassium be present. The corresponding sodium compound is easily soluble. If neither magnesium, potassium, nor sodium be present, the filtrate from the fifth group will contain nothing but the excess of ammonium salts used as group reagents; when evaporated and ignited it therefore leaves no residue.

PRACTICAL PHARMACOGRAPHY.

CARYOPHYLLUM.

Syn. Cloves, Eng.; Clous de Girofles, Fr.; Gewürznelken, Germ.; Garofani, Ital.; Cravinho, Port.; Clavo, Sp.

Macroscopic Characters.—Cloves consist of the dried unexpanded flower-buds of *Eugenia caryophyllata*, Thunb. They are of a reddish-brown colour, about 10 millimetres long and 5 millimetres in diameter. The upper portion consists of

Fig. I.—CARYOPHYLLUM.—*a*, Natural size (Penang clove); *b*, longitudinal section magnified; *c*, tranverse section through the ovary; *d*, pollen grain magnified; *e*, bast fibre.

four closely-imbricated petals, forming a globular head and enclosing numerous stamens inserted at the base

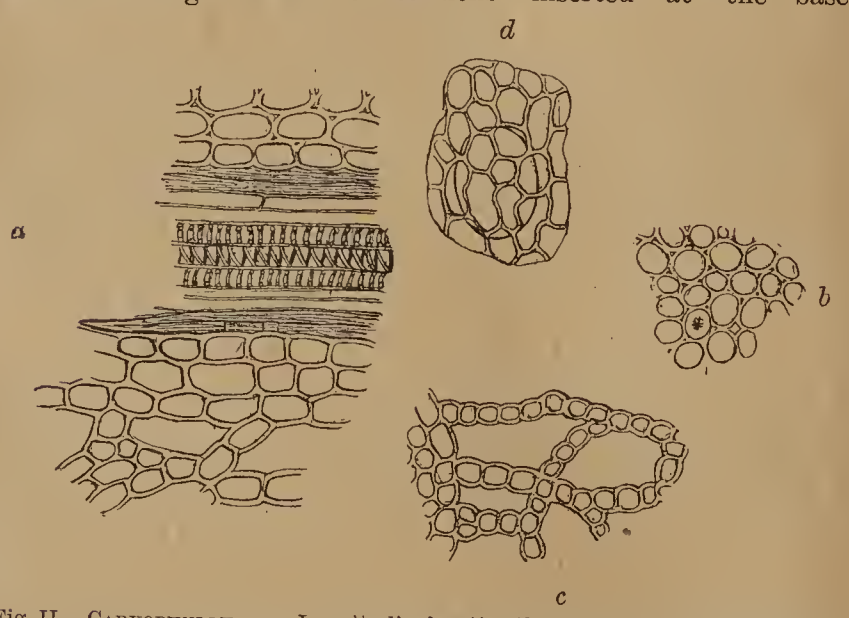

Fig. II.—CARYOPHYLLUM.—*a*, Longitudinal section through a fibro-vascular bundle; *b*, collenchymatous cells with cluster crystal, from outer parenchyma between the oil cells and fibro-vascular bundles; *c*, porous tissue near the centre of the calyx tube; *d*, lower epidermis of the petals. After Tschirch and Oesterle.

of the petals, the latter arising from a quadrate epigynous disk, the angles of which are directed towards the four triangular spreading calyx teeth. The ovary is two-celled, and contains numerous ovules. It is enclosed in the fleshy calyx tube a little below the calyx teeth, and is crowned with a short subulate style, which arises from a depression in the disk. The calyx tube is nearly cylindrical, slightly tapering, and compressed below. If the cloves are of good quality, the surface exudes essential oil when indented by the finger-nail, and they present a bright brown colour and plump appearance, and have pale brown petals. On cutting through the calyx tube transversely an irregularly double ring of large oil cavities of an oval or radially elongated form are seen near the circumference (Fig. III., *pe*). The odour and flavour of cloves resemble those of eugenol, and they have, like it, a biting taste. There are several varieties in commerce, but these do not differ in structure, being distinguished chiefly by their appearance, size, and colour, due to the care taken in their collection and preparation for the market. Those of Penang are the largest, and are plump and of a bright brown colour, those of Amboyna being rather smaller but of a dark brown colour, and those of Zanzibar still smaller, dark coloured, with the buds frequently broken, and containing stalks and foreign matter.

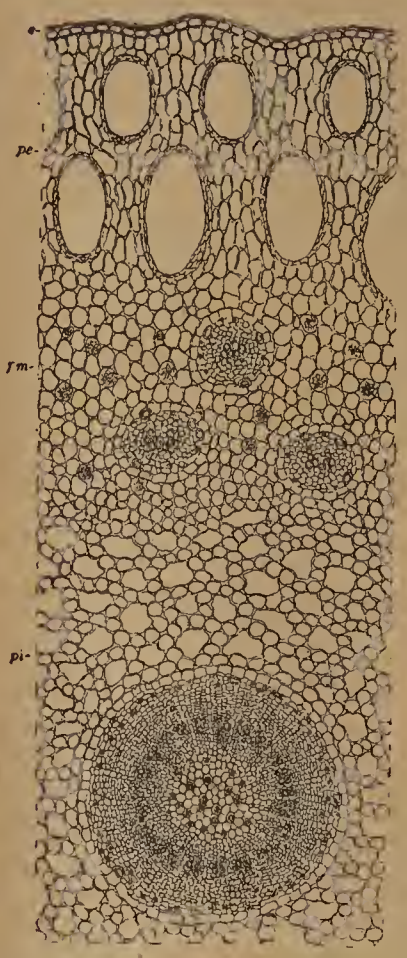

Fig. III.— CARYOPHYLLUM.— Transversese ction of half the calyx tube. After Planchon and Collin.

Microscopic Characters.— The epidermal cells possess outer walls of considerable thickness, 13 to 14 μ, but which are not strongly cuticularised. The layer beneath the epidermis consists of thin-walled cells containing two or three rows (Fig. I., *c*) of large oval oil cells, often 300 μ in diameter (Fig. III., *pe*). Still further inwards is a layer of collenchymatous cells (Fig. II., *b*), a ring of about thirty fibro-vascular bundles (Fig. III., *fm*), and then a layer of tissue containing large intercellular cavities (Fig. III., *pi*). The centre of the calyx tube is occupied by a dense ring of fibro-vascular bundles (Fig. III., *pi*, and Fig. II., *a*). The spiral vessels are comparatively small, but the bast fibres are very broad, with a large lumen (Fig. I, *e*), and the tissue surrounding the bundles frequently contains numerous cluster crystals (Fig. II., *b*, and III., *fm*). Nearly the whole of the tissue gives a dark blue reaction with ferric chloride, due to the presence of eugenol. *Powder.*—The chief characters noticeable

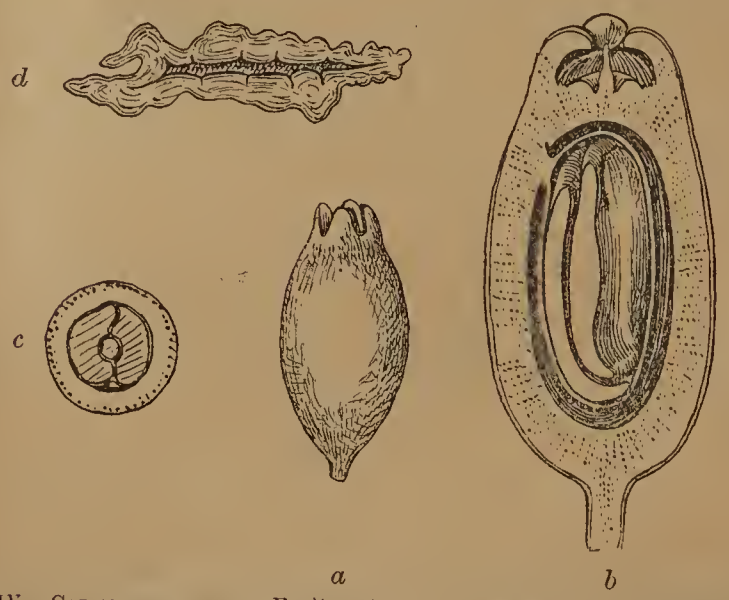

Fig. IV.—CARYOPHYLLUM.—*a*, Fruit, nat. size; *b*, ditto magnified, longitudinal section, showing the large suspended seed with two large cotyledons; *c*, transverse section of fruit; *d*, bast cell from the fruit-wall. After Tschirch and Oesterle.

are the large bast fibres, the triangular pollen grains (Fig. 1, *d*), the vascular bundles, with slender spiral vessels, the numerous brownish cluster crystals, and the absence of starch

and stone cells. The collenchymatous tissue and oil cells are not easily recognised, since the powder met with in commerce is rarely very fine, but torn fragments of the lines of cells forming the air cavities (Fig. II., *c*, and III., *pi*) are more easily distinguished. The powder is sometimes adulterated with the fruits or fruit-stalks of cloves. The powder o f the former may be recognised by the presence of starch grains (Fig. V., A), and large irregularly formed bast cells (Fig. IV., *a*), the latter by the numerous, almost isodiametric, but unequally thickened stone cells (Fig. V., C). Bast cells of irregular

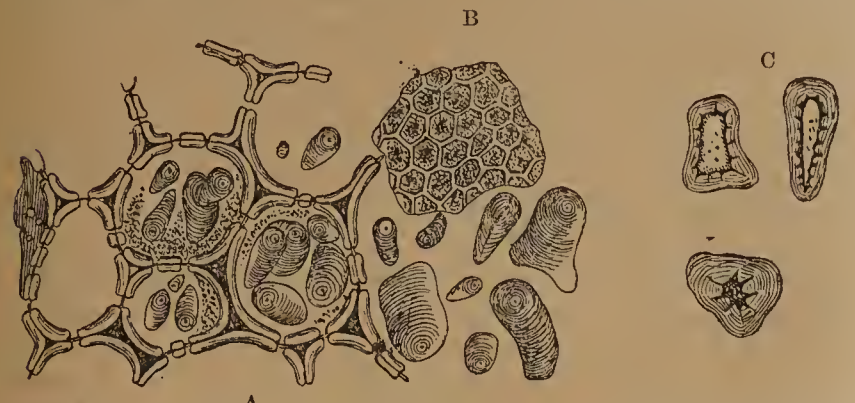

Fig. V.—Caryophyllum.—A, Tissue of the cotyledons with the starch grains *in situ*; B, epidermal tissue of the cotyledons. After Müller. C, Sclerenchymatous cells from clove stalks. After Tschirch and Oesterle.

form occur also in the fruit-stalks, but no starch. Fuller details of structure may be found in Tschirch and Oesterle's 'Anat. Atlas,' taf. xiii.

CARUI FRUCTUS.

Caraways, Eng.; Fruits de Carvi, Fr.; Kümmel, Germ.; Alcaravie, Port.; Alcarabea, Span.

Macroscopic Characters.—Caraways are the dried ripe fruit of *Carum carvi*, Linn. There are several commercial varieties imported from Holland, Russia, and occasionally from Mogador; they are also produced in the Eastern Counties of England. The varieties met with in English commerce vary in size, colour, and purity. The English, which are the most esteemed, are of brighter tint than the Dutch, which are of a dark brown colour. The Russian are smaller and often mixed with much dirt and *débris* of the fruit stalks. Occasionally

Fig. I.—Carum Carvi.—*a*, Russian variety, natural size and magnified. *b*, English, Do. *c*, Mogador, Do.

a large pale variety is imported from Mogador. It is about half as long again as the English kind. The English caraways consist of separate mericarps, which are about 3 to 4 Mm. long and rather more than one millimetre in diameter, somewhat curved, and tapering towards either end. The five pale longitudinal ridges are barely half as broad as the shining dark brown furrows, in each of which lies a large conspicuous vitta. There are also two vittæ on the commissure or flat side of the fruit. The odour and flavour of caraways somewhat resembles that of dill, due to the presence of carvol in the essential oils of both fruits.

Microscopic Structure.—The epicarp consists of somewhat quadrate colourless cells with flexuose walls, and is furnished with stomata (III. *e*), and a small one in each ridge of the fruit. Each ridge contains a fibro-vascular bundle (II. D, III. *fb*, and *tr*). The vittæ are chambered, and are lined with a brown polygonal epithelium (III. *cs*). There is also one small oil receptacle outside each vascular bundle in the ridges of the fruit. These are not represented in

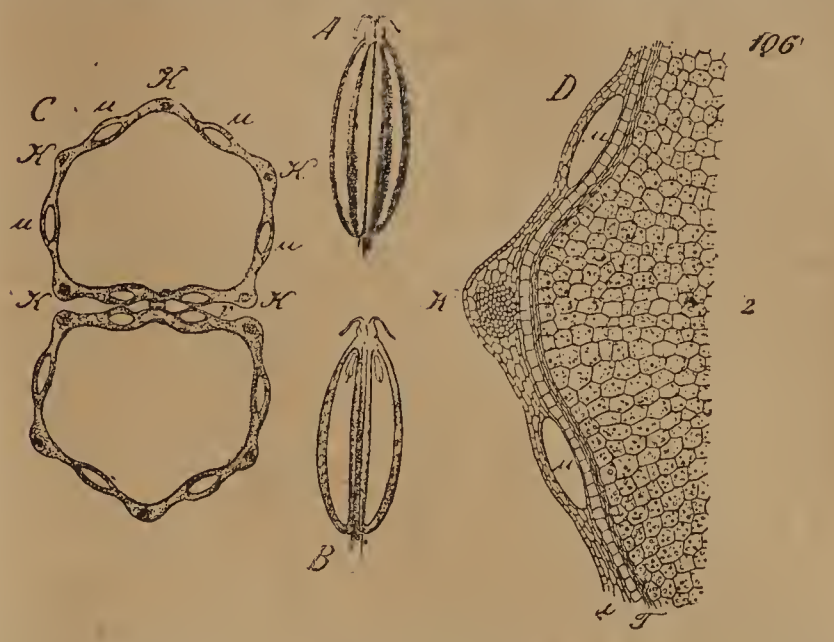

Fig. II.—Carum Carvi.—A, entire fruit magnified, showing ridges; B, longitudinal section, showing embryo and albumen; C, transverse section of fruit; D, portion of ditto, showing structure. After Berg.

Berg's figure (II. D). The mesocarp consists of brownish-yellow angular cells (III. *m*), and the endocarp has elongated cells (III. *en*). The endosperm has colourless thick-walled angular cells containing aleurone grains and oil (III. *a*).

Fig. III.—Carum Carvi.—Powdered fruit; *a*, albumen, containing aleurone grains and oil; *fb*, wood fibres in the ridges of the mesocarp; *cs*, cells of vittæ; *e*, striated cells of epicarp with stomata; *m*, cells of mesocarp; *sc*, sclerogenous cells of the mesocarp; *en*, cells of endocarp; *es*, cells of inner integument of seed. After Collin.

The principal features in the powder are the brown polygonal epithelium of the vittæ, the wood fibres and narrow spiral vessels of the fibro-vascular bundles of the ridges, the long, narrow, brownish-yellow cells of the endocarp, and the absence of crystals and starch. The development of the vittæ in caraway fruit has been described in the *Pharmaceutical Journal* [4], vi., p. 259, by Mr. H. E. Matthews. The small vitta outside each vascular bundle is not represented in Fig. II. D., but may be seen in the figures given by Mr. Matthews, p. 260.

Protectin.—Under this name Evens and Pistor have introduced a very thin silky paper which is impregnated on one side with a solution of caoutchouc. It can be sterilised like any other compress. It adheres firmly to the skin and all materials and products, so that, by means of small pieces of this paper, any desirable bandage can be formed. The use of the material is particularly recommended in operations, for protecting wounds and surfaces from infection. —*Pharm. Zeit.*, xlii., 6726.

COLONIAL DRUGS IMPORTED INTO GERMANY.

An interesting paper by P. Siedler appears in the *Ber. der Deutsch. Pharmaceutischen Gesellschaft*, describing some drugs recently imported into Germany, and it indicates the attention that new products receive in that country, as well as the rapidity with which the teaching in technical schools and museums is bearing fruit. Kola nuts are now imported from the German colonies of Togoland and the Cameroons, and have been sent over in the fresh state. Herr Siedler thinks that the taste of the fresh seeds will not be agreeable to European palates, and that they are only suitable for use when dried and properly prepared. The fresh nuts, as imported, were frequently mouldy; the fusty odour passed off, however, on exposure to the air for a time. He found that the kola nuts from Togoland and the Cameroons yielded, by the ammonia and chloroform method of Keller, an average of 1·621 per cent. of mixed caffeine and theobromine. Some difficulty was experienced in assaying the fluid extract and liqueur of kola, but by the use of chloroform saturated with gaseous ammonia he was able to overcome the difficulty. The seeds of *Dimorphandra* offered some time since in London marked as kola appear to have reached Germany, and are identified by Herr Siedler as those of *Dimorphandra mora*, Schomburgk, of Guiana; but it is not evident on what grounds they are identified as that species. The seeds of *Lucuma mammosa* imported as sapota or "macogany" nuts, and those of the bitter kola (*Garcinia kola*, Heckel), are confounded with the true kola, but neither contain caffeine.

Gum arabic has been imported into Hamburg, from German S. W. Africa, to the extent of 5000 kilos last year, partly in the natural form, and partly in coarse powder freed from adhering bark. The coarsely powdered gum is considered not worth importing, and the other, although yielding a more viscous solution than Khordofan gum, is apparently the mixed product of several trees, as it contains a good deal of gum that swells without dissolving. Herr Siedler found it deficient in ash, since it yields only 1·71 per cent. of ash, as against 2·7 to 4 per cent. of ash in Khordofan gum (Flückiger). A drug named "njimo" from the Cameroons possesses a yellow colouring matter, a very bitter taste, and acts as a sialogogue. These characters seem to indicate a *Xanthoxylum*, *Toddalia*, or allied genus.

A number of products from the Portuguese island of Saõ Thomé, on the West African coast, have been examined by Herr Siedler. One of these is the indiarubber of *Manihot glaziovii*, which he found to be very inferior to the product grown in Ceara, showing that the climatal or terrestrial conditions do not suit the plant, and affording a useful lesson to planters of the necessity for ascertaining the conditions that suit plants before commencing plantations. A kind of gutta percha called "azeitona," and obtained from *Sideroxylon densiflorum*, Baker, appears to be of very inferior quality.

Balsam of S. Thomé is the name of an oleoresin yielded by the Pao Oleo (*Santiriopsis balsamifera*, Engl.), a Burseraceous tree. The terebinthinate oleoresin flows spontaneously from cracks or wounds in the tree, and is collected in cocoanuts, and is placed in the sun to become clear. A bottle of the balsam thus clarified costs about 1000 to 3000 Reis. It is highly valued by both the whites and blacks in the island for healing wounds. Internally it is taken for catarrh of the bladder and bronchitis. The dose is 0·3 to 2·0 gr. It is also used in the form of pills, pastilles, syrup, emulsion, electuary, and tincture. All who cross to Europe from S. Thomé and Principe usually carry a flask of the balsam with them.

Cinchona bark from *C. officinalis*, *C. calisaya*, and *C. succirubra* were received from the same island, where the cultivation commenced in 1864, with, unfortunately, the comparatively worthless *C. Pahudiana*. In 1869-71 plants of *C. succirubra* were sent from the botanical gardens at Coimbra, as well as a few of *C. officinalis*. From 1878-1885 other species were sent, including *C. lancifolia*, Mutis., *C. micrantha*, R. et P., *C. cordifolia*, Mutis., *C. caloptera*, Miq., *C. Haiskailiana*, Miq., *C. calisaya*, R. et P., and vars. *anglica* and *Javanica* and *C. Ledgeriana*, Moens. Between 1880 and 1887, 1,600,000 cinchona trees were planted, mostly *C. succirubra*, the best growing at an elevation of 1000 metres. Some of the more important planters have founded a quinine manufactory at Lisbon for utilising the bark they produce.

A lemon-grass oil from Saõ Thomé possesses distinct peculiarities. It has been examined by Mr. H. Haensel, who finds that it differs from citronella oil of *Andropogon nardus* and the lemon-grass oil of commerce in its optical inactivity, these oils rotating a ray of polarised light to the left, behaving thus like citral.

Another drug described by Herr Siedler is axin, the product of *Coccus axin*, a Mexican insect feeding on species of *Zanthoxylum* and *Spondias*. It is of a dark or orange-yellow colour, tolerably clear, melting at 35° C., soluble in ether, chloroform, and boiling alcohol, but easily becomes brownish and rancid, and is then insoluble in ether and alcohol. It consists essentially of palmitic and lauric acids, and, according to Worlée, is a good remedy for prurigo. Almadina is the juice of a Euphorbiaceous plant in German West Africa, said to be very poisonous, but procurable in quantity.

THE ELECTROZONE PROCESS.

The fluid termed "Electrozone"—produced by the electrolytic action of a current of electricity generated by the dynamo—has been proved, by trials at Maidenhead, to be an absolute bactericide in the treatment of effluent from the Town Sewerage Works. The course followed there is by sedimentation with ferrozone, and filtration through sand and polarite. The effluent is met by a jet of electrozone, and both commingle in a flow of about forty seconds to the brook, which discharges into the Thames a couple of miles down stream in a perfectly sanitary condition. Dr. Kanthack, of Cambridge, has reported that the amount of available chlorine in the electrozone necessary to sterilise the filtered sewage effluent is only one-fifth of a grain to the gallon. This minute quantity practically destroys all bacteria, for out of every million, after a few minutes' contact, not ten survive the treatment. Electrozone is also an effective deodorant, by reason of its annihilation of the gas-producing organisms. These results show an immense advance over the best processes of sewage treatment in use.

Dr. Rideal, in his report, expresses the opinion that an economical method of disposing of sewage would be by utilising the bacteria in the first instance by passing the sewage through screens and beds of porous materials, in which the solids might be liquefied by bacterial action and the putrescible organic matter converted into nitrates, which are harmless from a chemical point of view, but are associated with innumerable bacteria which can be destroyed by electrozone. A great feature in the Electrozone Process is its perfect adaptability to large fluctuations in the rate of discharge of sewage. All chemical precipitations, as well as those based on filtration or irrigation, are affected injuriously by differences of flow. It is, therefore, very important to have the effluent sterilised to its full extent when a large body of flood water is coming down. Further, Dr. Kanthack shows that even if the effluent contains a large quantity of albuminoid and saline ammonia, which form good culture media for the growth of micro-organisms, that growth does not make appreciable progress for some forty-eight hours after the application of the electrozone, a point of enormous importance.

PHARMACEUTICAL JOURNAL.

A Weekly Record of Pharmacy and Allied Sciences

ESTABLISHED 1841.

Circulating in the United Kingdom, France, Germany, Austria, Italy, Russia, Switzerland, Canada, the United States, South America, India, Australasia, South Africa, etc.

Editorial Office: 17, BLOOMSBURY SQUARE, W.C.

LONDON: SATURDAY, MAY 28, 1898.

DEATHS BY POISON.

In the Registrar-General's fifty-ninth annual report for England, which has just been published, 1091 deaths that occurred in 1896 are attributed to the effects of poisons and poisonous vapours. Of that number 619—403 males and 216 females—were due to accident or negligence, whilst 472—279 males and 193 females—were cases of suicide. Taking the accidental cases first, we find that narcotics, including opium, laudanum, morphine, and chlorodyne, were responsible for 117 deaths—55 males and 62 females. Carbolic acid proved fatal in 34 cases only—25 males and 9 females, whilst oxalic acid was the cause of death in two instances, strong mineral acids in twenty-one, arsenic in four, chloral in six, aconite in three, belladonna and atropine in nine, and strychnine and nux vomica in four instances. Sulphonal has two deaths credited to it, prussic acid and oil of almonds four, potassium cyanide two only, colchicum wine, weed killer, and vermin killer one each. Lead poisoning heads the list with 127 deaths, and chloroform proved fatal in 51 instances. Considerably more than one-fourth of the cases are quite outside consideration in connection with the regulation of the sale of poisons, as the deaths are ascribed in those instances to inhalation of smoke, coke fumes, coal gas, sewer gas, etc., or to the use of unripe fruit, poisonous fish, tinned salmon, ptomaines, alcohol, laburnum and wild-rose seeds, ice cream, phosphorus matches, and so forth. Finally, not more than one-fourth of the remaining cases were due to poisons scheduled in accordance with the Pharmacy Act, or about one-fifth only of the total number of deaths ascribed to the effects of poison taken by accident or through negligence.

The 472 suicidal cases are remarkable for the partiality shown for carbolic acid as a means of terminating existence. Altogether, 163 suicidal deaths were due to that cause—88 males and 75 females; narcotics accounted for 66 deaths, oxalic acid for 24, prussic acid and oil of almonds for 28, potassium cyanide for 19, strychnine and nux vomica for 24, arsenic for 5, mercuric salts for 3, salts of lemons for 4, cocaine for 1, aconite for 1, belladonna for 3, Easton's syrup for 1, vermin killer for 4, and weed killer for 1. The fact stands out prominently, therefore, that carbolic acid was responsible in 1896 for practically as many suicidal deaths as all the scheduled poisons put together, and it cannot be doubted that this is entirely due to the entire lack of restriction on its sale and the corresponding facility with which it can be obtained. To summarise this part of the report very briefly, it may be accepted that in one-third of the cases of suicidal poisoning the use of scheduled poisons was resorted to; another third, or rather more, can be ascribed to carbolic acid; whilst strong mineral acids, phosphorus, and other unscheduled substances account for the remainder. In fact, the whole of the evidence tends to show that, in regard to the risk of poisoning generally, whether by accident or design, the public interest is remarkably well served so far as scheduled poisons are concerned, and that where there is no restriction on the sale of poisonous substances the lack of the registered chemist's special training and consequent discretion is at once felt.

The exceptional position occupied by carbolic acid as a means of destroying life is clearly shown in the following table, which includes the figures for the last five years for which official reports are available:—

Group.	Poison.	1892	1893	1894	1895	1896
Accidents	Carbolic Acid	33	31	35	34	34
	Other Agents	481	566	553	564	585
	Total Deaths	514	597	588	598	619
Suicides	Carbolic Acid	73	117	167	224	163
	Other Agents	228	253	334	356	309
	Total Deaths	301	370	501	580	472

The figures speak for themselves, and it is unnecessary to do more than point out that whilst the proportion of accidental deaths caused by carbolic acid has diminished since 1892, the proportion of suicidal cases in which that corrosive poison has been resorted to has increased from less than one-fourth to more than one-third of the whole. Adding together the deaths by poisoning, whether due to accident, negligence, or suicide, the results work out as here shown—

Cause of Death.	1892.	1893.	1894.	1895.	1896.
Carbolic Acid	106	148	202	258	197
Other Agents	709	819	889	920	894
Total Deaths	815	967	1091	1178	1091

That is to say, the percentage of deaths by poison caused by carbolic acid alone has increased from 13 per cent. in 1892 to 18 per cent. in 1896. In 1895 the proportion rose to nearly 22 per cent., but for some reason or other the plague of deaths by poisoning has abated somewhat since that fatal year, an improvement having been manifested both as regards accidental cases and suicides. The grand total for 1896 was reduced to the same figure as for 1894, and considering the constant growth of the population, that shows a considerable improvement upon the latter year. But much room yet remains for improvement, and everything points to an extension of the present poison schedule as being likely to impose the most effectual check. Other means may be suggested, and attempts may be made to try them, but what past experience has proved effective is not likely to be improved upon in the direction indicated.

ANNOTATIONS.

THE *P.J.* SYNOPSIS OF THE B.P., 1898, extends its sphere of usefulness as time wears on, and it is encouraging to record the fact that the demand for it continues unabated. Mr. Parker, whose letter is published at page 523, expresses his gratitude for the assistance afforded him by the little work, by suggesting further useful additions, and though every improvement of the book involves further expense, it is proposed to make the suggested alterations without increasing the price of the Synopsis. Many pharmacists have been troubling themselves unduly about the time at which the new Pharmacopœia should come into operation, but many of them have quite overlooked the fact that the medical practitioner must be educated into a perception that it exists. Few persons would take the trouble to master the changes in such a book unless they were compelled to do so, and prescribers probably feel under less obligation in that respect than any other class. The pharmacist's obvious duty therefore is to lead medical men in the way they should go, and to that end he ought to place in the hands of every member of the medical profession with whom he is acquainted a copy of one of the now numerous synopses of the 1898 Pharmacopœia. By avoiding the introduction of all extraneous and irrelevant matter, the *Pharmaceutical Journal* Synopsis is better fitted for that purpose than any other summary, and readers who may be attracted by the comments of correspondents who explain how useful the little book has proved to them, are urged to go and do likewise, to the extent of purchasing one or more copies and utilising them to the best advantage.

PROFESSOR REMINGTON has been induced by the *American Druggist* to express a tentative opinion upon the new B.P., and presumably that opinion was based on the details concerning the work published in this and other journals, as the book had not yet reached America. He approves, naturally enough, of the adoption of the metric system by the compilers, but also, like most sensible pharmacists, regrets that the adoption is partial only, though he recognises that the plan actually adopted may prove the wiser course in the long run. The abolition of proof spirit and the greater diversity in the strengths of the official alcohols are regarded as tending in the direction of greater accuracy, and it is thought that the chemical tests will also be found to be more accurate than formerly. A closer acquaintance with the book, however, may possibly result in modification of the last-mentioned view; it ought to do so, at any rate, considering that the changes appear to have been so largely based on theoretical rather than practical knowledge.

CONCENTRATED PREPARATIONS, "which manufacturers have termed 'concentrated decoctions and infusions,'" do not commend themselves to the veteran American pharmacist, and whilst protesting against the perversion of the term "liquor" to denominate anything but an aqueous solution of a substance, Professor Remington urges the more serious objection that the introduction of concentrated preparations of the class mentioned tends to encourage the practice of diluting concentrated liquors furnished by manufacturing houses, which "must continue to be very variable in strength and quality," since each manufacturer is a law unto himself in the matter. A pharmacopœia, it is contended, should do nothing that may encourage a division of responsibility, and the dispenser ought to be expected to make all official preparations directly from the drug which fulfils the pharmacopœial requirements, by a process which clearly produces uniform proportions. "Uniformity is the keynote of a pharmacopœia. A practitioner can scarcely hope to get the best results unless he is sure that the preparations he orders are up to the standard, and that the standard sanctions no deviation." That is well said, and the principle involved in the remarks quoted may be commended to the consideration of those responsible for fixing the standard of what is desirable in British pharmacy, if they expect that standard to be respected by prescribers or dispensers.

THE TINCTURE PRESS is another thing that Professor Remington objects to the use of, in so far as regards the process of percolation at least. But if the marc is not to be expressed, how is the pharmacist to recover the residual alcohol? He cannot afford to throw it away, and to recover it by distillation is not feasible in small operations, whilst displacement by water is an operation that gives satisfaction in but few hands, and then only in selected cases. Due regard to economy must be observed, and the only mistake the British pharmacist makes in this matter is that he frequently fails to recover enough alcohol by expression, simply because he has not taken care to furnish his laboratory with a tincture press that is thoroughly efficient. Continental pharmacists are much wiser in that respect, and it is satisfactory to find that some German ideas in regard to tincture presses are gradually making way in this country.

DEFECTIVE WEIGHTS have brought trouble upon a Leicester chemist, and not without reason if one may judge from the fact that there was a deficiency of ten and a half drachms on weights representing a total of three pounds fourteen ounces. The defence raised was that no one on the premises knew the weights were deficient. Admitting that statement to be quite correct, it is not surprising to find that the magistrates failed to see that weights should be permitted to get into such an unsatisfactory condition. The remark made by defendant's representative to the effect that the offence was due to inadvertence, the weights having been cleaned with oxalic acid, makes matters rather worse than otherwise, for surely a chemist ought to know better than to clean brass weights with a strong acid. Cleanliness may be next to godliness, but, in the public interest, brightly-polished metal is of less importance than accurate weights, especially in a chemist's shop.

"MORE POISONING" is the heading of a paragraph in the *Globe*, the writer of which, after having occasion one day to comment upon the facilities offered for murder or suicide by the sale of "rat poison" and "vermin killer" containing arsenic, had the text of another sermonette furnished to him in a few hours by a case of poisoning in which a domestic servant had been killed by taking, from two tins of "rat poison and vermin killer," enough arsenic, according to the medical evidence, to kill sixty people. He remarks pathetically that though we have laws against the sale of poisons, yet here was a case of a servant at a club who had free access to at least enough poison to destroy half the members, and he appears somewhat purturbed at the thought that if the deceased, instead of taking her own life, had been afflicted with homicidal mania, she might have played havoc in a club with a supply of poison sufficient to kill sixty persons. The tradesman who supplied the poison to the club denied that he conducted a retail business, and the tins used were presumably only two out of a number supplied to the same institution. Thus, in spite of the law, observes the writer in the *Globe*, it still appears to be possible for menials to be placed in charge of poison sufficient to kill hundreds of persons. "This is obviously a condition of affairs which the law does not contemplate, and it is high time that the law should be more rigorously enforced or, if it does not cover such cases, that it should be extended. We have a right at least to expect that the law should be able to prevent any uneducated person who merely requires a poison for purposes of poisoning from obtaining it." Those remarks are quite in the right spirit, and the law certainly

ought to be amended if it does not already cover such cases. But though wholesale transactions are exempt from the penalties imposed by the Pharmacy Act, it is not necessarily a wholesale transaction when a club is supplied, and a little more light might with advantage be thrown upon the case referred to. The exemption, according to Section XVI. of the Pharmacy Act, 1868, applies only to the business of wholesale dealers, in supplying poisons "in the ordinary course of wholesale dealing." That, being interpreted, obviously means when the goods are supplied to a middleman, and not to a consumer. If a wholesale firm should supply a scheduled poison in any quantity direct to a consumer, that may create the mischief which the Act was intended to prevent, and would therefore be an offence within the meaning of the Act. The quantity sold has no bearing upon the matter, the sale being equally illegal whether an ounce or a stone is supplied, unless the provisions of the Act are fully complied with.

In the Earlier Note in the same newspaper it is pertinently pointed out that while in the case of some poisons the State adopts stringent precautions to prevent them getting into unsafe hands, there are others, not less deadly, which can be bought as readily as any article of food. It is also remarked as a striking fact that while of late there have been quite an exceptional number of suicides by poisoning, not one instance has come under the writer's notice of any scheduled drug being employed for the purpose. It seems quite unnecessary, therefore, for a person inclined to suicide or bent on murder to apply to a druggist for what is required; it can be obtained only too readily of almost any grocer. "Sometimes, as in a case just reported in Warwickshire, the deadly agent is called 'vermin killer'; in other instances 'rat poison' serves the same purpose. Arsenic and laudanum are also easily obtainable in considerable quantities without any inconvenient questions being asked (*sic*). The result is that silly girls and lads crossed in love are enabled to make away with their lives on the moment. If they were given time for reflection, some, if not all, would probably come to a more philosophic view, and decide that life was worth living after all." That time, it may be observed, is almost invariably forthcoming when a chemist is approached in the matter, and the fact that suicides of the sort referred to are becoming more frequent than ever—the evidence generally showing that the act was committed under sudden impulse, begotten of disappointment and despair—should suffice to point the moral that the registered chemist is the only person fitted to deal in poisons. It is quite true that the promiscuous sale of unscheduled poisons facilitates murder as well as suicide, for if a scheduled drug be used to get rid of a human being, there is a good chance of tracing home the crime to its author, but when neither name nor address need be given, and there is no restriction upon the sale of the article employed by the criminal, detection becomes exceedingly difficult, as the police have no clue to follow up.

The Deterioration of Paper has engaged the attention of a committee of the Society of Arts for some time past, and the report of that committee has recently been published. Actual disintegration is stated to be apparent in papers of all grades, being the result of chemical change in the fibres themselves. Discoloration is also said to affect all papers more or less, and the evidence obtained warrants the general conclusion that discoloration of ordinary cellulose papers (as distinguished from those containing mechanical wood-pulp), under usual conditions of storage, is proportional to the amount of resin they contain, or more generally to the resin and the conditions employed for fixing it in the ordinary process of engine sizing. The practical conclusions of the committee are that book paper should be sized with a minimum quantity of resin; that the presence of starch is objectionable; that care must be taken that paper should contain a minimum of chlorides; that 10 per cent. of total mineral constituents is the extreme limit for papers for publications of permanent value; and that a close and well-compacted sheet is especially necessary for printing papers. In conclusion, papers are classified according to composition, and it is recommended that for book papers required for publications of permanent value not less than 70 per cent. of cotton, flax, or hemp should be used, not more than 2 per cent. of resin, and not more than 10 per cent. of mineral matter.

The Röntgen Rays in Warfare have found a powerful advocate in Surgeon-Major Beevor, who maintains that it is now the duty of every civilised nation to supply its wounded in war with an X-ray apparatus, amongst other surgical aids, not only at base hospitals, but close at hand, wherever soldiers may be actually engaged in warfare and exposing themselves to injury in the performance of their hazardous duty. Amongst other instances of the service rendered by this new diagnostic method, he quoted, in a recent lecture, the case of a bullet embedded in the backbone, another in the hip, and that of an Indian soldier, who at Rawal Pindi was shot in the foot, pieces of the bullet finally lodging in the back of the heel. Another notable instance was that of General Woodhouse, who received bullet wounds in the leg and arm at Dargai. In every one of the instances enumerated, the bullets were localised by the aid of the rays, and then successfully removed, the men subsequently rejoining their comrades at the front. One great desideratum in the construction of all apparatus for military work is that they should be "get-at-able," thus enabling the operators to renovate the inevitable defects of wear and tear. Every portion of their apparatus should therefore be easy of access; the cell, condenser, connections, etc., should be packed in cases that can be opened and inspected at a moment's notice without the necessity of special instruments, and with a view to obtaining that desirable condition, the Army Medical Department has spared no expense or trouble, having, after due consideration, ordered the latest and most improved apparatus. For once, therefore, that Department would appear to have done its duty, and now it is to be hoped the apparatus will be placed under the control of specialists, and not left to the tender mercies of private soldiers promoted for that purpose, as in the case of compounders who are assumed—with insufficient reason, as we think—to be fit to dispense all medicines for Tommy Atkins.

In a Note on Botanical Nomenclature, by Professor J. U. Lloyd, the writer comments upon Professor Kraemer's preference for the common names of plants as being less confusing than scientific names. Professor Lloyd and his brother at one time strenuously advocated the use of scientific names only, having gone so far as to criticise the use of common names by physicians and pharmacists. But subsequent experience has made it necessary for them not only to acquiesce in the use of certain common names, but to advocate them publicly, and the scientific names of certain remedies were excluded years ago from lists issued by them, wherein all the botanical remedies used in medicine are named. Those names are now only referred to in notes. In this connection the *Euphorbias* and *Eupatoriums* are cited as examples, experience having shown that physicians and pharmacists alike have less trouble in distinguishing their common names than in carrying the botanical distinctions. But it is urged that there must be a discriminating selection of common names, for the use of some common names is to be deplored, since they in turn create confusion.

MEETINGS OF SCIENTIFIC SOCIETIES

CHEMICAL SOCIETY.

A meeting was held on Thursday, May 19, the President, Professor Dewar, F.R.S., in the chair. After the usual preliminaries the President, at the request of the Secretaries, Professor Dunstan and Dr. Wynne, proceeded to make a communication to the members assembled respecting the recent

Liquefaction of Hydrogen and Helium.

The full account need not be repeated, since it is substantially the same as that given on page 496 in our last week's issue. One point may, however, be mentioned touching the history of this subject. Both Wroblewski and Olszewski have determined various physical characters of hydrogen in the liquid condition. They may be tabulated as follows:—

	Wroblewski.	Olszewski.
Critical temperature	−240° C	−234° C
Boiling point	−250° C	−243° C
Critical pressure	13 atm.	20 atm.

—Referring to the actual work connected with the undertaking, Professor Dewar remarked that for five years the accumulation of solid air in the apparatus employed had proved to be perhaps the most serious obstacle. The difficulty of obtaining really pure hydrogen had contributed in no small degree to prolong the research and add to the incidental expenses. Numerous devices had been used, of which full particulars will form material for a subsequent paper.—In respect of the properties of liquid hydrogen, it was mentioned that the meniscus is even more marked than that of liquid air. The great difficulty at the present time lies in the fact that experimentation is hindered at every point, owing to the solidification of air around the vessel containing liquid hydrogen as soon as the vessel is exposed to the atmosphere. The lecturer has attempted to determine the boiling point and density of liquid hydrogen, but hitherto without success. The thermo-junction employed for the determination of the boiling point proved to be quite useless for the purpose; and the observed density, about 0·8, must not be taken as an accurate figure. A few strands of cotton-wool burn fiercely after they are dipped in liquid hydrogen; they also adhere firmly to the poles of a magnet, being fastened on by solid air, and not on account of any magnetic properties which they may possess. —Sir William Crookes rose to formally propose a vote of thanks to Professor Dewar for his recent success. He forebore to criticise, as he ventured to think that only one man present was in a position to do so, viz., the author of the paper.—Professor McLeod, in seconding the proposition, referred to the important position that hydrogen holds, from its very general employment as a standard to which other elements are referred. The late Sir Benjamin Brodie and Graham held the opinion that hydrogen would prove to be a metallic element. It will be an interesting problem in the future to determine whether this is the case. He would like to know whether the absence of deposit in liquid helium proved the absence of argon?—In reply, Professor Dewar said that the helium had been most carefully prepared from a sample of Bath gas. He admitted that it is most difficult to remove final traces of hydrogen. The Bath gas, minus the nitrogen, contains about 8 per cent. of helium.—The meeting then accorded to Professor Dewar a hearty vote of thanks for his distinguished and epoch-making services to science, whereby he had reflected honour upon the Society.—A paper by Mr. F. G. Edmed was read on

The Constitution of Oleic Acid and its Derivatives (Part I.).

From evidence based on the oxidation products of oleic acid, on treatment with chromic acid and certain other oxidising agents, the author considered that the constitution of oleic acid is represented by the formula—

$$CH_3(CH_2)_7CH=CH(CH_2)_7COOH.$$

The oxidation products obtained point to the conclusion that the double bond cannot occur at the end of the chain.—In the discussion that followed, this view received support from Dr. Tilden and Professor McLeod.—Mr. Hehner asked the author whether he was sure that the substance worked on really was oleic acid, and received a reply to the effect that every possible precaution had been taken to obtain the genuine article.—Short papers were then contributed on "The Action of Formaldehyde on Amines of the Naphthalene Series," by G. T. Morgan; and on "Stereo-isomeric Derivatives of Camphor," by T. M. Lowry, B.Sc.—The meeting then adjourned.

ROYAL INSTITUTION.

On Thursday, May 19, the Right Hon. Lord Rayleigh, M.A., D.C.L., LL.D., F.R.S., gave the second of a course of lectures on

Heat.

A simple heat engine was set in motion. This ingenious contrivance, devised by Mr. Griffiths, of Cambridge, consists of an empty flask in communication with a U-tube containing mercury. The tube connecting the flask and U-tube is kept in position by means of well-fitting rubber corks. A metal cap is placed over the flask, for the purpose of warding off cool currents of air, and the flask is heated by means of a bunsen burner. Owing to the waves of air which are set up in the flask and tube, the mercury vibrates continually in the U-tube with a perfectly regular motion. The graduation of thermometers next received attention, the chief points of the process being illustrated experimentally. The lecturer discussed the effects produced on the passage of water to steam and ice. A large glycerin tin containing boiling water was corked during ebullition. On cooling the tin by means of cold water the contraction of the steam set up a strain inside sufficient to cause the sides to collapse. It was shown, by means of an interesting piece of apparatus known as a water hammer, that if water strikes a glass vessel in a vacuum, a concussion ensues as audible and as pronounced in its effect as any produced by a hard, solid body. An ice machine, made by the Pulsometer Company, was exhibited and set in motion. In its construction use is made of the avidity with which strong sulphuric acid absorbs aqueous vapour. By a rocking movement the acid is maintained in a state of agitation, and in five minutes a quart of water was readily converted into ice. Reference was made to the fact that saline water, on cooling below the freezing point, yields pure ice, and not a mixture of ice and salt. This is true so long as the crystals produced have smooth surfaces, but it is evident that any interstices in the ice crystals must retain appreciable quantities of mother liquor. To demonstrate this point, ice produced from permanganate solution was shown possessing a distinct purplish tint. Faraday proved that this retention of interstitial moisture might be prevented by continually brushing the crystals during their formation.—Lord Rayleigh next drew attention to the fact that if a liquid expands on solidifying, the application of pressure raises its melting point. To prove this, he made use of an adaptation of Bottomley's experiment, which Professor Dewar had prepared for lantern demonstration. A block of ice is supported at its ends, and a piece of piano-wire, heavily weighted, suspended from it. The wire slowly melts its way through the block of ice, but immediately behind the wire the water passes to ice again. This phenomenon, known as regelation, is due to the fact that as soon as the wire has passed, the water produced is relieved from a high pressure, and thus is capable of being reconverted into ice. Professor Dewar has shown that the passage of the wire may be arrested by cooling the ice down to a very low temperature by the agency of other refrigerants. Passing to the effects of heat on the colours of various chemicals, the lecturer showed sheets of paper covered with crystals of the double iodides of mercury and copper, also of mercury and silver. The former were a brilliant scarlet, the latter of a primrose tint. On the application of heat they assumed respectively a darker red and an orange-brown colour. But, whilst the heat of boiling water is sufficient to act upon the compound of mercury and copper, it requires the heat of a strong electric current to change the colour of the mercury and silver salt. Joule's mechanical equivalent of heat next received attention, and Carnot's theories relating to heat engines were lightly touched upon. In this connection it was mentioned that non-reversible engines do less work than such as are reversible, consequently they are less useful from a thermodynamic point of view.

On Saturday, May 21, the first of a course of two lectures was given at the Royal Institution by J. Arthur Thomson, M.A., Lecturer on Biology at the School of Medicine, Edinburgh, on the

Biology of Spring.

In this lecture the botanical side of the question received the largest share of attention. The appreciation of the seasons in respect of their relation to living organisms may be traced back to ancient times. Poets of all ages have sung of the seasons. Among others may be recalled Homer, Horace, and, in modern times, Tennyson. And perhaps the late Poet-Laureate excelled them all in the skill with which he pictured the seasons. Among prose writers Richard Jeffries waxed eloquent upon this subject, and Shakespeare doubtless felt the effect of the seasons when he penned the lines :—

> And thus from hour to hour we ripe and ripe,
> And thus from hour to hour we rot and rot,
> And thereby hangs a tale.

It was in 1750, says Sachs in his 'Text-Book of Botany,' that a school of botanists grew up who studied phenology, or the biology of the seasons. They considered this subject, however, from too narrow a point of view, devoting their attention almost entirely to temperature and its effects on the life processes. But, as we shall see, other factors must be taken into consideration, in order to fully appreciate the relation which external changes in physical nature bear to internal physiological history. One may take it that the ratio of heat supply in summer is to that in winter as 63 : 37. This fact is of immense biological significance, for with warmer winds and increasing heat come a more intense light, the chorus of birds, abundance of flowers, and the quickening of the pulse in man. These are some of the countless signs that announce to us unmistakably the arrival of spring, the first of the seasons. Spring is the time of new beginnings, the time of growth and youth. With spring as an example it is therefore evident that life is punctuated by the seasons. Referring to what is known as the hypnotic state of seeds, the lecturerset himself to account for this quiescence, so general in nearly all plants, the seeds of the poplar being among the few exceptions. It cannot be that the ground into which a seed falls late in autumn is inhospitable. No doubt the seed suffers a reaction after a period of vigorous growth ; again, the firm, often hard and horny husk which protects the seed must be rotted away, and the store of reserve materials yet remains to be brought to an easily assimilable condition. The winter sleep of seeds no doubt gave rise to the mythological story of Demeter, who wandered far in search of her stolen child, and finally adopted another child, which she watched over and cared for, but did not nourish. The goddess Demeter was to the Greeks what Ceres was to the Romans, the deity who watched over the growth of grain and other plants.—The conditions of germination are the absorption of water by the porous area of seeds, viz., the hilum, which water is taken up by the protoplasm ; the rotting away by slow degrees of the husks, by the agency of bacteria ; and lastly the fermentative and digestive processes which transform insoluble starch and proteids into materials which can readily be assimilated. Vines shows us that every evening the starch formed in green leaves during the day is transformed into sugar and transported to other parts of the plant. Professor J. Reynolds Green has done much to prove by what agencies the complex series of digestive processes is carried on in seeds, and the relation which these changes bear to germination. It may be noticed that as soon as a seedling has used up all its reserve store of food it suffers a temporary check. There is a hiatus in its growth. This pause is comparable to the loss in weight which animals suffer a few days after birth. It is consequent on what may be termed the weaning of the seedling from its first form of nourishment, and disappears directly the young plant is able to adapt itself to the new conditions of life. The effect of light on the green leaf was next considered, in virtue of which vibrations in the ether fall upon the chlorophyll in the leaf, supplying that energy to the protoplasm which sets up and maintains the complex series of constructive and destructive processes connected intimately with the life and largely with the growth of the plant.—The lecturer then pointed out that the multiplication of small aquatic organisms is an essential condition of the general renewal or re-invigoration of higher forms of life. For example, the infusoria which are bred from the muddy sediment of ponds and streams furnish food for the Crustacea, which in their turn are devoured by fishes. Considering that in parts far removed from the sea, as is the case, for instance, in some parts of Germany, freshwater fish are held in great esteem by the inhabitants, we may construct a chain of living beings, starting with the tiny protozoon of the mud, and passing on from waterfleas to fishes and finally to man, in which each depends for its existence largely on the individual next below it in the scale. Though undoubtedly many of the minute organisms are harmful to man it must not be forgotten that he is largely indebted to organisms equally minute for his health, nay, for the possibility of his existence on the earth. Mr. Thomson went on to mention the question of the ascent of sap, which has caused much discussion from the time when it was first considered, probably in 1583, until recent times. It was treated of by Francis Darwin in 1896, and so late as 1897 received much attention from Marshall Ward, in his work on timber diseases. The question about which so much has been said is, How does sap ascend in the trunk ? A question of this kind cannot be understood, or fully answered, unless it is recognised from the first that one cause alone cannot account for the phenomenon. This life-process is most active in spring and least so in winter. It follows that the excessive transpiration of leaves creates a current of cell-sap. The upward stream is helped, too, by the fact that within the cells and vessels up which it passes the pressure is considerably lower than that of the atmosphere. Other factors which aid the upward current are the turgidity of the cells, the process of osmosis which goes on from cell to cell, capillarity, and surface tension. The effects of the ascent of sap next engaged the attention of the lecturer, who then passed on to consider the unpacking of buds in spring. The principle of economy which influences the arrangement of leaves in a bud largely affects the ultimate position of leaves on the adult stem. Sir George Ainy proved this by arranging a series of paper leaves on an indiarubber band, stretched to a considerable extent. On allowing the indiarubber to regain its normal condition the leaves were found to be arranged in the form of a bud. The unpacking of buds bears a close analogy with seeds. While one is a young branch, the other is a young plant. Both are representatives of the glories of the preceding summer, and are protected, the former by scale leaves, the latter by husks. Each undergoes a period of quiescence, and is packed within the smallest possible space. April is well termed "the month of opening" by Ruskin, in his 'Fors Clavigera.'—It is a matter of common knowledge that there is a regularity in the succession of flowers throughout the year, so much so that one would no more expect to see an aster bloom in springtime, or a wood hyacinth in late autumn, than one would look for rock roses in a bog, or marsh marigolds on sandy plains. A deep principle underlies this regular succession of flowers, viz., that the older and more primitive plants tend to flower in springtime. The reason for this is not far to seek, if we consider only a plant like the common fir tree. It is pollinated by the agency of winds, so that this process can go on as well in spring when insects are scarce, as later on in the year. This pollination of fir trees by the wind is not the only reason for their flowering early in the year. Here, again, we must not be content with a simple answer. They are trees, and are hardy, and come of an ancient stock. If we consider the floral procession we cannot fail to notice that "of the flowers that bloom in the spring" by far the greater number belong to the class of Monocotyledons, among which may be cited the snowdrops, daffodils, and crocuses. These are amongst the simplest types of flowers. As the year goes on complications arise, plants appear which are specialised on certain lines, *e.g.*, the primitive superior ovary tends to become inferior, the cohesion and adhesion of parts and whorls begin to appear, and the hypogynous stamens show a tendency to assume other positions. As an example of a highly differentiated type of flower the Orchidaceæ stand pre-eminent. They nearly all appear in summer. Again, at this season the buttercup and other flowers with free floral leaves gradually give place to flowers like the dead-nettle, with a noticeable union of parts. Indeed, the extreme is reached in late summer and early autumn, when the Composite family reaches the height of its glory. In this order we note the highest known type of flower, and these flowers with their inferior ovary, union of parts, and other well-known highly developed characters, will testify to the truth of the statement that flowers appear in the order of their complexity of development. In conclusion, the lecturer mentioned the spring migration of birds, and showed how this phenomenon is closely wrapped up with the evolution of climate. Time was when palms flourished in Britain and magnolias grew wild in Greenland. Birds then

made their home in northern lands. Then came the Ice Age, and as the cap of ice gradually extended along these northern regions it drove the birds before it. Doubtless as this terrible age passed away the birds flocked once more to the home of their ancestors, but the yearly approach of winter invariably compelled them to fly southward. In this connection it is of interest to note that the autumn flight of birds is often long delayed. The young birds take the lead in a leisurely sort of way, and dally long before they fly. Even then they do not strike at once for their destination, but take a course perhaps from east to west before they finally go south. The return of birds in spring, on the other hand, stands in marked contrast to their departure. No longer do the young birds take the initiative, for it is the older birds that lead the way in a mad rush, taking in their course the hypotenuse of the path along which the young birds had led them south in the preceding autumn.

ROYAL INSTITUTION.

On Tuesday next, May 31, Professor S. H. Butcher begins a course of two lectures at the Royal Institution on "Literary Criticism in Greece"; on Thursday, June 2, Dr. Edward E. Klein delivers the first of two lectures on "Modern Methods and their Achievements in Bacteriology"; and on Saturday, June 4, Dr. Richard Caton begins a course of two lectures on "The Temples and Ritual of Asklepios at Epidaurus and Athens" (with lantern illustrations). The Friday evening discourse on June 3 is by Professor W. M. Flinders Petrie, on "The Development of the Tomb in Egypt"; that on June 10 is by Lord Rayleigh, whose subject is "Some Experiments with the Telephone."

THE "THREE PRESIDENTS'" RECEPTION.

The Presidents of the Institute of Chemistry of Great Britain and Ireland, the Society of Chemical Industry, and the Society of Public Analysts held a reception at the galleries of the Royal Institute of Painters in Water Colours, on May 24th. The guests, who numbered about 1500, were received by Dr. and Mrs. Stevenson, Professor and Mrs. Frank Clowes, and Dr. and Mrs. Bernard Dyer. Among those who attended were Sir William MacCormac, President of the Royal College of Surgeons, Sir Hugh Owen, Sir Henry Roscoe, SirEdward Frankland, Sir John Turney, Sir Alexander Binnie, Mr. Walter Hills, President of the Pharmaceutical Society, Dr. J. H. Gladstone, Dr. W. J. Russell, Professor W. A. Tilden, Dr. T. E. Thorpe, Professor J. M. Thomson, Professor Ayrton, Professor Armstrong, Professor R. Meldola, Mr. David Howard, Treasurer of the Institute of Chemistry, Dr. Horace T. Brown, Mr. C. E. Groves, Mr. M. Carteighe, Mr. Otto Hehner, Mr. R. J. Friswell, Mr. C. J. Stewart, and Mr. Thomas Tyrer. Music was provided in one of the rooms by the Westminster Singers.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.

A special general meeting was held on Monday, May 23, when Mr. Jas. Cocks occupied the chair, and was supported by a large number of members of both the Junior and Senior sections. The Chairman explained that the object of the meeting was to consider a new scheme of education as formulated by the Educational Committee, the text of the scheme and report of the Educational Commitee being embodied in the following circular :—

May 19, 1898.

Dear Sir, —You are earnestly requested to attend a special meeting of the Association, on Monday evening next (23rd), at 8.30, to discuss a matter of great importance, namely, the establishment of permanent classes for Minor examination students in Plymouth.

The great strides that have been made of late in education render it more necessary than ever that pharmaceutical apprentices should devote, during their apprenticeship, some considerable time to the study of pharmacy and its allied sciences, in order to face the Board of Examiners with confidence and fit themselves for a future useful career.

The days of a short cramming period at a London school are almost over, and there is every probability that, in the not very distant future, a curriculum of study will be enforced.

For some time past the Educational Committee of the Association have had the matter under consideration, and, after very careful deliberation, have arrived at a scheme of 3 years' study, as set forth on the other side, the classes to be held at the technical schools, and under their authority.

By taking advantage of the tuition thus afforded an apprentice may, in the last 3 years of his pupilage, thus fit himself for the ordeal of examination by the time his apprenticeship is finished.

Before these classes can be inaugurated with the consent of the Association, it is necessary that the matter receive the careful thought of all Association members (senior and junior), and the support of both sections. Your presence at the meeting on Monday next is therefore urged.

It need not be pointed out that the matter is of just as much importance to employers as to employed, since the town in which good opportunities are afforded for gaining the education requisite for a chemist is, and will be, the one sought after by parents and guardians of would-be pharmacists.

The botany classes and rambles, as held last summer, will be again continued this summer, commencing on Wednesday evening, the 25th inst., at 8 o'clock. As hitherto, Mr. Reade will be the preceptor. The fee is 2*s.* payable in advance to the undersigned.

Yours faithfully, John R. Johnson,

R.N. Hospital, Stonehouse. *Hon. Sec. Educational Committee.*

This circular had been sent to every member of the Association, and after the scheme had been fully discussed, it was unanimously decided to adopt it. Detailed particulars are given in the table below.

PROSPECTUS OF CLASSES PROPOSED.

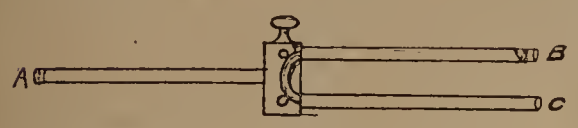
A Student will be recommended to spread his subjects over three years, in the following order.

	Subject.	Duration.	When Held.	Fee.	Remarks.
1st Year, inclusive fee, whole course, £1 18s. 6d.	Elementary Inorganic Chemistry	2 hours	Evening	5s.	Science and Art Class
	,, ,, ,, (Practical)	3 ,,	,,	10s.	Do.
	,, Botany	2 ,,	,,	5s.	Do.
	,, Physics	1 hour	,,	21s.	Special Class
2nd Year, inclusive fee, £3 10s. 0d.	Advanced Inorganic Chemistry	2 hours	Evening	5s.	Science and Art Class
	,, ,, ,, (Practical)	3 ,,	,,	10s.	Do.
	,, Botany	2 ,,	Afternoon	21s.	Do. 8 Students to join
	Theory of Pharmacy and Pharmacy Law ...	2 ,,	,,	42s.	Special Class 8 Students to join
3rd Year, inclusive fee, £4 10s. 0d.	Dispensing, etc., with Prescription Latin...	1 hour	Afternoon	21s.	Special Class 8 Students to join
	Organic and Pharmaceutical Chemistry ...	2½ hours	,,	63s.	Special Class 8 Students to join
	Materia Medica	2 ,,	Evening	12s. 6d.	Special Class

NOVEL APPLIANCES,
PHARMACEUTICAL AND CHEMICAL.

Müller's New Three-way Stopcock.

This ingenious device is made by C. Müller, 148, High Holborn, London, and will have many applications in gas analysis and in other ways. By means of it a gas may be passed from A to B, from A to C, or from B to C, or all three tubes may be shut off.

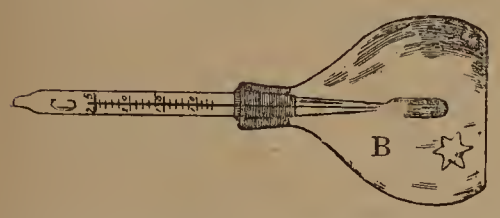


Manufacture of New Melting Pots.

An improvement in the manufacture of melting crucibles for chromium and similar metals is effected by coating the interior of the crucible with the oxide of the respective metal. This is done by melting a flux, such as borax, with the addition of the oxide of the desired metal until the oxide remains suspended in it. By agitating the mass during cooling a coating is formed in the interior of the crucible.—*Chem. Zeit.*, xxi., 604.

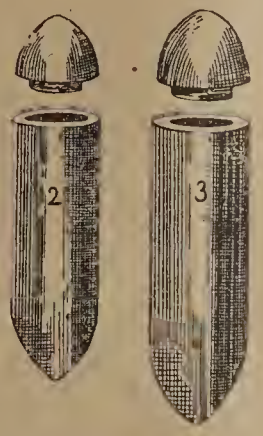
Improved Specific Gravity Bottle.

The specific gravity bottle here figured contains a simple and ingenious addition to ensure the thoroughly mixing of the contents, and therefore a uniform temperature throughout the bulk of the liquid. This is effected by means of a small glass grenade bulb B, which, on rotating the bottle, promotes the thorough stirring of the liquid. It is made by C. E. Müller, 148, High Holborn, London.



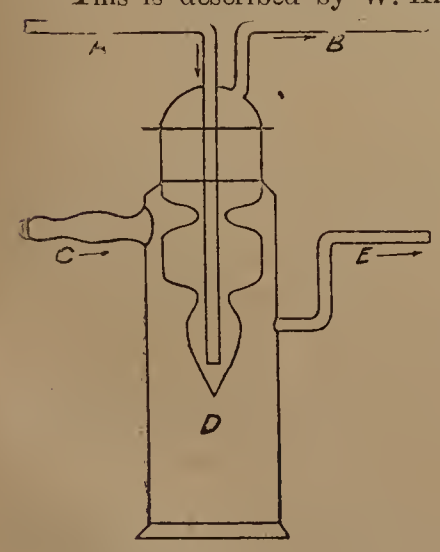
Gibb's Hollow Suppositories.

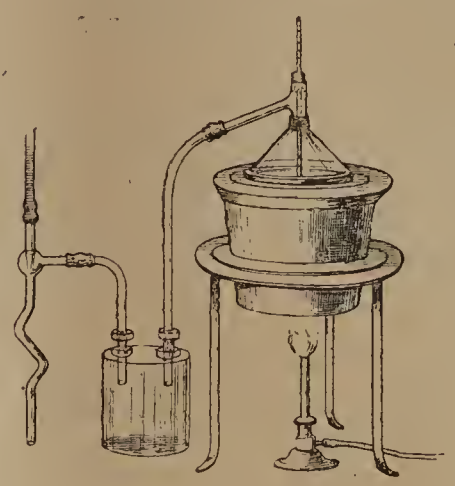
These suppositories are made in eight sizes, with self-sealing stoppers, and are composed entirely of pure cacao butter. The advantage they possess for accurate dosage of potent medicines will be obvious, and it may fairly be considered that they afford a means of aiding that reform in the pharmacy of suppositories which has lately been shown to be so much needed in this country. Messrs. Schieffelin and Co., of New York, are the agents for the supply of these suppositories.



A New Condensing Apparatus.

This is described by W. Klimont (*Zeitsch. f. angew. Chem.*, 1897, 11). The apparatus is used when working with very volatile fluids, where an ordinary condenser cannot well be applied, or would prove insufficient. As this latter is at present used the tubulated receiver which is immersed in a vessel of water, possesses the disadvantage that a part is not covered by water and that it is very difficult to regulate exactly the flow and reflux of the cooling liquid. Klimont's apparatus depicted here explains itself. It is of course an easy matter to connect several of these receivers with one another and to thus establish a series of condensers which may be if necessary wholly immersed in cold water. A. Inflow of the water. B. Outflow. C. Entrance of the vapour to be condensed. D. Condensation vessel. E. Exit of uncondensed vapours. This apparatus is made by Messrs. Rohrbeck's successor, Vienna.—*Pharm. Zeit.*, xlii., 468.





Small Vacuum Apparatus for Laboratories.

Haussmannd recommends the following:—A glass funnel is accurately fitted on to a flat cylindrical porcelain vessel with a broad smooth edge. As will be seen from the drawing, the apparatus can be readily connected with any available air-pump by means of a tube. The dimensions of the apparatus are such as to be easily inserted into every water bath, and will be found useful for many purposes of distillation under reduced pressure.

Zarge's Patent Mixing and Stirring Apparatus.

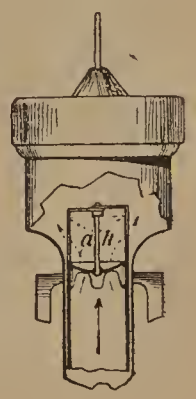
The drawing shows three flanges B, C, and D arranged transversely across cylinder A. The middle blade turns round the axis E, and in performing its two revolutions presses alternately against B and D, which move on axes F and G attached to the outer circumference; these are returned to their original position by spiral springs, and shoot back again when the revolving blade passes. The fluid in the cylinder is therefore driven from one compartment to the other, and churned in transit by the revolving blades.—*Chemiker Zeit.*, xxi., 545.

The Stethinoscope: A New Instrument for Auscultation.

This is a new form of sound receiver, which is constructed on the same principle as the microphone. It magnifies and renders more audible all sounds proceeding from the heart and lungs, and is fitted with an adjusting mill head, by means of which the volume of sound reaching the ear can be regulated. This delicate instrument would appear to hold the same position with regard to the old form of wooden stethoscope that the compound microscope holds to the pocket lens. Such aids as this to early diagnosis of grave affections of the thoracic organs must be invaluable to the medical practitioner. It can be attached to the binaural stethoscope, and is of small compass, so that it is easily portable. It is manufactured by Maw, Son, and Thompson.

Arrangement for Regulating the Mixing of Air and Gas in Bunsen's Burners.

To regulate the mixing of air and gas in the modified Bunsen burner represented in the accompanying illustration, in place of the opening and shutting disc described in the original patent, the parts (*aa*) are now more or less closely placed for ventilation, so that eventually they cover the air inlets only. The parts are readily adjustable, and a maximum of heat is easily obtained with a minimum gas consumption, whilst the annoyance of "lighting back" is avoided.—*Chem. Zeit.*, xxi., 604.



LEGAL INTELLIGENCE.

PROCEEDINGS UNDER THE PHARMACY ACTS.

Pharmaceutical Society *v.* Dormer.

At the County Court of Bedfordshire held at Luton, on Tuesday, May 24, before His Honour Sir A. G. Marten, the Council of the Pharmaceutical Society of Great Britain sued Ellen Dormer, of Waller Street, Luton, for a penalty of £5, incurred on February 28, in selling and keeping open shop for the retailing, dispensing or compounding of poison, to wit, oxalic acid, contrary to the provisions of the Pharmacy Act, 1868.

Mr. T. R. Grey, instructed by Messrs. Flux, Thompson and Flux, appeared for the Society.

Mr. Grey stated that the action was brought by the Pharmaceutical Society to recover a penalty of £5 for selling a certain scheduled poison, oxalic acid, on February 28, the defendant not being a registered chemist, as required by the Pharmacy Act, 1868. He pointed out that the Act was passed to prevent the danger likely to arise to the public through unqualified persons keeping open shop for the sale of poisons, such as are included in Schedule (A) of the Act. After quoting from the various sections of the Act, he dealt with Section 15, under which any person who sells or keeps open shop for the sale, dispensing or compounding of poisons, shall, for every such offence, be liable to pay a penalty or sum of £5. Section 17, which he only wished to refer to, made it necessary for even qualified chemists, who have a right under the Act to sell poison, to see that the name and address of the seller and the word "Poison," together with the name of the article, is on the packet or bottle containing the poison sold. In the case before the Court this had not been done. The Pharmaceutical Society had to see that the Act was not infringed, and in this case they had sent an agent to see if oxalic acid was being sold in Luton by unqualified people, and found that it was.

John Partridge said he received instructions from the Pharmaceutical Society to go to the defendant's shop in Waller Street, Luton. On February 28 he went to the shop. The name E. Dormer was over the window. He saw the defendant's son, William Henry Dormer, and asked for two pennyworth of oxalic acid. There was no name on the packet supplied, but the words "Oxalic Acid—Poison." He added in ink the date of purchase and the name of the defendant, and afterwards handed the packet to Mr. Eastes for analysis in precisely the same condition as he received it.

Ernest John Eastes, F.I.C., said he was an analyst, and on May 20 he received the packet (produced) from the previous witness. He analysed the contents, and found it to contain ¼ lb. of oxalic acid, one of the poisons mentioned in the Pharmacy Act.

Mr. Grey formally put in the Register of Chemists and Druggists, which, he pointed out, did not contain the name of the defendant.

His Honour: Was the shop an open shop?

Mr. Partridge, recalled: Yes, your Honour.

William Henry Dormer appeared for his mother, the defendant, who keeps an oil shop in Waller Street, Luton. He pleaded ignorance of the law relating to the sale of poisons, and said he had been an assistant in the town for over fourteen years, and knew that oxalic acid was sold generally in Luton by unqualified men.

Mr. Grey said he ought to call His Honour's attention to the fact that they had been under the impression that the man William Henry Dormer was the defendant in this case, but it appeared he only represented his mother, who was the real defendant. He wished to point out, however, that they were suing for the penalty for keeping open shop for retailing, dispensing, or compounding poisons, and it had been proved that the man had sold the poison in the shop.

His Honour: Do you admit serving the poison to the witness Partridge?

Mr. Dormer: Yes; and ask for the minimum penalty.

Mr. Grey, continuing, said the reason why the clause "Any person who shall sell or keep open shop, etc.," appears in the Act is to hit the real defendant in a case like the one before the Court. The penalty is a fixed amount according to the Act, and if His Honour found for the plaintiff Society the penalty would be £5.

His Honour: I give judgment for the amount claimed with costs, payable in fourteen days.

Pharmaceutical Society *v.* Thornton and Saunders.

At the same Court, Henry Thornton and Frederick Saunders, trading as Goldsmith and Co., and carrying on business as ironmongers in Luton, were sued by the Pharmaceutical Society for a similar offence on the same date as the previous case.

Mr. T. R. Grey said this was very similar to the last case, except that the sale was 1 lb. of oxalic acid.

Henry Thornton appeared for the defence, and represented his partner, Frederick Saunders.

John Partridge gave evidence as to the purchase of 1 lb. of oxalic acid at the defendants' shop in Market Hill, Luton, on February 28. He identified the packet and receipt produced as those received from defendants. After marking it with the date of purchase and the name and address of the sellers, he handed the packet to Mr. Eastes, analyst, in the same condition as received from the defendants' shop.

Mr. Thornton said he had no defence to make, except to say that oxalic acid was used in the straw trade, and had been sold in Luton by unqualified persons for the last forty or fifty years without a complaint until now. It was sold at every oil shop in the place, as it was used for manufacturing purposes in the only trade of the town. Since receiving the summons they had not sold oxalic acid in their shop.

Mr. E. J. Eastes having given evidence as to his analysis of the contents of the packet handed to him by the witness Partridge,

Mr. Grey formally put in the Register of Chemists and Druggists, which did not contain either of the defendants' names, or the firm's name, which could not be registered.

His Honour: I must give judgment for £5 with costs, payable in fourteen days.

Pharmaceutical Society *v.* J. and T. Sedden.

In the next case, the defendants J. and T. Sedden were sued by the Society for keeping open shop for the sale of poison contrary to the provisions of the Pharmacy Act, 1868, on February 28, 1898.

Mr. T. R. Grey said that this case should have come before His Honour, but the defendants, who kept the shop at 11, Waller Street, Luton, had on the previous day paid the penalty £5, and also 10*s.*; as, however, this was not paid within five clear days of the case coming before the Court, and as the costs would have to be divided between the three cases, he asked for an order for costs.

His Honour: I must order that the defendants pay costs and Counsel's fee.

EXTRACTS FROM CONSULAR REPORTS.

A Firm of Druggists in Germany has introduced a new line in Rio Grande do Sul, viz., white paraffinum molle in tins, of 10 grammes, for the pocket; dried medicinal herbs, in compressed packets of 1 kilo, are also sent from Germany. Fumigating pastilles have a large sale, but owing to the difference in price those of English manufacture are not so much in demand as the German article. Consul Bernal thinks tabloids should sell well, with directions in Portuguese, if the new import duties on foreign specialties, which came in force in January, 1898, should be again reduced. He also is of opinion that British drug firms might supply various articles of everyday use put up in popular form.

A Return of Scholarships in Great Britain, given for proficiency in modern languages, as compared with those given for other subjects, Consul W. Powell thinks would be very interesting, as he believes it would show such scholarships to be very much in the minority. He is of opinion that much of the commercial knowledge of Germany has been supplied by young Germans who have been employed as clerks in Great Britain, chiefly as foreign correspondents. British merchants and manufacturers allege as a reason for employing these young men, who come to England for the express purpose of learning such or such a business, and to return to the Fatherland with the practical knowledge thus learnt, that British clerks cannot be used as foreign correspondents, because not one in a thousand can correspond correctly in any foreign language, and frequently those that are proficient in languages are not the kind of men that employers care to have as clerks. The remedy for this must be obvious, and British youths intending to follow a commercial career would do well to take the lesson to heart and to profit by it.

LETTERS TO THE EDITOR.

The B.P. Synopsis.

Sir,—The *P. J.* Synopsis of the 1898 B.P. is the most admirable summary I have seen. But there is room for an important improvement which I think would greatly enhance its value, viz., 1. A marginal note "stronger" or "weaker" to each preparation altered in potency, together with figures showing relative strength of old and new preparations. 2. A brief summary as below, showing at a glance such fundamental alterations as a prescriber needs to bear in mind—

Notable Alterations in Potency.

STRONGER.	WEAKER.
Decoct. Granati Radicis (twice)	Aqua Chloroformi (half strength)
Lamellæ Cocainæ (4 times)	Ext. Bellad. Alcoholic (one-third)
Pil. Phosphori (twice)	Ext. Nucis Vomicæ (two-thirds)
Pil. Saponis Co. (slightly)	Ext. Opii Liq. (three-fourths)
Spirit. Cajuputi (5 times)	Ext. Physostig. (one-fourth)
Spirit. Cinnam. (5 times)	Inj. Apomorph. Hypoderm. (half)
Spirit. Juniper. (2½ times)	Inj. Morphin. Hypoderm. (half)
Spirit. Lavand. (5 times)	Suppos. Morphin. (half)
Spirit. Menth. Pip. (5 times)	Tinct. Aconiti (two-fifths)
Spirit. Myristicæ (5 times)	Tinct. Strophanth. (half)
Spirit. Rosmarini (5 times)	
Tinct. Belladonnæ (twice)	
Tinct. Chlorof. et Morph. (4 times in Morph.)	
Tinct. Nucis Vomicæ (twice)	
Tinct. Podophylli (twice)	
Tinct. Quassiæ (3 times)	

Notable Alterations in Nomenclature.

1885. OLD NAME.		1898. NEW NAME.
Ergotinum	=	Ext. Ergotæ
Inject. *Ergotini* Hypoderm.	=	Inject. *Ergotæ* Hypoderm.
Lin. Camph. *Co.*	=	Lin. Camph. *Ammon.*
Lin. Iodi	=	*Liquor* Iodi *Fortis*
Liq. Cocain. *Hydrochlor.*	=	*Inject.* Cocain. *Hypoderm.*
Pil. *Asafœtidæ* Co.	=	Pil. *Galbani* Co.
Tinct. Chlorof. et Morph.	=	Tinct. Chlorof. et Morph. *Co.*

By means of your summary I was prepared to dispense prescriptions by the new Pharmacopœia on the date of its issue, and with the addition to the summary of the notes suggested, any prescriber would in five minutes grasp the whole, and need not trouble further about the new B.P. than to carry this *multum in parvo* in his pocket.

Maida Vale, W., May 28, 1898. R. H. Parker.

*** The additions kindly suggested by Mr. Parker will be embodied in the new edition of the book now in preparation. [Ed., *P. J.*]

Sir,—Your little book on the 1898 pharmacopœial processes, etc., is of great use to students in comparing the new with the old formulæ, and it has been of special value to me in my classes in acquainting the students with the contents of the new volume before it was available. The inclusion of Mr. Bird's alcohol conversion tables will be found very serviceable to the general pharmacist in making their preparations, but I hope to see the table, printed in the Journal of May 21, introduced in your next edition, where he shows the conversion of 60 o. p. alcohol, often stocked by pharmacists, into present official strengths.

Liverpool School of Pharmacy, May 23, 1898. R. C. Cowley, Ph.C.

*** The extended alcohol table is too large to insert in the Synopsis, but copies can be obtained from the Publishers, 5, Serle Street, W.C., in the form of a large sheet on stout paper, suitable for pasting on a card and suspending in the laboratory, at threepence each, post free. [Ed. *P. J.*]

Sir,—The reprint of your B.P. notes, which I had not seen until now, is a marvellous production, considering the price, and must be extremely useful to all who are fortunate enough to possess a copy. It will be of very great service to me.

Brixton, S.W., May 21, 1898. Wm. Jones.

The Benevolent Fund.

Sir,—I am glad to see by the report of the Annual Meeting that Mr. Hampson has brought forward, more publicly than at the Council table, his desire to do away with the present objectionable system of election of annuitants upon our Benevolent Fund. It always has struck me as peculiarly objectionable in a Society such as the Pharmaceutical, composed of men of more or less refined feelings and sentiments, to require of such in the time of adversity, when perchance from causes too often beyond their control, poverty and distress have entered their doors, to come forward and publicly advertise their position in the face of friends and acquaintances with whom they have hitherto been in every respect on terms of equality; and to compel them to solicit from such the favour of a paltry vote towards obtaining a small annuity in order to keep the wolf from the door. A case comes to my mind, known to me personally, evidencing the repugnance with which a man of education and refinement regards the idea of appealing to his brethren for help under such circumstances. It occurred some twenty odd years ago, and is well known at 17, Bloomsbury Square, in which a member who had held a high official position in the Society was unexpectedly overtaken by loss of business, and seriously reduced in circumstances; but rather than even making known his altered position to our Secretary, left London, and was only by accident found by a fellow member and former colleague living in a single room upon the smallest possible pittance. Instances of similar cases could without difficulty be related, proving to demonstration the desirability of an alteration in our present mode of election. And when it is remembered, as Mr. Hampson says, every individual case is thoroughly investigated by the Benevolent Fund Committee, whose duty it is "to inquire into the most minute matters in connection with each applicant," I feel convinced that subscribers to the Fund, if properly approached, would willingly and with perfect confidence leave the final selection of annuitants to the discretion of the Council. Inasmuch as our President very justly observes, that unless he can see clear evidence that Mr. Hampson's views are supported by a very large majority of the subscribers to the Fund, he could not dare to take the proposed step, I would, as one of the oldest subscribers, venture to suggest that a letter should be addressed by the Council to every subscriber to the Fund, asking the expression of their consent or otherwise to the proposed alteration. The result of such an inquiry would, I feel convinced, at once set at rest any doubt upon the subject, and the alteration being adopted, henceforth no more heart-burnings and wounded feelings would be added to the already distressed sufferers.

Brighton, May 23, 1898. Edwin B. Vizer.

Dispensing Difficulties.

Sir,—May I be allowed to supplement my remarks of last week concerning the prescription for ointment given to "Aratus Sum" to dispense at the recent examination, viz.:—

℞ Glycerin. Borac. ..... ℥iv.
Liq Plumbi ..... ℥iv.
Ung. Zinci Benz. ..... ad ℥ij.
M. ft. ung.

All who replied seem to agree as to the time it takes to produce a satisfactory preparation. With a view to a more rapid process, I made several experiments, and came to the conclusion that if mucilage of gum acacia is mixed with the liquor plumbi, it forms a gelatinous mass, and may then be incorporated in any proportion with the ung. zinci benz. The above method takes less than half the time, yields an ointment that does not exhibit any tendency to separation of the water, and is altogether easier of manipulation.

Lewisham, S E., May 20, 1898. Graham Bott.

Sir,—How should the following be dispensed? The doctor could not be communicated with:—

℞ Potass. Bromid. ..... ℥iii.
Inf. Gent. Co. Conc. ..... ℥ii.
Aq. Menth. Pip. ..... ℥iv
Two tablespoonfuls for a dose when necessary

Is it a ℥iv. or a ℥vi. mixture, or as written? Opinions are divided on the subject here. Some say ℥iv., others ℥vi., as the dose then would be ℥ss. pot. brom. An opinion would oblige.

May 20, 1898. Dispenser (10/30).

*** A four-ounce mixture would appear to be intended. [Ed. *P. J.*]

Mr. Cross and the Pharmacy Bill.

Sir,—The enclosed letter to the Secretary of the Highland Agricultural Society is in reply to the letter of Mr. Cross, which appeared in the Journal of May 14. Our Association has deemed it fit to take the matter up, as Mr. Cross represents a Glasgow constituency. You may publish the letter in this week's Journal, if only to refute such base statements made by Mr. Cross.

558, Cathcart Road, Glasgow, May 23, 1898. D. Watson.

[ENCLOSURE.]

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION.

558, Cathcart Road, Glasgow.

May 23, 1898.

To James Macdonald, Esq.,
Secretary Highland Agricultural Society,
3, George IV. Bridge, Edinburgh.

Sir,—My attention has been drawn to a communication from Mr. Alexander Cross, M.P., relative to the Pharmacy Acts Amendment Bill, presently before Parliament, which your Society had under discussion at the meeting held on 4th curr. The letter is such an extraordinary one, and contains so many statements, not only foreign to the Bill in question, but so contradictory to each other, that I desire to draw your attention to them.

Before doing so, however, I might just say that the Bill seeks for no further powers as regards the sale of poisons, but is purely and simply for the internal administration of the Pharmaceutical Society's affairs, and has the cordial support of the entire trade. We are quite aware as to why Mr. Cross opposes the Bill, and while he gives many reasons, he does not state that his opposition is a personal one, arising from the fact that an assistant to his firm was prosecuted two years ago for the illegal sale of a poisonous preparation manufactured and sold by his firm.

The committing of an offence against the law is bad enough, but when a Member of Parliament—in his public capacity as such—takes advantage of his position to redress a private wrong, it is high time such things were exposed.

As to the general question of the sale of poisons, it is much too large a question to be discussed in writing. Suffice it to say that the present restrictions regarding their sale were forced on the Pharmaceutical Society by the Legislature in 1863, and the illegal sale of such poisons is therefore punishable.

As to the statement that the object of the present Bill is for the purpose of securing a greater monopoly and larger profits in the sale of such articles as Mr. Cross refers to, no one knows better than himself that such a statement is contrary to fact.

Mr. Cross has had all the information it was possible to give placed before him. He knows precisely that the present Bill will not affect the sale of poisons one way or the other. He also knows that his proposed amendment is entirely foreign to the Bill; but because his firm are manufacturers of articles which the law holds can only be sold by registered chemists, he is up in arms, and poses as the champion of the agricultural interests and higher pharmaceutical education, when in reality it is his own interests he desires to serve.

Those statements made by Mr. Cross are grossly unjust to the whole body of chemists, and are put in a very subtle manner, evidently with the one object, viz., of defeating this Bill at all hazards. I beg, therefore, on behalf, and in the name of our Association, to submit this letter for your consideration.

D. Watson (Hon. Secretary).

The New B.P. Lozenges.

Sir,—May I offer a few remarks on the fruit lozenges of the new Pharmacopœia. It appears that some firms are making them smooth, whereas others are making them rough. I think they should be made smooth, as it is quite easy to produce them with a smooth surface. They do not contain a large proportion of fruit extract, whereas the fruit lozenges of the Throat Hospital Pharmacopœia, which are usually rough, consist mainly of fruit extract, and in making these it is necessary (and not a matter of choice) to prevent the paste sticking to the slab to use coarse sugar. If a lozenge can be made with a smooth surface, it appears to me that it is more convenient to the patient, while it is more likely to be of accurate strength. The rough sugar used in dusting fruit lozenges is far heavier and more bulky than starch powder (which is used with smooth lozenges), and by adhering to the scraps dilutes the same, so that the last lozenges cut are likely to be weaker than the first, unless precautions are taken and constant supervision exercised to see that the directions given are carried out by the workpeople. It is evident also that the stamping of the name on smooth lozenges is far more legible than on the rough. This also is an advantage. For these reasons it appears to me that the new B.P. fruit lozenge should be made smooth.

London, May 25, 1898. E. W. Warrick.

CORRECTIONS.

Liquefaction of Hydrogen.—On page 496, column 2, line 26, for "astatic" read "static."

Alcohol Conversion Table.—Mr. Bird asks us to note that the weight of 60 o.p. spirit required to produce 1000 C.c. of 70 p.c. alcohol should be 636 Gm., and not 640 Gm., as printed in the table at page 501 last week. The correction has been made in the reprinted table, which can now be obtained from the Publishers of the Journal, 5, Serle Street, W.C., at a cost of threepence per copy, post free. The specific gravity table in Mr. Bird's notes of last week is included in the sheet, and the latter is particularly suitable for use in pharmaceutical laboratories.

ANSWERS TO QUERIES.

Books for Students.—See reply to "Ill All" in last week's Journal. [*Reply to* Inquirer.—10/33.]

Effervescence in Lotion.—The cause of effervescence in the mixture is the liberation of boric acid by the action of glycerin on the borax, carbon dioxide being evolved. [*Reply to* Salol—10/17.]

Formaldehyde.—Definite information on the subject is still lacking. It is not safe for you to recommend the addition of any preservative to milk, as no such addition is justifiable from a legal point of view. [*Reply to* Ozone.—10/34.]

Alcohol Craving in Drunkards.—Unfortunately there is no reliable remedy such as you refer to, which "may be added to tea without the patient detecting it, and destroy the appetite for intoxicants." The morbid craving for alcohol is recognised now to be as much a disease as any other malady; as such, it should only be treated by a qualified medical practitioner. More is done by surroundings, "suggestion," and moral influence than by drugs in the treatment of such cases. Most so-called drink cures are frauds, and some contain alcohol, or powerful alkaloids, even more harmful than alcohol. [*Reply to* G. J. P.—10/1.]

Sodii Bicarb., Ammon. Carb. and Tinct. Nucis Vom.—The tincture of nux vomica contains the strychnine and brucine combined with a vegetable acid (igasuric acid), forming soluble salts. When alkaline hydroxides or carbonates are added the alkaloids are liberated, and if the amount present is in excess of the solubility of the alkaloid some of the latter will be precipitated. That, however, never occurs in practice with nux vomica. Taking the amount present at 20 minims of tincture per fluid ounce of mixture: since 1 fl. oz. of tincture contains one grain of alkaloids, 20 minims will contain 1/24 grain alkaloids. This quantity in 1 fl. oz. of mixture represents 1 part of alkaloids in 9500, and since the solubility of strychnine in water is 1 in 7000 there is never any danger of strychnine precipitation occurring. [*Reply to* Tyro.—10/18.]

Hydrargyri Iodidi Rubri.—It is impossible to state dogmatically whether the green, yellow, or red iodide should have been used. The dose in each pill, although slightly exceeding the maximum given in B.P., 1885, is a perfectly safe one for the red iodide, and much smaller than the quantity of that substance contained in the maximum official dose of liquor arsenii et hydrargyri iodidi. The only way to settle the matter would be to communicate with the prescriber, but a knowledge of collateral circumstances, such as age of patient and frequency of dose, might enable one to form a correct conclusion. By analogy with the chlorides, one might say that the mercur*ous* iodide should have been used, since hydrarg. chlorid. is always understood to mean calomel and not corrosive sublimate. [*Reply to* W.—10/19.]

OBITUARY.

King.—On May 15, William George King, Chemist and Druggist, Market Drayton. Aged 73.

Morley.—On May 15, Joseph Morley, Chemist and Druggist, Beverley (Yorks). Aged 76.

Ransom.—On May 15, William Ransom, Chemist and Druggist, Market Rasen. Aged 57.

Wylde.—On May 15, James Wylde, Chemist and Druggist, Stretford Road, Manchester. Aged 81.

Britton.—On May 19, William Brannam Britton, Chemist and Druggist, Barnstaple. Aged 36. Mr. Britton served his apprenticeship with Mr. W. Curtis, J.P., M.P.S., of Barnstaple, afterwards becoming his son-in-law, and carrying on the business. He was organist of Holy Trinity Church, Barnstaple, and also took an active interest in local athletics. His death is greatly regretted in the district, where he was highly respected.

Cellars.—On May 19, William Cellars, Chemist and Druggist, late of Edinburgh. Aged 25.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Adamson, Bennett, Butterworth, Cocks, Dyson, Farr, Forshaw, Haigh, Hewlett, Ingham, Lyons, MacEwan, Measures, Morgan, Naylor, Nicholson, Osborne, Ramsay, Ransom, Snow, Stringer, Thursfield, Wilkinson.

Pharmacy and the Allied Sciences.

A REVIEW OF CURRENT WORK.

New Form of Wine Sophistication.

Since the white variety of certain wines commands a higher price than the red, H. Hugounenq states that these latter are sometimes artificially decolorised by means of animal charcoal and potassium permanganate. The sophistication is readily detected on incineration, but may be more quickly revealed by adding to 10 C.c. of the suspected sample 1 or 2 C.c. of caustic soda solution and 1 C.c. of hydrogen peroxide. A deep red-brown colour will be given by an artificially decolorised wine, a natural white wine merely becomes slightly darker in colour. The test will answer without the addition of peroxide, if the alkaline mixture be well stirred and left exposed to the air.—*Journ. de Pharm.* [6], vii., 321.

Alkaloidal Matter in Wine.

Having had occasion to examine a sample of wine for the possible presence of a toxic alkaloid, G. Guérin found it to give distinct traces of an apparently non-toxic base. Continuing his researches on all available varieties of wine he obtained distinct alkaloidal reactions from all. He concludes, therefore, that a trace of an alkaloid is a natural constituent of wine, and calls attention to the fact that J. Oser in 1868 isolated an alkaloid from among the fermentation products of sugar, to which the formula $C_{13}H_{24}N_4$ was attributed.—*Journ. de Pharm.* [6], vii., 323.

Acidity of Tuberculous Sputum.

A simple indication of the existence of tubercule is stated by De Bracker (*Journ. de Méd. de Paris*) to be the acidity of the sputum. A portion of fresh tuberculous sputum, agitated in a test tube with an equal volume of titrated alkaline solution of phenolphthalein, has sufficient acidity, due to the presence of formic acid, to discharge the colour. Fränkel's pneumoccus also generates acid, but the symptoms of pneumonia are sufficiently definite to render diagnosis easy to the practitioner. Pfeiffer's bacillus of influenza also gives an acid reaction, but less intense than that of the tubercule bacillus, and not sufficient to enable the sputum to decolorise an equal volume of alkaline phenolphthalein solution.—*Répertoire*, liv., 150.

Therapeutics of Coronillin.

Coronillin has been stated to be a useful substitute for digitalis, but the researches of Hugo Guth show that this glucoside is not so trustworthy as the older drug. He finds that the diuresis it occasions is not permanent, that it gives rise to diarrhœa, and although its action is not cumulative, certain patients have a marked idiosyncrasy against it. Moreover, it is doubtful if it exercises any direct action on the circulation.—*Therap. Monats.*, xii., 31.

Cholesterin of the Lower Cryptogams.

According to E. Gérard certain microbes and algæ contain a form of cholesterin, which, in general characters, closely agrees with the ergosterin of Tanret, with which it is probably identical, and differs widely from animal cholesterin and from the phytosterin of the higher plants. The body was isolated from cultures of *Staphylloccus albus* and from *Fucus crispus*. This cholesterin dissolves entirely in strong sulphuric acid, giving a blood-red colour. The solution, shaken with chloroform, leaves the latter uncoloured. The sulphuric acid solution diluted with water gives a greenish precipitate, not white, like that obtained from animal cholesterin; with a solution of the new body in carbon tetrachloride concentrated sulphuric acid gives a deep red colour, and the tetrachloride assumes a bright green tint. Both this cholesterin and ergosterin are decomposed and become coloured on exposure to the air.—*Journ. de Pharm.* [6], vii., 375.

Cousso Honey as an Anthelmintic.

The Emperor Menelik is reported by Theodorow to have a garden planted with koso plants, which is stocked with beehives. After the flowering season some of the honey is taken from the hives. A teaspoonful of it dissolved in water is said to be an excellent remedy for tapeworm, and free from any objectionable effects.—*Lancet.*

Angelica Oil.

According to H. Raeusel, the volatile oil distilled from fresh roots is lower in specific gravity, and more strongly dextrogyrate than that obtained from dried roots. The figures for oil of fresh root being, sp. gr. 0·860 at 16° C.; rotation, +36·5. Dried root oil, sp. gr. 0·882 at 21° C.; rotation, +26. Terpeneless angelica oil has a sp. gr. of 0·9597, and a rotation of +5·21.—*Pharm. Woch.*, xv., 45.

Mouth Washes and Eczema.

Neisser reports several cases of obstinate eczema of the lips which at first defied all treatment. In the end it was found that after the use of certain mouth waters and tooth powders containing oil of peppermint and oil of cloves had been discontinued, a rapid improvement and even complete healing ensued. The worst effects are said to be produced by the use of odol, which has the following composition: Salol, 3·5; alcohol, 90·0; distilled water, 4·0; saccharin, 0·2; ol menth. pip., ol. anisi, ol. fœniculi, ol. caryophylli, or ol. cinnamomi to flavour.—*Therap. Monatsch.*, xii., 79.

Remedy for Chrysanthemum Rust.

R. W. Hodder states that this new disease, which has only appeared within the last twelve months, may be eradicated by the following treatment. Half a pound of whale oil soap is boiled in a gallon of water; to the boiling solution a gallon of petroleum is added, and 2 ounces of ammonium carbonate; the mixture is then heated to boiling with constant stirring until thoroughly emulsified. One part of this emulsion with 15 parts of water are used to syringe the plants, both the upper and under sides of the leaves being well sprayed with the solution. When treated in this way the spots soon dry up. In addition to killing the rust it is a good insecticide, and will clear off any insects with which the plants may be infested. Where the fungus makes its appearance in a collection of plants, the whole should be treated by this method, or the rust will constantly appear.—*Garden*, liii., 247.

Detection of Added Starch in Cocoa.

Posetto states that pure cocoas only give a transient blue coloration, not lasting in any case twelve minutes, with the reagent described below, while the same adulterated with starch give a very marked and persistent reaction. The test is stated to be sufficiently delicate to reveal the presence of 1 per cent. of added chesnut meal. The reagent consists of iodine, 5; potassium iodide, 10; water, 100. Two grammes of the cocoa are boiled for two minutes with 20 C.c. of water in a test tube. The decoction is cooled, 20 C.c. more water and 0·5 C.c. of the reagent added without shaking. An intense persistent blue coloration indicates the presence of added starch.—*Giornale di Farm. di Chim.*, through *Pharm. Centralh.*, xxxix., 155.

THOMAS HENRY, APOTHECARY, AND THE ORIGIN OF ARTIFICIAL MINERAL WATERS.

BY WILLIAM KIRKBY, PH.C.

Dr. Schunck, in his presidential address before the annual meeting of the Society of Chemical Industry last year, stated that "to Dr. William Henry is sometimes given the credit of the invention of aërated waters. There is some doubt about this, but if correct, he must be numbered among the benefactors of mankind as having added largely to its innocent gustatory pleasures."

I am not aware that Dr. William Henry, son of Thomas Henry, "has been credited with the invention of artificially aërated water as a beverage." It is, however, on record that Thomas Henry, the father, was the inventor of artificial mineral waters, as appears from the following extract from Dr. Angus Smith's 'A Century of Science in Manchester' (1883, p. 127) :—

Whilst without going deeply into the history of artificial mineral waters and aërated drinks, we are inclined to believe that the elder Henry [Thomas Henry—born Oct. 26 (old style), 1734; his son William Henry—born 1774] was the true inventor, or evidently considered that he was the first in the field. Dr. Henry separated from his partner Mr. Thompson, taking for himself the magensia and leaving the aërated waters to the latter.

In order to ascertain to what extent we are really indebted to Thomas Henry in this matter, it may be well to briefly review his work in connection therewith.

The interest which he took in the questions dealing with fixed air (carbonic acid gas) and the impregnation of water with it, must have been very great if we may judge from the pertinent notes appended to the text of his translation of Lavoisier's 'Physical and Chemical Essays.' That he edited and translated this work, which treated so fully of the history of carbonic acid gas and the endeavours to make artificial mineral waters, and in so doing exhibited such a thorough acquaintance with the whole of the subject, quite precludes the idea that he ever claimed to be the inventor of artificially aërated waters. He was quite familiar with the work of Venel, Priestley and others. Concerning the first of these, who was professor of chemistry in the University of Montpellier, he has a foot-note in which he claims for Dr. Brownrigg the honour of being the first to establish the identity of the gas in natural mineral waters with Boyle's "factitious air" and choke damp. This note is worthy of quotation in full :—

Mr. Rouelle . . . and Mr. Lavoisier in his account of Mr. Venel's experiments, page 33, have attributed the first discovery of the natural impregnation of water to this ingenious professor. I should think myself inexcusable, therefore, if I did not take this opportunity of doing justice to the merits of our very worthy and learned countryman Dr. Brownrigg, and this cannot be done more effectually than by transcribing a passage from Sir John Pringle's elegant "Discourse on the Different Kinds of Air," delivered before the Royal Society, November 30, 1773: "I shall only observe that the memoir containing the account of Mr. Venel's experiments was not read before the Royal Academy of Sciences till the year 1750, and that he has supposed the air contained in waters which have been called 'acidulous' to be common atmospheric air."—T. H.

Thus the fuller discovery of this principle we owe to Dr. Brownrigg, of Whitehaven, who about thirty years ago [1743] began clearly to unfold this mystery. But those curious papers were not then inserted in the 'Transactions,' as the too modest author had requested a delay till he should be able to make them more worthy of that honour. In that communication he remarks "that a more intimate acquaintance with those nitrous airs in mines called *damps* might lead to the discovery of that principle of mineral waters known by the name of the *spirit*; that the mephitic exhalations termed the *choak-damp* he had found to be a fluid permanently elastic, and from various experiments he had reason to conclude that it entered the composition of the waters of Pyrmont, Spa, and others, imparting to them that pungent taste from which they are denominated *acidulæ* and likewise that volatile principle on which their virtues chiefly depend." "In order to ascertain a fact of so much consequence, Dr. Brownrigg took the opportunity when at Spa several years, to make some experiments for this purpose, when he had the satisfaction to find those waters pregnant with the *artificial* or *factitious air* of Mr. Boyle, the same with that of the suffocating *grotto* near Naples, and the same with the *choak-damp* of our coal mines; for as much as this air instantly extinguished flame and the life of those animals he inclosed in it."—(Lavoisier's 'Physical and Chemical Essays.' Translated by Thomas Henry, 1776).

In 1767 and 1768 Priestley was experimenting upon the artificial impregnation of water with fixed air, and in 1772 he returned to the subject in the hope of being able to devise a drink which should be a prophylactic against the scurvy in seamen. Priestley's apparatus was simplicity itself, and was very soon improved upon by Nooth, Parker, and Magellan (Mag'alhaens). It was with a view to improving upon the glass machines in use that Henry designed the apparatus described in a pamphlet entitled: "Account of a method of preserving Water at Sea from Putrefaction and of restoring to the water its original pleasantness and purity, to which is added a mode of impregnating water in large quantities with fixed air for medicinal uses, on Board Ships, and in Hospitals, and likewise a process for the preparation of Artificial Yeast, by Thomas Henry, F.R.S., and member of the Medical Society of London. Warrington. Printed by W. Eyres for J. Johnson, No. 72, St. Paul's Churchyard, London. MDCCLXXXI." As this pamphlet appears to be rare, it may be well to quote the whole of the portion dealing with the impregnation of water with fixed air. It affords indubitable proof that Henry only claimed for his apparatus that it made it possible to prepare aërated water on a larger scale than herctofore.

HENRY'S AERATED WATER APPARATUS.

THE METHOD OF IMPREGNATING WATER IN LARGE QUANTITIES WITH FIXED AIR, SO AS TO GIVE IT THE PROPERTIES OF MINERAL WATER FOR THE USE OF THE SICK ON BOARD OF SHIPS AND IN HOSPITALS.

Dr. Priestley some years ago communicated to the Lords of the Admiralty a method of impregnating water with fixed air obtained from an effervescing mixture of chalk and vitriolic acid, and of making an artificial Pyrmont water. This operation has since been considerably facilitated by the invention of Dr. Nooth's glass machine, with Mr. Parker's and Mr. Magellan's improvements. That machine, though admirably contrived for the preparation of such quantities of artificial mineral water as may be necessary in private families, would be too small for the sickly crew of a large ship. But it appears to me that a mode may be adopted by which the process may be performed on a much larger scale.

The advantages which would proceed from an easily practicable method of supplying the sick men in long voyages with such water must be obvious to every medical practitioner. The mineral waters of Pyrmont and Seltzer may, by these means, be closely imitated, and the artificial water will be beneficial in all cases in which the natural is found useful. By this process also may Mr. Bewley's mephitic julep be prepared—than which the materia medica, perhaps, does not afford a more efficacious or more grateful medicine in putrid fevers, scurvy, dysentery, bilious vomitings, hectic, etc.

THE PROCESS.

Cut off the two extremities of a calf's or pig's bladder (f.) (fig. 5), and having previously moistened them, into one end insert the top of the tubular stopper (c) round the neck of which it is to be closely fastened with strong thread. Into the upper end introduce the part (g) of the long bent tube (h) and tie them round in the same manner. The pipe (h) must be passed through a hole, formed by a hot iron borer, in a large cork adapted to the orifice (i) in the cask (BB), to which it must be cemented; and the length of the pipe from this point must be such as to reach within a few inches of the bottom of the cask (BB), which is to be completely filled with fresh water, or such as has been recovered from lime.

To a quantity of mild calcareous earth and water, as directed in the preceding process, placed in the air vessel (C, fig. 5), add a small portion of strong vitriolic acid, and by the time most of the common air may be supposed to be expelled by the fixed air, arising from the mild calcareous earth, add a larger quantity of acid, and putting the tubulated stopper (e) in its place, the bladder (f) will become inflated. Press it gently till its sides collapse; and then introducing the pipe (hh) with its cork, into the orifice (i) of the cask (BB), again press the air forward, as it distends the bladder, into the water cask, where, bubbling up through the

water, it will rise to the surface, and by its pressure, force the water to ascend into the funnel (k) which is to be cemented into the head of the cask at (l). In proportion as the water becomes impregnated with fixed air, that in the funnel will return into its place; but if, at any time, the latter should rise so high as to be in danger of overflowing, a quantity of air may be let out of the water cask by means of the small plug at (m). And this is necessary to be done occasionally, to discharge the residuum of fixed air, which is not soluble in water.

The water may be tasted from time to time by drawing off a small quantity at a cock fixed into the cask, and when it has obtained a sufficiently pungent taste, the process may be finished. This will take several hours, but in this case little attendance will be required.* If the operation be required to be performed more expeditiously, it may be quickened by agitating the water cask. To do this, the tubular stopper (e) must be withdrawn from the air vessel, and supported, together with the bladder, by an assistant, while the cask (BB) is shaken. During this time another tubular stopper must be put into the air vessel, and it may be immersed into a quantity of lime-water to prevent waste. When the agitation has been continued for some minutes, in proportion to the falling of the water in the funnel, replace the stopper attached to the bladder (f) in the air vessel when taken out of the lime-water, and proceed as before, repeating the agitation occasionally.

During the process, additional quantities of vitriolic acid may be introduced into the air vessel through the opening at (d), which is to be, at all other times, carefully secured with its stopper.

Perhaps the most convenient size for the cask, intended for the purpose of impregnating the water with fixed air, would be about ten or twelve gallons. Should the scurvy or other putrid diseases prevail, or should putrid provisions or other septic causes render the crews more than usually liable to such diseases, and occasion a larger consumption of this water to be necessary, the cask may be proportionately larger, or a greater number of small casks may be employed.

It is interesting to notice Henry's use of the bladder as a primitive kind of pump. The first suggestion, however, for the use of mechanical means for increasing the pressure of the gas seems to have come from Priestley, who wrote, "I do not doubt . . . . but that by the help of a condensing engine, water might be much more highly impregnated with the virtues of the Pyrmont Spring, and it would not be difficult to contrive a method of doing it."†

In 1785 Thomas Henry communicated to the Manchester Literary and Philosophical Society a paper by Dr. Haygarth upon the impregnation of liquids with fixed air, in which is described an ingenious apparatus, the essential feature consisting of a pair of household fire-bellows for increasing the pressure of the gas.

Beyond Dr. Angus Smith's reference to Henry's association with the commercial manufacture of mineral water I have not met with any written or printed record. Early in this century there was a Thompstone engaged in this trade, and the firm is in existence to-day under another name, but when and for how long the partnership between Henry and Thompson existed, when it was terminated, and where the waters were made I have not succeeded in ascertaining. Mr. Ogden (Messrs. T. and W. Henry) informs me that the present building in which the celebrated magnesia is made was erected in 1810, and there are no vestiges of mineral water manufacture about the premises, neither do the business archives contain any records of transactions in goods of this class.

Thomas Henry's interest in fixed air extended beyond artificial mineral waters. In the pamphlet already referred to he describes a yeast made by impregnating with fixed air a mixture of flour and water thickened by boiling, and then mixing it with flour and warm water and "setting to rise" before baking. He thus anticipated the production of aërated bread by about half a century. In 1785 he described a process for the aëration of beers and wines which had become vapid. The apparatus consisted of the lower globe of Nooth's machine with the neck closed by a perforated stopper; this was charged with chalk, water, and the necessary acid, and lowered into the cask containing the beer; the pressure of generated gas overcame that of the superincumbent liquid by which it absorbed until the point of saturation was reached.

It is clear, I think, that it is to Thomas Henry, apothecary and chemist, of King Street, Manchester, and not to his son William, that the credit is due of being a pioneer in the manufacture of artificially aërated waters. It is worth noting that Henry's pamphlet was published in 1781, that is, eight years before the establishment of the Geneva factory, and about twenty years before the establishment of English houses for the regular supply of these waters.

*The operator must be attentive that the top of the cask is air-tight. If some water be poured upon it, any defects may be detected by the air bubbling through the water, and the faulty place must be secured with luting.

† 'Experiments and Observations on Different Kinds of Air,' by Joseph Priestley, LL.D., F.R.S. 1790. Vol. I.

THE PRACTICE OF PHARMACY IN RUSSIA.*

BY PROSPER H. MARSDEN.

In casting around for a paper likely to be of interest to your Association, much difficulty is experienced in finding a subject which has not been previously very ably dealt with.

The subject of pharmacy in Russia does not appear to have been touched upon here, and I venture, therefore, to hope that a few, more or less disconnected, notes upon the practice of medicine and pharmacy in the extensive dominions of the Great White Tsar may be thought worthy of your consideration for a few minutes this evening. I propose to divide my paper into an historical survey of pharmacy, some account of its regulations, and to show you examples of labels, wrappers, and other things in common use amongst our Russian *confrères*. In the earliest recorded days of the vast country which is now Russia, the healing art was in the hands of wizards, and wolf-men, sorcerers, and seers, who were at once physicians, surgeons, prophets, and historians who transmitted the traditions of their race from generation to generation.

Of the Scythians, who inhabited the country at the period of which I am speaking, very little is known. At the famous Hermitage Museum in St. Petersburg there is a valuable collection of relics of the Scythian days. One of the most remarkable examples of these, showing the artistic talent displayed at that date, is a vase of electrum, most probably of Greek manufacture, of repousée work. It depicts a Scythian battlefield; on one side we see a chieftain consulting a wolf-man, another of these surgeons examining a man's jaw for loose teeth or broken bones, and a third bandaging a limb much as it is done at the present time.†

This vase is supposed to date from 400 to 350 B.C., that is to say, from about the time when Socrates was drinking the fatal hemlock, the time of Plato, of the Athenian Demosthenes, and of Philip of Macedon. It was discovered in the Royal tomb at Kul-obi, which had been broken into whilst getting stones to build the Barrack ats Kertch, and is the oldest record of the healing art in the Empire.

Very little is known of medicine between this time and some twelve hundred years later, when Rurik, the Swedish Viking, and his two brothers, settled in Novgorod in 862.‡ About this time Christianity was introduced into Russia from Byzantium, and with Christianity came the first knowledge of the arts and of medicine. The famous monastery of Kieff was the earliest seat of learning, and its monks soon became noted for their successful treatment of disease. The wizards and wolf-men disappeared and medical practice was confined to the monks till the eleventh century, when certain Armenians appear to have set up in opposition to them. During the next two hundred and fifty years the Tatars conquered the country, putting very many of its inhabitants to death, but sparing the monks on account of their value as medicine men.

Towards the end of the fifteenth century many foreigners had found their way into the country, and amongst them physicians whose lives do not appear to have been exactly happy. We read that in 1490 Ivan, the Tsar's eldest son, fell ill of gout in his feet. One of the courtiers had brought into the country a Jewish physician, who was called Master Leo, the Jews being, as is well known, the great practisers of physic in those times. The unhappy man was induced to undertake the cure of the young

* Read before the Liverpool Chemists' Association.

† Morfill: 'Russia, The Story of the Nations Series,' p. 15.

‡ Morfill: op. cit., p. 19.

prince, and to stake his head upon its certainty. His treatment, however, was unsuccessful; the prince, after acute suffering, expired at the age of thirty-two. According to an account given of the therapeutics adopted by the Jew, cauterisation played an important part. Master Leo, however, in six weeks was publicly executed, "on the Bolvano, the other side of the river Moskva."*

Another abrupt departure of an eminent practitioner after the manner of the time in Russia is shown in the fate of a German named Anthony, whose surname has not come down to us. This worthy man had been attending a Tatar prince at Court, with the unfortunate result that the prince expired, and the unfortunate Anthony was handed over to the angry relatives. The fate of the poor man is set forth in the chronicle as follows:—

"A German pl ysician, Anthony, came to the Grand Duke; the Grand Duke treated him with much honour. He practised upon Prince Karakach, the son of Daniel, but with such results that he killed him by giving him a deadly mess of herbs. Whereupon the Grand Duke gave him up to the son of Karakach. He put him to the torture and wished to let him go on his paying a ransom. This the Grand Duke would not permit; . . . . . accordingly they took him to the river Moskva, under the bridge in winter, and cut him to pieces with a knife like a sheep."†

The first English medical man to practise in Russia was a Dr. Ralph Standish,‡ who sailed in 1557 to the country with the famous traveller Anthony Jenkinson, arriving at Astrakhan in 1558. A very interesting account of Jenkinson's ideas of the country and of his voyage down the Volga is in existence. He returned to Moscow in 1563. Some eight years later Moscow was burnt by the Tatars, and the Tsar, Ivan the Terrible, was forced to take refuge at the Troitsa monastery, some sixty miles away. This Tsar is worthy of mention as being most anxious to trade with this country, and as being compared with our Henry VIII. He killed his son in a fit of rage by striking him on the head with an iron staff,§ repudiated his wife, shutting her up in a convent, although, in spite of the degraded condition of the country, he was unable to send her to the scaffold as did our king. The account of the Tsar's death by the Englishman Horsey, who was at that time Ambassador to the Russian capital, is of some interest as concerning the earliest English mention of pharmacy in Russia. After speaking of the depressed state of the Tsar, stricken with remorse at his sins, chief of which are mentioned above, Ivan is reported to wish that he may be carried to his Treasury. Horsey then describes the closing scene:

"Brought forth, setts him down on his bead; calls Rodovone Baerken (*sic*), a gentleman whome he favoured, to bring the chess board. He setts his men [Horsey, always on the look-out for portents, here adds in a note "All savinge the kinge, which by no means he could not make stand in his place with the rest upon the plain board"], his chief favorett and Boris Fedorowich Goddonove (Godunov) and others about him. The Emperor in his loose gown, shirtt, and lynnen hose, faints and falls backward. Great outcrie, and sturr; one sends for Aqua vita, another to the oppatheka (apothecary's shop, *apteka*) for marigold and rose water and to call his gostlie father and the phizicions. In the mean he was strangled and stark dead."‖

So died the Tsar who is known as the Russian Nero, who, when he built the lovely Church of St. Basil (a photo. of which I have brought down to show you) to commemorate the taking of Kazan, put out the eyes of the architect lest he might one day build a rival to it.

Horsey gives a graphic account also of the death of Dimitri, the son of Ivan the Terrible. He says: "One night I comended my soull to God above other, thinckinge verilly the tyme of my end was com. One rapt at my gate at midnight: I was well furnished with pistolls and weapons, I and my servants, some fifteen, went with these weapons to the gate. "O my good friend Jerom innobled lett me speak with you.' I saw by moonshine the Emperis (dowager's) brother Alphonassy (Afanase) Nagorie. 'The Charowich Demetrius is dead. His throate was cutt about the sixth hower by the deackes; some one of his pagis confessed upon the racke by Boris his settinge one; and the Empcris poysoned and upon pointe of death, her hcar and nails and skin falls of; haelp and geave some good thinge for the passion of Christ his sake.' I ran up, fetching a littel bottele of pure sallett oyell (that littel vial of balsom, which the Qucen gave me), and a box of Venice treacle. 'Here is what I have, I praie God it may do her good'!"* It was during the reign of Ivan the Terrible that the Ministry of Medicine was inaugurated, and under the ægis of this Government institution the first *apteka* or pharmacy was opened in 1581.† This apteka was at first merely a central store for the distribution of medicine to the Court.

It was an Englishman who opened the first pharmacy in Russia, and little is known of him beyond the name—James Frencham. Owing, doubtless, to the oppressive treatment he received at the hands of the Russians, Frencham, soon after founding the first apteka, appears to have left Moscow and returned to his own country. An extensive correspondence took place between the Tsar and our Queen Elizabeth, in consequence of which Frencham was induced to return to Russia some twenty years later, together with his wife and family and a collection of drugs, a list of which, containing the names of no less than 164 drugs and preparations, is still extant.

In the Ministry of Medicine, to which the apteka was attached, there were several classes—the physicians, surgeons, aptekars or apothecaries connected with the Court apteka, and under them alchemists, distillers, pupils, and collectors of herbs; also oculists, barbers, blood-letters, bone-setters, and—undertakers. The income of the Ministry was derived from a Government grant. The old apteka was for the use of the Court alone, and very soon a new one was opened which sold drugs and preparations to the army and to private individuals. It also had to care for the public health by preventing the spread of infectious diseases. The medicaments for the personal use of the Tsar were kept in a room locked and sealed by the Secretary of the Ministry, the drugs themselves being in sealed bottles and boxes. Should His Majesty require medicine the physician's prescription was submitted to the Ministry, who copied it into their books. It was then presented as an official paper to the Tsar, who gave the order for its preparation. It was taken to the Apteka, and prepared only by the most trusted dispensers. Now, when all was ready, it was tasted by a whole series of official personages, first by the prescribing physician, secondly by the President of the Ministry, and lastly by the high Court official, who actually took it into the august presence.

Many stories are current concerning these tasters; for instance, we are told that the body physician to the Tsar Alexis, the father of Peter the Great, had to swallow the whole bottle of a mixture intended for the Tsaritza, as it had caused severe vomiting in the last taster, a high Court lady, who had taken the potion to her Majesty.

Not only did the aptekas provide medicines, but in the earlier days they furnished such items as ten pounds of good amber to the Patriarch of Moscow for the preparation of the Chrism, and in

† The *Lancet*, *loc. cit.*

later times they provided aniseed and other aromatic substances for the preparation of the strong spirituous liqueurs or vodkas for which Russia is celebrated, and even varnish and paints for the Imperial yacht.

In those days polypharmacy was rife in Russia, as in the other countries of Europe. In the medicine chest which accompanied Alexis in one of his journeys to the famous Troitsa Monastery, some sixty miles from Moscow, amongst the oils, elixirs, essences, syrups, salts, powders, and plasters we find a "syrup of colt's hoof," a "spirit of worms," "spirit of ants," and a "balsam of unicorn horns." Anyone who has dipped into the literature of medicine of this date will remember the fabulous price set upon unicorn's horn. In 1655 three of these valuable articles of materia medica were offered to the apteka in Moscow for 10,000 roubles (say £6000 nowadays); ultimately the vendor was offered 5300 roubles. Another piece of a horn, weighing ¼ oz., was sold for twenty sable skins. The horn was probably that of the rhinoceros, and it was taken in a state of powder as a specific for fevers, pestilence, and snake-bites, and it was said to be a certain prophylactic in smallpox dysentery, and the plague. Benzoar stones were also in great request. Nearly all the drugs used in Russia at this time came from abroad, Germany, Holland, and England, chiefly from the last, the newly opened port of Archangel being the great market for English drugs. Later on efforts were made to collect simples in Russia and Siberia, botanical expeditions were undertaken to distant parts of the Empire, and a class of herb collectors sprang up.

Foreign medical men coming into the country brought a large stock of drugs and preparations with them. Amongst the famous physicians who visited the Muscovite Court in the seventeenth century was Dr. Arthur Dee in 1621. Dr. Dee may be remembered as body physician to James I. and Charles I., and whose reputation as a seer and physician travelled from the house which is now Chetham College in Manchester to the ends of the world. Dee is well described by William Harrison Ainsworth in 'Guy Fawkes.'

One feels inclined to linger over the mystic polypharmacy of this age, but the subject has been already well done by at least one of our members, and it hardly comes within the scope of my paper. We will therefore pass on to the time of the great Peter, who did so much to raise Russia to its present high position. Peter conceived the excellent idea of sending his countrymen to foreign Universities to study their teaching and methods, much as he himself came to Deptford to study shipbuilding. So much success attended this movement that in 1706 the first hospital and school of medicine were opened in Russia under the direction of a Dutchman, Dr. Nicolaus Bidloo, Peter's own body physician. Accommodation was provided for fifty students in this school, and the subjects of anatomy and apothecaries' science were taught, the latter including botany, pharmacognosy, pharmacy, and pharmacology, and the London Pharmacopœia appears to have been used.

Catherine II. built a large number of hospitals, conspicuous amongst which was the great Foundling Hospital of Moscow, still existing.

During the eighteenth century, Universities were inaugurated throughout the Empire, and in the present century there have been four University statutes, placing the curricula and examinations of medical men and pharmaceutists upon a sound basis.

Russia, so very much behind Western countries in some respects, has the most stringent pharmaceutical regulations of any country in the world.

A candidate desirous to learn "the art and mystery of the apothecary" must be fairly well educated. Boys are accepted from the fifth class in the Government School or Gymnasium; occasionally they are accepted from the fourth (in these schools there are eight classes, the eighth being the highest). He will now be about seventeen or eighteen years of age, and will serve three years, no premium being received, and a salary is paid at once of about ten or eighteen roubles per month for the first year, rising about two roubles each year as a general thing. This is an average estimate, but of course the salary is dependent upon the character of the apteka. The apprentice always lives in and is allowed off duty on alternate Sundays, and a few hours on one evening of each week. In the old days the pupils were called "disciples"; they had no salary, but were fed and clothed, and at the end of their time received a complete outfit and a present of some one hundred roubles. This is still generally given, either at the option of the employer, or it may be specially provided for in the indentures. During the three years the apprentice will study the theoretical part of his work, and at the end of the time passes the assistant's examination. After another three years served as an assistant in a pharmacy, which must not be in a village, he may enter for the qualifying examination of Provizor. This is generally taken about the age of twenty-five or so, and before entering for the examination he must put in a two and a-half years' course at a University, this being usually done during the assistantship. One would think that with this lengthy course of study the apteka would be allowed his freedom from military service; such, however, is not the case, but if he has taken the qualifying examination before being called upon for military service the period of such service is shortened.

The opening of a new apteka is attended with some difficulties. The aptekar must show the local authorities that the population has increased to a certain extent to justify the opening of a new apteka. This is a rule which is pretty general in Continental countries, and prevents the overcrowding of towns with shops of one kind which is so noticeable in England. This limiting the number of aptekas has led to much speculation, which the Medical Department has recently been looking into.* This department, which is under the Ministry of the Interior, looks after the welfare of pharmacy, prevents overcrowding (the town of Yaroslav, once the capital of Russia, has four pharmacies and 30,000 inhabitants), examines periodically the registers of prescriptions, and fixes a maximum tariff of prices for drugs.†

For the highest rank in pharmacy, that of Magister, the candidate is required to have been three years a Provizor, to have passed four years in a University, and to defend a dissertation with at least six theses. The magister of pharmacy take equal rank with M.D. in civil and military practice.

In 1888 women were allowed to enter pharmacy after passing the four lower classes of the Gymnasium. After passing through their apprenticeship, female candidates will be allowed to go on to the assistant and provizor examinations. They are not allowed to receive their instruction in a public apteka, but must obtain it privately, and an aptekar taking female apprentices and assistants may not employ male assistants.

In 1888 there were 2518 public aptekas in the Russian Empire, dispensing an average of nearly 5000 prescriptions each annually.‡

The vast apteka of K. J. Ferrein in Moscow may be taken as an ideal Russian pharmacy. There are dispensed here annually 300,000 prescriptions, at a price to customers of about 2*s.* each. Some 300 men are employed, of whom 123 are qualified. Twenty men are employed in the sale room, and 28 provizors in the dispensary.

* *Novoe Vremja*, November 23, 1897 (O.S.).
† *Chemist and Druggist*, August 18, 1888.
‡ *Chemist and Druggist*, August 25, 1888, Sept. 8, 1888.

Poisonous drugs are handed to the compounder and the weights checked by one of two aptekars specially appointed.*

It may not be out of place to give some account of the careful way in which the business is carried on in the average aptcka. You take your prescription and hand it to the assistant in the sale room; he hands it to a provizor, who reads it through and says how long it will require to make up. A receipt is given to you with a number, and a request to return in a quarter, half, or one hour, generally the latter. At the appointed time you return, present receipt, and obtain your medicine, the prescription for which is copied upon the reverse of one of the curious fan-stick-shaped labels you see upon the table. The original is retained by the apteka. A view of Ferrein's place is upon the table, from which you will notice the usual Continental style of pharmacy, three sides of a square table, and a wide space behind of some four feet. The bottles are labelled in Latin, and the poisons are kept in special locked cupboards with glass doors. Things go easily, as behoves in a Government—and that a Russian Government—institution.

Night duty is taken by assistants in turn. On the mat inside the apteka door sleeps the night porter, and beside him a dog. You ring bell, he lets you in, and rouses the man on duty, who dispenses your medicine. I may say here, *en passant*, that the Russian servant, when not actually working, sleeps. The people as a whole are very illiterate, very few of the poorer people being able to read or write. As an example of the crass stupidity of the Russian *mujik* or peasant class, I am told that during the recent cholera epidemic medical students were excused half a year's time to help cure the patients; in some parts of Russia there was not a single doctor for a district as large as England. One of these men coming to a village saw a patient, and wishing to prescribe for the case asked the mujik for pen and paper. Neither was to be had in the village, and the woman was dying. The doctor being a man of some resource had the door of the *izba* (hut) taken off, and with a piece of chalk wrote his prescription upon it. The peasant harnessed his *telega* (cart), and took this most original prescription to the nearest apteka—thirty miles away.†

Another story goes that a doctor gave a bottle of medicine to a mujik, whose wife was at death's door, telling the man to "shake her" (bottle being feminine in Russian) before administering. Later on the doctor called to see his patient; poor woman dead. Asked did she have the medicine? No! Why not? Well—she died. It transpired upon inquiry that the mujik, a powerful fellow, called in an equally able-bodied friend, and they gave the poor patient such a shaking that she died soon after.‡

I have upon the table types of the labels in common use in Russia; they are of some interest, being quite unlike the adhesive labels in use in most countries.

On sheets 1, 2, and 3 are labels for mixtures, lotions, etc. Upon the front is written the number of the prescription, time of receipt, dispensing, and when required, the directions to the patient, the prescriber's name, the date, and the price. The ubiquitous eagle or a picture of the dignified-looking apteka finishes this side of the fan-stick label. On the reverse is copied the prescription, and the provizor on duty for the day, who is personally responsible for the correct compounding of the prescription, adds his signature or rubber stamp.

This label is fixed upon the bottle by means of an adhesive label bearing the words "For internal use," "For external use," as the case may be, or it may be tied on with the bottle cap (Hunt's bottle caps are much used in Russia), and the string sealed upon the narrow end of the fan-stick label.

Powders, cachets, etc., put up in boxes have the labels shut in with the lid, and wrapped round the box. The papers are smaller than those in general use here, and have the name of the aptekar upon the back. It is a common practice to mark prescriptions containing dangerous poisons: "Not renewed without the doctor's signature."

Sheet 5 brings us to the painful fact that even in a country so highly advanced in pharmacy as Russia there exist cutting chemists. Sheet 5 has upon it the announcement that S. Goldberg has taken over the apteka of the late R. Keller from the chemico-pharmaceutical laboratory of which at such and such a place (in the centre of Moscow), he sends out foreign patent medicines, disinfectants, etc., at prices of drug stores. Whether Mr. Goldberg has his window ornamented by brobdignagian frogs harnessed to triumphal cars bearing throat lozenges of great size, or mannikins made to roll their eyes and point to notices of headache powders associated with a flower opening its petals in the early morning, I know not. It is certain, however, that even in Russia stores exist.

There is also a Price Current of a Moscow house upon the table, from which you will see that the chemist in Russia keeps a large range of general goods besides his drugs.

I have now gone over the chief points in the rise of pharmacy in Russia and its conditions. In the Russian Empire there are 6932 pharmaceutists, of whom 3131 are provizors, 2527 are apteka assistants, 1215 are apprentices, and only 59 are magisters.

The conditions of life in an apteka are harder and more abnormal than in this country. Every worker is engaged ninety to ninety-six hours per week. If we add to this sleep at eight hours per diem the Russian pharmaceutist has for recreation and self-improvement sixteen hours per week.* A signed letter from a first-class Moscow paper, from which the above is quoted, and which is not likely to magnify the case, declares that for two hundred years nothing has been done to improve the condition of the aptekar. With his eight or ten years' study he does not appear to be better off than his *confrère* in England, except as regards social status.

I could go on to speak about the hospitals of Russia, but I feel sure that what I have read to-night has been enough for one evening. These institutions are, as a rule, very large and well furnished, and to anyone particularly interested I would recommend the perusal of the *Lancet* special supplement for August 7, 1897, on the occasion of the meeting of the International Medical Congress in Moscow, to which I am indebted for much of the above information.

I thank you for giving me your attention during the reading of this paper, and in conclusion I wish to express my best thanks to my brother, who has been for many years resident in Moscow, and through whose help I have been able to show you the labels upon the table, and to obtain much reliable information upon the subject of Russian pharmacy.

DETERMINATION OF ALKALINE BICARBONATES IN THE PRESENCE OF CARBONATES.—Lunge (*Zeits. fur ang. chem.*) heats the mixture to 260-270° C. in a small tube communicating with a gasometric apparatus, and measures the volume of CO_2 liberated. An ordinary alkalimetric determination of the residue then follows, from which the amount of neutral carbonate originally present is found by deducting the quantity of bicarbonate equivalent to the CO_2 evolved.—*Annales de Chim. Analyt.*, iii., 18.

SOME NOTES ON CRYSTALLOGRAPHY.

(*Continued from last vol., p.* 305.)

FORMS OF TARTARIC ACID.—Racemic acid has no action on a ray of polarised light, being composed of dextro- and lævo-rotatory tartaric acids in equal proportions. It is prepared by treating dibromsuccinic acid with silver hydroxide—

$$\begin{matrix}CHBrCOOH\\|\\CHBrCOOH\end{matrix} \quad \begin{matrix}AgOH\\+\\AgOH\end{matrix} \quad = \quad \begin{matrix}CH(OH)COOH\\|\\CH(OH)COOH\end{matrix} \quad + \quad 2AgBr.$$

If blue mould, *Penicillium glaucum*, be placed in a solution of racemic acid, this fungus lives upon the dextro acid, and lævo-rotatory tartaric acid is left.

The fourth variety, mesotartaric acid, also has no action upon a ray of polarised light. It is prepared by heating dextro acid to 175° C., and cannot be separated into its two varieties.

The arrangement of the molecules in these acids may be assumed to be represented in the following diagrams.

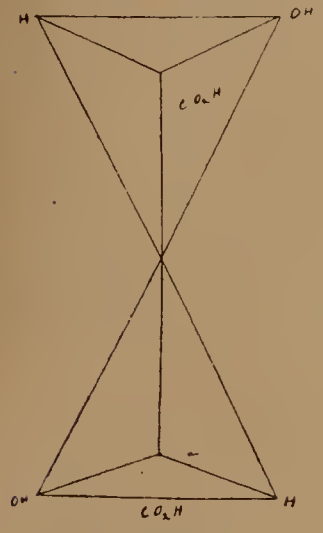

Fig. 2.—Dextro-rotatory Tartaric Acid.

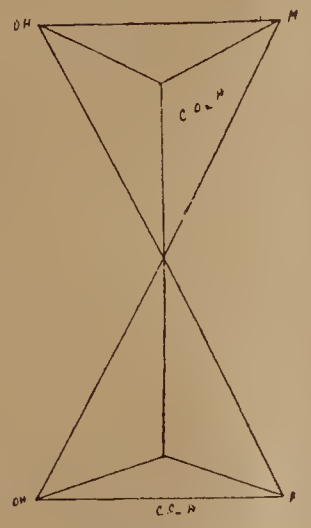

Fig. 3.—Meso-tartaric Acid.

SYSTEMS OF CRYSTALLOGRAPHY.—If a crystal of simple form be examined, it can be seen that imaginary lines passing through the centre may be drawn from end to end, from one angle to the one exactly opposite, and from side to side, and that upon these lines the molecules of which the crystal is formed are placed. These lines, the axes, are not always imaginary, however, for some crystals possess remarkable optical properties, and upon the

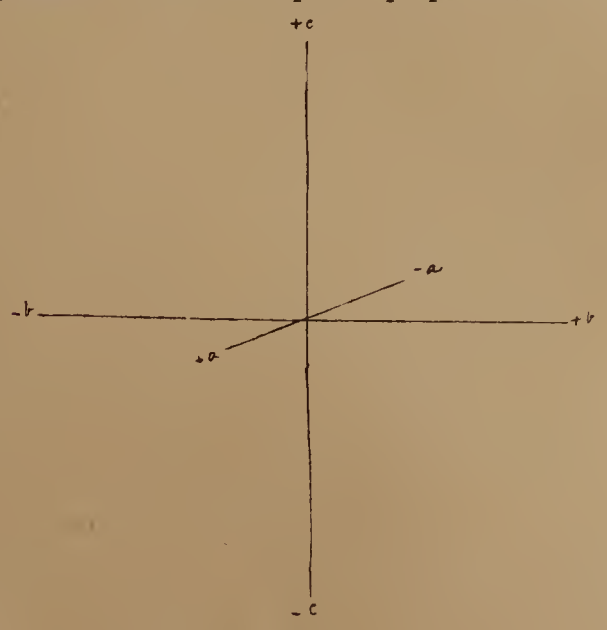

Fig. 4.

relative length, position, and angles that these axes incline to, the form of the crystal depends.

When the crystallographic axes are of unequal length it is usual to designate the one which stands vertically by the letter *c*, the one running from right to left *b*, and the one which runs from from front to back *a*.

The two extremities of each axis are distinguished by the + or − sign, as shown in Fig. 4.

If all three axes are of equal length they are all represented by *a*, if two are of equal length they are designated by *b*, and if the third is of the same length, by *c*.

If the axial intersections are not rectangular, they are designated

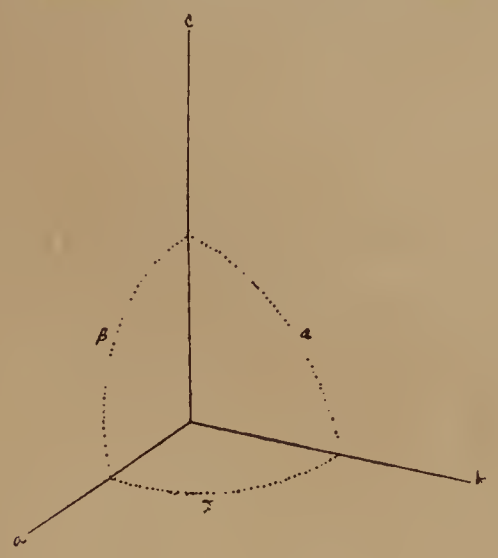

Fig. 5.

by the Greek letters α, β, and γ as follows:—$b \wedge c = \alpha$; $a \wedge c = \beta$; and $a \wedge b = \gamma$, as in Fig. 5.

The planes in which two of the crystallographic axes lie are called axial or diametral planes. They are co-ordinate planes of analytical geometry, and divide the space within the crystal into eight sectants called octants, or in one system where four axes are used into twelve sectants called dodecants.

PARAMETERS.—The values of the intercepts of any crystal plane on the axes are called the parameters of the plane.

An intercept is that portion of a line which lies between the two

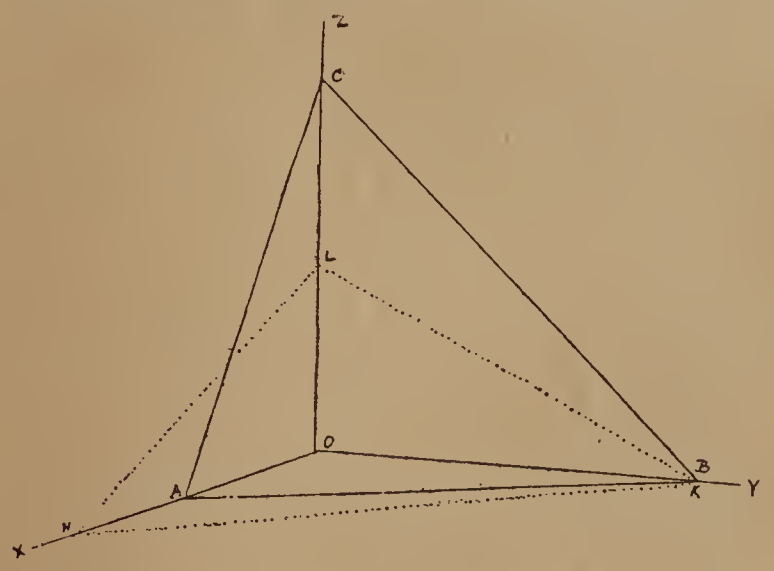

Fig. 6.

points at which it is intersected by other two lines, by a curve, by two planes, or by a surface.

The parameters are expressed in terms of certain axial lengths which are assumed as unity.

Suppose that ABC is a plane which intercepts the axes X, Y, Z at their unit lengths. The position of any other plane, HKL is determined if we know the values OH, OK, and OL in

terms of OA, OB, and OC. In this case $\frac{OH}{OA}=2$, $\frac{OK}{OB}=1$, $\frac{OL}{OC}=\frac{1}{2}$. These quotients are the parameters of the plane HKL.

If we denote the axes X, Y, Z by a, b and c the most general symbol for any plane becomes $na : pb : mc$, where n, p, and m are rational quantities and the parameters of the plane (see Fig. 6).

The values of the various angles, together with geometical methods adopted for their representation, will not be dealt with here, for to obtain a proper conception of the peculiar relationship requires a fairly advanced knowledge of mathematics.

The geometric forms are based upon the development with reference to certain imaginary planes, called the planes of symmetry. These are planes capable of dividing bodies into two halves, related to each other in the same way as an object is to its reflection in a mirror.

(To be continued.)

DETECTION OF SEAL OIL IN MEDICINAL COD-LIVER OIL.

BY EDWIN DOWZARD.

It is a well-known fact that cod-liver oil is liable to be adulterated with not only the liver oil of other fish than those belonging to the *Gadus* family, but also with fish oils (such as Japan fish oil) and refined seal oil, the presence of which is extremely difficult to prove. According to Kremel, the colour reaction with nitric acid gives reliable results, but seal oil is the most difficult to detect, as it gives practically no reaction. By means of Amagat and Jean's oleorefractometer, however, there is reason to believe that the presence of seal oil can be detected with certainty, as shown by the figures given below :—

Cod-Liver Oil.			Pale Seal Oil.
English.	Norwegian.	Newfoundland.	
+44	+45·0	+44·5	+32·0
	+43·5	+44·0	+32·0
	+44 0	+45 0	+32 5
	+43 5	+44·0	
	+45 0	+44·5	
	+44·0	+44·0	
		+44 5	

Of the fourteen samples of cod-liver oil, only two had a number of +43·5, and, as the purity of these oils was open to question, they need not be taken into account. The three samples of seal oil examined were all obtained from different sources, and show a remarkably constant figure.

+44 may then be taken as the minimum; and +45 as the maximum for pure cod-liver oil.

Taking +44·5 as the average, the following table gives the numbers obtained with mixtures of the two oils :—

Cod-liver Oil.	Seal Oil.	Refractometer figure at 22° C.
100	0	+ 44·5
90	10	+ 43·25
80	20	+ 42·0
70	30	+ 40·75
60	40	+ 39 5
50	50	+ 38·25
40	60	+ 37·0
30	70	+ 35·75
20	80	+ 34·5
10	90	+ 33·25
0	100	+ 32·0

As pure cod-liver oil varies between such narrow limits, the determination of the refractometer number appears to be of some value. It is absolutely necessary that the oil should be first agitated with alcohol (sp. gr. ·800), the mixture heated to 30° C., then allowed to separate, and the oil finally dried at 110° C. Until more pure samples of cod-liver oil have been examined, it will perhaps be well to take +43·5 as the minimum figure.

COMPRESSED TABLETS AND TABLET TRITURATES.

BY FRANK EDEL.

Among the modern fads of medicine none seem to have taken so deep a hold on the profession as tablets; the pharmacist may argue against it, but it seems to be a waste of time as far as preventing their use is concerned.

It is true, and the fact cannot have escaped the attention of thinking men, that many combinations are offered in tablet form, which, to say the least, are not capable of exhibiting the best results of the drugs, which, in fact, are not adapted for use in that shape, and the pharmacist can easily convince any thinking physician that such tablets are not to be recommended; but with the tablet nuisance generally he can do nothing more than to prepare to meet it. A prominent pharmacist said to the writer some time ago, that in prescribing tablets, the physician was working directly against himself, for it was no uncommon thing for people to come into his store and ask for 10 cents' worth of this or that kind of tablet, which having previously been prescribed for them, and noting the name, they now had come to the pharmacist direct, instead of getting a prescription from the doctor.

The pharmacist must be able to supply these goods, if he would hold his trade, and if the trade is sufficient, he should place himself in such a position that he can produce these goods as wanted. Not only does this give him the advantage of being able to produce goods of his own make, but it also places him in position to furnish on short notice any special combination that may be required by the physician. Of course, if the demand is limited, and will not warrant the pharmacist in the outlay for implements with which to produce these preparations, then it is best for him to depend on the manufacturer; but the cost is not large, and there is nothing about the manufacture of tablets that should deter any intelligent pharmacist from undertaking to make them himself.

Let us consider the tablets as we find them; first, as moulded, or tablet triturates, and, second, as compressed tablets.

In order to place the pharmacist in position to produce his own tablet triturates, he should first supply himself with at least two, preferably three, tablet moulds or plates, viz., a ½ grain, a 1½ grain mould, and a 2 grain mould; or the 1½ grain mould may be omitted, and in its place a 1 grain mould be purchased. The smaller mould is for making hypodermic tablets, and the smaller forms of tablet triturates, while the other moulds will do for almost any tablet of this kind that is likely to be called for. When larger ones are called for, they can be prepared as compressed tablets.

The vehicle almost universally used in making hypodermic tablets is pure powdered cane-sugar, which should be as finely powdered as it is possible to obtain. Formerly some used dried sodium sulphate, but this, while still recommended in some pharmaceutical works, is objectionable because it is not readily soluble when placed in water, takes up a proportion of water of crystallisation, and forms a hard, slowly soluble mass. Sugar, however, is readily soluble and answers the purpose admirably. For making other tablets, it is usual to make the vehicle of sugar of milk or, in case the mass is not adhesive enough, with a mixture of milk-sugar and a small proportion of cane-sugar. In case there is a considerable amount of solid extract in the mass, it is best to use a proportion of starch; mix well, and then add the proper amount of milk-sugar or cane-sugar. Where considerable amounts of tinctures are used, it will be found best to use an equivalent quantity of fluid extract, and where this even would be excessive, to reduce cautiously the volume, by evaporation, and then add starch and proceed as above.

Let us suppose that we want to make a hundred tablets of sulphate of morphine, ¼ grain, for hypodermic use. We select our one-half grain plate, and having weighed out five grains of sulphate of morphine we rub it with a small portion of powdered sugar; then we place our plate on a piece of smooth glass or a pill tile, moisten the mass with alcohol, and with a spatula we fill as many holes in the plate as we can, using all the material; next we moisten some powdered sugar with alcohol and take enough of this to fill perfectly twenty holes (the aim being to get experimentally the total weight of twenty tablets), then smooth the surface by rubbing with the spatula, and place the plate on the ejecting plate and eject the tablets. Let stand on the ejectors for a few minutes and when sufficiently dry, remove from the plates and place them in some clean place until thoroughly dry. When dry, weigh them; the weight being the weight of twenty tablets, and deducting the amount of morphine used, we get the weight of sugar that is necessary to make the

tablets. Of this we make a note for future refercnce. In this way we can calculate the formula for any tablet we may wish to make.

A little experience with this work will do a great deal more for the pharmacist in this class of work than anything else, and enable him to make these preparations rapidly and in every way equal to the work done by larger manufacturers.

To make compressed tablets, the first requisite is a tablet machine, and of these there are quite a number on the market. While I have not tried all of them, I will say this much, that with those I have tried I have had no trouble in doing satisfactory work. They range in price all the way from eight dollars up to two hundred dollars for the large power machines. While the ten and fifteen dollar machines do nice work, they do not work automatically, and are consequently not so rapid in their work as those that are automatic in their feeding and ejecting. The cheapest good, entirely automatic, machine is sold for twenty-five dollars.

In making compressed tablets, beginners make the mistake of thinking that it is necessary to have the powder slightly moist, and to this, more than anything else, can be attributed the trouble encountered in the preparation of tablets by compression. The materials to be made into tablets should be in as fine powder as possible, then thoroughly mixed and moistened, and granulated by passing through a No. 16 or 20 sieve and dried. Some preparations will compress nicely and form tablets without any preparatory treatment, but the great majority require special treatment before compression. Such chemicals in granulated form, as potassium iodide, potassium bromide, ammonium chloride, etc., can be compressed as they are; quinine bisulphate requires only the addition of a suitable lubricant, when it can be compressed, and for this reason it is usually preferred to the sulphate; it also has the advantage of being more soluble. The sulphate of quinine, in common with the great majority of other preparations, requires the addition of some adhesive agent before it can be satisfactorily compressed.

The adhesives used are usually powdered acacia, powdered sugar, and sometimes glucose, the latter, however, being seldom used, as it tends to make too hard a tablet. Sometimes trouble will be found in that the tablets stick to the moulds, to guard against which it is often necessary to use lubricants. The lubricants commonly used are powdered talcum, not to exceed 2 per cent., powdered boric acid, and a 2-per-cent. solution of white petrolatum in ether. Some have recommended the liquid vaseline in ether, but I have not been pleased with that. It should be the aim to use as little adhesive as possible in order to secure satisfactory adhesion in the finished tablet, but where the substance itself is insoluble, as in the case of salol, it is best, in my opinion, to use a considerable quantity of sugar, as this, being soluble and dissolving out, will help to disintegrate the tablet. For tablets such as those made of charcoal it is necessary to use 3 per cent. of acacia and 5 per cent. of sugar, and with the addition of these adhesives in the quantities named almost any powder can be compressed; but it will not be found necessary in the great majority of instances to use this amount of adhesive. In making tablets containing solid extracts, the extracts themselves often will furnish sufficient adhesiveness, and in this case starch will be found excellent to take up the excess of moisture.

In making tablets it will be found best—although not absolutely necessary when working with a small machine and with a limited number of tablets—to granulate carefully the powders after thoroughly mixing them. This, in a majority of cases, is done by moistening with water and passing through a No. 16 or 20 sieve and then allowing to dry. If this is carefully done, it will often not be found necessary to lubricate the granulated powder before compression.

Where chemical action is likely to be set up in consequence of the solubility of the chemicals in water, it is best to employ some moistening liquid that will not exert a solvent action. In such cases alcohol is generally used, and where this even might be objectionable it is customary to granulate them separately and then carefully mix the several granulated powders. This I generally do by placing them in a dry wide-mouth bottle and agitating them thoroughly.

In making tablets of calomel and sodium bicarbonate I use sugar as a vehicle and adhesive, and granulate the calomel with a portion of the sugar and dry. Then I granulate the soda with the remaining sugar and dry. Lastly, I mix the two as above, and, if necessary to lubricate, use a small quantity of powdered talcum, carefully sprinkling it into the bottle containing the powder and agitating until mixed.

The foregoing procedure can be used in making effervescent tablets of citrate of lithium, of lemonade tablets, and other tablets of a similar nature; but generally I prefer to dry the powders thoroughly before mixing; then granulate by moistening with alcohol, and dry. As a rule, tablets made in this way will require no lubricant.

To lubricate a granulated powder, it will be found most convenient to use the solution of petrolatum by means of an atomiser and spray the powder, then allow the ether to evaporate, when the powder is ready for compression. Powdered boric acid is to be used with such tablets only as are intended to yield perfect solutions, as in hypodermic tablets made by compression.

Some tablets can be made by simply moistening the powder with water, granulating, and drying. Of this kind are tablets of compound licorice powder and tablets of Dover's powder. Tablets containing extract of licorice require no adhesive.

No trouble should be experienced in putting the various medicaments into tablet form, if the pharmacist will but use judgment in the selection of adhesives and care in granulating his powder, and see to it that the granulated powder is dry before beginning to compress. A friend who for several years has been selling a great many tablets of a special kind, lately determined to make them himself, and has bought a power machine. Since then he has turned out about four hundred thousand tablets, and recently informed me that he had had no trouble in doing the work, since he had taken the precaution to have his powder dry before compression.—*Western Druggist.*

DENTAL NOTES.

Deodorant Tooth Powder.

Menthol, 10 centigrammes; β-naphthol, 5 centigrammes; saccharin, 25 milligrammes; cretæ precipitat., 50 grammes; sap. med., 50 centigrammes; ol. rosæ, *q.s.*

Violet Tooth Powder.

β-naphthol, 5 centigrammes; saccharin, 25 milligrammes; sap. med., 1 gramme; calcium carbon precipitat., 50 grammes; ionone and ol. cananga, 1 or 2 drops of each.—*Pharm. Zeitsch. f. Russl.*, xxxvi., 696.

Iodine Tincture for Dental Work.

Iodine crystals are dissolved in absolute alcohol until completely saturated. A mixture is then made of a third of this solution, a third of aconite tincture, and a third of chloroform.—*Zahnt. Reform*, xvii., 451.

Lac for Cavities.

Dissolve copal resin in equal parts of alcohol and chloroform, and add an equal volume of hydronaphthol. The result is a thin adhesive lac of highly antiseptic, but non-irritating properties.—*Zahn. Rundsch.*, vii., 4091, after *American Weekly.*

To Stop Bleeding.

Wicks recommends the following application as a hæmostatic. Resin, powdered, 4; carbolic acid, 95 per cent., 3; chloroform, 2. Make a cone of wadding, saturate one end with the solution, and press firmly into the wound. The tampon can be removed after a few hours.—*Zahntech. Reform*, xvii., 452.

Gold Solder.

According to Dr. Beebee (*Dental Comos*), dental solder may be obtained by melting fine copper, 53 parts; fine silver, 25 parts; and pins, 12 parts. By the addition of fine gold, any desired carat may be obtained. If very high carat solder is wanted, the author uses less alloy, and substitutes more fine silver.—*Zahnt. Reform*, xvii., 451.

Gilding.

Dissolve in a litre of distilled water, crystallised sodium pyrophosphate, 80 grammes; hydrocyanic acid, 12 per cent., 8 grammes; and crystallised chloride of gold, 2 grammes, in the order named. Heat to boiling. The article to be gilded is suspended in this bath with a copper wire after being carefully cleaned.—*Zahnt. Reform*, xvii., 449, after *Zeit. f. ang. Microscopy.*

Metric Weights and Measures.

Equivalents of Metric and Imperial Weights and Measures for Use in Trade.

BY an Order in Council, dated May 19, 1898, the following new table of metric equivalents is substituted for the table in Part I. of the Third Schedule to the Weights and Measures Act, 1878.*

METRIC TO IMPERIAL.

LINEAR MEASURE:

1 Millimetre (Mm.) (1/1000th M.)	=	0·03937 Inch.
1 Centimetre (1/100th M.)	=	0·3937 ,,
1 Decimetre (1/10th M.)	=	3·937 Inches.
1 Metre (M.)	=	**39·370113 Inches. 3·280843 Feet. 1·0936143 Yards.**
1 Decametre (10 M.)	=	10·936 Yards.
1 Hectometre (100 M.)	=	109·36 ,,
1 Kilometre (1000 M.)	=	0·62137 Mile.

SQUARE MEASURE:

1 Square Centimetre	=	0·15500 Square Inch.
1 Square Decimetre (100 Square Centimetres)	=	15·500 Square Inches.
1 Square Metre (100 Square Decimetres)	=	10·7639 Square Feet. 1·1960 Square Yards.
1 Are (100 Sq. Metres)	=	119·60 ,, ,,
1 Hectare (100 Ares or 10,000 Sq. Metres)	=	2·4711 Acres.

CUBIC MEASURE:

1 Cubic Centimetre	=	0·0610 Cubic Inch.
1 Cubic Decimetre (C.d.) (1000 Cubic Centimetres)	=	61·024 Cubic Inches.
1 Cubic Metre (1000 Cubic Decimetres)	=	35·3148 Cubic Feet. 1·307954 Cubic Yards.

MEASURE OF CAPACITY:

1 Centilitre (1/100th Litre)	=	0·070 Gill.
1 Decilitre (1/10th Litre)	=	0·176 Pint.
1 Litre	=	**1·75980 Pints.**
1 Dekalitre (10 Litres)	=	2·200 Gallons.
1 Hectolitre (100 Litres)	=	2·75 Bushels.

WEIGHT:

Avoirdupois.

1 Milligram (1/1000th Grm.)	=	0·015 Grain.
1 Centigram (1/100th Grm.)	=	0·154 ,,
1 Decigram (1/10 Grm.)	=	1·543 Grains.
1 Gramme (1 Grm.)	=	15·432 ,,
1 Dekagram (10 Grm.)	=	5·644 Drams.
1 Hectogram (100 Grm.)	=	3·527 Oz.
1 Kilogram (1000 Grm.)	=	**2·2046223 Lbs. or 15432·3564 Grains.**
1 Myriagram (10 Kilog.)	=	22·046 Lbs.
1 Quintal (100 Kilog.)	=	1·968 Cwt.
1 Tonne (1000 Kilog.)	=	0·9842 Ton.

Troy.

1 Gramme (1 Grm.)	=	0·03215 Oz. Troy. 15·432 Grains.

Apothecaries.

1 Gramme (1 Grm.)	=	0·2572 Drachm. 0·7716 Scruple. 15·432 Grains.

* The new equivalents are practically identical with those adopted in the book of equivalents published at the Pharmaceutical Journal Office, 5, Serle Street, W.C., and advertised in the current issue of the Journal.—[ED. *P. J.*]

IMPERIAL TO METRIC.

LINEAR MEASURE:

1 Inch	=	25·400 Millimetres.
1 Foot (12 Inches)	=	0·30480 Metre.
1 Yard (3 Feet)	=	**0·914399 Metre.**
1 Fathom (6 Feet)	=	1·8288 Metres.
1 Pole (5½ Yards)	=	5·0292 ,,
1 Chain (22 Yards)	=	20·1168 ,,
1 Furlong (220 Yards)	=	201·168 ,,
1 Mile (8 Furlongs)	=	1·6093 Kilometres.

SQUARE MEASURE:

1 Square Inch	=	6·4516 Sq. Centimetres.
1 Square Foot (144 Square Inches)	=	9·2903 Sq. Decimetres.
1 Square Yard (9 Square Feet)	=	0·836126 Square Metre.
1 Perch (30¼ Square Yards)	=	25·293 Square Metres.
1 Rood (40 Perches)	=	10·117 Ares.
1 Acre (4840 Square Yards)	=	0·40468 Hectare.
1 Square Mile (640 Acres)	=	259·00 Hectares.

CUBIC MEASURE:

1 Cubic Inch	=	16·387 Cubic Centimetres.
1 Cubic Foot (1728 Cubic Inches)	=	0·028317 Cubic Metre.
1 Cubic Yard (27 Cubic Feet)	=	0·764553 Cubic Metre.

MEASURES OF CAPACITY:

1 Gill	=	1·42 Decilitres.
1 Pint (4 Gills)	=	0·568 Litre.
1 Quart (2 Pints)	=	1·136 Litres.
1 Gallon (4 Quarts)	=	**4·5459631 Litres.**
1 Peck (2 Gallons)	=	9·092 Litres.
1 Bushel (8 Gallons)	=	3·637 Dekalitres.
1 Quarter (8 Bushels)	=	2·909 Hectolitres.

APOTHECARIES MEASURE:

1 Minim	=	0·059 Millilitre.
1 Fluid Scruple	=	1·184 Millilitres.
1 Fluid Drachm (60 Minims)	=	3·552 ,,
1 Fluid Ounce (8 Drachms)	=	2·84123 Centilitres.
1 Pint	=	0·568 Litre
1 Gallon (8 Pints or 160 Fluid Ounces)	=	**4·5459631 Litres**

AVOIRDUPOIS WEIGHT:

1 Grain	=	0 0648 Gramme.
1 Dram	=	1·772 Grammes.
1 Ounce (16 Drams)	=	28·350 ,,
1 Pound (16 Ozs. or 7000 Grains)	=	**0·45359243 Kilogram**
1 Stone (14 Lbs.)	=	6·350 Kilograms.
1 Quarter (28 Lbs.)	=	12·70 ,,
1 Hundredweight (Cwt.) (112 Lbs.)	=	50·80 ,, 0·5080 Quintal.
1 Ton (20 Cwt.)	=	1·0160 Tonnes or 1016 Kilograms.

TROY WEIGHT:

1 Grain	=	0·0648 Gramme.
1 Pennyweight (24 Grains)	=	1·5552 Grammes.
1 Troy Ounce (20 Pennyweights)	=	31·1035 ,,

APOTHECARIES WEIGHT:

1 Grain	=	0·0648 Gramme.
1 Scruple (20 Grains)	=	1·296 Grammes.
1 Drachm (3 Scruples)	=	3·888 ,,
1 Ounce (8 Drachms)	=	31·1035 ,,

NOTE.—Approximately 1 Litre equals 1000 Cubic Centimetres, and 1 Millilitre equals 1·00016 Cubic Centimetres.

PHARMACEUTICAL JOURNAL.

A Weekly Record of Pharmacy and Allied Sciences

ESTABLISHED 1841.

Circulating in the United Kingdom, France, Germany, Austria, Italy, Russia, Switzerland, Canada, the United States, South America, India, Australasia, South Africa, etc.

Editorial Office: 17, BLOOMSBURY SQUARE, W.C.

Publishing and Advertising Office: 5, SERLE STREET, W.C.

LONDON: SATURDAY, JUNE 4, 1898.

TITLES AS TRADE-MARKS IN AMERICA.

A RECENT decision of the United States Court of Appeals, in a case involving the question of the value of titles used as trade-marks, is regarded as being of such great importance to the drug trade that it has been styled a "revolutionary" and an "epoch-making" decision. The point actually decided is comparatively a minor one, the Court holding that the proprietors of an article which has been patented in the United States, cannot subsequently protect the name of that article by securing its registration as a trade-mark after the expiration of the patent. But few American proprietary preparations are patented, as their proprietors prefer to depend upon the registration of their titles as trade-marks; German synthetic remedies, on the other hand, are usually protected both by patents and trade-marks. The great importance of the decision, however, as pointed out by the *Western Druggist*, resides in the general principles laid down by the Court as governing the case; those principles "bear directly upon the question of trade-marked titles and patents, separately and jointly, and therefore upon the legal status of practically all pharmacal preparations, domestic and foreign, in the American market."

The preparation, which had been patented, and concerning which the dispute arose, was named "Castoria." The title was not registered as a trade-mark, and after the patent expired in 1885 other persons than the original inventor began to apply the same name to a preparation made by them. A suit was therefore brought to restrain them from so doing, the plaintiff claiming the exclusive right to the use of the word "Castoria." In the judge's decision, however, it was stated that the patent gave no right to any particular name, but simply to the exclusive manufacture and sale of the preparation. All such rights expired in 1885, and from that time forth any party has had a right to manufacture and sell that particular compound, and also a right to manufacture and sell it under the name by which it has become generally known to the public, and if to that public the article has become generally known only by a single name "that name must be considered as descriptive of the thing manufactured" and not of the manufacturer. It is true, said the judge, that during the life of a patent the name of the thing may also be indicative of the manufacturer, because the thing can then be manufactured only by the single person, but "when the right to manufacture and sell becomes universal the right to the use of the name by which the thing is known becomes equally universal. It matters not that the inventor coined the word by which the thing has become known. It is enough that the public has accepted that word as the name of the thing, for thereby the word has become incorporated as a noun into the English language and the common property of all."

Commenting on this decision, the *Western Druggist* observes that since most American proprietary medicines are without patent protection, and since the right to manufacture and sell similar preparations is therefore "universal," it may be held to follow, in the words of the decision, that the right to the use of the names by which proprietary preparations are known must be equally universal. It is contended that any name given to an article must, of necessity, in accordance with this decision of the Court of Appeals, be a descriptive name, and hence cannot be appropriated as a trade-mark. If that be so, the public will be free to appropriate all single titles of unpatented products in the market, and those of all patented products when their patents expire. "To make them good will require the addition of some distinctive word or mark, or of some substitute descriptive title, as 'Listerine-*Lambert*,' or 'Phenacetin-*Bayer*,' or '*Papine*, a purified opium,' the trade-mark being in the italicised words," whilst the employment of the descriptive word or words not so indicated will be free to all. And though it is acknowledged that the general recognition and enforcement of this principle may be productive of great hardship in many cases, and of opportunities for wholesale fraud by unscrupulous dealers, it is suggested that those misfortunes can only be the result of carelessness by the manufacturers in failing to devise valid trade-marks, or of a faulty interpretation of trade-mark law by the Courts in the past.

Moreover, observes our Transatlantic contemporary, though the name given to an article, whether "coined" or not, may be open to general use, inasmuch as it must be used in such a manner "as not to deprive others of their rights or to deceive the public," the manufacturer will not be left altogether defenceless in the matter, for whilst he may be prevented appropriating as a trade-mark the only name by which an article can be designated or described in the ordinary course of business, he has an unassailable right to adopt as his peculiar mark any symbol, device or non-descriptive word by which his products may be readily identified. This view is undoubtedly in manifest accord with "the interests of legitimate medicine and pharmacy," as well as of the general public, and it may be rendered incumbent on American manufacturers, in their own interests, to take prompt steps to have their trade-marks revised in harmony with the principles set forth in the "Castoria" case. Whether the same principles are likely to commend themselves to British judges remains to be seen, but it would be interesting to see the point raised in our Courts whether exclusive rights can be maintained in a "coined" word which, in the course of time, becomes so descriptive of a particular thing as to form part of the English language. It is in this way, of course, that our language continually increases, and general acceptance of the American principle would obviate many difficulties. And, in any case, manufacturers ought to be able to ear-mark their preparations without infringing the liberty of the subject.

ANNOTATIONS.

THE FORFARSHIRE AND DISTRICT CHEMISTS' ASSOCIATION has taken a wise step in sending to each medical practitioner in the district a copy of a circular, in which it is stated that the Executive Committee of the Association, having had under consideration the alterations in the British Pharmacopœia, considers it advisable, in view of the numerous changes and important alterations in the strengths and doses of some official preparations, that some time should be allowed to elapse in order that everyone concerned may have an opportunity of becoming fully acquainted with the new volume. It is proposed, therefore, that until September 1 the members of the Association shall continue to dispense prescriptions according to the Pharmacopœia of 1885, unless prescribers prefer to order the new preparations, in which case it will only be necessary to indicate that fact on the prescriptions, as the chemists are quite prepared to supply those preparations. Appended to the circular is a list of the altered doses of potent medicines, and an offer is also made to send a pamphlet giving full particulars of all changes if any medical practitioner should desire it. This is an example well worthy of being followed, the more especially if the *P. J.* 'Synopsis of the British Pharmacopœia (1898) Processes and Formulæ' be supplied for the purpose.

THE SEVENTH EDITION OF THAT SYNOPSIS, which is now ready, embodies very extensive and important additions, based on the suggestions by Mr. R. H. Parker, published in last week's Journal. The main idea kept in view in preparing this edition has been that of enabling medical practitioners to grasp the significance of the alterations effected by the revisers of the Pharmacopœia, without unduly encroaching upon their time. To the busy medical man who has been in practice some years it is more or less immaterial what is now official in the Pharmacopœia; he knows what medicaments are capable of producing certain effects, and all that concerns him is that he may be able to depend upon his patients receiving and taking what he actually intends. If, therefore, the strengths of preparations frequently prescribed by him have been altered, it is important that he should have his attention directed to the fact, and that, it is thought, may with advantage be done by local chemists or their association. The Synopsis, in its latest revised form, offers the readiest means of imparting the desired information, for whilst the first page is now devoted to a concise summary of the alterations of chief importance in the potency or nomenclature of official preparations, full particulars of all alterations in processes and formulæ are given in the following pages, and the chief features of the alterations are emphasised by brief notes in italics at the end of the respective paragraphs. Though the cost of making the additions to the Synopsis is considerable, the price of the little book is retained at the same nominal figure (4*d.* per copy) as formerly; but with the idea of securing greater permanency, a few copies have been specially bound in limp cloth, with gilt letters, and can be supplied by the publishers of the Journal, at one shilling each.

THE UNQUALIFIED ASSISTANT QUESTION continues to exercise the minds of the medical profession, and at the meeting of the General Medical Council last week a petition was received from some three hundred and forty registered practitioners, residing in various districts, desiring that special examinations should be held during the present year for unqualified assistants who have gone through a complete medical curriculum, and are over forty years of age. The Mayor of Wisbech has also forwarded a petition, signed by more than three thousand persons, praying that a certain individual may be reinstated in his position as an unqualified assistant; many medical practitioners are urging the difficulty experienced in obtaining the services of a sufficient number of qualified assistants; and unqualified assistants themselves are appealing to be allowed to continue to earn a livelihood in the same manner as formerly. One such individual, who has acted as an assistant for twenty-two years to leading practitioners in Wales, desires permission, in order that he may support "a wife and family," to commence business "as a chemist." The idea of the General Medical Council granting such permission is novel, to say the least, and the petitioner reveals a considerable amount of ignorance in assuming that he will be able to afford such luxuries if he re-commences life as a chemist and druggist. But why, in any case, should it apparently be taken for granted that medical failures are fitted to become pharmacists?

THE MEANS ADOPTED by the General Medical Council for persuading reluctant practitioners to part with their unqualified assistants appear to be indirect rather than direct. For the present, at all events, it seems unlikely that anyone will be charged with infamous conduct in a professional respect, on the ground that he employs an unqualified assistant; but the conduct of such assistants is being sharply looked after, and the least excuse serves for accusing the employer of acting as cover. In two such cases that were investigated last week, the defendants escaped the usual penalties by undertaking to remove the cause of offence. In another case which should cause chemists to reflect, a medical practitioner has had his name erased from the Register because of infamous conduct in a professional respect in connection with certain quack remedies which are extensively advertised. The particulars of the complaint in this case were (1) that the defendant had associated himself with, and was a party to, the sale, dissemination, and advertisement of those quack remedies; (2) that he acted as consulting physician at the place where such quack remedies were administered and sold, and permitted his name and qualifications to be advertised as those of the consulting physician at that place. Many registered chemists appear to think it is a part of their business to stock and assist the sale of such quack remedies, but though no disciplinary powers can be invoked in their case, encouragement of such questionable business verges closely upon, if it be not actually, "infamous conduct in a professional respect."

ENVIOUS THOUGHTS ARE AROUSED in the pharmaceutical mind when one reflects upon the power possessed by the governing body of the medical profession to erase from the 'Medical Register' the names of erring brothers. On Thursday, last week, one registered man, who was judged guilty of infamous conduct in a professional respect, had his name erased because he had, under cover of his name and qualifications, permitted and enabled an unqualified person to attend on and administer medical relief and treatment to patients, to give medical certificates, and generally to carry on a medical practice as if he were a duly qualified and registered practitioner. Such conduct may not unfitly be compared with that of registered chemists and druggists who hire themselves out to joint-stock companies consisting of unregistered persons, and so enable the latter to carry on business in unfair competition with duly qualified and registered chemists and druggists. But, alas, no such remedy is at hand in pharmacy as in the sister profession of

medicine. The only means that suggests itself for remedying this greatest evil in present-day pharmacy is for all registered chemists in business to agree among themselves never on any considcration to find employment for, or have any business transactions with, men who have at any time been in the service of joint-stock companies the shareholders in which are not registered chemists Such a remedy might be considered drastic, but there is little doubt that it would prove effective.

The British Pharmaceutical Conference will assemble at Belfast in a few weeks, and in connection with the visit, a ladies' committee has been organised by Mrs. J. C. C. Payne to look after the lady visitors. Mrs. S. Clotworthy has been appointed "Chairwoman," and Miss Watson, Hon. Secretary. A meeting of this Committee was held at 3, Clarendon Place, Belfast, on Tuesday, 31st ult., at 12 o'clock, when there was a good attendance of members. Arrangements were made to look after the lady delegates during the sittings of the Conference, whilst abstruse scientific subjects are being discussed that will not be interesting to them, and to take them to visit different places of interest in the city. Arrangements for the Conversazione on August 9, and for the ladies' drawing-room party on the 10th were fully made. The chemists' wives and sisters of Belfast are evidently prepared to give their English, Scottish and Welsh sisters a hearty welcome to Ulster, and to make their visit interesting.

The Conference Blue List for the year is now published, and bears marks of thorough revision. The omissions are very numerous, many antiquities having been removed, whilst several new subjects for research are suggested, including *Euphorbia pilulifera*, solution of hamamelis, *Papaver rhœas*, senna fruits, syrup of glucose, mucilage, green extracts, preparations of pepsin, and terebene. Most of these have obviously been suggested by alterations in the British Pharmacopœia, and it may be taken for granted that the publication of that work will result in the provision of enough subjects of papers for the Conference to serve for some time to come.

The Nottingham and Notts Chemists' Association has had a most successful year, the financial statement showing a satisfactory balance to the good, whilst the Annual Report affords ample proof of the value of the local arrangements for pharmaceutical education. Classes have been held at University College, Nottingham, in chemistry (theoretical and practical), materia medica, physics, and organic chemistry. The chemistry class has been attended by 39 students—the highest number on record. That in materia medica was joined by 16 students, which is also the highest number that has ever taken up that subject in the town. Two students attending the classes have passed the Minor examination. The membership of the Association is now 50, and there are 41 associates. After the report had been considered and adopted at the annual meeting, held last week, Mr. Gill introduced a discussion on the Pharmacy Acts Amendment Bill and the amendment proposed by Mr. J. H. Yoxall, M.P., a resolution being unanimously adopted declaring that Mr. Yoxall's amendment would perpetuate an anomaly, and suggesting that a deputation should wait upon Mr. Yoxall and lay the views of the Association on the subject before him. The following officers were elected: President, Mr. R. Fitzhugh; Vice-President, Mr. E. Gascoyne; Treasurer, Mr. J. Wilford; Hon. Secretary, Mr. A. Eberlin; the balloting for the Council resulting in the election of the following: Messrs. C. A. Bolton, R. Beverley, A. Beilby, W. Gill, T. Mason, A. Middleton, J. T. Rayson, F. R. Sergeant, J. C. Spencer, and T. Wilson.

Mr. W. S. Glyn-Jones, of the P.A.T.A., has of late had the misfortune to appear in another capacity than that of organiser of a trade protection association, for as a retail chemist he has been called upon to answer a charge of adulterating lime water. According to the press accounts, the lime water was alleged to be deficient in lime to the extent of 85 per cent., or adulterated with 85 per cent. of water, but what that means is not clear. On testing the preparation himself, Mr. Glyn-Jones found it contained the full percentage of lime, and he defended himself before the magistrate with conspicuous ability. In fact, he raised one objection with regard to the analyst's certificate which so far prevailed on the magistrate that he adjourned the case to consider the point at leisure. Ultimately, however, the analyst prevailed, and Mr. Glyn-Jones was mulcted in a fine of ten shillings and costs.

Lord Playfair, whose death occurred on Sunday last, entered upon the serious business of life as a pupil in the establishment of Messrs. Frazer and Green, chemists, Glasgow, and for the past scventeen years he has been an Honorary Member of the Pharmaceutical Society. Applied science, education, and politics shared his attention as a man of the world, and he attained the varied distinctions of Privy Councillor, G.C.B., LL.D., and F.R.S. After studying chemistry at St. Andrews, Glasgow, London, and Giessen, in 1843 he became Professor of Chemistry at the Royal Institution, Manchester, and Sir Robert Peel appointcd him on the Commission to inquire into the sanitary condition of large towns. In 1851 he was appointed special commissioner in charge of the Department of Juries at that year's Exhibition, and five years later he became Professor of Chemistry at Edinburgh University. In Parliament he represented the Universities of Edinburgh and St. Andrews in the Radical interest for seventeen years, and the Southern Division of Leeds from 1885 to 1892, when he was made a peer. During his Parliamentary career he was Postmaster-General, Chairman of Ways and Means, and Vice-President of the Council, and after his elevation he continued to sit upon important Commissions. Throughout life he was a voluminous writer on educational, technical, and economic subjects.

"The Species, the Sex, and the Individual" was the title of an interesting paper dealing with the evolution of animal structure, recently read before the Linnean Society by Mr. J. T. Cunningham, M.A. The main points of his argument were as follow:—Selection assumes the occurrence of variations; the variations must be either similarly indefinite and promiscuous in all cases, or different in different cases—that is, in different species, differcnt sexes, different stages of life. If they are different in different cases, then selection is a very unimportant matter; for the chief questions are evidently what are the differences and what makes them different? It is suggested that to deny that the variations have always been different in different cases is to deny the most evident facts, and though such denial may be possible when considering only the difference between species, it is impossible when studying the differences between the sexes in the same species, and between different stages in the same individual. In all cases the variations correspond to differences in habits and mode of life, and are in many cases of the same kind as the changes known to be produced in the individual by special stimulation, or special activity of organs. That is true of many and probably of all cases of adaptation, and it would appear that adaptation is not produced indirectly by selection from indefinite variations, but directly by the influence of stimulation in modifying the growth of the parts or organs of the body.

REVIEWS AND NOTICES OF BOOKS.

THE FLORA OF BERKSHIRE. By GEORGE CLARIDGE DRUCE, Hon. M.A. Oxon. Pp. 644. Price 16*s*. Oxford: Clarendon Press.

In this volume of some 840 pages Mr. Druce has brought together in a very attractive manner an immense amount of interesting information concerning the Royal county. The flora itself, which occupies 624 pages, is a most valuable record, every page of which must have cost the author a great deal of hard work in field, library, and museum. Over 1200 plants are noted as having been recorded for Berkshire, of which 893 are natives. In addition to these a number of species are mentioned which have been found in neighbouring counties, but not in Berks. —Mr. Druce's opinions on botanical nomenclature—the result of personal investigation—are well known, and have been freely expressed in botanical journals, and in the present work he has consistently carried them out. The earliest names for the families, genera, and species that he has been able to find after the date 1753 are adopted, and the date and reference given for each. This is so far an advantage, since if they are incorrect or if any name has been overlooked much labour is saved for the next investigator. But the prejudice that exists in the minds of many botanists against altering the exact spelling of the name originally given should receive its deathblow in the anomaly that presents itself when this rule is consistently followed out, as in the genus *Potamogeton*, some of the species thus becoming masculine and others neuter, *e.g.*, *Potamogeton polygonifolius* and *Potamogeton coloratum*.

The remarks given concerning varieties, forms, and hybrids under the species to which they belong should be of considerable use to all observers of our native plants, since they receive, as a rule, but little attention in systematic works on British botany, although the records of their occurrence may ultimately throw considerable light on the limits of species. It is not always safe to give synonyms for these, unless authentic specimens have been compared, and in many cases it would have been better to have given no name but to have simply described them as forms with numerals or letters attached. But as a storehouse of valuable information concerning the plants themselves, there can be no question that the Berkshire flora will find appreciativo readers. In addition to the botanical and popular names and Berkshire localities of each species, the author has taken a great deal of trouble in collecting and describing the botanical history, synonyms, duration, time of flowering, habitat, etc., whilst his comments on the occurrence of varieties and local peculiarities of structure and habit are exceedingly interesting, their value being greatly enhanced by the fact that most of them are the result of personal observation. The various abbreviations used, and the system of arrangement, etc., adopted in this work, are fully explained in "The Plan of the Flora," which is supplemented by lists of herbaria, books of reference, etc., consulted by the author, and quoted in the work. The Flora proper is followed by a comprehensive summary in which the author compares the flora of Berks with those of neighbouring counties, and of the remainder of Great Britain.

One of the most pleasing features of the book is the generous manner in which the author expresses his thanks to all who have in any way contributed to the accomplishment of his great undertaking. After making ample allowance, however, for any outside assistance he may have received, the work bears striking testimony to his untiring energy and perseverance. An accomplished botanist, a keen observer, a persevering and accurate investigator, possessed of considerable artistic taste, and a great facility of expression, he has succeeded in putting into this book a great deal of information which botanists as well as many who are not botanical students will find of considerable interest. The first ten pages of the introduction are taken up with a concise and interesting description of the "Topography," "Elevation of Surface," and "Woods and Forests," including some valuable agricultural statistics and over 100 altitudes. The meteorological records are dealt with in a carefully compiled article containing statistics of average rainfall, temperature, etc., calculated from observation extending over many years. In the twenty pages devoted to geology the various geological formations which come to the surface in Berks are indicated, the description of each formation being supplemented by a list of the more interesting plants found growing on it. The "River Drainage of Berks" and the "Floral Districts" are very ably described, and a charming account is given of the districts referred to. The remainder of the introduction is taken up with biographical sketches of those botanists who have contributed to the records of the county flora, starting with Turner, A.D. 1512, and continuing to present-day workers. This portion of the work, although possibly deemed by the author to be necessary to its completeness, is perhaps a little superfluous, as one does not usually look in a 'Flora' for other information than that relating to plants. The book contains an excellent map, on which the botanical districts are very clearly marked, and Mr. Druce is to be congratulated on having produced a 'Flora' that not only affords pleasant reading, but contains a large amount of useful information concerning plants.

DIE HEILPFLANZE DER VERSCHIEDENEN VÖLKER UND ZEITEN. By the late DR. GEORG DRAGENDORFF. Stuttgart, 1898.

Further parts of this cyclopædic work have now appeared. Part 2 includes some of the apetalous orders, and some of the Thalamifloræ and Calycifloræ orders. Part 3 contains only one apetalous order, viz., Euphorbiaceæ, which is placed between Olacineæ and Callitrichaceæ, the nearest large families being Burseraceæ on the one hand and Anacardiaceæ on the other. The fourth part contains the remainder of the Calycifloræ orders, and most of the Corollifloræ except the Compositæ. The arrangement is, however, so different to that followed by British botanists that without giving an actual list of the natural orders it is difficult to indicate how far the work has proceeded, and until the work is completed and the index published it must necessarily be difficult to find any plant sought for. It is to be regretted that a table of the natural orders in the sequence adopted was not given in the first part. The chief value of the work is in the number of bibliographical references given. Occasionally a botanical inaccuracy may be noticed, as where *Aloexylon agallochum* is given as a Leguminous plant and considered to be the source of aloes wood, which is now known to be derived from *Aquilaria* and *Gonostylus*. It is satisfactory to learn that the talented author practically completed the work before his death, so that it will form a monument of his industry and extensive research.

DELICATE REACTION FOR ALKALINITY OF WATER.—A 1 per cent. solution of toluylene red, $C_{15}H_7N_4Cl$, is, according to A. Cavalli (*Il Selmi*), one of the most delicate reagents for showing the presence of alkalinity in water. Two or three drops of this solution added to 50 C.c. of water give an intense yellow coloration if the water is distinctly alkaline. If the alkalinity be slight, the colour is orange or pale red. This reagent will detect 1 part per million of alkaline carbonate, and is far more delicate than the indicators generally used.—*Annal. de Chim. Analyt.*, xxii., 23.

ROYAL INSTITUTION OF GREAT BRITAIN.

LECTURES ON HEAT.

At the Royal Institution, Albemarle Street, on Thursday, May 26, the last of a course of lectures was given by the Right Hon. Lord Rayleigh, M.A., D.C.L., LL.D., F.R.S., on

Heat.

Lord Rayleigh first considered the condensation and deposition of aqueous vapour, and the various conditions under which these phenomena take place. To illustrate the effect of alteration of pressure on the condensation of vapour, an experiment was shown in which a glass cylinder, containing air moderately charged with aqueous vapour, was suddenly deprived of some of the contained air by means of a pump. The result was the formation of a cloud of condensed vapour. The effect of temperature next received attention, and various methods described by which one may measure the dew-point, *i.e.*, the temperature at which vapour begins to be deposited. Referring to the presence of motes in the atmosphere, and their ability to favour the formation of fog, Lord Rayleigh remarked that the necessity for motes in forming fogs has a limit, since if air, previously filtered from motes by passing it through cotton-wool, be expanded suddenly, as just described, a fog forms as readily as if motes were present. Some water was poured into a red-hot silver dish in order to illustrate the spheroidal state that the liquid assumes under such conditions. This non-evaporation of water at first sight seems surprising, but is easily accounted for by the fact that a layer of steam coming between the vessel and the bulk of the water acts as an insulator of heat, and so retards the evaporation of the mass. On cooling the dish, however, a point is reached at which this insulator disappears, when the mass of water rapidly passes into steam with almost explosive force. That the layer of steam actually is an insulator was shown by immersing one wire belonging to a strong battery in the liquid and attaching the other wire to the silver dish. So long as the water maintained the spheroidal state no current passed, but the moment the water commenced to evaporate, the needle of a galvanometer, with which the wires were in communication, was greatly deflected. The phenomena that attend change of physical state in matter next received attention; supersaturated solutions containing different proportions of sodium acetate were treated with minute solid particles of the same salt, and it was seen that the rates of re-crystallisation were related to the degree of supersaturation of the solutions. Passing again to the subject of heat engines, the lecturer pointed out that even in the best of modern steam engines it is not possible to convert more than one-fifth of the heat from the boiler into mechanical work. This loss is due to the conduction of heat by the walls of the cylinder; the condensation of the first steam produced, which cools the steam with which it comes in contact, and other causes. Many devices have been suggested and tried to raise the present efficiency of engines, among which were mentioned the use of jacketed cylinders, and the employment of superheated steam, which does not deposit moisture at the moment of cooling. Even under these conditions the highest known efficiency is 0·2, or one-fifth of the total heat produced in the boiler. Joule's law, therefore, breaks down in practice, and it is difficult to know in what direction we must look in order to obtain a higher efficiency for steam engines. With gas and oil engines the figure is raised to 0·25, owing mainly to the fact that the heat is developed in the interior of the cylinder. Ice machines were then dealt with, and wider applications of the theory of the dissipation of heat were briefly discussed, especially those of a chemical or quasi-chemical nature. It was shown, *e.g.*, that the boiling point of a saline solution is higher than that of the pure solvent. Van t'Hoff's investigations on osmotic pressure were referred to, emphasis being laid on one of the main conclusions, that the pressure exerted by a dilute solution of a substance is the same as if the same amount of substance were present as a gas, occupying the same volume at the same temperature. Lord Rayleigh concluded with a few remarks concerning the distillation of mixtures, a subject which he first investigated in 1891, and to which he has lately been paying considerable attention. As an example he gave figures obtained by distilling mixtures of alcohol and water in different proportions and noting the relative proportions of these liquids in the distillate. We give these results in tabular form :—

Proportions Taken.		Distillate Obtained.
Water per cent.	Alcohol per cent.	Alcohol per cent. (approx.
90	10	50 (under)
80	20	65
70	30	70 (over)
60	40	75 (under)
50	50	75 (over)
40	60	80
30	70	80 (over)
20	80	90
10	90	93
	100	100

This subject is still under investigation, and we may look shortly for more exact figures than the above, as well as for similar particulars concerning the distillation of weak acids, dilute ammonia, and other mixed liquids.

PHARMACEUTICAL TRANSACTIONS.

NORTHERN BRANCH CHEMISTS AND DRUGGISTS' SOCIETY OF IRELAND.

The Committee of the above Society met on Friday, May 27, in the offices, Garfield Chambers, Belfast, Mr. W. Lyttle, Vice-President, in the chair. On the motion of Mr. Rankin (Hon. Secretary), the following members were appointed as a Law and Parliamentary Committee :—Messrs. S. Gibson, W. Lyttle, J. Brown, J. H. Shaw, Sir James Hazlett, M.P., and Mr. J. Trackleton. The following druggists were admitted members of the Society :—Messrs. J. S. Bulmer, Bangor; J. B. Gorman, Bangor; J. Nevin, Belfast; and J. Long, Belfast.

British Pharmaceutical Conference.

Mr. Rankin reported that arrangements in connection with the approaching Conference were now in an advanced state, and when completed would, he felt sure, give entire satisfaction to all parties. A Ladies' Committee, with Mrs. Clotworthy as chairwoman and Miss L. Watson, Knock, as hon. secretary, had been appointed, and during the sitting of the Conference this Committee would look after the comfort and enjoyment of their sisters. The Lady Mayoress had also kindly promised to give a garden party in the Exhibition Hall, Botanic Gardens, and this would be followed by two concerts the same evening, one for the ladies and the other a smoking one for the gentlemen. A trip had also been organised to Garron Tower by way of Larne, and returning *viâ* Ballymena. Taking the arrangements so far as had been decided upon, he (Mr. Rankin) had no doubt but that they would be such as would make the Conference a most enjoyable and successful one.

The P.A.T.A.

Mr. Brown called attention to the fact that Homocea was being advertised and sold at 10½*d.*, which he understood was under the minimum price. He suggested action should be taken by bringing the matter under the notice of the P.A.T.A., with the view of getting the protected price adhered to.—The Chairman said he had no doubt Mr. Rankin, their Hon. Secretary, who was also local secretary for the P.A.T.A., would see if anything could be done.—Mr. Rankin said he would be pleased to do so in this or any other case to which his attention might be drawn.—Arrangements were made for joining in an excursion on July 12, and the Committee adjourned.

EDINBURGH DISTRICT CHEMISTS' TRADE ASSOCIATION.

The sixth annual meeting of the Association was held in the Pharmaceutical Society's House, 36, York Place, Edinburgh, on Friday, May 27, 1898, at 8.30 p.m., Mr. John Bowman, President, in the chair. The minutes of last meeting were read and approved. The Chairman said they had lost one of their members, Mr. James Watt, junior, of Haddington, by death since last meeting, and it was agreed that the Secretary should send a letter of sympathy to his widow and father.—The Hon. Secretary (Mr. C. F. Henry) read the

Annual Report and Financial Statement.

The membership was now sixty-four, as compared to sixty-five

last year. The Committee felt that the membership should be larger, and especially recommended that an effort should be made to get as members a considerable number of new men who had recently started business. The Prize Scheme for assistants and apprentices suggested last year had been carried out very successfully, and seventeen competitors had sent in papers. The negotiations with wholesale firms as to discounts on proprietaries had not yet been settled, but it was expected that the wishes of the Association would be conceded. The Association had also communicated with the Revenue authorities in reference to mineral oil in methylated spirit, and a reply had been received which would involve further action. In regard to the question of jury service, the Association were in communication with the Council of the Pharmaceutical Society, by whom the question had been remitted to the Law and Parliamentary Committee. The Hon. Secretary remarked, in submitting the report, that the Association had recently been referred to as a model association and a force to reckon with.—On the motion of Mr. McLAREN, seconded by Mr. LUNAN, the report was adopted.—The financial statement, showing a balance of £45 15*s.* 1*d.*, was adopted on the motion of Mr. BURLEY, seconded by Mr. McDOUGALL.—The HON. SECRETARY read the following reply from the Inland Revenue anent

Mineralised Methylated Spirit.

"Somerset House, London, W.C.,
"May 10, 1898.

"Sir,—I have laid your letter of 23rd ultimo before the Board of Inland Revenue, who have given their careful consideration to your representations with regard to the addition of petroleum or mineral naphtha to methylated spirit. In reply, the Board direct me to acquaint you that they are unable to accede to your suggestion that they should allow methylated spirit free from mineral naphtha to be sold by retail; but they will be prepared to consider applications from photographers, polish, varnish and collodion makers, bookbinders, and others who can satisfy them that they have a legitimate use for unmineralised methylated spirit for permission to obtain the supply they require from methylators in quantities of not less than five bulk gallons at any one time.

"I am, Sir,
"Your obedient servant,
"(Signed) J. P. BYRNE,
"Assistant Secretary."

—The CHAIRMAN said this reply left the matter pretty much where it was.—The SECRETARY said the proposal to give permission to obtain five gallon quantities was nothing new. That was well known and was being acted upon by the classes referred to at the present time.—Mr. RUTHERFORD HILL said the letter took no note of the point that methylated spirit was now so unusable for many domestic purposes, such as cleaning plate and windows, etc., owing to the odour of mineral naphtha, that many had given up using it, and were now compelled to purchase duty-paid spirit for this purpose. It was not practicable for these parties to obtain five gallon quantities from a methylator. The fact was that the presence of mineral naphtha unfitted the methylated spirit for a great many of the purposes for which it was formerly legitimately in common use, and practically quite defeated the very purpose of the Legislature in allowing a duty-free spirit to be used. The Board of Inland Revenue indicated no reason for retaining the mineral naphtha. It was very generally alleged by persons who had good opportunities of knowing that mineral naphtha had no effect whatever in rendering the methylated spirit undrinkable. Under these circumstances, he thought the Association would not be acting unreasonably in respectfully asking the Board of Inland Revenue what reasons weighed with them in deciding to retain the mineral naphtha.—Mr. McGLASHAN said what was stated by Mr. Hill was quite true. The present position was very much this: They held licences for retailing methylated spirit, but the action of the Board of Inland Revenue had resulted in the stoppage of a very large part of the trade they used to carry on under the licence, because people had ceased to use the mineralised spirit for many of the common purposes for which methylated spirit was legitimately used prior to the new regulations. And for many other purposes for which retailers used to supply methylated spirit the public were now compelled to purchase quantities of five gallons, not from the persons who used to have this trade, but from the authorised methylators, who are all large wholesale dealers. He thought there was something wrong in granting them licences to retail methylated spirit, and then by this mineral oil regulation practically to a very large extent withdrawing the sale and forcing it into the hands of the wholesale dealers. That was a view of the case which, he thought, they would be justified in bringing under the notice of the Board of Inland Revenue. It was ultimately agreed that the Secretary should communicate with the Board on the lines indicated by Messrs. Hill and McGlashan.—The SECRETARY also read letters from the Wholesale Chemists' Joint Committee anent £5 orders for proprietaries, and from the Council of the Pharmaceutical Society anent jury service, as indicated in the annual report.—The following new members were proposed for election:—Archibald Currie, George Hall, George Hall, jun., John Henderson, and James Robb.—The report of the special committee on the papers submitted by competitors in reply to the following questions was read. It appeared that seventeen assistants and apprentices competed, and a high average of marks was attained, only five having less than 60 per cent. The first prize was gained by James Lennox (Duncan, Flockhart and Co.), 139, Princes Street, with 86 per cent. of marks, and the second prize by G. H. C. Rowland (J. C. Pottage), 117, Princes Street.

Examination Questions.

1.—What does the law require in regard to the storage and sale of Benzol?

2.—What are the regulations as to the retail sale of Methylated Spirit?

3.—State particularly what constitutes a medicated wine of Ginger, Coca, Pepsin or Quinine, such as may be sold without a licence?

4.—You receive two orders for Arsenic from two farmers, one for seven pounds and the other for twelve pounds. How would you execute these?

5.—What regulations govern the use of stills by chemists?

6.—What is your opinion of the liability, or otherwise, to Medicine Stamp Duty of the following label? Further, if you consider it "liable," in what respects is it so, and if you think it "not liable," what alteration would make it "liable"?

—The CHAIRMAN then handed to the first prizeman a cheque for £2 2*s.*, and to the second prizeman a cheque for £1 1*s.*—It was intimated that the annual excursion to St. Fillans, on Loch Earn, would leave Caledonian Station, Princes Street, on Thursday, June 9, at 8.30 a.m., reaching Comrie at 10.30 a.m., and St. Fillans at 11.15 a.m. The return journey would be from St. Fillans at 6.15 p.m, Comrie at 7.10 p.m., and reaching Edinburgh at 9.10 p.m. A number of Glasgow pharmacists are to travel to Comrie from Buchanan Street, Glasgow, by train at 8.40 a.m., and pharmacists from Dundee and Perth will join the party at Comrie at 10.30 a.m. The office-bearers for next year were then elected as follow:—President, Mr. David McLaren; Vice-President, Mr. George Lunan; Honorary Secretary and Treasurer, Mr. Claude F. Henry, 1, Brandon Terrace, Edinburgh; and as members of Committee, Messrs. Boa, Bowman, Burley, Forret, Hendry, McDougall, D. MacGlashan, J. McGlashan, Macpherson, Stephenson, Swan, and Wylie. The meeting closed with a vote of thanks to the office-bearers, and especially to the Chairman, Mr. Bowman, who retires after two years' service as President.

TOXICOLOGICAL DETECTION OF CHLOROFORM.—Seyda treats the viscera to be examined with tartaric acid and distils in a current of steam. The chloroform generally passes over in the first 20 C.c. of distillate. This is diluted to 50 C.c., and a fifth part taken warmed to 80 C. Two C.c. of solution of resorcin and 1 C.c. of 25 per cent. solution of soda are added, when a rose coloration will appear in ten minutes if chloroform be present, and will persist for twelve hours. The amount of chloroform may be approximately determined colorimetrically by matching the tint with a solution of 1·4 gramme of chloral hydrate, equivalent to 1 gramme of chloroform, in a litre of water.—*Pharm. Centralh.*, xxxviii., 552.

LEGAL INTELLIGENCE.

PROCEEDINGS UNDER THE PHARMACY ACTS.

PHARMACEUTICAL SOCIETY *v.* FENNELL.

On Wednesday, May 26, at the Southwark County Court, before His Honour Judge Addison, the Council of the Pharmaceutical Society of Great Britain sued Gilbert Fennell for a penalty of £5 for selling poison contrary to the provisions of the Pharmacy Act, 1868.

Mr. T. R. Grey, instructed by Messrs. Flux, Thompson, and Flux, appeared for the Council. The defendant appeared in person.

Mr. Grey stated that the defendant was an assistant in the employ of Arthur Oldcorn, trading as Francis Hicks and Co., chemists and druggists, of 179, Westminster Bridge Road. Messrs. Hicks and Co. also had a shop in Piccadilly Circus, but it was at the first-named place that the defendant was employed. The offence in respect of which the penalty was sued for was the sale by the defendant of a pennyworth of oxalic acid, he being an unqualified person, and as such not entitled to make the sale. The learned counsel then drew attention to the sections of the Pharmacy Act, 31 and 32 Victoria, cap. 121, which created the offence and imposed the penalty for an illegal sale of scheduled poisons by an unqualified person. It was laid down that the penalty was to be a fixed amount, viz., £5 for each offence, and to be sued for in the County Court.

His Honour: If a qualified man has two shops he must have a qualified man in both of them. There is no doubt of that.

Mr. Grey said it was owing to the way the shop was being carried on that the Society had sent someone to make the purchase in question.

His Honour: If anybody could say "I am responsible for the shop, and the person who is acting there is under me," the Act would be a dead letter. It is intended to impose a personal obligation, and to provide that the person who makes up or sells poisons should know what he is about. If the master is not in when a poison is inquired for, the assistant, if unqualified, should say so, and refuse to sell the poison. Has not some question been raised as to the quantity necessary to constitute a poison?

Mr. Grey replied that there was one case where 1/10th of a grain of morphine was contained in a proprietary medicine. The defendant contended in that case that his article was a patent medicine, and claimed to come under the exemption in Section 16. It was shown that no patent had been taken out for it. It was contended that because it had a Government stamp on it the defendant was entitled to call it a patent medicine, but the Judges did not agree with this view.

His Honour said he did not suppose that now-a-days a patent would be granted for a medicine containing poison.

Mr. Grey said he was sorry to say such a patent could be obtained.

His Honour said the granting of patents for proprietary nostrums was, in his opinion, very wrong. It was a species of quackery that the law of England alone allowed, and ought not to be tolerated in an enlightened community. To his mind also the way in which people were allowed to employ hieroglyphics in prescriptions was wrong and ought not to be allowed in a civilised country. With regard to proprietary medicines, anybody could compound them; it was merely the name of the proprietor that was protected.

Mr. Grey said no doubt that was so, but then the ingredients were not known.

His Honour said that was a great mistake; he had seen in a medical journal the ingredients of all these proprietary medicines disclosed. Was there any question as to the authority of the Society to sue in the present case?

Mr. Grey put in the Minute of the Council authorising the proceedings.

Mr. John Partridge formally proved the purchase of one pennyworth of oxalic acid from the defendant, and afterwards handing the packet to Mr. Eastes for analysis. There was no other person in the shop with defendant when the purchase was made.

Mr. Ernest John Eastes, F.I.C., deposed to having received the packet from the last witness, which on analysis he found to contain 190 grains of practically pure oxalic acid in crystals. This was a very dangerous quantity, as little as 60 grains having been known to destroy life.

Mr. Grey then put in the Register of the Pharmaceutical Society, in which the defendant's name did not appear, and this closed the plaintiffs' case.

Mr. Gilbert Fennell, the defendant, said he did not recollect the occasion of the purchase in question, but contended that he was entitled to sell a poison over the counter if his master was present on the premises.

His Honour said the presence of the defendant's master did not entitle him to make the sale independent of him. The fact that the master was on the premises was no excuse, for if it were so it would be a very easy way of evading the Act. The master might give a poison to an errand boy to be handed over to a customer, and there were a variety of ways in which a master might be said to have made the sale, but that could not be said merely because the master was on the premises. The case was not only hopelessly without defence, but the vague defence set up by the defendant showed how serious the offence was, because he did not remember anything about the transaction, which meant that it was such a commonplace thing in his mind, when a person came in and asked for a pennyworth of this deadly poison, to give it him as a matter of course that it did not dwell in his recollection. If it were his function to impose the amount of the penalty he should say that this was a case in which the full penalty ought to be imposed; but as he had no such power, and was bound by the Act of Parliament, within which this case came, he would impose a penalty of £5 with costs.

The defendant declared his inability to pay the penalty and costs.

His Honour said the costs were dealt with in the Statute and followed as a matter of course. Of course, if the Society liked to deal leniently with the defendant in that respect, it was entirely a matter for them.

Mr. Grey said he would draw the attention of the Society to what His Honour had said.

His Honour said he did not wish to say anything in the matter. It was quite right that a public body which had to enforce the law in these cases should perform its duties. He had nothing before him except the fact that there had been a most flagrant violation of the law. Was it clear that if the master was shown to be cognisant of what the assistant was doing, that he could not himself be sued?

Mr. Grey said if it could be proved up to the hilt that a qualified man employed an unqualified assistant to sell poisons for him, possibly judgment could be obtained against the qualified man.

His Honour said if it were systematically done, he thought he should find some way of making the master liable.

A certificate was given for the attendance of counsel.

THE SALE OF FOODS AND DRUGS ACT.

A YEAR'S ADULTERATION STATISTICS AT BIRMINGHAM.

The medical officer for the city of Birmingham (Dr. Alfred Hill) states, in his recently issued annual report to the Health Committee, that more drugs were examined during the twelve months than in either of the two previous years. The percentage of adulteration, though lower than in any recent year, is still much higher than in London or in England and Wales as a whole. Dr. Hill thinks the reason is that at Birmingham the drugs most likely to be defective are taken in preference to articles which experience has shown are less liable to be adulterated. More attention than usual has been given to the examination of the accuracy with which medicines are dispensed in the city. In all, sixty samples have been analysed. In three cases simple Pharmacopœia preparations were ordered, viz., camphor liniment, iodine liniment, and carbonate of iron pills; the other prescriptions had to be specially prepared by the pharmacist. Fourteen of the sixty samples—or twenty-three per cent.—differed so much from what was ordered by the prescription that they were certified as adulterated. Fifty-two of the samples were obtained from persons qualified under the Pharmacy Act, and of these eleven were condemned. Of the remaining eight samples taken from unqualified vendors, three were condemned. Of seven samples of iodide of potassium and cinchona mixture, four were of the correct composition, or nearly so. One contained seventy-five per cent. of the amount of iodide of potassium ordered and was also deficient in cinchona; another contained only 85 per cent. of the proper amount of iodide of potassium, and a third had an excess of 10 per cent. of this drug, One of six mixtures containing butyl-chloral hydrate, glycerin, and incture of cardamoms was somewhat deficient in strength

but owing to the absence of an adequate official standard of purity of the active ingredient, Dr. Hill says he could not call it adulterated. Four of the samples were purple in colour and two were brown, the difference in appearance being due to the B.P. allowing butyl-chloral hydrate to be neutral or slightly acid in reaction, to the presence of tincture of cardamoms, and to ordinary water being used. The Pharmacopœia requires, as Dr. Hill points out, that "in dispensing prescriptions aqua should be understood to mean distilled water." Three or four magnesia mixtures contained from 462 to 485 grains of sulphate of magnesia to the 8 oz. mixture ordered, but one contained only 441 instead of 480 grains. This was probably due to the dispenser erroneously supplying an avoirdupois ounce of 437·5 grains instead of an apothecaries ounce of 480 grains. The vendor in this instance was cautioned, as was also the chemist who supplied a quinine mixture containing an excess of 18 per cent. of sulphate of quinine. Three other samples contained a slight excess. One of four samples of sodium bromide mixture contained only 160 grains of sodium bromide, while the prescription ordered 180 grains, and the vendor was cautioned. The other three samples contained 168 to 178 grains, but as the B.P. allows a slightly damp salt to be used they passed as genuine. Four of the fifteen samples of camphor liniment contained only half to three-quarters of the camphor that should be present, another was slightly low in camphor, and the remainder were satisfactory. One of the defective samples had not been prepared with olive oil as required by the B.P. Each of four samples of iodine liniment contained about the correct quantity of iodine, but one was deficient of 16 per cent. of the iodide of potassium ordered by the B.P., and the vendor was cautioned. Three of five samples of carbonate of iron pills were correctly dispensed, but one contained only 25 per cent. of the carbonate of iron that should have been present—a deficiency which was not due to deterioration by oxidation. The remaining sample consisted of iron, or Blaud's pills instead of carbonate of iron pills, and although the two preparations are similar in nature, Dr. Hill is of opinion that the substitution of one for the other cannot be justified. One sample of iron and quinine pills contained an excess of 80 per cent. of sulphate of iron. This may have been due to the dried salt having been used in error. Twelve samples of glycerin were analysed, and in four minute traces of arsenic were found, probably owing to slight impurities in the chemicals used in their manufacture, but the quantity present was too small to be considered adulteration. Two samples contained glucose or starch syrup, a form of adulteration which Dr. Hill has not found in any of the fifty samples examined in past years. Four of the six samples of spirit of nitrous ether yielded, under standard conditions, from five to seven volumes of nitric oxide gas, but two were seriously deficient, yielding only three and a half volumes and one volume respectively. As spirit of nitrous ether is a drug liable to deterioration, Dr. Hill advises that the stock should be kept in a cool, dark cellar, and not obtained in large quantities, and that the shop bottle should not contain more than can be sold in a short period. All the samples of tincture of rhubarb procured during the last two years have been genuine, the average amount of solid ingredients being 0·96 ounce per pint. Three of five samples of beeswax were genuine, another was nearly so, containing a small quantity of stearic acid, but the other, in respect of which the vendor was fined, was adulterated with at least 25 per cent. of paraffin wax, and at least 10 per cent. of resin. Five samples of cream of tartar all contained traces of lead, but not enough to be called adulteration. Three samples of extract of malt were not altogether satisfactory in quality, but as there is no standard for the preparation given in the B.P., Dr. Hill was unable to call them adulterated.

DETERMINATION OF OXYGEN IN WATER.—A simple apparatus has been devised by A. Florence for the determination of oxygen in water. It consists of a large round-bottomed flask, connected by an indiarubber cork with a small graduated burette, to which a mercury reservoir is fitted by a side tube. The flask is filled with the water to be examined, then connected with the burette, which has been filled with mercury, and emptied, so as to form a vacuum. The tap between the flask and the burette having been opened, the water is warmed until all gas has been evolved; the gas obtained is then examined in the usual manner by absorption with potash, then with pyrogallol, which are passed into the burette by the cup at the top.—*Répertoire*, 1897, 385, through *Pharm. Centralh.*, xxxix., 28.

MEDICAL JOTTINGS.

THE GENERAL MEDICAL COUNCIL opened its usual May session last week. Sir William Turner, the President, occupied the chair. Mr. C. S. Tomes, F.R.S., F.R.C.S. Eng., L.D.S., the Crown member appointed for five years in succession to the late Sir Richard Quain, was introduced by Mr. Bryant, and took his seat. The President then delivered his opening address. He announced that he had received a letter from Miss Quain, asking the Council to accept from her sisters and herself a marble bust of her late father in memory of his long association with the Council. The President then welcomed the new member, Mr. C. S. Tomes, whom he described as "distinguished in scientific research, an eminent dental practitioner, and a Fellow of the Royal College of Surgeons of England." He next alluded to the Midwives Registration Bill, which, if it passed its second reading, had little chance of becoming law, except the promoters of the Bill were prepared to amend it in Committee so as to meet the suggestions of the General Medical Council. After a reference to the action of the Council in regard to unqualified assistants, which had evoked numerous letters from both employers and assistants, the President narrated the circumstances of his action in regard to withholding from Mr. Horsley, a member of the Council, certain documents which he desired to inspect for the purposes of the work of the Council. Counsel's opinion had been taken, and it was to the effect that the Council's papers are the property of the corporate body and not of its individual members, and that the papers referred to cannot be produced for inspection without leave being first granted by the Council or the Executive Committee.

MR. HORSLEY AFTERWARDS ASKED LEAVE to call the attention of the Council to what he stigmatised as an infringement of the rights and privileges of individual members, and contended that the President had no power to direct that documents should be withheld from the inspection of members, and that counsel's opinion now quoted was totally at variance with that given by Mr. Farrer, their solicitor, in 1882. Sir C. Nixon proposed to move that Mr. Horsley should be granted the use of the Council's documents for the purpose of carrying on an investigation in connection with the legal expenses of the Council, but the President ruled that it was not the time to receive such a motion. Dr. MacAlister then moved that, having heard the President's statement, the Council expresses its complete satisfaction therewith and passes to the next business. This motion was seconded by Dr. Pettigrew, and after some discussion was carried without dissent. Mr. Horsley subsequently moved that a special committee be appointed to inquire into the conduct of the legal business of the Council, he contended that the present method was extravagant and that a committee such as he asked for and on which he hoped to serve could report as to what steps might be taken to diminish the expenditure in which their present precedure apparently involved them. On a division the motion was rejected by 18 votes to 9. Mr. Horsley was more successful in his next motion, which was to the effect that a letter by the late President addressed to the Privy Council on the subject of Reciprocity of Medical Practice in relation to Foreign Countries should be rescinded. The Council did not adopt this motion in its entirety, but an amendment to the effect that the memorandum on reciprocity be not reprinted was carried by a large majority.

ON THE INITIATIVE of Dr. Glover, regulations were framed under which the documents of the Council shall be accessible to members; these were drawn up with the double object of securing the safety of the documents and making them available for the use of members in any reasonable way and for any reasonable purpose, whilst ensuring that care should be taken that all information gained from them relating to penal cases should be regarded as confidential.

SOME PENAL CASES were next taken, and the Council then proceeded to the consideration of petitions and communications relative to unqualified assistants. Amongst them was a petition forwarded by the Mayor of Wisbech, signed by 3449 persons, asking that a former unqualified assistant should be reinstated in his position. Another was from a gentleman who had acted as an assistant for twenty-two years to leading practitioners in Wales, desiring permission, in order that he may support a wife and family, to commence business as a chemist or be allowed to pass an

easy final examination. These were all referred to a special Committee for report thereon to the Council.

The Council then proceeded to the consideration of charges against Mr. George Hamilton Wyse, Lic. Apoth. Hall, Dublin, Lic. R. Coll. Phys., Edin., Lic. R. Coll. Surg., Edin., of 51, Talbot Street, Southport, on the complaints of the Medical Defence Union and the Wigan Medical Guild, in regard to covering unqualified assistants, and he was judged to have been guilty of infamous conduct in a professional respect, and the Registrar was directed to erase his name from the Medical Register.

This was followed by the consideration of the case against Mr. Joseph Hamilton Hart, Lic. R. Coll. Phys., Edin., Lic. R. Coll. Surg. Edin., Lic. Fac. Surg. Glasg., of Morley, near Leeds, who was summoned to appear to answer the charge "That he, as a registered medical practitioner, had been guilty of infamous conduct in a professional respect in connection with certain quack remedies, which were styled and extensively advertised as "Munyon's Homœopathic Remedies." The particulars of the complaint against him were :—(1) That he associated himself with and was a party to the sale and dissemination and advertisement of these quack medicines. (2) That he acted as consulting physician at the place where such quack remedies were administered and sold, and permitted his name and qualifications to be advertised as those of the consulting physician at such place. Dr. H. Woods, President of the Incorporated Medical Practitioners' Association, supported the charge, and tendered Mr. R. R. M. Madden, the secretary, as a witness. Counsel having been heard on behalf of Mr. Hart, who gave evidence on his own behalf, the Council deliberated on the case *in camera*, and decided that Mr. Hart had been guilty of infamous conduct in a professional respect, and directed the Registrar to erase his name from the Medical Register.

At the instance of Mr. Tomes the following resolution which had previously been arrived at *in camera* regarding a deputation to the Board of Trade upon the amendment of the Companies Act, was placed upon the minutes :—"That the President, Mr. Tomes and Mr. Horsley be a Committee to take such steps as they deem most effective to induce the Government to insert a clause in the Companies Act Amendment Bill now before Parliament, with the object of preventing the registration of companies to carry on medical, surgical and dental practice.

On Tuesday last, the concluding day of the session, the following motion was made by the President and agreed to unanimously :—"That the best thanks of the Council be given to the Pharmacopœia Committee for the laborious duties which they have discharged during the last five years, and which have resulted in the production of a work which they have every reason to believe will be satisfactory to the profession."—"That the thanks of the Council be further tendered to the members of the Pharmacopœia Committee of the Pharmaceutical Society for their valuable assistance in relation to the pharmacy of the British Pharmacopœia, 1898 ; to the Referees in chemistry, botany, and pharmacology for their ready help in the solution of difficult technical questions ; to the Secretary, Dr. Tirard, for his assiduous and able services to the Pharmacopœia Committee, and through that Committee to the Council ; and, lastly, to the Editor, Dr. Attfield, for all he has done to make the Pharmacopœia complete and accurate."

Determination of Oil in Emulsions.—Three hundred parts of the oil and gum emulsion, or emulsion obtained by means of seeds, should be evaporated with 50 parts of white kaolin and 50 parts of rough sand. Towards the end of the operation add 50 parts of dried sodium sulphate and evaporate the mixture to dryness with occasional stirring. The substance is then powdered and extracted with ether in the extraction apparatus. The ether is evaporated and the oily residue weighed. Emulsions of oil prepared with yolk of egg are simply warmed to 100° C. for some time. The albuminoids of the yolk of egg are thus coagulated, the turbid fluid is then readily shaken out with ether. It must be remembered, however, that the components of yolk of egg, which are soluble in ether, fat, and lecithine, are also removed, and they must be deducted from the calculation.—*Pharm. Ztg.*, xlii., 15, after *Journ. d. Pharm. Els. Loth.*, 321.

LETTERS TO THE EDITOR.

The Benevolent Fund.

Sir,—I hope the suggestions of both Mr. Hampson and Mr. Vizer *re* the Benevolent Fund may receive the hearty support of all subscribers. There need be no fear of the Council failing to act with the most rigid honesty to all who apply for help from the Fund. The present system of soliciting votes is open to great abuse, and favours those candidates who can bring the greatest influence to work.

Sale, June 1, 1898. Allen Smith.

Dispensing Difficulties.

Sir,—Mr. Graham Bott in his letter of May 20, respecting the dispensing of the ointment given at the recent Minor Examinations, mentions "all who replied seem to agree as to the time it takes to produce a satisfactory preparation." I am not agreed on this point, having rubbed down on a slab a fourth part of the amount specified (which I forwarded as a sample) in less than a quarter of an hour, at first attempt, by the method stated.

Knowle, Birmingham, May 28, 1898. R. Kathleen Spencer.

The New B.P.

Sir,—Might I suggest as a practical means of avoiding differences in dispensing new prescriptions written since the issuing of the 1898 Pharmacopœia, that the chemist who first dispenses it should put either at the side of his business stamp, or against any special ingredient in the prescription, a mem. notifying according to which Pharmacopœia it has been dispensed. The figures 85 or 98 would be understood by the trade without causing any observation by the patient.

May 26, 1898. Pharmacist (134/12).

The Liquefaction of Hydrogen.

Sir,—It is not my intention to enter into the discussion of the liquefaction of hydrogen. It has, however, interested me sufficiently to make me look up my notes of Professor Dunstan's lectures, when he was Lecturer at the Society's School. I find, under date October 16, 1895, the following :—"Liquefaction of H. a very late (recent) discovery, 1895. By the method of putting pressure on H. when cooled to a very low temperature, Polish chemist cooled air to – 232° C., about the lowest yet recorded. H. (was) cooled to this, and putting about 20 atmospheric pressures H. was reduced to a mobile liquid." The name of the Polish chemist I was afterwards given as Olszewski. The note is also interesting, I think, as showing that the Society's students are kept fairly abreast of the times.

Ealing, May 31, 1898. A. E. Gair.

*** Several years ago it was stated that Pictet had condensed hydrogen to a "steel-blue liquid," later that Wroblewski had obtained it in the form of a "grey foam-like mass," and later still that Olszewski had compressed it into a "colourless transparent liquid." But statements are not always to be accepted as proofs, and even up-to-date lecturers may err in accepting them as such. [Ed., *P. J.*]

Alcohol-Conversion Rules.

Sir,—Although some excellent alcohol-conversion tables have recently appeared in the columns of the Journal, no generally applicable rules for diluting strong alcohol have yet been given. I give below, therefore, a set of rules condensed from various sources which give all the information the practical pharmacist is likely to need.

Rules for making alcohol of any required lower percentage, from alcohol of any given higher percentage.

I. *By Volume.*

Let the volume percentage of the stronger alcohol be V.

,, ,, ,, ,, weaker ,, ,, v.

Rule.—Mix v volumes of the stronger alcohol with sufficient water to produce V volumes of product. Allow the mixture to cool to 60° F., then make up any deficiency with water.

Example.—An alcohol of 30 per cent. by volume is to be made from alcohol of 90 per cent. by volume. Take 30 volumes of the 90 per cent. alcohol and dilute with water to 90 volumes.

II. *By Weight.*

Let the weight percentage of the stronger alcohol be W.

,, ,, ,, ,, weaker ,, ,, w.

Rule.—Mix w parts by weight of the stronger alcohol with sufficient water to produce W parts by weight of product.

Example.—An alcohol of 50 per cent. by weight is to be made from alcohol of 90 per cent. by weight. Take 50 parts by weight of the 90 per cent. alcohol, and add enough water to produce 90 parts by weight.

Rule for making any required quantity of alcohol, of any percentage by volume, from any stronger alcohol.

Rule.—As the percentage of the alcohol given is to that of the alcohol required, so is the quantity desired to the quantity of strong alcohol to be taken; to this quantity of strong alcohol must be added sufficient water to make up the required quantity.

Example.—It is desired to make 80 fluid ounces of 75 per cent. alcohol from that of 90 per cent. As 90 : 75 :: 80 : 66⅔. That is, 66⅔ fluid ounces of 90 per cent. alcohol are to be diluted to 80 fluid ounces with distilled water. This rule makes no allowance for any subsequent contraction, and a mixture after being made should be allowed to cool to 60° F., when the volume must be finally adjusted by the addition of water.

Rule for converting percentage of alcohol by volume into percentage of alcohol by weight.

Rule.—Divide ·79367 by the specific gravity, and multiply the quotient by the percentage by volume. Thus, alcohol of 57·3 per cent. by volume has a sp. gr. of ·920, and ·79367 ÷ ·920 × 57·3 = 49·5, the percentage by weight.

Rule for converting percentage of alcohol by weight into percentage of alcohol by volume.

Rule.—Multiply the percentage by weight by the specific gravity and divide by ·79367. Thus, alcohol of 49·5 per cent. by weight has a sp. gr. of ·920, and 49·5 × ·920 ÷ ·79367 = 57 3, the percentage by volume.

Rule for converting percentage of alcohol by volume into percentage of proof spirit.

Rule.—Multiply the percentage of alcohol by volume by 1·7525. Thus, rectified spirit B.P. 90 per cent. by volume = 157·725 per cent. of proof spirit (equivalent to nearly 58° over proof) (90 × 1·7525 = 157·725). Conversely, percentage proof spirit may be converted into percentage of alcohol by volume by dividing the former by 1·7525.

Note.—It will be remembered that the legal temperature for voluming alcohol is fixed at 51° F., the spirit not being valued according to the percentage of alcohol it contains, but according to the amount of proof spirit. This last is defined by the Act 58, George III., as being such as shall weigh exactly 12/13ths of an equal measure of distilled water.

London, May 23, 1898. E. W. LUCAS.

ANSWERS TO QUERIES.

NEW B.P.—The book is published by Spottiswoode and Co., Gracechurch Street, London, E.C., price 10*s.* 6*d.* It can be got through any bookseller. [*Reply to* A. H. P.—11/7.]

TEXT-BOOK OF BOTANY.—Dr. Porter's translation of the text-book of botany, by Strasburger, Noll, Schenck, and Schimper, is, we understand, published by Macmillan and Co, Limited, but we are unable to say anything about the book as yet, not having seen it. [*Reply to* Student.—134/45.]

B.P. AQUÆ.—1. The use of medicated waters prepared by trituration with calcium phosphate is permitted "in India and other tropical countries," but in Hampstead you are supposed to distil the preparations. 2. Why not use the article that is ordered? The commercial powder ought, of course, to be purified before use. [*Reply to* T. G. W.—11/1.]

TO LOOSEN FAST STOPPERS.—The best way to loosen these is to allow a thin stream of hot water to run over the neck of the bottle, for instance, from the kitchen boiler, or an exhaust steam pipe, rapidly and gently tapping the bottle meanwhile. In this way we have removed the most refractory stoppers. Another plan is to make two loops of thick string round the neck, and having fastened each end of the string securely, move the bottle briskly up and down so that the neck becomes hot from the friction, then tap as before. The selection of solvents necessarily depends upon the nature of the contents of the bottle. For alkalis strong hydrochloric acid will do; for resinous matter benzol or chloroform acts best. [*Reply to* W. H.—10/32.]

BOTANICAL.—Your specimens are *Salix cinerea* and *Pedicularis sylvatica*. [*Reply to* J. F. W.—11/3.]

CONCENTRATED TONING BATH.—If there is a deposit of metallic gold, it shows the presence of an impurity of some kind. Distilled water must of course be used. [*Reply to* J. C. W.—11/12.]

BLACKING PLATE CARRIERS.—The best way to black plate carriers is to use a dead black varnish, such as may be made by rubbing up lampblack with a little gold size and turpentine. [*Reply to* FEROX.—11/13.]

COMPOSITION OF MANGE LOTION.—This appears to be a mixture of boiled linseed oil with a very little creosote, as far as we have been able to examine it in the limited time at our disposal. It contains no sperm oil as you state. [*Reply to* A. D.—10/20]

SOLUBLE LEMON FLAVOUR FOR BEVERAGES.—Fresh lemon peel cut in shreds, 20 ounces; alcohol, 90 per cent., 30 fluid ounces; terpeneless lemon oil, 1 drachm. Macerate together for fourteen days, strain, press and filter through a little powdered pumice stone. [*Reply to* H. M. M.—10/31.]

STANDARDISING B.P. PREPARATIONS.—We are not quite clear what information you require. The Pharmacopœia formulæ are specially devised in the interests of those who make small quantities, and the instructions given seem sufficiently definite and practical in most cases. [*Reply to* J. J. A.—10/22.]

SOURCE OF COMMERCIAL SUGAR.—We do not know the source of the brand of sugar you name; probably it is cane sugar and not beet sugar. But that is immaterial; if it answers to the official description and tests, it must be practically pure sucrose, whatever may be its botanical source. [*Reply to* M. P. S.—11/4.]

COMPOUND TINCTURE OF RHUBARB.—Your formula is, of course, very different from the official one, and it would not be safe to sell the preparation under the name you apply to it now that the name is that given in the B. P. 1898, which is now in force. With regard to the sale you refer to, you can only await events. [*Reply to* X. Y. Z.—11/9.]

SULPHATES OR SULPHITES.—The formula in question is perfectly correct. It must not be considered in connection with any formula for negative developers where the sulphites are used as oxygen absorbents but being for papers and not a developer, the higher salt must be used in each case. The writer of the article has used the formula exactly as written, and you may rely upon it thoroughly, provided always that a careful account be kept of the amount of paper toned in one bath, or else, when the gold is used up, "toning" goes on apparently as usual, but in reality is not gold toning at all. [*Reply to* J. I.—11/5.]

BOOKS ON BOTANY.—A popular work on the fertilisation of plants which is well worth reading is 'The Sagacity and Morality of Plants,' by J. E. Taylor, published by Chatto and Windus, price 7*s.* 6*d.* The standard work on the subject is D'Arcy Thompson's translation of Müller's 'Fertilisation of Flowers,' published by Macmillan and Co. Then there are Darwin's two classical works, 'Cross and Self Fertilisation of Plants' and 'Fertilisation of Orchids,' both published by John Murray. No, the works of Van Teighem have not been translated into English. Yes, 'Strasburger' has been excellently translated by Professor Hillhouse, and is a standard work for English students. It is published by Macmillan. [*Reply to* BOTANICAL.—11/18.]

OBITUARY.

BRADDOCK.—On May 28, George Braddock, Chemist and Druggist, Oldham. Aged 52.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Barrett, Baylis, Brown, Butterfield, Cummings, Eccles, Elsdon, Gadd, Gamble, Gifford, Hill, Hoit, Howie, Holloway, Jones, Keeley, Lunan, McKnight, Miller, Neville, Nightingale, Penistan, Sage, Spencer, Taylor, Vizer, Wiggin, Wright.

Pharmacy and the Allied Sciences.

A REVIEW OF CURRENT WORK.

Lead and Potassium Iodide.

F. C. H. Brooks has recently examined a double iodide of lead and potassium, $PbI_2,2KI$, which was discovered about a year ago and possesses the remarkable property of being decomposed by water, with the formation of lead iodide and potassium iodide, thus :—

$$PbI_2,2KI = PbI_2 + 2KI.$$

This peculiar property makes the double salt a most delicate test for water, the action of which appears to be catalytic. To prepare the compound dissolve 1 Gm. of lead nitrate in 10 C.c. of distilled water, add a saturated solution of potassium iodide until the precipitate is just dissolved, and on allowing the solution to stand for a few minutes a copious crystalline precipitate of the double iodide falls. Wash the almost white, silky, acicular crystals with a little absolute alcohol to remove any excess of potassium iodide, and preserve in a stoppered bottle over calcium chloride. Exposure to the air of a room for a few minutes causes decomposition, a distinctly yellow colour then making its appearance. The salt is very slightly soluble in boiling chloroform, but is easily dissolved by a strong solution of potassium iodide without decomposition.—*Chem. News*, lxxvii., 191.

Proteids of the Pea and Lentil.

T. B. Osborne and G. F. Campbell publish further information respecting the proteids of the pea. They find that the legumin of that seed, as formerly described by them, was contaminated with more or less vicilin, and that when the latter is completely separated, the legumin is identical in composition and reactions with that of the vetch. The pea is now shown to contain legumin, a globulin not coagulated by heating its solutions ; vicilin, a globulin soluble in a more dilute brine than legumin and coagulated on heating its solutions to 95° to 100° ; legumelin, a proteid partially precipitated by dialysis ; a proto-proteose and a deuteroproteose. The combined amounts of legumin and vicilin extracted was about 10 per cent., whilst the amount of legumelin obtained was slightly more than 2 per cent. The lentil was found to contain the same proteids as the pea.—*Journ. Am. Chem. Soc.*, xx., 348.

Cathodic and Röntgen Rays.

Papers on kathodic rays, Röntgen rays, and electro-dispersion are very plentiful at present. Professor Battelli and Dr. Garbasso have examined more closely the action of kathodic rays on insulated conductors with the view of testing the existence of indeformable rays in the interior of the Crookes' tube, and their results agree with the hypothesis that the different modes of action of kathodic and Röntgen rays depend on the different conditions of the medium in which the conductor is placed. P. de Heen, in a paper on the electro-dispersive power of air modified by a Bunsen burner, publishes results which indicate the existence of a special kind of energy, to which he applies the name "infra-electric," and in a second paper he describes experiments dealing with the propagation of what he calls "anti-electric" energy behind shadows, but it is not clear what is the distinction between the terms "infra-electric" and "anti-electric." Drs. R. Malazoli and C. Bonacini, writing on the diffusion of Röntgen rays, state that the two electrodes contemporaneously emit "ortho-kathodic" rays, but that which communicates with the negative pole of the excitor develops them the more intensely. They also find that, at a certain stage of rarefaction, two cones of radiation seem to start from the electrodes, carrying opposite charges, both being displaced by magnets subject to the same laws. The violet anodic light, like the ortho-kathodic rays, is intensely affected by magnetic action, but it follows the opposite law, behaving like an electric current from the anode to the anti-anode. M. Villard is of opinion that the action of kathodic rays in reducing crystals, silicates, copper oxides, etc., suggests that those rays are formed of molecules of hydrogen due to traces of moisture left in the tube.—*Nature*, lvii , 544.

Staining Tubercle Bacillus.

According to Dr. G. Sims Woodhead, the following is one of the best methods of staining the tubercle bacillus :—The small, yellow, caseous-looking points from a sputum rich in the bacilli are spread out by pressure between two cover-glasses, so that a fairly thin film remains on each when they are carefully slipped one over the other until they come apart. Thoroughly dry the covers, protecting them carefully from dust, pass rapidly three times through the flame of a spirit-lamp, care being taken not to scorch the film, then float film-face downwards, on the staining solution, which has previously been filtered into a watch-glass. The stain should consist of saturated alcoholic solution of basic fuchsine, 1 part; absolute alcohol or rectified spirit, 10 parts carbolic acid solution (5 p. c.), 10 parts. Leave the preparations in the watch-glass for 12 to 24 hours, unless time is an object. In the latter case heat the fluid gently until vapour is given off, then drop the films on the surface, and leave them for 3 to 5 minutes only. Next transfer the covers to an aqueous solution of sulphuric acid (25 p. c.), and when decolorisation is complete, as evidenced by the pink coloration not returning when the specimens are plunged into a bowl of tap-water containing a single drop of ammonia solution, thoroughly rinse in the slightly alkaline water and counter-stain in an aqueous solution of methylene blue. Finally, wash in water, carefully dry and mount in Canada balsam. The bacilli should stand out as bright red rods on a blue background of cells, etc.—*Practitioner*, lx., 590.

Miersite.

L. J. Spencer describes a cubic modification of native silver iodide—miersite—the existence of which proves that silver iodide is trimorphous. Whilst the new mineral is cubic, tetrahedral and isotropic, iodyrite is hexagonal, hemimorphic and optically uniaxial, and iodobromite, the third modification, is cubic, holohedral and optically anomalous.—*Nature*, lvii., 574.

Dialysis in Photography.

A. Haddon has studied the passage of certain salts used in photography through gelatin septa. He finds that sodium hyposulphite dialyses more rapidly through a septum tanned with oxidised pyrogallic acid than through plain gelatin, and that gelatin hardened with chrome alum allows least salt to pass through. Potassium bromide passes at the same rate, whatever the state of the gelatin ; sodium carbonate resembles the hyposulphite in its action ; sodium sulphite passes most rapidly through plain gelatin, and least through that treated with chrome alum ; mercuric chloride resembles sodium hyposulphite ; and pyrogallic acid passes most rapidly through gelatin hardened with chrome alum, plain gelatin coming next in order.—*Photo. Journal*, xxii., 224.

Softening Bones.

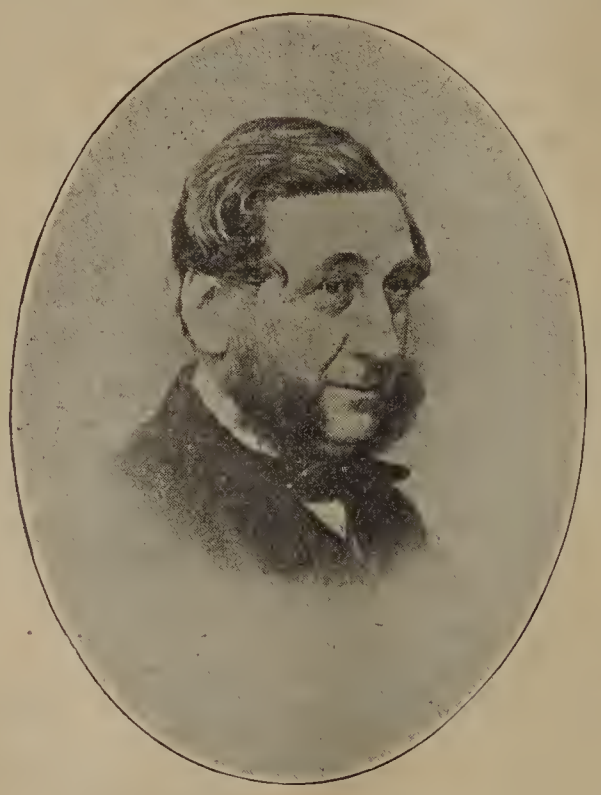
J. J. Andeer finds that an aqueous solution of phloroglucin acts as a powerful decalcifying agent on the bones of animals, but is without action on the most delicate organic tissue. If treatment with hydrochloric acid be employed as well, the residual "ossein" will be without a trace of either calcium phosphate or carbonate.—*Comptes Rendus*, cxxvi., 1295.

THE PHARMACEUTICAL SOCIETY AND ITS PRESIDENTS.

GEORGE WEBB SANDFORD.—1863-69, 1870-71,* AND 1879-80.

THIS eminent pharmacist was the direct political successor to Jacob Bell, but, though he was a member of the Council when Bell died in 1859, he was not elected to the presidential chair until four years later, and beyond being an almost constant attendant at the Council meetings, he took no prominent part in pharmaceutical affairs until that time. His work was chiefly political, and his only contributions relating to the practice of pharmacy being a paper on the process of displacement, read at an evening meeting of the Society in December, 1860, and a note in 1862 on the characters of lithium citrate as a suitable salt for medicinal purposes.

Mr. Sandford was a man endowed with much strength of will and indomitable perseverance, and he was born to be a leader of men. He had eminently a judicial habit of mind, and was singularly clear in his judgment, so that he was consulted on all sides and on every manner of subject. Had circumstances called him to public life, he would infallibly have made his mark. His fine presence commanded respect, the impression thus created being aided by a ready utterance and an engaging manner. Jocularly he was called the Member for Bloomsbury, and he was singularly successful in his interviews with exalted official persons. He may be regarded as the central figure of the contest between the purely trade element of pharmacy and its more professional tendencies as represented by the Society, which preceded the passing of the Pharmacy Act, 1868. Born in 1813, his connection with the business of pharmacy commenced about the period when chemists and druggists were becoming generally recognised as retailers and dispensers of medicine, taking in that respect the position formerly occupied by apothecaries before they had been authorised by the Act of 1815 to practise medicine. About the same period the first attempts to establish organisation among chemists and druggists were being made and the desirability of regulating the sale of poisonous drugs was also attracting attention with the public and the Legislature. About the year 1827, Sandford was apprenticed to a Mr. Sadler, who carried on the business of a chemist and druggist at North Walsham, a small market town in Norfolk. After completing his term of apprenticeship, Sandford came to London in 1832, and called first on Alexander Blake, of Piccadilly, who considered him too young (19); but not succeeding elsewhere in gaining a situation, he arranged to be taken on trial by Mr. Blake for six months. That probationary engagement developed into a more permanent connection extending over sixty years, and for nearly fifty years Sandford was in partnership with three generations of the Blake family.



GEORGE WEBB SANDFORD.

Shortly after the formation of the Pharmaceutical Society, of which Alexander Blake was a founder, Sandford became an associate, his name appearing in the list of associates published in 1842, and in the supplementary list published in March, 1846, his name appears among the members of the Society. In 1853 and 1854 he was elected a member of the Council, and again in 1857, continuing to hold that position until 1881, when he retired.

On the death of Jacob Bell in 1859, immediately after the commencement of the fourth year of his presidency, his immediate successor in that office was Thomas N. R. Morson, who continued to occupy the chair for two years with Peter Squire, as Vice-President. After the Council had duly recorded its grateful sense of the invaluable services rendered by the deceased leader to the Society and of the total self-abnegation in which those services were ever given, a committee was appointed to take the requisite steps to form a Capital Fund, out of which one or more scholarships, bearing the name of Jacob Bell, might be established, and Sandford was elected a member of it. At the same meeting intimation was received of the fact that the sum of two thousand pounds had been bequeathed to the Society by Bell, with directions that it was to be extended in increasing the efficiency of the School of Pharmacy or in otherwise promoting pharmaceutical education. It was decided that the best means of giving effect to the testator's desires would be to provide a new and larger laboratory, and in accordance with that view, plans were prepared for extensive alterations of the Society's premises, and the existing laboratory was erected and fitted at the top of the house in Bloomsbury Square. The *Pharmaceutical Journal* had already become the property of the Society, the copyright of the publication having been transferred by its orginal proprietor and editor shortly before his death, and arrangements were made, in accordance with which the editorial dutics were divided into three parts. Professor Redwood taking charge of the department of chemistry and pharmacy, whilst Professor Bentley edited communications dealing with botany and materia medica, and John Barnard those treating of matters of commerce. The world of pharmacy being disturbed by no contentious matters or internal discords, whilst outside attempts at legislative interference with the craft were for the time being non-existent, the work of the Society was carried on quietly until the expiration of Mr. Morson's third term of office as President in 1861.

From 1861 to 1863 Peter Squire, another past President, followed Morson in the chair, with Sandford as Vice-President. His term of office was rather more eventful than that of his predecessor, for the latent spirit of opposition to the Pharmaceutical Society once more became active in an organisation of dissatisfied opponents, and again became a source of trouble.

* Resigned, April 5, 1871, during his term of office.

The United Society of Chemists and Druggists was formed in 1860 with a variety of objects, more or less identical with those of the Pharmaceutical Society. At first, however, such competition as existed was beneficial rather than otherwise to the Pharmaceutical Society, as it stimulated those at the head of affairs to more active exertions, and caused them to consider whether all their arrangements were the best possible. Meanwhile it was definitely decided that no further relaxation should be permitted in the rule which stipulated that examination should precede admission to membership of the Society. Amongst other incidents in Mr. Squire's later term of office was the appointment of a committee, including the whole of the Council of the Pharmaceutical Society, to make arrangements in connection with the International Exhibition of 1862, for the formation of a representative collection of drugs and pharmaceutical preparations. Much more important than this, however, was the exemption of pharmaceutical chemists from service on juries, which was secured in connection with the Juries Bill of 1862. The reason given in the House of Lords for not extending this privilege to all chemists and druggists was that they had no statutory qualification by which they could be distinguished as persons entitled to exemption.

The distinction, in regard to a coveted privilege, thus drawn between pharmaceutical chemists and other persons carrying on business as chemists and druggists was a practical demonstration that the advantage attaching to statutory pharmaceutical qualification was not merely the right to use a "fancy title." The medical press spoke of it as being, in the public interest, a useful recognition of chemists belonging to the organisation of the Pharmaceutical Society as distinguished from the "motley host of traders" exercising the calling of chemists and druggists outside that organisation. In that respect the exemption of pharmaceutical chemists from jury service was regarded as offering important encouragement to the educational efforts of the Society that might be expected to have the effect of widening its influence and raising the educational standard of druggists. Even the United Society, though at first vehemently denouncing the measure as an instance of "exclusive legislation," unjustly favouring a class interest, was so much impressed with the cogency of the argument in support of educational organisation, that shortly afterwards proposals were made by that body for obtaining an Act of incorporation, and, at the same time, to provide for education and examination as the only means by which chemists and druggists could obtain recognition. This adoption of the principles of the Pharmaceutical Society was in some degree satisfactory, though it placed the two societies in such a position of competition that one of them must necessarily be absorbed or superseded by the other, and it was under these conditions that Sandford became President. When elected in 1863, he entered at once on his political career. The two great objects he kept in view were the importance of associating the whole of the trade in one great corporate body, with compulsory registration by Statute and, secondly, the prevention of interference by any outside body.

In this latter object he was opposed in the first instance by the General Medical Council. At the suggestion of the Home Secretary that body had prepared a draft Bill which was to include the regulation of the practice of pharmacy. There was to be a general system of education and examination under the direction of the Medical Council, registration of all persons qualified to practise pharmacy, such qualified persons alone to have the right to dispense and compound prescriptions, or to keep open shop for that purpose. Inspectors were to be appointed by the Medical Council, whose duty should be to see that the provisions respecting pharmacy were duly carried out. The sale of all secret remedies was to be prohibited, and proprietary medicines were to have their composition stated by a sworn certificate.

The main principle of the proposed measure was quite in accordance with that on which the Pharmaceutical Society had endeavoured to establish a system of qualification that would afford at once security to the public and due protection to those engaged in the practice of pharmacy. It was, therefore, only the contemplated mode of applying that principle that could be opposed by the Council. The position was one of extreme difficulty, as it was obvious that self-government on the part of the Pharmaceutical Society would be at an end if the provisions of the Medical Act Amendment Bill were carried out. Further complication arose from the action of the United Society of Chemists and Druggists which had then become an antagonistic body, under the influence of a secretary who manipulated its proceedings. Many amongst the members of that Society were men of cultivation and high standing, but strenuous opponents of medical control and probably in many instances conscious of having unwisely declined to embrace the opportunity offered at the passing of the Pharmacy Act to secure a recognised position. The members of the United Society were not in favour of the proposed legislation any more than Mr. Sandford. Their leader, from whom subsequently they threw off allegiance, owed his position to a mellifluous mode of speech and to a retentive memory, by which he recollected in a surprising manner the names and persons of those whom he was supposed to introduce. His was the policy of attack, which crumbled when once mutual understanding was established, and though for a time he succeeded in promoting opposition to the Pharmaceutical Society he utterly failed to lessen the estimation in which the Society was held in influential quarters as being the most suitable body to carry out the regulation of the practice of pharmacy that was felt to be necessary.

Eventually the Medical Council was induced the following year to withdraw its Bill, and to suggest to the Home Secretary the importance of legislative enactment, which might ensure competence in persons keeping open shop for dispensing medicines and compounding prescriptions.

This was Sandford's chance, for the Pharmaceutical Society had been pointed out as being the proper body to take charge of education, examination, and registration for the future chemist and druggist; it was already in existence, and had moved in that direction. The Medical Council, the Colleges of Physicians of London and Edinburgh, were won over to allow the Society to draft a Bill, and at a special meeting of the members (1864) the Council was urged to make application to Parliament for further powers without delay.

In addressing the annual meeting at the close of the first year of his presidency, Sandford spoke of the Medical Council as being very willing to assist the Pharmaceutical Society in obtaining independent power to regulate the practice of pharmacy, and there is reason for believing that he had been usefully instrumental in promoting that disposition by impressing the members of the Medical Council with appreciation of the work done by the Society to advance pharmacy. Speaking on that occasion of the difficulty of having to satisfy the Medical Council on the one hand and on the other members of the trade who ought to have been co-operating with the Society in advancing a work that was really more for their benefit than that of the Society, he referred to the Society's Pharmacy Bill as offering an opportunity of raising the position of chemists and druggists as a class while adding to the general welfare and security of the public.

But the United Society, unhappily, drafted another Bill, so that rival proposals were submitted to the House of Com-

mons. The inevitable consequence ensued: Both Bills were referred to a Select Committee, and as the subject was of small interest to the House, it soon proved wearisome, and the Committee closed its sittings by recommending legislation on the sale of poisons only. The one remaining hope for a Pharmacy Bill was reconciliation between the two Societies. In effecting that Sandford was conspicuously successful. Interviews were arranged between the Council and the Executive of the United Society, to the great gain of both, and notwithstanding the persistent efforts of the secretary of the latter body, he was not permitted to frustrate that most desirable amalgamation. In view of the importance of the occasion, Mr. Sandford was unanimously requested to continue the onerous duties of President; and the Bill, of which this better understanding was the outcome, became law on July 31, 1868.

At the Conference meeting at Norwich, the supporters and former opponents of Mr. Sandford united to do him honour. A public testimonial was presented, and his portrait by J. P. Knight, R.A., is suspended in the Council Room of the Society. The passing of the Pharmacy Act, 1868, by no means ended Sandford's work; on the contrary, it drifted into a variety of detail which was the cause of much labour, sometimes of a vexatious character. Bye-laws had to be prepared, and poison regulations to be considered. These did not meet with approval when submitted to the Society at the annual meeting in 1870. A resolution embodying the same draft as "recommendations" only was passed at the following Annual Meeting, on which occasion Mr. Sandford resigned his office.

The Privy Council attempted to make the "recommendations" agreed to at the meeting regulations having the force of law by special legislation, but the Bill introduced was withdrawn. Sandford was re-elected President about ten years afterwards, but at the election in 1881, he decided not to accept nomination; accordingly he retired from the Council after twenty-four years of unceasing service. He died at Cromer in 1892, aged 80.

HALOGEN METABOLISM.

Under this heading F. Blum, in the *Münchener Medicinische Wochenschrift* of February 22 and March 1, 1898, discusses the nature and physiological relations of the active substance of the thyroid gland. Our knowledge of the subject began with Baumann's discovery of iodine in the normal thyroid. The same observer with Roos subsequently showed that the iodine of the gland exists in organic combination, constituting iodothyrin, the substance in which resides the active property of the thyroid.

1. THE NATURE OF THE IODINE-CONTAINING SUBSTANCES OF THE THYROID GLAND.—Blum holds that the accepted view that iodothyrin is the active substance of the gland must be modified, because extraction with hot alcohol gives only a trace of iodine, and that not as iodothyrin but as an albuminate. The residue insoluble in hot alcohol also yields an iodine-containing compound which differs from iodothyrin in containing a greater proportion of sulphur and a smaller proportion of iodine. This substance is an iodine-albuminate which, like alkali-albumin, is slightly soluble in hot alcohol. "Thus free iodothyrin is not present in the thyroid gland, nor is it set free by boiling with alcohol in a way comparable to the separation of lecithin from yolk of egg by ether; but on the contrary, alcohol extraction yields only an iodine-containing substance belonging to the albumins." Even extraction by water and subsequent coagulation by heat does not give iodothyrin, but an albuminate containing iodine. After long extraction with water the greater part of the iodine-containing substance passes into solution, and by heating this extract after addition of NaCl, a coagulum containing all the iodine in the form of albuminate is obtained. If this coagulum is treated with superheated steam an iodine albumin incoagulable by heat is obtained. To this substance Blum proposes to apply the term, "Thyrogen 'C.'" The importance of this substance consists in its solubility and its capability of being sterilised.

This incoagulable iodo-albumin, like other albumins, is capable of being converted into an insoluble body by the action of formalin (formaldehyde). For this insoluble body the term "Thyrogen f" is proposed.

These observations are in favour of the author's view, viz., that the iodine is present in chemical combination with an albumin and not merely as an association-body of iodothyrin and albumin. This finding is further corroborated by the following facts:—1. That the amount of iodothyrin obtainable from the iodo-albumin varies according to its mode of preparation. 2. That by treating synthetically-formed iodo-albumins with acids and alkalies or by submitting them to artificial digestion, bodies resembling iodothyrin can be obtained.

The amount of iodothyrin obtainable from sheep's thyroids by weak acids or alkalies varies greatly according to the time during which the action is continued. After long boiling with weak alkalies sheep's thyroids yielded between 8 to 9 per cent. of iodine, and from the residue no more iodine could be extracted. When the latter proportion had been obtained it was thought that because the proportion of iodine underwent no further change, the proportion of sulphur present varied at different periods of the preparation. By long heating with alkalies, a sulphur-free compound was obtained when the iodine amounted to 9 per cent. This, according to Blum, points to the conclusion that the sulphur and the iodine originally belong to the same molecule, but that the iodine is in more stable combination than the sulphur; that an iodine- and N-containing molecule, iodothyrin, forms the nucleus of a larger molecule. The latter, in the process of decomposition, yields NH_3, H_2S, and trimethylamine, as detected by smell. Blum's observation that in albuminous bodies I, Br, and Cl form substitution-products, in which the halogen group is in stable combination, has been confirmed by other observers.

II. THE ORIGIN OF THE IODO-ALBUMIN.—Blum found the amount of the iodo-albumin was increased in animals' thyroids by feeding on sheep's thyroids and also by administrations of KI. The additional iodine in the thyroid glands of animals thus fed was found to be in combination as iodo-albumin. The author concluded that in the thyroid gland the iodine-containing substances brought by the circulation were split up with the development of free iodine, which entered into combination with albuminous substances in the gland, resulting in the increase of iodo-albumin present.

3. THE FATE OF THE IODO-ALBUMIN IN THE ORGANISM.—In order to ascertain whether the iodine-containing substance of the thyroid undergoes katabolic change in other parts of the body, having estimated the amount of iodine in a sheep's thyroid at 1 Mg., the author fed dogs on sheep's thyroids, and found that he could recover from the urine nearly the whole of the iodine, by using ammoniated silver solution and applying heat. This mode of treatment does not affect iodothyrin, and hence it may be concluded that nearly the whole of the iodine-containing albumin of the thyroid substance taken as food had undergone destructive metabolism, resulting in the liberation of nascent I. The following considerations give a clue to the part of the body in which the chemical changes occur. It is not in the alimentary canal, for neither peptic nor tryptic digestion cause decomposition of iodothyrin. Again, since in animals that have been deprived of their thyroid glands, the administration of iodo-albumin by the mouth causes iodine salts to appear in the urine, the destructive metabolism cannot be solely attributed to the thyroid, but since in animals that have been given KI with their food traces of albumins containing iodine are found in various tissues, such as the muscles and the spleen, it would appear probable that destructive metabolism of iodo-albumin may be executed in any part of the body where oxidation processes are in progress.

4. IS THERE AN IODINE METABOLISM IN THE BODY IN NORMAL CONDITIONS, *i.e.*, apart from the artificial administration of iodine? Blum considers that his investigations warrant the conclusion that an iodine metabolism does occur, and that its chief seat is in the thyroid gland which elaborates iodo-albumin. The latter is redistributed to the tissues by the blood-stream. In the body generally, iodine metabolism is observed only after artificial administration of iodine. It is different with the thyroid gland. This organ seizes on the traces of iodine-containing substances present in the circulation in normal conditions; elaborates them into its own peculiar iodo-albumin, and for a long period of time holds a stock of iodine established, and thus exercises its action upon the tissues of the body generally.

DETECTION OF ARACHIS OIL IN OLIVE OIL.—For this purpose Blarez suggests the saponification of 1 C.c. of the suspected oil with 15 C.c. of 5 per cent. alcoholic potash. Since earthnut oil gives a hard potash soap, whilst olive oil soap is liquid without a trace of crystals, the amount of arachis oil can be approximately determined from the consistence of the resulting soap. In this way an admixture of 5 per cent. of arachis oil with olive oil is shown by the separation after 3 to 4 days of a few crystals, which liquefy above 10° C.—*Répertoire*, 1897, 446, through *Pharm. Centralh.*, xxxix., 32.

NOTES ON MICROSCOPY.

Cleaning Cover Glasses.—Braun recommends the following process for cleaning microscopical covers. Collect the cover glasses to which cedar oil adheres, in a glass containing methylated alcohol. Pour off the alcohol, wash with benzene, boil for about half an hour with soda solution, stirring with a platinum needle. When rinsing, rub the glasses with the hands to remove any adhering matter. Then place them for twenty-four hours into acetic acid, and finally into 96 per cent. spirit. Rub dry with a piece of soft leather, and pass through a flame.—*Ph. Ztg.*, xlii., 762.

Preserving Media for Biological Preparations. — The following fluids are recommended by Amann for preserving biological specimens:—*Lactophenol*: Carbolic acid, 20; lactic acid, 20; glycerin, 40; distilled water, 20 parts. Recommended for fronds of mosses, hepaticæ, fungi, and algæ. *Lactophenol copper solution:* Crystallised chloride of copper, 0·2 part; crystallised acetate of copper, 0·2 part; distilled water, 95·0 parts; lactophenol, 5·0 parts. For preserving chlorophyll, recommended for Demidiaceæ, Palmadaceæ, Confervæ, etc. *Concentrated lactophenol copper solution:* Crystallised copper chloride, 2·0 parts; crystallised copper acetate; 2·0 parts; lactophenol, 95·0 parts; water containing algæ is mixed with 10 per cent. of the above solution. The whole material is preserved thereby for a long time. *Lactophenol glycerin jelly:* White gelatin, 85; distilled water, 44; glycerin, 30; dissolve by heating on the water bath, filter and mix with 10 parts of lactophenol. *Lactophenol copper glycerin jelly:* Prepared as above with the substitution of 10 parts of lactophenol copper for lactophenol. Phyocyanin and chlorophyll retain their colour excellently in this medium. *Lactophenol gum:* A strong solution of gum arabic in water 1, glucose 2, and lactophenol. For preparing mosses for the herbarium. *Potassium mercuric iodide glycerin:* The author states that the salt dissolved in concentrated anhydrous glycerin gives a mounting medium of 1·78 to 1·80 refraction index. He recommends the mixture for Diatomaceæ. The preparations are ringed on with amber or dammar varnish mixed with 2 per cent. of boiled linseed oil.—*Pharm. Centr.*, xxxviii., 544.

Reagents for the Microscopical Examination of Food.—Van Bastellar finds the following reagents useful for the microscopic examination of foods:—(1) Chloral hydrate, 5; distilled water, 3. This is an excellent clearing medium, and shows the structure of various cells, such as beet in chicory, and chicory in coffee, also renders detection of inorganic matter mixed with starches more rapid. (2) Aniline, 1; acetic acid, 10. Gives a bright yellow tint with schlerenchyma and woody tissue, detects powdered nut shells, olive stones, etc., in pepper. (3) Acetic acid, 1; water, 2. Gives a violet tint with fragments of tissues of *Melampyrum* seeds in flour. (4) Potassium iodide, 1; iodine, 1; water, 50. Renders starch distinct by colouring the granules blue and therefore making the size and shape more evident for their identification. (5) Potash, 1; water, 100. Causes certain grains of starch to swell, and thus distinguishes them from others which are more resistant. Also gives a reddish tint with turmeric and a violet colour to ergoted particles in flour. (6) Methyl violet, 1; water, 300. Stains starch granules. (7) Tincture of logwood (1 in 15), 4; sodium chloride, 1. Detects presence of alum in bread, flour, etc. (8) Sulphuric acid, 1; water, 20. Gives effervesence in presence of carbonates or bicarbonates, thus detects such mixtures as chalk in flour. Also gives a blood-red tint to ergoted flour. (9) Eosine, 1; solution of ammonia, 10. Stains altered yeast cells and bacilli. (10) Hæmatoxylin, 1; water, 25; alcohol, 25; sodium chloride, 5. Resembles No. 7 in action. (11) Solution of ferric chloride, 1; water, 5; blackens acorn tissues, also those of leguminous seeds. Gives a greenish tint to powdered date stones and other adulterants in pepper. (12) Copper sulphate, 1; water, 20; ammonia *q.s.* to give a clear blue solution. Gives a dirty greenish blue with some foreign admixtures with rice. (13) Ferrocyanide of potassium, 1; water, 100. Gives a reddish tint with flour or other substances contaminated with copper salts. (14) Fuchsine, 1; alcohol, 100; stains various tissues, notably those of pepper. (15) Chlor-iodide of zinc, 1; water, 50 Reacts like potassium iodide. (16) Solution of ammonia, 1; water, 20. Acts like No. 5, and gives blue tint with copper.—*Journ. de Pharm.* [6], vi., 228.

PHARMACEUTICAL SOCIETY.

MEETING OF THE COUNCIL.

WEDNESDAY, JUNE 8, 1898.

Present:

Messrs. Allen, Atkins, Bateson, Bottle, Carteighe, Corder, Cross, Grose, Hampson, Harrison, Hills, Johnston, Martindale, Newsholme, Park, Savory, Southall, Storrar, Symes, Warren, and Young were present, and the chair was taken by Mr. Walter Hills.

The minutes of the last monthly meeting and of the special meeting on May 18 were read and confirmed.

Mr. Hills said that in connection with the minutes he had to report that letters had been received from Dr. Leach, Professor Ramsay, and Professor Remson, expressing their gratification at being elected Honorary Members of the Society.

The Late Lord Playfair.

The Chairman said that, before passing to the agenda, he wished to call attention to the fact that they had lost another of their distinguished Honorary Members in the person of the late Lord Playfair, who died on May 29. Lord Playfair was elected an Honorary Member of the Society in 1889, having been proposed by Mr. Daniel Frazer, a former member of the Council. Lord Playfair expressed on several occasions his interest in the work of the Society, and it was interesting to call to mind that he had undertaken at the Jubilee Dinner, in 1891, the charge of the toast of the Pharmaceutical Society. He mentioned then that he claimed to have a very early connection with the Society, that he had been connected with pharmacy, for he had attended a six months' course of lectures some fifty years previously under Pereira, and that he had served something like six months in a chemist and druggist's shop in Glasgow. Lord Playfair spoke of his experience in a chemist's shop as having been of inestimable benefit to him in after life. As they all knew, Lord Playfair was a very prominent man in the political world. He was a member of the Cabinet at one time, a Privy Councillor, Vice-President of the Council in 1886, and also Lord in Waiting to Her Majesty. He was a chemist to the Museum of Practical Geology, Professor of Chemistry at the University of Edinburgh, Founder of the Chemical Society, and he was an associate of the celebrated John Dalton. He was a distinguished politician, an educationalist, and a scientist, and was one of those men of whom all Britishers might well be proud.

Election of President.

The ballot having been taken in the usual way Mr. Walter Hills was unanimously re-elected President.

Mr. Hills said it was very pleasant to him to be once more elected to that honourable position with such unanimity, and he thanked his colleagues for this renewed expression of their confidence in him. He could only say, as he did two years ago, that relying on their kind help, which had never failed him hitherto, he would do what he could for the advancement of their common interests.

Election of Vice-President.

On a ballot being taken Mr. Newsholme was unanimously re-elected Vice-President.

Mr. Newsholme said he was exceedingly obliged to the Council for this mark of confidence. He felt it a great honour to occupy that position, and he appreciated it all the more that he should be associated for another year with Mr. Hills as President. His work during the past year had been very light, thanks to the President, and it must be very gratifying to every one to see that his services were so much appreciated, as indicated by his re-election at the head of the poll.

Election of Treasurer.

On a further ballot being taken, Mr. Robert Hampson was unanimously re-elected Treasurer.

Mr. Hampson, in returning thanks for his re-election, said he hoped that his duties would be more onerous than ever during the coming year; owing to larger funds coming into his possession as Treasurer of the Society.

STANDING ORDERS.

The Standing Orders of the Council were re-enacted for the ensuing year.

REAPPOINTMENT OF OFFICERS.

Mr. Richard Bremridge was reappointed Secretary and Registrar for the ensuing year. Dr. B. H. Paul was reappointed Editor, and Mr. John Humphrey, Sub-editor of the Journal. Mr. E. M. Holmes was reappointed Curator of the Society's Museum, and Mr. J. Rutherford Hill was reappointed Assistant-Secretary in Scotland.

EXAMINERS FOR THE COUNCIL PRIZES AND SCHOLARSHIPS.

It was decided that Messrs. Harvey Gibson, McLeod, and E. H. Farr should be requested to conduct the examination for the Council Prizes Competition in July next. It was also agreed that Messrs. Phillips, Saul, and Pinches should be requested to conduct the examinations for the Jacob Bell Memorial and Manchester Scholarships.

ELECTION OF MEMBER.

Pharmaceutical Chemist.

Percy Davies, of Penistone, having passed the Major examination and tendered his subscription for the current year, was elected a "Member" of the Society.

ELECTION OF ASSOCIATES IN BUSINESS.

The following, having passed the Minor examination, being in business on their own account, and having tendered their subscriptions for the current year, were elected "Associates in Business" of the Society:—

Beckwith, John Batty; Liverpool
Brooks, Albert Henry; Margate
Cornfoot, Thomas Boots; Herne Bay
Eaton, Robert; Manchester
Jago, Charles Albert; Chertsey
Jones, Richard Robinson; Amlwch
Knights, George Ekins; Swaffham
Petrie, James; Blairgowrie
Rowell, Thomas Bell; Haydon Bridge
Shakerley, William Arthur; Clapham
Whittle, James; Morpeth

ELECTION OF ASSOCIATES.

The following, having passed the Minor examination and tendered, or paid as "Students," their subscriptions for the current year, were elected "Associates" of the Society:—

Brigham, J. George; Thornton Watlass
Checketts, Mary; Leamington
Clunas, John; Nairn
Callwick, John Henry; Birmingham
Emsley, Robert Burns; Southport
Field, George Rogers; West Bromwich
Ludlam, William Henry; Sheffield
Phillips, Ivor Regina'd; Abergavenny
Ritchie, David French; Southsea
Rollin, Arthur Stanley; Durham
Rowan, William; Creetown
Smith, Harry; Huddersfield
Whitehead, Thomas; Northallerton

ELECTION OF STUDENTS.

The following, having passed the First examination and tendered their subscriptions for the current year, were elected "Students" of the Society:—

Akhurst, Arthur Alfred J.; Brixton
Barker, Frank Horace; Northampton
Bennett, Oswald Edward; Bristol
Booth, John; Huntly
Boulton, Jesse; Kidsgrove
Brisby, Thomas Edmund; Pickering
Cable, Alice Mildred; London
Cuthbert, Thomas H.; Lancaster
Daft, George; Southwell
Doughton, Samuel Davies; Aberystwith
Duncan, Samuel Claudius; Liverpool
Dunkerton, Edward Bernard; Lincoln
Fann, Charles Montague; Grimsby
Flew, William Norman; Bradford
Forster, Edward Maver; Alnwick
Grayshon, Harry; Leeds
Hanbury, F. Capel; Upper Clapton
Hirst, Benjamin A.; Ilkley
Holmes, John William; Kensington
Holroyd, Asa; Queensbury
Horton, Albert John: Maidstone
Horton, Alexander H.; Birmingham
Hughes, Thomas Kiernan; Corwen
Izdebski, Stanislas; Ross-on-Wye
Jack, Robert Martin; Lochgilphead
Jenkins, Henry Watkins; Brecon
Jones, Frederick James; Runcorn
Jones, John Richard; Rhyl
McKee, Isaac; Glasgow
McPhail, John; Newcastle-on-Tyne
Maidment, Harold Harding; Faringdon
Marsden, Joseph; Manchester
Moffatt, William; Barnard Castle
Nowell, John Percy L. D.; Paignton
Pattison, George; Darlington
Pettifer, Frank; Leighton Buzzard
Peverett, Stephen Walker; Wisbech
Priest, William; Huddersfield
Prime, William Arthur; Birmingham
Raywood, Vaughan Rycroft; Harrogate
Sayle, Ernest Edward; Huntingdon
Scott, Charles; Falkirk
Searle, Frederick William; Plymouth
Shorthouse, Ronald Gordon; Bilston
Smith, Alfred; London
Stocks, Alfred Booth; Queensbury
Stone, George; Llanelly
Urwin, Albert; South Shields
Webb, James Thomas; Dukinfield
Wilson, Frank; Barnard Castle

RESTORATIONS TO THE REGISTER.

The names of the following persons, who have severally made the required declarations and paid a fine of one guinea, were restored to the Register of Chemists and Druggists:—

Charles Grayson, East Hartlepool.
Charles Lemon Seely, 7, Victoria Parade, East Finchley, N.
Charles William Davis Stevens, 71, East Hill, Wandsworth, S.W.

Several persons were restored to their former status in the Society upon payment of the current year's subscription and a nominal restoration fee of one shilling.

APPOINTMENT OF COMMITTEES.

The Council went into Committee to consider the arrangement of the different Committees, as the result of which the following appointments were made:—

General Purposes.—The whole Council, to meet on the evening before the meeting of the Council, and at such other times as may be necessary.

Finance.—The President (Mr. Hills), Vice-President (Mr. Newsholme), and Messrs. Allen, Carteighe, Grose, Hampson, Martindale, Park, Savory, Storrar, and Warren.

Benevolent Fund.—The President (Mr. Hills), Vice-President (Mr. Newsholme), and Messrs. Atkins, Bateson, Bottle, Corder, Cross, Harrison, Johnston, Southall, Symes, and Young.

Library, Museum, School and House.—The President (Mr. Hills), Vice-President (Mr. Newsholme), and Messrs. Allen, Atkins, Bottle, Carteighe, Hampson, Harrison, Martindale, Savory, and Warren.

Law and Parliamentary.—The President (Mr. Hills), Vice-President (Mr. Newsholme), and Messrs. Allen, Atkins, Bottle, Carteighe, Cross, Hampson, Harrison, Johnston, Martindale, Park, Savory, Southall, Storrar, Symes, Warren, and Young.

Standing Committee to watch Parliamentary Business, and take action thereon in the interests of Chemists and Druggists.—The President (Mr. Hills), Vice-President (Mr. Newsholme), and Messrs. Allen, Carteighe, Martindale, Savory, and Warren.

Research.—The President (Mr. Hills), Vice-President (Mr. Newsholme), and the members of the Library, Museum, School, and House Committee.

Evening Meetings.—The Staff of the Society's School, the Editor, and the Curator were appointed to assist the President and Vice-President in making arrangements for the Society's evening meetings in London.

REPORT OF THE FINANCE COMMITTEE.

The SECRETARY read the report of this Committee, which was of the usual character, and recommended sundry accounts for payment.

The PRESIDENT, in moving the adoption of the report and recommendations, said there was nothing to which he need call special attention. He would like to refer to the donations which had been received for the Benevolent Fund, because it showed the widespread interest taken in that Fund by the different classes connected with the Society. A letter had been received from the Brighton Junior Association of Pharmacy enclosing a cheque for £4 10*s.* representing the winter's collection, bringing up their total to £31 odd. Letters had also been received from the Chemists' Assistants' Association forwarding 16*s.* 8*d.* collected at the musical and social evenings, and from the Nottingham Chemists' Association enclosing 5 guineas. It was a matter for satisfaction that there was such a good object on which the Members could devote their surplus cash on all possible occasions.

REPORT OF THE BENEVOLENT FUND COMMITTEE.

The report of this Committee included a recommendation of grants to the amount of £81 in the following cases:—

A pharmaceutical chemist, life member (61) and subscriber, who has recently failed in business and is unable at present to do anything in consequence of an accident. (London.

The widow (63) of a chemist and druggist member and subscriber who is in poor health, and without employment. (Forest Gate.)

The widow (48) of an associate, who has had two previous grants; she is unable to do much in consequence of illness. (Towyn.)

A former chemist and druggist (42) whose name was erased from the Register in 1896. He is now suffering from chronic disease and has a wife and two young children. (Mitcham.)

The widow (34) of an associate in business and subscriber, who has three children dependent on her. (Hyde.)

A registered chemist and druggist (78) whose name was erased in 1892; is acting as temporary assistant, but is suffering from ill-health. (London.)

A registered chemist and druggist (70), and former subscriber, who has had four previous grants. (Bootle.)

One application was not entertained.

The Vice-President, in moving the adoption of the report and recommendations, said he need only refer to one of the cases which came before the Committee—that of an old gentleman to whom a grant had been made for the purpose of enabling him to go into the country for a short time for the purpose of recruiting his health and enabling him to get work and earn his living, which he was anxious to do. There were certain institutions in the north of England where persons temporarily broken down were received at a very cheap rate, but the amount voted would not allow of a long railway journey, and if any one knew of any similar institution in the south, the Secretary would be glad to receive information about it. With reference to the case of an orphan whose name was mentioned by Mr. Bottle in October last, he was glad to report that, owing to the publicity thus given to the case and to the exertions of the Secretary, who always took a great interest in such cases, the little boy had been elected to the Wanstead Orphan Asylum. He had also to report the death of an old gentleman, to whom a sum of money was voted last month, who was found by the Secretary, when he went to see him, to be practically at the point of death, so that the grant was of no use to him, and had not been expended.

Mr. Allen said he had also to report that a sum of money which had been placed in his hands to distribute at the rate of 5*s.* a week had not been wholly expended, owing to the death of the recipient. He wished to add, however, that that small weekly sum had been of the greatest benefit and had kept the home together during the last few months of the poor man's life, and his widow was very grateful for the help the Society had afforded.

The report and recommendations were unanimously adopted.

Library, Museum, School, and House Committee.

The report of this Committee stated that the report of the Librarian had been received, including the following particulars:—

	Attendance.	Total.	Highest.	Lowest.	Average.
April	Day	255	22	5	11
	Evening	88	8	2	5

Circulation of Books.	Total.	Town.	Country.	Carriage paid.
April	150	71	79	19*s.* 5*d.*

Several donations had been received (*Ph. J.*, May 14, p. 466), and the Committee had directed that the usual letters of thanks be sent to the respective donors.

The Committee recommended that 'Pharmaceutical Formulas' be purchased for the Libraries in London and Edinburgh.

The Curator's report had also been received, and included the following particulars:—

	Attendance.	Total.	Highest.	Lowest.	Average.
April	Day	483	33	11	20
	Evening	43	8	1	2

Several donations had been received (*Ph. J.*, May 14, p. 466), and the Committee directed that the usual letters of thanks be sent to the respective donors.

The Secretary having read the Report of this Committee,

The President said there was only one point to which it was necessary to call attention. It was suggested by the Committee that the associates and students of the Society be permitted to borrow books from the Library without being required to obtain a recommendation from a member or an associate in business, and that the regulations be amended accordingly. He thought the Council would thoroughly agree with the changes recommended by the Committee. Hitherto associates and students had to obtain the signature of a member of the Society in order to obtain books, but it was thought now that there was no need for any such restrictions.

The Report was unanimously adopted.

The Sessional Address.

It was decided that Sir J. Crichton Browne should be invited to deliver the sessional address in October next.

Correspondence.

The President announced that a letter had been received from the Registrar of the Pharmacy Board of Victoria acknowledging receipt of the Society's letter of January 14 last, which had been forwarded to the various colonies which had joined with Victoria in forwarding the request made by that Board.

A letter had been received from the Dover Chemists' Association enclosing a resolution passed by that body, which stated that the present method of electing annuitants was satisfactory, and deprecating any restriction on the voting powers of the members as likely to be disastrous in its results.

A letter had been received from the Tunbridge Wells and District Chemists' Association, enclosing a resolution that in the opinion of that Association it was desirable that the recommendations for the keeping and storage of poisons adopted at the meeting of the Pharmaceutical Society on May 17, 1871, should be adopted as regulations and incorporated as a Bye-law. This letter was referred to the General Purposes Committee.

A letter had also been received from the Secretary to the Agent-General for Queensland, enclosing a request from the Brisbane Public Library to be supplied with the publications of the Society. This letter was referred to the Library Committee for consideration.

Local Secretaries.

The President said an extract had been sent up from the Minutes of the Executive of the North British Branch, of April 29, in which the opinion was expressed that it would be an advantage to appoint Local Secretaries for a period of five years instead of annually as at present, and also that it would be well for the Council to select Local Secretaries directly, without the formality of local nomination, though still leaving it open to local associations to make recommendations. This communication was also referred to the Library Committee for consideration.

A letter had been received from the Clerk to the Spectacle Makers Company, saying that a scheme had been under the consideration of the Court for some time for conferring diplomas on opticians who can prove that they possessed certain scientific qualifications, and as it was proposed to admit pharmaceutical chemists to the examination for the diploma, and to the freedom of the Company at a reduced fee, it was desired that the Council of the Pharmaceutical Society should nominate a member to serve on the Committee.

This communication was referred to the Library Committee.

An application to receive certificates of the University of Bucharest in lieu of the First examination was referred to the Board of Examiners.

Mr. Bottle said with regard to the letter from the Dover Association, he should like to say that the opinion expressed was in consequence of an observation from himself inviting it, but that he in no way influenced the decision by any expression of his own opinion or feeling in the matter.

Report of the General Purposes Committee.

The Council then went into Committee to consider the report of this Committee.

On resuming, the report and recommendations were unanimously adopted, and special resolutions were passed authorising the Registrar to take proceedings against the persons named therein.

SELECTED FORMULÆ.

Puncture Cement for Rubber Tires.

Glycerin, 3 vols.; liquid water glass, 1 vol. Add acid till a jelly is formed. Dilute this with three times its volume of glycerin, and place 4 to 6 ozs. of the mixture in each tire.—*Amer. Druggist.*

Pascola Tablets.

These are said to be composed of extract of cascara sagrada, 0·72 gramme, senna, pulv. corticis ulmi, pulv. radicis glycyrrhiz., āā 0·18 gramme, saccharin, 0·24 gramme in each.—*Zeit. d. allg. oest. Apoth. Ver.*, li., 798.

Chrome Glue.

According to Schweitzer a mixture of glue containing 10 per cent. of potassium bichromate solution (1 in 50) becomes insoluble when exposed to sunlight. Broken glass coated with the freshly prepared solution and exposed to the sun for some hours, becomes so firmly united that even hot water had no effect on the joint, and the fracture was scarcely visible. This cement will be found useful for repairing glass ornaments and similar articles where the joint is required to be as little visible as possible. The glue may also be used for producing waterproof textures.—*Sci. Amer.*, lxxiv., 343.

PHARMACY ACTS AMENDMENT BILL.

THIRD READING PASSED.

The House of Commons on Wednesday went into Committee on the Pharmacy Acts Amendment Bill, the short title of which is "A Bill to Amend the Pharmacy Acts, 1852 and 1868." The objects of the Bill are to render persons who have passed the "First" or Preliminary examination required by the Pharmacy Acts, and who are consequently registered as "Apprentices" or "Students," eligible to become "Student-Associates" of the Pharmaceutical Society, instead of "Students" as heretofore; to render every person whose name appears on the Register of Chemists and Druggists eligible as a member of the Society; to provide for the retirement of one-third of the Council every year by rotation, instead of by ballot as provided by the Charter; and to enable the Secretary to receive voting papers for the election of members of Council up to and on the day of election.

Clauses 1 and 2, the interpretation clause, and the clause making Apprentices or Students eligible to be elected Student-Associates, were agreed to without discussion, two amendments on the paper in the name of Mr. Alexander Cross and one in the name of Mr. Weir not being moved.

On Clause 3, which proposes to make all registered chemists and druggists eligible as "Members" of the Pharmaceutical Society,

Mr. YOXALL proposed an amendment, extending the clause to "the assistant of a legally qualified apothecary, having served not less than three years at the trade." He said: The object of the amendment which I propose to move is to amend the present educational test applied by the Society to those persons who want to rank as Members of the Society. At present there are two tests applying to the two ranks in the Society—the Major examination applies to membership, and the Minor examination qualifies for associateship. The object of the Bill is to allow those who are Associates to become Members without passing the higher test. I am aware that during the lapse of years the lower test has become almost as stringent as the higher test used to be, and my objection to this clause is removed by that consideration, and if the Hon. Member in charge of the Bill would be so good as to give me an assurance that the Society would, in view of a subsequent Bill, take into consideration the status of those who are now members so as to preserve the proportion between the present Members and the present Associates — if he would give me that assurance I would not press the amendment. May I hope for an assurance on that point?

Colonel BROOKFIELD: I do not like to pledge the Pharmaceutical Society, but I promise to recommend the proposition of the Hon. Member to the Society.

Mr. YOXALL: In that case I will not move the amendments which stand in my name.

The remaining clauses of the Bill, dealing with the retirement of Members of the Council by rotation, the voting for the election of officers, the exclusion of Ireland from the operation of the Act, etc., were agreed to without discussion.

Dr. CLARK: There was a new clause proposed by the Hon. Member for the Camlachie Division of Glasgow, and I want to ask the Government, who, I understand, are practically in favour of this Bill, what action they propose to take in reference to this matter. The Hon. Member (Mr. Alexander Cross) opposes the Bill for this reason: He is a wholesale seed merchant, and he is in the habit of sending farmers and cattle-dealers antiseptic solutions for killing vermin, and some of these contain scheduled poisons. My hon. friends are in the habit of sending out these scheduled poisons in large quantities mixed with other things, and I understand the Society is trying to prevent them selling these poisons for agricultural or commercial purposes. I understand the Government have practically pledged themselves to bring in a Bill to amend the Pharmacy Act in order that men of this type may be able to sell poisons for agricultural purposes, so that farmers and others might not be compelled to buy them from chemists and druggists at three or four times the price charged by those firms who deal with them in large quantities. It is for this reason that my hon. friend has put down his amendment. Unless I am given to understand that the Government intend to bring in a Bill I should be inclined to move this new clause. The object of legislation, I take it, is to prevent the sale of drugs for medicinal purposes by individuals who are not qualified to do so, and what we want is to get from the Pharmaceutical Society an assurance that it will not use the powers it has got from Parliament for that purpose for an entirely different purpose. At the present time the nearest chemist's shop to this House is kept by a man who is unqualified. By calling his shop a drug store and refusing to sell certain poisons a man can evade the Pharmacy Act altogether. What the Pharmaceutical Society ought to do is to get the Act amended so as to get further powers to deal with a case of this kind, and not to attempt to prevent the sale of poisons for other than medicinal purposes. I do not know whether the Hon. Member in charge of the Bill will give a pledge of that kind, otherwise I will move this new clause.

Dr. FARQUHARSON: I do not think it matters for what purpose poisons are going to be used. What we want to do is to stop their unrestricted sale. This Bill gives no extra powers to the Pharmaceutical Society. That Society has done good work in the past in trying to prevent a great and growing evil by putting a stop to the system under which associations which called themselves drug stores were able to elude the provisions of the Pharmacy Act and go on selling dangerous poisons without let or hindrance. There is nothing in this Bill which regulates the sale of poisons, and the Hon. Member, in proposing that we should add to the measure a clause authorising the sale of dangerous poisons in the form of agricultural manures and things of that kind, is raising a very dangerous and difficult question. My hon. friend will be well advised not to stir up this question, because many of us believe that there is a very dangerous principle involved in these very powerful poisons being sold by agricultural chemists without any restriction whatever.

Mr. CHANNING: I should like to say in support of what has fallen from the Hon. Member for Aberdeenshire (Dr. Farquharson), that we have had during the last few days a striking example of how extremely undesirable it is that the present lax regulations in regard to the sale of dangerous poisons should be continued. The case which is present in all our minds led to a frightful murder, owing to the facility with which a person can obtain poisons even in a chemist's shop, and if public attention is drawn to the fact that they can obtain scheduled poisons on the excuse of wanting them for agricultural purposes, surely the danger would be extremely great. I do not think my hon. friend would be well advised to press the amendment.

Dr. CLARK: Poisons such as are used for agricultural purposes cannot be used for the purpose indicated by the Hon. Member, because they must be mixed with indigo blue or soot, and they could not possibly be used in that form for a different purpose. The new clause which I propose to move is as follows:—"That nothing in this Act nor in the Act to regulate the sale of poisons, 31 and 32 Victoria, c. 121, entitled the Pharmacy Act, 1868, shall apply to or interfere with the business of persons who are engaged in the sale, distribution, or manufacture of insecticides, destroyers of vermin or disease germs in plants, of ant destroyers, of preparations for prevention of disease in potatoes, grain, or other field or garden crops, or for the preservation and protection of plants from disease in greenhouses or in the open air, or for other such or similar purposes, or of sheep dips or wool dressings or other articles used for such purposes." Now, sir, the condition of things at the present time is perfectly ridiculous. Some very powerful poisons are not scheduled at all, and anyone can sell them. Take for instance carbolic acid. That is not a scheduled poison, but it is one of the most dangerous poisons that can be had, and yet anyone can get it in any quantity anywhere. This Bill I know is only a small Bill for the purpose of admitting Associates as Members of the Society, but now that we have got the question before us I want to ask the Government—and perhaps I should address my question to the representative of the Local Government Board—whether they intend to bring in a Bill dealing with this question? We want legislation in order that the purpose and object of the Pharmacy Act may be carried out; that there shall be strong restrictions upon the sale of poisons, especially on the sale of poisons that are not mixed with soot or blue to prevent them being used for improper purposes. We want to increase the number of scheduled poisons, so that instead of having only half-a-dozen, the list may include all poisons except those which are mixed with other articles, which cannot be separated except by a chemical process, so that none but chemists can extract the poison in such a form that it could be used for the purpose indicated by my hon. friend. Unless I get an assurance from

the Government that they intend to bring in a Bill to amend the Pharmacy Act, I shall take a division on this amendment.

The Chairman (Mr. Lowther): The Hon. Baronet, the Member for Wigan, asked me whether this clause was in order, and I said I thought it was, but after hearing the arguments, I must say that I think I made a mistake in accepting the words in the first two lines, "Nor in the Act to regulate the sale of poisons, 31 and 32 Vict., c. 121, entitled the Pharmacy Act, 1868." The clause would be in order with the omission of those words.

Dr. Clark: I will put it in that form.

Sir F. S. Powell: It is rather a strong order to bring into a Bill of this kind, dealing with the constitution of the Pharmaceutical Society, a clause dealing with the regulation of the sale of poisons. I do not think it is quite fair to the House, and I do not think it is fair to the public, who have a large interest in this matter I do not think it is a reasonable proposal to introduce a provision of this kind into the Bill, and I hope the Hon. Member will not press it to a division. His object is not at all the same as that of the Hon. Member for the Camlachie division of Glasgow. The object of the Hon. Member for Caithness is that which all right-minded men have at heart, including Her Majesty's Government, viz, to restrict the sale of poisons, or to put the sale under thoroughly sound restrictions; to enlarge the Schedule rather than to restrict it; but the object of the Hon. Member who sits on this side of the House (Mr. Cross)—I hope I am not attributing to him any criminal motive—his object is to facilitate the sale of poisons which in the particular business for which he is responsible are used for a useful and proper purpose. I think most members of the Committee will agree that so serious a proposal as is contained in the new clause which has been suggested should not be tacked on at the end of what is virtually a private Bill for the better government and constitution of a perfectly harmless and respectable corporation. For this reason it is impossible to accept the amendment, although I sympathise entirely with the object of the Hon. Member for Caithness.

Mr. John Burns: It is evident by the discussion that has taken place that the regulations under which poisons of many kinds can be sold are in a most unsatisfactory state. I hope the Hon. Member who has charge of this Bill, and I presume the Pharmaceutical Society—when by this Bill we have improved the status of its members—will be willing to give the House of Commons all the assistance they can in the endeavour to put the regulations for the sale of poisons on a satisfactory footing. I support the general object of this Bill; anything that will educate chemists or anyone else will certainly have my support. I believe that the average chemist and mixer of poisons is capable of much education in the right direction. I believe that when they are properly qualified and properly controlled the sale of poison will be restricted to proper persons. I venture to say that chemists and druggists connected with the Pharmaceutical Society have not fully recognised the duty which they owe to the public, and that as soon as they have put their own house in order they must join either with the Government, or with the Hon. and gallant Member who has charge of the Bill, in putting the sale of poisons under such conditions that the wholesale seed merchants, the sellers of sheep dip, the sellers of marine scaling compositions, and other traders, who must have poisons for the proper carrying on of their business, are not handicapped by the legislation which has been passed in the interests of the Pharmaceutical Society. If the Hon. Member will accept the suggestion which I offer he will facilitate the passing of this Bill. Coming from that point to another, I would like to mention that the members of the Pharmaceutical Society have much to improve in their own body. Within the last four or five months there have been some poisoning cases in which members of that Society have shown great laxity. I do not wish to weary the House with instances, but let us take that frightful tragedy the poisoning of Mrs. Aveling at Norwood. If the chemist from whom the poison was obtained had done his duty to the public, that lamentable event might have been avoided. The mere passing of this Bill would not prevent a recurrence of such cases unless the Pharmaceutical Society undertakes to put the law as it stands into operation with all the vigour that it is capable of. Acts of Parliament are all very well, but if they are enforced with laxity there is not much good even in an Act of Parliament. I would suggest to the Hon. and gallant Member, who is likely to get his Bill to-day, that he should read into the Bill the various suggestions that have been made with regard to the future sale of poisons generally, and that he should tell his friends who are promoting the Bill that they must use their powers with greater courage and greater discretion in the interests not of the Pharmaceutical Society alone, but in the interests of the general public.

Colonel Denny did not think there was any danger in leaving the sale of poisons used for commercial and agricultural purposes under the same regulations as at present.

Dr. Farquharson pressed the Government to explain their intentions with respect to a future Bill.

Mr. F. W. Russell: The Local Government Board has no interest in this Bill—it is not a matter which comes within our province at all, but after the discussion that has taken place I think the Hon. Member for Caithness would be well advised to withdraw his amendment, which raises a question altogether outside the scope of this Bill.

Dr. Clark: I do not wish to widen the scope of this Bill, but to press upon the Government the fact that the present condition of things is very unsatisfactory. There are a number of very deadly poisons that are sold practically without any restriction, in fact the Poison Law is a ridiculous farce. There is no check, for instance, on the sale of one of the most deadly poisons, cyanide of potassium, a single grain of which will kill a person. It is used very much in the arts, and in Wales it is used in gold production, and if you are making any change you should assuredly put some restriction on the sale of this particular poison. The reason why opposition was raised by the Hon. Member for one of the divisions of Glasgow was because, as a wholesale seed merchant, he had been selling for years a preparation of arsenic and soot. The Pharmaceutical Society lately instituted a prosecution against him for selling this compound, and it was in consequence of that he put down this amendment, and in his absence I moved it. At the same time I hope something will be done to further restrict the sale of poisons, especially in quantities that will destroy human life. At the present time any person could, by giving a fictitious name, purchase as much poison as would kill every member of this House. What we want to do is to have the system further amended under the Pharmacy Act, and to have the Schedule of Poisons revised with the view to its extension. I beg leave to withdraw the amendment.

The schedule was agreed to and the Bill was reported to the House without amendment.

Colonel Brookfield formally moved that the Bill be read a third time.

Mr. John Burns: On the third reading may we have some expression of opinion from the Hon. and gallant Member as to the effect on the promoters of this Bill of the general discussion that has taken place.

Colonel Brookfield: I shall indicate to the Society the wishes of the Hon. Member and others, that it should give more strict attention to the subject of the regulations for the sale of poisons, and if I could also persuade the Society to fall in with the proposals that the Government make in that direction it will be my duty to do so. I entirely sympathise with the views of the Hon. Member, but the whole intention of this measure is to make the position of the Pharmaceutical Society more democratic than it has been, and in that endeavour I think we may claim the sympathy of the Hon. Member for Battersea.

Mr. John Burns: In consequence of the answer of the Hon. and gallant Member I do not propose to offer any opposition to the Bill; but I wish to remind the Hon. and gallant Member that democracy does not go the length of allowing people to poison each other.

The Bill was then read a third time amid cheers.

Xeroform.—Paschkis has used xeroform in about 100 cases, the result, on the whole, being very satisfactory. Venereal ulcers were cleaned very quickly, deep losses of tissue were soon healed by the formation of healthy granulations, and cicatrisation made rapid progress. Erosions and surface lesions healed remarkably quickly, and scleroses in the course of a few days. The latter will of course frequently break out again. A special advantage of xeroform is that it is non-caustic and does not form a scab, which favours the retention of pus. The author has not been able to determine from his own experience the antiseptic properties of xeroform, but Huepp, Hesse and Schmit state that it is germicidal. He recommends xeroform as a most serviceable remedy for wounds, the application being extremely simple.—*Wiener Klinische Rundsch.*, xi., 693.

PRACTICAL BACTERIOLOGY.

TECHNICAL MYCOLOGY: THE UTILISATION OF MICRO-ORGANISMS IN THE ARTS AND MANUFACTURES. By Dr. FRANZ LAFAR, with an introduction by Dr. Emil Chr. Hansen, translated by Charles T. C. Salter. Vol. I.—Schizomycetic Fermentation. Pp. xviii., 405, with Plate and 90 Figures in the Text. Price 15*s*. London: Charles Griffin and Company, Limited. 1898.

No better evidence could be offered of the extent to which bacteriology has become an applied science of the highest importance than the existence and contents of this—the first—volume of Dr. Lafar's work. Its four hundred odd pages treat of bacteria both in theory and in practice, for whilst technical microbiology as a whole is more comprehensively dealt with in the book than in any other publication, the theoretical side of the subject is most exhaustively considered previously. Thus, in the introduction, the author commences by presenting the facts for and against the theory of spontaneous generation, concluding by observing that, as a matter of reason, we are obliged to assume that, at some definite moment in the past, organic living beings were produced from unorganised potentially organised substances; and further, that such creative power may still be operating, may perhaps be performing at present. The possibility of this, it is contended, cannot be gainsaid, though it is thought that much less complicated organisms than bacteria must have been the result of this primary creation of living beings.

After referring to the labours of Leeuwenhoek, Plenciz, Needham, Spallanzani, Schultze, Schröder and Dusch, Pasteur, Béchamp, and other investigators of the little things of the Universe, the author then summarises the theories of fermentation that have been propounded by Stahl, Gay-Lussac, Cagnaird-Latour, Schwann, Kützing, Liebig and others, and defines fermentation as a decomposition or transformation of substances of various kinds, brought about by the vital activity of fungi. The so-called "spontaneous" fermentation of sweet fruits and decompositions effected by light and air are briefly touched upon, and a short section is devoted to the position of the organs of fermentation in the botanical system.

Coming to the body of the work, we find it is divided into thirty-eight chapters, which in turn are arranged in nine sections, dealing respectively with the general morphology and physiology of the Schizomycetes; the principles of sterilisation and pure cultivation; chromogenic, photogenic, and thermogenic bacteria; the heat-resisting bacteria; lactic fermentation and allied decompositions; the formation of mucus, and allied phenomena of decomposition; decompositions and transformations of organic nitrogenous compounds; oxidising fermentations.

Section I. treats of the form and dimensions of bacteria, the structure and constitution of the bacterial cell, the power of independent movement in bacteria, vegetative reproduction by fission, the permanent (reproductive) forms or spores, and the germination of the endospere. Concerning this section it is unnecessary to do more than refer to the excellent manner in which the subject-matter has been presented in the least possible space, and appropriately illustrated with well-chosen drawings. Section II. deals with bacteria under the influence of physical agencies and in their relation to one another, as well as with the classification of the organisms. The influence of electricity, temperature, light, and mechanical shock are discussed in turn, whilst symbiosis, metabiosis, and antagonism are clearly explained.

The principles of sterilisation and pure cultivation are very fully considered in Section III., and in Section IV. we arrive at some practical applications of the subject. Thus the red coloration in milk, cheese, and stock-fish; blue coloration in milk and cheese, and green coloration of the latter are all shown to be produced by chromoparous bacteria, and everything known regarding those particular organisms is clearly stated. Luminous bacteria are shown to be tests for enzymes, many interesting facts are recorded concerning phosphorescent forms, and the spontaneous heating of hay, cotton, and hops are attributed to the proper bacterial agencies, as well as the fermentation of tobacco and the production of burnt hay.

In Section V. we are introduced to the *Bacillus subtilis* and its congeners, including the potato bacillus and organisms found in the soil. The fermentation of cellulose, the "retting" of flax, and the rancidity of fats are considered in connection with butyric acid fermentation and allied decomposition processes. The preservation of milk, meat, eggs, vegetables and fruit naturally come in for their proper share of attention in this section. Section VI. is devoted to a study of the souring of cream, the curdling of milk, and the part played by lactic acid bacteria in distilling, brewing, vinification, and the preparation of fodder, as in the ensilage process, whilst kindred organisms are shown to be concerned in tanning processes.

The importance of bacteria in the manufacture of sugar, and the production of ropiness in milk, wine, beer, and other liquids are described in Section VII., whilst the succeeding one treats of the phenomena of putrefaction, the fermentation of cheese and allied decompositions, the fermentation of urea, etc., and the fixation of free nitrogen by bacteria. Finally, in Section IX., the iron, sulphur, and nitrifying bacteria are fully considered, after which acetic fermentation and the oxydases are described.

It is quite apparent from this rough summary of the contents of the book that no important phase of the subject of which it treats has been overlooked; neither the theoretical nor the practical side of the subject has been sacrificed to the other. Moreover, the matter has been so skilfully compiled that enough is said in most, if not all, cases, without verging on excessive treatment of any particular part. The botanical, chemical and technical aspects of the subjects have, alike, been satisfactorily dealt with, and the work should prove of the utmost value to pharmacists, chemists, agriculturists, and many others who are directly or indirectly concerned in the utilisation of micro-organisms in the arts and manufactures. No similar work so complete in its arrangement has yet been published, and it is difficult to conceive of a more satisfactory practical handbook being produced. Pharmacists who make a specialty of bacteriological work should not hesitate to procure this book at once.

PHOTOGRAPHY AS AN ART.

PRACTICAL PICTORIAL PHOTOGRAPHY. Illustrated. Part I. Practical Instructions in the Application of Photography to Artistic Ends. By A. HORSLEY HINTON. Pp. 108. Price 1s. London: Hazell, Watson and Viney, Ltd. 1898.

This little book contains a simple statement of the theories which govern pictorial work in photography, together with working instructions to reduce the art as far as possible to practical rules. As the author points out probably no branch or application of photography has been so misunderstood, or has suffered so much by such misunderstanding, as that which forms the subject of this book. "It has suffered because it has been so often criticised for failing to do what it was never intended to accomplish, and condemned for not doing the very thing the performance of which it was essential should be left undone if success was to be attained in the particular application of photographic means which we call Pictorial Photgraphy." The author does his best in the space allowed him to correct prevailing errors on the subject, and the outcome is a useful and practical little guide.

PHARMACEUTICAL JOURNAL.

A Weekly Record of Pharmacy and Allied Sciences

LONDON: SATURDAY, JUNE 11, 1898.

THE COUNCIL MEETING.

As is usually the case, the principal business of the reconstituted Council last Wednesday was of a formal nature. After the minutes of the previous monthly meeting and of the special meeting on the 18th ult. had been read and confirmed, Mr. WALTER HILLS, as Chairman, drew attention to letters which had been received from Dr. LEECH, Professor RAMSAY, and Professor REMSON, expressing their gratification at having been elected Honorary Members of the Society. Reference was also made to the recent death of Lord PLAYFAIR, who had long been associated with the Society as one of the most distinguished of its Honorary Members, and he mentioned the circumstance that he was elected in 1881 on the motion of Mr. DANIEL FRAZER, a former member of Council, who had in early life been a fellow-pupil with PLAYFAIR in the establishment of FRAZER and GREEN, of Glasgow. Mention was also made of the great interest Lord PLAYFAIR always took in the progress of the Society.

The first business of the meeting was the election of a President for the ensuing year, when all the votes were in favour of Mr. WALTER HILLS, a result that will be satisfactory not only as reflecting his position at the head of the poll in the Council election and renewing the association of an honoured name with the occupation of the presidential chair; but also as a recognition of the zeal with which Mr. HILLS has sought to advance the interests which are common to the Society and the craft it represents.

The election of Mr. NEWSHOLME as Vice-President was equally unanimous, and in returning thanks to the Council for this renewed mark of confidence, he expressed his sense of the honour being enhanced by the opportunity of again serving with Mr. HILLS as President.

Mr. HAMPSON was unanimously re-elected Treasurer, and in returning thanks gave utterance to the hope that his labours in that capacity might be increased during the coming year by larger additions to the Society's funds.

The standing orders of Council were then adopted by resolution. Mr. RICHARD BREMRIDGE was re-appointed Secretary and Registrar: the Editor, Sub-Editor, Curator, and Assistant-Secretary in Scotland were also re-appointed.

It was resolved that Messrs. HARVEY GIBSON, MCLEOD, and FARR should be requested to conduct the examinations for the Council prizes competition, and Messrs. PHILLIPS, SAUL, and PINCHES the examinations for the Jacob Bell Memorial and the Manchester Scholarships.

The several committees were re-appointed, as shown at page 550.

The report of the Finance Committee was adopted without discussion, the only particulars referred to by the PRESIDENT being the receipt of several donations to the Benevolent Fund, which show the interest taken in it throughout the country. One of these donations was from the Brighton Junior Association of Pharmacy, as the result of a collection of small sums, and bringing up the total contribution from that source to thirty-one pounds. Another donation was from the Chemists' Assistants' Association, and a third from the Nottingham Chemists' Association. This mode of adding to the resources of the Benevolent Fund might be considerably extended.

On the recommendation of the Benevolent Fund Committee, seven grants, amounting to £81, were ordered to be paid, the particulars of which are given at page 550.

The VICE-PRESIDENT, in moving the adoption of the report, mentioned the case of one of the recipients, to whom a grant had been made in order to enable him to go into the country to recruit his health, and added that he would be glad to receive information as to whether any institutions exist in the south like those in the north of England, where facilities are provided at a cheap rate. With regard to the case of the orphan mentioned last October by Mr. BOTTLE, he was pleased to say that the boy had been elected to the Wanstead Asylum as a result of the assistance which had been given. Mr. ALLEN also mentioned a case in which assistance from the Fund had been very beneficial in relieving the necessity of a family, and had been gratefully acknowledged.

The report of the Library, etc., Committee recommended that in future the signature of a member of the Society should not be required when associates or students desire to borrow books from the Library as there is now no need for that restriction; the suggestion was agreed to, and it was resolved that Sir J. CRICHTON BROWNE should be invited to deliver the sessional address in October next.

Several communications were mentioned by the PRESIDENT, One from the Registrar of the Pharmacy Board of Victoria, stating that the reply sent by the Council in regard to reciprocity had been forwarded to the various colonies which had joined with Victoria in the request made by the Board.

A letter from the Dover Chemists' Association expressed the opinion that the present mode of electing annuitants is satisfactory, and that any restriction of the voting power of subscribers to the Benevolent Fund is undesirable.

A letter from the Tunbridge Wells and District Chemists' Association, enclosed a resolution passed by that body to the effect that it is desirable to adopt, as regulations, the recommendations for the keeping and storage of poisons agreed to at the meeting of the Pharmaceutical Society on May 17, 1871, such regulations to be incorporated in a Bye law.

A letter from the Secretary of the Agent-General for Queensland enclosed a request that the Brisbane Public Library might be supplied with the Society's publications.

An extract from the minutes of the Executive of the North British Branch, expressed the opinion that local secretaries should be appointed for a period of five years instead of annually, and that it is desirable for the Council to appoint local secretaries directly without the formality of local nomination, unless that was voluntarily done.

A letter from the Clerk to the Spectacle Makers' Company gave details of a proposed scheme for conferring diplomas on opticians, to certify their scientific qualifications, and as pharmaceutical chemists are also to be admissible to examination for that purpose, the Council was requested to nominate a member of the Society to serve on the Committee which has this matter under consideration.

An application has been received to accept certificates of the University of Bucharest in lieu of the First examination.

After the Report of the General Purposes Committee had been considered, resolutions were passed authorising the Registrar to take proceedings under the Pharmacy Acts against a number of persons alleged to have infringed their provisions.

ANNOTATIONS.

THE PHARMACY ACTS AMENDMENT BILL passed its third reading in the House of Commons on Wednesday. Colonel Brookfield, member for Rye, was taking charge of the Bill, in the unavoidable absence of the Hon. W. F. D. Smith, and it so happened that the favourable position of the Bill permitted it to be brought on for discussion. That, of course, was all that was required to show the weakness of the opposition against the measure, and as the now too familiar adverse arguments were brought up one after another their weakness was easily revealed, with the result that the Bill passed through the Committee stage unaltered and was read a third time. The next step is to present it to the House of Lords, and all things considered the present position of the Bill cannot be regarded as otherwise than highly favourable. The report of the debate in the House of Commons is given in full at page 552, and the attention of our readers is specially directed to the remarks of the various speakers, more particularly those of Dr. Clark and Mr. John Burns, which contain much food for thought.

MR. YOXALL'S POSITION with regard to the Pharmacy Acts Amendment Bill has been far from intelligible to those whom alone the Bill concerns, and the report of what he said on Monday, when he was waited upon by a deputation from the Nottingham and Notts Chemists' Association, seems to show very clearly that he knew little about his subject. He informed the deputation that his action with regard to the Bill was solely in the public interest, but public interests are not involved in the slightest degree. Again, he insisted that he had been safeguarding the position earned by men who had passed the Major examination, but the position earned by passing that examination is the right to use the title "pharmaceutical chemist," which is amply safeguarded by a special Act of Parliament; there is nothing in the Bill to affect that right, which is entirely independent of membership of the Society. The legal qualification of chemists is the only matter that concerns the public interests, and that qualification alone should be taken into account in regard to membership of the representative body of the craft. Moreover, as it happens, that position has commended itself to the House of Commons, and, we may reasonably hope, will also commend itself to the House of Lords.

THE TUNBRIDGE WELLS AND DISTRICT CHEMISTS' ASSOCIATION has issued a circular letter to the medical men of the district, suggesting that, owing to the difference of opinion as to the actual date on which the new British Pharmacopœia should be generally adopted as the standard for dispensing purposes, it seems desirable that some date should be decided upon by the medical profession, in order that the chemists may know when it is desired that the new preparations should be used generally. Midsummer Day was suggested in the circular as a convenient date, and attention was directed to the more important alterations in the strengths of official preparations, whilst with a view to securing uniformity of procedure, it was further suggested that all prescriptions written before Midsummer Day should be dispensed with preparations of the 1885 Pharmacopœia, unless the contrary is specially indicated. We understand that the circular which was signed by Messrs. R. A. Robinson (President), and A. E. Hobbs (Hon. Secretary), and headed by a list of all the members of the Association, has elicited satisfactory responses from all the principal medical men in the Tunbridge Wells district, whilst in several instances the Association has been cordially thanked for bringing the matter forward.

THE PHARMACEUTICAL SOCIETY OF IRELAND is to be congratulated upon its persistent efforts to secure for chemists and other professional men that protection by the Legislature which is their just due, and though no immediate effect may be produced by those efforts, it is nevertheless possible that if they be properly followed up some good may be effected in the future. The proposal submitted to the Committee of the House of Lords on the Companies Acts Amendment Bill was that a Clause should be inserted in the Bill, to the effect that "No company may be registered to do acts for which a course of education and examination are required to qualify, unless each member of the company is qualified." In support of that proposition, the respected President of the Irish Society urged that, whilst the purpose of the Companies Act is understood to be "to enable any seven or more persons associated for any lawful purpose" to form themselves into a company and secure registration, it cannot reasonably be regarded as a "lawful purpose" to enable seven unqualified persons to do what one is legally prohibited from doing. But the Select Committee, unfortunately, is averse to such extension of its inquiry as would enable the subject to be brought under consideration, and for the present, therefore, the efforts of the Council of the Irish Society are apparently as abortive as those of the British Council, an account of which will be found duly recorded in our issue of April 9 last.

NEWSPAPER REPORTS OF INTERVIEWS appear, as a rule, to have but a slight basis of fact nowadays. So much is that generally accepted as being the case, that it comes somewhat as a surprise to find people of intelligence taking such reports seriously. Some months ago quite a small sensation was produced by a report of an alleged interview on pharmaceutical matters published in *Truth*, and now the Secretary of the Pharmaceutical Society finds it necessary to deny that he or any member of his staff has been interviewed by another newspaper representative with regard to the new Pharmacopœia. Doubtless the artless interviewer will continue on his accustomed way, whatever may be said about his methods or results, but it would appear as if trustworthy news was very scarce when the conductors of daily papers have resort to such padding as Mr. Bremridge's letter refers to.

ANOTHER NEW GAS has been discovered in the atmosphere by Professor Ramsay and Mr. Morris W. T. Travers, or rather they have detected it in the residue left on evaporating a large quantity of liquefied air. Crypton, as the new element has been named by its discoverers, exists in the air in the minute proportion of one part in twenty thousand, and its presence was only detected by the aid of the spectroscope. The spectrum of the gas is said to be characterised by two exceedingly brilliant lines, one being nearly coincident with the helium yellow line D3, whilst the other may be compared in intensity with the helium green line. The gas is monatomic, and its density is conjectured to be about forty. A small specimen of it was shown at the meeting of the Paris Academy of Sciences on Monday, and a communication on the subject was presented to the Royal

Society on Thursday of this week. According to the Paris correspondent of the *Standard*, the discoverers of the new element operated on seven hundred and fifty cubic centimetres of liquid air, supplied to them by Dr. W. Hampson, who has recently been in conflict with Professor Dewar regarding the invention of the apparatus employed by the latter for liquefying gases. The liquid was reduced by evaporation to ten cubic centimetres, and the residue, after being converted into gas, was successively freed from oxygen and nitrogen. The residual gas measured twenty-six cubic centimetres, and presented the weakly-defined spectrum of argon, together with the additional lines already referred to above.

The Report of the Pharmacopœia Committee, which was received too late to be referred to last week, shows that considerably more than half of the twenty thousand copies printed of the fourth British Pharmacopœia have already been disposed of. Special indebtedness is acknowledged to Dr. Leech and Dr. MacAlister for their original investigations in connection with many problems that arose during the work of compilation, and it is intimated that progress has already been made in connection with the preparation of an Addendum, in which medicinal plants and other substances suggested for inclusion by Indian and Colonial authorities will be dealt with more fully than has been possible in the Pharmacopœia itself. It is hoped that the Addendum may be ready for publication in eighteen months, and a first proof will be submitted to the Indian, Colonial and other medical authorities interested in about six months. Dr. Tirard continues to act as Secretary of the Committee until the Colonial Addendum is published, and Dr. Attfield has been appointed Editor. A long appendix to the report describes the methods adopted in preparing the British Pharmacopœia, 1898, and when due allowance is made for the quite unnecessary complexity of the arrangements that have prevailed, one can only wonder that a workable Pharmacopœia was ever produced at all. The Editor of the work, in particular, is deserving of much sympathy, and not the least for the time and labour he must have spent in compiling the curious collection of facts and figures recorded in the appendix to the Pharmacopœia Committee's report.

The Alkali, etc., Works registered in England, Ireland, and Wales number 1058, according to the report by the Chief Inspector for the year 1897, the decrease since the previous report was published being 16—11 alkali works and 5 others. In Scotland there are 125 works registered, bringing the total number of registered works to 1183. Though the number of works decomposing salt by the Leblanc process shows a reduction, great activity is displayed in those that remain in operation. Hargreave's process for the direct production of sodium chlorate from chlorine and sodium carbonate has been in regular work on the large scale during the year, and with excellent results as regards absorption of chlorine. Four works are now actively engaged in the production of chlorine by electrolysis, and the erection of works on the large scale to test the commercial practicability of the Hargreaves and Bird electrolytic cell is anticipated. The technical difficulties at first experienced by the Electro-Chemical Company of St. Helen's appear in great measure to have been overcome, and manufacture is now steadily proceeding, whilst operations were commenced early last year at the large works of the Castner Kellner Alkali Company at Weston Point, near Runcorn. At those works very careful provision has been made for absorbing the residual chlorine in the bleaching powder chambers, whilst the form of the latter is such as to obviate the necessity of workmen entering to pack the powder.

Referring to the St. Neot's Poisoning Case, the *Morning Post* surmises that it is impossible to devise any fresh precautions against the sale of poisons for nefarious purposes than those which the Legislature has already provided, as it would be "at once pedantic and improper for a chemist to demand any guarantee beyond that which the Legislature has prescribed, viz., that the applicant, in addition to giving to him the statutory acknowledgment, should be known or come to him with a responsible introduction." It is acknowledged that it is not to any fresh legislative restrictions that we must look to safeguard society against the attentions of the professional poisoner, who belongs usually to the apparently respectable and well-to-do class, and, if he can create a sufficiently plausible excuse, can obtain more than enough poison to accomplish his purpose. But there are two circumstances, it is pointed out, from which people who are apprehensive of a serious increase in homicidal poisoning in this country may derive considerable comfort. The one is the immense growth which has taken place in recent years of the power of toxicologists to trace and bring home to criminals who adopt this method of murdering their victims, the presence and use of even the most subtle and intangible drugs known to chemical science. The other is the almost judicial blindness which nearly always characterises the action of the nineteenth centurp poisoner. Not only does the criminal usually leave behind him a track of blunders which make identification a comparatively easy task, but the poisoner is also apparently unable to grasp, and to perceive the consequences of, the plainest historical facts in connection with the science of toxicology. For it is extremely difficult to understand how anyone who intends to poison another should, at this time of day, make use of strychnine. Its effects are so obvious, and its detection so certain, that no one can expect to use the poison for illegal purposes with impunity.

Films for Photography are strongly recommended by Mr. W. J. Stillman, who has sent to the *Times* an account of a crucial experiment he has just concluded to test the value of films of celluloid as a substitute for glass. Having been requested to organise the photographic section of the first African expedition led in 1893 by the late Captain Bottego, he decided to provide the official photographers with celluloid films, and with a view to exhaustive testing of the capacities of the material, he kept by him several packets of the thick cut films, and tested them from time to time. Of one of those packets, which has been in his possession in Rome ever since, having been coated in June, 1892, he has just exposed and developed four on a most difficult subject, and produced four perfect negatives, as good in every respect as if they had been made five years ago. Considering the extreme portability and infrangibility of the films and their inestimable superiority in these respects over glass, and in other respects over paper, he thinks these experiments have a high value for scientific voyagers to whom photographic illustration is so important and the difficulties of photographic operation *en voyage* are so great. *A priori*, as the celluloid is produced under the action of strong acids, and has a certain tendency to liberate the acids with time, their action tending to cause insensibility in the haloid which holds the photographic image, he anticipated that in so long a time as has been covered by his experiment they would have become quite insensible, but he did not see that in this respect there was much falling off. A little there probably must be, for in the case of films of the highest sensibility he has found that impressibility for all practical purposes had disappeared after a year, those of a lower sensibility losing less in proportion; but that is of absolutely no moment, exposure in the camera for a second more or less being a matter of no importance.

MEETINGS OF SCIENTIFIC SOCIETIES

ROYAL INSTITUTION.

On Saturday, May 28, the second and last of a series of lectures was given by J. ARTHUR THOMSON, M.A., on the

Biology of Spring.

The attention of the audience was first directed to the rapid multiplication of minute organisms so charactcristic of spring, many cxamples being given, including lowly algæ, which may multiply six-fold within a week, and infusoria, which are capable of becoming a million in the same space of time. Nutritive chains were then referred to, *e.g.*, that traceable from diatoms to fishes. The lecturer next gave the life-histories of crabs, gnats, dragon-flies, May-flies, eels, frogs, butterflies and other living things, illus-ting the various points of interest by the aid of exquisite drawings and abundant lecture-specimens. Reference was made to Grant Allen's recent account of the gnat in the *Strand Magazine*, describing the boats of eggs floating down the stream, three hundred in each mass, giving rise to the voracious larval form which casts its cuticle three times over, then the pupa with its big head without a mouth, and finally the gnat itsclf. Many points of interest were mentioned concerning the May-fly, which may pass two or three years in the water in the larval form, but spends one or two short days in air, taking no nourishment and concerning itself chiefly with the propagation of its kind. The larval form is subject to many adverse conditions, being affected by attacks of disease known as "moulting," and liable at all times to be thinned in numbers by hungry fishes. It is espccially interesting to note the life history of the common eel, because from the days of Aristotle this subject has been a mystery, and has only recently been solved. Indeed, Aristotle thought that eels were bred from mud by a process of spontaneous generation, and among other ancient recipes we find it stated that a good supply of turf moistened with dew is all that is required to produce a large family of eels. In our own times this question has puzzled the mind of so great a man as Huxley. As a matter of fact, in spring what is commonly known as the "eel-march" takes place. The elvers or young eels, then about one or two years old, and in size resembling a stocking-needle, migrate from the sea to the estuaries of the rivers, such as the Thames and Severn. Here, and in the broader reaches, the males remain, whilst the more adventurous females steadily make their way up the river to its source and along the tributaries, in spite of water-falls, sluices, and mill-dams. Nothing deters them, until at length they reach the ponds, where they remain for some years and reach maturity. At the proper time they re-commence their wanderings, this time travelling down the rivers, and only by night, in tur-bulent crowds, until they meet their mates in the waters of the estuaries. They pair and go together into the deep sea, where the eggs are laid and the young are reared. This explains why the eggs and very young eels are never found in England. Laid in the dark in the deep sea, the eggs eventually float, are hatched, and the larvæ spend from one to two years of sea life. Before they were recognised as young eels they received the name of *Lepto-cephalus*, but now they are known to be identical with the elvers that yearly may be seen marching up the rivers. Passing to the frog, the lecturer gave many interesting details of its meta-morphosis. After the winter-sleep, during which time the frog needs no food, it wakes up and during March lays count-less eggs in watcr. These eggs are encased in jelly, and many are the useful purposes which the jelly serves. It prevents crushing of the eggs as they are rocked to and fro on the surface of the water, and, being unpalatable, offers little or no temptation to water animals. Again, from its slipperiness only broad-billed ducks can make anything out of it, and the interspaces afford a refuge for green algæ, which give off a constant supply of oxygen during the day. The jelly also enables the eggs to receive a larger supply of the sun's rays, and so acts as an incubator. The various changes in the frog's career were then briefly sketched, showing how in about ten days the tadpole comes out of the egg and goes through numerous stages until finally the frog is produced. It is interesting to note the variety of food that nourishes the frog at different periods in its history, since the various forms are either vegetarian, carnivorous, or insectivorous. Speaking of cater-pillars, it was shown how many are the risks to which their lives are liable. On account of the turgid state of their bodies the peck of a bird or a pin-prick is fatal. Reptiles lie in wait for them, ichneumon flies attack them for the purpose of laying eggs in their bodies, and adverse climatic condi-tions do them serious harm. It follows that they adopt many protective devices, by virtue of which they are able, *e.g.*, to resemble in colour the twigs on which they live. Mr. Thomson went on to discuss the question of instinct in young birds. Young rooks, reared artifically, so that there was no possi-bility of parental authority, suggestion or example coming in to upset the experiment, did not know red worsted from real red worms, nor did they understand the use of water until they pecked at their feet whilst standing in a bath. A young moorhen that had been hatched in an incubator and reared in a study, away from all its kind, swam readily in a bath, but showed no inclination to go under water. It was taken from Bristol to Yorkshire and allowed to swim in a stream, in the hope that running water might awake the sleeping instinct. It was not until one day a dog came bungling through the reeds at the side of the stream and made a feint at it that the instinct to dive came to the bird. At the critical moment it dived unhesitatingly. The lecturer concluded by gathering together some of the impressions that spring makes on the mind of the biologist. A visit to a fish hatchery, where a million eggs may be seen in the oscillating tubs, will convince one of the abun-dance of life at that season. The great mortality is another striking feature of springtime; the man who attends to the hatchery is content if he gets one fish from 10,000 eggs. A million embryo oysters are produced before one full-grown healthy oyster is obtained, a fact which should add prestige to this dainty article of diet. Though a frog lays many thousands of eggs, yet the average number of frogs in any district remains fairly constant. Darwin found that only 8 per cent. of the seeds in his seed-plot became full-grown plants, and it is known by all that farmers must ruth-lessly single their turnips in order to obtain a good crop. In fact, it has been well said of Nature—

> "So careful of the type she seems,
> So careless of the single life."

Another point of extreme interest, which nowadays is receiving a large share of attention from eminent men of science, is the plasticity of youth. By feeding young tadpoles with flesh, the proportion of females may be raised from 50 to 80 per cent. Finally it was shown how the child organism exhibits heredity, in being in one sense as old as its parent, whilst in addition the child organism is often something new, leading the race, and causing variation. In this connection it was remarked that the researches of Professor Hodge, of Chicago, had led him to the con-clusion that bees after a day's work are in a state of cellular collapse, the nuclei being affected. Nerve fatigue thus exerts a considerable effect on structure, an assertion which is again borne out by the discovery by Professor Hodge that there are more healthy and normal nerve cells in a young bee's brain than there are in the brain of the same bee at the end of the summer.

At the meeting on Thursday, June 2, EDWARD E. KLEIN, M.D., F.R.S., Lecturer on Physiology at St. Bartholomew's Hospital, gave the first of two lectures at the Royal Institution, on—

Modern Methods and Their Achievements in Bacteriology.

The determination of the number of bacteria in a given material their rapidity of growth and multiplication, first received atten-tion. In order to convey some concrete idea of their extreme minuteness, it was mentioned that if a postage stamp $\frac{7}{8}$ inch long and $\frac{3}{4}$ inch wide (22·2 Mm. by 19·05 Mm.) were covered by a single layer of the typhoid bacteria, placed end to end and side by side, 500,000,000 bacteria would be required; and further, that the same area, covered to the depth of one-tenth of an inch (2·54 Mm.) would accommodate no less than 2,000,000 million of these microscopic creatures. If beef-broth be sterilised, and to the limpid liquid be added bacteria known as *Staphylococcus aureus*, in the proportion of 246 per cubic centimetre of broth, and the whole maintained at the temperature of the animal body (about 98° F.) for twenty-four hours, it will be found that the liquid has become quite turbid, and calculation will reveal the presence of 20,000,000 bacteria in every cubic centimetre of the solution. In other words, each original bacterium has become 80,000. The bacterium which causes fowl cholera, an epidemic disease which quickly decimates a large fowl yard, is so abundant that the blood of an infected fowl teems with them to the extent of

15,000,000 to each cubic centimetre. Indeed, if 1/50th of a drop of this blood be injected into a healthy rabbit the animal sickens and dies in twenty-four hours, and the blood in its body contains about 12,000,000,000 bacteria. The lecturer then described the methods now in use of cultivating bacteria in solid media, and which were first introduced in 1881-82 by Robert Koch. It was mentioned in passing how great were the benefits conferred upon humanity by the rapid increase in our knowledge of bacteria, due mainly to these methods, especially in the departments of medicine, chemistry, and botany. A series of slides was then shown, illustrating the cultivation of bacteria by the use of solid media, their identification by appropriate methods of culture and various modern methods of artificial staining. It was shown how bacteria may thus be sifted out and determined specifically by accurately noting their morphological and biological characters. One slide showed a culture of some bacteria collected in Oxford Street at mid-day, by exposing a bottle containing beef-broth to the air for a few minutes. A portion of the broth was mixed with gelatin, spread on a glass plate 3½ inches (88·9 Mm.) in diameter, and placed for a few hours in an incubator. The result of this treatment was that the isolated bacteria multiplied enormously and founded colonies, which could be transferred to other portions of the nutritive medium and sub-cultures so obtained. A sample of sewage was diluted to a known extent, mixed with a definite quantity of medium, and similarly treated. In this way it is possible not only to identify and sift the multitudinous forms of bacteria, but also to estimate their number and roughly compute their weight. Thus the sewage was found to contain about 2,000,000 typhoid bacteria per cubic centimetre, and it is estimated that about 40,000 million *Staphylococcus aureus* weigh 1 gramme. The lecturer next dealt with the analysis of water, and showed conclusively the absolute futility of a chemical analysis, unless it is supplemented by a careful bacteriological examination. It has been stated by the most eminent authorities on water analysis that the presence of 0·05 of organic matter per 100,000 parts is a negligible quantity. Some time ago a water was described as containing 1 grain (0·0648 gramme) of organic matter in 5000 tumblers, *i.e.*, one 5/000th of a grain (·00001296 gramme) per tumbler. Now, granting that this organic matter represented bacteria, and in weight they resembled the *Staphylococcus aureus*, it follows that each tumbler contained the alarming proportion of over 518 thousand typhoid bacteria. If we go a step farther and consider the alarming rate at which the cholera bacteria multiply in the blood of a healthy rabbit, we cannot fail to grasp the shockingly fatal results that may accrue from an imperfect examination of a sample of water infected with the typhoid bacterium. The fact was emphasised that infinitesimal weights of bacteria cannot possibly be detected by the aid of purely chemical methods, and that no examination of water is complete unless it has passed through the hands of an expert bacteriologist. One-sixtieth part of crude sewage in 100 C.c. of distilled water gives a proportion of about 1·7 of sewage per 10,000 of water. Chemical analysis detects this small amount of organic impurity, but the chemist looks upon this sample of water as one of exceptional organic purity, and passes it as a first-class potable water. But the bacteriologist has methods at command which enable him to detect far smaller proportions of organic matter, and he sees great danger when water is contaminated with sewage to the numerically small extent of one part in 500,000. The lecturer passed on to the consideration of the conditions that affect the growth and vitality of bacteria. All bacteria may not be present in a given area in the same proportion, and if a culture be made in a nutritive medium that favours the growth of all alike, it is possible to miss specific bacteria that may be of great importance. It is customary, therefore, to add to the media certain substances that are known to retard the multiplication of the rabble, whilst they favour the growth of the few. The addition of 1/500th per cent. of carbolic acid acts in this way, and is largely used in the case where, *e.g.*, it is required to find the *bacillus coli*. By adding sewage to phenolated broth a pure culture of *B. coli* may be obtained. This medium is favourable also to the typhoid bacillus, and both multiply well in a medium prepared from a sterilised infusion of potato mixed with gelatin and iodine. The incubation period for these two varieties of bacillus varies from twenty-two to forty-eight hours. It was noticed that whereas the *B. coli* develops carbon dioxide the typhoid bacillus does not. The cholera vibrio grows and multiplies best in a medium containing 1 per cent. of salt and 1 per cent. of peptone. By such devices the specific bacteria may be isolated from other varieties, and in the form of a sub-culture spread upon glass, dried, stained, and examined. In 1893 the value of this selective method was proved in a striking manner. A man died from an unknown cause, an inquest was held on the body, and as a result the death attributed to pneumonia. Another doctor, somewhat sceptical about this conclusion, took a portion of the dead man's bowels, mixed it with gelatin and placed it in an incubator for ten days. Then a portion of the putrid, evil-smelling substance was transferred to a peptone solution, a plate culture of the same prepared, and the presence of the cholera bacillus proved beyond the shadow of a doubt. Dr. Klein described another method of sifting, depending on the principle that whilst some bacteria thrive in air, others are killed thereby. These two classes are described respectively as aerobic and anaerobic bacteria. The cholera bacillus and *B. coli* are examples of the former class. Anaerobic conditions are attained by a variety of methods, including the absorption of oxygen by alkaline pyrogallol and its removal by the use of an air-pump. If milk, boiled and sterilised, be mixed with sewage, placed under anaerobic conditions, and examined after twenty-four hours' incubation, it will be found clear in one part, while the top and bottom portions of the vessel will be occupied by a coagulum. The liquid literally teems with anaerobic bacteria. Bacteria which cause phosphorescence on old rotten wood, and the bones of dead fish next received attention. In such cases the bacteria either themselves become luminous or else produce a luminous secretion. A medium composed of broth with small proportions of sodium chloride and asparagin favours the multiplication of these luminous bacteria in the course of 48 hours' incubation. An exquisite photograph was shown of a flask filled with a fluid charged with such bacteria; the plate and flask were left in the dark for several hours and a strikingly beautiful picture was produced. Slides were then placed in the lantern, showing many specific forms of bacteria, including those of anthrax, tuberculosis, influenza, as well as those which convert urea into ammonium carbonate, nitrites into nitrates, and give rise to other well-known and important changes in nature. It was shown how useful are the bacteria which invade the roots of leguminous plants in enabling a plant to absorb its supply of nitrogen direct from the atmosphere. The question of the choice of suitable dyes was then discussed, and the various aniline dies, *e.g.*, methyl blue and gentian violet passed in review. A slide was exhibited of the bacteria cultivated from the expectoration of a person suffering from tuberculosis. The culture had been stained with fuchsine and then treated with nitric acid, which discharges the colour from all bacteria except the tubercular bacillus. The discovery of a method of isolating this dreadful scourge was made in 1882 by Koch, and enabled him to prove conclusively that tabes mesenterica in children, lupus, scrofula and many other loathsome and unmentionable diseases are but different forms of one and the same complaint, viz., tuberculosis. In conclusion Dr. Klein said that though he would place high in the list of famous achievements Simpson's discovery of the use of chloroform, Jenner's method of vaccination with calf-lymph, and Lister's antiseptic surgical methods, yet he reserved the highest place of honour for Koch's discovery of a method of isolating the bacillus of that fell destroyer, tuberculosis.

CHEMICAL SOCIETY.

A meeting was held on Thursday, June 2, the PRESIDENT, Professor Dewar, in the chair.—The usual routine business having been gone through, the PRESIDENT announced that it was his melancholy duty to pay a tribute, in the name of the Chemical Society, to the memory of the late Lord Playfair. As a man he was straightforward and generous to a fault. He used to own that his unrivalled success was largely due to his early training in chemistry under Liebig and Graham. It is noteworthy that the deceased scientist has developed a new type of public man in applying deep scientific knowledge in a political sphere. The President went on to say that owing to the death of this sole remaining founder and senior past President of the Chemical Society it was necessary to postpone the proposed banquet to the past Presidents, and in all probability October 28 would be the date ultimately fixed upon for the function.

Professor DEWAR then modestly suggested that as there were only two papers to be read that evening he might be permitted to communicate further information concerning the properties of

Liquid Hydrogen.

The preliminary announcement respecting the properties of hydrogen in the liquid condition was necessarily meagre, considering the small quantity of liquid operated upon. Further supplies have, however, been obtained, and various physical constants determined. It is extremely difficult to obtain any quantity of the liquid at pleasure, on account of the impurities that will cling to the hydrogen, the formation of solid air, and furthermore, the effect of the low temperature reached on the apparatus itself, which prevents it working well for several days. The first constant that had been determined was the boiling point under atmospheric pressure. This was done by means of a platinum resistance thermometer. Provided the platinum is fairly pure, the relation between temperature and resistance is practically that of a straight line. The resistance is taken at 0° and 100° C., a line is drawn between these two points, and a figure is obtained which is the temperature in platinum degrees for the thermometer employed. It is then necessary to find the relation of this temperature to the ordinary temperature degrecs. It is not possible with the instrument used on this occasion to reach a lowcr temperature than −263°·3 C. The resistance in liquid hydrogen was found to be a little more than one-tenth of an ohm, and at 0° C. 5·3 ohms. On deducing from these data the temperature in standard degrees, Professor Dewar found that liquid hydrogen boils at either −238° C. or −239° C., *i.e.*, at about 35° on the absolute scale. This result is about 8° higher than that obtained by Wroblewski by means of Van de Waal's theory, or in other words, about 15 per cent. higher than was anticipated. The critical temperature of liquid hydrogen is about 50° on the absolute scale. Hence the whole phase of the liquid condition of hydrogen takes place within a range of 15° C., *i.e.*, between 35° and 50° on the absolute scale. This range is small compared with that of oxygen and nitrogen, which is about 65° C. It follows that slight numerical variations are of the utmost importance, for who can say what internal molecular changes are accomplished within the narrow range of 15° C. ! On comparing the platinum thermometer with another, and calculating what figures would have been obtained if the second instrument had been used, the figures were found to be −238°·2 and −238°·9 C. Mr. Dixon, of Peterhouse, has calculated the relation of the platinum degrees to those on the ordinary scale of temperature, and finds the number lies between −237° and −239° C. Therefore thc boiling point of hydrogen lies very near −238° C., but, said the lecturer, this number must still be taken with reservation, because at this low temperature we are within 6° of the limit of temperature at which the platinum resistance thermometer will work. Some other instrument will have to be invented if ever a lower temperature is to be registered by mortal man. The density of hydrogen vapour as it leaves the boiling liquid is about 0·55, or one-half that of air and about equal to the density of marsh gas in a similar condition. It is remarkable that whereas the vapour of air from liquid air is about 3¾ times the density of air at ordinary temperatures, the vapour of hydrogen from liquid hydrogen is 8 times denser than that of hydrogen at ordinary temperatures. On exposing liquid hydrogen to the air in an open vessel, a cloud of solid air quickly formed in the interior of the vessel and sank into the liquid; consequently the vapour of hydrogen in the vessel was less dense than air. By plugging the vessel with cotton wool this cloud of air may be prevented from falling into the liquid. Professor Dewar questioned whether we shall ever reach within twenty degrees of absolute zero, and then drew attention to the fact that whilst liquid oxygen is 250 times as dense as the vapour of oxygen at its boiling point, in the case of hydrogen the liquid is 100 times the density of the vapour. On June 1, careful experiments were made in order to determine exactly the density of liquid hydrogen. Ten C.c. of liquid hydrogen were taken, evaporated, and the volume of gas produced was measured. The professor expected the density would prove to be about one-half that of air, or perhaps a little more. The 10 C.c. of liquid gave 8 litres of gas, and the density was calculated as 0·07 (approx.). The atomic volume of hydrogen is 14·3, as compared with oxygen 13·7, and nitrogen between 14 and 16. The density of hydrogen in palladium has been computed at 0·62. If the above figures are correct the specific heat of hydrogen must be high; it may be about 6·4, or six times that of water. The latent heat of vaporisation of a substance being proportional to its absolute boiling point, it was found that the latent heat of vaporisation of hydrogen is about 350 units per gramme, which is high in comparison with oxygen, 16 grammes of which require 864 heat units. In comparing liquid hydrogen with oxygen and air, the liquids must be taken volume for volume, and not weight for weight.—Professor THOMPSON proposed a hearty vote of thanks to Professor Dewar for this valuable communication, and regretted that the author himself was the only one present who could discuss the subject. In seconding the proposition, Professor Dunstan suggested that had the members known what was in store for this meeting a much larger audience would have assembled. The proposition was then carried with acclamation.—A paper by H. J. H. Fenton, M.A., and Mildred Gostling, B.Sc., was then read by Mr. FENTON on

The Behaviour of Certain Organic Substances towards Hydrogen Bromide in Presence of Ether.

The formation of the ethylic salt of dihydroxymaleic acid gave the authors the first clue that there was anything unusual in the action of hydrogen bromide on organic substances. The investigation was followed up, ethyl oxalate, stearate and borate were produced, and it was found that ether acts as a base towards an acid in the presence of perfectly dry hydrogen bromide. Various carbohydrates were then subjected to the action of hydrogen bromide in presence of ether. One gramme of the carbohydrate was put in a stoppered cylinder, and a certain amount of ether, saturated with dry hydrogen bromide gas, was added. Cane sugar at once developed a fine purple colour, lævulose, inulin and sorbose (an isomer of lævulose) gave the same colour on standing from fifteen to thirty minutes. Dextrose, galactose, and maltose developed a purple colour after standing twenty-four hours, but the colour was not so brilliant as was the case with cane sugar. Starch and dextrin gave only a yellow coloration, arabinose and rhamnose developed a reddish-brown tint, whilst mannite, sorbite, and erythrite became yellow. Generally speaking, the hexaldoses give a purple coloration on standing twenty-four hours, the keto-hexoses almost at once develop a purple colour, pentoses do not give the purple tint at all, whilst the alcohols are similarly unaffected. Xylose occupies an intermediate position, as regards its reaction with hydrogen bromide and ether, between the keto-hexoses and the hexaldoses. Rhamnose, though a six-carbon sugar, since it is methyl pentose, develops no blue colour. The authors found that the presence of ether was unnecessary, and that the development of colour was due entirely to the hydrogen bromide. The substance which nearest approaches this with the purple coloration is Stenhouse's metafurfurol. The substance which the authors obtained has its colour discharged by water with the formation of a greenish-black precipitate. Sulphuric acid brings back the purple colour.—In the discussion that followed, Mr. CHAPMAN mentioned that some years ago a paper appeared dealing with the absorption of hydrogen chloride by cane-sugar.—Professor DUNSTAN asked whether the authors had experimented with the chloride and iodide of hydrogen. He would like to hear any speculations which Mr. Fenton might have to bring forward as to the cause of the colour and the composition of the compound. It would be interesting to know whether the substance is identical with metafurfurol.—The PRESIDENT suggested that it would be a most desirable thing if the authors could devise a rapid method for the detection of the various sugars, and the present investigation might possibly prove capable of such application. He hoped that the authors would before long give the Society more definite information concerning the interesting compound which they have discovered.—In reply, Mr. FENTON hesitated to say anything at present as to the composition of the new compound. He had failed to obtain any purple colour, using hydrogen chloride in place of hydrogen bromide. It is important to remember that whilst all sugars that give this reaction have six carbon atoms, there are some 6-carbon sugars, *e.g.*, rhamnose, that do not react in this way, and it is only those which show the ketose grouping that rapidly develop the purple coloration referred to.—Professor J. NORMAN COLLIE, Ph.D., F.R.S., then followed with a paper by himself and Wilfred Lean (Redwood Research Scholar of thc Pharmaceutical Society), dealing with the

Production of some Chloropyridine Carboxylic Acids.

The authors prepared from chlorolutidine carboxylate (*Chem. Soc. Trans.*, 1897, lxxi., 303), several chloropyridine carboxylic acids, and by reducing one of these with tin and hydrochloric acid, obtained carbo-cinchomeronic acid, which is one of the products of the action of oxidising agents on quinine, cinchonine, papaverine and several other alkaloids. The substance used as the starting point of the research was ethylic chlorolutidine-mono-carboxylate. It is a sweet-smelling liquid, having a boiling point of 288°-290°C.

By the hydrolysis of this ether the free acid was obtained crystallising in small needles, with a melting point of 148° C. By the action of permanganate of potassium on the ethylic salt, two acids were obtained, one having the formula $C_5HN(COOH)_2(COOEt)Cl(\alpha\gamma.\beta.\alpha')$ and melting at 169°, the second an α'-chloropyridine-$\alpha\beta\gamma$-tricarboxylic acid, $C_5HN(COOH)_3Cl$, melting at 212° C. This latter acid yielded carbo-cinchomeronic acid, or pyridine-$\alpha\beta\gamma$-tricarboxylic acid, $C_5H_2N(COOH)_3$, when reduced with tin and hydrochloric acid.—This paper produced no discussion, possibly for the same reason that had obtained in the case of Professor Dewar's paper.—The President thanked the authors for their communication, and adjourned the meeting until June 16.

Pharmaceutical Transactions.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.

The last meeting of the session was held at 17, Bloomsbury Square, London, on May 20, when Mr. J. Evans occupied the chair.

Mrs. K. L. Moore gave an interesting account of

A Visit to Japan.

So rapid is the progress of civilisation—or rather of Western ideas—in the country, that impressions of yesterday may be incorrect to-day. The Japanese seem to have lost their former good taste in many things, but particularly in dress, recklessly combining some of their native garments with an English bowler and American boots. Right in the country one still sees occasionally the old peasant with his white or blue leggings, straw shoes, big hat, and robe tucked into his girdle, his head shaved down the middle, and back hair turned up in a queue in the ancient mode. The woman of the old school is a curious person with blackened teeth and shaved eye-brows, peacefully occupied with a pipe of such small dimensions that two puffs exhaust it; quickly filling it, however, the good lady starts again with unruffled countenance and undiminished patience. The former custom was for all married women to blacken their teeth and shave their eyebrows, for a very obvious reason. The present Empress set the fashion in discontinuing this. At Kamakura one comes across the famous Diabutsu or Great Buddha, a magnificent bronze figure, forty-nine feet in height, the eyes are pure gold, and a silver boss on the forehead weighs 30 lbs. This Buddha dates from the thirteenth century, and is perhaps the grandest of all Japanese works of art. It is truly an imposing figure, the calm, intellectual, passionless face seeming to concentrate in itself the whole philosophy of the Buddhist religion, "the triumph of mind over sense, of eternity over fleeting time." Around the figure crop up numerous temples, and here are many lotus ponds. The lotus is intimately connected with Buddha, being considered typical of the ideal man. Since it grows in the mud, yet produces a lovely flower, it is a symbol of purity in a wicked world; as its odour sweetens the air around, so his good deeds influence those about him; it opens in the morning sunshine, and his mind is expanded by the light of knowledge; its branchless stalks, rising without a break to the leaf or flower, are a type of his single-mindedness and directness of purpose, and its edible root shows that the basis of his life must be usefulness to others; to this it may be added that, like the very good, the flower dies young. The flower opens early, closes before noon, and falls the second day. In roaming the country, whenever one rests for a few minutes at a tea-house, the smiling owners place instantly by your side a little teapot and tiny handleless cups, and a hibachi, with its pile of glowing charcoal. Their friendly welcome never fails to make an impression, however poor the quality of the tea may be. The bamboo plantations are an essential feature of the landscape. The young plants grow so fast that one can almost see them move. Some are cut and eaten while still tender, those which are allowed to grow to large poles are used for every imaginable purpose, they are made into water pipes, flower vases, barrel hoops, umbrellas, baskets, waterproofs and hats, scaffolding poles, pipe stems, fans, and delicate whisks for stirring the powdered tea. Indeed, it would be almost easier to say what the bamboo is not used for. At the door of one of the tea-houses visited was a tank of water containing fish. You were invited to indicate your particular fish, and it was caught and cooked on the spot. Like all other houses, this was a light framework structure with a roof heavy in proportion, and supported on stones with slightly hollowed tops resting on the surface of the soil. There are no continuous walls—the side of the house, composed at night of wooden sliding doors, is stowed away during the daytime. In summer everything is thus opened to the outside; in winter semi-transparent paper slides replace the wooden sliding-doors during the day. The floor of all living rooms is covered with thick mats made of rushes, fitting perfectly together. Furniture is conspicuous by its absence, consequently you have to sleep on the mats. Fortunately they are soft, and when covered with a heavy "futon"—the regulation Japanese bed-covering—sleep is by no means impossible. The journey from Nikko to Utso-nomiya was undertaken in jinrickshas, a couple of coolies to each, and they covered the 25 miles in 2½ hours with an occasional rest, and appeared fresh and smiling at the end. The Japanese are remarkable in their love of small things. Their trees 60 years or more old and yet only a foot high are well known, their carvings in ivory and their pottery and metal work are on the same lines. You can get small vases in the Satsuma ware, not more than 3 or 4 inches high, with battle scenes painted on them, in which are depicted at least 1000 warriors, every detail being perfect, though the faces are so small that a good magnifying glass is necessary to see them. The lecturer concluded by expressing a wish that when the Trans-Siberian Railway is opened in 1900, many would take advantage of any excursions on that line, and go to see the beauties of Japan.

Mr. W. J. Spurway then read a note upon the

Determination of Arsenious Anhydride by Means of Volumetric Solution of Iodine,

embodying the results of work undertaken to clear up a difficulty met with in the course of work in the Society's Chemical Laboratory. That method of ascertaining the amount of As_4O_6 in a solution was devised by Möhr, and depends upon the fact that As_4O_6 is oxidised by means of iodine to the higher oxide As_2O_5. The reaction is represented by the equation—

$$As_4O_6 + 4I_2 + 4H_2O = 2As_2O_5 + 8HI.$$

This reaction does not take place, however, in an acid solution. It is therefore necessary that some alkali should be present to neutralise the hydriodic acid which is liberated by the reaction. Further, it is necessary that the alkali employed shall not absorb or otherwise affect the iodine solution, so as to prevent the formation of the blue iodide of starch at the end of the reaction. For this purpose Möhr selected the acid carbonate of sodium, which, if added to a cold and neutral solution of As_4O_6, answers the purpose quite well. It is one of those acid salts which, curiously enough, have an alkaline reaction. Regarded as a compound of the basic oxide Na_2O with two molecules of the acid oxide CO_2, and one molecule of water ($Na_2O \cdot 2CO_2H_2O$), this fact is explained thus: The strong alkaline nature of the Na_2O molecule is sufficient to overcome two molecules of the acid oxide CO_2.

Mistakes, however, arise when, following the instructions of text-books, we bring the arsenic into solution by boiling it with a strong solution of acid carbonate of sodium. The boiling converts the acid carbonate into the normal carbonate, so that when we titrate such a solution with iodine, the end of the reaction is hidden owing to the absorption of some iodine by the strongly alkaline carbonate.

The following experiments show the error that is introduced by this treatment:—

10 C.c. of a neutral solution of $As_4O_6 + NaHCO_3$ at 60° F. decolorised 9·4 C.c. of iodine solution.

10 C.c. of a neutral solution of $As_4O_6 + NaHCO_3$ after boiling, decolorised 9·6 C.c. of iodine solution.

10 C.c. of a neutral solution of $As_4O_6 + NaHCO_3$ boiled and titrated whilst boiling, decolorised 10·3 C.c. of iodine solution.

The amount of $NaHCO_3$ used in each case was the same. Also, it has been pointed out by Fresenius that there is a considerable variation in the amount of iodine absorbed by a solution of Na_2CO_3, which apparently depends upon the amount of dilution. These are the figures he gives:—

20 C.c of pure Na_2CO_3 sol. (5 grains in 100 C.c.)	absorbed.	·4 C.c. Iodine sol. (53064 in 100 C.c.)
20 C.c. of the same sol. +	60 C.c. of water absorbed	·8 C.c. of the same iodine sol.
20 C.c. ,, ,, ,, +	120 C.c. ,, ,, ,,	1·2 C.c. ,, ,, ,, ,,
20 C.c. ,, ,, ,, +	280 C.c. ,, ,, ,,	2·2 C.c. ,, ,, ,, ,,

These two sets of experiments appear to account in some measure for the variations and inaccuracies of results obtained by following

the instructions given in text-books. Whilst working at this subject, the author's attention was directed to a paper read before the Association about ten years ago by Mr. E. J. Woolley, who recommended that borax should be substituted for acid carbonate of sodium. He claimed that it gave quite as accurate results as when $NaHCO_3$ is added to a neutral solution of As_4O_6, and was preferable, since it could be heated to any extent without producing any absorption of iodine afterward, even when used in comparatively large quantities. Now borax is another acid salt which has an alkaline reaction. This is explained in the same way as in the other case. The strongly basic properties of the Na_2O molecule are more than sufficient to overcome two molecules of the weak acid oxide B_2O_3. It was suggested that it would be useful to try a series of experiments in order to ascertain whether the use of borax gave such satisfactory results as was claimed for it, because as far as can be ascertained he is the only person who has recommended its use. The following results were obtained:—

I. A solution of borax is not decomposed by boiling, does not absorb iodine, and does not prevent the formation of blue iodide of starch.

II. It is an easy and convenient solvent for arsenic.

III. In a series of comparative titrations, using varying quantities of borax and sodium acid carbonate with a neutral solution of As_4O_6 and a weak solution of iodine, the following results were obtained:—

10 C.c. of neutral solution of As_4O_6 with 1 gramme of $NaHCO_3$ decolorised 23·2 C.c. of iodine solution.

10 C.c. of neutral solution of As_4O_6 with 5 grammes of $NaHCO_3$ decolorised 23·4 C.c. of iodine solution.

10 C.c. of neutral solution of As_4O_6 with 10 grammes of $NaHCO_3$ decolorised 23·3 C.c. of iodine solution.

10 C.c. of neutral solution of As_4O_6 with 1 gramme of borax decolorised 23 3 C.c. of iodine solution.

10 C.c. of neutral solution of As_4O_6 with 5 grammes of borax decolorised 23·3 C.c. of iodine solution.

10 C.c. of neutral solution of As_4O_6 with 10 grammes of borax decolorised 23·25 C.c. of iodine solution.

It will be seen that, if anything, borax is less liable to variation than sodium acid carbonate, even when the latter is used under proper precautions. These results, therefore, corroborate the statements made by Mr. Woolley, and prove that such determinations can be carred out, not only more conveniently and quickly but more accurately if borax be used instead of sodium acid carbonate.

In conclusion, attention was directed to the instructions given in the British Pharmacopœia for the estimation of arsenious anhydride. The 1885 edition directed that the As_4O_6 should be dissolved by boiling it with sodium acid carbonate in excess, and titrated with iodine solution. That method, of course, renders the determination liable to the errors previously pointed out, and it is therefore satisfactory to find that in the new Pharmacopœia instructions are given to cool the solution, to add a small quantity of hydrochloric acid in successive drops, and to shake well, the idea being to convert the Na_2CO_3, which has been formed by the boiling, back into the acid carbonate. Again, in the B.P. 1885, in the determination of As_4O_6 in liquor arsenicalis it is directed to boil the solution for five minutes with sodium acid carbonate and titrate with iodine solution. Now this preparation contains an excess of potassium carbonate, and by boiling with $NaHCO_3$, an additional quantity of sodium carbonate is formed. Each of these absorbs iodine in varying degrees, and it is little wonder that inaccurate results are obtained by following such directions. The new B.P. orders that the solution should first be neutralised with hydrochloric acid and then titrated with iodine in presence of a slight excess of sodium acid carbonate. That method of course gives satisfactory results.

Animated discussions followed both papers, the CHAIRMAN, SECRETARIES, and Messrs. BATTLE, DURBIN, LESCHER, MATTHEWS, PAYNE, SMITH, A. W. TURNER, and J. S. TURNER took part.—The meeting then adjourned.

PHARMACEUTICAL SOCIETY OF IRELAND.

On Wednesday, the 1st instant, the monthly meeting of the Council was held at 67, Lower Mount Street, Dublin. The PRESIDENT, Mr. R. J. Downes, was in the chair, and there were also present the Vice-President, Mr. Grindley (Hon. Treasurer), and Messrs. Bernard, Wells, Porter, Conyngham, Ryan, Kelly, Simpson, Sullivan, and Dr. Walsh.—The PRESIDENT reported that he had been a guest at the annual dinner of the Pharmaceutical Society of Great Britain, and was received very kindly and favourably. In response to the toast of his health, he said he did not take it as a personal compliment, but as a recognition of the position of the Irish Society in pharmacy. He said they respected the seniority and talent of the British Society, and would stand by them as far as they could in the project they had on hand, whilst they expected the same support from them. The President, in a subsequent interview, told him that the British Society would assist them as far as they could in their effort to obtain an amendment of the Companies Act, and would be delighted if they should succeed. He (the President) also had an interview with the Duke of Abercorn, who promised to support them, and the Earl of Mayo had written promising to present their petition in the House of Lords when the House meets.—Mr. BERNARD: Did anything occur about our Preliminary examination being accepted by them?—The PRESIDENT: No, it was not referred to.—Mr. BERNARD: They accepted our recognition of their Preliminary examination, but would not give us anything in return.—Mr. CONYNGHAM said the British Society had treated them very badly in not receiving into their warm and big-hearted bosoms the Irish Society, which received no man without examination, although they themselves registered drapers and ironmongers without examination (*sic.*).—Mr. KELLY: I do not think there is any use in bringing up these old sores. We should clasp hands of friendship with them and work for the common good. I myself felt their not receiving our Preliminary certificate; at the same time they offer to help us and we offer to help them, and let us work together for the common good of pharmacy.—Mr. WELLS said he did not think they should be looking back at past wrongs and keeping open old sores. He (Mr. Wells) believed they had a good friend in the President of the English Society.—The PRESIDENT repeated that he had been received most kindly by the British Society on the occasion of his visit, and he thought the Council should reciprocate the feeling.—The subject dropped.—The question as to whether the examiners at the ensuing examinations should examine out of the new British Pharmacopœia was considered in Committee, and it was ordered that the Examiners should take cognisance of that work, but that they should use a discretion in awarding marks.—Mr. John McCloy, who had passed an Intermediate Board Junior Grade examination was admitted to preliminary registration as a student, but the PRESIDENT said he would give notice of a motion to rescind the existing regulation as to examinations other than the Society's Preliminary, as they were accepting examinations that did not come up to the standard of their own.—Two new members were admitted, and three were nominated for membership; and other business having been disposed of, the Council separated.

NOTTINGHAM CHEMISTS AND MR. YOXALL, M.P.

In accordance with a resolution passed at the annual meeting of the Nottingham and Notts Chemists' Association a deputation waited upon Mr. Yoxall, M.P., at the House of Commons on Monday evening with reference to the Amendment to the Pharmacy Bill, which stands in his name. Owing to illness and other causes, several influential members of the Association were unable to journey to London, and the interview was entrusted to Messrs. F. R. Sergeant and W. Gill, who were genially received by Mr. Yoxall, although the hon. member had been obliged to put off an important engagement in order to meet them. At the outset Mr. Yoxall wished to make it clearly understood that, apart from his attitude to the measure, the Bill had in his opinion no chance of passing this session, owing to the large amount of Government business to be disposed of. He had never blocked the Bill, and his action with regard to it was solely in the public interest, and to safeguard the position earned by men who had passed the Major examination. Any movement which aimed at improving the educational standard of any profession would have his cordial support.

The deputation, after expressing appreciation of the motives which actuated the hon. member, proceeded to point out some of the special circumstances which existed at the time the 1868 Act was passed and their bearing on that Act, and briefly alluded to the action of the Pharmaceutical Society since that date, making special reference to the increasing stringency of the Minor examination and the Government Inspectors' Reports thereon. Allusion was also made to the part played by chemists and druggists in promoting pharmaceutical education in various parts of the country, and the desirability of strengthening the Pharmaceutical Society in

order to further prosecute that work. With regard to the title "Pharmaceutical Chemist," that would still be reserved for Major men.—After discussing these matters Mr. YOXALL said: I now see the position of affairs better than before; the Bill has, I think, no chance of passing this session, but if again introduced next session with clauses that specify distinctly (1) That the title of Pharmaceutical Chemist shall be reserved for Major men; (2) That membership of the Society, according to the terms of the Bill, shall not carry with it the right for Minor men to attach the letters M.P.S. to their names; or if that right is conferred on Minor men, then Major men shall take a different title (and I would suggest Fellow of the Pharmaceutical Society), then I would move no amendment to it, but on the other hand give the Bill my cordial support.—The deputation thanked Mr. Yoxall for his kindness in receiving them, and for the careful attention he had given to the facts laid before him, and were afterwards shown round the House, and then returned to Nottingham feeling that although the Pharmacy Bill was doomed for this session there was a brighter prospect for it next year.

LETTERS TO THE EDITOR.

COMMERCIAL SUMATRA BENZOIN.

Sir,—Mr. Evans, in his paper on this subject (*ante*, p. 507), in reference to my Conference paper, seems to have overlooked the title of it when he said, "Mr. Dunlop gave no indication of the actual quality of the benzoins he examined beyond merely the trade designation." My starting-point being different from his did not admit of me giving further description, and, moreover, all the samples were submitted for examination—and thus spoke for themselves—at the time my paper was read. Mr. Evans bought "the best" (he did not say what he paid). I bought the highest priced in nine cases out of twelve, and two seconds (also in price), and one "elect" for comparison. The purchases were made from the leading London and provincial houses in the ordinary course of business. These conditions were, I think, the best for finding out what was in the market. Mr. Evans' results confirm the statement made in the *Chemist and Druggist* editorial comment on my paper. viz, "Dieterich's repeated assays of the resin show that from 7·5 to 10 per cent. of matter insoluble in 90 per cent. alcohol is the range for first-class resins." When such is the case it is to be regretted that the B.P., 1898, has only modified its previous mis-statement about solubility by adding the words "almost entirely." The importance of the drug is indisputable, and on that account the limitation of the pharmaceutic use of it to the Siam varicty would have been in line with the modern trend towards standardisation. The up-to-date details anent acid benzoic could with advantage have been extended to benzoin itself.

Glasgow, June 3, 1898. THOMAS DUNLOP.

THAT DISPENSING PROBLEM.

Sir,—If Miss Kathleen Spencer will refer to my letter of May 20 respecting the ointment difficulty, she will not find any specified time stated; thus I fail to understand how she can disagree upon a point with which she is unacquainted. As a matter of fact the ointment, made according to my first process, occupied seventeen minutes, so after all we do not differ to any great extent, viz.:—only two minutes. However, I thought seventeen minutes too long for the examination room, and that if a more rapid process could be given it would be acceptable to the majority of students.

Lewisham, S.E., June 3, 1898. GRAHAM BOTT.

REGISTERED CHEMISTS AND JOINT-STOCK COMPANIES.

Sir,—It is with a feeling of profound sorrow that I read in this week's Journal, under the heading "Annotations," an expression of regret that all chemists who have had remuneration for their services at the hands of a limited company cannot have their names expunged from the Register. The palpable narrow-mindedness of this remark must be evident even to your contributor. Let us take a few of the pros and cons of the matter—service with limited companies. First, the limited company pays a salary 25 per cent. more than the average chemist (who may employ an out-door assistant). The hours are better arranged, there being considerably less confinement The freedom of the out-door situation (which system of employment is practically universal with limited companies) is so in accordance with the natural instincts of the Englishman (even a chemist) that a renegade (I suggest this term to your contributor) never returns to the narrow-minded fold. Again, a week or two ago I read in your "Situations Vacant" column "an out-door berth" offered by a private chemist to a really good man, salary 30*s.* per week (or did he mean month?). A salary generally given to a porter in the store trade. When I read such advertisements, with such a salary, publicly offered, I cannot restrain a faugh of disgust. That an educated man can so hold up the trade or profession to general ridicule passes my comprehension. And this is the type of man who would wipe the name of an assistant, who earns an honest salary, off the Register. Perhaps your readers will say that the writer is a rank store man. I am not, neither am I engaged by a limited company. There are, without doubt, sides to the store problem, but in my very varied experience, embracing—speaking generally—every class of business, I count my knowledge gained with the stores not the least valuable.

London, June 6, 1898. H. BROOK CLEGG.

*** When our correspondent is himself a registered chemist his opinions may possibly undergo a change. Meanwhile, it may be suggested that the "narrow-mindedness" is obviously displayed by those registered men who, for the sake of receiving, for the time being, 25 per cent. more in the way of salary, and having a few hours more freedom per week, are prepared to damage the position of their craft, and injuriously affect their own future prospects, by enabling unqualified persons to compete unfairly with registered chemists and druggists. [ED. *P.J.*]

THE DILUTION OF LIQUIDS FROM ONE GRAVITY TO ANOTHER.

Sir,—The following formula holds good for the dilution of syrups with water and other liquids where no contraction of volume takes place; for instance, I desire to know how much water must be added to 40 fluid ounces of oxymel scillæ, s.g. 1·45, to bring it to s.g. 1·32, the formula in question is—

$$\frac{1{\cdot}45 - 1{\cdot}32}{1{\cdot}32 - 1{\cdot}00} = \frac{13}{32} \times 40 = 16{\cdot}25$$

By the process of alligation this works out accurately, thus

40	×	1·45	=	58
16·25	×	1·00	=	16·25
56·25			=	74·25
		1	=	1·32

Now on using this formula to liquor ammonii acetatis I find it does not agree according to the official s.g.'s and by experiment I find no contraction takes place, and the question I desire to submit to your readers is, which is wrong, the formula or the official s.g.'s? Pharmacists who have the concentrated liquores could dilute their stocks to the present requirements if only the difficulty herein referred to was overcome and a standard s.g. inserted in the B.P. During experiments I have generally observed a peculiar odour of the preparation in question, Howard's ammonia and Beaufoy's acetic acid being used. Can any of your readers explain what this is due to?

Birmingham, June 7, 1898. R. L. DAVIS.

THE NEW PHARMACY BILL.

Sir,—In my letter which appeared in the *Pharmaceutical Journal* of March 12 last I suggested as a new and additional title for what I considered would become the "disposed" Pharmaceutical Chemist under the Act that of "Master of Pharmacy." It seems such a title would not be without precedent, as according to Mr Marsden's interesting paper in the Journal of last week on "The Practice of Pharmacy in Russia," that of "Magister" of Pharmacy is in use in that country denoting the highest rank of Russian pharmacists.

Great Witley, June 6, 1898. JOHN TWINBERROW, Ph.C.

THE NEW PHARMACOPŒIA AND THE MINOR EXAMINATION.

Sir,—At the Council Meeting in May the President stated that it had been decided that candidates for the Minor should not be examined in what was special to the new Pharmacopœia until January, 1899, that is, eight months after it has been issued. It occurred to me at the time that this arrangement was not necessary nor desirable, and would not be convenient. Since then several circumstances have arisen in my own experience to confirm my first impression, and I venture now, though late, to refer to the subject. The arrangement in question was professedly for the convenience of Minor candidates. There are two examinations still to be held this year—one in July the other in October. The Pharmacopœia became official as soon as it was issued so I apprehend. Consequently candidates presenting themselves in July and October will have been reading for two months and

five months respectively a book which is unused, out of date and not official. This seems to me a huge waste of time. Besides, may not a candidate at one of these examinations have some legal justification if he objects to be examined on the obsolete Pharmacopœia? I fail to see the necessity for any delay whatever. As soon as the Pharmacopœia was issued, pharmacists hastened to get ready all the new preparations. Members of their staff who are possible candidates would in consequence have opportunity to make, or assist in making, a greater number of preparations in a given time than they ever previously made, or saw made, in a like period. They would thus become familiar with the processes right away. Moreover, I venture to think that any candidate who is familiar with the 1885 Pharmacopœia could, in a shorter time even than he would have at his disposal before either examination, get a grip of what is special to the 1898 Pharmacopœia. And supposing that a candidate knew very little about it, it strikes me that it would be more profitable to him to do his reading from the book which he is to use afterwards, than from one which he must necessarily abandon immediately whether he pass or fail. It will be much easier to "get up" the New Pharmacopœia than the old. The more uniform classification of strengths and doses will lessen memory work very considerably. I very much doubt whether the candidates will appreciate the delay. While it is desirable that consideration should be shown them in the matter, possibly the discretion of the examiners might be trusted to temper justice with mercy suited to the occasion of the introduction of a new medicine book.

Edinburgh, June 7, 1898. PETER BOA.

A DISCLAIMER.

Sir,—Will you kindly make it known that the representative of the *Evening News* who is reported in that paper as having "visited the Pharmaceutical Society." and who retails the conversation he had with the "Society's official," did not come to my office, and consequently did not interview me or any member of my staff.

17, Bloomsbury Square, W.C., June 3, 1898. RICHARD BREMRIDGE.

ANSWERS TO QUERIES.

TINCTURE PRESS.—Messrs. Maw, Son and Thompson and other dealers supply good double-action tincture presses, both of English and foreign make. [*Reply to* W. E. M.—11/16.]

SALE OF FOOD AND DRUGS ACT.—The labels alone would not suffice; you must be able to prove, in case of need, that the customer's attention was properly directed to the fact that the preparations sold were not according to the Pharmacopœia standards. [*Reply to* W. H. G. L.—11/23.]

SUBSTITUTE FOR SOLUTION OF ETHYL NITRITE.—Possibly an aqueous solution of sodium nitrite will answer the requirements of the case. Use the pure salt, with about 10 per cent. of glycerin in the solution. The dose of sodium nitrite is from 2 to 5 grains. The action of the salt is very similar to that of ethyl nitrite. [*Reply to* ETHYL NITRITE.—11/17.]

PREPARATION OF ANTIMONY OXYCHLORIDE.—The buff colour which you note is not due, as you suppose, to iron, but to the presence of a trace of H_2S, the mixture of Sb_2S_3 and HCl not having been boiled sufficiently to drive off the last vestige of that gas. It takes a good deal of boiling to drive it all off, and the least trace left will affect the colour of the precipitate in the manner you state. Redissolve your buff oxychloride in acid, boil it well, reprecipitate with water and it should then appear white. [*Reply to* GLYCYRRHIZA.—10/28.]

PERCENTAGE SOLUTION.—A true percentage solution must contain x parts by weight in 100 parts by weight, or x parts by volume in 100 parts by volume. In the first instance you quote, the simplest plan would be to weigh, in a suitable vessel, the required number of parts of menthol and chloroform, then add sufficient alcohol to make a hundred parts by weight. You would thus have a true percentage solution. In the second case, either proceed in a similar manner, or take ten volumes of the previously melted acid and dilute to one hundred volumes with the solution ordered. [*Reply to* EXACTITUDE. 11/27.]

NATURAL HISTORY.—Write to the Director of the Natural History Museum, Cromwell Road, S.W.; the Director of the Royal Gardens, Kew; or to the Superintendent of the Zoological Society's Gardens, Regent's Park, N.W. [*Reply to* PHUSIS.—11/26.]

COLOUR FOR CARBOY.—What colour do you want, green, red, or yellow? Your query of the 13th ult. did not reach us. Please note that all queries should be addressed to the Editor. [*Reply to* R. W.—11/14.]

RECIPE FOR SAUCE.—Please repeat your query and state what type of sauce you want; thick or thin. Despite the hackneyed saying of the witty Frenchman that we English have a "thousand religions but only one sauce," the name of the latter is legion, and we cannot spare space to give you even typical examples. [*Reply to* R. W.—11/14.]

FORMULA FOR PROPRIETARY PILLS.—They are said to contain arsenic, but we do not profess to give formulæ for quack medicines advertised in the public press. All such recipes must necessarily be more or less mere guesses; moreover, to prepare or sell a mere imitation of another man's proprietary article should be beneath the dignity of one of the craft. [*Reply to* P. P.—11/8.]

PERFUME FOR TOILET LANOLIN.—To give the lanolin a white lilac odour nothing is better than a few drops of terpineol unmixed with anything. For violet a few drops of a mixture of ionone, 20 minims; oil of lignaloe, 1 minim; otto of rose, 2 minims; terpineol, 5 minims, in essence of orris, 2 drachms, may be used. The use of coumarin, vanillin and of essential oils which contain much aldehydes should be avoided in preparations for the skin, since these bodies are apt, sometimes, to irritate. [*Reply to* NEPETA.—11/11.]

APPRENTICESHIP.—You say you were apprenticed "three years ago last June, . . . for the term of four years." If that be so, your term of pupilage will expire during the present month, and it seems absurd therefore to talk of cancelling your indentures. But, to answer your question, we are most decidedly of opinion that, unless there be exceptional reasons to the contrary, an employer is entitled to compensation if he is to be deprived of a pupil's services during the last year of apprenticeship. You should not overlook the fact that your services are worth more to him now than at any time previously; if up to the present he has fulfilled his part of the bargain, you should now be prepared to fulfil yours. [*Reply to* H. H.—11/25.]

OBITUARY.

BEST.—On May 27, James Best, Pharmaceutical Chemist, Moorgate Street, London. Aged 64.

BAXTER.—On May 29, at Bromley, Kent, Alice Emily, third daughter of Wm. Walmisley Baxter, Pharmaceutical Chemist. Aged 34.

VARNEY.—On May 30, Henry George Varney, Chemist and Druggist, Oxford. Aged 47.

HEELY.—On June 1, John Heely, Chemist and Druggist, Kennington Road, London. Aged 67.

COX.—On June 1, John Cox, Pharmaceutical Chemist, Watergate, Grantham. Aged 71. Mr. Cox had been a member of the Pharmaceutical Society since 1853, and was local secretary for Grantham from 1878 to 1885. He was apprenticed to Mr. Wilcockson, chemist, of Long Row, Nottingham, in 1839, and in 1848 purchased the business of Mr. Smith, Watergate, Grantham, which he continued to conduct until the day before his death. He served on the Town Council from 1868 to 1874, and also acted as Mayor's Auditor and Overseer of the Poor. Mr. Cox was generally respected, and his death will be mourned by many friends.

SMITH.—On June 6, Percy Smith, Chemist and Druggist, Croydon. Aged 28. Mr. Smith was an Associate of the Pharmaceutical Society.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Batty, Davis, Dawson, Dell, Ferrall, Gill, Hobson, Hyslop, James, Jesper, Johnson, Kermonde, Lance, Macaulay, Manners, Marshall, Neville, Parker, Shepherd, Taylor, Tredaway, Whysall.

Pharmacy and the Allied Sciences.

A REVIEW OF CURRENT WORK.

Assay of Nitrites.

C. E. Smith bases a new method for the assay of ethyl and amyl nitrites on the reaction between nitrous and chloric acids, which results in the formation of nitric and hydrochloric acids. B. Grützner had previously utilised the same reaction in the determination of nitrites, dissolving 0·1 to 0·2 Gm. of the nitrite in 500 C.c. of water, adding 0·5 Gm. of potassium chlorate and a known volume of decinormal silver nitrate, then strongly acidulating with nitric acid, while shaking, and after a few minutes titrating the excess of silver with decinormal sodium chloride. For the assay of spirit of nitrous ether, Smith introduces into a 100 C.c. flask, provided with a loosely fitting stopper, 10 C.c. of distilled water, 5 C.c. of cold saturated solution of potassium chlorate, 5 C.c. of the spirit to be tested, and 5 C.c. of 10 per cent. nitric acid. The flask is then closed and shaken frequently during half-an-hour, after which add 10 C.c. of decinormal silver nitrate, shake briskly for a moment, add 10 drops of ferric ammonium sulphate solution, and quickly titrate the excess of silver with decinormal potassium sulphocyanate. The end point is reached when, after momentary shaking, upon adding the last drop of solution, the reddish colour is not entirely dispersed. In the case of amyl nitrite, partially fill a 100 C.c. graduated flask with alcohol, insert the stopper and weigh; then add 5 to 6 Gm. of the amyl nitrite to be tested and weigh again. Next fill the flask to the 100 C.c. mark with alcohol, and mix thoroughly by shaking. Proceed as directed for spirit of nitrous ether, using 20 C.c. of distilled water, 10 C.c. of potassium chlorate solution, 10 C.c. of alcoholic dilution of amyl nitrite, and 10 C.c. of dilute nitric acid. Lastly add 20 C.c. of decinormal silver nitrate and titrate as before.—*Am. Journ. Pharm.*, lxx., 273.

Bacteria in Calf-lymph.

Careful quantitative determinations of the bacterial contents of calf-lymph by Dr. Dreyer have shown that the initial number of microbes present may vary considerably, and that in the majority of cases it is very large indeed—on one occasion reaching as many as 17½ millions in one cubic centimetre. Within twenty-four hours, however, a great diminution takes place, but that decrease does not continue at the same rapid rate. Thus, one sample contained on the first day of its collection over 2½ millions of bacteria per C.c.; after five days, 112,750; after eighteen days there were still, however, 111,765 present. As G. C. Frankland points out, some forms persist over very long periods of time, from five months to a year or more. To determine the pathogenic character of lymph-bacteria Dreyer inoculated, subcutaneously and intraperitoneally, both mice and guinea-pigs. Out of thirty-five mice thus treated only two succumbed, one to subcutaneous and the other to intraperitoneal inoculation; in none of the other animals was any reaction perceptible. As regards the guinea-pigs, in no single instance did any result follow the intraperitoneal inoculation, whilst in nearly every subcutaneous inoculation a small and insignificant abscess was observed to form at the point of inoculation. Dr. Dreyer also experimented upon himself and inoculated his arm each time with some of the same lymph used for the mice and guinea-pigs respectively, but in no case did any reaction worthy of record follow. In order to determine more particularly the qualitative bacterial character of these various samples of calf-lymph, plate-cultures were made and pure cultures obtained of different bacteria, which were subsequently inoculated both into mice and into Dr. Dreyer's arm. In two cases coccus forms proved fatal to mice, whilst in the other inoculations no symptoms of importance followed. As regards the inoculations practised by the investigator upon himself with those pure cultures, nothing more significant than a slight abscess resulted, except on one occasion, when an affection of the adjoining lymphatic glands was experienced.—*Zeit. f. Hygiene*, through *Nature*, lviii., 44.

Synanthy in the Foxglove.

An interesting specimen of a monstrosity of the white digitalis has been picked in the Yealmpton district, and the following particulars have been furnished by Mr. Oswald A. Reade, of Plymouth:—"There were several such plants growing in a group, and in one of these the stamens were quite perfect and pollen-bearing. Five flowers appear to have combined to form a terminal flower, which has reversed the order of opening and turned an indefinite into a definite inflorescence." The monstrous flower is, of course, an instance of synanthy. An illustration of this, occurring in the foxglove, is given in Masters' 'Teratology,' p. 40. To this the following remarks are attached:—"One of the most common malformations in the foxglove results from the fusion of several of the terminal flowers into one. In these cases the number of parts is very variable in different instances; the sepals are more or less blended together, and the corollas as well as the stamens are usually free and distinct, the latter often of equal length, so that the blossom, although truly complex, is, as to its external form, less irregular than under natural circumstances. The centre of these flowers is occupied by a two or five-celled pistil, between the carpels of which not unfrequently the stem of the plant projects, bearing on its sides bracts and rudimentary flowers. An instance of this nature is figured in the *Gardeners' Chronicle*, 1850, p. 435." In Mr. Reade's plant the appearance is certainly that of a definite or terminal inflorescence, the flowers of the raceme, for at least four inches below the terminal flower, being small and unopened. It is, however, not really definite, for in the centre of the monstrous flower, and taking the place of the ovary, is a ring of small green sepals, enclosing still smaller greenish petals, and a ring of diminutive stamens; another flower still more diminutive and equally green occupying the centre; the whole appearing to the naked eye like an open ovary, containing seeds. It is, therefore, an interrupted indefinite, rather than a truly definite inflorescence, recalling that of the *Dipsacus* in appearance. In Mr. Reade's flower some of the outer sepals are half petaloid, and some of the filaments partly petaloid.

Mucilage in Plants.

H. Kraemer finds that methylene blue has the advantage of being a decisive reagent for mucilage in plants; only some lignified cell-walls otherwise take up the colour, and the stain may be applied by proper manipulation to dry as well as to fresh plant material. Fresh specimens of leaves, etc., are left for several hours in a solution of methylene blue, 0·4 Gm., in 95 per cent. alcohol, 100 C.c.; afterwards cut sections and transfer each to a slide with a few drops of a similar solution, in which four-fifths the alcohol is replaced by an equal volume of nearly anhydrous glycerin. The mucilage cells are stained blue in a short time, and after covering the specimens they may be kept indefinitely, the contrast between the stained and unstained portions becoming more marked as time passes. Dried material should first be softened in water, then transferred to strong alcohol prior to cutting sections.—*Am. Journ. Pharm.*, lxx., 285.

PHOTO-MICROGRAPHY.

BY EDMUND J. SPITTA, L.R.C.P. LOND., M.R.C.S. ENG., F.R.A.S.

Medium Power Photo-Micrography.

We now commence the next division of the subject, which perhaps, literally speaking, is true photo-micrography. Inasmuch as the apparatus used in th is section, as well as in the next—critical photography—is the same, I shall devote some little time and attention to describing it fully. Primarily, it consists of a microscope with substage condenser, a limelight with its adjusting arrangement, a secondary condenser, with its means of centreing, a camera, and a shutter to cut off the light before exposing the plate. Occasionally, too, we shall want as accessories a water-bath and also a suitable stand to hold either a coloured fluid screen or a piece of tinted glass. Inasmuch as the whole requires extreme rigidity, everything must be fixed with the utmost firmness on to a solid table having extra struts between the legs to keep it steady, and the legs themselves should rest on a concrete floor (or anyhow on four concrete supports isolated from the floor), so that any movement on the part of the photographer may not affect his apparatus. All this preparation for medium power work may seem superfluous, but as it is an absolute necessity for high power work, it had better be made carefully from the first. The precautions against tremulations of the floor cannot be too well carried out, and this is the better understood if the reader remembers that when photographing at 1000 diameters 1/1000th of an inch shake in the specimen makes a shift of 1 inch in the photographic plate. The heat generated by the limelight upon the microscope, too, is not a negligible quantity—for all metals sensibly expand with heat—and in the arrangement about to be described is provided against by having a metallic shield to protect the microscope, which screen has a hole in its centre only of sufficient size to permit enough light to pass through and fill the substage condenser. But of this I shall speak hereafter.

The tremulations caused by passing vehicles is a source of never-ending trouble to the photo-micrographer, especially if he practises his art in a crowded town, and even the most thickly concreted floor in a cellar beneath the level of the ground will certainly not suffice to entirely eliminate it. The best plan, where such troubles exist, is to adopt an arrangement such as is used by the "process block" engravers. It consists essentially in slinging the whole table, bereft of its legs, to two beams placed across the apartment. An upper room, instead of a cellar, can then be employed for the work, which is far more comfortable, seeing it can be warmed and kept free of damp. The details of this arrangement may be as follow:—Each beam should be about 4 inches wide and 3 inches thick, both being placed above the head of the photographer, who thereby will save himself many a spoilt plate by an accidental jar against the beam, let alone an occasional ugly blow on the head.

Four pieces of rope about the thickness of the first finger or stout wire should be firmly fixed to each corner of the table, and be of such length that, when the observer is sitting in a chair at the camera end of the apparatus, the ground glass is on a level with the head. If the operator be desirous of making his arrangement as complete as possible, it is a decided advantage for the ropes from the table to pass over large wheel pulleys affixed to the beams, the apparatus being kept in equilibrium by four weights. The convenience of this addition is very great, because when the microscope is not in use a cover can be thrown over it, and the whole table pushed up out of harm's way. It has another advantage, that of always being ready for use without any preliminaries whatever. To complete the details, where rooms with wooden floors are used, and the apparatus slung, it should not be neglected to suggest that a little sand or water be kept within easy reach in an open bucket, to pour over any piece of incandescent lime which may perhaps spirt off and fall on the table, or more unluckily still, on the floor. Let it be remembered that treading on incandescent lime is not a safe thing to do, save perhaps with the heel; neither is it at all times sufficient to put it out, and it may very easily cost the photographer a new sole to his boot, if not a burn on his foot. Let a cupboard with lock and key be also provided, and if the dark room be on the same floor so much the better.

Many forms of costly photo-micrographical apparatus are sold ready made, but I have hitherto found, after numerous additions and alterations, that the simple arrangement about to be described, which can be readily made by any carpenter, leaves little to be desired, and as I have had it in use some years, and have taken direct photographs with it to over 3000 diameters, I feel no hesitation in offering it to readers as certainly the cheapest form where real effectiveness is desired.

It is of the horizontal type which for general purposes is the most useful. Occasionally, however, a vertical form is wanted, and I shall describe the one I use and others in due course.

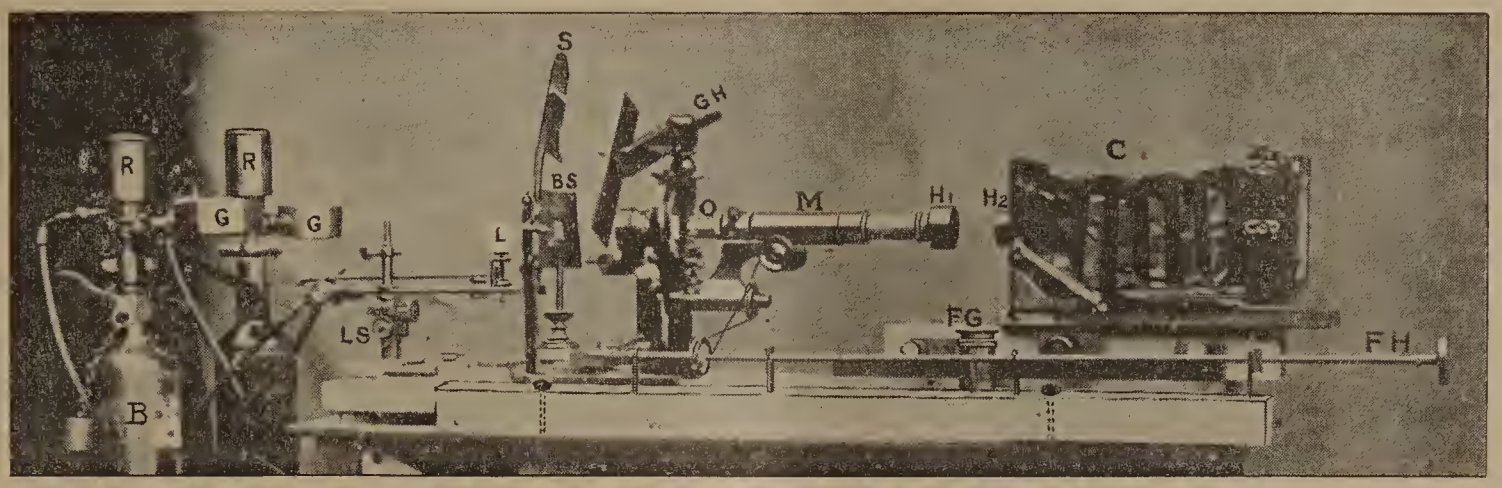
Description of the Apparatus.

Two blocks accompany the text, one showing the horizonta arrangement in elevation (Fig. 1) and the other in plan (Fig. 2). The same camera (C) is used, fixed upon its slide as described in the issue of May 21, but in this case the mahogany rails tapped for the three wooden screws are shown fixed to a broad piece of timber 1½ inches thick, 4 feet 6 inches long, and 9 inches wide, being attached to the table by firm metal screws passing through indiarubber washers. Projecting from the front of the camera, where the lens usually is fixed, is seen a small tube of brass (H2). It loosely fits into a larger tube (H1) seen attached to the microscope (M) when the camera is pushed up to take the photograph. The object of these two tubes fitting so loosely one in the other is to allow the microscope to be moved to and fro whilst focussing, without touching the camera. If properly made they should exclude all light. The microscope must be one of the best manufacture. I do not think it fair to individualise any special maker, because most well-known firms make instruments which are completely satisfactory for the purpose. Messrs. Watson and Sons have made a specialty of their Van Heurck microscope, whereas Messrs. Baker and Co., of Holborn, have introduced, at the design of Mr. Nelson, another very admirable form. Messrs. Swift and Son, too, have designed a most elaborate arrangement, I believe at the instigation of Mr. Pringle, but the instrument I employ with much satisfaction is the No. IA stand, manufactured by the firm of Zeiss. This has been in use for several years and I have little fault to find with it.

The leading points to bear in mind when choosing a microscope for photo-micrography may be summarised as follows:—The stand should be very heavy and well-balanced when placed horizontally. It should have a perfectly smooth coarse adjustment and one capable of taking up any loss of way which wear will inevitably produce in it. The fine adjustment should be as delicate as possible, and one which can be readily cleaned without necessitating the return of the instrument to the optician. There are several forms of fine adjustments in use, and each manufacturer thinks his own is the best, but it has appeared to me that whilst duly acknowledging the points of vantage each maker claims, that one frequently is apt to overlook those which turn out distinctly objectionable. Messrs. Watson and Sons claim, and very justly,

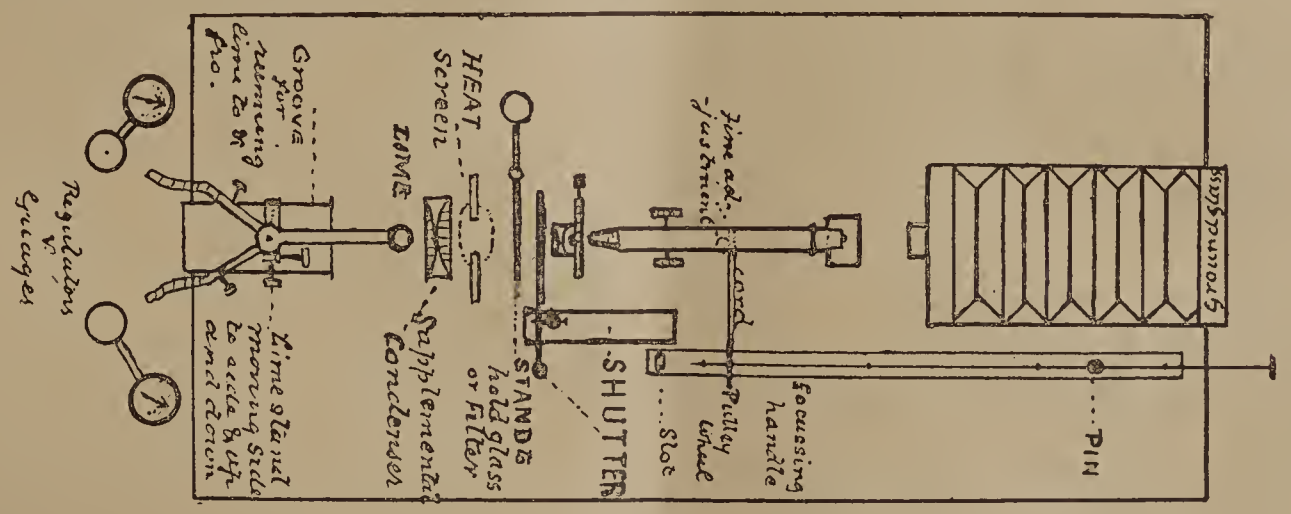
that their fine adjustment is exceedingly good, and it really must be admitted that there is little fault to be found with it; so far as personal knowledge there is none. But certain authorities, whilst approving very heartily of the excellence of the workmanship, disallow the principle upon which it is constructed, in common with all the modern forms, claiming that no principle is so good as that adopted by Powell and Lealand. The Campbell differential screw of undoubted excellence is advocated by the firm of Baker in Holborn, and the manner in which they turn it out in the Nelson model is simply excellent and well worthy of all praise. Critics even here think that the differential screw designed on purpose to give the most fine motion by the interaction of two screws of different threads overdoes its mark, and that it would be better if not so delicate. To this I entirely demur. It is my experience that the finer the movement the better, and I even obtained a screw of 200 threads to the inch from Messrs. Troughton and Simms to put in one of my microscopes for a special purpose.

In the microscope I at present employ, viz., Zeiss model IA, the fine adjustment is of the most excellent description, hard steel bearings taking all the wear—in my own case of no small amount—without any fault to find. The only exception I make in this otherwise excellent microscope is the great tendency of the fine adjustment to go "wrong," simply through the unsuitable lubricant used by the firm. Moreover, no directions are given as to cleaning, so the microscope may have to go abroad simply because the fine adjustment—in itself a most beautiful piece of workmanship—is temporarily disabled from the grease having set. I have known this to occur in two microscopes sent out by the firm, within a few days of their delivery. For the sake of those who use this firm's form of fine adjustment a description how to clean it is appended, which I have frequently done both for myself and others without a shadow of difficulty. It is a convenience to learn how to do this, for it is a most provoking experience just when in the act of photographing to find all operations must cease as the fine adjustment refuses to act. On the stem of the microscope underneath the divided head of the screw of the fine adjustment is seen on each side a small hole. A piece of soft steel exactly the size to fit these holes must be procured about 2 inches in length. Placing the pin in the hole, it is turned to the right, in the opposite direction to the hands of a watch; round and round, and the top comes off. Looking inside, a key screw will then be seen, which has to be undone by inserting a properly made key. A few turns in the same direction as the first screw and it is released and with it the spring. The body comes off and can be cleaned by passing through it a handkerchief several times. No lubricant I know of equals fine chronometer oil put on very thinly—tallow and wax, so often used, are abominable and turn green after but a short interval of use. Both the keys can be procured to fit at a trifling cost from Mr. Mason, optician, Park Road, Clapham.



ELEVATION.

Fig. 1.



PLAN

Fig. 2.

The mechanical stage must be well made and possess verniers, so that when objects are once found and noted they can be brought again into the field of view without any trouble. It is better for the stage to be capable of rotation about the axis of the microscope, and such motion is a great convenience, for at times

specimens are not placed upon the slide in a position favourable to photograph them without they are turned on their axes to the right or left. If no rotation of the stage is possible, the object itself has to be moved, which, when employing a high power, frequently causes it to pass out of the field of view, thus necessitating time and trouble to find it again. Should, however, the expense involved in having a rotating stage be thought undesirable, a mechanical one should always be obtained. Even this is costly, but that can be got over by employing one of the many forms of removable stages that are sold by most makers, which are not so costly. To a great extent these are all made after the Mayall model, which has one rack and one endless screw. None of these last so well as the ordinary type, for the endless screw soon shows sign of wear, and the loss of way rapidly becomes very annoying. To obviate that Messrs. Baker, of Holborn, have quite recently

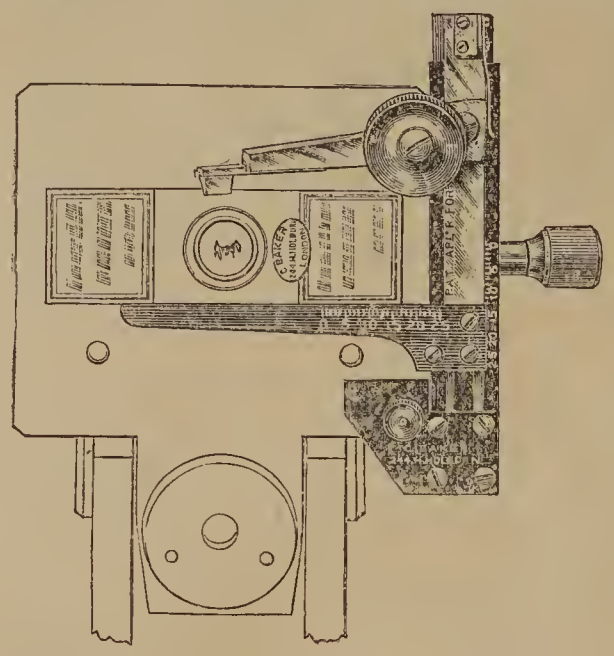


Fig. 3.—Baker's Removable Stage.

brought out a new model which only requires two screws to attach it to any ordinary stage. I have examined it carefully and can recommend it, as it seems likely to wear well, having no endless screw in its construction, and besides, it allows considerable movement in both directions, each of which is graduated to millimetres. Through the kindness of the firm a block of the arrangement is given herewith, which explains itself.

The condenser should rack up and down with ease and facility with the ordinary rack work, and if it should be provided with a fine adjustment the photo-micrographer, when dealing with very high power magnifications, will be the more satisfied This, I regret, is absent in the Zeiss microscope.

Continuing the brief general description of the apparatus, as shown in the diagram, we next come to the Bunsen holder (G H), which holds a piece of tinted glass in any position desired, or can be made to support one of Zeiss's colour screen troughs if necessary. We then see the brass screen (B S), already referred to, purposely turned slightly on its axis to show the central hole, which allows sufficient light to pass through from the lime to fill the condenser. A shutter (S), temporarily fixed in the air, is also shown, which conveniently shuts off or admits the light to the objective, as occasion requires. It is quite separate from the table, and can be removed at pleasure ; its foot is seen resting on the wooden base board. Between the screen and the lime (L) (which can be pushed to and fro with its jet and stand (L S) on a slide on the table) may be placed, when required, a secondary condenser, or paralliser, as it is sometimes called. The position is shown in the plan. It will be described in due course.

Lastly we come to the lime (L), supported on its jet, which, as before stated, was made by Beard. It is fixed to a stand (L S) by a thumb-screw and pin, as usual with lanterns. The piece of apparatus called the stand (L S) was designed to enable the lime to be moved to and fro, up and down, and from side to side, and was made by Mr. Mason, of Park Road, Clapham. I have used it with every satisfaction, and, as will be seen, it is of no small service when we come to centreing the light before taking the photograph. It will be fully described in its turn. The two gas bottles (B) with their regulators (R) and gauges (G) complete the figure, with the exception of the long arm focussing handle (F H). This is supported in somewhat a novel way, being attached to a square piece of wood, better seen when looking at the plan diagram. The pulley end is capable of movement laterally, turning upon the pin, also shown. When arranging the silken cord, passing from the fine adjustment to the pulley on the focussing rod, the piece of wood is brought near to the microscope, thus enabling the operation to be done quite easily. After it has been passed over both (the pulley and the fine adjustment screw) the wood is pushed away from the microscope and fixed there by a thumb-screw, just visible in the plan diagram at the foot of the exposure shutter, passing through the slot into the table. This method is convenient, as it enables any stretching of the cord be taken up as much as necessary.

(*To be continued.*)

SOME NOTES ON CRYSTALLOGRAPHY.

(*Concluded from page 532.*)

System 1.—The Monometric, Regular, or Cubic System.

In this form the axes are three, equal, and placed at right angles to each other, the most important forms being the cube (Fig. 7),

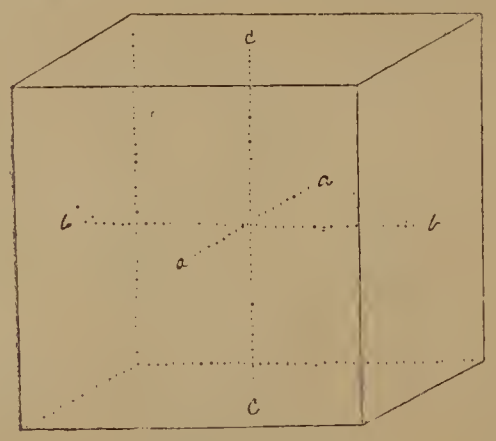

Fig. 7.—The Cube.

the regular octahedron (Fig. 8), and the rhombic dodecahedron (Fig. 9). The letters *a*—*a*, *b*—*b*, *c*—*c* show the termination of the axes.

This system has nine planes of symmetry, the three principal ones being at right angles to each other, and six others, which intersect one another at angles of 60°. Forms of this system possess the highest order of symmetry.

Examples of the cube may be well seen in common salt and iodide of potassium ; the opaqueness of the latter salt probably being due to the presence of a trace of carbonate.

Other examples of the cube are chloride and bromide of potassium, fluorspar, and disulphide of iron. Regular octahedra are the diamond, spinelle, and lead nitrate. When lead is melted and

partially allowed to solidify, on pouring off the portion of remaining liquid the metal is found to crystallise in the form of octahedra.

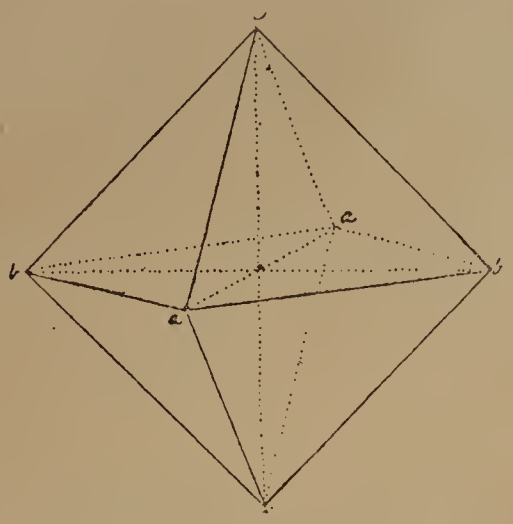

Fig. 8.—The Regular Octahedron

If a strip of zinc be suspended in a solution of lead the lead will

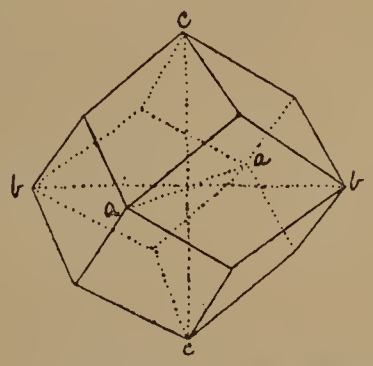

Fig. 9.—The Rhombic Dodecahedron.

be deposited in the form of arborescent crystals with a brilliant metallic lustre, showing the crystalline form very distinctly.

The crystalline form of the garnet is a rhombic dodecahedron.

System 2.—Dimetric, Quadratic, Tetragonal, or Prismatic Pyramidal.

These are symmetrical, about three axes at right angles to each other. Two only are of equal length, the third, *c*—*c*,

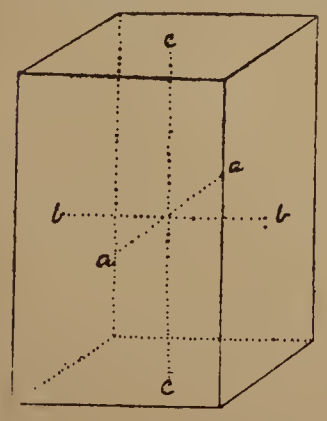

Fig. 10.—The Right Square Prism.

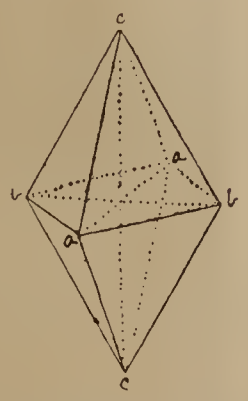

Fig. 11.—The Right Square-based Octahedron.

being longer or shorter. The most important forms are the right square prism (Fig. 10) and the right square-based octahedron (Fig. 11).

Native stannic oxide and yellow ferrocyanide of potassium are examples of this system.

These crystals have five planes of symmetry, one principal plane, normal to a vertical axis in the crystal, and four other planes at right angles to the principal plane and intersecting each other at an angle of 45°.

System 3.—Hexagonal or Rhombohedral.

Includes several forms, is characterised by four axes, three of which are equal, in the same plane, and inclined to each other at angles of 60°; the fourth axis is perpendicular to them all. The crystals have seven planes of symmetry, namely, one principal plane, normal to a vertical axis, and six other planes at right angles to the principal plane, and intersecting each other at angles of 30°.

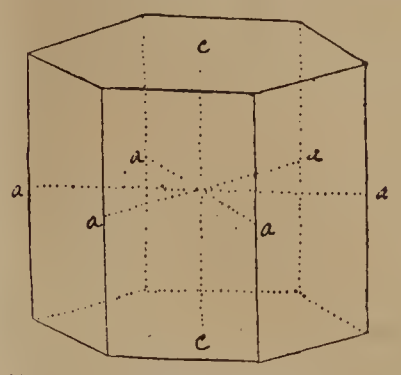

Fig. 12.—The Regular Six-sided Prism.

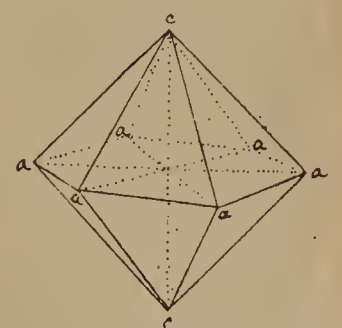

Fig. 13.—The Regular Double Six-sided Pyramid.

Nitrate of potassium crystallises in the form of regular six-sided prisms, and also in the form of small rhombohedral crystals isomorphous with sodium nitrate and calcspar.

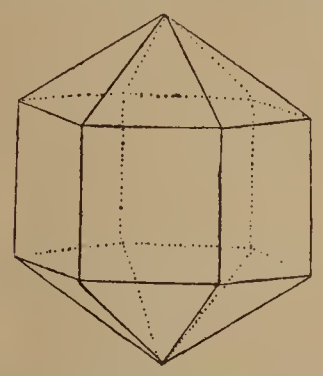

Fig. 14.—Crystal of a Common Form of Quartz.

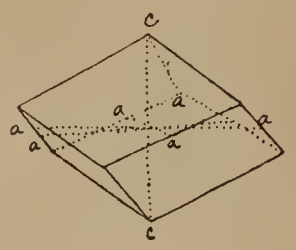

Fig. 15.—The Rhombohedron.

Quartz or rock crystal assumes the form of a hexagonal prism with pyramidal terminations, as Fig. 14.

Lead carbonate occurs naturally as cerussite in the form of transparent rhombs isomorphous with arragonite.

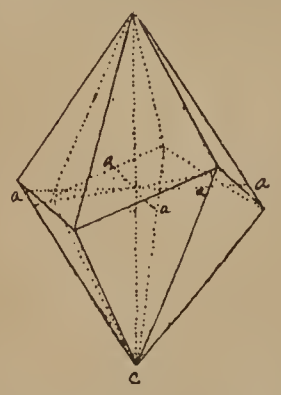

Fig. 16.—The Scalenohedron.

System 4.—Trimetric, Rhombic, or Right Prismatic.

This form has three axes of unequal lengths placed at right angles to each other. Rhombic sulphur is a good example of this variety. Fairly large crystals in this form may be obtained by allowing a solution of sulphur in carbon bisulphide to evaporate slowly.

Many substances assume this form: Potassium bicarbonate, chromate, sulphate (the two latter being isomorphous), ammonium

sulphate, barium sulphate, and white mundic. Magnesium sulphate crystallises in the form of colourless rhombic prisms isomorphous with zinc sulphate, but when deposited from a cold, super-

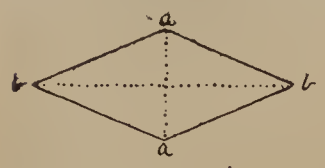

Fig. 17.

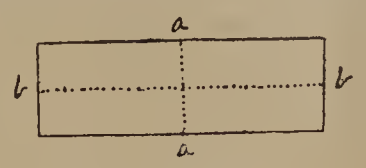

Fig. 18.

saturated solution, it forms prisms belonging to the monoclinic system, containing the same quantity of water of crystallisation; above 50° C., monoclinic prisms of the composition $MgSO_4 6H_2O$ are deposited.

SYSTEM 5.—THE MONOCLINIC OR OBLIQUE PRISMATIC.

These crystals have three axes of unequal length, two of which are obliquely inclined to each other, the other axis forming right angles to these two. The bases of these monoclinic forms are identical with those of the trimetric system. Sulphur fused and cooled, carbonate of soda, borax are examples of this system, as are also potassium carbonate, ferrous sulphate, sodium sulphate, and phosphate. Potassium chlorate crystallises in white tables belonging to this system; if a large crystal be examined it will exhibit fine iridescent colours.

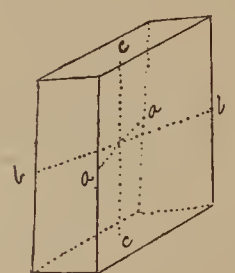

Fig. 19.

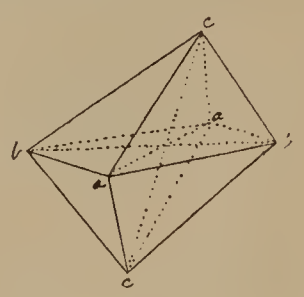

Fig. 20.

SYSTEM 6.—THE TRICLINIC OR DOUBLY OBLIQUE PRISMATIC.

The forms of crystals adopted in this system are very difficult to understand. There are three axes of unequal length, all obliquely inclined to each other. Sulphate of copper, potassium dichromate, and bismuth nitrate assume this form.

After considering the six systems a few diagrams will illustrate how one crystal of a certain system will pass to another form. I

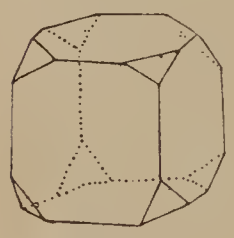

Fig. 21.

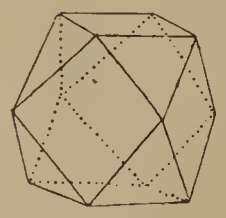

Fig. 22.

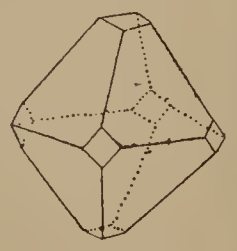

Fig. 23.

the crystal increases in size equally, it will naturally follow that its figure will remain unaltered, but should this increase be only partial, new matter being deposited unequally, but still obeying the laws of that particular system, other figures will be formed, but still having a certain direct geometrical relationship to the original.

If there be regular omissions of successive rows of matter from the cube at each solid angle while there is growth in another direction, it will be easy to conceive how the form of the cube may pass into the octahedron (Figs. 21, 22, and 23).

A tetrahedron may easily arise from the octahedron, and then the crystal assumes the form called a hemihedron, and is hemihedral to an octahedron.

A hemihedron has only half the planes which a symmetrical crystal of the type to which it belongs should possess.

The following diagrams show the passage of a octahedron to a tetrahedron :—

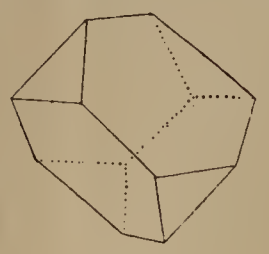

Fig. 24.

Fig. 25.

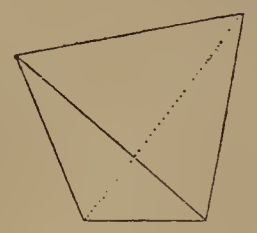

Fig. 26.

A hemimorphic crystal has two ends with dissimilar planes; that is to say, half the planes which surround a symmetric crystal occur quite independently of the other half, when the faces cannot be considered hemihedric. Hemimorphic forms always occur in combination with others. They possess the curious property of discharging, when heated, positive electricity at the analogous pole, and negative electricity at the antilogous pole, but when the crystal is cooled, the reverse action occurs.

TWIN CRYSTALS.—It often happens that during the process of crystallisation two crystals may unite, not in a parallel manner, but having one crystal plane common to both. These are symmetrical to some plane, which, however, is not a plane of symmetry for the single crystals. In the formation of crystals it has been shown that if some viscous substance be present, crystals which usually occur free are found to be united in the manner of twin crystals. This is supposed to be due to the motion of the molecules being retarded, through the partial parallelism of the molecules, but if the molecular forces have full time to act, a perfect crystal will result.

The imperfections of crystals are due to several causes, the chief being internal impurity, irregularity in their angles and surfaces, and distortion in form. The presence of a small quantity of sodium hydrate when crystallising sodium chloride will convert the crystals into the octahedral variety in place of the cubic form.

Crystals growing rapidly often enclose some of the mother liquor, which will alter their appearance. Occasionally it happens that the mother liquor upon one side of a crystal is not of the same density as that on the other, hence it is natural to conceive that growth will be greater on that side of the crystal surrounded by the solution of greater density.

DETECTION OF BORIC ACID IN MEAT.—Ten grammes of the minced material is triturated with four or five times its weight of calcined sodium sulphate. The mixture is dried on the water bath and then finely powdered with a little more dried sodium sulphate. The powder is then digested in the cold for twelve hours with 100 C.c. of methylic alcohol, with frequent agitation, and then distilled. The residue is treated with another 80 C.c. of methylic alcohol and again distilled until the total distillate measures 150 C.c. Fifty C.c. of this is mixed with 75 C.c. of water and 25 C.c. of glycerin, and titrated with semi-decinormal soda solution, using phenolphthalein as an indicator. On the appearance of a pinkish tint a little more glycerin is added; if it should not be persistent more standard alkali is run in. If borax is present as well it will be found in the residue, from which it may be extracted by filtering the methylic alcohol solution, evaporating, incinerating, and determining by the Hœnig and Spitz method.—*Rev. Chim. An.*, v., 468.

RESEARCHES ON CORYDALINE.*

BY W. HARRISON MARTINDALE, PH.D., MARBURG.

Professor E. Schmidt having proposed to me an examination of the tubers of *Corydalis cava*, with especial attention to decomposition products of corydaline, in consideration of the fact that our knowledge of *Corydalis* bases is still imperfect, it appeared of interest to study more closely the product of reduction of dehydrocorydaline and to compare its properties with those of natural corydaline. My researches on this point have demonstrated that the base formed from dehydrocorydaline by assumption of four atoms of H. possesses the same composition and the same melting point as natural corydaline, that it yields similar salts to those of the latter, with one or two exceptions, of which mention will be made later; but that this artificial base is completely inactive towards a ray of polarised light, that it is physically isomeric with natural corydaline.

I came into possession of various raw alkaloids and salts, as these had been left me by my predecessor, Ziegenbein, in work on corydaline. Further, a small quantity of an alkaloid bearing the name "corydalin crist" was given me. The latter, on examination, proved to be a mixture of corycavine and other alkaloids of higher melting points, as well as traces of bulbocapnine and corydaline. The melting point of this commercial corydaline, which it is true, was not of recent manufacture, lay between 180° and 184°.

It was purified by dissolving in dilute HCl, precipitating with NaOH and crystallising from 96 per cent. alcohol. The latter solution yielded small prismatic crystals melting at 210°. CO_2 was passed into the alkaline mother liquor and induced a crystalline precipitate melting at 215°. The melting point as well as the following colour reactions identified the body with corycavine.

1. Conc. H_2SO_4... dirty green, changing to brown.
2. Conc. HNO_3... red.
3. Conc. H_2SO_4 at 100°... dark green.

As, on the one hand, this commercial "corydalin crist" contained little or no actual corydaline, and, on the other hand, the preparations left by Ziegenbein were not in large enough quantities for the purpose of studying dehydrocorydaline in the direction stated, I decided to prepare corydaline myself from *Corydalis* tubers.

CORYDALIS CAVA (C. TUBEROSA, D.C.).

From 'Hortus Britannicus,' after 'Botanical Magazine.'

Reduced one-third.

I procured 20 kilos. of entire tubers from Rump and Lehners, of Hanover, and followed directions given by Freund and Josephi, the method being due to A. Ehrenberg.

Having been dried and powdered, the tubers were extracted in a Soxhlet apparatus with 96 per cent. alcohol for ten days. The alcohol was distilled off and an extract obtained of syrupy consistence. This was made alkaline with ammonia and shaken out twice with ether in separators. The combined green ethereal solutions were now transferred to a retort and the ether distilled off until the volume had been reduced to about one-half. This liquor was now allowed to evaporate spontaneously in shallow dishes, the following fractional crystallisations being obtained:—

I. The first crystals melted at 125°–130°.

II. The ethereal mother liqour on further evaporation gave yellowish crystals melting at 130°.

III. The volume of the mother liquor was again reduced by distillation; alcohol was now added to the extent of double the volume, and on evaporation a crust of crystals was procured possessing approximately the melting point of corydaline.

IV. Further shakings of the original ammoniacal extract with ether, after distilling off half of the latter, as well as

V. The mother liquor of IV. (evaporated further and treated with alcohol) yielded further quantities of impure corydaline.

VI. The original extract was repeatedly shaken with ether; the ethereal solutions having been mixed, the ether was partly distilled off, and crystals were formed melting at 136°.

By this means I obtained 180 grammes of corydaline. This process of fractional crystallisation was resorted to in order to separate the various alkaloids, Ziegenbein having previously procured on these lines from 20 kilos. of tubers: Corydaline, 114 grammes; bulbocapnine, 82 grammes; corycavine, 12 grammes; corybulbine.

The presence of a larger proportion of corydaline, and practical absence of the other alkaloids, was of great value in my case, as the sphere of my work lay in corydaline, and it enabled me to procure a large quantity of pure alkaloid by merely recrystallising from alcohol, using animal charcoal for the purpose of decoloration, without having to resort to tedious processes of separation.

Corydaline, when pure, melts at 134°-135°. My combustions lead me to consider $C_{22}H_{27}NO_4$ its correct formula. It turns yellow on exposure, due to oxidation to dehydrocorydaline, which latter may easily be removed by washing with alcohol.

Although many salts of corydaline have already been prepared I made and analysed several in order personally to compare them with the salts of inactive corydaline, and I found that in general the salts of the former are easily obtained with two exceptions—namely, the hydrochloride and acid sulphate.

The gold salt was prepared and was found to agree with Ziegenbein's formula

$$(C_{22}H_{27}NO_4 \cdot HCl)_2AuCl_3.$$

A normal salt

$$C_{22}H_{27}NO_4 \cdot HCl \cdot AuCl_3$$

is first formed but undergoes decomposition into the one mentioned. The platinum salt and sulphocyanide were also prepared and analysed.

From dehydrocorydaline hydroiodide $C_{22}H_{23}NO_4 \cdot HI + 2H_2O$, I prepared inactive corydaline. The best method of preparing the salt is to heat perfectly pure corydaline in alcoholic solution with an excess of iodine in strong stoppered glass bottles in a water bath for two hours. The quantities employed were corydaline, 5 grammes; iodine, 5 grammes; alcohol, 96 per cent., 100 C.c. The contents of the bottle are allowed to cool undisturbed before it is opened; the periodides will have separated in shining rosettes of crystals on the side, and as a brown mass on the base of the bottle. The periodides are then separated from the mother liquor, and excess of iodine is removed by treating with thiosulphate and sodium carbonate until a light yellow solution is obtained. The mother liquor is treated in a similar manner, and these solutions are allowed to crystallise; the hydroiodide separates in shining citron yellow needles. In

* *Résumé* of inaugural thesis for graduation in the Philosophical Faculty of the University of Marburg.

opposition to Ziegenbein, I find that the salt is comparatively easily soluble in water, especially on addition of a few drops of dilute sulphuric acid.

On reduction, dehydrocorydaline takes up four atoms of hydrogen, forming inactive corydaline. Ziegenbein obtained a body which he called "reduced dehydrocorydaline" by the action of zinc in dilute sulphuric acid upon acetone-dehydrocorydaline, but he did not examine the compound. I repeated this experiment and obtained a small quantity of the reduced base, but as the composition of the acetone compound is still uncertain, and as it is an unstable body I decided to employ the hydroiodide for the purposes of reduction, and I found that the latter salt yields better results.

Ten grammes of the latter was the quantity usually worked upon. This is placed in a 3 litre flask and heated on a steam bath with 1 litre of water and a little sulphuric acid; to finally aid solution a little alcohol may be added. A brisk evolution of hydrogen is now maintained for about a day in this solution by alternate addition of zinc (previously etched with platinic chloride) and sulphuric acid.

The solution, which should now be colourless, is allowed to cool, and is filtered, and the filtrate poured into strong solution of ammonia. The zinc hydrate precipitated redissolves, and the alkaloidal base separates as a flocculent mass on the surface, and may be easily collected, washed, dried, and recrystallised from alcohol. The mother liquor may be shaken out with ether, but contains little of the alkaloid. Inactive corydaline is tasteless, and much less sensitive to light than the natural base. The rotatory power of corydaline was found by Freund and Josephi to be $[\alpha]_D = +300{\cdot}1$.

A chloroformic solution of the reduced alkaloid which I obtained was now examined in Laurent's apparatus, and showed that it was completely inactive. Combustions proved that its composition was the same as that of natural corydaline.

The salts of inactive corydaline are much easier to obtain than the corresponding ones of the natural alkaloid. There exists a variety of small differences, but the principal one is in the gold salts.

I was unable to split up my inactive corydaline by means of the HCNS salt into the dextro- and lævo-rotatory forms. Investigations are now in progress at Marburg to determine whether this may be effected by means of the tartrate.

Dehydrocorydaline resembles berberine in forming an acetone compound. The compound is of a very unstable nature. Further similarity is seen in that they both form hexasulphides.

Action of Methyl Iodide on i-Corydaline.

Dobbie and Lauder obtained an additive compound with corydaline of the formula $C_{22}H_{23}NO_4CH_3I$. I have studied the action of methyl iodide on *i*-corydaline, and was able to procure an additive compound of similar composition to that described by Freund and Josephi of the active alkaloid, showing that the new base is also a tertiary one.

i-Corydaline methiodide was prepared by heating inactive corydaline in a stout glass stoppered bottle with an excess of iodide of methyl for two hours at water-bath temperature. The excess of methyl iodide was removed by distillation and the residue crystallised from alcohol.

i-Corydaline methyl chloride is easily prepared from the crystals so obtained by rubbing them into a paste with water and excess of chloride of silver. This mixture is heated on a water bath with gentle stirring until the reaction is complete. The chlorine body thus formed by displacement is apparently as soluble as that of the corresponding compound of active cordyaline.

The silver iodide formed and the excess of silver chloride were filtered off and the filtrate divided into four parts for the preparation of (1) the chlorine compound in crystals, (2) the gold salt, (3) the platinum salt, (4) free methyl-*i*-corydaline.

Analyses showed these to have the composition assigned to them in the tables published in my thesis.

Methyl-i-Corydaline.—According to Freund and Josephi, on addition of KOH to a solution of corydaline methyl chloride, the following reaction occurs:—

$$C_{22}H_{27}NO_4CH_3Cl + KOH = KCl + H_2O + C_{22}H_{26}(CH_3)NO_4.$$

The same equation illustrates what takes place on employing inactive corydaline methyl chloride. On addition of KOH to the above-mentioned filtrate a slight precipitate of the base occurred, but it was necessary to allow the alkaline solution to stand on a water bath some little time before the new compound was entirely thrown out in the form of oily drops. These then became hard and were collected and recrystallised from alcohol.

Methyl-*i*-corydaline melts at 224°, whereas Freund and Josephi's methyl-corydaline melts at 112°. Analysis showed that the two agreed in composition, the formula being $C_{23}H_{29}NO_4$.

Methyl-*i*-corydaline hydrochloride, $C_{23}H_{29}NO_4HCl + 3H_2O$; the gold salt $C_{23}H_{29}NO_4HCl{\cdot}AuCl_3$; and the platinum salt

$$(C_{23}H_{29}NO_4HCl)_2PtCl_4$$

were then prepared. A synopsis of the salts of corydaline and methyl-corydaline is given in my thesis for the purpose of comparison with those of inactive corydaline and methyl-*i*-corydaline.

Action of the Halogens upon Corydaline.

The action of iodine has already been mentioned. The decomposition which takes place may be represented by the equation—

$$C_{22}H_{27}NO_4 + 4I = C_{22}H_{23}NO_4HI + 3HI$$

Just as I was bringing my researches to a close Dobbie and Marsden* published a communication—Corydaline, Part V., and stated they had prepared dehydrocorydaline (originally discovered by Schmidt and Ziegenbein) by another process of oxidation, namely, by means of nitric acid. The salts mentioned in this communication had all been previously prepared by Ziegenbein.

Dobbie and Marsden propose the formula $C_{22}H_{25}NO_4$ for the base, as they still adhere to the formula $C_{22}H_{29}NO_4$ for corydaline.

They state that reducing agents convert dehydrocorydaline into optically inactive corydaline—a fact which I had discovered in November, 1896.

The action of chlorine upon corydaline was accidentally discovered by Dobbie and Lauder. A body of the formula $C_{22}H_{28}ClNO_4$ resulted.

The action of bromine on corydaline remained, therefore, for me to investigate.

A small quantity of corydaline was dissolved in chloroform, and to this solution a chloroformic solution of bromine was added until the former possessed a distinct odour of bromine. A yellow crystalline body was formed and was recrystallised from acetic ether, but the crystals obtained from the latter solution were not better defined than those from the original chloroformic solution.

On treating an absolute alcohol solution of corydaline with an alcoholic solution of bromine better results were forthcoming. It is necessary to operate with dilute solutions of each; the bromine solution being added drop by drop—a precipitate occurs which at first partly redissolves. On further addition of Br solution a bright yellow precipitate persists, becoming crystalline on standing. This was recrystallised from alcohol, and light yellow needles were produced of the formula $C_{22}H_{23}NO_4{\cdot}HBr$ – dehydrocorydaline hydrobromide.

The action is therefore analogous with that of iodine. This salt crystallises from water with four molecules H_2O. In order to characterise it further, the Br was replaced by Cl by means of chloride of silver, and from the hydrochloride formed, which showed on analysis the composition $C_{22}H_{23}NO_4{\cdot}HCl + 4H_2O$, the gold salt was prepared. This gold salt prepared by me had the composition $C_{22}H_{23}NO_4{\cdot}HCl{\cdot}AuCl_3$, and melted at 221°. That obtained by Ziegenbein, using the hydroiodide as starting point, melted at 219°, and possessed the same composition.

It will be observed that, before proceeding further, I recrystallised the precipitate at first formed on addition of alcoholic bromine to alcoholic corydaline solution. It did not seem to me probable that the hydrobromide was at first precipitated; indeed, I was of the opinion that there was an intermediary formation of a perbromide.

A fresh quantity was therefore acted upon in the way stated, and the precipitate at first formed was collected, washed, dried, and analysed in a Carius tube. The figures obtained agreed with the formula $C_{22}H_{23}NO_4{\cdot}HBr + Br_2$. This perbromide gives off its "perbromide" bromine on keeping. In endeavouring to estimate this latter volumetrically by means of an excess of KI solution, then adding an excess of volumetric thiosulphate, and finally titrating the unaltered thiosulphate with volumetric iodine solution, it was found that on running in the latter a brown flocculent precipitate was produced which completely concealed the end of the action. This occurred in two analyses. The body was therefore collected after standing a short time and was dissolved in boiling alcohol. The latter solution yielded yellow crystals, which were found to be dehydrocorydaline hydroiodide formed by an interchange between the bromine of the hydrobromide and the iodine of the volumetric iodine solution.

Proceedings Chem. Soc., 179, 101.

Pursuing the methods given by Dobbie and Lauder as closely as practicable, I found that the oxidation products of corydaline were difficult to extract from the precipitated hydrated peroxide of manganese by means of boiling water as they suggest. I divided the filtrate from this manganese precipitate, and treated each separately. The former was evaporated to dryness on a water bath after having been slightly acidulated with dilute sulphuric acid. The residue was then extracted with alcohol.

The manganese precipitate was suspended in water and SO_2 passed through it. This served two purposes—the peroxide was dissolved, forming a clear solution, whilst the organic matter was precipitated. The latter was crystallised from alcohol.

Corydalinic acid is said to be insoluble in ether, whereas hemipinic acid is soluble. The alcoholic mother liquors were therefore evaporated to dryness and extracted with ether. To the filtrate from the body precipitated by SO_2 a small quantity of sulphuric acid was added, and the whole evaporated to dryness on a water bath, and the organic matter extracted as before.

In short, all was done to possibly separate any acids formed and to purify them by treating with animal charcoal.

The mother liquors were each treated separately, on the principle of fractional precipitation, with lead acetate and these precipitates decomposed with H_2S.

Flat rosettes of crystals were thus obtained of yellowish colour with melting points 155°, 157°, 175°, 177°.

It appeared to me that what was before me was hemipinic acid in its various modifications. The following facts led me to conclude that this was indeed the case.

1. The crystals contained no nitrogen.

2. The varying melting points. Dobbie and Lauder's hemipinic acid melted at 174° – 175°. They state, however, that they often observed a difference of 10°. That procured by Schmidt and Schilbach from berberine melted at 160°-161°. Wegscheider's acid melted at 175°-179°. Beckett and Wright's at 182°.

3. As nothing definite could be concluded from these melting points I prepared the anhydride of the acid according to directions of Mathiessen and Wright and also of Schmidt and Schilbach.

The formation of the anhydride is expressed by the following equation :—

$$C_6H_2\begin{cases}(O\cdot CH_3)_2\\COOH\\COOH\end{cases} = H_2O + C_6H_2\begin{cases}O(CH_3)_2\\CO\\CO\end{cases}>O$$

Although the acid itself melts so indefinitely, its anhydride has a constant m. p. 167°.

The anhydrides I prepared agreed exactly in melting points with this figure. I observed also the blue fluorescence of the alcoholic solution of the anhydride mentioned by Schmidt and Schilbach.

4. For further confirmation these anhydrides were tested for N. None was present.

5. Characteristic to orthohemipinic acid is further the rufiopin reaction (tetraoxyanthrachinone, $C_{14}H_4(OH)_4\rangle O_2$).

The latter is formed by treating hemipinic acid with H_2SO_4 at 180°, and forms red needles soluble in alkalies with violet colour.

The samples of my acid (both low and high melting ones) gave this reaction. The identity of the hemipinic acid obtained from corydaline with that from berberine, hydrastine, narcotine is therefore clear.

In spite of the exhaustive work of Dobbie and Lauder, I can only conclude, in recognition of my own, that the existence of corydalinic acid requires further corroboration. This acid which sublimes without decomposition and is "tetra basic" may perhaps be a mixture of hemipinic acid and a trace of a body containing nitrogen; as it is, in itself, improbable that a tetra basic acid should sublime without decomposition.

Furthermore there is a concordance between the composition of corydalinic acid and its salts (taking their own data into account), and that of hemipinic acid and hemipinates.

Action of Potassium Permanganate on Corydaline in Cold Sulphuric Acid Solution.

In order to ascertain any possible resemblance between corydaline and papaverine the former was oxidised on similar lines to those employed by Goldschmidt in obtaining papaveraldine.

A small quantity of corydaline was dissolved in just sufficient 1/10 N sulphuric acid as was necessary to form the acid salt, and a 2 per cent. solution of potassium permanganate was added until, on being allowed to stand, the violet colour persisted.

The excess of permanganate having been removed by SO_2, the manganese precipitate was collected and washed and then extracted with boiling alcohol. This hot alcoholic solution, which was marked by a fine blue green fluorescence, threw out small yellowish-white opaque scaly needles on the sides of the vessel. After purifying by recrystallising from alcohol this body was examined as follows :—

It melted at 145°, and formed an almost neutral solution in hot alcohol.

Examined for nitrogen, a distinct Berlin blue reaction was obtained, which was not due to the presence of unaltered corydaline.

A combustion gave results only approximating to a hypothetical corydaldine.

Examined to determine whether the body possessed any basic properties whatever :—

1. The endeavour to form a hydrochloride failed. The body was only very slightly soluble in hot dilute HCl. Complete solution of the quantity taken for the formation of the salt did not occur. That portion which dissolved was again thrown out on cooling, and contained no chlorine.

2. It did not form a gold salt either in aqueous or alcoholic solution.

3. Platinic chloride gave no precipitate, even on long standing.

These results showed that the body in question possessed little similarity with papaveraldine.

SELECTED FORMULÆ.

Gilding Copper Articles.

The following paste is spread on evenly after the articles have been washed free from oxide :—Dissolve potassium cyanide, 30 grammes, in a little distilled water add sodium gold chloride, 10 grammes, then purified potassium carbonate in finest powder, 6 grammes, and finally precipitated chalk, 55 grammes. Add sufficient water to form into a soft paste. After the articles are satisfactorily coated, rinse several times in clear water, and dry them in sawdust.—*Pharm. Centr.*, xxxviii., 541.

Liquid Tar Soap.

Roderfeld gives the following formula for a liquid preparation of coal tar :—

Soft soap	300 grammes.
Glycerin	200 ,,
Liquor carbon. deterg.	50 ,,

Digest these on the water bath until the alcohol is entirely evaporated. When cold mix with :—

Oil of mellissa	60 gtt.
,, geranium	30 ,,

Set aside and filter in hot water funnel.—*Pharm. Centralh.*, xxxviii., 543.

Aqua Alkalina Effervescens.

Jaworski gives this name to a mixture containing in 1 litre of water, impregnated with carbonic acid, sodium bicarbonate, 8; sodium salicylate, 2·5; and sodium biborate, 1 gramme. The water is prescribed for acute acidity of the stomach. Dose, a tumblerful in the morning. A weaker preparation of the same ingredients is given in doses of a tumblerful after each meal.—*Zeit. d. Allg. Oest. Apoth. Ver.*, li., 600.

Application for Mange.

Issleit recommends the following application, which he calls scabinol, for mange in the dog :—Sapo mollis, 4; β-naphthol, 1; styracis, 2; tobacco extract, 3. To be applied to one-third of the skin at the most for three consecutive days. After three applications wash the whole of the body with dilute scabinol (a tablespoonful to a quart of water). Several hundred dogs have been cured by this treatment in the Geissen vetérinary clinic.—*Vet. Rec.*, x., after *Journ. Med. Vet. and Zoot.*, 372.

Resorcin Hair Tonic.

Salicylic acid, gr. 15; resorcin, ℥ss.; tinct. cantharidis, ℥ss.; tinct. capsici, ℥i.; saponin, ℥i.; lanolin, ℥i.; aqua rosa ad, ℥x. Melt the lanolin; dissolve the saponine in one ounce of water, and mix with the lanolin. Dissolve the other ingredients in the spirit and rose water; then mix.

NOTICES OF BOOKS.

THE 'EXTRA PHARMACOPŒIA,' by Martindale and Westcott (London: H. K. Lewis. 10*s.* 6*d.* n.) comes fresh from the press in its ninth edition, very close on the heels of the British Pharmacopœia, 1898, in accordance with which the smaller book has been duly revised. The revision, coupled with the numerous additions rendered necessary by the progress of medicine and pharmacy, has increased the number of pages from 581 to 626, but that has not involved any apparent increase in the size of the book. At the beginning there are several pages devoted to weights and measures, in which an attempt is made to facilitate the adoption of metric doses, and a table is given of approximate equivalent doses in terms of the Imperial and metric systems. Whether such doses as 0·00065 Gm. (1/100 gr.) and 0·03 C.c. (1/2 M.) will prove thinkable quantities to prescribers may well be doubted, but they are given here with many others in a table that is at least easy to refer to. A synopsis of the principal changes in British Pharmacopœia follows, and of the subsequent pages every one bears evidence of very careful revision, whilst most include important additions. One very prominent feature in the monographs is the expression of all doses in metric, as well as Imperial equivalents. As might be expected, the section on coal-tar derivatives is extended, but not largely so. Alcohol, aloes, aurantium, coca, and digitalis are the headings of the monographs that bear most marks of alteration, and the thorough manner in which all derivatives and subderivatives are dealt with is worthy of special note. The useful section on antitoxins, following the secondary list of drugs near the end of the book, has been greatly extended, serotherapy being treated by Dr. Westcott in a much fuller manner than formerly. Organotherapy has also assumed a much greater importance, relatively speaking, than formerly, whilst the appendix has grown and the indexes have not remained unaffected by the progressive spirit, a new and useful list of antidotes, for example, occupying nearly a page. In fact, the book bears evidence of the most thorough revision from cover to cover, and this best of all pocket works of reference for medical men and pharmacists is accordingly rendered better than ever.

'THE DETERMINATION OF SEX,' by Dr. Leopold Schenk (London: The Werner Company, Cockspur Street. 5*s.*) is the English translation of a work that has excited considerable attention in the world. As the author expresses it, he has made an effort to snatch a secret from Nature, and as a result of his investigations he has arrived at the conclusion that if a woman be dieted according to a method which he describes, "she can reach a stage in which she becomes sexually superior to the man, and her offspring will then be male, in accordance with the law of the cross-heredity of sex." In other words, Dr. Schenk thinks he has discovered how to secure that male rather than female children shall be born at will. The treatment recommended must be commenced some time before impregnation, and consists in giving the individual a highly nitrogenous diet with fat, adding only so much carbohydrate as is absolutely necessary to prevent its want being felt. But for details of the method, readers must be referred to the book itself. Suffice it to say that Dr. Schenk finds there is a tendency for sugar to be present in the urine of women when bearing female children, the saccharine contents sometimes reaching a remarkable quantity, though they cannot be diagnosed as indicating an unhealthy condition. The reverse is said to be the case when male children are borne, and it is therefore assumed that "a ripe fertilisable ovum in the ovary of a woman whose urine habitually contains sugar has a tendency, when the proper conditions are supplied, to develop into a female." By regulating the diet so that the sugar disappears, Dr. Schenk proposes to change that tendency and cause the ovum to develop into a male, and he gives particulars of several instances in which his method was apparently successful. So far, however, it has not been found possible to exercise any influence over an alteration in the course of development of the ovum, such as would occasion the birth of a female. Whilst, therefore, according to Dr. Schenk, boys can be produced at pleasure, girls will only come at their own sweet will. The book consists in great measure of an excellent summary of theories that have prevailed from the earliest periods, on the subject of which it treats, and it will therefore be found interesting, even if the author's arguments should not prove convincing. The volume is well printed, of a convenient size, and may be expected to have a wide circle of readers.

A NEW POISONS BILL.

The following is the text of a Bill for regulating the sale of certain poisonous substances not at present scheduled under the Pharmacy Act, 1868. The Bill was introduced into the House of Lords by the Duke of Devonshire, Lord President of the Council, on Monday, June 13, and read a first time.

A BILL

INTITULED

AN ACT FOR REGULATING THE SALE OF CERTAIN POISONOUS SUBSTANCES. A.D. 1898.

BE it it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

Regulations as to sale of poisonous substances in schedule.

1.—(1.) No person shall sell any substance which is mentioned in the schedule to this Act, and which is not for the time being deemed to be a poison within the meaning of the Pharmacy Act, 1868, unless the box, bottle, vessel, or package in which the substance is contained, and also any external wrapper or cover, are distinctly labelled with the name of the substance, and with the word "Poison," and with the name and address of the person selling the substance.

(2.) Provided that if the substance is supplied for internal use by a legally qualified medical practitioner or by a pharmaceutical chemist or chemist and druggist, and the ingredients of the substance and the name of the person by whom it is supplied are entered in a book kept by that person, the words "To be used with caution" may be substituted for the word "Poison."

(3.) The Privy Council may make regulations as to the keeping and selling of substances mentioned in the said schedule, and all such regulations shall be laid, as soon as may be, before both Houses of Parliament.

(4.) The Privy Council may from time to time, by order, amend the said schedule by adding any substance thereto, or removing any substance therefrom, and references in this Act to the said schedule shall apply to the schedule as so amended.

A.D. 1898.

(5.) If any person contravenes any of the provisions of this Act, or of any regulation made thereunder, he shall be liable on summary conviction to a fine not exceeding five pounds, or in the case of a second or any subsequent conviction not exceeding ten pounds.

(6.) In the application of this section to Ireland, the Lord Lieutenant in Council shall be substituted for the Privy Council, and references to the Poisons (Ireland) Act, 1870, shall be substituted for references to the Pharmacy Act, 1868.

33 & 34 Vict. c. 26.

Power to prescribe regulations as to poisons, 31 & 32 Vict. c. 121.

2. The power exerciseable under section one of the Pharmacy Act, 1868, by the Council of the Pharmaceutical Society, with the consent of the Privy Council, of prescribing regulations as to the keeping, dispensing, and selling of poisons, may be exercised also by the Privy Council, and that section shall have effect accordingly.

Commencement and short title.

3.—(1.) This Act shall come into operation on the first day of January one thousand eight hundred and ninety-nine.

(2.) This Act may be cited as the Poisonous Substances Act, 1898.

SCHEDULE. A.D. 1898.

Butter of antimony.
Carbolic acid.
Chloride of zinc and its solutions.
Cresylic acid.

Hydrochloric acid, Nitric acid, Sulphuric acid — unless diluted in manner prescribed by the British Pharmacopœia for the time being in force.

Sugar of lead and other salts of lead.

Preparations of carbolic or cresylic acid or their homologues used as disinfectants and containing more than ten per cent. of any of them.

Substances sold for the purpose of poisoning insects or vermin.

REGULATION OF THE SALE OF POISONS.

FROM the diversity of opinions expressed and suggested when the Pharmacy Acts Amendment Bill was discussed in the House of Commons last week, it may be expected that no little difficulty may be experienced in satisfying the desires of all persons interested in the regulation of the sale of poisons. That considerable interest is taken in this subject may be inferred from the discussion which then took place and from the circumstance that it was introduced in connection with a Bill which does not bear upon the sale of poisons in the least degree, or relate to that subject otherwise than by the perhaps unfortunate association existing between the practice of pharmacy and the retailing of certain articles which the Legislature has declared to be poisons, and therefore requiring to be supplied only by persons possessing adequate knowledge of their properties. But though in regard to the real object of the Bill before the House, the discussion which took place was strangely irrelevant, it was in itself very interesting, for it showed that the speakers were, in most instances, influenced by partial considerations of the subject, and in a manner that would lead to directly opposite conclusions.

Thus, for instance, while Dr. CLARK appeared to regard the existing legislative provisions by which the sale of poisons is controlled as operating in restriction of trade and constituting an objectionable monopoly in favour of a particular class of traders, Mr. CHANNING and Mr. BURNS appeared to be of opinion that, for the sake of public safety, the provisions of the law now in force should be much more stringent and that, even within the limits now recognised by the law, the facilities afforded for obtaining poison are far too great. These differences of opinion expressed by members of the House of Commons no doubt represent similar differences on the part of the public, who are very often mainly impressed by their individual experiences. A person whose friend or acquaintance has been poisoned will consider the regulations affecting the sale of poisons too lax, while another who has had some difficulty in obtaining a supply of laudanum in a strange place will be equally dissatisfied with them as being unduly obstructive. Dr. CLARK's idea that the sale of poisons should be restricted only so far as they are applied to medicinal purposes would, if acted upon, leave but little protection against accidental or criminal poisoning, and as Dr. FARQUHARSON and Mr. CHANNING pointed out, the proposal to authorise the sale of poisons on the excuse of their being wanted for agricultural purposes involves a very dangerous principle.

In addition to the discordance of opinions as to the regulation of the sale of poison, there is evidence of a great want of acquaintance with the provisions of the existing law. Thus, for example, Dr. CLARK spoke of potassium cyanide as a poison on the sale of which there is no check, and his equally erroneous statement that any person could, by giving a fictitious name, obtain as much poison as would kill every Member of the House of Commons is another indication of the same defect. Newspapers in the same way show ignorance on the part of writers on this subject, and consequent inability to comprehend its importance. For example, one of the London evening papers described the Bill before the House of Commons last week as "a measure to restrict the sale of poisons," over which the members "had a bit of fun," in consequence of its being supposed to upset the shipbuilding interest and the agricultural interest. The *Manchester Courier* regrets that the Bill has passed the third reading because it makes no suggestion towards remodelling the conditions imposed under the Sale of Food and Drugs Act (*sic*) for the dispensing of poison, or dealing with "the scandalous state of the law in this direction." An editorial note in the *Newcastle Daily Chronicle* speaks of the Bill apparently under impressions produced by what was said in the House of Commons on Wednesday, and the inference is drawn that the Bill aims at strengthening "the druggists' monopoly" by imposing further restrictions upon the freedom of other tradesmen. The opinion is expressed that recent prosecutions show a desire on the part of chemists to extend their rights at the expense of other traders. These expressions evidently show that the writer does not understand the nature of existing legislation or its objects. To describe the existing restriction of the retail sale of poison as "the druggists' monopoly" is directly opposed to fact, since that restriction was established solely in the public interest, and the demand for an extension of the poison schedule now made by Dr. CLARK and other members of Parliament is obviously based upon the assumption that the existing restriction does not in that respect go far enough to afford protection to the public.

THE GOVERNMENT POISONS BILL.

THE Bill introduced into the House of Lords by His Grace the Duke of Devonshire is a renewed expression of the opinion that—in regard to carbolic acid and the other poisonous articles included in the schedule to that Bill (see page 574)—protection of the public does not require that the sale of those articles should be restricted to persons possessing certified technical skill and knowledge. That view is to some extent opposed to the principle embodied in the Pharmacy Act, 1868, and is more in accord with Dr. CLARK's contention that restrictions should apply to poisons only in so far as they are employed for medicinal purposes. The Bill, while proposing to leave the sale of poisonous articles as it is—open to any person—imposes the regulation that such articles shall be labelled poison by the vendor, but it makes no provision for administration, nor does it specify how the penalties incurred by contravening its provisions are to be enforced. As it stands the Bill will probably fail to satisfy either those who demand increased restrictions for the safety of the public, or those who desire relaxation of the law by which the sale of poisons is now controlled.

ANNOTATIONS.

THE PHARMACY ACTS AMENDMENT BILL was introduced in the House of Lords on Thursday, June 9, after passing its third reading in the House of Commons, and on the motion of the Earl of Morley (Chairman of Committees) it was read a first time. It is now down on the paper for second reading.

THE NEW POISONS BILL, so long expected, has come at last, and its provisions should afford interesting reading to chemists and druggists. For a Government Bill it is fairly colourless, and it is open to doubt whether chemists would suffer any hardship if it became law as it stands, considering that they now voluntarily do all that it stipulates should be done At the same time it will require that serious attention which should be devoted to all measures intended to modify the provisions of the Pharmacy Acts. The general effect of the Bill, if it became law, would be to render the sale of any articles in the schedule a penal offence, unless they are distinctly labelled, as poisons in Part 2 of the schedule of the Pharmacy Act are now required to be. But the sale would not be otherwise restricted—grocers, drapers, or anyone else could sell the articles as at present, except that they must be properly labelled. To that extent the public might be better protected than at present, though it may reasonably be contended that labelling alone cannot obviate the risk of danger so effectually as restricting the sale of such articles to competent hands. It may also be suggested that the difficulty with regard to poisonous substances supplied for internal use by medical practitioners or chemists would not be met by the substitution of the words "To be used with caution" for the word "Poison," as it is essential in many cases that the patients should not be aware of the dangerous nature of the medicine they are taking.

THE SECOND CLAUSE OF THE BILL, it will be observed, is designed to empower the Privy Council to prescribe regulations as to the keeping, dispensing, and selling of poisons, to be enforced under the Pharmacy Act, 1868, such as the Pharmaceutical Society has hitherto been content to recommend. As to the Schedule, the only item in the list to which serious objection can be taken is the last—"Substances sold for the purpose of poisoning insects or vermin." For substances sold for such a purpose may not necessarily be poisons within the meaning of the Bill, and it would hardly be reasonable to deem a substance—such as camphor, naphthalin, or ordinary insect powder—poisonous when sold for one purpose and not when sold for another. But, if it be seriously intended to proceed with the Bill, considerable modification of its clauses may be anticipated. For the present, therefore, it will suffice to direct attention to those clauses and await developments.

THE LONDON UNIVERSITY BILL has passed its second reading in the House of Commons, and been referred to the Standing Committee on Law. The opponents of reform did their best to prevent the progress of the measure, but the weakness of the opposition was revealed by the fact that the task of moving the rejection of the Bill was moved by Mr. Harwood, a graduate who has hitherto taken no part in university politics, whilst no more distinguished seconder could be found than Mr. Yoxall, who made himself slightly conspicuous in connection with the Pharmacy Acts Amendment Bill, and whom the *Times* describes as "a most respectable and estimable Member of the House, who has been connected throughout his career with teaching in elementary schools," which hardly seems the best method of qualifying as a university reformer. But to return to the amendment; it received so little support that its mover and seconder did not care to go to a division, and the obstructive tactics of certain graduates of the existing University failed to produce any effect for once. If the Government will only persist with the Bill, there need be no difficulty in passing it this session, and London will then be within measurable distance of having a real University at last.

THE OBJECTIONS TO THE BILL brought forward by Mr. Harwood, Sir John Lubbock, and others, were easily disposed of by Mr. Bryce and Mr. Haldane, who, as the *Times* points out, have both a thorough knowledge of the conditions and requirements of University education. Mr. Bryce pressed the point that the members of Convocation of the University of London should not be endowed with rights of which Parliament deliberately, and for good reasons, deprived the graduates of the old Universities of Oxford and Cambridge. In Oxford and Cambridge the members of Convocation were deprived by Statute of their legal right of veto on measures which directly touched vested interests of every kind. No such interests, observes the *Times*, exist in the University of London, except a sentimental reluctance to have any change made in the examinations by which degrees are given, and, as those examinations have been repeatedly and radically changed during the past half century, the hollowness of the protest is evident.

IN THE HOUSE OF LORDS, on Tuesday, the Earl of Mayo presented a petition from the Pharmaceutical Society of Ireland, asking that, in the Companies Bill now before Parliament a clause may be inserted to the effect that no company may be registered to do acts for which a course of education and examination are required to qualify, unless each member of the company is qualified. Such a clause would be only fair and reasonable in the public interests, but whether it is likely to be inserted is not so certain.

THE QUESTION OF FOREIGN PATENTEES came up in the House of Commons on Tuesday, when Captain Philpotts asked the President of the Board of Trade whether he had considered the report made by the referee appointed to inquire into the matter of Levinstein *v.* Farbwerke vormals Meister, Lucius, and Brüning, and whether, on its consideration and on a general review of the way in which foreign patentees occasionally availed themselves of the monopoly conferred by a patent in this country, and of the difficulties with which British manufacturers had to contend in order to obtain licences under the patents of foreigners not *bonâ fide* working them in this country, he was prepared to propose any legislation on the subject or to adopt some other means of removing the grievance complained of. Mr. Ritchie replied that the report referred to is still under consideration. He was not prepared at present to make any statement as to legislation, or to admit that the existing law as to compulsory licences cannot be made to work satisfactorily, but he could assure his hon. friend that he was sensible of the importance of the question in its relation to the rights and obligations of patentees, both British and foreign, and he should carefully watch the working of the provisions of the Patent Act. Captain Philpotts further asked whether the hon. gentleman could say when the report would be presented, and in reply, Mr. Ritchie stated that the report was a very important one, and contained many suggestions which requires consideration, but he hoped its presentation by the Board of Trade would not be delayed for more than a few days.

The Library Regulations of the Pharmaceutical Society were altered last week in such a way as should commend itself to all "Associates" and "Students" of the Society. Heretofore it has been necessary for all subscribers, other than "Members" or "Associates in Business," who desire to borrow books, to present a recommendation from a member or associate in business, who was held responsible for the safe keeping and return of such books. Now, however, that restriction has been abolished, and the ordinary "associate" or "student" may borrow books, in accordance with the regulations, as freely as other subscribers, and entirely on his own responsibility. Those who have not yet taken advantage of the privilege of borrowing books from the Library have now no excuse for not doing so, the more especially as the outward carriage is defrayed by the Society in the case of all subscribers residing out of London.

The Herbarium Silver Medal, annually offered by the Council of the Pharmaceutical Society to subscribing "Students" of the Society who are under the age of twenty-one years, is awarded for the best herbarium, containing not more than one hundred and fifty specimens, collected in any part of the United Kingdom, the Channel Islands, or the Isle of Man, between January 1 in one year and July 1 in the year following. The time is rapidly approaching for collections to be sent in for this year's competition, as they must be received by the Registrar of the Society not later than Friday, July 1. Intending competitors will therefore please note.

Professor Dewar has replied in an effective manner to Dr. Hampson's charge of having utilised without acknowledgment an idea of his, conveyed through a third party, in a paper on the liquid hydrogen jet, published in 1895. "Such a suggestion," observes the Professor, writing to *Nature*, "is absolutely without any foundation in fact." His results, he contends, would have been attained had Dr. Hampson never existed, just as they have been developed, and that individual has in no way contributed directly or indirectly to the success of the hydrogen experiments. Dr. Hampson is also said to be the only inventor or investigator who has not in a straightforward way approached Professor Dewar directly in such matters. The paper of 1895, on gas jets containing liquid, appears to have been a fruitful source of recrimination, as no less than three patentees of low temperature apparatus—viz., Solvay, Linde, and Hampson—have each recognised in its contents part of the essential subject-matter of their respective patents. But the Hampson patent, according to Professor Dewar, was not published before April, 1896, and the first exhibition of the working apparatus took place towards the end of March of the same year; or some three months subsequent to the Professor's Chemical Society paper. Mr. Hampson declares in his letter that he "*was afterwards the first in this country to liquefy air and oxygen without employing other refrigerants.*" In the much-quoted paper of 1895, however, the following passages occur :—"With such a simple apparatus and an air supply at 200 atmospheres, *with no previous cooling*, liquid air begins to collect in about five minutes, but the liquid jet can be seen in between two and three minutes." "In the above experiments air is taken *at the ordinary temperature*, which is a little above twice its critical temperature, and is partially transformed in a period of time, which in my experiments has never exceeded ten minutes, simply and expeditiously into the liquid state at its boiling point—194°, or a fall of more than 200° has been effected in this short period of time." With these quotations Professor Dewar concludes what appears, on the face of it, to be a very complete refutation.

The President of the Royal Photographic Society, the Earl of Crawford, entertained a large gathering of the members of that Society and their friends at a conversazione, held on Tuesday evening, at the Grafton Galleries, London. The visitors were able to inspect the fine collection of ancient MSS. and ancient volumes in metal and ivory bindings, which his Lordship, as President of the Bibliographical Society, has arranged in the galleries for exhibition during the remainder of the month. The visitors were received by the Earl of Crawford in person, and by ten o'clock the rooms were filled with ladies and gentlemen, who enjoyed the intervals of conversation and music between studies of the well-arranged lines of cases containing the exhibits, which exceeded two hundred and fifty in number, and were carefully and completely described in the souvenir catalogues.

The Dispensers of the London Asylums have presented a petition to the London County Council, in which they urge their claim to a consideration of their position, the duties they are called upon to perform, and the remuneration offered for their services. An extract from the recent address by Dr. MacNaughton-Jones is quoted in support of the dispenser's claim to special consideration, and figures are given to show that the salaries paid to the petitioners are much below those received by dispensers at the principal London hospitals, by compounders in the Poor Law service, and by qualified assistants in pharmacies. It is urged, therefore, that in view of the responsibility of the positions occupied by the dispensers of the London Asylums, the technical nature of their duties, and the pressure under which those duties are carried out, the salaries at present paid do not afford adequate remuneration for the services rendered. Inasmuch as the satisfactory performance of a dispenser's duties requires that he should not be worried by pecuniary difficulties, the hope may be expressed that the request embodied in this petition may be met in the reverse of a mean spirit, and the attention of pharmacists on the London County Council is specially directed to the matter.

Registration of New Companies proceeds apace, and pharmacists are not free from the tendency to register their firms under the Companies Acts. Amongst firms who have just availed themselves of registration under the Acts is that of Messrs. Reynolds and Branson, wholesale and retail chemists, Leeds. The company is a private one, and the present partners take the whole of the share capital, whilst retaining the direction of the business as previously. The business was founded so far back as 1816 by Mr. Wm. West, F.R.S., was continued by Harvey, Reynolds and Co., and later by Reynolds and Branson, who in 1894 took over the business of Mr. Smeeton.

Chemists' Assistants are not too hasty in organising for self-defence, and any effort in that direction is therefore all the more worthy of commendation. Apparently such an effort is about to be put forth in London, and we gladly announce that a meeting of chemists' assistants will be held at the Horseshoe Hotel, Tottenham Court Road, on Thursday next, June 23, at 8 p.m. sharp, for the purpose of establishing an assistants' union. Any assistant who may read this announcement should accept it as a personal invitation, and make a point of being present, if possible.

The Paris Exhibition of 1900 is becoming an event of the near future, and we are requested to announce that the Royal Commission is now prepared to circulate information respecting the Exhibition. The classification and rules for exhibitors, together with forms of application for space, can be obtained by applying to the Secretary of the Royal Commission, Paris Exhibition 1900, St. Stephen's House, Westminster, S.W.

MEETINGS OF SCIENTIFIC SOCIETIES

ROYAL INSTITUTION.

On Thursday, June 9, the second and concluding lecture was delivered by EDWARD E. KLEIN, M.D., F.R.S., on

Modern Methods and their Achievements in Bacteriology.

The organs of locomotion of bacteria known as cilia or flagella were first considered, and methods of staining them with the usual dyes were mentioned. The fact was emphasised that these cilia are not always present and that some bacteria are motile, though they have no flagella, *e.g.*, the bacteria that cause foul brood in bees. Other bacteria do not move, though they have flagella. The bacterium that causes lockjaw is an example of the flagellate non-mobile variety. The power of locomotion is essential to those micro-organisms that depend on a free supply of oxygen for their existence. For this purpose the *B. coli* and the typhoid bacillus will be found floating at the surface of liquids, where oxygen is most abundant. Doubtless those bacteria that have flagella, and do not use them, required them once, but now they need them no longer for the purpose of locomotion. Whether they serve any other end is not at present known. The method of reproduction by means of spores next received attention, and it was shown how excessively resistant the spores are to hard external conditions. It is fortunate for man that comparatively few pathogenic bacteria form spores, inasmuch as they can easily be exterminated by suitable treatment. Were the most dangerous bacteria of the spore-forming class, it would be impossible, for example, to sterilise milk by merely boiling it. The lecturer insisted that no typhoid, diphtheria, or scarlet fever would be carried to human beings by water or milk if these liquids were first boiled. In fact, the typhoid bacillus is killed at a temperature below the boiling point of water. The three principal methods of exterminating bacteria are: (1) Thorough and prolonged desiccation, (2) boiling with water, and (3) the application of certain chemical reagents. In this connection the lecturer remarked that there is a great difference in the amounts of heat necessary to kill bacteria, since some spores will stand two hours' boiling, whilst others will germinate after exposure to a temperature of 140° C. for five minutes. Though, as is well known, tinned foods are subjected to the heat of boiling water for a few minutes, one occasionally meets with a quantity of bacteria that have been produced from the spores which the heat was insufficient to kill. In attacking the problem of disinfection it must be remembered that spore-forming bacteria need different methods of treatment from the non-spore forming varieties. The lecturer then discussed the study of pure cultures at some length, and pointed out that as a result two very important facts had been ascertained, viz.: (1) that the substance of which bacteria are composed may include some poisonous and highly deleterious principles, and (2) that certain bacteria in appropriate media have the power to form certain definite chemical compounds. Many bacteria, not connected with disease, when prepared in pure cultures outside the animal body contain poisonous principles. This is the case with *B. coli* and the typhoid vibrio, but not with the bacteria of anthrax and diphtheria. Many bacteria possess specific poisons. Koch, considering this subject carefully, was led to perform some experiments, which brought him to remarkable conclusions and to the discovery that certain means of diagnosing diseases difficult of detection were within the power of the bacteriologist. Thus, he made an extract of the tubercle bacillus, and injected a portion of the liquid into a tubercular patient. He found that if a patient is affected with tuberculosis, even in its earliest stages, the injection of the extract above mentioned will produce certain marked physiological changes, characterised especially by a rise in temperature and slight local swelling. Koch named this extract tuberculinum, and employed it with great success in the diagnosis of tuberculosis in men and animals. Dr. Klein said that people had expected too much from this discovery of Koch. Its success lay not so much in curing patients afflicted with the disease as in diagnosing the disease when other methods failed. It is high time that government compelled dairy farmers to apply this test to cows immediately they are bought, that tuberculosis, a disease to which cattle are particularly liable, may not be passed on to children as is now the case to an alarming extent. Similarly the bacillus of glanders in horses may be detected, and this method should prove not only a boon to the owners of horses, but a safeguard to those who tend them, since glanders is a disease which is easily communicated to human beings. On injecting the extract of the glanders bacillus, practically the same symptoms are produced as is the case with the tuberculosis bacillus, but here, again, a thoroughly healthy animal is entirely unaffected. Passing to the second important fact brought to light by the study of pure cultures, viz., that bacteria form certain chemical substances when grown in appropriate media, the lecturer mentioned that with disease-producing bacteria these chemical changes yield substances which are known as toxins. Thus we are acquainted with diphtheria toxin, tetano-toxin, typho-toxin, and many others. Take the case of the bacteria that cause influenza. They enter the body, find a suitable nutritive medium in the interior, grow and multiply, and form a chemical compound, *i.e.*, a toxin, which causes the complaint which we know as influenza. The same process goes on in the case of diphtheria and other diseases, but the toxins produced in different diseases are all different. Now, for a long time it has been recognised as a fact that the animal body, by being once attacked by any specific disease, thereby naturally acquires more or less immunity from future attacks of the same complaint. Hence investigators concluded that immunity from any specific disease might be artificially acquired by the injection into the patient of the specific toxin. This was tried experimentally and found to be successful. On introducing a toxin, the severity of the attack brought on is proportional to the quantity of toxin injected. A slight attack wards off a worse attack, and perhaps prevents any further contagion of the disease. By this means it is possible to drive up, so to speak, the immunity of the animal body from the disease in question. It has been an interesting problem to determine the cause of this immunity, whether naturally or artificially acquired. Eventually it was discovered that in the blood of an animal immune from any particular disease a substance is present which has received the name antitoxine. Take, for example, the diphtheria toxin; 0·1 C.c. is enough to kill ten guinea-pigs in the course of twenty-four to thirty-six hours. If minute portions of this solution be injected into a horse, a slight attack of diphtheria will manifest itself, but will soon pass off. By dosing the animal from time to time with larger and larger quantities, the physiological effects become less and less pronounced, until finally the animal is able to stand the injection at one time of 250 C.c. of the same solution, without suffering any injurious effects. If now a supply of blood be drawn from the horse it will be found to possess antitoxic properties. The presence of an antitoxine in the blood of an immune animal does not alone account for the immunity which that animal enjoys from a particular disease. It has been observed that certain cells of the animal body, the leucocytes, undergo a peculiar change on an attack of the disease, and acquire the property of being able to guard the body from future attacks from the same quarter. But these leucocytes do not entirely account for the phenomenon. Pfeffer has shown that a further substance, possessing immunising, *i.e.*, germicidal properties, is also present in the blood and tissues of an immunised individual. It is an extraordinary fact that blood serum obtained from animal bodies that are immune from a specific disease has the power to agglutinate the bacteria of the same disease when the serum and bacteria come in contact. It is remarkable, too, that the blood of an animal body smitten with any specific complaint is possessed of this agglutinating property from the earliest stages of the disease. This agglutination test is of extreme practical importance in the diagnosis of disease, because if a patient be suspected to be suffering, *e.g.*, from typhoid, and other means of diagnosis fail, it is only necessary to add a few drops of the patient's blood to a pure culture of the typhoid bacillus. If the culture which at first was somewhat cloudy from the presence of countless bacteria clears in parts, and produces a precipitate of the contained bacteria by agglutination, it may be taken as certain that the patient is suffering from typhoid fever. The lecturer illustrated the various points by means of numerous excellent lantern slides, and concluded by mentioning a case in which the agglutination method of diagnosis had proved triumphant, so recently as October and November of last year. An outbreak of typhoid occurred at Bristol, and many medical men failed to recognise the disease as such. The medical officer of health, Dr. Davies, found that the sufferers all obtained their supply of milk from one farm. But the cattle were all healthy and the dairy arrangements excellent. Eventually it was observed that the milk-cans and other utensils

were all washed in water which proved to be polluted with sewage. The sewage was traced to one house in a neighbouring village, from which sewage was discharged into the brook. The inhabitants of the house were not aware that they had been suffering from typhoid, but admitted that three weeks previously they had been troubled with persistent diarrhœa. This enterprising doctor then took samples of their blood and tried the agglutination test with marked success. He was thus able not only to detect the source of the contagion but also to prove that these people had been suffering from a disease which in other respects had left no traces, and to take means for preventing a recurrence of the malady.

In his lecture delivered at the Royal Institution on Saturday, June 4, on

The Temples and Ritual of Asklepios

at Epidaurus and Athens, Dr. Caton referred to the meagre accounts obtainable in the Greek authors. That the temples and groves were of considerable extent was evident from the admirable series of slides chiefly taken by the lecturer, which were used as illustrations for the lecture. Vast piles of masonry are continually being excavated, and whether it was the Stadium, or the Gymnasia, or the Abaton, or sacred ward for the sick, all received adequate explanations from the lecturer's hands.—The second lecture was delivered by Dr. Caton on Saturday, June 11. After describing the various grades of the Hierarchy, the lecturer gave an account of the preliminary ablutions and sacrifices required from each visitant to the shrine, and proceeded to describe the ceremonies which took place at night in the Abaton or ward for the sick, the evening prayers to the god, after which all the sick were encouraged by the priest to hope that Asklepios would visit them in person or appear to them in visions. The inscriptions record that both events occurred frequently. In the daytime the sick man presented himself before the Chrys-elephantine figure of Asklepios in the temple, and various solemn rites were enacted. The sacred serpents and dogs, which were regarded as incarnations of the god, were taught to apply the tongue to any ailing part, after which the patient hoped for immediate miraculous cure, and doubtless the numerous "malades imaginaires" who visited the shrine believed they actually experienced it. The occupations and amusements provided for the sick were described, as also were the valuable methods of treatment introduced in later times, such as baths, careful dieting, vigorous muscular exercises, a form of massage, and various useful drugs. Extracts were read from the engraved tablets recording miraculous and other cures. The superstition of the Greeks in regard to birth and death, which events were not allowed to take place within any sacred precinct, and the consequent cruel ejection of those sick persons who most needed rest and help from the sanctuary, were referred to, also the later provision of a home for the dying, and of a maternity department outside the precinct. The lecture concluded with an account of the transfer of a sacred serpent from Epidaurus to the Island of the Tiber, and the establishment of Æsculapian rites in Western Europe.

On Friday, June 10, a paper was read at the Royal Institution by the Right Hon. Lord Rayleigh, M.A., D.C.L., F.R.S., on

Recent Experiments with the Telephone.

By using a combination of the telephone with a sensitive flame, numerous effects were demonstrated illustrating the sensitiveness of the telephone.

ROYAL SOCIETY.

At the second conversazione of the year, held on Wednesday, June 8, there were several exhibits of special interest to pharmacists. A stand, prepared by Dr. E. Obach, F.I.C., was devoted to

Gutta-Percha.

Botanical specimens were shown of the twigs of the gutta-percha tree (*Dichops. v. Palaq. gutta*), with flowers and fruits preserved in formaldehyde, as well as parts of the trunk and dried specimens of various gutta-percha plants from Singapore and Perak. A collection of the principal "brands" of commercial gutta-percha was on view, also leaves of the tree before and after treatment. The greediness with which collectors uproot the trees for the sake of the juice bids fair, unless checked, to seriously affect the output in course of time. To obviate this difficulty Dr. Obach has devised a method of obtaining large supplies of this valuable product from the leaves, so as to save the trees. Many samples of the ordinary raw material were included in the exhibit, as well as pieces of gutta-percha obtained from the leaves by Obach's process. To illustrate an application of gutta-percha, portraits of Sir William Hooker and Dr. Werner v. Siemens in coloured gutta-percha were displayed, together with gutta-percha impressions from Jubilee medals and electrotype reproductions. Diagrams were hung on the wall illustrating gutta-percha-yielding plants, their geographical distribution, the form and position of the latex sacs, the chemical composition of specimens of known botanical origin and of typical "brands" of commercial gutta-percha and of balata. It will be remembered that the three principal ingredients of the commercial article are water, resin, and the hydrocarbon gutta. Among the many interesting experiments made were those illustrating (*a*) the great transparency of gutta-percha to X-rays; (*b*) the different behaviour towards ozone as compared with caoutchouc; (*c*) the high insulating property of well-dried gutta-percha; (*d*) the great improvement in the physical and mechanical properties of gutta-percha by subjecting it to Obach's hardening process. Ozone at once destroys caoutchouc, but has no action on gutta-percha; the insulating property of this product renders it invaluable for coating the copper core of submarine cables, specimens of which were on the table.

Mr. Walter Gardiner exhibited some photographs of

Trees which Grow in Grand Canary and Madeira,

including umbrella pines, *Euphorbia canariensis*, the Phœnix palm, and dragon trees growing in maize fields. The euphorbia stem is quite cactus-like in habit, and is so highly charged with latex that on scratching the stem a quantity of the latex is shot out with almost explosive force to a considerable distance. A specimen was handed round which even after having been collected many months, left a trail of milk-white juice on gently drawing a penknife along the surface.

Professor J. Norman Collie, F.R.S., exhibited two models to represent in space the arrangement of the

Carbon and Hydrogen Atoms in the Benzene Molecule.

In one model the carbon atoms were represented by large and the hydrogen atoms by small spheres. By rotating the carbon atoms, the hydrogen atoms were seen to approach the centre in two sets. These two sets being composed of three alternate hydrogen atoms or those united with the carbon atoms 1, 3, 5, or 2, 4, 6. In the second model the tetrahedra represented the carbon atoms. The connecting bonds were represented by elastic bonds. In this model the various planes of symmetry could be seen.

Professor W. Ramsay, F.R.S., was the centre of attraction with his interesting exhibit of the

Spectrum of Krypton.

the newly-discovered gas, which is present in the atmosphere to the extent of about 1 part in 100,000. This gas was obtained by allowing the major portion of nearly a litre of liquid air, kindly provided by Dr. Hampson, to evaporate, collecting the residue separately, and purifying it from oxygen and nitrogen. The spectrum, in which the lines of argon were still feebly visible, showed two brilliant lines, one, the yellow, nearly but not quite identical in wave length with D_3, the characteristic ray of helium; and the other, a brilliant yellow-green, which Sir W. Huggins believes to be identical with the green auroral line. The density of the gas is considerably higher than that of argon, and it has been proved, like the latter, to be monatomic. The large spectroscope showed side by side the yellow lines of sodium, D_3 of helium, and D_4 of krypton.

The last exhibit to which reference need be made is that of Sir Richard T. Thorne, F.R.S., and Dr. Copeman, illustrating the

Bacteriology of Calf Vaccine Lymph, with Special Reference to the Preparation of Aseptic Glycerinated Lymph, as now Adopted by Government.

This method was first brought out in 1891, and as yet no experimental controversion of it has been brought forward. The vaccine is obtained exclusively from the calf, to safeguard the patient from erysipelas, syphilis and other hereditary diseases to which man is liable, but from which calves are immune. Tuberculosis is the only serious complaint which is likely to be given to a patient by the use of calf vaccine lymph, but the use of this aseptic glycerinated lymph removes this danger, as the following experi-

ment will prove. To a small test tube containing aseptic glycerinated lymph was added, for experimental purposes, a considerable quantity of virulent culture of the tubercle bacillus. Sub-cultures on solidified blood-serum and glycerin agar made a month later from this mixture of lymph and tubercle microbe failed to yield any growth whatever, showing that the tubercle bacillus had been entirely killed out by the action of the glycerin. The adventitious microbes of calf-vaccine lymph were demonstrated by means of a series of test-tube cultivations of the various microbes isolated from the lymph. These microbes were shown growing on various nutrient media in separate test tubes containing blood-serum, agar-agar, gelatin, and potato. Glycerinated calf-lymph was exhibited stored in small test tubes which each contained about 3 grammes of material. Thirty test tubes contained the amount of material, after glycerination, obtainable from one calf. The lymph is sent out for use in hermetically sealed capillary tubes each containing amply sufficient lymph for a single vaccination. The method of testing the bacteriological purity of glycerinated lymph was demonstrated by a series of plate cultivations. Each plate represented the growth obtained in agar medium from a sample of the glycerinated lymph taken at a different interval from the date at which the lymph was glycerinated. It was seen that the number of groups of microbes which (after due incubation) appeared on the plates diminished week by week, until after the lapse of a month from glycerination no growth whatever took place, although the lymph remained as active as ever when employed for the purpose of vaccination.

On Thursday, June 9, at the Royal Society, the PRESIDENT, Lord Lister, F.R.C.S., took the chair at a crowded meeting of Fellows, who had assembled to hear a paper by WILLIAM RAMSAY, F.R.S., and MORRIS W. TRAVERS, on

A New Constituent of Atmospheric Air.

Professor Ramsay, who read the paper, briefly described the experiments which have been carried out during the past year in attempting to ascertain whether, in addition to nitrogen, oxygen, and argon, there are any gases present in air which have escaped observation owing to their being present in very minute quantity. In collaboration with Miss Emily Aston, the authors have found that the nitride of magnesium, resulting from the absorption of nitrogen from atmospheric air, on treatment with water yields only a trace of gas; that gas is hydrogen, and arises from a small quantity of metallic magnesium unconverted into nitride. That the ammonia produced on treatment with water is pure has already been proved by the fact that Lord Rayleigh found that the nitrogen obtained from it had the normal density. The magnesia, resulting from the nitride, yields to water only a trace of soluble matter, and that consists wholly of hydroxide and carbonate. So far, then, the results have been negative. Recently, however, through the kindness of Dr. W. Hampson, the authors have been furnished with about three-quarters of a litre of liquid air. This liquid was allowed to evaporate down to 10 cubic centimetres, the operation being conducted very slowly. About four-fifths disappeared as nitrogen at −194° C., then the 1 per cent. of argon at −187° C., and about one-fifth as oxygen at −182° C. The small residue was converted into gas, and collected in a gas-holder. It consisted of the new gas, mixed with oxygen, nitrogen and argon. After removal of oxygen with metallic copper, and nitrogen by means of a mixture of pure lime and magnesia dust, followed by exposure to electric sparks in presence of oxygen and caustic soda, there remained 26·2 cubic centimetres of a gas which showed the argon spectrum feebly, and, in addition, a spectrum which the authors believed had not been seen before. The new spectrum has not yet been disentangled from the argon spectrum; it is characterised by two very brilliant lines, one almost identical in position with D_3, and almost rivalling it in brilliancy. There is also a green line, comparable with the green helium line in intensity, as well as a somewhat weaker green line, with a shorter wave-length. In order to determine as far as possible which lines belong to the argon spectrum, and which to the new gas, both spectra were examined at the same time with the same grating. The lines which were absent, or very feeble, in argon have been ascribed to the new gas. Mr. E. C. C. Baly has made a preliminary study of the spectrum so obtained, and the figures which he has given suffice to characterise the gas as a new one. The approximate density of the gas was determined by weighing it in a bulb 32·321 cubic centimetres capacity under a pressure of 521·85 millimetres, and at a temperature 15·95° C. The weight of this quantity was 0·04213 gramme. This implies a density of 22·47, that of oxygen being taken as 16. A second determination was made in the same bulb, after sparking the gas for four hours with oxygen in presence of soda. The pressure was 523·7 millimetres, the temperature 16·45° C., and the weight 0·04228 gramme, which implies the density 22·51. The wave-length of sound was determined in the gas by the method described in the "Argon" paper. The calculations show that, like argon and helium, the new gas is monatomic, and therefore an element. From the investigations made, the authors conclude that the atmosphere contains a hitherto undiscovered gas with a characteristic spectrum, heavier than argon, and less volatile than nitrogen, oxygen and argon; the ratio of its specific heats would lead to the inference that it is monatomic, and therefore an element. If this conclusion turns out to be well substantiated it is proposed to call it "krypton" or "hidden." Its symbol would then be Kr. It is impossible at present to state positively what position in the periodic table this new constituent of the atmosphere will occupy. The number 22·51 must be taken as a minimum density. The authors hazard a conjecture that krypton will turn out to have the density 40, with a corresponding atomic weight 80, and will be found to belong to the helium series, as is, indeed, rendered probable by its withstanding the action of red-hot magnesium and calcium on the one hand, and on the other of oxygen in the presence of caustic soda, under the influence of electric sparks. A larger supply of the gas will be procured, and if possible, separated more completely from argon by fractional distillation. The density obtained is doubtless that of a mixture of krypton and other gases, principally argon. In conclusion the authors suggested that, on the assumption of the truth of Dr. Johnstone Stoney's hypothesis that gases of a lighter density than ammonia will be found in our atmosphere, it is by no means improbable that a gas lighter than nitrogen will also be found in the air. They have spent many months in preparation for a search for it, and will be able to state ere long whether the supposition is well founded.—The paper gave rise to a lengthy discussion, in which Lord RAYLEIGH, Sir WILLIAM CROOKES, Dr. ARMSTRONG, Sir NORMAN LOCKYER, Professor DEWAR, and Professor MENDELEEF took part. All were agreed in complimenting the authors on their latest discovery.—Sir WILLIAM CROOKES confessed that when first he heard of the results of these experiments he did not consider that clear proofs were given that a new element had really been discovered, but the fuller and more complete account given at the meeting had removed these doubts from his mind. He, together with Dr. Armstrong, struck an unpleasant chord in referring to the fact that this communication was first made to the French Académie des Sciences.—Sir NORMAN LOCKYER spoke of the extreme interest which centred round this gas for all connected with astronomy, inasmuch as Sir W. Huggins suggests the possibility of the identity of the green line with the auroral line.—Professor MENDELEEF, who was asked to speak in what language he pleased, made a few complimentary remarks, leaving Professor Dewar to speak for him at greater length.—The latter expressed his admiration of the work done, but at the same time stated that he felt that the ground had been cut away from under him. Referring to a paper read by himself at the Chemical Society last autumn, and another at the Royal Institution in April of this year, "On the use of Liquid Air as an Analytical Agent," he could only think that the authors had profited by his work in order to carry out their own researches.—In his reply, Professor RAMSAY pointed out that copies of his paper were sent off simultaneously to the Royal Society of London, also to Berlin and the Académie des Sciences. Had the Royal Society met as usual on Thursday, June 2, the communication would have been read first in England. One reason that influenced him in sending a copy to M. Berthelot was this: that if the paper had not been read in Paris on Monday, June 6, the ladies would not have seen the spectrum of krypton at the Conversazione on June 8. He regretted, however, that circumstances should have prevented him from making the announcement to the Royal Society in the first instance. The matter in question would be a useful object lesson to those who advocated the unity of science, and ignored the accident of nationality. With regard to Professor Dewar's objections he could only say that he had not read either of the papers referred to, and so could not possibly profit by them.—The PRESIDENT then formally tendered to the authors the thanks of the Society for their valuable communication.

Pharmaceutical Transactions.

PHARMACEUTICAL SOCIETY.

DONATIONS TO THE LIBRARY AND MUSEUM.

At a meeting of the Library, Museum, School and House Committee, on Wednesday, June 15, the Librarian and Curator presented the following reports of donations :—

To the Library (London).

Professor E. Schaer, Strassburg :—Ueber Fouquiera splendens, 1898 ; Beit äge zur chemischen und pharmacognostischen Kenntnis der Pasta Guaraná von E. Kirmsse, 1898 ; Offene Fragen auf dem Gebiete der Pharmakognosie, 1898.

Professor Arthur Meyer, Marburg :—Untersuchungen über die Wasserapparate der Gefässpflanzen, von O. Spanjer, 1898.

General Medical Council, London :—British Pharmacopœia, 1898.

Mr. H. W. Gadd, Exeter :—Synopsis of the new B.P., 1898.

Messrs. C. J. Hewlett and Son, London :—Notes on the new B.P , 1898.

The Editor of the *Pharmaceutical Journal* :—Synopsis of the B.P., 1898 ; Metric Equivalents of Imperial Weights and Measures, and Thermometric Equivalents, 1898.

Mr. P. MacEwan, London :—Pharmaceutical Formulas. second edition, 1898.

G. Watt, Esq., M.B., C.M., C.I.E., Calcutta :—The Pests and Blights of the Tea Plant, 1898.

Royal Society of Edinburgh :—Proceedings, 1895-97.

Royal Institution of Great Britain, London :—Proceedings, 1897 ; List of Members, 1897.

M. Maurice Duyk, Bruxelles, Secrétaire général du VIIIme. Congrès international de pharmacie :—Compte rendu. 1898.

F. M. Bailey, Esq., Brisbane :—Contributions to the Flora of Queensland, five amphlets.

L. Wray, jun., Esq., Perak : Perak Museum Notes, vol. 2, pt. 2.

To the Library (Edinburgh).

Mr. H. W. Gadd, Exeter :—Synopsis of the new B.P., 1898.

Messrs. C. J. Hewlett and Son, London :—Notes on the new B.P., 1898.

The Editor of the *Pharmaceutical Journal* :—Synopsis of the B P., 1898 ; Metric Equivalents of Imperial Weights and Measures, and Thermometric Equivalents, 1898.

Royal Society of Edinburgh :—Proceedings, 1895-97 ; Indian Meteorological Memoirs, vol. 7, pts. 6-7, and vol. 8, pt. 2.

To the Museum (London).

Mr. Law, British Central Africa, through Professor G. F. Scott-Elliot :—Specimen of a *Strophanthus* pod and stem.

BRITISH PHARMACEUTICAL CONFERENCE.

A meeting of the Excutive Committee was held at 16, Bloomsbury Square on Wednesday, June 8.—Present : Dr. C. Symes, (President), in the chair ; Messrs. Atkins, Martindale, and Payne (Vice-Presidents) ; Messrs. Bird, Farr, J. C. Umney, and White ; Messrs. Naylor and Ransom (Hon. Gen. Secretaries), and Mr. Nightingale (Asst. Sec.)—Letters regretting their inability to attend were read from Messrs. Ewing, W. Hills, W. F. Wells, Martin, Collier, Guiler, and McKnight.—The minutes of the previous meeting were read and confirmed.—It was moved by the President, seconded by Mr. Atkins, and carried unanimously that the Secretary be requested to send a letter of condolence to the relatives of the late Professor Dragendorff, Ph.D., M.D., of Rostock, an Honorary Member of the Conference.—Sympathetic references were also made to the deaths of the Right Hon. W. E. Gladstone, who addressed the members of the Conference on the occasion of their excursion to Hawarden in 1896, and of the Right Hon. Lord Playfair, a distinguished chemist who, in the earlier part of his career, was intimately connected with pharmacy.—An application was read from Mr. E. J. Parry for a grant of £5 towards the expenses of a further investigation of oil of sandal wood. It was unanimously agreed that this sum be granted.—A draft of the proposed programme of local arrangements for the Belfast meeting was sent by Mr. McKnight, the Honorary Local Secretary, on behalf of the Local Committee, and submitted by Mr. Payne for the approval of the Executive. Proceedings will commence on Tuesday, August 9, when an official welcome will be offered by the Right Hon. the Lord Mayor of Belfast on behalf of the citizens, and by the Rev. Thos. Hamilton, D.D. (President of the Queen's College) on behalf of the College where the sittings of the Conference will be held. The usual sessions of the Conference will be held from 10 a.m. to 1 p m., and from 2 to 4 p.m. At the conclusion of the afternoon sitting carriages will arrive to take members to the Giants' Ring and other places of interest. The reception and conversazione will be held in the Queen's College in the evening. On Wednesday, August 10, the business of the Conference will be continued in the morning and concluded at 4 in the afternoon. By invitation of the Lord Mayor and Lady Mayoress (the Right Hon. James Henderson, M.A., J.P., and Mrs. Henderson) a garden party will be given at 4.30 p.m. in the Botanic Gardens, Cork. Thursday, August 11, will be devoted to an excursion to the coast of Antrim, visiting Larne, Garron Tower, Glenariff, and Parkmore. The programme embodying the above arrangements was unanimously adopted, and the thanks of the Executive were accorded to the Local Committee who had drawn it up, and to Mr. Payne for his kindness in attending the meeting as a deputation from Belfast.—The place of meeting for 1899 was considered, and it is understood that invitations will be received from Brighton and Plymouth.—A proposed list of officers for the ensuing year was adopted for recommendation to the general meeting.—Thirteen gentlemen, having been duly nominated, were formally elected to membership.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.

The Annual Outing took place on Wednesday, June 8, and favoured by fine weather proved an unqualified success. The party numbering eighty, started from the Guildhall Square, Plymouth, at 1 p.m. in six well-appointed vehicles. On arriving at Yealmpton light refreshments were partaken of. On resuming the journey the carriages passed through the romantic and beautiful Membland Drives, extending over nine miles. The party having been photographed, the annual tug-of-war took place between married and single members of the craft. The single team (under the captainship of Mr. P. A. Kelly) proving victorious. A move was then made for the village of Noss, where high tea was provided, after which the party resumed the journey home ; arriving about 11 p.m. The arrangements were capitally carried out by the following committee :—Messrs. J. Cocks (President), J. Barge, J. H. Bailey, P. A. Kelly, A. J. Lamble, F. Maitland, J. Maurice, O. A. Reade, J. B. Swainson, C. T. Weary, W. H. Woods, Messrs. C. J. Park and A. D. Breeze (Hon. Secs.).

LIVERPOOL CHEMISTS' ASSOCIATION.

The Council of the Liverpool Chemists' Association, taking into consideration the importance and necessity of a definite understanding between prescribers and dispensers as to the use of the new British Pharmacopœia, has consulted with the President and Council of the Liverpool Medical Institution, and with their approval, recommends the adoption of the B.P. 1898, as the standard for prescribing and dispensing on and after July 1, 1898.

BRISTOL PHARMACEUTICAL ASSOCIATION.

At a meeting of members held at the University College on Thursday, 9th inst , the Hon. Secretary reported that he had been in communication with some local physicians as to the date upon which the new Pharmacopœia should be used in dispensing. The subject had been brought before a meeting of the local medical association, and they suggested that a notice should be sent by this Association to the medical profession, stating that after a certain date all new prescriptions would be dispensed according to the new Pharmacopœia, and that July 1 was a convenient date. —It was therefore unanimously resolved that the Hon. Secretary be requested to send such notice to the members of the medical profession, enclosing a copy of the reprint of formulæ, processes, etc., from the *Pharmaceutical Journal*, as well as a circular, to all chemists in business.—A resolution was also passed stating that the Association is entirely in sympathy with the objects and aims of the P.A.T.A.

EDINBURGH AND DISTRICT CHEMISTS' TRADE ASSOCIATION.

The fifth annual excursion took place to St. Fillan's, Loch Earn, on Thursday, June 9, 1898. About twenty members and friends left the Caledonian station by special train for Comrie at 8.30 a.m. At Larbert a contingent of pharmacists representing the Glasgow and West of Scotland Association joined the train, and Comrie was reached at 11 a.m., half an hour late. Here the party was joined by another contingent representing the Forfarshire District Chemists' Association. Carriages were in waiting, and in delightful weather the company greatly enjoyed the six-mile drive through the rich valley of Strathearn to St. Fillan's, at the eastern extremity of Loch Earn. During the short interval before dinner there was time to realise the truth of Mr. Baddeley's words, "We know not what the real Arcadia may be like, but no spot in Britain

so thoroughly embodies our most cherished conceptions of it as St. Fillan's. It is the quintessence of undesigned loveliness. Every feature is attractive, both in itself and in its relation to others. The river ripples merrily and carelessly out of the still lake, and all around are hills beautiful in shape and colouring." He goes on to say, "There is nothing bare and nothing uncomely." One felt that this remark must have been penned before the disastrous wind storm four years ago, by which whole forests of trees, many being of great size, were levelled to the ground in one night. During the drive many evidences of the devastation were seen.—Dinner was served in the large new dining hall of the hotel. Mr. David MacLaren, President of the Association, presided, and Mr. George Lunan, Vice-President, occupied the Croupier's chair. Among others present were Mr. J. Laidlaw Ewing, Mr. and Mrs. John Bowman, Mr. and Mrs. D. MacKenzie, Mr. and Mrs. D. B. Dott, Mr. and Mrs. G. Coull, Mr. A. Noble, Mr. and Mrs. C. F. Henry, Mr. and Mrs. R. J. Macdougall, etc., Edinburgh; Mr. and Mrs. W. L. Currie, Mr. and Miss D. Watson, Mr. and Mrs. R. Cunningham, Mr. and Mrs. Robertson, Messrs. McKellar, Moir, etc., Glasgow; Mr. and Miss Fraser, Paisley; Mr., Mrs., and Miss Charles Kerr, C. Cumming, J. Thomson, J. W. Russell, J. L. Doig, etc., Dundee; Harley, Perth; Harley, Crieff; Bruce, Dunblane; Chalmers, Kelty; Forgie, Falkirk; Allan, Kirkcaldy; Fisher, Dumfermline; McLagan, Grangemouth, etc. Telegrams of apology and good wishes were received from Messrs. Storrar, Kirkcaldy, and Forret, Edinburgh.—After a sumptuous dinner Mr. DAVID WATSON, Hon. Secretary Glasgow and West of Scotland Pharmaceutical Association, proposed "Success to the Edinburgh Chemists' Annual Picnic," which was acknowledged by the CHAIRMAN.—The CHAIRMAN proposed "Success to the Glasgow and Forfarshire Chemists' Associations," which was acknowledged by Mr. W. L. CURRIE, President Glasgow Association, and Mr. CHARLES KERR, President Forfarshire Association. In doing so both referred with great satisfaction to the passage of the Pharmacy Bill through the House of Commons on the previous day, and the references to the Bill were received with loud and prolonged applause.—The CHAIRMAN moved votes of thanks, which were cordially awarded to Mr. Carmichael, of St. Fillan's Hotel, and to the Honorary Secretary, Mr. C. F. Henry, and both suitably replied.—The company then adjourned to the park behind the hotel, where a very successful photograph of the group was secured by Mr. Charles Brown, 10, Cornwall Street, Edinburgh, from whom copies may be had for three shillings each. The afternoon was devoted to boating on the loch and rambling about the seductive surroundings. After tea, the company drove back to Comrie, and took train for Edinburgh at 7.10 p.m., arriving at their destination about 9.30, after spending a day that will remain as a bright and happy memory till the next excursion comes round. The whole company are under a deep debt of gratitude to Mr. Henry and his Committee for the excellent arrangements, which were carried out without a single hitch.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION.

The first summer meeting of the Association was held in the Pharmaceutical Society's House, 36, York Place, Edinburgh, on Friday, June 10, 1898, from 8.30 to 10 p.m., Mr. G. H. C. ROWLAND, President, in the chair. There was a large display of plants comprising 61 genera and illustrating 29 natural orders, and including local collections made by Messrs. McBain and Pike and a collection by Mr. Hill made at Loch Earn on the previous day. At 9 o'clock Mr. RUTHERFORD HILL described a number of the specimens which included *Quercus robur* showing:—(1) Currant galls produced by the puncture and deposited ovum of the gall wasp *Spathegaster baccarum* on the male catkins; (2) Spangle galls on the leaves produced, by *Neuroterus fumipermis*; (3) Large bud galls or oak apples, produced by *Dryoterus terminalis*, from Loch Earn, and *Lychnis viscaria*, a rare plant, from Blackford Hill, Edinburgh. The plants bore ample testimony to the unusual coldness and lateness of the season. The common ash, *Fraxinus excelsior*, was in many places still in the winter condition, without a single leaf bud open, and there was a specimen of winter cress, *Barbarea vulgaris*, with flower buds unopened. Most plants were from a month to six weeks behind the usual June condition. In view of the Association prize schemes, which will be based on the work of the summer excursions and meetings, a list of the plants shown has been kept, and may be seen at the Society's House.—The meeting closed with a vote of thanks to Mr. Hill.

LEGAL INTELLIGENCE.

PROCEEDINGS UNDER THE PHARMACY ACTS.

PHARMACEUTICAL SOCIETY *v.* RHODES.

At the Hull County Court on Thursday the Deputy Judge (Mr. H. Thomas) heard an action brought by the Pharmaceutical Society against Percy Rhodes, trading as the Cash Drug Stores, 33, Paragon Street, Hull, for a breach of the Pharmacy Act.

Mr. T. R. Grey (instructed by Messrs. Flux, Thompson and Flux, solicitors to the Pharmaceutical Society), appeared for the plaintiffs, and Dr. T. C. Jackson represented the defendant.

Mr. Grey said the action was to recover the full amount of the penalty incurred by the defendant on January 20, 1898, in selling or keeping open shop for the retailing, dispensing, or compounding of poison, to wit, morphine, contained in and forming part of the ingredients in a compound called Mrs. Winslow's soothing syrup; the penalty incurred by the defendant on January 29 for keeping open shop for the selling of the compound called Kay's compound essence of linseed; and a third penalty for having, on January 29, taken, used, or exhibited the title of chemist, all three penalties being incurred under the Pharmacy Act, 1868.

Sabina Watson and Jonathan Mitchenson gave evidence, the former as to the purchases, and the latter as to receiving the purchases, which he forwarded to the Pharmaceutical Society.

Mr. Grey then put in the Register to prove that the defendant was not a registered chemist, and said that, owing to the admissions of the defendant, that would be the plaintiffs' case.

Dr. Jackson said that his defence with regard to the two first items was that the sale did not take place on the premises of the defendant. Mrs. Watson called at the defendant's shop and asked for the goods. Rhodes told her he had not them, but she asked if he could get them, and he did so. The sale therefore took place at the premises where the goods were purchased. In other words, the relationship of the defendant was that of agent to the principal. He was instructed to go and purchase an article and hand it over to him. Rhodes was accountable to the lady as an agent, and not as a vendor. A. T. Thirsk, of 30, Londesboro' Street, was the dispensing chemist, as stated on the label.

The Judge: I think from the evidence that the label which was attached by the defendant was probably part of some old stock in trade of other people. I do not think it is a case of fraudulently pretending to be another man, but a man putting on a label is acting as a chemist. Besides, this was not a "patent" medicine.

Dr. Jackson: There is nothing to prevent a man selling these drugs.

The Judge: Surely an unregistered man is not entitled to sell sweet nitre. Supposing he sold sweet nitre as a grocer. Is not sweet nitre a drug?

Dr. Jackson: Then we are not charged with selling a drug, but with taking, using, or exhibiting the title of chemist?

The Judge: A man must be acting as a chemist in what he does. The sale of the article is some evidence of it, and if a man puts a label on, does he not adopt the label as his own?

Dr. Jackson: I think not. It is clear there is no evidence that he took the name of Thirsk, because Mrs. Watson knew him as Rhodes.

The Judge: I am not going to hold that he was A. T. Thirsk.

Dr. Jackson: The Act says he must take, use, or exhibit the name of a chemist; and I submit that he did not, on the evidence, do anything of the kind. This, continued Dr. Jackson, was a highly penal section, and must be construed as favourably as possible to the individual. The evidence was that Thirsk was a duly qualified chemist, that he sold to Rhodes, and that Rhodes thereby became possessed of labels honestly, one of which was used on a bottle by a man who had been only a very few days on the premises.

The Judge: Would there be any defence if Mrs. Watson had not paid him?

Dr. Jackson: If she had not paid the man the true remedy would have been for Rhodes to sue her for indemnification.

The defendant, in evidence, said he bought the syrup and the compound of linseed from Messrs. Lofthouse and Saltmer.

The Judge: And here we have a thing which he buys from a firm and does not disclose the name of the people from whom he buys to his own purchaser.

Mr. Grey: That is so.

Judge Thomas then delivered judgment. He said that in regard to the action to recover the penalty for retailing and dispensing on January 20, Sabina Watson had stated that she went to the shop of Percy Rhodes and ordered on one day and got supplied on another, a bottle of Mrs. Winslow's soothing syrup. That was admitted to come within the meaning of one of the schedules of poisons referred to in the Act of Parliament. He found, therefore, as a fact, that there was an actual sale by Rhodes to Mrs. Watson as a customer. He found also that Rhodes was an unqualified person and therefore he gave judgment for the full penalty claimed—£5 and cost. On the second claim there must be also a penalty for the full amount with costs. As to the third claim for taking, using, or exhibiting the title of chemist, that depended upon the construction of the Section of the Act of Parliament of 1868—Section 15. The charge upon that Section was that the defendant on January 29, 1898, did take, use, or exhibit the title of chemist, contrary to the Act of Parliament. The story was that Rhodes had, about a fortnight before purchased a chemist's business from the National Drug Company, that he had been carrying on business for fourteen days with the usual fittings of a chemist. In that shop there was a label purporting to have been sold by some chemist—A. T. Thirsk—in one case called a manufacturing chemist and in the other a dispensing chemist, of Londesbro Street, Hull. Thirsk carried on business up to two years ago, and Percy Rhodes had admitted that he got a quantity of Mr. Thirsk's labels when he bought the business, and used them. That being so, he was acting as a chemist and using, certainly, the title of chemist by the fact that he put labels upon bottles. A man could by his acts represent himself to be using the title of chemist. It was clear that Rhodes did use, take, and exhibit the title, and therefore he must give judgment in that case for the full penalty, with costs. The judgment on all the cases was for £15, with costs.

Pharmaceutical Society *v.* Jackson.

At Bacup County Court on June 14, before His Honour Judge Coventry, the Council of the Pharmaceutical Society of Great Britain, by Richard Bremridge, the Registrar, 16, Bloomsbury Square, London, W.C., brought an action against Thomas Jackson, assistant to Mr. R. Mountain, chemist, Market Brow, Bacup, for that he (Jackson), being an unqualified person, did on March 26, 1898, sell certain poison, to wit morphine, contained in and forming part of the ingredients in a compound called Mrs. Winslow's soothing syrup, contrary to the provisions of the Pharmacy Act, 1868. Mr. Grey, a barrister, of London, appeared for the Council of the Pharmaceutical Society. The defendant did not appear.

The bailiff, in answer to His Honour, said he served the summons at defendant's lodgings. Defendant was at that time ill in bed and insensible, and it was not likely that he would ever be right again.

His Honour did not think they could go on in that case.

Mr. Grey said this was the first time he had heard anything of this. He thought they ought to have been told.

His Honour: Who ought to have told you? All the Court has to do is to serve.

Mr. Grey said he had got all his witnesses present from London. They might hear the evidence.

The bailiff in the meantime went to make further inquiries, and found that defendant had been removed to Mr. Mountain's residence at Haslingden, and was still ill in bed.

His Honour: Is anyone here from Mr. Mountain's?

Mr. Goldsmith (Registrar's Clerk): Mr.. Mountain told me he should not do anything in it, but let it take its own course.

Mr. Grey said that purchases of poison had been made from two other unqualified managers in the employ of Mr. Mountain. One had paid the penalty claimed, and the other had absconded. In this case he (Mr. Grey) appeared for the plaintiffs, and it was an action for the recovery of a penalty for the sale of poison by an unqualified man. Mr. Grey indicated the provisions of the various sections of the Act of Parliament under which the proceedings were taken, and said the penalty was £5. The case was taken by the Pharmaceutical Society, who were ordered by the Statute to see that the Act was carried out, owing to information received that a great many sales by unqualified men were being made in the district, and this was one of those cases. The defendant in this case was an assistant to a Mr. Mountain, who was a qualified chemist, and who occupied three shops. It was, of course, impossible for Mr. Mountain to attend to all three shops, and he had appointed unqualified men to look after them in his absence, and allowed them to sell poisons. Unluckily they could not sue Mr. Mountain; they had to sue the person who actually sold the poison. Mr. Grey quoted the case of the Pharmaceutical Society *v.* Wheeldon, and read extracts from the judgement of Mr. Justice Hawkins in that case.

Arthur Foulds said he resided at Manchester, and was instructed by the Pharmaceutical Society to make a purchase at the shop in the Market Brow, Bacup. He went to the shop on Saturday, March 26, and there saw Thomas Jackson. He purchased from him some castor oil and Winslow's soothing syrup. He handed it over to Mr. Moon in the condition in which he received it from the defendant.

Harry Moon, clerk in the office of the Registrar to the Pharmaceutical Society, said he received the bottle and other things from the last witness. The bottle was sealed at both ends. He afterwards handed it over to the analyst.

Ernest Jno. Eastes, analyst, Fellow of the Institute of Chemistry, said he had had great experience as an analyst. The last witness handed to him a bottle of Winslow's soothing syrup. He carefully analysed the contents of the bottle, and found morphine present in an appreciable quantity. Morphine was the active constituent of opium, and one of the poisons mentioned in the schedule of the Pharmacy Act.

Mr. Grey put in the Register, and said defendant's name did not appear therein.

In reply to his Honour Mr. Moon said there were five Thomas Jacksons in the list, but none of them referred to the defendant in this action.

Mr. Grey asked for the full penalty of £5.

His Honour imposed the full penalty of £5, and said if defendant had any objection to make to it, he must make it at once.

LETTERS TO THE EDITOR.

The Dilution of Liquids from One Gravity to Another.

Sir,—In reply to Mr. Davis, I find by experiment the s.g. of liq. ammon. acet. to be 1·014 (theoretically it should be 1·0146). The lowness of my figure is accounted for by the fact that the s.g. of the liq. ammon. acet. fort. used was only 1·071. I should think therefore that the ex-official s.g. is wrong (was it meant for 1·012?). The arithmetical process given by Mr. Davis is very useful and is easily remembered by the formula—

$$\frac{a-b=c}{b-c=a}$$

where a = the observed gravity; b = the required gravity; and c = the water. This gives a fraction which when multiplied by the number of ounces, pints, etc., taken, gives the answer in like terms, but as Mr. Davis points out, it only holds good where no contraction in volume occurs.

Nuneaton, June 13, 1898. A. E. Slinn.

The Pharmacy Bill.

Sir,—Every well-wisher to the cause of pharmacy will rejoice at the turn in the tide that promises a speedy consummation of the labour so freely bestowed by the originators of the Bill. Former opponents, if they do not become friends, will have no alternative but to submit to the provisions of the Bill as by law established. The anti-climax has been brought about through the "Seedsman's" opposition, who has really been "hoist with his own petard," and although subjected to restrictions, he will have the opportunity of doing good if even unwillingly. There still, however, remains an unredressed evil—the indiscriminate sale of several dangerous poisons by irresponsible persons. Foremost, carbolic acid—now produced at so cheap a rate (9*d.* per gall.) as to offer an inducement to the shopkeeper to promote its sale in very accommodating quantities; supplied in drinking vessels, pickle, ale or ginger-beer bottles, etc., to children without any precaution—sugar of lead, white vitriol (impure zinc sulph.), white (carbonate of) lead, spirits of salt, aqua fortis, sulphuric acid (diluted as vitriol), strong liquor of ammonia, etc., all fraught with danger to the careless or to the unsuspicious. It is to be hoped that Government, proceeding on the lines of the Pharmacy Acts Amendment Bill, will introduce a more comprehensive measure; thus tending to the protection, not only of the public, but also to consolidate and extend the influence of the Pharmaceutical Society throughout the land.

June 13, 1898. Sirius (135/10).

EXEMPTION OF CHEMISTS FROM JURY SERVICE.

Sir,—In the interesting account in this week's Journal of the life of the late Mr. Sandford, it is stated, in reference to the Juries Bill of 1862, that "the reason given in the House of Lords for not extending this privilege (of exemption from jury service) to all chemists and druggists was that they had no statutory qualification by which they could be distinguished as persons entitled to exemption." I need not point out that this statutory qualification was conferred by the Act of 1868, and thus an additional reason is furnished for something being now done towards the exemption of all chemists on the Register.

Edinburgh, June 14, 1898. CLAUDE F. HENRY.

SEVUM PHOSPHORATUM.

Sir,—The following may be of interest:—In two different samples of sevum phosphoratum (Martindale), after keeping some time (in one case perhaps two months), the phosphorus was found to have separated out in distinct small grains.

June 13, 1898. PHOS (135/12).

A DISPENSING PROBLEM.

Sir,—During the past few weeks I have had to dispense the following prescription:—

℞ Tinct. Ferri Mur.	ʒii.
Spt. Æther. Nitric	ʒss.
Mucilag. Acaciæ	ʒi.
Syrup ad	ʒiii.

And I found when I first dispensed it that the result was very unsatisfactory. It separated in clots and when prepared in the bottle was so stiff that it could not be poured. I find that the same mixture is referred to in the 'Art of Dispensing,' and no doubt from its difficulty this is, as is usual with such mixtures, "going the round." It is recommended in the work mentioned to divide several ingredients into three batches and dilute with the syrup, giving a larger portion of syrup to the mucilage than to the other ingredients. This makes a more homogeneous preparation, but cannot be poured from the bottle, and no doubt should be dispensed in a wide-mouth, glass-stoppered bottle, with an orifice sufficiently wide to admit of an ordinary medicine teaspoon, but it would certainly not be advisable to send it out in a covered pot, as suggested by such an eminent pharmacist as Mr. Ince, because of the volatility of the spirit. As an alternative plan for the dispensing of this mixture, I have tried the addition of a few minims of dilute hydrochloric acid, B.P., and this has the effect of rendering it more fluid, so that it can be easily poured from an ordinary medicine bottle. No objection was raised to this addition by the writer of the prescription, but whether such an alteration would be permissible in the ordinary routine of a dispensing establishment is a point I would like to have the opinion of your readers upon.

Headless Cross, Redditch, June 13, 1898. MINNIE FARR.

ANSWERS TO QUERIES.

PETROLEUM EMULSION.—See reply to "Petroleum" in our issue for April 23 last. [*Reply to* J. J. A.—11/35.]

BOTANICAL.—They are *Scrophularia vernalis* and *Arenaria peploides*. [*Reply to* D. S. N.—12/1.]

CERATUM GALENI.—This is usually understood to mean cold cream. [*Reply to* L. L. M.—11/30.]

MINOR EXAMINATION.—We should imagine not, but it would be as well to be familiar with the main points of difference, as shown in the *P. J.* Synopsis. [*Reply to* STUDENT.—11/34.]

SHAMPOO POWDER.—Borax, 3; powdered soap, 6; powdered extract of quillaia bark, 1; dried sodium carbonate, 3; perfume, *q.s.* Oil of *Myrcia acris* is generally liked as a perfume for this preparation. [*Reply to* NEPETA.—11/10.]

SCHOOL OF PHARMACY.—We do not know of any such school at Leeds, but there are special classes in chemistry, botany, and materia medica, at the Yorkshire College and at the Leeds School of Science and Technology. Perhaps those may meet your requirements. [*Reply to* LIVINGSTONE.—12/3.]

PLATE SPEEDS.—There is no actual ratio between the three systems, but 60 H. and D. is equal to about 75 Watkins, and about 48 Wynne. [*Reply to* J. J. M.—11/19.]

TONIC DROPS.—Nux vomica and quinine appear to be amongst the ingredients, and possibly they are the only ones, but we do not advise you to guess at the composition of medicine prescribed by a medical man. [*Reply to* QUASSIA.—11/21.]

HAND CAMERA.—You must let us know a little more fully what you wish to do. Do you require a camera for general all-round work, or for hand camera work pure and simple; with dark slides or with magazine? Please write more fully. [*Reply to* R. K. K.—11/20.]

ANTIPYRETIC.—You should make a point of supplying what is actually asked for. The name of the article you mention is registered as a trade-mark, and applies only to the product of a particular manufacturer. [*Reply to* DOUBTFUL.—11/28.]

CABINET-MAKERS' POLISH.—We presume this is what you ask for, but your query is so illegibly written that it is impossible to decipher it with certainty. If this be so, the following may suit you:—Seedlac, 2 ozs.; pale resin, 2 ozs.; dissolve in methylated spirit, 20 fl. ozs. It should be laid on warm, and, if possible, the work should be warmed too. [*Reply to* REX.—10/14.]

COLORATION OF URINE.—The colour of the sample of urine is most probably due to the patient having taken some aniline dye, such as methylene blue, which is frequently administered in capsules or coated pills, so that the patient does not observe the enormous colouring power of the material he is taking. Most of the dye is eventually excreted in the urine, and you will probably find on inquiry that the above is the correct explanation of the phenomenon. The determination of the exact composition of the dye taken would obviously be a matter of considerable difficulty. If you cannot trace the administration of any aniline dye, communicate with us again. [*Reply to* H. G. W. D.—11/27.]

POLARIMETER FOR THE OFFICIAL TESTS.—You can obtain an excellent half-shade English-made instrument of the Laurent type from Messrs. Watson and Co., High Holborn. You should specify that you require a 100 Mm. tube, as the ordinary tube is 200 Mm., but the former is generally used for essential oils, and the official figures are for a tube of that length. This instrument must, of course, be used with the sodium light, the requisite lamp for which is supplied with it. There are also some small "portable saccharimeters" in the market which can be used with ordinary light, but although cheap and convenient, they are not so delicate as the instrument recommended above. In certain cases, the difference in the reading obtained with the monochromatic sodium light and that from other sources is very material. [*Reply to* T. H. D.—11/6.]

OBITUARY.

CORNELIUS.—On June 4, James Cornelius, Pharmaceutical Chemist, Camden Road, N.W. Aged 67. Mr. Cornelius had been a member of the Pharmaceutical Society since 1864.

SIMPSON.—On June 6, John Wm. George Simpson, Chemist and Druggist, Maidstone.

DONALD.—On June 7, at his residence, 24, Connaught Road, Stroud Green, London, N., Francis Arthur Donald. Aged 42. Mr. Donald was for twenty-seven years on the staff of Messrs. Burgoyne Burbidges and Co., and at the time of his death was in charge of the export department of their office. Mr. Donald was highly respected by the whole staff, and his genial, kindly presence will be greatly missed.

FERN.—On June 11, Isaac Fern, Chemist and Druggist, Macclesfield. Aged 69.

HOBLEY.—On June 11, Joseph Hobley, Chemist and Druggist, Llanberis. Aged 75.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Bayley, Bullivant, Crook, Elsdon, Everett, Ferry, Harley, Lawson, Lee, Lenfestey, Maddison, Martin, Martindale, Mawson, Moore, Napier, Parry, Patterson, Pickering, Raimes, Slinn, Standage, Street, Turner, Williams, Wright.

Pharmacy and the Allied Sciences.

A REVIEW OF CURRENT WORK.

Bermuda Arrowroot. Hitherto no authentic account has been given of the interesting arrowroot industry carried on in Bermuda. One reason for the superior character of Bermuda arrowroot is the scrupulous care taken in every stage of the manufacture. The mode of culture is very similar to that of the common potato. The roots, after being collected, are washed, and their outer cuticle completely removed. This process requires care, for the cuticle contains a resinous matter which imparts colour and a disagreeable flavour to the starch, and cannot be removed by subsequent treatment. The pared roots are then well washed, and crushed to a pulp between powerful rollers. The pulp is thrown into perforated cylinders, where it is agitated by revolving wooden paddles, while a stream of pure water carries off the fecula from the coarser fibres of the pulp, and discharges it through the perforated bottom of the cylinder. Thence it is conveyed in pipes, and passed through fine muslin strainers into reservoirs, in which it is allowed to settle, and the supernatant water drawn off. After repeated washings, it is again allowed to settle for some time, when the surface is skimmed with palette knives of German silver. The rollers and cylinders are made of brass and copper. The drying is conducted with equal care and cleanliness. The substance, spread in flat copper pans placed on rollers, is covered with white gauze and run under glass-covered sheds when there is danger from rain or dew. When dry it is packed with German-silver shovels in new barrels lined with paper, which is stuck in with arrowroot paste. The barrels are exported on the decks of vessels under cover, since, if placed in the hold, the arrowroot might be tainted by the effluvia of other freight.—*Kew Bulletin*, No. 135, pp. 50-51.

Germination and Deoxidation. At a recent meeting of the Linnean Society Professor J. B. Farmer and W. G. Freeman demonstrated the action of germinating peas, cress, and barley in causing the deoxidation of a watery solution of methylene blue to a colourless liquid on shaking up the solution with air, while on adding a drop of hydrogen peroxide the blue colour was restored. Green plants placed in the solution were found to act in a manner precisely similar to the seedlings, though the action may be modified by assimilation in sufficient light.

Artificial Indigo. Though the artificial synthesis of indigo was accomplished by Baeyer, of Munich, eighteen years ago, the product has only recently been available in large quantities for manufacturing purposes. Early in the present year the Badische Anilin and Soda Fabrik, Ludwigshafen, offered pure indigo-blue (indigotine) at the price of 17*s.* per kilo., which is about the value of pure indigo-blue contained in commercial indigo. Thus in spite of the reduced value of the natural article, the production of artificial indigo assumes a threatening importance to the indigo grower. Sigismund Lang, in the *Chemiker Zeitung*, points out that the price of artificial indigo is still too high, inasmuch as the cost of pure indigo-blue contained in the leading sorts of commercial indigo varies from 12*s.* 6*d.* to 16*s.* 6*d.* He further calls attention to the importance of the 2 to 10 per cent. of indigo-red (indirubin, indipurpurin) contained in the better class of natural indigo, and which is said to be absent in the artificial. It appears that the presence of indigo-red causes the proper fixing of indigo-blue on the fibre. This explains why Java indigo, which contains little or no indigo-red, is unsuitable for vat-dyeing. In some of the synthetical formations of indigo-blue a red colouring matter is obtained as a bye-product. If, as is suspected, this should prove to be identical with the natural indigo-red, a means will be available for remedying the existing defect in the artificial indigo.—*Kew Bulletin*, No. 135, pp. 33-35.

Coagulation of Latex. R. H. Biffen has examined the latex of various plants with a view to determine the phenomena that attend its coagulation when exposed to the action of air, water, alcohol, acids, alkalies, and other substances. Rubber-yielding plants were largely chosen on account of the abundance of latex, and because the various processes used in the preparation of crude rubber seemed likely to throw some light on the subject. Para rubber is prepared by exposing a thin layer of latex of *Hevea brasiliensis* and other species of *Hevea* to the action of the smoke of burning Attalea nuts. Coagulation is immediately brought about, resulting in the formation of a soft curdy mass of rubber which on drying becomes tough and elastic. The explanation that this is due to the evaporation of water is inaccurate, because no loss of weight follows. On burning the nuts and condensing the smoke, two layers of liquid were collected, the upper consisting mainly of acetic acid, the latter of creosote and pyridine derivatives. On adding acetic acid to the crude latex, coagulation immediately occurred; this must be due to the action of the acid. The same latex is itself alkaline, and the addition of a solution of ammonia preserves it indefinitely from spontaneous coagulation. On the other hand, in the acid latex of *Castilloa elastica*, a tree which grows in Mexico and Nicaragua, alkalies cause coagulation. For this purpose the Indians use a decoction of the stems of the moonflower (*Ipomœa bona-nox*). In the case of *Hancornia speciosa*, in order to produce "mangabeira" rubber, common salt is added; in the preparation of "balata," from *Mimusops globosa*, in Venezuela and Trinidad, coagulation is effected by boiling. As the milkiness of latex is due to the presence of innumerable small particles of caoutchouc, in themselves soft and sticky, it was separated by a centrifugal machine, rotating 6000 times per minute. The separated particles were shaken with water and again separated. On diffusing them again through water and adding an alkali no coagulation occurred. From the failure of the chemical reagents employed to bring about the clotting of the washed particles, the author infers that no chemical change occurs in the rubber itself, and that the cause of the phenomenon must be looked for in the medium in which they are suspended. J. R. Green has found albumin, globulin, albumose, and peptone in several rubber-yielding latices. Biffen proves the presence of proteids in the clear solutions, by the xanthoproteic reaction, after separation of the rubber particles. Thus in *Hevea brasiliensis* an albumin, present in the latex, is clotted by heat and acetic acid; a globulin in *Manihot glaziovii* is coagulated on heating to 74 to 76° C.; the acid latex of *Castilloa elastica* contains an acid albumin which is precipitated on neutralisation. These coagula gather up the rubber, and possibly the starch particles, just as white of egg gathers up suspended particles when clotted for the purpose of clearing jellies.—*Annals of Botany*, vol. xii., No. xlvi., pp. 165-71.

New Theory of Alternation of Generations. W. H. Lang has cultivated the prothalli of a number of species of ferns under slightly abnormal conditions, and considered their bearing on the problem of the nature of alternation. He brings forward a theory as a provisional hypothesis, founded on facts different from those which led Bower to elaborate the antithetic theory. It is briefly as follows:—

With the spread of algal organisms to the land, where, in the absence of any vegetation causing shade, some would be exposed to a more intense illumination, the flattened form would probably be assumed. Prolonged drought and the influence of direct sunlight, inducing a change to a cylindrical form, might be accompanied by the substitution of a reproductive organ forming dry reproductive cells (spores) for those adapted to an aquatic existence. The acquisition of more highly absorbent organs (primitive roots) would further the existence and growth of this modified gametophyte. This spore-producing stage would at first follow the sexual stage in any individual exposed to dry conditions. The association of the asexual with the sexual individual might come about by the absence of water preventing the liberation of motile spores from the zygote. The latter would be obliged to germinate *in situ*, and the fact that it did so under dry conditions would tend to shorten the sexual stage and hasten the assumption of the sporophytic form and mode of reproduction. From the spore, which would always separate from the parent, a sexual individual would arise, since germination could take place only in a damp spot. As soon as, with increase in size and complexity of the spore-bearing plant, a vegetation capable of affording shade came into existence, the conditions suitable for the persistence of the more primitive, alga-like, sexual stage in the life-history would be present. The latter has, of course, also been modified in various ways.—*Annals of Botany*, vol. xii., No. xlvi., pp. 251-6.

Orientation of the Plant Egg. C. MacMillan discusses the ecological significance of the orientation of the plant egg, and concludes that the phenomenon is at bottom one of adaptation. Three principal types of egg-orientation are recognised: the primitive or bryophytic, characteristic also of Equisetum and Angiopteris; the semi-inverted, characteristic of Isoetes and the leptosporangiate ferns; and the inverted, characteristic of Lycopodinæ and Spermatophyta.—*Bot. Gazette*, xxv., 301.

Crystallised Carbon Dioxide. Profcssor A. Liversidge states that when solid carbon dioxide is examined under the microscope, it presents along its edges projecting wire-like crystals, which have branching filaments issuing from them, apparently at right angles, resembling somewhat the groups of minute crystals seen in crystallised iron, gold, and ammonium chloride.—*Proc. Australasian Association.*

Chlorination of Acetylene. M. A. Mouneyrat has found that a mixture of acetylene and chlorine, exposed to diffused light, always combines to form acetylene tetrachloride without explosion, in the absence of free oxygen or any gas that might produce oxygen. If, however, such a gas be present, an explosion occurs, which the author attributes to the formation of acetylene monochloride, which takes fire directly it comes in contact with air.—*Bulletin de la Soc. Chim. de Paris* [3], xix.-xx., No. 11, pp. 448-52.

Preparation of Iodoform by Electrolysis. An improved method is suggested by F. Foerster and W. Meves. A dilute solution of alcohol, containing soda and potassium iodide, is taken at a temperature of 65-70° C. and subjected to a current of 1 ampère. The reaction ensues according to the equation—

$$C_2H_6O + 5I_2 + H_2O = CHI_3 + CO_2 + 7HI.$$

By employing a current of 3 or more ampères, as recommended by Elbs and Herz, a certain amount of potassium iodate is produced. —*Journ. f. Prk. Ch.*, through *Bull. de la Soc. Chim. de Paris* [3], xix.-xx., No. 11, pp. 456-7.

COCAINE HYDROCHLORIDE.

BY B. H. PAUL AND A. J. COWNLEY.

It is some years since that, in the course of an inquiry into the quality of cocaine hydrochloride and of cocaine products generally, the conclusion was arrived at that Maclagan's test was the best and most ready test for the purpose of distinguishing a pure salt of cocaine (B. H. Paul, *P. J.* [3], xviii., 781). Maclagan's test, as is now well known, consists in dissolving 1 grain of cocaine hydrochloride (0·064 gramme) in 2 fluid ounces (56½ C.c.) of water, adding two drops of ammonia solution and well stirring (*P. J.*, *ibid.*, and [3], xvii., 686). According to this test a good sample of cocaine hydrochloride should give a perfectly crystalline precipitate after a few minutes' stirring of the solution with a glass rod. At the time when the earlier experiments referred to above were made, the commercial cocaine hydrochloride was of indifferent quality, having been prepared for the most part from the total alkaloids of the coca leaves, either by dissolving the alkaloids in hydrochloric acid and evaporating the solution to dryness or with the better class of salt by crystallising the mixed hydrochlorides.

From experience gained in the course of many analyses of the crude total alkaloids of the coca leaf, as now imported from South America and Java, and which is the only material now used in the manufacture of cocaine salts, it is not to be expected that even a crystalline hydrochloride obtained from this "crude cocaine" should necessarily be cocaine hydrochloride, considering that the total alkaloids of the coca leaf consist of varying proportions of cocaine. In some samples of "crude cocaine" not more than seven-tenths of it is pure cocaine, whilst several of the other cocaine alkaloids yield cystalline hydrochlorides.

Since from Liebermann's and Giesel's work on the synthetic preparation of cocaine from ecgnonine it is now possible to eliminate all the other alkaloids and to prepare pure cocaine, there is no reason that cocaine hydrochloride of undoubted purity should not be obtainable. Cocaine hydrochloride made from synthetically prepared cocaine readily answers Maclagan's test, which, in our opinion, is still the best test for readily ascertaining the purity of commercial cocaine hydrochloride.

In order to ascertain the purity of the cocaine hydrochloride now commercially supplied samples were obtained and submitted to Maclagan's test, using ammonia of 960 specific gravity.

Sample A. A crystalline precipitate almost at once.
" B. " " " "
" C. " " not so readily.
" D. No precipitate for some time, and then it was clotty and amorphous.

The German Pharmacopœia, iii., and the United States Pharmacopœia, 1890, tests for cocaine hydrochloride, known as the permanganate test, consist in dissolving 0·10 gramme of the salt in 5 C.c. of water acidulated with 3 drops of dilute sulphuric acid and adding 1 drop of weak potassic permanganate, when the colour should hardly disappear in half an hour. This test is essentially a test for cinnamyl cocaine, which we first showed to be a natural constituent of several varieties of coca leaves (*P. J.* [3], xx., 166), and have since found almost invariably present in "crude cocaine." Applying the permanganate test to the samples described above, the following results were obtained:—

A. Retained its colour for 30 minutes.
B. " " "
C. Colour less permanent.
D. Colour disappeared at once and required four times the stipulated amount of potassium permanganate to give a permanent colour for 30 minutes.

It is evident, therefore, that by Maclagan's test, as well as by the permanganate test, samples A and B are pure cocaine hydrochlorides. Sample C is a fairly good sample, whilst sample D is certainly not to be accepted as a sample of good commercial quality.

It has lately been stated (F. Günther, *Pharm. Centralh.*, xxxix., 1) that Maclagan's test is dependent on chance, and is therefore not to be relied upon, that it is not known what impurities can be detected by it; moreover, that a distinction is not shown in the physiological action between one that answers this test and one that does not. The answer to these contentions naturally suggests itself. As it has been found that Maclagan's test is only answered by pure cocaine hydrochloride, and that the other products of the coca leaf do not satisfy the test, then it is certainly in favour of Maclagan's as being a satisfactory one for determining the purity of commercial cocaine hydrochloride. In our opinion a sample of cocaine hydrochloride that does not answer Maclagan's test is not of sufficient purity for medicinal purposes.

LIQUOR STRYCHNINÆ HYDROCHLORIDI.

BY GEORGE LUNAN.

It has not been, so far as I have seen, particularly noted that the new solution of hydrochloride of strychnine (B.P., 1898) is considerably weaker in alkaloid than the 1885 preparation. The new edition of the 'Extra Pharmacopœia' states that it is one-tenth weaker.

The 1885 formula, under careful manipulation, including very gentle heat and allowing for the contraction upon mixing the spirit with the distilled water, produced a solution containing one grain of alkaloid in about 108 minims; the 1898 formula produces a solution of the hydrochloride of the alkaloid containing one grain in about 110 minims (a fraction less in minims in each case).

The molecular weights of strychnine and hydrochloride of strychnine, calculated by the corrected atomic weights given in 1898 B.P., are 331·75 and 403·7 respectively, so that the hydrochloride contains 82·17 per cent. of the alkaloid. But a further reduction in alkaloidal value is due to the fact stated above, the 1898 containing 1 grain of hydrochloride in 110 minims—the 1885 1 grain of alkaloid in 108 minims. This is seen by comparing the formulæ, the new having $17\frac{1}{2}$ grains hydrochloride in 1920 minims, the old 18 grains strychnine in about 1940 minims (doubling the latter formula).

Calculating that $17\frac{1}{2}$ grains of hydrochloride contain 14·379 grains of alkaloid as follows: $\frac{82{\cdot}17 \times 17{\cdot}5}{100} = 14{\cdot}379$, it is found that 1 grain of alkaloid is contained in nearly 134 minims of new B.P. solution; thus $\frac{1920}{14{\cdot}379} = 134$, and by superposing $\frac{108}{134}$ you arrive almost at the exact comparative alkaloidal strength of the two solutions, *i.e.*, 80·6 minims of old liquor are equal to 100 of new, and that for practical purposes the new B.P. solution is one-fifth weaker than old, that is, 4 minims 1885 equal 5,1898.

This result may be verified by finding reduction in strychnine value caused by $\frac{108 \times 82{\cdot}17}{110} = 80{\cdot}6$. If the compilers of the B.P. had wished the preparation to contain 1 grain of alkaloid in 110 minims, the quantity of hydrochloride required would have been $21\frac{1}{4}$ (21·29) grains for the four ounce formula.

It is undoubted that the new preparation, in being weaker having percentage of title stated, in being made with the neutral salt and to a definite volume, will be more satisfactory from a pharmaceutical point of view, but it remains for dispensing chemists to warn medical practitioners that the new solution has only four-fifths the strychnine value of the old.

PHOTO-MICROGRAPHY.—III.

BY EDMUND J. SPITTA, L.R.C.P. LOND., M.R.C.S. ENG., F.R.A.S.

(*Continued from page 568.*)

Commencing now to describe each part separately in detail, there is little more to say about the camera and its slide, seeing I have fully described them. It is not difficult to understand how the mahogany rails between which the camera moves to and fro are fixed on the base-board of the apparatus, but we should like to say a word about the ground-glass screen-holder. It is made so that the ground glass itself can be slipped out with great ease and another of finer or coarser grain placed in its stead. This is done very simply by the use of two brass buttons.

Turning these on one side the glass falls out, turning them back again another can be fixed. With respect to the kinds of ground glass employed, there are three varieties:—The ordinary coarse-grained one, another of finer texture, and a third made specially for me by Ross, Ltd., which is so fine as to hardly be worthy of the name of ground glass at all. When commencing to take a photograph either the first or second is used, and after illuminating the field equally, in a manner to which I shall presently refer, one proceeds to focus; if that can be done on the coarse or medium glass I am always more satisfied, but if with extremely difficult objects the ability to do so is not certain, I change to the finest type or even use a piece of plain glass. The objection to using plain glass, or the finest of the ground glasses in the first instance, is that the general appearance of the field is entirely lost. You see nothing with the naked eye but light streaming from the eye-piece, and, therefore, any inequality of the illumination is sure to escape notice. But for the more accurate focussing that is required with the secondary markings of diatoms or the flagella of bacilli I have to resort to it accompanied by the use of a focussing glass (FG), which is shown in the diagram near the foot of the camera (see p. 567). Much difference of opinion exists as to what kind of magnifying glasses it is better to use.

Dr. Bousfield, the eminent photo-micrographer, advocates the use of a lens with as low a power as possible. Others prefer a spectacle lens mounted in a frame much like an ordinary pair of spectacles, having about an inch focus, whereas not a few prefer the ordinary photographic hand-magnifier, which has already been referred to, providing it is achromatic. Personally I have a predilection for this type, and use one made by Dallmeyer, which he terms his "Low-power focussing hand magnifier." Before using a hand magnifier it should be carefully focussed on the same ground glass upon which it is to be employed. This is not quite so easy a matter as one would think, for it requires a little practice to know when the glass-grinding marks are really strictly in focus. It is a good plan to draw a pencil mark on the ground glass, and then applying the magnifier to its plain surface, to hold both to the light, and to keep altering the focussing screw of the magnifier until the grains of the lead are seen on the glass. No pains should be spared in getting this focus accurately, for it is needless to point out, if carelessly done, it will affect the final use of the magnifier. This is the only trouble of using three kinds of ground glass, lest one should vary in thickness and so upset the focussing arrangement of the magnifier. Of course, the only way out of such a trouble is to procure three pieces of the same thickness.

One word concerning the length of the piece of wood marked 3 in Fig. 1 of the second article (see p. 432). I have found that it is very convenient for it to have a somewhat greater length in the front than that given in the last article, when applied for the purpose now under consideration. The object of so doing is this, when using the additional "front" to the camera for the purpose of gaining

more magnification a weight can be put upon the projecting portion, which gives greater solidity to the whole apparatus. If it be too much trouble to make another piece of wood (piece 3, Fig. 1, first article) a very good substitute is to change the holes of the screws of the same piece in such a fashion that about 2 inches project in front of the camera, at a loss of that which lies underneath it, as, indeed, is shown in the diagram.

It remains now to give a diagram (Fig. 4) and dimensions of the

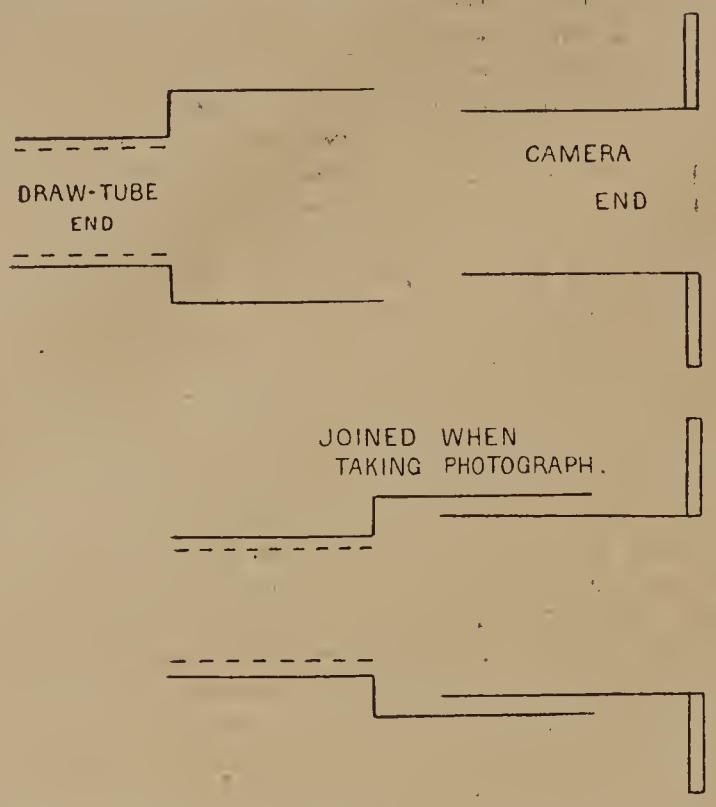

FIG. 4.—DIAGRAM OF DRAW-TUBE AND CAMERA ENDS.

tubes which are respectively attached to the microscope and camera to exclude the light at the juncture of the two. That portion attached to the camera is $1\frac{1}{2}$ inch wide and $1\frac{1}{2}$ long. It is joined on to a flange, which fits on to the ordinary sliding front, whilst that fixed on to the draw tube of the microscope is $1\frac{3}{4}$ inch in diameter at its free portion, into which the other passes, but

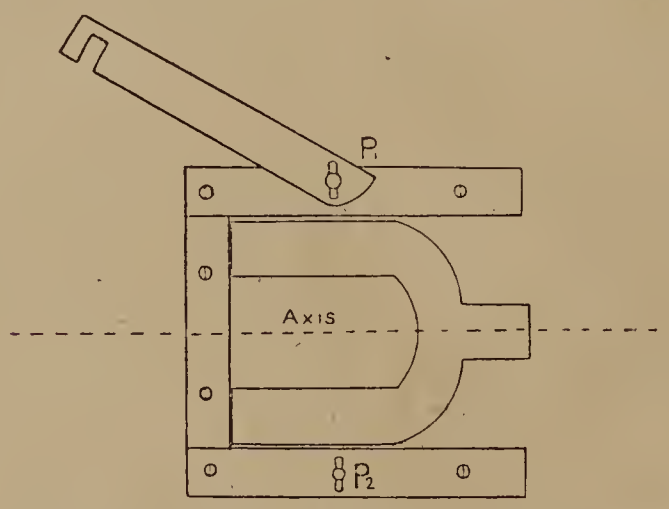

FIG. 5.—DIAGRAM OF BASE-BOARD OF APPARATUS.

reduced in diameter at its other extremity to fit the draw tube, allowance being made for a cork lining to prevent it scratching the lacquer.

The microscope must be firmly held in position on the table. There are many ways of doing this, but as these articles are to be essentially practical, here is the simple plan I adopt. Three pieces of wood are made about one-sixteenth of an inch thinner than the foot of the horseshoe stand of the microscope. They are fitted together and screwed into the large base-board of the apparatus, as shown in the accompanying diagram (Fig. 5). A fourth piece of wood covered with velvet is also shown there, which turns on a screw-down pin at P, a washer one-sixteenth inch thick being interposed between it and the piece beneath, and passing over the foot of the instrument, is held by the thumb-screw figured at P2. The axis of the microscope should correspond to the axis of the camera.

We now proceed to particulars, and the first of these is to mention the arrangement for changing the objectives. The ordinary method is that of affixing to the end of the tube what is commonly called a revolving nose-piece. These are made to hold two, three or four objectives, and if they could be made so true that when an object is found with a half inch it would be equally in the centre of the field when the eighth is brought into

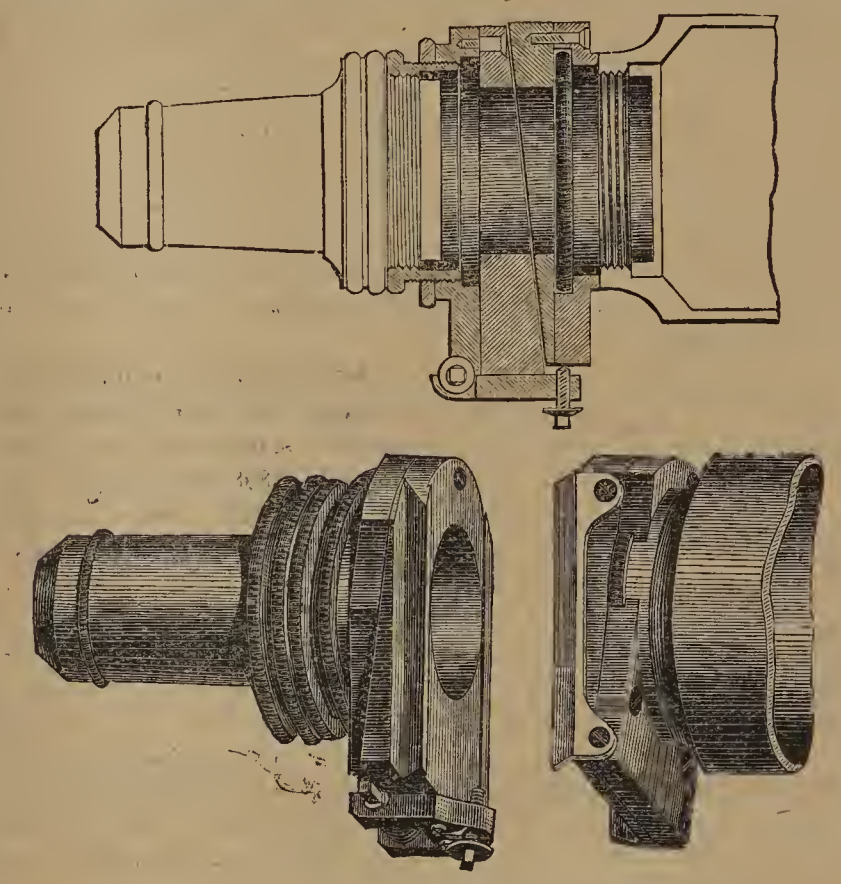

FIG. 6.—ZEISS SLIDING OBJECTIVE CHANGER.

position it would be satisfactory; but this it seems impossible to do, inasmuch as each objective always requires an adjustment peculiar to itself. It is to meet this difficulty the firm of Zeiss have introduced what they term their "Objective Changer" (Fig. 6). It consists of two parts, one attached to the microscope itself, which is never removed, and another which is fixed to every objective.

When a change is desired it is only necessary to slide one objective out and another in. The portion separately attached to each objective is supplied with two adjusting screws, which enable the microscopist to move the objective from side to side or from above downwards. This adjustment is done once for all, provided the objective be not removed from the holder, when perhaps readjustment may be necessary. The convenience of such an appliance must be experienced to be appreciated, but a word of caution is necessary in centreing objectives with these changers, and it is this: Seeing that each objective can be moved from side to side or from above downwards in its holder to a sensible amount, it is quite possible so to shift the objective that the object is unconsciously viewed almost entirely through its outer zones only, instead of along its optical axis. The consequence of this is that the perfection of defi-

nition may be seriously interfered with; just as if with an ordinary photographic lens and camera a photograph was taken with the lens pushed up or down in the sliding front, and the photograph taken with the marginal rays instead of the central ones (Fig. 7). The way to avoid this mistake is to adopt the

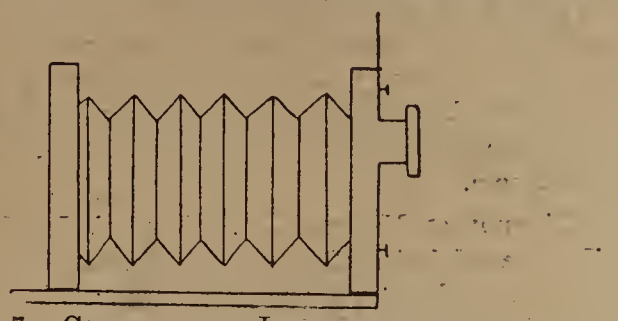

Fig. 7.—Camera with Lens pushed up.

following plan. Let us suppose the microscopist is desirous of centreing several objectives for the same microscope. Having secured a sensibly sized diatom—one preferably with a well-defined edge and centre, such as one of Arachnoidiscus type—let it be placed on the stage of the microscope, and a ½ inch objective (as it comes from the maker) screwed into the nose piece of the microscope tube in the ordinary fashion. The diatom is then fidgetted about on the stage until it is practically central in the field of view

This power is then removed and the highest objective of the battery placed in its stead, say, for instance, a 1/12th immersion. Having again focussed the diatom, its central position is brought accurately into the middle of the field and the objective removed. The "body portion of the changer" is now affixed to the microscope tube and the other portion of it to the 1/12th, and the two united by sliding them together. The diatom by our previous experiment was placed central with the axis of the tube, and it only now remains to see whether it is still so placed. If not, it must be centred by the adjusting screws on that portion of the changer attached to the objective, and not by moving the diatom. Each objective must be centred by its own changer in the same way the diatom remaining untouched throughout. To make my meaning clear, the first portion of the description deals with the method of getting the diatom in the axis of the tube of the microscope, the second shows how to make the axis of each objective central also. It is very obvious that the lenses will now perform at their best, for every object will be axially viewed by each objective.

NOTES ON MICROSCOPY.

Localisation of Amygdalin and Emulsin in Eriobotrya.—M. L. Lutz states that the distribution of these two substances corresponds in *Eriobotrya japonica* to that found in other genera of Pomeæ. Amygdalin occurs in the hypocotyl, plumule, and radicle, and in the cotyledons; emulsin in the cotyledons alone. The presence of amygdalin was detected also in cells dispersed through the parenchyme of the cotyledons, and in the parenchymatous cells of the phloem of the vascular bundles.—*Bull. Soc. Bot. de France*, 1897, p. 263.

Production of Gum in the Sterculiaceæ.—According to M. L. Mangin, the production of gum in trees belonging to this order is normally limited to canals and lacunæ imbedded in the parenchyme of the pith or of the cortex. The gum does not usually escape outside the stem or branch, but this does not sometimes happen. The formation of the gum is brought about by a special mechanism. The walls of the cells which border the gum-passages become gradually thickened and transformed into gum, while the outermost cell-wall retains its original structure without alteration.—*Comptes rendus*, cxxv., 1897, p. 725.

MEASUREMENT OF QUANTITY OF HEAT.*

Heat of Fusion.

In the determination of heats of fusion by the calorimeter the method is very similar to that for specific heats. Thus to find the heat of fusion of ice, or the latent heat of water as it is termed, a known weight of ice at 0° is put into the water of the calorimeter at about 20°, and the fall in temperature caused by its complete melting is observed. The number of degrees multiplied by the number of grammes of water taken (plus the water equivalent of the apparatus) gives the number of calories that have been used up in melting the ice, and in raising the temperature of the water so formed from 0° up to the final temperature. The quantity used in the last-named change is known, since the weight of the water is the same as the weight of the ice from which it was formed, and every gramme requires 1 cal. to raise its temperature one degree. Deduct the number of calories so found from the number that have been withdrawn from the water originally taken, the remainder is the number used up in melting the ice, from which the quantity required to melt 1 gramme is at once found.

If the experiment is now repeated, but starting with ice below 0°, the specific heat of ice (which is not the same as that of liquid water) is found. For we ascertain directly the total amount of heat that disappears, and we calculate how much of it is used in melting the ice, and how much in heating the water so formed; the remainder is the amount of heat required to raise the temperature of the known weight of ice from what it was originally up to 0°, and from this the specific heat of ice is obtained directly.

The method by which the heats of fusion of bodies other than ice are found is similar; for bodies that are solid at ordinary temperatures it is usually more convenient to take them in the liquid state and measure the heat given out in solidifying. The substance is enclosed in a small platinum flask, into which a thermometer is also inserted; the influence of the flask and thermometer is, of course, allowed for, being found by calculation or previous direct experiment. Three determinations are necessary; in one the solid substance is taken and its specific heat in that state ascertained. Next, the liquid substance is taken and a determination made of its specific heat in that state. Finally, measurement is made of the heat given out by starting with the liquid and cooling it beyond the point at which it solidifies. From the two earlier results the amounts of heat given out by it in cooling in the liquid state down to the solidifying point, and in the solid state from that point down to the final temperature, are respectively calculated; the remainder of the heat given out is due to the change of state, and from its amount the heat of fusion is at once found.

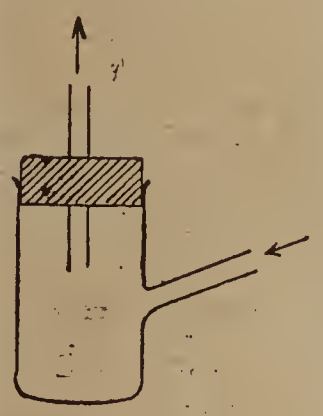

Fig. 1.

Heat of Vaporisation.

To find the heat of vaporisation of a substance its specific heat in the liquid state is first determined in the usual way. Next, a quantity of the vapour at the temperature of condensation (or boiling-point) is led into a condenser in the calorimeter, and the

* Previous articles on physico-chemistry have treated of weighing or the measurement of mass, and the correction of apparatus (*P. J.* [3], xxv., 889); the method of interpolation, graphic representation, and the specific gravity of liquids and solids (*P. J.* [3], xxv., 1141); the specific gravity of gases, vapour density, and specific volume (*P. J.* [4], ii., 304); melting-points and boiling points (*P. J.* [4], 328); latent and specific heats (*P. J.* [4], iii., 293).

change of temperature noted. The weight of vapour is given by the increase in weight of the calorimeter. The amount of heat given out by this weight of the liquid in cooling from its boiling-point to the final temperature is deducted from the whole amount of heat that has been measured; the difference is the heat given out in the condensation of the vapour, which is, of course, the same as the heat used up in its formation; the numerical value of the heat of vaporisation is found directly from this. It is important that the vapour that is led into the calorimeter should not carry any particles of liquid with it, the tube conveying it should therefore have an upward slope, and may with advantage carry a small trap like that shown in Fig. 1, in which such particles of liquid are deposited.

The heat of vaporisation of a substance depends to some extent on the temperature at which the vapour is formed. A liquid gives off vapour long before it reaches its boiling point, and the amount of heat used in forming this vapour is not in general the same as the amount of heat required to produce an equal weight of vapour at the boiling-point. The heat of vaporisation of a substance below the boiling-point is found thus:—Some of the liquid is put in a small distilling-flask in the calorimeter, the temperature being somewhat above that required. A glass tube drawn out to a very fine opening passes through the neck of the flask and dips below the surface of the liquid, as in Fig. 2, and the side tube is connected to an air-pump by which the pressure is reduced. Vapour is gradually formed and carried away, well-dried air of a constant temperature being allowed to pass through the tube A, and the temperature of the water in the calorimeter falls. The amount of heat withdrawn is calculated in the usual way from this fall of temperature (the flask, etc., and the contained liquid being of course also considered), and the heat of vaporisation found from these data is taken to be that for the mean temperature of the experiment.

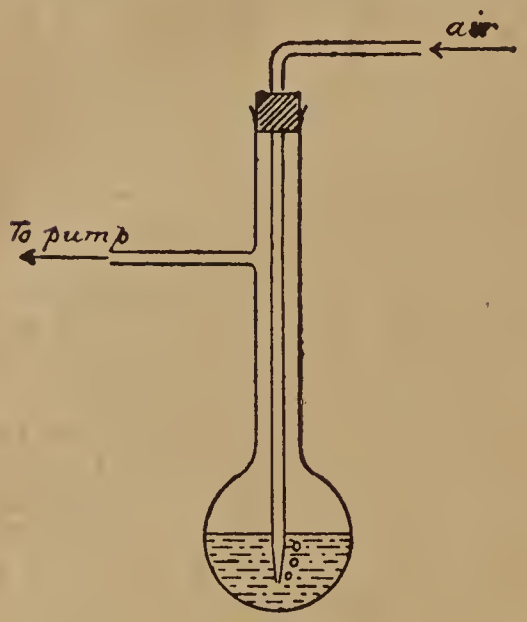

FIG. 2.

METHOD OF COOLING.

In addition to the direct measurement of quantity of heat by the calorimeter as described above, it may also be measured indirectly; specific heat capacities are sometimes determined by these indirect methods, and one or two of them will now be described.

If equal quantities of two substances at the same initial temperature are allowed to part with heat by radiation, the surfaces from which radiation occurs and all other conditions being alike in both cases, the one that contains more heat will take the longer time to cool, and the times occupied in cooling through the same range of temperature will be directly proportional to the heat capacities of the two substances. The method is most suitable for liquids; the substance under experiment is put in a metal cylinder like the inner vessel of the calorimeter described above, but much smaller, and furnished like it with a lid, thermometer, and stirrer; but the outer surface, instead of being polished, is covered with lampblack. This vessel is hung by silk threads in an air space inside a water jacket, and the surface of this, which is towards the inner vessel, is also covered with lampblack. The lampblack on the two surfaces is to promote radiation and absorption respectively, and the water-jacket is to prevent accidental fluctuations of temperature. The time required for the substance to cool through a definite (not too small) range of temperature is accurately ascertained. The experiment is then exactly repeated with an equal weight of water, making the observations for the same range of temperature. The specific heat of the liquid in question is then found by a simple division sum.

METHOD OF MELTING ICE. BUNSEN'S ICE CALORIMETER.

The heat of fusion of ice having been accurately determined, the specific heat of any body may be measured by finding how much ice can be melted by the heat given out when a known weight of it is cooled through a known interval. The most convenient apparatus for this purpose, when small quantities of material are employed, is Bunsen's ice calorimeter. This is represented in Fig. 3, and consists of the following parts: A is a glass tube resembling a test-tube, sealed into a glass jacket, B. This tapers off rather abruptly to a narrow tube, which is bent twice at right angles, and communicates by a ground joint with a capillary tube, C, graduated in millimetres. The capillary is removed, a little water put into B, and boiled there; when it has boiled a little while the open end of the tube is dipped below the surface of water which has been boiling for some time in a beaker, and the heating is stopped. As soon as the water vapour in B condenses, the water from the beaker rushes in, and the jacket is thus filled with air-free water. The open end of the tube is dipped below mercury while the water cools, and some mercury is thus drawn in; if necessary, more mercury is afterwards allowed to take the place of some of the water by suitably inclining the apparatus, so that the volume of mercury is about one-tenth of that of the water. Finally, the capillary is inserted so that it is partially filled with mercury. The calorimeter is now filled once for all, and never needs to be emptied. To use it the water in the jacket is frozen by putting alcohol cooled below 0° into A; the freezing is stopped before the cylinder of ice quite reaches to the outer wall of the jacket, and the whole is then brought exactly to 0° by surrounding it for a long time with melting snow. The substance to be experimented on, and whose temperature and weight are known, is put into A. If it is a solid, a little air-free water at 0° is also put in, to assist in the transference of heat; A is now closed by a cork. The heat that is given out by the substance is entirely used up in melting a part of the ice, the whole apparatus and its contents still remaining at 0°. The water that is formed occupies less space than the ice, consequently the mercury rises in the jacket and falls to a corresponding extent in the capillary, and the extent of the fall is proportional to the amount of ice melted, and therefore to the amount of heat given out. The value of the divisions on the capillary is ascertained by performing an experiment with a known substance, such as water. To avoid errors in reading, the end of the capillary may be bent downwards and dip into a weighed vessel of mercury; by again weighing the latter when movement has ceased, the amount of mercury drawn

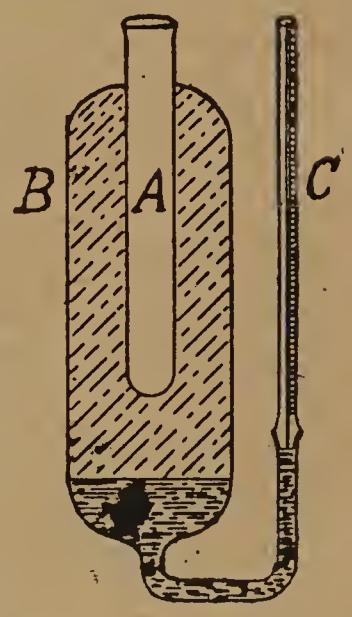

FIG. 3.

in is found, 1 gramme corresponds to 65 calories. The special advantages of this calorimeter lie in its suitability for small quantities of substances, and in the fact that since the temperature is constant, heat exchange between the apparatus and its surroundings may be reduced to zero, and slow thermal effects can then be measured without increasing the liability to error.

Atomic Heats.

Very important relations exist between the specific heats of bodies and some of their other properties. It has long been known that the specific heats of elementary bodies, determined for the substances in the solid state, are inversely proportional to their atomic weights; in other words, that the specific heat of a solid element multiplied by its atomic weight gives as product a constant number. The numbers actually so obtained are not absolutely the same, but nearly so, the average value being 6·4. This quantity, specific heat × atomic weight, is called the atomic weight of an element. The slight variation in the value admits of a ready explanation. The specific heat of a solid body is not the same at all temperatures, usually having a higher value as the temperature approaches the melting point. The solid elements differ very widely in their melting points and other physical properties, and hence it is not to be expected that determinations of their specific heats at approximately equal temperatures should give quite comparable results. The observed facts are, nevertheless, very striking; and the constant value of the atomic heat has more than once been utilised in deciding between different multiples of a number to represent the atomic weight of a little known element, that number being chosen which, when multiplied by the specific heat of the solid element, gives a product most nearly equal to 6·4. Another interesting fact is that the specific heats of the elements are the same whether the element is free or in combination with others. This has been established as a generalisation by Kopp, but it is not without real or apparent exceptions.

EXAMINATION OF POWDERED VEGETABLE DRUGS.*

BY HENRY KRÆMER.

Powdered drugs and "pressed herbs" will, no doubt, at a not very distant day, be the form in which most of the vegetable drugs will be bought and sold by the apothecary. It seems reasonable to suppose, however, that a few drugs, as licorice root, slippery elm bark, chamomile flowers, rhubarb, orris root, Canada snake root, senna leaves, manna, etc., will always be obtainable in a more or less crude condition, as most of these require that they be broken as little as possible for some of the purposes for which they are used. But even these may be ground and compressed into forms, as "rhubarb fingers," that may be in keeping with more elegant pharmacy. Some of the manufacturers, at least, of powdered vegetable drugs and "pressed herbs" have overcome probably nearly every objection that might be raised against their products. They have done, moreover, the art of healing an immense amount of good, inasmuch as their products are sold in proper containers or are wrapped so as to insure against the maximum amount of deterioration.

It is well known that the average pharmacist pays very little attention to the preservation of all his stock of crude vegetable drugs. The number of suitable containers are generally few, and the stock is necessarily in much greater excess of these. Those that have no proper receptacles, as well as the over-abundance of drugs purchased for which no suitable containers are provided, are wrapped in what is by no means impervious paper and stored away either on top of each other or side by side, or both, in an "out-of-the way" place.

Some of the advantages in the buying of powdered drugs are:—

(1) That they are ground by the manufacturer of pharmaceutical products to the fineness specified by the U.S. Pharmacopœia, or, when the drug is not official, to that which is generally used.

(2) The pharmacist is saved the expense for apparatus, as a drug-mill, sieves, etc.

(3) He furthermore saves time in grinding the crude drugs or attending to the same.

(4) The powdered drugs which he purchases are in impervious containers, and of such a form that he does not hesitate to place them on his shelves or his "out-of-the-way" place, be it the hottest part of his store (over the cases) or the most humid part.

(5) No additional expense may be felt by the pharmacist for securing other containers than those in which his products come to him.

Some of the disadvantages in the purchasing of powdered drugs are:—

(1) That the drug in this condition costs from 5 to 50 per cent. more.

(2) The apprentice does not obtain the kind of practical experience in grinding drugs that will be always of inestimable value to him in determining either their identity or quality.

(3) The product which has been ground by someone else is likely to be more uncertain than one ground by the pharmacist himself from crude drugs of which he can so readily test the quality.

(4) There is at present no easy method for the average pharmacist to determine the purity of the powdered drugs he purchases.

Now, some pharmacists have the idea that a large sum of money must be expended in order to be able to grind one's own drugs—that, for instance, steam power is necessary, an expensive mill must be provided and a special room set apart for doing this kind of work. The fact of the matter is that such an expensive and elaborate plant is impracticable as well as unnecessary. Comparatively little money need be expended to purchase a good hand-mill and the necessary sieves. With but very little outlay the retail pharmacist can grind his own drugs and overcome the disadvantages above noted. It is not the object of this paper, however, to discourage the buying of powdered drugs or even to compare the expense of grinding either commercial drugs or those of one's own collecting with that of commercial powdered products, but to consider the qualitative and quantitative investigation of powdered drugs.

Qualitative Examination.

We are indebted particularly to the labours of Flückiger, Wigand, Vogl, Arthur Meyer, Moeller, Tschirch, Schrenck, and others, who, during the past ten years, chiefly have given to us in their publications the characteristic structures of many of our crude drugs. All this has been necessary and is a preparation for the study of powdered drugs. While much has been done, even in the study of powdered products, there still remains much to be done in the study of both crude (particularly American) and powdered drugs. Several things are necessary for the study of powdered drugs:—

(1) Suitable methods for the rapid discrimination and study of the characteristic tissues and contents of the powder. While sections of the fine particles can be made (by holding the particle between the forefinger and thumb and drawing the razor through the specimen), still this is laborious and requires considerable practice, time, and confidence. It is therefore necessary to devise means and employ reagents which shall make the specimen transparent and not destroy either the tissues or contents that

---

* From the *American Journal of Pharmacy*.

need to be seen. The most satisfactory reagent for general purposes in the hands of the writer has been the employment of the following solution :—

CHLORAL-GLYCERIN SOLUTION.

Glycerin (C. P.) } Equal parts.
Distilled Water }
Chloral—sufficient to saturate the solution.

A few drops of this solution are placed on the slide and from 0·002 to 0·008 gramme of the powder added. The cover-glass is put on the specimen and the preparation is heated gently over either a spirit lamp, gas flame, or oil lamp until it begins to boil. This is then allowed to cool and examined. If not sufficiently transparent it is heated again. This is generally not necessary, as with but one heating the tissues are transparent and contents may be examined. It is true that this treatment causes a slight swelling of the cell wall, and is not applicable in testing for starch ; but this reagent has the advantages of clearing the specimen and preventing it, without further treatment, from drying out.

When examining specimens containing starch another solution is used, as follows :—

CHLORAL-GLYCERIN SOLUTION + IODINE.

Chloral-glycerin solution—any convenient quantity.
Iodine—a sufficient quantity is added to saturate the solution.

This solution is placed on the slide and the same quantity of powder used as before, but heat is not applied. The starch grains, with all of the characteristic markings, will be brought out and may be studied.

When lignified cells are sought, the powder must first be moistened with a drop or two of the following solution of anilin hydrochloride, and then after a few minutes a few drops of the chloral-glycerin solution may be added :

ANILINE HYDROCHLORIDE SOLUTION.

Aniline hydrochloride	5 Gm.
Hydrochloric acid (C.P.)	25 C.c.
Alcohol (95 per cent.)	25 C.c.
Distilled water	50 C.c.

The anilin hydrochloride is dissolved in the alcohol, and to this solution the water containing the hydrochloric acid is added. When this solution is used of course crystals of calcium oxalate or calcium carbonate are destroyed.

The author is at present at work upon other solutions having the same principal in their composition as the above ; but those mentioned are all that are necessary generally, and have been used with success.

(2) All investigators should record the size of the tissues or their contents in microns. The length of bast or wood fibres, size of pores, crystals, starch grains, stone cells, etc., are all more or less characteristic for the drugs we have to consider. It is not sufficient to say that drawings were made by the use of a 1/5th-inch objective and a 1-inch ocular. The objectives and oculars of the various makes of microscopes not only magnify differently, but the question of tube length is also important in this connection. But even if all of these data were given, it must be conceded as being tedious to the reader to calculate the size of the elements, which might be so easily done by the author. Even for an investigator to say that his drawings are magnified so many diameters does not give us the true and scientific idea of the elements which the author has seen and we are to use in the study of powdered drugs. We need records in microns of the size of tissues and constituents of drugs from many sources for comparison, so that another investigator may readily get at the facts. This is the only scientific method for the prosecution of this kind of work, and must be rigidly pursued by all.

(3) A scheme for the logical qualitative determination of a powder is necessary. It will be somewhat difficult to work out a scheme that will be of practical benefit, because it is necessary to begin with the consideration of the characteristics of all drugs and adulterants that may be used. It will not be possible, for instance, to separate the leaves from roots, etc., as is done in the study of crude drugs. Many points, such as colour, taste, odour, as well as constituents and structural characteristics must be considered. The author is at present engaged in a work having for its object the identification of a powder and quality of it, and hopes to have it completed during the coming year.

(4) Furthermore, it is necessary for all those who have to do with the training of the apprentice, and buying and selling of powdered drugs, to engage in the study of the same until the most satisfactory methods for determining the identification and quality be ascertained. In our educational institutions there is little or nothing being done, apparently, in this direction. It seems that the time is ripe for some time to be given to the study of powdered drugs in connection with that of crude drugs. This will undoubtedly be of the most practical benefit, as powdered drugs are already handled by most pharmacists to some extent, at least.

This subject of the investigation of powdered drugs is one of great importance to-day. The older method of teaching pharmacognosy in this country must be supplanted by the new, having for its object the study of the powdered commercial drugs. This knowledge ought to be demanded by our State boards of pharmacy. It is in keeping, too, with the desires of the profcssional pharmacist, as it will tend to keep out the competing "merchant" and "grocer." Our "pure food laws" will require the pharmacist to know the value of the drugs and foods he sells. This may be required also of the grocer, but he can buy and sell in original packages. The pharmacist is hardly in the same position, as he cannot always dispense in original packages, and he is responsible for the purity of the goods that he possesses and sells. The conscientious pharmacist wants this knowledge, desires stringent examinations and just laws, and will in his everyday dealings live up to what he knows. He has nothing to lose ; it is only the incompetent or dishonest dealer in drugs and foods who will suffer.

(*To be continued.*)

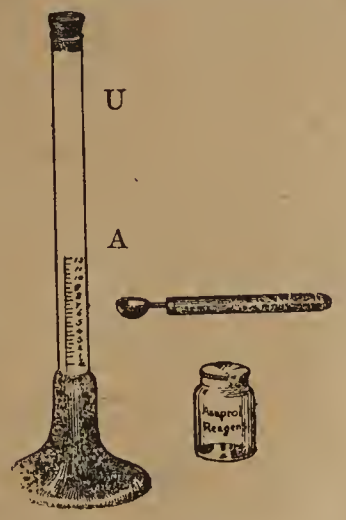
PREPARING HISTOLOGICAL SPECIMENS.—Dr. A. Hebebrand condemns the system now in vogue of preparing microscopical specimens of vegetable substances, particularly the maceration of sections or powders of drugs in strong alkalis or acids for the purpose of "clearing." These are, he states, destructive to the more delicate elements of the tissues, thus causing the more resistant parts to appear in larger quantities than they exist in the original substance. The following modification of the usual process for preparing vegetable substances is recommended by the author : Mix a large bulk of the substance, powder a small part finely, and again take a small portion of this and powder it finer still, rub through a 1/2 Mm. sieve. Mix as much of the fine powder as will go on the point of a knife with a 10 to 15 C.c. of 7 per cent. sodium carbonate solution, and pass chlorine gas through the mixture for two to ten minutes, during which time the solution must remain alkaline, then dilute with water. The bleached tissues are allowed to settle, and are ready for microscopic examination. The preparation will be found in excellent condition for the purpose. The counting of the various elements is greatly assisted by the use of an eye-piece micromteer.—*Forsch. Ber.*, 1897, 308.

NOVEL APPLIANCES,

PHARMACEUTICAL AND CHEMICAL.

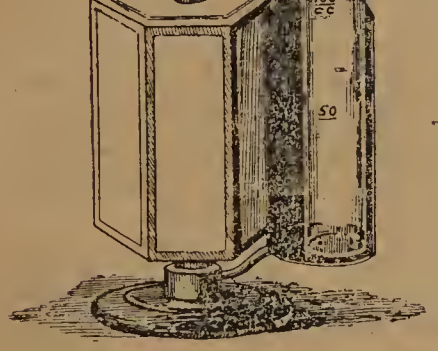
Regler's Albuminimeter.

The principle of the instrument is similar to that of others at present in use for the volumetric measurement of precipitated albumin in urine. In the present case the reagent consists of asaprol, which is dissolved in citric acid and water in the following proportion:—Asaprol, 8; citric acid, 8; distilled water, 200. Or, if preferred, a mixture of asaprol and citric acid in equal parts may be employed in powdered form for convenience in transport. To use the instrument the reagent is filled to the mark A, or in the case of the powder this is measured out in the spoon and introduced into the tube dissolved in water sufficient to fill to mark A. The urine is then introduced to mark U, the whole is shaken up and allowed to stand twenty-four hours, when the volume of the precipitate is read off from the graduations, which represent parts per mille of albumin.



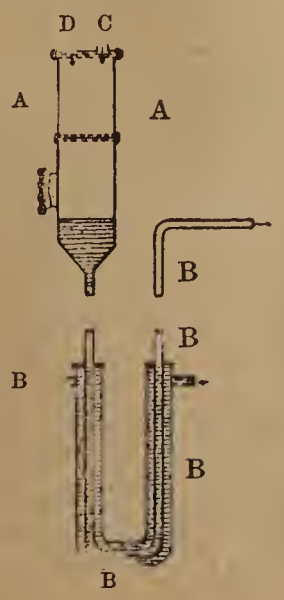
Apparatus for Colorimetric Analysis.

To obviate the necessity of making control colours and consequent waste of time, Konig has introduced a colorimeter, consisting of a rotating apparatus with six different shades of colours, each of which represents a definite quantity of the substance to be matched. The flask containing the fluid to be tested is placed in front of the screen fixed at the side, and the apparatus turned until the colour is reached which most nearly resembles that of the fluid. The test cylinder should always be filled up to 100° C.c. The proportion of the colouring body in 100° C.c. fluid corresponding to each colour is printed on top of the plate; by multiplying by 10 the amount contained in 1 litre is obtained. If the shade of the fluid lies between two colours, it is diluted with one-fourth or one-half until the exact shade is obtained. Although the results obtained by this device may not be always scientifically accurate, they at least compare favourably with the usually employed colorimetric methods, such as Nesslerising, and the saving of time that they effect is very considerable.—*Chem. Zeit.*



Arrangement for the Separation of Gases and Fluids under Pressure.

In the apparatus, of which an illustration is here shown, the gases and the fluid are led under pressure into the separator A through the tube D. The fluid is there separated from the gases by means of its own gravity. The fluid is drawn off by means of the U tube B at the lower end of the separator, and carried to such a height so that the counter pressure of the fluid column enables the pressure in the apparatus to be maintained. The gases escape by means of the tube C fixed in the lid of the separator. This apparatus would appear to have a wide application where gases are handled under pressure accompanied by water or other fluids.—*Chemik. Zeit.*



SELECTED FORMULÆ.

APPLICATION FOR WARTS.

Glacial acetic acid, 10; precipitated sulphur, 20; glycerin, 50. To be applied daily.

CASTOR OIL POMADE.

Castor oil, 150; spermaceti, 20; oil of bergamot, 3·5; oil of cassia, 0·5; oil of cloves, 0·5; oil of lavender, 1.

POUDRE DE RIZ.

Wheat starch, 250; French chalk, 150; carbonate of magnesia, 50; powdered orris root, 50; oil of lemon, 2·5; otto, 0·5.—*Pharm. Zeit.*, lxxi., 523.

LANOLINE ROSE CREAM.

Mix together lanoline, 25; almond oil, 60; powdered soap, 8; stir in gradually water, 15, and rose water, 30; and perfume as desired.—*Pharm. Zeit.*, lxxii., 515.

TO FASTEN PAPER LABELS ON GLASS.

Evaporate a solution of sodium silicate to a syrupy consistence with constant stirring, with a mixture of 25 per cent. of sugar and a little glycerin.—*Pharm. Zeitung*, lxxii., 515.

KOLA MALT EXTRACT.

Dried extract of kola, 10; dissolve in warm distilled water, 10; malt extract, 80. Evaporate in vacuum to 100.—*Pharm. Centralh.*, xxxix., 92, after *Ph. Ztg.*, 781.

GODINEAU'S ELIXIR.

According to Aufrecht, this is composed of:—Sodium chloride, 0·46 gramme; pepsin, 5·62; sugar, 24·5; water and colouring matter, 65·5 grammes. This preparation is sold as a remedy for anæmia and impotence.—*Pharm. Zeit.*, xlii., 402.

SULPHUR CANDLES FOR DISINFECTING PURPOSES.

Melt 25 parts of nitre until decomposition begins, then incorporate 75 parts of sublimed sulphur. The melted mass is run into moulds holding the wick. If the candle does not burn well at first, dust a little chlorate of potassium round the wick.

MENTHOL COLLODION.

This is recommended by Namé for contusions. It is a mixture of 3 to 10 grammes menthol and 20 to 24 grammes collodium; its action is pain alleviating, and healing. The bruised parts are well washed with ether and then painted with the menthol collodium.—*Zeit. d. Allg. oest. Apoth. Ver.*, li., 797.

BICYCLE ENAMEL.

Ebert gives the following formula:—Linseed oil, 4 ozs., are heated to boiling point, and 8 ozs. amber added, also 1½ oz. of asphalt, and 1½ oz. of colophony. After complete solution, remove the mixture from the fire and add gradually 8 ozs. of turpentine. —*Pharm. Woch.*, xv., 3.

LINIMENTUM EXSICCANS.

Munzberger recommends the following formula for this preparation:—Tragacanth powder, glycerin, alcohol (90 per cent.), of each 3; distilled water to 100. The tragacanth powder is mixed with the glycerin and alcohol, and the water added after the mixture has been thoroughly agitated.—*Zeit. d. Allg. oest. Apoth. Ver.*, lii, 30.

VINUM PEPTOTHYROIDINI.

The following process is due to Maurange:—100 grammes thyroid glands are finely chopped and digested with 500 grammes of water, 2 grammes of pepsin, 15 grammes of tartaric acid for six to eight hours at about 45° C. A few drops of nitric acid are then added to a portion, which should not give a precipitate when peptonisation is complete. The liquid is then filtered carefully, neutralised with sodium bicarbonate, and evaporated to a syrupy consistence *in vacuo* at a temperature not exceeding 45° C. The syrupy liquid obtained is diluted with 7·5 litres of wine, and again filtered after standing two days.—*Pharm. Centralh.*, xxxviii., 854, through *Wiener Med. Press.*

REVIEWS AND NOTICES OF BOOKS.

THE WONDERFUL CENTURY. By ALFRED RUSSEL WALLACE. Pp. i.-x., 1 to 400, with 12 diagrams. Price 7*s.* 6*d.* London: Swan, Sonnenschein and Co., Ltd. 1898.

It is needless to say this is an interesting book, for Darwin's co-discoverer possesses in a marked degree the faculty of imparting interest to any subject of which he treats. In this record of the successes and failures of the nineteenth century, an attempt has been made to give brief descriptive sketches of those great material and intellectual achievements which especially distinguish the century from the preceding ones, and to show how fundamental is the change they have effected in our life and civilisation. Naturally, our own time is held to be superior to any past epoch, and it is also claimed by the author to constitute the beginning of a new era of human progress. But successes have not been unaccompanied by failures, or what the author regards as failures, and both sides of the shield are here presented as they appear from his point of view.

The successes are dealt with under the heads of modes of travelling, labour-saving machinery, the conveyance of thought, fire and light, photography, spectrum analysis, theoretical discoveries in physics, minor applications of physical principles, the importance of dust as a source of beauty and essential of life, great problems of chemistry, astronomy and cosmic theories, geology, evolution and natural selection, and, lastly, popular discoveries in physiology. Each chapter is a thoughtful essay on the branch which the author has attempted to summarise, and few of the important achievements of science are inadequately treated, whilst nothing that is stated should be beyond the comprehension of any ordinary reader. There is a concise account of the relative positions of Darwin and the author in connection with the theory of natural selection, and a generous appreciation of the work of the deceased naturalist.

The failures of the century are considered in the second part of the work which, curiously enough, much exceeds the first part in bulk. But when it is found that this section deals with those matters concerning which the author feels most strongly—so much so, indeed, as to have secured for him the title of "faddist"—all cause for surprise vanishes. The neglect of phrenology, which Dr. Wallace thinks will yet prove itself to be the true science of mind, is held to be cause for regret; hypnotism and psychical research are upheld with a zeal which many people will consider worthy of a better cause, whilst vaccination is held to be a delusion and its penal enforcement a crime. It is to be regretted that so much space should have been devoted to the last-mentioned subject, but the essay may prove useful as an authoritative digest of the best arguments and facts than can be advanced by anti-vaccinationists.

Militarism is, not without reason, dubbed the curse of civilisation, the whole world being regarded as being at present "but the gambling table of the six great Powers," and many of the more terrible aspects of modern life are rightly attributed to the demon of greed. But, in concluding his statements of facts and expressions of opinion, the author inclines to the view that the balance, as between success and failure, is on the right side. "The flowing tide is with us. . . . and as this Century has witnessed a natural and intellectual advance wholly unprecedented in the history of human progress, so the Coming Century will reap the full fruition of that advance—in a moral and social upheaval of an equally new and unprecedented kind, and equally great in amount." Rampant socialism stamps its impress on the drastic remedies for popular grievances proposed by Dr. Wallace, but many people find it difficult to conceive how they are to be properly redressed except by root and branch methods. And however the author's social theories may appeal to the majority, no one can make a mistake in reading this, his latest book.

A MANUAL OF BACTERIOLOGY, CLINICAL AND APPLIED, WITH AN APPENDIX ON BACTERIAL REMEDIES, ETC. By RICHARD S. HEWLETT, M.D., M.R.C.P., D.P.H. (London). Pp. i.-viii., 1 to 439. Price 10*s.* 6*d.* London: J. and A. Churchill, 7, Great Marlborough Street. 1898.

The increase of text-books in any particular subject leads, sooner or later, to the necessity of a reason being given for the publication of a new work. Such a reason is supplied by almost every page of Dr. Hewlett's manual, for of all the practical works on the subject yet published this is of a certainty most free from the reproach of being a mere compilation. The subject matter, of course, is not new, nor is there anything strikingly novel in the manner in which the facts are presented, but no one who has devoted any time to bacteriological work can refer to the book without the conviction that the working directions are the outcome of wide practical experience.

The plan of the book is clearly explained in the preface, where it is stated that attention has been limited to those portions of bacteriology, or micro-biology as it may more exactly be termed, which are of especial interest in clinical medicine and hygiene. The preparation of tissues, methods of culture, descriptions of pathogenic organisms and their detection, the examination of water, etc., are therefore given at some length. In addition, at the end of the sections dealing with pathogenic organisms which attack man, directions are given for bacteriological clinical diagnosis and examination, such as will render the book of great service in the laboratory. The introduction is a brief but useful survey of the rise and progress of the study of micro-organisms, and is naturally followed by a very clear account of the nature, structure, and functions of bacteria—their classification, general biology, and chemistry, as well as the relation of bacteria to disease. No better summary of the subject could be desired.

The methods of cultivating and isolating organisms are then described, the most suitable forms of apparatus being indicated, whilst detailed instructions are given for the preparation of culture media. An exceptionally useful chapter is that on the preparation of tissues and organisms for staining and mounting; the various methods are described at length, and care is taken to direct attention to precautionary measures that may advantageously be resorted to. Such information imparts to the work a special value which cannot be over-estimated, and it is in this particular direction that the book will be found so much superior to any other manual of its size and scope.

The investigation of microbial diseases, the inoculation and dissection of animals, and the optical outfit required, receive brief but careful consideration, and the two subsequent chapters deal respectively with immunity—antitoxins and antitoxin treatment, and with suppuration and septic conditions. Anthrax, diphtheria, tuberculosis, and other diseases with which micro-organisms are associated next receive very full treatment, and attention is then given to the bacteriology and bacteriological examination of water, air, soil, sewage, milk, and foods. Antiseptics and disinfectants have a chapter devoted to them, and the appendix includes equivalents of the more common metric and Imperial weights and measures, a list of solubilities of aniline stains, and several pages dealing with the use of antitoxins in medical practice. Altogether, the work is most excellent, and there is little doubt that it will prove the most useful book of its kind for pharmacists.

PHARMACEUTICAL JOURNAL.

A Weekly Record of Pharmacy and Allied Sciences

Circulating in the United Kingdom, France, Germany, Austria, Italy, Russia, Switzerland, Canada, the United States, South America, India, Australia, South Africa, etc.

Editorial Office: 17, BLOOMSBURY SQUARE, W.C.
Publishing and Advertising Office: 5, SERLE STREET, W.C.

LONDON: SATURDAY, JUNE 25, 1898.

PHARMACY LEGISLATION.

BOTH the Pharmacy Acts Amendment Bill and the Poisonous Substances Bill continue to be the subject of numerous comments in the newspapers, and in most instances such a want of acquaintance with the facts of the case is manifested, similar to that mentioned in last week's Journal, as to raise some doubt as to the value of the newspaper press as a means of educating public opinion. The *St. James's Gazette* speaks of the Pharmaceutical Society as having been, until quite lately, somewhat lax in the performance of those duties of safeguarding the public which fell to its share. Even the *Globe*, which is more generally correct in this respect, speaks of the administration of the pharmacy law as being more defective than the law itself. The *Standard*, in dilating upon the consequences of the unregulated sale of carbolic acid, is especially unhappy in representing that the Pharmaceutical Society has hitherto been singularly inert in performing its duty to the public by enforcing the law relative to the sale of poisons. Although reference is made to the circumstance that the Privy Council has from time to time refused to add carbolic acid to the list of poisons in the Schedule of the Pharmacy Act, the writer in the *Standard* does not appear to be aware that as far back as 1881 the Council of the Pharmaceutical Society decided that carbolic acid should be added to the Poison Schedule, and that its addition was recommended. That recommendation, which has been repeated several times since, was the utmost extent to which the power vested in the Council could be exercised, since the Pharmacy Act provides that the action of the Council is to be subject to the control of the Privy Council. So far, therefore, as concerns carbolic acid, there is no ground for the statement that the Pharmaceutical Society has been inert in performing its duty to the public. Nor can that statement be justified as regards the enforcement of the law relative to the sale of poisons. The performance of the duty imposed upon the Council in this respect is limited to such articles as are included in the Poison Schedule, and the efficiency with which its powers have been exercised is shown by the circumstance that the sale of secret nostrums and proprietary medicines containing scheduled poisons has now been brought under the operation of the law as the result of costly litigation instituted by the Council of the Society. In addition to this, the provisions of the Act relating to the sale of poisons by unqualified persons have been enforced year by year to the extent of several hundred cases. These facts are sufficient to refute the charge of laxity in the administration of the pharmacy law, so far as the Pharmaceutical Society is charged with that duty.

The beneficial effect of the action taken by the Council as the executive of the Pharmaceutical Society is shown by the recent returns of the Registrar-General, according to which it appears that, in regard to the risk of poisoning generally, whether by accident or design, the public interest is remarkably well served so far as scheduled poisons are concerned, the number of deaths caused by them being very much less than those caused by substances which are not included in the Poison Schedule. The evidence afforded by these returns for many years past is strongly in favour of an extension of the Poison Schedule as providing the most effectual check upon the misuse of poison. But this useful result has not been so generally appreciated as it deserved to be, and the action taken by the Council in enforcing the provisions of the law has, on the contrary, been denounced in some quarters as an attempt to establish a trade monopoly by which various branches of industry would be prejudicially interfered with. It is from that point of view Mr. CROSS would desire to have the sale of preparations used for destroying vermin or weeds and for dressing sheep or crops, etc, exempted from the operation of the Pharmacy Act, although they may contain some of the more virulent poisons in considerable amount. The chief argument put forward in support of that demand is to the effect that preparations of the kind referred to have no connection with medicine or pharmacy. That does not, however, do away with the objection to be made to such a mode of rendering poisons easily procurable. If there were any sufficient reason for considering that argument at all, it would still seem necessary to place such sale of poisons for agricultural purposes under special control by requiring the vendors to be licensed for that purpose, as other persons are licensed to carry on trades affecting the interests of the public. A similar condition might also be necessary if the contemplated provisions of the Poisonous Substances Bill were carried out.

The mention made of the Pharmacy Act Amendment Bill by newspapers is marked by as much want of correct information as that relating to the regulation of the sale of poisons. The *Manchester Courier* says the Bill seems to be thoroughly misunderstood by the majority of people and, in attempting to describe its object, gives proof of the fact by suggesting that the membership of the Pharmaceutical Society should be reserved to those who have passed the Major examination, on the mistaken assumption that membership of the Society has a distinctive value as a qualification. It is also stated that, as a consequence of making Minor men members of the Society, Major men will have to fall back upon their qualification as pharmaceutical chemists, and that this is an "obvious injustice." A more complete misr presentation could not be made, since the title of pharmaceutical chemist—a voluntary qualification—is the only indication of having passed the Major examination. The compulsory qualification obtained by passing the Minor examination is the one which, since the passing of the Pharmacy Act, 1868, should entitle its possessors to membership of the Society consistently with the Society's charter and the object of associating together all persons legally qualified for the practice of pharmacy. The higher title and qualification of pharmaceutical chemist will still remain intact and it is also quite independent of membership of the Society.

ANNOTATIONS.

THE STANDARDISATION OF DRUGS as required by the new Pharmacopœia, more especially of the more important alkaloidal tinctures and extracts, behoves pharmacists to exercise care that standardised preparations really represent the contents officially prescribed. It is almost too much at present to expect that the ordinary pharmacist should possess the skill of a trained analyst, and he has therefore to depend entirely for the safeguard of his interests on a warranty from the manufacturers that the preparations answer the requirements of the Pharmacopœia. Rather than leave the question to be raised eventually by the public official, who will be keen enough to appreciate the possibilities of error that are likely to arise, it would be advisable that manufacturers should set their house in order and obtain skilled control of preparations that require to be standardised, both for their own reputation and that of pharmacists in general. Manufacturers in this country are unfortunately too apt to regard scientific control of manufacturing operations in a "penny-pie" fashion in contradistinction to the methods adopted by their continental rivals.

THE QUALIFICATION OF DISPENSERS has recently been the subject of correspondence in the London press, and, judging from letters on the subject which have been published, it would appear that some confusion exists with regard to the assistant's certificate issued by the Society of Apothecaries of London. That certificate is granted on the result of an examination conducted in accordance with the provisions of the Apothecaries Act, 1815, which provides that "it shall not be lawful for any person or persons . . . to act as an assistant to any apothecary, in compounding or dispensing medicines, without undergoing an examination." The penalty specified in Section XX. for breaking the law in this respect is that "every person so offending shall for every such offence forfeit and pay the sum of £5," but so far as can be ascertained the clause relating to that penalty has never been enforced in recent years, though offences of the kind referred to must have been very numerous. It is difficult to see therefore what reasonable ground now exists for continuing to grant the certificate, if those who do not hold it and yet act as assistants to apothecaries are not proceeded against for infringement of the Statute.

THE ASSISTANT'S EXAMINATION, as conducted at the Apothecaries' Hall, consists of two parts, practical and oral. No candidate is admitted for examination under the age of seventeen years, and a fee of three guineas must be paid seven days previously. The subjects of the first part of the examination are the compounding and dispensing of medicines, whilst candidates are examined orally in chemistry, materia medica and pharmacy, and the translation of prescriptions. In chemistry a knowledge is required of the general principles of the science; the meaning of chemical symbols and formulæ; the distinctive properties of acids, bases, and salts; the preparation and properties of oxygen, hydrogen, nitrogen, chlorine, bromine, iodine, carbon, sulphur, phosphorus, arsenicum, and their more important compounds with oxygen and with hydrogen; the chief mineral acids and their action upon metals, etc.; the chemical composition of water and air; the preparation, properties, and tests of the commoner salts of about a dozen metallic elements; alcohol, ether, acetic ether, chloral hydrate, chloroform, iodoform, glycerin, quinine and strychnine; hydrocyanic, acetic, tartaric and citric acids and their commoner salts. In materia medica and pharmacy all that is required is to show a knowledge of the chemical and physical characters, composition and doses of the articles and preparations official in the British Pharmacopœia, and to recognise some fifty to sixty chemical compounds, etc., and less than fifty crude drugs.

THE SCOPE OF THE EXAMINATION, therefore, is not excessive, and as an indication of some slight intimacy with the interior of a pharmacy or a dispensary, the certificate granted on passing the examination may prove consoling to persons, who for any reason are unable or unwilling to pass the Minor examination of the Pharmaceutical Society. If Section XX. of the Apothecaries Act were still enforced some definite inducement might exist for anyone to enter for the apothecaries' assistant's examination; as things are, however, candidates who offer themselves for the examination appear to waste the amount of the fee they pay, for the certificate is no evidence of any qualification and is worth little, if any, more than the paper it is printed on. It is, we believe, an attractive specimen of the printer's art, and doubtless its handsome appearance has been partly accountable in time past for the number of registered chemists and druggists who, flushed with their victory at Bloomsbury Square, have rushed off to Blackfriars to secure the extra three-guinea decoration for their future pharmacies, possibly also with the idea that some suggestion of medical qualification may be conveyed thereby. Seriously, however, the whole thing is an anachronism, and even the recognition of the certificate by the Local Government Board is not sufficient excuse for a corporate body continuing to "raise the wind" by distributing ornamental pieces of paper to individuals who may or may not have spent one or two years, with some slight increase of technical knowledge, in a pharmacy or a dispensary.

THE SALE OF POISONS BY CHEMISTS should be carried out strictly in accordance with the regulations prescribed by the Pharmacy Act, 1868; if they neglect to take all the necessary precautions they will only have themselves to blame if they involve themselves in serious trouble. It would be both absurd and unfair if chemists could interfere with the illegal sale of scheduled poisons by other traders and yet be under no obligation to carry out the requirements of the law in their own business. An instructive case against a chemist was recently heard at the South-Western Police Court. It seems to have been instigated by what may be termed class revenge on the part of a professional photographer, but the moral is none the less obvious. The photographer purchased some potassium cyanide at the chemist's shop and the sale was not registered; the purchaser thereupon communicated with the police, a prosecution under Section 17 of the Pharmacy Act followed, and the chemist was fined in due course. Defendant pleaded that it was his qualified (? unqualified) assistant who effected the sale and forgot to make the required entry, but the magistrate said he could not be allowed to relieve himself of responsibility in that manner. The informer's satisfaction at the result must have been somewhat damped by the refusal of the magistrate to grant his expenses, but he has the consolation of knowing that he performed a public duty.

NEW CONSTITUENTS OF THE AIR continue to increase in number, the discovery of Krypton by Professor Ramsay and Mr. Morris Travers having been quickly followed by the announcement by the same investigators that air contains two other previously unknown constituents, which they name Neon and Meta-argon respectively.

According to a report in the *Standard*, when a quantity of Argon was liquefied it formed a colourless fluid from which a solid substance separated, whilst a gas remained unaltered. The gas—Neon—has a characteristic spectrum and its density is less than 15 and probably not more than 11, in which case it will conform to the periodic law, occupying a place in the interval between Argon and Helium. Meta-argon, as the solid substance has been named, has a very complex spectrum, and it appears to occupy the same relative position with regard to Argon that nickel does to cobalt, having the same atomic weight, but different properties. Curiously enough, no trace of Krypton was found during this investigation which has resulted in the discovery of two other presumably elementary bodies, but to detect it a much larger quantity of material would require to be operated upon, and, moreover, Krypton probably exists in the gaseous state at the temperature of boiling air, whilst Meta-argon is solid at that temperature.

The Companies Bill will once more be successfully strangled in the House of Lords Select Committee, for the Committee has not met for some time now, and no day is fixed for a resumption of proceedings. Towards the end of the month it should, in accordance with precedent, meet for the purpose of reporting that it cannot finish its labours this Session, and the Bill will thereupon pass into "*Cler. Parliamentor's*" official *ewigkeit*. After four years' waiting this prospect is not encouraging.

The Petroleum Problem still remains unsolved, but on Wednesday the Committee appointed to deal with the question re-assembled to consider certain recommendations formulated by the Chairman, Mr. Collings. The object of the recommendations is to amend the existing law with regard to the storage and transport of petroleum, and their effect would be to bring petroleum generally under legislative control, to make the present flash point—73° Abel test—the dividing line between petroleum oil and petroleum spirit, and to prevent petroleum oil or spirit, except in small quantities, being kept on other than licensed or registered premises. It is also proposed to regulate the conveyance and hawking of the oil and spirit, and to provide an efficient system of testing. The *Times* points out that in formulating his conclusions with regard to the flash point, Mr. Collings has drawn special attention to the confusion which exists concerning the terms "flash point" and "raising the flash point." Some of the witnesses examined by the Committee were not aware that the present legal flash point has not and never has had any reference whatever to the use of petroleum as an illuminant, and that petroleum of any flash point can be used for lighting purposes. From the evidence it is clear to Mr. Collings that the object of adopting a legal flash point at all, in the Acts of Parliament now in force, was to fix a dividing line between petroleum which should, as regards storage and handling, be subject to legal control, and that concerning which no legislative precautions were then thought necessary. When, therefore, anyone speaks of "raising the flash point" of petroleum as an illuminant, he speaks of raising what does not exist. But what is doubtless intended is that there should be a new law, fixing a certain high flash point, and that the use of all petroleum with a lower flash point shall be prohibited for lighting purposes.

The Petroleum Committee at its meeting on Wednesday, made some further progress with the detailed consideration of Mr. Collings' draft report. So much time was occupied, however, in discussing the leakages which have taken place concerning the proceedings of the committee last week that very little actual business was done, and the anticipated decision respecting the flash point recommendation had not been taken when the hour of adjournment arrived. It is stated that especial annoyance was expressed at the publication by the *Times* of the names of the members who voted in the division upon the question whether the chairman's draft report or that submitted by Mr. Ure should be read a second time, paragraph by paragraph. Seeing, however, that the information in question will become public property when the minutes of the committee's proceedings are laid upon the table of the House, the objection would appear to be sentimental rather than real.

The Pharmacy Acts Amendment Bill is still down for second reading in the House of Lords, but no difficulty is anticipated in proceeding with the measure, the Earl of Hardwicke having undertaken to move the second reading at an early opportunity. The Duke of Devonshire will move the second reading of the Poisonous Substances Bill on Friday night, this week. Several letters dealing with that measure will be found in this week's Journal, and we are asked to announce that the Committee of the North-East Lancashire Chemists' Association has ordered a special general meeting for Tuesday, the 28th inst., "To consider the Government Poisons Bill now before the Lords."

The Death is Announced at Vienna of Professor Anton Kerner, Ritter von Marilaun, the eminent botanist, at the age of 67. Professor Kerner was educated for a doctor, and was indeed for two years on the medical staff of the Vienna General Hospital, but soon abandoned medicine for the pursuit in which he was to acquire fame. He wrote many works on botanical subjects, and was made member of the Vienna Academy of Sciences in 1872, while he received the order of knighthood in 1876.

Another Strychnine Poisoning Case, which is involved in some degree of mystery, has occurred at Haworth, where Mr. J. E. Hill, Deputy Coroner, on June 21, resumed an inquiry into the death of John William Place (11), son of Francis Place, 3, Earl Street, Haworth, which occurred on May 27 after taking a worm powder. The analyst engaged in the case detailed the results of his examination, which he said revealed traces of strychnine. He had also analysed a powder sent to him in a registered packet by Dr. Walker, but found no strychnine in it. This powder was one made up by the druggist at the request of the police-sergeant, and said to be identical with the one supplied to the boy. Mr. Tidswell, the druggist in question, volunteered to give evidence, and, after the usual caution, he stated that half an hour after hearing of the boy's death he saw the bottles containing poison in their usual places in his pharmacy, and they were all distinctly labelled. The jury consulted in private, and arrived at the conclusion that death had occurred by misadventure, the cause being strychnine poisoning, but how the poison had been administered there was no evidence to show.

The Photographic Tourists' Guide can still be procured from the publishers of the Journal at a nominal cost, and chemists who have not yet laid in a stock should do so at once. Every copy of the book distributed will benefit not only the individual who sells it or gives it away, but also every other chemist who is interested in the photographic trade. It should be borne in mind that except in the case of towns where no chemist is known to have a dark room, all the names given in the gazetteer included in the book are those of registered chemists. Whoever, therefore, helps himself in this matter at the same time helps his fellows in the craft.

PHARMACEUTICAL SOCIETY.

MEETING OF THE EXECUTIVE OF THE NORTH BRITISH BRANCH.

A meeting of the Executive of the North British Branch was held in the Society's house, 36, York place, Edinburgh, on Friday, June 17, at 10.30 a.m. Mr. J. LAIDLAW EWING in the chair. Present: Messrs. Bowman, Coull, Currie, Ewing, Fisher, Johnston, Hardie, Henry, Kermath, Lunan, McLaren, Mitchell, Moir, and Strachan. Apologies for absence were received from Messrs. Kerr and Storrar.

The minutes of last meeting were read and approved.

The ASSISTANT-SECRETARY read the report of the Scrutineers on the voting for the new Executive, and the report was approved of for submission to the Annual Meeting. He also reported that Dr. Keppie Paterson had applied to him on behalf of the Edinburgh Medical Missionary Society for a loan of cases or specimens for the Medical Missionary Loan Exhibition to be held in Heriot's Hospital, Lauriston, during the visit of the British Medical Association to Edinburgh, in July. It was remitted to the Chairman and Assistant-Secretary, with powers to give such assistance as might be possible in connection with the exhibition.

Mr. COULL drew attention to the wording of the instructions on the voting papers, and suggested that it might be more definite. The question of the form of the voting paper was left over for further consideration. The meeting then closed.

The Annual Meeting.

The annual meeting of Members and Associates in Business residing in Scotland, was held in the Society's House, 36, York Place, Edinburgh, on Friday, June 17, 1898, at 11 a.m.—Mr. J. LAIDLAW-EWING in the chair.

Address by the Chairman.

The CHAIRMAN said it was satisfactory to observe that they had again a considerable number of men who were willing to serve the Society in Scotland as members of the Executive. The number of voting papers returned this year was larger than on any previous occasion, and he thought that might be taken as an indication that a greater interest was being taken in pharmaceutical affairs. It was unnecessary that he should detain them now with any lengthy reference to the work of the Executive during the past year. That would be already familiar to them from the Annual Report. which appeared in the *Pharmaceutical Journal* on May 7, 1898. It was much to be regretted that the examinations continued to show a far from satisfactory percentage of passes. Last year he mentioned that the results were worse than before, and this year again showed worse still. He would very earnestly commend to all interested the carefully drafted Report on Examinations presented to the Council by the Board of Examiners in Scotland in February last. He had been much surprised to find in some quarters an impression that the Board had been harsh and unsympathetic in the language used in that report. As one of those responsible for it he could truly say it was conceived and executed in the most kindly and considerate spirit possible, and with no other object but that of assisting those who were coming up for examination. He was glad to say they had had many testimonies from those who had really studied the report that they had got great help and much guidance from the perusal of it. He felt sure the same experience would be the fortune of anyone who would give it careful and fair consideration. During the year the Executive had been able to carry out almost the whole of the alterations in the Society's House referred to last year, and now they had an establishment in Edinburgh which they could feel proud of and show to their friends with satisfaction. He felt they ought to take every opportunity of expressing to the Council of the Society their deep sense of gratefulness to them for the handsome way in which they had enabled the Executive to carry out these alterations. During last winter they had a very successful series of evening meetings. An effort was made to secure attendances by having the meetings on fixed dates announced beforehand. The third Wednesday of each month was fixed upon but the result was not so good as was expected. Either the night is not a suitable one or the multiplicity of societies and meetings in Edinburgh interferes. This multiplicity of meetings has for some years been increasingly felt in Edinburgh, and a movement has been on foot for some time to try to secure an adjustment of programmes to remedy the evil. Whatever may be done in that direction there are several reasons that may induce the new Executive to arrange these meetings for some other night. They might readily be made a useful monthly reunion of pharmacists for the discussion of professional as distinct from purely trade matters, the latter being already admirably provided for by the energetic District Chemists' Trade Association. Last year he referred to the movement for a Pharmacy Bill specially dealing with extension of the membership of the Society. To-day they could all rejoice that after a very tedious and arduous time of parliamentary activity they had so far succeeded as to have carried the Bill, without any amendment, through the House of Commons and past the first reading in the House of Lords. It seemed reasonable to hope that no long time would elapse before that small, but in his judgment highly important, Bill found a place in the Statute Book. The Hon. Mr. Smith, M.P., who had had charge of the Bill in the House of Commons, deserved the best thanks of all pharmacists for the patient, unremitting, and able way in which he promoted the passage of the Bill. He had the honour of meeting Mr. Smith at the House, and he was a most courteous, gentlemanly, and painstaking man, and it was a great advantage to have had so able a representative. The Bill had also thrown a great amount of anxious and arduous work upon their much esteemed President, and his assiduous devotion to the interests of the Society called for their hearty and grateful acknowledgment. In the short discussion which took place in the House of Commons, pharmacists had nothing to regret. It was made abundantly plain that legislators are not in a mood to allow any relaxation in the law relating to the sale of poisons. As to changes in the *personnel* in the Board of Examiners, there had been two changes, Messrs. Fraser and Sutherland having retired by rotation and the vacancies have been filled by the return of Mr. Jack and the appointment of Mr. Lunan. The Executive was also losing the services of Mr. Lunan, who had been a useful city member, and Mr. Paterson, Aberdeen, was retiring after several years' service.

The ASSISTANT-SECRETARY then read the report of the Scrutineers as follows:—

Scrutineers' Report.

At a meeting held on April 29, 1898, the Executive appointed June 17, 1898, as the date of the election for the ensuing year.

Four hundred and eleven nomination papers were issued by the Assistant-Secretary on May 21, 1898.

The nomination papers returned showed that fifty-six Members and Associates in Business had been nominated, of whom the following twenty-seven signified their willingness to act if elected:—

Ayre. George Martin, 75, High Street, Perth.
Boa, Peter, 119, George Street, Edinburgh.
Bowman, John, 3, Duke Street, Leith.
Burley, William, 35, George Street, Edinburgh.
Coull, George, 17, Smith's Place, Leith Walk, Edinburgh.
Cumming, Charles, 49, Reform Street, Dundee.
Currie, William Little, 223, Byres Road, Dowanhill, Glasgow.
Dow, William, High Street, Kinross.
Ewing, James Laidlaw, 9, Princes Street, Edinburgh.
Ferrier, David Hynd, 2, Hilltown, Dundee.
Fisher, John Hutchison, 66, High Street, Dunfermline.
Graham, Alexander, 79, Main Street, Lochgelly.
Hardie, James Miller, 68, High Street, Dundee.
Harley, Thomas, 21, High Street, Perth.
Henry, Claude Francis, 1, Brandon Terrace, Edinburgh.
Kermath, William Ramsay, Greyfriars Garden, St. Andrews.
Kerr, Charles, 56, Nethergate, Dundee.
M'Adam, Robert, 34, Virginia Street, Glasgow.
M'Laren, David, 42, South Clerk Street, Edinburgh.
Macpherson, Collin Allen, 97, Dalry Road, Edinburgh.
Mitchell, Donald, 30, Union Street, Inverness.
Moir, James, 447, Victoria Road, Crosshill, Glasgow.
Russell, James Anderson, 212, New City Road, Glasgow.
Strachan, Alexander, 138, Rosemount Place, Aberdeen.
Swan, William, 92, Morningside Road, Edinburgh.
Thomson, John Hutchison, 102, High Street, Lochee, Dundee.
Watson, David, 558, Cathcart Road, Govanhill, Glasgow.

A voting list was accordingly drawn up, and on June 8, 1898, four hundred and twelve voting papers were issued. The Scrutineers met last night at 7 o'clock and proceeded to examine the voting papers. The result was found to be as follows:—

Voting papers issued	412
,, ,, returned	201
,, ,, informal	0

There were thus two hundred and one votes to be recorded. The following gentlemen have a majority of votes:—

Ayre, George Martin, 75, High Street, Perth.
Boa, Peter, 119, George Street, Edinburgh.

Bowman, John, 3, Duke Street, Leith.
Coull, George, 17, Smith's Place, Leith Walk, Edinburgh.
Currie, William Little, 223, Byres Road, Dowanhill, Glasgow.
Ewing, James Laidlaw, 9, Princes Street, Edinburgh.
Fisher, John Hutchison, 66, High Street, Dunfermline.
Hardie, James Miller, 68, High Street, Dundee.
Henry, Claude Francis, 1, Brandon Terrace, Edinburgh.
Kermath, William Ramsay, Greyfriars Garden, St. Andrews.
Kerr, Charles, 56, Nethergate, Dundee.
M'Adam, Robert, 34, Virginia Street, Glasgow.
M'Laren, David, 42, South Clerk Street, Edinburgh.
Mitchell, Donald, 30, Union Street, Inverness.
Moir, James, 447, Victoria Road, Cross-hill, Glasgow.
Russell, James Anderson, 212, New City Road, Glasgow.
Strachan, Alexander, 138, Rosemount Place, Aberdeen.

The voting papers and all other documents connected with the election are submitted herewith.

JAMES L. EWING, Chairman.
R. L. Hendry. Rea I. McDougall.
James Paton. John Robertson.

The actual result of the poll was as follows :—

Currie	180	Russell	116
Ewing	177	Moir	115
Kermath	173	Ayre	69
Henry	170		
Strachan	169	Harley	67
Bowman	162	Swan	64
Kerr	158	Watson	62
Boa	157	Macpherson	61
McAdam	153	Burley	59
Fisher	152	Cumming	53
Coull	145	Ferrier	53
McLaren	139	Dow	47
Hardie	134	Graham	45
Mitchell	131	Thomson	38

One voting paper was received too late for enumeration.

Mr. TOCHER (Peterhead) said he had very great pleasure in moving the adoption of the Scrutineers' report. He was very pleased indeed to hear of the large number of votes recorded at this election, because it betokened an increased interest in the affairs of the Society among members north of the Tweed. Speaking of the alterations on the Society's House, he said he had examined the building the other day and he very much admired it. He agreed very much with the remarks made by Mr. Ewing with regard to the Pharmacy Bill, and he wished to congratulate the North British Branch on the fact that it had passed the third reading in the House of Commons last week. Those members of the North British Branch who had taken an active interest at the inception of the measure must feel very pleased that after a rather fitful career it had emerged from the conflict intact. Since it had gone so far, he for one placed greater value on the privileges conferred by the Pharmacy Act of 1868 than he did prior to that discussion. The fact that members of the Legislature were exerting themselves to get the law relating to poisons practically repealed, together with the fact that the Privy Council had a measure in view which, in effect, ignored the application of skill in retailing poisons—these facts did not point to an immediate realisation of their aspirations, or, indeed, to a greater degree of security to the public. But it seemed to him, as Mr. Ewing had said, that there was a greater anxiety on the part of members of Parliament to see the Poisons Law stringently enforced. This is as it should be, and they owed a debt of gratitude to Mr. Cross for his action in the matter. Whatever his intentions were it had had the effect of clearing the air considerably. Chemists and druggists should be encouraged by what had taken place, and he, at least, hoped to see the day when their true status as pharmacists would be recognised by the State, as it was in other European countries. He sincerely trusted that the Executive of tho North British Branch and the members of the Council proceeding on the recommendations made to Colonel Brookfield, M.P., would firmly adhere to the view that the sale of poisons should be conducted by competent persons, and endeavour to get the regulations for dispensing —which were very far from being confined to pharmacists—put on the same footing as obtained in Ireland and on the Continent. With regard to the Bill itself, he thought chemists and druggists were now completely enfranchised, and could have no ground for complaint against the Society, which it was now entirely in the power of all to take advantage of. But they must not expect too much. The purpose in view would still be defeated if chemists and druggists were apathetic in availing themselves of the open door. The Council, and indeed chemists generally throughout the country, had no interests to serve in this matter but to secure the privileges of membership to their fellow craftsmen.

Mr. LAING (Stenhousemuir), in seconding the motion, said he had been very pleased at the general progress that had been recently made in the North British Branch and in pharmaceutical matters generally. He sympathised much with the Chairman's observations last year regarding certain sheriffs in the country. It would be a nice thing to bring more pressure upon them, but unfortunately the pharmaceutical press did not bring much pressure to bear on sheriffs or the public generally. With regard to the new Bill, he thought this was a fitting time and place to say that it was only the beginning. He was greatly pleased at the reception it met with in Parliament. He also thought the Cross gentleman did them a world of good in bringing forward his position, because it enabled them to get the views of men of intelligence in regard to the poison laws, and also enabled them to see that there was great sympathy in Parliament with even more stringent regulations than they had now. He considered this little Bill was simply the preliminary to a greater Bill that would secure to pharmacists much greater privileges than they now enjoyed. He thought it would be foolish to talk of Parliament giving them a monopoly. They had earned their monopoly, and all those who took the same measures had an equal right to it. It was not a close monopoly. It was in the interests of the public, and unless pharmacists could have some security and some impulse towards progress and education they would not devote their time to these things in a way commensurate with the dignity of pharmacy. Therefore if co-operative stores and such like were to have so great liberties as they had now it would not be to the interests of the public generally, and it could not promote that education in pharmacy that the Society wished and that the State also wished. He was hopeful that these views were very generally shared by many members of Parliament at present and that the higher officials in the Commons sympathised greatly with them. In the future they ought to have a strong Bill promulgated in the interests of all concerned. He had very great pleasure in seconding the adoption of the Scrutineers' report.

The report was unanimously adopted.

The CHAIRMAN then declared that the first seventeen candidates on the foregoing list, together with the President of the Society (Walter Hills), the Vice-President (G. T. W. Newsholme), and John Johnston, Aberdeen, and David Storrar, Kirkcaldy, *ex-officio* members, would constitute the Executive for the year 1898-9.

On the motion of the CHAIRMAN a vote of thanks was unanimously awarded to the Scrutineers, and a similar vote of thanks having been awarded to the Chairman on the motion of Mr. R. L. HENDRY, the meeting closed.

PHARMACEUTICAL TRANSACTIONS.

EDINBURGH CHEMISTS', ASSISTANTS' AND APPRENTICES' ASSOCIATION,

The first botanical excursion of the season took place on Friday, June 17, 1898, to Cramond Brig, by Caledonian train at 8.7 p.m. A short walk by the side of a stone and lime dyke, on which were many specimens of wall rue, *Asplenium ruta-muraria*, brought the company to the valley of the River Almond. The ramble extended about a mile and a-half westward along the southern wooded bank of the stream, then across an old bridge to the "Grotto," an old summerhouse, dated 1745, and beautifully decorated with shells, and then back again to the Queensferry Road by the northern bank of the river. The district was new to most of the members, and it proved a very rich one, and many interesting specimens were gathered and described by Mr. Rutherford Hill, who conducted the excursion. Among specimens gathered were *Ranunculus acris* and *R. repens*, illustrating the erect habit of the former contrasted with the procumbent habit and runners of the latter; *Caltha palustris*, *Cardamine impatiens*, *Lychnis vespertina*, and *L. diurna*, the latter illustrating the starved-like, paler-flowered male plants and the more vigorous, deeper pink-flowered female plants; *Arenaria trinervis*, very like chickweed, but distinguished by the entire petals and distinctly tricostate leaves; *Acer pseudo-platanus*, *Geranium robertianum*, *Vicia sepium*, illustrating climbing by tendrils; *Galium aparine*, climbing by hooked hairs; and *Lonicera periclymenum*, climbing by twining stems; *Geum rivale* and *G. urbanum*, with all the gradations of the *G. intermedium*, some showing mostly the features of one parent and some the other; *Saxifraga granulata* in abundance; *Œnanthe lachenalii*, *Galium cruciatum*, *Arctium lappa*, *Doronicum pardalianches*, *Ilex aquifolium*, very large trees showing great abundance of blossom

and a promise of many Christmas berries. *Fraxinus excelsior* on tree was noted without a single open leaf-bud—an unusual circumstance so late as the middle of June; in a marshy hollow there was found a great bed of *Scrophularia aquatica*, the rich green colour contrasting with the brownish-green of the plants of *S. nodosa* here and there interspersed, the winged stem of the former and the tuberculated root of the latter were also noted. As a further evidence of the lateness of the season, it was noted that neither of these species of *Scrophularia* were in flower. Several beds of *Nepeta glechoma*, *Allium ursinum*, *Myosotis sylvestris*, *Luzula sylvatica*, *Symphytum officinale*, and *Mercurialis perennis* were also met with in this rich loamy hollow. Darkness began to fall before the exploration of the Dell had nearly concluded, and it was generally felt that another hour could have been very profitably spent had there been light. The weather was fortunately fine, and a smart six miles' walk brought the party back to town about 11 o'clock.

SCHOOL OF PHARMACY.

On Saturday, June 11, to the delight of the chemistry class, Prof. Collie showed round a tube of the new gas—krypton, and subjected it to sparks produced by a Ruhmkorff's coil. A spectroscope was provided in order that the spectrum might be observed. —The PROFESSOR gave a brief history of the search for krypton, and described the methods adopted in discovering it. Not a man present went away without an inward feeling of pride partly in himself, inasmuch as he was kept well abreast of the times, and still more in his Professor, who has in the past, in conjunction with Professor Ramsay, done so much to clear up the mystery of the constitution of the atmosphere. There were few, if any, in the class who expected to see two more new elements in the course of a week, and great was the enthusiasm when on Saturday, June 18, the Professor produced two other tubes and announced that Professor Ramsay had wrested two more elementary gases, which he named neon and meta-argon, from the air we breathe. After a short description of this most recent research Professor Collie invited his students to examine the spectra of those elements, neon and meta-argon. Considering that these two gases had previously been seen by the Fellows of the Royal Society alone, the students of the School of Pharmacy may well be gratified by Professor Collie's thoughtfulness.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.

The last meeting of the session was held on Friday, June 10, the PRESIDENT, Profcssor Greenish, in the chair.—After the minutes of the last meeting had been read and confirmed, the annual report of the Executive Committee was read. The success of the Association had been very marked, all meetings (both social and ordinary) having been unusually crowded. An average number of thirty-eight members had attended, showing the interest taken in the excellent papers presented, which were all by members themselves, and to some extent involving practical work and the ensuing keen discussions. The audited accounts showed a slight deficit on the year's working, but a substantial balance still remained in hand.—After some discussion the report was adopted by the meeting.—Mr. BATTLE then proposed a vote of thanks to Mr. Harold Wilson, who had for two years shared the secretarial duties of the Association, and who was now leaving the School.—Mr. LESCHER seconded and Mr. SMITH supported the motion, which was then put to the meeting and carried by acclamation.—Professor GREENISH then made a few complimentary remarks, and Mr. WILSON having expressed his gratitude for their kindness, the meeting adjourned.

WESTERN CHEMISTS' ASSOCIATION (OF LONDON).

The summer outing this year takes the form of a river excursion for the members of the Association and their friends (including ladies), and will take place on Thursday, July 21 next. The party will leave Paddington Station at 8.45 a.m., arriving at Henley at 10.15 a.m., from which place an electric launch will convey the party up the river as far as time will allow. Cold luncheon and tea will be taken on board the launch, which will return to Henley in time to catch the train arriving at Paddington at 10 p.m. The price of the tickets, including return railway fare from Paddington to Henley, luncheon and tea on board, is fixed at 16*s.* each (exclusive of wines). Application for tickets should be made as soon as possible, and not later than July 14, as the Committee is compelled to limit the number of guests to about sixty. It will greatly help the Committee in carrying out the arrangements if members will kindly give the names of the guests for whom the tickets are intended. Tickets can be obtained from the President, Mr. J. H. Mathews, 68, Queen's Gardens, W., or either of the Hon. Secretaries, Mr. Herbert Cracknell, 17, Craven Road, Westbourne Terrace, W., or Mr. J. F. Harrington, 45, High Street, Kensington, W.

DUBLIN CHEMISTS' FEDERATION.

On the evening of Monday, the 20th instant, a meeting of pharmaceutical chemists and chemists and druggists was held at the house of the Pharmaceutical Society of Ireland, 67, Lower Mount Street, Dublin, for the purpose of forming a Dublin Chemists' Federation. Amongst those who attended were Mr. Downes, President of the Pharmaceutical Society of Ireland, Messrs. William Allen, Wells, jun., Brown, Conyngham, Kelly, Turner, Hunt, etc. The chair was taken in the first instance by Mr. Downes, who referred to the meeting held in Dublin last December, at which Mr. Glyn-Jones, of the Proprietary Articles Trade Association, delivered an address explanatory of the objects of that Association, and at which resolutions were passed approving of it and in favour of the establishment of a Dublin Chemists' Federation, also appointing Dr. Walsh convener of a meeting to be held for that purpose. He (Mr. Downes) need not put before the present meeting the benefits that might result from their joining together to look after their trade interests.—Dr. WALSH explained the steps he had since taken in furtherance of the resolutions of the meeting held in December last, and mentioned that he had sent out eighty-four circulars to pharmaceutical chemists, chemists and druggists, and proprietors of wholesale houses in Dublin and its vicinity.—The CHAIRMAN said they were very much obliged to Dr. Walsh for the trouble he had taken. The first business now was to elect a President of the new body.—On the motion of Mr. WELLS, seconded by Mr. ALLEN, Dr. Walsh was unanimously elected President of the Federation, and took the chair accordingly.—On the motion of Mr. TURNER, seconded by Mr. BROWN, Mr. John Smith was elected Honorary Secretary.—On the motion of Mr. DOWNES, seconded by Mr. WELLS, the following were appointed a committee with power to add to their number: Messrs. Brown, Ray, Turner, and O'Sullivan.—Mr. GEORGE BROWNE was elected Treasurer, and the annual subscription was fixed at 2*s.* 6*d.*—Mr. DOWNES then called attention to the Bill lately introduced in the House of Lords by the Duke of Devonshire entitled "An Act for Regulating the Sale of Certain Poisonous Substances," and invited the meeting to protest against it on the ground that it was badly drawn, imposed unnecessary restrictions upon pharmaceutical chemists in respect of the labelling, etc., of "poisonous substances," created an injudicious distinction between "poisonous substances" and "poisons," and was intended to recognise the sale of poisonous substances by an unqualified class of persons, to the prejudice of qualified chemists in Ireland who alone were competent to perform that function with safety to the public.—Messrs. KELLY and WELLS condemned the Bill, and on the motion of Mr. DOWNES, seconded by Mr. KELLY, a resolution was passed requesting the Committee of the Federation to consider the Bill, and either take action on it or report to a future meeting of the Federation.

DETERMINATION OF PEPTONE IN URINE.—E. Friend states that it is possible to obtain urine perfectly free from nucleo albumin and protalbumoses by the addition of small volumes of lead acetate solution. Urines containing less than 0·1 per cent. of albumin only require 2 drops of 10 per cent. solution for every 10 C.c. If more albumin is present the following process is adopted:—The urine is boiled up after 1 drop of 20 per cent. acetic acid has been added, then neutralised with 1 or 2 drops of 20 per cent. potash solution, and precipitated with 2 to 3 drops of 10 per cent. lead acetate solution. The clear filtrate does not become turbid either with acetic acid and potassium ferrocyanide or on boiling. It is also free from the colouring matter of urine, and is well adapted for the direct application of the biuret reaction. If a turbidity should still result with potassium ferrocyanide the treatment should be repeated with a smaller volume of lead acetate solution. —*Pharm. Centralh.*, xxxix., 94, through *Wiener Klinische Rundsch.*, 37.

LEGAL INTELLIGENCE.

PROCEEDINGS UNDER THE PHARMACY ACTS.

Pharmaceutical Society *v.* Langford.

At the Lambeth County Court on Thursday, June 16, before His Honour Judge Emden, the Council of the Pharmaceutical Society sued John Langford, 30, Lucas Road, Kennington, for the amount of the penalty incurred on April 13, 1898, in selling poison, to wit, a preparation of opium called "laudanum," contrary to the provisions of the Pharmacy Act, 1868 (31 and 32 Vict. cap. 121), viz., £5.

Mr. T. R. Grey, instructed by Messrs. Flux, Thompson and Flux, appeared for the plaintiff Society. The defendant, an unqualified assistant, appeared in person.

Mr. Grey said the case to be heard by His Honour was one brought by the Pharmaceutical Society against the defendant John Langford for selling poison, he not being a registered qualified chemist as required by the Pharmacy Act, 1868. The defendant in this case had sold one of the poisons mentioned in the Schedule —laudanum—at 30, Lucas Road, Kennington, to an agent of the said Society. Over the door of the shop was the name of a qualified chemist who is now deceased. Whether the defendant was simply the assistant or the owner of the business the Society did not know. If he should prove to be the owner of the business, he would be liable to be prosecuted for keeping open shop for the sale of poison and for exhibiting the title chemist, but if he was only the assistant he was still liable for selling poison. Mr. Grey then read the provisions of the various sections of the Act dealing with the sale of poison, and quoted the case of the Pharmaceutical Society *v.* Wheeldon.

John Partridge, commission agent, said he was instructed by the Registrar of the Pharmaceutical Society to go to 30, Lucas Road, Kennington. On April 13 he went to that address and saw over the door the words "R. C. Turton, Chemist by Examination." He entered the shop, where he saw the defendant, and asked him for twopennyworth of laudanum. He also made several other purchases, amongst which was a bottle of Collis Browne's chlorodyne. He put the date of purchase on the packages and afterwards handed them to Mr. E. J. Eastes.

Ernest John Eastes, F.I.C., said he was an analyst and that he received from the last witness the bottle produced in Court. He carefully analysed the contents and found it to be laudanum—a tincture of opium. It contained 2 grains of morphine, which was a dangerous poison.

Mr. Grey then put in the official Register of Chemists and Druggists, pointing out that it did not contain the name of the defendant.

The Defendant, in reply to a question by His Honour as to what he had to say to the charge, said he was an assistant at the shop mentioned by the witness Partridge, and was engaged by Mr. J. Beddard, brother-in-law to the late proprietor of the shop, and was employed by him. He admitted that on the occasion of April 13 he did sell the poison stated.

His Honour: And when you did that you knew you were not a registered chemist. Did you not understand the Pharmacy Act?

The Defendant: I did not properly understand the Act. I only did what many other unqualified men do.

His Honour: Many others! That only makes the case worse. Have you ever served in a chemist's shop before?

The Defendant: Oh, yes! I have been over thirty-four years in the business.

His Honour: If you have been over thirty-four years in the business you must have known that you were doing wrong by supplying this poison.

Mr. Grey said it was clear that if the defendant had for thirty-four years been serving in chemists' shops he would know perfectly well that he was doing wrong in selling laudanum. On this occasion the defendant also sold to a man he did not know a bottle of Collis Browne's chlorodyne, which was a poison. If His Honour believed the evidence, the penalty was fixed by the Act, and there could be no possible reduction; there must be the full penalty or nothing. He asked for judgment for the £5.

The Defendant said he was not in a position to pay. He was very sorry he had broken the law, but he only did what many assistants did in other shops, especially in the large stores, where there was only one qualified man—the manager.

His Honour said the evidence the defendant gave was very serious, as it showed that the Act is not being sufficiently enforced. The case had been made out against the defendant. There could be no doubt whatever that the Act should be rigidly enforced, but it seemed clear that the law was being very much broken at the present time, and if that was so it really made him feel justified in giving judgment for the £5 claimed. It was very clear that the Act was so being overlooked as to encourage such people as the defendant in supplying the public with poisons. There must, therefore, be judgment for the plaintiffs. Continuing, His Honour said it was a great pity that Beddard was not before the Court. R. C. Turton's name was over the door, and notwithstanding that the man had died, his name was still kept up. He thought the Pharmaceutical Society should have gone further into the matter.

PARLIAMENTARY NOTES.

The Annual Exodus of minor Bills has set in at an exceptionally early date with unprecedented severity, and private members are abandoning their legislative offspring in quite a wholesale manner. Of the two hundred and ten items upon this Session's list of public Bills, no fewer than eighty-one have now been dropped or withdrawn, and the moribund remanets are in so precarious a situation (unless they happen to be "starred") that no combination of sane individuals would undertake the insurance of their parliamentary lives. Chief among the now departed measures was Mr. Kearley's proposal for an amended Adulteration Act. The honourable and energetic member for Devonport has been dreadfully unfortunate in not getting a second reading for his Bill, and in having failed also to "draw" Mr. Chaplin on the subject of the remedy promised by the Government in the speech from the Throne. Mr. Kearley cannot ameliorate the unchecked evils in connection with the sale of food, food products, and drugs, and the Government will not. Thus the merry game of fraudulent substitution and adulteration goes on for another twelve months, whilst the uncertainty of chemists, analysts, vestries, and magistrates will not be dispersed for many a day.

Registration Projects, too, have crumbled up badly. It was fondly hoped by the zealous promoters individually concerned that accountants, architects, boilers, plumbers, midwives, and firms would this year be severally placed upon registers and become duly regulated in their respective spheres of activity. But the fond hope has been rudely dispelled, for not a single registration measure has survived the annual sacrifice. The public must, therefore, take its chance of alighting upon incompetent Betsy Prigs and her homologues in the before-mentioned callings, just as it has submitted to that risk without much prejudice since the days of the Conquest.

Camlachie is also among the hapless fathers of slain Bills. He brought in two little measures for hastening the millennium in Scotland, and might have passed them if he had not, in an evil moment, assumed the position of implacable obstructor to the Pharmacy Acts Amendment Bill. In the result Mr. Cross failed to stop the Society's Bill, but his own innocents were never allowed to reach a second stage, and now we have to chronicle their disappearance altogether. The honourable gentleman might have done better if he had not thought too deeply of the personal considerations of the case.

Early Closing has practically made no progress, and none need be expected this year. True, the two Shops Bills of Sir John Lubbock and Sir Charles Dilke are still on the active list of the business of the House, but both are blocked by Mr. Sydney Gedge, of Walsall, and cannot have the shadow of a chance now that the Government has "bagged" all the Wednesdays of the Session. Mr. Gedge, who is a solicitor (Gedge, Kirby and Millett, 11, Gt. George Street) and a Governor of Christ's Hospital, is understood to oppose the measures "more in sorrow than in anger," and simply as a matter of principle.

The Poisonous Substances Bill is to be read a second time in the Upper House on Friday, 24th instant, and the whole calling of pharmacy will be anxious to hear what His Grace of Devonshire, as Lord President of the Privy Council, has to say in support of a proposal which is an inversion of the education-of-the-vendor

principle, and bases the safety of the public upon the flimsy foundation of a label. We hope to present a full report of the proceedings of the House of Lords in respect to the Bill next week.

THE PHARMACY BILL is still awaiting second reading in the Lords, but no alarm need be felt at the delay, which is not due to any unforeseen opposition. It is expected that the Earl of Hardwicke will move the second reading next week.

EXTRACTS FROM CONSULAR REPORTS.

CHEMICALS IMPORTED INTO GHENT during 1897 amounted to 38,907 tons as compared with 45,510 tons in 1896. The chemical imports include carbonate of soda, caustic soda, chloride of lime, sulphate of ammonia, sulphate of soda, etc., all from the British Isles; and phosphate rock and nitrate from Florida and Peru respectively. The decline of 6603 tons during 1897, according to Vice-Consul Hallett, turns upon nitrate imports; for while chemicals from British ports increased, and also phosphate rock from Florida, there was a falling off in nitrate imports of 9938 tons.

THE SALE OF MATCHES, their importation and manufacture, in the Panama Republic, has now become a monopoly, and all matches received since October 7 last have been treated as contraband.

THE VALUE OF MEDICINES, CHEMICALS, DRUGS, ETC., imported to Panama during the year 1897 amounted to £19,873, as compared with £18,918 in 1896. Of the first amount Great Britain supplied goods to the value of £5121, France £5265, Germany £1324, United States of America £7854, other countries £309.

ARTIFICIAL HONEY is a bye-product of the German beetroot sugar distilleries, and although high duties were imposed by the German Customs tariff upon foreign honey in order to protect the genuine home product, the rapidly increasing competition of the artificial article has given it the severest blow. Genuine honey, according to Consul-General Ward, was very scarce throughout all Germany in 1897, and in consequence large supplies had to be imported from foreign countries, the total importation (by sea) being 2,140,500 kilos. as against some 1,760,000 kilos. in 1896.

IMPORTATIONS OF BEESWAX to Hamburg during the last five years are reported to have increased considerably. In 1893 the total importations were 278,100 kilos, while last year 970,000 kilos were received. The largest increase was in Mozambique and Zanzibar wax, but German East Africa now sends annually larger quantities of beeswax to Hamburg. Carnauba wax, which at one time was shipped *vid* England, has recently been taken direct in larger amounts than formerly, viz., 315,000 kilos in 1897 as against 145,000 kilos the previous year. Of Japan wax, which was subject to considerable fluctuations in price, the importations reached 480,000 kilos, compared with 245,000 kilos in 1896.

ONE OF THE IMPORTANT BRANCHES of chemical industry in Germany is the manufacture of explosives, in particular dynamite and all kinds of gunpowder. Tho factories in the neighbourhood of Hamburg alone exported something like £465,000 worth of dynamite, gunpowder, and gun-cotton in 1896, the largest proportion being destined for South Africa. Besides this quantity a considerable amount of explosives was sent by rail and river to the interior of Germany.

NITRATE IMPORTED INTO HAMBURG during 1897 amounted to 378,000 tons, as against 536,000 tons in the preceding year. It was anticipated that an improvement would take place in the nitrate business during the year, but contrary to expectations matters were less favourable for importers than the year before. An attempt was made in Chili by the "Salitreros" to limit production and to keep up prices, but the effort is reported to have failed, owing partly to the large stocks existing in Europe and partly to the fact that after determining to fix the future output according to the production of a given period, the "Salitreros" themselves forced the production during that period to an unreasonable degree, thus tending to defeat their own object. In addition to this, the appearance of new producers in the nitrate market at the same time, caused the "ring" to collapse, and prices which stood in January, 1897, at 7 marks 95 pf., for February-March, 1898, delivery fell to 7 marks 10 pf. in December of the same year.

LETTERS TO THE EDITOR.

All Communications for the 'Pharmaceutical Journal' must be Addressed to the Editor, 17, Bloomsbury Square, London, W.C., and not in any case to individuals supposed to be connected with the Editorial Staff; no responsibility can be accepted unless this rule be observed. Communications for the Current Week's Journal should reach the Office not later than Wednesday, but news can be Received by Telegraph until 4 p.m. on Thursday.

ADVERTISEMENTS AND ORDERS for copies of the 'PHARMACEUTICAL JOURNAL' must be addressed to the Publishers, 5, Serle Street, Lincoln's Inn, London, W.C. Cheques and money orders should be made payable to "Street Brothers."

ARTICLES AND REPORTS sent for the Editor's approval should be accompanied by stamped directed envelopes, otherwise no guarantee can be given that they will be returned if not found suitable.

CORRESPONDENTS should write in ink, on one side of the paper only, and must authenticate the matter sent with their names and addresses—of course not necessarily for publication. No notice can be taken of anonymous communications

DRAWINGS FOR ILLUSTRATIONS should be executed twice the desired size; clean sharp lines being drawn with a pen and liquid Chinese ink. Shading by washes is inadmissible. Photographs can be utilised in certain cases.

NAMES AND FORMULÆ should be written with extra care, all systematic names of plants and animals being underlined, and capital letters used to commence generic but not specific names.

QUERIES addressed to the Editor will be replied to in the Journal as early as possible after receipt, though not necessarily in the next issue. Replies cannot be sent by post, even though stamped envelopes accompany the queries.

THE NEW POISONS BILL.

Sir,—Your issue of June 18 certainly contained no news of greater interest for pharmacists than the text of the "Poisonous Substances Bill," introduced into the House of Lords on June 13. Clause 2 would authorise the Privy Council to provide regulations as to the keeping, dispensing, and selling of poisons. It refers to Section 1 of the Pharmacy Act, 1868, as conferring upon the Pharmaceutical Society, with the consent of the Privy Council, the power to prescribe such regulations. A reference to the Act will show that this power is permissive and that it is vested in the Society itself (not in its Council). Section 1 of the Act of 1868 certainly imposes no compulsion upon the Society in this matter. It provides a method by which the Society may deal with the question of keeping poisons and vary such regulations from time to time. This power was analogous to that conferred by Section 2 upon the Council (not the Society here) of proposing alterations in the schedules of poisons. In each case the elasticity was reasonably provided, as saving the need for further legislation. My memory may require furbishing a little as to some points of the discussion of this subject which occurred thirty years since, but I keep a grip upon their main features. A gloss which was put upon Section 1 in certain quarters asserted that the exercise of the power was compulsory, and the explanation was given that private and unlawful bargaining had been used in negotiations with the permanent officials of the Privy Council. If this plea should be raised now, I appeal to the Society's minutes for any evidence. One thing is certain, viz., that the members of thirty years ago would not have purchased a Pharmacy Bill at the price of authorising the Privy Council to remove from the Register every man who offended any regulation that might be made for keeping poisons. It may be well to remind a new generation that this is the penalty which the new Bill will make operative, whilst the regulations creating offences are to be framed by persons ignorant of the technicalities of our calling. A modern writer tells us of seeing a large procession demonstrating for some supposed "rights," and in its rear gloomily walked the great men of the party. When challenged they explained that they were there compulsorily, for they were the leaders. Will history repeat itself? *Nous verrons.*

Leeds, June 22, 1898. RICHARD REYNOLDS.

Sir,—Would it not be a wise and opportune step for the Council to propose that the recommendations passed in 1871 for the storage of poisons be now compulsory? If the new Poisons Bill becomes law some regulations will be in force sooner or later, and for that reason alone the Council would not meet with the same opposition from the Society which it had before to encounter. It would be much better for such regulations to be framed by the Council than by an outside body, which might formulate some inconvenient or impracticable requirements. In the experience which chemists

have had, for instance, with the Board of Inland Revenue, this has already been shown. For example, lately it was proposed that the formula for Gregory or other such pills should be printed on every small label. There are many other points in the Bill which will necessitate most careful consideration. Its ambiguity is evident even in the first clause, which says, "No person shall sell," etc., and "labelled . . . with the name and address of the person selling the substance." Is the assistant to be deemed the seller, and, if not, what about limited liability companies? As they are no doubt included within the scope of the Bill, it is evident that such a company is now at last to be considered a "person."

Edinburgh, June 18, 1898. CLAUDE F. HENRY.

Sir,—The Privy Council's Poisons Bill must have our most strenuous opposition. Clause 1, is entirely contrary to the principle of the Pharmacy Act, 1868, viz., that for the protection of the public the distributors of poisonous substances shall be certified to possess competent skill and knowledge. Sub-Clause 2 is absurd; it even requires that a bottle of medicine containing 1 part of carbolic acid in 1000 of water shall be labelled "To be used with caution!" If this grotesque production may be taken as an example of the intelligence of the Privy Council, one wonders what would be the result of the operation of the second clause of the Bill, intended to give the Privy Council an independent right to amend the Schedule and to institute regulations for "keeping, selling, and dispensing poisons." The Pharmaceutical Society should certainly not surrender the powers it now possesses in relation to these matters. Surely, if the sale of any poisonous substance is found to be a public danger, its distribution should be restricted to responsible and trained vendors; nor is it unreasonable that the public should pay such vendors for this measure of protection. Commercial competition is now-a-days quite sufficiently keen to prevent that payment becoming excessive.

35, Clifton Road, Maida Vale, W. R. H. PARKER.

The Determination of Sex.

Sir,—The mystery of life is a never-failing subject for the physiologist, but all research to ascertain the *causa causarum* has failed and must fail—the writing on the wall that bars inquiry: "Thus far shalt thou go and no farther," puts a stop to the inquisitive mind, and the man is referred back to study phenomena. Every now and then a gifted individual starts a new theory, which for a time sets the whole world talking about and speculating regarding its truth or the reverse. After considerable discussion and argument pro and con, the interest subsides. "Our little systems have their day—they have their day and cease to be." The latest "effort to snatch a secret from Nature," as the author says, is to be found in a book by Dr. Leopold Schenk (*P. J.*, 18th inst.). His object is a praiseworthy one, viz., the production of a greater number of men children. For with the awful destruction of begetters now going on in many parts of the world, the whole system of society seems to be threatened with subversion, and a result, polygamy or concubinage looms in the near distance. Dr. Leared humorously describes an old chief in Morocco who demanded an aphrodisiac. The number of this veteran's children was so great that he could not count them. But the question is the practicability of increasing our male population, and Dr. Schenk thinks he has discovered the secret. If he had studied an extensively read book on physiology it is possible that some light might have been borrowed from Dr. George Combe, who in the year 1828 produced that most valuable work 'The Constitution of Man in Relation to External Objects.' My copy is of the fourth edition, but I am informed that the modern editions are minus several important chapters. Dr. Combe reports the experiments of M. Chas. Girou de Buzareingnes, who divided a flock of sheep into two equal parts; the result was in one instance 53 males and 84 females, in the other 80 males and 55 females. Imagination too has much to do with the determination of sex; instances recorded in Scripture speak of faith, as in the case of Abraham and Hannah. I was acquainted with a gentleman—the father of eighteen children—and he stated that he could and did correctly predict whether his wife would give birth to a son or a daughter. Such instances being tabulated might prove useful.

Kew, June 18, 1898. R. GOODWIN MUMBRAY.

A Dispensing Problem.

Sir,—The Illinois prescription (1885) containing iron, sweet nitre, mucilage and syrup has been again discussed, proving the survival of the unfittest. It is an example of trick skill in dispensing which ought never to have been sanctioned by a Board of Examiners. A writer in the *Pharmaceutical Journal* (June 18, 1898, p. 584), has experienced the usual difficulty, and commenting on the subject remarks that "it would certainly not be advisable to send it out in a covered pot, as suggested by such an eminent pharmacist as Mr. Ince, because of the volatility of the spirit." The "eminent" gentleman alluded to never even hinted at such a proceeding. He remarked in a public lecture, "that made in most ways it assumes the form of a thick jelly, which may be sent out in a covered pot"; a mere statement of fact, being precisely what happens, as indeed the writer of the note has discovered, thus: "It separated in clots and when prepared in the bottle was so stiff that it could not be poured." Knowing the value of the protective agency of simple syrup, I tried its effect on this badly constructed formula, in equal proportions on the three ingredients, and failed in the result. But recognising the exact relation to incompatibility of the tincture, the spirit and the mucilage, an accurate distribution of the syrup was made, from which resulted a bright pourable mixture, much resembling in viscosity and colour freshly prepared oxymel of squills. So presented, the formula was rescued from the covered pot—the one and only method of exhibition was to put it into a wide-mouth stoppered bottle, carefully avoiding the introduction of a metallic spoon, the use of which in the case of iron compounds, accentuated by the presence of spirit of nitrous ether, is not to be advised. The mixture can be thinned as desired in proportion as the mucilage is replaced by simple syrup.

Shepherd's Bush, W., June 18, 1898. JOSEPH INCE.

Sir,—With reference to the prescription mentioned by Miss Minnie Farr in your issue of June 18, viz.:—

℞ Tinct. Ferri Mur.	.....	℥ii.
Sp. Ether. Nitrosi	.....	℥ss.
Muc. Acaciæ	.....	℥i.
Syrup	.....ad	℥iii.

I consider that it was the evident intention of the original prescriber to administer the drugs in a gelatinous form. So far as my experience goes, I have found the above (dispensed somewhat according to the method given in the 'Art of Dispensing,' and mentioned by your correspondent) to result in a perfectly satisfactory jelly, palatable and without undue acidity. Of course, the addition of dilute hydrochloric acid, although giving fluidity, makes it much more acid, and this, I believe, would not be sanctioned by the majority of prescribers. In my opinion, it should be dispensed as written, without addition of any kind, and sent out in a wide-mouthed bottle.

Lewisham, S.E., June 17, 1898. GRAHAM BOTT.

Sir,—The prescription printed in your last issue under the above heading is one of those frequently occurring cases in which the prescriber, either from ignorance or inadvertence, orders an impossible combination. The pharmacist's duty in such a case is to so modify the vehicle as to ensure the correct dose of all the ingredients in as presentable a form as possible and without any illegitimate addition. In the present instance the prescription, dispensed as written, forms a thick mass of dirty looking jelly which will not run out of the bottle. The addition of about 30 minims of dilute hydrochloric acid (as cleverly suggested by your correspondent) works a marvellous tranformation; the semi-solid reddish mass being converted into a bright lemon coloured syrup. But a more simple and certainly more legitimate method of overcoming the difficulty consists in the addition of an equal bulk of distilled water, the mixture being made a six ounce instead of a three ounce one (the dose, of course, being increased from one to two teaspoonfuls). In this way a clear and permanent solution is effected (the clots of jelly which form when first mixed disappearing after repeated agitation). By such means, and without the addition of any foreign ingredient, justice is done to all parties concerned; the doctor's intentions are carried out to the full, the patient gets medicine he can imbibe with comfort, and the chemist sends out a mixture that does him credit. It only remains for the latter to endorse the prescription for the guidance of future dispensers.

Brighton, June 20. C. S. ASHTON.

ANSWERS TO QUERIES.

Special Notice.—*Scientific, technical, legal, and general information required by readers of the 'Pharmaceutical Journal' will be furnished by the Editor as far as practicable, but he cannot undertake to reply by post. All communications must be addressed "Editor, 17, Bloomsbury Square, London, W.C.," and must also be authenticated by the names and addresses of senders. Questions on different subjects should be written on separate slips of paper, each of which must bear the sender's initials or pseudonym. Replies will, in all cases, be referred to such initials or pseudonyms, and the registered number added in each instance should be quoted in any subsequent communication on the same subject.*

MICROSCOPY.—Get a copy of Cross and Coles' 'Modern Microscopy' (Baillière, 3*s.* 6*d.*) [*Reply to* QUAESITUM.—12/5.]

LATIN FOR GRAMME.—Neuter noun, third declension. Thus: *Gramma, grammatos*; plur. *grammata*. [*Reply to* J. W. J. T.—12/7.]

PARTNERSHIP.—The answer to your questions should be supplied by the deed of partnership, as such matters ought to be agreed upon before commencing operations. [*Reply to* Y. Z.—12/9.]

WALNUT STAIN.—Write to Williams and Co., of Hounslow, for samples of their spirit soluble stains, which are cheaper and better than anything you can make yourself. [*Reply to* SPES.—12/15]

DISPENSING.—The 'Art of Dispensing,' published at 42, Cannon Street, London, price 3*s.* 6*d.*, should serve your purpose well. [*Reply to* A. H. P.—12/14.]

ORIGIN OF NAMES OF SUBSTANCES.—We are obliged for your suggestion, but do not consider the subject of sufficient general interest. [*Reply to* H. C. S.—135/12]

TEST FOR SPUTUM.—The abstract quoted does not give the strength of the alkaline phenol-phthalein solution employed by Dr. Bracker. [*Reply to* SPUTUM.—11/31.]

RUBBER SUBSTITUTE.—We fear we cannot help you in your desire for a rubber substitute possessing the properties you name. If such a substance existed it would be worth a considerable sum. [*Reply to* G. W. E.—12/2.]

BOTTLING MACHINE.—Write, asking for particulars, to Bratby & Hinchcliffe, 146, Minories, London, E.C.; Barnett and Foster, 26, Eagle Wharf Road, London, N., or Hayward Tyler and Co., 90, Whitecross Street, London. [*Reply to* E. J. B.—12/22]

SALE OF BRUNSWICK GREEN.—The Arsenic Act only applies to the sale of "arsenious acid and the arsenites, arsenic acid and the arseniates, and all other colourless poisonous preparations of arsenic." [*Reply to* J. W. J. T.—12/6.]

PULV. AMYGDALÆ AMAR.—(1.) No. (2.) The acid is formed when water is brought in contact with the powder. (3.) It appears to contain a trace of fixed oil, but that, of course, will not contain free prussic acid. [*Reply to* MEMINISSE.—12/12.]

VARNISH FOR DRAWING.—You should first "size" the drawing with a clear size made by boiling parchment cuttings in water. When dry apply the following varnish with a soft brush:—Sandarac, 20 parts; mastic, 8; camphor, 1; methylated spirit, 50. [*Reply to* C. F. J.—11/29.]

METRIC WEIGHTS AND MEASURES.—You will be able to purchase stamped weights and measures shortly. Maw, Son, and Thompson's list includes particulars of counter scales and weights of every description. Stone's balances for dispensing purposes are well-made and not expensive. [*Reply to* COUNTRYMAN.—12/8.]

EMP. BELLADONNÆ LIQ.—Try the B.P.C. formula: Alcoholic extract of belladonna leaf, 960 gr.; rectified spirit, 9 fl. oz.; pure ether, 9 fl. oz.; camphor, 130 gr.; pyroxylin, ½ oz. Dissolve the extract in the spirit, add the ether, decant after standing 12 hours, then add the camphor and pyroxylin. Finally, make up to 20 fl. oz. by adding a sufficient quantity of a mixture of spirit and ether, in equal volumes. [*Reply to* W. F.—12/21.]

BOTANICAL.—(1) It does not appeal to students, but to practical botanists with extended experience. Published monthly, 1*s.* 8*d.*, Dulau and Co., Soho Square, London. (2) John's 'Flowers of the Field' (S.P.C.K., 6*s.*), Henslow's 'Dictionary of Botanical Terms' (Groombridge, 4*s.*). [*Reply to* DULCIS.—12/4.]

BACTERIA.—1. From nitrogenous substances in the medium in which they grow, as in the case of the yeast plant and most other vegetable organisms. 2. No. 3. They are single bacteria, spiral in shape. 4. In the form of readily decomposable nitrogenous compounds. [*Reply to* H. R. M.—11/32.]

COLOURS FOR LEATHER.—For the brown tint probably a methylated spirit solution of Bismarck brown will answer, and suitable spirit soluble aniline tints for the other tints. For black heelball use a mixture of carnauba wax, 5; beeswax, 5; and lampblack, 2. The colour of this may be modified by substituting oil soluble aniline colours for the lampblack. [*Reply to* QUERIST.—11/15.]

SHOW COLOURS FOR BOTTLES.—*Blue*: (1) Dissolve Prussian blue, 1 oz., in sufficient oxalic acid and water, dilute to the desired tint. (2) Copper sulphate, 2; sulphuric acid, 1 fl. pt.; water, *q.s.* *Red*: Iodine, 1; potassium iodide, 1; water to produce the desired tint. Distilled water only should be used for these colours. [*Reply to* R. W.—11/14.]

FIXATION OF NITROGEN.—Apart from the nodule bacteria, nitrogen is fixed by *Clostridium pasteurianum*, a fission fungus belonging to the group of butyric acid bacteria. It occurs in the form of rods, 1·2μ broad and about 5μ long, each of which produces an endospore. The organism is strictly anaërobic, and is therefore obliged to rely on the co-operation of aërobic fission fungi, which remove the oxygen from its sphere of influence and leave it surrounded by nitrogen. [*Reply to* HUMUS.—12/19.]

THICK SAUCE.—Brown sugar, 16; tamarinds, 16; onions, 4; powdered ginger, 4; salt, 4; garlic, 2; cayenne, 2; soy, 2; fl. pts.; ripe apples, 64 parts; mustard powder, 2; curry powder, 1; vinegar, *q.s.* Pare and core the apples, boil them in sufficient vinegar with the tamarinds and raisins until soft, then pulp through a fine sieve. Pound the onions and garlic in a mortar and add the pulp to that of the apples. Then add the other ingredients and vinegar, 60; heat to boiling, cool, and add sherry wine, 10, and enough vinegar to make the sauce just pourable. If a sweet sauce is desired add sufficient treacle before the final boiling. [*Reply to* R. W.—11/14.]

OBITUARY.

THOMAS.—On June 11, Robert Thomas, Chemist and Druggist, Liverpool. Aged 66. Mr. Thomas had been a member of the Pharmaceutical Society since 1869.

LOW.—On June 12, Robert Low, Pharmaceutical Chemist, Arbroath. Aged 26. Mr. Low had been a member of the Pharmaceutical Society since 1894.

DUTTON.—On June 16, John Dutton, Pharmaceutical Chemist, Birkenhead. Aged 79. Mr. Dutton had been a member of the Pharmaceutical Society since 1847. He commenced his career as pupil to a medical man in Nantwich, but after two years in that capacity he went as apprentice to a chemist in the same town, afterwards going to London as assistant to the late Mr. Deane, of Clapham Common, from whom he went to Mr. Morson, of Southampton Row. In 1845 he went to Birkenhead, for which town he was Local Secretary of the British Pharmaceutical Conference at the time of its first visit to Liverpool, in 1870. Mr. Dutton has not taken an active part in business for the last fifteen years, but has lived a country life at Tarporley, Cheshire. His wife was a daughter of the late Mr. Thomas Moore, J.P., of Colchester.

TANSLEY.—On June 16, Arthur James Tansley, Chemist and Druggist, Kidsgrove, near Tunstall. Aged 47.

THOMAS.—On June 16, William John Thomas, Chemist and Druggist, Wrexham. Aged 29.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Bishop, Bonn, Count, Cracknell, Crouch, Currie, Forster, Foster, Freeman, Gifford, Haigh, Harrington, Henderson, Henry, Horsfield, Lunan Macdonald, Pearce, Reynolds, Symes, Wilkinson, Young.

NEW IDEAS & TRADE NOTES

Messrs. Evans, Gadd & Co., Exeter, send specimens of their office calendars for 1898. Like the publications of previous years, they are of a very useful character, with detachable monthly tables in large type and a complete calendar in smaller type by the side, while on the back the usual postal information is given, together with a complete table of dates for 1899.

Mr. W. Wilkinson, Ph.C., Cheetham Hill, Manchester, sends a very pretty, perfumed pocket calendar for 1898, containing postal and other useful information, such as "Hints for the Sick Room," etc.

Messrs. Ayrton & Saunders intimate that a full line of their samples can be seen in the show rooms of Messrs. J. C. Langley & Co., 456, Collins Street, Melbourne, Australia, who also hold a full line of all their articles and are able to supply from stock.

NEWS IN BRIEF

General Index.—Orders for the proposed General Index to the Journal should be sent in at once to the Editorial Department, 17, Bloomsbury Square, W.C. An order form will be found on the last page of this inset.

The Windsor and Eton Scientific Society was entertained at the Albert Institute on Wednesday, December 22, by Mr. A. C. Seward, M.A., of Cambridge, one of the Pharmaceutical Society's Examiners, with a lecture on "Fossil Plants," the Rev. Albert Lee in the chair. Mr. Seward observed that the subject he had to speak on was one which did not lend itself particularly well to popular treatment, and that in one short lecture it was difficult to deal with the question thoroughly. He then proceeded to explain how rocks are formed, and incidentally mentioned that the rocks in the neighbourhood of Windsor contain numberless plants. The lecturer then went on to make a few remarks concerning coal. The latter, he said, consisted largely of carbonised remains of plants, and occasionally one could see on the surface of a piece of coal a distinct trace of some plant. Occasionally, too, it was possible to pick off from a piece of coal little round or oval bodies which are just visible to the naked eye. On subjecting these to a more minute examination they are found to be the remains of plants. A far more important fact with regard to coal was, however, that in the cold seasons—at all events in the north of England—one often found in coal hard masses of ironstone-like substance, which very frequently contained a large number of plant fragments. The lecture was graphically illustrated by means of a lantern skilfully manipulated by Mr. W. Oldham, pharmaceutical chemist, of Eton. The slides, which were taken from a painting made under the direction of a well-known Continental fossil botanist, giving the audience a very clear idea as to what kind of forests the coal supply originated from. In conclusion, the lecturer said the field of the fossil botanist was a wide one, and offered much promise to anyone who had the opportunity and desire to follow such study.—The Rev. Albert Lee thanked Mr. Seward in the name of the audience for his most admirable lecture. He was sure they were most deeply indebted to him for giving it.

Glasgow and West of Scotland Pharmaceutical Association.—The last meeting of the year was held on Tuesday, December 21, in the larger hall at 94, West Regent Street, Mr. W. L. Currie presiding.—There was a large attendance of members and their lady friends to hear Mr. Alex. Scott, of Callander, lecture on the beauties of Scottish scenery: "From Doune to Killin, *viâ* Callander, Trossachs, and Lochearnhead," illustrated by over 150 lime-light views. The lecturer, in an attractive manner, gave a description, historical and legendary, of each picture thrown on the screen, and dwelt specially on the romantic beauty of some of the scenes, which the lecturer said surpassed many of the much-lauded scenes in Switzerland. The "worthies' in the various districts passed through did not escape the ordeal of Mr. Scott's camera taking a snap-shot, and the humorous sketches the lecturer gave of interviewing these "worthies" added much to the enjoyment of the evening, which seemed to pass too quickly. The Chairman moved a hearty vote of thanks to Mr. Scott for his able and interesting lecture, Mr. Robb seconded, which was heartily responded to. Mr. Scott, in reply, said it gave him great pleasure to come amongst his brother pharmacists in Glasgow, and although unable to attend the meetings of the Association he nevertheless took a great interest in what was being done. This brought a most enjoyable meeting to a close about 11 p.m.

Dr. F. W. Passmore has been taken into partnership by Mr. H. Helbing, of Queen Victoria Street, E.C., and the firm will henceforth be known as Helbing & Passmore, analytical and consulting chemists.

Mr. G. S. Mumford has taken into partnership his two sons, Edward Selby Mumford and Sydney Mumford, and in future the business will be carried on under the style of G. S. Mumford & Sons, Newcastle Granary and Mills, Farringdon Road, E.C.

Messrs. Dakin Brothers, 87a, Leadenhall Street, E.C., intimate that they have taken into partnership Mr. Eugène Herbert Nicoll, who has been engaged with the firm for a period of twenty-two years.

Coming Pharmacy Balls.

Thursday, January 6.

Midland Chemists' Assistants' Association Ball, at the Edgbaston Vestry Hall, Birmingham. Hon. Secs.: F. Casson, High Street, Harborne, and E. W. Mann, 97, Bristol Road, Birmingham.

Friday, January 7.

Plymouth, Devonport, Stonehouse and District Pharmacy Ball, at the Town Hall, Stonehouse. Hon. Sec.: F. Maitland, 31, Chapel Street, Stonehouse.

Wednesday, January 19.

Chemists' Ball, at the Portman Rooms, Baker Street, London, W. Hon. Sec.: W. Warren, 24, Russell Street, Covent Garden, London, W.C.

Thursday, January 20.

Midland Pharmaceutical Association Ball, at the Grosvenor Rooms, Grand Hotel, Birmingham. Hon. Sec.: H. S. Shorthouse, 159, Stratford Road, Birmingham.

Edinburgh Chemists' Ball, at the Freemasons' Hall, George Street, at 9 p.m. Hon. Sec.: Rea I. McDougall, 1, Gladstone Place, Leith, from whom tickets (15*s.* each) can be obtained.

Wednesday, February 9.

Junior Pharmacy Ball, at the Portman Rooms, Baker Street, London, W. Hon. Sec.: W. J. Henson, Beulah Hill, London, S.E.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

B. W. Pugh and F. H. E. R. Pugh (trading as A. Riddle & Co.), Lime Juice Manufacturers, 38, Commercial Street, E. Debts will be received and paid by F. H. E. R. Pugh.

Geo. T. Cooper and Wm. Hesketh (trading as Mark Cooper), Manufacturing Chemists, Drysalters, and Oil Merchants, Henry Street, Church, Lancaster. Debts will be received and paid by Geo. T. Cooper, who will continue the business under the same style as before.

Percival Turner and Frederick G. Kemble (trading as Turner & Kemble), Medical Agents and Accountants, 4, Adam Street, Adelphi, W.C.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

Ernest Wm. H. Sall, Surgeon, 8, Gloucester Terrace, Southsea.

Oscar Wall, Chemist, residing at 61, Duke Street, Rusholme, Manchester, and lately in business at 35, Renshaw Street, Chorlton-on-Medlock, Manchester.

LATE ADVERTISEMENT.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

LONDON REPORT.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

DECEMBER 30, 1897.

The markets not having reopened since the holidays, and there being no changes of importance to record, we have thought it would be interesting to our readers to sum up the present position of the more important articles as compared with twelve months ago.

ACID CARBOLIC. — Present values are practically the same as those of twelve months ago, both for the crude and for crystals, and whilst to-day the position is very firm, there is no very definite indications as to the future course.

ACID CITRIC—Closes the year at slightly lower values than last year, with a somewhat weak tendency.

ACID TARTARIC.—The position of this article is very similar to that which it held twelve months ago, values being about the same.

ALOES.—*Cape* were very low in price twelve months ago, good bright hard realising only 19s. per cwt. in the first sale of 1897. Later on prices rose decidedly, closing firm at 21s. 6d. to 23s. 6d. for same quality. *Socotrine* were very scarce at the beginning of the year, and 100s. per cwt. was asked for good kegs, for which 80s. per cwt. is the present quotation. *Curaçao* are decidedly dearer for both boxes and gourds, the latter being very scarce. Value at the moment, 38s. per cwt. for good pale livery in boxes, as against 30s. twelve months ago. From New York we hear that there have been several arrivals lately, which were promptly disposed of at full prices. *Capey* held for 17s. per cwt., *c.i.f.*

ATROPINE.—Price of *Sulphate* at beginning of the year was 11s., and of the *pure* 13s. 6d., prices being now 2s. per oz. dearer at 12s. 6d. for the *Sulphate*, and 15s. per oz. for the *pure*.

BALSAMS.—*Peru* closes very firm at 8s. per lb., as against 7s. per lb. twelve months ago. *Tolu* is lower than last year, closing at 2s. 3d. to 2s. 6d. per lb., as against 2s. 6d. to 2s. 9d. per lb. *Copaiba* closes steady at 2s. per lb. as against a rather higher figure last year.

BISMUTH.—The expected advance in value to 5s. per lb. for the *metal*, and 4s. 10d. per lb. for the *subnitrate*, took place shortly after the beginning of the year, prices having previously been 3s. and 3s. 6d. per lb. respectively. A further advance has been anticipated, but has so far not yet taken place.

BORAX—Has been on the downward grade throughout the year, starting at 19s. 6d. to 20s. per cwt. for crystals, and closing dull at 14s. to 14s. 6d. per cwt.

BROMIDES—Are about 2d. per lb. dearer, price of *Pot. Bromide* being 1s. 9d. to 1s. 10d. per lb. against 1s. 7d. to 1s. 8d. in January last.

BUCHU LEAVES.—At the beginning of the year the value of good green rounds was 3¾d. per lb., but later on with small shipments and very reduced stocks in first-hands some considerable buying for speculative account took place, and really good quality was held for as much as 8d. per lb., but no sales at this price have been reported. Demand continuing limited, the small arrivals proved sufficient to satisfy it, and probably 6d. per lb. was highest price paid. At the close the market is rather weaker at 5½d. per lb. for good green.

CALUMBA ROOT.—At the beginning of the year medium sorts could be obtained at 15s. to 20s. per cwt., whilst to-day these are very scarce, the last price realised being 50s. per cwt. Higher values are looked for.

CAMPHOR.—The year opened with a declining market for the *crude*, quotations ranging from 93s. per cwt. *c.i.f.* terms for *China* and 110s. per cwt. *c.i.f.* for *Japan*. At the close quotations rule somewhat firmer at 86s. per cwt. *c.i.f.* for *China* and 90s., same terms, for *Japan*. *Refined* closes at about same rates as those which ruled at the beginning of January. It is stated, however, that English makers will reduce their price 1d. per lb. at commencement of the New Year.

CARDAMOMS.—Stocks have been low during the whole of the year, with consequent high prices. At the first auctions in January a considerable decline on the extreme rates ruling at the end of 1896 took place, and the year closes with prices about on a par with those then established.

CASCARA SAGRADA—Is slightly dearer, present value being about 18s. 6d. per cwt.

COCAINE—Had at commencement of the year come down to what was then considered to be an excessively low price, viz., 11s. 9d. per oz. ; since then, price, however, continued to fall, with one slight recovery, until the article was quoted 8s. to 8s. 6d. per oz. according to brand. Towards the close of the year a decided upward movement took place, and makers now quote 10s. 3d. to 10s. 9d. per oz.

CODEIA—Is slightly lower at 11s. 3d. to 11s. 6d. per oz. against 11s. 6d. to 11s. 9d. at commencement of the year.

COD-LIVER OIL.—This article has rapidly fallen in value during the past twelve months. The nominal value this time last year was about 135s. per barrel for best non-freezing *Norwegian* oil, whilst at the present moment it is quoted at just half the money, and from all appearances lower than higher rates will rather rule in the near future.

COLOCYNTH—Has become very cheap since this time last year, the price for good pale *Syrian* apple being then 1s. 10d. to 1s. 11d. per lb. as against 1s. 1d. per lb. now, but it would appear probable that at this latter price it does not pay to ship, and higher values are looked for. With present low rates for *Turkey* apple the demand for *Spanish* is exceeding small.

CREAM OF TARTAR—Started the year at 82s. per cwt. for first white *French* crystals, and closes at 75s. 6d. per cwt., with a very quiet feeling.

GLYCERINE — Shows a decided fall in value of at least 5s. to 7s. 6d. per cwt. on present values of 52s. 6d. to 57s. 6d. per cwt., for the best white chemically pure, double *distilled* 1·260 quality in tins and cases.

IODINE.—Price is now 7½d. per oz., against 9d. per oz. in January, the *Iodides* being also cheaper in proportion, *Potass. iodide* having been reduced from 11s. 6d.-12s. to 9s. 9d.-10s. 3d. per lb.

IPECACUANHA.—At the first sale of the year 51 bales *Rio* root were shown and held for 5s. 9d. to 5s. 10d. per lb., these prices being then above the ideas of buyers. At the last sale of the year 7s. to 7s. 2d. per lb. was readily paid, and higher prices up to 7s. 6d. have since been realised. *Carthagena* sold at the commencement of the year at 4s. 2d., present value being now about 6s. 3d. to 6s. 6d. per lb.

LITHIA.—Price of the *carbonate* has risen from about 9s. 6d., the figure which was ruling in January, to 10s. 8d. to 11s. per lb., the *citrate* being also dearer.

MENTHOL—Opened the year with a value of 7s. 9d. per lb. on the spot, since which the article has touched a considerably lower figure, closing the year, however, at about same price as at the commencement.

MERCURIALS—Are practically unchanged in price on the year at 2s. 2d. to 2s. 5d. per lb. for *Corrosive sublimate* and 2s. 6d. to 2s. 9d. per lb. for *Calomel*.

MORPHIA—Has fallen since beginning of the year from 5s. 3d.-5s. 6d. to 4s. 3d.-4s. 6d. per oz. for the *Hydrochlorate salt* in powder.

OPIUM—Has declined in value during past twelve months about 9d. to 1s. per lb. for some of the qualities, and somewhat more or less for other kinds, while *Persian*, on the other hand, even commands a slightly better price, in consequence of its scarcity.

PHENACETIN.—*Bayer's* article was quoted at the commencement of the year at the fancy figure of 14s. 3d. per lb. for quantity and in bulk, which figure it still commands, while the commercial article, which was quoted 5s. per lb. at beginning of the year, is now obtainable at 4s. to 4s. 3d. per lb., according to quantity and packing.

PILOCARPIN.—The course of this article has been in a persistently downward direction, and price, which was down to 65s. per oz. at commencement of 1897, after having some time previously been as high as 160s., is now quoted for quantity and in bulk as low as 22s. 6d. per oz., which is not so very much above the normal price which had ruled for some time previous to the abnormal rise in value.

PODOPHYLLIN—Was quoted early this year at the high price of 15s. to 16s. per lb., according to make. Demand having, however, become quiet, value receded to 9s. 6d. to 10s. 6d., since when, in consequence it is said of scarcity, bad yield, and high price of mandrake root, makers have again advanced their quotations to the figures ruling at the commencement of 1897.

QUICKSILVER.—At the beginning of the year importers' price was £6 12s. 6d. per

bottle; to-day they ask £6 17s. 6d. per bottle. The article is very firm, and an advance in price is thought not improbable.

QUININE—Had at the beginning of this year again reached the almost unprecedently low price of 9d. per oz., being also very weak at that reduced figure. Since then the article further receded in value, until makers quoted 7½d. per oz.; shortly afterwards an improved feeling set in and price was successively advanced to 10d., 11d., 1s. 1d., 1s. 2d., and 1s. 3d. per oz., partly in consequence of the combined action of the makers, but chiefly in sympathy with the higher prices of and active demand for the bark, since when, however, a reaction set in, and makers now quote 1s. 1d. per oz.

RESORCIN—Is cheaper; price in January was 6s. 3d. to 6s. 9d. per lb. against present quotation of 5s. 6d. to 6s. 3d. for pure *recryst.*

SACCHARIN.—The price of 36s. per lb., which was the figure at which the article was quoted at commencement of the year, remains nominally unchanged, everything now depending upon the results of the legal action which the saccharin corporation is taking, with a view to upholding and enforcing the validity of the patents, under which it claims the monopoly of the sale of the article in the United Kingdom.

SANTONINE.—This article has come down a few pence in price, present quotation for large quantity in bulk being 5s. to 5s. 6d. per lb.

SENNA.—The stocks have been drawn upon very considerably during the past twelve months, being to-day some 1600 bales less than that at the same period last year. This shortage has taken place in the *Tinnevelly* variety. Prices close therefore very firm. *Alexandrian* kinds are in oversupply except for really fine leaf, which is scarce and in demand, although nominal, price is very low at 9d. per lb.

SHELLAC.—The year opened with a dull market at 80s. per cwt. on the spot for *TN Second Orange*, but values have fallen throughout the twelve months, closing, however, firm at 65s. per cwt.

STRYCHNIA—Has risen during the year about 2d. per oz. for the *pure*, say from 1s. 11d., which was the maker's price in January last, to its present value of 2s. 1d., the *salts* having been advanced in proportion.

SULPHONAL.—Price of this article, which had remained steady at the advanced figure of 15s. to 16s. per lb, to which makers had raised their quotation at the end of 1894, has since, in consequence of outside competition, been reduced by the two principal makers, first to 7s. 9d. and then to 7s. 3d. per lb., at which latter figure it remains; makers, however, declaring that at this figure the article not only is not remunerative, but that it actually shows them a loss, and that a tangible advance in price is, therefore, only a question of time.

THYMOL—Is cheaper, to-day's value being about 6s. 6d. per lb., against 6s. 9d. to 7s. in January last.

Anent the Drug Sales, it is reported that several of the brokers are strongly in favour of holding a public sale on 6th. inst., which may therefore possibly be the case. Bank-rate remains at 3 per cent. We wish our readers a Happy and Prosperous New Year.

NEWCASTLE CHEMICAL REPORT.

DECEMBER 29, 1897.

The holidays are at present stopping business, and until the year turns, new lines on contract will scarcely be gone into. Some fair inquiries for Sulphur and Soda Ash are in calculation, but practically nothing positive is passing. Prices remain as follow:—Alkali: 52 per cent., £5 5s. Caustic Soda: 70 per cent., £7 10s. to £7 15s. Soda Crystals: 42s. 6d. to 57s. 6d. Sulphur: £5. Soda Ash: 52 per cent., £4 5s. Bleaching Powder, according to markets, £6 5s. to £7 5s. per ton.

MANCHESTER CHEMICAL REPORT.

DECEMBER 29, 1897.

Generally, heavy chemicals are unchanged, and there is a slight downward tendency in Caustic Soda, but in Ammonia Soda an advance of 5s. per ton is reported, making the price £4 2s. 6d. per ton in bags on rails. Soda Crystals are scarce, but without change in price. Brown Acetate of Lime is firm at £6 for Welsh and American delivered Manchester. There is no change in Sulphate of Copper, which is easier. Pitch continues to decline, and is as low as 16s. per ton, *f.a.s.* Ship Canal. Yellow Prussiate of Potash closes at 7d.—a farthing higher than last week. Chlorate is somewhat lower, but Bichromate is unchanged. Glycerin, double distilled, is being advanced by makers here, and varies from 49s. to 51s., *f.o.b.*, Manchester. Sal Ammoniac: £33 per ton, firsts; and £31, seconds. Aniline Oil and Salt: 7d. and 6½d. respectively.

In regard to the chemical trade of the North, our correspondent adds the following remarks, and as they are based on observation and personal knowledge of the district, may prove of interest and value to our readers. He says: "It is difficult indeed to gauge accurately the progress or otherwise of the chemical trade of the North for the past year. While pessimists have asserted that the market for bleach and soda is in a deplorable condition, yet there are optimists who humorously assert that so long as the Chinese do not wash there is hope for the alkali trade. While the frequent reductions of wages both in Cheshire and Lancashire, coupled with the fact that bleaching powder has dropped considerably, say, 20s. per ton, point to an undesirable state of things, yet during the year there has been a perfect race between the pioneers of various new processes in the way of cheapening production. There is also the fact that the prices of miscellaneous articles cannot go lower, and as the year closes many of them show an advancing tendency. Take now a brief glance at our imports and exports during the past eleven months. The imports of chemicals, dye stuffs, etc., show a decrease of about three-quarters of a million, but this is compensated for to some extent by the exports of chemicals and medicinal preparations amounting to £7,957,214 in 1897, as against £7,513,302 in 1896. In the United States the development of the alkali trade has been very rapid. The Michigan Alkali Co. is producing 400 tons per week of high strength caustic soda, and the Matheson Company, which holds the American patent rights for the electrolytic process, is also getting to work, so that the prospect is bad for English-made stuff, and is further darkened by the action of the Dingley Tariff Bill. Parenthetically it is a question still whether the progress of the electrolytic processes will be as rapid as some people think, and in this respect experts are manifestly divided in their views.

LIVERPOOL REPORT.

DECEMBER 29, 1897.

In consequence of the holidays business has been limited without material alterations to report as regards prices, which are those of last week.

CANARY SEED.—150 bags of Turkish are reported sold at 26s. per 464 lbs.

CASTOR SEED.—564 bags of Maranham sold at auction for 10s. per cwt.

FŒNUGREC SEED.—100 bags of Egyptian sold privately, ex quay, at 9s. 1½d. per cwt.

LINSEED—Continues firm, with little offering and no sales to report.

OILS.—*Castor*:—Both French and Calcutta are selling steadily at 3⅝d. to 3⅜d. per lb. *Olive* is selling at late rates in small amount. *Linseed oil* of Liverpool makes is firm at the unaltered rate of 16s. to 16s. 6d. per cwt. *Cottonseed oil* is quiet at the easy rate of 14s. 6d. to 15s. 3d. per cwt. *Spirits of turpentine* is offered at 24s. 3d. to 24s. 6d. per cwt., but there is not much inquiry.

POTASHES—Are in retail demand at 19s. 6d. per cwt.

PEARLASH—Is quiet at 30s. per cwt.

SODA NITRATE—Is steadily selling at 7s. 6d. to 7s. 9d. per cwt.

SATURDAY, JANUARY 1.

ROYAL INSTITUTION, at 3 p.m.
"The Principles of the Electric Telegraph," by Professor Oliver Lodge. (Lecture III., Land Telegraphy. Lectures IV., V., and VI. will be given on January 4, 6, and 8.)

MONDAY, JANUARY 3.

SOCIETY OF CHEMICAL INDUSTRY, at 8 p.m.
"Standard Methods of Tanning Analysis as adopted by the International Association of Leather Trades Chemists, with remarks thereon," by Professor H. R. Procter and Dr. J. G. Parker.
"Extraction of Tanning Materials at Various Temperatures," by Dr. J. G. Parker.
"Neatsfoot Oil," by Messrs. J. H. Coste and E. J. Parry.

TUESDAY, JANUARY 4.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.
"Vegetable Thieves and Murderers," by W. West.

THURSDAY, JANUARY 6.

PHARMACEUTICAL SOCIETY, at 12 noon.
Meeting of Council.
MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.
Second Annual Ball.

FRIDAY, JANUARY 7.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
Municipal Election. (Candidates: Messrs. Tavendale, F. Milne, and Murray.)
SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
"Respiration in Animal and Vegetable Organisms" (illustrated), by Cyril Carr.

EXCHANGE Offers & Wants

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern, gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Books.

Will post 'Chemist and Druggist' every Monday in exchange for 'Pharmaceutical Journal,' posted same day, commencing with issue for January 1, 1898.—Enness, Chemist, Wandsworth, S.W.

WANTED.

10s. offered for 'British Medical Journal' for 1898, posted week after publication.—Herbert J. Whittaker, 37, Camden Street, Belfast.

Wanted.—Upright Counter Case, mahogany, about 2¾ ft. high, about 6 ft. long.—McGibbon, Wathon-Dearne.

Wanted.—Pharmacopœia, English and foreign, earlier than 1820.—Williams and Norgate, 14, Henrietta Street, Covent Garden, London.

Wanted.—Chemical and physical apparatus, balances, batteries, etc.—"Cervix," 'Pharm. Journ.' Office, 5, Serle Street, London, W.C.

Fittings, fixtures, utensils, etc.; must be good; cash prices free on rail.—Balchin's Pharmacy, Gosport.

GENERAL INDEX to the PHARMACEUTICAL JOURNAL

A general index to the "**Pharmaceutical Journal**" for the seventeen years ending June 29, 1895—including volumes IX. to XXV. of the 3rd series—will be printed by subscription if a sufficient number of orders are received. The subscription price will not exceed one guinea and may be considerably less if a large number of orders are sent in, as it is not desired to do more than cover the cost of production. A suitable order form is appended for the convenience of intending subscribers.

SPECIAL NOTICE.—If the work is to be proceeded with, it is necessary that orders should be sent without delay to the

Editorial Department, "PHARMACEUTICAL JOURNAL,"

17, Bloomsbury Square, London, W.C.

ORDER FORM.

Please add my name to the list of subscribers for the proposed General Index to the "**Pharmaceutical Journal,**" *to be published at a price not exceeding one guinea.*

Name.....

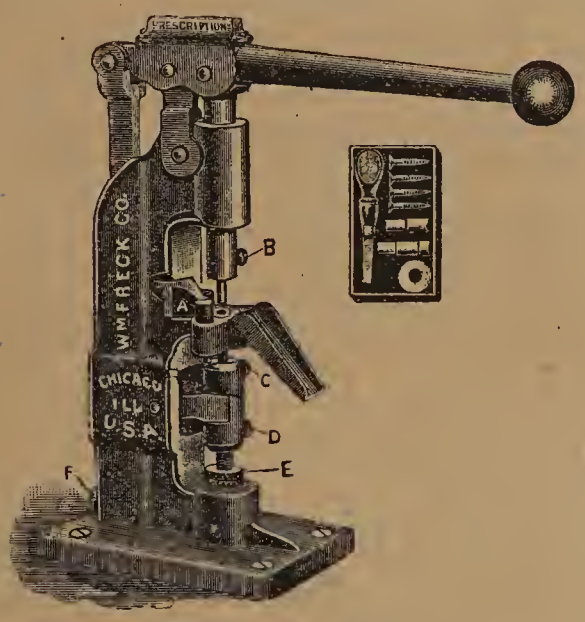
Address.....

Date..... *Number of Copies required*.....

NEW IDEAS & TRADE NOTES

PRESCRIPTION TABLET MACHINE.

MESSRS. S. MAW, SON & THOMPSON, London, furnish particulars of the Freck prescription tablet machine, which has been especially designed for dispensing medicines in tablet form and also for making compressed tablets for general demand. It is claimed to have the same advantages as the best high-priced manufacturing machines, and large quantities of tablets can be made by its aid with ease; its capacity being given as 25,000 tablets per day. The powder or material to be made into tablets is put into the feeder or funnel, and the feeder moved over the die, which is filled automatically; the feeder is moved back, the lever brought down, compressing the powder, the lever raised again at the same time that the lower compressor in the die is raised, bringing the perfect-shaped tablet to the surface, whence it is discharged through the spout by the sweeping motion of the feeder. All these various movements are accomplished by once lowering and raising the lever, in addition to moving the feeder. The lower



compressor is adjustable by means of screw for making tablets of various thicknesses, and if once set, will make tablets of perfect uniform weight; it is also adjustable so that it will stop exactly even with the surface of the die, no matter how deep it recedes into it. Each machine has two sets of dies and compressors, making tablets of 9/32 and 3/8ths of an inch diameter respectively, of any required thickness, and from 1/2 to 10 grains in weight. Additional sets in sizes of 3/16ths, 7/32, 1/4, 5/16ths, 7/16ths, and 1/2 inch can be obtained. The dies and compressors can be changed quickly and easily, and for making large quantities of tablets, a funnel is fastened on the feeder. One pound of pressure on the lever is claimed to give ten pounds of pressure on the tablet, and the latter can be made as hard or soft as desired. The machine is 12½ inches high, occupies 4×6 inches of counter or shelf space, and weighs twelve pounds. The price of it is fifty shillings.

CONCENTRATED NOURISHMENT.

OXINE is an extract of beef and vegetables, devised with the view of avoiding the defects of meat extracts that contain little or no real nourishment, and are as a matter of fact not much more than stimulants. It is supplied in tablets (6*d.* each), each of which makes one pint of beef-tea, in 2, 4, 8, and 16-oz. jars, containing a product of half that strength; also in skins and in the form of lozenges. Prof. Meldola, in his report on OXINE, states that "as far as chemical analysis can throw light on the nutritive value of animal and vegetable preparations, the results are highly satisfactory. The total quantity of nitrogen contained in the solid material, and the proportion of this element present in an assimilable form, is greater than in any other product of a similar character of which the composition has been made known. So also the mineral constituent or ash contains all the necessary salts for human requirements. The albuminoids are present in a soluble and easily digestible condition, and the preparations are thus eminently fitted for nutritive purposes in cases where weakness of the digestive system prohibits the use of solid food."

PHARMACEUTICAL ENTERPRISE.

MESSRS. WRIGHT, LAYMAN & UMNEY send a very neat and interesting publication giving a short account of the various departments of their business. A perusal of this clearly indicates an earnest endeavour on the part of the firm to keep abreast with the modern and more scientific requirements of the business of pharmacy. Views are included of the firm's warehouses in Southwark Street, the storage warehouse, Union Hall, Boro', S.E., the general offices, despatch department (home trade), export packing department, "wet" floor, drug mills, manufacturing laboratory, distillation department, vacuum apparatus, analytical and research laboratory, pill and tablet department, medicinal and toilet soap manufacturing department, soap and fancy goods packing department, engine and boiler house. All the illustrations are well printed from excellent process blocks, and the result is highly creditable to the firm.

Coming Pharmacy Balls.

WEDNESDAY, JANUARY 19.

CHEMISTS' BALL, at the Portman Rooms, Baker Street, London, W. Hon. Sec.: W. Warren, 24, Russell Street, Covent Garden, London, W.C.

THURSDAY, JANUARY 20.

MIDLAND PHARMACEUTICAL ASSOCIATION BALL, at the Grosvenor Rooms, Grand Hotel, Birmingham. Hon. Sec.: H. S. Shorthouse, 144, Edmund Street, Birmingham.

EDINBURGH CHEMISTS' BALL, at the Freemasons' Hall, George Street, at 9 p.m. Hon. Sec.: Rea I. McDougall, 1, Gladstone Place, Leith, from whom tickets (15*s.* each) can be obtained.

WEDNESDAY, FEBRUARY 9.

JUNIOR PHARMACY BALL, at the Portman Rooms, Baker Street, London, W. Hon. Sec.: W. J. Henson, Beulah Hill, London, S.E.

NEWS IN BRIEF

THE DUNDEE CHEMISTS' ASSISTANTS AND APPRENTICES held their annual social in the Queen's Hotel on Monday, January 3. There was a very good attendance, and Mr. R. M. Lindsay, who presided, dealt briefly with the chief features in connection with current pharmaceutical politics, and congratulated the master chemists on having such a fine body of assistants and apprentices as were present that evening. A vote of thanks to the Chairman terminated a very pleasant gathering.

THE LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY will hold its eighth annual dinner on Thursday, January 13, at the Bee Hotel, Queen's Square, Liverpool, at 8.15 p.m. Tickets, 3*s.* 6*d.* each, can be had from the Hon. Sec., Mr. J. Harris Burns, 87, Bold Street, Liverpool, or from members of the Council.

PHARMACOGRAPHY IN 1897.—Two obvious printer's errors were overlooked by the author of this article in correcting the proof supplied to him. On page 15, column 2, line 21, "Mitzpflanzen" should be "Nutzpflanzen," and on line 23 "West" should read "East." The name of Sir Joseph Hooker was also inadvertently associated with the 'Icones Plantarum.' He has had no connection with that work for some years past.

COMPLIMENTARY BANQUET TO THE LORD MAYOR OF MANCHESTER. — Mr. Harry Kemp, the Hon. Secretary to the Banquet Committee, desires us to say that as two or three instances have come to his knowledge where chemists in the district, either through his fault or that of the postal authorities, have not received any circular respecting this function, he will be glad if any others similarly treated, and who may wish to be present on January 26, will at once communicate with him.

MR. T. DONALD WATSON has accepted the Secretaryship of the Formalin Hygienic Co., Ltd., 9 and 10, St. Mary-at-Hill, E.C., and is no longer connected with the firm of Messrs. Fuerst, Bros., Philpot Lane, E.C.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.—On Tuesday, January 4, Mr. Wm. West, F.L.S., gave an interesting lecture, entitled "Vegetable Thieves and Murderers," before a moderate attendance of members at the Great Northern Victoria Hotel. Describing first the foods necessary for building up plants and how obtained and assimilated, the lecturer proceeded to explain the many varieties of vegetable life which obtained their nourishment, either partially or wholly, from sources outside themselves. Several illustrations were thrown on a large screen, not only of examples in this country, but of others in various parts of the world. The lecture was greatly enjoyed by an attentive and appreciative audience.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

JANUARY 6, 1898.

The past week, while quite fulfilling any reasonable expectations in this direction, has hardly yet brought a full revival of business after the New Year holidays, while the changes which have taken place have been of minor importance. Acid Citric is weaker. Acid Tartaric and Cream of Tartar steady. Iodine and Iodides, Bromine and Bromides, Quicksilver and Mercurials all firm at unchanged values. Cod-liver Oil dull and weak. Glycerin quiet. A better feeling appears to prevail respecting Quininc, without, however, having so far led to any change in price. Santonin lower. Cascara Sagrada decidedly dearer, and fully expected to further advance. Acid Carbolic dull. Lithia Salts firm. Bismuth unchanged. Codeia steady. Opium and Morphia very quiet. Cocaine, Sulphonal, and Phenacetin without change. English makers reduced their price for refined Camphor, as was anticipated. Shellac firmer. Cubebs and Oil of Cubebs dearer. Colocynth very firm. The following are prices actually ruling for articles of chief interest :—

ACID BORACIC—Unchanged at 24s. per cwt. for *crystals* and 25s. per cwt. for *powder*.

ACID CARBOLIC—Has been rather dull at 7d. per lb. for the 35-36° C. *ice crystal* in large packing, price of other qualities and packing being in proportion, say 7½d. for 39-40° C. *ice crystals*, and 8½d. for 39-40° C. *detached crystals* in larger bulk ; *crude* 60° F. 2s. per gallon ; 75° F. 2s. 5d. ; *liquid* 95 per cent. of pale straw colour 1s. 2d. to 1s. 3d. per gallon in 40 gallon casks.

ACID CITRIC—Is lower at 12½d. to 1s. 1d. per lb. according to make. It is thought that this article has now touched rock bottom, and that an early upward movement is not improbable.

ACID TARTARIC.—Steady at 1s. 1d. to 1s. 1½d. per lb. for *English* and 12½d. per lb. for *foreign* crystals.

AMMONIA COMPOUNDS.—*Sulphate* is very firm ; grey prompt 24 per cent., London, £9 2s. 6d. to £9 5s. per ton. *Chloride* unchanged at 23s. 6d. to 25s. 6d. per cwt. for the 98 per cent. *Bromide* steady at 2s. 2d. per lb. *Nitrate* firm at 40s. per cwt. *Sulphocyanide* : 1s. to 1s. 1½d. per lb. according to quantity. *Iodide* steady at 14s. 6d. per lb.

ATROPIA.—Price of this article is fully maintained at 12s. 6d. for the *Sulphate* and 2s. 6d. per oz. more for the *pure*.

BISMUTH.—So far no change has taken place in the price of this article, which remains at 5s. for the *metal*, and 4s. 10d. per lb. for the *subnitrate* in 5-cwt. lots.

BLEACHING POWDER—Steady at £7 per ton on the spot.

BORAX—Quiet and unchanged ; *crystals*, 14s. per cwt. ; *powder*, 14s. 6d. per cwt.

CAMPHOR—*Crude* : Business in this article is slow, although nominal quotations are higher at 87s. 6d. per cwt., *c.i.f.*, for *China* and 91s., *c.i.f.*, for *Japan*.

CAMPHOR (REFINED).—As anticipated, the English makers reduced their prices on the 1st inst. to 1s. 3½d. per lb. for bells and ½ and 1-lb. blocks and for flowers, and th usual differences for the smaller blocks.

CARDAMOMS. — About 150 cases were offered by auction to-day, part of these being without reserve, as damaged by fire and water *ex* the "Kawachi Maru" s.s. The damaged portion sold well at 1s. 9d. to 1s. 11d. per lb., whilst for good bold pale *Mysores* 3s. 9d. to 3s. 10d. per lb. was paid. Good *decorticated* realised 3s. 6d. per lb., which was rather less than was paid at the December auctions. One lot *Malabar* sold at 3s. per lb., being also easier.

CASCARA SAGRADA—Is much firmer, nearest quotation being about 22s. 6d. per cwt. *c.i.f.* It would, however, be difficult to buy much even at this price, while much higher prices are confidently anticipated in the near future. One firm has received instructions to at once ship back to New York on arrival here between 40 and 50 tons of the article, now *en route* for this country—a fact which speaks for itself.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* : 2s. 1d. per gallon. *Benzole* : 50 per cent., 1s. 9d. ; 90 per cent., 1s. 6d. *Crude Naphtha* : 30 per cent. at 120° C., 10d. *Solvent Naphtha* : 95 per cent. at 160° C., 1s. 11d. per gallon ; 90 per cent. at 160° C., 1s. 8d. ; 90 per cent. at 160° C., 1s. 5d. per gallon.

COCAINE—Is quiet at late quotations, makers still asking 10s. 6d. to 10s. 9d. per oz. for 100-oz. lots, while there are still a few second-hand holders who would accept somewhat less. Present price is still extremely low, and, in view of the possibility of a further advance in value, many buyers are keeping full stocks.

COCOA BUTTER.—At the monthly auctions on Tuesday 30 tons Cadbury's make sold at again lower prices, the average being 9⅝d. per lb., as against 10½d. per lb. last month and 11⅞d. per lb. at the November sale.

CODEIA—Steady at unchanged value, say, 11s. 3d. to 11s. 9d. per oz., according to quantity.

COD-LIVER OIL. — There is not much doing in this article, quotation being 62s. 6d. to 65s. per barrel for best non-freezing Norwegian. Stocks on the other side are said to be considerable, and there will probably be a pressure to sell before the advent of the new season's oil.

COLOCYNTH.—The crop of *Syrian* is said to be small this year, and the stock in first hands a few cases only. Business has been done this week at 1s. 2d. per lb. for fair apple, and 1s. 3d. per lb. is now asked. For new crop more money is asked, and only very moderate quantities appear to be available.

CREAM OF TARTAR—Very firm at 75s. 6d. for first white French *crystals* on the spot ; *powder*, 78s. to 79s. per cwt.

CUBEBS—Are strongly held by importers at a nominal value of 35s. per cwt., but it would probably be difficult to buy much at this price.

FERRI ET AMMON. CIT.—In sympathy with lower quotations for citric acid this has been reduced to 1s. 1½d. per lb.

GLYCERIN.—So far there has not been much doing this year in this article, price of which remains 52s. 6d. to 57s. 6d. per cwt., according to quantity and brand, for the best white double-distilled chemically-pure 1·260 quality in tins and cases.

HELLEBORE ROOT—Has been in demand during the past ten days, it is said, for shipto the United States, and it appears impossible now to find any stocks, either here or on the Continent, except in the form of powder, for which quotations range from 25s. to 45s. per cwt., according to holder and purity.

JAPAN WAX—Is slow of sale at 37s. per cwt. on the spot, whilst for arrival 33s. per cwt., *c.i.f.*, is the latest quotation.

KAVA KAVA—Is dearer at 9d. per lb.

LITHIA—Remains firm at the late advance to 10s. 8d. to 11s. per lb. for the *carbonate*, and 6s. 4d. to 6s. 8d. for the *citrate powder*, and in view of the fact that the article appears to be now completely controlled by the two makers, it would appear that price will be fully upheld.

MENTHOL—Is quiet but steady at 7s. 6d. to 8s. per lb. according to quantity, both on spot and for arrival.

MERCURIALS—Are unchanged at 2s. 6d. to 2s. 9d. per lb. for *Calomel* and 2s. 2d. to 2s. 5d. per lb. for *Corrosive sublimate*.

MORPHIA.—Very quiet, price of the *Hydrochlorate* powder being 4s. 3d. to 4s. 6d. per oz. for quantity.

OILS (ESSENTIAL).—*Cubebs* is dearer at 4s. 6d. per lb. *Pimento* is also dearer at 13s. per lb. for English. *Lemongrass* is very scarce, last price paid being 10d. per oz., and some holders now ask 1s. per lb. *Peppermint* : H.G.H. continues weak for arrival at about 5s. 4½d. per lb., *c.i.f.* terms. *Cajuput* is very scarce, and 4s. 9d. per bottle is asked. *Star Aniseed* is very dull without change, which may also be said of *Cassia*. *Bergamot* is easier at 6s. 9d. to 7s. per lb. *Lemon* is also easier at 3s. 3d. to 3s. 4d. per lb.

OILS (FIXED) AND SPIRITS.—*Linseed* is firm at £4 17s. 6d. for pipes on the spot, and £15 7s. 6d. for barrels same position. *Rape* steady ; ordinary brown on spot £24 10s. ; refined spot £26. *Cotton* steady ; crude spot £12 10s. ; refined £13 17s. 6d. to £14 7s. 6d., according to make. *Olive* unchanged at £32 for Spanish, £31 10s. to £33 for Levant. *Cocoanut* : Ceylon on the spot £22 10s. *Cochin*, £28. *Palm* : Lagos on the spot £23. *Turpentine* : Steady. American spot 23s. 7½d., per cwt. *Petroleum* : Unchanged. *Russian* spot 4⅝d. per gallon. *American* 4½d. per gallon. *Water white*

5¾d. *Petroleum Spirit*: American 6d.; deodorised 6¼d. per gallon.

OPIUM—Remains unchanged with but little doing in the article.

ORANGE PEEL.—The new crop still commands a fairly ready sale at 1s. per lb. for thin cut, whilst old crop is to be had at 5d. to 8d. per lb. as to condition.

PHENACETIN—Is quiet at 4s. to 4s. 3d. for both *crystals* and *powder* in quantity and bulk packing.

POTASH COMPOUNDS.—*Chlorate* rather firmer at 3¾d. per lb. on the spot. *Citrate* is lower at 1s. 1½d. per lb. in sympathy with the reduced price of citric acid. *Bromide* steady at 1s. 10d. per lb. for ordinary quantities less than 1 cwt. *Iodide* in good demand at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bicarbonate* steady at 30s. per cwt. for crystal or powder in large bulk. *Permanganate* is weak at 65s. per cwt. for small, and 70s. for large crystals. *Prussiate*: *Yellow* quiet at 6½d. per lb., *red* 1s. 1d. per lb.

QUICKSILVER—Unchanged at £6 17s. 6d. per bottle from first hands, and 6d. less from second-hand holders.

QUININE.—A decidedly better feeling prevails respecting this article, and while makers' price is still 1s. 1d. per oz., it is doubtful whether they would accept any very large orders at this figure. The price from second-hand is nominally still 12½d., but there are few sellers, the larger second-hand holders appearing to have very decided ideas as to the future of the article. It is further reported that the holders of bark in Amsterdam have decided to offer only a limited moderate quantity in next and following sales. In some quarters the idea appears to prevail that Quinine not only will not be cheaper but that we may very likely see tangibly higher prices in the not too distant future.

SAFFRON.—Market appears now to be in such a position that an upward turn may come at any moment. Genuine *Valencia* is quoted at 35s. to 40s. per lb., whilst *Alicante* is to be had at 22s. 6d. to 27s. 6d. per lb., according to quality and quantity.

SEIDLITZ POWDER.—Messrs. Howards have reduced their price to 60s. 3d. per cwt.

SANTONIN.—The two principal makers of this article have reduced their price, which is now 4s. 11d. per lb. for smaller quantity down to 4s. 5¼d. for 3-cwt. lots taken in one delivery. The object of this reduction would appear to be with a view to driving out of the field or at least discouraging one or two other smaller makers who have hitherto been underselling. It is, however, reported that so far the reduction has been without effect, and that underselling is still going on, which might mean the possibility of a still further reduction in the price of this article.

SHELLAC.—The shipments for December just to hand proved to be much smaller than anticipated, and more firmness has been given to the market, prices closing dearer. At the auctions on Tuesday unusually small supplies were catalogued, and although bids showing an advance of fully 3s. per cwt. on last sale's rates were made, holders were extremely firm, and nearly the whole was bought in. A few cases basis *TN* sold at 65s. per cwt. A total of 500 cases offered and 31 cases sold. *Second Orange*: of 336 cases 25 sold, fair to good bright curly at 64s. to 66s., good pale lemony *PM* in double triangle bought in at 84s., and fair bright curly *BRO* in diamond little matted at 70s. *Button*: of 164 cases 6 sold, ordinary mixed firsts at 73s.; the remainder bought in, *BL* 2 at 70s., and circle 2's at 65s. to 67s. Since the sales about 200 cases *Second Orange* have been sold; fair to good bright at 65s. to 68s. per cwt. The shipments from Calcutta (per "Reuter") to the United Kingdom were for the last half of December 2600 cwt., making 6700 cwt. for the month, against 14,800 cwt. last year; and to the United States for the last half of December 1200 cwt., making 4200 cwt. for the month, against 5000 cwt. last year. To the Continent the shipments were 3200 cwt., making 5900 cwt. for the whole month, against 4400 last year.

SODA COMPOUNDS.—*Crystals* steady at 55s. per ton ex-ship terms. *Nitrate*: Refined on the spot £7 15s. per ton. *Bicarbonate* steady at £7 10s. to £7 15s. for the commercial 98 per cent., and 18s. 6d. per cwt. for the fully bicarbonated. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* firm at 11s. 7d. per lb. *Sulphite* 17s. 6d. per cwt for ordinary crystals, and 22s. 6d. per cwt for recryst.

SODA TARTARATA—Has been reduced to 68s. to 71s. per cwt. according to quantity and packing.

SPICES (VARIOUS).—Zanzibar *Cloves* are steady, with business at 3 1/2d. to 3 5/8d. for January to March, and 3 5/8d. for March to May. *Black Pepper*: Small sales of Singapore at 3⅞d. for spot, and moderate business for arrival at 4 1/2d. to 4 5/8d. *White Pepper* r Penang April to May delivery, 6½d.; Singapore February to April steamer, 7¼d. *Cassia ltgnea*: Quiet, but steady at 46s. 6d. to 47s.

SULPHATE OF COPPER.—Slow of sale at £15 5s. to £16 10s. per ton according to make and quantity.

SULPHONAL—Remains in *statu quo*, the two makers still selling at 7s. 3d. per lb., which is less than half the price which they were asking twelve months ago.

LIVERPOOL REPORT.

JANUARY 5, 1898.

AMMONIUM SALTS.—Carbonate is still somewhat scarce at 3d. per lb. Sal ammoniac is said to be about to increase in price 33s. and 31s. per cwt. Sulphate continues a firm market, £9 2s. 6d. to £9 3s. 9d. per ton.

BEESWAX.—20 packages of Gambia were sold at £6 5s. to £6 7s. 6d. per cwt.

BLEACHING POWDER—Is dull at £5 12s. 6d. to £6 5s. per ton.

CANARYSEED—Continues flat. The only sales reported are 50 bags of Turkish at 26s. per 464 lbs. and 200 bags of Spanish for shipment at 32s. 9d. per 464 lbs.

CASTOR SEED.—124 bags Maranham found buyers at 10s. per cwt.

COPPERAS—Is extremely firmly held at 39s. per ton for Lancashire, and 37s. for Welsh.

COPPER SULPHATE—Is a shade dearer on the spot for prompt shipment; £16 per ton.

GUM ARABIC.—A large import of Brazilian gum will shortly come on this market.

HONEY.—150 barrels Chilian Pile X sold at 26s. per cwt.

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns

LINSEED—Is very scarce and dear; 600 bags of Trebizonde sold at 35s. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor oils* are in fair demand at the firmly maintained price of 3⅝d. to 3¾d. per lb. for both Calcutta "good seconds" and French first pressure. *Olive oils* have only been selling in retail amount at extreme prices. *Linseed oil* of Liverpool make keeps its price up well, 16s. to 16s. 6d. per cwt., but the transactions are for this week unimportant. *Cottonseed Oil* is very flat for Liverpool refined, which is quoted at 14s. 6d. to 15s. 3d. per cwt. *Spirit of Turpentine* is firmly held for 24s. 3d. to 24s. 6d., but inquiry is small.

POTASH SALTS.—*Bichromate*: 4½d. per lb. *Chlorate*: 3½d. per lb. *Cream of Tartar* is at 75s. to 76s. per cwt. for best white, but is neglected. *Pearlashes*: 30s. per cwt. *Potashes* are in better inquiry at 19s. 6d. per cwt. *Saltpetre*: 21s. 6d. per cwt.

SODA SALTS.—*Bicarbonate*: £6 15s. per ton. *Borax*: £13 10s. per ton. *Caustic*: 76 per cent. to 77 per cent., £8 15s. per ton; 70 per cent., £7 5s.; and 60 per cent., £6 5s. *Crystals*: Firm at £2 17s. 6d. per ton.

MANCHESTER CHEMICAL REPORT.

JANUARY 5, 1898

The market has not yet recovered its wonted activity after the holidays, and business is of a very "hand to mouth" character. Sulphur and Soda Ash continue firm, but Bleaching Powder is dull at £5 to £5 5s. per ton, softwood casks on rails. Brown acetate of lime varies from £5 15s. to £6 per ton, Welsh and American both delivered Manchester. Sulphate of Ammonia is firmer at £8 17s. 6d. per ton, on rails Lancashire. Ammonia Alkali 58 per cent. is quoted £4 per ton in bags, on rails. Pitch continues dull, but there is a prospect of a revival shortly. Green Copperas is unchanged, and makers of Lancashire are well sold forward. Glycerin is again slightly higher locally. Cresote is easy at 2¼d. Naphthas in slightly more request. Yellow Prussiate unchanged at 7d. per lb. best local make. Sulphate of Copper £16 10s. to £17 per ton, best brands delivered Manchester. Aniline Oil and Salts 6¾d. and 6¼d. respectively.

NEWCASTLE CHEMICAL REPORT.

JANUARY 5, 1898

Contracts made usually at this time of the year with the paper makers show little or no change in values. The trade moves slowly, and with the exception of Sulphur, which keeps scarce, late prices continue to rule, as follow:—Bleaching Powder, £6 5s. to £7 5s. Soda Crystals: 42s. 6d. to 57s. 6d., according to markets. Caustic Soda: 70 per cent., £7 10s. to £7 15s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £5 per ton.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Arthur E. Pownall & Alfred A. Mumford, Physicians and Surgeons, Chorlton-cum-Hardy, Lancaster.

C. F. Slater, S. R. Slater, & Fredk. Crossley (trading as Slater Brothers & Crossley), Manufacturers of Surgical Appliances and Electrical Apparatus, 20, Baker Street. Debts will be received and paid by C. F. Slater & S. R. Slater.

Oswald H. Edwards & David Donelly, Physicians and Surgeons, Mersey Road and Sims Cross, Widnes, Lancaster.

Henry Sanderson & James R. Windmill (trading as Sanderson & Co.), Mineral Water Manufacturers, John Street, West Bromwich. Debts will be received and paid by Henry Sanderson.

Jonathan Pollard and J. W. B. Winter (trading as J. Pollard and Co.), Chemists and Druggists, 3, Woolshops, Halifax. Debts will be received and paid by Jonathan Pollard.

W. E. Barton and G. Colley March, Physicians, Surgeons, etc., Staunton-on-Wye, Hereford. Debts will be received and paid by W. E. Barton, who will carry on the practice.

Albert Wheatley and Thomas Stainton (trading as Wheatley and Son), Veterinary Surgeons, Friar Street, Reading. Debts will be received and paid by Albert Wheatley.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

Wilkinson and Spencer, Mineral Water Manufacturers, 70A, Heap Lane, Bradford.

Oscar Wall (trading as Wall and Co.), Chemist and Druggist, late of 35, Renshaw Street, Chorlton-on-Medlock, Manchester. Now out of business and residing at 61, Duke Street, Rusholme, Manchester.

DIARY FOR THE WEEK.

SATURDAY, JANUARY 8.

ROYAL INSTITUTION, at 3 p.m.
"The Principles of the Electric Telegraph," by Professor Oliver Lodge. (Lecture VI., Space Telegraphy).

TUESDAY, JANUARY 11.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9 p.m.
Short Papers by Members.

WEDNESDAY, JANUARY 12.

PHARMACEUTICAL SOCIETY.
Council Meeting at 11 a.m.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY at 8.30 p.m.
"The Proposed New Pharmacy Bill," by Geo. Squire (President).

THURSDAY, JANUARY 13.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, at 8.15 p.m.
Annual Dinner. (Bee Hotel, Queen's Square.)

NORTH STAFFORDSHIRE AND DISTRICT CHEMISTS' ASSOCIATION, at 7 p.m.
Discussion on the New Pharmacy Bill, followed by a Supper and Social Evening.

FRIDAY, JANUARY 14.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
"Heat," by R. Glegg.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
Open Meeting, Arrangements by William Duncan.

LATE ADVERTISEMENTS.

Engagements Wanted.

LONDON.—Junior seeks day or evening engagement. 23. Good references. S.W., "Pharm. Journal" Office, 5, Serle St.

PERMANENT or TEMPORARY. Experienced. Qualified. BORAX, "Pharm. Journal" Office, 5, Serle St., W.C.

Assistant Wanted.

CAPE COLONY.—A qualified ASSISTANT wanted, of good address, age 25 to 30, for an old-established high-class business. Passage paid out, under a three years' agreement. Apply by letter to GOOD HOPE, "Pharm. Journal" Office, 5, Serle St., London, W.C.

EXCHANGE—OFFERS AND WANTS.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Microscope by Crouch; 2 objectives, 1 in. and ⅛ in., in mahogany case; suitable for Minor or Major work. Also Vine's 'Botany' (new).—Apply "Micro," 28, Gracechurch Street, City.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern, gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

WANTED.

Wanted.—Pharmacopœia, English and foreign, earlier than 1820.—Williams and Norgate, 14, Henrietta Street, Covent Garden, London.

Microscope, Students'.—Wanted to hire for three months.—Apply, with terms, which must be moderate, to C., 17, The Avenue, Bedford Park, Chiswick, W.

Wanted for cash, old electric lamps and scrap platinum.—P. Rowsell, 14, Walcot Square, Lambeth, S.E.

NEWS & TRADE NOTES

CAMWAL CALENDARS FOR 1898.

Two very neat folding pocket calendars are published by Camwal, Ltd. On the outsides are four coloured sketches (two on each calendar) illustrating the use of syphons (1) in the sickroom, (2) at card parties, (3) at picnics, (4) on the dinner table. Inside of each folding card is a complete calendar for 1898, and a space is reserved for the distributing chemist's name and address. It may be mentioned that the calendars are not "printed in Germany."

EXTRACT OF MEAT.

THE LIEBIG'S EXTRACT OF MEAT COMPANY, LTD., intimate that at a board meeting held on Friday, January 7, it was resolved to declare a half-yearly interim dividend of 5 per cent., the same as last year, being twenty shillings per share free of income tax, payable on and after February 15 next to the proprietors registered in the company's books on February 8 and to holders of share warrants to bearer.

AN HISTORICAL ALMANAC.

MR. JOSEPH H. WATSON, chemist and druggist, Shipley (Yorks), sends a very interesting historical almanac replete with entertaining literary matter. It also gives postal and other information respecting the Shipley Urban District Council, Fire Brigade, Poor Law Officers, West Riding Police, Inland Revenue Officers, Shipley School Board, the Institute, etc.

HOLLOWAY'S COCA WINE.

This preparation, which is said to invigorate the nerves, restore brain power, remove sleeplessness, prevent fatigue, and prolong life, may or may not be all that the makers claim in those respects, but it is certainly a palatable beverage, and possesses just sufficient of the coca flavour to be agreeable. It might therefore be thought to recommend itself so strongly that no effort would be required to sell it. The makers, however, are not content to rest on the undoubted merits of the preparation, for they intimate that doctors' samples are supplied free to agents, while the Holloway's Coca Wine Co. pays—on £15 assorted orders of coca, Liebig's extract meat and malt wine and invalid port—for the licence required to sell; and supplies books on "Nerve Worry," with the agents' names printed on free. More than this, they advertise their goods in the local papers. It is claimed that this is the best paying medicinal wine agency there is, on account of the low sale prices—1*s.* 6*d.* and 2*s.* 9*d.* respectively—and the discount to the trade—33⅓ per cent. and 2½ per cent. monthly. Being members of the P.A.T.A. the makers will not allow their coca wine to be cut below 1*s.* 4½*d.* or 2*s.* 6*d.* per bottle.

BACTERIOLOGICAL LABORATORY.

MESSRS. SOUTHALL, BROS. & BARCLAY, BIRMINGHAM, intimate that they have opened a new bacteriological laboratory in connection with their establishment. They are sending out circulars giving a scale of charges and pointing out the importance of the bacteriological examination of water and milk, besides giving instructions for taking samples.

NEWS IN BRIEF

AN EVENING MEETING of the Pharmaceutical Society (North British Branch) will be held at 36, York Place, Edinburgh, on Wednesday, January 19, at 8.30 p.m., Mr. J. Laidlaw Ewing in the chair. A paper on "Pharmaceutical Ethics" will be read by Mr. David Storrar.

'THE QUARTERLY THERAPEUTIC REVIEW' (price 1*s.*), published by Messrs. Baiss Brothers & Co., Jewry Street, E.C., and New Brown Street, Manchester, is a useful record of new remedies and formulæ, and of special applications and preparations of medicines.

MR. J. B. TAYLOR, Ph. C., who for the last fifteen years has carried on business at 19, High Street, Bedford, under the style of Taylor & Cuthbert, announces that he has taken into partnership Mr. H. S. Brawn, a former assistant, and that in future the business will be carried on at 69a and also at 53, High Street, Bedford, under the names of Taylor & Brawn.

THE LIEBIG'S EXTRACT OF MEAT COMPANY, LTD., has removed its advertising and packing warehouses to two new buildings in Rangoon Street, Fenchurch Street, E.C.

MR. WM. JNO. HOGG, younger son of Mr. Jas. Hogg, chemist, York Street, Belfast, was successful at the second examination for the diploma M.R.C.S. (Eng.), L.R.C.P. (Lond.), the subjects of which are anatomy and physiology, which took place on 6th, 7th, and 10th inst. at the Examination Hall, Victoria Embankment.

MR. GEO. FISHER and MR. FRANK FLOOD, chemists and druggists, of Leamington Spa, have entered into partnership and purchased the business of Mr. Lamplough, at 35, Bath Street, which they intend running in conjunction with the business hitherto carried on by Mr. Fisher at 23, High Street.

THE CHEMISTS' CLUB.—The following is a list of amounts promised, up to date in connection with the reorganisation of this club:—Horace Davenport, Esq., 33, Great Russell Street, £10 10s.; Messrs. Maw, Son, & Thompson, £5 5s.; Messrs. Sanger & Sons, Winsley Street, Oxford Street, £5 5s.; Messrs. Baiss Brothers & Co., £5 5s.; Messrs. Barclays (Limited), £5 5s.; Messrs. F. Newbery & Sons, £3 3s.; Messrs. Ingram and Royale, £3 3s.; Messrs. Willows, Francis, Butler, & Ayscough, Thompson, £2 2s.; Messrs. Bowles & Co., £2 2s.; Messrs. Blondeau & Co., £2 2s.; Messrs. Kent & Sons, £2 2s.; Members of the General Committee, £10 10s.; total, £56 14s.

MESSRS. EVANS, GADD & Co. intimate that their postal addresses are now Fore Street, Exeter, and Redcliff Street, Bristol, whilst their registered telegraphic addresses are "GADD, EXETER," and "GADD, BRISTOL."

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.—A musical and social evening was held in the Exchange Restaurant on December 29, Mr. Chas. Thompson, local secretary of the Pharmaceutical Society, in the chair. The Secretary (Mr. E. Osborne) proposed Messrs. J. S. Buckley, R. D. McAllister, and J. H. Pearson as new members, and they were duly elected. The musical part of the programme was ably rendered by Messrs. S. Stephens, Smith, Woolman, Poole, Thornton, Stan Leigh, and Taylor, and was much appreciated. The Chairman spoke of the benefits to be derived from unity, and urged all Birmingham assistants to join the Association. Mr. H. Jessop proposed a vote of thanks to the artistes, and a vote of thanks to the Chairman for presiding terminated the meeting.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION BALL.—The second annual ball was held on Thursday, January 6, at the Vestry Hall, Edgbaston. The gathering was well attended, and proved a distinct success. Mr. E. Whitehead performed the duties of M.C., and was assisted by the following gentlemen as stewards:—Messrs. Jessop, Lawton, Landor, Thomas, Davis, Burton, Osborne, Bindloss, Stewart, Selby, and Gateley. Hon. Secs., Messrs. E. W. Mann and F. Casson. Dancing was continued to the music of Mr. A. Westwood's band until 2.30 a.m., when the party broke up.

MANCHESTER PHARMACEUTICAL ASSOCIATION.—An ordinary meeting of this Association will be held in the room of the Chemical Club, Victoria Hotel, on Wednesday, January 19. All connected with the trade are cordially invited to be present. The chair will be taken by Mr. G. S. Woolley, President, at 7 p.m. A paper on "Pharmaceutical Organisation" will be read by Mr. John Taylor. At the close of Mr. Taylor's paper the subject of the draft Pharmacy Bill will be introduced for discussion. Considering the importance of this Bill, it is desirable that every chemist in the district should take this opportunity of expressing his views in regard to it.

LATE ADVERTISEMENTS.

Market Report and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

January 13, 1898.

The course of business has been a little disappointing during the past week, although it is somewhat early in the year to expect things to have already got into full swing. Acid Citric would appear to be about to take a turn for the better. Cream of Tartar is firm. Acid Tartaric undecided. Quicksilver dearer, but Mercurials unchanged. Iodine and Iodides, Bromine and Bromides, without alteration, which also applies to Bismuth and Lithia Salts. Opium and Morphia very quiet. Codeia firm. Cod-liver Oil weak. Glycerin the turn harder. Quinine quiet. Ipecacuanha very firm, and looks almost like going dearer. Cannabis Indicus again dearer, as is also Sulphate of Ammonia. Borax and Acid Boracic weak and quiet. Acid Carbolic dull. Santonine steady. Shellac firm. Cascara Sagrada has advanced, much higher prices being spoken of. The following are prices ruling for some of the chief articles :—

Acid Boracic—Quiet at 24s. per cwt. for *crystals* and 25s. per cwt. for *powder*.

Acid Carbolic—Dull at 6⅞d. to 7d. per lb. for 35-36° *ice crystal* in bulk ; other qualities and packing in proportion. *Crude*: 60° F. 2s. 1d. per gallon, 75° F. 2s. 6d. ; *Liquid*, 95 per cent., of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40 gallon casks.

Acid Citric.—Whilst prices are nominally unchanged at 12½d. per lb. for ordinary and 1s. 1d. per lb. for Howard's *crystals*, the market seems to have a firmer tendency, and it would appear that the bottom has been reached.

Acid Tartaric.—There is considerable competition in this article, and *crystals* are offered as low as 12⅜d. per lb. for foreign and 1s. 1d. per lb. for English, but buyers hold off.

Acetanilide—Is weak at 1s. 2½d. to 1s. 4d. per lb., according to quantity and packing.

Ammonia Compounds.—*Sulphate* continues its upward course, and this week closes at the again dearer price of £9 10s. for gray prompt 24 per cent. London. *Muriate* is steady to rather dearer at 24s. to 26s. per cwt. for the 98 per cent. *Bromide* firm at 2s. 2d. per lb. *Nitrate* firm at 40s. per cwt. *Iodide* steady at 14s. 6d. per lb. *Sulphocyanide* 1s. to 1s. 1½d. per lb. according to quantity.

Atropine—Firm at 12s. 8d. per oz. for the *sulphate*, and 15s. for the *pure*.

Balsam Canad.—Is very firm and tending higher ; 1s. per lb. *c.i.f.* terms is asked for 3 cwt. casks.

Balsam Peru—Is firmer at 8s. 3d. to 8s. 9d. *Tolu*, good quality, is quoted at 2s. 3d. to 2s. 4d., but demand is somewhat slow.

Bismuth—Unchanged at 5s. for the *metal*, and 4s. 10d. for the *subnitrate*, for large quantity.

Bleaching Powder—Quiet and less firm at £7 per ton, ex wharf London.

Borax.—Steady at unchanged rates. *Crystals* at 14s. per cwt. ; *powder*, 14s. 6d. per cwt.

Buchu Leaves.—There appear no further shipments coming forward, and sales of fair round leaves have been made at 6d. per lb., an advance on last sales' rates.

Cannabis Indicus has been again advanced in price, good green tops to 5d. per lb., brownish and broken 4d. to 4½d. per lb. Stock is small, and further shipments seem unlikely for some time to come.

Cascara Sagrada—Is in good demand, and is steadily advancing and likely to be very much dearer in the spring. It is said by one of the principal American firms that practically none will be gathered, owing to the general exodus of the people who usually do the collecting to the Klondyke goldfields. In New York the value is above that of this market, 21s. per cwt. *c.i.f.* for new bark being asked. Here a small business was done at 21s. on the spot for old root, but now 25s. is asked, and holders are very firm.

Cinchona Bark.—For the opening sales at Amsterdam on the 20th inst. 5657 packages are catalogued. The exports from Java for the month of December were 731,000 Amsterdam lbs., against 890,000 lbs. in 1896, and 634,000 lbs. in 1895. For the twelve months the shipments were 8,511,000 Amsterdam lbs., against 10,079,000 lbs. in 1896, and 8,827,700 in 1895.

Cloves.—Only 165 bales *Zanzibar* offered at auction, and all sold at 3d. to 3¼d. ; 10 cases low dark *Penang* bought in at 4½d. Privately, *Zanzibar* are in good demand ; higher rates have ruled, and the market is very firm. Business includes spot at 3⅛d., Jan.-March delivery, 3⅛d. ; Feb.-April, 3 7/32d. ; March-May, 3¼d. ; and April-June, 3⅛d.

Coal Tar Distillation Products.—*Toluol* : 2s. *Benzole* : 50 per cent., 1s. 7½d. ; 90 per cent., 1s. 4½d. *Crude Naphtha* : 30 per cent. at 120° C., 10d. *Solvent Naphtha* : 95 per cent. at 160° C., 1s. 11d. per gallon.

Cocaine – Remains in a somewhat anomalous position, makers being firm at 10s. 3d. to 10s. 9d. per oz., according to quantity and brand, one of the manufacturers whose article is most in favour stating that they are unable to book orders at this, or in fact at any price ; while, on the other hand, second-hand holders of certain brands would probably accept tangibly less than above prices in order to effect sales. It is difficult in any way to foresee the future course of prices. It must, however, not be overlooked that same is still very low compared with those which ruled for this article not so very long ago.

Coca Leaves—Are dearer at 8d. per lb. for good green Truxillo.

Codeia—Is firm at 11s. 3d. to 11s. 9d. per oz., according to quantity.

Cod-liver Oil.—With the early approach of the 1898 oil and the large stocks left over from 1896 and 1897, prices are very weak, and it is difficult to say what would really be taken for Norwegian non-freezing quality. We think 62s. 6d. per barrel is about the nearest quotation, but there is practically no business passing.

Colocynth.—*The Oil Paint and Drug Reporter* of New York has received advices from Trieste that the market there is bare of supplies, and adds : "It looks as if something were going to happen." That "something" is evidently meant to be a rise in values, and from the appearance of our market it would seem that they are about right. There are only a few cases here to be had at 1s. 3d. per lb.

Colombo Root—Is in demand, but supplies are very short, and in view of the plague in India we fear it will still be some time before any considerable arrivals take place. Last price paid for small dusty sorts, 50s. per cwt.

Cream of Tartar—Is very firm. First white French *crystals*, 75s. 6d. per cwt. ; *powder*, 78s. to 79s. per cwt.

Damiana Leaves.—Owing to the arrival in New York of new crop, price has declined to 8d. per lb., *c.i.f.* terms. This is a considerable drop, last quotation for old crop being 1s. 6d. per lb.

Galls.—China firm but quiet at 64s. to 65s. per cwt. on the spot ; for arrival quotations are higher at 54s. 6d. to 55s. per cwt., *c.i.f.* terms.

Ginger. – Rough *Cochin* is flat, and 1552 bags offered were mostly bought in, washed rough at 20s. to 24s. Of cut kinds, 43 cases sold, medium chiefly cut but wormy at 38s. 6d. to 40s. ; B cut bought in at 75s., and fine bold 105s. 98 bags limed *Japan* bought in at 15s. ; 10 bags damaged *Bengal* sold at 12s. For *Jamaica* the demand was slow, and only 20 barrels sold ; common to good common, 70s. to 72s.

Glycerin.—Market is decidedly firmer, *crude* being £2 per ton dearer in consequence of large demand for dynamite purposes. Refined is harder, the chief English makers having advanced their price in proportion to the rise in value of crude. Best German makes are quoted 52s. 6d. to 57s. 6d. per cwt. according to quantity and brand for the best white chemically pure double distilled 1 260 quality in tins and cases.

Gum Acacia.—Market is quiet, with a small business doing at steady rates. *Picked*, £6 10s. to £14 per cwt. ; *Turkey sorts*, 80s. to 85s. per cwt. ; *Ghezorah*, very scarce and wanted ; nominal values, 37s. 6d. to 42s. 6d. per cwt.

Insect Flowers.—Market in Trieste is firm and inclined to harden. Quotations from thence come at 120s. per cwt. for *closed* flowers, 80s. per cwt. for *half-open*, and 60s. per cwt. for *open* flowers, all *c.i.f.* London.

Ipecacuanha—Is exceedingly firm, and for *Rio* nothing under 7s. 6d. per lb. can be bought, and very little even at this figure. For *Carthagena* 6s. to 6s. 3d. per lb. is named as the nominal quotation, but there

is very little stock available. The prospects for both kinds are towards even higher prices.

LITHIA—Is firm from the makers at 10s. 8d. for the *carbonate* and 6s. 8d. per lb. for the *citrate powder*. It is, however, possible to buy somewhat below these prices from second-hand holders who were fortunate enough to secure a supply before the late advance in makers' prices.

MENTHOL—Quiet at 7s. 6d. to 8s. per lb. for good dry white crystals, both on spot and to arrive.

MERCURIALS.—Makers have so far made no change in their prices, which remain 2s. 2d. to 2s. 5d. for *Corrosive sublimate*, and 2s. 6d. to 2s. 9d. for *Calomel*.

MORPHIA—Remains inactive at 4s. 3d. to 4s. 6d. for the *Hydrochlorate powder*, according to quantity and packing.

OILS (ESSENTIAL).—*Peppermint* continues to be offered at very low rates, which, it is said, do not pay the American growers, and they propose growing other crops which promise a better return. The acreage planted this year will, therefore, be much smaller, and with a small production prices must be dearer. *H.G.H.* in bottles is quoted 5s 6d to 5s. 9d., and prime *Wayne County* in tins, 3s. 6d. per lb. net on the spot. *Japanese* very quiet at 3s. 3d. per lb. for dementholised, and 5s. per lb. for 40 per cent. *Wintergreen* is firmer at 5s. 6d. per lb. in tins on the spot, and 5s. 9d. per lb. *c.i.f.* in bottles. *Spearmint*: *H.G.H.* 8s. per lb. in bottles, *c.i.f.* terms. *Star Aniseed* is rather inclined to be weaker at 7s. 6d. per lb. on the spot, and 6s. 6d. to 7s. per lb. for January to February steamer. *Cassia* dull; 70 to 75 per cent., 5s. 6d. on the spot, and 4s. 6d. per lb. *c.i.f.* *Citronelle* steady but quiet; spot 1s. 3½d. per lb. *Lemongrass* quiet, but very firm at 10d. per oz.

OILS (FIXED) AND SPIRITS.—*Linseed*: The market is quieter, but without actual change of value, which is still quoted £14 17s. 6d. for spot pipes and £15 7s. 6d. barrels. *Rape*: Flat and lower. Ordinary brown on the spot £24. Refined on spot £25 10s. *Cotton*: Firm at higher rates. Crude London spot £12 12s 6d. to £12 15s. Refined spot £14 to £14 10s., according to make. *Olive*: Spanish, £32; Levant, £31 10s. to £32. *Cocoanut*: Unchanged. Ceylon on the spot £22 10s.; Cochin, spot, £28. *Palm*: Lagos on the spot £23 to £23 10s. *Turpentine*: The market closes dearer, but quiet at the advance; American, spot, 24s. 1½d. per cwt. *Petroleum Oil*: Dull; Russian, 4⅝d. per gallon; American, 4½d. per gallon. *Petroleum Spirit*: American, 6d. per gallon; deodorised, 6¼d. per gallon.

OPIUM.—Dull and without change, *Druggists'* being quoted at 9s. 3d. to 11s. per lb. *Soft Shipping*, at 10s. 6d. to 12s. 6d. *Persian*, 10s. 6d. to 11s. per lb.

ORANGE PEEL.—The new crop continues to arrive freely, and small sales have again been made at 1s. per lb. for fine cut and 5d. per lb. for old. It would probably now be possible to buy new crop at rather less money.

PHENACETIN—Is quiet but steady at 4s. to 4s. 3d. per lb., according to quantity, for both *crystal* and *powder*.

PILOCARPINE.—The tendency of this article continues its downward course, price being nominally 20s. to 21s. per oz., but less would no doubt be accepted for larger quantity.

PODOPHYLLIN—Is firm at 13s. 6d. to 14s. 6d. for the P.B. quality, and 11s. 6d. to 12s. 6d. per lb. for the less soluble American article.

POTASH COMPOUNDS.—*Chlorate* steady at 3¼d. per lb. on the spot. *Bromide* firm at 1s. 10d. per lb. for ordinary quantities less than 1 cwt. *Iodide*, 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bicarbonate* unchanged at 30s. per cwt. for crystal or powder in large bulk. *Permanganate* is still weak, but values are nominally the same at 65s. per cwt. for small crystals, and 70s. per cwt. for large crystals. *Prussiate* quiet but steady at 6¾d. per lb.

QUICKSILVER.—After having done a large business at £6 17s. 6d. per bottle, the importers advanced their price on Tuesday to £7 per bottle, second-hand holders advancing in proportion to £6 19s. 6d.

QUININE.—Market is very quiet, makers' price remaining nominally 1s. 1d. per oz; second-hand also asking same price, but not appearing very anxious to sell. The result of the approaching Bark sales in Amsterdam is awaited with interest, and it appears probable that same will not inconsiderably affect the future course of price of the manufactured article. It is believed that those who should be most competent to form a correct opinion have laid in full supplies.

SANTONINE.—It is stated that the underselling has ceased, and that lowest price at which the article is now obtainable is that of the two agents for the principal maker, viz., 4s. 5¼d. per lb. for large quantity in original cwt. cases.

SENEKA ROOT—Is very quiet, prime Western being quoted 1s. 3d. per lb. on the spot.

SERPENTARIA ROOT—Is becoming very scarce, and but small quantities are available at 1s. 2d. per lb.

SHELLAC.—Whilst there has been rather less activity in the market, a very firm tone prevails. On the spot fair sales have been effected, including *TN Orange* cakey to good fair free at 63s. to 67s. per cwt., and *Button* at a further advance. The speculative market is firm.

SODA COMPOUNDS.—*Crystals*: Unchanged at 55s. per ton ex-ship terms. *Nitrate*: £7 15s. per ton for refined on the spot. *Bicarbonate*: The commercial 99 per cent. is still quoted at £7 15s. per ton, and the fully bicarbonated quality 18s. 6d. per cwt. *Bromide*: Steady at 2s. 2d. per lb. *Iodide*: Steady at 11s. 7d. per lb. *Sulphite*: 17s. 6d. per cwt. for ordinary crystals, and 22s. 6d. per cwt. for recryst.

SPERMACETI—Is lower for American on the spot at 1s. 3d. per lb.

SPICES (VARIOUS).—*Black Pepper* being firmly held, was mostly bought in; Penang 3⅝d., Lampong 3⅞d., Singapore 4d. A few bags Wynaad sold at 4d. and 2 bags Ceylon at 4d. *White Pepper*: Penang bought in at 6⅛d. and Siam at 7d. Of Singapore 69 bags sold at 6⅞d., the remainder bought in; fair 7¼d., fine to choice 8½d. to 10d. *Chillies*: Zanzibar bought in at 32s. 6d. to 37s. 6d. 20 cases good Japan sold without reserve at 41s. 6d. to 42s. 6d. *Pimento* is dearer; 70 bags sold at 4½d. to 4⅝d. *Cassia Lignea*: Bought in at 37s. *Cassia Vera*: Bought in at 26s. *Cinnamon*: 300 bags coarse Ceylon chips sold at 2¾d.; 45 bags quillings sold at 8d. to 8½d. *Nutmegs* dull. *Mace*: 25 packages West India sold, low to good middling red, 1s. 1d. to 1s. 7d.; one lot pale, 1s. 9d.; 18 cases Wild Bombay bought in at 3½d.

SULPHONAL.—The two chief makers are still accepting from-hand-to-mouth orders at 7s. 3d. per lb.

SULPHATE OF COPPER—Quiet, but unchanged at £15 10s. to £16 10s., according to brand.

NEWCASTLE CHEMICAL REPORT.

JANUARY 11, 1898.

This chemical trade so far does not show much animation. New business is slow in coming forward. Bleaching powder is lower, otherwise there is not much change to record. Quotations are:—Bleaching Powder, £6 to £6 10s., according to markets. Soda Crystals: 42s. 6d. to 57s. 6d. Caustic Soda: 70 per cent., £7 10s. to £7 15s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

LIVERPOOL REPORT.

JANUARY 12, 1898.

The general tone of the market has considerably improved during the week; inquiries have been numerous and sales of some importance have been effected. Among the latter may be mentioned a lot of Syrian Fœnugrec Seed, together with dried Kola Nuts and some of the Brazilian Gum Arabic mentioned last week. A decline has been experienced in the price of Quillaya Bark, owing to the arrival of a Chilian importation relieving the scarcity of this article recently noticeable here. The prices of oils generally have not experienced much change, but a better tone prevails with Cottonseed and Linseed Oils and Spirits of Turpentine. More has been doing in heavy chemicals, which meet with improved inquiry. Caustic Soda is stronger owing to a good amount of business having been done in it.

AMMONIUM SALTS.—Sulphate has advanced to £9 7s. 6d. per ton.

BEESWAX.—4 cases of Peruvian sold at £6 12s. 6d. per cwt., and 5 packages of Gambia at £6 7s. 6d.

BLEACHING POWDER—Is firmer, £5 12s. 6d. to £6 5s. per ton.

BORATE OF LIME.—1560 bags sold ex quay on private terms.

CANARYSEED—Is steady in price, but the business passing is small in amount. Turkish seed has been sold at 25s. 6d. to 26s. per 464 lbs., and Spanish at 37s.

CASTOR SEED.—163 bags Parahiba sold ex quay at 9s. 6d. per cwt.

COPPERAS—Remains firmly at the recent quotation, 39s. per ton for Lancashire, and 36s. for Welsh.

COPPER SULPHATE—Is quiet at last week's price, £16 per ton.

FŒNUGREC.—50 bags Egyptian found buyers at 9s. per cwt. ex quay, and 20 tons Syrian also at 9s. to 9s. 3d. per cwt. quay and store.

GUM ARABIC.—Brazilian variety has been selling at 25s. per cwt.

HONEY.—A lot of Peruvian was disposed of at 22s. 6d. per cwt., and retail amounts of Chilian Pile X at 30s. per cwt.

KOLA NUTS.—173 packages of dried sold at 3d. per lb.

LINSEED—Is very strong in all positions. 1500 bags of Turkish made from 36s. 6d. to 37s. 3d. per 416 lbs., and 776 bags ditto 36s. 9d. to 38s. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor oils* are in better demand, and the amount of trade doing is satisfactory and at steady prices, both Calcutta and French 1st pressure being at 3⅝d. to 3¾d. per lb. *Olive oils* are in fair inquiry; holders still want high prices, and business is reported in Seville oil at £32 per tun. *Linseed oil* of Liverpool make is still quoted at 16s. to 16s. 6d. per cwt. *Cottonseed oil* is steadier at 14s. 9d. to 15s. 6d. per cwt. *Spirits of Turpentine* is firm at 24s. 6d. per cwt.

POTASH SALTS.—*Bicarbonate*, 50s. per cwt. *Bichromate*, 4⅛d. per lb. *Chlorate* 3½d. to 3¾d. per lb. *Cream of Tartar* is unchanged at 75s. to 76s. per cwt. *Potashes*, 19s. 6d. per cwt. *Pearlash*, 32s. per cwt.

SODIUM SALTS.—*Bicarbonate*, £6 15s. per ton. *Caustic*, 76 to 77 per cent., £8 15s. per ton; 70 per cent., £7 5s.; 60 per cent., £6 5s. *Crystals*, £2 17s. 6d. per ton. *Nitrate*, 7s. 6d. to 7s. 9d. per cwt. *Borax*, £13 5s. per ton.

MANCHESTER CHEMICAL REPORT.

JANUARY 11, 1898.

The Board of Trade Returns just published are regarded here as very unsatisfactory, and judging from appearances, the heavy chemical trade with the United States must now be looked upon as a diminishing quantity. For December only 109,278 cwts. were exported, as against 236,332 cwts. in 1896, and 300,618 cwts. in 1895. Bleaching materials do not show such a conspicuous decrease. In Alkali generally there is a decrease of 27·4 in quantity and 26·0 in value, and in Bleaching materials 15·1 in quantity and 21·4 in value. Despite this, however, the shares of one well-known Cheshire company have risen during the past week, while those of other firms are fairly steady. Caustic Soda is firm at £8 12s. 6d. for 77 per cent., and Bleaching Powder varies from £5 10s. to £5 15s. on rails, with quotations for forward delivery at £5 5s. The scarcity of Brown Acetate of Lime continues, and dealers here have little or no stock. The current rates are now £6 to £6 5s. per ton for best American, *c.i.f.* Manchester, and Welsh about £6. One small lot of the latter has been offered at £5 15s. Ammonia Alkali, 58 per cent., varies from £4 to £4 2s. 6d., in bags, on rails at makers' works. Aniline Oil and Salt are offering at very low prices, especially for forward delivery. Sulphate of Copper is 10s. per ton higher for best brands, £17 10s. delivered Manchester. Alum is quiet at late rates. Acetic Acids and Acetate of Soda have an upward tendency. Generally, there is a better feeling reported from some of the Lancashire manufacturing centres, and if the improvement continues it cannot fail to benefit the dyeing and chemical industries.

MARRIAGES.

FELL—ALLEN.—On January 5, at St. Andrew's, Wells Street, by the Rev. Reginald Fisher, M.A., John Campbell Fell, 9, Albemarle Mansions, Holloway, N., analyst to "Camwal," to Jane (Jennie), eldest daughter of the late George Allen and of Mrs. Allen, Langdon Hills, Essex.

ROBINS—SMITH.—On January 8, at St Edmund's Church, Alexandra Park, Manchester, by the Rev. Tindall, Rector, H. H Robins to Edith, eldest daughter of Mark Smith, Hazlehurst, Whalley Range, Manchester.

SCOTT—COOPER.—At All Saints' Church, Cockermouth, on the 11th inst., by the Rev. E. Cannington-Bennett, W. Stanley Scott, proprietor of the firm of Cooper Bros., Chemists, to Mrs. M. A. Cooper, widow of the late F. Ashley-Cooper, Savings Bank, Cockermouth.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Geo. R. Cox, Junr., Percy Stuart Cox, Fred. A. Cox, and Samuel J. Edmondson, trading Cox Brothers, General Produce Brokers, Exchange Buildings, Liverpool, and 6, Crosby Square, London, so far as regards Fred. A. Cox.

Thomas J. Merrick and C. W. Crofts, Veterinary Surgeons, Castillian Street, Northampton, so far as regards Thomas J. Merrick.

W. T. Freeman and C. H. R. Holden, M.D., Surgeons and Physicians, Reading and Bradfield, Berks. Debts will be received and paid by either partner. W. T. Freeman will in future practise on his own account at Sidmouth House, Reading, and at Bradfield, and G. R. Holden will practise at 168, Castle Hill, Reading.

Herbert J. Hargrave and C. Seymour Langley, Physicians and Surgeons, Haverhill and Great Thurlow, Suffolk. Debts will be received and paid by H. J. Hargrave.

Joseph A. Gilburt and Hy. W. Harragan, Box Manufacturers, Old Ford, E.

Henry H. Pollard and Geo. Brown, Chemists and Druggists, 113, High Street, Newport, Isle of Wight. Debts will be received and paid by Henry H. Pollard.

C. H. Osmond and E. A. Bulmer (trading as Osmond, Bulmer & Co.), Wholesale Chemists and Druggists, 210, Sultan Road, Landport, Hants.

Wm. Berg and Arthur R. Meyer (trading as M. R. Meyer & Co.), Merchants and Exporters of Colonial Produce, 37, Mincing Lane, London.

DIARY FOR THE WEEK.

TUESDAY, JANUARY 18.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.
"A Wheel in Brittany," by W. F. Bray.
ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things" (Lecture I.), by Professor E. Ray Lankester.

WEDNESDAY, JANUARY 19.

ABERDEEN AND NORTH OF SCOTLAND SOCIETY OF CHEMISTS AND DRUGGISTS, at 8 p.m.
"At Home." (Douglas Hotel.)
BOLTON PHARMACEUTICAL ASSOCIATION.
Ordinary Meeting.
CHEMISTS' BALL at the Portman Rooms, Baker St, W.
MANCHESTER PHARMACEUTICAL ASSOCIATION, at 7.
"Pharmaceutical Organisation," by John Taylor, and Discussion on the Draft Pharmacy Bill.
MIDLAND CHEMISTS' ASSISTANTS ASSOCIATION, at 9.15.
"Pharmacy Law," by H. S Lawton.
PHARMACEUTICAL SOCIETY (N. B. Branch), at 8.30.
"Pharmaceutical Ethics," by David Storrar.
PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION, at 7 p.m.
General Quarterly Meeting.
ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.
President's Annual Address.

THURSDAY, JANUARY 20.

CHEMICAL SOCIETY, at 8 p.m.
Ballot for the Election of Foreign Members.
"The Action of Caustic Alkalies on Amides," by Julius B. Cohen and Edward Brittain.
"The Formation of Monomethylaniline from Dimethylaniline," by Julius B. Cohen and H. T. Calvert.
"Note on the Aluminium-Mercury Couple," by Julius B. Cohen and H. T. Calvert.
CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
Musical and Social Evening.
EDINBURGH CHEMISTS' BALL, at 9 p.m.
At the Freemasons' Hall, George Street.
LINNEAN SOCIETY OF LONDON, at 8 p.m.
"On the Larval Hyobranchial Skeleton of the Anurous Batrachians, with Special Reference to the Axial Parts," by Dr. W. G. Ridewood.
"On the 'Abdominal Pore' in the Myscinidæ," by R. H. Burne.
MIDLAND PHARMACEUTICAL ASSOCIATION, at 7 p.m.
Twenty-fifth Annual Ball. (Grand Hotel).
ROYAL INSTITUTION, at 3 p.m.
"The Halogen Group of Elements" (Lecture I.), by Profcssor Dewar,

FRIDAY, JANUARY 21.

GLASGOW SCHOOL OF PHARMACY.
Annual Dinner. (Bath Hotel).
ROYAL INSTITUTION, at 9 p.m.
"Buds and Stipules," by Sir John Lubbock.

EXCHANGE.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern, gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

WANTED.

A few Students' Microscopes (Leitz preferred), each with 1 in. and ¼ in. objectives, very cheap.—P. B., 61, Grosvenor Street, W.

Green's 'Botany,' vol. i.; Everett's 'Physics,' latest editions, good condition; also to exchange 'Pharmaceutical Journal' for 'Chemist and Druggist' weekly.—A. G., 37, Bearwood Hill, Burton-on-Trent.

Becker's or other students' chemical balance, cheap.—S. Holliday, 19, West Street, Warwick.

HOLLOWAY'S COCA WINE.—The new address of the makers of Holloway's Coca Wine —61, New Oxford Street, London, W.C.—was inadvertently omitted from the notice which appeared at page 66a of last week's issue.

DUTIES ON ETHER AND ALCOHOL.—A correspondent of the *Saturday Review* points out the hardships involved to British manufacturers and patentees by the duties levied on sulphuric ether, absolute alcohol, and other articles. In Germany the excise upon chemicals is insignificant.

MR. FRANK MAITLAND, chemist and druggist, Stonehouse, Plymouth, was duly installed Worshipful Master of Lodge Fortitude, No. 105, at the Masonic Temple, Plymouth, on Monday, January 10.

MR. C. J. PARK, pharmaceutical chemist, Mutley Plain, Plymouth, was duly installed Worshipful Master of the St. John's Lodge, No. 1247, on Thursday, January 13.

MR. ROBERT MACDONALD, chemist and druggist, late assistant with Mr. John McMillan, Great Western Road, Glasgow, has commenced business at No. 99, Academy Street, Inverness.

SCHOOL OF PHARMACY DINNER.—This dinner is to be held on Wednesday, February 16, in the Duke's Salon, Holborn Restaurant. It is hoped that there will be a representative gathering of past and present students and others connected with the Society. Mr. T. Edward Lescher, 17, Bloomsbury Square, is Hon. Sec., and would be glad to receive applications for tickets, price 5*s.* each, as early as possible.

THE SACCHARIN LITIGATION.—Mr. Justice North having refused to grant an interlocutory conjunction restraining infringement of the patents owned by the Saccharin Corporation by the Chemicals and Drugs Co., Ltd., who undertook to keep an account of all saccharin sold by them until the trial of the action, the plaintiffs appealed, and filed further affidavits in support of their case. The appeal came on before the Master of the Rolls and Lords Justices Rigby and Vaughan Williams on Wednesday, January 19, when Mr. Moulton, Q.C., appeared for plaintiffs, and Mr. Swinfen Eady, Q.C., for defendants. The affidavit in defence filed by Mr. Hunter, secretary to the defendant company, not being considered quite satisfactory, he was allowed to give evidence *viva voce* (a very unusual thing in the Appeal Court), and as the result the appeal was dismissed with costs.

EXCISE PROSECUTION.—At the Birmingham Police Court on January 13 Frank Henry Prosser, pharmaceutical chemist, 112, Spring Hill, was charged under the Spirits Act of 1880 with having failed to enter in his stock book the receipt of ten gallons of spirit on October 1, and also to cancel a certificate of the receipt of five and a half gallons of spirits on September 6.—Mr. T. J. Birtwell, supervisor of the Inland Revenue, stated that the defendant had been previously warned.—For the defence it was urged that the omissions were due to the illness of Mr. Prosser.—A fine of £3 and costs was imposed in each case.

THE SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY will hold its first chemists' ball in the Masonic Hall, Sheffield, on Thursday, February 10. As no previous ball has been held under the auspices of the Society, the Council hope that both members and associates will unite to make the function a great success with a view to its being made an annual fixture. Tickets may be had from members of the Council or from the Hon. Sec., Mr. J. B. Pater, 265, Fulwood Road, Broomhill, Sheffield. The cost of tickets—single, 6*s.*, double, 10*s.* 6*d.*—will include light refreshment.

THE LATE PROFESSOR TYNDALL, before his death, desired his wife (at such time as should be most convenient to herself) to present in his name to the Royal Institution the sum of one thousand pounds, as an expression of his attachment to the Institution, with which he was so long connected, and of his sympathy with its objects. His wife has now carried out his wish by sending a cheque for the amount to the Treasurer, Sir James Crichton-Browne, the money to be disposed of as the Board of Managers may see fit for the promotion of science.

PHARMACY ACT PROSECUTION.—At the Nottingham Summons Court on Tuesday, January 18, before Mr. S. H. Sands and R. W. Smith, John Henry Hopkins, chemist and druggist, 88, Alfred Street South, was prosecuted by the police and fined 20*s.* for selling infants' preservative containing a preparation of opium without distinctly labelling the bottle with the name of the preparation and the word "Poison."

MR. JAMES PETRIE, Chemist, Blairgowrie, was awarded a silver medal for his exhibits of photographic apparatus at the second International Photographic Exhibition, held under the auspices of the Blairgowrie and District Photographic Association, It may be mentioned that a fine collection of prints kindly lent by the Sandell Plate Co., Ltd., was exhibited, including two of the Pharmaceutical Society's Board Room and Examination Hall in Bloomsbury Square.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

S. A. Sturton and F. A. Sturton, Pharmaceutical Chemists, Goldhawk Road, Shepherd's Bush, W. Debts will be received and paid by S. A. Sturton.

J. H. Cuff, Veterinary Druggist, 453, Caledonian Road, N., has assigned his business to his two sons, J. H. Cuff, jun., and S. W. Cuff, who will in future carry on the business under the style of J. H. Cuff and Sons.

C. F. Knight and H. G. W. MacLeod, Surgeons and General Medical Practitioners, 341, Brixton Road, S.W. Debts will be received and paid by H. G. W. MacLeod.

S. G. Rawling and A. Davies, Manufacturers of Botanic Drinks, Spa Works, Meanwood Road, Leeds. Debts will be received and paid by S. G. Rawling, who will carry on the business under his own name.

R. Lamphier and A. E. Odling, Physicians and Surgeons, Alford, Lincs. Debts will be received and paid by A. E. Odling, who will continue the business under the old style.

T. H. Cruse, W. R. Gossling, and A. J. Pratt (trading as Cruse & Co.), Chemists and Druggists, 63, Palmerston Road, and 1, Victoria Road, Southsea, and 7, The Strand, East Southsea. Debts will be received and paid by T. H. Cruse, who will continue the businesses.

Medical Jottings.

THE EXHIBITION OF FOODS, DRUGS, INSTRUMENTS, ETC., in connection with the sixty-sixth annual meeting of the British Medical Association, will be held in the Drill Hall, Forrest Road, Edinburgh, from July 26 to 29 next. Applications for plans and regulations should be addressed to the Secretary, Dr. Norman Walker, 7, Manor Place, Edinburgh. Last year, in consequence of the meeting being held in Montreal, the usual exhibition did not take place.

THE MERCERS' COMPANY has sent the Vice-Chancellor of Cambridge University a cheque for one thousand guineas towards the fund for rebuilding the School of Medicine and Surgery attached to the University.

A NEW AMERICAN MEDICAL PAPER is to be published weekly, which will be called the *Philadelphia Medical Journal*. The first number is to be issued this month. Dr. G. M. Gould will have charge of the editorial department.

DR. S. WEIR-MITCHELL, of the University of Philadelphia, is on the Board of Trustees of this new venture. He is well known to laymen in this country by his successful novels. The latest — 'Hugh Wynne, Free Quaker, a story of the War of Independence'—is one of the most striking successes in the world of fiction at the present time. The sale has exceeded 45,000 copies.

THE EXPORTS OF MEDICINES from the United Kingdom, comprising drugs and medicinal preparations, during the twelve months ending December 31, last amounted to the value of £1,132,636, against £1,122,201 during 1896, and for the month of December only the value was £102,226, against £113,562 in 1896.

Football.

PHARMACEUTICAL F.C. v. ST. MICHAEL'S UNITED.—This match, played on January 15 at Wormholt Farm, resulted in a win for the Square team by 8 to *nil*.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

JANUARY 20, 1898.

Business has been rather quiet during the past week, and there are few changes of importance to record. Quininc has stiffened up, in anticipation of the result of to-day's Bark sales in Amsterdam, particulars of which had not, however, come to hand at time of going to press. Opium and Morphia remain quiet. Codeia firm. Cocaine is reported firmer to-day in consequence, it is stated, of firmness of price of the crude article. Sulphonal, Phenacetin, Quicksilver, and Mercurials unchanged, as also are Brominc and Bromides. The position of Iodine has again become unsettled, which cannot fail in turn to react upon that of Iodides. It is quite certain that any change can only be in a downward direction, and it is to bc feared that when the drop does come it will be a serious one. Sulphate of Ammonia again dearer. Acid Carbolic dull. Citric quiet. Tartaric steady. Cream of Tartar very firm. Cod-liver Oil weak. Glycerin without change. Sulphate of Copper dearer in sympathy with the stronger position of the metal. Ipecacuanha firm, with a rising tendency. Bismuth and Lithia unchanged. The following are the actual prices of articles of principal interest :—

ACID BORACIC—Steady at 24s. per cwt. for *crystals* and 25s. per cwt. for *powder*.

ACID CARBOLIC—Quiet but steady at 6⅞d. to 7d. per lb. for 35/36° C. *ice crystal*, in bulk; other qualities are also unchanged in value. *Crude*: 60 F. 2s. 1d. per gallon; 75° F., 2s. 6d. *Liquid*: 95 per cent. of pale straw colour, 1s. 2d. per gallon, in 40 gallon casks.

ACID CITRIC—Is dull at 12½d. per lb. to 1s. 1d. per lb. for *English*.

ACID TARTARIC—Fairly steady at 12⅜d. per lb. for foreign, and 1s. 1d. per lb. for English.

AMMONIA COMPOUNDS.—*Sulphate*: very firm at again higher prices, closing £9 15s. per ton for gray prompt 24 per cent. London. *Muriate* firmer at 24s. 6d. to 26s. 6d. per cwt. for the 98 per cent. free from metals. *Bromide* steady at 2s. 2d. per lb. *Iodide* unchanged at 14s. 6d. per lb. *Nitrate* firm at 40s. per cwt. *Sulphocyanide*: 1s. to 1s. 1½d. per lb., according to quantity.

BISMUTH—Unchanged at 5s. for the *metal*, and 4s. 10d. per lb. for the *subnitrate* in 5-cwt. lots.

BORAX—Quiet at 14s. per cwt. for *crystals*, and 14s. 6d. for *powder* in quantity and in bulk.

BROMINE AND BROMIDES—Remain in good demand at unchanged prices.

CASCARA SAGRADA—Is very firm at 22s. 6d. to 25s. per cwt.

CLOVES.—No *Zanzibar* offered at auction. 20 bags *Seychelles*, small and dark, sold at 3¼d. to 3⅜d. 23 bags dull *Amboyna* sold at 4½d. 60 cases unpicked *Penang* sold without reserve at 5¼d. Privately *Zanzibar* have continued to advance somewhat, but are now quiet, though steady; small spot sales at 3¼d.; March to May delivery, 3 3/8 d.; and April to June, 3 1/2 d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: 1s. 11d. *Benzole*: 50 per cent., 1s. 7d. per gallon. *Crude Naphtha*: 9d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 11d. per gallon.

COCAINE—Remains exceedingly quiet, makers' price being unchanged at 10s. 3d. to 10s. 9d. per oz., according to brand. The large supplies in second hands appear, however, to press upon the market, and until these are lightened the sales by the manufacturers themselves cannot well fail to continue on a limited scale, especially in view of the fact that some brands are being offered from second hands as low as 9s. 9d. per oz., and hardly finding a ready sale even at this reduced figure.

CODEIA—Is firm at 11s. 3d. to 11s. 9d. per oz., according to quantity.

CREAM OF TARTAR—Very firm, to the turn dearer at 75s. 6d. to 76s. per cwt. for first white French *crystals*; *powder*, 78s. to 79s. per cwt.

GINGER.—*Cochin* continues flat, and rough kinds were mostly bought in; wormy to good fair washed at 16s. to 24s.. 20 cases ordinary C cut sold at 32s. 6d. to 33s. 6d.

IODINE.—It is rumoured that a large producer on the West Coast has resolved to force his stocks on the market independently of the Syndicate. This, if it takes place, can hardly have any other result than a reduction in price of *Iodides*, which, however, so far remain unchanged.

MERCURIALS.—Makers have so far made no alteration in their prices, which remain at 2s. 2d. to 2s. 5d. for *corrosive sublimate*, and 2s. 6d. to 2s. 9d. per lb. for *Calomel*.

MORPHIA—Very quiet at 4s. 3d. to 4s. 6d. per oz. for the *Hydrochlorate powder*.

OILS ESSENTIAL.—*Lavender*: Exot., 4s. 9d. to 6s. 3d. per lb. as to quality. *Pennyroyal*: 4s. 9d. per lb. *Neroli*: 8s. per lb. *Bergamot*: *Calabrian*, 8s. per lb. *Lemon*: 3s. 3d. to 3s. 6d. per lb. *Orange*: Sweet, 6s. 6d. per lb.; bitter, 9s. per lb. *Peppermint* is quiet; *HGH* is selling at 5s. 6d. to 5s. 9d. per lb. on the spot, and 5s. 4½d. per lb. for arrival, *c.i.f.* terms. *Wayne County*: 3s. 9d. per lb.; Japanesc unchanged at 3s. 3d., *c.i.f.*, for dementholised. *Star Aniseed* quiet at 7s. 6d. to 7s. 9d. per lb. on the spot. *Cassia* slow of sale at 5s. 6d. per lb. for 70-75 per cent.

OILS (FIXED) AND SPIRITS.—*Linseed*: A considerable amount of business has been done this week at dearer rates; on the spot, pipes, London, £15 5s.; barrels, £15 15s. *Rape* has declined still further to £23 for ordinary brown on the spot, and to £24 10s. for refined on the spot, at which lower prices an important business has been done. *Cotton* very firm at advance noted last week; £12 15s. for crude on the spot, and £14 10s. for refined on spot. *Olive* unchanged at £32 for Spanish and £31 10s. to £32 for Levant. *Cocoanut* quiet at £22 10s. for Ceylon on the spot and £28 for Cochin same position. *Palm* the shade firmer at £23 on the spot. *Turpentine*: The market is very firm at 24s. 3d. per cwt. for American on the spot. *Petroleum* dull; Russian spot 4¼d. per gallon, American 4½d. per gallon, water-white 5⅝d. per gallon. *Petroleum Spirit*: American 4½d. per gallon, deodorised 6¼d. per gallon.

OPIUM—Dull at unchanged values, quotations being nominally the same as given in our last report.

ORRIS ROOT.—*Verona* is offered at 22s. per cwt. for *sorts*, 24s. 6d. per cwt. for small white, and 25s. per cwt. for prime, *c.i.f.*, London. *Florentine*: Extra picked is quoted 41s, picked 36s., and sorts 35s. per cwt., *c.i.f.*, London.

PHENACETIN.—The hoped-for improvement in this article has so far not taken place, price remaining 4s. to 4s. 3d. per lb. according to quantity.

POTASH COMPOUNDS.—*Chlorate* firm at 3¼d. per lb. on the spot. *Bromide* firm at 1s. 10d. per lb. for quantities less than 1 cwt. *Iodide*, 9s. 9d. to 10s. 3d. per lb., according to quantity. *Permanganate* very weak, but for ordinary quantities nominally unchanged at 65s. per cwt. for small crystals, and 70s. for large crystals. *Bicarbonate* steady at 30s. per cwt. for crystals or powder. *Prussiate*, 6¼d. per lb. for English.

QUICKSILVER—Is firm at last week's advance to £7 per bottle from first hands, and £6 19s. 6d. from second hands.

QUININE.—Market remains inactive; price is, however, very firm, the nominal quotation being still 1s. 1d. per oz., some makers, however, declining to book orders, while from second hand only limited quantities could be obtained at about figure named above. It now depends upon the result of to-day's Bark sales in Amsterdam what the course of the article is likely to be in the immediate future, many people believing that an advance in value is quite probable in view of the change of tactics adopted by the holders of the raw material.

SHELLAC.—Only moderate supplies were catalogued for the auctions on Tuesday. Active competition prevailed owing to moderate shipments, but this also caused holders to show increased firmness, with the result that the higher prices asked checked business, and less than half the offerings were disposed of; prices, however, of *Second Orange*, showed a further advance of 3s. per cwt. on last sales rates, making standard *TN* now 68s. per cwt. A total of 952 cases offered and 383 cases sold. *Second Orange*: Of 823 cases 319 sold, *AA* in circle red of the mark at 73s., fair red to good bright free *TN* at 67s. to 69s., strong bright cakey at 68s., ordinary flat red at 64s., red curly cakey at 63s., low livery at 62s., shivered block dull red to fair bright at 63s. to 65s., red flint

block at 61s. *Garnet*: Of 54 cases 24 sold, *AC* slightly cakey at 75s., fair free *PBG* at 63s., low blocky *JBG* and Snake at 57s. to 58s. *Button*: Of 75 cases 40 sold, weak glassy pale at 80s., ordinary to fair 2nds at 73s. to 75s., fair circle 2nds at 64s. The shipments from Calcutta during the first half of January were as follow: To the United Kingdon, 4500 cwt. against 3600 cwt.; to the United States, 200 cwt. against 2300 cwt.; and to the Continent, 1600 cwt. against 1100 cwt. last year.

SODA COMPOUNDS.—*Crystals* steady at 55s. to 60s. per ton *ex* ship terms. *Nitrate* firm at £7 15s. per ton on the spot. *Bicarbonate* firm at £7 15s. per ton for the 98 per cent. commercial quality, and 18s. 6d. per cwt. for the fully bicarbonated. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* fairly steady at 11s. 7d. per lb.

SPICES (VARIOUS).—*Black Pepper*: Only 14 bags offered and bought in. *White Pepper*: 201 bags Singapore bought in at 7¼d. *Chillies*: 20 cases fine Japan sold, without reserve, at 43s. *Capsicums*: 10 bags common small Bombay bought in. *Cassia Vera*: 8 baskets coarse sold at 24s. to 27s. *Cinnamon Chips*: 16 bags sold at 3¾d. *Mace*: 5 packages West India sold at 1s. 4d. to 1s. 7d. *Nutmegs*: 2 cases *Penang* sold, 65's at 2s. 7d.; 10 cases Bombay sold, 90's at 1s. 5d., 108's at 1s. 1d., wormy broken at 4½d. to 5d.; 4 packages West India sold, 80's to 76's in shell, 9d. to 10d. *Pimento* is firmly held, only 44 bags sold, fair, 4⅞d.; good, 5d.

SULPHATE OF COPPER—Dearer in sympathy with the strong market for the metal at £15 15s. to £17 5s. per ton, according to make and package.

SULPHONAL.—The two principal makers are still selling at 7s. 3d. per lb. for limited quantities only and for immediate delivery.

VANILLA.—The quantity of vanilla to be sold after the long interval since the last auctions necessitated the separation from the ordinary drug auctions. On Friday, the 14th, therefore, about 1150 tins were offered, and there being keen competition nearly the whole sold, extra long lengths at slightly easier rates, whilst prices of all other sizes and qualities were full up to 1s. per lb. dearer than last sales. *Seychelles*: Of 1028 tins 975 sold, fair to good colour, 7½ to 9 inch at 25s. to 26s. 6d., 8 to 8½ inch at 24s. to 25s., 7½ to 8 inch at 22s. 6d. to 24s., 6½ to 7½ inch at 20s. 6d. to 22s., 5 to 6 inch at 19s. 6d. to 21s., 3 to 4½ inch at 17s. 6d. to 19s. 6d., brown and common 9s. to 18s. 6d. *Mauritius*: 61 tins all sold, fair flavour, 7 to 8 inch at 23s., 6½ to 7 inch at 21s. 6d. to 22s., 5½ to 6½ inch at 20s., 4 to 5½ inch at 18s. 6d. to 20s., brown and common 12s. to 17s. *Bourbon*: Of 35 tins 31 tins sold, fair to good colour, 6 to 7 inch at 20s. to 22s. 6d., 5½ to 6 inch at 19s. 6d. to 22s., common 16s. The remainder and *Tahiti* were bought in.

At to-day's drug auctions, notwithstanding the intermediate separate sales of Vanilloes and Cardamoms, the large number of 19 catalogues, representing over 2500 lots, together more than 9000 packages, of various drugs were offered; but on the whole the actual business transacted was limited, the following being the result as far as it has been possible to give same prior to going to press:—

ALOES.—Fair hard bright *Cape* held for 23s. to 24s., slightly inferior selling 20s. 6d. to 22s., rather drossy at 18s. 6d. to 19s. per cwt. 41 kegs and 34 boxes fair dry *Socotrine* were held for 80s., ditto part dark and mixed for 75s. per cwt.

ANISEED.—20 bags good *Russian* sold cheaply at 19s. 6d. per cwt.

ANNATTO PASTE.—59 cases all bought in, 2s. 6d. per lb. being the price required.

ANTIMONY.—50 cases of crude *Japan* were taken out at £20 per ton.

ARGOL.—7 bags *Cape*; part sold at 35s. per cwt.

ASAFETIDA.—Privately there has been some inquiry lately for export, but the quality offered in sale to-day was not fine. Nearly 300 cases were on show, but of these only some 40 cases sold at 44s. to 50s. per cwt. for broken block mixed almonds, some loose. A further arrival of about 100 cases is advised.

ASPHALT.—61 cases fair *Syrian* all bought in at 9d.

BALSAM COPAIBA.—2 casks clear brown were held for 2s. per lb.

BUCHU LEAVES—Were lower, being rather more freely offered. Fine green long sold at 7¾d. per lb., whilst fair green realised only 4½d. per lb. Fair green round sold in part at 5¼d. per lb., being a drop of ¾d. per lb. on last sale; yellowish rounds only realised 2¼d. per lb.

CACTUS FLOWERS.—10 bags were again up in sale and were bought in at 8d. per lb, there being no demand.

CARDAMOMS.—Nearly 400 cases were catalogued, and at first the demand was very slow, such sales as were made realising about last rates, but later on there was decidedly more competition, and an advance of 4d. to 5d. per lb. took place. *Decorticated* of good quality realised 3s. 4d. to 3s. 5d. per lb., whilst inferior fetched 2s. 9d. per lb. only. Fine bold pale *Mysores* sold 4s. per lb., second size 3s. 8d. to 3s. 9d. per lb., medium 3s. 6d. to 3s. 7d. per lb., slightly splitting 3s. 4d. per lb.

CASTOR OIL.—Fair *Calcutta firsts* were held for 4½d., *seconds* for 3¾d. Mixed quality in casks part selling at 2½d. per lb.

COLCYNTH PULP.—10 boxes fair *Spanish* held for 3s., 1 bale brownish selling at 1s. 7d. per lb.

COLOCYNTH.—3 casks good small *Turkey* apple were taken out at 1s. 3d. per lb.; 2 cases broken *Spanish* at 10d.; 1 bag seeds also offered, but did not find a buyer.

COLOMBO ROOT.—16 bags small to bold washed held for 70s. per cwt.

CROTON SEEDS.—7 bags of fair quality sold subject to approval at 41s. per cwt.

CUBEBS.—80 bags part *Java* part dusty shrivelled *Singapore* were all bought in, 40s. being the price named, while 24 bags slightly mouldy were bought in at 35s. per cwt.

CUMMIN SEED.—62 bags held for 20s. per cwt., fair to good *Malta* being bought in at 32s.

CUSCUS ROOT.—5 bales cleaned were bought in at 30s. per cwt.

CUTTLE FISH.—50 mats good pale fairly bold were held for 3½d., fair medium, rather dirty, part selling at 2¼d. per lb.

DRAGON'S BLOOD.—Fine is still scarce. 2 cases blocks, fairly bright, sold cheaply at £6 per cwt.; dull saucers, 95s. per cwt., whilst very seedy lump was taken out at £5 to £6 per cwt.

ERGOT OF RYE.—4 bags fair *Russian* bought in at 11d. per lb.

GALANGAL ROOT.—64 bales of fair quality all bought in at 30s. per cwt.

GALLS.—11 bags *Bagdad* damaged sold without reserve at 35s. to 51s. per cwt.

GENTIAN ROOT.—49 bags of only medium quality were bought in at 25s., a bid of 20s. being declined, 21 bales of fair quality sold cheaply at 20s. to 21s. per cwt.

GUAZA.—45 Robbins were all bought in stalky green at 5d.; slightly brownish tops at 4½d.; and brown old at 4d. per lb.

GUM AMMONIACUM.—Good clean drop seed to bold drop held for 55s., darkish block realising 28s. to 39s. 1 case fair drop without reserve sold very cheaply at 41s. per cwt.

GUM ARABIC.—Good pale grain was taken out at £6 10s., and 13 bags sorts at 75s. per cwt.

GUM BENJAMIN.—Fair *Palembang* realised 35s. per cwt. *Sumatra* medium seconds were held for £5 to £6 per cwt., fair ditto selling at £7 10s. 4 cases *Penang* sold at 62s. 6d.

GUM EUPHORBIUM.—23 serons, part very woody, held for 20s. per cwt.

GUM GALBANUM.—16 packages fair dark part woody, part blocky were taken out at 1s. up to 1s. 4d. per lb. for fine.

GUM KINO.—2 tins of good quality taken out at 15s. per lb., a bid of 10s. being refused.

GUM MASTIC.—7 cases part yellow part pale were held for 2s.; 1 case sold subject to approval at 1s. 9d. per lb.

GUM MYRRH.—6 cases good pale native picked bought in at 70s., fair pale sorts at 80s., 2 casks siftings selling at 41s. per cwt.

GUM SANDARAC.—11 casks were bought in at 75s. per cwt.

GUM TRAGACANTH.—5 cases taken out at £12 per cwt.

HONEY.—5 packages *Jamaica* sold at 23s. 6d. per cwt.; 88 cases *Honolulu* were bought in at 25s. to 28s. per cwt.

IPECACUANHA—Continues in active demand, and decidedly higher rates are generally anticipated. In sale about 60 bales *Rio* were offered, and fair sales were made at 7s. 7d. to 7s. 9d. per lb., being an advance of 4d. to 5d. per lb. A bid of 7s. 6d. per lb. was made by a shipping firm for a long string, but owners would not accept. Good bold root held for 8s. per lb.

KAMALA.—5 cases of good quality all sold at 10½d. to 1s. 0½d. per lb.

KOLA NUTS.—10 bags fair bold bright were held for 7d. per lb., a bid of 5d. being declined.

LIQUORICE ROOT.—Of 69 bales fair rough, part sold at 6s. to 7s. per cwt.

MENTHOL.—Fairly dry crystals, part slightly oily, were held for 7s. per lb.

NUTMEG PASTE.—2 cases of fair quality were held for 2½d. per oz.

ORRIS ROOT.—10 bags rough *Verona* were bought in at 35s. per cwt.

PATCHOULI LEAVES.—29 bales, all more or less country damaged and mixed with sand, were bought in, 4d. per lb. being the price named.

QUILLAIA BARK.—20 bales crushed bought in at 40s. per cwt.

SAFFRON.—15 tins held for 27s. per lb.

SANDALWOOD LOGS.—5 tons were all bought in, £16 per ton being the price which would have been accepted.

SCAMMONY RESIN.—13 cases were all taken out at prices varying from 12s. to 30s. per lb., according to quality.

SCAMMONY ROOT.—100 bags were held for 30s. per cwt., 105 bags being also bought in at the same figure.

SENNA.—Privately there has been a good demand during the past week, but it was expected by some that lower prices would have to be taken owing to the large quantity offered. On the contrary, however, a very strong competition led to decidedly dearer rates for the 600 bales *Tinnevelly* offered, small yellowish leaves realised 2d. to 2¼d. per lb., small green 2¾d. to 3d. per lb., and for the bolder leaves up to 4¾d. per lb. was paid. For *Alexandrian* leaves the demand was slow, and only really fine green sold at 6d. to 7d. per lb., siftings 2¾d. per lb.

SPERMACETI WAX.—1 bale taken out at 3d. per lb., there being no bid.

SQUILLS.—5 bags sold without reserve at 2¼d. per lb.

TAMARINDS.—85 barrels *West Indian* bought in at 8s. 6d. per cwt.

TARTAR.—7 casks Greek bought in at 60s. per cwt.

THYME SEED.—26 bags of fair quality bought in at 10s. per cwt.

TONQUIN BEANS.—4 cases foxy and slightly mouldy held for 10d., good crystallised *Para* part selling at 1s. 9d. per lb.

VERMILION.—9 cases *China* unworked were bought in at 2s. 1d. per lb.

WAX.—2 cases fair *Zanzibar* realised £6 5s.; 8 bags *Tangiers* held for £7; 5 bags *Australian* sold for £6 5s., 1 case ditto being bought in at £8 10s.; fair to good *Jamaica* sold at £6 15s. to £7 2s. 6d.; fair *Calcutta* held for £6 to £6 10s., *Bombay* for £5 15s., *North American* for £6 15s., *Australian* for £6 5s. per cwt. 50 cases fair *Japan* bought in at 37s. 6d. per cwt.

NEWCASTLE CHEMICAL REPORT.

JANUARY 19, 1898.

Quietness still prevails, and not much new over-sea business reported. Sulphur is a trifle scarce, but price unchanged. Other quotations are :—Bleaching Powder, £6 5s. to £6 15s. Caustic Soda: 70 per cent., £7 10s. to £7 15s. Soda Crystals: 42s. 6d. to 57s. 6d., according to markets. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

JANUARY 19, 1898.

In miscellaneous articles there is an upward tendency, and heavy chemicals are fairly steady. Bleaching Powder over next year varies from £5 5s. to £5 10s. per ton, soft wood casks, prompt delivery, and forward, £5 to £5 5s.; White Caustic Soda, 78 per cent., is at £8 15s., and seventies at £7. Ammonia Alkali, 58 per cent., is well maintained at £4 to £4 2s. 6d. on rails, maker's works. A fair demand for Bicarbonate of Soda continues, and Industrial is firm at £5 5s. per ton for 1-cwt. kegs, on rails at works, Northwich. Pitch is very low, 15s. per ton being named *f.a.s.* Manchester Ship Canal. Naphthas are very steady. Green Copperas is still active for Lancashire make, and as local demand is at present great, especially for sewage precipitating purposes, prices are well maintained. Glycerin continues to advance, and is locally £51 to £52 for double distilled *f.o.b.* Ship Canal or on rails. Brown Acetate is scarce, and at £6 5s. to £6 10s., according to quantity. Sulphate of Copper steady at £17 10s. per ton for best brands delivered Manchester. Yellow Prussiate of Potash, 7d. Creosote easier at 2d. to 2¼d. The local trade in oil in bulk to the Manchester Ship Canal continues. Four steamers are fixed from Philadelphia and Batoum with about 17,500 tons.

LIVERPOOL REPORT.

JANUARY 19, 1898.

A considerable advance having taken place in the price of Olive Oils in Spain, holders here have increased their prices accordingly twice within the week, Seville and Malaga oils now bring extreme rates, as do also those from the Levant. Linseed oil has given indication of higher rates in sympathy with the scarcity of seed experienced here for some time past. The market has been entirely cleared of Turkish Linseed, and the price to arrive is quoted at 38s. per 416 lbs. An advance in Potashes is worth noting, for they have been stationary for some time past, so far, however, Pearlashes are unaffected. Sales of Beeswax have been numerous, comprising Gambia, Chilian, and good quality Peruvian, all of which obtained good prices. In chemicals, Sulphate of Ammonia and Sulphate of Copper have gone higher, particularly the latter, which has increased in price 15s. to 20s. per ton since last report.

AMMONIUM SALTS.—*Carbonate* is still scarce at 3d. per lb. *Sal ammoniac* quoted from 31s. to 33s. per cwt. *Sulphate* dearer, £9 12s. 6d. to £9 15s. per ton.

BEESWAX.—Gambia sold at £6 7s. 6d. per cwt., 40 sacks Chilian at £6 12s. 6d., and 7 cases Peruvian at £6 12s. 6d. to £6 15s.

BLEACHING POWDER—Is a shade firmer at £5 12s. 6d. to £6 5s. per ton.

BORATE OF LIME—Quiet at £7 17s. 6d. per ton.

CANARYSEED—Is somewhat slow of sale at 25s. 6d. to 27s. 6d. per 464 lbs. for Turkish.

COPPERAS—Firm at 36s. to 38s. per ton.

COPPER SULPHATE—Is dearer, viz., £16 15s. to £17 per ton.

LINSEED—Is held at very high rates. All Turkish sold out at 38s. per 416 lbs., which was the figure paid for a consignment about to enter the river. River Plate for forward delivery, 34s.; Calcutta, 38s. and 36s.

OILS.—*Castor oils* have been selling freely at the same price as last week for Calcutta and French, first pressure, 3⅝d. to 3¾d. per lb. *Olive oils* are advancing in price, particularly Spanish. Malaga and Seville are quoted at £31 10s. to £32, and £32 10s. to £33 per tun respectively. Candia also £33 to £33 10s. *Linseed oils* of Liverpool pressure have risen 3d. per cwt., viz., 16s. 3d. to 17s. *Cottonseed oil* of Liverpool refining, 14s. 9d. to 15s. 6d. per cwt. *Spirits of turpentine* are selling moderately at 24s. 6d. per cwt.

POTASH SALTS.—*Potashes* have advanced to 19s. 9d. and 20s. per cwt. *Pearlashes* are unchanged at 32s. *Cream of tartar* attracts but little attention at 75s. to 76s. per cwt.

QUILLAYA BARK—Has been selling freely at £18 per ton.

DIARY FOR THE WEEK.

TUESDAY, JANUARY 25.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9 p.m.
"Pharmacography" (Illustrated), by J. Lothian.

ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things," by Professor E. Ray Lankester.

WEDNESDAY, JANUARY 26.

WESTERN CHEMISTS' ASSOCIATION (OF LONDON). Musical and Social Evening, at 9 p.m.

MANCHESTER CHEMISTS' DINNER to the Lord Mayor of Manchester, Mr. Robert Gibson, Ph.C.

THURSDAY, JANUARY 27.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
"How an Evening Paper is Produced," by E. W. Richardson.

NEWPORT AND MONMOUTH CHEMISTS' ASSOCIATION. Annual Dinner (Westgate Hotel).

ROYAL INSTITUTION, at 3 p.m.
"Halogen Group of Elements," by Prof. Dewar.

FRIDAY, JANUARY 28.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30.
"Glycerin: Manufacture and Use," by R. Leslie.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
"The Profession of Pharmacy," by W. Makepeace Lock.

ROYAL INSTITUTION, at 9 p.m.
"Instinct and Intelligence in Animals," by Professor C. Lloyd Morgan.

SATURDAY, JANUARY 29.

PHARMACEUTICAL FOOTBALL CLUB.
Return match with the Hon. Artillery Co. at the latter's headquarters at Finsbury.

GLASGOW SCHOOL OF PHARMACY.—The first annual supper in connection with this school was held on Friday, January 21, at the Bath Hotel, Bath Street, Glasgow. Over sixty students and friends were present. Mr. W. L. Currie occupied the chair, and was supported by Mr. J. Lothian (Principal of the School), Dr. Lees Grecnock, a former principal, Mr. James Robb, and Mr. David Watson. The loyal toast was proposed, and the Chairman paid a fitting eulogium to Mr. Lothian in proposing the toast of the evening—"The Glasgow School of Pharmacy." Mr. Lothian replied and urged his students, if they had the true grit of Scots, to go on to the Major examination, and remedy the dearth of pharmaceutical chemists in Scotland. Other toasts were proposed and replied to by Dr. Lees, Mr. J. Robb, and Mr. Taylor. Songs, etc., were also given, and a very enjoyable evening was spent.

DR. FRANK CLOWES, since taking up the position of Chief Chemist to the London County Council, has been elected by the University College at Nottingham as Emeritus Professor of Chemistry. The following is an extract from the minutes of the University College Committee :—

> Resolved, that in recognition of the valuable services rendered to the College by Professor Clowes, first in organising the Chemical Department, and afterwards, for sixteen years, discharging the duties of Chemical Professor, and for three years the duties of Principal, the honorary position of Emeritus Professor of this College be conferred upon him.

MR. WILLIAM MURRAY, chemist and druggist, manager for Mr. James Hinds, 127, Gosford Street, Coventry, has taken over the business carried on there.

SCHOOL OF PHARMACY.—The second annual dinner of the School of Pharmacy is to be held on Wednesday, February 16, in the Duke's Saloon, Holborn Restaurant. Professor Greenish, F.I.C., F.L.S., in the chair. It is hoped that old students and others connected with the Society will make an effort to be present. The Hon. Secretary, Mr. T. Edward Lescher, will be glad to receive applications for tickets, price 5s. each, as early as possible, so as to enable him to complete arrangements.

EDITORSHIP OF THE 'BRITISH MEDICAL JOURNAL.'—Dr. Dawson Williams, assistant editor, who has been connected with the editorial department of the *British Medical Journal* for seventeen years, at a recent meeting of the Council of the British Medical Association, was unanimously appointed to succeed the late Dr. Ernest Hart as editor of the journal. Dr. C. Louis Taylor, who has been sub-editor for the last eleven years, was appointed assistant editor.

CHEMISTS' ASSISTANTS' ASSOCIATION.—The second Cinderella of the season will be held at the Portman Rooms, Baker Street W., on Thursday, Feb. 3. Tickets can be obtained from Mr. H. H. Robins, 113, Ridley Road, Forest Gate, E., or Mr. Cooper, 48, Baker Street, W.

WESTERN CHEMISTS' ASSOCIATION (OF LONDON).—A successful musical and social evening was held at the Westbourne Restaurant, 1, Craven Road, W., on Wednesday, January 26, the President in the chair. Each member had the privilege of introducing a friend on the occasion, and the necessary arrangements were carried out by the Hon. Secretaries, Messrs. H. Cracknell and J. F. Harrington.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION.—A meeting of this Association was held in the Rooms at 94, West Regent Street, on Tuesday evening, January 25, Mr. W. L. Currie, President, in the chair, when a lecture on "Pharmacography" was delivered by Mr. John Lothian, Principal of the Glasgow School of Pharmacy. Mr. Lothian showed how essential a knowledge of the structure of drugs is in the practice of pharmacy, and how, owing to the extended use of powdered drugs nowadays a practical acquaintance with the microscope is more than ever incumbent on the pharmacist. After describing the preparation of drugs for section work, the lecturer showed over sixty slides by the optical lantern, illustrating the histology and pharmacognosy of the principal starches, spores, roots, stems, barks, leaves, and glands used in medicine, including a number of slides of powdered and adulterated drugs, describing the elements by which drugs are recognised in the powdered state. The lecture was listened to by a large and appreciative audience, including a number of ladies, and on the motion of the Chairman, seconded by Mr. Brodie, a cordial vote of thanks was awarded to Mr. Lothian for his interesting and instructive lecture.

THE ROYAL BOTANIC SOCIETY has granted a fresh concession to students, who will in future be admitted to the Botanic Gardens daily from 9 a.m. to 3 p.m., except on Sundays and on the Wednesdays and Saturdays in May, June, and July.

MESSRS. BAISS BROS. & Co. held the annual dinner and smoking concert of the gentlemen of their staff at the "City Arms" on Friday evening last, when a very successful and pleasant evening was spent. Amongst those present were the heads of the firm, Mr. A. Baiss (in the chair) and Mr. S. S. Baiss, together with their two sons, Mr. W. A. Baiss and Mr. G. G. Baiss, while amongst the many visitors we noticed Mr. W. C. Allen, Mr. A. Lambert, and Mr. S. Lambert.

MESSRS. MAYS & MACKAY, wholesale druggists and oil merchants, Reading, intimate that they have purchased the freehold of the premises formerly occupied by the late firm of "Paget & Riggot" at 5 and 6, Gun Street, Reading, and that in future their business will be carried on at that address.

SALE OF FOOD AND DRUGS ACT.

SPIRIT OF NITROUS ETHER.—On Wednesday, January 19, at the Boston Sessions House, Henry Mells, chemist and druggist, Kirton, Lincolnshire, was summoned for selling spirit of nitrous ether below the minimum standard required by the British Pharmacopœia. The County Analyst (Mr. C. E. Cassal), certified that the spirit was deficient to the extent of 72·9 per cent. of the required nitrous ether, and that it contained 7·93 per cent. of extraneous water.—The defendant stated that he purchased the drug from one of the first houses in London, and he sold it as it came to him, but there might have been evaporation of the spirit through frequent removal of the stopper of the bottle, in which it was kept for retail purposes. The Magistrates said the defendant was bound to provide pure drugs and sell them according to the British Pharmacopœia. It was clear from the analyst's certificate that had not been done, and therefore he had broken the law.—Fined 40s. and costs.

PAREGORIC ELIXIR.—John Richard Smith, Hart's Hill, Dudley, has been summoned at the Dudley Borough Police Court for selling paregoric not of the nature and substance demanded.—The analysis showed that there was an entire absence of opium in the preparation, and the spirit contained therein was 15 per cent. under proof.—The defendant stated that it was sold as obtained from the wholesale house.—Fined £1 and costs and ordered to pay the analyst's fee.

BORIC ACID IN BUTTER.—On Wednesday, January 19, the stipendary magistrate, Mr. J. Ignatius Williams, gave judgment in the case of Thomas Jones, grocer, Tyncwydd, who was summoned recently at the Pontypridd Police Court by the Glamorganshire County Council for selling butter containing boric acid, to the extent of 63 grains in the pound.—The defence was that under the Margarine Act the defendant was entitled to use the boric acid as a preservative, as the Act stated that salt or any other preservative could be used.—The magistrate fined the defendant £5 and costs, and remarked that it was a case which should be threshed out, and a true interpretation put upon the word "preservative," contained in the section of the Margarine Act quoted for the defence.

DYES IN FOOD.—Dr. A. Wynter Blyth, public analyst for Marylebone, in a report issued January 21 to the local vestry, referring to the colouring of margarine with aniline dye so as to resemble butter, expressed the hope that the proposed amendment of the Sale of Food and Drugs Act will make it an offence to colour foods with aniline dye unless the purchaser was informed of the fact. He adds: "The aniline dyes possess such great tinctorial power that even with those that are poisonous the quantity taken in the consumption of any one ordinary coloured article is most minute, so that in few cases could decided symptoms be produced. On the other hand, when sugar, butter, milk, cream, sausages, confectionery, and a number of other things all have a small trace of ani-

line, these traces in the day total up. Observation and experiment have shown that the aniline dyes in small doses interfere with digestion." Dr. Blyth is of opinion that the increase of maladies of the digestive organs is in part due to the increasing use of the aniline or tar colours, and to the use of antiseptics, such as boracic acid, formalin, and salicylic acid.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

JANUARY 27, 1898.

Business has been somewhat quiet during the past week, while the changes which have taken place are of quite minor importance. So far the anticipated drop in Iodine has not taken place, the article remains, however, in a very critical position. Opium is dearer. Morphia and Codeia unchanged. Bromine and Bromides firm. Quicksilver and Mercurials unchanged. Cream of Tartar steady. Acid Tartaric and Citric quiet. Acid Carbolic dull. Sulphate of Ammonia again dearer. Bismuth unchanged. Glycerin firmer. Cod-Liver Oil weak. Cinchona Bark and Quinine in sympathy, firmer, as is also Cocaine. Sulphonal and Phenacetin unchanged. Acetanilid very weak. The following are particulars of some of the prices actually ruling:—

ACETANILID—Is lower, and could be bought in ton lots at 1s. per lb., or, perhaps, even below this; in view, however, of the pressure to sell, buyers are somewhat frightened of the article.

ACID ACETIC—Quiet at unchanged rates, which for ordinary quantities below half-ton lots are as follows:—B.P., 15s. 3d. per cwt.; 80 per cent., 32s.; and glacial, 39s. 3d. per cwt. in carboys of 130 lbs. each.

ACID BORACIC.—Steady at 24s. per cwt. for *crystals*, and 26s. per cwt. for *powder*.

ACID CARBOLIC—Remains somewhat dull at 6⅞d. to 7d. per lb. for the 35°-36° C. *ice crystal* in 2½ cwt. drums and overcasks. Other qualities and packing in proportion. *Crude* 60° F., 2s. per gallon; 75° F., 2s. 6d. *Liquid* 95 per cent., of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC—Is very quiet at 12½d. to 1s. 1d. per lb. for *English*.

ACID TARTARIC.—*English* on the spot 12¾d. to 1s. 1d. per lb.; *Foreign* 12¼d. to 12½d. per lb. same position.

AMMONIA COMPOUNDS.—It is anticipated all ammonia compounds will go dearer. *Sulphate* is in very active demand at again dearer rates, gray prompt 24 per cent. London £10 5s. per ton.; Beckton prompt not offering. *Chloride* firm at 25s. 6d. to 26s. 6d. per cwt. for the 98 per cent. free from metals, whilst the chemically pure small crystals is 32s. to 33s. per cwt. *Oxalate* steady at 6¼d. per lb. *Bromide* steady at 2s. 2d. per lb. *Iodide* nominally unchanged at 14s. 6d. per lb. *Nitrate* very firm at 40s. per lb. *Sulpho-cyanide* 1s. to 1s. 1½d. per lb., according to quantity.

BISMUTH.—No change has taken place in price, either of the *metal* or of the *salts*.

BLEACHING POWDER.—Steady at £7 5s. per ton on the spot.

BORAX—Quiet at 14s. per cwt. for *lump* and 14s. 6d. per cwt. for *powder* in quantity and in bulk.

CAFFEINE—Is quiet at the late reduction to 14s. 4d. per lb. It is reported, however, that a new maker has entered, or proposes entering, the market, which will, of course, mean increased competition, and possibly a further reduction in the price of the article.

CAMOMILES—Are in good demand, with a tendency to higher prices, especially for the better qualities. Quotations range from 30s. to 40s. per cwt., as to quality and quantity.

CAMPHOR.—*Crude* remains quiet on the spot, but prices from Japan come dearer at 94s. per cwt. *c.i.f.* for January-March steamer. *China* quoted 88s. per cwt. *c.i.f.*

CANTHARIDES.—*Russian* are firm at 1s. 10d. to 1s. 11d. per lb. *Hungarian* steady at 1s. 9d. to 1s. 10d. per lb. *Chinese* are very scarce; nominal value, 1s. 6d. per lb.

CASCARA SAGRADA—Is quiet but firm at 22s. 6d. to 25s. per cwt. on the spot.

CINCHONA BARK.—At the London auctions on Tuesday 3466 packages of all descriptions were offered. Competition was good, showing a marked improvement on the December sales, and about two-thirds of the whole sold at an advance on last London sales, and at about the same rates as were realised at Amsterdam lately. *Ceylon*: 231 bales and 6 cases offered and sold, according to analysis. *Succirubra*, stem chips and shavings, ordinary to fair at 2¾d. to 4⅜d., renewed ditto 3½d. to 3¾d., quill 3½d.; *Officinalis*, chips and shavings at 3¼d. to 4⅛d. *East Indian*: Of 1327 bales and 34 cases 976 bales and 26 cases sold (about 200 bales being withdrawn before the sales with high limits). Red, stem chips and shavings, fair to good rich at 3⅜d. to 5½d., renewed ditto at 4d. to 5¼d., good root at 4d., quill at 3⅛d.; *Officinalis*, natural stem chips at 3¼d. to 3½d., good shavings at 7d., good root at 4⅜d., renewed chips and shavings, fair to good at 3⅛d. to 5⅞d.; Ledger stem chips, fair to good at 4¼d. to 5⅞d., Ledger branch at 4d. to 4¼d., and good Ledger root at 4⅝d. *Java*: Of 117 bales and 100 bags offered 77 bales and 100 bags sold, good Ledger stem chips at 6¼d. to 7½d., low dark dusty ditto at 2⅜d. to 2½d., root 4⅝d. *South American*: Of 732 bales Bolivian Calisaya offered, about 200 bales sold, gray quill at 8⅛d. to 9½d., ordinary at 5¾d., flat country-damaged at 9¾d. to 10⅛d. *Carthagena*: 19 bales bought in, stout split quill at 6½d. *Pitayo*: 51 bales offered and 37 bales sold at 2d. to 2¾d. *African*: 843 bales offered and 618 bales sold, fair to good quill at 4⅜d. to 6⅝d., broken quill and chips at 5⅝d. per lb.

CLOVES.—Privately the market for *Zanzibar* has been active, with advancing prices. Sales include spot at 3½d., and for delivery, February to April, at 3½d., March to May at 3½d., April to June at 3⅝d., and June to August at 3⅝d. In auction 50 bales good bright *Zanzibar* bought in at 4½d., also 5 cases dark *Penang* at 7d. to 7½d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: 1s. 9d. *Benzole*: 50 per cent., 1s. 8d. per gallon; 90 per cent., 1s. 5d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 10d. *Solvent Naphtha*: 95 per cent. at 120° C., 1s. 11d. per gallon.

COCAINE—Is decidedly firm, makers not appearing at all anxious to book orders at their nominal prices, which remain at 10s. 3d. to 10s. 9d. per oz., according to brand, for 100-oz. lots. There are, however, still some second-hand holders who would probably accept somewhat less, but the quantity available from such holders would appear to be limited. It is reported that *crude* is very firm and tending higher, which would point to higher figures for the manufactured article.

CODEIA—Remains firm at 11s. 3d. to 11s. 9d. per oz., according to quantity and packing.

COD-LIVER OIL.—The new oil will be late on the market this season, but there seems no reason for thinking it will be missed, as not only is the demand very slow, but stocks here are very large. Quotation for fine non-freezing Norwegian quality is 60s. to 62s. 6d. per barrel.

CREAM OF TARTAR—In good demand at firm rates. First white *French* crystals, 76s. per cwt. Powder, 78s. to 79s. per cwt.

DAMIANA LEAVES.—From New York we hear that there have been further arrivals of new crop, and prices are lower at 7d. per lb., *c.i.f.* London.

GINGER.—*Cochin* continues dull. 122 bags wormy washed rough sold at 16s., fair bought in at 21s. to 22s. Of 48 barrels old *Jamaica*, 24 barrels sold, chiefly common, without reserve, at 66s. 6d. to 68s. 6d., one barrel middling 81s.

GLYCERIN—Is firmer, and 52s. 6d. per cwt. is now the general quotation for the 1260° s.g. chemically pure odourless and water white quality packed in cases of 4 56-lb tins.

IODINE.—It would appear that one of the larger producers on the West Coast, who hitherto held with the Syndicate, has a considerable quantity of *Iodine* here, which he is proposing to throw upon the market quite independent of the Syndicate. No doubt every effort will be made to induce him to remain in the fold, while, should he persist in his intention, the Syndicate will no doubt retaliate in an effective manner by lowering their price. Apart from the question whether any of those interested in iodine would in the long run be in any way really benefited by the threatened break up, which is somewhat more

than doubtful, the point would arise whether any quantity of iodine could be readily disposed of outside the Syndicate, owing to the fact that under the circumstances purchases at almost any price would appear rather dangerous. It is said, however, that a certain class of people "rush in where angels fear to tread." It therefore now remains to be seen what will happen. Meantime price of *Iodine* remains nominally unchanged at 7½d., prices of *Iodides* and *Iodoform* being also still unaltered. Of course, however, business in some is restricted to covering from hand-to-mouth requirements.

MENTHOL—Rather firmer at 7s. 6d. to 7s. 9d. per lb., according to quantity and brand.

MERCURIALS.—Unchanged at 2s. 2d. to 2s. 5d. per lb. for *corrosive sublimate*, and 2s. 6d. to 2s. 9d. per lb. for *Calomel*; other salts in proportion.

MORPHIA—Is quiet at nominally still unchanged prices, say 4s. 3d. to 4s. 6d. per oz. for the Hydrochlorate Powder. Should, however, the movement which has made itself felt in Opium be maintained, Morphia will no doubt advance in proportion.

OILS (ESSENTIAL).—*Clove* dearer at 2s. 6d. per lb. for English, and there appears every probability of a further advance. *Peppermint*: *H.G.H.* is firmer, but unchanged at 5s. 6d. to 5s. 9d. per lb. on the spot; *Japan*, 40 per cent., 4s. 3d. per lb. on the spot; and *dementholised*, same position, 3s. 3d. per lb. *Star Aniseed* quiet at 7s. 6d. per lb. *Cassia* steadier for arrival at 4s. 7d. per lb. *c.i.f.* for 70 to 75 per cent. *Citronella* unchanged at 1s. 3½d. per lb. *Lemon-grass* is quiet, with nominal quotations only. *Cajaputa* steady at 4s. 3d. to 4s. 6d. per bottle, according to brand and quantity.

OILS (FIXED) AND SPIRITS.—*Linseed* dearer since last week, but the market closes quieter in tone; on the spot pipes, £15 12s. 6d.; barrels, £16 2s. 6d. *Rape* firm and rather dearer at £23 10s. for ordinary brown on the spot, and £24 15s. for refined, same position. *Cotton* steady; crude London spot, £12 15s.; refined spot, £14 10s. *Olive* Spanish, £32; Levant, £31 10s. to £32. *Cocoanut*: Forward positions are very firm. On the spot, Ceylon is quoted £22 10s., Cochin, spot, £28. *Palm*: Lagos, on spot, £23 10s. *Turpentine* very firm, but unchanged. American, spot, 24s. 3d. per cwt. *Petroleum Oil* continues dull. Russian, spot, 4¼d. per gallon; American, spot, 4½d. per gallon; water-white, 5¾d. per gallon. *Petroleum Spirit*: American, 5½d. per gallon; deodorised, 6d. per gallon.

OPIUM.—After being very quiet all the week an advance was telegraphed last night from Smyrna; prices there, and here also in sympathy, being about 6d. per lb. higher for the various kinds. So far, however, not much business has taken place here at the advanced figures.

PHENACETIN.—We hear of offers in quantity at 3s. 8d. per lb. The make is said, however, to be one comparatively unknown upon this market.

PILOCARPINE.—One of the makers is quoting 16s. per oz. for both the *hydrochlorate* and the *nitrate* in 1-oz. lots.

POTASH COMPOUNDS.—*Chlorate* firm at 3½d. to 3¾d. per lb. on the spot. *Iodide* unchanged, but very little doing for fear of a decline. Nominal quotations 9s. 9d. to 10s. 3d. per lb. according to quantity. *Bromide* firm at 1s. 10d. per lb. for quantities less than 1 cwt. *Permanganate* very weak at 70s. per cwt. for large and 65s. per cwt. for small crystals. *Prussiate*: Red crystals, 1s. 2½d. per lb.; powder, 1s. 3d. per lb.; yellow, 6¾d. per lb. for English. *Cyanide*: 98-100 per cent. cake, 1s 2d. to 1s. 3d. per lb. according to quantity. *Oxalate*: Neutral 5d. per lb.

QUICKSILVER—Unchanged. First hands, £7; second hands, £6 19s. 6d. per bottle.

QUININE.—Market remains quiet but steady, makers' prices being still 1s. 1d. per oz. for 1000-oz. lots in bulk, there being few sellers from second hand below this figure; the firm tone of the London bark sales has also imparted a firmer feeling to the quinine market, although, so far, no actual alteration in price has taken place.

SHELLAC.—The market is steady at last week's advance, but closes quiet. On the spot there is a continued good inquiry for *Button*, but only a limited business has been done owing to scarcity of sellers. *Second orange* in slow demand at 68s. per cwt. for fair *TN*. *Garnet* quiet at 73s. for blocky *AC*.

SODA COMPOUNDS.—*Crystals* firm at 55s. to 60s. per ton ex-ship terms. *Caustic*: 70 per cent., white, £7 10s. per ton in large bulk; 60 per cent., £1 per ton less. *Acetate*: Refined white crystals, 14s. to 15s. per cwt.; chomically pure, 35s. to 37s. 6d. per cwt. *Hyposulphite*, 5s. 6d. to 8s. per cwt., according to make and quantity. *Bicarbonate* steady at £7 15s. per ton for the 98 per cent. quality; fully bicarbonated, 18s. 6d. per cwt.

SPICES (VARIOUS).—*Black Pepper*: Only 309 bags Lampong offered in auction and bought in at 3¾d. Privately the market for Singapore has been excited and rates have advanced. Considerable business has been done for arrival at 4 3/32d. up to 4 3/32d. according to position. *White Pepper*: None offered in auction, privately quiet but firm; Penang, April to June steamer, 6⅜d.; Singapore March to May, 7 7/16d. *Chillies*: 36 bags fine bright *Japan* sold at 45s. to 47s., also 12 cases good, without reserve, at 41s. 6d. to 42s. 6d. *Cassia Lignea* is firm at 49s. *Cinnamon chips*: Of 241 bags ordinary coarse *Ceylon* 41 bags sold at 2¾d. *Nutmegs* dull. *Mace* steady; of 17 cases *Penang* only 4 cases sold, good bold, partly wormy, at 2s. 1d. to 2s. 3d. *Pimento*: Only 20 bags offered and bought in at 5d.

SULPHATE OF COPPER—Again dearer at £16 to £17 10s. per ton, according to make and package.

SULPHONAL — Unchanged. The two makers, while insisting that present price shows them a loss, are still accepting orders for limited quantities at 7s. 3d. per lb., both for *crystals* and *powder*.

THYMOL—Is steadier at 6s. 6d. to 7s. per lb., according to quantity.

TURMERIC—Remains quiet, with a small business only, at 19s. per cwt. for *Cochin* finger, and 14s. 6d. for fair *China* ditto. *Bengal* quoted 14s. 9d. to 15s. per cwt.

NEWCASTLE CHEMICAL REPORT.

JANUARY 26, 1898.

Although not very marked, a shade more business is felt to be passing in heavy goods, notably Caustic Soda and Alkali. Spanish inquiries are a shade fuller. Sulphur and Soda Ash are somewhat on the scarce side. Quotations, however, do not change, and run as follow:—Bleaching Powder, £6 5s. to £6 10s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Caustic Soda: 70 per cent., £7 10s. to £7 15s. Soda Crystals: 42s. 6d. to 57s. 6d. Sulphur: £5 per ton.

MANCHESTER CHEMICAL REPORT.

JANUARY 26, 1898.

The market here maintains a firm aspect all round. Miscellaneous articles are in several instances higher, especially Sulphate of Ammonia, which continues to advance, and is now quoted £9 10s. per ton on rails, Lancashire, the highest figure known for some time past. An active inquiry prevails for Brown Acetate of Lime, which is said to have advanced a cent per lb. on the other side. No quotations are practically obtainable here, and it is said that £9 has been named for forward delivery, which is startling compared with the £6 10s. per ton of last week. Naphthas are steady, and Pitch is in more enquiry at 16s. per ton *f.a.s.* Manchester Ship canal, a most unremunerative figure indeed. Glycerin is unchanged, but firm. Ironfounders' Plumbago, £14 to £14 10s. per ton, according to quality, delivered Manchester. Peroxide of Manganese, £12 15s. to £13 5s., and Battery Manganese, £9 2s. 6d. and £9 10s. Manganese, 95 per cent., £15; 87 per cent, £10; 80 per cent., £8; and 70 per cent., £6, *f.o.b.* Manchester. Yellow Prussiate of Potash unchanged at 7d, Creosote firmer at 2¼d. Aniline Oil and Salt very low, 5¼d. and 5d. respectively. Sulphate of Copper tends upwards at £17 10s. to £18.

LIVERPOOL REPORT.

JANUARY 26, 1898.

During the week a steady tone has pervaded the market, prices have been good, with a general upward tendency, and the sales concluded have been of a more varied character than usual, and of a satisfactory nature. Olive Oils are practically unaltered as regards the stock held here, for the high rates ruling in Spain have almost stopped business in Liverpool, the prices asked being so high. A slight advance is to be observed in the price of Linseed Oil of Liverpool make, but other oils are practically as last week. A lot of Fennel Seed was sold ex-quay, as well as Guinea Grains, Sierra Leone Ginger, and various parcels of African Beeswax. Potashes are very firm just now, and Sulphate of Ammonia has again risen in price.

BEESWAX.—11 packages of Sierra Leone sold at £6 2s. 6d. per cwt., and some 95 lots of Gambia, Dakar, and Bissao Wax sold at £6 10s. per cwt.

BLEACHING POWDER—Is firm at £6 5s. per ton.

CANARYSEED.—Turkish is selling at

25s. 6d. to 27s. per 464 lbs.; 150 bags of medium quality sold at 25s. 6d.

COPPERAS.—High in price, 38s. and 36s. per ton.

COPPER SULPHATE—Is firm at £17 per ton.

CARNAUBA WAX.—Yellow has been selling at 72s. 6d. per cwt., and grey at 41s.

FENNEL SEED.—80 bags ex-quay found purchasers at 16s. 3d. per cwt.

GINGER.—Sierra Leone has been selling steadily, ex-store at 16s. to 17s. per cwt.

GUINEA GRAINS.—A small lot has been disposed of on private terms ex-quay.

GUM.—Some 15 tons of Brazilian Arabic have been sold at fully late rates.

HONEY.—100 barrels Pile 3 Chilian made 23s. 9d. per cwt., and small sales of Pile 1 have been effected at 26s. per cwt.

KOLA NUTS.—2d. per lb. was all that 39 packages of dried would bring.

OILS (FIXED) AND SPIRITS.—*Castor oil* is selling steadily at the well-sustained price of 3⅝d. to 3¾d. per lb. for Calcutta and French. *Olive oil* is very tightly held here, but pretensions of holders limit the sales. Spanish oils are quoted at £33 for Malaga, and £32 to £32 10s. per tun for Seville for shipment, cost, and freight. *Linseed oil* of Liverpool make is now at 16s. 6d. to 17s. per cwt. and very firm. *Cottonseed oil* is quiet at 14s. 9d. to 15s. 6d. per cwt. *Cocoanut oil*: The sale on private terms of 25 tuns, ex-quay, is reported. *Spirit of turpentine* continues firm at 24s. 6d. per cwt., selling freely.

POTASH SALTS.—Potashes are very firm at 20s. per cwt, and selling fairly well. *Pearlashes* are nominal. *Cream of Tartar* offers no inducement to buyers, who are few, at 75s. to 76s. per cwt.

Coming Pharmacy Balls.

THURSDAY, FEBRUARY 3.

CHEMISTS' ASSISTANTS' ASSOCIATION (Cinderella), at the Portman Rooms, Baker Street, London, W. Hon. Sec.: H. H. Robins, 73, Newman Street, W.

WEDNESDAY, FEBRUARY 9.

JUNIOR PHARMACY BALL, at the Portman Rooms, Baker Street, London, W. Hon. Sec.: W. J. Henson, Beulah Hill, London, S.E.

THURSDAY, FEBRUARY 10.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY'S BALL, at the Masonic Hall, Sheffield. Hon. Sec.: J. B. Pater, 265, Fulwood Road, Broomhill, Sheffield.

Football.

METROPOLITAN COLLEGE OF PHARMACY *v.* KENSINGTON RANGERS' RESERVES on Saturday, January 22, at Southfields, Wimbledon Park; resulting in a win for the Metropolitan by 2 goals to *nil*.

THE PHARMACEUTICAL FOOTBALL CLUB will finish the season on March 26, will a match between past and present students of the School of Pharmacy. Mr. A. F. Surfleet, a renowned footballer in his year, will captain the "Old Boys," and take the chair at the smoking concert which is to follow the match.

PERKIN. With an introduction by Mr. DAVID HOOPER. Calcutta: Government Printing Office. 1897. From the Authors.

ADVERTISEMENTS

(Received too late for Classification).

HIGH-CLASS SHOPS to be Sold or Let. Situate Broadway, Green Lanes, Palmer's Green, facing Cock Tavern. Grand opening for a good Chemist. Apply, W. Holmes, Crescent Estate, Palmer's Green.

WANTED experienced Chemists' TRAVELLERS for England, Scotland, and Ireland, must be first-rate Salesmen, of good standing, long experience, and must have extensive connection. Address with full particulars, CHEMIST, care of Street & Co., 30, Cornhill, E.C.

SURBITON, S.W.—Wanted active and obliging JUNIOR, about 21. Send full particulars and salary required, also carte if convenient. C. LOWE & Co., Chemists, Surbiton.

Diary for the Week.

SATURDAY, JANUARY 29.

PHARMACEUTICAL FOOTBALL CLUB *v.* HON. ARTILLERY CO., at the latter's headquarters at Finsbury. Kick off at 3 p.m.

MONDAY, JANUARY 31.

ROYAL GEOGRAPHICAL SOCIETY.
"Through Somaliland to Lake Rudolf," by H S. H. Cavendish.

TUESDAY, FEBRUARY 1.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.
Lecture by T. H. Pattinson.
ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things," by Professor E. Ray Lankester (Lecture III.).

WEDNESDAY, FEBRUARY 2.

NOTTINGHAM AND NOTTS. CHEMISTS' ASSOCIATION, at 8 p.m.
"The Scottish Alps," by W. L. Howie.
Supper at the Albert Hotel at 10 p.m.
PHARMACEUTICAL SOCIETY.
Meeting of Council at 11 a.m.

THURSDAY, FEBRUARY 3.

CHEMICAL SOCIETY, at 8 p.m.
"On the Dissociation of Potassium Platinichloride in Dilute Solution, and the Production of Platinum Monochloride," by E. Sonstadt.
"Effect of the Mono-, Di-, and Tri-Chloracetyl Groups on the Rotatory Power of Methylic and Ethylic Glycerates and Tartrates," by Percy Frankland and Thomas Stewart Patterson.
"The Rotation of Ethylic and Methylic Di-monochloracetyl Tartrates," by Percy Frankland and Andrew Turnbull.
"The Volumetric Estimation of Sodium," by H. J. H. Fenton.
CHEMISTS' ASSISTANTS' ASSOCIATION, at 7.30 p.m.
Cinderella Dance at the Portman Rooms, W.
LINNEAN SOCIETY OF LONDON, at 8 p.m.
"On the Muscular Attachment of the Animal to its Shell in Some Fossil Cephalopoda (Ammonoidea)," by G. C. Crick.
"The Comparative Anatomy of Certain Genera of Cycadaceæ," by W. C. Worsdell.
MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.30 p.m.
Dispensing Difficulties, by Members
ROYAL INSTITUTION, at 3 p.m.
"The Halogen Group of Elements," by Prof. Dewar.

FRIDAY, FEBRUARY 4.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
"A Matter of Life," by Charles Forbes.
ROYAL INSTITUTION, at 9 p.m.
"Some New Studies in Cathode and Röntgen Radiations," by Alan A. Campbell Swinton.
SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.
"Mountaineering Exploration in the Canadian Rocky Mountains," by Professor Collie.
SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
"Photo-Micrography as Applied to the Study of Diatoms," by J. Newton Coombe.

EXCHANGE.

OFFERED.

Miscellaneous.

For Immediate Sale.—Watts' 'Dictionary of Chemistry,' vols. I., II, and III.; 'Theoretical Chemistry,' Nernst, translated by C. S. Palmer; 'Outlines of General Chemistry,' Ostwald, translated by J. Walker. Very little used.—"F.," Tavistock, Ranelagh Road, Co. Dublin.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern, gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

WANTED.

For Cash, old electric lamps and scrap platinum.—P. Rowsell, 14, Walcot Square, Lambeth, S.E.

News in Brief

The Glasgow and West of Scotland Pharmaceutical Association will hold its Annual Supper on Tuesday, February 8, in the Grand Hotel, at 8 p.m. Tickets, 6*s.* 6*d.* each, may be obtained from the Hon. Secretary, Mr. D. Watson, 558, Cathcart Road, Glasgow.

Mr. Walter Temple Cooper's numerous friends and acquaintances will sympathise deeply with him in the great loss he has sustained by the death of his only daughter, Rita Winifred Cooper, on Tuesday last, at his residence, 66, Oxford Street, W. Only on the previous day his wife had presented him with a son, under conditions that gave rise to considerable anxiety, but it is satisfactory to learn that, despite the heavy blow to which reference has been made, no further danger is apprehended.

"The Dentist" is a new and independent monthly journal devoted to the interests of the dental profession. The first number, which is dated January, 1898, comprises interesting notes and researches, ample and impartial reports of societies and meetings, items of news, etc., etc. The subscription is 7*s.* per annum, and the publishers are Messrs. Hampton & Co., 13, Cursitor Street, London, E.C.

Edinburgh District Chemists' Golf Club.—The annual meeting of the club, adjourned from December, was held in the Pharmaceutical Society's house, 36, York Place, Edinburgh, on Tuesday, February 1. Mr. H. D. Alexander, Captain, in the chair. Mr. W. B. Cowie, Treasurer, submitted a highly satisfactory financial statement, showing a good balance in favour of the club. Eight gentlemen were elected members, and thereafter the committee arranged the details of the ensuing season's fixtures.

The Seventeenth Junior Pharmacy Ball will be held at the Portman Rooms, Baker Street, W., on Wednesday, February 9. The President of the Pharmaceutical Society—Mr. Walter Hills—the late President, Mr. Michael Carteighe — Mr. Arthur L. Savory, Mr. Richard Bremridge, and other prominent gentlemen have promised their support on this occasion. Music will be provided by Mr. Mortlake Mann's Orchestral Band, and the first dance will commence precisely at 9 p.m. The Hon. Secretary, Mr. W. J. Henson, Beulah Hill, S.E., intimates that he has a few tickets left that have been returned owing to illness, and those may be had on application to him.

The Sanitary Institute.—The twenty-fifth London Course of Lectures and Demonstrations for Sanitary Officers will be given in the Parkes Museum, Margaret Street, W., on Mondays and Thursdays at 8 p.m., commencing on February 21. The various subjects will be dealt with in a course of seventeen lectures, given by well-known authorities, and will be illustrated with diagrams, drawings, models, and lantern slides. The lectures will include the subjects scheduled for the examinations of the Institute.

Mr. G. H. Wilkinson writes to ask if any reader can favour him, through the Journal, with the present address of T. Edwards & Co., Opticians, late of Finsbury Pavement, London.

Bradford and District Chemists' Association.—Owing to the indisposition of Mr. T. Pattinson (who is suffering from a severe attack of influenza), the lecture which that gentleman should have given before the members of the Association on Tuesday last, February 1, at the Great Northern Hotel was postponed. The council, however, arranged a musical evening, at which there was a capital attendance. Mr. Dunn, the President, occupied the chair. Before the proceedings commenced the Secretary was requested to convey the sympathy of the members of the Association to Mr. Pattinson, expressing the hope that he would soon be restored to health. The programme, which was a varied one, was taken part in by Mesdames Mitchell and Moulson, and Messrs. Mitchell, Moulson, Severs, Hanson, H. Taylor, and C. McKee, and a very enjoyable evening was spent.—Mr. Dunn made special reference to Mr. Howie's lecture, entitled "The Scottish Alps," which is to be given on Monday next, Feb. 7, in the Mechanics Institute.—It was also stated by Mr. Waddington that the tickets were in brisk demand, over 200 having been disposed of.—On the motion of Mr. J. M. Newbould, a hearty vote of thanks was accorded to the ladies and visitors, which was ably seconded by Mr. F. K. Tayler. —Mr. R. W. Silson humorously responded on behalf of the ladies.

Business Changes.

Mr. S. W. Ord has joined the firm of Messrs. J. Lloyd Bullock and Co., pharmaceutical chemists, 3, Hanover Street, London, W. He has been manager of the firm for the last thirteen years, and we are pleased to learn that arrangements have now been completed which will interest him still more closely in the firm's business.

Mr. James Lees has disposed of his business at 88, High Street, Lees, and will now have only one address, namely, 110, Lees Road, Oldham.

Mr. Thomas Wade has purchased from Mr. J. Lees the business at 88, High Street, Lees, near Oldham.

Mr. Robert Leslie, Ph. C., M.P.S., has purchased the business that he has managed for the past two years at 627, George Street, Aberdeen.

New Ideas & Trade Notes

COD-LIVER OIL.

Messrs. Parke, Davis & Company send a brochure issued by them descriptive of the cod-liver oil industry in Norway, entitled "The Lofoten Islands and their Principal Product." A very interesting account is given of the "Land of the Midnight Sun," its inhabitants, and the fishing industry, whilst the booklet is profusely illustrated with scenes connected with the fishery. There is also a series of coloured pictures showing the appearance of healthy and diseased cod-livers.

THE SANITAS COMPANY, LIMITED,

This firm sends an advance copy of the third edition of a book, entitled 'How to Disinfect,' in which many improvements have been made and micro-photographs given of various disease germs. The publication gives, in a handy form, numerous useful hints for practical disinfection during cases of infectious illness and in every-day life. At a board meeting of the directors of the Sanitas Company, held on Friday, January 28, it was resolved to recommend the payment of a final dividend of 1*s.* and a bonus of 9*d.* per share, bringing up the total distribution for the year to $13\frac{3}{4}$ per cent. on the fully paid shares numbered from 1 to 50,000, and a final dividend and bonus of 1*s.* $2\frac{1}{2}d.$ (in all) on the shares numbered 50,001 to 60,000. The annual general meeting will be called for Wednesday, February 23.

VIMBOS SHOW-CARD.

The Vimbos Company are issuing as a show-card a very fine reproduction of Madame Brès' beautiful picture, "The Battle of Flowers." It will be remembered by those who visited the Paris Salon a year back that this exquisite work was awarded the gold medal. The picture was also exhibited last summer at Messrs. Graves' Gallery in Pall Mall at an exhibition of this artist's works, and was purchased by the Vimbos Company for a considerable sum. The reproduction of this delicate work has been very successful.

DATURA ASTHMA CURE.

Messrs. Potter & Clarke are issuing a new coloured show-card and a pamphlet in connection with their Datura Asthma Cure. Copies can be obtained by chemists on application to the firm.

Football.

Metropolitan College of Pharmacy *v.* Westminster College of Pharmacy, on Saturday, January 29, at Hyde Farm, Balham, resulting in a win for the Metropolitans by 5 goals to 1.

Pharmaceutical Football Club *v.* Hon. Artillery Company.—The return match between these teams was played on Saturday last at Finsbury, and resulted in a draw of two goals each.

Market Report and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

February 3, 1898.

Business has been somewhat disappointing during the past few days, while the changes which have taken place are quite unimportant. Quinine is steady and rather firmer. Same can be said of Cocaine. Cream of Tartar firm. Acid Tartaric and Citric quiet. Opium firm with an upward tendency. Ipecacuanha higher and very firm. Cardamoms steady. Senna in good demand for Tinnivelly, while Alexandrian is neglected. Iodine and Iodides so far still unchanged. Bromides steady. Borax and Acid Boracic quiet. Acid Carbolic dull. Morphia and Codeia steady. Cod-Liver Oil and Glycerin dull. Phenacetin and Acetanilid weak, Sulphonal unchanged. Lithia, Bismuth, Quicksilver, and Mercurials in steady demand at unaltered prices. The following are the ruling quotations for articles of chief interest :—

Acetanilid.—Is weak at 1s. to 1s. 1d. per lb. for quantity.

Acid Boracic—Quiet at 24s. per cwt. for *crystals*, and 25s. per cwt. for *powder* in large bulk.

Acid Carbolic—Is quiet at 6⅞d. to 7d. per lb. for 35-36° C. *ice crystal* in 2½ cwt. drums and overcasks. *Crude* 60° F., 2s. per gallon ; 75° F., 2s. 5d. *Liquid* 95 per cent. of pale straw colour, 1s. 1d. to 1s. 2d. per gallon, according to quantity, In 40 gallon casks.

Acid Citric—Continues dull, and quotations are nominal at 12½d. to 1s. 1d. per lb. for English *crystals*.

Acid Tartaric—Quiet; English, on the spot, 12¾d. to 1s. 1d. per lb. ; foreign, 12½d. to 12¾d. per. lb.

Ammonia Compounds.—*Sulphate* is steady, but no further advance has taken place on last week's price of £10 5s. per ton for gray prompt 24 per cent. London. *Sal ammoniac* is dearer at 35s. per cwt. for sublimed firsts and 33s. per cwt. for seconds. *Bromide* quiet but steady at 2s. 2d. per lb. *Iodide* dull at 14s. 6d. per lb. *Nitrate* steady at 40s. per cwt. *Chloride* firm at 26s. to 26s. 6d. per cwt. for the 98 per cent. free from metals and 33s. per cwt. for chemically pure small crystals.

Atropine—Firm at 12s. 4d. per lb. for the P.B. quality in 75 oz. lots and bulk packing.

Bismuth.—Unchanged at 5s. per lb. for the *metal* and 4s. 10d. for the *subnitrate* in 5-cwt. lots.

Bleaching Powder — Unchanged at £7 5s. per ton on the spot.

Borax—Is unchanged at last week's quotation of 14s. per cwt. for *crystals*, and 14s. 6d. per cwt. for *powder*.

Bromine and Bromides—Firm at unchanged prices, say 1s. 9d. per lb. for *Potass. bromide* in 10-cwt. lots.

Camphor.—*Crude* remains quiet, but prices from Japan come dearer at 94s. for January-March steamer. *China* 88s. per cwt. *c.i.f.*

Cloves.—Privately *Zanzibar* have continued in active demand at advancing prices. Sales comprise spot at 4⅛d. to 4⅛d. ; March to May delivery, 4⅛d. ; April to June, 4⅛d. ; June to August, 4¼d. In auction 10 bales good bright *Zanzibar* sold at 4½d. ; also 10 cases ordinary dark *Penang* at 5¼d.

Coal Tar Distillation Products.—*Toluol* : 1s. 11d. per gallon *Benzo'e* : 50 per cent., 1s. 7d. ; 90 per cent., 1s. 5d. *Crude Naphtha* : 10d. *Solvent Naphtha* : 95 per cent. at 160° C., 1s. 11d. per gallon.

Cocoa Butter.—In the monthly auctions on Tuesday 500 cases (50 tons) Cadbury's sold at 9¼d. to 9⅝d., the average being 9½d. per lb., against 9⅞d. per lb. in January, and 10½d. per lb. in December auctions.

Cocaine.—Makers' price remains 10s. 3d. to 10s. 9d. per lb., the latter figure being the nominal price of the brand most generally in favour, the manufacturers of which are, however, sold out, and are obliged to decline orders. The quantity available from second-hand would appear to be decidedly reduced, while the price of the *crude* is said to be firm, which would point to the probability of the continuance of a firm market for the article.

Codeia—Is firm at 11s. 3d. to 11s. 6d. per oz., according to quantity.

Cod-Liver Oil—Remains very quiet at nominally unchanged figures, nearest price for quantity being 62s. 6d. per barrel for best non-congealing *Norwegian* in tin-lined barrels.

Cream of Tartar—Continues firm at 75s. 6d. per cwt. for first white French *crystals* on the spot, and 78s. to 79s. per cwt. for *powder*.

Ginger.—*Cochin* continues flat. Of 774 bags offered only 126 bags low shrivelled ends sold at 12s., the remainder bought in, washed rough at 23s. to 26s., brown rough 29s. Also 22 cases small limed part cut at 35s. 170 bags limed *Japan* bought in at 14s. 6d. to 15s. Of *Jamaica*, 100 barrels good washed sold at 99s.

Glycerin.—The continued mild weather has not helped demand, and the article is quiet at 52s. 6d. to 55s., according to brand, for best German makes of chemically pure, white, double distilled, 1·260° quality, in tins and cases. *English* being offered slightly below these figures.

Iodine and Iodides.—So far the expected break in prices has not taken place, *Iodine* being still quoted 7½d. per oz. and *Potass. Iodide* 9s. 9d. per lb. in 2-cwt. lots. Other *Iodides* in proportion.

Lithia.—Firm at 10s. 8d. for the *Carbonate* in 2-cwt. lots.

Mecurials.—Are unchanged at 2s. 2d. for *Corrosive sublimate*, and 2s. 6d. for *Calomel* in 5-cwt. lots.

Morphia.—Market remains very steady in face of the firmness of *Opium*, and a fair business has been done at unchanged prices, viz., 4s. 3d. to 4s. 6d. per oz. for the *Hydrochlorate powder*.

Oil Cloves—Has been advanced again in consequence of the rapid rise in Zanzibar cloves. Quotations for English drawn oil range now from 2s. 9d. to 2s. 10d. per lb., according to quantity.

Oils (Fixed) and Spirits.—*Linseed* : The market is lower and closes quiet at £15 10s. for pipes on the spot ; barrels, £16. *Rape* : Dull and lower ; ordinary brown on the spot, £22 15s. ; refined, £24 5s. *Cotton* rather easier ; crude London spot, £12 12s. 6d. ; refined, £14 10s. *Olive* : Spanish and Levant, £33. *Cocoa-nut* : Ceylon on the spot, £22 10s. ; Cochin, £28. *Palm* unchanged at £23 10s. for Lagos on the spot. *Turpentine* quiet ; American spot, 24s. 3d. per cwt. *Petroleum Oil* dull ; Russian spot, 4¼d. per gallon ; American, 4½d. per gallon ; water white, 5¼d. per lb. *Petroleum Spirit* : American, 5½d. per gallon.

Opium.—Market has been fairly active for *druggists* and *manufacturing* kinds at 9s. to 10s. 6d. per lb. for the former, and 8s. 9d. to 9s. 3d. for the latter, a report having been current that the autumn sowings had been seriously damaged, if not destroyed, by frost, while the spring sowings are also stated to have suffered. Should this report be confirmed, it will no doubt mean a further considerable advance in value of the article in view of the fact that prices are still very moderate, while stocks are by no means excessive. Of course, the possible absence of demand from America must not be overlooked, as this is a by no means unimportant factor in the matter. For *soft shipping* the demand remains restricted, prices being nominally 10s. 6d. to 12s. 6d. per lb. *Persian* is quiet at unchanged rates, say 10s. to 11s. per lb.

Phenacetin.—The pressure to sell on part of manufacturers continues, and for really large quantity it would be possible to buy below 4s. per lb. for both *crystals* and *powder*.

Pilocarpine.—Makers now decline to sell below 18s. 6d. per oz. for both the *Hydrochlorate* and the *Nitrate*.

Potash Compounds.—*Chlorate* quiet and rather easier at 3½d. per lb. on the spot. *Iodide* quiet with a hand to mouth business at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bromide* firm at 1s. 10d. per lb. for quantities less than 1 cwt. *Permanganate* weak at 70s. per cwt. for large and 65s. per cwt. for small crystals. *Cyanide* : 1s 2d. to 1s. 3d. per lb. for the 98-100 per cent. cake. *Prussiate* unchanged at 6¾d. per lb. for *yellow* and 1s. 2½d. per lb. for *red* on the spot. *Oxalate* : Neutral 5d. per lb.

Quicksilver.—The market is quiet but firm at £7 per bottle from first hands, whilst second hands offer at 6d. per bottle less.

Quinine.—Market is quiet, but firm, people appearing to be like Mr. Micawber, "waiting for something to turn up." Manufacturers still quote 1s. 1d. per oz. in

1000-oz. lots for best German brands, but are apparently not free sellers at this price. It is stated that large speculative purchases have been made at this figure from second hand, from which it would appear that some people believe in the possibility of an advance in value of the article in the not too-remote future. Everything depends, however, upon the course of prices for *Bark*. One thing would appear certain, viz. : that an advance in value of Quinine is more probable than a decline.

Resin Scammony—Is easier at 6s. 3d. per lb., in consequence of the increasing supplies of roots and the slightly lower rates obtainable for same.

Santonine—Is steady at 4s. 5¼d. per lb. for 3-cwt. lots in original cases. In view of the reduced price buyers can hardly be wrong in securing a fair stock, especially as an advance to something like former figures would appear to be only a question of time.

Shellac.—At the fortnightly sales on Tuesday good supplies were catalogued, but a dull tone prevailed throughout. Holders on the whole were firm and as buyers declined to operate unless at a reduction only one-fourth of the whole passed the hammer at a reduction of 2s. per cwt. on the previous sales. A total of 1522 cases offered and 373 cases sold. *Fine Orange* : One case fine pale G, in double-triangle sold at 88s. *Second Orange* : Of 983 cases 263 cases sold, good bright at 71s., fair bright red flat at 66s. to 67s., fair bright little matted at 66s., fair flat red at 65s., reddish curly matted at 64s., bronzy reddish free at 63s. to 64s., shivered reddish at 63s., free livery at 62s., dark red cakey at 60s. *Garnet* : 90 cases offered and bought in, fine free flat *AC* at 77s., blocky *AC* at 72s., and common hard block *OCC* at 61s. *Button* : Of 448 cases 109 sold, good pale cakey A1 at 75s., palish hard block at 70s., ordinary blocky 1 at 65s., pure stamped No. 2 at 82s., ordinary to fair No. 2 at 70s. to 74s., blocky ditto 65s., flint block ditto 60s., circle 4's common at 36s. to 39s.

Soda Compounds.—*Crystals* steady at 55s. to 60s. per ton ex-ship terms. *Bicarbonate* firm at £7 15s. per ton for 98 per cent. and 18s. 6d. per cwt. for the fully bicarbonated. *Caustic* quiet at £7 10s. per ton for 70 per cent. and £6 10s. for the 60 per cent. *Acetate* : The pure has been reduced to 30s. per cwt. *Hyposulphite* : 5s. 6d. to 8s. per cwt. according to brand.

Spices (Various).—*Black Pepper* : 378 bags Penang bought in at 5d. ; 16 bags damaged Singapore sold at 3⅞d. ; 228 bags Wynaad mostly sold at 4d. to 4⅛d. *White Pepper* : 130 bags fine Singapore sold at 7¾d. to 8d. ; also 40 cases very fine bold bright in at 8⅝d. to 9⅛d. *Chillies* : 7 cases fine Japan sold at 45s. 6d. *Capsicums* : 32 bales brownish *E.I.* bought in at 25s., also 3 bags *Natal* at 75s. *Cassia Lignea* : Quiet at about 49s. *Cinnamon chips* : 100 bags ordinary Ceylon bought in at 3d. ; 19 bags quillings sold at 8½d. to 8¾d. *Mace* : Penang bought in at 1s. 6d. to 1s. 8d. ; 8 packages West India sold at 1s. 4d. to 1s. 6d. *Pimento* : Of 296 bags offered, 23 bags sold at 4⅞d. to 5d.

Sulphate of Copper.—Whilst unchanged from last week's quotations of £16 to £17 10s. per ton, according to brand, the market has been very quiet.

Sulphonal.—Both makers hint at the probability of a decided advance in price of this article ere long, reiterating that at present figure they are actually losing money on what they sell. They are, however, still accepting orders for limited quantities at 7s. 3d. per lb.

To-day's drug auctions passed off somewhat quietly, a number of the lots having been bought in. Cardamoms and Tinnevelly Senna sold fairly well, while Ipecacuanha was very firm, and again higher in price. The following are some of the particulars :—

Aloes.—12 cases *Cape* bought in at 24s. for good hard bright, good livery *Curacoa* at 32s. 6d. to 35s., dark at 26s., dark ditto in gourds at 25s. per cwt., 55 boxes dark livery selling cheaply at 14s. to 15s. per cwt.

Areca Nuts.—10 bags fair quality sold at 17s. 6d. per cwt.

Argol.—1 bag *Cape* held for 45s. per cwt.

Buchu Leaves.—3 bales good green rounds sold at 5½d. per lb.

Camphor Oil.—13 cases black held for 4½d. per lb. 10 cases white *Japan* refined bought in at 30s. per cwt.

Cardamoms. — Nearly 300 cases were offered, the bulk selling at steady to rather dearer prices. 4s. 3d. per lb. was paid for very fine bold pale *Ceylon-Mysore*, 3s. 11d. per lb. for same character but rather less bold, and 3s. 6d. to 3s. 7d. per lb. for medium size. Brownish *Malabars* realised 2s. 8d. per lb., while fair bold pale plump *Malabar* character sold at 3s. 8d. per lb., second size at 3s. 4d. to 3s. 5d. per lb., decorticated slightly easier at 3s. 2d. to 3s. 4d. per lb.

Cascarilla Bark.—Medium to fair quality sold at 35s. per cwt., balance being held for higher prices up to 52s. 6d. for good quality.

Cascara Sagrada.—42 bales were taken out at the fancy price of 32s. per cwt., 20 bales good quality being also bought in at 24s.

Castor Oil.—Yellow *Calcutta* held for 3¾., *French* for 3½d. per lb.

China Soy.—50 casks were held for 1s. per gallon.

Cinchona Bark.—Fair *Crown* bark sold at 8½d. down to 4½d. for damaged ; balance held for 9d. to 1s. per lb., 6 serons *Loxa*, containing also some *Huanuco*, at 1s. 3d. 8 packages *Red* bark sold at 1s. 6d. to 3s. 6d. per lb., down to 6d. for inferior and damaged. *Carthagena* held for 6d., low damaged selling at 1d. per lb.

Civet.—2 horns good fair quality bought in at 15s. per oz.

Coca Leaves.—39 bales fair *Truxillo* part rather brownish held for 6½d. to 8d. per lb.

Cod-Liver Oil.—19 casks fair *Norwegian* bought in at 70s.

Colocynth.—Two cases broken *Spanish* sold cheaply without reserve at 4½d. per lb. 9 cases fair *Turkey* apple held for 1s. 2d. per lb.

Cuscus Root.—95 bales of heavy held at 5s. per cwt.

Dragon's Blood.—2 cases in reed, well packed but rather dull, are held for £9 per cwt., at which the rest of the parcel had been sold previously. 4 cases dull seedy lump held for £6 10s. per cwt., and 1 case block mixed in quality was taken out at £6 10s. per cwt.

Ergot of Rye.—Good sound fairly bold *Russian* held for 10½d. per lb. ; 10 cases very weevilly *Spanish* bought in at 8½d.

Fennel Seed.—10 bags bought in at 16s. per cwt.

Gum Arabic.—2 cases good grain taken out at £6 10s., 2 cases pale ditto at £6 15s., bold yellow picked pea-size to bold at £10 10s., ditto rather smaller at £7 ; good *Turkey* sorts at 82s. 6d. per cwt.

Gum Benjamin.—Of 168 cases very fine seconds *Sumatra* realised £11 ; ditto, good, £9 12s. 6d. to £9 15s. ; good ditto but slightly brown at corners, nice centres but part false packed, £7 to £7 10s., rather lower quality fetching £6 to £6 15s. Common bought in at 60s. Glassy *Palembang* held for 60s. per lb.

Gum Guaiacum.—One cask fair block sold at 11d. per lb.

Gum Kino.—2 cases rather blocky *Australian* held for 5s. per lb. ; 3 cases *African* taken out at 4s. 6d.

Gum Myrrh.—5 casks good pale, rather small, bought in at 76s. ; low siftings sold at 15s. per cwt.

Gum Sandrac.—11 casks were bought in at 65s. per cwt.

Honey.—Of 169 cases *Honolulu*, part sold at 24s. per cwt., remainder being bought in at 26s., fair white set *Italian* at 40s.

Ignatius Beans.—93 bags fair, part rather small, bought in at 4d. per lb.

Ipecacuanha—Is held for long prices, and many buyers are holding off. Fair thin *Rio*, slightly damaged, sold at 7s. 10d. to 8s. per lb., whilst really good root was held for 8s. 3d. to 8s. 6d. per lb. *Carthagena* quality held for 6s. 6d. to 7s. per lb., a decided advance on last sales.

Kamala.—2 cases low dull quality taken out at 3d. per lb.

Lime Juice.—83 casks *New Zealand* all bought in at 10d. per gallon. 7 puncheons *West Indian* sold at 10d., and 4 puncheons at 9¾d.

Liquorice Root.—10 bales rough decorticated *Russian* bought in at 35s. per cwt.

Musk.—Good old-fashioned *Tonquin* small to bold dampish, fine flavoured, held for 62s. 6d. per oz. ; ditto Pile 3 rather damp for 27s. ; 1 tin thin skinned grey, fairly dry, part broken, for 70s. ; 1 tin ditto, doubtful and damp, a few pasty, for 35s. ; 1 tin low grain, for 12s. 6d. per oz.

Oils (Essential).—10 cases *Cajeputa* held for 4s. per bottle ; 5 cases of *Cinnamon* bought in at 4¼d. per oz. ; 5 cases good *Portuguese Eucalyptus* taken out at 2s. 6d. per lb. ; *Globulus* held for same price, fair commercial selling without reserve at 10d. to 10½d. *Peppermint Eucalyptus* held for 1s. 8d. per lb. 15 cases *Lemongrass* held for 10d. per oz. 10 cases *H.G.H. Peppermint* 5s. 6d. per lb.

Orange Peel.—Good new thin cut was held for 10d., rather dark ditto for 9½d. per lb.

Orris Root.—20 bags fair *Verona* were taken out at 30s., and 25 bags medium *Florentine* at 37s. per cwt.

Patchouli Leaves.—34 bales, all more or

less country damaged and mixed with sand, were taken out, 3½d. to 4d. being the price which would probably have been accepted.

Pistachio Nuts.—2 cases fair Syrian were taken out at 1s. 4d. per lb.

Rhubarb.—Good medium high dried held for 1s. 1d. per lb., dull ditto, with very little colour selling at 10d.; round horny ditto held for 9d.: good rough round *Shensi* for 2s. 2d. to 2s. 4d; rough medium ditto for 1s. 3d. to 1s. 4d. per lb.

Saffron.—55 tins *Valencia* bought in at 30s. per lb.

Sarsaparilla.—7 bales fair *Jamacia*, 6 sold at 1s. 6d. to 1s. 8d., 4 bags fair native ditto at 1s., 2 bales good *Guayaquil* at 1s. 3d., 3 bags coarse *Lima* bought in at 1s. 2d., 1 seron low *Honduras* at 1s. 2d., fair ditto at 1s. 10d. per lb.

Seneka Root.—12 bales very chumpy held for 1s. 3d. per lb., 4 bales selling cheaply without reserve at 1s.

Senna.—Rather more than 250 bales *Tinnevelly* were offered, but the quality was very poor, yet it was all bought up, with good competition at dearer rates. Low, small, discoloured leaves realised 1¼d. to 2d. per lb., whilst 2¼d. to 3d. was paid for medium quality. Fair boldish sold at 4¼d. per lb.; pods, 1½d. per lb. *Alexandrian* remains very dull, and no fine leaf was offered.

Squills.—29 bags held for 2½d. for fair and 1¼d. per lb. for dark.

Strophanthus Seed.—3 bags fair *Kombé* bought in at 3s. 2d. per lb.

Tamarinds.—64 barrels *West Indian* rather dry sold cheaply without reserve at 4s. 9d. to 5s. per cwt., fair *ditto* being held for 8s.

Tonquin Beans.—5 cases frosted *Para* sold cheaply at 1s. per lb., subject, however, to owner's approval.

Vanilla.—About 200 tons were offered. Of the Mauritius and Seychelles varieties the bulk sold at about steady rates, but for *Tahiti* there was very little demand, buyers expecting to do better by waiting.

Vermillion.—9 cases *Chinese*, unworked, bought in at 2s. 1d. per lb.

Wax.—4 bags good *Australian* realised £6 5s. to £6 12s. 6d. 15 cases *East Indian* held for £7. Fair *Zanzibar* sold at £6 5s. down to £5 12s. 6d. per cwt. for medium. Dark *Carnauba* held for 40s. per cwt.

NEWCASTLE CHEMICAL REPORT.

February 2, 1898.

A quiet tone continues on this market for all classes of heavy goods. Soda Crystals and Caustic Soda are more dealt in, but only for inland use. Prices unchanged as follow:—Alkali: 52 per cent., £5 5s. Caustic Soda: 70 per cent., £7 10s. to £7 15s. Soda Crystals: 42s. 6d. to 57s. 6d., according to markets. Sulphur: £5. Soda Ash: 52 per cent., £4 5s. Bleaching Powder, £6 5s. to £6 15s. per ton.

MANCHESTER CHEMICAL REPORT.

February 2, 1898.

Inquiries on 'Change show that Alkalies continue firm, especially Ammonia Alkali and Bleaching Powder. Bichromates tend lower owing to the continuance of competition amongst the makers. In other respects various articles are in fair report, especially Sulphate of Copper, which is in active demand for the Continent. Locally the price varies from £17 10s. to £18 for best brands delivered in Manchester district. Brown Acetate of Lime is unchanged at £6 10s. per ton, and there is no confirmation of the rumours of a large advance in American. Pitch has gone up to 18s. per ton, *f.a.s.*, Manchester Ship Canal, and Coal Tar Products generally are fairly steady. Yellow Prussiate still firm at 7d. Acetates of Lead in somewhat better demand. Green Copperas steady.

LIVERPOOL REPORT.

February 2, 1898.

Ammonium Salts.—*Carbonate*: 3d. per lb. *Sal ammoniac*: 31s. and 33s. per cwt. *Sulphate* is dearer, £10 5s. per ton.

Beeswax.—18 packages of Gambia sold at £6 12s. 6d. per cwt.

Bleaching Powder—Is unchanged at £6 5s. per ton.

Canaryseed—Is quiet at 25s. 6d. to 26s. 6d. per 464 lbs. for Turkish, but no sales are reported.

Copperas—Is very firm at 36s. and 38s. per ton for Welsh and Lancashire respectively.

Copper Sulphate—Is easier in price at £16 10s. to £16 15s. per ton.

Kola Nuts.—Lots of 35 and 23 packages and 1 ton respectively, dried, sold for 2d. per lb.

Linseed—Continues scarce. 200 tons Calcutta near at hand sold for 37s. 9d. per 416 lbs., and 800 bags Turkish at 36s. 6d. to 40s. per 416 lbs.

Oils (Fixed) and Spirits.—*Castor oil* is in fair demand at 3⅝d. per lb. for Calcutta "good seconds" and French 1st pressure. *Olive oil* is quoted at £34 5s. to £34 10s. per tun for Candia, and £34 for Spanish. *Linseed oil* is steady at 16s. 6d. to 17s. per cwt. *Cottonseel oil*, Liverpool refined, is quiet at 14s. 9d. to 15s. 6d. per cwt. *Spirits of Turpentine* is firmly held for 24s. 9d. per cwt.

Soda Salts.—*Bicarbonate*: £6 15s. per ton. *Borax* is firmer at £13 5s. per ton. *Crystals* are dearer at £2 17s. 6d. per ton. *Caustic*: 76 to 77 per cent., £8 15s. per ton; 70 per cent., £7 5s. per ton. *Nitrate*: 7s. 6d. to 7s. 9d. per cwt.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

W. H. Brodie and Wm. Escombe, Physicians, etc., carrying on business at Robertsbridge and Battle, Sussex. Debts will be received and paid by W. H. Brodie, who will continue the business.

George Walker and Charles Troke (trading as Walker, Troke & Co.), Wholesale Druggists, 2, Bath Street, City Road, E.C.

RECEIVING ORDER IN BANKRUPTCY.

(From the London Gazette.)

John Kelsey, Herbalist and Drug Vendor, The Drug Stores, Doncaster Road, Stairfoot, near Barnsley, Yorks.

William H. G. Wilkes, Surgeon, carrying on business at 256, Broad Street, and residing at 363, Dudley Road, Birmingham.

John A. Priestley, Chemist and Druggist, 25, Liverpool Road, Stoke-on-Trent.

DIARY FOR THE WEEK.

Saturday, February 5.

Pharmaceutical Football Club v. Metropolitan College of Pharmacy, at Wormholt Farm, Shepherd's Bush. Kick-off at 3.

Monday, February 7.

Bradford and District Chemists' Association.
"The Scottish Alps" (illustrated), by W. L. Howie (Mechanics' Institute).

Society of Chemical Industry, at 8 p.m.

Tuesday, February 8.

Pharmaceutical Society, at 8 p.m.
"Bacteriology for Pharmacists," by Leo Atkinson.

Glasgow and West of Scotland Pharmaceutical Association, at 8 p.m.
Annual Supper. (Grand Hotel.)

Royal Institution, at 3 p.m.
"The Simplest Living Things," by Professor E. Ray Lankester (Lecture IV.).

Wednesday, February 9.

Brighton Junior Association of Pharmacy, at 8 p.m.
"The Pharmacy Stakes: A Straight Tip!" by A. T. Jeeves.

Junior Chemists' Ball, at the Portman Rooms, Baker Street, W.

Manchester Pharmaceutical Association, at 7.30 p.m.
Paper by Mr. Grier. (Victoria Hotel.)

Midland Chemists' Assistants' Association, at 9.15.
Musical and Social Evening.

Newcastle-on-Tyne and District Chemists' Association, at 8 p.m.
"Tour Through Scotland" (Illustrated), by Robert Davidson. (Church Institute.)

Sheffield Pharmaceutical and Chemical Society.
"The P.A.T.A.," by J. W. J. Turnor. (37, New Surrey Street.)

Thursday, February 10.

Cambridge Pharmaceutical Society, at 8.45 p.m.
Annual Dinner. (Victoria Assembly Rooms.)

Chemists' Assistants' Association, at 9 p.m.
Short Papers by Members.

Sheffield Pharmaceutical and Chemical Society.
First Annual Ball. (Masonic Hall.)

Friday, February 11.

Aberdeen Junior Chemists' Association, at 9.30 p.m.
Questions and Hat Night.

Edinburgh Chemists', Assistants', and Apprentices' Association, at 9.15 p.m.
Communications by Alex. J. Dey and J. Harris Burns.

EXCHANGE.

OFFERED.

Miscellaneous.

Best Cash offer, 100 ozs. original tin Howard's Quininc.—Endle, Chemist, Boscombe.

Microscopical Slides.—Six dozen sections materia medica, superbly mounted by Rödig, Vienna. In pine cabinet, price £3.—A. J. Callaway, Salisbury.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern, gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Shop Fittings.

Complete Fittings of chemist's shop (except bottles), including drawers, counters, shelving, showcases, carboys, etc., to be sold in a few weeks, suitable for branch, £30; detailed list on application.—Morgan, Chemist, Burton-on-Trent.

One 2-gall., two 1½-gall. window carboys and 14 dozen shop-rounds free on rail at Redditch for £4, all packages free; address—Ramsay, Redditch.

WANTED.

For Cash, old electric lamps and scrap platinum.—P. Rowsell, 14, Walcot Square, Lambeth, S.E.

Mr. A. P. Nosworthy, chemist, of Preston Street, Brighton, has opened a branch establishment at Portslade, near Brighton.

The first part of Prof. Dragendorff's work on medicinal plants of all times and peoples has just been published by Messrs. Enke, of Stuttgart.

Mr. E. W. Morris, pharmaceutical chemist, of St. Thomas's Hospital, London, who has just been appointed pharmaceutist to the London Hospital, will carry with him to his new sphere of work a host of good wishes for his future success.

Messrs. Willows, Francis, Butler & Ayscough Thompson had their premises at 101, High Holborn, W.C., burnt out on Thursday morning. We understand, however, that this unfortunate accident will not interfere with the execution of orders by the firm, as arrangements have been made to conduct the business at 78 and 80, York Road, King's Cross, where the firm was preparing to remove shortly. All communications should be sent to the new address. The fire is supposed to have originated in the tincture room.

Davy, Hill's Cricket Club held their Second Annual Dinner on the 5th inst., at the Falstaff Hotel, and the evening was a most enjoyable one. Mr. C. A. Hill took the chair and songs by Messrs. J. T. Alderman, R. F. S. Edward, Arnold Lewis, and others were greatly appreciated. Mr. G. Wallis toasted the "Club" and pointed out that the season of 1897 had been a very successful one; eleven matches having been played with clubs connected with the drug trade—seven were won, three lost, and one was drawn.

A Special Issue of 17,000 Copies of the Journal will be published the week after next, when not less than 17,000 copies will be circulated. Every chemist and druggist throughout Great Britain will have a copy forwarded to him, in addition to many other persons directly interested in the drug and chemical trades. A large number of copies will also be sent to the Colonies and abroad. Communications for this special issue should reach the Editor not later than Tuesday the 22nd inst.

The Seventeenth Junior Pharmacy Ball was held on Wednesday, February 9, at the Portman Rooms, Baker Street, W. Amongst those present were Mr. Walter Hills, President of the Pharmaceutical Society, and Mrs. Hills, Mr. Arthur L. Savory and Mrs. Savory, Messrs. R. Bremridge, W. Warren, W. H. Francis, A. W. Tanner, J. C. Umney, E. W. Lucas, and Morley Taylor. Mr. C. W. Martin efficiently performed the duties of M.C. in the absence of Mr. T. C. W. Martin.—Mr. Walter Hills occupied the chair at supper, and in proposing the toasts of "Success to the Junior Pharmacy Ball" and the "Health of the Ladies," remarked that the Ball, now at the age of "sweet seventeen," was on this occasion a record one, nearly 400 tickets having been given up at the doors. Great credit was due for this gratifying result not only to the present management, but also to the energy of workers in former years, and to the excellent Secretary for the past six years, Mr. H. A. Robinson. Their present Secretary, Mr. H. W. Henson, had worked hard for the success of that night, and he would ask him to reply for the "Junior Pharmacy Ball," whilst he would couple with "The Ladies" the name of Mr. Robinson. It was with great regret that he noticed the absence from amongst them of their genial M.C., Mr. T. C. W. Martin.—The toasts of "The Ladies" and the "Junior Pharmacy Ball" were most enthusiastically received, the latter being followed by prolonged cheering.—The Hon. Secretary, Mr. H. W. Henson, in reply, acknowledged his indebtedness to the hard-working stewards forming the Committee. Their only fault was that they would sell too many tickets, but that was a most gratifying proof of the success and popularity of the ball.—Mr. H. A. Robinson then replied for the ladies.—Dancing was continued until 4 a.m.

The School of Pharmacy Annual Dinner will be held in the Duke's Salon, Holborn Restaurant, on Wednesday next, February 16, and past and present students who have not yet obtained tickets should apply without further delay to the Hon. Sec., Mr. T. Edward Lescher, 17, Bloomsbury Square, W.C. The chair will be taken on this occasion by the Dean of the School, Professor Henry G. Greenish, who will be supported by Mr. Walter Hills, the President of the Pharmaceutical Society, Mr. Michael Carteighe, Professor Collie, Dr. Attfield, Mr. Wm. Martindale, Mr. G. S. Taylor, Mr. Wm. Arkinstall, Mr. W. M. Holmes, and other prominent pharmacists.

The Cambridge Pharmaceutical Association held its annual dinner at the Victoria Assembly Rooms, Cambridge, on Thursday evening last. The event, which passed off most successfully, was attended by Mr. Walter Hills, President of the Pharmaceutical Society, Dr. Paul, Editor of the *Pharmaceutical Journal*, and other visitors, as well as most of the local pharmacists.

In connection with the firm of Messrs. David Thom, Domeier & Co., Limited, of Manchester and London, a list of applications for shares was opened on Tuesday, February 8. The share capital is £180,000, divided into 18,000 6 per cent. cumulative preference shares of £5 each and 18,000 ordinary shares of £5 each. The number of shares issued was 16,000 6 per cent. preference shares at par, and 16,000 of the ordinary shares at par. The balance of the preference and ordinary shares are reserved for future issue as and when found necessary. The vendors to the Company were prepared to take at par one-third of the present issue of ordinary shares as part payment of the purchase price. The preference shares are entitled to a cumulative preferential dividend of 6 per cent. per annum, and rank as regards capital, as well as dividend, in priority to the ordinary shares, but are excluded from sharing in surplus assets. The dividend on the preference shares will be payable on January 1 and July 1 in each year, and will be first due on July 1, 1898. There were no debentures issued.

The Elliman Painting Book, published by Messrs. Elliman, Sons & Co., Slough, England, is intended for the use of boys and girls learning to paint, and contains nine coloured hunting scenes and nine black with white copies of the same to colour. The painting book will not be issued free to the public, but will be supplied wholesale at the rate of threepence per copy for any number, large or small, to be sold to the public at sixpence.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

T. Nelson White and Jemima S. Andrews (trading as the Spring Water Co.), 453, Holloway Road, N., so far as regards T. Nelson White.

Robert B. Ferry and Robert Manners (trading as Robert Baily Ferry), Chemists and Druggists, The Claremont Pharmacy, 46A, Coatsworth Road, Gateshead. Debts will be received and paid by Robert B. Ferry.

John Ballardie and Moses Holden (trading as Ballardie, Holden & Co.), Manufacturing Chemists, etc., Clyde Works, Marybone, Liverpool. Debts will be received and paid by John Ballardie, who will continue the business.

Edgar J. Harris and P. H. Parr, Elastie Web Manufacturers, Wellington Street, Leicester. Debts will be received and paid by Edgar J. Harris, who will continue the business.

Francis Knoeferl, Mechanical Engineer, 100, Bolsover Street, Marylebone, W., and John H. Gartrell, Dental Surgeon, 47, Chapel Street, Penzance, carrying on business as Mechanical Engineers at 106, Great Portland Street, W., and 100, Bolsover Street, Marylebone, W., under the style of the Dental Engineering Co. Debts will be received and paid by John H. Gartrell.

James McDougall Tudge and Geo. Severs, Surgeons, 47, Gerrard Street, Soho, W.

Wm. B. Benjafield and James Heath, Surgeons, Edmonton, Middlesex.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

Wm. L. Aspell (trading as W. L. Aspell & Co.), Box Manufacturer, residing at 10, West Street, Leicester, and carrying on business at Mansfield Street, Leicester.

Charles M. Fegen, Surgeon, Toddington, Bedford, and lately residing at Addington Road, Bow, Middlesex.

Thomas Green, Veterinary Surgeon, etc., Hucknall Torkard, and at Calverton, Notts.

Wm. A. Selvey, Dentist, residing at Osborne Villas, Ombersley Road, Worcester, and carrying on business at 30, The Cross, Worcester, and 24, High Street, Kidderminster.

Market Report and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

February 10, 1898.

Business has been excessively quiet during past week, while the changes which have taken place have been comparatively quite unimportant. A considerable speculative demand appears to have set in for Ginger, owing partly, no doubt, to a report that the Jamaica crop will be short, and people who have the credit for knowing what they are about are stated to be picking up parcels as offered, and putting them aside. The advance in Cloves has also been maintained Pilocarpine is dearer, but price is apparently not yet fixed. Cocaine was reduced, but has since practically been put back to its former level. Calumba Root appears to be weaker. It was, however, hardly probable that the high prices ruling would be maintained for very long. Quinine is quiet. Opium, Morphia, and Codeia unchanged. Cream of Tartar, Acid Tartaric and Acid Citric dull. Iodide and Iodides so far still unaltered. Lithia and Bismuth, Quicksilver and Mercurials also without change, as also is Sulphonal. Phenacetin and Potash Permanganate very weak. Acetanilid rather firmer. Cod-liver Oil dull. Glycerin steady. Bromine and Bromides firm. The following are the prices actually ruling :—

Acetainilide.—This article seems to have taken a turn for the better, and 1s. 1d. appears to be now the price for 10-cwt. lots in bulk.

Acid Boracic—Unchanged at 24s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

Acid Carbolic—Quiet at 6⅞d. to 7d. per lb. for 35 to 36° C. *ice crystal* in bulk ; other qualities and packing in proportion. *Crude* : 60° F., 2s. 2d. ; 75° F., 2s. 11d. per gallon. *Liquid* : 95 per cent. of pale straw colour, 1s. 3d. per gallon in 40-gallon casks.

Acid Citric—Is very dull of sale, and quotations for English *crystals*, whilst remaining nominally unchanged at 12½d., to 1s. 1d. per lb., could probably be shaded somewhat.

Acid Tartaric—Continues very quiet, and transactions are limited. Quotations are 1s. 1d. per lb. for English and 12½d. per. lb. for foreign.

Ammonia Compounds.—*Sulphate* is quiet and slightly easier at £10 2s. 6d. per ton for gray prompt 24 per cent. London. *Sal ammoniac* firm at last week's advance, 35s. per cwt. for sublimed firsts and 33s. per cwt. for seconds. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* unchanged at 14s. 6d. per lb. *Chloride* steady at 26s. to 26s. 6d. per cwt., for the 98 per cent. free from metals, and 33s. per cwt. for the chemically pure small crystals.

Asafœtida.—There is more disposition on the part of holders to sell, but very little is doing. A further arrival of 121 cases has taken place, the stock being now considerably larger than same time last year. Quotations range from 35s. to 100s. per cwt., according to quality.

Atropine—Firm at 12s. 6d. for the *P.B.* quality in quantity and in bulk.

Bleaching Powder — Quiet at £7 per ton in bulk and quantity on the spot.

Bismuth—Remains still unchanged at 5s. for the *metal* and 4s. 10d. per lb. for the *subnitrate salt* in 5-cwt. lots.

Borax—Very quiet at 14s. per cwt. for *crystals*, and 14s. 6d. per cwt. for *powder*.

Bromides—Without change at 1s. 10d. for *Potass.* and 2s. 2d. per lb. for *ammonia* and *soda*.

Buchu Leaves.—No advices have yet been received on the subject of the new crop. There have been some small inquiries this week, and quotations remain firm at 5½d. per lb. for good green round, 5d. for pale green, and 3d. to 4d. for yellow to yellowish ditto.

Calumba Root. —This is more freely offered, and prices appear to be giving way. For ordinary natural root, for which 60s. to 65s. per cwt. has been asked and paid lately not more than 40s. per cwt. could now be obtained, but we hear of no actual business resulting from the lower offers.

Camphor.—*Crude* : The demand is slow, but quotations are steady to rather firmer for shipment. *Japan*, February to March steamer, 95s. per cwt., and *China*, 88s. per cwt., *c.i.f.*

Castor Oil.—Quiet, but high prices continue to rule. *Calcutta* firsts 5¼d. per lb., seconds, 3¾d. per lb.

Cloves.—*Zanzibar* are in continued good demand. Prices have fluctuated slightly, but are again higher. Business includes spot, 4¼d. to 4⅜d. ; February to April delivery, 4¼d. ; March to May, 4⅜d. to 4 11/32d. ; April to June, 4⅜d. to 4⅞d. ; June to August, 4 17/32d. to 4⅝d. At auction only 93 bales *Zanzibar* offered, and 11 bales damaged sold. Of *Penang* 3 cases good picked sold at 1s.

Coal Tar Distillation Products.—*Toluol* : 2s. per gallon. *Benzole* : 50 per cent., 1s. 8d. ; 90 per cent., 1s. 5d. *Crude Naphtha* : 30 per cent. at 120° C., 10d. *Solvent Naphtha* : 95 per cent. at 120° C., 2s. per gallon.

Cocaine.—One of the makers suddenly reduced his price to 9s. 5d. per oz. for 100-oz. lots, hoping, it is assumed, to thereby steal a march on his competitors. The other makers, however, promptly followed suit, result being that the article was obtainable from the makers generally at above figure, while second-hand holders would probably have accepted a little less. It was stated that the position of the *crude* by no means warranted the reduction in price. The maker in question has since advanced his price to 10s. per oz., so that we are now again practically in the same position as regards the article as we were last week.

Codeia—Is firm at 11s. 3d. to 11s. 6d. per oz., according to quantity.

Cod-Liver Oil.—Market is very quiet, old *Norwegian*, in view of the heavy stocks, being obtainable at 62s. 6d. per barrel, and possibly even lower for large quantity, while for the new, 70s. to 72s. 6d. is asked, it being stated that prevailing stormy weather is interfering with the catch.

Cream of Tartar—Is slow of sale but without actual change in quotations, as given last week, of 75s. 6d. per cwt. for first white French *crystals*, and 78s. to 79s. per cwt. for *powder*.

Dandelion Root—Is very scarce and dear, holders asking 42s. 6d. to 45s. per cwt. for fair quality *whole* root, the *cut* being dearer in proportion.

Galls.—*China* are firmer for arrival, with good sales for January to February shipment at 52s. per cwt., *c.i.f.*, whilst direct China quotations come dearer at 54s., *c.i.f. Persian* in slow demand with rather freer sellers of blues, but quotations are nominally unchanged.

Ginger.—The market for *Cochin* has improved, there being a better demand and firmer rates prevailing. At auction 530 bags sold, cuttings, 15s. ; shrivelled, 17s. 6d. ; ordinary small and lean wormy rough, 17s. to 18s. 6d. ; ordinary to good fair washed rough, 28s. to 28s. 6d. Of cut kinds 136 cases sold also at full rates, including 64 cases new, as follows : Small, 35s. ; medium, 46s. to 47s. ; bold, 70s. to 72s. ; selected bold, 90s. to 92s. ; the remainder, old ordinary cut small and ends, 29s. 6d. to 33s. ; C cut, 46s. to 46s. 6d. ; fine selected bold, 100s.

Glycerin.—Market is quiet but steady, *German* brands being quoted 52s. 6d. to 56s. per cwt. for the best white double-distilled chemically-pure 1·260 quality in tins and cases. *English* in same packing being offered at 50s. to 52s. 6d. per cwt.

Hypophosphites—Are in good demand at unchanged prices, say 3s. 3d. per lb. for the *Lime Soda* and *Potash Salts* in 10-cwt. lots.

Insect Flowers.—Quotations are firm at 125s. per cwt. for closed flowers, 110s. per cwt. for flowers partly open, and 60s. to 62s. 6d. per cwt. for open flowers.

Insect Powder.—There has been some considerable demand lately for powder of really good quality, and stocks of same have been almost exhausted. Quotations range from 60s. per cwt. for "commercial" to 160s. for really genuine.

Iodine—Still unchanged at 7½d. per oz., *Iodide of potassium* being still quoted 9s. 9d. per lb. for 2-cwt. lots. Very little confidence is, however, felt in the stability of the article, and only from hand-to-mouth orders are being placed for *Iodides* generally.

Ipecacuanha—Continues scarce, and a fair business is said to have been done at rather dearer rates.

Japan Wax—Remains very quiet, good squares on the spot are quoted 34s. 6d. per

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns

cwt., whilst for arrival February to March shipment sellers ask 32s. 6d. per cwt., *c.i.f.*

Lithia—Steady at 10s. 8d. per lb. for the *Carbonate* in quantity.

Menthol.—Dull at 7s. 3d. per lb. on the spot, whilst for arrival 6s. 9d. to 7s. per lb. *c.i.f.* is quoted from Japan.

Mercurials—Are unchanged, *corrosive sublimate* being quoted 2s. 2d. to 2s. 5d., and *Calomel* 2s. 6d. to 2s. 10d. per lb., according to quantity.

Morphia—Quiet at unchanged prices, the *Hydrochlorate powder* being quoted 4s. 3d. to 4s. 6d. per oz., according to quantity.

Oils Essential.—*Peppermint*: American H.G.H. is slow of sale at 5s. 6d. per lb. on the spot; other qualities quite neglected. *Star Aniseed* slow of sale, spot nominally 7s. 3d. to 7s. 6d. per lb., February-March steamer 6s. 6d. per lb. *c.i.f.* *Cassia* quiet but steady, 70 to 75 per cent. 5s. 2d. per lb., whilst for arrival 4s. 6d., *c.i.f.*, is still quoted. *Citronelle* steady at 1s. 2¾d. per lb. *Cloves* very firm at 2s. 10d. per lb. *Lemongrass* lower at 5d. per oz. on the spot.

Oils (Fixed) and Spirits.—*Linseed*: Business has been good this week, prices have advanced, closing on the spot, pipes £15 15s., barrels, £16 5s. *Rape* firm at last week's reduction; ordinary brown on the spot, £22 15s.; refined, £24 5s. *Cotton* steady but unchanged at £12 12s. 6d. for crude London spot; refined, £14 10s. *Olive*: Both Spanish and Levant are quoted £33. *Cocoanut*: Ceylon on the spot, £22 10s.; Cochin, £28, being unchanged. *Palm*: Lagos, on the spot, £23. *Turpentine* very firm and dearer at 24s. 6d. per cwt. for American on the spot. *Petroleum Oil* very flat at 4¼d. per gallon for Russian, and 4⅜d. per gallon for American on the spot; water white, 5½d. per gallon. *Petroleum Spirit*: American, 5½d. per gallon; deodorised, 6d. per gallon.

Opium.—No change has taken place in the position of this article, prices remaining practically the same as those given last week. From *Smyrna* more favourable news has been received as to the prospects of the new crop, which if confirmed may mean lower prices for the article.

Orris Root.—Rather firmer at 38s. 6d. to 45s. for fair *Florentine*, according to quantity.

Permanganate of Potash.—The pressure to sell on the part of the various makers has had the effect of frightening buyers. It is said that offers of large quantity for delivery during the year have been made at 60s. per cwt. for small crystals, without, however, leading to any business of importance.

Phenacetin.—The pressure to sell on the part of manufacturers continues, and for a large quantity it would be possible to buy at 3s. 9d. per lb., and perhaps even a little below this.

Pilocarpine—Is at last again tending upward, one maker having withdrawn his quotations, prices so far remaining, however, nominally 20s. per oz. both for the *Hydrochlorate* and the *Nitrate* salt.

Podophyllin.—Makers ask 12s. 6d. to 14s. according to quality for the *P.B.* quality, while the not fully soluble *American* article is quoted 11s. to 11s. 6d. per lb.

Potash Compounds.—*Chlorate* very dull, nominal quotations 3½d. per lb. on the spot. *Iodide* dull, but unchanged at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bromide* steady at 1s. 10d. per lb. for less than 1 cwt. lots. *Permanganate* weak at nominally 63s. 6d. for small crystals, and 67s. 6d. per cwt. for large crystals in quantity, which marks further reduction. *Cyanide*: 1s 2d. to 1s. 3d. per lb. for the 98-100 per cent. cake; market is firm. *Prussiate* is steady at 6¾d. per lb. for *yellow* and 1s. 2½d. per lb. for *red*.

Quinine—Has been exceedingly quiet during past few days, makers' prices for best *German* brands remaining unchanged at 1s 1d. per lb. for 1000-oz. lots, in 100-oz. tins, while as regards second hand, although there are at the moment few buyers, it would be difficult to buy any quantity at an even only slightly lower figure than that quoted by the makers themselves.

Quicksilver. — Unchanged from first hands at £7 per bottle, whilst from second hands quotations are the shade easier at £6 19s. per bottle.

Saffron.—Market is firm with an upward tendency, finest *Valencia* being held for 38s. to 40s per lb.; second quality for 36s. to 37s. 6d. per lb.; *Alicante* for 26s. to 27s. 6d. per lb.

Santonin—Quiet but firm at 4s. 5¼d. per lb. for 3-cwt. lots, smaller quantities being dearer in proportion.

Senna.—There has been a fair demand for *Tinnevelly* privately since the auctions, and some business has been done at full prices. So far practically nothing has come forward for next week's sales, so that offerings thereat will be mainly of second-hand parcels. There is every probability, it is said, of very high prices ruling before the new crop comes in six months hence.

Shellac.—The tone of the market is quiet, and prices, if anything, are the shade easier since last week. There is a demand for fine cakey *second Orange*, but of this kind there is very little offering, and consequently transactions have been small. For arrival no sales are reported in *TN*, but about 200 cases have been sold for February to April shipment, *AA* in circle at 75s. 6d., and *G* in double triangle at 86s. 6d. per cwt., *c.i.f.* The speculative market is quiet but steady, moderate sales have taken place, including *TN Orange*, March delivery, at 66s. 6d. to 67s. per cwt.

Soda Compounds.—*Crystals* unchanged at 55s. to 60s. per ton ex-ship terms. *Bicarbonate* steady at £7 15s. per ton for 98 per cent. and 18s. 6d. per cwt. for the fully bicarbonated. *Caustic* firm at £7 15s. per ton for the 70 per cent. and £6 15s. for the 60 per cent. *Hyposulphite* in rather better inquiry, but prices are unchanged at 5s. 6d. to 8s. per cwt., according to brand.

Spices (Various).—*Black Pepper* mostly bought in, Lampong at 3⅞d., Singapore at 4⅛d. *White Pepper*: Of Penang only 50 bags sold at 6⅜d., and of Singapore 71 bags sold, good, 7½d., fine bright bold, 8¼d. *Chillies*: 42 bags Japan sold at 48s. to 50s. *Cassia Lignea* is dearer, and firm at 50s. to 51s. *Mace*: 3 cases Penang pickings sold at 1s. 4½d.; 8 packages West India sold at 1s. 4d. to 1s. 6d. *Nutmegs* dull, a few cases Bombay sold, 95's at 1s. 5½d.; 45 packages West Indian also sold, 73's at 1s. 10d.; 75's and 77's at 1s. 6d. to 1s. 7d.; 104's at 1s. 3d.; 114's

at 1s. *Pimento* : 300 bags fair, 1896 import, sold at 4¾d. to 4⅞d.

SULPHATE OF COPPER — Is quiet at £16 2s. 6d. to £17 per ton, according to brand.

SULPHONAL.—Makers are still accepting orders for limited quantities at 7s. 3d. per lb. for both *crystals* and *powder*.

TURMERIC—Is steady but quiet, fair *Bengal*, 14s. 6d. per cwt. ; *Madras* finger, 17s. to 19s. per cwt , according to quality.

NEWCASTLE CHEMICAL REPORT.

FEBRUARY 9, 1898.

This market has a somewhat healthier tone, with the bulk of business fairly in keeping with the season's average. A new departure is being made by the United Alkali Association. That is to say, quotations on the cost, freight, and insurance line are being made direct to consumers abroad of Caustic Soda and Soda Crystals. This practically means the abolition of middle hands and spot agents. Quotations are given as follows, and according to destinations :—Bleaching Powder, £6 5s. to £6 10s. Soda Crystals : Basis, 45s. to 57s. 6d., Caustic Soda : 70 per cent. basis, £7 10s. to £7 15s. Soda Ash : 52 per cent., £4 5s. Alkali : 52 per cent., £5 5s. Sulphur : £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

FEBRUARY 9, 1898

The Board of Trade Returns indicate a more satisfactory condition of the heavy chemical trade, and the exports, especially to the United States, do not exhibit the heavy decline of the previous month. In this market makers of 70's White Caustic Soda are asking 2s. 6d. per ton more for home consumption, and as stocks in the States are low, this may be expected to be maintained. Sulphate of Copper is very uncertain and prices are nominal, varying from £17 10s. to £18 per ton for best brands here. Brown Acetate of Lime is firm at £6 to £6 10s. Naphthas and Benzols are steady. Glycerin is a shade quieter, but Yellow Prussiate is firm at 7d. per lb. for best Lancashire make. Chlorate of Potash weaker. Aniline oil and salt still rule low.

LIVERPOOL REPORT.

FEBRUARY 9, 1898.

AMMONIUM SALTS. — *Carbonate* : Still quoted at 3d. per lb. *Sal ammoniac* : Has advanced £2 per ton, now selling at £33 to £35 per ton. *Sulphate* : £10 5s. per ton.

BEESWAX.—Chilian £7 per cwt., and 10 packages assorted Chilian at £6 15s. to £7 per cwt.

BLEACHING POWDER—Is quiet at £5 12s. 6d to £6 5s. per ton.

CANARYSEED—40 bags Spanish sold at 37s. per 464 lbs. ; 100 bags Turkish, rather poor average, sold at 26s. 6d. per 464 lbs. The quotation lies between 25s. 6d. to 26s. 6d. per 464 lbs.

CASTOR SEED.—263 bags Parahyba sold at 10s. 1½d. per cwt.

COPPERAS.—36s. to 38s. per ton.

COPPER SULPHATE—Is quiet at £16 10s. to £16 15s. per ton.

COCHINEAL.—Silver grain Teneriffe has been selling at 11d. per lb. ; black is held for 11d. to 1s. per lb.

KOLA NUTS.—23 packages of dried sold for 2¼d. per lb., and 27 bags ditto for 2d. per lb.

LINSEED.—25 tons of River Plate sold at 36s. per 416 lbs., and 150 bags at 36s. 6d. January shipment is quoted at 34s. 3d., and February at 33s. 6d. ; 140 bags of Turkish sold at 38s. 6d. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor oils* exhibit a firmer feeling, and are quoted sparingly to arrive, being held for 3⅝d. per lb. on the spot for both Calcutta "good seconds" and French 1st pressure. *Olive oil* is non-existent here just at the moment, and Spanish oils to arrive are priced at from £33 10s. to £34 per ton. *Linseed oil* of Liverpool make packed in export casks is selling at 16s. 6d. to 17s. per cwt., for which price it is very firmly held. *Cottonseed oil* is quietly steady at 14s. 9d. to 15s. 6d. per cwt. for Liverpool refined oil. *Spirits of Turpentine* has advanced to 25s. per cwt., at which price it is firmly held.

POTASH SALTS.—*Bicarbonate*, 30s. per cwt. *Bichromate*, 4d. per lb. *Chlorate*, 3½d. per lb. *Cream of Tartar* is steady at a quotation of 76s. per cwt. *Pearlash* continues firm at the recent advance to 37s. and 37s. 6d. per cwt. *Potashes* enjoy a fair demand at 20s. per cwt. *Saltpetre*, 21s. 6d. per cwt.

SODA SALTS.—*Bicarbonate* : £6 15s. per ton. *Caustic* is firmer at £8 12s. 6d. per ton for 76 to 77 per cent. ; £7 5s. to £7 10s. for 70 per cent. ; and 60 per cent., £6 5s. to £6 10s. per ton. *Crystals* firm at £2 17s. 6d. per ton. *Nitrate* in fair demand at 7s. 6d. to 7s. 9d. per cwt.

EXCHANGE.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand ; triples and biunials ; oxyhydrogen microscope ; marvellous pamphengos oil lantern, gives 14-ft. picture ; 60,000 slides and effects ; 4-in. 4-wick lanterns, 18s. 6d. each, bargains ; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Overstocked.—Superfine oil of lemon, 8½ lbs., in copper, delivered free for 21s. Sample pound, idelivered free for 3s. Cash with order.—Moss, 34 Avondale Road, Chorley.

Cwt. Bigg's Sheep-dip, 7 and 14 lb. jars and tins ; also 2 cwt. Clarke's carbolised wheat-protector ; what offers?—Potts, Ilkeston.

Taree splendid, large, beautifully-engraved specie jars for sale, very cheap ; also three clear glass specie jars, different sizes, and one large show bottle ; offers invited.—Henry Brett, Fakenham, Norfolk.

Roscoe & Schorlemmer's 'Chemistry,' Vol. I., Non-Metals ; Vol. II., Metals (in two parts). Published at 21s., 18s., and 18s. In perfect condition. What offers?—Johnson, 155, Lea Road, Wolverhampton.

Upright Mahogany Counter-case, 5 ft. by 2 ft. 10 in. by 9 in., slide back, bent-glass ends, with mirror backs, carved tablets, glass shelves, polished edges ; good condition ; price 50s —Robinson, Chemist, Moss Side, Manchester.

WANTED.

Camwal Shares Wanted.—Lowest price to Blount, Chemist, 4, Fenham Road, Newcastle-on-Tyne.

For Cash, old electric lamps and scrap platinum. —P. Rowsell, 14, Walcot Square, Lambeth, S.E.

SATURDAY, FEBRUARY 12.

PHARMACEUTICAL FOOTBALL CLUB v. "MUTER'S," at Wormholt Farm, Shepherd's Bush. Kick-off at 3 p.m.

TUESDAY, FEBRUARY 15.

ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things" (Lecture V.), by Professor E. Ray Lankester.

ROYAL PHOTOGRAPHIC SOCIETY, at 5 p.m.
"Process Reproduction from an Editor's Point of View," by Wallace L. Crowdy, Editor of the *Artist*.

WEDNESDAY, FEBRUARY 16.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY.
Social Evening.

PHARMACEUTICAL SOCIETY (North British Branch).
Evening Meeting.
"Fluid Extract of Liquorice," by Peter Boa.
"The Quantitative Determination of Sugar in Urine by the Kinninmont Method," by Arthur McKellar.
Additions to the Library and Museum.

ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.
"Essay in Micro-Crystallography" (Illustrated), by T. C. White, followed by an exhibition of miscellaneous lantern slides, by J. E. Barnard.

SCHOOL OF PHARMACY.
Annual Dinner (Duke's Salon, Holborn Restaurant).

WESTERN CHEMISTS' ASSOCIATION (OF LONDON), at 9 p.m.
Discussion on the New Pharmacy Bill, opened by R. H. Parker.

THURSDAY, FEBRUARY 17.

CHEMICAL SOCIETY, at 8 p.m.
"Some Lecture Experiments," by J. Tudor Cundall.
"Observations on the Influence of the Silent Discharge of Electricity on Atmospheric Air," by W. A. Shenstone and W. T. Evans.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
"Formaldehyde in Dispensing," by G. Roe.

GLASGOW AND WEST OF SCOTLAND SCHOOL OF PHARMACY, at 8.30 p.m.
Social Meeting and Supper. (Trades' House Restaurant, 89, Glassford Street.)

LINNEAN SOCIETY OF LONDON, at 8 p.m.
"On the Genus Arenaria," by F. N. Williams.
"On the Histology of the Salivary and Other Glands of the Colubridæ," by G. S. West.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.30 p.m.
Paper by Mr. J. Barclay (Mason College).

FRIDAY, FEBRUARY 18.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
Magazine Evening.
Editor, P. D. Milne.

ROYAL INSTITUTION, at 9 p.m.
"A Yorkshire Moor," by Professor L. C. Miall.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Exhibition Night.
Demonstration by Dr. Andrew Walker.

Football.

The match arranged for Saturday last between the Pharmaceutical Football Club and "Watson Will's" was scratched.

NEWS IN BRIEF

An Action to Recover Damages was brought against Samuel James Coley, chemist and druggist, Stroud, before Justice Day and a special jury, at the Gloucester Assizes, on Wednesday, February 16, to recover damages for alleged negligence. The evidence was to the effect that the plaintiff, Mrs. Nolan, of Stroud, sent to one of the defendant's shops for some carbolised oil to apply to a cut finger. The defendant's assistant dispensed a liniment containing carbolic acid in the proportion of 1 in 2 instead of 1 in 20, with the result that the plaintiff, on applying the liniment, suffered injury to her finger-joint. The defendant admitted negligence by his assistant, but denied the alleged injury to the plaintiff's finger. The jury found for the plaintiff, with £40 damages.

Mr. George Breeze, J.P., has disposed of "The Borough Pharmacy," Catherine Street, Devonport, to Mr. J. Reed, of Halsworthy.

Messrs. Breeze & Co., Devonport, have removed their baking and egg powder works to more commodious and central premises at Station Road, Union Street, Plymouth.

Supposed Poisoning by Ptomaines.—On Monday, February 7, Mr. G. P. Wyatt concluded an inquiry at the Streatham Town Hall, respecting the death of Captain Thomas Malcolm Dickenson, 32, of the Royal Engineers, who died after a railway journey during which he ate some tinned apricots. On arriving at his destination he had complained of being fatigued, had a light supper and retired to bed. Next morning he went about as usual, but later in the day he became ill, suffering from pain in the abdomen, accompanied with sickness and diarrhœa. He was put to bed and every attention was given him, but death occurred the following morning. Deceased attributed his illness to "the beastly tinned food," and a post-mortem examination showed that the intestines were congested, and bore signs of irritation. The cause of death in the doctor's opinion was ptomaine poisoning. On behalf of the Midland Railway Company it was stated that ten other persons partook of the same food that deceased did in the train and that there had been no other complaint. The verdict of the jury was that "Deceased met his death from syncope and enteritis, consequent upon taking something of a poisonous nature, but what that was there was no evidence to show."

Protection of Trade.—At the annua meeting of the Exeter branch of the London Association for the Protection of Trade on Monday last, Alderman H. Gadd, J.P. (ex-President of the Exeter Association of Chemists and Druggists, and of the firm of Messrs. Evans, Gadd & Co., wholesale chemists and druggists of Exeter and Bristol) was elected on the Committee for the ensuing year.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Mary Hale and George Thompson (trading as W. Hale and Thompson), Chemical Manure Manufacturers, 60, Mark Lane and Abbey Lane, West Ham. Debts will be received and paid by George Thompson.

Edward G. P. Arnall and Sydney L. Stephens, Veterinary Surgeons, Bodmin and Wadebridge, Cornwall.

Thomas Lakey, George Lakey, George Edwards, and W. T. Seager (trading as George Edwards & Co.), Specialists in Foods and Medicines for Birds, etc., 39, Paradise Street, Lambeth, S.E., so far as regards Thomas Lakey and George Lakey.

Geo. A. Merchant and Jos. Mercer (trading as Tamplin & Co.), Mineral Water Manufacturers. Debts will be received and paid by Jos. Mercer, who will carry on the business under the same title.

EXCHANGE.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil lantern, gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Overstocked.—Superfine oil of lemon, 8½ lbs., in copper, delivered free for 21s. Sample pound, delivered free for 3s. Cash with order.—Moss, 34 Avondale Road, Chorley.

Microscopical Slides.—Six dozen section materia medica, superbly mounted by Rödig, Vienna. In pine cabinet, price £3.—A. J. Callaway, Salisbury.

WANTED.

Wanted.—Green's 'Botany,' volume ii.—A. M. Ashwin, Tiddington, Stratford-on-Avon.

Wanted.—Second-hand Hooker's 'Students' British Flora,' 'Selecta è Prescriptis,' and Ince's 'Latin Grammar.'—Communicate with prices and dates to—F. Porter, 40, Upper Charnwood Street, Leicester.

Pair Specie-Jars, small, good condition; sell or exchange Stokes's till in working order.—Beal, 446, Rochdale Road, Manchester.

Camwal Shares Wanted.—Lowest price to Blount, Chemist, 4, Fenham Road, Newcastle-on-Tyne.

For Cash, old electric lamps and scrap platinum.—P. Rowsell, 14, Walcot Square, Lambeth, S.E.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

February 17, 1898.

Business has been quiet during the past week, the unsettled appearance of the political horizon having, in combination with other circumstances, tended to restrict transactions. The changes of the week are not very important. Quinine is quiet. Opium, Morphia, and Codeia unchanged. Quicksilver rather dearer, but no alteration in price of Mercurials. Bismuth unaltered. Bromine and Bromides, Iodine and Iodides without change. Cream of Tartar and Acid Tartaric quiet. Acid Citric firm, with higher prices expected. Sulphonal unchanged. Phenacetin weak. Cod-liver Oil very dull. Permanganate of Potash weak. Borax and Acid Boracic quiet, but steady. Sulphate of Ammonia again slightly easier. Cocaine steady. The following are the prices actually ruling for articles of chief interest.

Acetanilid—Is quiet at 1s. 1d. to 1s. 2d. per lb. according to quantity and make.

Acid Boracic—Dull of sale at 24s. per cwt. for crystals and 25s. per cwt. for powder.

Acid Carbolic—Is dull at 6¾d. to 7d. per lb. for the 35° to 36° C. *ice crystals* in large bulk. *Crude*: 60° F., 2s. 1d. per gallon; 75° F., 2s. 10d. *Liquid*: 95 per cent. of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

Acid Citric.—Price remains nominally 1s. 0½d. per lb., but makers will no longer book orders at this figure, and a decided advance in price is confidently predicted for the near future.

Acid Lactic.—One maker is quoting this article in smaller quantities at 2s. per lb.; for the best make, however, 2s. 3d. to 2s. 6d. per lb., according to quantity, is the price.

Acid Tartaric—Very quiet at 12½d. to

1s. 1d. per lb. for foreign and English respectively.

Ammonia Compounds.—*Sulphate* is quiet and lower at £10 per ton for gray prompt 24 per cent. London. *Bromide* steady at 2s. 2d. per lb. on the spot. *Iodide* quiet at 14s. 6d. per lb. *Sal-ammoniac* steady at 35s. per cwt. for sublimed firsts and 33s. per cwt. for seconds. *Chloride* firm at 26s. to 26s. 6d. per cwt. for 98 per cent. free from metals, and 33s. per cwt. for chemically pure small crystals.

Antipyrin.—The patent for this article having expired, the price of *Antipyrine Knorr* has been reduced 6d. per oz. On the other hand, makers of *Phenazone*, which is practically identically the same thing, are offering at a much lower figure, and it remains to be seen whether the demand for Dr. Knorr's article at a fancy price will continue.

Atropine—Firm at 12s. 6d. per oz. for the *P.B.* quality in large bulk.

Bismuth—Without change at 5s. per lb. for the *metal*, and 4s. 10d. for the *subnitrate* in 5-cwt. lots.

Bleaching Powder—Steady at £7 per ton in bulk and for quantity.

Borax.—Demand fairly good at 14s. per cwt. for crystals and 14s. 6d. per cwt. for powder.

Bromine and Bromides—Firm at 2s. 2d. per lb. for the former, and 1s. 10d. for *Pot. Bromide.*

Camphor.—*Crude* is inactive, but quotations remain unaltered. *Japan* for arrival is quoted at 95s., *China* 87s. 6d. per cwt., *c.i.f.* terms. *Refined* unchanged.

Cantharides.—*Russian* are held for 1s. 9d. per lb. in quantity.

Cinchona Bark.—At the London auctions on Tuesday supplies were but moderate, amounting to 2128 packages, as compared with 3466 packages at the preceding sale. A dull tone prevailed throughout, due probably to a desire on the part of the manufacturers to depress prices in anticipation of the more important sales which are taking place in Amsterdam to-day—only one-third selling at barely last rates. *Ceylon*: 169 bales and 2 cases offered and 42 bales sold, according to analysis; Succirubra, stem chips and shavings, ordinary to fair at 3d. to 3⅝d., renewed ditto 3½d. to 3¾d; Officinalis, renewed chips and shavings at 4½d. *East Indian*: Of 917 bales and 32 cases offered 402 bales and 8 cases sold; red stem chips, good at 4d., good silvery mossy quill at 8d., mixed at 3½d.; Officinalis, good quilly chips at 4d., fair chips and shavings at 4¼d. to 4½d., ordinary chips and branch at 2⅝d. to 2¾d., good broken quill at 4½d.; renewed chips and shavings, fair to good rich at 4¼d. to 6¼d., ordinary, 3d. to 3⅝d. Ledger, good natural stem chips at 6d. *Java*: 58 bales and 100 bags offered and sold, good Ledger stem chips and branch at 5½d. to 7½d. *South American*: 309 bales Bolivian cultivated Calisaya quills offered and bought in. 171 bales flat Calisaya offered and sold at 4¼d. to 8½d. 29 bales Carthagena and 164 serons Cuprea were all bought in. *African:* Of 177 bales 63 sold, fair quill at 5⅞d. to 6¼d., broken quill at 4¾d. to 5¾d.

Cloves.—Privately the market for *Zanzibar* has been easier, and prices declined somewhat, but are now firm at a slight recovery. Business includes March to May delivery at 4 13/16d., April to June 4 15/32d., and June to August at 4⅜d. At auction 266 bales *Zanzibar* offered were mostly bought in, only quite small lots sold at 3¼d. to 4¼d. 17 bags *Seychelles* bought in at 5d., also 14 boxes old *Java* at 7d.

Coal Tar Distillation Products.—*Toluol*, 1s. 11d. *Benzole*: 50 per cent., 1s. 8d.; 90 per cent., 1s. 5d. *Crude Naphtha*: 30 per cent. at 120° C., 10d. *Solvent Naphtha*: 95 per cent. at 160° C., 2s. per gallon.

Cocaine—Is quiet but steady, maker's price being 10s. to 10s. 6d. according to brand for 100-oz. lots in bulk packing, while from second hand limited quantity could be bought somewhat below these figures.

Codeia—Is steady at 11s. 3d. to 11s. 6d. per oz. for quantity and in bulk packing.

Cod-Liver Oil.—Stormy weather on the Norwegian coasts fail to cause firmer rates for cod-liver oil, the huge stock of old here acting as a drag on the market. For fine new non-freezing quality prices range from 65s. to 75s. per barrel, according to brand.

Coriander Seed.—Selling fairly well at 8s. 6d. to 9s. for good *Morocco.*

Cream of Tartar—Fairly steady at 75s. per cwt. for first white *crystals* on the spot, and 77s. to 79s. per cwt. for *powder.*

Eserine.—Makers appear to have advanced their price to 1s. 6d. per gramme for the *Sulphate*, the reason given for the advance being that as a result of excessive competition between the comparatively few makers of the article, the price had been reduced to an unremunerative level. Price of the *Salicylate* will no doubt be the same as the *Sulphate*, the *pure*, which is in very limited demand, being dearer in proportion.

Ginger.—At auction 1153 bags and 336 cases *Cochiu* offered, chiefly old import in second hands, but holders being firm only 240 bags and 63 cases sold, small and dull washed rough in bags 27s. to 29s., small native part cut in cases 34s. to 37s. Cut 39s. 6d. Of 425 bags limed *Japan* 110 bags sold at 20s., slightly mouldy 19s. Of *Jamaica* 160 barrels sold irregularly, chiefly new, low, and common, lean dark Rhatoon at 57s. 6d. to 66s., a few lots old middling to good washed at 79s. to 88s.

Glycerin—Quiet at 52s. 6d. to 60s. according to quantity for the *German* double distilled chemically pure white 1·260 quality in tins and cases, *English* being offered at somewhat cheaper rates.

Gum Mastic—Is strongly held at 2s. per lb. for good clean pale tear, but buyers hold off.

Iodine and Iodides—Still unchanged at 7½d. per oz. for *Iodine*, and 9s. 9d. per lb. for *Pot. Iodide* in 2-cwt. lots.

Japan Wax—Is rather dearer at 36s. per cwt. for good squares.

Lithia Salts—Unchanged at 10s. 8d. per lb. for the *Carbonate* in 2 cwt. lots.

Matico Leaves.—Good green can now be had on the spot at 10d. to 1s. per lb. according to quantity.

Menthol—In more demand; quotations range from 7s. 3d. to 7s. 6d. per lb. according to quantity and position.

Mercurials.—Makers have so far made no alteration in their prices, which remain at 2s. 2d. to 2s. 5d. for *Corrosive sublimate*, and 2s. 6d. to 2s. 9d. for *Calomel*, according to quantity and packing.

Morphia—Is quiet and unchanged at 4s. 3d. to 4s. 6d. for the *Hydrochlorate Salt* in powder for quantity and bulk.

Oils (Essential).—*Peppermint*: H.G.H. quiet at 5s. 6d. per lb. on the spot. *Japan* 3s. 1½d. per lb. for dementholised. *Star Aniseed*: Steady at 7s. 6d. per lb. on the spot. *Citronella*: Rather easier at 1s. 2½d. for drums and tins. *Cinnamon*: Steady, good and fine qualities quoted 1s. 6d. to 2s. 6d. per oz., common 5d. per oz., leaf oil 3¼d. per oz. *Lemongrass*: Tending lower, 4¾d. per oz. is now the quotation. *Eucalyptus*: A good business doing at 1s. to 2s. 6d. per lb., according to quality.

Oils (Fixed) and Spirits.—*Linseed* is firm at £15 17s. 6d. for pipes on the spot, and £16 5s. for barrels, same position, whilst for forward delivery more money is asked. *Rape* is steady at a slight advance, ordinary brown being now quoted £23 on the spot, and refined £24 10s. *Cotton* is also slightly dearer at £12 15s. for crude, and £14 10s. for refined. *Olive*: Spanish and Levant unchanged at £33. *Cocoanut*: This market is firmer for forward positions with a good business passing. Ceylon on the spot £22 10s., and Cochin £28. *Palm*: Lagos is dearer at £23 10s. on the spot. *Turpentine*: Quiet and rather easier at 24s. 4½d. per cwt. on the spot. *Petroleum Oil*: Very quiet at 4¼d. per gallon for *Russian* and 4⅜d. per gallon for *American*, both on the spot. *Petroleum Spirit*: Unchanged at 5½d. per gallon for American. *Castor Oil*: Steady. French and Belgian first pressing 30s. 6d. per cwt., second pressing 29s. 6d. per cwt. on the spot.

Opium.—In spite of the repeated reports of damage to the crops by frost, market remains in *statu quo*, there being absolutely no change to report.

Orris Root—Quiet at about 40s. to 45s. per cwt. for fair *Florentine.*

Phenacetin—Continues weak at 4s. per lb. The competition between the various makers continues, and threatens to force the price of the article down to an even lower level.

Pilocarpine.—In consequence it is stated of the scarcity of really good *Jaborandi leaves*, combined with the poor yield of the larger portion of the raw material available, which is offering, makers successively advanced their price, and are now quoting 28s. per oz. for the *hydrochlorate* and *nitrate salt*, it being stated that even higher prices are not improbable. It will be remembered that not so very long since for similar reasons as are given above, the high price of 160s. per oz. had to be paid for *Pilocarpine salts.*

Potash Compounds.—*Chlorate*: Quiet and without change at 3½d. per lb. on the spot. *Iodide*: Quiet at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bromide*: Unchanged at 1s 10d. per lb. for quantities under 1 cwt. *Permanganate*: Dull of sale at nominally 65s. for *small* and 70s. per cwt. for *large* crystals. *Cyanide*: 1s. 2d. to 1s. 3d. asked for 98-100 per cent. cake. *Prussiate*: Unchanged at 6¾d. per lb. for *yellow* and 1s. 2½d. per lb. for *red.*

Potash Permanganate—Continues weak at unchanged figures, price being nominally

65s. and 70s. per cwt. for *small* and *large* crystals respectively.

Quicksilver.—After doing a large business at their old price, importers raised the figure to £7 2s. 6d. per bottle, second hands following to £7 2s.

Quinine—Remains very quiet and nominally unchanged at 1s. 1d. per oz. for best *German* brands in 1000 oz. lots in large tins. From second-hand it would be possible to buy limited quantities at somewhat below this figure.

Rose Leaves.—*French* are very firm at 1s. 8d. per lb. *Dutch* can be bought relatively cheaper at 1s. 2d. to 1s. 3d. per lb. *Pale*: 8d. to 9d. per lb.

Saffron—Is very firm to rather dearer. Prices range from 36s. to 42s. 6d. per lb. for Valencia kinds according to quality and quantity. *Alicante* at 26s. to 27s. 6d. per lb.

Santonine.—Price is still 4s. 5¼d. per lb. for quantity in large bulk packing.

Shellac.—Business on the spot is very quiet, and shows no improvement. *Second orange TN* quoted 66s. for short prompt and *AC Garnet* at 75s. per cwt. for good free. There is a firmer tone for arrival with dearer prices in Calcutta, but only a small business has been done, which includes *TN Orange*, April-June steamer, at 65s. *c.i.f.* At the auctions on Tuesday small supplies were catalogued. Fair competition prevailed for *Second Orange* and about one-half sold at an advance of about 1s. per cwt. A total of 521 cases offered and 240 cases sold. *Second Orange*: Of 375 cases 209 sold, middling to fair bright free at 65s. to 67s., bright curly, little matted, at 66s., fair cakey reddish at 65s. to 66s., reddish livery free at 64s. to 65s., middling flat reddish, without reserve, at 62s. to 63s., broken livery at 62s., fair block at 60s. *Garnet*: Of 62 cases 3 sold, KG in circle, flat weak ruby at 62s.; the remainder bought in, including fair frec curly AC at 75s. Of 84 cases 28 sold in small lots, fair pale firsts at 80s. to 81s., purc stamped circle 2's at 77s., ordinary to fair circle 2's at 64s. to 67s.

Soda Compounds.—*Crystals* remain steady at 55s. to 60s. per ton *ex* ship terms. *Bicarbonate* quiet at £7 15s. per ton for 98 per cent., and 18s. 6d. per cwt. for the free from monocarbonate quality. *Caustic* steady at £7 15s. per ton for 70 per cent., and £1 per ton less for 60 per cent. *Hyposulphite* firm at 5s. 6d. to 8s. per cwt., according to brand. *Bromide* steady at 2s. 2d. per lb.

Spices (Various).—*Black Pepper*: At auction 1472 bags mostly bought in; Penang, 3⅝d.; good, 4⅜d.; Lampong, 3⅞d. to 4d.; 90 bags Singapore sold, chiefly first-class sea-damaged, 4⅛d. *White Pepper* firmly held, and mostly bought in; Palembang, 6⅜d.; Penang, 6½d; 70 bags Singapore, good bold, sold at 8½d.; one lot, 8⅝d. *Cayenne Pepper*: 2 cases Natal sold at 1s. 3d. *Chillies*: 133 packages fine bright Japan sold at 50s. *Capsicums*: One bale ordinary Natal sold without reserve at 41s. *Cassia Lignea*: 330 bales broken bought in at 34s. *Nutmegs* steady. *Mace*: 2 cases Penang sold, good bright pale and red, part wormy 2s. 1d.; fine bright palish 2s. 9d.; 30 packages West Indian sold at 1s. 4d. to 1s. 7d. *Pimento*: 128 bags new sold at 4½d. to 4⅝d. *Kola Nuts*: 1 case Grenada sold, at spice auctions, at 4d.

Sulphate of Copper—Is firmer, although quotations remain unchanged at £16 2s. 6d. to £17 per ton, latter price being for 98 to 99 per cent.

Sulphonal.—The two chief makers are still executing orders for limited quantity at 7s. 3d. per lb. for *crystals* and *powder*.

Turmeric—Remains quiet; in auction 984 bags *Bengal* were offered, but the whole was bought in at 14s. 6d. to 15s. per cwt. *Cochin* slow of sale; fair split bulbs bought in at 8s. 6d. to 9s. per cwt. *Madras*: Damaged finger and bulbs sold at 10s. per cwt.

To-day's drug auctions went off very quietly. The changes, which were mostly in a downward direction, not being very important, the following are the particulars of prices paid, or required.

Aconite Root.—12 bags fair *Japan* were bought in at 27s. 6d. per cwt.

Aloes.—Fair to good livery *Curacoa* in tins sold at 25s. to 30s. per cwt. 100 boxes fair dark livery ditto bought in at 35s. 15 kegs good *Socotrine* held for 80s. 8 cases *Cape* part sold at 23s. for fair hard bright, rest held for 24s. per cwt. 3 cases *Zanzibar* sold at 82s. 6d.

Anatto Seed.—4 bags bought in at 6d. per lb.

Argol.—20 bags *Cape* bought in at 40s. to 50s. per cwt.

Asafœtida.—Practically the whole of 118 cases offered were bought in at 60s. for good bright almondy part free, down to 37s. 6d.; a limited portion of the best lots being held as high as 65s. per cwt.

Balsam Tolu.—6 cases held for 2s. 3d. per lb., 4 cases taken out at 2s. 2d.

Balsam Peru.—5 cases were bought in at 8s. 6d. per lb.

Buchu Leaves.—5 bales good green rounds held for 5d. per lb., a bid of 4¾d. being declined; 2 bales ditto selling at 4¾d., and 1 bale pale green ditto at 4d.

Cardamoms.—Of the 175 cases offered only a portion sold at fairly steady prices; good bold, pale *Mysores*, 4s. per lb.; second size, 3s. 9d. per lb.; small, 2s. 11d. to 3s. 5d. per lb. Decorticated held for 3s. 2d. per lb. A parcel of 51 packages sold "without reserve" ex the "Kawachi Maru," lately on fire in the London Docks, and soaked with water, realised very good prices considering the condition, viz., 2s. 4d to 2s. 6d. for fair brownish medium-sized *Mysore*. Good, undamaged seed, 3s. 1d. per lb. It was understood that these lots should be reweighed and retared directly after the sale.

Cascara Sagrada.—42 bales good thin old bark held for 22s. 6d. per cwt.

Cascarilla Bark.—8 bales bought in at 50s. per cwt. for fair quilly, and 35s. for dusty.

Castor Oil.—Somewhat irregular, *Calcutta* firsts held for 4d., seconds for 3¾d. Yellow selling at 2d. to 2⅛d. per lb.

Cinchona Bark.—10 bales bold *Carthagena* were held for 5d. per lb. 7 packages *Crown Bark* taken out at 9d. 42 serons *Peruvian* part sold at 8d. to 10½d. per lb.

Civet.—This article is freely offered in the drug auctions, but no sales seem to take place publicly, the offering in the sales taking the form of advertisement, we suppose. Finest is held for 17s. 6d. to 18s. per oz., according to quantity; good, 15s. to 16s., whilst soft, of fair flavour, can be obtained at 13s. to 14s. per oz.

Colocynth.—5 cases *Turkey* medium apple held for 1s. 1d. per lb., 4 boxes *Spanish* pulp for 3s.; 14 cases low broken ditto bought in at 7d. per lb.

Colombo Root,—3 bales washed, rather mixed, were held for 65s. per cwt.

Cubebs.—65 bags greyish black, part small, were held for 40s. per cwt., a bid of 32s. 6d. being refused. Fair, but rather stalky held for 35s.

Cummin Seeds.—20 bags *Malta* taken out at 25s. per cwt., 25 bags of lower quality being held for 19s.

Cuttle Fish.—5 bags dirty sold at 1d. per lb.; 136 mats fair bold held for 3½d.

Dill Seed.—2 bags sold at 17s. per cwt.

Dragon's Blood.—2 cases very scedy and dullish lump sold at £5 15s. per cwt. Fine lump remains scarce, and is much inquired for.

Ergot of Rye.—10 cases very weevily *Spanish* is held for 6d. per lb., but no buyers could be found. 17 bags slight weevily held for 8½d. per lb.

Essential Oils.—*West Indian Oil of Limes* sold at 3s. 5d. to 3s. 7d. per lb. 1 tin *Bay Oil* taken out at 7s. per lb., 1 case of *Dodge & Olcott's* being held for 9s. 6d. per lb. 3 coppers *Oil of Lemon* held for 2s. 9d. per lb. 1 case *Dodge & Olcott's Oil of Wintergreen* for 5s. 6d. per lb. 11 cases fair quality *Oil of Eucalyptus* for 2s. down to 1s. 3d. for commercial, 6 cases *globulus* for 2s. 3d. per lb., 5 cases *cedar wood* for 1s. per lb., 2 cases *Grasse geranium* for 30s.

Fennel Seed.—8 bags of fair quality sold at 16s. 6d. per cwt., lower quality realising 11s. to 11s. 6d.

Galls.—206 bags fair *Bagdad* were held for 57s. per cwt.

Gamboge.—Of the 28 cases offered only 5 cases good pickings sold cheaply at £6 15s., good bright slightly soft grain pipe held for £8 5s. per cwt., dull Saigon held for £5 5s. to £6 10s. per cwt.

Gentian Root.—10 bales medium quality held for 22s. 6d. per cwt., fair dry selling at 24s.

Golden Seal Root.—6 bags fair fibry sold at 1s. 10d. per lb.

Guaza.—20 bales fair quality, but very dusty, held for 6d. per lb.

Gum Ammoniacum.—3 cases good clean seed to bold drop held for 60s. per cwt.

Gum Benjamin.—24 cases good even seconds *Sumatra* fetched £9 to £9 2s. 6d., low ditto being held for 75s. per cwt., medium selling partly without reserve at £4 15s. to £7 5s.; good ditto held for £11. *Palembang* for 22s. 6d. per cwt.

Gum Guaiacum.—Fair glassy block held for 1s. 3d. per lb., fine glassy for 2s. 6d.

Gum Myrrh.—Good sorts held for 70s., low to dark for 21s. to 40s. per cwt.

Honey.—Ordinary *Jamaica* bought in at 25s. per cwt., 20s. being accepted for eight packages of somewhat inferior quality, and 20s. for a rather better lot, six half-barrels *Greek* bought in at 19s.

Ignatius Beans.—20 bags good fairly bold held for 3d. per lb.

Ipecacuanha. The offerings consisted of 47 bales *Rio* and 16 bales *Carthagena*;

nothing of the former quality could be had under 8s. per lb., but only a few bales sold at from that price to 8s. 1d. per lb. Picked held for 9s. per lb. *Carthagena* did not sell, being held for very long prices.

JALAP.—29 bales small heavy, part wormy, tubers held for 6½d. per lb.

KOLA NUTS.—Of 9 packages 6d. was the price required for fair dry, rather dark, a bid of 3½d. per lb. being declined. 3 barrels very mouldy were bought in, only 1d. per lb. being offered; 1 bag bold dry dull realised 2½d. per lb.; 5 bags good washed were taken out.

KAMALA.—4 cases fair bright bought in at 1s. per lb.

LICORICE ROOT.—7 bags crushed taken out at 19s. per cwt.

MUSK.—1 tin thin skin grey *Tonquin*, small to bold, fairly dry, part dark bought in at 70s. per oz. 1 tin ditto, Pile 3, a few pasty at 40s. 1 tin common grain being held for 12s. per oz.

ORANGE PEEL.—38 cases good thin cut held for 9d. per lb.; later in the sale lower prices were accepted, thin cut selling at 7½d. per lb.

ORRIS ROOT.—20 bags fair *Verona* held for 28s. per cwt. 50 bags *Florentine* sold at 40s. to 41s. for good pale down to 27s. to 29s. for inferior discoloured.

PISTACHIO NUTS.—2 cases fair *Syrian* held for 1s. 5d. per lb.

QUILLAIA BARK.—5 bales of fair quality, part dark, bought in at 30s. per cwt.

QUINCE SEED.—5 barrels red *Spanish*, slightly mouldy, sold at 1s. 2d. to 1s. 3½d. per lb.

QUININE SULPHATE.—3 cases labelled "Sulfate de Quinine de la Chinin fabrik," in tins, without, however, giving any indication as to which of the "Chinin fabriks," were withdrawn at 1s. 1d. per oz.

RHUBARB.—medium round *Shensi* was taken out at 2s., medium flat ditto for 1s. 9d., small ditto, part trimmings, for 3s., and pickings for 1s. per lb., good bold flat *high dried* three quarter pinky, quarter dark fracture fetched 1s. 2d., small ditto, 1s. 1d.; good bold round *Canton*; fair pinky and grey fracture held for 1s. 4d., small trimming selling at 1s. 5d.; good flat *Canton* held for 1s. 3d. per lb.

SARSAPARILLA.—12 serons *Honduras* taken out at 1s. 9d. per lb. 12 bales *Lima* held for 1s. 2d. to 1s. 4d. per lb.

SCAMMONY ROOT.—50 bags were held for 30s. per cwt.

SENEKA ROOT.—12 bales very chumpy bought in at 1s. 3d. per lb.

SENNA.—*Tinnevelly*: Only 15 bales were offered to-day by importers, and these were as usual sold at 1½d. to 2¼d. for small spotty discoloured leaves; 1 bale fair bold slightly yellowish sold at 4½d. per lb., a very full price. *Alexandrian*: 6 packages in all were offered, but bought in at 7½d. for good green leaf, and 6d. for small part broken.

SIMAROUBA BARK.—2 bales, of which no sample was forthcoming, were held for 9½d. per lb.

STAR ANISEED.—23 cases *China* bought in at 105s. per cwt.

STROPHANTHUS SEEDS.—3 bags fair *Kombé* were taken out at 3s. 3d. per lb.

TAMARINDS.—20 casks fair *West Indian* bought in at 8s. per cwt.

TONQUIN BEANS.—16 cases sold at 1s. 1d. to 1s. 3d. for fair small, crystallised, foxy selling at 6d. per lb., good frosted held for 1s. 9d.

TURMERIC.—8 bags more or less water damaged was bought in at 8s. 6d. per cwt.

VANILLA.—188 tins in all were offered, the bulk selling at fairly steady prices, except for the *Tahiti* kind, which were all bought in, 8s. being asked. *Mauritius* sold well at steady rates, 23s. being paid for good 7½-inch beans, 22s. 6d. for 7-inch, 20s. 6d. for 6½ inch, 18s. 6d. for 5½ to 6 inch, and 18s. for 4½d. to 5 inch. *Seychelles* sold at 22s. for 7½ inch, 19s. for 5½ to 6½ inch, and 14s. for splits. *Madagascar*: 7 to 7½ inch of good flavour sold at 21s. per lb., 5 inch, part split and mouldy sold at 14s. 6d. to 15s. per lb.

WAX.—Four cases *Calcutta* bought in at £6 5s., fair to good *Jamaica* sold at £6 17s. 6d. to £7 2s. 6d., showing a decline in value of about 2s. 6d. per cwt., low *Zanzibar* sold, subject to approval, at 92s. 6d., good being held for £6 10s. to £7, yellow *East Indian* held for £5 10s. per cwt., a bid of £5 being refused.

NEWCASTLE CHEMICAL REPORT.

FEBRUARY 16, 1898.

More is doing in Crystal Soda for home use. Caustic Soda is moving somewhat better, but prices all round remain unchanged. Quotations are: Soda Crystals: 45s. to 57s. 6d. Bleaching Powder, £6 5s. to £6 10s. Caustic Soda: 70 per cent., £7 10s. to £7 15s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

FEBRUARY 16, 1898.

There was some slight flutter caused on 'Change to-day by a report that the price of Bleaching Powder had, owing to further competition from electrolytic process makers, dropped another pound per ton. Inquiries in different quarters, however, showed that it was only rumour, and that it must have referred to the previous reduction at the commencement of the contract season. The quotations are £5 2s. 6d. to £5 5s. per ton, soft wood casks on rails. Caustic Soda, both high and low strengths, is firm, and Soda Ash and Crystals are also unchanged. Sulphate of Copper is lower, and £17 is the figure for best brands, delivered Manchester. Brown Acetate of Lime is also easier and in better supply at about £6 per ton for best American *c.i.f.* and Welsh at station. Yellow Prussiate is firm at 7d., and Green Copperas is unchanged. Anilines are very quiet, and Oil and Salt are selling at even lower figures than those quoted last week.

LIVERPOOL REPORT.

AMMONIUM SALTS—Are unchanged, except Sulphate, which is 2s. 6d. per ton easier, viz., £10 2s. 6d. per ton here.

BEESWAX. Niger has been selling in small quantities at £6 per cwt.

BLEACHING POWDER—Continues quiet at £5 12s. 6d. to £6 5s. per ton.

CANARYSEED—Enjoys a better inquiry, and sales have been made at better prices; some 250 bags of Turkish of fair average to good quality sold for 26s. per 464 lbs.

CASTORSEED.—330 bags of Pernambuco sold at 10s. 4½d. per cwt., and 156 bags of Maranham at 10s. 3d.

CARNAUBA WAX.—150 bags of grey changed hands at 41s. 6d. per cwt.

CHILLIES.—80 bags of Sierra Leone sold ex store at 32s. 6d. to 40s. 6d. per cwt.; 33 bags ditto sold at 36s and 132 bags ditto at auction were disposed of at 42s. 6d. to 43s. per cwt.

COPPERAS—Continues in good demand at 38s. per ton for Lancashire, and 36s. for Welsh.

OILS (FIXED) AND SPIRITS.—*Castor oils* have not risen in price, as was anticipated, but are steady at the firmly maintained price of 3⅝d. per lb. for both Calcutta "good seconds" and French "first pressure." *Olive oils* are selling only in retail quantities, though Spanish oils are being inquired after for shipment. In a circular of Messrs. Harpen & Co. attention is drawn to the excellent quality of Spanish oils this year, stating that their acidity averages from 1·50 per cent. to 3 per cent., instead of 15 to 40 per cent., as was the case in the bad season 1895-6, and suggesting that as the Gallipoli oils used in wool working are unobtainable through failure of the crops, Spanish oils can be substituted without risk, owing to their high quality. *Linseed Oil* of Liverpool make is firm at 16s. 9d. to 17s. per cwt. *Spirits of Turpentine* has receded in price 3d. per cwt., and now sells steadily at 24s. 9d. per cwt.

POTASH SALTS.—*Potashes* have risen in price to 22s. and 22s. 6d. per cwt. *Pearlash*: 37s. 6d. to 40s. per cwt. Other salts unchanged.

SODA SALTS—Are unchanged, with the exception of borax, which is now at £13 10s. to £13 15s. per ton.

TUESDAY, FEBRUARY 22.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.
Lecture by W. M. Gardner.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9 p.m.
Short Papers by Members.

WEDNESDAY, FEBRUARY 23.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY.
Short Papers by Messrs. S. Ching and A. S. Kent.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9.15. p.m.
Short Papers by Members.

THURSDAY, FEBRUARY 24.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
Discussions on "Trade Unionism in Pharmacy," opened by the President, and on "The New Pharmacy Bill."

FRIDAY, FEBRUARY 25.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
Concert.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
"The Simpler Plants and Animals" (illustrated), by George Senter.

PUBLIC DISPENSERS' ASSOCIATION, at 8 p.m.
"The Art of Dispensing, Its Demands, Claims, and Responsibilities," being the inaugural address by Dr. H. Macnaughton-Jones.

THE BENEVOLENT FUND

OF THE

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

ORPHAN FUND OF THE PHARMACEUTICAL SOCIETY.

The list of donations and subscriptions to this Fund will be found on a separate page, amongst the advertisements.

The World of PHARMACY Week by Week

THE GREAT EVENT of the week is, of course, the publication of the present issue of the *Pharmaceutical Journal*, the total guaranteed circulation of which exceeds 17,000 copies, whilst the Editor is placed in direct communication with every registered chemist in Great Britain, in addition to many other persons directly interested in the various branches of the drug and chemical trades. No such circulation is ever attained by any other organ of the drug trade in the United Kingdom.

NEXT IN IMPORTANCE comes the fact that on the day the Journal went to press last week, *i.e.*, on Thursday, February 17, G. S. Sutton, of Gosport, was mulcted in a penalty and costs, under the provisions of the Pharmacy Act, 1868, for the illegal sale of a scheduled poison, viz., laudanum. The defence was set up that defendant was an executor, but that view was not accepted by the County Court Judge (p. 203).

THE PHARMACY ACTS AMENDMENT BILL will probably be introduced into the Commons House of Parliament this week, the Hon. W. F. Smith, Member for the Strand Division, being in charge of the measure (p. 201).

IN SUPPORT OF THE BILL, the Midland Pharmaceutical Association, the chemists of Northampton, and the Derby and District Chemists' Association have taken steps to approach their local representatives in Parliament, and many individual pharmacists are understood to be doing likewise. But many more should do so (pp. 208-222).

THE TEXT OF THE BILL, with full explanations, is republished this week, in order that every chemist on the Register may have an opportunity of considering its provisions (p. 200).

JACOB BELL'S LABOURS in connection with the first Pharmacy Act are succinctly described in an article treating of that pioneer scientific pharmacist's life and work (p. 195).

ANOTHER BILL of interest to our readers is that dealing with Medicine Stamp Duty, and this week we treat at length of the conditions of exemption from that Duty (p. 192).

A NINETEENTH-CENTURY GOLD FACTORY is described by a sceptical American contributor, and the account is readable and interesting, if not convincing to persons who incline to modern alchemistic views (p. 189).

THE SELECTION OF PHOTOGRAPHIC APPARATUS is the topic selected by another contributor, an expert in his particular line, and the suggestions made should be specially seasonable at the present period of the year (p. 191).

THE STUDENTS' PAGE continues to instruct, and the explanatory notes on the Pharmacopœia monographs will appeal as strongly as ever to students (p. 204).

PERFUMERY FOR PHARMACISTS is exhaustively dealt with in an article which brings the whole subject up to date, the principal oils used in perfumery, synthetic perfumes, and recently introduced natural perfumes all receiving attention (p. 197).

"THE MEDICINAL PLANTS OF THE WORLD" is the heading given to an appreciative review of a new and important work by Dr. Georg Dragendorff, which many of our readers who can comprehend "that awful German language" will doubtless be glad to possess (p. 199).

IN "THE MONTH" we cater for a more advanced class of workers, and the gist of several important scientific and practical papers is there given in a condensed form (p. 183).

DAVIESIA LATIFOLIA is referred to by Mr. J. Bosisto, of Victoria, and the results of a chemical examination of the crystalline substance extracted therefrom are published by Messrs. Paul and Cownley (p. 187).

FLUID EXTRACT OF LIQUORICE has engaged the attention of Mr. Peter Boa, who speaks well on the whole of the official process for preparing the extract, and considers that water is the best menstruum for extracting the sweetness of the root (p. 188).

THE METRIC SYSTEM receives very full consideration this week, useful time-saving tables of equivalents being published for the benefit of the little-leisured pharmacist (p. 209).

MANY SOCIETIES AND ASSOCIATIONS are reported, and, to quote from a contemporary, Secretaries of societies are reminded that we are always pleased to insert abstracts of the proceedings of such bodies, so long as they are of general interest. Some correspondents would save themselves and the Editor much trouble if they would bear that fact in mind. Votes of thanks, election of members, and the usual routine business are of local consequence only, and the fact should not be overlooked that reports ought to be kept up to date.

THE BENEVOLENT FUND ALBUM kept at 17, Bloomsbury Square, London, contains the portraits of annuitants who have been elected on the Fund, but there are several gaps in the list, and the Secretary, Mr. Richard Bremridge, will be glad to receive any portraits that are not yet in the Album (p. 202).

EXEMPTION FROM JURY SERVICE for all chemists and druggists is claimed by a correspondent, whose argument is logically unanswerable, but he overlooks the fact that such exemption does not fall within the range of pharmaceutical legislation (p. 223).

OUR CANADIAN LETTER, written by a correspondent who is fully cognisant of all matters affecting the craft in North America, is in great measure devoted to a consideration of the anti-cutting movement (p. 213).

New Ideas and Trade Notes

ENEMAS AND AIR CUSHIONS.

Messrs. S. Maw, Son, and Thompson, Aldersgate Street, E.C., have lately brought out a new enema of excellent quality, which is entirely of English manufacture throughout, and is supplied at a very low price—viz, 21s. per dozen—in order that it may, if possible, drive away the cheap and unreliable German syringes from the market. The quality of the rubber of which the enema is made is first-class, and cutting the syringe in two proves that it is homogeneous. In fact, there is little doubt it is

far superior to any other syringe yet produced at the price. The same firm has shown us some air cushions which only cost 2*s*. each. They are made in Japan, very strong; in fact, they have been thoroughly tested in this respect. Messrs. Maw's well-known town representative could make no impression when standing on one, and he is no light weight. They can be destroyed after use in infectious cases, as the cost is so small. When not inflated they fold up easily, and go in the pocket, and for those who attend cricket matches or camp out they afford protection against damp.

WHAT NOT TO DO—"50 DONT'S."

Messrs. Rouse Bros., 61, Charlotte Street, Tottenham Court Road, W., have compiled a card of "50 Dont's" to hang in the pharmacy for the use of chemists, their assistants and apprentices. A copy of the card is being sent to every chemist in business, and if the good advice contained thereon is followed out much trouble and annoyance will be spared both chemist and customer. The firm will be pleased to forward a card to anyone connected with the trade who may write for one to the above address and mention this Journal.

PETROLEUM EMULSION WITH HYPOPHOSPHITES.

Messrs. C. R. Harker, Stagg, and Morgan, Laurence Pountney Lane, London, E.C., send a sample of their Petroleum Emulsion with Hypophosphites. This emulsion is prepared from a very pure soft petroleum jelly, emulsified by a special process, and contains 33⅓ per cent. of petroleum with 8 grains of the hypophosphites of lime and soda per fluid ounce. The emulsion is a cream-like liquid of uniform consistence, readily pourable from the bottle, permanent and perfectly inseparable. By reason of the purity of the materials used in its manufacture it never becomes malodorous nor decomposes in any way. When taken in milk it recalls fresh cream; in wine, water, or even alone, its taste is unobjectionable to the most fastidious. It has a slight pleasant flavour, but may be had unflavoured if desired. The firm also manufacture a "pure white" emulsion from sulphur-free white petroleum oil. This possesses the characters of the ordinary emulsion, with the exception of being snow-white in colour. It may be mentioned that this make of petroleum emulsion, on account of its general excellence and moderate price, has acquired a wide reputation. It is put up in 8 oz. and 16 oz. bottles. The firm of Harker, Stagg, and Morgan is well-known in connection with the supply of sulphur-free petroleum oil, and the Emulsion is an excellent specimen of a preparation made therewith.

"LIGHTNING" PLATES AND X-RAYS.

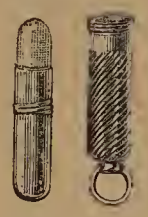
Messrs. Cadett and Neall, Limited, photographic plate manufacturers, Ashtead, Surrey, announce that they are building a new factory specially for the manufacture of printing-out papers of various kinds, films, and other photographic specialties. Their present factory is very complete with up-to-date machinery, and their sale of plates per annum amounts to millions, both the slowest and fastest plates being made. In connection with the "Lightning" plate—which is a specialty of the firm, very thickly coated, and for sensitiveness is claimed to be the quickest in the world—a warning is issued to dealers and users of "X" ray apparatus, it having been found that the plates have been spoiled through the walls of two rooms, the plates being at a distance of 25 feet from the tube. Dark rooms for "X" ray work, therefore, should be metal-lined, or the plates stored in metal-lined cupboards. A monthly publication, 'Dry Plates,' is supplied gratis to dealers known to the firm, who are asked to apply for further copies if the usual monthly supply is not sufficient to meet the demand.

NEW CACHETS.

Mr. Max Schliephak, 90, Victoria Street, S.W., sends specimens of the Urbánek Cachets, for which he is the sole British agent. They are well made and of elegant appearance, readily soluble, and may be had in any colour, printed or embossed with the buyer's name. Although the Urbánek Cachets can be used with any existing machine, the makers have constructed a special apparatus for ensuring the most elegant appearance in the finished cachet. The apparatus, which is of nickel-plated metal, may be had on approval by application to the above address. Mr. Schliephax, who has had large experience in pharmacies in England and on the Continent, has recently opened an International Pharmaceutical Agency at 90, Victoria Street, S.W., as exporter, importer, and commission agent for everything connected with the drug trade, and undertakes the introduction of English goods on the Continental market. He holds sole agencies for Messrs. Georg Winderoth, Cassel; Joseph Urbánek, Prague; H. Lynke, Cäpenick Noris; Zahn and Co., Berlin, &c., for the United Kingdom and colonies.

ST. PAUL'S PERFUMES.

Messrs. F. Newbery & Sons, of King Edward Street, E.C., are constantly adding novelties to their toilet and fancy departments. The St. Paul's Perfumes in dome stoppered bottles at 16*s*. per dozen find a ready sale, and are appreciated by the few customers to whom they have been shown. Quarter dozens are supplied in neat cases. The "New Art" series of 1*s*. smelling-salt bottles in different colours, such as crystal and green, crystal and coral, and iridescent, are supplied in cut-glass bottles of various shape. A 6*d*. pencil-case menthol cone, and reversible, is easily carried in the pocket and supplied at 3*s*. per dozen. Another handy article is a 6*d*. bevelled-glass pocket mirror, with a perpetual calendar at the back, and in white, gilt embossed, flexible celluloid case.



A NEW TOILET ARTICLE.

Messrs. A. Pinfold & Co., Metronome Works, Bradford, are placing on the market a new toilet article "Carboniferous Pumice," to be sold at 6*d*., and is intended to take the place of the ordinary and usually unshapeable lumps of pumice at present sold. The article is moulded in tablets with oval face back and front, and is meant to be both a disinfectant and an excoriator for the hands. The firm is sparing no pains or expense to put the article before the public in the most attractive manner possible. It is put up in quarter gross boxes with fully descriptive label, and sent carriage paid throughout the United Kingdom, either direct from Bradford or through any wholesale house.

D.C.L. CHEMICAL LABORATORY.

The Distillers' Co., Ltd., Edinburgh, to commemorate the opening of their enlarged and reconstructed head office at 8, 10, and 12, Torphichen Street, recently entertained a representative gathering of their officials and agents at a dinner in the Hall, 74, Queen Street, Edinburgh. The enlarged offices occupy a prominent site on the main thoroughfare forming the continuation westwards of Princes Street. The building is a large square structure measuring about 70 feet by 50 feet, is four storeys in height, and has a good external architectural appearance. The chemical department consists of a general laboratory fully equipped with the most advanced apparatus for the analysis of the raw and manufactured materials used and produced by the Company, with special reference to the manufacture of malt extract and yeast, and provision has also been made for the conduct of experimental work. Opening off the general laboratory is a smaller room for photographic and polariscopic purposes, and provided with means for using daylight or monochromatic light at will. There is also a third and separate room provided with the apparatus necessary for the prosecution of bacteriological work. Amongst other apparatus this room contains a large microscope, by Watson & Son, London, fitted with a battery of the highest class apochromatic objectives, by Powell and Lealand. Provision has also been made for photomicrographic work with high powers, including a specially arranged camera for vertical work and a powerful arc light fitted with condensers giving the illumination necessary for instantaneous exposures. The whole building is lighted by electricity.

A FOCUS TUBE REVIVER.

Mr. F. H. Glew, 156, Clapham Road, London, S.W., has invented a simple method of reviving vacuum tubes, which he claims saves all re-pumping and sparking. Moreover the vacuum tube can be continuously maintained at any desired pressure for any number of hours. The method employed is to place inside the narrow stem of the focus tube a few pieces of very fine soft iron wire, each piece of wire being coated with resinous matter, and the tube is then exhausted and sealed off in the usual way. When the vacuum gets too high, by continued use, one of these small pieces of iron wire is selected, by means of a magnet, and brought into a convenient part of the stem of the tube; a spirit lamp is then gently waved under the tube at this spot, until sufficient of the resinous coating of the wire is decomposed. Of course the focus tube is connected to a coil during this disengagement of gas, so that the result can be readily watched, and the process stopped at any stage by removing the lamp. The attachment can be readily fitted to any existing make of tube.

A NEW PRICE-LIST.

Messrs. Parke, Davis, & Co., 21, North Audley Street, W., send their 1898 price-list, by which all previous quotations are cancelled. It is not only a complete catalogue of the products of the firm's laboratories, but a variety of useful information is also given, including abbreviations of authors' names, botanical synonyms, convenient formulæ for the preparation of B.P. tinctures, notes of reference, etc. An important feature of the list is a "Table of Equivalents," this being a table of all the denominations of weight and measure that represent the packages offered in the price-lists, opposite which are placed their approximate and exact metric equivalents. There is also a table covering frequently used quantities, showing the approximate and exact equivalents in metric and imperial weights and measures. These tables are given so that chemists and others may "make themselves familiar with the points of superiority which the metric system has over those at present in use, since every indication points to its early general adoption." A copy of this list may be obtained from the publishers on application.

SOUTHALL'S EXPORT JOURNAL.

Messrs. Southall Bros. & Barclay, Lower Priory, Birmingham, send a copy of the half-yearly issue of their 'Export Journal,' and prices current of drugs, chemical, attractive specialities, druggist's sundries, etc. Part I. of the publication gives the current prices of drugs and chemicals, Part II. a list of the leading lines of the firm, Part III. an illustrated price list of chemists' attractive specialities for counter sale, while Part IV. deals with druggists' and surgeons' sundries and implements. There is also a fine list of advertisers' goods and the firm's "Terms of Sale." Every chemist in business may possess this useful publication by applying to the above address.

NEW PREPARATIONS.

Mr. B. Kühn, 36, St. Mary-at-Hill, Eastcheap, E.C., submits samples in original packages of two preparations lately introduced by him. These preparations are Colchi Sal Capsules and Betul-Ol Liniment, and both names will readily convey to the practitioner the nature of their composition and their value as therapeutics. Colchi Sal Capsules contain a compound of pure colchicine and natural methyl salicylate, obtained from *Betula lenta*, and the accurate dosing of these drugs in capsules makes the preparation very valuable as a remedy in gouty and rheumatic affections. It has, moreover, been found that pure colchicine does not exhibit the depressing effect of colchicum usually prescribed. Betul-Ol Liniment is chiefly composed of the oil of *Betula lenta*, and is applied externally when colchi sal is not borne by the stomach. The ready permeation of this preparation accounts for the surprisingly quick beneficial results after appreciation. Both preparations are only dispensed by the chemist and doctor's prescription, and are neither sold nor advertised to the public. Chinosol Sanitary Tablets.—Mr. Kühn also submits the latest form in which this well-known antiseptic and disinfectant is brought under the notice of the sanitary authorities. These tablets find their principal use for the prompt production of disinfecting and deodorising fluids. For instance, one tablet (cost twopence) produces three quarts of an aqueous solution sufficient for disinfecting a room of 1000 cubic feet by the aid of a spray. More diluted solutions are used for washing linen, floors, etc. The convenience, owing to easy portability, combined with the valuable properties of chinosol, have quickly been appreciated by sanitary authorities.

COMPRESSED RHUBARB.

Messrs. Stallman & Fulton, Dunster House, Mincing Lane, E.C., send samples of pure rhubarb compressed into attractive and convenient shapes. It is much neater and more compact than the ordinary rhubarb root or the old-fashioned cut and trimmed pieces. Another good point is that, being compressed, the rhubarb presents a hard surface impervious to worms, and however long it is kept, is claimed always to keep its colour and never to look dingy. It can easily be reduced to powder in a mortar and answers all the tests and requirements of the P.B. Four shapes are made, the pieces weighing from about 1½ to 3 drachms each according to size.

Medical Jottings.

Some correspondence is taking place in the columns of the *British Medical Journal* on the subject of "Consultation with Homœopaths." The mere fact that letters in favour of homœopathy appear in our contemporary without protest may be an indication that the prejudice against this particular school of practitioners is scarcely so vehement as in times gones by. One correspondent, who signs "M. D.," contends that the so-called "irregular" therapeutic method of one generation is placidly accepted as sound practice by the next, and that in the domain of therapeutics (the proverbial "backward boy") there is no room for dogmatism. The same writer states that it is too late in the day to characterise homœopathic practitioners as knaves or fools, as they have graduated (some with distinction) in the regular schools, and there is no ground for assuming that they are actuated by other than honourable considerations.

Since his election, a few months since, as a direct representative of the profession on the General Medical Council, Mr. Victor Horsley has demonstrated that he is very much in earnest in regard to the responsibilities of his position. He recently issued an address to his constituents complaining in very strong terms of the apathy of the Council in regard to the prosecution of offenders against the Medical Acts. Mr. Brudenell Carter, another member of the Council, and representative thereon of the Apothecaries' Society, has taken up the gauntlet in defence of the Council, which, he claims, does not rule the profession any more than it rules the courses of the stars.

If, however, it be technically correct that the Council does not rule the profession, yet no one can question that it has very great influence over it—witness the recent

resolution as to the employment of unqualified assistants, and the warning to all registered practitioners that in future such employment will be regarded as "covering" and deemed to be infamous conduct in a professional respect, which entails the penalty of erasure of the offender's name from the Register.

APART from the anxiety which the serious state of Sir Richard Quain's health causes his many friends, it is unfortunate that he is unable to attend to his duties as President of the Council, in view of this controversy and of other pressing matters of importance, such as the publication of the new Pharmacopœia. Sir Richard has presided over the deliberations of this governing body since 1891, and his absence at this juncture is all the more regretted on account of his intimate acquaintance with every detail of the business routine connected with the Council, and, in addition, he is a *persona grata* to everyone with whom he comes in contact, except, perhaps, those unfortunate practitioners who become acquainted with the disciplinary powers of the Council.

MRS. COULSON KERNAHAN has a new novel in the press, 'Trewinnot of Guy's,' which will deal with medical life, and will be dedicated to Sir Samuel Wilks, President of the Royal College of Physicians and Consulting Physician to Guy's Hospital. Mrs. Kernahan's first husband was the late Professor Bethany, of Caius College, Cambridge, and Guy's Hospital.

MARRIAGES

SMITH—GERRARD.—At St. Mary's Church, Wimbledon, on Thursday, February 17, by the Rev. T. R. Price, Montague Smith, L.R.C.P., M.R.C.S., third son of Mr. W. Smith, M.A., Head Master of the Orphan Working Schools, Haverstock Hill, to Kate Louise Gerrard, second daughter of A. W. Gerrard, pharmaceutical chemist, late of Chertsey.

RICHARDSON—ARNALL.—On February 16, at the Parish Church of St. Peter's, Belgrave, Reginald E. S. Richardson, second son of Colonel John G. F. Richardson, J.P., Elmfield, Knighton, Leicester, and a member of the firm of John Richardson & Co., manufacturing chemists and druggists, to Ethel Mary Arnall, second daughter of Mr. Joseph Arnall, The Grange, Loughborough Road, Belgrave.

REMINGTON—THOMAS.—On Monday, February 7, in the Protestant Episcopal Memorial Chapel of the Holy Communion, Philadelphia, U.S.A., Dr. Arthur Hart Remington, son of Professor Joseph P. Remington, President of the Philadelphia College of Pharmacy, to Miss Sophie Thomas, daughter of George C. Thomas, of Drexel & Co.

NEWS IN BRIEF

AN INTERESTING POINT.—At the Thornbury Petty Sessions last week Mr. James Spencer Palmer, chemist and druggist, of High Street, Thornbury, was summoned for obstructing the footway outside his shop by placing thereon two barrels, and allowing them to remain there for two hours without just cause. Considerable interest was taken in the case, as it involved the right of shopkeepers in the town to deposit goods on the footway in front of their business premises. Mr. H. P. Thurston (Messrs. Thurston & Jolly, of Thornbury) appeared for the defendant, who explained that he was called away whilst unpacking the barrels to attend to some customers in his shop. The Bench dismissed the case.

A CURIOUS REMEDY for pain in the stomach was recently tried by a lithographer named David Maxwell, of Greenock, who, after going to bed, complained of a pain in his stomach and drank a quantity of oxalic acid, with the result that he shortly afterwards expired.

THE CHARGE OF POISONING his cousin, Annie Holmes, by means of strychnine against Walter Horsford, farmer, of Spaldwick, Hunts, was again brought before the St. Neot's magistrates on February 18, and after further evidence had been submitted, the Bench committed the accused for trial to the Assizes on the charge of "Wilful Murder."

LIEUT. COL. PROBYN, L.C.C., is to be nominated by the Lord Mayor as one of the Sheriffs of the City of London during the coming year.

THE CLOTHWORKERS COMPANY has given £100 to the North-Eastern Hospital for Children, Hackney Road, Shoreditch.

A DENTAL ACT CASE.—At Newport (Mon.) on February 7 a young man was charged under the Dental Act (1878) with using the word "dentist" without being duly registered or qualified; he was further charged with applying the word "dentorium" for his business. For the defence it was contended that the word "dentorium" did not imply that the user was a registered dentist. A fine of £3 5*s*. was imposed with respect to the first charge, but in regard to the application of the word "dentorium" the magistrates thought the evidence insufficient to convict.

A CASE OF MEAT POISONING alleged to have occurred recently at Oakenholt, Flint, resulted in a coroner's inquest. It appears from the evidence that a woman named Lamb, aged 41, bought a quantity of brawn at a local butcher's shop on January 23, she, her husband, and family afterwards partaking of it for supper. The next day all who partook of the brawn became ill with violent stomach pains, all recovering after a few days except Mrs. Lamb, who, in spite of medical attention, expired on February 6, the cause of death being stated by the doctor to be "gastro-enteritis, due to diseased meat." The verdict of the jury was "Death from Typhoid Fever."

INTERNATIONAL PHOTOGRAPHIC EXHIBITION AT THE CRYSTAL PALACE, 1898.—The Prince of Wales has consented to open this Exhibition, and intending exhibitors are asked to note that the date of opening of the Exhibition by His Royal Highness has been fixed by him for Monday, April 25, and not Wednesday, April 27, as originally announced. The latest date for the reception of exhibits in each section will therefore be two days earlier than that first stated on the prospectus.

MESSRS. LINDSEY & SONS, Truss Makers and Surgical Machinists, 32, Ludgate Hill, E.C., have acquired the business at 6, Castle Square, Brighton, lately carried on by Mr. J. Peell.

INDUSTRIAL EXHIBITION.—Several firms connected either directly or indirectly with the trade are exhibiting at an industrial exhibition which is being held at the Victoria Hall, Exeter, for the purpose of practically demonstrating the advantages of using up-to-date food preparations, domestic and sanitary appliances, labour-saving and scientific inventions, etc. The only pharmacy stand is that of Messrs. Holman, Ham & Co., manufacturing chemists, of Exeter. The stand is most attractively fitted up with a choice selection of novelties and specialties, the display of perfumes and toilet necessaries being artistically arranged. The exhibit includes several preparations, for the production of which the firm deservedly takes credit. Other exhibits include those of Messrs. Champion & Co., of vinegar fame; the Anglo-Swiss Condensed Milk Co.; Messrs. Keen, Robinson & Co., whose name has been associated for more than a century with the mustard trade; Hovis Bread, Sunlight Soap, Maypole Dyeing Soap, Van Houten's Cocoa, Bovril, Brown & Polson's Patent Corn Flour and Paisley Flour.

THE CHEMICALS AND DRUGS CO., LTD., of Manchester, have been successful in resisting the attempt of the Saccharin Corporation to secure an interim injunction restraining them from selling saccharin. Unless previously settled by arrangement, the whole question as to the validity and scope of the patent will be decided later on at the trial of the action; in the meantime the Chemicals and Drugs Co. inform their customers that they are prepared to supply saccharin unfettered by any injunction.

A SIXTEEN OUNCE BOTTLE OF CARBOLIC ACID was purchased by a young married woman at Oxford on Tuesday this week, and when the husband returned from work in the evening he found her sitting in a chair, dead, having swallowed about six ounces of the poison. A distressing feature of the suicide is that the parties were married as recently as Saturday last.

THE BRITISH ASSOCIATION.—The arrangements for the Bristol meeting of the British Association are well in hand, and the local

secretaries have been informed that a particularly interesting feature of the meeting will be an international conference on Terrestrial Magnetism and Atmospheric Electricity. This conference, at a meeting held in Paris two years ago, appointed a permanent committee to consider various questions in relation to these subjects. This was a very representative one, comprising representatives of England, United States, Germany, Portugal, Sweden, Austria, France, Italy, Denmark, Holland and Russia. This committee will now present a report to the conference to be held in Bristol.

Mr. A. W. Gerrard, who recently severed his connection with the pharmacy carried on by him for some years at Chertsey, has joined the firm of Gibbs, Cuxson, & Co., manufacturers of surgical dressings, etc., Birmingham.

An Interesting Wedding was solemnised on Monday, February 7, in the Protestant Episcopal Memorial Chapel of the Holy Communion, Philadelphia, when Miss Sophie Thomas, daughter of Mr. George C. Thomas (of Drexel and Co.), was united in the holy bonds of matrimony to Dr. Arthur Hart Remington, a graduate of the Medical Department of the University of Pennsylvania, and a son of Professor Joseph P. Remington, President of the Philadelphia College of Pharmacy. The Memorial Chapel was built in 1888 by the bride's father, and, in honour of its founder's daughter, the chapel, which was crowded with a fashionable assemblage, was simply but very beautifully decorated. The ceremony was performed by the Rev. Richard N. Thomas, uncle of the bride, assisted by the Right Rev. William Neilson McVickar, D.D., Bishop Coadjutor of Rhode Island. Dr. and Mrs. Remington after the ceremony proceeded to Vienna, where the former will spend two years in hospitals to gain experience in special work before beginning the active duties of his profession in Philadelphia.

Edinburgh District Chemists' Trade Association.—A meeting of this Association was held on Tuesday, Feb. 22, when the Secretary read some correspondence with the wholesale Chemists' Union as to prices of proprietary articles, intimating that the subject would be considered at the first meeting of the Union in March or April next. Mr. Peter Boa, in introducing a discussion on "Methylated Spirit without Rock Oil," referred to the reasons which led to the addition of rock oil to the methylated spirit and the regulations regulating the sale on Sundays, and after 10 p.m. or before 8 a.m. on Saturday and Monday. He objected to rock oil being added, on the ground that while it did not render the spirit undrinkable, it made it unsuitable for many technical purposes. He also spoke on the question of licences. Mr. Hill agreed with Mr. Boa's objection, and thought if the case was fairly represented to the Excise authorities they might agree to withdraw the regulations. Mr. Coats was not altogether in accord with the objections raised, while Mr. M'Dougall thought they should write to the Excise authorities asking them to allow the oil to be omitted. Mr. MacKenzie thought Mr. Boa had confounded the action of the police with the Excise in the matter of granting licences. Mr. Forret sympathised with the position taken by Mr. Boa. Other members having expressed their opinions on the question, it was remitted to the Committee with powers to communicate with the Federation of local Associations on the subject and take any steps considered necessary.

Obituary.—Mr. William Duff, of Messrs. Raimes, Clark & Co., who has been seriously ill for many months, died at his residence, Richmond Cottage, Restalrig Terrace, Leith, on Saturday, February 19, 1898, aged 62. Mr. Duff served his apprenticeship in Cupar, from which he came forty-two years ago to the firm with whom he has been ever since, and of which he became a partner in 1888. Mr. Duff was widely known for his assiduous devotion to duty, his strict and methodical business habits, and his unfailing courtesy. He will be missed by a wide circle of friends in the drug trade throughout Scotland. He was an Associate in Business of the Pharmaceutical Society.

Football.

The Westminster College Football Club met the South London School of Pharmacy Club on Saturday, February 19, with the result of a win for the former by 4 goals to 3.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Charles L. Smithard and R. W. Morrow, Surgeons and Apothecaries, 381 and 383, Oldham Road, Manchester. Debts will be received and paid by R. W. Morrow.

George Woods and John Goodier, Wholesale Druggists and Drysalters, Kay Street, Preston.

Walter Geo. Eagle and Frederick Eagle, Drysalters, etc., 63, Wavertree Road, Liverpool. Debts will be received and paid by Walter George Eagle.

W. T. Peacock and Aug. Hadley, Medical Agents and Accountants, 19, Craven Street, Strand, W.C. Debts will be received and paid by Aug. Hadley, who will carry on the business.

Hinton E. Bateman and Thomas Kirsopp, Surgeons, York. Debts will be received and paid by Hinton E. Bateman, who will practise on his own account at 48, Micklegate, York. Thomas Kirsopp will practise on his own account at 58, Bootham, York.

Richard B. Thompson & Arthur Ryden (trading as J. A. Archibald & Co.), Aërated Water Manufacturers, Pitt Street, Blackburn.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

William Shearer, High Street, Camberley, Surrey, Mineral Water Manufacturer.

Reuben L. Gibson, 27, Swan Street, Loughborough, Leicester, Chemist, Druggist, and Dentist.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

February 24, 1898.

Business has again been very restricted during the past week, and disappointment has been freely expressed at the lack of orders. It is to be hoped, however, that with an improved political outlook we may see a better state of affairs in the Drug and Chemical Trade. The changes in value which have taken place during past few days have been quite unimportant Opium and Morphia very quiet. Codeia steady. Cinchona Bark and Quinine dull. Quicksilver and Mercurials, Iodine, and Iodides, Bromine, and Bromides, without change. Sulphonal steady. Acetanilide rather firmer. Phenacetin very weak. Essential Oils quiet, with the exception of Messina Essences, which are dearer. Glycerine fairly steady. Cod Liver Oil rather dearer for new oil, while the old oil is said to be in heavy supply, and is neglected. Orris Root higher. Cream of Tartar and Acid Tartaric quiet. Citric firmer, and expected to be dearer as soon as the season of more active consumption commences. Linseed Oil and Cottonseed Oil dearer. Borax and Acid Boracic quiet and unchanged. Shellac dull. Ipecacuanha very firm. The following are the prices actually ruling for articles of chief interest.

Acetanilide—Is rather firmer at 1s. 1d. to 1s. 2d. per lb. for quantity and large bulk packing.

Acid Acetic—Is fairly active, prices remaining unchanged at 14s. 3d. per cwt. for 30 per cent., 15s. 3d. per cwt. for the B.P. strength, 25s. per cwt. for the 60 per cent., 28s. 6d. for the 70 per cent., 32s. per cwt. for the 80 per cent., and 39s. 3d. for the glaciale.

Acid Boracic—Quiet at 23s. per cwt. for crystals, and 25s. per cwt. for powder.

Acid Carbolic—Is rather dull at 6¾d. to 7d. according to make and packing for 35° to 36° C. *ice crystals* in 2½ cwt. drums and overcasks. Other qualities and packing being quoted at proportionate prices. *Crude*: 60° F., 2s. 1d. per gallon; 75° F., 2s. 9d. *Liquid*: 95 per cent. of pale straw colour, 1s. 1d. to 1s. 2d. per gallon in 40-gallon casks.

Acid Citric.— Price is normally unchanged at 12½d. per lb. for foreign, but it is doubtful if any quantity could be obtained at that figure. Demand is slow, but should the position change in this respect decidedly higher values would probable rule.

Acid Oxalic—Firm at 3⅝d. per lb. for *crystals*, and 4⅛d. per lb. for *powder*.

Acid Tartaric. — English on the spot steady at 1s. 1d. per lb., foreign 12½d. per lb.

Aconite.—*Root*: German is quoted 39s. per cwt. on the spot. *Leaves*: 28s. 6d. to 42s. 6d. per cwt., according to quality.

Ammonia Compounds.—*Sulphate* is very dull at last week's price of £10 per ton for grey prompt, 24 per cent., London. *Bromide* unchanged at 2s. 2d. per lb. on the spot. *Iodide* quiet at 14s. 6d. per lb. *Sal Ammoniac* steady at 35s. per cwt. for sublimed firsts, and 33s. per cwt. for seconds. *Chloride* firm at 32s. per cwt. for the chemically pure crystals, and 25s. 6d. per cwt. for the 98 per cent. ,free from metals. *Sulpho-cyanide* firm at 1s. 1d. to 1s. 2d. per lb. *Oxalate*, 6¼d. per lb. for crystals.

Antipyrine.—Price of Dr. Knorr's article remains at the lately reduced figure of 2s. 1½d. per oz. Under the name of Phenagone, however, an article which in every respect fully answers all the requirements of the *P.B.* can be bought at a much lower price. Quotations vary considerably, but buyers are taking special care to handle only a really reliable quality, there being several inferior makes in the market.

Bismuth.—The *metal* remains at 5s. per lb., and the *subnitrate* at 4s. 10d. per lb., in in 5-cwt. lots.

Bleaching Powder—Steady at £7 per ton in bulk and for quantity.

Borax—Quiet and unchanged at 14s. per cwt. for lump, and 14s. 6d. per cwt. for powder.

Bromine and Bromides—Are steady at unchanged prices, *Pot. Bromide* being quoted at 1s. 10d. per lb.

Buchu Leaves.—A fair business has been done this week at 5d. per lb. for good green rounds.

Cantharides.—*Russian* continue firm at 1s. 9d. per lb., although demand is inactive. *China* are scarce and prices nominal.

Camphor.—*Crude* continues very quiet, and quotations are easier at 90s. *c.i.f.* for *Japan*, and 82s. 6d. *c.i.f.* for *China*, whilst the spot quotation of the latter quality is 90s. per cwt.

Camomiles—Are in fairly good inquiry, fine *Belgian* being quoted 37s. 6d. to 40s. per cwt., fair quality 32s. 6d. to 35s. per cwt.

Cinchona Bark.—By a slip it was stated last week that the bark sales were taking place in Amsterdam on that day, whereas same only take place to-day, result not being known at time of going to press. Meanwhile the position of the article has remained quiet and unchanged.

Cinchonidine Sulphate—Continues in good demand at 8½d. per oz.

Cloves.—Privately *Zanzibar* quiet but steady; sales include April-June delivery at 4 7-32d. and June-August at 4 9-32d.; spot quoted 4⅛d. At auction of 237 bales *Zanzibar*, 70 bales sold at 3¾d. to 4d.; of 28 cases *Penang*, 14 cases picked sold at 8½d. to 9½d.

Cocaine—Is quiet but steady at 10s. to 10s. 9d. per oz., according to quantity and brand. Some outside makes are said to be offering below this figure. In the case, however, of an article like this, buyers will be well advised if they confine their purchases to the best known and most reliable brands.

Coal Tar Distillation Products.—*Toluol*: 1s. 11d. per gallon; *Benzole*: 60 per cent., 1s. 8d.; 90 per cent., 1s. 5d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 10d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 11½d. per gallon.

Cod-liver Oil—Is rather firm at 65s. to 75s., according to brand, for best new non-congealing *Newfoundland* in tin-lined barrels owing to bad weather, which, it is stated, is seriously interfering with the fishing; but, in face of the large stocks of old oil, any really important advance in valuc of the new oil would appear to be somewhat problematical.

Codeia—Is steady at 11s. 3d. to 11s. 6d. per oz.

Cream of Tartar—Is unchanged, but demand is very slow, and a very small business has been done this week. First white *crystals* on the spot, 75s. 6d. per cwt.; *powder*, 77s. 6d. to 79s. per cwt.

Damiana Leaves—Continue to decline in value, 6½d. per lb. *c.i.f.* being the last price received from the other side.

Dandelion Root—Is exceedingly scarce, especially for really good bold root, demand from America having practically exhausted the *Continental* supply, while *English* root is hardly procurable at all. 45s. to 47s. 6d. per cwt. is asked for rather inferior *German whole* root. and 50s. to 52s. 6d. for *cut*.

Epsom Salts—Are in good demand for medicinal quality, prices ranging from 77s. to 92s. 6d. per ton, according to quantity and packing.

Ergot of Rye—Is firm, good *Russian* being quoted 10½d. to 11d., and really good sound *Spanish* 1s. 4d. per lb.

Gentian Root—Is quiet at 22s. 6d. to 23s. 6d. per cwt.

Ginger.—At the auctions on Tuesday 750 bags rough *Cochin* met a slow demand, and only 350 bags sold—low shrivelled at 12s. 6d.; ordinary small washed rough, 22s.; good, 30s.; fine bold, 32s. to 32s. 6d. per cwt. 419 bags limed *Japan* bought in at 19s. to 20s. per cwt. 101 bags *African* bought in at 27s. per cwt. The *Jamaica* crop is arriving rather earlier than usual, and it is reported that it will be a large one. However, 196 barrels of the new crop met with a good demand, and all sold at an advance of fully 1s. to 2s. per cwt.; low, lean, and dark Rhatoon, 60s. 6d. per cwt.; ordinary, 62s. to 62s. 6d. per cwt.; common dark small, chiefly scraped, 66s. to 69s. per cwt.; good small, 71s. to 73s. 6d. per cwt., and one barrel 79s. per cwt. One lot bold resinous held for 90s. per cwt., a bid of 88s. per cwt. being refused.

Golden Seal Root.—Stocks in New York are very light, and prices are advancing. This week's mail advices quote 1s. 10½d. per lb. *c.i.f.*, but state that very little is to be had at that figure.

Glycerin.—Market is quiet but steady, *German* makers quoting from 52s. 6d. to 58s. per cwt., according to brand, for the best white chemically pure double distilled 1·260 quality, in 2-cwt. cases each 4×56-lb. tins; other qualities and packing in proportion, *English* being quoted slightly below the lower figure mentioned above.

Gum Tragacanth.—There has been a much improved demand now that the late arrivals have been put on the market, and a considerable business has been done, mostly in the medium and lower qualities. Quotations: Firsts, £13 10s. per cwt.; seconds, £12; thirds, £10 15s.; fourths, £9 10s.; yellow and pinky, £7 10s.; other qualities down to 40s. per cwt.

Iodine and Iodides—Remain unchanged at 7½d. per oz. for the former, and 9s. 9d. for *Pot. Iodide* in 2-cwt. parcels.

Ipecacuanha.—*Rio* is exceedingly firm, nothing being obtainable under 8s. per lb., which price is asked for thin wiry root, good bold being held for 8s. 6d. per lb. *Good Carthagena* root is scarce, and prices quite nominal.

Japan Wax—Is rather firmer on the spot. Good squares 36s. per cwt. on the spot; for arrival 33s. per cwt., *c.i.f.* terms, is quoted.

Lycopodium.—Good sifted *Russian* is quoted 1s. 4d. to 1s. 6d. per lb., according to quantity.

Menthol—Is quiet at 7s. to 7s. 3d. per lb. on the spot, according to quantity.

Mercurials.—Makers still quote 2s. 2d. for *Corrosive Sublimate*, and 2s. 6d. for *Calomel* in 5-cwt. lots.

Morphia—Quiet at 4s. 3d. to 4s. 6d. per oz., according to quantity, for the *Hydrochlorate* powder in quantity and bulk packing.

Oils (Essential).—*Peppermint H.G.H.* is fairly steady on the spot at 5s. 6d per lb., whilst for arrival 5s. 3d. per lb. is asked. *Japanese* dementholised unchanged at 3s. 1½d. per lb. *c.i.f.*, 40 per cent. 4s. 1½d. per lb. *c.i.f.* *Star Aniseed* quiet but fairly steady at 7s. 3d. to 7s. 6d. per lb. on the spot and 6s. 6d. per lb. *c.i.f.* for arrival February-March steamer from second hands whilst China asks mone money at 6s. 8d. per lb. *c.i.f.* *Cassia* quiet with small sales of 65 to 70 per cent. at 4s. 9d. on the spot and, for arrival 80 to 85 per cent. at 4s. 9d. per lb., *c.i.f.*, terms. *Citronelle* steady at 1s. 2½d. per lb. in drums. *Lemongrass* quiet at 4¾d. to 5d. per oz. Messina essences are all very firm, but buyers are holding off in face of the advanced prices which are demanded.

Oils (Fixed) and Spirits.—*Linseed*: A very firm market at decidedly higher rates. On the spot, pipes London, £16 5s., barrels £16 10s. *Rape*: A steady market. Ordinary brown on the spot, £23; refined spot, £24 10s. *Cotton* very firm at much higher prices; crude on the spot, £13 15s.; refined £14 10s. to £15, according to make. *Olive*: Both Spanish and Levant are quoted at £33. *Cocoanut*: Ceylon on the spot unchanged at £22 10s., but Cochin is lower at £27 on the spot. *Palm* firm at £23 10s. for Lagos on the spot. *Turpentine*: The market is firmer, especially for forward positions; American on the spot, 24s. 4½d. per cwt. *Petroleum oil* flat; Russian spot, 4¼d. per gallon, American 4⅜d. per gallon. *Petroleum spirit*: American, 5½d. per gallon.

Opium—Remains exceedingly quiet at about late quotations—viz., *Druggists'*, 9s. 3d. to 10s. 6d.; *Manufacturing*, 8s. 9d. to 9s. 6d.; *Soft shipping*, 10s. 3d. to 12s. 6d.; and *Persian*, 10s. to 11s. per lb.

Orris Root.—Advices from Leghorn state that the market there for *Florentine* orris root has become much firmer, large purchases having been made for American account, and it becomes more and more evident that the stocks are much smaller than has hitherto been thought. Quotations for selected root are 45s. per cwt.; sorts, 42s.; and small white, 41s. per cwt., *c.i.f.* terms, and a further rise is thought probable.

Phenacetin—Remains very weak. The pressure to sell on part of the different makers continues, and prices range from 3s. 9d. to 4s. 3d. per lb., according to quantity and brand.

Pilocarpine.—Quotation remains 28s. per oz. for both the *Hydrochlorate* and the *Nitrate Salt* for not less than 1 oz., smaller quantities being charged at 1s. 3d. per gramme.

Plumbi Acetas.—Good dry white crystals are quoted 24s. 3d. to 24s. 9d. per cwt.

Potash Compounds.—*Chlorate* is very quiet, and last week's price of 3½d. per lb. on the spot still rules. *Iodide*: Unchanged at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Carbonate*, 21s. to 22s. 6d. per cwt., according to quantity and package. *Bromide*: Steady at 1s. 10d. per lb., for ordinary quantities under 1 cwt. *Cyanide* firm at 1s. 2d. to 1s. 3d. per lb. for the 98 to 100 per cent. in white cakes, and 6¾d. to 7d. per lb. for the 30 per cent. *Prussiate*, English make of *yellow*, 6¾d. per lb., and 1s. 2d. per lb. for *red*. *Oxalate*, 5d. per lb. for neutral. *Permanganate* very dull of sale at 62s. 6d. per cwt. for *small*, and 67s. 6d. per cwt. for *large* crystals. *Bichromate* steady at 3⅞d. to 4d. per lb.

Quinine—Is quiet, manufacturers' price remaining 1s. 1d. per oz. for best *German* brands in 1000-oz. lots, in 100-oz. tins and cases, there being sellers of limited quantities from seconds at a rather lower figure.

Quicksilver—Firm at last week's advance to £7 2s. 6d. per bottle from first hands, and £7 2s. from second hands.

Saffron—Is decidedly firmer, and higher prices will in all probability rule very shortly. To-day's values range from 37s. 6d. to 46s. 6d. per lb. for *Valencia*, and 24s. 6d. to 26s. 6d. per lb. for *Alicante*.

Santonine.—Maker's price is 4s. 5¼d. to 4s. 11d. per lb., according to quantity, in large bulk packing.

Scammony.—*Virgin* is rather lower at 27s. to 30s. per lb. for fair to fine "firsts," and 20s. to 23s. per lb. for "seconds." *Resin* is quiet at 6s. 6d. to 7s. per lb., according to quantity. *Roots*: The supplies are increasing, but holders are firm at 27s. 6d. to 30s. per cwt.

Senega Root—Does not improve, demand being very dull, 11¼d. to 1s. per lb., *c.i.f.*, London, is the New York quotation.

Shellac.—The market is very quiet and a dull tone prevails. On the spot only retail sales have been made, including *Second Orange* at 65s. to 66s. per cwt., basis *TN*. *HC Garnet* quoted 75s. for fine flat free. Blocky *OCC* sold at 59s. per cwt. For arrival there is no disposition to operate, and the market closes with sellers of *TN Orange*, April to June steamer, at 64s. per cwt., *c.i.f.*

Soda Compounds.—*Crystals* are unaltered at 55s. to 60s. per ton ex ship termo. *Bicarbonate* quiet at £7 10s. per ton in bulk for the 98 per cent., and 18s. 6d. per cwt. for the fully bicarbonated quality. *Hyposulphite* in better demand at 5s. 6d. to 8s. per cwt., according to make and package. *Acetate* steady at 14s. per cwt. for the refined white crystals, and 35s. per cwt. for the chemically pure. *Caustic*: £7 15s. per ton for 70 per cent. white and £6 15s. per ton for 60 per cent. *Phosphate*: 98 to 99 per cent., 16s. per cwt. in bulk.

Spermaceti.—Advices from New York bring lower quotations for this, 1s. 2¾d. per lb. *c.i.f.* being the general price.

Spices (Various).—*Black Pepper*: 388 bags offered were chiefly bought in, Singapore at 4⅛d.; 20 bags Lampong sold at 3¾d; and 50 bags good Wynaad, of old import, at 4¼d. to 4½d. *White Pepper* also mostly bought in—viz., 100 bags Penang at 6⅝d., and 218 bags good to fine bold sold at 9½d., except 15 bags which were sold at 9¼d. *Chillies* firmly held; 183 balcs Zanzibar bought in at 42s. to 45s., except 9 bales sea-damaged sold, first-class, at 37s. 6d. *Capsicums*: 9 bales ordinary long brown East India sold at 23s. *Cassia Lignea*: 40 bales broken bought in. *Cinnamon Chips*: 22 bags damaged sold at 2¾d. *Mace*: Of 22 cases Penang only 2 cases good heavy palish sold at 2s. 8d. to 2s. 9d.; the remainder bought in, chiefly pickings at 1s. 6d. *Nutmegs*: 4 cases Penang sold, 65's at 2s. 7d.; 11 barrels West India sold, 80's at 1s. 8d., 91's at 1s. 6d., 102's at 1s. 2d. to 1s. 3d. *Pimento*: Only 30 bags offered, chiefly without reserve, and sold at 4d. to 4¾d.

Strophanthus Seeds.—Green *Kombé* are firmly held at 3s. 3d. per lb. for original packages, and brown at 11d. to 1s. per lb., according to quantity.

Sulphate of Copper—Is firm at from £16 2s. 6d. for ordinary to £17 per ton for 98 to 99 per cent.

Sulphonal.—The two principal makers are still booking small orders at 7s. 3d. per lb. in bulk for both *crystal* and *powder*. They decline, however, to sell large quantity or to book for forward delivery at this, or, in fact, at any figure, which would appear to point to the probability of an advance in price in the not too distant future.

Turmeric—Continues very quiet, with only retail sales at previous rates. *Bengal* quoted 14s. 3d. per cwt., and *Madras* bright finger at 19s. per cwt.

LIVERPOOL REPORT.

February 24, 1898.

During the week slight advances have taken place in Linseed Oil, Cottonsced Oil and Turpentine, whilst the recent rapid rise in Potashes has received a check and has made a retrograde movement to the extent of 1s. per cwt. Transactions of an extended nature have been accomplished in African Chillies at good prices, in Gambia and Peruvian Beeswax at full rates, and in Kola Nuts at last week's figures. Linseed and Canaryseed are but little altered since last report, and the business done in them is only of an unimportant character.

Ammonium Salts.—*Carbonate* is likely to be dearer 3d. per lb. *Sal ammoniac*, 33s. to 35s. per cwt. *Sulphate* is firmer at £10 2s. 6d. per ton.

Beeswax.—Sales of Peruvian have been made at £7 per cwt., and 48 packages of Gambia "sorts" have been sold at £6 10s. per cwt.

Bleaching Powder—Is quiet at £5 12s. 6d. to £6 5s. per ton.

Canaryseed—Is firm at 25s. to 27s. per 464 lbs. for Turkish, 100 bags sold at the former figure; 50 bags of Spanish made 37s. per 464 lbs.

Castor Seed.—1267 bags of River Plate went for 7s. per cwt.

Chillies.—*Sierra Leone*: Some 300 bags sold at prices from 29s. to 44s per cwt.

Copperas.—36s. per ton *Welsh*, 38s. *Lancashire*.

Copper Sulphate—Is firmer at £16 12s. 6d. to £16 15s. per ton.

Kola Nuts.—7 baskets of fresh found a buyer at 2¾d. per lb., and 47 packages of dried sold at 2d. per lb.

Linseed—Continues firm and scarce. Sales limited to 40 bags of *Larnaca* at 42s. per 416 lbs. and a little *Turkish* at 39s. 6d.

Oils (Fixed) and Spirits.—*Castor Oils* firmly maintain their quotation of 3⅝d. per lb. for Calcutta and French, with a moderate amount of business doing. *Olive Oils*: Spanish are quoted at £33 to £34 per ton. *Linseed oil* of Liverpool make has advanced to 17s. and 17s. 3d. per cwt. with a firm market. *Cottonseed oil* is also a shade dearer, viz., 15s. to 15s. 6d. per cwt. *Spirits of turpentine* has improved in price, and now varies between 24s. 9d. to 25s. per cwt.

Potash Salts.—*Chlorate*: 3¼d. to 3½d. per lb. *Bichromate*: 4d. per lb. *Potashes* are cheaper—21s. 6d. per cwt. *Pearlashes*: 37s. 6d. to 40s. per cwt. *Saltpetre*: 21s. 6d. per cwt.

Soda Salts.—*Bicarbonate*: £6 15s. per ton. *Borax*: £13 10s. to £13 15s. per ton. *Caustic Soda* is scarce at £8 12s. per ton for 76 to 77 per cent., £7 10s. for 70 per cent., and £6 10s. for 60 per cent. *Crystals* firm at £2 17s. 6d. per ton.

Sulphur.—Roll, £6 5s.; flowers, £7 12s. 6d. per ton; recovered, £5.

NEWCASTLE CHEMICAL REPORT.

February 22, 1898.

This market continues to keep on the steady side, with a fair run on Soda Crystals for home use. More buoyancy is observable in light goods, whereas heavy chemicals are practically unchanged in value. Prices are:—Bleaching Powders, £6 5s. to £6 10s. Soda Crystals, basis, 45s. to 57s. 6d. Caustic Soda, basis, £7 10s. for 70 per cent. strength. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

February 22, 1898.

There is an air of uncertainty about the market here which it is hard to interpret. In heavy chemicals rumours of fluctuations are abroad, which keep some buyers from operating. Ammonia Alkali, 58 per cent., is in strong request, but there is no change in price—£4 2s. 6d. to £4 5s. bags, and £4 7s. 6d. casks. White Caustic Soda is still firm, and Industrial Bicarbonate is in

request. Miscellaneous chemicals are dull. Brown Acetate of Lime tends lower. It is quoted at £6 per ton ex-warehouse, but there are offers at £5 10s. per ton *c.i.f.* Manchester for best American. There is a prospect of German makes of Benzols being placed on the market, and although steady there is an absence of any great speculative demand. Sulphate of Copper is easy at £17 per ton, best brands, delivered Manchester. Epsom and Glauber Salts are unchanged.

Publications received.

A VISIT TO GIESSEN, OR THOUGHTS ON LIEBIG AND CHEMISTRY IN GERMANY. By Professor SENIER, of Queen's College, Galway. Pp. 19. Dublin: Edward Ponsonby, 116, Grafton Street. 1898. From the Author.

BERICHTE DER DEUTSCHEN PHARMACEUTISCHEN GESELLSCHAFT, IM AUFTRAGE DER GESELLSCHAFT HERAUSGEGEBEN VOM VORSTANDE, ACHTER JAHRGANG. Heft I. Berlin: Gebrüder Borntraeger. 1898. From the Publishers.

Diary for the Week.

SATURDAY, FEBRUARY 26.

PHARMACEUTICAL FOOTBALL CLUB v. BLOOMSBURY, at Wormholt Farm, Shepherd's Bush. Kick off at 3 p m.

MONDAY, FEBRUARY 28.

ROYAL GEOGRAPHICAL SOCIETY, at 8.30 p.m.
"The Annual Range of Temperature in the Surface Waters of the Ocean and Its Bearing on Oceanographical Problems," by Dr. John Murray.

TUESDAY, MARCH 1.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION. Meeting of the Trade to Discuss the New Pharmacy Bill.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY. Social Evening.

ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things" (Lecture VII.), by Professor E. Ray Lankester.

WEDNESDAY, MARCH 2.

PHARMACEUTICAL SOCIETY, at 11 a.m.
Meeting of Council.

THURSDAY, MARCH 3.

CHEMICAL SOCIETY, at 8 p.m.
"Note on the Preparation of Dry Hydrogen Cyanide and Carbon Monoxide," by John Wade and Laurence C. Panting.
"Production of Some Nitro- and Amido-Oxylutidines," by Dr. J. N. Collio and T. Tickle.
"Production of Some Nitro- and Amido-Oxylutidines" (Part II.), by Dr. J. N. Collie and Miss L. Hall.
"The Interaction of Magnesium and Solution of Copper Sulphate," by E. Divers.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8 p.m.
Twentieth Annual Dinner (Holborn Restaurant).

LINNEAN SOCIETY OF LONDON, at 8 p.m.
"On the Sense Organs of the Lateral Line in Certain Fishes," by F. J. Cole.
"On the Occurrence of *Carex helvola* in Britain,' by G. C. Druce.
"On Arctic Spiders from Franz Josef Land," by Rev. O. Pickard-Cambridge.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.45 p.m.
Smoking Concert. (Colonade Hotel.)

ROYAL INSTITUTION, at 3 p.m.
"Recent Researches in Magnestism and Diamagnetism" (Lecture I.), by Prof. J. A. Fleming.

FRIDAY, MARCH 4.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
General Meeting.

EDINBUROH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
Annual Supper. (Imperial Hotel.)

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION (Junior Section), at 8 p.m.
"Some of Our Microscopic Foes,' by Dr. W. Cheyne Wilson.

ROYAL INSTITUTION, at 9 p.m.
"Recent Results of Physico-Chemical Inquiry," by Prof. T. E. Thorpe.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 5-30.
"What is a Microscope?" by T. E. Wallis.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Practical Demonstration by Dr. A. J. Hall.

Exchange Offers & Wants

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books.

Minor Books.—Attfield; Squire (latest); Asa Gray (latest); and others. Particulars free.—Gower, Publisher, Waterloo, Liverpool.

'Chemistry Applied to Manufactures and Arts,' 8 volumes, 25s. (£4); 'The Analyst' for 1892, 4s. (8s.), and for 1893, 7s. (14s.); Remsen's 'Organic Chemistry,' 3s. (6s 6d.); 'The Analyst's Laboratory Companion,' 1st edition, 2 copies, 2s. each (5s.); a fine copy of Liebig's rare 'Handbook of Organic Analysis,' 7s. 6d.—Johnson, 155, Lea Road, Wolverhampton.

What cash offers for 'Pharmaceutical Journal, posted Tuesdays?—A. E., 213, High Street, Poole.

Miscellaneous.

What offers? About 28 lb. each P. Alocs Barb., P. Cinchon. Rub., Carbo Animalis, Ivory Dust; 7 lb. P. Corf. Aromat., etc.—Allison, 66, Kennington Park Road, S.E.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil lantern, gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Overstocked.—Superfine oil of lemon, 8½ lb., in copper, delivered free for 21s. Sample pound, delivered free for 3s. Cash with order.—Moss, 34 Avondale Road, Chorley.

Willcox's No. 2 Gun Metal Pump. Only used short time, for water. Good as new. 25s.—Moss, 34, Avondale Road, Chorley.

Two show-jars on stands, as Maw's fig. 21.—Worfolk, Ilkley.

Overstocked.—Daisy Powders, 1s. 1½d. new, 9s. 1d. doz.; Ashton and Parson's 1s. Pilules, new, 2s. 3d. doz. All saleable kinds. Any assortment.—Matthew, Pharmaceutical Chemist, 529, Battersea Park Road, S.W.

Shop Fittings.

To be Sold, cheap, several mahogany cases and shop bottles, suitable for small chemist's shop. Apply—T. M. Holmes, Chemist, Bowness-on-Windermere.

Fair Condition.—Two nests drawers (20 and 28), 6 ointment jars, 36 tincture bottles, 20 powder ditto. Send for particulars, stamped envelope.—"Chemicus," 278, New Cross Road, London, S.E.

A Bargain. Must be sold. Chemist's Shop-fittings and Fixtures. To be Sold, cheap, Entire Fixtures of a Handsome Large Pharmacy. Bottles, jars, carboys, mahogany-fronted counters, plate-glass, wall-cases, &c., &c., cost at least £450. Lease being disposed of, must be sold quickly. Quite sufficient to fit up a handsome 17 ft. by 24 ft. shop.—Apply, J. W. Feltwell, Chemist, 91, Hammersmith Road, West Kensington, W.

Entire Fittings.—Carboys, Bottles, Counter, Dispensing Screen, Drawers, Bent and Upright Glass Cases for Sale. Good Condition. Cheap.—Write, Corks, 4, Cale Street, Chelsea. Chance for beginner

WANTED.

Wanted.—Kelly's 'Directory of Chemists and Druggists.' State price.—Gowen, Fleet, Hants.

For Cash, old electric lamps and scrap platinum.—P. Rowsell, 14, Walcot Square, Lambeth, S.E.

Camwal Shares.—Single shares purchased. States lowest price to—W. Brown, 222, Well Street, South Hackney, N.E.

Directories of Ireland, Scotland, Northumberland, Durham; Brown's 'Advertisers' A.B.C.'—Write B., 320, Upland Road, Dulwich.

Wanted.—*Pharmaceutical Journal*, July 13, August 3, 1895; January 16, May 22, 1897. Full price will be paid for clean and complete copies by the publishers, 5, Serle Street, London, W.C.

Wanted.—Scott's 'Botany.' 'Flowering Plants.—H. S., 3, Town Street, Batley Carr, Yorkshire.

Marriages.

Davies—Jones.—At Bethel Chapel, Newcastle Emlyn, J. Davies, Pharmaceutical Chemist, Llanelly, late of Newcastle Emlyn, to Mary Ellen Jones, only daughter of Mr. Isaac Jones, Lanlasisaf, Rhydlewis, by the Rev. E. Phillips, pastor.

Perkins—Lamb.—On March 2 at Stoke Damerel Parish Church by the Rector, the Rev. S. Gordon Ponsonby, S. A. Perkins, Chemist, of Torpoint and Devonport, to Ada R. Lamb, sceond daughter of W. J. Lamb, of Devonport.

Business Changes.

Messrs. Herrings & Co., 40, Aldersgate Street, London, have transferred their business to Messrs. Willows, Francis, Butler, & Ayscough Thompson, and we understand that whilst the manufacture of pharmaceutical preparations by the latter firm will be under the personal charge of Mr. Francis and Mr. E. C. Butler, Mr. Ayscough Thompson will actively co-operate in the management of the business and also supervise the manufacture of the special preparations with which his father's name was identified for so many years. The services of Messrs. Herrings & Co.'s representatives have been secured by their successors.

Mr. J. Davies, M.P.S., pharmaceutical chemist, late of Newcastle Emlyn, has acquired the business formerly carried on by Mr. J. Wesley Jones, Stepney Street, Llanelly. The business at Newcastle Emlyn will be carried on by his brother, Mr. H. Davies.

Mr. William Ruff, chemist and druggist, Whitby, has purchased the business recently carried on by Messrs. Craven Bros., West Cliff Pharmacy, Skinner Street, Whitby.

Mr. B. W. Priest, of Parliament Street, Westminster, has retired and sold his business connection to Messrs. Hooper & Co., of Pall Mall, W.

Mr. Alfred Griffiths, late assistant to Mr. E. Presley, chemist, Bristol has purchased the business of Mr. F. Millward, chemist, 60, Woodville Road, Cardiff.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Ingham and Birtwistle, Herb Beer Manufacturers, Germany Street, Lancaster. Debts will be received and paid by R. Ingham.

Francis Dixon-Nuttall and F. R. Dixon-Nuttall (trading as Nuttall & Co.), Glass Bottle Manufacturers, St. Helen's. Debts will be received and paid by F. R. Dixon-Nuttall, who will continue the business under the old style.

Market Report and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

March 3, 1898.

Business has again been quiet during the past week, while, as regards the changes which have taken place, the chief feature has been the considerable reduction in makers' prices of Quinine. Opium and Morphia remain very dull. Codeia steady. Phenacetin weak. Sulphonal unchanged. Cod-liver Oil unsettled. Glycerin quiet. Acid Carbolic dull, and rather weaker. Quicksilver and Mercurials unchanged. Acid Citric firm. Acid Tartaric and Cream of Tartar steady. Cocoa Butter rather dearer. Shellac dull and lower. Quillaia Bark rather dearer. Borax and Acid Boracic quiet. Potash Permanganate in large supply. Ipecacuanha exceedingly firm. Iodine and Iodides, Bromine and Bromides, Bismuth and Salts, without change. Cocaine quiet. Prices rule as follow :—

Acetanilide—Is quiet at 1s. 1d. to 1s. 2d. per lb., according to quantity.

Acid Boracic.—Weak at 23s. to 24s. for *crystals* and 25s. to 26s. for *powder*.

Acid Carbolic - Quiet at 6¾d. to 6⅞d. per lb. for the 35 to 36° *ice crystal* in quantity and bulk packing. *Crude*: 60° F., 2s. per gallon; 75° F., 2s. 8d. *Liquid*: 95 per cent., 1s. 2d. per gallon.

Acid Citric—Is firm at 1s. 0½d. per lb. for spot, it being stated that makers are refusing to book orders for forward delivery.

Acid Oxalic—Is quoted 3⅝d. to 3¾d. per lb. for *crystals* and 4⅛d. to 4¼d. for *powder* according to quantity.

Acid Tartaric—Quiet at 1s. 0½d. per lb. *c.i.f.* for *foreign* and 1s. 1d. for *English*.

Ammonia Compounds.—*Sulphate*: 5s. lower at £9 15s. per ton for gray prompt 24 per cent. London. *Bromide*: 2s. 1d. to 2s. 2d. per lb. *Iodide*: 13s. 4d. *Sal ammoniac*, firsts, 35s. per cwt., seconds, 33s. *Chloride*: 32s. 6d. per cwt. for the chemically pure crystal, and 26s. for the 98 per cent., free from metals, quality. *Sulpho-cyanide*: 1s. 2d. *Oxalate cryst.*: 6¼d. per lb.

Antipyrine.—Dr. Knorr's article is still quoted 2s. 1½d. per oz. for *crystals* and *powder*. *Phenazone* P.B., which is chemically and otherwise absolutely the same thing, is, however, being offered at a much lower figure; in fact, some makers are quoting such extraordinarily low prices for the article that doubts have been expressed as to the quality. While there is no doubt that *Phenazone*, being cheaper, will eventually supersede Dr. Knorr's *Antipyrine*, buyers will do well to take due care that they are getting a really reliable article.

Bismuth—Is still quoted at 5s. per lb. for the *metal*, and 4s. 10d. for the *subnitrate* in 5-cwt. lots.

Borax.—Dull at 14s. per cwt. for *lump* and 14s. 6d. for *powder*.

Bromine and Bromides—Without change at 1s. 9d. for *Pot. Bromide* in 10-cwt. lots.

Cloves.—Privately *Zanzibar* have fluctuated, but close firm at about same prices as last week; spot, 4⅛d. to 4⅛d.; March to May delivery, 4⅛d.; April to June, 4⅛d.; June to August, 4¼d. At auction only 50 bales *Zanzibar* offered and bought in at 4d. 29 cases good picked *Penang* bought in at 11d.

Coal Tar Distillation Products.—*Toluol*: 1s. 10½d. *Benzole*: 60 per cent., 1s. 9d. per gallon; 90 per cent., 1s. 6d. *Crude Naphtha*: 10d. *Solvent Naphtha*: 2s. per gallon.

Cocaine—Is quiet, makers' prices for best brands being 10s. to 10s. 9d. per oz. for 100-oz. lots, makes less in favour being quoted somewhat below these prices, while from second-hand it is also possible to shade these figures.

Cocoa Butter.—The monthly sales on Tuesday established a rise of ¼d. per lb. 50 tons Cadbury's selling at an average price of 9¼d. per lb., as against 9⅛d. in February and $9\frac{9}{16}$d. per lb. in January.

Codeia—Unchanged at 11s. 3d. to 11s. 6d. per oz.

Cod-Liver Oil—Is quiet, price of new non-congealing *Norwegian* in tin-lined cases being nominally 65s. to 67s. 6d. per barrel, so far the yield of the *Lofoden* fishery has not reached one quarter of the average figures of past ten years, the livers are, however, stated to yield well, which with finer weather might mean a large output of oil, which fact, combined with the large existing stocks of old oil, continues to exercise a depressing influence on the market.

Cinnamon.—The first quarterly sales of the year took place on Monday, when a total of 1956 bales *Ceylon* was offered, as compared with 1248 bales at the same time last year. A generally good demand prevailed, and about 1550 bales were sold. The bulk consisted of unworked, a large proportion being common coarse qualities. Good and fine *Plantation* sold readily at an advance of 1d. to 2d. lb., medium first and second sorts sold at ½d. to 1d. advance, thirds about ½d. per lb. dearer, and fourths about ½d. per lb. lower. Firsts worked *Ceylon* sold, superior 1s. 5d. to 1s. 11d.; fair to fine 1s. to 1s. 4d.; seconds, superior 1s. 4d. to 1s. 8d. per lb.; medium to good 10½d. to 1s. per lb, thirds, superior 1s. 3d. to 1s. 6d.; fine 1s.; ordinary 9d. to 9½d. per lb.; fourths, fine to superior 11d. to 1s. 3d. per lb.; ordinary to medium 8d. to 9d.; unworked qualities sold 6d. to 1s. 2d. per lb. according to quality. *Chips*: Low dusty to ordinary 2⅜d. to 3¼d. per lb.; quillings 6½d. to 11½d. per lb.

Cream of Tartar—Steady at 75s. 6d. for *crystal* and 77s. 6d. to 79s. per cwt. for *powder*.

Damiana Leaves—Are quoted on the

spot at 10d. per lb., but from the United States the price is noted 7d. per lb., *c.i.f.*, although advices thence state crop is much lighter than for several years past.

ERGOT OF RYE.—Good sound *Spanish* is scarce, nominal price being 1s. 4d. to 1s. 6d. per lb., sound *Russian* being quoted 10d. to 11d.

FERRI ET QUININÆ CITRAS—In sympathy with the reduction in quinine, is lower, 25-oz. tins being now quoted 6d. per oz., 1-oz. vials 7d. per oz. for quantities less than 100 ozs.

GENTIAN ROOT—Is quoted 20s. to 22s. 6d. per cwt., *c.i.f.*

GINGER.—At auction 1131 bags *Cochin* offered were chiefly bought in, small to good washed at 27s. to 32s., and brown at 32s. 6d. to 35s., only 95 bags being sold, fair new washed at 30s.; 67 cases cut bought in, C at 48s., B at 75s. Of 263 bags limed *Japan* 93 bags sold, chiefly without reserve, slightly mouldy 18s. 6d.; 10 cases ditto sold at 20s. Only 17 barrels new *Jamaica* were offered and sold, ordinary small scraped at 70s.

GLYCERIN—Is quiet at 50s. to 52s. 6d. for *English* and 55s. to 57s. 6d. for best *German* brands of white chemically pure double distilled 1·260 quality in tins and cases

GUM ACACIA.—Of *picked* only small sales have been made at steady rates at from £6 15s. to £15 per cwt., according to quality. *Soudan sorts* are firm, and higher prices are asked; for hard 67s. 6d. per cwt. has been paid, and 85s. is asked for good soft.

GUM MASTIC.—2s. per lb. continues to be asked for fine clean pale tear, but whilst supply increases, demand has fallen off, and lower prices are anticipated.

IODINE AND IODIDES—Remain unaltered at 7½d. per oz. for the former, and 10s. 3d. for *Pot. Iodide* in 2-cwt. lots.

LITHIA—Unchanged at 10s. 8d. per lb. for the *carbonate* for 10 cwt.

MENTHOL—Is quoted 7s. 3d. to 7s. 6d. per lb. for good dry white *crystals* on the spot.

MERCURIALS.—Are unchanged at 2s. 2d. for *corrosive sublimate* and 2s. 6d. per lb. for *calomel*, for 10 cwt.

MORPHIA.—Makers still quote 4s. 3d. to 4s. 6d. for the *Hydrochlorate* powder; other salts in proportion.

OILS (FIXED) AND SPIRITS.—*Linseed* continues firm at £16 5s. for pipes on the spot and £16 10s. for barrels. *Rape* firm at £23 for ordinary brown on the spot, and £24 10s. for refined in same position. *Cotton*: Crude is unchanged at £13 15s. on the spot, but refined is dearer at £14 15s. to £15 10s., according to make. *Olive*: Unchanged at £33 for either Spanish or Levant. *Cocoanut*: Ceylon on the spot firm at £22 10s. Cochin has recovered at £27 10s. on the spot *Palm*: Lagos, on the spot, at £23 10s. *Turpentine*: This article is lower, but closes firm at 24s. 7½d. per cwt. for American on the spot. *Petroleum Oil*: This market has exhibited a strong reaction after a long period of inactivity, and prices close with a decided upward tendency; Russian, on the spot, 4⅜d.; American, same position, 4⅝d. per gallon; water white, 5¼d. per gallon. *Petroleum Spirit*: American, 5½d.; deodorised, 6d. per gallon.

OPIUM—Absolutely without change from last week, there being practically nothing doing in the article.

PHENACETIN.—Some makers are quoting as low as 3s. 6d. per lb. for both *crystals* and *powder* in 10-cwt. lots, the best makes are, however, held for more money, say 3s. 9d. to 4s. 3d. per lb., according to quantity.

POTASH COMPOUNDS.—*Chlorate* quiet at 3¾d. to 4d. per lb. *Iodide*: 10s. 3d. *Carbonate*: 22s. 6d. per cwt. *Bromide*: 1s. 10d. per lb. *Cyanide* in demand at 1s. 2d. per lb. for 98 per cent. cake and 7½d. to 8d. for the 30 per cent. *Prussiate*: Yellow 7d. and red 1s. 2d. to 1s. 3d. *Oxalate*: Neutral 5d. *Permanganate* dull at 62s. 6d. per cwt. for small crystals. *Bichromate*: 4d. per lb.

POTASH PERMANGANATE.—Stock continue to accumulate, while demand remains slack, small *Crystals* being quoted as low as 60s. per cwt. for half-ton lots, the price for large *Crystals* being 5s. per cwt. higher. It is thought, however, that in view of the approach of the summer a better demand will shortly set in which would soon result in a clearance of the accumulated stocks, and might very easily lead to higher prices ruling.

QUICKSILVER.—First hands are firm at £7 2s. 6d. per bottle, whilst second hand can be had at 6d. per bottle less.

QUILLAIA BARK—Is quoted higher from *Hamburg* at 18s. to 20s. per cwt. *f.o.b.* in 10 ton parcels.

QUININE.—The present month began for this article with a very decided fall in values, both the English and German makers reducing their prices to 1s 1d. and 11d. per oz respectively for bulk packing as against 1s. 4d. and 1s. 1d. per oz., which were the quotations ruling last month. Various reasons are given for this slump: shipments of the new Java make to this side, large bark shipments from India, a desire on the part of the European makers of the alkaloid to show bark holders that they are not to be dictated to, etc., but, whatever the reason, the fact remains, and for the moment the article is in bad repute as a desirable speculation; perhaps for this very reason we may shortly see a reaction. German brands quoted 11d. per oz. for 1000 oz lots in 100-oz. tins, and this for delivery over 60 days and with a falling clause for this period, whilst Howards quote 1s. 1d. per oz. for 100-oz. tins, 1s. 2d. per oz. in vials for not less than 100-oz. lots. Other salts in proportion.

SHELLAC.—Privately a very dull tone has prevailed, and the market shows no improvement. At the fortnightly sales on Tuesday the supplies were very moderate but with a very slow demand, prices showed a decline of 2s. to 3s. per cwt. on last sales' rates for *second orange*, whilst *button* declined fully 4s. per cwt. A total of 847 cases offered and 198 cases sold. *Second Orange*: Of 612 cases 135 sold, fair bright red flat at 64s. to 65s., dull palish flat at 65s., ordinary curly reddish at 63s., broken curly livery at 62s. *Garnet*: Of 94 cases 15 sold, without reserve, common ruby, part hard block, at 55s., good curly free *AC* bought in at 76s. *Button*: Of 141 cases 48 sold, chiefly without reserve, good seconds at 73s., ordinary circle 2's at 61s., ordinary thirds at 55s.

SODA COMPOUNDS.—*Crystals*, 60s. per ton, ex-ship. *Bicarbonate*, 18s. 6d. per cwt. for the fully bicarbonated, and £7 15s. to £8 per ton for the 98 per cent. quality. *Hyposulphite*, 6s. to 8s. per cwt. *Acetate*, 35s. to 37s. 6d. per cwt. for the chemically pure, and 15s. for refined white crystals. *Caustic*: 60 per cent., £6 15s. to £7; and 70 per cent., £7 15s. to £8 per ton. *Phosphate*, 16s. to 17s. 6d. per cwt.

SPICES (VARIOUS).—*Black pepper*: 30 bags Lampong sold at 3¾d., the bulk being bought in at 3⅞d., 217 bags Singapore sold before the auction; of Tellicherry 27 bags sold at 4¼d. *White pepper* all bought in, Singapore 7⅝d. to 8d., Penang 6½d. *Long pepper*: 50 bags bought in at 24s. *Chillies*: 149 bales Zanzibar, of old import, sold, without reserve, middling dull to fair, at 35s. to 37s. 6d., 7 cases fine bright Japan bought in at 52s. 6d. *Capsicums*: 9 bags brownish East India, on stalk, sold at 25s. 6d., 8 bags brown Japan, sea-damaged, sold at 25s.; 1 bale old Natal sold at 70s. *Cassia Lignea*: Steady, but quiet, at about previous prices. *Cinnamon Chips*: 53 bags Ceylon sold, common, 2¼d.; good, 4½d. to 4¾d.; 21 packages broken quill sold at 8d. to 11d. *Mace*: 3 cases Penang sold, ordinary red partly wormy, 1s. 6d.; 3 boxes West India sold at 1s. 7d. to 1s. 8d. *Nutmegs* dull. *Pimento*: Of 245 bags offered 75 bags sold at 4⅝d.

SULPHONAL.—The two makers will still only book quite limited orders at 7s. 3d. per lb. for *crystals* or *powder*, maintaining that they are losing money on all they sell at the price. It is, however, curious that they should be willing to continue selling at a price which, as they maintain, shows them not a profit, but a loss.

The Drug Auctions to-day passed off quietly, only a moderate amount of business being transacted, there being no very striking changes in values.

ALOES.—Of 35 boxes *Curaçoa* part bought in at 20s., for *Capey* 17s. being refused, good hard *Zanzibar* selling for 55s. to 57s. 6d. per cwt. 14 cases *Cape* all sold at 22s. to 23s. 6d. for fair hard bright down to 19s. for rather drossy. 25 kegs good *Socotrine* realised 80s. per cwt.

AMBERGRIS.—1 case *Auckland* sold at 40s. per oz. for fair, part fossilised, and at 23s. to 28s. for undeveloped, part chalky, 1 tin selling at 30s.

ANATTO SEEDS —13 bags fair quality were bought in.

ANISEEDS.—25 bags *Spanish* held for 27s. per cwt.

ANTIMONY.—50 cases crude *Japan* bought in at 20s. per cwt.

ASAFETIDA.—The new arrival from the Persian Gulf, partly damaged by coal, owing to being stored in the coal bunkers, was offered to-day, but, with the exception of one or two lots which had been sold previous to the auctions, there was no interest shown in the article. Holders are firm, and bids based upon late "without reserve" sale have been declined.

BALSAM COPAIBÆ.—7 cases all sold at 1s. 6d. per lb.

BALSAM TOLU.—3 cases held for 1s. 8d. per lb.

BUCHU LEAVES.—32 bales *rounds* sold with good competition at 3¾d. to 4¼d. per lb. for fair stalky green to good dark green.

CAMPHOR OIL.—13 cases *black* taken out at 40s. per cwt.

Cardamoms. — About 200 cases were offered, the bulk selling at about 2d. per lb. advance on last sale rates. Fine bold pale *Mysores* sold up to 4s. 3d. per lb. ; medium ditto, 3s. 9d. to 3s. 10d. per lb. ; small, 2s. 9d. to 3s. 4d. per lb., *decorticated* realising 3s. 2d. per lb. *Malabar* sold at 2s. 7d. per lb.

Cascarilla Bark.—25 barrels siftings taken out at 20s. per cwt.

Castor Oil.—25 cases *Calcutta* seconds held for 3¼d. per lb.

Chalmugra Oil.—One case yellow sold at 1s. 5d. per lb.

Cinchona Bark.—Of 96 bales flat *Yellow bark* part sold at 7d. to 9d. per lb., rest taken out at 8d. to 1s. 3d. 11 cases red bark taken out at 5s., a bid of 2s. 3d. per lb. being declined ; 2 bales mossy *East Indian* cinchona bark bought in at 1s. 6d. per lb. ; 6 bales fair bold *Carthagena* held for 5d.

Cinchonine.—2 cases *Whiffen's* alkaloid and 5 cases *Howard's* sulphate sold with all faults at 1½d. per oz.

Civet.—1 horn good fair light colour held for 12s. per oz.

Coca Leaves.—33 bales, somewhat inferior *Truxillo* held for 5½d. to 6d. per lb.

Colocynth.—5 cases fair bold, rather brownish *Turkey* held for 1s. 2d. per lb. 5 cases ditto, small to medium, part broken, for 1s. 1d.

Colombo Root.—3 bags fair washed were held for 57s. per cwt. A new arrival of this scarce article, amounting to 187 bags good bright, but very mixed, with stem, sold well at 42s. 6d. to 45s. per cwt., 5 bags fair washed, part wormy, sold at 50s. per cwt.

Cubebs.—65 bags black and gray mixed part mouldy taken out at 35s. per cwt., 14 bags selling, subject to approval, at 28s.

Cummin Seeds.—50 bags taken out at 20s. per cwt.

Cuttle Fish.—36 mats fair pale broken held for 3½d. per lb.

Dragon's Blood.—This article was in poor supply, fine quality, which is wanted, being still absent; 7 cases in reed, but poorly packed, was taken out at £8 15s., whilst further 3 cases in reed well packed were held for £9. Two lots of seedy lump were withdrawn at £7. Dull, dark-coated slabs held for 85s. per cwt.

Ergot of Rye.—2 cases very weevily *Spanish* sold without reserve at 6¼d. per lb., 8 cases good ditto being bought in at 1s. 9d. Fair *Russian* held for 9d. per lb.

Gamboge.—Offered in fair quantity, but all was bought in, except 3 cases pickings, which sold cheaply at £6 17s. 6d. per cwt. Good bright softish held for £8 5s. per cwt.

Gentian.—10 bales fair *root* bought in at 24s. per cwt., 5 bags fine *powder* held for 30s.

Guaza-—20 bales brownish tops, part very dark, held for 5d. per lb.

Gum Arabic.—1 case fair grain bought in at £7 per cwt ; 2 cases picked fair pale small to medium at £11 ; 6 bales fair yellowish sorts held for 82s. 6d., and 45 bags insoluble Persian for 20s. to 25s.

Gum Benjamin. — Very fine seconds *Sumatra* sold at £9 17s. 6d. to £10 15s., fair ditto at £6 7s. 6d., to £7 12s. 6d., down to 90s. for lower Penang character quality, grey almondy seconds selling cheaply without reserve at 45s. up to £5 5s., according to quality ; fair *Penang* held for £5 down to 60s. for common, a bid of 50s. being declined, fair *Palembang* sold at 35s., bold to boldish free *Siam* held from £15 to £18 ; dusty seed and pea, blocky, part free, selling at £7 10s. down to 45s. for inferior.

Gum Chicle.—One bag bought in at 7s. 6d. per lb.

Gum Guaiacum.—1 case part fair glassy block, part drossy sold, without reserve, at 8d. per lb.

Gum Kino.—4 cases *African* part sold very cheaply at 2s. per lb. ; 2 tins fair *Cochin* bought in at 15s.

Gum Mastic.—4 cases good pale held for 2s. per lb.

Gum Myrrh.—10 barrels fair sorts bought in at 75s. per cwt.

Gum Opoponax. — One case genuine bought in at 7s. per lb.

Honey.—3 packages medium *Jamaica* sold at 21s. per cwt. 38 packages *Australian* taken out at same price.

Ignatius Beans.—20 bags fair quality held for 3d. per lb., only 1d. being bid.

Ipecacuanha—Was in better supply, although stocks remain low and holders continue very firm. The bulk of the *Rio* root was bought in, fair wiry being held for 8s. per lb., at which one good bale sold, and fair bold natural at 8s. 6d. per lb.; whilst 14 bales of picked, received from France, were bought in at 9s. per lb. *Carthagena* quality is held for 6s. 6d. to 6s. 9d. per lb.

Jalap.—26 bales small fair heavy held for 6½d. per lb.

Kamala.—2 cases of rather dull appearance taken out at 5d. per lb.

Licorice Juice.—10 cases in 4-oz. sticks held for 60s. per cwt.

Licorice Root.—7 bags crushed bought in at 17s. per cwt.

Menthol.—6 cases rather oily *Japan* held for 6s. 6d. per lb., 2 cases ditto selling very cheaply at 6s. 2d. to 6s. 3d.

Musk.—Of 8 tins 75s. per oz. was the price required for small to bold thin-skinned blue, a few broken, and 40s. for old-fashioned untrimmed ; small to bold fair shape, pile 3, part damaged, being held for 22s.

Oils (Essential).—*Globulus* held for 2s. 3d. per lb. *Cygnet* brands for 1s. 9d. *Kangaroo Island* and *Lubra* brands for 1s. 8d., and fair commercial for 1s. per lb. *Cajeputa* : 1 case, of which no sample was forthcoming, held for 4s. 3d. per bottle. 8 cases ditto at 4s. 1d. *Lemon* : 3 cases *Battaglini* held for 3s. 9d. per lb. *Sassafras* : 2 cases Dodge & Olcott's held for 1s. 9d. per lb. 4 cases *Cinnamon* for 4d. per lb., 3 cases *Cinnamon leaf* for 4d. per oz. 12 drums *Citronella* sold without reserve at 12⅝d. to 12¾d. per lb. 10 cases Japan Peppermint oil, guaranteed to contain 40 per cent. of menthol, bought in at 5s. per lb., *dementholised* ditto selling very cheaply at 2s. 6d.

Orange Peel.—23 cases fair thin cut held for 8d. to 8½d. per lb.

Orris Root.—Of 57 bags fair *Florentine*, 10 bags sold at 38s. per cwt., balance being taken out at 40s., a bid of 37s. being refused.

Patchouli Leaves.—34 bales, all more or less country damaged and mixed with sand, bought in at 4d. per lb.

Quillaia Bark.—5 bales of fair quality were held for 24s. per cwt.

Quinine.—3 cases *Brunswick* bought in at 1s. per oz.

Rhubarb.—Very bold round *Canton* fair fracture held for 1s. 5d. per lb., ditto small to medium for 1s. 3d., small trimmings for 1s. 7d., 1 case flat ditto selling for 1s. 7d. Rough pickings round or flat held for 1s., horny high-dried for 8d., ditto small pale coated, very little colour, for 10d. 16 cases pale coated ditto, fair colour, sold cheaply at 11¾d., and 16 cases rough horny ditto sold at 7d. to 7¼d., mainly at the latter figure. Good round *Shensi* held for 2s. 6d. per lb.

Sarsaparilla.—6 bales good *Jamaica* sold at 1s. 7d. to 1s. 9d. per lb. ; 28 bales *Lima* bought in at 1s. 6d. ; 1 bale red native *Jamaica* sold at 11½d., and 1 bale grey ditto at 11d. per lb.

Scammony Root.—167 bags taken out at 32s. per cwt.

Senna.—Only a few odd lots of second-hand *Tinnerelly* were offered, about 20 selling at from 2d. to 3½d. per lb. for small spotty to fair yellowish bold. Stocks are lower than they have been for a long time past, and holders are very firm. *Mecca* kind, of which 45 bales were offered, met with no demand. Supplies of *Alexandrian* were large, and a portion sold very cheaply at 5d. per lb. for fair leaf slight yellowish, good siftings at 2¾d., and pods at 4d. per lb.

Squills.—Four bags held for 3d. per lb.

Star Aniseed.—10 cases *China* bought in at 110s. per cwt.

Sticklac.—105 cases *Siam* held for 42s. 6d. per cwt.

Tamarinds.—21 barrels *West Indian* were bought in.

Tonquin Beans.—4 cases boldish black foxy held for 1s. per lb.

Turmeric.—4 cases wormy *China* bulbs, part dark, sold without reserve at 3s. 3d. per cwt.

Vanilla—Was in small supply, and but little sold. *Mauritius* : 6 by 5½ inch at 18s. per lb. *Seychelles* : 7½ to 8 inch at 23s. per lb. *Tahiti* : All out, 8s. per lb. being asked.

Vermilion.—8 cases *China* held for 2s. per lb.

Wax.—5 bags fair *Zanzibar* sold at £6 5s. per cwt., 4 cases *Italian* held for £6 12s. 6d., 8 cases *China* held for £5 5s., 10 cases bleached *Calcutta* for £5 15s. 3 bags *Australian* fetched £6 15s., 3 cases ditto, £6 17s. 6d. 1 case *Bombay* sold subject to approval at 75s., 13 bags *San Domingo* realised £6 10s. to £6 12s. 6d. 25 packets fair *Madagascar*, £6 5s. to £6 15s. ; 12 bags *Jamaica*, £6 15s. to £7 5s. 50 cases vegetable *Japan* bought in at 37s. per cwt.

MANCHESTER CHEMICAL REPORT.

March 2, 1898.

There are no changes in price in heavy chemicals to report, and only a moderate business is passing here. Caustic Soda is steady, but Bleaching Powder is flat, and tends downwards. In miscellaneous articles Sugar of Lead has had a sharp advance, and is quoted £31 per ton station, Manchester, and Glycerine, double distilled, is locally about a shilling higher, ranging from 52s. to 53s. Brown Acetate of Lime is still rather scarce for prompt delivery at £6 per ton. No Welsh is offering forward, but American is quoted £5 to £5 15s. Sulphate of Copper is expected to advance in sympathy

with a rise in the price of the metal, and holders here are not inclined to sell. Yellow Prussiate is easier at 7d. for Lancashire make. Alum is dull. Epsom and Glauber Salts unchanged.

NEWCASTLE CHEMICAL REPORT.

MARCH 2, 1898.

This market remains quiet. Inquiries for spring shipment for the Baltic ports are now in circulation, but so far little new business has been booked. Prices are practically unchanged, and remain as follow:—Bleaching Powder, £6 5s. to £6 10s. Soda Crystals, basis, 45s. to 57s. 6d. Caustic Soda, 70 per cent. basis, £7 10s. to £7 15s. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

LIVERPOOL REPORT.

MARCH 2, 1898.

The prices of chemicals generally are unchanged and the business done in them has been small.

AMMONIUM SALTS — Are unaltered, except the Sulphate, which has weakened to £9 17s. 6d. per ton.

BEESWAX.—Eight packages Gambia sold for £6 10s. per cwt.

BLEACHING POWDER — Still commands £5 12s. 6d. to £6 5s. per ton.

CANARYSEED—Is quieter and prices are slightly easier, 125 bags of Turkish seed have sold at 26s. to 27s. 6d. per 464 lbs.

CARNAUBA WAX.—Two tons of yellow sold at 75s. per cwt.

COPPERAS—Is still firm at 36s. to 38s. per ton.

COPPER SULPHATE—Is somewhat easier, but slow of sale at £16 10s. to £16 12s. 6d. per ton.

FŒNUGREC. — Numerous small sales of Egyptian seed have been made at 10s. per cwt.

GINGER.— Old-crop Sierra Leone has been selling at 22s. 6d. per cwt. ex store.

KOLA NUTS.—Dried have sold freely at 2d. per lb, about 100 packages having found buyers at this price.

LINSEED—Is selling at firm prices, spot lots of Calcutta at 37s. 6d. per 416 lbs., and River Plate at 35s., spot and forward. 100 bags of River Plate feeding seed sold at 37s. 6d. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor oils* command a fair share of business, and French 1st pressure has been selling freely at 3½d. per lb., which is also the price quoted for "good seconds" Calcutta. *Olive oil* of Spanish make has been selling at £33 10s. per ton. *Linseed oil* has again risen in price, and Liverpool-made oil is selling at 17s. 3d. to 17s. 6d. per cwt. *Cottonseed oil* is also higher viz., 15s. 3d. to 15s. 9d. per cwt. *Spirits of Turpentine* is steady at the recently improved price of 24s. 9d. to 25s. per cwt.

POTASH SALTS—Are unchanged from last week. *Potashes and Pearlash* are selling slowly at 21s. 6d. per cwt. for the former, and 37s. 6d. to 40s. per cwt. for the latter. *Cream of Tartar* is neglected at 76s. per cwt.

EXCHANGE.

OFFERED.

Miscellaneous.

Magic Lanterns, seeond-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil lantern, gives 14-ft. picture; 60,000 slidcs and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d.—Hughes, Brewster Housc, 82, Mortimer Road, Kingsland, N.

Overstocked.—1s. 1½d. Daisy, 8s. 6d. per doz.; Diamond Dycs, 1s. 8d. per doz.; 1s. Pilulcs and Tincturcs (Watson Wates), 2s. 3d. per doz.; Munyon's Remedies, 7s. 6d.; all fresh; list.—Ruxton, Chemist, Arbroath.

What offer for nineteen quarter-pound packets of Fullwood's Annatto, hard and dry, in perfect condition?—T. F. Hudson, Chemist, Grovc Road, Bow, E.

Southall's Materia Medica, collection D, complcte with key, cost £2 15s., will take 25s.; also Southall's Herbarium Collcction, cost 10s. 6d., will take 5s.—Potter, Chemist, Plaistow, E.

Dental Instruments, cost £15. Ncw. Forceps, etc. Sell £7 10s.—"Line," Mitcham Cyclists' Rcst, Mitcham.

Shop Fittings.

Entire Fittings of Chemist's Shop to be sold in onc lot or parts, or shop may be rentcd as fitted. Bcst offer accepted.—149, Barking Road, Canning Town, E.

Optical and Photographic.

For Sale.—Eastman Kodak (folding), 3 double dark slides, 45s.; also 7½ by 5 camera (Watson), 6 brass bound double dark slides, solid leather case, tripod, cloth, with 9 by 7 Ross U.S. lens, completc, £8; also Vogel portrait lens cabinet, £4.—A. Upson, Chemist, Maidenhead.

Apochromatic Objective, one inch, by Zeiss. New, perfect. Offers.—A. J. Callaway, Salisbury.

Books.

Perkins' 'Organic Chemistry,' both parts in one volume, 3s. 6d. Green's 'Botany,' vol. ii., 4s. Silvanus Thompson's 'Electricity and Magnctism,' 2s. 9d. Thomé's 'Botany,' 2s. Everett's 'Physics,' 1s. 9d.—P. Davies, 69, Market Street, Manchester.

Copies of thc 'Pharmaceutical Journal" for 1893 and 1894.—Addrcss, Miss Thompson, 66, Gough Road, Edgbaston.

Attfield's 'Chemistry,' fifteenth cdition; new, 15s., will takc 7s. 6d.—Laidlaw, 26, Clyde Street, Edinburgh.

WANTED.

Chemical Balance and wcights, in good working order.—Gatward & Wright, Chemists, Yeovil.

Wanted, old clectric lamps and scrap platinum, or old platinum utensils; utmost value promptly remitted by—P. Rowsell, 14, Walcot Square, Lambcth, London, S.E. (please mention this paper).

Wanted.—*Pharmaceutical Journal*, July 13, August 3, 1895. Full price will be paid for clean and eomplete copies by the publishers, 5, Serlc Street, London, W.C.

Football.

The match between the Pharmaceutical Football Club and Bloomsbury, played on Saturday last at Wormholt Farm, resulted in a win for the Square team by 1 goal to nil.

PHARMACEUTICAL TEAM.—Prescott, goal; Jones and Lescher, backs; Happold, Payne and Evans, half backs; Warren, Durbin, Owen (centre), Merrikin and Day, forwards.

The Westminster College met South London School (Muters) on Saturday, February 26, in a "friendly," the game ending in a win for Westminster by 5 goals to 1.

DIARY FOR THE WEEK.

SATURDAY, MARCH 5.

PHARMACEUTICAL FOOTBALL CLUB v. ST. MICHAEL'S UNITED at Wormwood Scrubbs. Kick off at 3 p.m.

TUESDAY, MARCH 8.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.
"With the Pink Party in Switzerland," by R. W. Silson.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY.
Lecture by Dr. F. J. Paley.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9 p.m.
"Drug Journals and Their Advertisers," by Arthur M'Kellar.

PHARMACEUTICAL SOCIETY, at 8 p.m.
Evening Meeting:—
"The Pharmacy of Cantharides," by Prof. H. G. Grecnish and Harold Wilson.
"Recent Additions to the Museum," by E. M. Holmes.

ROYAL COLONIAL INSTITUTE, at 8 p.m.
"Our West Indian Colonies," by George Carrington. (Whitehall Rooms, Hôtel Métropole.)

ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things" (Lecture VIII.), by Professor E. Ray Lankester.

ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"The Passage of a Few of the Salts uscd in Photography through Gelatin Septa," by A. Haddon.

WEDNESDAY, MARCH 9.

NEWCASTLE-ON-TYNE AND DISTRICT CHEMISTS' ASSOCIATION, at 8 p.m.
"Apprenticcs—Their Dutics and Ours," by Geo. F. Merson. (Métropole Hotel.)

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9.15 p.m.
Musical and Social Evening.

MANCHESTER PHARMACEUTICAL ASSOCIATION, at 7.30 p.m.
(1) "The Detection of Water in Ether; (2) "A Comparison of the Melting Points of Commercial Specimens of Soft Paraffin," by James Grier. The prizes gained in the recent competition will also be awarded at this meeting.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, at 8.30 p.m.
"Poor Law Dispensers," by J. F. Eardley.

PHARMACEUTICAL SOCIETY, at 11 a.m.
Preliminary Meeting to arrange for the Annual Dinner.

THURSDAY, MARCH 10.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
"Résumé of Mercury," by J. Fothergill.

NOTTINGHAM AND NOTTS. CHEMISTS' ASSOCIATION, at 8 p.m.
Annual Dinner. (Albert Hotel, Derby Road.)

ROYAL INSTITUTION, at 3 p.m.
"Recent Researches in Magnestism and Diamagnetism" (Lecture II.), by Prof. J. A. Fleming.

LIVERPOOL CHEMISTS' ASSOCIATION, at 7 p.m.
Second General Meeting.
"Glucose Determination at the Dispensing Counter," by R. C. Cowley and J. P. Catford.
"Necrology (The Disposal of the Dead): Short Historical Sketch," by H. B. Morgan.
"Notes on Piquia Oil and Pichurim Beans," by T. H. Wardleworth.

FRIDAY, MARCH 11.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION.
"Some of the Mechanisms of Plants," by Prof. J. Reynolds Green.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
Open Meeting. Arrangements by W. B. Cowie.

NEW IDEAS & TRADE NOTES

THE "PAZO" COMPRESSOR.

The "Pazo" compressor for tablet making at the dispensing counter, described some time ago in the *Pharmaceutical Journal* (last vol., p. 548), has now been placed on the market and affords a ready and convenient means of compressing all kinds of drugs into tablet form without lubrication or granulation. These are essential points for dispensing counter use, and also for all conditions where exactness is required, such as test tablets. It is also an important tool to the manufacturer, as he can produce small quantities up to 250 in less time than he can set the tools of a power automatic machine. The "Pazo" compressor differs from other tablet machines in the uniform character of its product. The bottom die being adjusted to the tablet, every succeeding tablet falls from the machine an exact reproduction, the pressure being removed from the operator's control. The powder being placed in a funnel arranged just above the lower die, A, falls into that detachable die; the handle is brought down as far as it will go (Fig. 2), and then lifted completely back; the tablet will then have been compressed, extracted, and thrown from the machine. The only adjustment for pressure, according to the material and thickness, is in the stalk adjusting the bottom die, and that is set in a few seconds. The "Pazo" compressor is nickel-plated and bronzed, and the price is 50*s*. Extra dies can be supplied if required. The machine is made and supplied by the "Pazo" Company, Oldbury.

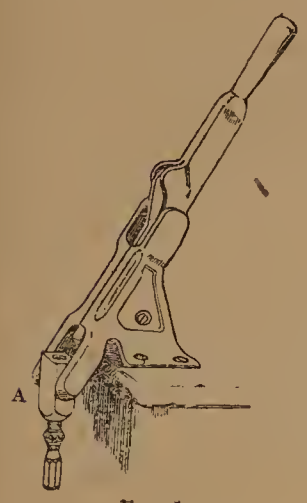


Fig. 1.

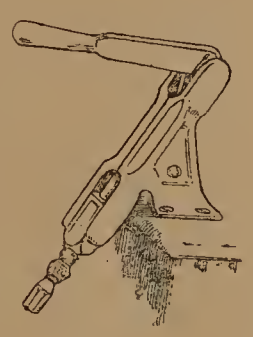

Fig. 2.

CONCENTRATED TOILET PREPARATIONS.

Messrs. Rouse Brothers, 61, Charlotte Street, Tottenham Court Road, W., send samples of excellent toilet articles made from their well-known concentrated preparations. These include a very nice Glycerin and Cucumber made from the firm's Cucumber Paste, which also makes a very satisfactory Milk of Roses. The Toilet Vinegar made from Ess. Toilet Vinegar is about as good as can be obtained anywhere, and the Florida Water, from Florida Water Ess., is equally good. The Eucalyptus Eau de Cologne, from Eucalyptus Cologne Ess., is a happy combination, both pleasant as a perfume and valuable as an antiseptic. The quality and get-up of the various preparations, are all that can be desired. The firm supplies very attractive labels for these preparations and the sheets of formulæ sent out not only give the formulæ, but also include a variety of particulars with a view to assisting the retailer in selling the articles. All the formulæ having first been the subject of numerous experiments and nothing taken for granted, they can be depended upon to yield satisfactory products.

HIGH-CLASS CHEMICALS.

Messrs. Harrington Brothers, 4, Oliver's Yard, City Road, E.C., send a copy of their wholesale price-list of chemicals, etc., for March. It contains a comprehensive list of chemicals for research, laboratory, and educational purposes, photographic and technical chemicals for potters and glass manufacturers, varnish makers, nickel and electro-platers, etc., together with the firm's business terms.

"FLYODOOMO" FLY STICKERS.

Mr. Jno. H. Smith, proprietor of the "Flyodoomo" fly stickers, is removing his factory from Balderton Gate to larger and more convenient premises at Carter Gate, Newark, of which he has bought the lease in order to compete with the increased demand which he anticipates this season. The numerous testimonials received from all parts of the country have been arranged in a printed list, which testifies to the increasing popularity of the "Flyodoomo" papers. It may be mentioned that Mr. Smith now does all his own printing, his machinery having been at work all through the winter, chiefly on "Flyodoomo" papers.

NEW VARIETY OF ASBESTOS.

The London Asbestos Company, of 101, Leadenhall Street, London, is bringing to the notice of chemists a new variety of asbestos, which, owing to the extreme fineness of its fibres, forms a silky wool-like material admirably suited for filtering chemicals. The material has been thoroughly tested by a well-known chemist, who reports that it serves excellently for filtering purposes, being of a peculiarly close or matted texture, and consisting for the most part of fibres of extreme fineness. It is a perfectly neutral material, and acids or alkalies, strong or dilute, have no sensible action upon it. For laboratory work it is admirably suited, not being brittle like glass-wool, and retaining the finest precipitates. Freshly precipitated barium sulphate, which passed through ordinary filter paper is completely retained, the filtrate being quite clear. This asbestos is said to be a better filtering material for chemicals than anything now in use, and it is much cheaper than glass-wool. The price is 10*s*. per lb.

Parliamentary Notes.

Dangerous Trades.—In Committee on the Civil Service Estimates Sir Charles Dilke called attention to a number of lead poisoning cases occurring amongst workers in the Potteries, and suggested that the employment of young people in dangerous processes should be prohibited. The Home Secretary, in reply, admitted the dangers arising from lead working, and expressed the opinion that the Workmen's Compensation Act, 1897, was to be interpreted as allowing compensation in cases of accidental poisoning. In the course of his remarks he revealed the fact that the Home Office is fully alive to the urgent need for more stringent precautions and better safeguards in the interests of the health of the operatives. The Department is, in fact, ready to assist manufacturers in experiments with a view to the discovery of innocuous ingredients for use in what are now dangerous processes. Here, then, is a field of activity for the chemical investigator, and the research laboratory which shall solve the problem of how to render lead working harmless will deserve well of the country and of humanity.

Poison Regulations Threatened.—The reply to Mr. Sam Wood's question as to the scheduling of carbolic acid has elicited a declaration from the Home Secretary that a Bill for the regulation of the sale of poisonous substances has been prepared, and will shortly be introduced. The Privy Council, he stated, does not think it expedient to add carbolic acid to the schedule to the Pharmacy Act, 1868, but it is of opinion that the sale should be regulated, and in accordance with a promise already given, the Government is prepared to submit to the House a proposal for effecting this. Such a declaration of opinion is of immense import to registered men; for it seems to foreshadow the advent of a third schedule, and the consequent admission of the dangerous principle that the education of the vendor of potent chemical substances is quite a secondary factor in preserving the public from accidental poisoning. It is to be hoped that the representatives of pharmacy will appreciate the gravity of the situation, and will at once take steps to confer with the public authorities on the subject.

Opium.—Sir Joseph Pease, the member for the Barnard Castle division of Durham, has given notice of a motion calling attention to the trade in opium between India and China. The Hon. Baronet represents the Society for the Suppression of the Opium Traffic, and believes that in time the House of Commons will be impressed with the iniquity of encouraging the trade in the drug. He has publicly stated that the trade is falling, and that though Malwa opium is bolstered by reduced duties and bounties to growers it cannot flourish.

Position of Bills.—The Food and Drugs Bill, of which a *résumé* is given at page 257, is down for second reading on Monday, the

21st inst. Midwives' Registration is relelated to Wednesday, May 11. Merchandise Marks Amendment—represented by two Bills, one introduced by Mr. McArthur, and the other by Sir Howard Vincent—appeared on the paper on the 9th inst., and is now passed over till another private members' night. The Registration of Firms Bill is patiently awaiting March 30, and is still unopposed, whilst the two Shops Bills (early closing) have a half chance of slipping into the committee stage as we go to press.

Personal Notes.

PROFESSOR CAREY FOSTER, who has occupied the Chair of Physics at University College, London, for more than thirty years, is about to vacate that position.

PROFESSOR BASTIAN'S retirement from the Professorship of Clinical Medicine, which he has held for twenty years, is announced, and also his resignation from the post of physician to University College Hospital, after thirty years' service. He has since been appointed Consulting Physician to the Hospital and Emeritus Professor of Clinical Medicine.

MR. J. S. RISIEN RUSSELL, M.D. (Edin.), F.R.C.P., has been appointed Assistant Physician to University College Hospital, London.

SERGT. JOHN GIBSON, chemist and druggist, was the chairman at a complimentary dinner given to the non-commissioned officers of the "A" (Hexham) Company of the 1st V.B. Northumberland Fusiliers on March 4 at the Royal Hotel, Priestpopple.

MR. J. HINTON LAKE, Vice-President of the Exeter Association of Chemists and Druggists, and Local Secretary of the Pharmaceutical Society, was unanimously elected Hon. Treasurer of the Exeter Camera Club for the ensuing year at the annual meeting last week.

LIEUT.-COLONEL CLIFFORD PROBYN has recently been elected Grand Treasurer of the Order of Freemasons.

MR. ALFRED THORBY LONG, pharmaceuceutical chemist, Bognor, has been elected as a member of the West Sussex County Council.

MR. A. F. POLLARD, B A. (Oxon.), son of Mr. H. H. Pollard, J.P., Ryde, I.W., has been recommended for the Arnold prize at his University. It is worth £60, and is open to all graduates of Oxford who have not exceeded twelve years from matriculation. Mr. Pollard graduated in first-class honours in the History School, 1891, and took the Lothian prize in 1892 with an essay on "The Jesuits in Poland." The subject of the Arnold is "Protector Somerset."

MR. R. A. ROBINSON, chemist and druggist of Brompton Road, S.W., and Tunbridge Wells, successfully contested the South Kensington division as one of the Moderate candidates at the recent London County Council election, gaining his seat—to which he was first elected in November, 1896, without a contest—by a majority of 2408 votes. Mr. Robinson, who is a native of Whitby, came to London in 1870, purchasing the business of Messrs. W. Malden and Co., Brompton Road, S.W., in 1875. For a number of years he has taken an active part in local affairs, and he has been elected chairman of various committees of the Vestry and Board of Guardians. In the last Council he was one of its representatives on the governing body of the Birkbeck Institute and the South-West Polytechnic, and also a member of its several committees.

MR. T. H. W. IDRIS, J.P., principal of the firm of Idris & Co., Ltd., last week was again elected at the head of the poll to the L.C.C. in the Progressive interest, as one of the members for North St. Pancras. Mr. Idris was elected to the first Council, and has since continued to represent the division. He has held several important offices since his first election to the Council, doing valuable work as Chairman of the Water Committee, the Rivers Committee, and the sub-committee of the Public Health and Water Committees. He has also done good service on the Councils of the Lea and Thames Conservancy Board.

LIEUT.-COLONEL PROBYN, J.P., head of the firm of Hooper, Struve & Co., chemists and mineral water manufacturers, etc., Pall Mall, W., received the highest number of votes in the Strand division at the L.C.C. election. He was one of the Moderate candidates, and has represented the division since the Council was first established. Prior to that he was a member of the Vestry of St. George's, Hanover Square, and also for some time the representative of Westminster on the London School Board. He has been the chairman of the Local Authority of St. Martin's-in-the-Fields since the Local Government Act first came into force, and while on the Council has been chairman of the Improvements Committee.

MR. C. G. CLARKE, J.P., member of the firm of Messrs. Potter & Clarke, Artillery Lane, E.C., who was one of the Progressive candidates for Peckham, found himself heading the poll by some 352 votes. He has long taken a deep interest in municipal affairs, having been a member of the Camberwell Vestry and Chairman of its Finance and New Streets Committee, a member of the Camberwell Board of Guardians, and manager of the Sumner Road Board Schools.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

Mark William McDonald, Surgeon, 2, Oxford Road, Waterloo, Lancs.

Dr. Isidore McWilliam Bourke, 63, Nevern Square, Earl's Court, S.W., and residing at 40, Redcliffe Square, W. Kensington, W.

Medical Jottings.

DR. W. S. PLAYFAIR, Professor of Obstetric medicine at King's College, will vacate this post at the end of the present winter session. Dr. Playfair, who is a younger brother of Lord Playfair, has been connected with King's College for the past thirty-five years, and now retires after having been professor for a quarter of a century.

MR. BRUDENELL CARTER lectured before the Society of Arts recently on "Children's Sight." Out of 8125 children attending the London Board Schools whose sight had been examined at Mr. Carter's instigation only 39·15 per cent. had normal vision with both eyes, so that nearly 60 per cent. of London school children between the ages of eight and thirteen do not see as acutely, that is, as well and as sharply, as they ought to do. On the whole, however, the state of these children in respect to the more injurious form of short sight and the higher and more injurious forms of flat eye compared favourably with that of children in many other capitals. Mr. Carter advocated that the vision of every child brought to school should be tested on admission, and in every case where subnormal the parent should receive official information, and should be recommended to obtain skilled advice before schooling was proceeded with, and that spectacles should be supplied of the kind required for the individual defect.

DR. J. ROSE BRADFORD, F.R.S., the Assistant Professor of Clinical Medicine at University College, London, will deliver the Goulstonian Lectures on March 15, 17, and 22, on the "Pathology of the Kidneys." The Lumleian lecturer this year will be Sir R. Douglas Powell, Physician to Middlesex Hospital. The subject chosen is "The Principles which Govern Treatment in Diseases and Disorders of the Heart," and the dates March 24, 29, and 31. The lectures will be delivered at the Royal College of Physicians, Pall Mall East, at 5 p.m., on the respective Tuesdays and Thursdays indicated by the dates.

DURING 1897 the Röntgen Rays were used in 416 cases at St. Thomas's Hospital, and it has been found necessary to appoint an assistant to the officer in charge.

THE late Mr. W. H. Burns has left a legacy of £1000 to the Royal National Pension Fund for Nurses. Mr. Burns was, at the time of his death, Chairman of the institution.

THE PROFESSORSHIP OF SURGERY at this University, vacated by the death of Sir George Humphry, is not to be filled up. We learn from the *Hospital* that for the time being the professorship will be suspended, and a Reader in Surgery appointed, upon whom will devolve all the ordinary teaching functions of the professorship. One difficulty thus surmounted is that a professor should have charge of hospital patients and be engaged in the active practice of his profession. This would have involved the appointment of one of the surgeons of Addenbroke's Hospital, who, however, are not chosen by the University

authorities. The stipend of the readership is to be £240 per annum. A further difficulty in regard to continuing the professorship was the inadequacy of the endowment.

A Meeting was held on Wednesday, the 2nd inst., at the rooms of the Royal Medical and Chirurgical Society, Hanover Square, to discuss the question of raising the funds necessary for the new Medical School Buildings in connection with the University of Cambridge, for which a site has been assigned by the Senate. A sum of £20,000 will be required, some of which has already been promised, including a thousand guineas from the Mercers' Company.

At the annual meeting of the Medical Defence Union held last week at St. Martin's Hall, the new President, Dr. W. S. A. Griffith, in the chair, the report of the Council was adopted, in which thanks were expressed to various bodies, and amongst them the Pharmaceutical Society for the greatest consideration and courtesy shown in all instances where they had been requested to deal with any matters brought before them by the Union officials. Mr. Victor Horsley was thanked for his valuable work whilst President for so many years, and assured of the sincere sympathy of the Union with him in the attacks that have been made upon him in the discharge of his duties on the General Medical Council.

Lord Charles Beresford is announced to take the chair at the annual dinner of the Irish Medical Schools' and Graduates' Association, to be held at the Café Monïco, London, on St. Patrick's day.

Professor Grimaux, who has been deprived of his professional chair of chemistry at the École Polytechnique, Paris, in consequence of his evidence given in favour of M. Zola at the recent trial, was given a remarkable ovation at a recent meeting of the Biological Society. Professor Richet, who prefaced his speech by the remark that it was the custom of the Society to congratulate its members when an honour was conferred on them, offered on the part of the members a warm tribute of homage and affection to their colleague.

Football.

The match between the Pharmaceutical Football Club and St. Michael's United, played on Saturday last at Wormwood Scrubbs, resulted in a win for the Square team by 3 to *nil*.

Pharmaceutical Team.—Prescott (goal), Jones and Lescher (backs), Evans, Nelson, and Payne (half-backs), Happold, Day, Owen (centre), Durbin and Warren (forwards).

Glasgow and West of Scotland School of Pharmacy Football Club *v.* Nobel's Explosive Co. Football Club.—Match played on March 5 at Pollokshields resulted in a win for the Pharmacy Club by 2 goals to 1.

Pharmacy Team:—Messrs. Dawson (goal), Macarthur and Banks (backs), D. Banks, Scott, and Drynan (half-backs), Russel, Lochhead, and Paton (centre), Buchanan and Wilson (forwards

News in Brief

Benevolent and Orphan Funds.—The following corrections to the list of subscribers to the Benevolent Fund have been supplied by the Secretary of the Pharmaceutical Society:—

On page 182*f* Calvert, E. C., & Co. should be entered under Manchester.

On page 182*f*, under Bradford, Yorks, Alexander, E. G., 10s. 6d., should read Edinburgh, Alexander, H. D., 10s. 6d.

On page 182*j*, under Harbury, for Gollins, E. de T., read Collins.

On page 182*m*, under London, Harry, E. H., £1 1s., should read Harry, E. H , 2s. 6d.

On page 182*n*, under Lowestoft, Hinde, A. H., should be 5s.

On page 182*o*, under Manchester, Jones, J. A., should read Jones, I. A.

On page 182*r*, under Southend, Heywood, J. H., should be 10s. 6d.

The following names appearing under South Molton should appear under Southport:—

Nuttall, R. H , £1 1s ; Ratcliffe, S., 5s. ; Righton, James, £1 1s. ; Round, Frederick, 10s. 6d. ; Smith, F. J., 5s. ; Surr, Edward, 10s. 6d. ; Whitworth, James, 5s. ; Wilding, G. J. (Birkdale), 5s. ; Winter, William, 10*s.* 6d.

The following were omitted:—

Under London, Jenkins, Henry, £1 1s.

Under Walsham-c.-Willows, Harrington, A., 5s.

Under Manchester, Waugh, J., 5s.

Donation omitted from Orphan Fund list:

Glasgow Meeting British Pharmaceutical Conference, £5.

Messrs. Willows, Francis, Butler & Aysoough Thompson, to whom Messrs. Herrings & Co. have sold their business, are extremely fortunate in having so quickly succeeded in obtaining such suitable premises. The building at 40, Aldersgate Street, which in future will be Messrs. Willows & Co.'s only address, is admirably equipped with laboratories, drug grinding mills, and every facility for the manufacture of pharmaceutical preparations. The warehouses are extensive and the situation central. Our readers will remember that Messrs. Willows' premises at 101, High Holborn were burnt out about a month since.

The Leicester Chemists' Social Union, hold their annual dinner on Tuesday, March 29, at the Wyvern Hotel, Leicester. All chemists and assistants in the town and county being eligible to attend. Tickets, 2*s.* 6*d.* each, may be obtained from the Hon. Secretary, F. W. Goodess, Hotel Street, Leicester.

North of England School of Pharmacy.—The third annual ball of this institution will be held on Wednesday, March 16, at the Grand Assembly Rooms, Barras Bridge, Newcastle-on-Tyne. Tickets (double, 7*s.* 6*d.*; gents, 5*s.* ; ladies, 3*s.*) may be obtained from the Hon. Secs., 55, Northumberland Street, Newcastle.

Late Association News.—Long reports of several meetings held this week have been received too late for insertion in this week's issue of the Journal. Thus, on Tuesday, Mr. Arthur McKellar read a paper on "Drug Journals and their Advertisers" before the members of the Glasgow Pharmaceutical Association. On Wednesday, Mr. James Grier read two papers before the Manchester Pharmaceutical Association; one dealt with "The Melting Point of Soft Paraffins," and the other with "The Detection of Water in Ether." On the same evening Mr. G. F. Merson read a paper entitled "Apprentices—Their Duties and Ours" before the Newcastle-on-Tyne Chemists' Association.

Sir James Pender, M.P., and the Draft Pharmacy Bill.—A memorial, signed by twenty pharmaceutical chemists and druggists residing in Northampton, was recently forwarded to Sir James Pender, M.P., the member for the Mid Division, calling his attention to the Pharmacy Bill, and asking him to support it. To Mr. F. C. Ashford, who forwarded the memorial, Sir James has replied as follows:—

Thornby Hall, Rugby,
February 27.

Dear Mr. Ashford,—Your Bill was read a first time on Thursday night. I will support it by my vote when it comes up later on.

Yours faithfully,
James Pender.

The Employees of Cockburn & Co., Ltd. (wholesale and retail chemists, Glasgow), and friends, held their annual supper and dance in the Cockburn Hotel, Bath Street, Glasgow, on Thursday, February 24. Dancing commenced at 8.30 p.m. Mr. Watson, director, in the unavoidable absence of Mr. Cowan, Chairman of the Company, presided at the supper. The toast of "The Firm" was proposed by Mr. Michie in well-chosen language, and the Managing Director, Mr. C. T. Cockburn, replied. A number of other toasts were duly honoured. Thereafter an adjournment was again made to the ball-room, where a most enjoyable programme was provided. "Auld Lang Syne" concluded an evening appreciated by all, and reflects the greatest credit on the indefatigable and genial Secretary, Mr. J. B. Surgenor, under whose generalship the whole proceedings were conducted.

Brighton Junior Association of Pharmacy.—The above Association held a musical and social evening on Wednesday, March 2, at Newburgh Hall, Cannon Place. The President was in the chair, and a very pleasant evening was spent.

'The Chemists' Opinion,' dated February, 1898, is issued by "Camwal," and contains a full report of the proceedings at the general meeting of shareholders held on Tuesday, December 7, 1897, at Anderton's Hotel, Fleet Street, E.C., when Mr. Horace Davenport, Chairman, proposed the adoption of the report and balance sheet. The report shows how the Association has been extending its operations in various districts, and altogether provides much interesting reading.

A QUANTITY OF LAUDANUM sold by Alfred Marsh, a Dover chemist's unqualified assistant, to a young woman named Stokes was the cause of her being brought before the Dover magistrates on a charge of attempted suicide. She was committed for trial at the next Quarter Sessions.

THE BRITISH ASSOCIATION—1900 MEETING.—On Monday last a public meeting, convened by the Mayor, was held in Bradford Town Hall, at which it was decided to invite the British Association to hold its meetings in the city in 1900. The resolution was proposed by Mr. J. Brigg, M.P., seconded by the Vicar of Bradford and carried unanimously. An Executive Committee was also appointed to make arrangements for the visit, if accepted.

OWENS COLLEGE, MANCHESTER.—Anonymous donations of £10,000 and £5000 have been made for the erection and maintenance at this college of a new physical laboratory.

MIDLAND PHARMACEUTICAL ASSOCIATION.—The members of this Association held a successful smoking concert at the Colonnade Hotel, Birmingham, on the 3rd inst. Mr. F. J. Gibson presided over a company numbering over one hundred, and conducted the proceedings with admirable tact. The excellent programme arranged by the Hon. Sec. (Mr. H. S. Shorthouse) was thoroughly enjoyed. At the conclusion Mr. Gibson proposed a vote of thanks to the artistes, which was cordially agreed to.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.—On Tuesday evening last, March 8, Mr. R. W. Silson (a member of the Association) delivered a lecture entitled: "The Pink Party in Switzerland" before the members of the Association and their friends at the Great Northern Hotel. Mr. Dunn, the President, occupied the chair, and there was a crowded attendance. The lecture was illustrated by sixty or more capital slides, taken by the lecturer whilst on a tour with the "Pink Party," and included mountain and lake scenery, and buildings of interest in Lucerne, Brussels, Antwerp, etc. Most of the views were quite works of the highest art, and caused much applause. At the conclusion Mr. A. H. Waddington thanked Mr. Silson for his highly entertaining lecture, being supported in his remarks by Messrs. Rimmington, Dunn, Branson (Liverpool), and Pickard, Mr. Silson suitably replied. At the conclusion of the lecture the meeting assumed a social character, the remainder of the evening being spent in conversation.

DEWSBURY AND DISTRICT CHEMISTS' ASSOCIATION.—A meeting of chemists was held on Monday evening the 7th inst. at Messrs. Nell and Co.'s auction rooms, Church Street, Dewsbury, when representatives were present from Dewsbury, Batley, Ossett, Heckmondwike, Mirfield, Ravensthorpe, West Town, and Batley Carr. Mr. A. Foster, Dewsbury, was elected chairman. Mr. Foster explained why the meeting had been called, and trusted that it would be the means of creating a good feeling amongst the chemists of the district, and also that they would be able to meet one another oftener than they had done. It was resolved to form an association under the title of the Dewsbury and District Chemists' Association. The election of officers then took place, which resulted as follows: President, Mr. A. Foster, Dewsbury; Vice-Presidents, Mr. C. Crooke, Mirfield; Mr. G. Walker, Dewsbury; Treasurer, Mr. W. Stead, Heckmondwike; Secretary, Mr. R. Gledhill, Dewsbury; members of the Council, Mr. T. Kerry, Ravensthorpe; Mr. W. Pickles, Batley Carr; Mr. W. L. Fewster, Dewsbury; Mr. J. W. Cussons, Ossett; Mr. C. G. Gloyne, Dewsbury; Mr. J. Day, Savile Town; Mr. G. N. Gutteridge, Dewsbury; Mr. R. Butler, Dewsbury. Subsequently a discussion took place on the Pharmacy Acts Amendment Bill, and the Secretary reported that he had forwarded the petition in favour of it to the borough member, and had also asked him to support it by his vote in Parliament.

Business Changes.

MR. J. R. VOLANS, late manager to Mr. Clarke, Pharmaceutical Chemist, Great Malvern, has purchased the business recently carried on by Mr. E. R. Cherrett, Trimdon Street, Sunderland.

MR. J. LAIDLAW EWING is retiring from the retail department at 9, Princes Street, Edinburgh, and going into the wholesale manufacturing department of Messrs. Duncan, Flockhart & Co.'s business at South Canongate. Mr. Andrew Hunter, chief assistant, has been assumed as a partner and will take Mr. Ewing's place at the East End retail establishment. Mr. Hunter is the son of a former partner, the late Mr. David Hunter, who was closely associated with Professor Sir J. Y. Simpson in the early experiments connected with the introduction of chloroform.

MR. F. J. RICHARDS, 152, Dudley Road, Birmingham, has disposed of his business to Mr. J. McLanachan, late of Lewisham, the negotiations being conducted through Messrs. Blackwell, Hayes, and Spilsbury.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

J. W. Cook and E. G. Kenny, Medical Practitioners, Colchester.

James W. Smith and Albert Smith, Chemists and Druggist, Denbigh Pharmacy, 1A, Archer Street, Westbourne Grove. Debts will be received and paid by Albert Smith.

Alfred P. Balkwill, F. W. Hunt, C. T. Weary (trading as Balkwill & Co.), 106, Old Town Street, Plymouth, and Trafalgar Place, Stoke, Devonport, so far as C. T. Weary is concerned. The business at 106, Old Town Street, Plymouth, will be continued by Alfred Balkwill and F. W. Hunt under the style of Balkwill & Co., and the business at Trafalgar Place, Stoke, Devonport, by C. T. Weary under his own name.

Matthew Hallwright and Lauchlan Rose, Surgeons, etc., 215 and 124, Hagley Road, Edgbaston, Warwickshire. Debts will be received and paid by Matthew Hallwright.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

MARCH 10, 1898.

There has been a slight improvement in business in drugs and chemicals during past few days. Notwithstanding this, however, many complaints have been heard that so little was doing. Changes in value, either upwards or downwards, have been unimportant, the only advance of any moment being a rise in price of Atropin, caused, it is stated, by the continued scarcity of good yielding raw material. Phenacetin weak. Quinine unchanged. Opium and Morphia quiet, Codeia steady. Bromides and Iodides, Quicksilver and Mercurials, Bismuth salts, Lithia and Sulphonal without alteration. Glycerin and Cod-Liver Oil quiet and fairly steady. Acid Phosphoric rather dearer. Borax and Acid Boracic dull. Sulphate of Ammonia easier. Cascara Sagrada firm. Cream of Tartar higher. Acid Tartaric quiet. Acid Citric firm and slightly dearer. Ipecacuanha very firm, as is also Saffron. Cocaine without change. The following are actual prices:—

ACETANILID.—Is quiet at 1s. 2d. to 1s. 3d. per lb., according to quantity.

ACID ACETIC—Unchanged at 15s. 6d. per cwt. for the B.P. strength, and 40s. for the glacial.

ACID BORACIC—Quiet at 24s. per cwt. for *crystals* and 26s. for *powder*.

ACID CARBOLIC—Quiet at 6¼d. to 6⅞d. for the 35-36° C. *Ice crystal*, for quantity and in large bulk packing. *Crude* 60° F. 2s., 75° F. 2s. 9d. per gallon. *Liquid* 95 per cent. of pale straw colour 1s. 1d. to 1s. 2d. per gallon, according to quantity, in 40-gallon casks.

ACID CITRIC—Is firm, and rather dearer, 1s. 0½d. to 1s. 0¾d. per lb. on the spot.

ACID PHOSPHORIC.—There has been a small advance in price of the syrupy 1·750 quality, prices now ranging from 11d. per lb. upwards according to quantity and packing.

ACID TARTARIC—Somewhat slow of sale at 1s. 0½d. per lb., *c.i.f.*, for *foreign*, and 1s. 1d. for *English*.

AMMONIA COMPOUNDS.—*Sulphate* dull and easier; gray prompt 24 per cent., £9 10s. per ton. *Bromide*: 2s. 1d. to 2s. 2d. per lb. *Iodide*: 13s. 4d. per lb. *Sal ammoniac*: Sublimed firsts, 35s. per cwt; seconds, 33s.

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

per cwt. *Chloride*: The chemically-pure crystals are quoted 32s. 6d. per cwt.; 98 per cent. free from metals 26s. per cwt. *Sulpho-cyanide*: 1s. 2d. per lb. *Oxalate*: 6¼d. per lb. for crystals.

Antipyrine.—Dr. Knorr's article is still held for the fancy price of 2s. 1½d. per oz. The chemical equivalent, *Phenazone*, is, however, being sold freely at a third less money, according to quantity and packing.

Atropin.—In consequence of the continued scarcity of good and suitable raw material, makers advanced their price today to 16s. 5d. per oz. for the *pure*, and 14s. 1d. for the *sulphate P.B.*, price for 75 oz. contracts being 4d. per oz. less.

Belladonna Root.—Good root continues scarce, 45s. per cwt. spot being asked, and only quite limited quantity available.

Bleaching Powder—Steady at £7 5s. per ton on the spot.

Borax.—Lump is quoted at 14s. to 14s. 6d. per cwt., and *powder* 14s. 6d. to 15s. according to quantity.

Bromine and Bromides.—There is no change in price to report, *Pot. Bromide* being 1s. 9d. per lb. for 10 cwt.

Bismuth.—*Metal*: 5s. per lb. *Subnitrate*: 4s. 10d. for large quantity.

Caffeine—Remains unchanged at 14s. 4d. for the *pure* and 11s. 2d. per lb. for the *citrate*.

Camphor.—The market for *crude* is quiet, and for arrival a limited business has been done in China, March to April steamer, at 84s. 6d. per cwt. *c.i.f.* *Refined*; *German* is quoted lower at 1s. 2¼d. per lb. for bells in quantities of from 3 to 5 cwt.; ton lots 1s. 1¾d. per lb.

Cascara Sagrada.—Several large parcels have lately arrived, but these go probably direct into consumers' hands, and as there are no offers from the Pacific Coast the position of the article is firm. It is generally believed that practically nothing will be gathered this season. Prices on the spot range from 22s. to 26s. per cwt., according to quantity and quality.

Cloves.—Privately *Zanzibar* have receded during the week and close dull with sellers of April-June delivery at 3 3/32d., and June-August at 4 3/32d. At auction only 12 cases *Penang* were offered and bought in, middling to good picked 8½d. to 10d.

Coal Tar Distillation Products.—*Toluol*: 1s. 11d. *Benzole*: 60 per cent., 1s. 8d. per gallon; 90 per cent., 1s. 5d. *Crude Naphtha*: 10d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 11½d. per gallon.

Cocaine—Is quiet, makers' prices for best brands being unchanged at 10s. to 10s. 9d. per oz. according to quantity and packing; makes less in favour are being offered at cheaper figures, without, however, meeting with much response on part of buyers, who find it preferable to handle only known and reliable brands of the article.

Codeia—Steady at 11s. 3d. to 11s. 6d. per oz. for the *pure* in quantity, the salts being quoted 1s. per oz. less.

Cod Liver Oil.—Market is quiet, price of new non-congealing *Norwegian* in tin-lined barrels ranging from 62s. 6d. to 70s., according to quantity and brand.

Colycynth.—Stock of Turkey apples is moderate, and is held for 1s. 2d. to 1s. 3d. per lb. according to quality, but business in the article is quiet.

Cream of Tartar—Is dearer at 76s. per cwt. for first white *crystals* on the spot, whilst for *powder* 78s. to 79s. per cwt. is asked.

Ginger.—Only 350 bags *Cochin* offered, and 293 bags sold, ordinary to good fair washed at 23s. 6d. to 26s., fine lot 26s. 6d., limed rough 22s. 6d., common small part wormy 20s. 6d.; 275 bags limed *Japan* sold without reserve, sound at 18s. 6d., mouldy 17s. 6d.

Glycerin—Quiet and unchanged. It is possible, however, that the present bleak weather may stimulate the demand for the medicinal qualities, which has been somewhat slack this winter owing to the mild weather which prevailed. Best *German* white chemically-pure double-distilled 1·260 quality in tins and cases is quoted 52s. 6d. to 57s. 6d. per cwt., *English* being obtainable at a slightly lower price.

Herbs.—*Aconite* varies from 27s. 6d. to 42s. per cwt. according to quality. *Arnica*: 22s. 6d. to 26s. per cwt. *Belladonna*: 48s. to 56s. per cwt. *Centaury*: Bunches are quoted at 37s., cut, 48s. per cwt. *Hemlock*: 26s. per cwt. *Henbane*: 38s. to 45s. per cwt. *Hyssop* in bunches 18s. 6d. per cwt. *Mellilot* with flowers cut 22s. 6d. per cwt. *Motherwort*: 26s. 6d. per cwt. *Parsley*: 42s. per cwt. *Pulsatilla*: 31s. per cwt. *Rue*: Bunches 33s. per cwt. *Stramonium*: Ordinary, 32s. to 42s. per cwt., rubbed, 40s. to 48s. per cwt. *Tarragon*: Bunches 35s. per cwt. *Wormwood*: Bunches 14s. to 21s. 6d. per cwt., cut 24s. per cwt.

Hypophosphites Remain in good demand at 3s. 3d. per lb. for *Lime*, *Soda*, and *Potash* salts in 10-cwt. lots, smaller quantities being charged higher in proportion.

Iodine and Iodides—Unchanged. 7½d. per oz. being price of the former and 9s. 9d. to 10s. 3d. for *Pot. Iodide*, according to quantity.

Ipecacuanha.—*Rio* is very firmly held at 8s. to 9s. per lb., according to quality. Business, however, is quiet.

Jalap—Is in good inquiry. Some arrivals of new crop have taken place in New York but condition is very poor. Spot price of desirable lots is firm at 6½d. to 7d. per lb. according to quantity.

Leaves.—*Bay*: 24s. per cwt. *Belladonna*: 6d. Fine picked are held for 65s. per cwt. for foreign. *Coca*: Green Truxillo are held for 7d. to 8d. per lb. *Comfrey*: 30s. 6d. per cwt. *Damiana*: 8d. per lb. on the spot. *Foxglove*: Foreign are quoted at 40s. to 45s. per cwt. according to quality. *Henbane*: 8d. to 9d. per lb. for foreign. *Hyssop*: 32s. per cwt. *Marshmallow*: 20s. 6d. per cwt. *Mullein*: 23s. per cwt. *Rose*: 1s. 6d. per lb. *Tarragon*: 65s. per cwt.

Lithia.—Firm at 10s. 8d. per lb. for the *carbonate*, 6s. for the *citrate cryst.*, and 6s. 6d. for *citrate powder* in quantity.

Menthol—Is fairly firm, prices ranging from 7s. to 7s. 6d. per lb., according to brand and quality.

Mercurials.—Makers still quote *Calomel*, 2s. 6d., and *corrosive sublimate*, 2s. 2d. per lb. for half-ton lots.

Morphia—Without change, manufacturers still quoting 4s. 3d. to 4s. 6d. for the *Hydrochlorate* salt in powder.

Oils (Essential).—*Star Aniseed* is in slow demand, nominal quotation being 7s. per lb. on the spot, and for arrival, 6s. 6d. to 6s. 7d. per lb., *c.i.f.* *Cassia* quiet: For

arrival 70 to 75 per cent. sold at 4s. 4½d. per lb.; 75 to 80 per cent., 4s. 6d. per lb., both *c.i.f.* terms. *Lemongrass* quiet at 5d. per lb. *Peppermint*: American quiet; *HGH*, on the spot, 5s. 6d. per lb.; for arrival, 5s. 1d. per lb., *c.i.f. Japanese*: Dementholised, 3s. 3d. per lb. *Lemon* continues firm, and the same may be said of the other Messina essences.

OILS (FIXED) AND SPIRITS.—*Linseed*: The market has been exceedingly quiet, and prices have given way, closing spot, pipes, £16, and £16 7s. 6d. for barrels. *Rape* is also lower at £22 15s. for ordinary brown on the spot and £24 5s. for refined. *Cotton* is a shade easier. London crude, on the spot, £13 12s. 6d. Refined, on the spot, £14 15s. to £15 10s, according to make. *Olive*: Spanish or Levant, £33. *Cocoanut* firm, at dearer prices. *Ceylon*, on the spot, £23. *Cochin*, spot, £28. *Palm*: Lagos continues firm at £23 10s., on the spot. *Turpentine* has improved in value, and closes dearer at 25s. 3d. per cwt. for American, on the spot. *Petroleum Oil* is quiet, but unchanged at 4⅜d. per gallon for Russian, on the spot, and 4⅝d. per gallon for American, same position. Water white, 5¾d. per gallon. *Petroleum Spirit*: American, 5½d. per gallon; deodorised, 6d. per gallon.

OPIUM.—With but little doing in the article prices range as follow:—*Persian*, 10s. to 11s. 3d. per lb.; *Soft chipping*, 10s. 6d. to 12s. 6d.; *Druggists*,' 9s. 6d. to 10s. 9d.; *Manufacturing*, 8s. 6d. to 9s. 6d. per lb.

PERMANGANATE OF POTASH—Weak at 60s. per cwt. for *small crystals*, and 5s. per cwt. more for *large crystals* in half-ton lots.

PHENACETIN—Remains weak at late prices, say, 3s. 9d. to 4s. per lb., according to quantity and make.

PILOCARPINE — Firm at 1s. 3d. per gramme for both the *Hydrochlorate* and the *Nitrate salt*.

POTASH COMPOUNDS.—*Chlorate*, spot, 3½d. to 3¾d. per lb. *Prussiate*: Yellow, 6¾d. per lb.; 1s. 2d. per lb. for red. *Permanganate* very quiet and in full supply at 62s. 6d. per cwt. for small crystals and 67s. 6d. per cwt. for large crystals. For large contracts these prices could be shaded. *Bromide* unchanged at 1s. 10d. per lb. *Iodide* steady at 9s. 9d. to 10s. 3d. per lb. *Oxalate*: Neutral, steady at 5d. per lb. *Cyanide* firm at 1s. 2d. per lb. for the 98 per cent. cake. *Bichromate*: 3⅞d. to 4d. per lb. *Bicarbonate* firm at 30s. per cwt. for powder.

QUICKSILVER—Continues firm at £7 2s. 6d. per bottle from first hands, whilst second hands are willing to take 6d. less.

QUININE—Market is in a very undecided condition, the agents for one of the best *German* brands state that having sold all that they had to offer, they would have to first submit any further orders to their principals, their price being however nominally still 11d. per oz. for 1000 ozs. lots in 100-oz. tins. From second hand it would be possible to buy below this figure especially for brands less in favour on this market.

ROOTS.—*Aconite* steady at 42s. per cwt. *Alkanet*: Picked 39s. per cwt., natural, 28s. per cwt. *Angelica*; Loose 24s., twisted 31s. per cwt. *Arnica*: Picked is quoted at 80s. per cwt. *Belladonna* is very firm at 45s. per cwt. for good. *Calamus*: Crude aromatic, 25s. 6d., peeled, 31s. per cwt. *Colchicum*: Sliced, 36s. 6d. per cwt. *Comfrey*: 25s. per cwt. *Dandelion*: Whole is quoted at 44s. per cwt., cut, 52s. per cwt. *Enula*: 26s. 6d. per cwt. *Hellebore*: White is scarce, and no stocks of any importance are available; without fibre a small lot is quoted at 36s. 6d. per cwt. *Golden-seal* is advancing in America, on the spot 2s. 1d. per lb. is quoted. *Mezereon*; 26s. 6d. per cwt. *Bark root*; 50s. 6d. per cwt. *Valerian*: 24s. 6d. to 32s. per cwt., according to quality. *Zedoary*: 25s. 6d. per cwt.

SAFFRON—Remains very firm at 36s. to 45s. for *Valencia* and 25s. to 27s. 6d. per lb. for *Alicante*.

SALICINE—Is in good inquiry at 10s. 3d. to 10s. 6d. per lb., according to quantity.

SCAMMONY. — *Virgin*: Firsts have been dealt in at 30s. per lb. and good seconds at 23s. 6d. per lb. *Resin* firm at 6s. 6d. to 7s. per lb. *Roots*: Whilst supplies are increasing, holders decline to reduce values, which remain at 27s. 6d. to 30s. per cwt.

SENNA.—*Tinnevelly*: There has been a good deal of inquiry for small leaves at 2¼d. to 2½d. per lb., but very little is to be had, and it seems evident more money will have to be paid.

SHELLAC.—The market is exceedingly quiet, although prices remain steady; spot, *TN Orange*, 64s. to 65s. per cwt.

SPICES (VARIOUS).—*Black pepper*: Penang bought in at 4¼d; 40 bags Singapore sold at 4d. *White pepper*: 294 bags, good to fine bold, Singapore bought in at 8½d. to 9½d. *Cassia Lignea*: 50 boxes sold at 50s., and 45 bales broken at 34s. to 36s. *Cinnamon Chips*: Only 40 bags Ceylon sold at 3d. to 3½d. *Mace* in good demand at rather better prices: 10 cases Penang sold, red, 1s. 8d. to 1s. 10d., good bright palish, 2s. 4d.; 2 packages Grenada sold, damaged, 1s. 5d., good pale, 2s. 3d. *Nutmegs* steady; 2 cases Bombay sold 93's at 1s. 6½d.; 7 packages Goenada sold 96's at 1s. 3d., 126's at 1s.; 19 packages Penang bought in, 64's at 2s. 8d., 79's at 1s. 10d. *Pimento* quiet; 579 bags bought in at 4⅝d. to 4¾d.

SULPHONAL.—Makers are still booking orders at 7s. 3d. per lb., only, however, for quite limited quantities.

SODA COMPOUNDS.—*Crystals*: 60s. per ton, ex-ship terms. *Bicarbonate*: £7 5s. per ton for the commercial 98 per cent. article and 18s. 6d. for the free from mono-carbonate quality. *Hyposulphite* steady at 6s. to 8s. per cwt. *Nitrate*: Refined £7 15s. per ton. *Caustic*: £7 15s. per ton for the 70 per cent. white, and £1 less for the 60 per cent.

SPERMACETI—Is quoted 1s. 3d. to 1s. 3½d. per lb. on the spot.

SULPHATE OF COPPER—Is firm at £16 10s. to £17 5s. per ton on the spot, according to brand.

TURMERIC—Remains quiet, although steady. Small sales of good *Malabar* finger at 19s. per cwt., *Bengal* quoted at 14s. per cwt., and *Cochin* split bulbs at 8s. to 8s. 6d. per cwt.

LIVERPOOL REPORT.

MARCH 9, 1898.

A considerable advance has taken place in the price of Quillaya Bark, which has risen £2 10s. per ton. An upward tendency is also observable in Cream of Tartar and Olive Oil. Spirits of Turpentine has been selling well at 1s. per cwt. more than last week. Small sales of Guinea Grains, Kola Nuts, African Beeswax, and Chilian Honey are reported at about recent figures.

AMMONIUM SULPHATE—Is lower and dull, viz., £9 12s. 6d. per ton.

BEESWAX.—Sierra Leone has brought £6 6s. 3d. per cwt., and Gambia, £6 15s.

BLEACHING POWDER—Is unchanged, viz., £5 12s. 6d. to £6 5s. per ton.

CANARYSEED.—Though the amount offering is small, the price for Turkish, 26s. to 27s. per 464 lbs., does not tempt buyers.

CASTOR SEED.—800 bags of Brazilian made 10s. 3d. per cwt.

GUINEA GRAINS—Have been selling in small amount at 23s. per cwt.

KOLA NUTS.—9 barrels dried sold at 1½d. per lb.

LINSEED—Continues scarce, 900 bags of River Plate "feeding" variety sold at 37s. per 416 bags, and 300 bags Turkish ditto at 38s. 6d. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor Oils* enjoy a better inquiry, and a steady tone prevails. Both Calcutta and French still fetch 3⅝d. per lb. *Olive Oil*: A firmer feeling obtains at present, due to higher rates in Seville and Malaga. Spanish oils are quoted at £33 to £33 10s. per tun. *Linseed Oil* is steady at 17s. 3d. to 17s. 6d. per cwt. *Cottonseed Oil* is easier in tone at 15s. 3d. to 15s. 9d. per cwt.

SPIRITS OF TURPENTINE—Is firmer, and notwithstanding an advance of 1s. per cwt., is selling well at 26s.

POTASH SALTS.—*Cream of Tartar* is scarce, *i.e.*, finest white, and 77s. per cwt. is asked for spot parcels. *Potashes* and *Pearlashes* are unchanged for last week.

QUILLAYA BARK.—Early in the week all the Chilian at £16 10s. per ton was bought up, and since then sales have been made at £17, £18, and £19 per ton. Some 150 bales in all have been disposed of.

NEWCASTLE CHEMICAL REPORT.

MARCH 9, 1898.

Although not much business is passing, the prospect, through better inquiries for heavy goods, is more hopeful. Fair orders for Soda Crystals are in circulation. Prices unchanged as follow:—Sulphur, £4 15s. to £5. Alkali, 52 per cent., £5 5s. Soda Ash, 52 per cent., £4 5s. Bleaching Powder, £6 5s. to £6 10s. Soda Crystals, basis, 45s. to 57s. 6d. Caustic Soda, 70 per cent. basis, £7 10s. per ton.

MANCHESTER CHEMICAL REPORT.

MARCH 9, 1898.

In heavy chemicals a fair business appears to be passing locally, but export demand is weak. The Board of Trade Returns are, on the whole, unsatisfactory. There are few changes in the price of any products here, but they are firm generally. Sulphate of Copper is dull at £16 15s. to £17 for best brands delivered Manchester. Sugar of Lead is firm at the recent advance to £31 per ton here. Salt Cake is easy at 18s. to 19s. per ton on rails. Pitch in better demand at 17s. 6d. per ton, *f.a.s.*, Manchester Ship Canal. Green Copperas scarcely so active, but a few inquiries are

to hand, and full prices are asked by local makers. Glycerin is firm at £52 to £54 for double distilled, *f.o.b.* or *f.o.r.* Manchester. Yellow Prussiate, notwithstanding reports to the contrary, is still quoted 7d. per lb. for best makes. Stocks in first hands remain low.

Benevolent Fund Album.

The following is a list of past and present Annuitants on the Benevolent Fund, whose portraits are not in the above album, with the dates of their election. The Secretary will be glad to receive copies of photographs in those cases. They should be addressed to him at 17, Bloomsbury Square.

Diary for the Week.

Saturday, March 12.

Pharmaceutical Football Club, Practice game at Wormholt Farm at 3 p.m.

Monday, March 14.

Society of Chemical Industry, at 8 p.m.
"Electrical Industries at the Foyers Waterfalls," by R. W. Wallace.

Tuesday, March 15.

Royal Institution, at 3 p.m.
"The Simplest Living Things" (Lecture IX), by Professor E. Ray Lankester.
Royal Photographic Society, at 8 p.m.
"Half-tone Negative Making," by W. H Lascelles.

Wednesday, March 16.

Brighton Junior Association of Pharmacy. Social Evening.
Bristol Pharmaceutical Association, at 7 p.m.
Annual Dinner. (Stuckey's Restaurant, Wine Street.)
North of England School of Pharmacy (Newcastle), at 7 30 p.m.
Presentation to Mr. and Mrs. Morson, followed at 8 p.m. by the Third Annual Ball. (Grand Assembly Rooms, Barras Bridge.)
Pharmaceutical Society (North British Branch), at 8.30 p.m.
Evening Meeting:—
"The Determination of Ash as an Analytical Method," by D. B. Dott.
"A Syringe for Filling Capsules," by J. A. Forrot.
"Invisible and Sympathetic Inks," and "Methylated Spirit in Photography," by J. Rutherford Hill.
"Additions to Library and Museum."
Royal Microscopical Society, at 8 p.m.
"Exhibition of Mounted Rotifers," by C. F. Rousselet.
Western Chemists' Association (of London), at 9 p.m.
Discussion on the Proposed Alteration of the Name of the Association.

Thursday, March 17.

Chemical Society, at 8 p.m.
"The Reduction of Bromic Acid and the Law of Mass Action," by Winifred Judson and J. Wallace Walker.
"The Action of Ferric Chloride on the Ethereal Salts of Ketone Acids," by R. S. Morell and J. M. Crofts.
"Note on the Volatility of Sulphur," by T. C. Porter.
"Action of Ammonia and Substituted Ammonias on Acetylurethane," by George Young and Ernest Clark.
Chemists' Assistants' Association, at 9 p.m.
"Demonstration: Water Analysis," by E. W. Hill.
Linnean Society of London, at 8 p.m.
"Natural Selection the Cause of Mimetic Resemblance and Common Warning Colours," by Professor E. B. Poulton.
"On the Brain of the Edentata (Including Chlamydophorus)," by Dr. Elliott Smith.
"On Limnocarpus, a New Genus of Fossil Plants from the Tertiary Deposits of Hampshire," by Clement Reid.
Liverpool Chemists' Association, at 7.30 p.m.
Annual Dinner (Adelphi Hotel).
North Staffordshire Chemists' Association, at 5 p.m.
Annual Dinner (Copeland Arms Hotel, Stoke).
Royal Institution, at 3 p.m.
"Recent Researches in Magnestism and Diamagnetism" (Lecture III.), by Prof. J. A. Fleming.

Friday, March 18.

Royal Institution, at 9 p.m.
"The Bringing of Water to Birmingham from the Welsh Mountains," by James Mansergh.
Sheffield Microscopical Society, at 8 p.m.
"The Helps and Hindrances of the Microscope as a Scientific Instrument," by William White.

EXCHANGE Offers & Wants

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Shop Fittings.

Entire Fittings of Chemist's Shop to be sold in one lot or parts; or shop may be rented as fitted. Best offer accepted.—149, Barking Road, Canning Town, E.

Miscellaneous.

Five 5s., 6 2s. 6d, and 10 2s. Chapman's Cattle Oils, good condition. What offers?—Filtness, Chemist, Crowboro'.

Lamp, £3 5s.; Cafe, £3 15s.; Vulcaniser, £2 5s.—Chemist, 84, Park Street, Camden Town.

Books.

'Pharmaceutical Journal,' 1859–1879, 20 vols., bound, 30s.; 'Year-Book Pharmacy,' 1870, 1871, 1873, 2s. each.—"Kentish Gazette" Office, Canterbury.

WANTED.

Wanted, old electric lamps and scrap platinum, or old platinum utensils; utmost value promptly remitted by—P. Rowsell, 14, Walcot Square, Lambeth, London, S.E. (please mention this paper).

Wanted.—*Pharmaceutical Journal*, July 13, August 3, 1895. Full price will be paid for clean and complete copies by the Publishers, 5, Serle Street, London, W.C.

Two 1-gall. swan-neck carboys, 2-grain pill machine, glass show-stand; price and description.—Eagle Tresecot, Gosport.

Wanted.—Nest of Small Shop Drawers, mahogany, about 4½ by 5, must be in good condition. 20 and 30 oz. N. M. Shop Rounds. Casing for Counter Front 6 ft. by 33 in. Syrup bottle 40 oz.—Dignus, "Pharm. Journ." Office, Serle Street, W.C.

The Questions, practical and oral, asked recently at Assistants' Examination, Apothecaries' Hall. State remuneration.—W. Smith, 2, The Avenue, Carmarthen.

GENERAL INDEX to the PHARMACEUTICAL JOURNAL

A general index to the "**Pharmaceutical Journal**" for the seventeen years ending June 29, 1895—including volumes IX. to XXV. of the 3rd series—will be printed by subscription if a sufficient number of orders are received. The subscription price will be one guinea, and a suitable order form is appended for the convenience of intending subscribers.

SPECIAL NOTICE.—If the work is to be proceeded with, it is necessary that orders should be sent without delay to the

Editorial Department, "PHARMACEUTICAL JOURNAL,"

17, Bloomsbury Square, London, W.C.

ORDER FORM.

Please add my name to the list of subscribers for the proposed General Index to the "**Pharmaceutical Journal**," *to be published at the price of one guinea.*

Name.....

Date..... *Number of Copies required*.....

The World of PHARMACY Week by Week

A SPECIAL PHOTOGRAPHIC SUPPLEMENT will be published with the *Pharmaceutical Journal* for April 2, and the editor will be glad to receive suitable communications for that issue from photographic readers. Chemists who have dark rooms for the use of customers and stock photographic goods are requested to notify the facts to the Editor as early as possible, and he will also be glad to receive any suggestions as to ways in which the Supplement may be rendered generally useful to readers.

At an Evening Meeting in Edinburgh on Wednesday last Mr. D. B. Dott introduced a discussion on "The Determination of Ash as an Analytical Method," and Mr. J. A. Forret exhibited a Syringe for Filling Capsules (pp. 282, 283, 298).

The President of the Society, Mr. Walter Hills, asked the Bristol pharmacists on Wednesday last to consider what would be the condition of pharmacy in this country if the Pharmaceutical Society did not exist (p. 298).

Mr. G. T. W. Newsholme, Vice-President of the Pharmaceutical Society, has specified a few reasons why the Society is not popular in some quarters (p. 296).

Opposition to the Pharmacy Bill has arisen in an unexpected quarter (p. 300).

Mr. W. A. H. Naylor replies to question No. 12 of the 'Blue List' issued by the British Pharmaceutical Conference *re* the "Alkaloidal Constituents of Cascarilla Bark" (p. 279).

The Histology of Cardamom Seeds is dealt with in this week's issue, being a continuation of the articles on "Practical Pharmacography" (p. 279).

Mr. H. P. Hearder has devised a Simple Mould for Suppositories, an illustrated description of which is given (p. 281).

Palladium Hydrogen was the subject of a paper recently read at a meeting of the Royal Society of Edinburgh by Mr. John Shields. We quote the three theories put forward (p. 281).

'Doctors and Patients: Hints to Both' is the title of a book by Dr. Robert Gersuny, of Vienna, which, together with several others, is reviewed on p. 288.

Messrs. R. C. Cowley and J. P. Catford, at a meeting of the Liverpool Chemists' Association on March 10, described a simple process for "Glucose Determination at the Dispensing Counter," by means of which they think chemists may gain a reputation for smartness (p. 283).

The Double-Staining of Sections with Hæmatoxylin and Safranine is dealt with by Mr. F. A. Upsher Smith (p. 284).

Sir Richard Quain died on Sunday last, and a few particulars of his career are the subject of an editorial note (p. 289).

The Difference of Opinion between Dr. Hesse and Professor Schmidt with regard to scopolamine hydrobromide is the subject of a note on page 290.

Pharmaceutical Education at Aberdeen.—The report of the Education Committe of the Aberdeen Pharmaceutical Association is summarised (p. 290).

Adulteration and Misrepresentation were discussed at a dinner of the London Chamber of Commerce on Tuesday (p. 290).

The Benevolent Fund is the richer by twenty-five guineas, owing to the success of the recent Chemists' Ball (p. 290).

The Remarkable Career of Sir Henry Bessemer ended on Tuesday last. A brief account is given of his lifework (p. 291).

Under the Heading "Pharmaceutical Transactions," reports of various London and provincial associations are given, including several interesting papers on practical pharmaceutical work (p. 292 *et seq.*).

The Melting Point of Soft Paraffins and the Detection of Water in Ether are dealt with by Mr. James Grier (pp. 293, 294).

Several Members of Parliament have sent favourable replies to letters from their constituents asking them to support the new Pharmacy Bill.

Sir Alfred Hickman, M.P. (Wolverhampton) says, "It appears to me that the members of your Society are the best judges as to the government of, and admissions to it, and I am therefore prepared to give the most favourable consideration to any legislation proposed by it."

Mr. P. A. Muntz, M.P. (North Warwickshire): "Your circular shall receive my careful attention."

Mr. J. L. Gibbons, M.P. (South Wolverhampton), writes: "The subject-matter of your letter shall receive my careful consideration."

Mr. F. A. Newdigate, M.P. (Nuneaton), expresses himself as follows: "With regard to the Pharmacy Acts Amendment Bill, which you say is being introduced into the House of Commons by Mr. Smith, I will give the matter my best atttention and consideration. I never like to take upon myself to support any Bill without first hearing the debate thereon, unless it is something before the country about which one has already made up one's mind on one side or the other. If, as you say, the Bill is a non-contentious one, it ought to be got through the House of Commons without much difficulty. In any case, I will give your representations my best consideration."

Colonel Victor Milward, M.P (Stratford-on-Avon), says: "I am in receipt of your circular, but you will be glad to hear I have been well approached by my own constituents on the subject."

Mr. A. Drucker (Northampton), says: "When the Pharmacy Bill comes before the House of Commons again it will have my strong support."

The Western Chemists' Association (of London) had before it on Wednesday the question of the advisability or otherwise of altering its name. For some time past it has been suggested, from outside sources, that the proper style of the body ought to be "The London Chemists' Association," and in order to test the feeling of the members in the matter, the President (Mr. J. H. Mathews) had given notice of his intention to bring the subject up for discussion. This he did in an informal way on Wednesday evening, and in an eminently impartial and judicious manner he put the case for and against the proposed change of name. His audience was a thoroughly representative one, and the members present discussed the question in all its bearings, but not a single advocate of the proposed change presented himself, and the President therefore closed the discussion with the intimation that no further steps would be taken in the matter. At the same time he desired it to be clearly understood that any chemist in business would be welcomed as a member of the Association, which already includes as members chemists in other parts of London than the West End.

NEW IDEAS & TRADE NOTES

BLONDEAU'S NEW TOILET PREPARATIONS.

ON previous occasions we have drawn attention to the attractive manner in which Messrs. Blondeau put up their various toilet articles, and judging from the taste and finish displayed in their latest productions, this firm finds that it is politic not only to study the quality of the various

ingredients employed, but that the dainty and artistic method of enveloping their productions all tends to secure a ready sale for them. The Vinolia Liquid Dentifrice, a tonic astringent, of pleasant taste, compares favourably with the best American and Parisian dentifrices. For those who like a tooth soap Messrs. Blondeau supply an article in flat metal case, delicately perfumed and artistically embossed; the manufacturers remind their customers that it is made in Great Britain. Blondeau's Lavender Smelling Salts in fancy green glass-stoppered bottles, artistically labelled and capped, should sell readily. The Vinolia Toilet Water is another charming production. The Premier Vinolia Pomade, in

screw-topped glass jar, is handy for use; the basis is probably lanoline, and can be recommended to those who require a little extra grease to the scalp when Nature has ceased to secrete the necessary supply. Savon Violettes de Parme is a delightfully scented soap, with the well-known Vinolia basis, and maintains the reputation of this firm, who first achieved their success in the manufacture of high-class toilet soaps.

OREXIN PILLS AND TABLETS.

MESSRS. A. & M. ZIMMERMANN, 9 and 10, St. Mary-at-Hill, London, E.C, send samples of Orexin Pills and Chocolate Tablets. The use of orexin has been found by Dr. Ferdinand Steiner, of Vienna, to be attended with satisfactory results where loss of appetite follows the shock of severe operations, also in tuberculosis, anæmia, and chronic gastric catarrh. The difficulty of dispensing such an intensely bitter substance has been overcome in these pills and chocolate tablets, which are readily taken by all patients.

ON THE P.A.T.A. LIST.

MESSRS. F. BARKER & SON, of Finsbury Park, have placed their Shaving Paper on the P.A.T.A. protected list.

NEWS IN BRIEF

THE INSTITUTE OF CHEMISTRY will hold its annual dinner at the Trocadero Restaurant, Piccadilly, W., on Thursday, April 28, and the chair will be taken on the occasion by the President, Dr. Thomas Stevenson.

THE ROYAL PHOTOGRAPHIC SOCIETY will, as already announced, hold an International Photographic Exhibition at the Crystal Palace this year, and H.R.H. the Prince of Wales has graciously consented to open the Exhibition. We are now asked to notify that the date of the opening of the Exhibition by His Royal Highness has been fixed by him for Monday, April 25, and not Wednesday, April 27, as originally announced. Exhibitors are requested to note, therefore, that the latest date for the reception of exhibits in each section will be two days earlier than that first stated on the prospectus.

A MEMORIAL TO AUGUST KEKULÉ, the famous chemist, is to be erected in the Chemical Institute of Bonn, where he was professor for nearly thirty years. A Committee for this purpose has been formed, of which Privy Councillor von Rottenburg is the Honorary President, and Dr. Curtius, Director of the Chemical Laboratory, the acting President. Contributions should be sent either to the Treasurer of the German Chemical Society, Dr. J. F. Holtz, Müllerstrasse, 170, 171, Berlin, N., or to Consul Jos. Zuntz, Popplesdorferalle, 63, Bonn.

CARBOLIC ACID.—For some inscrutable reason the Privy Council experience an invincible repugnance to placing carbolic acid in the schedule to the Pharmacy Act, in spite of the numerous victims who weekly succumb to the effects of this terrible poison taken accidentally or for suicidal purposes. Carbolic acid is about the most dangerous antiseptic of its kind. It is intensely poisonous, as much so in fact as ordinary prussic acid, it is intensely caustic, and in incautious hands is productive of the most formidable lesions, yet it is allowed to be sold absolutely without restriction. It is some small satisfaction to be informed that the Government contemplate introducing a Bill to regulate the sale of the acid as well as of certain other poisonous substances, but until we know what are the safeguards to be introduced it is impossible to regard the matter as having been disposed of. The only explanation we can suggest of the supineness of the Government in respect of carbolic acid is a desire to avoid restricting the sale of the drug to qualified chemists, which might excite a feeling of hostility among the grocers and oilmen who at present dispense the poison with indiscriminating hands.—*Medical Press and Circular.*

THE FUNERAL OF SIR RICHARD QUAIN took place at 4 o'clock on Wednesday afternoon at Hampstead Cemetery. A large number of guests and others assembled at 67, Harley Street during the afternoon, and the coffin was covered with a mass of beautiful wreaths. Other floral tributes sent by Sir Richard's many colleagues and friends filled a large car which preceded the hearse. The hearse was followed by about fifty private carriages containing the principal mourners. Among those at the graveside were Lord Rathmore, Sir Samuel Wilks (President of the Royal College of Physicians), the Registrar of the College and several of the Censors, Sir H. Thompson, Sir Squire and Lady Bancroft, Sir Dyce Duckworth, Sir W. Roberts, Mr. Inderwick, Q.C., Mr. Brudenell Carter, Dr. Mitchell Bruce, and many other prominent medical men. Mr. Walter Hills, President of the Pharmaceutical Society, was unable to be present, owing to a prior engagement at Bristol, but Mr. and Mrs. Hills were amongst those who sent wreaths.

THE NEXT CINDERELLA DANCE of the Chemists' Assistants' Association will be held on Thursday, March 24, at the Dorset Hall, Portman Rooms, this being the last Cinderella of this session. Tickets may be obtained from the Hon. Secretaries, Mr. H. H. Robins, 113, Ridley Road, Forest Gate, and Mr. F. Cooper, 48, Baker Street, W.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.—In connection with the above, a smoking concert was held at the Balfour Hall, Plymouth, on Wednesday, March 9. Owing to the absence (through indisposition) of Mr. J. H. Bailey, the chair was taken by the President (Mr. J. Cocks), and a most enjoyable time was spent by a company numbering about seventy. The arrangements were admirably carried out by the following committee: Messrs. Jas. Cocks (President), F. Maitland, H. Reynolds, E. T. Cocks, with E. W. H. Green and H. C. Cantle (Hon. Secretaries).

MICROBES AND SANITATION.—Mr. F. W. Richardson, the Bradford City analyst, gave a lecture recently at Bradford on "Microbes and Sanitation." Alderman Willis Wood presided. The lecturer, by means of lantern slides, elucidated the subject of the nature and distribution of germs. The principal zymotic and contagious diseases received full treatment, and the diminution of the death-rates was shown to be concomitant with improvements in sanitation. He described typhoid fever as "filth disease," one day to be blotted out through the final abolition of insanitary conditions. Sewer gas was undoubtedly responsible for the spread of typhoid, sometimes directly and in other cases by its potent action in reducing the vital resistibility of the organism. Bad plumbing in the way of defective drains and traps had very much to be responsible for, and the examination and

registration of plumbers was a sign of real progress. Tubercular consumption can be largely prevented, and the importance of preventing promiscuous expectoration on the part of consumptives was emphasised. The other chief infectious diseases were considered in brief, and the best methods of sanitary prevention were outlined.

Legal Intelligence.

A Trade Mark Action.—On Saturday last the action of Pullen *v.* The British Medicinal Capsules Company, Limited, and W. J. Rendell's Trade Mark, No. 182,688, came become Mr. Justice Romer in the Chancery Division of the High Court of Justice. Mr. Ingpen said the action was brought to restrain the defendants from passing off certain medicated articles as and for the plaintiff's. An injunction had been already granted, and the motion of the defendants to expunge plaintiff's trade mark was directed to come on with the action. The defendants had consentcd to a perpetual injunction, and to deliver up all boxes and labels, and to pay the costs of the action. It had also been arranged that the motion to expunge the trade mark should be dismissed with costs. Mr. F. G. Hart appeared for the defendants. His Lordship made an order in the terms agreed.

Messrs. T. Christy & Co., of Lime Street, E.C., have instituted proceedings against Mr. Max Schliephak, of Victoria Street, S.W., in consequence of an infringement of their patents in the Morstadt Cachet Apparatus. We are informed that the defendant has consented to an order for a perpetual injunction being made against him, and has expressed his regret at having unintentionally infringed Messrs. Christy's rights.

Sale of a Chemist's Business.—In connection with the brief report of the proceedings in the case of Faithfull *v.* Kemp, published in last week's Journal (p. 276), we are asked to explain that a claim for £1000 damages was put forward by Mr. Faithfull in respect of the sale of Kemp's chirata preparations, the property in which, however, had been expressly and absolutely reserved by Mr. Kemp in the memorandum of agreement. The claim was withdrawn when the case came into court, and the decision of the Judge accorded exactly with an offer made by Mr. Kemp to Mr. Faithfull before the hearing. His Lordship said: "I do not think I can do better than follow the terms which both parties very nearly agreed to, and that is, the plaintiff to have the costs of the action, and the defendant the costs of the counter-claim." The counter-claim—Kemp *v.* Faithfull and James Wylie—was in respect of a promissory note accepted in payment of the balance of the purchase money for the business in question, with interest and rent due.

Pilfering a Londonderry Chemist.—On Monday last, March 14, Patrick Devine, who was in the employment of Mr. T. J. Rainey, chemist and druggist, Londonderry, as a messenger, was charged with the larceny of a number of articles, including hair brushes, nail brushes, sponges, paints and paint-brushes, tablets of soap, and other articles to the value of £40 from the shop of his employer. He was sentenced to three months' imprisonment with hard labour. On the application of Mr. O'Doherty, the magistrates agreed to make the sentence date from the time of arrest. Cases against John Slevin, dealer, and William Sheills, stall-keeper, for receiving the goods were adjourned.

At the Bradford County Court on Tuesday, March 15, before His Honour Judge Bompas, Q.C., Elizabeth Hamilton sued Herbert Bairstow, 264, Barkerend Road, Bradford, to recover a sum of 30s., the price of a set of artificial teeth.—In the course of evidence it appeared that in 1892 the defendant undertook to make a set of teeth for the plaintiff for £2 10s., and 7s. 6d. for painless extractions. The teeth were paid for but had never fitted, and after the plaintiff had taken them many times to be altered, they could not be made to fit; thereupon she got another dentist to make her a set, for which she paid 30s., the amount sued for. — The defendant admitted that he was not a registered dentist, but claimed to be a chemist, although his name does not appear on the Register of Chemists and Druggists for 1898. Judgment was given for the plaintiff for the amount claimed.

Personal Notes.

Messrs. W. McEwen and E. Lawrence have been presented with handsome gifts on the occasion of their leaving the employment of Messrs. Frazer & Green, Ltd., of Glasgow. The presentation was made on the 28th ult., and took the form of a gold-mounted umbrella and pocket-book to Mr. McEwen (who enters on an engagement with Messrs. Squire & Sons, London), whilst a pipe and tobacco-pouch was presented to Mr. Lawrence. Mr. Hunter made the presentations, and the two gentlemen expressed their appreciation of the gifts in fitting terms. Thereafter songs and recitations were rendered by various members of the company, and the proceedings terminated with a vote of thanks to Mr. Jas. Robb, who presided.

Mr. John Laurence, who has recently resigned his position as manager of Messrs. Frazer and Green's Sauchiehall Street branches, was waited on last week by a deputation representing the assistants of the firm, and presented with a gold-mounted walking-stick as a memento of their long and pleasant intercourse with him. The engraved band bore the inscription "To John Laurence, Glasgow. February 28, 1898," and was the workmanship of Messrs. George Edward & Sons, Her Majesty's goldsmiths in Glasgow.

Football.

Pharmaceutical Football Club.—The present season's list of fixtures will terminate on Saturday, March 26, with the Old Boys Match. The game will be played at Wormholt Farm, and will be followed by a smoking concert at the Bush Hotel, Goldhawk Road.

Marriages.

Snow—Towse.—On Thursday, March 10, at the Parish Church, Filey, by the Rev. A. N. Cooper, Charles Metcalfe Snow, chemist and druggist, Bradford, to Annie Elizabeth Towse, daughter of Mr. Samuel Towse, the postmaster of Filey.

Business Change.

Messrs. Clift & Crow's premises, Lee Bridge, Lewisham, having been acquired by the London and Midland Bank, Limited, they have removed their business to the house next door, which they have refitted as a most complete pharmacy.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

George Stanton and Herbert Sumpter (trading as Gibbs & Atkins), Chemical Manufacturers, 17, Lewis Road, Loughborough Junction, London, S.W. Debts will be received and paid by Herbert Sumpter.

Joseph S. Revely and John J. Vernon, Physicians and Surgeons, 25, Greek Street, and Turncroft Lane, Stockport. Debts will be received and paid by John H. Vernon.

John Fellowes Wallop and Geo. Hewett (trading as Thomas Mayo & Co.), Mineral Water Manufacturers, 23, Augustus Street, Regent's Park.

RECEIVING ORDER IN BANKRUPTCY.

(From the London Gazette.)

Alexander R. Dodd, Surgeon, 24, Montagu Street, Portman Square, W.

NEWCASTLE CHEMICAL REPORT.

March 16, 1898.

There is very little change on this market. Inquiries are fair for spring movements for the Upper Baltic ports, but so far not much actual business is booked for heavy chemicals. Prices are:—Bleaching Powder, £6 5s. to £6 10s. Soda Crystals, basis, 45s. to 57s. 6d. Caustic Soda, 70 per cent. basis, £7 10s. to £7 15s. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. Sulphate of Ammonia, £9 7s. 6d., all ports.

(Received too late for Classification).

Rectification of the Register

In Accordance with the Pharmacy Act, 1868.*

The names given hereunder are those of persons whose addresses are unknown to the Registrar, and communications sent to them have been returned through the post. The Registrar therefore desires to make known as widely as possible that any registered person who fails to communicate his whereabouts, is, under Section X. of the Act, liable to have his name erased from the Register :—

Those marked * are Pharmaceutical Chemists.

Adams, Walter	Church Street, Chesham.
Adcock, William	Back 64, Ladywood Road, Birmingham.
Alexander, Ernest Glover	Opposite Carlisle Hotel, Manningham, Bradford.
Allen, John Wilfred	41, Roseberry Street, Liverpool.
Anderson, Edward Ellice	183, High Street, Battersea, London, S.W.
*Appleton, Robert	Hawthorn, near Melbourne, Victoria.
Ashford, Francis	Deptford High Street, London, S.E.
Atkinson, Robert John	45, Harcourt Street, Newcastle-on-Tyne.
Baillie, Janet	Tranent, Haddingtonshire.
*Baldwin, Arthur Henry	40, Peascod Street, Windsor.
Balfre, Juan Morday	1, Reporton Road, Fulham, London, S.W.
Banfield, Harold	26, Urswick Road, London, N.E.
Banks, Benjamin	23, Comerford Road, Brockley, London, S.E.
Banks, James Dinsdale	Kington, Hereford.
Bardill, Draper Welch	St. Peter Street, Derby.
Bartle, William Thomas	5, Market Place, Brigg, Lincs.
Bartlett, Percy John	"Elstree," Hawk Rd., Upper Norwood, London, S.E.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

MARCH 17, 1898.

The past week has again passed off very quietly as regards business in drugs and chemicals, there having been but little doing, while there are practically no changes of importance to report. Quinine is dull. Cocaine fairly steady. Sulphonal expected to be dearer. Phenacetin and Acetanilide quiet. Codliver Oil dearer for new Norwegian, owing to reported limited catch. Quicksilver and Mercurials, Iodine and Iodides, Bromine and Bromides without change. Ipecacuanha very firm. Cream of Tartar firm and dearer. Acid Tartaric dull. Acid Citric firm and the turn harder in price for spot, there being no sellers of quantity for forward delivery. Acid Boracic and Borax dull and weak. Sulphate of Ammonia again lower. The following are actual prices :—

ACETANILIDE—Steady at 1s. 2d. to 1s. 3d. per lb., according to quantity.

ACID BORACIC—Very dull at 23s. to 24s. per cwt. for *crystals*, and 25s. to 26s. per cwt. for *powder* on the spot.

ACID CARBOLIC—Remains quiet at 6¾d. for 35/36° C. *Ice crystal* in large drums and overcasks and for large quantity, other qualities and packing in proportion. *Crude* 60° F. 2s., 75° F. 2s. 7½d. per gallon. *Liquid*: 95 per cent. of pale straw colour 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC—Is very firm on the spot, but a limited business only is passing at 12½d. to 12¾d. per lb. for *crystals*.

ACID TARTARIC—Dull at 1s. 1d. per lb. for *English* crystals, and 12½d. per lb. for *foreign*.

AMMONIA COMPOUNDS.—*Sulphate* is lower and market is very flat. Gray prompt 24 per cent., London, £9 5s. per ton. *Bromide* steady at 2s. 1d. to 2s. 2d. per lb. *Iodide* firm at 13s. 4d. per lb. *Sal ammoniac* unchanged at 35s. per cwt. for sublimed firsts and 33s. for seconds. *Oxalate* unchanged at 6¼d. per lb. for crystals. *Chloride*: 32s. 6d. per cwt. is noted for the chemically pure crystals, whilst for the ordinary quality free from metals 26s. per cwt. is asked. *Sulphocyanide* is in fair demand at 1s. 2d. per lb.

BORAX—Fairly steady at last week's quotations of 14s. to 14s. 6d. per cwt. for *crystals*, and 14s. 6d. to 15s. per cwt. for *powder*.

ASAFETIDA.—The whole of the coal-damaged lots ex last auctions has been cleared at private rates, and in addition several lots of low brown quality at about 40s. per cwt.

BALSAM TOLU—Is firmly held here at 2s. 2d. per lb., but New York values are lower with a large stock. It is thought, however, that the bulk of this is of poor quality.

BISMUTH—Unchanged at 5s. per lb. for the *metal*, and 4s. 10d. for the *subnitrate* in 5 cwt. lots.

BLEACHING POWDER.—A moderate business doing at £7 5s. per ton for quantity on the spot.

BROMINE and BROMIDES—Unchanged, the former at 2s., *Pot. Bromide* at 1s. 10d. per lb.

CAMPHOR—Is dull, *crude* being quoted 85s. per cwt. for China March-April steamer, and 90s. per cwt. for Japan near at hand and distant, both quotations *c.i.f.* terms.

CINCHONA BARK.—At the monthly auctions on Tuesday the supplies amounted to 2880 packages, being slightly in excess of the quantity offered at the February auctions. The bulk consisted of East India shipments, which met a fair demand mainly for English and American quinine manufacturers, but the decline in values established at the last Amsterdam sales was fully confirmed. Succirubra barks met a good demand at full rates. *Ceylon*: 206 bales offered, and 105 bales sold, according to analysis; Succirubra, natural stem chips at 2½d.; renewed shavings, good at 4¼d.; Hybrid root, good at 3⅞d. to 4¼d. *East Indian*: 2292 bales and 42 cases offered and 1621 bales and 28 cases sold, red stem chips and shavings, fair at 2⅛d. to 2¾d., fair root at 2¼d. to 2⅝d., good silvery Druggists' quill at 7d. to 7¼d., fair renewed red quill at 3½d. to 4½d.; renewed chips and shavings, ordinary to fair at 1⅝d. to 2⅞d.; *Officinalis*, good chips and shavings 4d. to 4¼d., ordinary to fair at 1¼d. to 3¼d., fair mossy thin quill at 4¼d., fair renewed split ditto at 5¼d.; renewed chips and shavings, fair to good at 4d. to 5½d., ordinary to middling at 2⅜d. to 3⅜d.; *Ledger* natural stem chips, ordinary to fair at 2⅝d. to 4⅝d., common 1½d. to 2¼d., *Ledger* branch at 2⅜d. to 3d. *Java*: Of 43 bales and 151 bags offered 43 bales sold, *Ledger* dusty stem chips at 4⅜d. to 4½d. *South American*: 31 bales *Bolivian cultivated Calisaya* quill offered and 26 bales sold at 5d. to 5⅞d. *Carthagena* 25 bales, *Pitayo* 4 bales, and *Maracaibo* 29 bales all bought in. *African*: 57 bales offered and 5 bales damaged sold.

CLOVES.—Privately *Zanzibar* are dull, sales include April-June delivery at 3¾d., June-August at 3⅞d. At auction 270 bales *Zanzibar* sold at 3¼d. to 3⅞d., one lot good 4⅛d. 30 bags *Amboyua* bought in at 5½d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: 1s. 10d. per gallon. *Benzole*: 60 per cent., 1s. 7½d.; 90 per cent., 1s. 5d. *Crude Naphtha*: 10½d. *Solvent Naphtha*: 95 per cent. at 160° C., 2s. per gallon.

COCAINE.—Best brands are firmly held by the makers, 10s. to 10s. 6d. per oz. for quantity and bulk packing; brands less in favour are being pressed for sale at rather lower prices, without, however, meeting with much demand.

CODEIA—Steady at 11s. 3d. to 11s. 6d. per oz., according to quantity.

COD-LIVER OIL.—The market for new oil is decidedly firmer, and it is stated that the agents for the best brands of non-congealing *Norwegian* in tin-lined barrels are asking 77s. 6d. to 80s. per barrel for the new oil; last year's oil remains, however, weak and slow of sale at 65s. to 70s., according to brand.

CREAM OF TARTAR—Is very firm and dearer at 76s. 6d. per cwt. for first white *crystals* on the spot, *powder* being quoted 78s. to 79s. per cwt. The higher strengths are proportionately dearer up to 85s. per cwt. for the 99 per cent. crystals.

GINGER.—*Cochin* is flat, and at auction of 1080 bags only 248 bags sold at easier rates, ordinary to good washed rough at 25s. 6d. to 27s. 6d., and medium to small rough washed, without reserve, 23s. 6d. to 28s. 6d. Of limed *Japan* 200 bags sold, without reserve, at 16s. 6d. to 17s. For new *Jamaica* there was a good demand, and higher prices were realised; common dark and lean *Rhatoon* 64s. to 66s. 6d.; ordinary small and lean scraped 68s. to 72s.; good ordinary brownish and low middling 74s. to 78s. 6d.; middling plump washed 80s. to 84s.

GLYCERIN—Is quiet but steady at 52s. 6d. to 57s. 6d. for best *German* white double-distilled chemically pure 1·260 quality in tins and cases, *English* being quoted slightly below these figures, according to quantity.

GOLDEN SEAL ROOT.—Quotations from New York come lower at 1s. 8½d. per lb. *c.i.f.*, but it is pointed out that the stock in the country is very limited, and any improvement in the demand would surely cause another rise in the market.

IODINE and IODIDES.—Without alteration. *Pot. Iodide*, in 2-cwt. lots, 9s. 9d. per lb.

JAPAN WAX—Continues dull, and but little business is reported; good squares are quoted 35s. 6d. per cwt. on the spot, whilst for arrival 33s. per cwt. *c.i.f* is asked.

MENTHOL CRYSTALS.—A small business in fine dry crystals has been done at 7s. 3d. to 7s. 6d. per lb. according to quantity.

MERCURIALS—Unchanged at 2s. 6d. per lb. for *Calomel*, and 2s. 2d. per lb. for *Corrosive sublimate* in half-ton lots.

MORPHIA—Remains very dull, the position of the article being also somewhat undecided, in sympathy with that of the crude drug. Makers still quote 4s. 3d. to 4s. 6d. per oz. for the *Hydrochlorate Salt* in powder. For large quantities, however, somewhat less than the lower figure would probably be accepted. The position of the article has been further shaken by the fact that a German manufacturing chemist, who had already attained a hardly enviable notoriety, in consequence of his continued aggressive attitude towards his fellow manufacturers, both here and on the Continent, has entered the lists, quoting low prices for morphia broadcast, with the intimation that stock is held in London. In view of the fact that the manufacturer in question has of late years been more distinguished for the exceeding cheapness of his prices than for the surpassing excellence of the quality of his preparations, buyers here will probably decide to continue to give the preference to the home-made article.

OIL OF TURPENTINE.—A large German firm is supplying through his London agent

a very high-class article under the name of *Oleum Pini Sylvestris*, his price for quantity being 1s. 3d. per lb. in 14-lb. tins. We fear, however, that he will find a difficulty in selling even the very finest quality of "Turps" at the above figure.

Oils (Essential).—*Peppermint H.G.H.* is firmer, and sales have been made at 5s. 6d. to 5s. 7½d. per lb. on the spot, forward being dearer at 5s. 9d. *c.i.f. Japan* quiet at 3s. per lb. for dementholised and 4s. 9d. per lb. for 40 per cent. *Star Aniseed* continues slow of sale at 7s. per lb. on the spot. *Cassia* also very stagnant, quotations 4s. 6d. per lb. for 70 to 75 per cent., and 4s. 7½d. per lb. for 75 to 80 per cent. *c.i.f.* terms. *Lemon* is slightly easier at 2s. 6d. to 4s. per lb. according to quality. *Citronella*: 1s. 2d. per lb. is now the lowest price for both drums and tins. *Lemongrass* quiet, but quotations unchanged, 5d. per oz. nearest value.

Oils (Fixed) and Spirits.—*Linseed* is again lower this week at £15 12s. 6d. for pipes, and £16 for barrels. *Rape* lower and closes quiet at £22 10s. for ordinary brown on the spot; refined, £24. *Cotton* also lower at £13 for *crude*, and for *refined*, £14 10s. to £15, according to make. *Olive* very firm, but unchanged at £33 for Spanish or Levant on the spot. *Coco-nut* continues firm at £23 for Ceylon on the spot, and £28 for Cochin, same position. *Palm*: Lagos on the spot, £23 10s. *Turpentine* is lower at 24s. 9d. per cwt. for American on the spot. *Petroleum Oil* is dull and easier. Russian, on the spot, 4⅞d. per gallon; American, 4⅝d. per gallon. *Petroleum Spirit*: American, 5⅜d. per gallon; deodorised, 5¾d. per gallon.

Opium—Is very quiet, there being but very little doing. Prices remain about same as last week, with, however, a somewhat weaker tendency.

Phenacetin.—Inferior makes are being hawked round at almost any price; reliable quality costs 3s. 9d. to 4s. 3d. per lb., according to quantity.

Pilocarpine—Is firm at 1s. 3d. per gramme or 28s. per oz. in 1-oz. lots.

Potash Compounds.—*Chlorate*, continues dull of sale at 3½d. per lb. on the spot. *Prussiate*: Yellow is quiet at 6¾d. per lb., red being unchanged at 1s. 2d. per lb. *Permanganate* slow of sale at 60s. per cwt. for small crystals and 65s. per cwt. for large crystals in half-ton lots. *Bromide*, quiet at 1s. 10d. per lb. *Iodide*, unchanged at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Oxalate*: Neutral firm at 5d. per lb. *Cyanide* firm at 1s. 3d. per lb. for 98 per cent. cake, and very scarce for prompt delivery. *Bichromate*: 3⅞d. to 4d. per lb. as to quantity. *Bicarbonate*: Crystal and powder quoted 30s. per cwt.

Quicksilver — Continues steady at £7 2s. 6d. per bottle from first hands, and 6d. less from second-hand holders.

Quinine—Is quiet, manufacturers still quoting 11d. per oz. for best *German* brands in 100-oz. tins for 1000-oz. lots, there being sellers from second hand at something below this figure.

Shellac.—The market is in an inactive condition, and at the auctions on Tuesday a further decline of from 1s. to 2s. per cwt. was established, and *TN Orange* is now quoted 62s. per cwt. Only moderate supplies were catalogued, but barely one-third found buyers. A total of 982 cases offered and 300 cases sold: *Second Orange*, of 605 cases, 267 sold, partly without reserve, flimsy palish flat free at 63s., middling to fair bright red at 61s. to 62s., ordinary red broken flat at 60s., ordinary to fair red cakey to blocky at 58s. to 61s. *Garnet*: Of 196 cases 10 sold, fair flat free *AC* at 73s. *Button*: Of 181 cases 23 sold, good pale coloury resinous at 82s. 6d., ordinary resinous *BL2* at 68s., fair *BL3* at 58s. to 59s.

Soda Compounds.—*Crystals*: 60s. per ton, ex-ship terms. *Benzoic*: The artificial is quoted 2s. 3d. per lb., whilst for the pure article from gum 4s. per lb. is asked. *Bicarbonate*: £7 5s. per ton for the commercial 98 per cent., and 18s. per cwt. for the free from mono-carbonate quality. *Hyposulphite*: 5s. 6d. to 8s. per cwt. *Iodide*: 11s. 7d. per lb. *Nitrate*: Refined £7 15s. to £8 5s. per ton. *Caustic*: £7 15s. per ton for the 70 per cent. and £6 15s. per ton for the 60 per cent. *Sulphite*: 17s. 6d. to 22s. 6d. per cwt. as to brand.

Spices (Various).—*Black pepper*: 213 bags Singapore bought in at 4⅛d. to 4⅜d. *White pepper*: 233 bags Penang bought in at 6½d. *Chillies* dull; Zanzibar bought in at 40s. to 42s. 6d.; of 163 bags fine Japan 101 bags sea-damaged, were sold, first class, at 46s. *Cinnamon Chips*: 40 bags bought in at 4d.; 16 bags Ceylon quillings, etc., sold at 9d. to 9½d. *Mace*: Of 68 cases Penang 10 cases sold, ordinary wormy, broken, 1s. 7d.; the remainder bought in. Pickings, 1s. 6d.; ordinary, 1s. 8d.; good bold pale, 2s. 8d. to 2s. 10d.; 26 packages West India sold at 1s. 5d. to 1s. 8d. *Nutmegs* quiet; Penang chiefly bought in; 88 packages West India mostly sold at about previous rates: 60's, 2s. 8d.; 68's, 2s. 3d.; 74's, 1s. 11d.; 81's, 1s. 8d., and ranging from 87's to 131's at 1s. 7d., down to 1s. *Pimento* quiet; of 277 bags only 32 bags sold at 4½d. to 4⅝d.

Sulphate of Copper—Firm at £16 5s. to £17 per ton according to brand.

Sulphonal.—One of the two principal makers has declined orders at 7s. 3d.; the other, however, continues to supply limited quantities at this figure, while the outside maker, whose competition was the cause of the reduction in price, appears to be sold out, he having raised his price to nominally 8s. 6d. per lb.

To-day's drug auctions passed off quietly. Cardamoms sold well, and Ipecacuanha was firmly held. The following are the particulars, as far as it is possible to give same, up to time of going to press:—

Aloes.—50 kegs good softish *Socotrine* held for 80s. per cwt., dull hard *Cape* part drossy sold at 16s. to 16s. 6d.

Ambergris.—3 tins were bought in at at 60s. for dark and grey, fair flavour.

Annatto Seeds.—2 barrels good bright held for 6d. per lb.

Argol.—32 bags *Cape* realised 48s. 6d. to 50s. per cwt.

Buchu Leaves.—6 bales fair green rounds sold at 4¼d. to 4½d. per lb.

Camphor Oil.—21 cases *Japan* white sold, without reserve, at 24s. to 30s. per cwt.

Caradmoms—Sold freely, fair bold *Ceylon* up to 4s. 2d. per lb., medium ditto at 3s. 1d. to 3s. 4d., ditto splitting at 2s. 6d. to 2s. 7d., pale brownish *Mysore* at 3s. 2d., brown *Malabar* at 2s. 8d., *Seed* at 3s. to 3s. 3d. per lb.

Cascara Sagrada.—60 bags of only medium quality taken out at 22s. per cwt., 20s. being, however, the price which would have been accepted.

Cascarilla Bark.—Fair bright bold quilly sold at 46s. to 46s. 6d. per cwt.

Castor Oil.—125 cases *Calcutta* all bought in, good seconds being held for 4¼d., ordinary ditto for 3½d. per lb.

Cinchona Bark.—40 bales *Crown Bark* part sold at 5d. to 8d. per lb.; 18 bales *Yellow Bark* taken out at 1s.; 2 bales *E.I. Cinchona Bark* at 1s. 6d.

Coca Leaves.—25 bales good green *Truxillo* were held for 7d. per lb.

Codliver Oil.—27 casks *JHR* brand last year's *Norwegian* oil bought in at 75s. per barrel.

Colocynth.—22 cases fair *Turkey* apple were held for 1s. 2d. per lb., smaller ditto part broken for 1s. 1d.

Colombo Root.—5 bags washed, slightly wormy, bought in at 55s. per cwt.

Coriander Seed.—222 bags *Morocco* held for 7s. 3d. per cwt.

Cummin Seed.—50 bags of medium quality held for 20s. per cwt.

Dragon's Blood.—5 cases bought in, price required being £8 5s. to £8 15s. for fair to well-packed reeds, somewhat dull to bright.

Ergot of Rye.—21 bags good bold sound *Spanish*, slightly greyish in colour, held for 1s. 4d. per lb., 23 bags slightly weevily, fairly bold *German* for 8½d., fair sound *Russian* for 9d.

Essential Oils.—*Lemon*: 4 cases *Battaligni* bought in at 4s. 3d. per lb.; 5 cases Hamnett's at 4s. 6d. *Cajeputa*: 1 case of fair quality held for 4s. 6d. per bottle. 10 cases *Cassia*, 70 per cent. cinnamic aldehyde, bought in at 5s. per lb.

Gamboge.—38 cases were bought in at £3 to £8 10s. per cwt. for good bright to slightly softish down to 80s. for good softish. 5 cases pickings sold at £6 7s. 6d.

Gentian Root.—10 bales good bold, slightly chumpy, held for 24s. per cwt.

Gum Arabic.—2 cases fair white small to medium picked held for £10 10s. per cwt., soft sorts for 80s.

Gum Benjamin.—Medium fair to good seconds *Sumatra* sold at £7 5s. to £10, lower quality ditto being held for £5 10s. to £6 5s. per cwt. Small to medium free *Siam* held for £18 down to £7 for blocky seed. *Penang* held for 70s. per cwt.

Gum Guaiacium.—2 cases, part drossy, part glossy block sold at 6d. to 6½d. per lb.

Gum Kino.—5 packages red *Calicut* held for 10s. per lb.

Gum Mastic.—1 case fair white held for 2s., pale yellow for 1s. 8d. per lb.

Gum Myrrh.—9 casks sifted sorts, rather dark colour, held for 40s. per cwt., 1 case pickings selling at 15s.

Honey.—Of 257 packages catalogued by one broker only 1 barrel low *Jamaica* was disposed of at 18s. per cwt. Fair *Australian* held for 21s., good *Canadian* for 25s. 200 cases *Californian* part sold, pale to brownish liquid at 25s., yellowish to pale at 29s. to 32s. per cwt.

Kola Nuts.—11 bags bought in at 6d. per lb. for good bright.

IPECACUANHA.—14 bales good *Carthagena* were held for 6s. 6d. to 6s. 9d. per lb., at which figure there were, however, no buyers. 1 bale 2Cs damaged selling at 5s. 8d. per lb. 21 bales *Rio* held for 8s. per lb.

LICORICE ROOT.—10 bales thin to chumpy decorticated Russian held for 35s. per cwt.

MENTHOL.—2 cases good dry white *Kobayashi* brand held for 7s. per lb.

MUSK.—4 tins bought in at 62s. for thin skin grey *Tonquin*, small to medium, fairly dry, few broken, down to 35s. for ditto, pile 3.

ORANGE PEEL—Realised lower prices, good bright, thin-cut selling at 7½d. per lb.

ORRIS ROOT.—20 bags fair *Verona* were held for 30s. per cwt.

PISTACHIO NUTS.—2 cases *Syrian* held for 1s. 4d. per lb.

PODOPHYLLIN RESIN.—10 tins brand McKeeson & Robbins were held for 11s. 6d. per lb.

RHATANIA ROOT.—12 bales of fair quality sold without reserve at 5½d. per lb.

RHUBARB.—Good medium round *Shensi* of fine colour was held for 3s. 2d. to 3s. 3d. per lb., good bold flat ditto, slightly rough, sold at 1s. 6d. down to 1s. 4d. for second size, and 1s. to 1s. 2d. for pickings; good small *high-dried* held for 1s. 2d. per lb., very bold orange coated round *Canton* pinky and grey fracture for 1s. 3d., ditto small trimming for 1s. 5d. Medium to bold flat ditto for 1s. 2d. to 1s. 4d. per lb.

SAFFRON.—14 tins fair *Valencia* held for 35s. per lb.

SARSAPARILLA.—Good *Lima*, part sold at 1s. 5d. per lb. for good thin down to 2d. per lb. for 4 Cs damaged. 8 bales *Honduras* held for 1s. 8d. per lb.

SCAMMONY ROOT.—20 bags of fair quality bought in, a bid of 20s. per cwt. not being entertained.

SENEKA ROOT.—18 bales fair bought in at 1s. 2½d. per lb.

SENNA.—7 bales *Tinnevelly* sold at 4¼d. per lb. for fair to good, down to 3¼d. for somewhat lower quality.

SQUILLS.—13 bags held for 4d. per lb. for good.

STAVESACRE SEEDS.—4 bags bought in at 34s. per cwt.

TAMARINDS.—22 barrels black *E.I.* sold at 12s. 6d. to 14s. 6d. per cwt.

VANILLA.—About 500 tins were offered but the demand was very slow and the bulk had to be withdrawn. Such lots as were sold found buyers only at a reduction of from 1s. to 1s. 6d. per lb. upon last sale's rates. It is said present rates do not pay shippers, and that consignments to the Continent are realising better prices than can be obtained on this market. Fine *Vanillon* was held for 15s. per lb.—sundry lots "without reserve" of common quality were withdrawn owing to the lack of interest shown by the room.

WAX.—Fair *Zanzibar* slightly drossy sold at £6 2s. 6d. per cwt., fair *Australian* at £6 17s. 6d. subject to approval, good *Jamaica* at £7 5s. to £7 7s. 6d. 3 bags *East Indian*, all more or less damaged by heat, realised £5 12s. 6d. to £5 15s. 2 cases *Mogador* bought in at £6. 16 casks ditto at £5 2s. 6d. 20 cases *Japan* taken out at 35s. per cwt.

LIVERPOOL REPORT.

MARCH 16, 1898.

In view of considerable arrivals of French 1st pressure Castor Oil and Calcutta, "good seconds" prices have slightly dropped. This is the case also with Spirits of Turpentine. A slight advance has taken place in Cream of Tartar, but the business done has not been of any moment. A parcel of Brazilian Tonka Beans withdrawn at the auctions has since been disposed of on private terms.

AMMONIUM SALTS.—*Carbonate* is firm at 3d. per lb. *Sal ammoniac* is firm at 33s. to 35s. per cwt. *Sulphate* is again lower at £9 7s. 6d. to £9 10s. per ton.

BLEACHING POWDER—Is still quoted at £5 12s. 6d. to £6 5s. per ton.

CANARYSEED—Is unchanged at 26s. to 27s. per 464 lbs. for Turkish.

CARNAUBA WAX.—Sales of yellow are reported at 72s. 6d. per cwt.

OILS (FIXED) AND SPIRITS.—*Castor oils*, both Calcutta and French are quoted at 3¼d. to 3⅝d. per lb. *Olive oils*: Spanish Seville quoted at £33 10s. to £34 per ton. In Spain oils for shipment are dearer. *Linseed oil* is quiet at last week's rates, 17s. 3d. to 17s. 6d. per cwt. *Cottonseed oil* is firm at 15s. 3d. to 15s. 9d. *Spirits of turpentine* is quiet and prices have receded to 25s. 9d. per cwt.

POTASH SALTS.—*Cream of Tartar* is a turn dearer, viz., 77s. to 78s. per cwt., but business is slow. *Potashes* 21s. 6d. per cwt. *Pearlash*, 37s. 6d. to 40s. per cwt. *Prussiate*, 6¾d. per lb. *Saltpetre* is firmer at 21s. 6d per cwt.

QUILLAYA BARK—Is selling to arrive, March shipment, at £18 10s. to £19 per ton.

SODA SALTS.—*Bicarbonate*: £6 15s. per ton. *Caustic*: 70 per cent., £7 5s.; 60 per cent., £6 5s. per ton. *Crystals*: £2 17s. 6d. per ton. *Borax*: Firm, crystals £13 10s., powder £14 per ton. *Nitrate* is selling steadily at 7s. 6d. to 7s. 9d. per cwt.

TONKA BEANS.—16 bags of Brazilian offered at auction were withdrawn as 4d. per lb. was the highest bid. They have since been sold on private terms.

MANCHESTER CHEMICAL REPORT.

MARCH 16, 1898.

The course of the market here has not varied greatly for two or three weeks past. Locally there is a fair consumptive demand, and in view of the opening of the navigation the inquiries for northern shipment are now coming forward. Caustic Soda and Ammonia Alkali continue firm, and Bleaching Powder is steady at £5 5s. to £5 10s. per ton on rails for softwood casks. Brown Acetate of Lime is easier at £5 15s. to £6 for both Welsh and American. Sulphate of Copper does not respond to the rise in the price of the metal, although best brands are firm at £16 15s. to £17 per ton, delivered Manchester. Aniline Oil and Salt are a trifle better at 3½d. and 4¾d. respectively. Alum is quiet at £4 17s. 6d. to £5 per ton for loose lumps on rails, £5 2s. 6d. lump in tierces, and £5 10s. ground in bags. Salt cake is in better demand at 18s. to 19s. per ton. Pitch is also in more request at 17s. 6d. to 18s. per ton *f.a.s.* Manchester Ship Canal. Yellow Prussiate varies from 6¾d. to 7d. for best local make. Benzols are dull.

DIARY FOR THE WEEK.

SATURDAY, MARCH 19.

PHARMACEUTICAL FOOTBALL CLUB v. BLOOMSBURY a Acton. Kick-off at 3 p.m.

TUESDAY, MARCH 22.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9 p.m.
Short Papers by Members.

ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things" (Lecture X.), by Professor E. Ray Lankester.

ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"The Gum Bichromate Process," by Robert Demachy.

WEDNESDAY, MARCH 23.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9.15 p.m.
Ordinary Meeting.

THURSDAY, MARCH 24.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 7.30 p.m.
Cinderella Dance (Dorset Hall, Portman Rooms, Baker Street, W.).

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.30 p.m.
"The Bacterial Purification of Water," by Dr. P. Frankland.

ROYAL INSTITUTION, at 3 p.m.
"Recent Researches in Magnetism and Diamagnetism" (Lecture IV.), by Professor J. A. Fleming.

FRIDAY, MARCH 25.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
Communication by Mr. Peter Boa.

EXCHANGE.

OFFERED.

Shop Fittings.

Entire Fittings of Chemist's Shop to be sold in one lot or parts, or shop may be rented as fitted. Best offer accepted.—149, Barking Road, Canning Town, E.

Miscellaneous.

Gem Soda Water Machine, price £12, cost £28.—Farrington, Spa, Diss.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen mieroscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wiek lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Microscope in mahogany case, coarse and fine adjustments, two eye-pieces, 2 and ¼-inch object glasses, £2; Green's 'Botany,' 2 vols., new, 10s., or offers.—Morris, Winchmore Hill, N.

Overstocked.—3 dozen Buchanan's Scotch Food, 1s. 6d. size; will accept first postal order for £1; carriage paid; all clean and in good condition.—Hampshire, 143, Upperthorpe Road, Sheffield.

Overstocked.—Patents, clean, 2s. 9d. C. B. Chlorodyne, 22s. 6d. Pills: Cockle's, 8s. 3d. per dozen; Seigel's, 8s. 10d. per dozen; Towle's, 8s. 6d. per dozen; Norton's, 9s. per dozen; 2s. 9d. Steedman's Powders, 21s. Cheque with order 50s., carriage paid.—Yardley, Bloxwich.

Books.

'Pharmaceutical Journal,' 27 volumes, 1841 to 1868, bound in half calf, clean, in good condition. 'Chemist and Druggist,' vol. 51, unbound. What offers or exchange?—Kendall, 163, Dewsbury Road, Leeds.

WANTED.

Wanted, old electric lamps and scrap platinum, or old platinum utensils; utmost value promptly remitted by—P. Rowsell, 14, Walcot Square, Lambeth, London, S.E. (Please mention this paper).

Wanted.—*Pharmaceutical Journal*, July 13, August 3, 1895. Full price will be paid for clean and complete copies by the Publishers, 5, Serle Street, London, W.C.

The World of Pharmacy Week by Week.

A Review of Current Work in connection with pharmacy and the allied sciences is again given this week (p. 301).

Various Formulæ for Perfumes, in making which heliotropin, ionone, hyacinthin, and other synthetic bodies are used, are published in this week's issue (p. 302).

Chemists' Assistants who are thinking of taking situations in Ceylon will find interesting information concerning the climate, etc., of the "Spicy Isle" in this issue (p. 303).

The Resins of Podophyllum, Indian and American, have been examined by Mr. E. J. Millard, and his results should prove useful (p. 304).

The History of Russian Pharmacy, with the account of the English pharmacists engaged in the service of the Tsars during the sixteenth and seventeenth centuries, is concluded (p. 305).

The Progress of the Pharmacy Bill and the curious opposition of Mr. Alexander Cross, M.P. for Camlachie, are briefly commented on (p. 319).

The Students' Page this week is occupied by more explanatory notes on the B.P., the series being now almost completed (p. 310).

The British Pharmacopœia is the subject of an editorial, and information is also given regarding the forthcoming publication of the new Pharmacopœia (pp. 311-2).

The Question of the Registration of medical men has been raised at the Westminster Police Court, and the magistrate has expressed the opinion that such registration is not compulsory (p. 313).

Annual Dinners have been held at Liverpool and Stoke-upon-Trent, when the loyalty of the local chemists to the Pharmaceutical Society was very marked, as also their strong desire to witness the success of the new Pharmacy Bill (p. 314).

Three Pharmacy Act Cases are reported, in which penalties have been recovered by the Council of the Pharmaceutical Society from persons who have sold poison contrary to the provisions of the Act.

The Leicester Chemists' Social Union will hold its annual dinner at the Wyvern Hotel, Leicester, on Tuesday next, March 29, at 8 p.m. There will be a musical programme. Tickets (2s. 6d.) may be obtained from the Hon. Sec., Mr. F. W. Goodess, Hotel Street, Leicester.

News in Brief

The Photographic Supplement to the *Pharmaceutical Journal* will be published next week, and whilst thanking the many hundreds of correspondents who have already sent him information in connection therewith, the Editor will be glad to hear from any others who stock photographic goods, maintain dark-rooms for the use of customers, or have any photographic novelties or specialties to which they would like attention directed. It will not be amiss also if they will briefly state what there is to interest photographers in their respective localities, whilst the Editor will be only too glad to know how he can help any reader in connection with his business.

The Information Sent by correspondents will be utilised as fully as possible, whilst notes will be taken of the numerous useful hints supplied. It is necessary to point out, however, that a few correspondents who have sent information on postcards have unfortunately omitted to append their names and addresses. These include one at Chelmsford, one at Glasgow, and one at Portmadoc. This much can be gathered from the postmarks, but unless the correspondents referred to will take the trouble to write again it will be impossible to utilise some of the information they have kindly furnished.

Mr. P. C. Maitland, chemist and druggist, London, has been granted the diploma of the Society of Apothecaries of London.

Mr. Henry Fraser, Pharmaceutical Chemist, Pereira Medallist, and late Teacher of Pharmacy to the Aberdeen Pharmaceutical Association, at the recent medical examination held at Marischal College, Aberdeen, was successful in gaining the Fyfe Jamieson Gold Medal in anatomy, also 1st for Reginal Anatomy, 1st Materia Medica and Therapeutics, and 2nd in Physiology.

Mr. Charles A. Pratt, chemist and druggist, Chichester, has opened a business at 38, Fore Street, Saltash.

Bradford and District Chemists' Association.—The newly formed cycling section of the above Association selected Ilkley for a run on Tuesday afternoon last. The route taken was via Otley and Asquith, and from thence to Ilkley, where tea was partaken of, the party returning home about 8 o'clock after a very enjoyable outing.

Spirit of Nitre Case.—John F. Kingzett, chemist and druggist, Evesham, was summoned at the local Borough Sessions last week for selling half a pint of spirit of nitre that was alleged to be adulterated. The spirit was analysed by Dr. Swete, who is reported to have stated, though on what grounds does not appear, that the spirit of nitre was not of the nature and substance demanded by the purchaser. Apparently an attempt was made to persuade the magistrates that spirit of nitrous ether and spirit of nitre are synonymous terms, but the attempt failed, and the case was dismissed.

Olive Oil or Salad Oil.—At the Evesham Borough Sessions last week, John Foster, grocer, Bengeworth, was summoned for selling adulterated olive oil. The oil was supplied in a flask, for which sixpence was charged. Dr. Swete's analysis showed that the oil was adulterated with foreign oil to the extent of at least 30 per cent. For the defence it was urged that pure olive oil is never sold in flasks now, but only in bottles. But that artless tale failed to convince the magistrates, who were of opinion that the purchaser asked for olive oil, and did not get what he asked for. The defendant was therefore fined 5s. and 14s. costs, and Thomas Baker, another grocer, Vine Street, who was charged with a similar offence, was fined 5s. and 9s. costs.

Publications received.

Cumulative Index of Author, Subject, and Title of British Literature. Being a monthly supplement to 'The New Book List.' Edited by Cedric Chivers and Armistead Cay. Containing the publications of 1897 from January to December. Price 1s. 6d. London: Cedric Chivers, 10, Bloomsbury Street, W.C. January, 1898. From the Publisher.

Zur Kenntnis der Salophenwirkung. Von Dr. Richard Blocii. Being a reprint from 'Die Heilkunde Monatsschrift fur Praktische Medicin.' Pp. 6. Wien: Dr. Julius Weiss. From the Publisher.

"Scientific American Supplement" Reference Catalogue. Being a Catalogue of Valuable Papers. Pp. 48. New York City: Munn & Co., publishers, 361, Broadway. From the Publishers.

Jahresbericht über die Fortschritte der Chemie und verwandter Theile anderer Wissenschaften, begrundet von J. Liebig und H. Kopp, unter Mitwirkung namhafter Fachgenossen, herausgegeben von K. non Buchka. Fur 1896 (Erstes Heft, November, 1897). Braunschweig: Druck und Verlag von Friedrich Vieweg und Sohn. 1897.

Einige klinische und experimentelle Untersuchungen über Analgen und seine Anwendung bei Malaria, von Professor G. Scognamiglio in Neapel. Reprint from "Die Heilkunde Monatsschrift für praktische Medicin."

Ueber Tannon ein neues Antidiarrhoicum, von A. Bristowski. Reprint from *Pharmaceutischen Centrallhalle* 1897. No. 49

Algæ and Antiseptics. By Professor Rodney H. True. Reprint from the *Pharmaceutical Review*. Vol. VX., No. 8. From the Publishers.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

MARCH 24, 1898.

The week just ending has neither been characterised by any particular activity in the Drug and Chemical Markets, nor have any special changes worthy of record taken place. Iodine and Iodides still maintain their price. Quinine is quiet. Antipyrine Knorr is practically being superseded by its chemical equivalent Phenazone. Ipecacuanha is very firm, and appears likely to go even dearer. Rhubarb in good demand. New Cod-Liver Oil active and dearer, while last year's oil remains a drug on the market. Sulphate of Ammonia again lower. Bromine and Bromides, Quicksilver and Mercurials, Opium, Morphia, and Codeia without change. Cocaine quiet. Acetanilide and Phenacetine dull. Sulphonal expected to be higher. Glycerin quiet. Cream of Tartar and Acid Tartaric steady. Camphor dull for crude and steady for refined. Acid Boracic and Borax very quiet. Acid Citric very firm. The following are actual prices ruling for articles of chief interest :—

ACETANILIDE—Very quiet at 1s. 2d. to 1s. 3d. per lb. for *crystals* or *powder*, according to make, quantity and packing.

ACID BORACIC—Quiet at 23s. to 24s. per cwt. for *crystals*, and 25s. to 26s. per cwt. for *powder*.

ACID ACETIC.—The B.P. strength (33 per cent.) is quoted 15s. 3d. per cwt. in carboys; 70 per cent., 28s. 6d.; 80 per cent., 32s.; and the glacial (98-100 per cent.), 39s. 3d. per cwt.

ACID CARBOLIC—Dull at 6½d. to 6¼d. per lb., according to quantity and make for the 35° to 36° C. *ice crystal* in large bulk packing, other qualities and packing in proportion. *Crude*: 60° F., 2s. per gallon; 75° F., 2s. 6d. *Liquid*: 95 per cent of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC—Continues to be very firmly held at 12¾d. to 1s. 1d. per lb., and the general feeling is that we shall shortly see higher values.

ACID OXALIC AND OXALATES.—The Convention is reported to be very busy with these articles. *Acid crystals* are quoted 3⅝d. per lb. in large bulk, and *powder* 4⅛d. per lb. *Sal acetos*: Crystals 5d. per lb., powder ¼d. per lb. more. *Neutral oxalate potash*: 5d. per lb.

ACID PHOSPHORIC.—The slightly higher price lately fixed by makers for the 1·750 syrupy quality is maintained, the figure being 11d. per lb. for quantity in bulk.

ACID TARTARIC.—The position of this article has improved, and for *foreign* crystals 12⅝d. to 12¾d. per lb. is now quoted, *English* being firm at 1s. 1d. per lb.

ALOES.—*Cape* slightly firmer at, however, unchanged prices.

AMMONIA COMPOUNDS. — *Sulphate* continues a declining market. Gray prompt 24 per cent., London, £9 per ton. *Bromide* steady at 2s. 1d. to 2s. 2d. per lb. *Iodide* unchanged at 13s. 4d. per lb. *Sulpho-cyanide* firm at 1s. 2d. per lb. *Chloride*: Chemically pure small crystals, 32s. 6d. per cwt., free from metals 98 per cent., 26s. per cwt. *Oxalate*: 6¼d. to 6½d. per lb.

ANTIPYRINE.—Price of *Dr. Knorr's* article remains unchanged at 2s. 1½d. per oz. for quantity in 1-oz. tins.

ASAFŒTIDA.—A small, but steady inquiry goes on, and various little lots have been sold at from 45s. to 60s. per cwt. for low to medium qualities.

ATROPIA.—Very firm at the lately advanced prices of 16s. 5d. per oz. for the *pure* and 14s. 1d. for the *Sulphate P.B.*

BELLADONNA ROOT—Remains very scarce, especially for good quality, for which 45s. per cwt. is asked.

BISMUTH.—Unchanged at 5s. per lb. for the *Metal* and 4s. 10d. per lb. for the *Subnitrate* for large quantity.

BLEACHING POWDER.—Steady at £7 5s. per ton for quantity on spot.

BORAX.—A moderate trade passing at last rates—14s. to 14s. 6d. per cwt. for *lump*, and 14s. 6d. to 15s. per cwt. for *powder*.

BROMINE AND BROMIDES—Firm at late rates, say 2s. per lb. for the former and 1s. 10d. per lb. for *Potass. bromide*.

CAFFEINE—Without change at 14s. 4d. per lb. for the pure and 11s. 2d. per lb. for the *citrate*.

CAMPHOR.—*Crude* remains very dull, with very little business doing. Quotations: 87s. 6d. for *China*, and 92s. 6d. per cwt. for *Japan c.i.f.* *Refined* firm at unchanged prices, makers being fairly busy.

CASCARA SAGRADA.—Steady at 22s. 6d. to 24s. per cwt., according to quality and quantity.

CLOVES.—Privately *Zanzibar* are weak. Business has passed at 3⅝d. to 3⅞d. for spot, April to June delivery 3⅞d., and June to August 3¾d. to 3 23/32d. At auction of 203 bales *Zanzibar* 163 bales sold, middling to fair at 3½d. to 3⅝d., fine bright 4d. to 4¼d. *Penang* bought in at 6½d. to 10d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: 1s. 11d. per gallon. *Benzole*: 50 per cent., 1s. 7½d.; 90 per cent., 1s. 4d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 10d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 11d. per gallon.

COCAINE—Remains quiet, the brands most in favour being held for 10s. to 10s. 6d. per oz. according to quantity, while makes less favourably known are being offered below this figure; it is, however, positively stated that the position of *crude cocaine* would rather point to an advance in price of the refined article than to a decline.

CODEIA.—Without alteration at 11s. 3d. to 11s. 6d. per oz., according to quantity.

COD-LIVER OIL.—There has been a considerable business this week in new season's *Norwegian* at full to rather dearer prices up to 80s. per barrel, and the market closes strong, but the large second-hand stock prevents any big rise, such as the position of the new oil would appear to warrant. Old oil is dull, and is quoted 65s. to 70s. per barrel.

CREAM OF TARTAR.—Whilst business is restricted makers are firm, and an advance is anticipated with any improvement in the demand. First white French *crystals* on the spot are quoted 76s. per cwt.; *powder*, 78s. to 79s. per cwt.

ESERINE.—Price of the *sulphate* is 1s. 6d. per gramme.

GENTIAN ROOT—Is slightly weaker, good root being quoted at 23s. per cwt. on the spot.

GINGER.—The large quantity of 2816 bags rough *Cochin*, chiefly new crop, was offered at auction, but the demand was slow, and only 310 bags sold at rather easier rates: Cuttings, 17s.; shrivelled small pickings, 17s. 6d.; ordinary small old washed rough, 19s.; good new bright washed rough, 25s. to 26s. 94 cases new *Calicut* sold at steady rates, small and ends, 35s. to 36s; medium and small, 45s. to 46s., bold and medium 73s. to 76s., bold cut 86s. to 88s. 100 bags *Bengal* sold, without reserve, at 19s. 6d. 80 bags limed *Japan* bought in at 18s. New *Jamaica* is steady, the better qualities fetching higher prices. 350 barrels sold, low and common lean and dark Rhatoon 65s. to 66s., good common 72s., low middling brownish and small scraped 75s. 6d. to 81s. 6d., middling washed 83s. 6d. to 87s. 6d., one lot good middling bright 93s. 6d.

GLYCERIN—Quiet and somewhat slow of sale at 52s. 6d. to 57s. 6d. per cwt., according to quantity and brand, for the best German white double distilled chemically pure 1·260 quality in tins and cases. Other qualities and packing cheaper in proportion, English being offered at slightly cheaper figures than the above.

HYPOPHOSPHITES—Are in good demand. makers' prices being 3s. 3d. per lb. for either *Lime*, *Soda*, or *Potash*, in 10-cwt. lots.

ICHTHYOL —Prices of *Ichthyol ammonia* have now been fixed at 13s. per lb., including ½-lb. and 1-lb. tins, for smaller lots, and 12s. 6d. per lb. for 10 lbs. in one delivery. *Ichthyol soda*: 16s. per lb.

IODINE AND IODIDES.—So far the feared collapse in price has not taken place. Iodine remains at 7½d. per oz., and *Potass. Iodide* at 9s. 9d. per lb. for 2-cwt. lots in one delivery.

IPECACUANHA—Continues very firm at 8s. per lb. for ordinary *Rio*, at which a small business has been done this week, it being stated that a further advance in value is not improbable.

LITHIA—Is firm at the late advance, price of the *Carbonate* being 10s. 8d. per lb., and of the *Citrate* 6s. for the *cryst.*, and 6s. 6d. for the *powder* in 2-cwt. lots.

MENTHOL—Is firmer at 7s. 3d. to 7s. 6d.

per lb., whilst for arrival 7s. to 7s. 3d. per lb., March to May steamer, is the quotation.

Mercurials—Are without change at 2s. 2d. per lb. for *Corrosive sublimate* and 2s. 6d. per lb. for *Calomel* for large contracts.

Morphia.—Very quiet but unchanged as to price, 4s. 3d. per oz. being still quoted for the *Hydrochlorate powder* in quantity and in bulk.

Nitrate of Silver.—*Crystals* are quoted 1s. 5d. per oz.; *sticks*, 1s. 5¼d. per oz.

Nitrate of Soda—Steady at £8 per ton for *refined*.

Oils (Essential).—*Peppermint*: American has been in better demand, and prices close firmer. *HGH*: 5s. 9d. per lb. *Wayne County*: 3s. 9d. per lb. for choice. *Japanese*: Dementholised, on the spot, 3s. 3d. per lb. whilst for arrival the same price is asked, *c.i.f.* terms; 40 per cent., for arrival, 4s. 3d. per lb., *c.i.f.* *Star Aniseed* is in better demand at 6s. 9d. to 7s. per lb. on the spot, with sellers for arrival at 6s. 6d. per lb., *c.i.f.* *Cassia* quiet and unchanged on the spot; for arrival 75 to 80 per cent. has been done at 4s. 6½d. per lb., but more money is now asked; 80 per cent. quoted 5s. per lb. *c.i.f.* *Citronelle*: Some sales have taken place at 1s. 2d. per lb. for both drums and tins *Lemongrass* is quiet, but holders are firmer, 5d. per oz. being the nominal value.

Oils (Fixed) and Spirits.—*Linseed* has experienced a heavy fall since our last, but at the close show a partial recovery from lowest price touched, and the market has an upward tendency. On the spot pipes £15 5s., barrels £15 15s. *Rape* is lower and closes quiet. Ordinary brown on the spot £22, refined spot £23 10s. *Cotton*: The crude is unchanged at £13, but the refined is the shade easier at £14 5s. to £14 15s., according to make. *Olive*: These oils are firm. *Cocoanut*: Ceylon on the spot is unchanged at £23, but Cochin is rather easier at £28. *Palm*: Lagos, on the spot, £23 10s. *Turpentine* is again lower, closing very dull at 23s. 10½d. per cwt. for American on the spot. *Petroleum oil* is quiet and again lower at 4⅛d. per gallon, for Russian, and 4⅝d. per gallon for American. *Petroleum spirit* unchanged at 5⅜d. per gallon for American, deodorised 5¾d. per gallon.

Opium—Very quiet at about last week's prices, there being very little doing, quotations are *Soft shipping*: 10s. 3d. to 12s. 6d.; *Druggists*: 9s. 3d. to 10s. 6d.; *Manufacturing*: 8s. 4d. to 9s. 3d. per lb. *Persian*: A few cases have changed hands, prices remaining nominally 10s. to 11s. per lb.

Permanganate of Potash.—Market is steadier at 60s. per cwt. for *small crystals*, and 5s. more for *large crystals* in 1-cwt. kegs and for half-ton lots.

Phenacetin—Dull, the best makes are held for 3s. 9d. to 4s. per lb. according to quantity for both crystals and powder.

Phenazone—Is in growing demand, and is rapidly superseding Dr. Knorr's article, price being very considerably cheaper, in fact, just half, while chemically and otherwise the two articles are practically identical.

Pilocarpine.—Is firm at makers' price of 28s. per oz. for both the *Hydrochlorate* and the *Nitrate*.

Potash Compounds.—*Chlorate* is quiet with but few transactions passing, 3½d lb. is the nearest value in quantity. *Bromide* steady at 1s. 10d. per lb. *Iodide* steady at 9s. 9d. to 10s. 3d. per lb. *Prussiate*: Yellow 6¾d. per lb., red 1s. 2d. per lb. *Permanganate* slow of sale at 60s. per cwt. for small crystals, and 65s. per cwt. for large crystals in half-ton lots. *Oxalate*: Neutral firm at 5d. per lb. *Cyanide* very firm at 1s. 3d. per lb. for 98 per cent. cake, and still scarce for prompt delivery. *Bichromate*: 4d. per lb. *Bicarbonate*: 30s. per cwt. for crystal or powder.

Quinine—Remains very quiet, makers' prices for the best *German* brands being still 11d. per oz. for 1000-oz. lots in 100-oz. tins, whilst from second hand it is possible to buy somewhat below this figure. Opinions as to the future course of the article are somewhat divided. Buyers can, however, hardly be very wrong in securing a fair stock at present reduced value.

Rhubarb.—This article continues in good demand, and a fair business has been done privately this week in high dried at 1s. 2d. per lb., and *Canton* at 1s. 4d. to 1s. 5d. per lb.

Saccharin.—The question as to the rights of the *Saccharin Corporation* to the monopoly of the article appears to be still *sub judice*. Buyers will do well to see that they get the right article, and from a reliable source.

Saffron—Remains firm at 35s. to 42s. 6d. for *Valencia* and 25s. to 26s. for *Alicante*.

Salicine.—Makers' price is unchanged at 10s. 6d. per lb.

Senna.—*Tinnevelly*: The demand is very active, and a good business has been done this week from second hands in all qualities, more especially in those ranging in values between 3d. and 4d. per lb. *Pods* have been dealt in at 2d. to 2¼d. per lb.

Shellac.—There is rather more inquiry on the spot, and some small business has been done in *Second Orange* at fully steady prices, including middling to good bright *TN* at 62s. to 64s. per cwt., and blocky at 61s. per cwt., cash terms. The arrival market is quiet, with sales of *TN*, April to June steamer, at 59s. per cwt., *c.i.f.*, with further sellers at same price. The speculative market is fairly steady but quiet.

Soda Compounds.—*Crystals*, on ex-ship terms, are still quoted 60s. per ton. *Bicarbonate*: For the commercial quality, 98 per cent., £7 5s. per ton remains the quotation, and 18s. per cwt. is asked for the pure and fully-bicarbonated article. *Hyposulphite* is in good demand at 5s. 6d. to 8s. per cwt. according to brand. *Iodide* steady at 11s. 7d. per lb. *Bromide*: 2s. 2d. per lb. *Nitrate*: Refined £7 15s. to £8 5s. per ton. *Sulphite*: 17s. 6d. to 22s. 6d. per cwt. according to brand. *Caustic*: £7 15s. per ton for the 70 per cent. and 20s. per ton less for the 60 per cent.

Spices (Various).—*Black Pepper*: Lampong bought in at 3¾d., 26 bags Mangalore extra bold clean heavy sold at 7¾d. to 8d. *White Pepper*: Only 84 bags Penang, chiefly damaged, sold without reserve at 6¼d. *Capsicums*: 17 bales Bombay bought in, ordinary brownish round 32s. 6d., bold dull 50s. *Chillies*: Zanzibar bought in at 35s. to 42s. 6d., and Japan good to fine bright at 50s. to 52s.; 10 bags fine clean red African sold at 44s. *Cassia lignea*: 200 boxes bought in at 52s., also 449 bales broken at 35s. to 38s. *Cinnamon chips*: 100 bags coarse Ceylon sold at 3d. *Mace*: 8 cases Penang sold, without reserve, partly wormy, at 1s. 7d. to 1s. 8d.; 31 packages West India sold, low to good, 1s. 4d. to 1s. 9d. *Nutmegs* are dull at about previous rates. *Pimento* chiefly bought in at 4½d. to 4¾d., only 16 bags being sold at 4⅜d.

Sugar of Milk.—Very finest quality is obtainable at 57s. 6d. per cwt. for *powder* in 2-cwt. cases for quantity.

Sulphate of Copper.—A fair business passing at firm rates. Quotations unchanged at £16 5s. to £17 per ton, according to brand.

Sulphonal.—One of the two principal makers is still accepting orders for limited quantities at 7s. 3d. per lb. It is believed, however, that an important advance in price of the article is not improbable in the near future.

Turmeric—Continues dull and quiet, with but few sales. *Bengal* is quoted 14s. 6d. per cwt., good *Madras* finger, 19s.; and fair *Cochin* split bulbs at 8s. 6d. per cwt.

NEWCASTLE CHEMICAL REPORT.

March 23, 1898.

This chemical market is very quiet, without any change in values. Bleaching Powder, according to market, £6 5s. to £6 10s. Caustic Soda, 70 per cent. basis, £7 10s. Soda Crystals, basis, 45s. to 57s. 6d. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

March 23, 1898.

A better feeling prevails in the trade locally, and inquiries for spring shipments are said to be fairly good. Soda Crystals are about 2s. 6d. a ton higher, and Caustic Soda, especially high strength, is firm, but Bleaching Powder continues to rule rather dull. Sulphate of Copper is a shade lower, being quoted £16 10s. to £17 per ton, best brands, delivered Manchester. In face of the advance in the metal, this is rather unusual, and it would appear that there are good stocks of the material, both in first and second hands. Brown Acetate is still scarce, but without change in last week's prices. Yellow Prussiate is fairly firm at 6¾d. to 7d. per lb., best local makes, and Green Copperas is a shade easier, but without change in price. Benzols and Naphthas are steady. Alum continues dull and is quoted £4 17s. 6d. to £5 for loose lump. Recovered Sulphur is rather higher, £4 17s. 6d. to £5 in bags on rails.

LIVERPOOL REPORT.

March 23, 1898.

Quotations generally have not changed to any great extent since last report. Potashes have dropped 9d. per cwt. and so has spirit of turpentine; slightly easier prices also ruling in linseed and linseed oils.

Ammonium Salts.—*Sulphate* is lower in price, being now quoted at £9 5s. per ton, others unchanged.

BEESWAX.—5 blocks of Sierra Leone found buyers at £6 8s. 9d. per cwt.

BLEACHING POWDER. — £5 12s. 6d. to £6 5s. per ton.

CARARYSEED—Is neglected at the present moment, so that the price, 26s. to 27s. per 464 lbs. for Turkish is only nominal.

CARNAUBA WAX.—Further sales of yellow have been effected at the slightly lower price of 70s. per cwt.

CHILLIES.—30 bags good Sierra Leone fruit sold at 44s. per cwt.

KOLA NUTS.—Small sales of fresh took place at 2½d. per lb.

LINSEED—Is a little steadier in tone. 20 tons River Plate were bought up ex-store at 34s. 9d. per 416 lb. Calcutta is offering on the spot at 36s. 6d., forward at 35s.

RIVER PLATE—Offers at 34s. 6d., forward 33s.

OILS (FIXED) AND SPIRITS.—*Castor Oils* are just now quiet, and though Calcutta is quoted at 3¼d. to 3$\frac{5}{16}$d. per lb., and French 1st pressure 3¼d., lots off the quay could be bought at a lower figure, inquiry being small. *Olive Oils*—Spanish have sold to about 40 tons, and are quoted at £33 to £33 10s. for Malaga and Seville. *Linseed Oil* is offering at 17s. to 17s. 6d. per cwt. *Cottonseed Oil* is unchanged at 15s. 3d. to 15s. 9d. per cwt. *Spirits of Turpentine* is in buyers' favour at 9d. per cwt. less, viz., 25s.

POTASH SALTS.—*Cream of Tartar* is still at 77s. to 78s. per cwt., but inquiries are few. *Potashes* are dull at the reduced rate of 20s. 9d. per cwt. *Pearlash* is only nominal at 37s. 6d. to 40s. per cwt.

SODA SALTS.—*Bicarbonate* firm at £6 15s. per ton. *Borax* quiet at 13s. 10d. per cwt. *Caustic*: 76 per cent. to 77 per cent £8 15s. per ton; 70 per cent. £7 5s.; 60 per cent. £6 5s. *Crystals* dearer £3 per ton.

SULPHUR.—Roll, £6 5s. per ton. Flowers, £7 12s. 6d.

SULPHATES.—*Copper* quiet at £16 7s. 6d. to £16 10s. per ton. *Iron* firm at 36s. per ton for Welsh, and 38s. for Lancashire.

MARRIAGES.

BLOMFIELD—POLL.—On March 16, at the Lewisham Congregational Church, by the Rev. J. Morlais Jones, Francis H. Blomfield, chemist, of Erith, to Louisa E. Poll, only daughter of the late Isaac Poll, of Sydenham.

Football.

PHARMACEUTICAL FOOTBALL CLUB V. BLOOMSBURY.—This match was played on Saturday last at Acton, and resulted in a win for the Pharmaceutical by 3 goals to 1.

PHARMACEUTICAL TEAM.—Prescott, goal; Jones and Metcalfe, backs; Payne, Nelson, and Evans, half-backs; Shelton, Day, Owen (centre), Warren, and Wild, forwards.

NEW BOOKS AND NEW EDITIONS.

"Animated Photography: The A.B.C. of the Cinématograph." By Cecil M. Hepworth. 1s. London: Hazell, Watson, & Viney.

"The Food Plants of Scale Insects (Coccidæ)." By T. D. A. Cockerell. Pp. 60. 8vo., sewed. 3s. London: Wesley.

"A Text-Book of General Botany." By C. C. Curtis. Pp. 360. 4to., cloth. 12s. net. London: Longmans.

"Agricultural Chemistry." By Adie and T. C. Wood. 2 vols. Pp. 6+280 and 7+229. Small cr. 8vo., cloth. 7s. net. London: K. Paul.

"Rust, Smut, Mildew, and Mould." By M. C. Cooke. Being an introduction to the study of microscopic fungi. Sixth edition. Revised and enlarged. Illustrated. Pp. 270. Cr. 8vo. 6s. London: W. H. Allen.

"North American Lemnaceæ." By C. H. Thompson. Illustrated. Pp. 22. 8vo., sewed. 1s. 6d. net. London: Wesley.

"A Plain and Easy Account of British Fungi." By M. C. Cooke. With especial reference to the esculent and economic species. Sixth edition, revised. Illustrated. Cr. 8vo. 6s. London: W. H. Allen.

EXCHANGE.

OFFERED.

Shop Fittings.

Entire Fittings of Chemist's Shop to be sold in one lot or parts, or shop may be rented as fitted. Best offer accepted.—149, Barking Road, Canning Town, E.

Miscellaneous.

Block-tin Still, complete, new, price 14s.; 4 Hypodermic Syringes, in cases complete, price 2s. 6d. each; Female Rubber Urinal, Maw's, condition new, price 8s. 6d.; No. 3 Kodak, ready charged, A1 condition, price £5 10s.—"Chemist," Milton Road, West Cliff, Southend.

Werner's Pill-massing Machine, 6 lbs. size, nearly new, price £5, cost £8 10s., *vide* 'C. and D. Diary,' 1897 and 1898.—Holden, Chemist, Barnsley.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Twelve Pound Tins finest English honey, six shillings each, free on rail.—Abraham, Wainfleet St. Mary.

Loze & Co.'s No. 1A soda-water machine, for filling syphons and corked bottles, complete; indispensable to chemists; self-working by chemical action; original cost, £41; cash price, £22; including about 3 cwt. soda for generating gas; reason for sale, purchasing larger plant.—T. Marris, Mineral-water Manufacturer, Worksop.

Six well-tried and effectual formulæ, viz., eczema mixture, 1s. 6d.; neuralgia mixture, 1s. 6d.; influenza mixture, 1s.; erysipelas mixture, 1s.; epilepsy mixture, 2s. 6d.; tonic bitters, 1s.; with matter for labels and circulars, 1s. extra.—Prescriber, 6, Norfolk Street, Sunderland.

WANTED.

Wanted.—*Pharmaceutical Journal*, July 13, August 3, 1895. Full price will be paid for clean and complete copies by the Publishers, 5, Serle Street, London, W.C.

Wanted, old electric lamps and scrap platinum, or old platinum utensils; utmost value promptly remitted by—P. Rowsell, 14, Walcot Square, Lambeth, London, S.E. (Please mention this paper).

Wanted, Maisch's 'Materia Medica,' Proctor's 'Pharmacy,' fairly recent editions.—Davis, 7, Sidney Terrace, Weston-super-Mare.

Wanted, Southall's 'Materia Medica Cabinet,' either C or D collection. Send particulars to Mallinson, c/o Reynolds, Chemist, Harrogate.

DIARY FOR THE WEEK.

SATURDAY, MARCH 26.

PHARMACEUTICAL FOOTBALL CLUB V. PAST AND PRESENT, at Wormholt Farm, Shepherd's Bush. Kick off at 3.45. A smoking concert will be held at the Bush Hotel after the match.

MONDAY, MARCH 28.

ABERDEEN PHARMACEUTICAL ASSOCIATION, at 11 a.m. Special meeting in the rooms, 21, Bridge Street.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION, at 8 p.m.
"Chats on Trade Topics," by E. Mackay.

ROYAL GEOGRAPHICAL SOCIETY, at 8.30 p.m.
"Exploration On and Around Mount Aconcagua," by Edward A. Fitzgerald.

TUESDAY, MARCH 29.

LEICESTER CHEMISTS' SOCIAL UNION, at 8.30 p.m. Annual Dinner. (Wyvern Hotel.)

ROYAL INSTITUTION, at 3 p.m.
"The Simplest Living Things" (Lecture XI.), by Professor E. Ray Lankester.

WEDNESDAY, MARCH 30.

NEWCASTLE-ON-TYNE AND DISTRICT CHEMISTS' ASSOCIATION, at 8 p.m.
Annual Dinner. Also Presentation of Testimonial to Mr. Barnard S. Proctor. (Metropole Hotel.)

THURSDAY, MARCH 31.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY. Conversazione.

CHEMICAL SOCIETY, at 3 p.m.
Annual General Meeting.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
"Alternation of Generations," by Harold Matthews.

ROYAL INSTITUTION, at 3 p.m.
"Recent Researches in Magnetism and Diamagnetism" (Lecture V.), by Professor J. A. Fleming.

FRIDAY, APRIL 1.

ROYAL INSTITUTION, at 9 p.m.
"Liquid Air as an Analytic Agent," by Professor Dewar.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Frederick M. Miller and J. W. MacVine, Surgeons, Northolme, Upper Clapton, and 284, Amhurst Road, Stoke Newington. Debts will be received and paid by Frederick M. Miller.

G. Lacy Barritt and Wm. L. Byham, Physicians and Surgeons, Spalding, Lincs. Debts will be received and paid by G. Lacy Barritt, Robert Rees and Geo. Latham, Physicians and Surgeons, West Bromwich.

Ernest Watson and Edward Boustead (trading as the Valnera Co.), Patent Medicine Manufacturers, 10, St. George's Crescent, Liverpool. Debts will be received and paid by Edward Boustead.

W. J. Shone and F. J. F. Culhane, Surgeons, Great Marlow, Bucks.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

Chas. Edward Davies (lately trading as P. H. Schroder & Co., also formerly as C. E. Davies & Co., and now as Parker, Davies, & Co.), 34, Mincing Lane, E.C., and residing at Mountford Lodge, Kent Road, Gravesend.

John A. Parkins, Dentist, 29, Church Road, Lower Broughton (lately residing at 38, Talbot Road, Old Trafford, and 267, Chapel Street, Salford, and lately carrying on business at 8, King Street, Manchester).

NEWS & TRADE NOTES

MENE TOWELS

These towels are made in three sizes, retailing at 6d., 1s., and 1s. 6d. per dozen respectively, and they are worthy of special attention on account of their wonderful capacity for absorption of fluid. A single towel will take up 32 C.c. of fluid, and the waterproof wool backing prevents any of it passing through. The outer covering is absorbent gauze, then comes a layer of absorbent cotton, whilst the bulk of the towel consists of cellulose wadding, which possesses marvellous diffusive properties. The whole is rendered sterile by being treated with 1 in 2000 sublimate solution.

PROFITABLE PERFUMERY.

Messrs. Ayrton & Saunders, of Liverpool, are offering excellent value in perfumes put up in fancy glass bottles. The 6d. sizes are supplied at 48s. per gross, the 1s. lines at 96s. per gross, the 1s. 6d. sizes at 12s. per dozen, and a special 1s. 8d. size at 14s. per dozen. The last-mentioned is a 2-oz. bottle of best triple extract perfume, and chemists may have their own name and address printed free on the labels with orders of not less than six dozen. Similar advantages are offered with the other sizes, and chemists who are anxious to push specialties of their own would do well to write for samples.

VI-COCOA.

The cocoas on the market are many and various, but amongst them Dr. Tibble's Vi-Cocoa continues to hold its own. The preparation, as is well known, contains a certain proportion of kola and extract of malt, and its flavour commends it to many who object to that of unmixed cocoa. The retail prices of the preparation are protected, the minimum for each size being but slightly below the face prices, and anyone cutting below the minimum will be refused supplies by the makers.

MESSRS. BARCLAY & CO., LIMITED.

The second annual ordinary general meeting of this Company will be held at the Memorial Hall, Farringdon Street, E.C., on Wednesday, April 6, at 2.30 p.m., to receive the Director's report and statement of accounts to December 31, 1897; to elect a director and auditor; to declare dividends; and to transact the business of an ordinary general meeting. The report shows a profit balance of £1761 0s. 6d., being an increase of £454 1s. 6d. over 1896. The Directors recommend a dividend on the ordinary shares of 5 per cent., leaving a balance of £802 9s. 6d., which it is proposed to carry to the reserve funds and to write off the capital account.

RECEIVING ORDER IN BANKRUPTCY.

(From the London Gazette.)

Samuel Addingley, Glass Bottle Manufacturers, Lyndhurst, Tansheef, Pontefract, and carrying on business at Hope Glass Works, Knottingley, Yorks.

NEWS IN BRIEF

Mr. George R. Durrant, chemist and druggist, of Hertford, has taken into partnership his son, George Stuart Durrant, and the name of the firm in future will be George Durrant and Son.

The Students and Ex-Students of the North of England School of Chemistry and Pharmacy, Newcastle-on-Tyne, held their annual re-union in the Grand Assembly Rooms on Wednesday, March 16. Mr. James Whittle, Morpeth, presided over a very large company of ladies and gentlemen. Mr. N. D. Pringle, an "Old Boy," in the name of the present and past students, presented Mr. Merson, who until lately was Principal of the School, with a splendid illuminated address. Coupled with Mrs. Merson's name he also presented a magnificent onyx marble drawing-room timepiece and side ornaments suitably inscribed. Mr. Merson replied briefly, stating how much he appreciated the good feeling which had prompted this mark of esteem from his old pupils. Mr. F. R. Dudderidge, Principal of the School, proposed a vote of thanks to the Chairman and Presentation Committee, and this was seconded by Mr. T. Maltby Clague, Local Secretary of the Pharmaceutical Society. Immediately on the termination of this pleasant ceremony the company proceeded to the ballroom, where dancing was engaged in with zest till after 2 a.m.

A Photographic Exhibition is to be held in the City Art Gallery, Manchester, during April, all the Photographic Societies within eighty miles of Manchester taking part.

Sir George King has retired from the superintendence of the Royal Botanic Gardens, Calcutta, and has been succeeded by Surgeon-Major David Prain.

Mr. W. Prebble has opened a shop at 14, Newmarket Street, Blackburn. The whole of the fittings, including cabinet ware, show jars, bottles, show cases, counters, etc., being carried out by Messrs. Ayrton & Saunders.

Leicester Chemists' Social Union.—The annual dinner and concert was held in the Wyvern Hotel on March 29. About forty persons sat down to a splendid repast, which was followed by several excellent speeches from the President, Mr. T. Howard Lloyd, and other gentlemen.—An encouraging report of the year's work was read by Mr. F. W. Goodess, Hon. Sec., and a report from Mr. Hearnshaw, Hon. Treasurer.—The Committee and officers were then unanimously re-elected.—Afterwards a good musical programme was gone through, which contributed much to the success of the evening.

Mr. L. Tierney, chemist, Marple, has passed the Intermediate Examination for the degree of M.B.Ch.B. of the Victoria University.

Chemists' Assistants' Association.—The third and last Cinderella of the season was held at the Portman Rooms on Thursday, March 24. In spite of the extreme inclemency of the weather, a large number of members and their friends assembled and spent a thoroughly enjoyable evening. The arrangements were again in the experienced hands of Messrs. Robins and Cooper, and were admirably carried through.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

J. Hervey Jones & W. C. Grosvenor, Physicians and Surgeons, Chorlton Lodge, Stretford Road, Manchester, and 82, Alexandra Road, Moss Side, Manchester. Debts will be received and paid by W. C. Grosvenor, who will continue the practice.

Barnard S. Proctor & T. M. Clague (trading as Proctor, Son & Clague), Chemists and Druggists, Newcastle-on-Tyne. Debts will be received and paid by T. M. Clague, who will continue the business under the old style.

Edward Wavell, 144, Victoria Street, S.W., and R. D. Littlefield, 4, Victoria Terrace, Hove, Chemists and Druggists. Debts will be received and paid by R. D. Littlefield.

LIVERPOOL REPORT.

March 30, 1898.

Ammonium Salts.—*Carbonate*: 3d. per lb. *Sal ammoniac* firm at 35s. and 33s. per cwt. *Sulphate* is very dull, £8 17s. 6d. per ton.

Beeswax.—Sales of Chilian are reported at £7 to £7 2s. 6d. per cwt.

Bleaching Powder—Is quiet at £5 12s. 6d. to £6 5s. per ton.

Canaryseed.—Turkish continues nominal at 26s. to 27s. per 464 lbs.

Copperas—Is very firm at 38s. per ton for Lancashire and 36s. for Welsh.

Copper Sulphate—Is quiet at £16 5s. to £16 7s. 6d. per ton.

Hempseed.—84 bags of Syrian were sold ex quay on private terms.

Kola Nuts.—30 packages of dried found buyers at 1½d. per lb.

Linseed—Is firm, but business is not plentiful, small quantities of Calcutta have sold ex quay at 36s. per 416 lbs., and River Plate at 34s. 6d. 100 bags Turkish feeding seed went for 38s. 6d. for 416 lbs.

Oils (Fixed) and Spirits.—*Castor* is slow of demand, through holders expecting late rates. Calcutta good seconds 3¼d. to 3$\frac{15}{16}$d. per lb., and French first pressure at 3¼d. per lb. *Olive*: Spanish origin are still quoted at £32 to £33 10s. per ton, with a moderate inquiry and fair business passing. *Linseed* of Liverpool make is firm at 17s. to 17s. 6d. per cwt. *Cottonseed* is steady at 15s. 3d. to 15s. 9d. per cwt.

Spirits of Turpentine—Is firm at the improved price of 25s. 3d. to 25s. 6d. per cwt.

Phosphorus.—Wedges, 2s. per lb.; sticks, 2s. 1d.; amorpuous, 2s. 8 d. per lb.

Potash Salts.—*Bichromate*: 3¾d. per lb. *Chlorate*: 3¼d. to 3½d. *Potashes* very dull at 20s. 9d. per cwt. *Pearlashes* nominal at 37s. 6d. to 40s. per cwt. *Prussiate*: 6¾d. per lb. *Saltpetre*: 21s. 6d. per cwt.

Sulphur. — Roll, £6 5s. Flowers, £7 12s. 6d. per ton.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

MARCH 31, 1898.

Business has again been restricted during the past week, the threatening aspect of the political horizon having by no means tended to improve matters. The chief feature has been the weakness of Quinine, the advent of the Java-made article on the European markets having discouraged holders; the actual changes in prices have been otherwise slight. Cocaine is steady. Phenacetine quiet. Sulphonal without change. Bromine and Bromides, Iodine and Iodides, Quicksilver and Mercurials steady at unchanged prices. Cream of Tartar. Tartaric Acid and Citric Acid firm. Acid Boracic and Borax fairly steady. Permanganate of Potash quiet. Acid Carbolic dull. Sulphate of Ammonia weak. Senna in good demand. Orris Root firmer. Shellac dull and weak. Glycerine quiet. Cod-liver Oil dearer for the new oil. Acetanilide quiet. Camphor steady. The following are actual prices of articles of chief interest:—

ACETANILIDE—Is quiet at 1s. 2d. to 1s. 3d. per lb.

ACID BORACIC—Fairly firm with moderate inquiry, *crystals* 23s. per cwt., *powder* 25s. per cwt.

ACID CARBOLIC—Is quiet at 6½d. to 6⅝d. per lb. for the 35° to 36° C. *ice crystal* in large packing, other qualities and packing in proportion. *Crude*, 60° F., 2s. 1d. per gallon; 75° F., 2s. 7d.; *liquid*, 95 per cent., of pale straw colour, 1s. 2d. per gallon in quantity and in 40-gallon casks.

ACID CITRIC—Frm at 12¾d. to 1s. 1d. per lb.

ACID OXALIC—Firm at 3⅝d. to 3¾d. per lb., according to quantity.

ACID TARTARIC—Is firm at 12¾d. per lb. for *foreign* and 1s. 1d. per lb. for *English* crystals.

AMMONIA COMPOUNDS.—*Sulphate* remains very dull, but prices are unchanged since last week at £9 for gray, prompt, 24 per cent., London. *Bromide* firm at 2s. 1d. to 2s. 2d. per lb. as to quantity. *Iodide* steady at 13s. 4d. per lb. *Sulpho-cyanide* firm at 1s. 2d. per lb. *Oxalate*: 6¼d. to 6½d. per lb. *Sal ammoniac*: Firsts, sublimed, 35s. per cwt.; seconds, 33s. per cwt. *Chloride*: 26s. to 32s. 6d. per cwt. as to quality.

ASAFŒTIDA—Is in better inquiry for the United States, and a few parcels have been sold at private rates.

BLEACHING POWDER.—Quiet but unchanged at £7 5s. per ton for quantity.

BORAX—Unchanged at 14s. to 14s. 6d. per cwt. for *crystals* and 14s. 6d. to 15s. per cwt. for *powder*.

BROMINE AND BROMIDES—Unchanged, *Pot. Bromide* being in good demand at 1s. 9d. per lb. in half-ton lots.

CAMPHOR.—*Crude*: Quotations are steady, but very little business is doing. *China* is quoted 89s. per cwt., *c.i.f.*, and *Japan* 94s. per cwt., *c.i.f.*

CLOVES.—Privately *Zanzibar* are steady though quiet. Sales include June-August delivery at 3 2/3 3/3d. to 3 1/16d. At auction only 55 balcs *Zanzibar* offered, of which 30 bales fine bright sold at 4d. 25 cases *Penang* all bought in.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: 1s. 9d. per gallon. *Benzole*: 50 per cent., 1s. 6½d. per gallon; 90 per cent., 1s. 4d. *Crude Naphtha*: 30 per cent. at 160° C., 8½d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 10½d. per gallon.

COCAINE.—Best brands are held for 10s. to 10s. 6d. per oz. according to quantity, this being makers' price, while from second hand it would be possible to shade these figures.

CODEIA—Steady at 11s. 3d. to 11s. 6d. per oz.

COD-LIVER OIL.—Owing to the stormy weather and consequent unsatisfactory yield of the fishery so far, price for new *Norwegian* oil has advanced appreciably, quotations now ranging from 80s. to 95s, *c.i.f.*, according to brand, while the possibility of even higher prices is freely discussed. This advance in price of new oil has naturally also improved the demand for old oil, which is also stated not to be in such large supply as had been generally believed. The official report of the production of cod-liver oil in Lofoden to March 26, 1898, 6510 hectolitres, against 11,000 in 1897, 6240 in 1896, 10,700 in 1895, 8160 in 1894, and 17,045 in 1893. Market in Norway very excited, and prices rapidly advancing.

CREAM OF TARTAR—Is very firmly held on the other side, but business here is not very active. First white *crystals* on the spot are held for 76s. 6d. per cwt., and *powder*, 78s. 6d. to 79s. 6d. per cwt., same position.

DANDELION ROOT—Is very scarce, for thin *German* root 42s. 6d. per cwt. is asked, whilst for prime 45s. to 47s. 6d. per cwt. would have to be paid. There seems to be no *English* root available.

ESERINE (*Physostigmine*).—It is proposed to fix a new scale of prices for this article, based on 1s. 6d. per gramme for quantities of less than 25 grammes.

GINGER.—*Cochin* continues flat, and of the light supply of 578 bags rough, only 127 bags sold without reserve. Medium and small wormy washed at 17s. 6d. Of cut kinds, 35 cases sold at easier rates; old B cut at 67s. 6d.; new bold cut *Calicut* at 78s. 6d. to 83s. 100 bags limed *Japan* bought in at 19s.; also 130 bags *African* at 23s. *Jamaica* is firm, and higher qualities realised better prices; about 270 barrels sold, very common, lean and dark Rhatoon, 65s.; good common small and brown, 70s. to 75s.; low middling small and dull, scraped and washed, 76s. to 81s.; middling dull, 82s. 6d. to 83s.

GLYCERIN—Quiet at 52s. 6d. to 57s. 6d., according to quantity and brand, for *German* double-distilled, chemically pure white 1·260 quality in tins and cases, price of *English* being slightly below these figures.

GUM TRAGACANTH.—Demand has been fairly active, resulting in business for export to United States, as well as some small lots for the home trade. Firsts are quoted £13 10s. per cwt., seconds, £12 5s.; thirds, £11; fourths, £9 10s., and lower qualities in proportion.

IODINE AND IODIDES—Unchanged at 7½d. per oz. for the former, 9s. 9d. for *Pot Iodide*, and 13s. 4d. for *Iodoform* in large bulk quantity.

JAPAN WAX—Quiet at 35s. 6d. per cwt. on the spot.

MENTHOL—Steady at 7s. 3d. to 7s. 6d. per lb. for fine white *crystals* on the spot.

TURMERIC—Remains dull with small private sales of *Bengal* at 13s. 9d. per cwt., and *Madras* fair bright finger at 19s. cwt.

MERCURIALS—Unchanged at 2s. 2d. per lb. for *Corrosive Sublimate*, and 2s. 6d. for *Calomel* in 5 cwt. lots.

MORPHIA.—Price is nominally still at 4s. 3d. per oz. for the *Hydrochlorate* powder, demand for the article remaining very quiet.

NITRATE OF SODA—Steady at £7 15s. to £8 per ton for *refined*, according to quantity and packing.

OILS (ESSENTIAL).—*Peppermint*: American *H.G.H.* steady with an improved inquiry, on the spot 5s. 9d. per lb. is quoted, whilst for arrival prices are rather firmer. *Japanese*: Dementholised 3s. per lb., and 40 per cent. 4s. 3d. per lb., both *c.i.f.* terms. *Star Aniseed* is rather easier at 6s. 6d. to 6s. 9d. per lb. on the spot, the quotation for arrival remaining at 6s. 6d. *c.i.f.* *Cassia* slightly firmer, 75 to 80 per cent. being quoted 4s. 7½d., and 80 to 85 per cent. 5s. per bottle *c.i.f.* terms. *Citronelle* steady with small sales at 1s. 2d. per lb. for tins, and 1s. 1½d. for drums. *Lemongrass* fairly steady at 5d. per oz.

OILS (FIXED) AND SPIRITS.—*Linseed*: An improvement has taken place in this market; on the spot pipes £15 12s. 6d., barrels £16 5s. *Rape* firm at the late reduction; ordinary brown on the spot £22, refined £23 10s. *Cotton*: Dearer, closing firm; London crude spot £13 2s. 6d., refined £14 10s. to £15, according to make. *Olive*: Spanish and Levant unchanged at £33. *Coconut*: Ceylon on the spot unchanged at £23, but Cochin same position is lower at £27 10s. *Palm* lower at £23 on the spot. *Turpentine*: Rather firmer and closing steady at 24s. per cwt. for American on the spot. *Petroleum Oil* is dull but unchanged at 4⅛d. per gallon for Russian on the spot, and 4½d. per gallon for American; Water-white 5¾d. per gallon. *Petroleum Spirit*: American 5½d. per gallon, deodorised 5¾d. per gallon.

OPIUM.—Very quiet at unchanged prices. In Smyrna a few cases have changed hands at 8s. 2d. to 8s. 4d. per lb.

ORRIS ROOT.—A good export business to the United States is reported from Leghorn, and stocks, both of Florentine and Verona, in first hands are said to be small. *Florentine* is quoted from 35s. to 50s. per cwt., *c.i.f.*, according to quality.

Permanganate—Quiet but steady at 60s. and 65s. per cwt. respectively for small and large *crystals* in ton lots.

Phenacetin—Is rather firmer at 3s. 9d. to 4s. per lb., according to quantity for the best brands.

Pilocarpine.—Price remains unchanged at 28s. per oz. for both the *Muriate* and the *Nitrate* in 1-oz. lots. It is expected, however, that prices will advance considerably ere long in consequence of the dearth of *Jaborandi Leaves* of suitable quality for the manufacture of the alkaloid.

Potash Compounds.—*Chlorate* is very dull and spot quotation is unchanged at 3½d. per lb. *Bromide* firm at 1s. 10lb. *Iodide* unchanged at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Prussiate*: Yellow, 6¾d. per lb.; red. 1s. 2d. per lb. *Bichromate*, 4d. per lb. *Oxalate* steady at 5d. per lb. for the neutral. *Permanganate* quiet and unchanged at 60s. per cwt. for small, and 65s. per cwt. for large crystals. *Cyanide* firm at 1s. 3d. for 98 per cent. cake. Makers are still unable to overtake deliveries. *Bicarbonate* unchanged at 30s. per cwt. for crystal or powder.

Quicksilver—Is dull with but small business doing. First hands still ask £7 2s. 6d. per bottle, whilst second hands are 6d. to 9d. less, according to quantity.

Quinine.—Market is very dull, the advent of the Java made quinine having frightened holders. Makers' price remains unchanged at 11d. for best *German* brands, but from second hand there are sellers of limited quantity at 10d. per oz., and possibly even below this figure.

Senna.—It is said that over 100 bales *Tinnevelly* have changed hands this week by private sale at very full prices from 2½d. to 4½d. per lb. for fair small to medium bold greenish leaf. *Alexandrian*: The principal demand is for finest picked leaves, of which there are none in London in first hands. A few bales broken leaf have been sold at about 4½d. per lb.

Shellac.—The sales on Tuesday marked a further decline. Supplies were moderate, but the bidding opened very slowly, improved however, as the sale progressed, and about one-third found buyers at a decline of about 1s. to 2s. per cwt. on good *second Orange*. A total of 943 cases was offered, and 312 cases sold. *Second Orange*: Of 684 cases 294 sold; fair bright, very slightly matted, at 60s.; sickly palish flat at 59s. to 60s.; fair bright curly cakey, little broken, at 59s. to 60s.; fair bright reddish cakey at 59s. to 60s.; strong curly cakey, 59s.; curly red cakey to blocky at 58s.; fair bright shivered at 58s.; ordinary reddish livery at 57s. to 58s. *Garnet*: 59 cases offered and bought in; fair flat ruby *PBG* at 66s., and blocky *OCC* at 67s. *Button*: Of 200 cases 28 sold, chiefly without reserve; weak glassy 2nds, of good colour, at 66s.; common dark 2nds at 62s. The market, since the auctions, has shown more firmness, with improved demand. Prices in Calcutta are also higher.

Soda Compounds.—*Crystals* unchanged at 60s. per ton, ex ship terms. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* steady at 11s. 7d. per lb. *Hyposulphite* firm at 5s. 6d. to 8s. per cwt., according to brand. *Bicarbonate* is firm at £7 5s. per ton for the commercial 98 per cent., and for the fully bicarbonated quality 18s. 6d. per cwt. remains the quotation. *Sulphite* steady at 17s. 6d. to 22s. 6d. per cwt., according to brand. *Nitrate*: Refined, £7 15s. to £8 5s. per ton. *Caustic*: £7 15s. per ton for the 70 per cent., and 20s. per ton less for the 60 per cent.

Spices (Various).—*Black pepper*: Only 40 bags Aleppy offered and bought in at 4d. *White pepper*: 119 bags Penang sold, chiefly without reserve at 6⅞d. to 6¼d.; 40 bags Singapore sold, mainly fine at 8½d., one lot 7½d. *Chillies*: 54 cases good and fine bright Japan sold at 40s. 6d. to 42s. *Capsicums*: Only very small lots offered and bought in. *Cinnamon Chips*: 160 bags Ceylon bought in at 3d. to 3½d. *Mace*: 10 boxes *Singapore* bought in at 1s. 10d.; 19 packages *West India* sold at 1s. 5d. to 1s. 8d.; low, 1s. 4d. *Nutmegs* dull; 80 packages *West India* sold, 65's at 2s. 2d., 71's to 74's, 1s. 11d. to 1s. 9d.; 80's to 87's, 1s. 8d. to 1s. 7d.; 92's to 94's, 1s. 5d.; 94's to 99's, 1s. 4d.; 102's to 107's, 1s. 3d.; 106's to 111's, 1s. 2½d. to 1s. 2d.; 120's to 124's, 1s. 1½d. to 1s. 0½d.; 135's at 11d. *Pimento*: Only 49 bags were offered, and bought in at 4½d. to 4⅝d.

Sulphate of Copper—Steady on the spot at £16 10s. to £17 10s. per ton, according to brand.

Sulphonal.—The position of this article remains unchanged, outside makers appear to be sold out, and quote fancy prices. One of the two recognised makers is declining orders, the other states his willingness to still supply regular and favoured customers with limited quantities at 7s. 3d. per lb.

To-day's drug auctions passed off somewhat quietly, with, however, rather more animation than might have been anticipated in view of the actual condition of the drug and chemical trade, owing possibly to the fact that the next sales will take place four weeks hence.

Aconite Root.—11 bags fair *Japan* sold at 27s. 6d. per cwt.

Aloes.—*Curacoa*: A large parcel (1009 small gourds) imported in 1893, which have been held in anticipation of higher values in consequence of the non-shipment now in this form were offered to-day, the first lot selling at 20s. per cwt. for fair livery. No acceptable bid could be got for further lots, so the rest were bulked in one lot, consisting of fair livery down to capey, and these sold at 13s. 6d. per cwt., a very cheap price. *Socotrine*: Good kegs held for 80s. per cwt. *Cape* sold at about 1s. dearer prices, at 23s. 6d. for medium hard bright, down to 19s. per cwt. for rather drossy.

Ambergris.—1 tin part fossilised and chalky coat good flavour sold at 51s. per oz.

Annatto Seeds.—23 bags were held for 6d. per lb.

Areca Nuts.—1 bag rather wormy sold at 22s. 6d. per cwt.

Balsam Capivi.—2 casks part sold prior to auction, remainder being bought in at 1s. 11d. per lb.

Balsam Peru.—3 cases good quality held for 8s. per lb.

Balsam Tolu.—29 cases of good fair softish are held for 1s. 8d. per lb., but this was thought to be too high in the face of the *c.i.f.* quotation of 1s. 5d. per lb.

Buchu Leaves.—51 bales round leaves sold at cheaper rates, 4d. to 4¼d. per lb. for good green, and 3½d. to 3¾d. per lb. for pale green.

Cardamoms—Were in good supply, 410 cases in all being offered. At the opening prices were about 2d. lower than last sale, but later on, when it was announced that no sales would be held for four weeks owing to the Easter holidays, competition became very active, and prices closed dearer. For fine pale *Mangalore* 4s. 1d. to 4s. 4d. per lb. were paid. *Mysore*: Good medium to bold pale realised 3s. 9d. to 4s. 4d. per lb., small 3s. 1d. to 3s. 5d. per lb. Decorticated of good quality 3s. to 3s. 2d. per lb.

Cascarilla Bark.—28 bales and 5 barrels held for 35s. per cwt. for thin twiggy and 25s. for siftings.

Cassia Fistula.—10 bags very wormy thin *Bombay* could not be disposed of at 5s. per cwt.

Castoreum.—1 box of only medium quality realised 20s. per lb.

Castor Oil.—17 cases good *East Indian* firsts held for 4¼d. per lb.

Civet.—3 horns of fair commercial quality were taken out at 13s. per oz.

Colombo Root.—18 bags bold washed taken out at 50s. to 75s. per cwt.

Cowhage.—1 case very dark and mixed beans offered but no offer could be got.

Croton Seeds.—8 bags good fair sold at 61s., per cwt., which is again dearer.

Crude Antimony.—29 cases *Japan* were taken out at £21 per ton.

Cubebs.—138 bags of fair quality were bought in at 37s. 6d. per cwt.

Cus Cus Root.—3 bales good cleaned held for 30s. per cwt.

Cuttlefish.—36 mats fair pale but broken held for 3½d. per lb.

Dragon's Blood—Is scarce and only 6 cases in all were offered. 3 cases of fair bright saucers were sold without reserve at £5 per cwt., a cheap price; and 3 cases fair bright reeds, but packing rather broken, are held for £8 10s. per cwt.

Ergot.—Fair small *Russian* mixed with corn sold at 3¾d. per lb., a further 10 bags good sound held for 9d. per lb.; 6 cases *Spanish* very weevily sold at 5d. to 5¼d. per lb.

Essential Oils.—16 cases *Cajeputa* of good quality were taken out at 3s. 10d. per bottle.

Fœnugreek Seed.—Twenty bags fair quality sold at 11s. 6d. per cwt.

Grass Tree Gum.—20 bags were bought in at 12s. per cwt.

Guaza.—20 bales dusty tops held for 5d. per lb.

Guarana.—This article is exceedingly dull, 10 cases offered in auction were taken out at 1s. 7d. per lb.

Gum Benjamin.—16 cases rather common *Penang* sold without reserve at 59s. per cwt., fine *Siam* was bought in at £19 down to £6 15s. for lower quality, fine second *Sumatra* taken out at £11 per cwt., part selling subject to approval at £9 17s. 6d., medium seconds ditto bought in at £6 10s. *Palembang* at 35s. per cwt.

Gum Elemi.—13 cases of good pale sold cheaply at 25s. per cwt.

Gum Guaiacum.—4 cases were offered without reserve, fair to medium glassy block, part drossy and part frec tears, sold

at 6d. to 7¾d. per lb. 1 case very drossy and dusty at 3½d. per lb.

GUM KINO.—3 tins good genuine were taken out at 15s. per lb., a bid of 13s. being declined.

GUM MYRRH.—4 barrels good sorts were held for 70s. per cwt.

HONEY.—Fair *Jamaica* sold at 21s. 6d. to 27s. 6d. according to quality. Fair *Queensland* bought in at 22s. per cwt.

IPECACUANHA.—The stocks of all kinds are said to have fallen to 179 bales, but this did not seem to cause any competition, for with the exception of 2 bales damaged *Rio*, which sold at 7s. 9d. per lb., the whole was bought in at 8s. 2d. per lb. *Carthagena* also was exceedingly dull, and no bids were made. This quality was withdrawn at 6s. per lb.

JALAP. — 10 bales small wormy were offered, and bids of 4d. per lb. invited, but without result.

KOLA NUTS.—1 barrel *Jamaica*, of rather low quality, sold at 2½d. per lb.

MATICO LEAVES.—7 bales of this scarce article, but of broken leaf, were taken out at 1s. per lb.

MUSK.—5 tins old-fashioned *Tonquin*, small to medium, well trimmed, rather damp, held for 58s. per oz.

NUX VOMICA.—41 bags of good Cochin held for 11s. 6d. per cwt., which marks higher expectations.

ORANGE PEEL.—Good new thin cut taken out at 8d. per lb.

ORRIS ROOT.—22 bags fair *Florentine* taken out at 40s. per cwt.

REFINED CAMPHOR. — 9 cases *Japan* bought in at 1s. 3d. for slabs up to 1s. 6d. for small tablets.

RHUBARB.—Bold flat high dried ¾ good ¼ dark held for 1s. 2d. per lb., good small ditto for 1s. 2d., rough flat part small *Canton*, good colour, for 1s. 5d., bold rough round *Shensi* for 1s. 9d., ditto good round trimming root for 3s. 2d., round pickings selling at 1s. 3d. per lb.

SARSAPARILLA—Was in large supply, the bulk being of the *Lima* description, but no sales were made, and the whole was withdrawn at 1s. 2d. to 1s. 3d. per lb. *Guayaquil*: 1 bale sold at 1s. per lb. *Native Jamaica*: 3 bales were offered, but a bid of 10d. per lb. was refused. 19 bales *Honduras* were held for 1s. 6d. per lb. *Jamaica*: 3 bales held for 1s. 10d. per lb.

SENNA.—250 bales of *Tinnevelly* were offered to-day, the bulk being in first hands. Quality again was very poor, but the competition was exceedingly brisk, and very extreme prices were given, 2¼d. to 2½d. being paid for small spotty leaves, and up to 4½d. per lb. for medium leaf of good colour. There are no news of further shipments, so that even higher prices may be anticipated before the new crop comes in.

STROPHANTHUS SEED.—4 bags fair *Kombé* bought in at 3s. 2d. per lb.

SULPHATE OF QUININE.—10,000 ozs. of the Java-made article met with no buyers, there being no bid made; 9d. per oz. was understood to be the price, and the broker intimated that there was a prospect of regular shipments, which, we trust, will meet with a more favourable reception than was accorded to the first arrival. Dr. Paul's analysis and certificate was distinctly favourable as to quality, but the question of appearance will have to be taken into consideration if the article is to come into regular use here.

TAMARINDS.—20 barrels good *West Indian* sold at 10s. per cwt.

TURMERIC.—13 bags mixed finger and bulbs sold without reserve at 12s. per cwt.

VANILLOES.—Only 60 tins of all qualities were offered, and these realised good prices. *Seychelles* fetched 17s. 6d. to 20s. per lb. according to length and condition. *Madagascar* were mostly bought in as were *Tahiti*.

WAX.—Fair *Zanzibar* part sold at £6 5s. per cwt. Fair *Madagascar* held for £6 10s. per cwt. Good *Jamaica* sold at £7 2s. 6d. 50 cases *Japan* vegetable bought in at 36s. per cwt.

NEWCASTLE CHEMICAL REPORT.

MARCH 30, 1898.

Now that the Baltic steamers have commenced to load for the upper ports more activity is shown in business for heavy goods. Prices, however, remain unaltered, and are quoted as follow:—Bleaching Powder, £6 5s. to £6 10s. Soda Crystals, 42s. 6d. to 57s. 6d. Caustic Soda, 70 per cent, £4 5s. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £5 per ton.

MANCHESTER CHEMICAL REPORT.

MARCH 30, 1898.

There is nothing new to report in heavy chemicals except that forward prospects for spring shipment appear fairly good. The prices for export are, however, comparatively remunerative, and the continued imposition of hostile tariffs, notably in Russia and the United States is giving the utmost anxiety to the manufacturers not only in this district but elsewhere. Turning to miscellaneous articles, Sulphate of Copper for best brands is about 10s. per ton higher, owing to the advance in the metal, but resale lots can still be bought at late rates. Brown Acetate of Lime is about £5 15s. for Welsh, and there is little American offering. Coal Tar products are dull, although Pitch is a little better—18s. per ton *f.a.s.* Manchester Ship Canal. Yellow Prussiate maintains its position, and is steady at 6¾d. to 7d.

DIARY FOR THE WEEK.

MONDAY, APRIL 4.

SOCIETY OF CHEMICAL INDUSTRY, at 8 p.m.
Election of Officers and Five Members to the Local Committee.
"The Bacterial Treatment of Sewage Containing Manufacturing Refuse," by W. J. Dibden.

TUESDAY, APRIL 5.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.
First Annual Dinner. (Great Northern Victoria Hotel.)

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION.
Annual Business Meeting.

WEDNESDAY, APRIL 6.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY.
General Meeting for Election of Officers and other business.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.
Meeting of Council.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "PHARMACEUTICAL JOURNAL," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Werner's Pill-massing Machine, 6 lbs. size, nearly new, price £5, cost £8 10s., *vide* 'C. and D. Diary,' 1897 and 1898.—Holden, Chemist, Barnsley.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Fifty ozs. finest French Carmine (guaranteed), 1s. 3d. oz., 12 ozs., 1s. 2¼d.; 1 gross 6d. tins Andrew's Liver Salt (quite new), 25s., both carriage paid.—J. G., 35, Granby Street, Liverpool.

Books.

Copies of the 'Pharmaceutical Journal' for 1893 and 1894.—Address, Miss Thompson, 66, Gough Road, Edgbaston.

Lewkowitch's 'Oils, Fats, and Waxes,' 14s. (21s. net.); 'Chemistry Applied to Manufactures and Arts,' 8 vols., 21s. (£4); Liebig's 'Rare Handbook of Organic Analysis,' 7s. 6d.—Johnson, 155, Lea Road, Wolverhampton.

Bernthsen's 'Organic Chemistry,' 1896, new offered in exchange for Perkin and Kipping's, latest edition, complete.—Sam. Hogg, Pharmacist, York Street, Belfast.

Attfield, 1889; Bentley's 'Manual,' 1887; Pereira, 1890; B.P., 1885; Wills' (various); C. and D. Diaries, new; Thorpe; 'Pharmacy Laws,' Newth, Bowers; Bentley's 'Systematic,' all modern, state requirements.—Gower, Publisher, Waterloo, Liverpool.

Shop Fittings.

Three Handsome Show Specie Jars, height 24 in., gilt cover; 2 Window Carboys, 6 galls., height 30 in., cut-glass stoppers. What offer?—Apply, Andrews, 36, Pevensey Road, Eastbourne.

WANTED.

Wanted, old electric lamps and scrap platinum, or old platinum utensils; utmost value promptly remitted by—P. Rowsell, 14, Walcot Square, Lambeth, London, S.E. (Please mention this paper).

Wanted.—*Pharmaceutical Journal*, August 31, Sept. 14, 1895; May 2, 1896; July 3, 1897. Full price will be paid for clean and complete copies by the Publishers, 5, Serle Street, London, W.C.

Wanted.—'Inorganic Chemistry; (Newth's); Green's 'Botany'; Kipping's 'Inorganic.'—Pill, 20, St. Margaret's Road, Plumstead.

Advertisement.

(Received too late for Classification).

JUNIOR ASSISTANT wanted at once, for inland watering place. Excellent opportunity for energetic young gentleman just out of pupilage to obtain experience in best-class dispensing. Apply, with full particulars, enclosing carte and stating salary required, to PHARMACIST, care of Barron, Harvey's, 6, Giltspur St., London, E.C.

1. Spinal Cord (Cat) Cervico-medullary region × 6. Dallmeyer 1·75 inch. F/16.

2. Medulla (Cat) × 7. Dallmeyer 1·75 inch. F/16.

3. Male Spider (Garden) × 2. Zeiss 75 mm. "Planar." F/16.

4. Male Spider (Garden) × 9. Zeiss 75 mm. "Planar." F/16.

5. Tortoise-shell Butterfly × 1¼. 3 inch Photo-Portrait Petzval. F/16.

6. Ureter × 12. Ordinary micro-objective, showing unequal illumination and falling off peripheral definition.

7. Œsophagus (injected) × 6. Dallmeyer 1·75 inch. F/16.

Blocks by A. E. Dent & Co.

EXAMPLES OF LOW POWER PHOTO-MICROGRAPHY.

Photographic Supplement

TO THE

PHARMACEUTICAL JOURNAL

LONDON: SATURDAY, APRIL 2, 1898.

Contents.

Index to Advertisements.

Special Notice.—The Editor has the advice and aid of leading experts in all matters connected with photography, and will always be glad to afford assistance to readers who submit wants or difficulties experienced by themselves or their customers.

Notes and News.

The Photographic Supplement has already been the means of bringing the Editor into much closer touch with a very large section of his readers than would probably have been possible by any other means, and he is hopeful that it may yet prove even more helpful in that direction. Meanwhile, heartiest thanks are cordially tendered to all who have assisted by suggestions or contributions in making this novel venture a success.

Regarding Dark Rooms, the particulars that have poured in from hundreds of correspondents during the past fortnight have proved altogether too voluminous to cope with entirely within the comparatively narrow limits of a single issue of the Journal. Nevertheless, an endeavour will be made to deal with everything that has been sent in and before the photographic season has advanced too far.

The "Amateur Photographer" is urged by one correspondent, for his own sake, to use the strange dark-room for changing purposes only. Working in strange places, with strange developers, in a different position to what he has been accustomed to, it is not to be wondered at, observes this writer, that the amateur makes "a strange mess of the job," whilst when he is done he cannot take away his negatives until they are dry, and who, he asks, is to be responsible for them in the meantime.

Radiography is recommended by another correspondent as a profitable extra for chemists in towns of sufficient size. He also suggests that there is "money in developing and printing for amateurs." The local hospital engages him for X-ray work about twice a month on an average, and for that he gets good fees. Cinematographe business is found to be less profitable on the whole, but this correspondent finds it worth doing if done thoroughly. Thus, he is not only prepared to take special subjects for the Cinematographe, but he will develop other people's exposures and print positives. Readers who require work of this nature done should not fail to consult the list on page 18 of this Supplement.

Two Photographic Exhibitions in London are now announced for the same week—the one announced to open at the Portman Rooms on April 22, and that of the Royal Photographic Society, at the Crystal Palace, commencing April 27. In connection with the former, the Thornton-Pickard Manufacturing Company, which intends to exhibit largely, sends particulars of a competition in which £200 will be offered in prizes, ranging from £50 downwards, for photographs taken with the Thornton-Pickard Camera and Shutter. At the Crystal Palace, the exhibition will be divided into eight sections:—(1) the history of photography; (2) pictorial photography; (3) portraiture and general technical photography; (4) apparatus and material; (5) photo-mechanical processes; (6) scientific applications of photography; (7) photography in colours; and (8) photography as a science. All who can most certainly ought to attend.

PHOTOGRAPHY FOR CHEMISTS.

The prominent position taken by the photographic art among the pleasures and pastimes of our day renders it highly necessary that the pharmacist should keep abreast of the times and prepare himself for a trade which has grown by leaps and bounds within a few years, and of which he is eminently suited to secure a share.

It is not enough that he should retail plates and papers over the counter—for in this there is the least profit—but the chemist, by means of his own practical knowledge, should make for himself a reputation as being the proprietor of reliable and efficient preparations, by the use of which the photographic worker may depend upon good and certain results. Considerable time and trouble must be expended with what appears to be doubtful prospect of adequate remuneration, but time will prove that these are not wasted energies; for the amateur, realising that he can obtain sound practical advice from his chemist dealer, and also that his many difficulties, trifling though they may be, receive a kind and sympathetic attention, will always be a sure customer for everything he requires in the pursuit of his hobby, and thus compensate to some degree for the information which has been imparted to him. It is therefore strongly urged here that every chemist who contemplates building up a photographic connection should make himself thoroughly acquainted, both in theory and practice, with the details of every process and operation with which the art is so inseparably associated, for by so doing he will gain the confidence and patronage of both amateur and professional. He should also be in a position to advise beginners in the choice of apparatus, and the manipulation of all classes of cameras and accessories.

Then again, the pharmacist has exceptional opportunities for becoming himself a proficient and skilful worker, for with his knowledge of chemistry, together with his natural manipulative skill, the processes which to the general amateur present difficulties at every turn, to him become at once easily mastered and of little importance. Photography is a delightful pastime under all conditions, and when once enthusiasm has been awakened, the commercial side of the question will receive consideration as a matter of course.

In discussing the subject of photography as a money-making business adjunct, the first thing that naturally presents itself is the question of a dark room. It is obviously unwise to advertise a dark room unless a really comfortable apartment is available. While for one's personal use a small makeshift place answers fairly well, it is a bad policy for business purposes to make a dark room of any unventilated corner, or a small closet hardly large enough to admit the body of one person, let alone of allowing sufficient space in which to work. For a moderate outlay a space may be partitioned off, or a spare room brought into use, and the requisite fittings, such as gas, water, sink, and working bench supplied, proving not only a credit to the dealer but a pleasure for the amateur to use. In such cases, where a specially-designed dark room has been erected a small charge should be made for its use, or regular customers may be allowed its use free of charge for changing plates; but in all instances where developing is done a charge should be made, including a supply of solutions and dishes. Having provided the dark room a notification of its existence should be sent to every journal and publication which issues a list, it being distinctly stated whether the room be free or not. The annuals published by the leading journals of photography should always be reminded in this way, while some of them also state the brands of plates and papers kept in stock. Dark rooms are thus brought publicly into notice, while on the other hand amateurs in holiday times are always anxious to know of their existence.

A neatly-printed price-list, of a size suited to the requirements of the chemist's particular trade, is suggested as a valuable aid to business. It may with great advantage be illustrated with photographs of places of local interest, with a statement as to the apparatus with which they were taken; while the manufacturers of photographic requisites are generally willing to loan blocks and electros free of charge, which greatly enhance the attractiveness of the list. The wholesale dealers also send out separate lists of seasonable goods, such as special hand-camera lists, Christmas and New Year's mounts, etc., of which the chemist may have a supply for the asking. As these lists do not contain the name of the house by which they are issued, the chemist may attach his own name and address, thus rendering them more exclusive.

As regards the quantity and quality of apparatus to be kept in stock, much care and tact must be exercised, a great deal depending upon the class of customers frequenting the pharmacy and the photographic tendencies of the people in the neighbourhood. Some districts abound in amateur photographers, in which cases a good business can generally be done in all kinds of apparatus, and it behoves the pharmacist not to lose any chance of benefiting himself in this direction. While not advocating the purchase of a large amount of expensive instruments, it is advisable to have one or two cameras on view, and also to push a special hand-camera at an easy price for amateurs. The variety of apparatus upon the market at the present time makes it a matter of impossibility to stock even a proportion of it, but the office should be replete with the wholesale lists published by every manufacturer of note, which should always be ready for reference at a moment's notice, in order that a quotation may be given when required. It often happens also that the chemist has opportunities of effecting the sale of second-hand apparatus among his customers, when a handsome commission is generally secured.

Concerning the stock of materials, the three important items are of course plates, papers, and mounts, and in all these a liberal and varied supply should be always ready to hand. As regards the first named there should be a good assortment of the different brands of instantaneous quarter plates for hand-camera workers. These would include the Ilford "Empress" and "Special Rapid," Cadett "Lightning," Imperial "Flashlight" and Barnet "Rocket." The Ilford plates should be stocked in all sizes and rapidities up to whole plate, for there is no gainsaying the fact that they are exceedingly popular among all classes of photographers. Isochromatic or colour-sensitive plates are in considerably less demand as a rule, and it is therefore preferable to feel one's way with them, as it is indeed with all plates, for it must not be forgotten that the sensitive salts of silver are so extremely sensitive, not only to light, but to so many vapours and emanations, that great circumspection should be exercised in stocking large quantities and in storing them; and it is extremely easy for the plates to be fogged, although the boxes have never been opened. It is usual to allow professionals a small discount upon plates in quantity, but as a rule they pay full prices for single packets or small assorted quantities.

The popular printing paper for the amateur is P.O.P., and there should be no stinting of stock here. The principal varieties in general demand are the Ilford, in all cut sizes and tubes, Eastman's "Solio," and the Paget Prize P.O.P. Albumenized paper still sells well to professionals, and they prefer the pale pink tint as a rule.

Bromide papers sell more slowly, but there ought to be a fair demand for Ilford, Barnet, and Eastman's in all sizes up to whole

plate. Some dealers sell single sheets of the larger sizes of bromide paper, but this is attended with great risk, and usually results in more loss than gain. The papers of the Platinotype Company should not be stocked unless there is a regular demand for them, as damp completely spoils the paper, and the fresher it is the better it works.

The selection of mounts should receive particular attention—not so much as regards quantity as variety; amateurs being generally very fastidious in their choice, and preferring something new. Besides the ordinary kinds, there should be an assortment of "slip" and fancy mounts for snapshots and small prints.

But the chemist should above everything, make a specialty of all solutions for the successful treatment of the materials he supplies. Good reliable formulæ should be selected which will suit the majority of plates and papers upon the market. Developers should be systematically kept in large quantities in Winchester quarts, carefully labelled with the formula and retail price. The accelerating solutions, generally named No. 2, for the different developers, together with the hydrokinone solution No. 1, may be kept in this way; but pyro solution should always be made as required, and so sent out absolutely colourless and fresh. There are so many formulæ for reliable developers issued by the various firms of plate makers that it is next to impossible to err in selection. The pyro-soda developer given here will work well with practically any make of plate and is easily prepared :—

No. 1.	Pyrogallic Acid	120 grains.
	Nitric Acid	30 minims.
	Distilled Water to	20 ounces.
No. 2.	Sodium Carbonate (crystal)	8 ounces.
	Sodium Sulphite	8 ounces.
	Potassium Bromide	80 grains.
	Water to	80 ounces.

The pyro. solution should be made fresh as required, but the soda solution may be kept any length of time. It is well to have a standard hydrokinone developer ready for sale, in which case both solutions keep fresh for a considerable time. A "Universal" developer suitable for plates, papers, and lantern slides goes well, and is convenient for the amateur's use, the label clearly stating the proportions for use in each instance. An easy method of working out the prices of developers is to charge a halfpenny per ounce all through, with extra for bottles, which simplifies matters greatly.

This is not the place to discuss the merits and demerits of the combined toning and fixing bath, but whether its use be recommended or not the fact remains that the amateur will have it, and the following formula works as successfully as any :—

No. 1.	Sodium Hyposulphite	20 ounces.
	Alum	5 ounces.
	Sodium Sulphate	10 ounces.
	Potassium Sulphate	2 ounces.
	Water	160 ounces.
No. 2.	Gold Chloride	15 grains.
	Lead Acetate	64 grains.
	Water	8 ounces.

For use take 8 ounces of No. 1 and 1 ounce of No. 2. The price would be 4*d.* and 6*d.* respectively, bottles excluded. This bath is very popular, as it saves much time, and provided that too many prints be not toned to the weakening of its strength in gold, the results are most pleasing and certain.

It is impossible in the space at disposal to enter into all the details of the formulæ which the chemist is able to prepare for sale, but enough has been said here to show that the scope is ample, and by meeting the wants of photographers as they occur from time to time a substantial business may always be expected, and one, too, which is profitable in every department.

CHEMISTS' DARK ROOMS.

BY A CUSTOMER.

It has been my lot to travel far and wide in England with a camera, and naturally I have made use of many dark rooms which are placed at the disposal of their customers by chemists, and really the experiences I have gone through have in many cases been extraordinary, sometimes laughable, but in others decidedly lachrymose.

In the first place, the receptions I have met with have differed considerably; sometimes courteousness, with a pleasing interest in my work and useful hints as to what could and could not be done in the neighbourhood, and I have left feeling that I had almost made a friend. On the other hand, however, I have been met with a sort of cold what-a-nuisance-you-are reception, and I have come away feeling that, all the time, although I paid for the privilege of using the dark room, I was a trespasser, and that never no more would I go into any man's dark room, but carry my own with me.

Now let me say that, like most careful workers, I always carry my stock of plates with me, for alack and alas, too often the country dealer's stock is old, and whilst I may say with Goldsmith, "I love everything that's old: old friends, old times, old manners, old books, old wine," I must really except old dry plates. Not that an old dry plate is not as good as a new one when it is properly kept, for whilst they may not like old wine improve by keeping, they do not take much harm as a rule.

The researches of Dr. W. J. Russell, which formed the subject of the Bakerian lecture before the Royal Society recently are a proof, if one were needed, how extremely careful the dealer should be. He has found that if dry plates are kept in a cupboard with mercury, magnesium, cadmium, zinc, nickel, aluminium, pewter, lead, bismuth, tin and cobalt, fog will be caused, that is a developable impression similar to that given by light.

In the face of this statement, will anyone be surprised that the careful worker prefers to obtain his plates fresh from the maker rather than trust to a local dealer? How often, too, have I seen a dealer's stock of plates kept "because it was nice and dry" at the top of the shop—about the worst place, where all vapours must go and where the change in temperature must be at times from zero to boiling-point almost.

If—and I know many hundreds of amateur tourists who always take their plates with them—the amateur carries his plates to his holiday haunt, where is the local dealer to sell his plates, and what shall it profit him to state, "Dark room free to customers for changing plates?" Personally, I much prefer to pay a small fee; there is then no obligation. It is a business transaction, and, having paid my fee, I have a right to grumble if I find I am landed in a miserable little stuffy hole, of which the door will not fit light-tight, if there is a bit of candle guttering in a small lamp, the glass of which I know to be utterly unsafe for my plates, and the only place to place the dark slide is either a wooden sink saturated with hypo and pyro spillings, or else a shelf made out of a bit of cube sugar-box or some other packing-case, and littered with empty boxes and bits of papers.

If a chemist advertises that he has a dark room, then at least he should see that it is a *dark* room and not with ill-fitting door and windows and with a bad lamp. It is not necessary for the dark room to be a palace, but it should, however small, be provided with some safe light, either an oil lamp, which will not die a miserable death as regards its light just when the customer may be in the middle of changing, and whether it be a lamp or a window, at least two extra orange or ruby screens should be provided, so that when extra or colour sensitive are being used the light may be deepened. The best ruby glass is that made by Putzler Gebrüder, of Pensig, it is expensive but it is a pot and not a flash glass. The wholesale agent for this, is I believe, David Allan, 157, Whitfield Street, Tottenham Court Road, London, W.C. If this is fitted either to the window or lamp, the light will be safe for nearly all plates, but as extra screens may be so easily made with a piece of ruby or orange fabric and stout millboard, one or two of these should be provided also.

Above all things let there be a shelf fairly wide of a convenient height, and let it be kept free from all chemicals, papers, and empty boxes. If the shelf or bench is planed, there will be no difficulty in keeping it free from dust, but if it is merely rough wood then a piece of oil-cloth should be nailed onto it.

In every dark room there must be a catch or lock inside the door, so that it can be made quite secure against accidental opening, and above all things do not lock your customer in. I had a pleasant experience some years ago at an East Anglian watering place. Wishing to change plates, I was led by the chemist up a long yard littered with emply boxes, cases, and an evil-looking dog that eyed my trousers longingly, and was shown into a wooden hutch, not over-clean, smelling very strongly of rank tobacco, and carefully locked in, "as there is no catch inside. I'll come back in about five minutes and let you out." I changed my plates, filled my pipe and lit it, and waited, and finally, after hammering at the door and being bombarded by the evil cur with furious barking, I was let out in about a quarter of an hour decidedly savage in temper and nearly asphyxiated, for of ventilation there was none.

I have gone down through trap-doors behind the counter where it required all one's ingenuity to carry the camera case and plates and at the same time save one's head from the ceiling. I have been into excellently fitted-up rooms where, however, my arrival had to be carefully announced, and the family hustled out of the way on the road, with a little querulousness on both sides of the family. This sort of thing makes one feel unhappy.

If a dark room is to be fitted up for changing alone, it may be small, but if development is to be permitted, then it should be of convenient size, well lit, well ventilated, provided with water supply, sink, measures from minim up to 4 oz. and one 10 oz. A Winchester quart full of clean hypo. solution, strength 25 per cent., some carbonate of soda solution, also potassium bromide, both 10 per cent., some 20 per cent. sodium sulphite solution, also alum solution, 5 per cent. The bottles should be plainly labelled, the strength of the contents clearly indicated, and the bottles dusted and the stoppers not wedged in like a rock.

As regards developers it is an open question whether it is worth while to keep any ready-made in the dark room, for if they are put up for sale there will always be some in the shop, and it is impossible with one developer to cater for all fads and fancies.

The question as to charging for the use of the dark room is one upon which there can be no doubt from the dealer's point of view. Everyone should be charged, but if plates or anything else be bought, then the fee should be remitted when changing of plates alone is done, but there should always be a charge for development. Amateurs are not always the cleanest and tidiest of workers, nor are they always sparing in material.

I have never yet come across a dealer who has made the use of the dark room a special feature, nor who has utilised it to its fullest extent, and I feel sure that a great deal more might be done by the issue of weekly tickets to admit at any time, whilst the shop was open, at 2*s.* 6*d.* for changing, and 5*s.* for developing. If that were done, and the tickets made a source of information, by giving the best places and time of day to take the most prominent objects of interest in the neighbourhood, more business might be done.

Photographic Tourists' Guide.

THE following list of photographic dark-rooms and dealers in photographic materials has been compiled and corrected up to date, in the hope that it may prove useful to chemists who may be consulted by amateur photographers proceeding on a holiday tour. The plan on which the list has been devised is that, in the case of towns where registered chemists stock photographic materials and have dark-rooms, no address other than that of a chemist is given; where, however, the name of the town is preceded by an asterisk (*), that mark indicates inability to find that any chemist in the place does a photographic trade, and for the sake of completeness, addresses other than those of chemists are given in such cases. Where there is a dark-room, the fact is indicated by a capital "D" following the name and address, and except where the dark-room is at an hotel, it may mostly be taken for granted that plates and other photographic materials are stocked. The dark-rooms can, in some cases, be used for developing as well as changing, and even where there is not a dark-room, it is usually possible to get plates changed.

SPECIAL NOTICE.—Additions to this list, and corrections, will be welcomed by the Editor, who will also be glad to receive further brief notes concerning points of interest in the respective districts, such as are here given. It is proposed, on the completion of the list, to reprint it in a handy form for the pocket, so that it may serve as a useful and compact guide for amateur photographers on tour in the United Kingdom. The book may either be sold at a nominal price to cover cost, or distributed free to customers. A specimen copy of the 'Guide' will be sent free to any registered chemist who fills up and returns the coupon at p. 9, together with a stamp to cover postage. Quotations will also be sent, if desired, for one hundred or more copies of the book.

*Aberdare (Glamorgan).

Berry & Co., 47, Commercial St. D.
Alfred Lea, 18, Commercial St.

Aberdare is situated on the River Dâr, four miles from Merthyr Tydfil.

Aberdeen (Aberdeen).

G. E. Broomhead, 44, Union St.
J. Clark, 397, Union St. D.
A. F. Dugan, 4, South Mount St. D.
W. Reid, 100, Holburn St. D.
R. Urquhart, 65, St. Nicholas St. D.
W. Watson, 43, Castle St. D.

Aberdeen is the starting point for the Deeside Highlands, and within one hour's ride of the Queen's Highland home and some of the grandest mountain scenery in Scotland. The immediate neighbourhood presents sea and cliff scenery in great variety.

Aberdovey (Merioneth).

I. T. Lloyd, The Dovey Pharmacy. D.

Aberdovey is within walking distance of the Happy Valley and other well-known spots. Romantic and picturesque marine scenery.

Aberystwith (Cardigan).

J. P. Thomas, 60, Terrace Rd. D.

Aberystwith Castle, the University College, the view from Constitution Hill, and a view of the hill from the beach are noteworthy. Llanbadarn Church, the Devil's Bridge, and Tallylynn Lake deserve a visit.

*Abingdon (Berks).

W. J. Vasey, 12, Broad St. D.

Abingdon is on the Thames, seven miles from Oxford. It contains the ruins of a noted abbey.

Accrington (Lancs).

T. Stanley, 2, Whalley Rd. D.

Accrington is near Whalley Abbey and the valleys and junction of the Ribble, Hodder, and Calder.

Alcester (Warwick).

I. D. Adcock & Son, High St.

Alcester is reputed to be the site of a Roman station on the Icknield Street.

*Alderley Edge (Cheshire).

Thomas Gregson. D.

Alderley Edge is about four miles from Macclesfield. Several good pictures may be obtained on the Edge, which commands an extensive view of that part of Cheshire, the boundary hills of Staffordshire and Derbyshire being plainly visible.

Aldershot (Hants).

E. H. Orange, 25, High St. D.
J. Williams, Victoria Rd.

Aldershot is rendered picturesque by the prevalence of the military element. The camp is the chief place of interest, and, amongst others, there is the mausoleum at Farnborough.

Alloa (Clackmannan).

J. Cummings, 21, Mill St. D.

Alloa is the best centre for the famous glens of the Ochils. Alloa Tower (600 years old), Clackmannan Tower, Rumbling Bridge, Caldron Linn, and Castle Campbell are amongst the chief places of interest.

Alnwick (Northumberland).

Davison & Patten, 22, Bondgate. D.

Alnwick is a very interesting place. The quaint old town, the Castle, which is the seat of the Duke of Northumberland, and the neighbouring Hulne Abbey and Birsley Towers will well repay the expenditure of plates.

Alresford (Hants).

J. H. Richardson, Broad St.

Alresford has a fine sheet of water, covering 200 acres, called Alresford Pond, through which runs the River Itchen. Alresford House is the seat of the Rodney family.

Alston (Cumberland).

T. Storey. D.

Alston is situated in a valley near the confluence of the Nent and the South Tyne. Several adjacent eminences command beautiful views of Hartside, the lake of Ullswater, and Solway Firth.

*Alton (Hants).

G. Frost, Market St. D.

Alton has a very ancient church (St. Lawrence) in good preservation. The country around is very pretty.

*Altrincham (Cheshire).

Thornton-Pickard Mfg. Co. D.

Altrincham has a healthy climate and pleasant situation. It is about eight miles south of Manchester.

Alyth (Perth).

A. A. Adam, Commercial St.

Alyth Burn contains some lovely scenery. At Reekie Lime there is a fine waterfall on the Isla.

Ambleside (Westmoreland).

Thomas Bell, Lake Rd. D.

Ambleside is one mile north of Lake Windermere, noted for its picturesque scenery. Good pictures may be obtained in all parts of the neighbourhood.

*Anstruther (Fife).

D. Gibson, Commercial Hotel. D.

Anstruther, Easter and Wester, are two contiguous royal burghs, nine miles south of St. Andrews.

Arbroath (Forfar).

James Jack, 102, High St. D.
J. S. Whyte, 57, Guthrie Port. D.

Arbroath is noted for its Abbey, magnificent red sandstone cliffs, and plenty of good landscapes.

*Ashby-de-la-Zouch (Leicest'r)

C. Matthews, 63, Market Street. D.

Ashby-de-la-Zouch is near Charnwood Forest and in a most charming district. The Castle ruins form an object of interest.

Ashford (Kent).

F. W. Stedman, 76, High St. D.

Ashford is a good centre to work from, though presenting nothing of interest itself.

Ashton-in-Makerfield (Lancs)

Aspinall & Co., Gerard St. D.

Ashton-in-Makerfield is between Newton and Wigan.

Ashton-under-Lyne (Lancs).

S. Sharp, 241, Stamford St. D.

Ashton-under-Lyne has an origin of great antiquity. Its old parish church is a fine structure.

Aylesbury (Bucks).

John Wood, 35, High St. D.
A. G. Wright, 16, Market Sq. D.

Aylesbury contains ancient and historic buildings, including a fine old church The rural scenery is also attractive.

Ayr (Ayr).

W. Burns, 109, High St. D.

Ayr is in the "Land of Burns," and the roads in the vicinity are excellent for cycling and driving. It is also favourably situated on the West Coast, and pleasant steamboat excursions are of daily occurrence.

*Bakewell (Derby).

Castle Hotel. D.
Commercial Hotel. D.

Bakewell is in the neighbourhood of Haddon Hall, Chatsworth and the Lathkill Valley. There is a Saxon cross in the churchyard, and the town itself contains good material for the photographer.

Ballina (Mayo).

Adamson & Co., The Pharmacy.

Ballina is a seaport on the tidal river Moy in Ireland. It is a great resort for anglers.

*Ballycastle (Antrim).

Antrim Arms Hotel. D.

Ballycastle is a small seaport on an open bay opposite Rathlin Isle.

*Ballymena (Antrim).

T. C. Erwin, 76, Church St. D

Ballymena is twenty-two miles north-west by north from Belfast. It is one of the greatest linen and flax markets in Ireland.

Banbury (Oxon).

T. R. Goodman, 5, High St. D.

Banbury, famous for cakes and ale, is on the Cherwell, twenty-two miles north of Oxford.

Banff (Banff).

W. Alexander, Low St. D.

Banff is interesting by reason of its picturesque rocks and cliffs, fishing villages, and the fine scenery on the River Deveron.

Bangor (Carnarvon).

Roberts & Co., High St.

Bangor is an ancient cathedral city, with many objects of interest, including harbour and shipping.

Barmouth (Merioneth).

D. E. James, 1, St. Ann's Sq. D.

Barmouth lies within easy distance of unrivalled and unsurpassed scenery, the district being aptly termed "The Switzerland of Wales."

***Barnet** (Herts).

E. A. Maxwell, 39, High St. D.

Barnet is about eleven miles north of London., in a district possessing historic interest.

Barnsley (Yorks).

A. R. Tomlin, 13, Church St. D.
J. Wood, 15, Peel St.

Barnsley is two miles from Stainborough Castle, possesses a fine public park, and is surrounded by beautiful scenery.

Barnstaple (Devon).

J. J. Tremeer, 65, Boutport St. D.

Barnstaple is within a few miles of some of the finest scenery in Devon, the bays and inlets forming splendid marine scenery.

Barrow-in-Furness (Lancs).

S. Taylor, 178, Dalton Rd. D.

Barrow-in-Furness is on one of the routes to the Isle of Man, and is within a short distance of picturesque sea and lake scenery and of the ruins of Furness Abbey.

Basingstoke (Hants).

E. C. Perry, Wote St. D.

Basingstoke has in its vicinity, on an eminence, an ancient encampment of an elliptical form, 1100 yards in circumference, called Aubrey Camp. Basing House is also in the neighbourhood.

Bath (Somerset).

B. G. K. Clarke, 8, Broad St. D.

Bath is one of the most picturesque towns in the West of England, places of special interest being the Roman Baths, Abbey, The Priory and Priory Park, Victoria Park, Longleat (the seat of Lord Bath), Corsham Court (the seat of Lord Methuen), Bowood (the seat of Lord Lansdowne), Lacock Abbey, and several other places where good views may be obtained.

Batley (Yorks).

R. Broadhead, 38, Commercial St.

Batley has an old parish church, Perpendicular in style. The ruins of Howley Hall are of some interest.

Bawtry (Yorks).

F. Jackson & Sons, High St.
T. W. Nettleship, Market Pl. D.

Bawtry is eight miles from the fine ruin of Roche Abbey. Austerfield and Scrooby Churches and the Manor Houses are of interest, also the birthplaces of Bradford and Brewster, the founders of the Pilgrim Fathers.

Battersea (Surrey).

G. F. H. Bartlett, 38, Battersea Park Rd. and 143, High St. D.

Battersea is three and three-quarter miles from Waterloo Station. Its chief attractions are Battersea Park, a fashionable resort of lady cyclists, a fine old church, and the River Thames.

***Beaconsfield** (Bucks).

White Hart Hotel. D.

Beaconsfield was, before the opening of the railways, a busy place, a seat of ribbon manufacture. Edmund Burke and the poet Waller are buried within the precincts of the old parish church, a handsome structure, in the Norman style, of stone and flint, with tower and spire.

Beaumaris (Anglesey).

E. R. Thomas, 40, Castle St. D.

Beaumaris is the chief town in the Isle of Anglesey. There is, in addition to an old historic castle, splendid scenery within easy distance providing abundant material for landscape and marine work.

Beckenham (Kent).

E. W. Routley, 60, High St. D.

Beckenham is surrounded by very pretty country.

Bedale (Yorks).

J. Swinbank, Market Pl.

Bedale is situated in a valley, on the stream called Bedale-beck. The St. Gregory's Church, erected in the reign of Edward III., is in the early English style. Snape Castle is in the district, which provides some lovely views.

Bedford (Befordshire).

Anthony & Son. High St. D.

Bedford is the birthplace of John Bunyan, his cottage and statue being objects of interest, as also is Elstow Church.

***Beith** (Ayr).

James Wylie, 33, Main St. and Garnock View. D.

Beith is a small town, the chief building being the Speir School, resembling the old college at Glasgow.

***Belbroughton** (Worcester).

J. Bate.

Belbroughton is about five miles from Bromsgrove, and has a great manufacture of hay-knives and scythes.

Belfast (Antrim).

J. Hogg, York St.
J. Lizars, 73, Victoria St. D.
Rodman and Co. D.
Nicholl's Medical Hall, 25, High St.

Belfast has some fine buildings. The Queen's College is in the Tudor style of architecture, and will be the habitation of the British Pharmaceutical Conference, 1898; Belfast Castle, on the slopes of Cave Hill; Albert Memorial, Belfast. On the River Lagan are very choice bits of scenery. Convenient but outside the city are several places of interest, including Carrickfergus Castle, Shane's Castle, and Dunluce Castle. At Antrim may be found the most perfect "round tower" in Ireland. Grey Abbey, on the shores of Strangford Lough, and Bangor Bay, are well worth attention.

Belper (Derbyshirc).

W. T. Burkinshaw, Church St. D.

Belper is surrounded by beautiful scenery, and is close to Haddon Hall, Chatsworth, Wingfield Manor, and other places of interest.

***Berkhampstead** (Hants).

J. T. Newman, 176, High St. D.

Berkhampstead is on the small river Bulburn, and is surrounded by hills. It was a royal residence under the Mercian kings, and again in the time of Henry II.

***Berwick** (Northumberland).

W. Green, 9, Castlegate. D.

Berwick-on-Tweed is near to many interesting historical subjects, and fine scenery on the Tweed.

Bettws-y-Coed (Carnarvon).

R. Parry, Pendyffryn. D.

Bettws-y-Coed is noted for its wild and beautiful scenery, and stands unrivalled in its wealth of varied subjects, including rivers, bridges, woods, crags, and mountains.

Beverley (Yorks).

J. Morley, Toll Gavel. D.

Beverley is within easy distance of fine coast scenery and pretty little country bits. Then there is the splendid Minster, St. Mary's Church, North Bar Gateway, Old Friary, and other objects of interest to the photographer and tourist.

Bexhill (Sussex).

G. Brisley, Red Cross Pharmacy, Station Rd. D.

Bexhill is chiefly interesting for its old-world bits and corners of a smuggling village and some pretty inland scenery.

***Bideford** (Devon).

Tardrew & Sons.

Bideford is situated on the slopes of two hills which rise from the banks of the Torridge. Some of the houses are built with bricks and wooden framework.

***Biggleswade** (Beds).

Geo. Wagg. D.

Biggleswade is noted for its cornmarket.

Birkdale (Lancs).

B. Wyles, 10c, Liverpool Rd. D.

Birkdale is a suburb of Southport.

Birkenhead (Cheshire).

J. Walker, 21, Grange Mount. D.

Birkenhead has for subjects the park, the docks, the training ships, street-arab tumblers near halfpenny bridge; mudlarks, at low tide, near Woodside Ferry; Hoylake for sunsets, etc.

Birmingham (Warwick).

W. Asten, High St., Erdington. D.
C. S. Baynton, New St. D.
J. Davis, 39, Summer Lane. D.
C. F. Jarvis, Villa Rd., Handsworth. D.
Morris, Banks & Co., 2, High St. D
Southall Bros. & Barclay, 1, Broad St. D.
C. Thompson, 159, Stratford Rd., Sparkbrook. D.
J. Thorpe, 29, Congreve St. D.

Birmingham is in close proximity to Warwick, Kenilworth, Stratford, and Sutton Park, with its luxurious wealth of botanical and geological interest. In Birmingham itself there are several ancient and charitable institutions—orphanages, hospitals, Roman Catholic College, Aston Hall. The Slum districts are especially worth attention, as they provide many interesting pictures.

***Bishop Auckland** (Durham).

T. Robinson, 25, Newgate St.

Bishop Auckland stands on an eminence 140 feet above the confluent Wear and Gaunless. The Bishop's palace and the Town Hall are noteworthy.

Bishop's Stortford (Herts).

G. T. Ecclestone, North St.

Bishop's Stortford was in Saxon times the property of the Bishops of London, and, as its name implies, is on the river Stort.

Blackburn (Lancs).

A. Garland, 80, King William St. D.
J. McNeill, 40, Preston New Rd. D.

Blackburn is a good centre for tourists wishing to view the fine scenery of the Ribble Valley, Stonyhurst College, Whalley Abbey and Church, and other interesting place.

Blackpool (Lancs).

J. Jackson, 61, Talbot Rd., and 87, Dixon Rd. D.

Blackpool is popularly known as "the Brighton of the North," and in the season there is a constant panorama of changing living pictures for snap-shot work.

Blaenavon (Monmouth).

H. M. Davies, 74, Broad St. D.

Blacnavon is five miles from Abergavenny, and is situated in a mountainous district.

Blairgowrie (Perth).

J. D. Petrie, 7, High St. D.

Blairgowrie and district form one of the best centres in Scotland for the photographer, there being in the vicinity, river, mountain, and loch scenery.

Blyth (Northumberland).

J. Keith, 16, Blagdon St.

Blyth is interesting chiefly by reason of its coast scenery.

***Bodmin** (Cornwall).

A. J. F. Bond, 85, Forc St. D.
A. Jane, Mountfolly Sq. D.

Bodmin contains the county hall of Cornwall. The church, rebuilt in 1472, has been restored since 1879.

***Bognor** (Sussex).

E. Wood, Royal Library. D.

Bognor is a favourite watering-place on the South Coast.

Bolton (Lancs).

T. H. Heyes, 150, Deansgate. D.
H. B. Pare, 12, Deansgate, and 1, Crown St. D.
J. Taylor, 210, St. Georges Rd. D.

Bolton possesses several old Elizabethan residences of historic interest. Hall i' th Wood, where S. Crompton invented the spinning mule, can be taken from the road, but before photographs can be taken of Smithill's Hall, an old Saxon dwelling, one of the oldest houses in Lancashire, and Turton Towor, permission must be written for. Wardley Hall and Dean Mills, a deserted village, are worth attention.

***Boot** (Cumberland).

J. Vicars, Gilbank. D.

Boot is in Eskdale, near the Solway Firth, and is in the midst of the picturesque border scenery.

Bootle (Lancs).

W. T. Warhurst, 311, Stanley Rd. D.

Bootle-cum-Linacre includes a large portion of the Liverpool docks.

Boscombe (Hants).

Tame & Co., opposite Salisbury Hotel and Royal Arcade. D.
S. P. Yates, opposite Post Office. D.

Boscombe is near to Bournemouth, and has many places of interest, including Christchurch Priory, the sea, coast, cliffs, and the River Stour, providing many fine bits of scenery.

Boston (Lincolnshire).

F. Thomas, 7, Market Place. D.

Boston is of interest chiefly for its marsh scenes, shipping, and the "Stump."

***Bourne** (Lincolnshire).

W. H. Redshaw, North St. D.

Bourne lies at the foot of a range of hills. Its church is a large ancient structure, with two towers at the western end.

Bournemouth (Hants).

F. E. Bilson, 1, Lansdowne Cres. D.
S. Hardwick, Carlton House, Commercial Rd. D.
W. Jones, 254, Old Christchurch Rd. D.
J. A. Toone, 50, Old Christchurch Rd. D.

Bournemouth is full of photographically interesting places and objects, the beauties of the town and shore being well known, in addition to which the New Forest is within easy distance.

Bowness (Westmoreland).

C. Birkett, Main St. D.
T. M. Holmes. D.

Bowness-on-Windermere is right in the heart of the Lake District, and is surrounded by some of the finest scenery in the United Kingdom.

Bradford (Yorks).

Harrison Parkinson & Co., Sunbridge Rd. D.

Bradford has buildings worth taking. At Horton, Bawling, Peel, Manningham, and Wibsey Parks there are good views. Saltaire should also be visited for views obtainable in Shipley Glen.

***Brading** (Isle of Wight).

T. Gardner, Red Lion

Brading has a bull-ring, one of the few left. The old church contains interesting tombs.

Braintree (Essex).

F. Row & Son, 47, High St. D.

Braintree Parish Church is a fine Gothic edifice of early date.

Bramley (Yorks).

W. S. Baxter, 200, Upper Town St

Bramley has extensive factories of woollen cloth, and near it are quarries of excellent building stone.

Brampton (Cumberland).

W. E. Younger, Market Place D.

Brampton is a very ancient town. Two miles to the east stands Lanercost Abbey, founded in 1169.

Brechin (Forfar).

G. Mackie, 51, High St. D.

Brechin is in the midst of a lovely country, the chief places of interest being Brechin Cathedral and "Round Tower," Brechin Castle, Kinnaird Castle, Edzell Village, Garmochy Bridge, over N. Esk, and the beautiful Elen of the Esk.

Brecon (Brecknock).

R. E. Charles, High St. D.

Brecon is within walking distance of picturesque old churches, castles, and mountain and river scenery.

Bridgwater (Somerset).

L. H. Llewellyn, Cattle Market. D.

Bridgwater, on the River Parret, is in a well-wooded country. St. Mary's Church has a graceful spire and contains a fine altar-piece. The Parret is subject to a bore 6 or 8 feet high.

Bridlington (Yorks).

H. J. Jackson, 11, Prince St. D.
J. V. Mainprize, 9, King St. D.

Bridlington is a well-known resort of cyclist tourists, and has some fine rural scenery and splendid marine views. There is also a magnificent church.

***Brigg** (Lincoln).

Jackson & Son, Booksellers, etc.

Brigg was formerly called Glandford-Brigg, and is situated on a branch of the Aucholme.

Brighouse (Yorks).

S. Cardwell & Son. D.

Brighouse is near to Kirklees Hall and the burying-place of Robin Hood. Permission is required to view them.

Brighton (Sussex).

H. Churchill & Co., 57, East St. D.
S. Hardcastle & Co., 71, EastSt. D.
H. Moon, 92, Trafalgar St.
E. F. Salmon & Son, 30, Western Rd., Hove. D.
J. Williamson, 144, Church Rd., Hove. D.

Brighton is interesting not only for its fine sea and landscapes, churches, castles, statues, and Dyke, but also on account of the numerous opportunities for snapshots on the parade and elsewhere, especially during "the season."

Bristol (Gloucester).

H. Hodder & Co., Broad St. D.

Bristol Cathedral, west front, is good. St. Mary Redcliff Church has a magnificent reredos. Good work may be done in the shipping. Many other good places are to be found, as Leigh Woods, Coombe Dingle, etc.

Brixham (Devon).

G. F. Newman, 1A, Fore St. D.

Brixham is an irregular place, sprinkled over three valleys and four hillsides, picturesque, and fishy to a degree. At Berry Head is a Roman camp.

Brockley Road (L'don, S.E.).

Leo Atkinson & Co., 285, Brockley Rd. D.

Brockley Road is within easy walking distance of London Bridge.

Bromley (Kent).

Shillcock & Son, 122, High St. D.

Bromley is near to Hayes and Keston Commons and the pretty district of Chislehurst.

Brompton (Kent).

W. E. Stokes, 46, High St. D.

Brompton is a suburb of Chatham, and is noted for the great naval and military establishments.

***Brough** (Yorks).

Buck, Castle Hotel. D.

Brough is in the East Riding, on the bank of the Humber, and not far from Hull.

Burnham (Somerset).

A. Pumphrey, Ph. Chemist. D.

Burnham produces charming sunset effects. There are good views of the town and pier to be obtained from the sea-wall.

Burnley (Lancs).

B. Cowgill, 48, Manchester Rd.
J. W. Wright, 141, St. James's St D.

Burnley is within a few miles of several ancient ruins and pretty scenery.

***Burslem** (Staffs).

T. Blackshaw, 35, Market Pl. D.

Burslem is the "Mother of the Potteries." It has a fine town hall, renaissance in style, with a lofty clock tower.

***Burton-on-Trent** (Staffs).

F. Hallam, 22, High St. D.

Burton-on-Trent is noted mainly for its enormous ale breweries.

Bury (Lancs).

W. Heywood & Co., 41, Princess St. D.

Bury is situated on a rising ground backed by hills on the north and east, between the Irwell and the Roche. There are large factories and foundries.

Bury St. Edmunds (Suffolk).

J. Floyd & Co., 2, Cornhill. D.

Bury St. Edmunds is noted for its Abbey, churches, the Norman Tower and Abbot's Bridge, Abbey Gate, and ruins.

Buxton (Derby).

H. W. Baker, 69, Spring Gdns. D.
W. Pilkington, 11, Market Pl. D.

Buxton is the centre of the Peak District, and is fed by the Midland and London and North-Western Railways being a health resort of high altitude. There is fine scenery in abundance for miles around, hills, dales, caves, rocks, and moorland, to suit the climber, pedestrian, cyclist, camerist, angler, and other classes of tourist.

Bushey New Town (Herts).

R. R. Gant, Villiers Rd. D.

Bushey New Town is the scene of Professor Herkomer's Art Colony, the fact of its being situated there being a sufficient criterion for artistic scenery and studies.

Callander (Perth).

A. Scott, Main St. D.

Callander is situated amidst the most beautiful scenery in Scotland, and is probably the best centre for the Trossachs, Loch Katrine, etc.

Camberwell (London, S.E.).

Prosser Roberts Co., 13, Church St. D.

Camberwell, photographically, is not an interesting district. It is about four stations beyond Ludgate Hill on the L.C. & D.R.

Camborne (Cornwall).

H. R. Beringer, Commercial St. D.

Camborne is favoured with good coast scenery.

Cambridge (Cambridge).

C. S. Addison, 6, Market Hill. D.
Beall & Son, 25, Sidney St. D.
E. Field, Hills Road. D.
J. H. Leech, 36, Trinity St., D.
G. Peck & Son, 30, Trumpington St. D.
R. Sturton, Fitzroy St.

Cambridge is noted for its colleges, University, and other public buildings, the Fitzwilliam Museum, Church of the Holy Sepulchre, and river scenery.

***Campbeltown** (Argyll).

J. E. Purves, Pier Studio. D.

Campbeltown is a seaport town. In the centre of its main street is a sculptured granite cross of the twelfth century, supposed to have been brought from Iona or Oronsay.

Canterbury (Kent).

E. Bing & Son, 41, St. George's St. D.

Canterbury possesses numerous fine ancient and historic buildings, including the Cathedral, St. Martin's Church, the Westgate, etc., etc.

Cardiff (Glamorgan).

Williams & Co., Park Hall Bldgs. D.

Cardiff is within walking distance of Llandaff Cathedral, Caerphilly Castle, and Castle Goch. The docks and shipping also afford many snapshots.

Cardigan (Wales).

E. C. Evans, 11, High St. D.

Cardigan is on the right bank of the Teifi. The remains of a castle crown a low cliff on the river, and are reputed to date from 1160.

Carlisle (Cumberland).

T. Ridley, 9, English St. D.
J. Robson, 26, Scotch St. D.
W. R. Scott, 139, Denton St.

Carlisle is a good centre for photography, the places within the city being the Castle and Cathedral; in addition, there is good local and historical scenery.

Carmarthen (Wales).

C. E. Davies, 48, King St. D.

Carmarthen forms a good headquarters for photographers, the coracle fishing, cockle gathering, yachting, and Castle ruins affording many interesting "bits," and the mountain and river scenery is very fine.

Carnarvon (Carnarvon).

G. C. R. Owen, 27, High St. D.

Carnarvon has a castle which is one of the noblest ruins in the kingdom, and half a mile from the town are the remains of the Roman station, Segontium or Caer Seiont. There is a Roman fort on the left bank of the Seiont, and from the Twt Hill (190 feet) there is a fine view of Snowdon and of the island of Anglesey.

Carnforth (Lancs).

A. W. Hankinson. D.
F. T. Patman, Seascale. D.

Carnforth provides good mountain scenery, and is very near to the Cumberland Lakes.

Carshalton (Surrey).

F. Carter, High St. D.

Carshalton has many pretty little bits worth taking, as well as the river scenery on the Wandle, Beddington Church and Park, and the Carshalton Ponds.

Castle Douglas (Kirkcudbright).

F. Walker, 40, King St. D.

Castle Douglas is in the land of Crockett and Burns, and with its rivers, lakes, hills, valleys, old castles and abbeys, finds plenty of material for the camerist.

Chapel-en-le-Frith (Derby).

J. T. Gray. D.

Chapel-en-le-Frith is within a short distance of the Ebbing and Flowing Well, a remarkable phenomenon, the Blue John Cavern, the Speedwell Mine and underground rivers, and Peak Cavern (750 feet high). The district has been aptly termed the "Switzerland of England."

Chatham (Kent).

A. W. Morgan, Railway St.
W. E. Stokes, 22, High St., Brompton. D.
W. G. Turtle, 260, High St. D.
H. Watts, 68, High St.

Chatham, with its barracks and dockyard, affords many opportunities for snapshot work; then there is the Gordon Memorial, Rochester Cathedral and Castle, and other places of interest.

***Cheddar** (Somerset).

Cliff Hotel. D.

Cheddar lies at the entrance of a wonderful deep rocky gorge, nearly a mile long, the high cliffs of which contain fantastic stalactites and stalagmites.

Chelmsford (Essex).

W. Metcalfe, High St.
J. Tomlinson, Tindal Sq.

Chelmsford is situated at the confluence of the Chelmer and the Cam. Its chief buildings are the Corn Exchange, Shire Hall, Grammar School (1551), and parish church.

***Chelsea** (Middlesex).

Hoole & Co., 40, Queen's Rd. D.

Chelsea is noted for its Hospital, Royal Military Asylum, barracks, Botanic Garden, water-works, river-pier, embankment, and bridges across the Thames.

Cheltenham (Gloucester).

Thomas Brothers, College Pharmacy and Spa Pharmacy. D.

Cheltenham is situated in a pretty country, and is close to Gloucester Cathedral and Tewkesbury Abbey.

Chepstow (Monmouth).

H. A. Williams, 1, Beaufort Sq. D.

Chepstow lies between bold cliffs, on a slope rising from the river Wye, in the midst of fine scenery. It contains the ruins of a castle, and in the vicinity are the Wyndcliffe and Tintern Abbey.

(To be continued.)

PHOTOGRAPHIC TOURISTS' GUIDE.

Readers who would like to possess a copy of the above guide, when completed, in a handy form for the pocket, should fill up the accompanying coupon and send it to the Publishers as indicated below, with a stamp enclosed to defray postage.

COUPON to be filled up and returned, with a stamp to cover postage, to the

USEFUL PHOTOGRAPHIC FORMULÆ.

Every one of the following formulæ has been tested in practice, and they may be relied upon to satisfy even the most *exigeant* of customers :—

FERROUS OXALATE DEVELOPER.

For negative and transparency work, and bromide papers.

A.	Potassium Oxalate (neutral)	200 gr.
	Distilled water	800 C.c.
B.	Ferrous Sulphate	100 gr.
	Citric Acid	1 gr.
	Distilled water	300 C.c.
C.	Potassium Bromide	10 gr.
	Distilled water	100 gr.

For use mix 100 parts of A, 25 parts of B, and 1 part of C in this order. For negative work the devcloper should be heated to 65° F.

The potassium bromide or restrainer may be added to A, thus enabling the developer to be put up in two bottles, but obviously only 8 g. must be used. As a rule two 8-ounce bottles are sold for a shilling.

THE PYRO DEVELOPER.

Although there are innumerable formulæ for pyro developers, the best plan is to make up 10 per cent. solutions, and state plainly on the labels the quantities to be used.

Pyro is very readily oxidised, and therefore it is used with a preservative, which may be either sodium sulphite, potassium metabisulphite, or an acid, and the last is the least satisfactory. Metabisulphite ($K_2S_2O_5$) has the disadvantage of becoming decidedly acid, so that whilst it acts as a splendid preservative, it not only neutralises some of the alkali, but seems to act in some unexplained way on the reducing agents, and destroys their developing properties.

10 per cent. solution of pyro.

Sodium Sulphite	25 g.
Pyrogallol	10 g.
Distilled Water to	100 C.c.

The sulphite should be first dissolved and then poured on to the pyro, and the volume made up to 100 C.c., and the solution immediately bottled without filtering. The sulphite may be replaced by one-fourth (6·25 g.) of metabisulphite.

ACCELERATORS.

These may be either sodium carbonate, potassium carbonate, sodium or potassium hydrate (though it is not advisable to use these last), and liq. ammoniæ fort ·880. It is unnecessary to give directions for making these with 10 per cent. solutions.

A normal developer would be :—

Pyro	·5 g.
Sodium Sulphite	4·0 g.
Sodium Carbonate	1·5 g.
Potassium Bromide	·25 g.
Water to	100 C.c.

It is obvious that the only thing to do is to multiply the dry ingredients by 10, when we have the correct number of C.c. of the 10 per cent. solution to make any developer.

Still, as there may be some who would prefer to put up developers and not 10 per cent. solutions, the following formulæ are given :—

Pyro Solution No. 1.

Sodium Sulphite	100 g.
Sulphurous Acid	1 C.c.
Pyro	14 g.
Distilled Water to	500 C.c.

Soda Accelerator No. 2.

Sodium Carbonate	50 g.
Potassium Bromide	10 g.
Distilled Water to	500 g.

For use mix equal parts of No. 1, No. 2, and water.

Pyro Potash Developer No. 1.

Sodium Sulphite	125 g.
Sulphurous Acid	1 g.
Pyrogallol	50 g.
Distilled water to	500 C.c.

Potash Solution No. 2.

Potassium Carbonate	90 g.
Sodium Sulphite	25 g.
Distilled water to	200 C.c.
Potassium Bromide	9 g.

For usc, mix 3 parts of No. 1 and No. 2, and add 100 parts of water.

BEACH'S POTASH DEVELOPER.

This was for a long time a favourite, and still holds its own with many amateurs, because it gives beautifully clean black and white negatives, and the solutions will keep for a long time.

No. 1

Sodium Sulphite	500 g.
Warm Distilled Water	500 C.c.

Dissolve and when cold add

Sulphurous Acid	440 C.c.
Pyrogallol	125 g.

No. 2.

(*a*)	Potassium Carbonate	375 g.
	Distilled Water	500 C.c.
(*b*)	Sodium Sulphite	250 g.
	Distilled Water	500 C.c.

Dissolve each separately and then mix.

For use take No. 1, 4 parts ; No. 2, 1 part ; and sufficient water to make 64 parts.

Pyro-Ammonia Developer.

No. 1.

Potassium Metabisulphite	100 g.
Ammonium Bromide	50 g.
Pyrogallol	100 g.
Distilled Water to make	1000 C.c.

No. 2.

Liq. Ammoniæ Fort	100 C.c.
Distilled Water	900 C.c.

For use mix 15 parts of No. 1, 35 parts No. 2, and water to 500 parts.

HYDROQUINONE DEVELOPERS.

This reducing agent has been gradually superseded or used in conjunction with some of the newer developers.

Hydroquinone Soda Developer.

No. 1.

Hydroquinone	12·5 g.
Sodium Sulphite	50 g.
Distilled Water to	500 C.c.

No. 2.

Sodium Carbonate	62·5 g.
Distilled Water to	500 C.c.

For use mix in equal parts.

Hydroquinone Potash.

No. 1.

As above.

No. 2.

Potassium Carbonate	20 g.
Distilled Water to	200 C.c.

For use mix 2 parts of No. 1 with 1 part No. 2.

One Solution Hydroquinone Developer.

Sodium Sulphite	75 g.
Distilled Water	750 C.c.

Heat to 70° C. and add

Hydroquinone	10 g.
Sodium Carbonate	150 g.
Water to make	1000 C.c.

This will keep for a long time, and may be used over and over again. Is suitable for transparencies and bromide papers.

With hydroquinone the best restrainer is glacial acetic acid, from 10 to 20 drops to every 500 C.c. of developer, acting energetically.

Hydroquinone cannot be made into a 10 per cent. aqueous solution, but the following will keep well :—

Hydroquinone	100 g.
Sulphurous Acid	200 C.c.
Absolute Alcohol to	1000 C.c.

EIKONOGEN DEVELOPERS.

This is not much used at the present time as it is not very soluble in water and rapidly deteriorates, and it has really been replaced by the newer developers.

No. 1.

Eikonogen	9 g.
Sodium Sulphite	36 g.
Distilled Water to	500 C.c.

No. 2.

Sodium Carbonate	75 g.
Distilled Water to	500 C.c.

For use mix 3 parts of No. 1 with 1 part of No. 2.

(Continued on page 12.)

Useful Photographic Formulæ—continued.

Eiko cum Hydro Developer.

This formula is due to Mr. J. T. Chapman, of Manchester, and is an excellent developer for negatives, lantern slides and bromide paper :—

No. 1.

Hydroquinone	4 g.
Eikonogen	12 g.
Sodium Sulphite	48 g.
Citric Acid	2 g.
Distilled Water	to make 1000 C.c.

No. 2.

Potassium Bromide	0·5 g.
Sodium Carbonate	6 g.
,, Hydrate	3 g.
Distilled Water	to make 1000 C.c.

Mix 1 part of each and add 2 parts of water.

Amidol.

This reducing agent is diamido-phenol, $C_6H_3NH_2NH_2OH$. It cannot be made up into a stock developer, as it readily loses its developing power. The peculiarity of it is that it requires no alkali, and it should be added dry just before developing. A good formula is—

Amidol	2·5 g.
Sodium Sulphite	15 g.
Water	to 500 C.c.

Paramidophenol.

Generally met with commercially as a one-solution developer called "rodinal"—not in very great demand. The hydrochloride, $C_6H_4{\cdot}OH{\cdot}NH_2{\cdot}HCl$, is usually employed; a solution somewhat similar to rodinal may be made as follows :—

Paramidophenol Hydrochlorate	2·5 g.
Sodium Sulphite	4·5 g.
Sodium Carbonate	4·5 g.
Distilled Water	to 500 C.c.

For use take 50 parts of above potassium bromide, 1 part water to 500 parts.

Metol.

This is methyl-para-amido-meta-cresol, $C_6H_4{\cdot}CH_3{\cdot}NHCH_3{\cdot}O$; by itself it is not a satisfactory developer for negatives, but for bromide paper it is unsurpassed, and is useful with other reducing agents. With many people metol causes considerable skin trouble.

No. 1.

Metol	10 g.
Sodium Sulphite	125 g.
Potassium Bromide	2 g.
Distilled Water	to 1000 C.c.

No. 2.

Sodium Carbonate	100 g.
Distilled Water	to 1000 C.c.

For use mix in equal parts.

Metol-Pyro Developer.

No. 1.

Metol	4·5 g.
Pyro	5·5 g.
Potassium Metabisulphite	12 g.
Distilled Water	to 1000 C.c.

No. 2.

Sodium Carbonate	100 g.
Distilled Water	to 1000 C.c.

For use mix in equal parts.

Metol-Hydro Developer.

No. 1.

Metol	4·0 g.
Hydroquinone	5·0 g.
Sodium Sulphite	48 g.
Potassium Bromide	1·5 g.
Distilled Water	to 1000 C.c.

No. 2.

Potassium Hydrate	18 g.
Distilled Water	to 1000 C.c.

For use mix in equal parts.

One-Solution Developer.

Metol	5 g.
Hydroquinone	4 g.
Sodium Sulphite	100 g.
Potassium Bromide	2·5 g.
Sodium Carbonate	50 g.
Distilled Water	to 1000 g.

This is useful alike for negative and positive work.

(To be continued.)

TRADE MARK **'TABLOID'** BRAND

PHOTOGRAPHIC CHEMICALS

THEIR ADVANTAGES.

THEY ENABLE THE CHEMIST TO SUPPLY ALL NECESSARY PHOTOGRAPHIC CHEMICALS.

THEY ENTAIL PRACTICALLY NO SACRIFICE OF SHOP SPACE, AND, UNLIKE BULK CHEMICALS, YIELD A FAIR PROFIT.

THEY DO NOT DETERIORATE LIKE SOLUTIONS, AND GIVE BETTER AND MORE UNIFORM RESULTS.

THEY SIMPLIFY DEVELOPING, TONING, ETC., TO AN EXTENT IMPOSSIBLE BY ANY OTHER MEANS.

ONE 'TABLOID' DEVELOPER AND ONE 'TABLOID' ACCELERATOR IN ONE OUNCE OF WATER MAKE THE NORMAL DEVELOPING SOLUTION IN ONE MINUTE. ANY MODIFICATION IS EASILY OBTAINED TO SUIT UNDER OR OVER EXPOSURE.

DEVELOPING.

'Tabloid' Amidol Developer—
'Tabloid' Amidol ... ... gr. 2
'Tabloid' Amidol Accelerator ... ...

'Tabloid' Eikonogen Developer—
'Tabloid' Eikonogen ... ... gr. 2
'Tabloid' Eikonogen Accelerator... ...

'Tabloid' Hydroquinone Developer—
'Tabloid' Hydroquinone (Quinol) gr. 2
'Tabloid' Hydroquinone Accelerator ...

'Tabloid' Metol Developer—
'Tabloid' Metol ... ... gr. 1½
'Tabloid' Metol Accelerator ... ...

'Tabloid' Paramidophenol Developer—
'Tabloid' Paramidophenol ... gr. 2
'Tabloid' Paramidophenol Accelerator ...

'Tabloid' Pyro Developer—
'Tabloid' Pyrogallic Acid... ... gr. 2
'Tabloid' Pyro Accelerator ... ...

'Tabloid' Restrainers—
'Tabloid' Potassium Bromide ... gr. 1
'Tabloid' Ammonium Bromide ... gr. 1
'Tabloid' Sodium Citrate ... ... gr. 1

'Tabloid' Preservative—
'Tabloid' Sodium Sulphite, Dried gr. 5

FIXING.

'Tabloid' Sodium Thiosulphate ('Hypo') [gr. 20

TONING.

Gold—
A.—'Tabloid' Gold Sodium Chloride gr. 1
Any one of the following reagents is to be used with A according to the tone required—
B1.—*Blue.*—'Tabloid' Borax ... gr. 15
B2.—*Brown.*—'Tabloid' Sodium [Bicarbonate gr. 15
B3.—*Purple.*—'Tabloid' Sodium [Phosphate gr. 15
B4.—*Purple-Black.*—'Tabloid' So- [dium Tungstate gr. 15

Platinum—
'Tabloid' Platinum Compound.

Pamphlet with full instructions and particulars post free on application.

BURROUGHS WELLCOME and Co.,

SNOW HILL BUILDINGS, LONDON.
London Telephone Number—"601, HOLBORN."

London Cable and Telegraphic Address—"BURCOME, LONDON."

PHOTOGRAPHIC NOTES.

BY A FELLOW OF THE ROYAL PHOTOGRAPHIC SOCIETY.

The following notes are submitted for the perusal of those pharmacists who add a photographic department to their businesses. We are on the threshold of that season of the year when activity in photographic matters once more asserts itself. Observation shows me that the amateur photographer, in contradistinction to his professional "brother," is the patron upon whose support the chemist chiefly relies in the sale of photographic apparatus and material; and my suggestions are therefore made to the end that they may be serviceable in enabling the retailer to meet the needs of that class of client. I may perhaps be permitted to say that to a lack of a practical knowledge of photography the chemist only too often adds a great misapprehension of the requirements of photographers, although it is fair to add that this ignorance is now by no means so general as it once was.

"Hypo" in Solution.

I was once present at a meeting of photographers, and in the course of the evening a laugh was raised at the expense of one of them, who confessed that he always filtered his "hypo" solution for fixing purposes. In reality the laugh was with and not against the careful worker, who took a useful precaution which is almost universally neglected by photographers. All sorts of impurities are allowed access to the cask or barrel of sodium thiosulphate, which in many photographic establishments is kept in a dirty outhouse or other unsuitable place. Contaminated fixing baths are responsible for many spoilt negatives and prints. Proper care of the salt and filtration of the solution will always repay the little extra trouble involved by the minimisation of those mysterious spots on plates and paper which are the despair of the photographic expert to account for. Amateurs are not less gulity than their professional brethren in the careless handling of their hypo. I have observed in the dark rooms or "dens" of numerous photographic friends that the salt is kept under the most unfavourable conditions; it is allowed to get dry, to cake, and to attract dust and other impurities, and is generally used in that state, the formula only too often being "a handful to a pint of water." This brings me to the suggestion that if "hypo." were always available at chemists and photographic dealers in solution it would be to the convenience of very many small workers. Usually it is sold in the crystal, with the results above indicated, but I believe that those retailers who laid themselves out to supply it in solution, clean, filtered, and of a definite strength, would earn the grateful patronage of very many photographers. It is surprising how much the busy worker appreciates conveniences designed to smooth his path to success.

Celluloid Films.

One of the problems that have not been solved by the photographic chemist is the preparation of a celluloid film which does not react with a layer of sensitive silver salt in gelatin. The chemical inertness of a glass plate has long been aimed at, but it is far from having been reached in the present makes of celluloid. Paper is the greatest rival to glass in this respect, but the granularity and degradation of the fine detail of an image which are inseparable from the use of that support only assure for it a limited degree of popularity. The camphor or nitrous acid of the celluloid have been alleged to be the active agents in fogging the sensitive film, although the evidence under those heads is somewhat obscure. Be that as it may, it is undeniably risky to keep celluloid films for more than a very few months, in the expectation that they will then be perfectly fresh, and it is beyond all doubt that they are peculiarly susceptible to alterations of temperature. A glass plate may be relied upon to stand a journey to the tropics and back without undergoing deterioration either before or after exposure, but the same immunity can hardly be assigned to celluloid with certainty. If, therefore, any of your readers are carrying over a stock of celluloid film from last season they would do well to bear in mind that in selling them now they are running a serious risk of the customer not finding them quite free of fogging propensities. It would be well for them to act on this hint throughout the season.

The Metric System, etc.

In photographic circles during the last fifteen years various attempts have been made to acclimatise the metrical system of weights and measures in the compounding of formulæ, but so far absolutely no success is to be recorded. The photographer is usually a most conservative person whom it is difficult to convert from haphazard and unscientific methods of working to better

ways. In various directions the chemist has the opportunity of becoming a valuable agent in helping this much-to-be-desired reform. Let him, wherever practicable, express his photographic formulæ in grammes and C.c.'s, and "push" the weights and graduated measures, which will enable the photographer to put the system to practical use in his work. With the powerful help of chemists in this direction the recognised photographic authorities may yet succeed in doing something towards hastening the approach of a better state of things.

Contents of Bottles and Packages.

Reference to weights and measures reminds me that I have a little grievance to ventilate against the retailers of photographic chemicals, a reference to which may help your readers to profit by the omission I have to complain of. It is simply this, that very few photographic dealers in sending out bottles of solutions and packages of chemicals take the trouble to indicate besides the nature of the contents the quantity thereof. Theoretically, I suppose, although this information were invariably given, it should not be taken for granted. But speaking for myself, as a busy man, I would highly appreciate those particulars, for intermittent work plays havoc with the memory, and one is not always in a position to use one's chemicals straightaway. Again, it would be a considerable convenience if the makers of bottles always indicated their capacity upon them. A glance along my shelves informs me that, especially in the cheaper varieties, this is not by any means invariably done.

Photographic Apparatus.

Among photographers for many years the absurd and unreasonable craze for excessive lightness and portability in their apparatus has led to the introduction of many things, which experience very soon shows sacrifice, efficiency, and stability to less important considerations. The landscape camera is particularly a case in point. The conical bellows form of this instrument, which is now unfortunately so prevalent has been one of the most unfortunate introductions to the photographic market. A taper bellows, it is true, enables a lot of weight to be dispensed with in the construction of the camera and conduces to portability, but there its advantages end. With it you sometimes sacrifice the convenience of a sliding front; the opportunity of using your camera for stereoscopic photography; frequently the employment of very short focus lenses; and the maximum rise and fall of the objective; while the "sagging" of the bellows when the lens is lifted or depressed cuts off a portion of your pictures. All these disadvantages are obviated by the "square form" camera, as it is called, and where a chemist is selling a camera to a customer, this would be the kind of instrument I would urge him to give preference to. A beginner is notoriously unable to exercise any discrimination in this respect, but given the square form of instrument, so soon as he is proficient, his appreciation of it would be not untinged by some feeling of gratitude towards the retailer who gave him such wise counsel.

A Hint on Lenses.

In the last seven or eight years the photographic lens has been the object of what we might term an optical revolution Nowadays a modern 5-inch anastigmat will in most cases perfectly cover a plate one or two sizes larger than that for which it is intended. Formerly a lens of that focus would have been counted a very good one if it fairly well covered a quarter plate. Modern lenses, too, have the errors of curvature of field and astigmatism reduced to the minimum, and progress is being made in the total elimination of spherical aberration at the same time. To the outside photographic public, however, the optical properties of a lens are difficult of comprehension. The average amateur is not in a position to appreciate from mere descriptions the essential differences between a symmetrical doublet made on the Steinteil formula and a Goerz or a Zeiss anastigmat. It is a simple matter, however, to illustrate those differences graphically and by means of photography. Where the chemist makes a specialty of selling the new lenses as against the old, I would certainly advise him to take negatives by both kinds, and print them. Nothing is more striking even to the eye of the non-expert than the vast difference in the character of the two images; with the old lens the definition falls off near the centre of the field, and the corners are "foggy," and in some cases dark. With the new lens the image is sharply and uniformly defined right up to the extremities of the plate. Of course I am assuming that the lenses are tested focus for focus and aperture for aperture. If that be done the superiority of the newer forms of objectives is easily established to the satisfaction of the would-be purchasers.

Printing Papers.

The battle of the printing papers proceeds as merrily as it has done any time during the last few years. Modern workers can hardly realise the improvement which has taken place in the qualitative character of the popular bromide printing process. Thirteen years ago, when it was introduced, the cold dead blacks of the shadows and the hard whites of the lights were its principal characteristics. All that has been changed. Platinomatte (there is no platinum in the paper by the way), Velox, and Royal bromide give you delicacy of gradation, richness of deposit, softness, and the best effects of well-executed engravings. But to bring home the advantages in this respect to a photographer nothing is so effective and cogent as comparative examples, and I would certainly advise the chemist who makes a point of retailing photographic printing papers to have on view specimen prints by the various processes, ancient and modern. Let there be an opportunity for the photographer to compare a good bromide print of to-day with one of ten years ago, gelatin prints with albumin, collodion with both, and platinum with carbon. Thus the eye and the taste of the photographer are educated and brought up to date, and the photographic chemist acquires the useful reputation of knowing his business. I mention this matter of specimen prints for the reason that it is capable of being made much more of in the direction I have pointed at than is the case.

Hand Cameras.

Experienced men have come to the conclusion that the maximum of convenience and success in one's work is attained by the use of hand cameras taking double dark slides. I have been, unfortunately, a user of hand cameras for the last eleven years. My present favourite yields me a greater percentage of good negatives than any camera I have previously used, and the cause I trace to the fact that I work dark slides, and not a charging back or bag. Six of the slides I use take 12 plates, and are easily stowed away in a jacket pocket without attracting notice. I might enlarge on this subject to a considerable extent, but it is not necessary, as I am simply recording the outcome of experience. I would certainly counsel chemists to recommend hand cameras carrying dark slides if for no other reason than that, from the business point of view, they are more satisfactory to handle than others. To paraphrase the celebrated remark of the author of the "Pickwick Papers," "Volumes cannot say more."

PHOTOGRAPHIC CHEMICALS.

The following, whilst not a complete list of photographic chemicals, will be found sufficiently comprehensive for all the demands of an ordinary trade :—

Acetone
Acid Hydrofluoric
Acid Pyrogallic
Alum Chrome
Ammonium Sulphocyanide
Amidol
Asphaltum
Calcium Chloride (anhydrous)
Caramel
Dextrine
Diphenal
Eikonogen
Ferric Chloride (dry)
Gelatin, Nelson's soft
,, ,, hard
Glycin
Gold Chloride
Hydroquinone
Indiarubber (pure masticated)
Metol
Ortol
Potassium Bichromate
,, Chloroplatinite
,, Ferric Oxalate
,, Hydrate
,, Metabisulphite
,, Oxalate (neutral)
,, Sulphocyanide
Pyroxylin (high temperature)
Rodinal
Silver Nitrate
Sodium Carbonate
,, Hydrate
,, Hyposulphite
,, Sulphite
,, Sulphantimoniate (Schlippe's salt)
Thiocarbamide
Uranium Nitrate

From the above table have been omitted those which are likely to be in the ordinary stock—one or two inserted because of the following notes :—

Pyro should always be obtained in 1-oz. bottles. Asphaltum : Preferably in powder; not in great demand. Caramel : Liq. sacch. ust. is an extremely unsatisfactory form. The best is the dry powder, "crystal caramel," to be obtained from Lichtenstein and Co., Silvertown Chemical Works, London, E. Dextrine : White dextrine should always be supplied. Pyroxyline : Hopkins and Williams' high temperature, or else Schering's celloidin, is the best. Sodium hyposulphite : The small white recrystallised hypo. should always be supplied. It keeps better, is much cleaner, and gives greater satisfaction, and will always fetch a higher price.

With regard to the prices of photographic chemicals, it must be understood that they are considerably lower than would be charged in the ordinary way. The best thing to do is to obtain a price-list from some large London dealers and note the prices there charged.

Frequently it happens that some out of the way thing, such as an aniline dye, is wanted, and whilst these may sometimes be obtained from the wholesale house, they sometimes may not, and it is necessary to wait while it is obtained for you. As a rule, however, there is not much difficulty beyond a little delay, for the average amateur wants few ; it is only the expert faddist who wants out of the way dyes.

Frequently there arises a sudden demand for some new or rather little known chemical. If this is the case you may be quite sure that someone has been writing about it in the weekly photographic papers. It is as well, therefore, for the dealer to scan these, so as not to be quite ignorant of what is meant.

Above all things, be careful to supply what is asked for. Carbonate of soda is not the bicarbonate, neither is sulphite the sulphate, both of which have before now been obtained in mistake. Mercuric chloride is not calomel, nor is oxalate of potash the binoxalate.

Frequently a formula is brought with a request that it should be made up. In such cases the man whose custom is worth having will never object to an extra charge over cost of materials, though he will probably grumble if prescription rates are charged.

ACETONE AS A DEVELOPER.

A. and L. Lumière and Seyewetz report that the alkalies of alkaline developers can be replaced by acetone. In conjunction with pyrogallol, acetone forms an excellent developer. The authors use for the preparation of a normal developer 100 C.c. water, 5 grammes anhydrous sodium sulphite, 10 grammes of acetone and 1 gramme of pyrogallol. To obtain good negatives from plates which have been over-exposed, the developer is first used without acetone and the latter added gradually. Acetone is said not to colour the film yellow or affect it in any way, and to exercise a favourable influence on the colour of the silver and the development of the diapositive.—*Pharm. Centr.* xxxviii., 856, through *Chem. Zeit.*, 1897, Rep. 304.

Chemists' Photographic Specialties.

MANY chemists offer photographic appliances or materials, specially devised by themselves, and others undertake the development of films, printing, etc. A list of such is herewith given, and particulars of the articles offered—many of which are well worthy of attention—will be sent by the proprietors on application. The full addresses in all cases will be found in the 'Photographic Tourists' Guide,' p. 6, *et seq.*

PHOTOGRAPHIC LITERATURE.

The amateur photographer is a somewhat voracious reader, and it is as well, therefore, to cater for his tastes in this way. It will be found that the best way to obtain both the ephemeral literature and books is to enter into communication with Messrs. Dawbarn and Co., 6, Farringdon Avenue, E.C. They make a specialty of supplying photographic dealers with literature.

The weekly journals are :—

British Journal of Photography. Weekly. Friday—9 a.m. 2d. Greenwood & Co., 24, Wellington Street, Strand, W.C. The *Times* of photography, very substantial and very good.

Photographic News. Weekly. Thursday—4 p.m. 1d. 9, Cecil Court, Charing Cross Road, W.C. The oldest weekly photographic newspaper, and the best of its kind for amateurs and chemists.

Amateur Photographer. Weekly. Thursday—9 a.m., for Friday. 2d. Illustrated. Hazell, Watson & Viney, Ltd., 1, Creed Lane, Ludgate Hill, E.C.

Photography. Weekly. Thursday—9 a.m. 1d. Iliffe & Son, 3, St. Bride Street, E.C.

The monthly journals are :—

Photogram. Monthly. 3d. Photogram, Ltd., 6, Farringdon Avenue, E.C. A finely and artistically illustrated paper.

Process Photogram. Monthly. 6d. Photogram, Ltd., 6, Farringdon Avenue, E.C. Fully illustrated.

Practical Photographer. Monthly—25th. 6d. Illustrated. Percy, Lund & Co., Amen Corner, Paternoster Row, E.C.

Junior Photographer. Monthly—25th. 3d. Illustrated. Percy, Lund & Co., Amen Corner, Paternoster Row, E.C.

The chief annuals are :—

British Journal Photographic Almanac. Yearly. December. 1s. Illustrated. Cloth, 1s. 6d. Greenwood & Co., 24, Wellington Street, Strand, W.C.

Year-Book of Photography. Yearly. April. 1s. Illustrated. 9, Cecil Court, Charing Cross Road, W.C.

Photography Annual. Yearly. July. 2s. 6d. Illustrated. Iliffe & Son, 3, St. Bride Street, E.C.

As these may be obtained from the above-named firm on sale or return, and show-cards will be supplied, a trial might be made for a month or two.

The most likely books are the following :—

Photography in a Nutshell. By F. Kernel. 1s.
The Imperial Text-book of Photography. By E. J. Wall. 1s.
Platinotype. By Horsley Hinton. 1s.
The Ilford Manual of Photography. By C. H. Bothamley. 1s.
Modern Photography. By W. K. Burton. 1s.
Elementary Photography. By John A. Hodges. 1s.
Everyone's Guide to Photography. By E. J. Wall. 6d.
Photographic Enlargements. By Geo. Wheeler. 1s.
Development. By Lyonel Clark. 1s.
The Art of Retouching. By J. Hubert. 1s.
Optics for Photographers. By W. K. Burton. 1s.
The Stereoscopic Manual. By W. I. Chadwick. 1s.
Wet Collodion Photography. By C. W. Gamble. 1s.
Carbon Printing. By E. J. Wall. 1s.
The Lantern, and How to Use It. By C. Goodwin Norton. 1s.
Modern Magic Lanterns. By R. Child Bayley. 1s.
Photographic Chemistry. By F. C. Townshend. 1s.

The above are practically the most reliable books. For advanced workers the following should be supplied :—

Instruction in Photography. By Capt. Abney. 3s. 6d.
Practical Guide to Photography. By Marion & Co. 2s. 6d.
Science and Practice of Photography. By C. Jones. 2s. 6d.
Photography with Emulsions. By Capt. Abney. 3s. 6d.
Action of Light in Photography. 3s. 6d.
Photo-Micrography. By J. H. Jennings. 3s.
Picture Making by Photography. By H. P. Robinson. 2s. 6d.
Photogravure. By H. Denison. 4s. 6d.
Photo-Lithography. By Georg Fritz. 3s. 6d.

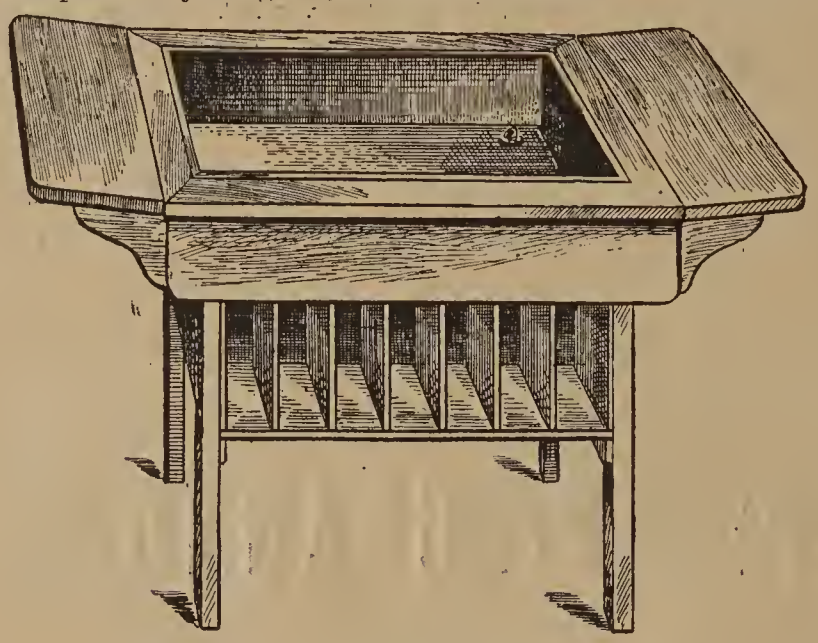
The following reference works are also useful :—

Dictionary of Photography. By E. J. Wall. 7s. 6d.
Encyclopædia of Photography. By W. E. Woodbury. 7s. 6d.
Photographic Reference Book. By W. A. Watts. 6s.
Materia Photographica. By C. Leaper. 5s.

NEW IDEAS AND TRADE NOTES

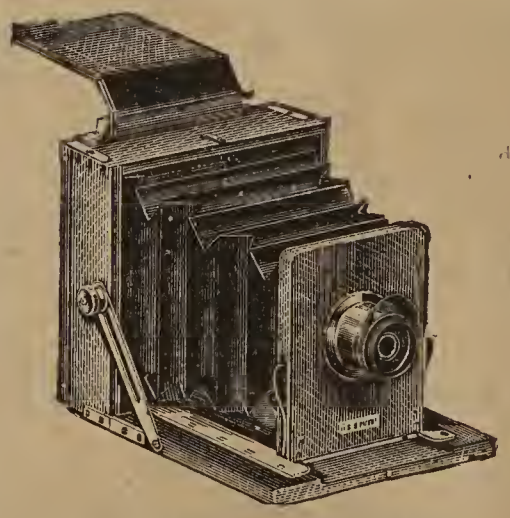
BARCLAY & SONS, LTD.

Messrs. BARCLAY & SONS, LIMITED, of 95, Farringdon Street, London, E.C., have a department specially devoted to photographic materials and requisites under the special charge of Mr. G. R. Barclay, an amateur photographer of many years' standing, who for a long period has taken a great interest in this engrossing pursuit, in fact, long before it became so much the vogue as at present. We have been shown advance sheets of this firm's NEW PHOTO PRICE-LIST to be issued at Easter. It is alphabetically arranged, retail prices only are given, so it can be shown to or distributed



THE FARRINGDON SINK AND DISH RACK.

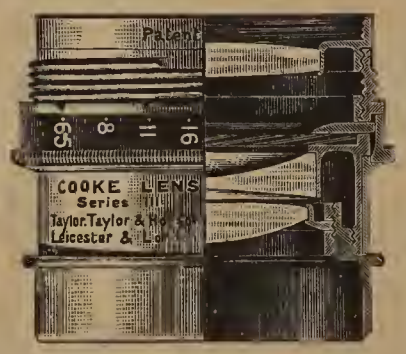
amongst customers. Chemists can be supplied with one hundred copies of the list with their own advertisement printed on the front cover at a very modcrate charge. The trade discounts are indicated by letters. The chemicals are quoted not only by the old-fashioned weights, but the metric equivalents are given. Graduated measures are also supplied, with the metric measures indicated. Plates by all the leading makers are kept in stock and the prices enumerated in this list. One of Messrs. Barclay's novelties this season is the FARRINGDON GUINEA SET, which includes a compact, well-made quarter-plate polished mahogany camera, one double dark slide, the lens is fitted with revolving diaphragm, and the tripod is light, strong, and rigid. By an ingenious arrangement the camera can be put to any focus by pressing two small arms, and the screw arrangement common to so many cameras is done away with. A half-plate size can be had to retail at 32s. 6d. The FARRINGDON SINK AND DISH RACK is a substantially made and well-finished piece of dark-room furniture specially designed by Mr. G. R. Barclay, and retailing at 70s. The sink is 24 by 15½ by 6 inches, and the waste can be connected with existing fittings or allowed to flow into a pail, the side flaps are hinged, and when in position are sloped to allow of drainage into the sink. A SUPPLY CISTERN of galvanised iron, holding ten gallons, can also be had to use with the sink. The price, including tap and lid, is 16s. Messrs. Barclay make a special feature of SCALES AND WEIGHTS for photographers. The scales can be had in polished oak box, with drawer, brass beam, weight scale and chains, folded brass crank, and movable glass pan, English weights, brass (two drachms to half scruple), metric weights, brass (10 grammes downwards), at 17s. 6d., or, in a cheaper form, with polished mahogany box, etc., at 13s. 6d. A useful article is the "GRIP" PASTE, which can be recommended for mounting photographs. For other novelties and particulars we must refer our readers to the new price-list previously alluded to, which will be sent on application, and will well repay perusal.



THE FARRINGDON SET.

THE COOKE LENSES.

Within the last few years the science of photographic optics has advanced by leaps and bounds, and one of the most satisfactory productions has been the series of lenses produced by Messrs. TAYLOR TAYLOR & HOBSON (see p. 15) from the calculations of Mr. H. Taylor, of Messrs. Cooke, of York. The particular features of this series of lenses is that they consist of single, not achromatised lenses, and differ from the ordinary type of rectilinear lenses in that they are composed of three lenses—a central negative element between two positive elements—each single and yet so perfectly adjusted by means of a screw adjustment that perfect definition is obtained with the full aperture over the given sized plates for which the lens is designed. The lenses are rectilinear and free from spherical and chromatic aberration, both for axial and oblique pencils—an important improvement—whilst the errors of astigmatism and curvature of the field are totally eliminated at all angles up to 25° to 30° from the axis. Experts would naturally suspect that, from the form of the lenses, that is the central negative lens there would be considerable flare or ghost, but from the peculiar forms and relative distances of the surfaces these are totally absent. There is one other point which is a great advantage in these lenses, and that is their perfect correction as regards the absolute coincidence of the size of the red, green, and violet images—an important matter now that three-colour photography is so much to the fore.



NELSON, DALE AND CO.

Considering that it is generally believed that the whole question of the great sensitiveness of the dry plates of the present day has to depend in considerable measure on the quality of the gelatin, and that the keeping properties of the plates and printing-out papers are also dependent on good gelatin, it is not to be wondered at the great name that Nelson's gelatin has attained in the photographic world. Address: 14, Dowgate Hill, E.C.

W. BUTCHER AND SON.

This firm submits a copy of the new photographic catalogue for the present season. It includes a large number of new things in almost every branch of the trade, and chemists would do well to write to Messrs. Butcher, Blackheath, S.E., for a copy.

HARRINGTON BROS.

This firm make a specialty of pure photographic chemicals, and their granulated hypo, which may be obtained in 1 lb. boxes, is well worth attention, as it thus obviously saves any trouble on the part of the dealer or customer. Other important items are the aniline colours for trichromatic and other photography, the chemicals for process work, and negative and enamel collodions and varnishes. These may be obtained either in bulk or bottles, and being of constant and well-proven composition are obviously of great advantage to the dealer. Address, Harrington Bros., 4, Oliver's Yard, City Road, E.C.

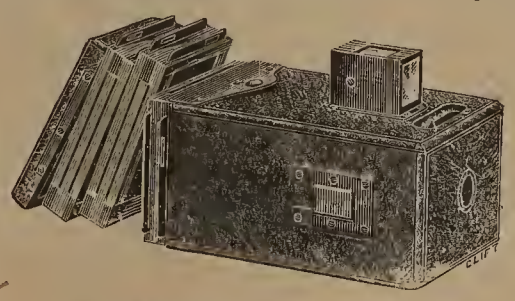
GEO. HOUGHTON AND SON.

Messrs. Geo. Houghton & Son, 88, High Holborn, W.C., make a specialty of the wholesale trade, and are prepared to supply, on favourable terms, everything that the photographic dealer requires in the course of his business. One of their novelties is the "Holborn Guinea" hand camera, fitted with two view finders, an ever-set

The Holborn Hand Camera.

shutter giving time and instantaneous exposures, a single achromatic lens, and covered with black leather. It takes six quarter plates, which are stored in sheaths at the back of the camera, and are released by pressing a knob on the top of the camera, whence they fall down into a reservoir at the bottom. The camera only weighs $2\frac{1}{4}$ lbs. when charged, and measures $7\frac{1}{4}$ by $6\frac{1}{4}$ by 4 ins.

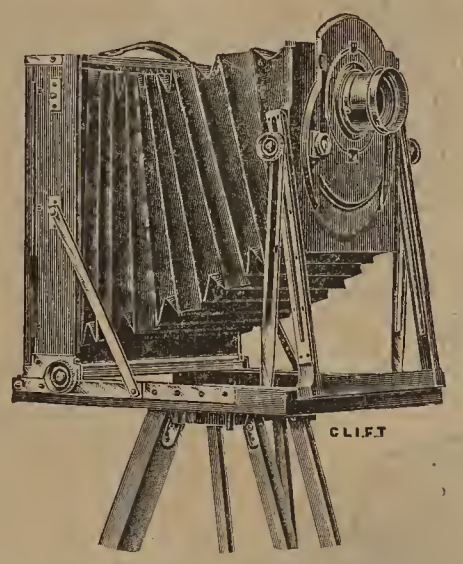
Another series of useful cameras which will appeal to many are the Expert, which are fitted with dark slides. It is made in two sizes—a quarter plate, fitted with three double dark slides, which are carried inside the camera, though there is room for another three slides, which are very compact and light. The larger camera is covered with Morocco leather with oxidised fittings, and two brilliant view finders, a handle for carrying, and tripod



The Expert Pocket Camera.

attachments. The lens is of the landscape pattern and fitted with rotating stops, which are manipulated from the outside of the camera, the lens and a time and instantaneous shutter, adjustable to various speeds, are fitted to a special front, which can be removed so that the lens may be easily cleaned. The price of this complete with three double dark slides is 30s. The smaller size of this camera is made for plates $2\frac{1}{8}$ by $1\frac{5}{8}$ ($\frac{1}{4}$ quarter plate), and is identical with the above with the exception of finders, of which only one of the brilliant pattern, which slips on to the top of the camera, is supplied. The price of this complete with three double dark slides is 17s. 6d.

As regards the Sanderson Camera, it may be noted that for many years camera construction has been practically at a standstill, and this particular form is noticeable in that it really is the most important advance in stand cameras for many years. To the old worker the principles of this camera will seem almost revolutionary, as the swing back has been entirely done away with, but by means of special side struts and a front swinging on the same



The Sanderson Patent Camera.

an amount of rise and fall can be obtained with this camera that is practically impossible with any other pattern. All that is necessary to do with this camera is to see that it is level, and then, with the head under the focussing cloth, to adjust the image on the ground glass by movements of the front. It is capable of all that an ordinary camera will do and a great deal more with infinitely less trouble. It is not increased in size, weight, or price.

"TABLOID" PHOTOGRAPHIC CHEMICALS.

The compactness of these preparations so obviously adapts them to the needs of the amateur that the necessity of keeping them in line with modern developments is easily understood. Messrs. Burroughs, Wellcome & Co. are evidently fully alive to the requirements of the case, and have recently so added to their list (see p. 13) that the amateur has every fully established developing agent at his command in a most convenient and compact form. Developing or toning by means of "Tabloid" Photographic Chemicals is simplicity itself. One "tabloid" developer, one "tabloid" accelerator dissolved in 1 oz. of water, and in a minute or less the normal developer is ready for use. It is even quicker than diluting concentrated solutions. The space saved is considerable, the freshness and activity of the developer is secured, there is no weighing out so many grains of this and so many grains of that, and yet with all these conveniences there is no loss of power in altering the constitution of the developer as under or over exposure may require. Toning is just as simple as developing. Many chemists do not cultivate the trade in photographic chemicals because the profit on them is too small to pay for the trouble they give or the shop space they occupy. But the majority of people may be expected to purchase their medicines, toilet requisites, etc., where they can also get the chemicals that they need for their hobby, and with the ever-increasing competition in trade and the continually growing number of amateur photographers that is a point the chemist may well bear in mind. It would certainly seem that tabloid photographic chemicals enable the pharmacist to cater for the photographer with the sacrifico of a minimum amount of space and time and with the certainty of a fair profit. A full list of the photographic chemicals now issued under the "Tabloid" brand, and a pamphlet giving complete working instructions will be sent by the firm to any applicant mentioning this paper. It will be noticed that each developer has its specially-adapted accelerator, and that in the case of the toning agents a great range of colour is made possible by separating the gold from the other ingredients of the bath. It is claimed that the keeping properties of "Tabloid" photographic chemicals have been amply proved by the experience of travellers in various parts of the world. One well-known traveller, Lionel Decele, for instance, speaking very favourably of them after using them to develop 4000 plates in equatorial Africa. The latest additions to Messrs.

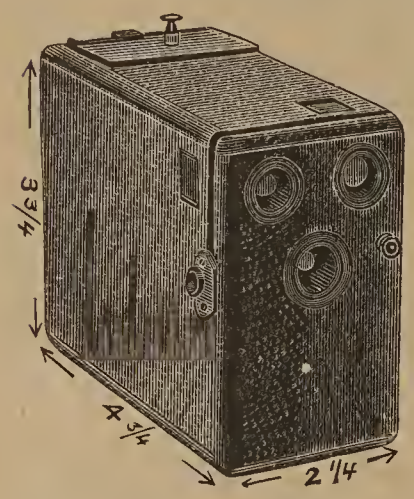
Burroughs, Wellcome's list include 2 gr. hydrokinone, eikonogen, 2 gr. pyro, 2 gr. amidol, and 1½ gr. metol with the requisite accelerators. They are readily soluble in water and give satisfactory developers with the minimum amount of trouble.

MYERS AND FROST.

The chemist who successfully cultivates the photographic trade will soon find that there comes a time when his customers want enlargements from small negatives made. If he undertakes this himself, he will probably find by the time he has learnt how to successfully turn out a good enlargement at first shot from every negative that all his profits have been swallowed up. Enlarging is a business in itself, and it is as well, therefore, to place such work in the hands of a competent firm, as the above, who give special terms to dealers. Address: 46a, Market St., Manchester.

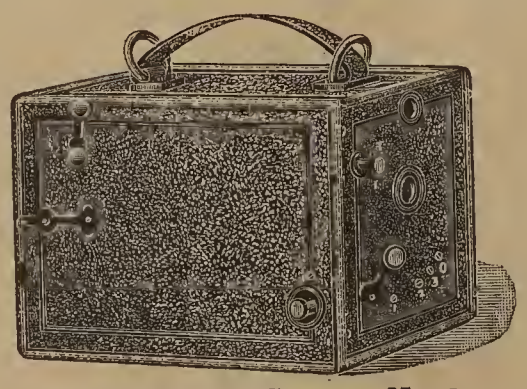
THE DIAMOND CAMERA AND PLATES.

Mr. J. G. Lockyer, of 87, Evelyn Street, Deptford, S.E., has placed on the market an extremely neat little camera called the "Diamond," which retails at a guinea and caters for the present rage for small pocket cameras. It takes six plates, 2⅛ by 1⅝ (a ¼ of a quarter plate), and these are stored in sheaths at the back of the camera and are released in turn by pressing the small knob seen on the top, and fall into a reservoir at the bottom. The lens is a landscape lens of fixed focus, giving good definition. Two view finders are fitted and an everset time and instantane ous shutter, which is altered from time to instantaneous and *vice versâ*. Mr. Lockyer also sells a special brand of plates, the "Diamond," in boxes of two dozen at 1*s*., and further supplies a guide and cutter for those who wish to cut their own plates. He particularly recommends his hydroquinone developer for these plates, which are of the same speed as the Special Rapid of other makers, but they work well with all ordinary developers. Mr. Lockyer has made a specialty of putting up standard developers, toning, reducing, intensifying, and other solutions, and a liberal trade discount is allowed.



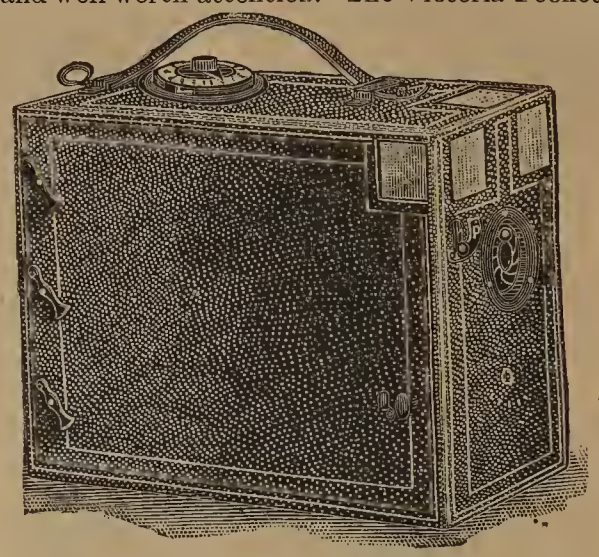
JAS. WOOLLEY AND SONS, LTD.

Messrs. Woolley & Sons, of Manchester, were amongst the first wholesale firms to recognise the possibilities in the photographic trade, and for the last ten years they have catered for the wholesale trade by supplying reliable apparatus at a liberal discount. They now issue a complete price list with the retail prices in it, so that it may be shown to a customer by the retail chemist; fifty of these catalogues are supplied to every customer who sends a £10 order, whilst literature and show-cards are also issued. A large show-room at the firm's premises is devoted entirely to photographic goods. One of their specialties is the Victoria Outfit, which consists of camera, one double dark slide, a good lens (either landscape or rectilinear), and tripod stand; other sets are completed by a roller-blind shutter and case. These outfits vary in price from 21s. to 67s. 6d. for the quarter plate, and 42s. to 126s. for the half plate, the price varying according to the lens, shutter, case,



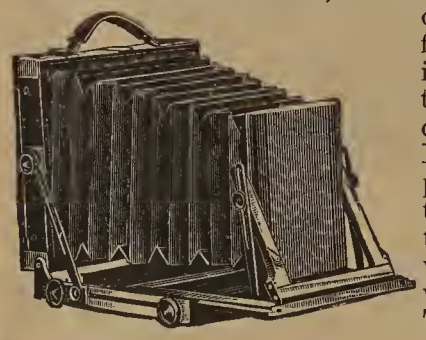
The Excelsior Camera, No. 1.

etc. Another improved camera is the "Standard," which has every movement that may possibly be desired, and is issued with three double backs and turn-table fitted to the camera, for 70s for quarter plate, 100s. for half plate. These are of very fine workmanship, and well worth attention. The Victoria Pocket Camera is



The Victoria Hand Camera.

another excellent little novelty which is very compact and portable and takes a spool of films for twelve exposures. It is also fitted with a brilliant finder, an achromatic lens and instantaneous shutter for various speeds. Price, 17s. 6d. Of the ordinary hand cameras for plates and films with magazines there are two kinds—first the Excelsior, for lantern-sized plates, 3¼ inches square, or for ¼-plate size. Both sizes are fitted with achromatic lenses and instantaneous shutters adjustable to various speeds, and they are covered with leather. The Victoria Hand Camera is of improved pattern and a more superior article than the last; it is fitted with two brilliant finders, single lens with iris diaphragm, and shutter with improved speed regulator. The price-list of all the accessories and apparatus is wonderfully complete, well illustrated and printed, and we can do no more than commend it to dealers' notice, as well as the series of washable backgrounds, which are always flat and never crease, and may be easily rolled up. These backgrounds are issued in four colours; they are wonderfully cheap and of excellent quality.



The Standard Camera.

CADETT PLATES.

Messrs. Cadett & Neall, of Ashtead, Surrey, make a specialty of dry plates of great rapidity, although they also make plates of ordinary speed, lantern plates and photo-mechanical or process plates. All their plates are accurately tested for speed by the now almost universally acknowledged best system of speed testing, namely, that worked out by the late Dr. Ferdinand Hunter and V. Driffield. Their spectrum plate is also the only really true orthochromatic plate in the market, but its great slowness and the demand for a more rapid plate has induced them to shortly place on the market a more rapid plate, but not of such perfect colour-sensitive qualities, the deficiency being in the blue-green.

JONATHAN FALLOWFIELD.

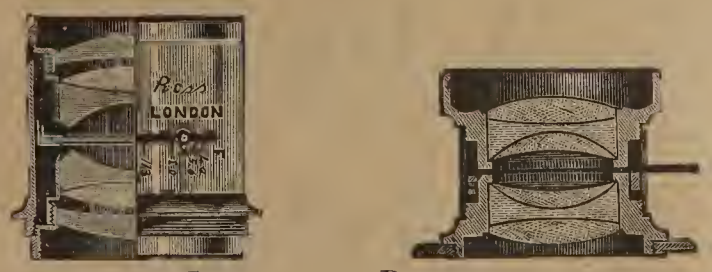
Mr. J. Fallowfield was probably better known as a photographic chemist and dealer than anyone else about 25 to 30 years ago, when his premises were in Lower Marsh, Lambeth; and with the advance of time and the great increase in photography he has found it necessary to migrate to 146, Charing Cross Road, W.C. Here there is to be found a complete stock of every requisite in photography, and that we do not notice his specialties is simply due to the fact that the description of them fills a bulky octavo volume of nearly 800 pages. It is obvious, therefore, that to commence on such a bewildering mass of material would appal the stoutest, but it also proves that his warehouse may be justly termed the Whiteley's of photography.

ROSS, LTD.

Since the introduction of the Jena glass with which Messrs. Zeiss have been so intimately connected, their photographic lenses have taken very high rank, and the anastigmats have found considerable favour amongst photographers of all classes. Probably the most useful of this series is Series VII.*a*, the convertible ana-

Convertible Anastigmats.

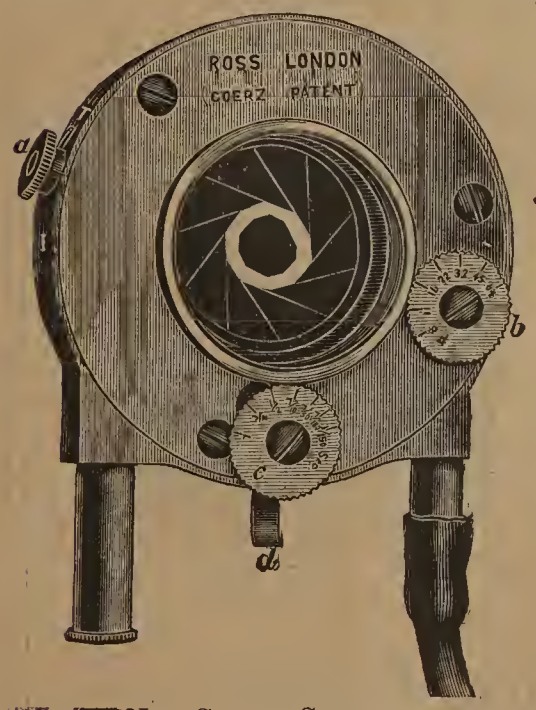
stigmats, which consist of two combinations, each of which is composed of four cemented elements, and which can be used as single lenses with a working aperture of F/12.5, whilst the two combinations working together form a rectilinear that works at an aperture of F/6·3 to F/8, according to the single lenses that are chosen. Thus, it is possible to have in one lens a set that will give a rectilinear of one focus with either two single lenses of the same foci, which is about double that of the rectilinear, or else two



Planar Lens.

Double Anastigmat.

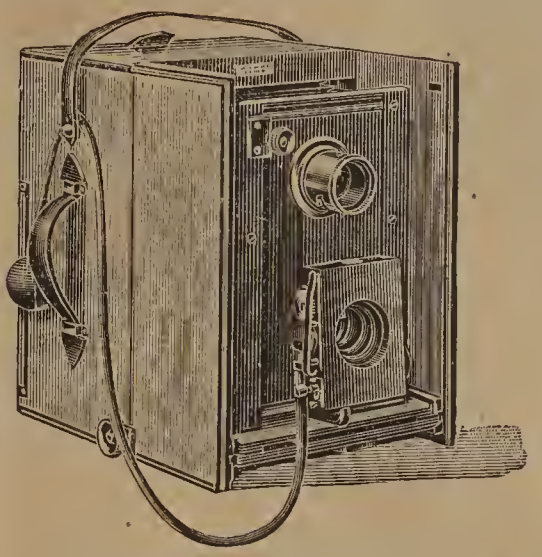
single lenses of dissimilar foci, so that one may have practically two or three lenses in one. This lens may aptly be called a universal lens suitable for all classes of work, for the rectilinear when stopped down gives such excellent definition over a large angle that it can be used on a big plate as a wide angle lens. A still more perfect lens is the "Planar," which is a symmetrical lens composed of four separated lenses, the outer one being single and separated by an air space from a doublet. The great features of this lens are that it works at an aperture of F/3·6 to F/6, and perfectly corrected for spherical and chromatic aberrations up to an angle of 62° to 72°. They are made in varying foci from three-quarters of an inch up to 33 inches, and the smaller sizes are provided with the English Microscopic Society screw, and for photo-micrographic enlargements the results are superior to anything yet done with lenses of similar foci. From the large working aperture they are obviously specially suitable for portraiture and kinematographic work, and the corrections are so perfect as to enable them to be used for all process and three-colour work.



New Sector Shutter.

Another valuable lens which is manufactured as the above at Clapham by Ross, Ltd., is the Goerz Double Anastigmat, the invention of Herren Goerz and Van Hoegh. These lenses are also characterised by their perfect correction and flatness of field and exquisite definition, even with the full aperture of F/8 over an angle of 70°, whilst stopping down increases the angle of sharp definition to 90°.

Goerz's New Sector Shutter is of the well-known iris diaphragm pattern, fitting between the combinations of a doublet lens, and opening from and closing to the centre. The full aperture is easily controlled, a scale of millimetres at the side enabling one to set it. The speed, too, is controllable by a milled head, from one second to 1/150th of a second; and the speeds are constant for any sized aperture, which is a distinct advance. The shutter is set without opening the lens, and works without shock or jar of any kind.



Portable Twin-Lens Camera.

One of the great difficulties in hand camera work is to ensure the sharpness of the image, and the most advanced workers are gradually coming round to the use of twin lens cameras, in which, by the use of a second lens, the composition as well as the definition of the picture can be seen, and a convenient and well-made camera of this pattern is that made by Ross, Ltd., which is fitted with two accurately paired lenses, a blind shutter, and either three dark slides or changing box for twelve plates. The address of Messrs. Ross, Ltd., is 111, New Bond Street, W.

"VELOX" PAPER.

Messrs. John J. Griffin & Sons, of 22, Garrick Street, Covent Garden, W.C., have taken up the sole wholesale agency of Velox Paper, which has gained considerable reputation in the U.S.A., the land of its birth, and also on the Continent. It is a development paper very slow, requiring for an average negative an exposure of from one to eight seconds to diffused daylight a few feet away from northern window; electric arc light requires about same exposure. Welsbach gas-light needs several seconds more than arc light; an ordinary gas-jet three or four inches distance from negative will yield a print in one or two minutes. The peculiarity of the paper is that it may be manipulated in subdued gas-light without any harm accruing, and whilst metol-quinol or amidol or metol alone are recommended for development, it will work well with any developer suitable for bromide paper. The results we have obtained are characterised by extremely rich velvety blacks, pure whites, and good gradations. It is made in two kinds and in six grades—the ordinary velox in "carbon," "glossy," and "rough" surfaces, and the special, which is somewhat quicker than the other, in "portrait," "glossy," and "rough." An excellent paper, worth pushing.

VOIGTLÄNDER AND SON.

Messrs. Voigtländer & Son, of Brunswick, and 92, Hatton Garden, E.C., are renowned as the manufacturers of the first Petzval Portrait Lens and the first Euryscope. Now with the advance of photographic optics they have introduced a series of anastigmatic lenses perfectly corrected for all the aberrations, with large aperture and good covering power. These lenses compare favourably with any of the newer lenses, and should not be overlooked.

REYNOLDS AND BRANSON.

Messrs. Reynolds & Branson, of Leeds, have for some considerable time made a specialty of apparatus for radiography, and amongst other good things is the Phœnix Camera, of superior quality and fitted with three double dark slides. The Phœnix Dark Room Lamps are also well made, and that for gas is so arranged that white light may be obtained at will. For testing plates a standard and constant light is of great importance, and the Hefner-Alteneck Amyl-Acetate Lamp, which has been modified by this firm, is on the Continent the generally accepted unit of light.

News in Brief

Mr. J. Uri Lloyd, of Cincinnati, U.S.A., is engaged in connection with Professor Felter, in getting out a new edition of the 'American Dispensatory,' reprinting and setting anew. The work is expected to be ready about the end of the year.

Liverpool Pharmaceutical Students' Society.—The usual smoking concert to wind up the winter session took place on Thursday, March 24, at the Kardomah Café, about forty members and their friends assisting.—The President, Mr. Pierson, performed the duties of chairman in a most satisfactory manner, working through a long programme of vocal and instrumental music, interspersed with recitations and a few short speeches concerning the work of the Society. During the evening a collection was made on behalf of the Pharmaceutical Society's Benevolent Fund, and its claims on the support of all connected with pharmacy were impressed upon the assembly by the President and Mr. Wardleworth. The excellent arrangements for the comfort of the audience reflected great credit on the Secretary, Mr. J. Harris Burns, who was indefatigable in his endeavours to make the affair a success.

Brighton Junior Association of Pharmacy.—On Wednesday, March 23, the above Association held a meeting at its headquarters, 31, Cannon Place. The chair was taken by the President, Mr. C. A. Blamey.—Mr. R. A. Cripps read a paper on "Official Extracts and Liquid Extracts," which proved most interesting and instructive.—This was the last scientific meeting of the session, but the annual conversazione and dance was held at the King's Apartments, Royal Pavilion, on Thursday, March 31, the rooms being prettily decorated, and the gathering, which lasted from 8.30 p.m. till 2 a.m., being most successful. The stewards Messrs. C. A. Blamey (President), C. G. Yates, G. B. Savage, S. Ching, and W. H. Andrews (Hon. Secretary).

Presentation at Exeter.—On Thursday last week a presentation was made at the Exeter Technical and University Extension College to Mr. Alan H. Ware, Ph.C., the Teacher of Pharmacy, Botany, and Chemistry. Some of his students and friends on the staff of the College subscribed for a handsome tea service, which was presented by Mr. Trott, who, in the name of the subscribers, expressed the esteem which was felt for Mr. Ware at the College by all who came in contact with him, and wished him every happiness during his approaching honeymoon. The tea service was accompanied by an illuminated address containing the names of the subscribers.

Manchester Literary and Philosophical Society.—At a special meeting of this Society, held on Tucsday, the Wilde medal for 1898 was presented to Sir Joseph Dalton Hooker, G.C.S.I., F.R.S., and the Wilde premium (£15 15s.) for 1898 to Mr. John Butterworth, F.R.M.S. Mr. J. Cosmo Melville presided, and Sir Joseph D. Hooker gave some interesting reminiscences of his visits to Manchester.

Mr. J. W. Drinkwater has opened a chemist's shop at Manchester Road, Chorlton-cum-Hardy, Manchester, and the entire fittings, including cabinet ware, show cases, counters, shop rounds, jars, etc., have been supplied by Messrs. Ayrton & Saunders, Liverpool. This shop is particularly artistic and the effect produced by it is extremely good.

J. H. Morris, Chemist, Branksome, Bournemouth, was elected, on Monday last, at the head of the poll to the Branksome Urban District Council (East Ward Division).

Mr. B. Kühn, of 36, St. Mary-at-Hill, Eastcheap, E.C., has, with the assistance of Messrs. Fritzsche, of Hamburg, the patentees of Chinosol, formed the business into a limited company under the style of "The Chinosol Hygiene Company, Limited." Mr. Kühn, who has previously had the sole agency for Chinosol and its various preparations, will act as Managing Director, and the address of the company will be 36, St. Mary-at-Hill.

Mr. C. Rundle has retired from the business of Messrs. W. Hooper & Co., Russell Street, Covent Garden, which he has carried on for the past fourteen years in conjunction with Mr. William Warren. This change involves Mr. Rundle's retirement from the Strand Board of Works, of which he was a prominent member.

Messrs. James Hillock's drug and chemical concern in Armagh is to be disposed of by public auction in consequence of the death of the proprietor.

The Trustees of the National Library, Kildare Street, Dublin, have added, by request, the Calendar of the Pharmaceutical Society of Great Britain to their collection of volumes.

An Interesting Lecture on "Exposure and Development" was given last week in Belfast by Mr. A. R. Hogg, a local chemist and druggist, before the Ulster Amateur Photographic Society.

A Statutory Notice to Creditors has been issued in the goods of the late Dr. Hamilton, Director of Messrs. Hamilton, Long and Co., state pharmaceutical chemists, Dublin, who died recently. Probate of the will of deceased has been granted to Messrs. W. and Arthur B. Watson, and a distribution of assets will take place on June 1 next.

The Grand Jury at County Armagh have recommended that before submitting samples for analysis due authority for the same must be obtained. They believe that the Food and Drugs Act would be more efficiently administered by the exercise of more discrimination in the selection of samples.

Publications received.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

APRIL 6, 1898.

Business has been greatly restricted during the past few days, the threatened rupture between the United States and Spain, combined with other political uncertainties, together with the near approach of the Easter holidays, having reduced actual transactions almost to the vanishing point. Quinine has had another tumble, it is hoped, however, now that the worst is over, and that we may shortly see a reaction. Acid Citric and Tartaric and Cream of Tartar are firm. Borax and Acid Boracic quiet and unchanged. Acetanilide, Phenacetine, and Sulphonal steady. Cocaine quiet. Iodine and Iodides, Bromine and Bromides, Bismuth Salts, and Lithia without change. Cod-Liver Oil higher. Glycerin steady. Ipecacuanha firm. Opium, Morphia, dull. Codeia steady. Pilocarpine expected to be dearer. Senna in short supply, and very firm. Cacao Butter higher. Prices ruling for articles of chief interest are as follow :—

ACETANILIDE—Is quiet at 1s. 2d. to 1s. 3d. per lb

ACID CARBOLIC.—Rather firmer at 6½d. to 6¾d. per lb., according to quantity and make, for the 35-36° acid in *ice crystal* in 2½-cwt. drums and overcasks. Other qualities and packing higher in proportion. *Crude* : 60° F., 2s. 1½d. per gallon; 75° F., 2s. 7½d. *Liquid* : 95 per cent., of pale straw colour, 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC—Steady at 1s. 0¾d. per lb. for prompt, makers not being ready sellers for forward delivery.

ACID OXALIC—Is quoted 3½d. to 3¾d. per lb., delivered in London.

ACID TARTARIC—Firm at 1s. 1d. for *English* in crystals ; *foreign*, 12¾d. per lb.

AMBERGRIS.—Really fine quality is becoming scarce, and with a good demand, prices, failing a good "find," will be bound to go dearer. For really fine grey, of good flavour, 95s. to 105s. per cwt. is asked.

AMMONIA COMPOUNDS.—*Sulphate* dull and weak. Gray, prompt, 24 per cent., London, £8 15s. per ton, Hull, £8 15s., Leith, £8 16s. 3d., Beckton, £8 12s. 6d., Beckton terms prompt, £8 10s. *Bromide* : 2s. 2d. per lb. *Iodide* : 13s. 4d. per lb. *Sulpho-cyanide*, 1s. 2d. to 1s. 3d. per lb. *Oxalate* : 6½d. per lb. *Sal ammoniac* : Firsts, sublimed, 35s. to 36s. per cwt. ; seconds, 33s. per cwt. *Chloride* : 26s. to 30s. per cwt.

BLEACHING POWDER—Is quoted £6 15s. to £7 5s. per ton on the spot, according to quantity.

BORACIC ACID—Steady at 22s. 6d. per cwt. for *crystals*, and 24s. 6d. per cwt. for *powder*.

BORAX—Quiet ; *crystals* 14s. 6d. per cwt., *powder* 15s. per cwt.

BROMINE AND BROMIDES—Without alteration, *Pot. Bromide* being in good demand at 1s. 9d. to 1s. 10d. per lb. *Soda Bromide*, 2s. 1d. to 2s. 2d. *Ammon. Bromide*, 2s. 1d. to 2s. 2d. per lb., according to quantity.

BUCHU LEAVES.—Although prices were lower in last week's auctions, it has been found by home consumers that privately no supplies are to be had at the prices then established. The whole of the late arrivals seem to have been purchased for shipments, whilst stocks here are held for more money. 5d. per lb. may be called the nearest value for good green round leaves.

CAFFEINE—In fair demand at 14s. 4d. per lb. for the *pure*, and 11s. 2d. per lb. for the *Citrate*.

CAMPHOR.—Market is lifeless, there being sellers of *China*, April to June steamer, at 84s. 6d., and of *Japan* at 90s. to 92s. 6d. per cwt., *c.i.f.*

CASCARA SAGRADA.—Good old bark is held for 22s. 6d. to 23s. 6d. per cwt., there not being very much offering.

CLOVES.—*Zanzibar* : Firm and in fair demand. Sales comprise June to August delivery at $3\frac{15}{16}$d. to 4d., and August to October at $4\frac{3}{32}$d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* : Pure, 3s. per gallon. *Benzole* : 50 per cent., 1s. 5d. per gallon ; 90 per cent., 1s. 3d. *Crude Naphtha* : 30 per cent. at 120° C., 9d. *Solvent Naphtha* : 95 per cent. at 160° C., 1s. 11d. per gallon.

COCAINE—Is firmer, best brands being quoted at 10s. to 10s. 6d. per oz. for quantity in bulk, makes less in favour being offered at rather lower figures. Messrs. C. F. Boehringer and Soehne have issued an English translation of a reprint from the *Pharmaceutische Centralhalle*, 1898, No. 9, on the "Ammonia Test of Cocainum Hydrochloricum according to Maclagan," which should prove of interest to those who might be otherwise tempted by the somewhat cheaper price to buy a less reliable brand of *Cocaine*. As will be well known to our readers, the *B. & S.* brand enjoys a world-wide reputation, and the fact that it so fully answers the requirements of the Maclagan test will no doubt be one of the causes of its popularity amongst those best able to judge the quality of the article. The publication in question appears to prove beyond all question the absolute necessity that cocaine should fully answer the Maclagan test, and that a preparation which does not fulfil these requirements is better avoided, however much apparent advantage same may offer in price.

COCOA BUTTER.—At the monthly auctions on Tuesday this article experienced a further rise, 65 tons of Cadbury's make selling with good competition at an average of 10½d. per lb., against 9¾d. in the March, and 9½d. per lb. in the February auctions.

CODEINE—Is in fair demand at 11s. 3d. to 11s. 6d. per oz. for quantity.

COD-LIVER OIL.—Price of the new *Norwegian* oil appears to be creeping up. Much will, however, depend upon the course of the fishing, result of which, so far, has been anything but favourable. Quotations vary from 82s. 6d. to 90s. per barrel *c.i.f.*, there being, however, no pressure on part of the agents to effect sales. Old *Norwegian* oil is obtainable at 70s. to 75s. per barrel.

CREAM OF TARTAR.—Without change at 77s. for first white *crystals* on the spot and 79s. to 80s. for *powder*.

DRAGON'S BLOOD.—There are several inquiries on the market for really fine, bright re-boiled lump, but although importers have sent orders out for this quality some time back, there would appear to be none coming. Nominal quotation for this quality, £12 10s. per cwt. *Reeds* are firmly held at £8 15s. to £9, according to quality. Ordinary re-boiled saucers can be had at £6 to £7 per cwt.

ESERINE.—*Physostigmine* : Makers have fixed the price at 1s. 6d. per gramme for quantities of less than 25 grammes. *Calabar Beans* are dearer, which may mean still further advanced price for eserine.

GLYCERIN.—Best *German* white chemically-pure double-distilled 1·260 quality is quoted 52s. 6d. to 57s. 6d. per cwt. in tins and cases. *English* : 50s. to 52s. 6d., according to quantity and make.

GUM ASAFŒTIDA.—Several orders from the United States have come in this week, but limits being below the ideas of importers, no business of importance has resulted. It would appear that America is really short of the article, so that we may hear of important business resulting ere long.

INSECT FLOWERS.—The stocks in Trieste are fairly large, and the demand for America seems to be rather smaller than usual. Prices are quoted 125s. per cwt. for closed, 90s. for half closed, 60s. per cwt. for open flowers, *f.o.b.*, Trieste.

IODINE AND IODIDES—Unchanged at 7½d. per oz. for the former, and 9s. 9d. per lb. for *potassium iodide* in 2-cwt. lots.

IPECACUANHA.—Since our last 122 bales of *Rio* quality have arrived, but as this was known before the sales, no change in the position has taken place, and holders decline to sell below 8s. per lb. for fair ordinary, and 8s. 6d. for good bold. Buyers, however, hold off in view of high prices asked, and the future course of the market resolves itself into a question as to whether buyers or importers can hold out the longer. *Carthagena* : A little more business has been done at the reduced figures of last sale.

JAPAN WAX—Is in slight demand on the spot at 35s. 6d. per cwt., while for April-June steamer 36s. per cwt. *c.i.f.* is asked.

LITHIA—Is firm at 10s. 8d. per lb. for the *Carbonate* in 2-cwt. lots.

MENTHOL.—7s. 3d. to 7s. 6d. per lb. is the price for best dry white crystals.

MERCURIALS—Unchanged at 2s. 2d. for *Corrosive Sublimate*, and 2s. 6d. per lb. for *Calomel* in half-ton lots.

MORPHIA — Quiet but unchanged at

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

4s. 3d. per oz. for the *Hydrochlorate salt* in powder.

Nitrate of Silver—Weak in sympathy with the *metal*. Crystals are quoted 1s. 4¾d. to 1s. 5¼d.; sticks, 1s. 6d. per oz. for 1000-oz. lots.

Oils (Essential).—*Peppermint*: American *H.G.H.* 5s. 9d. to 6s. *Wayne County*: 3s. 9d. to 4s. *Japanese*: Dementholised, 3s. 3d. to 3s. 6d. on spot, 40 per cent. 4s. 3d. to 4s. 6d. spot, and *c.i.f. Star Aniseed* 6s. 9d. to 7s. for spot and arrival. *Cassia*: 80 per cent. 5s. 3d. *c.i.f.*, 75 to 80 per cent, 4s. 9d. *Citronella*: 1s. 2d. to 1s. 3d. per lb. *Lemon-grass*: 5d. to 6d. per oz. according to quantity.

Oils (Fixed) and Spirits.—*Linseed*: Quiet at about 2s. 6d. decline, spot pipes £15 7s. 6d. to £15 10s., barrels £15 17s. 6d. *Rape*: Steady, ordinary brown spot £22 10s., refined £23 10s. to £24. *Cotton*: Quiet, London crude spot £13 to £13 2s 6d.; May to August £13 5s.; refined spot £14 10s. to £15, according to make. *Olive*: Spanish £33, Levant £32 10s. to £33. *Cocoanut*: Ceylon spot £23, April to June £22, *c.i.f.*, Cochin spot £27 10s., April to June £24 10s., *c.i.f. Palm*: Lagos spot £23. *Turpentine* firmer. American spot 23s. 7½d. to 23s. 9d., May 23s., June 21s. 10½d., July-December 20s. 9d. *Petroleum Oil* dull. Russian spot and forward 4⅛d. to 4⅜d. American: 4⅜d. to 4½d., water white 5¾d. per gallon. *Petroleum Spirit*: American 5⅜d., deodorised 5½d. to 5¾d. per gallon.

Opium.—Very quiet at 10s. to 10s. 9d. per lb. *Persian*, 8s. 3d. to 9s. for *manufacturing*, 9s. to 10s. 6d. for *Druggists*, and 10s. to 12s. for *soft shipping*, there being, however, but little doing in the article.

Orris Root.—*Florentine* is quoted at 35s. to 50s. per cwt. *c.i.f.*, according to quality; higher prices are, however, looked for in the near future.

Permanganate of Potash—Rather firmer at 62s. 6d. per cwt. for small crystals, and 67s. 6d. for large crystals.

Phenazone.—A reliable article is being offered at 1s. per oz. in quantity. While *Dr. Knorr's antipyrine* is still held for 2s. 1½d. per oz., the result can only be that *antipyrine Knorr* will be gradually superseded by *Phenazone*.

Phenacetin.—Steady at 3s. 9d. to 4s. 3d. for *crystals* or *powder*, according to quantity and packing. Bayer's make is still held at the fancy price of 14s. 3d. per lb., for quantity and bulk packing.

Pilocarpine — Is very firm at late advance to 33s. per oz. for *Nitrate* and *Hydrochlorate*, it being thought that, in view of continued scarcity of *Jaborandi Leaves* suitable for manufacture and yielding a fair result, we may yet see even a considerably higher price for the alkaloid and its salts.

Potash Compounds.—*Chlorate* quiet at 3¼d. to 3½d. per lb., according to quantity. *Bromide* steady at 1s. 10d. per lb. *Prussiate*: Yellow, 6¾d. per lb.; red, 1s. 2d. to 1s. 3d. per lb. *Bichromate*, 4d. per lb. *Oxalate*: Neutral, 3⅞d. to 4⅛d. per lb. *Permanganate* steady at 60s. to 62s. 6d. per cwt. for small crystals, and 5s. per cwt. more for large crystals. *Cyanide* firm at 1s. 2d. to 1s. 3d. per lb. for 98 per cent. cake, according to delivery required. *Bicarbonate*: Crystal or powder, 30s. to 32s. 6d. per cwt.

Quicksilver—Importers quote £7 1s. 3d., there being sellers, however, from second hand at £7 per bottle.

Quinine.—German makers reduced their price on the 5th inst. to 9½d. per oz. for the *Sulphate* for 1000 oz. lots in 100 oz. tins. The course of the article this year has proved more than disappointing to holders. The belief is, however, expressed that the worst is past, and that a reaction is not impossible.

Rhubarb—Is in good inquiry, and some sales have been made since last week's auctions. Fair round *Canton*, part rough, but of good colour, has been done at 1s. 2d. per lb.

Saccharin. — Position remains unchanged; the Saccharin Corporation claiming the right to the monopoly of the article, a question which, however, has yet to be decided in a court of law. Buyers will, nevertheless, do well to be careful as to the source of the article which they may have offered to them, it being asserted that doubtful quality is being offered in some quarters.

Saffron—Is firm at 35s. up to 45s. per lb. for very finest *Valencia*, and 22s. 6d. to 25s. for *Alicante*.

Salicine.—Makers' price remains at 10s. 6d. per lb. for quantity.

Senna.—*Tinnevelly*: As will be seen from the statistics given to-day, stocks are very low, and in the face of an apparent closing up of last year's crop it would appear that there will be some considerable scarcity before the new crop arrives in July or August next. There is a strong demand privately, and leaves, which in ordinary years are worth only 1½d. to 2d. per lb., are now being turned over at 3d. to 3½d. per lb. Of finer grades there is an absolute dearth. *Alexandrian*: Finer qualities scarce, but broken in poor leaf in over supply.

Shellac—Quiet, with, however, rather more demand on the spot. Fair *TN* has been sold at 60s. for cash terms, while for arrival there are buyers at 58s. per cwt. *c.i.f.* for April-June steamer. There are, however, no sellers at this figure.

Soda Compounds.—*Crystals*: 57s. 6d. per ton, *ex* ship. *Bicarbonate*: Commercial 98 per cent. is quoted £7 to £7 5s.; pure, fully bicarbonated, £18 per ton. *Caustic*: 60 per cent., £6 10s. to £6 15s.; 70 per cent., £7 10s. to £7 15s. per ton. *Hyposulphite*: 6s. to 8s. per cwt. *Iodide*: 10s. 7d. per lb. *Bromide*: 2s. 2d. per lb. *Nitrate*: Refined, £8 per ton. *Sulphite*: 18s. to 22s. 6d. per cwt., according to quantity and brand.

Sugar of Milk—Is quoted 55s. to 62s. 6d. per cwt. for *powder*, according to quantity and brand.

Sulphate of Copper.—Firm at 17s. to 17s. 6d. per cwt.

Sulphonal.—One of the makers is still accepting small orders at 7s. 3d. per lb. for *cryst.* and *powder*. It is, however, stated positively that a considerable advance in price may take place at any moment.

NEWCASTLE CHEMICAL REPORT.

April 6, 1898.

Rather more is doing in the heavy goods line, principally for Baltic and English Channel ports. Prices, however, go unchanged. Mr. James Tennant, Managing Director of the United Alkali Association, Limited, is announced as a

"traders'" candidate for a seat on the River Tyne Commission. Nine extra places have been granted by the Lords Committee through a Bill now before the House. Quotations are: Bleaching Powder, according to market, £6 5s. to £6 10s. Caustic Soda, 70 per cent. basis, £7 10s. to £7 15s. Soda Crystals, 45s. to 57s. 6d. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

LIVERPOOL REPORT.

APRIL 6, 1898.

Business has been more than usually dull, even for the time of the year, sales have been small, and quotations as a whole are practically those of last week.

CARNAUBA WAX.—Yellow has been selling at 70s. per cwt.

CANARYSEED.—There is only a small inquiry, and Turkish is still quoted at 26s. to 27s. per 464 lbs.

CASTOR SEED.—500 bags of Brazilian from Pernambuco and Maceio sold *ex* quay at 9s. 6d. per cwt.

CREAM OF TARTAR—Remains quiet at 77s. per cwt. for finest white.

HONEY.—100 barrels of Peruvian Pile 3 found buyers at 22s. 6d. per cwt.

KOLA NUTS.—23 packages of dried brought 1½d. per lb.

LINSEED—Quiet. River Plate "spot parcels" is quoted at 33s. 9d. per 416 lbs., and Calcutta, 36s.; River Plate to arrive in a few days, 33s. 3d. Turkish "feeding" variety has been selling at 39s.

OILS.—*Castor*: Both French and Calcutta only command a small amount of attention, but prices are steady at 3¼d. to 3⅝d. per lb. for Calcutta and 3¼d. for French 1st pressure. *Olive*: Values are unchanged and the market is quiet. Candia offers at £34 per tun and Spanish at £32 to £33 10s. *Linseed* of Liverpool makes is firmly held for 17s. to 17s. 6d. per cwt. *Cottonseed* is still at 15s. 3d. to 15s. 9d. per cwt. *Spirit of Turpentine* has dropped to 25s. per cwt., and is in moderate demand.

MANCHESTER CHEMICAL REPORT.

APRIL 6, 1898.

There is absolutely no change to report in heavy chemicals, and in face of the coming holidays business is decidedly slack. Sulphate of Copper is somewhat higher, and is quoted at £17 to £17 10s. for best brands, Manchester, although resale lots, may be had lower. Greater supplies of Brown Acetate of Lime appear to be coming to hand, and prices are rather lower, £5 10s. to £5 15s. for Welsh and Best American delivered Manchester. Sulphate of Ammonia is fairly firm for Lancashire make. Green Copperas appears to be in greater inquiry, notwithstanding the influx of Welsh for disinfecting and sewage purposes. Pitch is in better demand. Saltcake is rather lower. Naphthas are fairly firm, but Benzols are dull. Manganese is in fair request at the recent advance. Yellow Prussiate unchanged at 6¾d. to 7d per lb. for best Lancashire make.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "PHARMACEUTICAL JOURNAL," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Werner's Pill-massing Machine, 6 lbs. size, nearly new, price £5, cost £8 10s., *vide* 'C. and D. Diary,' 1897 and 1898.—Holden, Chemist, Barnsley.

Soda-water Trolley; a boy of eight can easily convey 3 dozen syphons and cases any distance; 35s., carriage paid.—Arthur and Co., Cambridge.

Oertling's balance and case weights. Cost £11 5s. Perfect condition. Price £7.—Hatfield, chemist, Limehouse.

Dental Chair (Perkins' pat.), in good condition, green plush, all parts adjustable, high and low base, suit tall or short operator, £6 10s.—Trow, Dentist, 237, Stratford Road, Birmingham.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Wanted, Latin-English and English-Latin Dictionary.—G. B. Gray, Branksome Pharmacy, Westbourne, Bournemouth.

Wanted.—'Inorganic Chemistry' (Newth's); Green's 'Botany'; Kipping's 'Inorganic.'—Pill, 20, St. Margaret's Road, Plumstead.

NEW BOOKS AND NEW EDITIONS.

"Pittonia": A Series of Botanical Papers. By E. L. Greene. With plates. Vol. III., part 17. Pp. 199 to 256. 8vo., sewed. 2s. net. London: Wesley.

"The Early History of Chlorine," being papers by Carl Wilhelm Scheele (1774), C. L. Berthollet (1785), Guyton de Morveau (1787), J. L. Gay-Lussac and L. J. Thenard (1809). Pp. 50. Cr. 8vo. 1s. 6d. net. (Alembic Club reprints.) London: Simpkin.

"Purification of Sewage and Water." By W. J. Dibdin. 21s. London: The Sanitary Publishing Company.

"Researches on the Molecular Asymmetry of Natural Organic Products." 1860. By Louis Pasteur. Pp. 46. Cr. 8vo. 1s. 6d. net. Alembic Club reprints, No. 14. London: Simpkin.

"Introduction to the Study of Organic Chemistry." By J. Wade. A text-book for students in the Universities and technical schools. Pp 476. Cr. 8vo. 7s. 6d. London: Sonnenschein.

"Lippincott Medical Directory": A complete vocabulary of the terms used in medicine, etc., prepared on the basis of Thomas's Complete Medical Dictionary. By R. W. Greene, J. Ashurst, etc. Roy. 8vo. 31s. 6d. London: Lippincott.

DIARY FOR THE WEEK.

WEDNESDAY, APRIL 13.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.
Third Annual Dinner.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, at 8.30 p.m.
"Microscopical Evening." Papers by J. Austen and C. O. Morrison.

THURSDAY, APRIL 14.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.30 p.m.
Demonstration with an Electric Projecting Microscopic Lantern, by J. D. Whittles.

PHARMACY CLUB, at 7 p.m.
Meeting at Café Royal.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
Annual Business Meeting.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Lecture by Charles Hoole.

Football News.

PHARMACEUTICAL F.C.—PAST *v.* PRESENT.—Despite the hostility of the elements the above teams turned out on Saturday, March 26, at Wormholt Farm, Shepherd's Bush. After a sharp and very short scramble in the mud the Old Boys were declared victors by 1 goal to *nil*.

TEAMS.

PAST.—W. Robinson (goal), A. Surfleet (Captain) and S. Sturton (backs), Spurge, Webster, and Butler (half-backs), C. Robinson, Lorimer, Fothergill (centre), Tebbutt and Morley (forwards).

PRESENT.—Prescott (goal), Jones and Metcalfe (backs), Evans, Nelson and Lescher (half-backs), Happold, Day, Owen (centre), Durbin and Warren (forwards).

Mr. T. Tickle acted as referee.

After the match the teams and their friends were entertained to tea at the Bush Hotel by the Pharmaceutical Football Club. The spread was followed by a very enjoyable smoking concert. Songs were contributed by a goodly number of past and present students, the talent displayed being of a very high order, and well supported by a powerful chorus. The piano was ably presided over by Mr. W. Prescott. During the evening Mr. Day proposed the toast of the Past Students of the School of Pharmacy, coupling with it the name of Mr. A. Surfleet, to whose exertions the mustering of such an excellent team of Old Boys was due. This was drunk with musical honours. The toasts of the Football Club, the Organising Committee, and the Chairman were also proposed by Messrs. Spurge, Sturton, and Tickle respectively, and were received with great enthusiasm. The evening was brought to a close with the "Square Anthem," Auld Lang Syne, and God Save the Queen.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

P. O. Haynes & Charles T. W. Hirsch. General Medical Practitioners, Woolwich. All debts will be received and paid by Charles T. W. Hirsch on behalf of the firm.

J. N. Choat, A. F. Williams, & T. Wardley (trading as the Red Cross Chemists' Co.), Abbey Parade, Herne Hill, and York Road, Ilford.

Photographic Tourists' Guide.

IN the following list an asterisk (*) preceding the name of a town indicates inability to find that any chemist in the place has a dark-room, though there may be one or more who stock photographic materials. Where there is a dark-room, the fact is indicated by a capital "D" following the name and address, and except where the dark-room is at an hotel, it may mostly be taken for granted that plates and other photographic materials are stocked. The dark-rooms can, in some cases, be used for developing as well a changing, and even where there is not a dark-room, it is usually possible to get plates changed.

Bovey Tracey (Devon).

E. Browning, chemist.

Bovey Tracey is four miles from Chudleigh and a short distance from Newton Abbott. It is noted for the Bovey coal, which is found in the neighbourhood.

Braemar (Aberdeen).

A. R. Clark, Rowan Cottage.

Braemar is about 1100 feet above sea-level, and is the sanatorium of Deeside, which abounds with landscape pictures of great beauty. Braemar Castle, Invercauld Bridge, Crathie Church, Crathes Castle, the Devil's Point, the Linn of Dee, Balmoral Castle, Aboyne Castle, Glenmuick House, and Danzig Shiel are all within easy distance. Some of the most beautiful "bits" of Deeside scenery are found between Braemar and the Linn. Mar Lodge, the autumn quarters of the Duke of Fife, is in this section. It was at Braemar that the Earl of Mar raised the standard of rebellion in 1715.

Chertsey (Surrey).

F. R. Flintan, Guildford St.
C. A. Jago, Guildford St. D.
Surrey Chemists' Co. D.

Chertsey is an irregularly built town, built partly on the site of an ancient monastery, near the right bank of the Thames.

Chester (Cheshire).

J. Guy, The Mount, Queen's Park.
G. Kemp, 59, Bridge St. D.
Shrubsole & Son, Town Hall Sq. D.
J. H. Spencer, 36, Bridge St.

Chester has many objects of interest in addition to a fine old Cathedral and the old city of Chester with its Rows, Roman Walls and Baths. Hawarden Castle, the seat of Mr. Gladstone, Eaton Hall, the seat of the Duke of Westminster, are within walking distance, while there is much beautiful scenery on the River Dee.

Chesterfield (Derby).

G. Sampson, 7, Market Place. D.
G. Wright, Cavendish Sq. D.

Chesterfield has in its immediate neighbourhood much of interest to photographers, the chief places of interest including Chatsworth, Hardwick Hall, and Bolsover Castle.

Chichester (Sussex).

E. A. Long, 15, East St. D.
F. H. Playfoot, 15, East St. D.
E. Thorp, 9, North St. D.

Chichester possesses a fine old Cathedral with various styles of architecture, the Old Cross, 15th century, built by Bishop Storey. The places of interest are Boxgrove Priory (Norman and 13th century work); Goodwood House, the seat of the Duke of Richmond; Cowdray Park, Midhurst, the seat of the Earl of Egmont, and the village of Bosham, a resort of artists.

Chippenham (Wilts).

Edgar Neal, High St. D.

Chippenham is within a few miles of Malmesbury Abbey, Avebury, Bowood, and Lacock Abbey and village, there being much of interest to the camerist.

*Chipping Norton (Oxon).

F. W. Freeman, Middle Row. D.

Chipping Norton is picturesquely situated on the slope of a hill, and contains public buildings of the usual character, including a substantial Doric town hall.

Chiswick (Middlesex).

G. Curtis, 441, High Rd. D.

Chiswick is near the Thames, and is a well-known resort of rowing men. There are some very pretty views at Chiswick Eyot.

Chorley (Lancs).

H. R. Dorning, Pall Mall. D.

Chorley is a very busy town on a considerable elevation near Preston. Near it are bleach fields, print works, coal mines and stone quarries.

*Christchurch (Hants).

A. Mallett, Church St. D.

Christchurch is named after the noble church of an Augustinian priory (1150), which includes every style of architecture from Norman to Perpendicular. There is an Early English porch and a beautiful rood screen.

Cirencester (Gloucester).

W. Griffiths, Market Place. D.

Cirencester has a fine church and some interesting old streets, and is surrounded by good landscape scenery.

Clacton-on-Sea (Essex).

W. Mann, 2, Pier Avenue. D.

Clacton-on-Sea has many objects of architectural interest, and is about four and a half miles from St. Osyth's Priory and Church. Good views may also be obtained from the pier.

*Cleckheaton (Yorks).

Knowles & Co., Ltd., Market St. D.

Cleckheaton is pleasantly situated on a declivity in the West Riding, about eight and a half miles west of Leeds.

Clevedon (Somerset).

J. H. Hart, Marine House. D.

Clevedon is famed for the magnificent sunsets to be seen across the Bristol Channel, then there are several 13th century churches and old marine houses, fine moorland scenery, and a tidal estuary, near where "low tide" pictures may be obtained.

*Clifton (Gloucester).

F. Bromhead, 1, Regent St. D.

Clifton stands above St. Vincent's Rocks, which rise majestically from the Avon, and the river is here spanned, 245 feet above high water, by a suspension bridge.

*Clun (Salop).

E. Vaughan, Jubilee Commercial House. D.

Clun stands on the river of that name, about five and a half miles S.S.W. of Bishop's Castle; the remains of a castle erected by the Earl of Arundel present a picturesque object in the surrounding landscape.

Coalville (Leicester).

F. Brunt. D.

Coalville is a village sixteen miles N.W. of Leicester by rail. It derives its importance chiefly from its collieries.

Cockermouth (Cumberland).

Cooper Bros, 17, Market Pl. D.

Cockermouth is situated at the confluence of Cocker and the Derwent. Each river is crossed by a handsome stone bridge. The castle is picturesquely situated on rising ground between the two rivers.

Colchester (Essex).

J. C. Shenstone, 13, High St. D.
A. Weddell, 105, High St. D.

Colchester and neighbourhood is rich in ancient buildings, including Roman remains, Norman castle, and ruins of a Norman priory, and there is a good museum, especially rich in Roman antiquities. The town is within a few miles of the village of Dedham, where most of Constable's pictures were painted.

Colne (Lancs).

Hirst & Co., 22, Market St. D.
T. Stuttard, Albert Rd. D.

Colne is within easy reach of Bolton Abbey and Woods, Barden Tower, "Wycollar Hall" and Glen, mentioned in Ainsworth's 'Lancashire Witches,' Pendle Forest, and other places of interest.

Colwyn Bay (Denbigh).

J. W. Adamson, Queen's Bldgs.
J. L. Hunt, Conway Rd. D.

Colwyn Bay is in the heart of plenty of lovely scenery—woodland, mountain, and river—has a very pretty seascape. It is within a few miles of Llandudno, Conway, Abergele, and other places where good pictures may be obtained.

Conway (Carnarvon).

L. Jones, Lancaster Sq. D.

Conway has many interesting subjects for the photographer, including Conway Castle and suspension bridge, Royal Cambrian Academy, town walls and ruins. It is also a good centre for excursions amongst the beautiful North Wales scenery.

*Copperhouse (Cornwall).

W. Pengelly, Fore St. D.

Copperhouse is noted amongst camerists for the good pictures to be obtained in the neighbourhood, the Godrevy Lighthouse, rocks, quays, shipping, and river providing abundance of material for work with the camera.

Cork (Ireland).

Cork Chemical & Drug Co., Ltd. D.
J. Blair & Son, 7, Patrick St. D.
Kiloh & Co.
R. Sumner, 31, Patrick St. D.

Cork contains two fine cathedrals, and is surrounded by beautiful scenery. There are several ancient ruins, including those of Blarney Castle. Its harbour is unsurpassed.

*Coupar Angus (N.B.).

A. Geekie, Abbotsville. D.

Coupar Angus is on the main line from Perth to Aberdeen, and has some very picturesque scenery.

Coventry (Warwick).

W. Clarke, Hampton House. D.
H. Glover, 68 & 69, Spon St. D.

Coventry itself, as well as the surrounding district, is most interesting to photographers, abounding as it does in magnificent churches, old streets and houses, and delightful scenery.

Cowes (I. of W).

A. E. Beken, Blenheim House. D.

Cowes is a good centre to "work" the district, which affords ample opportunities for both seascape and landscape studies.

Cranbrook (Kent).

A. W. Hudson, Market Place Pharmacy. D.

Cranbrook is an ancient market town in the Weald of Kent. The church is a fine specimen of Gothic style. There are also some very pleasant views in the neighbourhood.

Crewe (Cheshire).

E. Booth, 5, Chester Bridge. D.
J. L. Laing, 56, Victoria St. D.

Crewe is an excellent centre for many objects of interest, chiefly archæological, in the neighbourhood. At Sandbach, distant about six miles, there are some interesting ancient crosses (Druidical) with rude engravings and several old-fashioned hotels. There are also some fine old country residences in the neighbourhood.

*Crewkerne (Somerset).

J. Mumford, Market Sq. D.

Crewkerne has a cruciform Perpendicular Church, with a fine west front; also a Grammar School dating from 1499.

*Cricklade (Wilts).

White Horse Hotel. D.

Cricklade, a very ancient town, is situated on the Isis (Thames), seven miles N.N.W. of Swindon. It has some handsome stone crosses in the churchyards.

Crieff (Perth).

J. Harley, 5, James's Sq. D.

Crieff is in the midst of magnificent mountain and river scenery, the Falls of Turret and Barvick presenting very pretty views.

Crowle (Lincoln).

W. Pickering, Market Place. D.

Crowle stands on a plain, nearly surrounded by moorland, and has a church of the time of Henry I.

Crowthorne (Berks).

F. Satchell, High St. D.

Crowthorne is a residential village charmingly situated in the midst of extensive pine forests. It is a favourite resort for invalids, and on account of its beautiful situation affords endless scope for lovers of landscape photography. Places of interest: Royal Wellington College, and, within very short cycling distance, the Royal Sandhurst Military College, Cæsar's Camp—a Roman remains—and Eversley, the home and birth-place of Charles Kingsley.

Croydon (Surrey).

W. C. Phillips, 43, South End. D.
D. P. Roberts, 120, North End. D.
W. J. Rugg, 63, White Horse Rd. D.
H. Woodcock, 56, George St. D.

Croydon lies near the Banstead Downs at the source of the Wandle Whitgift's Hospital is a red brick quadrangular pile, and there are also the Whitgift Schools. Thirteen railway stations.

*Cullen (Banff).

Seafield Arms Hotel. D.

Cullen is a fishing-town with a harbour, backed by the conical Bin Hill (1050 feet). Cullen House, a seat of the Earl of Seafield, is a Scottish baronial pile.

*Cupar (Fife).

W. Courts & Son, 27, Crossgate. D

Cupar has a handsome Free Church, the Duncan Institute, a public park, and a large corn market.

Dalbeattie (Kirkcudbright).

H. Kerr, 92, High St. D.

Dalbeattie is situated amidst the famed beauties, in hill and wood and glen, of Galloway.

*Dalton-in-Furness (Lancs).

H. Armistead.

Dalton-in-Furness has extensive malting and ironworks. The ruins of Furness Abbey are in the vicinity.

*Danbury (Essex).

H. Reynolds, Griffin Hotel. D.

Danbury is a contraction from Danesbury, signifying town or castle of the Danes. On the summit of a hill there is an ancient encampment, about 680 yards in circumference.

Darlington (Durham).

G. Best, Bondgate. D.
J. Robinson, 7, Northgate. D.
F. G. Walton, 77, Parkgate. D.

Darlington is favoured with magnificent suburbs, and other attractions are its renowned engineering works, Training College, Queen Elizabeth's Grammar School, the Technical College, lovely parks and lakes, Stephenson's first passenger-train engine, and St. Cuthbert's Collegiate Church (1188), an example of Early English architecture. Richmond and Barnard Castle, with their unsurpassed scenery, are close by.

Dartford (Kent).

Horrell & Goff, High St.

Dartford is the centre for the Darenth Valley, and amongst other attractions there is a Roman villa.

Dartmouth (Devon).

H. M. Hadfield, The Quay.
H. Humphry, 2, Fairfax Pl. D.

Dartmouth is a lovely spot, and its surroundings constitute the most unique combination of scenery—river, sea, and and—in England. The rocks are very picturesque, and there are many quaint old houses.

Darwen (Lancs).

R. Shorrock, 6, Market St. D.

Darwen is near much lovely scenery in the valleys of the Ribble and the Hodder. Whalley Abbey and other places of interest also attract visitors.

Dawlish (Devon).

G. J. Cutcliffe, 7, Strand. D.

Dawlish is a convenient centre for South Devon scenery, which offers good scope for photographers, both on sea and land.

*Deal (Kent).

W. H. Franklin, High St. D.

Deal is on a bold open beach near the south extremity of the Downs. The features of interest include the fishing vessels, Deal Castle, and Walmer Castle.

Denmark Hill (S.E.).

T. H. Powell, 116, Denmark Hill. D.

Denmark Hill is on the L.C. & D.R., a few minutes ride from Ludgate Hill.

*Denton (Lancs).

J. Buckley, 27, Ashton Rd. D.

Denton is near Manchester, and a manufacturing centre. Its name is probably derived from Dane-town.

Derby (Derby).

W. H. Hoare, 8, Osmaston Rd. D.
Blunt & Evans, 26, Market Pl.

Derby possesses many buildings of good design, including All Saints' Church, of which the inhabitants are very proud. In the vicinity are many places of interest, and noblemen's and gentlemen's seats.

Devizes (Wilts).

W. Hill, 25, The Brittox. D.

Devizes Market-place has a very foreign look about it. St. John's Church is one of the most interesting in the county. The Quaker's Walk, leading from St. Mary's Church at Roundway, is worth taking.

Devonport (Devon).

F. J. Ryall, 40, Portland Rd., Stoke.

Devonport is on the east shore of the estuary of the Tamar, called the Hamoaze. Many men-of-war may be seen here. The arsenal and dockyard extend about four miles along the left bank of the estuary. Mount Edgcumbe is opposite Devonport.

*Dewsbury (Yorks).

Needhams, 3, Market St.

Dewsbury has some important public buildings of recent erection. With Batley it is the centre of the shoddy trade.

Dolgelly (Merioneth).

H. Morris, Bridge St.

Dolgelly is near the glen known as Torrent Walk, and is a good starting-point for the ascent of Cader Idris.

Doncaster (Yorks).

Howorth & Parkin, Thorne Rd.
Dunhill & Stiles, 2, French Gate.

Doncaster offers good scope for both architectural and landscape work. The parish church is one of the finest examples of Modern Gothic architecture in the kingdom.

Dorchester (Dorset).

A. H. Evans, 33, High East St. D.

Dorchester has fine avenues of trees. Pretty views may be had along the banks of the Frome just outside the town. The bridge is worth taking.

Dorking (Surrey).

F. W. Doubleday, 78, High St. D.

Dorking contains many very pretty corners much favoured by artists. Close to Boxhill and Mickleham Downs, both well-known resorts.

Douglas (I. of M.).

Brearey & Son, Prospect Hill. D.
T. S. Qualtrough, 76, Buck's Rd. D.

Douglas is surrounded by splendid scenery, both on sea and land, in endless variety.

Dover (Kent).

Long Bros., 1, New Bridge. D.

Dover offers good opportunities to the photographer in the cross-channel boats as seen from the pier, the Castle and the heights, but it is necessary to operate outside the fortifications

Dovercourt (Essex).

Bevan & Son, 7, Second Avenue. D.

Dovercourt is a watering-place near to Harwich, where photographers may obtain many "bits" amongst the shipping and river scenery. It has a sea-wall two miles long.

*Downham Market (Norfolk).

F. W. Coulson, High St.

Downham Market is a well-built town, and has an ancient Gothic church, with a low embattled tower surmounted by a spire.

*Drumnadrochit (Inverness).

Drumnadrochit Hotel. D.

Drumnadrochit is a romantic village, and the scenery is excellent. The ruins of Urquhart Castle, and a waterfall at Abriachan, may be specially noticed.

Dublin (Ireland).

Dobsons & Curtis Bros., 10, Suffolk St, D.
W. Hayes & Co., 12, Grafton St.
J. B. Laphen, 37, Mary St. D.
T. Mason, 5, Dame St. D.
T. Mayne, 19, Lord Edward St. D.

Dublin possesses one of the largest parks in the world—Phœnix Park, with the Vice-regal Lodge. Trinity College and Bank of Ireland are fine architectural subjects. Kingstown Harbour is not far away and should not be missed.

Dudley (Worcester).

W. H. Richardson, 222, Market Pl.
E. Smith, 83, High St.

Dudley has some immense caverns wrought in the limestone rock, which are very interesting. One extends nearly two miles into the solid rock and is traversed by a canal, by which the quarried material is conveyed to the mouth of the tunnel. Just outside the town are the ruins of an ancient castle, from which may be obtained a fine view.

Dumfries (Scotland).

A. Turner, Buccleuch St. D.
J. Tocher, 84, High St. D.
R. B. Carruthers, 90, High St.
J. Keith. D.
J. Reid, 104, High St. D.

Dumfries contains a statue of Burns and the house where he lived and died. It is situated amidst good scenery, including several historic views.

Dundalk (Ireland).

H. Backhouse & Co.

Dundalk, in county Louth is near mountains and lakes, that form distinctive points in beautiful landscapes.

*Dundee (Forfar).

Birnie, 48, Lindsay St. D.
B. Feathers, 6, Castle St. D.

Dundee is a very busy town on the Tay. There are places of interest near at hand and of easy access. The Cowgate, the Royal Arch, the Albert Memorial, and the Tay Bridge are worth notice.

Dunfermline (Fife).

W. L. Ker, 56, High St. D.

Dunfermline contains the old Abbey and Palace ruins.

*Dunkeld (Perth).

E. Cesari, Birnan's Hotel. D.

Dunkeld Bridge over the Tay, the Cathedral, including the marble monument to the Black Watch, and a monument to Wolf of Badenoch, are the principal objects. Around Dunkeld and on the river a day may easily be spent.

Dunoon (Argyle).

G. Stirling, Argyle St. D.

Dunoon is a pretty and fashionable watering place, and is full of hand and stand camera work. There are beautiful spots for both marine and landscape pictures.

Duns (Berwick).

W. Gunn, Market Place. D.

Duns is in a fine wooded district, and old border castles are within easy reach.

*Dunstable (Beds).

F. Knight, 2, George St. D.

Dunstable is an old-fashioned, brick-built place, and stands at the intersection of Watling and Icknield Streets. It has a fine priory church, partly Norman. In 1110 this priory was the scene of the earliest miracle play on record.

*Durham (Durham).

J. Chapelow, 14, Claypath. D.
W. Wilkinson, 81, North Rd. D.

Durham is magnificently situated, and its Cathedral, with its Norman nave and Lady Chapel, is one of the finest in the kingdom. The tombs of St. Cuthbert and the Venerable Bede are both within the Cathedral. The castle, river, bridges, and surrounding country offer a fine field to the photographer.

*Dursley (Glo'ster).

G. Ayliffe, Old Bell Hotel. D.

Dursley is situated amid picturesque scenery, near the Cotswold Hills. Near it are quarries of Bath stone.

Ealing (Middlesex).

R. W. Houfe, 12, The Mall.

Ealing is a pleasant residential suburb about five miles west of Paddington.

Earlestown (Lancs).

A. Peake, Queen St.
W. R. Knowles, Town Hall Pharmacy.

Earlestown is a suburb of Newton-le Willows, near which are the remains of an ancient barrow crowned with venerable oaks.

Earls Colne (Essex).

C. S. Tyler, High St.

Earls Colne is a town as ancient as the time of King Edward the Confessor. The church, in the Decorated style, has a large embattled tower, in which are six bells dated 1169.

Eastbourne (Sussex).

R. H. Browne, 1, Cornfield Rd. D.
J. Gibbs & Son, 53D, Terminus Rd. D.
G. A. Harmer, 47, South St. D.

Eastbourne is near Beachy Head, the South Downs, etc. There are several interesting old churches and castles, including Battle Abbey, Pevensey and Hurstmonceux Castles.

East Dereham (Norfolk).

E. Peck, High St. D.

East Dereham is a pleasant market town, having a cruciform church with a detached belfry, the "New Cocker," a font of 1468, a good south porch, St. Withburga's Well, and the grave of the poet Cowper.

East Molesey (Surrey).

W. Longtoft, Bridge Rd.

East Molesey is on the south side of the Thames, opposite Hampton Court

MARRIAGES.

Lander—Smith.—At St. Thomas's Church, Eighton Banks, Co. Durham, on April 11, by the Rev. S. Atkinson, assisted by the Rev. J. G. Disney, Arthur Lander, Pharmaceutical Chemist of the Medical Hall, Canterbury, to Hannah, eldest daughter of Councillor J. Smith, of Wrekenton.

Barker — Rawnsley. — At Trinity Church, Mirfield, by the Rev. C. T. England. Arthur Brook Barker, Chemist and Druggist, Market Place, Heckmondwike, to Mary Alice Sharp Rawnsley, Eastthorpe, Mirfield.

NEWS ITEMS.

The Kinninmont Prize.—Those intending to compete for the Kinninmont Prize are reminded that Saturday, April 30, is the last day upon which candidates' names can be received. Full particulars concerning the competition may be had from the Secretary, William L. Currie, 223, Byres Road, Dowanhill, Glasgow.

Chemist Sub-Postmasters. — At the Conference of the National Federation of Sub-Postmasters, held at Nottingham on Easter Monday, the following chemists were present:—W. F. Palmer (Nottingham), Fred. Coates (New Basford, Nottingham, President of the Nottingham Branch), W. K. Inglis (Delph, Oldham), Mr. Cussons (Ossett, Yorks), Arthur Hanon (Queensbury, Bradford), Fred. Lumby, J. T. Ruyson (Nottingham), F. B. Flint (Manchester), R. W. Silson (Bradford), J. Thorpe (Leeds). A general discussion took place at the conclusion of other business on the grievances of postmasters, in which several amusing instances of the way the Department treats its employés were given. A resolution, moved by Mr. Silson (Bradford), thanking the Chairman and officers for their services, and also the Nottingham branch for the arrangements made to receive the Conference, brought the proceedings to a close.

Mr. Gorrie, whose death is announced in this week's Journal, served his apprenticeship with Mr. Glass, of Perth, and went to Edinburgh in 1876 to Messrs. T. and H. Smith and Co. In 1878 he acquired the business at Minto Street, which he has since conducted. He was a loyal member of the Society, possessed considerable skill and ingenuity as a practical pharmacist, and on several occasions contributed papers to evening meetings of the Society in Edinburgh. He was at business as usual on Friday night, complained a little of feeling unwell before retiring to rest, and was found dead in bed in the morning. His high character and integrity had won for him the esteem of all who knew him. He leaves a widow and five children to mourn his loss.

The Dunlop Pneumatic Tyre Co., Ltd., 160, Clerkenwell Road, send a copy of the spring number of the *Dunlop News*, which contains interesting articles "About Tyre Repairs and Detachers," "The Gentle Art of Pacemaking," "The Past Winter's Racing," and numerous other items, including hints on cycling etiquette. A copy is sent post free on application to the firm.

Vi-Cocoa.—It having come to the knowledge of the Directors of Dr. Tibbles' Vi-Cocoa (1898), Limited, that a report is in circulation that a Mr. Harness is in some way connected with or interested in their business, Mr. G. Brooke Smalley, the secretary to the company, writes to contradict the report, which he states is wholly without foundation. No person of the name of Harness has ever been in any way concerned or interested in or in any way connected with the business, either under its present or former proprietorship.

Ether Drinking, which threatened some years ago to play havoc among the Irish poor, has broken out in East Prussia with great virulence. According to Dr. Sohn, a medical official in that province, men, women, and children indulge so freely in the pernicious habit that the roads and markets reek with tho mawkish fumes of the drug, and the schools strive against it in vain. The Lithuanian peasants are the chief victims, and their favourite tipple, known as "Schwefeläther," and consisting of ether and spirits of wine, may be bought freely in grocers' shops. Dr. Sohn attributes the spread of the practice to the imposition in 1887 of a duty on corn-brandy, which costs about eightpence a quart, whereas ether, being untaxed, can be purchased for sixpence. The local authorities have prohibited the sale of the noxious stuff, save by apothecaries and under medical authority; but it is anticipated that strong measures will have to be taken by the Government to stamp out the evil.—*Daily Chronicle.*

The Sale of Poisons.—We wonder whether the authorities are aware of the entire ineffectiveness of the Sale of Poisons Act. As a matter of fact, the same person who cannot procure from the chemist twopennyworth of laudanum to soothe an aching tooth can buy, without any formalities at all, poisons enough to slaughter a regiment from the people who sell photographic apparatus. We have not the slightest intention of saying what these poisons are; but at least one of them is many degrees more powerful than the ordinary dilution of hydrocyanic acid.—*Globe.*

Poisoned Grain.—Robert Watson, chemist and druggist, Sheffield, and the occupier of a farm at Goadby Marwood, was summoned at Melton Mowbray Petty Sessions, on April 12, for placing grain, mixed with poison, calculated to destroy life, in a field at Goadby Marwood, on March 21. — Police-constable Stapleton stated that a number of crows and pigeons had been found dead in a plantation on Mr. Watson's farm, and, on opening several birds, he found they had eaten some wheat. He saw Mr. Watson, who admitted that he wanted some crows to "tie up," and on the Saturday before he left Sheffield, having sold some poison to a farmer to dress wheat, he thought he might dress some himself, and on the Monday following he scattered it about the field at Goadby Marwood.—Supt. Mantle said it might have turned out a very serious matter, as several pigeons were found that were not quite dead, and one man was going to take some birds (including also a pheasant) and cook them. The poison was strychnine.—It was stated on Mr. Watson's behalf that he was not aware he was infringing the law in any way.—The Chairman said they regarded the case as a very serious one, but accepted the explanation given. The maximum penalty was £10, and he would have to pay £2, and costs, 14s. 6d.

Mr. W. J. Hardy, President of the Irish Pharmacists Assistants' Association, is leaving Messrs. J. J. Graham's State Pharmacy, Westmoreland Street, Dublin, to take over the proprietorship of an old-established Medical Hall in Belfast. Mr. Hardy is extremely popular with his colleagues in Dublin, and much regret is expressed at his departure.

The Ulster Chemists' Company are stirring up the Strabane Board of Guardians vigorously over the methods by which the contracts for the supply of medicines in use in the Union are selected.

Mr. Joseph A. Corbett, Oriel House, Bangor, Ireland, has obtained a decree for £2 2s. against a lady customer whom he supplied with medicines to the value of £7. A separate action against the defendant's husband, for the remainder of the money, has been advised by the Court.

The Annual Congress of the Royal Institute of Public Health will be held this year in Trinity College, Dublin, from August 18 to 23, under the presidency of Sir Charles Cameron, public analyst for Ireland. The Congress will include sections of chemistry and medicines. The Food and Drugs Act will be discussed, and other matters of interest to the drug and chemical trade will also come nder notice.

A Medicine and Medical Aid Society has been started in Cork. The objects of the new organisation are, *inter alia*, to provide drugs, etc., at a minimum of cost to the members, whose incomes must be under £100 a year to ensure admission. Such things as bottles, dressings, and appliances, cod-liver oil, and patent or proprietary medicines are not, it is stated, supplied by the Association.

MARKET REPORT

LONDON REPORT.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

APRIL 14, 1898.

As might have been expected, business has been very quiet since the holidays, while the imminent danger of the outbreak of hostilities between the United States and Spain has caused buyers in many instances to hold their hand where otherwise they might have been inclined to enter the market as purchasers. The only change of any importance has been an advance of about 1s. per lb. for Opium on the other side, which has only met with a response here to the extent of 6d. per lb. Quinine quiet at late reduction, Acid Citric and Tartaric steady. Cream of Tartar in full supply and rather lower. Quicksilver and Mercurials, Iodine and Iodides, Bromine and Bromides, without change. Glycerin quiet, as are also Cocaine, Sulphonal, and Phenacetin. Cod-liver Oil firm for new Norwegian. Borax and Acid Boracic quiet and dull of sale. The following are the actual prices ruling :—

ACETANILID—Is very quiet and 1s. 2d. to 1s. 3d. per lb., according to quantity.

ACID BORACIC—Quiet at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

ACID CARBOLIC—Is quiet at 6½d. to 6⅝d. per lb. for the 35° to 36° C. *ice crystal* in drums and overcasks. *Liquid* : 95 per cent., pale straw colour, 1s. 2d. to 1s. 3d. per gallon in large casks.

ACID CITRIC—Is steady at 12¾d. to 1s. 1d. per lb. for *crystals* according to make.

ACID OXALIC—Continues unchanged at 3⅝d. per lb. net.

ACID TARTARIC — Is firm at 12¾d. per lb. for foreign, and 1s. 1d. per lb. for English *crystals* on the spot.

ALOES.—There has been a good demand for *Socotrine* in kegs for shipment to the United States, and there is comparatively little left at 80s. per cwt.

AMMONIA COMPOUNDS.—*Sulphate* dull at £8 15s. per ton for gray, prompt, 24 per cent., London ; Hull, same price ; Leith, £8 16s. 3d. to £8 17s. 6d. per ton ; Beckton, terms prompt, £8 10s. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* steady at 13s. 4d. per lb. *Sulphocyanide* in good inquiry, quotations range from 1s. 2d. to 1s. 3d. per lb. *Oxalate* steady at 6½d. per lb. *Sal ammoniac* : Firsts, sublimed, 35s. per cwt. ; seconds, 33s. per cwt. *Chloride* : 26s. to 30s. per cwt.

ASAFETIDA—Is in good demand for American, a fair quantity having been sold this week at 50s. to 65s. per cwt. Really fine is scarce and wanted.

BLEACHING POWDER—Firm at £7 5s. per ton on the spot.

BORAX—Is steady at unchanged values. *Crystals*, 14s. per cwt. ; *powder*, 14s. 6d. per cwt.

BROMINE AND BROMIDES — Without change at 1s. 10d. per lb. for *Potass. Bromide*.

CAMPHOR.—The market for crude has continued very quiet, and for arrival no sales are reported, but quotations are steady ; *China* at 84s. 6d. to 86s. 6d. per cwt., and *Japan* at 90s. to 92s. 6d. per cwt. *c.i.f. Refined* is steady, with a fair business in contracts over the principal consumptive season.

CASCARA SAGRADA.—From reports from New York it would appear that the general opinion is that there will be a short crop gathered this year. At the same time it seems evident that those interested in the article on the other side do not wish to see an advance until later in the year, when it is anticipated decidedly higher values will rule. Present quotations : 22s. to 25s. per cwt. for good old bark, and 20s. to 21s. per cwt. for last season's bark.

CLOVES.—*Zanzibar* quiet, but though little business is passing prices are fractionally higher than last week, values being June to August delivery, 4 5/32d., and August to October, 4⅛d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* : Pure, 3s. per gallon. *Benzole* : 90 per cent., 1s. 2d. *Solvent Naphtha* : 95 per cent. at 160° C., 1s. 11d. per gallon.

CODEINE—Unchanged at 11s. 3d. to 11s. 6d. per oz. according to quantity.

COCAINE—Is quiet, but steady, makers' prices for best brands remaining 10s. to 10s. 6d. per oz. for quantity, while from second hands it would be possible to shade these figures.

COD-LIVER OIL—Has been inactive during the past few days, price of new *Norwegian* oil remaining practically unchanged at 85s. to 90s. per barrel, *c.i.f.*, according to brand.

COLOMBO ROOT.—Small sales have taken place at 30s. to 32s. 6d. per cwt. for fair dark to bright sorts mixed with stem. Demand is good, and late important arrivals are being absorbed gradually by home and shipping orders.

COLOCYNTH.—Demand is very small, but holders are firm, as position is good, and fine Turkey apples are not abundant. Quotations range from 1s. 1d. to 1s. 3d. per lb., according to quality.

CREAM OF TARTAR—Is very quiet, and but little business is passing. Stocks are fairly large, and prices must be quoted rather lower on the week at 75s. to 75s. 6d. per cwt. for first white French *crystals* on the spot and 78s. per cwt. for *powder*.

GUM AMMONIACUM.—Drop is held for 55s. to 60s. per cwt., whilst clean blocky can be had at 40s. per cwt.

GUM ARABIC.—Soudan sorts are a very firm market, the stock being small. Business, however, is restricted. Quotations for good soft sorts remain at 85s. per cwt. ; picked *Trieste*, £6 10s. to £14 10s. per cwt., at which small sales have been made.

GUM MASTIC.—Small sales of good clean pale tear have been made at 2s. per lb. Holders are firm, although supplies are now ample.

IODINE AND IODIDES—Are unchanged at 9s. 9d. per lb. for *Potass. Iodide* in 2-cwt. lots.

JAPAN WAX—Continues steady but quiet ; spot sales of fair to good squares at 34s. 6d. to 35s. 6d. per cwt., whilst for April to June steamer the quotation comes higher at 36s. *c.i.f.*

MENTHOL—Has been quiet this week, but prices are firm at 7s. 3d. to 7s. 6d. per lb. for good dry crystals on the spot in large bulk.

MERCURIALS.—No change in value to report.

MORPHINE.—Quiet at 4s. 3d. per oz. for the *Hydrochlorate* powder, in quantity and in bulk.

NITRATE OF SODA—Quiet at £7 15s. to £8 per ton for *refined*.

OILS (ESSENTIAL).—*Peppermint* : American oils are firmer. *H.G.H.* firm at 5s. 7½d. to 5s. 9d. per lb. *Wayne County* dearer at 4s. per lb. *Japan* steady at 3s. 3d. per lb. for dementholised, and 4s. 3d. for 40 per cent. *Star Aniseed* unchanged at 6s. 6d. per lb., with small sales passing. *Cassia* unchanged at 5s. 3d. per lb. ; 75 to 80 per cent., 4s. 9d. per lb. *Citronelle* quiet but steady at 1s. 2d. per lb. for both drums and tins. *Lemongrass* dull, with small sales at 4½d. per oz.

OILS (FIXED) AND SPIRITS.—*Linseed* is quiet on the spot, pipes, London, £15 17s. 6d., barrels, £15 15s. *Rape* quiet, ordinary brown on the spot £22 ; refined spot, £23 10s. *Cotton* steady ; London crude spot, £13 2s. 6d. Refined spot, £14 10s. to £15, according to make. *Olive* : Spanish and Levant £33. *Cocoanut* : *Ceylon* on the spot £23. *Cochin* spot £27 10s. *Palm* : Lagos on the spot

£23. *Turpentine* quiet. American spot 23s. 9d. per cwt. *Petroleum oil* dull; Russian spot 4⅛d. per gallon; American, 4⅜d. per gallon; water white, 5⅜d. per gallon. *Petroleum Spirit*: American, 5⅜d. per gallon; deodorised, 5¾d. per gallon.

Opium.—A fair amount of business has been transacted during the past few days. Prices in *Smyrna* show an advance of about 1s. per lb., which has only been responded to on this side to the extent of about half, or, say, about 6d. per lb., the demand having been chiefly for opium, showing a high percentage for manufacturing purposes, and for which as much as 9s. 6d. to 10s. per lb. has been paid on the spot, holders now asking an advance on these rates, which however, buyers are so far unwilling to concede. Should these rates be maintained we may see dearer prices for Morphia, and especially should a somewhat more active demand for the manufactured article manifest itself, a by no means improbable contingency, especially if the threatened hostilities between the United States and Spain become an accomplished fact.

Permanganate of Potash — Quiet at 60s. per cwt. for small *crystals* in half-ton lots.

Phenacetin—Is rather firmer at 3s. 9d. to 4s. 3d. per lb., according to quantity and make.

Phenazone—Continues in demand at about 1s 3d. per oz. in quantity and bulk packing, and is gradually superseding *Dr. Knorr's* antipyrine, which is still held for the fancy price of 2s. 1½d. per oz. in 1-oz. original tins.

Pilocarpine—Is firm at the late advance, 33s. 6d. per oz. being the price for both the *Muriate* and the *Nitrate* salt.

Potash Compounds.—*Chlorate* dull of sale at 3⅜d. to 3½d. per lb. on the spot. *Bromide* steady at 1s. 10d. per lb. *Prussiate*: Yellow, firm at 6¾d.; red, unchanged at 1s. 2d. to 1s. 3d. per lb. *Bichromate*: 4d. per lb. with only a small business doing. *Oxalate* unchanged at 4d. to 4⅛d. per lb. for the neutral. *Iodide* steady at 9s. 9d. to 10s. 3d. per lb. as to quantity. *Permanganate* quiet at 60s. to 62s. 6d. per cwt. for small crystals, and 5s. per cwt. more for large crystals. *Bicarbonate* firm at 30s. per cwt. for crystal or powder. *Cyanide*: Makers are full of orders and prices are firm at 1s. 2d. to 1s. 3d. per lb. for 98 per cent. cake, according to delivery required.

Quicksilver—Is steady at £7 1s. 3d. per bottle from first hands, and £7 from second hands.

Quinine—Remains quiet and without change at 9½d. per oz. for best *German* brands in 100-oz. tins and for 1000-oz. lots; while from second hand there are a few sellers at slightly below this figure. The general idea appears to be that in spite of the heavy supplies of bark we have now at last seen the worst, although some people think that in view of the large stock of raw material, coupled with the fact that the competition of Java made Quinine has still to be reckoned with, a further reduction in price is not beyond the regions of possibility, not to say probability.

Saffron — Is quiet, but firm at unchanged prices.

Sarsaparilla.—*Mexican*: Reports from New York say this article is in a very strong position, and 3½d. per lb., *c.i.f.* terms, is absolutely the lowest figure, whilst in other quarters even higher prices are asked. *Honduras* is also on the advance, 1s. 4½d. to 1s. 6½d. per lb., *c.i.f.*, being asked, according to brand.

Scammony.—*Virgin* firsts are easier at 28s. to 30s. per lb., seconds quoted nominally at 22s. to 25s. per lb. Syrian lump has been sold at 16s. per lb. *Resin* is steady at 7s. to 7s. 6d. per lb. *Roots* firmly held at 30s. per cwt.

Senna.—Long prices are being asked by second-hand holders of *Tinnevelly*, the bulk of whom are not anxious sellers on the market, preferring to keep their stocks for their own export inquiries. Sales have been made this week at 3d. to 4d. per lb. for fair small greenish to medium-sized leaves. By the steamer "Caledonia," due here on the 16th inst., about 300 bales are expected, but it is thought that these are all of a small spotty character same as late arrivals. *Alexandrian* leaves move off slowly; fine are scarce; broken have been done at 4d. per lb.

Shellac.—Business is very quiet, but holders are firm. On the spot small sales have been made of *second orange TN* at 60s. to 61s. per cwt, for middling to fair, and *Octagon B.* at 91s. 6d to 93s. per cwt, according to condition

Soda Compounds.—*Crystals* are firm at 57s. 6d. to 60s. per ton, *ex* ship terms. *Bicarbonate*: Commercial 98 per cent. is steady at £7 5s. per ton; fully bicarbonated, 18s. per cwt. *Iodide* steady at 10s. 7d. per lb. *Bromide*: Firm at 2s. 2d. per lb. *Caustic*: Unchanged, 60 per cent., £6 10s. to £6 15s. per ton; 70 per cent., £1 per ton more. *Nitrate*: Refined, £8 per ton. *Sulphite*: 18s. to 22s. 6d. per cwt., according to quantity and brand.

Strophanthus Seeds.—Some business in the *brown* has been done at 10d. per lb., whilst *green* is firmly held at 3s. 2d. per lb.

Sulphate of Copper —Is very quiet and prices are rather easier at £16 10s to £16 15s. per ton, according to make.

Sulphonal—Can still be bought from one of the two principal makers in limited quantity at 7s. 3d. per lb. for bulk packing.

LIVERPOOL REPORT.

April 13, 1898.

The Easter Holidays, coupled with the uncertainty regarding the American and Spanish war crisis, have caused an already quiet market to become even duller, transactions on a small scale being the sole ones to report, though fortunately prices are well maintained.

Ammonium Salts. — *Carbonate* is unchanged at 3d. per lb. *Sal ammoniac* firm at 35s. and 33s. per cwt. *Sulphate* continues very flat at £8 15s. per ton.

Copperas—Is firmly held for 38s. per ton Lancashire, and 36s. Welsh.

Copper Sulphate—Is firmer, due to a better demand, £6 15s. per ton.

Ginger.—320 bags of Sierra Leone "to arrive" sold at auction for 18s. per cwt.

Honey.—Sales of Peruvian Pile 3 are reported at 22s. 6d. per cwt.

Lime, Chlorinated—Is quiet at £5 12s. 6d. to £6 5s. per ton.

Oils (Fixed) and Spirits.—*Castor*: French and Calcutta are in steady demand, with better inquiry "to arrive." Calcutta 3¼d. to 3⅜d. per lb., French 3¼d. *Olive* is quiet and sales have been few. Candia is still quoted at £34 per tun and Spanish at £32 to £33. *Linseed*: Is slow of sale, but the price is well maintained, 17s. to 17s. 6d. per cwt. *Cottonseed* is unchanged at 15s. 3d. to 15s. 9d. per cwt. *Spirits of turpentine* enjoys a moderate amount of attention at 25s. per cwt.

Potash Salts.—*Chlorate*: 3¼d. to 3⅜d. per lb. *Potashes* are in slightly better demand at 20s. 9d. per cwt. *Pearlashes* are scarce at 37s. 6d. to 40s. per cwt. *Saltpetre* quiet; 21s. 6d. per cwt. *Tartar* is unchanged at 77s. per cwt. for best cream.

Soda Salts.—*Bicarbonate*: £6 15s. per ton. *Caustic* quiet; 76 per cent., £8 15s.; 70 per cent., £7 5s. per ton. *Crystals* firm, £3 per ton. *Borax*: £13 7s. 6d. per ton. *Nitrate* quiet, but steady at 7s. 4½d. to 7s. 7½d. per cwt.

Seeds.—*Castorseed*: 146 bags of Brazilian sold at 10s. per cwt. *Canaryseed*: Turkish is quoted at 25s. 6d. to 27s. per 464 lbs., and 100 bags have changed hands at the latter figure. 458 bags of damaged Turkish went at prices averaging 21s. 9d. per 464 lbs. *Linseed* is quiet, River Plate spot parcels command 32s. 9d. per 416 lbs., Calcutta ditto 35s. 6d.

NEWCASTLE CHEMICAL REPORT.

April 13, 1898.

A steady tone pervades the chemical industry of this district. More shipping orders are in circulation. The United Alkali Association has reduced Caustic Soda 5s. per ton. This is the only new feature of the week, otherwise there is no other change in values. Quotations are: Bleaching Powder, £6 5s. to £6 10s. Caustic Soda, 70 per cent. basis, £7 5s. to £7 10s. Soda Crystals, 45s. to 57s. 6d., according to markets. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

April 13, 1898.

The Board of Trade Returns indicate that during the month of March the chemical trade was in anything but a flourishing condition. For instance, the imports of chemicals, dye-stuffs, and tanning substances were 25·7 per cent. lower in 1898 than in the corresponding period of 1897, and there are decreases to be noted in every branch of exports, especially to the United States. Chemicals and chemical and medicinal preparations show a decrease of 8 per cent., Alkali a decrease of 27·1, and Bleaching materials of 2·8 per cent. The prices for Alkali appear to have been slightly in excess of last year, while Bleach was about 6 per cent. lower. It is, however, to the United States, where the decreased exports are most marked, and of Alkali there is only 89,149 cwts., as against 253,040 cwts. for the corresponding month of last

year. Bleaching materials show little or no variation for two years past. Locally, there are again few changes to note. Caustic Soda is rather easier, but without change in price for home consumption. Brown Acetate of Lime is easier at £4 12s. 6d. per ton, delivered Manchester, and Sulphate of Copper remains firm. Yellow Prussiate of Potash is in active request at 6¾d. to 7d., according to quantity. Vitriol and Muriatic Acid are in greater inquiry, but Coal Tar Products are unusually dull in all branches, except perhaps Carbolic Acid. Green Copperas in better demand for best Lancashire make, but without change in price. Aniline Oil and Salt dull at 5¼d. and 4¾d. respectively. Epsom and Glauber Salts unchanged and quiet.

"Anthony's Photographic Bulletin and American Process Year-Book," Vol. X. Edited by W. J. Scandlin. 2s. London: Lund.

"Modern Photography for Amateurs." By J. Eaton Fearn. Third edition, revised. Illustrated. Pp. 130. Cr. 8vo., paper. 1s. London: Upcott Gill.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "PHARMACEUTICAL JOURNAL," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Werner's Pill-massing Machine, 6 lbs. size, nearly new, price £5, cost £8 10s., *vide* 'C. and D. Diary,' 1897 and 1898.—Holden, Chemist, Barnsley.

What offers? 1 oz. Chinosol, 1 oz. Antikamnia, ½ Liebreich's Essence Pepsin, ½ doz. Valentine's, ¼ lb. Bromidia, ½ doz. B.W. Peptonising Powders, 2 ozs. Cocain Hydrochlorate.—Chemist, 156, Green Lanes, N.

A Chemist's Widow, in necessitous circumstances, desires to dispose of her late husband's dental forceps. Offers invited. Instruments may be seen at 17, Bloomsbury Square.

Dr. Williams' Pink Pills, 16 doz., unopened, 23s. 8d. per doz., post free; cash with order.—Harries' Drug Stores, Milford Haven.

Soda-water Machinery for sale, Barnett and Forster's No. 2 size, good condition, cheap. Apply to—R. H., 1, Southwick Street, W.

Optical and Photographic.

A few dozens of ¼-plate and ½-plate Ilford Bromide Paper, all kinds; also a few ¼-plate and ½-plate Ilford Lantern-plates, in good condition; offers wanted; samples at half price, post free.—Lecs, Chemist, Oldham.

High-Class Microscope in lock-up Mahogany Case, fine adjustment, three objectives (1 in., ⅓ in., ¼ in.), live box, tweezers, stand condenser, revolving diaphragm. Price £3.—Williams, Chemist, Llanfyllin

1½ doz. convex pebble-spectacles, 2 doz. pebble. foldcrs, cost 30s. doz.; few other concave and convex; all half-price, any lot.—Goss, 130, Notting Hill Gate, W.

Books.

Proctor's 'Pharmacy,' new, 7s.; Remsen's 'Organic Chemistry,' unused, 4s.; Southall's E Collection, 7s.; 130 specimens of official materia medica, some Southall's, 6s.—Morris, Winchmore Hill, N.

Thirteen years' 'C. and D.' 1880 to 1893, with Diaries complete, 15s.; also 12 'Year Book of Pharmacy,' 1874 and 1875, and 1878 to 1887, 12s.—Tyler, Torton, Kidderminster.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Camwal Shares, 200 (more or less).—Price, including transfer, "Chemist," South Street, Ponder's End.

Books wanted, such as are required by chemists and pharmaceutical students. Send list, stating edition, date of publication, condition, and price.—Gower, Publisher, Waterloo, Liverpool.

Diary for the Week.

TUESDAY, APRIL 19.

ROYAL COLONIAL INSTITUTE, at 8 p.m.
"A Co-operative System for the Defence of the Empire," by Colonel E. T. H. Hutton.

STREATHAM, BALHAM, AND TOOTING DISTRICT CHEMISTS' ASSOCIATION.
Meeting at 11, Greyhound Lane, Streatham Common.

WEDNESDAY, APRIL 20.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9.15 p.m.
"Specific Gravity Methods," by F. H. Alcock.

ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.
"Some Organic Substances of High Refractivity Available for Mounting Specimens for Examination under the Microscope," by H. G. Madan.
"Instantaneous Photo-micrography," by E. B. Stringer.
Exhibition of Diatoms by Hy. Morland, at 7.30.

WESTERN CHEMISTS' ASSOCIATION (OF LONDON), at 9 p.m.
Musical and Social Evening (Westbourne Restaurant).

THURSDAY, APRIL 21.

CHEMICAL SOCIETY, at 8 p.m.
"The Carbohydrates of Barley Straw," by C. F. Cross, E. J. Bevan, and Claud Smith.
"Isomeric Bornylamines," by M. O. Forster.
"Some Derivatives of Benzophenone," by F. E. Matthews.
"Researches on Camphoric Acid," by S. B. Schryver.
Ballot for the election of Fellows.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
Musical and Social Evening.

LINNEAN SOCIETY OF LONDON, at 8 p.m.
"The Structure of Dendroceros," by Professor Douglas Campbell.
"The Pterylosis of the Owls," by Mr. W. P. Pycraft.

FRIDAY, APRIL 22.

ROYAL INSTITUTION, at 9 p.m.
"The Recent Eclipse," by W. H. M. Christie.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

S. Parsons Smith, Henry G. Thompson, and G. E. Newby (practising as Drs. Smith and Newby), Physicians and Surgeons, Addiscombe, Croydon. So far as G. Thompson is concerned.

John W. Pannett and Benj. Ballard, Bottle Manufacturers, 2, Minerva Street, Hackney Road, London. Debts will be received and paid by Benjamin Ballard.

Thomas Kyffin and Henry Eve, Veterinary Surgeons, 11, College Lane, Liverpool. Debts will be received and paid by Henry Eve, who will carry on the business in his own name.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

Charles G. Thorp, Physician and Surgeon, 22, Noel Street, Nottingham, lately residing and practising at 68, Plixton Road, Urmston, Lancaster.

Joseph Henry Collier, Assistant-Surgeon, residing in lodgings at Minerva Street, lately at Spring Road, both in Bulwell, Nottingham.

Photographic Tourists' Guide.

In the following list an asterisk (*) preceding the name of a town indicates inability to find that any chemist in the place has a dark-room, though there may be one or more who stock photographic materials. Where there is a dark-room, the fact is indicated by a capital "D" following the name and address, and except where the dark-room is at an hotel, it may mostly be taken for granted that plates and other photographic materials are stocked. The dark-rooms can, in some cases, be used for developing as well as changing, and even where there is not a dark-room, it is usually possible to get plates changed.

Eccles (Lancs).

W. I. Scholes, 130, Church St. D.

Eccles is a pleasantly situated residential suburb of Manchester.

Edinburgh (Scotland).

J. Blenkiron, 69, South Clerk St. D.
J. A. Forret, 26, Brougham Pl.
McGlashan & Co., 60, Dalry Rd. D.
J. Walker, 14, Sciennes Rd.

Edinburgh is too well known to need description, but Princes Street, the Castle, Holyrood Palace, Craigmillar Castle, Duddingston Church and Loch, and the Forth Bridge may be mentioned as points of especial interest.

Egremont (Cheshire).

J. R. Clement, Brighton St.

Egremont is near Birkenhead, and consists principally of bricks and mortar, within easy walking distance, however, is New Brighton, the well-known Cheshire sea-side resort.

Elgin (Scotland).

G. Whyte, 122, High St. D.

Elgin has very fine Cathedral ruins. Pluscarden Abbey, also in ruins, and Cove Sea Caves, are worth attention.

Ely (Cambs).

Oakes & Gardiner, High St. D.

Ely has one prominent feature in its Cathedral, and there are many other attractions to tourists in the surrounding Fen country.

*Enniskerry (Ireland).

F. Bentley, Powerscourt Arms Hotel. D.

Enniskerry in county Clare, has beautiful scenery in its neighbourhood, and its air is mild and pure.

Esher (Surrey).

J. Chapman. D.

Esher is a pretty village on the Mole. Here are Esher Place, a brick gate-tower of Wolsey's Palace, and Claremont.

Eton (Bucks).

W. Oldham, 100, High St. D.

Eton is close to Windsor with its castle and in the midst of a country abounding in historical interest. The river scenery is also very attractive.

Evesham (Worcester).

T. E. Doeg, Bridge St. D.

Evesham is surrounded by rural and river scenery.

Exeter (Devon).

J. H. Lake, 41, High St. D.
E. Lemmon, 47, High St. D.
Milton & Son, 285, High St. D.

Exeter has a cathedral and is situated amidst some of the loveliest scenery in England. There are also many subjects of antiquarian interest.

Exmouth (Devon).

A. H. Toone, 8, Rolle St. D.

Exmouth has a very old church, and there are fine cliffs and beach views.

Fakenham (Norfolk).

R. A. Metcalf, Market Place.
H. R. Plattin, Market Place.

Fakenham has in its neighbourhood several old abbeys and ruins, some dating from the Conquest.

Falmouth (Cornwall).

F. J. Wilmer, Market Strand. D.

Falmouth harbour is one of the best in England. The entrance is defended by Pendennis Castle on the west, and by St. Mawes Castle on the east. Pilchard fishery off the neighbouring coasts.

Farnham (Surrey).

A. Dunston, 52, Borough.
Griffith & Inge, 25, Borough. D.

Farnham stands on the Wey, embosomed in hop-gardens. The principal feature is the old Castle of the Bishops of Winchester, built by Bishop Henry de Blois, King Stephen's brother.

Faversham (Kent).

M. Laxon, 14, Market Place. D.

Faversham has the scanty remains of a Cluniac Abbey, founded by King Stephen in 1147. Stephen's tomb is in the parish church, a fine cruciform building, Early English.

Felixstowe (Suffolk).

F. E. Brown, 8, Parade. D.
Pain & Bayles, Hamilton Rd. D.

Felixstowe has a picturesque old church. The cliffs, the rocks at low tide, and the sea and beach from cliffs, give good pictures. Snapshots for sea and beach.

*Filey (Yorks).

Walter Fisher, Belle Vue St. D.

Filey presents an almost inexhaustible amount of coast scenery to the photographer. Other objects are St. Oswald's Church, Early English in style, Filey Brig, and a ridge of rocks extending half a mile into the sea.

*Fleet (Hants).

J. T. Hackett, 291, Albert St. D.

Fleet is a small place on the S.W.R., not far from Winchfield, and is in a picturesque woody district.

Folkestone (Kent).

Bishop & Co., Tontine St. D.

Folkestone has a harbour, fishing fleet, old houses, etc.

Fordingbridge (Hants).

S. E. Lock.

Fordingbridge is agreeably situated near the borders of the New Forest, on the lesser Avon.

*Forest Gate (Essex).

H. Mitchell, 56, Woodgrange Rd. D.

Forest Gate is a growing suburb of London, on the G.E.R. The lower part of Epping Forest is contiguous.

*Forest Hill (Kent).

A. & S. Taylor, 118, Stanstead Rd. D.

Forest Hill has very pretty scenery within easy reach.

Forfar (Scotland).

G. R. Fowler, 38, Castle St.
J. R. Mackossen, 19, East High St.

Forfar is of great antiquity. Near are the ruins of the Priory of Restennet, and five miles west stands Glamis Castle.

Foulsham (Norfolk).

H. G. Maddison. D.

Foulsham boasts of some curious monuments in its church and churchyard. The church is a noble building of flint and stone, with a tower ninety feet high.

Fratton (Hants).

W. T. Gorfett, 30, Fratton Rd. D.

Fratton is near Portsmouth, and has beautiful surrounding districts.

*Freshwater (I. of W.).

A. H. Kirk. D.
Richardson & Son.

Freshwater Bay; the Arched and Stag Rocks; Tennyson's Lane, with rustic-bridge; thatched cottage, near the church. The prospect from the highest point of the Freshwater cliffs is exceedingly fine, and includes a full view of the Needles.

Frome (Somerset).

E. C. F. Green, Catherine Hill.

Frome stands amidst beautiful country scenery and has many old buildings of historic interest.

Gainsborough (Lincoln).

W. E. White, 7, Market St. D.

Gainsborough Manor House, built by John o' Gaunt, forms part of the corn exchange. The parish church has a fine old tower, dating from the twelfth century.

Galashiels (Selkirk).

B. Cartwright, 50, High St. D.

Galashiels is near the River Tweed, Abbotsford House, and Melrose and Dryburgh Abbeys.

*Galway (Galway).

R. W. Simmons, 26, Dominick St. D.

Galway is in proximity to loughs and mountains. The western portion of Galway county is wild and romantic. The glens are very picturesque. Raths and cromlechs abound, and there are several round towers.

Gateshead (Durham).

B. T. Ord, 38, Derwentwater Rd. D.

Gateshead is on the opposite bank of the river Tyne to Newcastle, and is connected by that city with the fine High Level and Swing Bridges. Docks, quays, shipping, etc., abound.

*Glasgow (Lanark).

Glasgow contains numerous fine public buildings, while the Clyde with its shipping, presents many attractive views.

Bolton & Sons, 47, West Nile St. D.
J. Brown, 70, St. Vincent St. D.
J. Davie, 19, Gordon St. D.
J. Lizars, 101, Buchanan St. D.
G. McDonald, 1009, Cathcart Rd., Mount Florida.
G. Mason & Co., 186, Sauchichall St. D.
McGhie & Co., 75, St. Vincent St. D.
Prescott & Co., 52, Queen St. D.
Rae Bros., 134, St. Vincent St. D.
W. A. C. Smith, 53, Dundas St. D.
J. Stuart, 120, Buchanan St. D.
J. Trotter, 28, Gordon St. D.

Glastonbury (Somerset).

S. J. Hulbert. D.

Glastonbury has the ruins of a grand old abbey, whilst Wells Cathedral and the Cheddar Cliffs are within easy distance.

Glossop (Derby).

A. P. Golden, 48, High St. D.

Glossop is a market town, amid bleak but picturesque hills. Near it is Glossop Hall.

Gloucester (Gloucester).

E. G. Hughes, 86, Northgate St.
H. R. Milner, 83, Barton St. D.
W. Walwin, Southgate St. D.

Gloucester has a fine Cathedral, and the whole surrounding district is full of interest to photographers.

Godalming (Surrey).

V. Norman.

Godalming has the Charterhouse Schools, and the scenery is magnificent.

Goole (Yorks).

J. T. Bentley, Boothferry Rd.
W. H. Buck, 16, Ouse St.

Goole offers views of the river and shipping.

Gorleston (Suffolk).

W. Hindle, 90, High St. D.

Gorleston is on the east coast, near to Great Yarmouth. The contrast between the two places is very great. Gorleston is the place for quiet people, Yarmouth is not. The Broads are not very far away.

Gosport (Hants).

E. S. Balchin, 82, Stoke Rd.
B. French, 95, North St. D.
W. B. Smith, 47, High St. D.

Gosport, which adjoins Portsmouth, presents much of interest to photographers. Shipping, ironclads, the "Victory," Royal Haslar Hospital, and the Solent with its yacht races, etc.

Grange-over-Sands (Lancs).

A. W. Hankinson, The Esplanade. D.

Grange has an interesting old church, and the lake and mountain scenery are superb.

Grantham (Lincoln).

Briggs & Gamble, High St. D.

Grantham lies on the ancient Ermine Street. High over the red-tiled houses soars the noble gray spire, 278 feet high, of St. Wolfran's Church. Sir Isaac Newton was a scholar in the Grammar School.

Gravesend (Kent).

H. N. Perry, 73, High St., and 16 Windmill St.

Gravesend forms the limit of the port of London. The scenery around is good. The river presents a busy picture at times.

*Greenlaw (Berwick).

Mrs. Turnbull, Castle Hotel. D.

Greenlaw is a small town on the Blackadder. Its courthouse is a large Grecian pile.

*Greenock (Renfrew).

J. Graham, 5, Grey Place. D.

Greenock is at the mouth of the Clyde and the starting point for many places of interest on the west coast of Scotland.

Grimsby (Lincoln).

J. Wharton, 73, Freeman St.

Grimsby is the largest fishing port in the kingdom. The parish church is a good cruciform edifice, Early English. There is a statue of the Prince Consort and a public park.

Guernsey (Channel Islands).

J. H. Carré, 46, Bordage St. D.

Guernsey is noted for its sea views, landscapes, rock scenery and shipping.

Guildford (Surrey).

F. Wheeler, 129, High St. D
E. W. Martin, 68, High St. D.

Guildford is situated in a lovely country, with hill and dale, old ruins, and charming walks on all sides.

Haddington (N.B.).

D. Gardiner, 51, Court St.

Haddington lies at the southern base of the Garleton Hills, on the Tyne, about seventeen miles from Edinburgh. Its Abbey Church, known as the "Lamp of Lothian," is a Decorated red-sandstone pile with a central tower ninety feet high. The ruined castles of Dirleton and Tantallon are amongst the antiquities within easy reach.

Halifax (Yorks).

W. Haigh, 28, Northgate. D.
C. A. Higgins, 7, Bull Green. D.

Halifax is situated on the river Hebble, and is almost entirely surrounded by hills. The parish church of St. John is a fine specimen of Perpendicular Gothic; All Souls', built from designs by Sir G. G. Scott, is one of the best and most elaborate of all the churches of which he was the architect.

Halstead (Essex).

J. T. Emerson, High St. D.

Halstead is near to Hedingham Castle and the Colne Valley, which is extremely pretty. The parish church has a wooden spire and many old monuments.

*Hamilton (N.B.).

G. Buchanan, New Cross Post Office.

Hamilton is on the left bank of the Clyde about ten miles from Glasgow. Hamilton Palace is the seat of the Duke of Hamilton, and connected with the palace are a superb mausoleum, the ruins of Cadzow Castle, the herd of wild white cattle and some primeval oaks.

Hammersmith (Middlesex).

W. A. Shephard, 155, King St. D.
H. R. Procter, 113, The Grove. D.

Hammersmith forms a part of West London. It possesses a fine suspension bridge, and is a good centre from which photographers may "do" both river and city.

Handsworth (Staffs).

C. F. Jarvis, Villa Rd.

Handsworth forms part of Birmingham. The parish church contains two elegant marble monuments to the memory of Messrs. Boulton and Watt, at one time the celebrated proprietors of an extensive manufactory called Soho.

Hanley (Staffs).

J. W. Moore, 10, Tontine Sq.
J. H. Waldron & Co., 79, Broad St.

Hanley is in the heart of the Potteries, about eighteen miles from Stafford. Amongst the places of interest in the neighbourhood may be mentioned the Duke of Sutherland's seat at Trentham, Moreton Old Hall (part timber), and Mow Cop on the summit of a range of hills dividing Staffordshire and Cheshire.

Harrogate (Yorks).

C. E. J. Eynon, 13, James St. D.
F. Perkins, 22, James St.
Wilson & Son, 40, James St. D.

Harrogate is celebrated for its sulphurous, saline, and chalybeate springs. It lies amongst the moors of the West Riding, 450 feet above sea-level, and is within easy reach of many places of interest which form good photographic subjects, both landscape and historical.

Harrow (Middlesex).

S. J. Gunn, High St.
S. Hartley, High St.

Harrow-on-the-Hill is a little over eleven miles from St. Paul's Cathedral and stands on a hill overlooking thirteen shires. Its "visible church" exhibits every style of Gothic architecture from Norman to Perpendicular, whilst in the churchyard is a flat tombstone on which Byron, in his school-boy days, used to lie. The Harrow School holds a proud position amongst the great schools of England.

Hartlepool (Durham).

John Horsley, 104, High St.
J. C. Winn, 56, Lynn St.

Hartlepool is about eighteen miles E.S.E. of Durham, near the estuary of the Tees. It has an ancient sea-fishing industry, a substantial sea-wall, and delightful promenade.

Harwich (Essex).

Bevan & Son, 62, Church St. D.

Harwich is a sea-port and market-town of Essex. It has a safe and capacious harbour, defended by a battery and by Landguard Fort, which dates back to the reign of James I.

Haslingden (Lancs).

C. O. Wain, 8, Church St.

Haslingden is situated in the midst of a mountainous district on the border of the Forest of Rossendale, and is about seventeen miles from Manchester.

Hastings (Sussex).

A. Brooker, 21A, Wellington Pl.
Jameson & Curtis, Harold Pl. D.

Hastings, the famous watering-place of Sussex, is picturesquely situated, the old town being surrounded by high cliffs on all sides except the south. There are many places of historical interest in the neighbourhood, several large public gardens, and Alexandra Park.

*Havant (Hants).

W. Scorer, 14, North St. D.

Havant is a small market-town about eight miles from Portsmouth.

*Haverfordwest (Pembroke).

L. Brigstocke, 6, Market St.

Haverfordwest is beautifully situated on an eminence above the river Cleddan, about ten miles from Milford. There is an old castle built in the fourteenth century, and also the remains of a twelfth-century Augustinian priory.

Hawes (Yorks).

A. Knaggs. D.

Hawes is situated in a very pleasant position near a branch of the River Ure Hardraw Scarr, which is a short distance from the town, is a magnificent cascade falling perpendicularly 102 feet. There is also very pretty landscape, river, and mountain scenery.

Hay (Brecknock).

J. L. Davies & Son. D.

Hay is a small market town about thirteen miles from Brecknock. It has a plain but romantically situated church, and is within easy reach of many good photographic subjects.

Hayfield (Derby).

A. Livesley & Son, Chemists.

Hayfield is noted for its well-kept streets and stone houses. It possesses a handsome church, and is within easy distance of many places of interest in Derbyshire and Cheshire.

Hebden Bridge (Yorks.)

J. B. Wright, Albert St. D.

Hebden Bridge is near to Hardcastle Crags, a favourite resort with photographers who like wooded hillsides and valleys interspersed with rocky river scenery. The Hebden valley contains some of the finest scenery in west Yorkshire.

Helensburgh (Dumbarton).

J. McMurray, 13, Clyde St. West. D.

Helensburgh, a favourite watering place on the north bank of the River Clyde, twenty-four miles from Glasgow, is conveniently situated for visiting the scenery of the Clyde and Loch Lomond. There are also some fine views at Rosneath, on Gareloch, and in Glenfrain

Helmsley (Yorks).

J. E. Allenby, Bondgate. D.

Helmsley is a small market town about twenty-one miles from York. The places of interest in the neighbourhood are Helmsley Castle, Rievaulx and Byland Abbeys, Kirkdale Church and Cave, and the Rievaulx Terrace, with Temple having fine painted ceiling.

Hemel Hempstead (Herts).

C. E. Wilkinson, High St. D.

Hemel Hempstead is a centre of the straw-plaiting industry; it has a fine old church (St. Mary's) of Norman architecture, and is surrounded by very pretty country.

Hereford (Hereford).

W. E. Haines, 36, High Town.
C. T. Kemp, 7, Eign St. D.

Hereford possesses a noble cathedral built between 1079 and 1535, and exhibits every style of architecture from Norman to Perpendicular. There are a few picturesque old buildings, and some good views may be obtained on the river Wye.

Herne Bay (Kent).

H. S. Sewell, William St.

Herne Bay is a much-frequented sea-bathing place, on a beautiful bay, about 12 miles from Margate, and is also easily reached by road from Canterbury. It has a handsome clock-tower, pier, and esplanade, and is a good centre for many places of interest in the neighbourhood.

Hertford (Herts).

G. W. Fitton, 37, Fore St.

Hertford is situated on the river Lea. There are two ancient churches, and the ruins of the old Hertford Castle. Panshanger, the seat of Earl Cowper, about two miles distant, possesses a valuable collection of pictures.

Hexham (Northumberland).

Gibson & Son, Fore St. D.

Hexham is surrounded by many objects of interest to photographers. It is beautifully situated on the right bank of the Tyne, and is easily reached from Newcastle. The abbey church of St. Andrew's is a fine specimen of thirteenth-century architecture, while in the vicinity are numerous old castles and Pele Towers. The Roman Wall is also of interest.

High Wycombe (Bucks).

C. W. Dowswell, 51, Easton St. D.
J. Wilford, 7, High St. D.

High Wycombe is surrounded by beech-clad hills. It was the seat of a Saxon fortress, Desborough Castle, some remains of which may be seen, and has a fine cruciform church, commenced in 1273. Hughenden and Chalfont are near.

Hitchin (Herts.)

W. Payne, 2, High St., D.

Hitchin is noted for its lavender gardens. It was a place of some consequence in the days of King Alfred, and has a fine old parish church.

Holyhead (Anglesea).

T. J. Jones, Market St.

Holyhead has magnificent coast scenery, caverns, and arches. Irish mail-boats are arriving daily. The breakwater is grand in a rough sea. The South Stack Rock is covered in season with thousands of sea-birds. The roof of the porch and carving over porch doorway of the old church of St. Cybi should be noticed.

Holywood (Co. Down).

J. C. C. Payne, Holywood Medical Hall. D.

Holywood has the ruins of an ancient abbey called Grey Abbey. Yachting studies at Bangor Regatta can be made. The Bleach greens are interesting.

Horncastle (Lincoln).

Carlton & Sons, 4, High St. D.

Horncastle is situated in Tennyson Land. Tattershall Castle and Kirkstead Abbey Church are noteworthy objects.

Hornsea (Yorks).

C. Morrow, Market Pl. D.

Hornsea is fourteen miles from Hull, near the sea, on a mere or lake about one and a half miles long, interspersed with numerous picturesque islands.

*Horsforth (Yorks).

J. W. Sutcliffe, Town St.

Horsforth is a small town in the West Riding, about five miles N.W. of Leeds. It has extensive factories of woollen cloth, and fulling, paper, and corn mills, with some tanneries.

Horsham (Sussex).

H. W. Brassington, 26, West St. D.

Horsham has a capital landscape and good rustic bits. St. Leonard's Forest is east of the town, and two miles N.W. is Field Place, Shelley's birthplace.

Hove (Sussex).

Watts & Co., 114, Church Rd. D.
J. Williamson, 144, Church Rd. D.

Hove is a suburb of Brighton, where there is plenty to interest the photographer.

Howden (Yorks).

R. J. Latham, Market Pl. D.

Howden Church is worth taking. Wressell Castle is four miles away.

Huddersfield (Yorks).

A. Akam, 49, King St. D.
R. Cuthbert, Westgate. D.

Huddersfield has some good buildings, a marble statue of Peel, and two parks, Beaumont Park and Greenhead Park.

Hull (Yorks).

Lofthouse & Saltmer, 12, Market Pl.

Hull, or Kingston-on-Hull, has large docks and basins, with plenty of shipping. It has also some noteworthy buildings.

Hunstanton (Norfolk).

J. W. Bodger, The Pharmacy. D.

Hunstanton is a watering-place on the Wash. It has a splendid Decorated church (*circa* 1330), and a lighthouse 107 feet high. Hunstanton Hall dates from the Tudor period.

Hyde (Cheshire).

G. F. Wild, Clarendon Pl. D.

Hyde has good wooded scenery and country farmsteads.

Ilfracombe (Devon).

F. Keall, 33, High St.
C. Thornley, 23, High St. D.

Ilfracombe is beautifully situated for land and sea views. An early morning walk to Hillsboro', a little hill some fifteen minutes away, is worth while. On the harbour innumerable snapshots and stand-camera negatives may be secured of shipping, with fine backgrounds. At Lynnmouth may be seen a miniature Switzerland.

Ilkley (Yorks).

G. W. Worfolk, Brook St. D.

Ilkley Bridge, seventeenth century, and bits of river scenery, should be taken towards evening. Other objects of interest are the old Parish Church, partly Norman, on site of Roman fortress, ancient crosses in churchyard, etc. Ilkley is a first-rate centre for the photographic tourist.

Inverness (N.B.).

A. Allan, 4, Church St. D.
W. J. Bethune, Queen's Gate. D.
W. Ogston, 18, Union St. D.

Inverness can boast of hundreds of tit-bits in its neighbourhood. The town, the river, the castle, and the cathedral are all worth taking; the Falls of Foyers, the Culloden battlefield, Strathpeffer Spa, Urquhart Castle in ruins, and Cawder Castle are accessible.

Ipswich (Suffolk).

Pain & Bayles, Cornhill. D.
Wiggin & Son, 34, St. Matthew's. D.

Ipswich has many fine specimens of architecture from 200 to 350 years old. Also there are many reminiscences of Cardinal Wolsey's life and times. Magnificent scenery on the banks of the river.

Jersey (Channel Islands).

J. T. Baker, 27, Halkett Rd. D.
F. G. De Faye, 21, David Pl. D.
T. J. Le Sulleur, 17½, Beresford St. D.

Jersey—sunny Jersey—has much charming scenery, both seascape and landscape. The noble old pile, Mont Orgueil, picturesque bays, shipping, etc., afford abundant material for the photographic artist. The neighbouring islands, and St. Malo, a very quaint old place, should also be visited.

Keighley (Yorks).

A. N. Kershaw, Corn Mill Bgde. D.
D. West, High St.

Keighley is a market and manufacturing town situated amid the Brontës' country. There are two public parks in Keighley.

Kelso (Roxburgh).

W. M. Alexander, The Square. D.

Kelso Abbey, Floors Castle, Stitchill Linn, scenes by Tweed and Teviot, etc., are all worthy of attention.

Kendal (Westmoreland).

G. F. Rigg, Finkle St.
Severs & Bateson, 23, Stricklandgate. D.

Kendal has in its neighbourhood much good material for the photographer. The lake scenery, river scenery, Levens Castle, and Castle are noteworthy.

***Kenilworth** (Warwick).

W. F. Kimberley. D.

Kenilworth is noted for its Castle, which was founded about 1120 by Geoffrey de Clinton, and was also celebrated for the sumptuous entertainment given to Queen Elizabeth by Leicester, at a cost of £1000 a day for eighteen days. A fragment of an Augustinian Priory (*circa* 1122), and the Norman doorway of the Parish Church are worth notice.

***Keswick** (Cumberland).

A. Pettitt, St. John's St. D.

Keswick, besides having many points of interest within easy reach of the town, is a good centre from which to work the lakes generally. In the direction of Windermere, the road being good, the photo-cyclist can do good work.

Kettering (Northampton).

H. S. Cox, 42, High St. D.
H. Hitchman & Son, The Gold St. Pharmacy. D.

Kettering has good scenery generally. There are miles of avenues, and the Parish Church, dating from about 1150, is a fine Perpendicular structure.

Kidderminster (Worcester).

Steward & Westover, Medical Hall.

Kidderminster is situated on the Stour. It has some good buildings. The Church is Early English to Perpendicular, with a noble pinnacled tower; whilst the Town Hall is in the Renaissanee style.

***Killarney** (Ireland).

J. Graham, Glebe Hotel. D.

Killarney in the Irish lake district, is best approached *via* Cork, Bantry, and Glengariff and at each place there is much to interest the photographer. An Irish car-driver and a Killarney boatman afford good opportunities.

Kingsbridge (Devon).

R. M. Stewart, 56, Fore St.

Kingsbridge has some of the loveliest scenery in England.

King's Lynn, Norfolk.

W. H. Cockle, High St. D.

King's Lynn has many places of interest. Snapshots of shipping, fishing fleet, etc., from north bank and harbour. In the neighbourhood are Sandringham, the home of the Prince of Wales, Castle Rising, and Castle Acre.

Kingston-on-Thames (Sur'y).

W. Brewster, Market Pl. D.

Kingston-on-Thames is in the midst of good views and places of interest. The river scenery, royal parks and palaces, are especially noteworthy.

Kirkcaldy (Fife).

D. Storrar, 228, High St. D.

Kirkcaldy has the Forth Bridge near it, and has also good coast scenery.

***Kirkcudbright** (N.B.).

J. Copland, Dundrennan. D.

Kirkcudbright is the ancient capital of the county, and is surrounded with terraced woods and romantic walks. The old Castle of the Maclellans, an ivy-covered ruin in the town; St. Mary's Isle, the seat of the Earl of Selkirk, one and a half miles south; and Dundrennan Abbey, founded 1142, six miles to the south east, are worth noting.

Knaresborough (Yorks).

C. B. Southwell, High St. D.

Knaresborough is a quaint old town, and has some of the prettiest views in Yorkshire about it.

NEW IDEAS & TRADE NOTES

B.P. FORMULÆ AND PROCESSES.

The *Pharmaceutical Journal* summary of the alterations, additions, and omissions in connection with the formulæ and processes of the 1898 Pharmacopœia, published in last week's issue, was so arranged that anyone reading the notes in conjunction with the 1885 Pharmacopœia and its Addendum could readily make any of the new preparations or alter any of the old ones, without waiting until the new Pharmacopœia is actually issued to the public. That object was fully attained, and it is gratifying to learn that leading wholesale firms have placed copies of the Journal, containing the summary, in the hands of their employés who are engaged in preparing the new and altered galenicals. The opinion generally expressed is that no other journal has published anything in connection with the new Pharmacopœia that can be utilised in a similar practical manner, and as the date of publication of the B.P., 1898, is not yet announced, the *Pharmaceutical Journal* summary has been carefully revised and reprinted in a handy form for the pocket. The information the book contains can be thoroughly relied upon, and no one who possesses a copy need anticipate any difficulty in making any of the new or altered preparations. Specimen copies of the book will be sent, post free, at 4d. each; the prices for quantities are 3s. per dozen, 18s. per hundred, and £7 10s. 0d. per thousand, all carriage paid. Orders should be addressed to Messrs. Street Bros., 5, Serle Street, Lincoln's Inn, London, W.C.

Messrs. Evans, Gadd & Co. intimate that they have organised a special department for the preparation of articles for retail sale, and will be glad to quote for compounding and putting up chemists' own proprietaries in large or small quantities. The manufacture of these is under the direct supervision of a qualified manager, who will undertake to preserve the secrecy of private formulæ entrusted to him. The same firm also send a notice *re* the forthcoming Chemists Exhibition, in which is given a plan of the exhibition with the position of the firm's stand indicated.

Messrs. Tremeer and Co., of Barnstaple, have recently added to their list a finely woven fabric, coated on both sides with pure Para rubber, thoroughly waterproof, non-adhesive, highly flexible, free from creases, easily put on and taken off, and can without any difficulty be cut to the required size. It never becomes either stiff from the cold or brittle with the heat, and can after use be thoroughly cleansed and purified and rendered quite fit for further use simply by being passed through any ordinary disinfecting fluid. It serves as a substitute for oiled silk and gutta percha tissue, and is sold at 3s. per yard.

Messrs. Tremeer & Co, Barnstaple, send a synopsis of some of the more important additions and alterations of the new Pharmacopœia, which the firm is issuing for the use and information of the medical profession. Messrs. Tremeer also intimate that they will issue a revsied price-list as soon as the Pharmacopœia is on sale.

Pharmaceutical Transactions.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.

At the third annual dinner of this Association, held at the Colonnade Hotel, Birmingham, on April 13, the President (Mr. Jessop) was unable to take the chair owing to indisposition. His place was taken by Mr. Casson (vice-president).—In proposing "The Pharmaceutical Society," Mr. G. E. Perry expressed his conviction that it was rapidly growing in favour with the majority of chemists. He remembered the time when it was little thought of, but now it was gradually drawing the chemists from all over the country into one body. He hoped for even better things when the Pharmacy Bill became law.—Mr. F. J. Gibson (President of the Midland Pharmaceutical Association) briefly replied to the toast —Mr. R. D Gibbs proposed "The Midland Chemists' Assistants' Association." and expressed delight at the fact that in Birmingham there were assistants energetic enough to form such a body. By banding themselves together, he was convinced assistants could obtain many advantages, chief among which he placed a reduction in the number of hours. He wished it to be clearly understood, however, that assistants could not get shorter hours by merely demanding them. It rested mainly with the public, and the public must be educated up to the fairness of the demand. Chemists' assistants must be ready to acknowledge themselves servants of the public, and filling their positions honourably and nobly their reward was sure to come.—Mr. Casson, in reply, referred to the kind help Mr. Gibbs had extended to the Association ever since its formation. He was proud to be an officer of such a body, and regretted exceedingly that the time was quickly approaching when he should be compelled to sever his connection with it.—Mr. F. G. Walton, proposing "The Health of the Visitors," said that however much they were stimulated by a spirit of independence, they were always glad to see friends from outside, whether at social or ordinary meetings.—Mr. Boucher replied to the toast, wishing the Association every success. A capital programme of music was contributed by Messrs. S. Halliley, O. Ward, T. W. Suker, and S. Austin (St. Mary's Quartette), and Messrs. Taylor, Thomas and Woolman. Mr. Smith accompanied.

MIDLAND PHARMACEUTICAL ASSOCIATION.

Under the auspices of this Association, Mr. Dencer Whittle, Lecturer on Bacteria Medica at Mason University College, gave a demonstration at the college on the 14th inst. with an electric projecting microscopic lantern. The President (Mr. F. J. Gibson) was kept away by an accident on the railway, and the chair was taken by Mr. G. E. Perry.—Mr. Whittles showed dental, medical, and veterinary specimens, and illustrated the crystallisation of many chemicals, including salicin and santonin. He also exhibited pictures explanatory of cyanide of mercury in the process of crystallising. The lecturer concluded with illustrations of the various animals which find their way into the human interior through cider, vinegar, and other liquids, and caused some merriment with pictures illustrating the flea, the sheep tick, and other minute insects possessing marvellous powers of irritation.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION.

The annual business meeting of the twentieth session was held in the Pharmaceutical Society's House, 36, York Place, Edinburgh, on Friday, April 15, 1898, Mr. George Sinclair, President, in the chair. The Prize Committee reported that the Ewing Pharmacy Prize had been gained by Mr. David Roger, 23, Bernard Street, Leith, and in the absence of Mr. Ewing, the President presented the winner with copies of Attfield's 'Chemistry,' Green's 'Botany,' and Wills' 'Materia Medica.' The annual report and financial statement were then read and adopted, the former showing a slightly increased membership and the latter a balance of £5 2*s.* 1*d.* Mr. John Bowman was elected an honorary member. A sum of £1 1*s.* 0*d.* was voted as a subscription to the Benevolent Fund of the Pharmaceutical Society. The following office bearers were elected for next session:—President, G. H. C. Rowland; Vice-President, J. D. Sinclair; Secretary, David Harley, 9, Princes Street, ; Treasurer, J. L Reid. Members of Committee, Messrs. G. Sinclair, McBain, Mowatt, Sivewright, A. McKenzie, McDiarmid, Kidd, and Roger. Prize Committee, J. M. Cameron, A J. Dey, and G. Sinclair.

PARLIAMENTARY NOTES.

Progress Reported.—The agitation which the representatives of Democracy have for years waged against Kew officialism has at length last borne fruit. After the first day of June, Kew Gardens will be opened to the public at 10 a.m. instead of at noon as hitherto.

The First Commissioner of Works, in making the announcement, pointed out that the innovation was experimental, and if it is found that the privilege of earlier entry—which includes the recent Royal addition—is made use of by the class of persons by whom it is said to be desired, it would be continued during the remainder of the summer season. The Gardens may become in time quite a Parliamentary holiday resort, the Member for Battersea having set the example by spending the recent recess in the Royal Borough, and recuperating his mind by searchings for official shortcomings.

The Pharmacy Bill was the third item on the notice paper for the evening sitting of the House on Tuesday, and to the unfledged parliamentarian this circumstance might have inspired something akin to hope. Those with a deeper knowledge of the ways of members could give the representatives of the Society no encouragement that the desired trial of strength with Mr. Cross would come on. As a matter of fact they were right. For three hours the members indulged in "airy nothings" on the vast subject of national education, and though there were thirty-two measures awaiting consideration (Mr. Kearley's Food Adulteration Bill amongst them), not one was touched. The Pharmacy Bill was deferred till Monday next, but has little chance of a hearing then. Still, it is too early to abandon hope, and with skilful engineering the difficulties may yet be successfully negotiated.

Mr. Henniker Heaton is in good form after the recess and is peppering the Post Office authorities with a whole fusillade of pertinent inquiries. On Monday he asked for guinea postal orders, and tried to induce the Department to issue paper tokens for all amounts from 6*d.* to 21*s.*, rising in sixpenny steps. But Mr. Hanbury was obdurate; on Thursday, Mr. Heaton has a sheaf of questions dealing with the shortcoming of the Post Office. The chief item in the bundle is in the form of a protest againt the discontinuing, without notice, of the conveyance of flowers by sample post or parcel post between England and the South of France. He also grumbles against the restrictions placed on the transmission, by book post, of orders for goods. At present the merchant may send for ½d., an order form in which the essential word "send" or "forward" constitutes the whole of the printed direction, but he may not modify the brusqueness of such order by printing "please" before the verb, nor may he indicate, by adding "urgent" or "immediately," that the order is important. Mr. Heaton wants this altered and also that certain anomalies in reference to the use of particular words should either be removed or made plain to merchants, who at present run the risk of unwittingly breaking the regulations.

Chemistry versus Art.—Sir S. Montagu (Whitechapel) is to ask the First Commissioner of Works whether he intends that in the South Kensington Museum re-arrangements, laboratories are to be placed under the same roof as the works of art, and if he has thought of the danger to the pictures and silver likely to result from the generation of gases and other noxious fumes. Evidently the hon. member has paid a recent visit to a chemical laboratory and the SH_2 has entered his soul.

Adulterated Vinegar.—Major Rasch (Essex S.E.) has given notice of a question respecting a recent case of poisoning by vinegar containing arsenic. The object of the inquiry is to ascertain the source of the adulterated article and whether it was British or imported.

Vaccination occupied the House during the Tuesday morning sitting, but no progress was made with it, owing to unexpected opposition by those who object "on principle." Sir Walter Foster and Sir Wm. Priestley both contributed to the debate, and both rather damned the measure with faint praise. Until the second reading of this Bill is done with no progress will be made with the London University Commission Bill, which, by the way, promises to be a very tough bone of contention indeed.

MARRIAGES

Watson—Lewis.—At the Parish Church, Tottenham, April 14, by the Rev. F. Speke, Herbert Shepley Watson, A.P.S., son of the late Alfred Watson, solicitor, Leeds, to Florence Mary, eldest daughter of Mr. G. D. Lewis, Tollesbury, Essex.

NEWS IN BRIEF

"A Pocket Synopsis of the British Pharmacopœia, 1898," with concise notes on the changes, particulars of new preparations, tables of doses, strengths, etc., compiled by Mr. H. Wippell Gadd, will shortly be published by Messrs. Evans, Gadd & Co., of Exeter.

The London School of Medicine for Women is to be congratulated on having secured royal recognition for its work in technical education. It is rumoured that the laboratories which the school authorities are establishing in connection with their premises at Handel Street, Brunswick Square, are to be opened by H.R.H. The Princess of Wales in July next. It is expected that the Prince of Wales will also be present on the occasion.

To Encourage the Teaching of Science the Technical Education Board of the London County Council will proceed shortly to award not less than five Senior County Scholarships. These scholarships are of the value of £50 a year, whilst tuition fees will be paid up to £30 a year, and are tenable for three years at University colleges and advanced technical institutes. The scholarships are confined to residents within the administrative county of London, and are open only to those whose parents are in receipt of not more than £400 a year. Candidates should, as a rule, be under twenty-two years of age, though the Board reserves the right to give preference to candidates who are under nineteen years of age. The scholarships are intended to encourage more especially the teaching of science, and to encourage those students who cannot afford a University training to pursue advanced studies for a period of three years in the highest University institutions in this country or abroad. Of the seventeen students who are now holding senior scholarships five are studying at Cambridge, five at the Central Technical College in Exhibition Road, three at the Durham College of Science, Newcastle-upon-Tyne, two at German universities, and two (ladies) at Bedford College and Holloway College respectively. The scholarships are awarded on a consideration of the past record and general qualifications of the candidates, and not upon the results of a set examination. Application forms may be obtained from the Board's Secretary, 116, St. Martin's Lane, W.C., and must be returned not later than Monday, May 16.

The International Photographic Exhibition, 1898, held under the auspices of the Royal Photographic Society, will be formally opened at the Crystal Palace, on Wednesday, April 27, and will remain open until Saturday, May 14. The various branches and applications of photography will be divided into sections, the following having been arranged:—(1) The History of Photography, (2) Pictorial Photography, (3) Portraiture and General Technical Photography, (4) Apparatus and Material, (5) Photo-mechanical Processes, (6) Scientific Applications of Photography, (7) Photography in Colours, (8) Photography as a Science.

The Photographic Guild is a society intended for the benefit of isolated photographers, amateur and professional. The guildhall and offices are at 6, Farringdon Avenue, London, E.C., the organising secretary being the Editor of the *Photogram*. Full particulars, rules, etc., are sent to applicants on receipt of a stamped addressed envelope by the Assistant-secretary at the above address.

The Western Chemists' Association (of London) held a very successful musical and social evening at the Westbourne Restaurant, Craven Road, W., on Wednesday, April 20, Mr. Walter Hills, President of the Pharmaceutical Society, in the chair. An excellent programme had been arranged, consisting of songs, humorous and otherwise, trios, violin solos, and a capital ventriloquial entertainment. A most enjoyable evening was concluded by the singing of the National Anthem.

P.A.T.A.—In connection with the election of the Retail Section of the Grocery Council, fifteen gentlemen have been nominated for the ten seats vacant. The election of the Council is being proceeded with, but as two of the twelve candidates nominated have stated their unwillingness to serve if elected, thus leaving ten candidates, the requisite number, there will be no poll. There are two new members, Mr. J. Hessell, chemist and druggist, Highgate Road, N.W., and Mr. C. J. G. Bunker, chemist and druggist, Great Dover Street, S.E., who take the places of Mr. John Williams, Chairman of the Manchester Grocers' Association, who is a candidate for the Grocery Council, and Mr. James Cocks, chemist and druggist, Stonehouse, Plymouth. The Retail Drug Section will now consist of chemists only. The *Record* expresses regret that Mr. Cocks, of Plymouth, the former Vice-President of the P.A.T.A., is unable for this year to devote the necessary time to enable him to serve on the Council, and goes on to hope that his absence from the Council will be but a temporary one. The Retail Section of the Photographic Branch of the Council consists of three members, the following gentlemen having been nominated:—Mr. W. Denham, Leeds; Mr. F. V. A. Lloyd, Liverpool; and Mr. J. J. Laws, the Secretary of the Streatham and District Chemists' Association. The Manufacturer's Section of this Council at present consists of Mr. David Allen, 147, Whitfield Street, W.; Mr. Otto Scholzig, Clapham; and Mr. W. Tyler, Aston, Birmingham, these gentlemen having control of the Photographic Section. The annual meeting of the Association, followed by the annual dinner, will take place at the Chemists' Exhibition, to be held in the Agricultural Hall during the week commencing June 13.

Plymouth, Devonport, Stonehouse and District Chemists' Association.—A committee meeting of the Educational Section was held on Thursday, the 14th inst. It was decided to hold examinations in pharmacy and materia medica in the first week in May. Prizes for the same were kindly offered by the President (Mr. Jas. Cocks), Messrs. R. F. Roper and J. K. Bond, Ba., B.Sc. Botanical rambles and evening classes in botany were also arranged for, Mr. O. A. Reade having again kindly offered his services in conducting the same.

Edinburgh District Chemists' Golf Club.—The members of this Club held their annual spring prize competition at Largo on Monday, the 18th inst. (Edinburgh spring holiday). The Captain's (Mr. H. D. Alexander) and two Club prizes, along with the Gibson Handicap Medal, were played for, with the following results: Captain's prize and Gibson Medal, James Stott; second prize, J. G. Anderson; third prize, H. D. Alexander. After luncheon, served in the Crusoe Hotel, a match between teams, Captain *versus* Vice Captain, resulted in favour of the latter by 6 holes.

New Pharmacies in Edinburgh.—Mr. James Anderson, chemist and druggist, has opened the new Lochrin Pharmacy, at 36, Home Street, and Mr. James McBain, chemist and druggist, ex-president of the Assistants' Association and the Pharmacy Athletic Club, is shortly to open a new pharmacy at Haymarket Terrace.

Public Dispensers' Association.—A meeting of this Association will be held at the Bloomsbury Hall, Hart Street, W.C., on Friday, April 29, at 8 p.m., when Dr. G. Dean, of the British Institute of Preventive Medicine, will deliver a lecture on "Antitoxins." The Committee desire to welcome all dispensers to this meeting.

Mr. W. Morley Martin, pharmaceutical chemist, Redruth, has been elected a member of the Redruth Urban District Council Election.

Judge Waddy, the learned Recorder of Sheffield, when committing a miner to prison for a month for attempting to kill himself by a dose of laudanum, followed by one of embrocation, rather puzzled those present by remarking that if the man did not go to gaol, he might be making another attempt on his life, and probably he would succeed, "and then he would find out how foolish he had been."

At Arbroath a Chemists', Assistants', and Apprentices' Association has been formed, Mr. R. Alexander being appointed to the position of secretary.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

APRIL 21, 1898.

The past week has been one of considerable excitement in consequence of the dispute between the United States and Spain having gradually reached a climax. At the moment of writing war appear quite inevitable, while the results of such a war, the course of which it is apparently impossible to foretell can hardly fail to have a not inconsiderable effect on several of the articles referred to in these columns. Probably American drugs will be among the first to feel the effects. This would appear especially likely in the case of Cascara Sagrada, American Oil of Peppermint, etc. Already the makers of the German brand of Quinine most in favour, viz., *B. & S.*, have decided to stop selling, and the market for the article is in consequence decidedly harder. Glycerin will probably be affected, as also will perhaps be the case with Opium and Morphia, and probably Carbolic Acid. It is thought possible also that Quicksilver will be dearer, which would no doubt eventually mean also an advance in price of mercurials. Much will, of course, depend upon how events shape themselves, and, on this point, opinions are divided, many people thinking that in the event of war it will probably go hard with America at the commencement. At the same time few people can doubt what would be the eventful result of the struggle, if war does break out; and it seems now practically absolutely certain that there will be war. As regards actual changes during the week, these have been few and of minor importance, Ipecacuanha being rather lower. The following are the particulars of prices actually ruling.

ACETANILID—Is quiet at 1s. 2d. to 1s. 4d. per lb., according to quantity.

ACID BORACIC—Unchanged at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

ACID CARBOLIC—Is quiet at 6½d. per lb. for 35° to 36° C. *ice crystal*, 7d. for 39° to 40° C. ditto, and 8d. for 39° to 40° C. *Detached crystals* in quantity, and large bulk packing; *crude* 60° F. 2s. per gallon, 75° F. 2s. 6d. *Liquid*: 95 per cent. of pale straw colour in 40-gallon casks, 1s. 2d. to 1s. 3d. per gallon for quantity.

ACID CITRIC—Is quiet at 12½d. to 1s. 1d. per lb. for foreign and English *crystals* respectively.

ACID LACTIC.—Makers quote 2s. 3d. to 2s. 6d. per lb. for the conc. 1·21 quality, in quantity and in bulk.

ACID OXALIC—Steady at 3⅝d. per lb. for *crystals*, and 4⅛d. per lb. for *powder*.

ACID TARTARIC.—English *crystals* are unchanged at 1s. 1d. per lb. on the spot, whilst foreign *crystals* are firmer at 12⅝d. 12¼d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* continues dull, but quotations are unchanged at £8 15s. per ton, for grey prompt 24 per cent., London. *Iodide* firm at 13s. 4d. per lb. *Oxalate* rather cheaper at 6d. per lb. *Sulpho-cyanide* steady at 1s. 1d. to 1s. 2d. per lb. *Chloride*, free from metal, 98 per cent., 25s. 6d. per cwt.; chemically-pure small crystals 32s. per cwt. *Sal ammoniac* unchanged at 33s. to 35s. for sublimed. *Vanadiate* 21s. 6d. per cwt.

ASAFETIDA—Has been in good inquiry for the United States, and several parcels have been taken at prices ranging from 50s. to 65s. per cwt.

ATROPINE—Is firm at 12s. 9d. to 13s. for the *Sulphate P.B.* in quantity.

BALSAM COPAIBA—Is very firm, and tending dearer. Quotations range from 1s. 9d. to 1s. 10d. per lb., *c.i.f.* terms.

BALSAM TOLU—Is very firm on the spot at 1s. 9d. per lb., whilst for arrival more money is asked, 1s. 9¾d. per lb., *c.i.f.*, being the current quotation.

BISMUTH—Steady at 5s. per lb. for the *metal*, and 4s. 10d. for the *subnitrate* in 5-cwt. lots.

BORAX—Unchanged at 14s. per cwt. for *crystals*, and 14s. 6d. per cwt. for *powder* in large bulk.

BROMIDES—Are in good demand at 1s. 10d. per lb. for *Potass. Bromide*, and 2s. 2d. for *Ammon.* and *Soda Bromide* price of *Bromine* being 1s. 11d. per lb. in 20-case lots.

BUCHU LEAVES.—*Rounds* are steady at 4½d. to 5d. for good to fine green, *longs* scarce at 9d. per lb.

CAMOMILES.—Good Belgian flowers are scarce, quotations being firm at 45s. to 47s. 6d. per cwt.; ordinary, 31s. 6d. to 32s. per cwt.

CAMPHOR—Continues dull for crude. Business for arrival has been done in *China*, April-June steamer at 83s. cwt., whilst for *Japan* there are sellers, same shipment, at 89s. per cwt., *c.i.f.* *Refined* is unchanged, but firm.

CASCARA SAGRADA—Is quiet, and there are evident "bear" interests at work to keep the price from rising just at present. Stocks on the Pacific Coast are said to be practically exhausted, and old bark is worth more in New York than on the London market. The position may change at any moment as soon as it is known what quantity, if any, is gathered this season. Old bark is selling at 25s. per cwt. on the spot.

CLOVES.—Privately *Zanzibar* are weak, and only small business is passing: prices for delivery are, June-August, 3 3/32d., August-October, 4⅛d. At auction only 70 bales *Zanzibar* were offered and mostly bought in, fine at 4½d., 20 bales damaged being sold up to 3⅞d.: 55 bags *Amboyna* bought in at 5¾d.

CINCHONIDINE SULPHATE—Is in fair inquiry at 6¼d. per oz. in large bulk.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*. commercial, 1s. 9d.; pure, 3s. per gal. *Benzole*: 50 per cent., 1s. 3d. per gallon; 90 per cent., 1s. *Crude Naphtha*: 30 per cent. at 120° C., 8d.; *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 9d.; 90 per cent. at 160° C., 1s. 6d.; 90 per cent. 190° C, 1s. 3d. per gallon.

COCAINE.—Some of the makes less in favour are being pressed for sale at low prices, while the makers of best brands still quote 10s. to 10s. 6d. per oz. for the *Hydrochlorate* in 100 oz. lots. It is thought, however, that they will probably have to reduce their price in order to meet competition, although it is stated that the position of *crude* would not justify any such reduction.

COCA LEAVES.—Green *Truxillo* are firm at 7d. per lb.

CODEIA.—In fair demand at unchanged price, viz., 11s. 3d. to 11s. 6d. per oz. for quantity in bulk.

COD-LIVER OIL.—Market remains firm at 82s. 6d. to 95s per barrel, according to brand, for new non-congealing *Norwegian* in tin-lined packages, old *Norwegian* oil being held for 75s. to 80s. As regards the position and probable future course of the market, our Tromsoe correspondent writes as follows:—Lofoten fishery about to close. Production up to April 11, 9271 hectl. Southern fisheries closed. Finmarken: No fishing commenced. Total production of cod-liver oil up till April 11, 18921 hectl.; total against same date 1897, 27956 hectl.; total against same date 1896, 14482 hectl.; total against same date 1895, 16274 hectl.; total against same date 1894, 18287 hectl.; total against same date 1893, 28000 hectl.; average preceding five years, 21000 hectl. During the same five years the average prices for non-freezing oil *c.i.f.* London first days of April have been: 1893, 60s.; 1894, 110s.; 1895, 130s.; 1896, 220s.; 1897, 80s.; average, 120s. Most exporters now quote 90s. It being now left entirely to Finmarken to make up for the deficiency, it is probable that until reports from those districts commence sounding more promising and indicating a larger output of oil prices will continue their upward course. All makers and exporters keep but very moderate stocks, and will be in no hurry to clear the same.

COLOCYNTH.—Further arrivals have taken place, but, whilst demand is slow, holders are firm at 1s. 2d. to 1s. 3d. per lb. for small discoloured to fair bold pale apple.

CREAM OF TARTAR—Is quiet, with but little business passing. First white *crystals* on spot 75s. per cwt.; *powder* 77s. to 78s. per cwt.

CUTCH—Is dearer, closing firm at 28s. per cwt. for *Eagle*, 31s. 6d. for *Star B.*, and 34s. cwt. for good tablets.

GINGER.—At auction *Cochin* went off flatly, and 1468 bags rough were mostly bought in; fair to good washed at 26s. to 0s., only 200 bags finding buyers at barely

previous rates; cuttings, 15s. 6d.; shrivelled pickings, 11s. 6d.; ends, 14s. 6d.; common dusty washed rough, 21s. Of cut kinds 145 cases sold, chiefly new crop Calicut; cut small, 32s. 6d.; medium and small, 46s.; bold and medium, 71s. to 77s. 6d.; fine bold, 75s. to 80s.; selected bold, 87s. 6d. to 91s. 55 bags limed *Japan* bought in. *Jamaica* met a good demand, and 309 barrels mostly sold at steady rates for common and at advanced prices for better qualities. Low dark Rhatoon, 67s.; common lean and small scraped, 72s. 6d. to 79s. 6d.; low middling to middling washed, 82s. 6d. to 91s.; good middling to good bright, 92s. to 103s.

Glycerin—Is decidedly firmer at 52s. 6d. to 60s. per lb., according to quantity and brand, for *German* white, double distilled chemically pure 1 260 quality in tins and cases, *English* being quoted rather below these figures. It is thought that the outbreak of hostilities between the United States and Spain, which is now apparently unavoidable, will lead to higher prices for this article.

Golden Seal Root—Is very firm in New York, and quotations come dearer at 1s. 11d. per lb., *c.i.f.* Supplies ars said to be very limited.

Guarana—Is slow of sale, but price is steady at 1s. 9d. per lb.

Gum Mastic—Is in fair supply, but only small sales have been made at 2s per lb. for clean pale tear.

Gum Tragacanth.—In the auctions held on the 15th inst a fair quantity changed hands. The prices of the finer qualities were maintained, but other qualities showed a decline of about 5s per cwt. Firsts are quoted £13 10s. per cwt., seconds £12 5s., thirds £11, lower qualities from 35s. to £9 10s. per cwt.

Iodides—Are in brisk demand at 9s. 9d. per lb. for *Potass. Iodide* in 2-cwt. lots, and 13s. 4d. for *Iodoform*, price of *Iodine* being unchanged at 7½d. per oz.

Ipecacuanha.—*Rio* is lower, one importer making sales at 7s. 6d. per lb. The principal importer, to whom the last shipment of 120 bales came, is said to be firm in asking 8s. per lb., but at the moment the demand can be filled at the lower value. For *Carthagena* there is a fair inquiry, notwithstanding that the new Pharmacopœia distinctly prohibits its use, price being firm at 5s. 6d. to 5s. 9d. per lb.

Isinglass.—The monthly auctions took place on Tuesday, when a total of 550 packages was offered, as against 607 packages in March. Demand was very slow, and only a small proportion sold at on the whole easier rates. The bulk again consisted of *Bombay* and *Kurrachee*, which met little demand, and holders being firm nearly the whole was bought in, Leaf selling at about previous rates. Tongue all bought in. Cake steady for the few lots sold. A good supply of *Penang* was chiefly sold, with less competition, and prices of both Leaf and Tongue were cheaper, cake being dearer. The small supply of *Saigon* leaf was neglected, and only a few cases were sold at about previous rates. Supplies of *Para* were light, but with a slow demand prices showed an average decline of 2d. per lb. *West India* also easier.

Jalap—Is very queit, and with the new crop arriving in New York, prices are tending easier. On the spot good small heavy root offers at 6d. per lb., whilst for arrival new crop good root, but damp, offers at 5d. per lb. *c.i.f.*

Japan Wax—Quiet, good squares offered at 35s. 6d. per cwt. on the spot; for arrival April-June steamer is quoted same price *c.i.f.* terms.

Lead Acetate—Is dearer by 1s. 6d. per cwt., quotations now being 27s. 6d. per cwt. on the spot.

Lithia Salts—are firm at 10s. 8d. for the *Carbonate*, 5s. 7d. for the *Citrate Cryst.*, and 6s. 1d. for the *Citrate Powder* in 2-cwt. lots.

Lobelia Herb.—Pressed packages are steady at 7d. to 8d. per lb. on the spot, loose 5d. to 6d. per lb. according to quantity.

Mercurials—Without change at 2s. 2d. per lb. for *Corrosive Sublimate*, and 2s. 9d. for *Calomel* in 10-cwt. lots, other *Quicksilver* preparations being quoted in proportion.

Morphia.—Quiet at 4s. 3d. per oz. for the *Hydrochlorate salt* in powder for quantity and bulk packing.

Nitrate of Soda.—*Commercial*, £7 10s. to £7 15s.: refined, £8 to £8 5s. per ton.

Nitrate of Silver.—Quiet at 1s. 5d. to 1s. 6d. per oz. for *crystals* in quantity, *sticks* higher in proportion.

Oils (Essential).—*Star Aniseed* is fairly firm at 6s. 9d. per lb. on the spot. *Cassia* very quiet and quotations are quite nominal. *Citronelle*, steady at 1s. 2d. per lb. for both tins and drums. *Peppermint*: American *H.G.H.* is steady at 5s. 7½d. to 5s. 9d. per lb. on the spot. *Wayne County* in fair demand at 3s. 9d. to 4s per lb., *c.i.f.* terms. *Sassafras*: Good quality, 1s. 9d. per lb. *Cajaputa* firm at 4s. 6d. to 4s. 9d. per bottle. *Sandalwood* is firmer at 12s. 6d. to 13s. per lb. for English drawn, and 11s. 6d. to 12s. 6d. for Australian. *Bergamot* is steady at 8s. 3d. to 8s. 9d. per lb. *Lemon*, 3s. 9d. to 4s. 6d. per lb. *Orange*: Sweet, 9s. per lb.; bitter, 9s. 9d. to 10s. per lb.

Oils (Fixed) and Spirits.—*Linseed* has been lower, but closes dearer again at £15 17s. 6d. for pipes on the spot, barrels £16 5s. *Rape* firm and rather dearer at £22 10s.; refined, £24 on the spot. *Cotton*: Crude on the spot is dearer at £13 5s.; refined spot, £14 15s. to £15 5s., according to make. *Olive*: Spanish and Levant firm at £33. *Coconut*: Ceylon, on the spot, £23; Cochin: £27 on the spot. *Palm*: Lagos, on the spot, £23. *Turpentine* steady at 23s. 9d. per cwt. on the spot. *Petroleum Oil* dull, Russian spot, 4⅛d. per gallon; American, 4½d. per gallon.

Opium—Is about 6d. per lb. dearer on this side, values here having now advanced to approximately the parity of prices ruling in *Smyrna*, value there being, however, still slightly higher than here.

Phenacetin—Unchanged at 3s. 9d. to 4s. 3d. per lb. for both *cryst.* and *powder*, according to quantity and brand.

Potash Compounds.—*Chlorate* is rather easier at 3⅜d. per lb. on the spot. *Bromide* firm at 1s. 10d. per lb. *Cyanide*: Most makers are oversold and considerably behind in their deliveries. For the 98 to 100 per cent. white cake 1s. 2d. per lb. is being paid for quantity. *Permanganate*: Present low prices are inducing buyers to cover their requirements for the coming season at 62s. 6d. per cwt. for *small crystals*, and 67s. 6d. per cwt. for *large crystals*. *Prussiate*: *Yellow* quiet at 6¼d. per lb. *Red*: 1s. 1d. to 1s. 2d. per lb. *Iodide* firm at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bicarbonate* steady at 30s. for *crystals* or *powder*. *Oxalate*: Neutral is steady at 5d. per lb. for *crystals*. *Bichromate* quiet at 4d. per lb. *Carbonate*: 21s. to 22s. per cwt. is asked for the 96 to 98 per cent. in large bulk.

Potash Permanganate—Steady at 60s. to 65s. per cwt., according to quantity for *small crystals* in 1 cwt. kegs; large crystals 5s. per cwt. more.

Quicksilver—Quiet at £7 1s. 3d. per bottle from first hands, and £7 from second hands.

Quinine—Remains quiet, makers' price for best *German* brands being still 9½d. per oz. for the *Sulphate*, for 1000-oz. lots in 100-oz. tins, while from second hands it would be possible to buy a shade below this figure. Brands of less repute are freely offered at 9d. per oz., without, however, finding many buyers. Future course of the article remains somewhat a puzzle, even to those who are usually best informed as to position and probable future course of the market. Since writing this we learn that the agents for the B. & S. brand have received instructions from the makers to cease selling.

Senna.—The demand for *Tinnevelly* continues strong, and sales have been made of small greenish but slightly spotty leaves at 3d. per lb. *Alexandrian*: Good picked leaves are wanted, nominal value being 7d. per lb. Broken leaf is steady at 4½d. per lb.; siftings, 2¾d. per lb.; pods being quiet at 5d. per lb.

Shellac.—At the fortnightly sales on Tuesday small supplies were catalogued. A fair demand prevailed, and about one-fourth found buyers at an advance of 1s. per cwt. for *Second Orange, TN* being now worth fully 61s. to 62s. per cwt. A total of 619 cases offered and 160 cases sold. *Second Orange*: Of 511 cases 139 sold, bright red shivered at 60s., fair to good fair *TN* 61s. to 62s., good bright *J* in circle at 62s. to 63s.; the remainder being bought in, including *M* in circle, fine pale flat little matted at 82s., fine bright *PM* in double-triangle at 82s., and good bright *MR* ditto at 78s. *Garnet*: 44 cases offered in small parcels and bought in, weak cakey *GG** at 64s., flat ruby *KG* in circle at 62s, and blocky snake at 60s. *Button*: Of 64 cases 21 sold, without reserve, low resinous black 60s. to 66s.; the remainder bought in including *KG* in circle 2's stamped at 77s.

Soda Compounds.—*Crystals* firm at 57s. 6d. per ton *ex* ship terms. *Bromide* firm at 2s. 2d. per lb. *Iodide* unchanged at 10s. 7d. per lb. *Acetate*: The chemically pure is firm at 35s. per cwt. *Hyposulphite* in good demand at 5s. 6d. to 8s. per cwt., according to brand. *Sulphite* steady at 18s. to 22s. 6d. per cwt., according to quantity and brand. *Caustic*: 70 per cent. white, £7 10s. per ton; 60 per cent., £6 10s. per ton in large quantity. *Nitrate*: Refined, £7 12s. 6d. to £8 per ton, according to quantity.

Spices (Various).—*Black Pepper* quiet; 368 bags Lampong sold at 3⅛d.; 247 bags Singapore bought in at 4⅛d. to 4¼d.; 246 bags Tellicherry bought in at 4⅜d.; 7 bags fine Wynaad sold at 4¼d. *White Pepper*: Only 131 bags Singapore sold, partly without reserve, fine bold, 8¼d. to 8¾d. *Cayenne Pepper*: 8 cases Nepaul

bought in at 1s. 6d. *Chillies*: 22 bales Zanzibar bought in at 35s.; 4 bags fine red Japan sold at 42s. *Cassia Lignea*: 284 bales, broken, bought in, also 9 boxes, whole Saigon at 56s. *Cinnamon Chips*: 871 bags Ceylon, all bought in at 3d. to 3¾d. *Mace*: 28 cases Penang, bought in at 1s. 7d. to 1s. 9d.; pickings, 1s. 5d. 15 packages West India, sold at 1s. 4d. to 1s. 7d. *Nutmegs* dull at about previous rates. *Pimento*: Of 210 bags, only 20 bags sold, middling at 4⅜d.

SULPHATE OF COPPER—Is easier. On the spot £16 to £16 10s. per ton, according to brand.

SULPHONAL—Remains quiet, price being unchanged at 7s. 3d. per lb. in bulk, at which price makers are still accepting orders, for limited quantities only, from regular customers.

TURMERIC — Quiet, but fairly steady, *Bengal*, dark fracture, selling at 14s. 6d. per cwt. *Cochin* split bulbs 9s. to 9s. 6d. per cwt.

THYMOL.—Demand is quiet at 6s. 6d. to 7s. per lb., according to quantity.

NEWCASTLE CHEMICAL REPORT.

APRIL 20, 1898.

This market, although not extra active, is kept moving fairly well with current shipping orders. Prices, however, do not vary, and are quoted as follow:—Bleaching Powder, £6 5s. to £6 10s. Soda Crystals, basis, 45s. to 55s. Caustic Soda, 70 per cent. basis, £7 5s. to £7 10s. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

APRIL 20, 1898.

The trade in heavy chemicals remains quiet in this district and there is no improvement to note. In miscellaneous articles therea re few changes. Sulphate of Copper remains easy, notwithstanding the continued firmness of the metal, and is quoted £17 per ton, best brands, delivered Manchester. Brown Acetate of Lime is lower, £5 7s. 6d. to £5 10s., according to delivery. Salt Cake is firmer at £1 per ton, on rails. Aniline Oil and Salt are unchanged and weak. Recovered sulphur varies from £4 10s. to £4 15s. on rails. Arsenic is variable, and about £19 to £19 10s., ex ship. Coal Tar Products are dull, and Pitch may be quoted 17s. per ton, *f.a.s.*, Manchester Ship Canal. Naphthas continue steady, but Benzols have a downward tendency. Ammonia Alkali, 58 per cent., varies from £4 to £4 5s. on rails. Alum is dull at £4 15s. to £5 per ton for loose lump on rails, £5 2s. 6d. lump in tierces, and £5 10s. ground in bags.

LIVERPOOL REPORT.

APRIL 20, 1898.

Business is still slack, and quotations have undergone but little change since last week.

GINGER.—Sales of Sierra Leone are reported at 18s. per cwt.

KOLA NUTS.—124 bags of dried sold *ex* quay at 1½d. per lb.

OILS (FIXED) AND SPIRITS.—*Castor* is still quoted at 3¼d. to 3⅝d. per lb. for Calcutta "good seconds," and 3¼d. per lb. for French first pressure, in which a good amount of business is passing. *Olive* is steady in price, but not much inquired for. Spanish sells at £31 10s. to £32 10s. per tun. *Linseed* of Liverpool make is very firm at 17s. to 17s. 6d. per cwt. *Cottonseed*: Liverpool refined is a turn dearer, selling now at 15s. 6d. to 16s. 6d. per cwt. *Spirits of turpentine* is firm at 25s. per cwt.

SEEDS.—*Canaryseed* is selling fairly well at good rates for Turkish, of which 350 bags have changed hands at 26s. to 26s. 6d. per 464 lbs.

LINSEED—Is a very strong market, and holders are firm in their requirements. 1000 bags of good "feeding" River Plate secd sold, ex-quay, at 34s. per 416 lbs.

The other items usually noticed in this calumn are without change from last report.

WEDNESDAY, APRIL 27.

FORFARSHIRE AND DISTRICT CHEMISTS' ASSOCIATION, at 4 p.m.
Annual Meeting and Dinner (5.30 p.m.) at the Imperial Hotel, Arbroath.

ROYAL PHOTOGRAPHIC SOCIETY.
Exhibition at the Crystal Palace.

THURSDAY, APRIL 28.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
Short Papers by Members.

FRIDAY, APRIL 29.

PUBLIC DISPENSERS' ASSOCIATION, at 8 p.m.
"Antitoxins," by Dr. G. Dean.

ROYAL INSTITUTION, at 9 p.m.
"Magneto-Optic Rotation and its Explanation by a Gyrostatic Medium" (with experiments and illustrations), by Professor Andrew Gray.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Demonstration on "Some Pathogenic Micro-Organisms," by Dr. Waddy.

Advertisements.

(Received too late for Classification).

PIETERMARITZBURG, NATAL.—ASSISTANT wanted with Minor qualification. Must have experience in good business, and be quick and accurate dispenser, and thoroughly steady. Three years' agreement to be signed. Second-class passage paid. Room supplied, but not board. Salary £12 10s. per month first year, £13 10s. second year, and £15 third year. Apply, stating experience, to D. O., care of John Murdoch & Co., 52, Leadenhall St., E.C.

A GOOD business Man as ASSISTANT at once, in suburban good-class business. Knowledge of photography preferred, and preference given to one requiring in-door berth for some time. Qualification not essential. Applications with all particulars to PHARMACIEN, "Pharm. Journal" Office, 5, Serle St., London, W.C.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "PHARMACEUTICAL JOURNAL," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books.

Books! Books!! Books!!! Various assortment, Latin, French, Greek, and Geometry, etc., from one-third to one-half published price, good condition; for list, with prices, apply to—Herbert Jackson, 432, Victoria Street, Grimsby.

Students' and Chemists' Books offered and wanted, for cash or exchange; purchasers please state requirements; sellers send list stating edition, date of publication, condition, and price.—Gower, Publisher, Waterloo, Liverpool.

Optical and Photographic.

A few dozens of ¼-plate and ½-plate Ilford Bromide Paper, all kinds; also a few ¼-plate and ½-plate Ilford Lantern-plates, in good condition; offers wanted; samples at half price, post free.—Lees, Chemist, Oldham.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Surplus Stock.—Dozen each Williams' Carter's, ann Cockle's Pills, Steedman's Powders (small), half-dozen large £3 1s. Cash with order, or London references if fresh customers, and cheque on receipt, carriage paid —Eastman, Forest Lane, Stratford.

Drugs and Chemicals.

25 oz. Quinine Sulphate, B.P., 11d. per oz., carriage paid.—Wells Wood, Chemist, Albion Parade, Stoke Newington, London, N.

What offers? 1 oz. Chinosol, 1 oz. Antikamnia, 1 lb. Iodoform, ½ lb. Liebreich's Essence Pepsin, ¼ lb. Bromidia, 3 B.W. Peptonising Powders (tubes), 1 oz. Piperazin, together or separate.—Chemist, 156, Green Lancs, N.

Apparatus and Machinery.

Chemical Balance. Write for particulars. Maw's No. 10 Medicine Chest. Specie Jar, 9 ins. diameter, handsomely labelled. Wenham Gas Lamp, 7s. 6d.—Allen, Chemist, Plymouth. Patents half price. Write for list.

WANTED.

Wanted.—Spark Coil, Battery, and any Apparatus suitable for X ray and spectroscopic work. Particulars to—Markham, 71, Queen Street, Hull.

The Questions, Practical and Oral, asked at the Examinations for Assistants, Apothecaries' Hall, London, held during 1897, and in January and April, 1398. State price.—A., "Pharm. Journ." Office, 5, Serle Street, London, W.C.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Wanted.—'London Latin Pharmacopœia,' 185 1 edition. State price.—H. Wiley, York Road, West Hartlepool.

Wanted.—Remsen's 'Organic Chemistry' and Muter's 'Analytical Chemistry,' recent editions.—Davis, 7, Sidney Terrace, Weston-super-Mare.

Photographic Tourists' Guide.

IN the following list an asterisk (*) preceding the name of a town indicates inability to find that any chemist in the place has a dark-room, though there may be one or more who stock photographic materials. Where there is a dark-room, the fact is indicated by a capital "D" following the name and address, and except where the dark-room is at an hotel, it may mostly be taken for granted that plates and other photographic materials are stocked. The dark-rooms can, in some cases, be used for developing as well as changing, and even where there is not a dark-room, it is usually possible to get plates changed.

Kidderminster (Worcester).

Steward & Westover, Medical Hall.
G. H. Taylor, 2, Worcester St. D.

Kidderminster is about two and a half miles distant from Habberley Valley, a popular resort of tourists and holiday makers, where there is good scope for camera work.

Kilmarnock (Ayr).

D. McNay, 12 & 14, Bank St. D.

Kilmarnock is the principal town of the county. The whole district is associated with the poet Burns and the covenanting period.

King's Heath (Warwick).

T. H. Foden, High St.

King's Heath is a suburb of Birmingham.

Kinross (Kinross).

W Dow, The Apothecary Hall. D.

Kinross is surrounded by very fine scenery, and is near to Lochleven, which has a castle in the centre, where Mary Queen of Scots was imprisoned. The Falls of Devon in the neighbourhood make pretty pictures.

Kirkby - Lonsdale (Westmoreland).

Royal Hotel. D.

Kirkby-Lonsdale is on the river Lune, which is here crossed by a picturesque bridge of three lofty arches. The surrounding scenery is very fine.

Lancaster (Lancs).

W. Briggs, 21, Cheapside. D.
W. Wyatt & Co., 34, New St., and 4, Stonewell. D.

Lancaster is a convenient centre for photographic work at the seaside (Morecambe) and in the Lake district There are many places of interest in the neighbourhood, including the Castle, while the river scenery is worth attention.

Leamington (Warwick).

C. Davies, 90, Warwick St. D.
Smith & Son, 102, The Parade. D.

Leamington makes a beautiful centre for doing Warwickshire, that garden county, filled with natural beauty and historical associations. Some pretty bits may be obtained on the banks of the Leam. At Warwick Castle, Guy's Cliff, and Kenilworth, there is everything almost to be desired.

Lechlade (Glo'ster).

G. A. Davis, Chemist.

Lechlade is pleasantly situated near the head of the River Thames, which affords some very pretty views. A plate or two may also be used on Fairford Church with its windows.

Ledbury (Hereford).

V. W. Meacham, High St. D.

Ledbury is surrounded by delightful scenery; other objects of interest are Eastnor Castle, the quaint Market House, and fine church.

Leeds (Yorks).

W. S. Baxton, Upper Town St.
Bramley. D.
G. W. Kendall, 163, Dewsbury Rd.
Reynolds & Branson, 14, Commercial St. D.

Leeds has some good public buildings, the Yorkshire College, Town Hall, Exchanges, etc. Kirkstall Abbey and Adel Church (1140) should also be noticed.

Leek (Stafford).

Johnson & Sons, 5, Stanley St D.

Leek is in the midst of some of the finest scenery in Staffordshire. Near by is Rudyard Lake, a favourite resort of cyclists.

Leicester (Leicester).

H. W. Clear, 66, Belgrave Gate. D.
F. W. Goodess, Hotel St.
H. Pickering, High Cross St. D.
S. Wand, 18, Haymarket.
J. L. West, 3, Market St. D.
J. Young, 16, Gallowtree Gate. D.

Leicester has many old buildings, including monasteries and churches, Leicester and Belvoir Castles, Jewry Wall, Roman Pavement, also Bradgate and Wistow Parks, Charnwood Forest, Longliffe, Woodhouse Eaves, and other places of interest.

Leigh (Lancs.)

W. Hampson, 73, Chapel St. D.

Leigh is near to Chat Moss, which is a suitable place for picture making and sky effects.

Leighton Buzzard (Bedford.)

Herington & Son, 16, Market Sq. D.
W. F. Piggott, 7, High St. D.

Leighton Buzzard is in a district purely agricultural. The Market Cross and the old parish church are amongst the objects of interest, and in the immediate vicinity are the houses of several county families, *viz.*, Earl Rosebery's seat, "Mentmore," Duke of Bedford's seat, Woburn Abbey, and the seats of Earl Brownlow and Lord Rothschild.

Leith (Edinburgh).

A. D. Guthrie, Bonnington. D.

Leith harbour, docks and shipping, together with Newhaven harbour, the village and fisher folk, provide many opportunities for the camerist to obtain interesting pictures. The City of Edinburgh also offers a large field for work, while a branch railway line runs to Evamond, and steamers to the Forth Bridge.

Leominster (Hereford).

Ellwood & Son, 25, Draper's Lane. D.

Leominster has a quaint old timber Butter Cross (1633). The church presents every style of architecture from Norman to Perpendicular.

Lerwick (Shetland).

A. L. Laing, Chemist.

Lerwick is a first-class holiday resort for photographers who care for wild rocky scenery, and visitors there will find plenty of material for pictures.

Leytonstone (Essex).

J. J. Ferguson, 143, Cann Hall Rd. D.
Matthews & Son, 722, High Rd.

Leytonstone is situated near to Epping Forest, where some very pretty bits may be obtained; a few plates may also be used in Wanstead Park.

Lichfield (Stafford).

J. B. Bayley, 36, Bore Street. D.

Lichfield Cathedral affords ample scope for both interior and exterior work. The elaborately sculptured west front requires a short focus lens. Chantrey's "Sleeping Children," inside the cathedral, should not be missed. In addition to Dr. Johnson's statue and birthplace, there are many quaint houses, and lots of pictures in the vicinity.

Limehouse (Middlesex).

Hatfield & Son, 817, Commercial Rd.

Limehouse forms a part of the East End of London. The principal objects of interest are the docks and Blackwall Tunnel, which is near.

*Limerick (Ireland).

J. Laird and Co., 116, George St.
P. Hartigan, Royal George Hotel. D.

Limerick Cathedral was founded in the 12th century. It has a fine tower, and the exterior is embattlemented. In the nave are Early English arches. The Roman Catholic Cathedral is a fine Gothic structure, and the bridges across the Shannon are deserving of notice.

Lincoln (Lincoln).

Battle, Son & Maltby.
J. T. Birkbeck, 5, Bailgate. D.

Lincoln is very ancient, and contains very interesting specimens of early architecture, notably the Castle; the Newportgate; the Stonebow Gateway, supporting a guildhall of mediæval architecture, the Jew's House, etc. The chief glory of the place, however, is the cathedral, admittedly one of the finest in England.

Linlithgow (Linlithgow).

C. M. Spence, 133, High St. D.
C. M. Spence, 67, High St. (Cross). D.

Linlithgow has been called "The Windsor of Scotland." Magnificent historical palace and Loch. St. Michael's Church. Numerous items of interest might be got in High Street, such as the beautiful and ancient (1628) Cross Well; St. Michael's Well; and ancient buildings. Other historical ruins in this district are Niddrie Castle, Blackness Castle, Binn's Tower, Haining Castle, and at side of River Avon an ivy-clad ruin of an old Carmelite Priory. There is also a fine glen—Carribber Glen—with the ruins of Rob Gib's Castle; Torphichen Priory; a splendid aqueduct, over which the Union Canal runs; a viaduct, over which the N. B. Edinburgh and Glasgow Railway passes; remains of Roman fortifications; and lovely landscapes, interesting historically and photographically.

Littlehampton (Sussex).

J. H. Longman, Beach Rd. D.

Littlehampton presents some splendid sea and river views, while Arundel Park and the old churches in the neighbourhood are worth attention.

Liverpool (Lancs).

R. H. Aspinall, 1, Leece St.
J. B. Beckwith, 139, Oakfield Rd.
Symes & Co., Hardman St.
F. Walker, Post Office, Beacon Lane. D.
J. Wood, 118, Northbrook St.

Liverpool, in addition to its numerous fine public buildings, is especially interesting to hand camerists on account of its shipping, both the docks and Landing Stage providing many good subjects. Some good marine views are also to be obtained.

*Llandilo (Carmarthen).

W. Williams Rutland House. D.

Llandilo is on the right bank of the Towey, in South Wales In the vicinity are limestone, flag, and mica slate quarries.

Llandudno (Carnarvon).

G. H. Brookes, Medical Hall.

Llandudno presents the usual snapshot subjects on the shore in the morning, with the arrival of the Liverpool steamer at 1; the Happy Valley, at 3·30; the eastern side of Great Orme, for breaking waves in stormy weather; Conway shore, for fine sunset effects; St. Tudno's Church (top of Great Orme), in the afternoon.

Llanelly (Carmarthen).

J. Davies, Stepney St. D.

Llanelly is a seaport with large docks. There are large copper works, also silver, lead, iron and tin works, potteries, chemical works, etc., in the vicinity.

Llangollen (Denbigh).

E. D. Jones, Medical Hall.

Llangollen is a popular holiday resort, in the heart of some of the most beautiful scenery on the river Dee. There are also many places of interest within easy reach.

Llanidloes (Montgomery).

T. P. Marshall, Trewythen Hotel. D.

Llanidloes has an interesting Church, built partly with materials from Cwmhir Abbey. There are extensive lead mines in the neighbourhood.

London.

J. Adams, 323, Kentish Town Rd.
W. H. Allen, 3, Liverpool Terrace, Barking Rd.
W. G. Blackham, 675, Holloway Rd., and 510, Hornsey Rd. D.
J. Brooks, 7, Broadway, East Ham.
C. W. Brumwell, 118, Holland Park Avenue. D.
J. Chilwell, 6, Weymouth St.
G. Daniel, 630, Holloway Rd.
G. W. Evans, 239, Hammersmith Rd.
F. H. Glew, 156, Clapham Rd. D.
A. W. Hanson, 26, East Dulwich Road. D.
W. Ham, 176, High St., Hounslow.
G. A. Hodgkinson, 254, Goswell Rd.
G. A. Hodgkinson, 9, Chapel St, Somers Town.
R. Howden, 28, Gracechurch St.
Lockyer Bros., High St., Deptford. D.
J. C. Meacher, 61, Stroud Green Rd. D.
T. A. C. Newton, Carlton Rd., Kilburn.
Owen and Co., 142, Fortess Rd.
G. Pasco and Son, 57, Hackney Rd.
J. H. Read, 90, Victoria St.
C. B. Robeson, Pavement, New Cross.
Rouch & Co, 180, Strand. D.
W. Sharman, 274, Mare St
G. J. Thomas and Co., 411, Mare St. D

London possesses so many public buildings and other places of interest to photographers that no attempt can be made in the space at disposal to enumerate them. Apart from the "fixtures," however, the river, streets and parks offer to the camerist an endless panorama of living pictures.

*Londonderry (Ireland).

Maxwell, Greer & Co., Ltd, Foyle St. D.

Londonderry has a triumphal arch—one of the gates of the city—erected to commemorate the siege of 1689, and a column erected in honour of George Walker, governor of the city at the time. There are two cathedrals, and other important public buildings. The harbour affords opportunities of snapshot work.

Longton (Staffs).

R. Prince, Market Place. D.

Longton is situated in the district of china and earthenware manufacture, and close by are ironworks and collieries.

Loughborough (Leicester).

J. H. Hepworth, 9, Church Gate. D.

Loughborough parish church is in the Decorated style, dating from the fourteenth century, but has a Perpendicular tower. There is also a bell foundry here, where the great bell of St. Paul's was cast. Charnwood Forest is not far away.

Louth (Lincoln).

Smith and Elkington, Mercer Row. D.

Louth.—There are a number of old churches in the Marshes, and some pretty wooded scenery on the Wolds.

Lowestoft (Suffolk).

G. E. Clarke, 129, London Rd. D.
Fryer & Co., Pier Pharmacy. D.
J. W. D. Hume, London Rd. D.
A. Wright, High Street.

Lowestoft offers splendid scope for snapshot and marine work, the sea, yachting, and fisher-folk providing many opportunities for pictures. There are also several interesting old churches.

Ludlow (Salop).

G. Woodhouse, 45, Bull Ring. D.

Ludlow has many old houses and buildings, also an ancient castle and some good river scenery.

Luton (Bedford).

H. E. Cocker, 81, George St. D.
Wootton & Webb, Market Place.

Luton possesses a very fine old parish church and a few antiquated buildings. Good landscapes may be obtained, and in a park near are a number of very large trees. At Someries, two miles away, are the remains of an old castle.

Lymington (Hants).

G. H. Gare, 24, High St. D.

Lymington is a picturesque little town situated on the Solent, and its neighbourhood offers special scope for the photographic artist. On one side there are the many beauties of the New Forest, while from here also is the shortest passage to the Isle of Wight (twenty minutes only from Yarmouth) where splendid views of Totland and Alum Bay and the Needles are to be had. The possibilities of the photographer from this little town are far too numerous and varied to be here described.

*Lymm (Cheshire).

C. E. Arden, The Bazaar. D.
David Hooley, Fleece Hotel. D.

Lymm is a very picturesque neighbourhood There is an old Roman cross with stocks. It is a good headquarters for surrounding places of interest: Rosthorne, Arley Hall, the private chapel at High Legh, with its splendid interior; quaint old church at Warburton.

*Lynton (Devon).

C. Hipp, Valley Rd. D.

Lynton is noted for its picturesque situation, 428 feet above Lynmouth, which Shelley called "the finest spot, except Cintra and Arrabida," he ever saw.

Lytham (Lancs).

H. H. Gourlay, 1, Church Rd. D.

Lytham objects of interest are the Green Drive, with picturesque pond and lodges; Lowther Gardens, Market Hall, St. Cuthbert's Church, Promenade, with St. Mary's Church, windmill, and lifeboat house. There are to be obtained also beautiful sunset and calm-sea pictures. The golf-links are on the seashore.

Macclesfield (Cheshire).

J. Hodkinson, 101, Mill St. D.

Macclesfield is situated on the river Bollin. It has a fine old church, founded by Queen Eleanor in 1278, a town hall, and other public buildings, as well as a park of 16 acres.

Maidenhead (Berks).

Thompson & Walton, 69, High St.
A. Upson, 35, High St. D.

Maidenhead.—There is very pretty river scenery on the Thames in the neighbourhood. Windsor Castle and Burnham Beeches are amongst the places of interest.

Maidstone (Kent).

Messrs. May & Co., 59, Week St. D.

Maidstone is a capital centre for a photographic holiday. The fine old church, 1381, is a miniature cathedral. Scores of old houses abound in the streets. Just outside the town there is a wide field of work for the camera.

Maldon (Essex).

A. W. Heaver, 64, High St. D.

Maldon affords ample scope for the camera, as it provides both land and sea scape. It boasts of many objects of interest to the antiquarian as well as the photographer, amongst which are the Tower or Moot (1440), with Council Chamber, in which are exhibited fourteen of the old Borough charters dating from 1290. St. Mary's Church (1056), All Saints' Church, which furnishes a unique example of an equilaterally triangular tower, the Tower of St. Peter's Church, and Becleigh Abbey, founded in 1180.

Malling, West (Kent).

H. C. H. Oliver, High St. D.

Malling has many archæological objects in its neighbourhood, including Malling Abbey and St. Leonard's Tower, both built by Gundulf.

*Mallwyd (Merianeth).

J. Steadman, Penarth Arms Hotel. D.

*Malton (Yorks).

G. J. Jones, 8, Wheelgate. D.

Malton is in both the East and West Ridings. It has a Norman church, 1150, and a free grammar school, founded 1545.

Malvern, Great (Worcester).

W. & J. Burrow, Devereux Gallery. D.
J. Need, Lygon House. D.

Malvern, West (Worcester).

J. Need. D.

Malvern is a favourite resort for photographers. From the summit of Worcestershire Beacon extensive views are obtained. The church is a fine cruciform structure, and Malvern College is a handsome building.

Manchester (Lancs.).

S. Broadbent, Stretford. D.
A. Bushby, 41, Stockport Rd. D.
J. T. Chapman, Albert Sq. D.
A. Gilmour, 451, Stockport Rd. D.
W. Maskew, 285, Oxford St. D.
J. W. Walton, 427, Bury New Rd., Higher Broughton. D.
J. Woolley, Sons & Co., Ltd., Victoria Bridge. D.

Manchester Cathedral, built in 1422, is a fine Gothic structure. The Town Hall and many other public buildings are worthy of note. There are also statues and monuments. The streets present many very busy spectacles, and some of the warehouses are of gigantic proportions.

Manningham (Yorks).

R. W. Silson, Church St. D.

Manningham is a suburb of Bradford; the latter has already been mentioned in this guide.

Mansfield (Notts).

Agar Bros, 14, Westgate. D.
J. A. Pegg, Church St. D.

Mansfield is in close proximity to Newstead Abbey, Rufford Abbey, Hardwick Hall, The Dukeries, and Sherwood Forest. The Ancient Rock Houses, or Cave dwellings, at the east end of the town, are well worth attention.

March (Cambs)

P. H. Davies, High St. D.

March parish church has a fine Perpendicular clerestory, with a splendid roof.

Markinch (Fife).

J. C. McCorquodale, The Pharmacy.

Markinch is situated in a picturesque part of Fifeshire (the "Kent" of Scotland), and is surrounded by charming landscape materials. Lochleven and Falkland Palace are within easy distance.

Margate (Kent).

W. S. Harvey, 20, Market Pl. D.

Margate is within walking distance of the ruins of various castles and abbeys, and the surrounding country is charming. The sands are the happy hunting grounds of the snap-shottist in search of novel and humorous pictures. The sunsets are almost unrivalled, and Margate is one of the few places in England where both the rising and setting of the sun can be viewed on the sea.

Market Harboro' (Leicester).

H. Dean, Desborough. D.

Market Harborough is situated amid woodland scenery and has some ancient buildings, notably a fine Perpendicular church, built by John of Gaunt.

*Marlborough (Wilts).

Angel Temperance Hotel. D.

Marlborough High Street is one of the widest in the Kingdom, and has several ancient houses. St. Mary's Church, with its Norman doorway (wide-angle lens at mid-day), the College chapel, especially the interior and the surrounding view (permission of Bursar required), Savernake Forest, abounding in views, and many other objects of interest may be noticed.

Maybole (Ayr).

R. Tocher, 10, High St., and Ardmay Cottage. D.

Maybole is in the "Land of Burns." It lies between Ayr and Girvan, surrounded by the most picturesque scenery. It is in the neighbourhood of the Castles of Culzean, Blairquhan, Cloncaird, Cassillis, Kilkerran, etc., and also the historic places of Turnberry, Crossraguel, Maybole Castle, Dunure Castle, Colleyiohr Church of Maybole, etc. The roads for cycling are excellent.

*Malton (Yorks).

G. J. Jones, 8, Wheelgate. D.

Malton is situated on the river Derwent. It has two ancient churches one in the Norman, the other in the later English style.

Mayfield (Sussex).

W. F. Crowther, High St. D.

Mayfield has very pretty landscapes and other objects of interest. To be specially noted are the Middle House (1754), the Convent, the Lower House (Tudor period), Stow House (1664), and old-fashioned inns and cottages, woods, etc.

Melrose (Roxburgh).

Bogie and Brown, Exchange Bldgs D.
D. F. Johnstone, High St. D.

Melrose Abbey is considered the finest ruin in Scotland. Abbotsford is in the neighbourhood, also Dryburgh Abbey, Rhymer Glen, etc.

Melton Mowbray (Leicester).

R. W. Brownlow, 6, Cheapside. D

Melton Mowbray has fine residences of notable people, besides many village scenes and churches worth taking.

Merthyr Tydfil (Glamorgan).

Thomas & Sons, 64 & 143, High St. D.

Merthyr Tydfil is on the River Taff. The old church, the Hospital, and Cyfartha Castle, of Roman architecture, are well worth taking. A mile northwest is Cwm Ffrwd, where grand country, river, and waterful scenes are to be obtained. The Cefn Bridge, with its fifteen magnificent arches, if taken from the Cwm Ffrwd side, makes a rare picture.

Merton (Surrey).

F. T. Bowen, 240, High St. D.

Merton has charming country scenery around it.

Mexborough (Yorks).

R. J. Shields, 56, High St. D.

Mexborough is situated in the West Riding of the county.

EXTRACTS FROM CONSULAR REPORTS.

Artificial Wine.—Consul Neville-Rolfe in his report for the Consulate of Naples 1896, referred to the German manufacture of a certain liquor from barley having the character of port wine (see *P. J.* [4], iv., 502). The paragraph was at the time facetiously handled by the English press, but in his latest report he confirms his statement, and says that the *Rivista Agraria*, an agricultural journal, states in its issue of November 7, 1897, that a large establishment is at work at Wandsbek, near Hamburg, producing "Malten-Weine" by an entirely new process of fermentation, the liquor having the characteristics of the wines of Southern Europe. The factory is reported to produce 10,000 hectolitres. The original discovery of the process was due to Pasteur, but the practical application of the theory was left to a Danish scientist, Mr. Hansen, and a German bacteriologist, Dr. Sauer. The barley is malted and carried to the point of fermentation, when lactic acid and vinous ferments are introduced into it, and it is then treated by sundry variations of temperature. When fermentation is completed the new wine is put into huge vats and then into casks, where it is subjected to artificial maturing by being raised to a high temperature. The wines are said to be noted for the large percentage of alcohol they contain, derived entirely from fermentation and not from added alcohol. The product is sold and described as "Highly fermented barley wine."

The Aruba Phosphate Company has suffered severely during the past few years through the large outputs of phosphates in Florida, U.S.A., which have brought down prices to very low figures, but the Company has the satisfaction, such as it is, of knowing that the export last year was about 55 per cent. more than in 1896, Great Britain being the best market, while formerly the greatest part of the phosphate of lime went to Germany.

The Cyanide Process for the extraction of gold from ore has during the last two years been adopted by the Aruba Island Gold Mining Company, Limited, with good results, a not inconsiderable sum of money having been obtained from the tailings, which had previously been laid aside. If the crushed ores can be worked in the dry state the cyanide process promises much better results than were formerly obtained.

The Export of Aloes and Orange-Peel from Curaçoa during 1897 was dull and unprofitable. In former years aloes had been exported to advantage, but, owing to the system of taxation in that and the sister islands from which this article is brought to Curaçoa for exportation, a duty was imposed on both producers and exporters; as Consul Jesurun remarks, "a most contradictory method of promoting the export trade of the colony." However, in future, as a result of a recommendation by the said Consul, who was a member of a commission to regulate the tariff, the import duty has been reduced to ½ per cent.

The Customs Tariff of France is based to a great extent on the actual weight of the article imported, except in the case of wines and spirits. Therefore, as this system is applied to manufactured goods as well as to raw material, Consul Hertslet is of opinion that British manufacturers should carefully consider how far lightness can be secured without loss of quality. Sheffield cutlery, it is stated, has suffered to a considerable extent through German competition in the French market, solely on account of the greater lightness of German articles, and their consequent admission into France on payment of less duty than that levied on English cutlery.

The Trade Mark "Made in Germany," according to a report on the trade of Samoa, is not confined to articles of German manufacture, but is frequently employed in the case of goods originally made in Manchester and purchased by German firms, who mark them with German trade marks and export them to other countries. One traveller doing a large business in Samoa and the adjoining colonies in the Western Pacific is reported to have stated in explanation, "The English manufacturers will not send out the goods, so we do it and make the profit."

The Imports of Chemicals into Ancona, consisting of acids, alkali, sulphates and oxides, during 1897 amounted to 2738 tons, of which 926 tons were exported from Great Britain, the remainder being sent from Austria-Hungary and Germany.

PARLIAMENTARY NOTES.

The Death of Col. Sir V. Majendie will occasion some delay in the presentation of the Report of the Petroleum Committee. The deceased gentleman has for the past few meetings of the Committee been the sole witness, and his evidence has been rather in the form of an epitome of the results of the whole petroleum investigation than the casual opinions of a Departmental official. In fact, there is reason to believe that the Committee were relying on the witness to reduce the mass of details to manageable proportions and to furnish material for the draft report. It was a work for which he was eminently fitted and, apart from the regret felt at the loss of a distinguished personality, the public will generally deplore the sudden interruption of his valuable services in this direction. The Committee will take no more evidence and will apply itself diligently for some weeks to the appalling task of drafting conclusions and recommendations.

Interest in the various non-official Bills in the House is slowly but surely dying as the hopelessness of their chances of progress becomes more and more apparent. We are unwilling to include the Pharmacy Bill in this category, but candour compels us to admit that the infinitesimal "Noes" have the advantage just now. The Bill is on the notice paper as we go to press, but that fact counts for little unless the official business is despatched before midnight. Early opposition is now producing its effect, and if Fate is not kinder within the next few weeks the Session will be barren so far as pharmaceutical legislature is concerned.

Early Closing is in the same parlous condition. The two Shop Bills have not even reached a second reading. No opposition is tabled, in the list of notices, but each time the measures are reached there are verbal protests and consequent postponement. The Bills are now down for Tuesday, May 10—a day when academic discussions and counts out are the rule and legislation the exception.

Economy and Efficiency is the motto of Dr. Clark (Caithness)—especially economy. It has been brought to his notice that the Privy Council has so little to do that the subordinate branches of the Department have been reduced. Forthwith it occurs to him that it is a sinful waste to pay the Clerk to the Council £1700 a year and his assistant £1200 for looking after a diminishing establishment, and he therefore proposes to ask the First Lord of the Treasury if this scandal cannot be abolished by amalgamating the two offices when a vacancy next occurs in either of them. It is to hoped that the honourable member will not dwell too much on the lack of business in the Privy Council Office or they may turn out some of their pigeon-holes and startle the House with a popular Poisons Bill!

Lead Poisoning.—Replying on Friday 22 to Mr. Coghill (Stoke-on-Trent), the Home Secretary stated that he had two eminent scientific experts engaged in researches having for their object the discovery of an innocuous glaze. They would report on the comparative danger or safety of different materials. The wider question of how far materials found to be comparatively harmless could be practically utilised was one which he thought could only be decided after experiment by the manufacturers themselves. He therefore invited their co-operation in following up the investigations now being undertaken by the Department. Chemical experts ought to be in request in the Potteries.

When?—The President of the Local Government Board was delightfully candid on Friday when Mr. Channing asked him when he proposed to bring in the Bill to amend the Food and Drugs Act. "When?" replied the Minister, "as soon as I see any prospect of being able to make progress with the measure." The Delphic Oracle could not be more oracular.

Hydrogen Sulphide is not to be allowed to roam unmuzzled at South Kensington to the detriment of the works of art in the reconstituted Museums. Replying to Sir S. Montagu, Mr. Akers-Douglas has pledged his word as an honourable First Commissioner that laboratories and art museums shall not reside under one roof when the new buildings are completed. A Departmental Committee is now engaged in allocating the space at their disposal for the rearrangement of the art and other treasures of the Science and Art Department.

British Pharmacopœia (1898) Synopsis.

The second edition of the 'Pharmaceutical Journal Synopsis of the formulæ and processes of the new British Pharmacopœia—which will become official forthwith—is now ready, and specimen copies will be sent post free, at 4d. each, on application to Messrs. Street Bros., 5, Serle St., Lincoln's Inn, London, W.C. The prices for quantities are 3s. per dozen, 18s. per hundred, and £7 10s. per thousand, carriage paid. Arrangements can be made to print the purchaser's name and address on a special wrapper in quantities of one hundred or more.

PHOTOGRAPHIC TOURISTS' GUIDE.—This guide will be completed next week, and will then be reprinted in book form. Readers who have not yet applied for a copy should fill up the coupon which appears in our advertisement pages this week.

MR. J. HOLDING, chemist and druggist, has been re-elected one of the churchwardens of St. Andrew's, Thornhill Square, Barnsbury, N.

EDINBURGH PHARMACY GOLF CLUB.—The final tie in the Spring Competition for the "T. and H. Smith" Trophy was played on the Braids on Saturday, April 23. After some good play Messrs. J. D. Sinclair and W. J. Walker, jun., defeated their opponents, Messrs. J. H. Murdoch and Wilson, by four holes up and three to play.

THE BRITISH INSTITUTE OF PREVENTIVE MEDICINE, after May 1, 1898, will be transferred from 101, Great Russell Street, W.C., the address at which it has been for some time past, to Grosvenor Road, London.

FORFARSHIRE DISTRICT CHEMISTS' ASSOCIATION.—The second annual meeting of the Association was held in the Imperial Hotel, Arbroath, on Wednesday, April 27. Mr. Charles Kerr, President, in the chair. There was a representative gathering. The Chairman, in referring to the work done by the Association, congratulated the members on the continued prosperity and evidence of lively interest in those matters affecting the craft. They had expressed warm approval of the Pharmacy Acts Amendment Bill at their last gathering, and although it had not yet become law, they sincerely hoped it would soon do so. The Hon. Sec. and Treasurer, Mr. James Russell, read the financial statement, which showed a satisfactory balance. Mr. Charles Kerr and Bailie Doig (Dundee) were re-elected President and Vice-President respectively; Mr. William Cummings (Dundee) waselected Secretary and Treasurer in place of Mr. James Russell, who retired after twenty-five years' service. The previous year's Committee was re-elected. Mr. J. Rutherford Hill then opened a discussion on "Regulations for the Sale of Poisons," a detailed report of which is held over until nextweek.

CHEMISTS' ASSISTANTS' ASSOCIATION.—This Association met on Thursday, April 21, at 73, Norman Street, W. As it was the first meeting after the Easter holidays, the evsning was devoted to proceedings of a musical and conversational character, songs etc., being contributed by Members.

MR. A. H. WADDINGTON, Chemist and Druggist, of Bradford, at the annual meeting of the Bradford branch of the Royal Society for the Prevention of Cruelty to Animals, was presented by the Mayor with a diploma of life membership of the Society, in recognition of his services as Hon. Sec. during the past five years.

ELLIMAN'S EMBROCATION.—The action by Messrs. Elliman, Sons & Co. against Flather, the object of which was to restrain the defendant from advertising and offering for sale recipes for the manufacture of Elliman's embrocation or liniment, or of an embrocation closely resembling it, came on for trial before Mr. Justice North on Saturday, April 23, as a short cause, the defendant not having appeared.—Mr. Ingpen appeared for the plaintiffs, and on his application his Lordship granted a perpetual injunction restraining the defendant advertising such recipes, or from using the name Elliman in connection with any recipe for the manufacture of embrocation or liniment, or from in any way representing or enabling or inducing others to represent or offer for sale embrocation or liniment not of the plaintiff's manufacture as theirs. He was also ordered to deliver up for destruction any circulars, advertisements, etc., which would be a breach of the above injunction, and to pay the costs of the action. —The plaintiff did not ask for damages.

THE REYNOLDS AND BRANSON'S CRICKET CLUB list of fixtures for the coming season, 1898, is to hand. Some twenty matches have been arranged, the first being on April 30, and the last on September 3. Mr. R. Reynolds is the President of the Club; Mr. F. Islip, Captain; Mr. H. Goodson, Hon. Secretary; and Mr. G. Jackson, Treasurer. The other officers are Messrs. F. W. Branson and R. F. Reynolds, Vice-Presidents; Mr. H. Hudson, Vice-Captain; Mr. J. W. Price, Assistant-Secretary; Messrs. E. R. Dixon, T. H. Goodson, E. B. Harrison, J. H. Jackson, and W. Key, forming the Committee. The Club ground is at New Peacock, Elland Road, Leeds.

MESSRS. WHITTAKER & Co. announce a second edition of 'The Chemists' Compendium," by C. J. S. Thompson. The additions to the work will include—A Complete Synopsis of the New British Pharmacopœia, A Synopsis of the United States Pharmacopœia, A Synopsis of the French Codex, A List of Modern Remedies, New Photographic Formulæ, Formulæ for preparing Medicated Wools and Surgical Dressings, and Miscellaneous Formulæ, including Recipes for all well-known unofficial preparations.

MR. JAMES WHITTLE, Chemist and Druggist, of Bedlington, has purchased the business carried on by the late Mr. T. R. Davidson, at 30, Bridge Street, Morpeth.

ACCIDENTAL POISONING CASES.—An inquiry respecting the death of Dr. Douie, aged 39 years, was held at Sevenoaks, on Wednesday, April 20. The evidence showed that the deceased, who was in his usual health on the Monday, was about to visit his patients, when he called to his wife to procure some mustard and water, explaining that he had made a mistake. Subsequently he added that, feeling thirsty, he had hurriedly taken up a glass and drunk a quantity of water. Afterwards, noticing a peculiar taste, he was horrified to find that he had used a glass which had previously contained tincture of nuxvomica. Dr. Marriott was called in, but so rapid was the action of the poison that the emetic did not take effect in time, and Dr. Douie expired within thirty minutes. Dr. Marriott having certified that the cause of death was poisoning, a verdict of death by misadventure was returned, and the jury expressed sympathy with the widow.—Dr. Danford Thomas held an inquest at the Hampstead Provident Dispensary Hall, on April 20, on the body of Henry Duke, 44, an ironmonger, of 32, Mill Lane, West Hampstead.—The evidence showed that the deceased got up early on Saturday, and went to work in a room in the basement of his shop. At 7 o'clock he went to his wife's bedroom, and told her he had drunk some spirit of salts by mistake. Dr. E. Mason, said when he was called in the deceased told him that he was sitting at his work, and felt thirsty. He thought the glass containing spirit of salts at his elbow contained water, and took a "mouthful." He tried to spit it out but could not, and so swallowed it. The coroner said that was an extraordinary mistake to make. The doctor said that as far as he could judge it was a mistake. He administered antidotes but the deceased died in two hours. The coroner said that for years the medical profession had been endeavouring to put the sale of such poisons as this under restrictions, and make it compulsory to keep them in special bottles. This would not prevent suicide, but it would stop cases such as this. A verdict of death from misadventure was returned.

FOODS AND DRUGS ACT PROSECUTIONS.—At the Sunderland Borough Police Court on Friday, April 15, several local chemists were summoned for selling drugs not of the nature, substance and quality demanded by the purchaser. The prosecutions were instituted by the Health Department, and some of the cases were in respect to

Gregory's powder. In the first case evidence was given that the powder contained 44·34 per cent. of carbonate of magnesia.—The defence was that the presence of this ingredient was not prejudicial to the purchaser, as this form of the powder was the most common one used.—A doctor, called for the defence, also stated that the powder as sold in that case was preferable to the form of preparation given in the British Pharmacopœia, as it was easier mixed with water, and there would be practically no difference in the results, whether carbonate of magnesia or oxide of magnesia were used.—The Magistrates said a technical offence had been committed, and therefore there would be a fine of 1s., without costs.—Three other cases were dealt with in like manner.—In another case the powder was stated to contain a percentage of carbonate of magnesia and also of carbonate of lime, and a fine of 1s. was imposed.—In another case the charge was in respect to precipitated sulphur, which was said to contain a percentage of sulphate of lime, but it was not suggested that it was deliberately added.—A technical offence was held to have been committed, and the defendant was ordered to pay 1s.—In a similar case the percentage of sulphate of lime amounted to about two-thirds of the article. This was held to be a more serious case, but as there was no fraudulent intention a fine of 1s. was imposed.—Precipitated sulphur was the cause of the other cases, sublimate of sulphur having been supplied when the precipitated was asked for. In one case, however, the packet was marked "Flowers of Sulphur," and the assistant offered to take it back if it was not the kind required, so the case was withdrawn. In the other cases fines of 1s. were inflicted.

NEW IDEAS & TRADE NOTES

A NEW CATALOGUE.

Messrs. J. Woolley, Sons & Co., Ltd., of Manchester, send a copy of the fourth edition of their new druggists'. sundries catalogue, which the firm is now ready to supply to any pharmacist requiring one on receipt of his business card. The catalogue is in six parts: (1) Surgeon's Instruments and Appliances; (2) Druggists' Sundries; (3) Proprietary Articles; (4) N.N. (no name) Series; Proprietaries without maker's name; (5) Stamped medicines, miscellaneous proprietary goods; (6) Photographic Apparatus, Cameras, dry plates, etc. It consists of 750 pages, and contains over 2000 illustrations, with a comprehensive index. Altogether it is a most useful book of reference for prices current of drugs and pharmaceutieal preparations.

IDRIS & CO., LIMITED.

The subscription list to a new issue of £70,000 four per cent. mortgage debenture stock at par, in this well known company, opened on Friday, April 29, and will close on or before Tuesday, May 3, for town, and on Wednesday, May 4, for country. Applications are invited for the above amount in sums of £10, or multiples thereof, payable 10 per cent. on application, 40 per cent. on allotment, and 50 per cent. on May 31 next. Further particulars will be found in our advertisement columns.

BREWED GINGER BEER.

The Directors of "Camwal" announce that first class modern ginger-beer plants have just been fixed at all their factories, and that from February 15, the association will be in a position to supply chemists with their own brand of brewed ginger-beer in stone bottles. This was at one time the most popular of temperance beverages, and is again coming into vogue, but the public have hitherto found some difficulty in getting a brand of the article on which they can rely as being manufactured from the best possible materials. In consequence of this, the Directors see no reason why chemists should not secure the better class trade in the beverage, and "Camwal" has now arranged to take up the manufacture. To ensure the supply of an article superior to any already in the market, no expense is being spared either in the materials used for manufacture of the ginger beer or in the style and get up of the bottle. The beverage itself is excellent, and if its palatability in cold weather is any guide, a hot "spell" ought to bring an enormous demand for it.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Charles D. Green & F. Murphy, Physicians and Surgeons, Upper Edmonton and Tottenham.

John Shaw & Alex. J. Fleming, General Medical Practitioners, Burlington House, Willoughby Road, and 3, Arkwright Road, Hampstead.

J. T. Pummell & D. Mansfield, Box Manufacturers, Pendleton Works, St. Saviour's, Norwich. Debts will be received and paid by D. Mansfield.

O. H. A. Maggs & A. F. Penny, General Medical Practitioners, 165, Buckingham Palace Rd., and 10, Oakley St., Chelsea.

W. R. Mills & W. F. Howes, Veterinary Surgeons, &c., Castle Meadow, Norwich. Debts will be received and paid by W. F. Howes, who will continue the business.

RECEIVING ORDER IN BANKRUPTCY.

(From the London Gazette.)

Timothy Lockett, Manufacturing Chemist, 26, Upper Albert Road, Heeley, Sheffield.

NEWCASTLE CHEMICAL REPORT.

April 27, 1898.

This market retains steadiness. More shipping orders for heavy goods are in circulation for the Baltic ports now that steamers have begun to run in that direction. Prices, however, remain unchanged, and are quoted as follow:—Bleaching Powder, £6 5s. to £6 10s. Caustic Soda, 70 per cent. basis, £7 5s. to £7 10s. Soda Crystals, basis, 45s. to 52s. 6d. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

Publications received.

The Flora of Berkshire. By G. Claridge Druce, Hon. M.A. Oxon. Pp. cxcix. + 644. Oxford: The Clarendon Press. 1897. From the Publishers.

Clinical Lectures on Diseases of the Heart and Aorta. By George William Balfour, M.D. St. And., LL.D. Edin. and St. And., F.R.C.P. Edin., F.R.S. Edin. Third Edition. Pp. xxiv. + 479. Price 12s. 6d. London: Adam and Charles Black, Soho Square, W. 1898. From the Publishers.

Helfenberger Annalen, 1897. Zweiter Band des zweiten Dezenniums. Im Auftrage der Chemischen Fabrik in Helfenberg. bei, Dresden, Eugen Dieterich, herausgegeben von Dr. Karl Dieterich. Pp. 466. Berlin: Verlag von Julius Springer. 1898. From the Author.

LIVERPOOL REPORT.

April 27, 1898.

Ammonium Salts.—*Carbonate*, 3d. per lb. *Sal Ammoniac* firm at 35s. and 33s. per cwt. *Sulphate* dull at £8 15s. per ton.

Beeswax.—10 tons of Benguela in bags was sold privately; terms not reported.

Bleaching Powder—Quiet at £5 12s. 6d. to £8 5s. per ton.

Cochineal.—10 bags of Teneriffe black sold on private terms; the rest is now held for 10½d. to 11½d. per lb.

Copperas.—Lancashire firm at 38s. per ton.

Copper Sulphate—Is firmer at £16 5s. to £16 10s. per ton.

Ginger – 800 bags of Sierra Leone in transit sold for 16s. 9d. per cwt.; 40 bags Bombay at 27s. 6d.

Oils (Fixed) and Spirits.—*Castor* is in fair demand at 3¼d. to 3⅝d. for Calcutta, and 3¼d. per lb. for French 1st pressure. This latter is rather firmer to arrive. *Olive*, of Spanish origin, is selling moderately, Malaga has sold in small amount at £31 10s. per tun and Seville at £30 10s. *Linseed* has experienced a series of small rises, the figure now being for Liverpool makes 18s. to 18s. 6d. per cwt. *Cottonseed* has been similarly effected, and that of Liverpool refining is now held at 17s. to 17s. 6d. per cwt. *Spirits of turpentine* since last report has risen 3s. per cwt., and is firmly held now at the high rate of 28s. per cwt.

Potash Salts.—*Bichromate*: 3¾d. per lb. *Chlorate*: 3¼d. per lb. *Potashes* are nominal at 20s. 9d. per cwt. *Pearlash* slow of sale at 37s. 6d. to 40s. per cwt. *Prussiate*: 7d. to 7¼d. per lb. *Saltpetre*: 21s. 6d. per cwt.

Quillaya Bark.—120 bales of Chilian changed hands at £17 10s. per ton.

Seeds.—*Canary seed*: Turkish is moving off regularly at 26s. 6d. to 27s. per 464 lbs., between which figures some 400 bags found buyers. *Linseed* is very strong, River Plate, 1000 bags, sold exquay at 35s. 6d. per 416 lbs. and Calcutta at 36s.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

APRIL 28, 1898.

Business has been fairly active during the past week, induced no doubt to a certain extent by the feeling that the war now in progress between the United States and Spain will probably tend to produce an advance in price of many articles, and some of those of special interest in the drug and chemical trades. The advance in value of wheat and bread, and also of coals, has been followed by a rise in Fixed Oils, Spirits, Turpentine, and of several other articles quoted in these pages. Opium and Morphia are also dearer. The chief interest has centred in the course of the Quinine market, the future of which does not appear, however, to be yet in any way definitely settled. Price of the sulphate is 2d. dearer on the week, while, on the other hand, Messrs. Howards and Sons announce small reductions in price of the salts other than Sulphate. Iodides are in active demand. Same may be said of Bromides. Quicksilver and Mercurials unchanged. Cocaine lower. Cotton Seed, Linseed, and Rape Oil, also Turpentine much dearer. Acid Tartaric and Citric steady. Cod-Liver Oil and Glycerin dull. The following are particulars of actual prices :—

ACETANILIDE—Unchanged at 1s. 3d. to 1s. 4d. per lb., according to quantity.

ACID BORACIC—Unchanged at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

ACID CARBOLIC—Quiet at 6½d. per lb. for 35° to 36° C. *ice crystals* in large drums and overcasks, other qualities in proportion. *Crude* 60° F. 2s. 2d. ; 75° F., 2s. 7½d. per gallon. *Liquid* : 95 per cent. pale colour, 1s. 2d. to 1s. 3d. per gallon.

ACID CITRIC—Continues dull at 12½d. to 1s. 1d. per lb. for *foreign* and *English* crystals respectively. Makers are, however, unwilling to book orders for forward delivery.

ACID TARTARIC.—There is no change to record in this article since our last report, *English crystals* being still quoted at 1s. 1d. per lb. on the spot ; *foreign crystals* firm at 12¾d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* is quiet and rather lower at £8 13s. 9d. per ton for grey, prompt, 24 per cent., London. *Bromide* steady at 2s. 2d. per lb. *Iodide* firm at 13s. 4d. per lb. *Oxalate* steady at 6d. per lb. *Sal ammoniac* : Firsts, sublimed, 35s. per cwt. ; seconds, 33s. per cwt. *Chloride*, free from metals, 98 per cent., 25s. 6d. per cwt. ; chemically pure small crystals, 32s. per cwt. *Sulpho cyanide* unchanged at 1s. 1d. to 1s. 2d. per lb.

BELLADONNA ROOT—Remains exceedingly scarce, 45s. per cwt. being asked for fair quality, with very little available ; in fact the market appears to be getting quite bare.

BLEACHING POWDER—Steady at £7 5s. per ton.

BORAX—Quiet at 14s. per cwt. for *lump*, and 14s. 6d. per cwt. for *powder* in large bulk.

BROMIDES — Are in good demand at 1s. 10d. for *Potass. Bromide*, and 2s. 2d. for *Ammon.* and *Soda Bromide*, *Bromine* being quoted 1s. 11d. per lb. in 20-case lots.

CINCHONA BARK.—Only moderate supplies were catalogued on Tuesday for the monthly auctions, amounting to 2230 packages of all descriptions, as compared with 2880 packages at the March auctions. There was good competition, the agents for the principal American Quinine manufacturers being the largest buyers, and the bulk sold at higher prices, the unit being $\frac{15}{16}$d. per lb as against about ¾d. last sale. *Ceylon* : 306 bales and 2 cases offered, and 165 bales and 2 cases sold, according to analysis. Succirubra, natural stem chips and shavings, ordinary to fair, at 1¾d. to 2¾d., ordinary renewed ditto at 2⅜d., renewed quill at 2⅝d. ; Officinalis, renewed chips at 3d. ; Ledger, fair to good stem chips at 3⅞d. to 5⅛d. *East Indian* : 1494 bales and 76 cases offered, and 1211 bales sold ; Red, stem, chips, and shavings, fair to good at 2¼d. to 3¼d., root at 2½d. to 3d., renewed chips and shavings 2½d. to 3d. ; Officinalis, chips and shavings, fair to good at 2¼d. to 3⅞d., good root at 5d., renewed chips and shavings, ordinary to fair 2⅝d. to 3⅜d., good at 4d. to 5½d. ; Ledger, stem chips, common to fair 1⅞d. to 3⅜d., fair to good at 3⅞d. to 5¼d. ; Ledger, branch, ordinary to good at 1⅞d. to 4d. ; fair renewed Hybrid, chips at 3½d. *Java* : 113 bags and 38 bales offered and sold ; Ledger stem chips, fair to good at 4½d. to 7d., ditto branch at 4⅜d. to 5¼d. *South American* : 105 bales Bolivian cultivated Calisaya quills offered and 93 bales sold at 4⅝d. to 5¼d. 41 bales Carthagena bought it. *African* : 55 bales offered and sold, ordinary Quill at 3¼d. to 3½d.

CINCHONIDINE.—To judge from the competition at the bark sales for bark containing this alkaloid the article is scarce, price is firm at 6½d. per oz. in large bulk packing.

CLOVES.—Privately *Zanzibar* are quiet, small business passing. August to October delivery, 3⅞d. ; June to August, $3\frac{25}{32}$d. At auction only 3 bales damaged *Zanzibar* offered and sold ; 8 cases *Penang* bought in at 9d. to 10d. ; 11 boxes good *Ceylon* sold at 5½d. to 6d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*, commercial, 1s. 4d. ; pure, 3s. per gal. *Benzole* : 50 per cent., 1s. 1d. per gallon ; 90 per cent., 11½d. *Crude Naphtha* : 30 per cent. at 160° C., 7d. ; *Solvent Naphtha* : 95 per cent. at 160° C., 1s. 8d. per gallon.

COCAINE.—As might have been anticipated, the pressure to sell on part of the makers of brands less in repute has led to a reduction in price of the brand most in favour, viz., *B. & S.*, for which the makers are now quoting 9s. 3d. per oz. for 100-oz. lots in bulk. It is said, however, that the position of the *crude* article by no means warrants this reduction in price.

COD-LIVER OIL—Has turned rather quiet, prices remain, however, nominally unchanged at 85s. to 95s per barrel for best new non-freezing *Norwegian* in tin-lined barrels. It is still thought by those most competent to judge that the future course of the article will probably be further in an upward direction.

CODEIA—Is unchanged at 11s. 3d. to 11s. 6d. per oz. for the *pure*, and 1s. per oz. less for the *Salts*.

CREAM OF TARTAR—Is rather lower at 74s. 6d. per cwt. for first white *crystals* on the spot, *powder* being quoted at 77s. to 78s. per cwt.

CUTCH—Remains very firm with high prices from Rangoon, but little business has been done ; good marks are scarce and in demand.

GINGER.—*Cochin* continues dull, only small supplies, rough kinds, offered and none sold at auction. Of cut kinds 73 cases sold : medium limed native 40s. to 43s., good A cut 80s. ; Calicut small 33s. 6d., medium 46s., bold and medium 68s., bold 75s., fine bold 84s. 69 bags limed *Japan* bought in at 19s. ; also 60 bags *African* at 21s. Of *Jamaica*, about 500 barrels sold, common to good common dark Rhatoon 69s. to 71s., good common 74s., low middling to middling scraped and washed 81s. 6d. to 87s. 6d., good middling to good plump 90s. to 96s. ; 3 boxes fine bold 107s. 6d.

GLYCERIN,—Has, contrary to expectation, remained quiet at about unchanged prices, viz., 52s. 6d. to 60s. per cwt., according to quantity and brand. For best white double distilled, chemically pure, 1·260 quality, of *German* make, in 56 lb. tins, 4 tins in a case. *English* being obtainable at rather below above figures.

IODIDES—Are in brisk demand at 9s. 9d. per lb. for *Potass. Iodide* in 2 cwt. lots, 13s. 4d. for *Iodoform*, and 10s. 3d. for *Soda Iodide*, *Iodine* being unchanged at 7½d. per oz.

LITHIA.—Price of the *Carbonate* remains unchanged at 10s. 8d. per lb. for 2-cwt. lots, while prices of the other salts have been advanced about 10 per cent. by the makers. Exact prices are, however, not yet stated.

MERCURIALS—Are unchanged at 2s. 2d, for *Corrosive Sublimate*, and 2s. 6d. per lb. for *Calomel* in 5-cwt. lots.

MORPHIA—Has been advanced 3d. per oz., while a further advance is spoken of as being fully justified by the present value of opium. Such further advance in the near future would therefore appear quite probable.

OILS (FIXED AND SPIRITS).—*Linseed* has advanced considerably, but closes quiet at the advance ; on the spot, pipes, London, £16 17s. 6d., barrels £17 5s. *Rape* also dearer at £24 for ordinary brown on the spot, and £25 10s. for refined on the spot. *Cotton* is much dearer, closing quiet but steady,

London Crude spot £15 10s., refined £16 10s. to £17 10s., according to make. *Olive* very firm but unchanged at £33 for Spanish or Levant. *Coconut* is unchanged at £23 for Ceylon on the spot and £27 for Cochin same position. *Palm* steady at £23. *Turpentine* has advanced rapidly, and closes in good demand at 27s. per cwt. for American on the spot. *Petroleum Oil* is firm but unchanged at 4⅛d. per gallon for Russian and 4½d. per gallon for American on the spot. *Petroleum Spirit*: American 5⅜d. per gallon, deodorised 5¾d. per gallon.

Opium—Is about 4d. per lb. dearer on the week, the market appears to be getting bare of really desirable manufacturing quality, while several months have still to elapse before the new crop can become available.

Orris Root—Is dearer, and it would be difficult to buy really good picked *Florentine* below 50s. per cwt.

Phenacetin—Is quoted 3s. 9d. to 4s. 3d. per lb., according to brand, quantity, and packing, for both *crystals* and *powder*, Bayer's make being still held for the fancy price of 14s. 3d. per lb. for bulk packing.

Phenazone.—This article, which has to a great extent superseded *Dr. Knorr's* antipyrine, with which it is to all intents and purposes absolutely identical, has been advanced to 22s. per lb. for quantity, owing it is said to a combination of the various makers who have apparently adopted this method of checking the excessive competition amongst themselves, which threatened to reduce prices to a ruinous level. It now ramains to be seen whether this advanced price will be maintained.

Potash Compounds.—*Chlorate* is quiet and rather easier at 3¼d. to 3½d. per lb. *Bromide* steady at 1s. 10d. per lb. *Iodide* firm at 9s. 9d. to 10s. 3d. per lb. *Cyanide* continues scarce on the spot, 98 per cent. cake, 1s. 2d. per lb. *Permanganate*, small crystals, 62s. 6d. per cwt.; large, 67s. 6d. per cwt. *Prussiate*: Yellow, unchanged at 6¾d. per lb.; red, 1s. 1d. to 1s. 2d. per lb. *Bicarbonate*, 30s. per cwt. for both crystal and powder. *Bichromate*, steady at 4d. per lb.

Quicksilver—Is firm at £7 1s. 3d. from first hand. Many people are expecting that the price will be advanced shortly.

Quinine.—Tuesday's bark sales went off with about 15 per cent. allowance. Price of the unit being about 1 5/8d. which looks as if we shall see still higher prices paid at the Amsterdam sales which, if it takes place, cannot fail to have its effect on the manufactured article. The chief German makers *Quinine*, wnile quoting nominally 11½d. per oz., decline to sell at this or in fact at any price, which also looks as if higher prices were probable. Sales have been made from second hand at 11¾d. per oz., and there are no longer many sellers at this figure. It is at same time, however, difficult to prognosticate with any degree of confidence the future course of an article, which so far cannot fail to have proved extremely disappointing to many holders, who bought at higher prices than are now ruling, in the confident anticipation of a further advance.

Soda Compounds.—*Crystals* unchanged at 57s. 6d. per ton *ex* ship terms. *Bromide* quiet at 2s. 2d. per lb. *Iodide* firm at 10s. 7d. per lb. *Hyposulphite* continues in good demand at 5s. 6d. to 8s. per cwt., according to brand. *Sulphite* steady at 18s. to 22s. 6d. per cwt., according to quantity and brand. *Nitrate*: Refined, £7 12s. 6d. to £8 per ton, according to qauntity. *Caustic*: 70 per cent. white, £7 10s. per ton; 60 per cent., 20s. per ton less.

Shellac.—The inquiry on the spot has been fair, resulting in moderate sales at steady prices, including *TN Orange* on the basis of 61s. per cwt. for fair cash terms. The Calcutta market is strong.

Spices (Various).—*Black Pepper*: Singa- sold at 4d., Lampong bought in at 4d., Tellicherry bought in at 4¼d.; 9 bags fine heavy bold clean Ceylon sold at 4⅝d. *White Pepper*: Only 170 bags Siam offered and bought in at 7⅞d. *Chillies* dull. Of 160 bags Japan, 120 bags sea-damaged sold without reserve, first class at 39s., sound bought in at 46s. *Cassia Lignea*: 250 boxes sold at 48s. to 51s. 6d.; 350 bales broken bought in at 34s. to 36s. *Mace* flat; 19 cases Penang bought in, pickings 1s. 6d., ordinary red 1s. 8d., except 1 case good bold which sold at 2s. 3d.; 11 packages West India sold at 1s. 5d. to 1s. 7d. *Pimento* dull; none offered at auction.

Sulphate of Copper—Is firm at £16 to £17 per ton, according to brand.

Sulphonal.—Quiet and without change, both the makers still accepting orders for limited quantity from regular customers at 7s. 3d. per lb. in bulk, for both *crystals* and *powder*.

———

As might have been expected after an interval of four weeks, the quantity of drugs, etc., up at to-day's sales were considerable. Same passed off quietly, a moderate proportion of the offerings finding buyers at about rates hitherto ruling, with the exception of Rio Ipecacuanha, which sold freely at decidedly higher prices, and Cape Aloes, which were held for much higher prices, in consequence, it was stated, of the severe drought, which is reported to be prevailing at the Cape.

Aconite Root.—10 bags *Japan*, of fair quality bought in at 27s. 6d. per cwt.

Aloes.—27 kegs good *Socotrine* held for 80s. per cwt., 20 cases ditto for 75s., 1 case East Indian (in skins) fetched 75s. 1 case ordinary drossy *Cape* sold at 19s. One of the brokers announced that in consequence of very serious drought prevailing at the Cape he was instructed to hold for much higher prices, which he accordingly did, up to 27s. for good hard bright quality, and 22s. for drossy, buyers were not, however, willing to pay these figures.

Aniseeds—10 bags bought in at 20s. per cwt.

Annatto Seeds.—3 bags sold at 4¼d. per lb.

Asphalt.—28 cases *Syrian* taken out at 20s. to 31s. 6d. per cwt.; one case *Egyptian* held for 90s.

Balsam Copaiba—5 packages bought in at 1s. 8d. to 1s. 9d. per lb.

Balsam Peru.—3 cases of good quality were held for 8s. per lb.

Balsam Tolu.—30 cases of good quality all sold at 1s. 6d. per lb., which shows a lower value for the article.

Buchu Leaves.—Fine green rounds sold very cheaply at 4d. per lb., rest fetching 4¾d. to 5d., and brownish green 3¾d.

Cactus Flowers.—The 10 bags which have been so often up for sale at the drug auctions, again made their appearance, and were as usual bought in at 8d. per lb., there being apparently no buyers of the article.

Camphor.—20 cases *Japan refined* bought in at 1s. 3¼d. per lb., 1 tub Japan crude selling at 91s. per cwt.

Cardamoms.—Over 500 cases were catalogued, only a portion of which had been reached at the time our report left. The market was firm and prices steady, 4s. 3d. to 4s. 5d. being paid for fine pale *Mangalore*. For *Mysores* 4s. was paid for good bold pale, 3s. to 3s. 8d. per lb. for small to medium pale. *Seeds* sold in part at 3s. per lb., other lots being held for 3s. 3d. per lb. *Malabar* held for 2s. 10d. to 3s. 3d. per lb.

Cassia Fistula.—64 bags very wormy part sold at 4s. per cwt.

Castor Oil.—Good *Calcutta* seconds bought in at 4¼d. per lb.

Cinchona Bark.—42 serons *Crown* bark, held for 1s. 1d. per lb., only 10½d. being bid.

Cinchona Bark.—29 packages *Crown* and *Grey Bark*, sold at 8d. to 10d. *Yellow Bark*, at 7d. to 8d. per lb.

Cod-Liver Oil.—Twenty casks, good new *Norwegian*, bought in at 100s. per barrel.

Colocynth.—3 casks small pale Turkey held for 1s. 3d. per lb.

Colombo Root.—177 bags were held for 25s. per cwt. for dark sorts and 32s. for rather better quality.

Coriander Seed.—50 bags were held for 7s. 3d. per swt.

Cowage.—2 cases sold subject to approval at 1¼d. per oz.

Croton Seed.—9 bags of fair quality sold at 72s. to 82s. per cwt.

Cubebs—Thirty bags sold cheaply at 21s. to 22s. per cwt.

Cummin Seed.—55 bags of only medium quality were held for 20s. per cwt., fair *Malta* for 24s. to 25s.

Cuttle Fish.—36 mats fair pale part sold at 3½d. per lb.

Essential Oils.—1 case *Ylang Ylang*, bought in at 3s. per oz. 1 tin *Bay Oil* sold at 6s. per lb. 2 Duppers *Rose Oil*, at 2½d. per oz. 1 case *Spearmint*, bought in at 5s. 6 cases *Cinnamon*, at 1s. 6d. per oz. 3 cases *Spike Lavender*, at 2s. per lb. 1 case Dodge and Olcotts' *Oil Sassafras*, held for 1s. 8d. per lb. 1 case *Oil of Limes* sold at 4s. 1d. per lb.

Galls.—262 bags *blue* held for 55s. per cwt.

Gentian Root.—49 bags, which had more the appearance of having been chopped than of having been properly cut, were taken out at 22s. 6d. per cwt.

Guaza.—Of 26 packages, 2 robbins, fair green dusty tops, were held for 5½d. per lb., while for 2 robbins, rather more dusty, 5d. would have been accepted. Bundles, some rather woody, bought in at 9d. per lb. These figures show an advanced value for the article.

Gum Ammoniacum.—6 cases dull and dirty block bought in at 30s. per cwt.

Gum Benjamin.—30 cases fair *Palembang* held for 35s. per cwt., lower quality for 28s. Fair seconds *Sumatra* sold at

£8 15s. down to £5 12s. 6d. for medium to low *ditto*. Good *Siam* was held for £15, down to £7 for lower quality.

GUM GALBANUM. — 16 packages were bought in at 9d. for dark woody part blocky, up to 1s. 4d. per lb. for fair.

GUM GUAIACUM.—6 packages drossy block bought in at 5d. to 6d. per lb.

GUM KINO. — One case slightly blocky *Australian* bought in at 6s. per lb.

GUM MASTIC.—6 cases fair pale held for 2s. per lb.

GUM MYRRH.—One case native picked sold at 75s. per cwt., lower quality being held for 60s., and dark for 25s. per cwt.

GUM OPOPONAX. — One case containing 7 tins of fair quality held for 5s. per lb.

GUM SANDARAC.—10 casks bought in at 57s. 6d per cwt.

HONEY.—60 cases fair *Australian* part sold at 22s. 6d. per cwt. 20 cases fine *Californian* held for 36s., a bid of 30s. not being entertained. 50 cases good pale *Italian* did not sell, 35s. per cwt. being price required.

IPECACUANHA.—31 bales *Rio* sold freely at full prices, viz., 8s 5d. to 8s. 9d. per lb.; *picked* being held for 9s. 9 bales *Carthagena* all bought in, 5s. to 5s. 3d. being the price which would have been accepted. These prices show a tangible advance for *Rio*.

JALAP.—56 bales good, heavy, sold readily at 5½d., per lb. down to 3d. for damaged and mouldy.

LIME JUICE.—58 casks taken out at 8½d. per gallon.

MUSK.—3 tins old-fashioned Tonquin small to bold slightly damp, were held for 52s. 6d. per oz.

ORANGE PEEL.—15 cases good new thin cut were bought in at 7d. per lb.

ORRIS ROOT.—Fair *Florentine* was held for 43s. down to 33s. per cwt. for *sorts*.

PATCHOULI LEAVES.—17 bales of low quality bought in at 4d. per lb.

SARSAPARILLA.—24 packages *Jamaica* sold readily at 1s. 8d. to 1s. 9d. per lb. 13 bales *Lima* at 1s. 2d. to 1s. 6d.

SCAMMONY.—9 cases were all bought in at 22s. to 28s. per lb., one case being held for 30s., a bid of 28s. being declined.

SCAMMONY ROOT.—85 bags of fair quality bought in at 22s. 6d. per cwt.

SENNA.—*Tinnevelly* was represented by 300 bales, mostly of very common small description, some of which realised as low as ½d. per lb.; bulk of the ordinary small spotty sold at 2¼d. to 2½d. per lb., and for this there was good competition. For a few bales of fair green medium bold 7d. to 8d. per lb. was paid. For the *Alexandrian* variety there has been a strong demand lately, and several lots have been sold at 6d. for medium leaf, and 4d. for broken leaf of fair colour. For 2 bales of good green leaf 7d. per lb. is asked for; 22 bales *Mecca* no bid could be obtained, 2d. per lb. being the price required, but for this grade there is no demand.

TAMARINDS.—90 barrels good *West Indian* taken out at 15s. per cwt.

TONQUIN BEANS.—1 case fair frosted *Para* realised 1s. 4d. per lb.

VANILLOES.—Nearly 300 tins were offered, the demand at the opening being very slack, but later on it improved, and the bulk sold at good prices, for *Mauritius* at 18s. 6d. to 20s. 6d. per lb. for fine quality from 5½ to 8 inch. For *Bourbon* fine quality sold up to 23s. for 7½ to 8 inch. *Seychelles*: The longer beans were all taken out, buyers' ideas being below those of importers'. A few lots with cut ends, but of fine quality, sold cheaply at 14s. to 18s. 6d. per lb. for 3½ to 8 inch. *Madagascar* sold at 12s. to 14s. per lb.

WAX.—5 packages good *Jamaica* sold at £7 5s. to £7 7s. 6d. per cwt., fair *Madagascar* at £6 5s. to £6 12s. 6d., 3 packages *Australian* at £7 2s. 6d., 15 barrels *North American* being bought in at £7 5s., *Yellow Spanish* at £6 10s., *White Calcutta* at £7, fair *Morocco* at £5 to £5 10s., *China* for £6 per cwt.

YELLOW BERRIES.—11 bags bought in at 19s. to 24s. per cwt.

MANCHESTER CHEMICAL REPORT.

APRIL 27, 1898.

So far as this market is concerned, the war between Spain and the United States does not appear to have been the cause of many changes. Local-made glycerin is, however, firm, and manufacturers hold out for full prices. In Alkalies, Caustic Soda is easier, but Ammonia Alkali and Bleaching Powder continue well sold. Bleaching Powder is firm at £5 7s. 6d. per ton, soft-wood casks on rails. High strength Caustic Soda, 77 to 78 per cent., is at £8 10s. per ton on rails. More perhaps in sympathy with the rise in the metal than anything else, Sulphate of Copper has advanced to £18 10s. per ton best brands, delivered Manchester. Brown Acetate of Lime is scarce and firm at £5 12s. 6d. per ton, Welsh and American, Manchester. Bicarbonate of Soda is firm at £7 per ton., 1 cwt. kegs, on rails, and Industrial Bicarbonates (for mineral water), £5 5s. to £5 10s. per ton, kegs, on rails at works, Northwich. Coal tar products are dull, but Pitch is improving, and is quoted 18s. per ton *f.o.s.* Manchester Ship Canal. Glycerin ranges from £52 to £53 per ton for double distilled, *f.o.b.* or *f.o.r.* Manchester. Yellow Prussiate is unchanged at 6¾d. to 7d. for best Lancashire make.

(Received too late for Classification).

WANTED, for a Branch Shop just opened, where there is a large and increasing population of about 7000, an energetic MANAGER. There is a good and newly-built house. Apply, stating age, salary required, references, and photo, E. C. ASHFORD, Chemist, Northampton.

PHARMACEUTICAL CHEMIST, with knowledge of analysis and preparation of fine chemicals, required for chemical works abroad. One who has passed the Major examination preferred. State qualifications and experience, and salary required, to F. I. C., care of G. H. Wilson & Sons, 6, Fenchurch Buildings, London, E.C.

EXCHANGE.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Microscope in mahogany lock-up case, 1 in. and ¼ in., with all accessories; also Major Books cheap. —Hornby, Willis Road, Hillsboro, Sheffield.

For immediate disposal, part stock of a chemist's and druggist's business, together with shop bottles, jars, carboys, etc.; the stock is all sound and good, and the bottles and jars equal to new, only being re-labelled in gold a few months ago, and altogether is a good opportunity for anyone starting business. For further particulars, apply Slater & Co., High Street, Stone, Staffs.

Minor Students.—New, unsoiled, all complete for Minor. Southall's Materia Medica Cabinet, cost £2 5s.; Southall's Chemicals, cost £1 5s.; Southall's Herbarium, cost 7s. 6d. What offers?—Minor, Ashleigh, Victoria Rd., Bedford.

A Monumental Bargain.—Highly glazed, super-calenderd, 14 lb. white demy paper, 4s. 3d. per ream, six reams carriage paid: same paper, unglazed, beautifully white, 3s. 9d.—Lennox, The Powder Man, Nottingham.

Apparatus and Machinery.

Chemical Balance. Write for particulars. Maw's No. 10 Medicine Chest. Specie Jar, 9 ins. diameter, handsomely labelled. Wenham Gas Lamp, 7s. 6d.—Allen, Chemist, Plymouth. Patents half price. Write for list.

Books.

Students' and Chemists' Books offered and wanted, for cash or exchange; purchasers write for list (post free); sellers send list stating edition, date, condition, price required.—Gower, Publisher, Waterloo, Liverpool.

WANTED.

Castor Oil Tins wanted in quantities. Address, X. Y., Art Gallery, Newcastle-on-Tyne.

Tooth-brush Case in good condition. Description, dimensions, and lowest price to—Perfect & Co., Landport.

Old Platinum Utensils or Scrap, also O Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

NEWS IN BRIEF

The British Pharmacopœia, 1898.—The following wholesale firms have intimated in their latest prices current that they intend to supply the new and altered preparations of the new Pharmacopœia in the execution of all orders after May 2, unless "B.P. 1895" is specified when ordering: Messrs. Allen & Hanburys, London; Messrs. Baiss Brothers & Co., London; Messrs. A. H. Cox & Co., Brighton; Messrs. Evans, Gadd & Co, Exeter; Messrs. Evans, Lescher & Webb, London; Messrs. Evans, Sons & Co., Liverpool; Messrs. Harker, Stagg & Morgan, London; Messrs. Hearon, Squire & Francis, London; Messrs. W. & R. Hatrick, Glasgow; Messrs. W. Kemp & Son, Horneastle; Messrs. Southall Bros. & Barclay, Birmingham; Messrs. Wright, Layman, & Umney, London.

The Presidents of the Institute of Chemistry of Great Britain and Ireland, the Society of Chemical Industry, and the Society of Public Analysts, and Mesdames Stevenson, Clowes, and Dyer will hold a reception at the Galleries of the Royal Institute of Painters in Water Colours, Piccadilly, on Tuesday, May 24.

The Council of the Chemical Society is to entertain at dinner on June 9 the following past Presidents, who have completed a period of fifty years' Fellowship of the Society:—Lord Playfair, Sir J. H. Gilbert, Sir E. Frankland, Professor Odling, Sir F. A. Abel, Bart., Dr. A. W. Williamson, and Dr. J. H. Gladstone.

Chemists' Assistants' Association.—At the meeting of this Association, held on Thursday, April 28, at 73, Newman Street, W., Mr. T. Morley Taylor, President, in the chair, several short papers were to have been read by members, but owing to illness and other unavoidable causes, the authors were not able to be present. In making an announcement to the above effect, the President expressed his regret at the illness of Mr. Fell, who was to have communicated one of the papers, and the meeting then resolved itself into committee to prepare for the annual meeting on May 5.

The Farbwerke vorm. Meister. Lucius & Brüning, of Hoechst o. M., Germany, and 46, St. Mary Axe, London, E.C., intimate that Messrs. Burroughs, Wellcome & Co., and Jeyes' Sanitary Compounds Company, of London, having ceased to act as their agents in future their well-known pharmaceutical products, including Dr. Knorr's Antipyrine (Lion brand) will be supplied to the trade from their London Office, 36, St. Mary-at-Hill.

Mr. H. L. Lee, who during the past two and a half years has filled the post of Lecture Assistant in the Society's School—first with Professor Dunstan, and latterly with Professor Collie—has been appointed Pharmaceutical Instructor at Rajkot, Kathiawar, Western India.

The Pfeiffer Laboratory.—The new buildings which the Princess of Wales has promised to open during July, at the London School of Medicine for Women, will be of immense value to lady students, who will find in them facilities for scientific research which it is claimed will compare favourably with those of any other medical school in the metropolis. In the plan is included a large block of laboratories, class rooms for physics, chemistry, physiology, and anatomy, and smaller apartments for the use of teachers and for private studies and investigations. The building is to be known as "The Pfeiffer," as a considerable proportion of the cost has been defrayed from the handsome legacy which the school received some years ago specially for improving its accommodation under the will of Mrs. Emily Pfeiffer. This addition is, however, but the beginning of a large scheme, to be realised in time, by which the school hopes to have a really handsome and commodious pile of buildings, and the interest of the Princess of Wales in the undertaking has been a great encouragement to all concerned. Meantime, it is interesting to note that upwards of thirty of its students received appointments in hospitals or under public bodies last year, in addition to the two ladies specially commissioned for plague duties in India.—*Daily Telegraph.*

The Glasgow Apothecaries Company intimate that in entering into a new copartnery they have given Mr. Robert M'Adam, the managing partner, a larger share, and the following travellers and heads of departments an interest in the business, viz.:—Messrs. John Walker, James Murdoch, William Maltman, David C. Houston, Colin Campbell, John Bannatyne, Stephen Young, John M'Turk, James M'Leod, and William Bowie.

Accidental Poisoning Cases.—Carbolic acid, taken in mistake for whisky, caused the death of Peter Tominey, 36, of Maryhill, on Saturday, April 20.—A doctor's daughter, Mrs. Darling, 40, the wife of a clergyman, tried to ride a bicycle, and afterwards complained of headache. Her husband recommended a seidlitz powder, so she went to her medicine chest and took a powder which, although contained in a blue paper similar to that used for seidlitz powders, proved to contain strychnine, and caused her death. A verdict of "Death from misadventure" was subsequently returned by a coroner's jury.—A liking for sherbet has resulted in the death of a young woman at Tunbridge Wells. It appears she took from a box a packet containing what she thought was sherbet, but in reality was oxalic acid in powder. "Death from misadventure" was the verdict in this case.—An overdose of laudanum taken on Easter Monday after a drinking bout caused an inquest to be held on Frederick L. George, of St. Mary's, and a verdict of "Accidental death" was returned.

Midland Pharmaceutical Association.—The members of this Society have been supplied with the annual report. The principal portion is that which refers to the work of the Trade Committee. This sets forth that the membership of the P.A.T.A. is increasing. In December last a canvass of the town was made by Mr. Glyn-Jones, Mr. Prosser, and Mr. C. Thompson, which resulted in 90 per cent. of the trade joining the Association. The influence of the members has been exerted towards getting makers of proprietary goods to place their articles on the protected list. The Committee protest strongly against individual schemes of protection, and suggest, as the best means of arriving at the personal advantage derived from the P.A.T.A. that the pharmacist should note the number of protected articles sold in his shop. The income of the Association for the past year has amounted to £50 9s. 9d., and the expenditure to £49 5s. 10d. The loss on the annual ball was £7 1s. 3d.

Mr. Thomas Padwick, pharmaceutical chemist, Redhill, having been in delicate health for some time, left Redhill for a short holiday and change of air, returning home on the Tuesday after Easter. He appeared to have greatly benefited by the change. But on Thursday evening, April 28, he went to bed about six o'clock, saying he wanted rest, and shortly afterwards was found to be suffering from an overdose of laudanum, evidently taken to produce sleep. In spite of medical attention, death occurred on Friday morning, and at a subsequent coroner's inquest the jury expressed the opinion that it was not a case of suicide, but that death was due to an overdose.

Proprietary Articles Trade Association.—Election of Council (1898).—The following is the list of successful candidates to the Manufacturers' Section: Allcock's Plaster Co., Ltd., Birkenhead; Bovril, Ltd., Farringdon Street, E.C.; Condal Water Co., Ltd., Walbrook, E.C.; David Corneille & Co., Fenchurch Avenue, E.C.; J. E. Garratt, Southwark Street, S.E.; Holloway's Wine Co., New Oxford Street, W.C.; Homocea, Ltd., Birkenhead; W. Lambert & Co., Seymour Place, W.; Thomas Powell., Ltd., Albion Place, Blackfriars, S.E.; Stephen Smith & Co., Ltd., Bow, E. To the Wholesale Section: Barclay & Sons, Ltd., 95, Farringdon Street, E.C.; W. Edwards & Sons, 157, Queen Victoria Street, E.C.; Evans, Gadd & Co, Exeter; Hirst, Brooke & Hirst, Ltd., Leeds; Lynch & Co., Ltd., 192, Aldersgate Street, E.C.; Maw, Son & Thompson, 7 to 12, Aldersgate Street, E.C.; F. Newbery & Sons, King Edward Street, E.C.; May, Roberts & Co., 9, Clerkenwell Road, E.C.; John Sanger & Sons, Winsley Street, W.; W. Sutton & Co., 76, Chiswell Street, E.C

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

P. O. Haynes & Charles T. W. Hirsch, General Medical Practitioners, Woolwich. Debts will be received and paid by C. T. W. Hirsch.

Wm. Thorne & A. J. Ruston-Harrison (trading as Strawson & Co.), Mineral Water Manufacturers, 8 and 10, Carver Street, Islington, Liverpool. Debts will be received and paid by A. J. Ruston-Harrison. The said Wm. Thorne will carry on his business at Birkenhead as heretofore.

W. Bancroft, J. T. Bancroft, & Cain Holmes (trading as C. Holmes & Co.), Mineral Water Manufacturers, Bradford. Debts will be received and paid by Cain Holmes.

Market Report and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

May 5, 1898.

Business has been somewhat more active during past week, although the war between the United States and Spain, while causing a better demand and higher prices for some articles which are of interest to our readers, has also not failed to injuriously affect trade in other of such articles. Opium is dearer, as is also morphia, a further advance in the latter article being considered the more probable in that it would be fully justified by the actual price of the raw drug. Codeia steady. Quinine, after undergoing certain fluctuations during the week, again dearer, the position of the article is, however, still somewhat undecided pending the result of the Amsterdam Bark Sales. Acid Citric rather dearer. Acid Tartaric and Cream of Tartar quiet. Borax and Acid Boracic steady. Shellac weak and lower. Quicksilver dearer. Mercurials unchanged. Iodides and Bromides firm and in good demand. Glycerin quiet. Cod-liver Oil dull. Gum Arabic dearer for sorts. Camphor quiet and rather easier. Orris Root very firm. Turpentine lower. Coconut Oil and Palm Oil higher. Gentian Root firmer. Cocoa Butter lower. Ipecacuanha again rather dearer. Cascara Sagrada firm and likely to advance considerably in value ere long.

The following are prices ruling for articles of chief interest:—

Acetanilide—Is rather firmer at 1s. 2d. to 1s. 3d. per lb. for quantity.

Acid Boracic.—Quiet at 23s. per cwt. for *crystals* and 25s. per cwt. for *powder*.

Acid Carbolic—Quiet at 6¼d. to 6½d. per lb. according to make for 35 to 36° C. *ice crystals* in large bulk, 39 to 40° C. 7d., and 39 to 40° C.; *detached crystals* 8d.; *crude* 60° F. 2s. 2d. per gallon, 75° F. 2s. 7d. *Liquid*: 95 per cent., of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

Acid Citric—Is rather firmer at 12¾d. to 1s. 1d. per lb. for *crystals*, according to make.

Acid Tartaric.—*English* crystals on the spot 1s. 1d. per lb. *Foreign* 12¾d. per lb.

Ammonia Compounds.—*Sulphate* is steadier, grey prompt, 24 per cent., London being quoted £8 11s. 3d. to £8 12s. 6d. per ton. *Hull* prompt, £8 12s. 6d. *Leith*, prompt, £8 11s. 3d. *Beckton*: £8 10s. to £8 11s. 3d. *Beckton*, terms, £8 7s. 6d. *Bromide*, firm at 2s. 2d. per lb. *Iodide* firm at 14s. 6d. per lb. *Oxalate* quiet at 6d. per lb. *Sal ammoniac*: First sublimed 35s. per cwt., seconds 33s. *Chloride*: Free from metals, 98 per cent., 25s. to 26s.; chemically pure in small crystals 33s. *Sulphocyanide* quiet at 1s. 2d. per lb.

Asafetida.—During the past month 107 cases have been delivered, and none having arrived, the stocks are now very moderate. The demand for the two extremes of quality is good, but really fine is very scarce.

Atropine—Is very firm at makers' prices, say 13s. 6d. for the *Sulphate P.B.* and 15s. for the *pure* for large bulk in quantity, very little being obtainable below these figures from second hand.

Belladonna Root—Is very scarce at 45s. per cwt. for good root, with, however, very little, if any, offering.

Bleaching Powder—Steady at £7 5s. per ton on the spot.

Borax.—A fair business passing at 14s. per cwt. for *lump* and 14s. 6d. per cwt. for *powder* in large bulk.

Bromides—Firm at 1s. 10d. for *Potass. Bromide*, and 2s. 2d. for *Ammon.* and *Soda Bromide*. *Bromine*: 1s. 11d. per lb. for 20-case lots.

Calumba Root.—The deliveries last month have considerably reduced late arrivals, and prices close rather firmer at 27s. 6d. to 30s. per cwt. for dark and low sorts, and 32s. 6d. to 37s. 6d. per cwt. for ordinary bright sorts.

Camphor.—Crude remains very quiet with rather easier quotations. For arrival there are *China* sellers at 82s. 6d. per cwt.; *c.i.f.* terms, and *Japan* at 88s. per cwt. *c.i.f.*

Cascara Sagrada.—The position of this article is gaining strength, and no large quantity could be obtained without causing a very decided advance of values. Prices are quite nominal, and for small quantities only. Last crop bark is quoted 20s. per cwt., whilst good old bark cannot be obtained below 25s. per cwt., whilst in New York 30s. per cwt. has to be paid for this latter quality.

Cloves.—Privately the market for *Zanzibar* is quiet, small business done. June-August delivery at 3 7/32d. to 3 1/8d.; August-October delivery quoted 3 1/8d. At auction only 6 bales *Zanzibar* offered and sold at 3⅛d. to 3½d. 14 cases *Ceylon* bought in. Of *Penang* only 2 cases good picked sold at 10½d.

Cocaine—Is quiet, the agents for the *B & S* make, which is the brand most in favour on this market, quoting 9s. per oz. for 100 oz. lots. It is, however, rumoured that the reduction in price has been made with a view to induce the makers who had been underselling to join in a combination. If this project succeeds, it will mean higher prices for the article again as soon as an agreement has been come to amongst the makers.

Cocoa Butter.—In the monthly auctions on Tuesday, 80 cases of Cadbury's sold at an average price of 9 5/16d. per lb., being lower; the April auctions realising an average of 10½d. per lb.

Coal Tar Distillation Products.—*Toluol*: Commercial, 1s. 4d.; pure, 3s. per gallon. *Benzole*.: 50 per cent., 1s. 1d.; 90 per cent., 11½d. *Crude Naphtha*: 30 per cent. at 120° C. 6d. per gallon. *Solvent nahptha* 95 per cent. at 160° C. 1s. 7d., 90 per cent. 160° 1s. 4d., 90 per cent. at 190° C. 1s. 3d. per gallon.

Codeia—Is steady at 11s. 3d. to 11s. 6d. per oz. for the *pure*, and 1s. per oz. less for the *salts*.

Cod-Liver Oil—Is dull, price for best new non-congealing *Norwegian* in tin-lined barrels being nominally 82s. 6d. to 85s., *f.o.b.*, according to quantity and brand.

Cream of Tartar—Is quiet and rather easier at 74s. 6d. per cwt. for first white *French crystals* on the spot; powder 76s. 6d. to 78s. 6d. per cwt.

Galls.—Market continues firm. Sales of blues have been made at steady rates, 55s. to 56s. per cwt.; green are scarce; white on the spot are not offering.

Gentian Root—Is slightly firmer, and it would appear not only that bottom has been touched, but that higher prices may be looked for. Good dry red root is now quoted 20s. per cwt. *c.i.f.*, with but little offering at this price; inferior quality is offering at a somewhat lower figure.

Ginger.—*Cochin* continues dull, 673 bags rough being mostly bought in. Only 25 bags sold; dull washed rough at 24s. 6d. Of cut kinds 21 cases sold, new bold A at 82s. 6d., B at 64s., old B at 58s. Of 171 bags limed *Japan*, slightly mouldy, 51 bags sold at 18s. Over 1000 packages *Jamaica* offered, and meeting a good demand mostly sold, common to good common lean and dark Rhatoon 68s. to 73s., low middling small scraped to middling washed at 76s. to 85s., good middling to good bright 86s. 6d. to 95s., fine bright and bold 96s. to 105s.

Glycerin—Is quiet, the expectation that the war would lead to an increased demand for the *Crude*, for the purpose of dynamite manufacture, which would in turn reflect on the price of the refined article, not having so far been realised. Best *German* double-distilled chemically pure, 1.260 quality, in tins and cases, is quoted 52s. 6d. to 60s per cwt., according to quantity and brand. *English* being obtainable at somewhat below these figures.

Golden Seal Root—Is reported to be very strong in New York, 2s. 2d. per lb., *c.i.f.* terms, being the quotation at the moment, but higher prices are anticipated, as being scarce with no new arrivals expected before August next.

Grains of Paradise—Are dearer at 30s. to 32s. per cwt., as to quantity.

Gum Arabic.—The market for *Soudan* sorts is very firm, and small sales have been made up to 85s. per cwt. Picked kinds are slow of sale, quotations range from £14 for good bold pale down to £6 10s. for yellowish grains.

Gum Tragacanth—Is in steady demand, and fair sales, chiefly in the medium and lower grades, have been made at full values. *Thirds* have also been done to the extent of a few cases at £10s. 10s. per cwt., but *Seconds*, which are nominally quoted £11 10s. to £12 10s. per cwt., are for the moment neglected, and *Firsts* are firm at £13 10s. to £14 per cwt.

Hypophosphites—Are in fair demand at

Monthly Statement of Drugs, etc., Warehoused in London.—May 3, 1898.

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

3s. 3d. per lb. for the *Soda Potash* and *Lime Salts*, in half-ton lots.

Iodides—Are in very good demand at 9s. 9d. for *Potass. Iodide* in 2-cwt. lots, and 13s. 4d. for *Iodoform*. *Iodine* is also unchanged at 7½d. per oz.

Ipecacuanha.—A good business has been done since the auctions last week at full to rather dearer prices for *Rio*, which is now quoted at 8s. 10d. to 9s. 3d. per lb., according to quality.

Lithia.—The advances in price of the *Salts* (other than the *Carbonate*, price of which remains unchanged at 10s. 8d. per lb.), are as follows: *Citrate crysta's* 6s. 8d. per lb., *powder* 6d. per lb. more; *Benzoate* 8s. 6d.; *Bromide* 9s. 2d.; *Salicylate* 5s. 6d. *Sulphate* 9s. 4d. per lb.

Mandrake Root—Is reported to be firmer in New York, where the quotation is 2½d. per lb., *c.i.f.*, London, for autumn dug root.

Menthol—Is quiet, with very little business doing in the article. Prices remained firm at 7s. to 7s. 6d. per lb., according to quantity for spot delivery.

Mercurials—Are unchanged, in spite of the advance in price of *Quicksilver*, *Corrosive Sublimate* remaining at 2s. 2d., and *Calomel* at 2s. 6d. per lb., for half ton lots.

Morphia.—Makers appear to be still booking orders for quantity at 4s. 3d. per oz. for the *Hydrochlorate powder*, and 2d. per oz. more for *crystal*. Present price of opium would warrant higher prices for morphia; in fact, it is stated that price should really rather be 4s. 9d. per oz. than 4s. 3d.

Nitrate of Silver—Quiet at 1s. 5½d. per oz. for *crystals*, the *sticks* being dearer in proportion.

Nitrate of Soda.—Ordinary, £7 10s. to £7 12s. 6d.; refined, £8.

Oils (Essential).—*Peppermint*: English is strong at 27s. per lb. American *H.G.H.* continues firm at 5s. 7½d. to 5s. 9d. per lb., whilst fine *Wayne County* is quoted 3s. 9d. to 4s. per lb. *c.i.f.* according to holder. *Star aniseed* quiet at 6s. 4½d. to 6s. 6d. per lb. in quantity. *Cassia* is very dull and quotations are nominal. *Lemongrass* is very quiet at 4½d. to 4¾d. per oz. *Cajuput* continues firm at 4s. per bottle

Oils (Fixed) and Spirits.—*Linseed* is easier and quiet at the reduction. On the spot, pipes, London, £16 7s. 6d.; barrels, £16 15s. *Rape* unchanged at £24 for ordinary brown on the spot, and £25 10s. for refined in same position. *Cotton* is lower; London crude on the spot, £15; refined, £16 5s. to £16 15s. *Olive* firm and unchanged at £33 for both Spanish and Levant. *Coconut* is dearer and closes very firm. Ceylon on the spot £24. *Cochin* £27 10s. *Palm* dearer and very firm at £23 10s. *Turpentine*: Values have declined rapidly, closing at 25s. 9d. per cwt. for American on the spot. *Petroleum Oil*: A strong market with advancing prices, Russian 4⅜d. per gallon, American 4¾d. per gallon. *Petroleum Spirit*: American 5⅜d. per gallon, deodorised 5¾d. per gallon.

Opium—Has advanced about 6d. per lb. in the week. Good *manufacturing* stuff is scarce here, and 10s. to 10s. 3d. per lb. is asked, while in *Smyrna* it is reported that prices above this parity have been paid. The rise appears to have been caused by the unfavourable prospects of the new crop, combined with the fact that the actual stocks all over the world appear to be considerably smaller than had been believed in some quarters.

Orris Root—Is very firm, and by some importers is quoted at dearer rates. From Leghorn we have received the following quotations: *Florentine*: picked, 39s. per cwt.; sorts, 35s. 3d.; *Verona*: picked, 25s. per cwt.; sorts, 23s. per cwt., all *c.i.f.* London.

Oxalic Acid.—3½d. to 3¾d. per lb., delivered in London.

Permanganate of Potash—Quiet at 62s. 6d. per cwt. for *small crystals*, and 67s. 6d. for *large crystals*.

Phenacetine—Is steady at 3s. 9d. to 4s. 3d. per lb. for best makes, both for *crystal* and *powder*, according to quantity and brand. *Sulphonal* can still be bought from the makers in hand to mouth quantities at 7s. 3d. per lb., for both *crystal* and *powder* in bulk packing.

Phenazone.—Owing to the combination of the makers, the advanced price of 22s. per lb. is maintained; several of the manufacturers being sold out, and the article therefore decidedly scarce. *Dr. Knorr's Antipyrine*, which is chemically the same thing as *Phenazone*, is still held for 34s. per lb.

Potash Compounds.—*Chlorate* is quoted 3¼d. per lb, spot, London. *Bromide* firm at 1s. 10d. *Iodide* firm at 10s. 3d. *Cyanide* is still scarce, and for prompt delivery 1s. 3d. per lb. would have to be paid for *Cake*, and 1s. 2d. per lb. for fairly early delivery. *Permanganate* quiet at 62s. 6d. per cwt. for *small crystals*, and 5s. per cwt. more for *large crystals*. *Prussiate*: Yellow, 6¾d. to 7d. per lb.; red, 1s. 2d. *Bicarbonate*: 30s. to 32s. 6d. for *crystals* and *powder*. *Bichromate*: 4d. to 4½d. per lb.

Quicksilver.—A large business has been done by the importers, who have now raised their price to £7 7s. 6d. per bottle, secondhand holders being firm at £7 7s.

Quinine.—Makers still decline to sell or even to name a price, pending the results of the Amsterdam bark sales, from second hand sales were made early in the week at 1s. 0½d. per oz. for 1000 oz. lots. Yesterday there were, however, sellers at 1s. and even in one or two cases at 11½d. To-day the market is firmer, with few sellers below 1s. 0½d. per oz.

Scammony.—One case *Virgin* firsts *ex* last auction, and for which 28s. per lb. was then bid, has since been sold at 30s. per lb.; medium seconds sold 20s. per lb.

Seneca Root—Is rather dearer at 1s. 2d. to 1s. 3d. per lb.

Senna.—As will be seen from the stocks on May 1, which we publish to-day, those of all kinds of senna have fallen to 674 bales, as against an average of 1800 bales for the five preceding years. A small business has been done in *Tinnevelly* at full rates, whilst *Alexandrian* has been in demand at 6d. to 6½d. per lb. for leaf, 4d. to 5d. per lb. for broken leaf, and 2¾d. per lb. for siftings.

Shellac.—This article continues very quiet, and prices show no improvement. The offerings on Tuesday were only small, but the demand was even smaller, so that only about one-eighth sold at irregular prices, on an average 1s. per cwt. lower, making *TN* now 60s. to 61s. A total of 755 cases were offered and 129 cases sold. Second Orange:

Of 581 cases 96 sold, good pale *SG* in diamond cakey at 72s., fair to good bright at 61s. to 62s., ordinary reddish 59s. Garnet: Of 72 cases 17 sold, fair ruby at 60s. to 61s., common weak ditto at 58s. Button: Of 102 cases 16 sold, resinous colory firsts at 73s., blocky mixed firsts at 66s., thirds 55s , fourths 50s.

SERPENTARIA ROOT—Is dearer at 1s. 3d. per lb. All *American* roots are tending dearer.

SODA COMPOUNDS.—*Crystals*: 57s. 6d. per ton, ex ship. *Bicarbonate*: £7 5s. to £7 10s. per ton, landed terms. *Bromide*: Firm at 2s. 2d. per lb. *Iodide*: Firm at 11s. 7d. per lb. *Hyposulphite*: Steady at 6s. to 8s. per cwt., according to make and package. *Sulphite*: 20s. to 22s. 6d. per cwt. *Nitrate*: Commercial £7 12s. 6d., refined £7 15s. to £8 per ton. *Caustic*: 70 per cent., white, £7 10s.; 60 per cent., £6 10s. per ton.

SPICES (VARIOUS).—*Black Pepper* dull, and mostly bought in, Tellicherry at 4⅜d. to 4½d.; of Singapore, 20 bags sold at 3¾d. *White Pepper* is firm, but 865 bags offered, were all bought in, Penang at 6¾d., and Singapore at 7¼d. *Chillies* remain dull. Japan all bought in at 40s. to 50s. *Capsicums* 5 packages Natal sold fair 76s., ordinary weathered 61s. *Cinnamon Chips*: 14 bags broken quill sold at 10½d., and 68 bags featherings at 9½d., of coarse chips 49 bags sold at 3d. *Kola Nuts*: 1 box Grenada sold, at 4d. *Mace*: 4 cases Penang sold good bold, partly wormy 2s. 1d., low discoloured and broken pickings 1s. to 1s. 1d.; 7 packages West India sold at 1s. 6d. to 1s. 8d., ordinary and country-damaged 1s. 3d. to 1s 4d. *Nutmegs*, flat. *Pimento*: Of 246 bags offered, only 50 bags fair sold at 4⅜d.

SULPHATE OF COPPER—Is quoted on the spot at £16 10s. to £17 10s. per ton, according to brand.

TURMERIC—Is quiet but fairly firm: *Bengal* sold at 15s. per cwt., whilst *Madras*, fair to good finger, is quoted 18s. 6d. to 20s. per cwt.; *Cochin* dull, split bulbs is held for 8s. 6d. per cwt.

NEWCASTLE CHEMICAL REPORT.

MAY 4, 1898.

More business is passing in the heavier class of goods. Shipping orders are more in evidence, but prices remain much the same as last quoted, viz.:—Bleaching Powder, £6 5s. to £6 10s. Caustic Soda, 70 per cent. basis, £7 5s. to £7 10s. Soda Crystals, basis, 45s. to 52s. 6d. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

MAY 3, 1898.

Business has been quiet on the whole, especially in heavy chemicals. Caustic Soda is again easier, and high strength (77 to 78 per cent.) is quoted £8 7s. 6d. to £8 10s. per ton on rails. Bleaching Powder is unchanged. In one or two cases, Bicarbonate of Soda is said to be higher, but there is no change to be noted in this district. Sulphate of Copper maintains the high figure of last week, and Brown Acetate, owing to probable short supplies of American, is at £6 5s. to £6 10s., sellers not being eager to part at these figures. The abnormally low price of Benzol has at last induced some movement, and some forward contracts have been made. Alum is quiet at £4 17s. 6d. to £5 per ton on rails for loose lump; £5 2s. 6d. lump in tierces, and £5 10s. ground in bags. Yellow Prussiate is almost cleared locally, and makers are asking 7¼d. per lb.

LIVERPOOL REPORT.

MAY 4, 1898.

BEESWAX.—25 sacks Chilian sold at £7 to £7 10s. per cwt.

CARNAUBA WAX.—About 20 bags of medium quality found buyers at 45s. per cwt.

GINGER.—Some 1200 bags have changed hands during the week at 16s. 9d. to 17s. per cwt.

KOLA NUTS.—25 bags sold at 1¼d. per lb.

OILS (FIXED) AND SPIRITS.—*Castor* is strong in tone with a forward tendency, and is selling freely at 3¼d. and 3⅝d. per lb. for Calcutta, and 3¼d. per lb. for French 1st pressure. *Olive*, of Spanish make, is slightly easier, and is moving off slowly; Seville, £30 10s.; Malaga, £30 10s. to £31 per tun. *Linseed* of Liverpool make is very firmly held at 18s. to 18s. 6d. per cwt. *Cottonseed*: Liverpool refined is slow of sale, but remains at recent quotations, viz., 17s. 3d. to 17s. 6d. per cwt.

SEEDS.—*Canaryseed* has revived considerably, Turkish being very much sought after, 2000 bags selling last week at 26s. 6d. to 27s. per 464 lbs.; prices now are 28s., 29s., and 30s. to 32s. according to the age of the seed, old crop 200 bags having sold at 30s., 32s. being now asked per 464 lbs. *Hempseed*: Syrian has sold for 32s. per 384 lbs. *Linseed*: 600 bags of River Plate sold at 35s. 6d. per 416 lbs.

SPIRIT OF TURPENTINE—Is tightly held for 28s. 6d. per cwt., a fair inquiry being experienced.

TARTAR—Finest cream is only in limited demand at 75s. per cwt.

DIARY FOR THE WEEK.

WEDNESDAY, MAY 11.

ROYAL SOCIETY.
Annual Conversazione.

THURSDAY, MAY 12.

ROYAL INSTITUTION, at 3 p.m.
"Heat" (Lecture I.), by the Right Hon. Lord Rayleigh.

FRIDAY, MAY 13.

ROYAL INSTITUTION, at 9 p.m.
"Recent Experiments on Certain of the Chemical Elements in Relation to Heat," by Professor W. A. Tilden.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Lecture by Mr. A. H. Allen.

SATURDAY, MAY 14.

REYNOLDS AND BRANSON'S CRICKET CLUB v. Bainbridge, Ltd.

EXCHANGE.

OFFERED.

Books.

Students' Books.—Attfield, B.P., Bentley, Bowyer, C. and D. Books, Diaries, Gerrard, Jago, Pereira, Remsen, Squire, Thorpe (various), Thorne, Wills (various), Wootton, and others; modern editions. Particulars free.—Gower, Publisher, Waterloo, Liverpool.

Brand New.—Carriage paid. Four magnificent 21s. volumes 'British Birds' (illustrated), and their Eggs' (coloured plates), 45s., 'Hants and Dorset County Directory' (latest 1897), 10s. 6d.—Futcher, Dentist, Talbot Road, Southsea.

Miscellaneous.

Magic Lanterns, second-hand; triples and bunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Surplus stock "Bovicura," 1 doz. each 5s, 2s. 6d., and 2s. sizes for 40s.; 3 doz. Ruben's embrocation (1s. 3d.) for 21s.—Whittles, Newent, Gloucester.

What offers for 3-oz. bottle perchloride of platinum?—Simpson, Chemist, Bloxham, Banbury.

Specials.—The first twelve volumes 'Strand Magazine' quite new; bound publisher cases, £2 11s. 6d. Note.—The First 2 volumes are 21s. each at the publishers.—Pouteau, 44, Warden Road, London, N.W.

Surplus Stock.—12 Williams', 12 Carter's, 6 Cockles', 6 Holloway's, 6 each Steedman's, 1s. 1½d. and 2s. 9d., £2 17s. 6d. Cash with order, or London reference if fresh customer.—Eastman, Forest Lane, Stratford.

Celladema Embrocation, human, 12 1s. 1½d. size; ditto, horses, 3 2s. size, 3 2s. 6d. size; ointment, 4 1s. size, 3 2s. 6d. size; blister, 3 1s. 6d. size; half retail price; the lot carriage paid.—Fuller, Chemist, Norwich.

Essential Oils to dispose of cheap. About 2 lbs. Citronelle (Fisher's); 40 ozs. Lemongrass; 2 lbs. Oil Bergamot; also 20 lbs. Birchromate of Potash.—Bromide, "Pharm. Journ." Office, 5, Serle Street, London, W.C.

What offers?—37×6d. Tetlow's Swansdown, 18×1s. Gossamer; Water-bed, full size, used 3 days, equal to new.—Cocks, Stonehouse, Plymouth.

Splendid St. Bernard Bitch.—Strong, and healthy, 11 months, grand pedigree, good-tempered and affectionate; sell, or exchange saleable patents.—Busby, Chemist, Stanley Bridge Post Office, Fulham.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Publications received.

PROCEEDINGS OF THE CHEMISTS' ASSISTANTS' ASSOCIATION, containing Papers and Discussions and full particulars of the meetings held during the session 1896-97.

SURGICAL TECHNICS IN HOSPITAL PRACTICE. By K. W. MONSARRAT, M.B., F.R.C.S., E. Pp. 132. Price 3s. net. Bristol: John Wright & Co. 1898. From the Publishers.

AN EPHEMERIS OF MATERIA MEDICA, PHARMACY, THERAPEUTICS, AND COLLATERAL INFORMATION. By E. R. SQUIBB, M.D., E. H. SQUIBB, S.B., M.D., C. F. SQUIBB, A.B. Volume IV., 1893 to 1897. Pp. 2100. Brooklyn, N.Y. 1897. From the Publishers.

Photographic Supplement

TO THE

PHARMACEUTICAL JOURNAL

LONDON: SATURDAY, MAY 7, 1898.

Hints for Photographic Tourists.

It is one of those unfortunate facts which come home to us as the brutal truth that our holidays are as a rule fixed for us, in so far that the exigencies of business may compel us to wander in search of rest at the time which is not the most agreeable to us. We have perchance a greater choice as to where we shall go, but even this is often a matter of necessity, for the simple reason that there may be circumstances, family circumstances, in the shape of children, who must of course go to the seaside, and, therefore, we, too, seek rest and relief on the pebbly shore, where the itinerant vendor of cakes, fruit and shell ware, not to mention the peripatetic musician, treats one to a complete rest if change can be such.

To the photographer, no matter where may be his headquarters, he may feel sure that he can find some work to do, and also at very little outlay obtain access to neighbourhoods rich in material for pictures, architectural studies or purely topographical work. The first thing to do on having decided upon headquarters is to find out what there is in the district as regards likely material. There is no difficulty in this, and at the expense of giving a gratuitous advertisement, it may be stated that in the 'Year-Book of Photography' there has been published during the last three years notes as to some hundreds of places in Great Britain under the title of "The Photographer's Gazetteer." They are brief and not, in the majority of cases, of the local guide-book order, but purely of photographic interest. Let it be understood that it is not intended, for one moment, to decry the use of a local guide-book, for that is one of the essentials, because it frequently gives one information that cannot be obtained through any other means.

Having fixed upon your headquarters, consult the "Photographic Tourists' Guide" and ascertain if there is a photographic dealer or dark room in the place you propose to visit. If you do not care to be burthened with plates write to the local dealer a week beforehand and state that you want so many dozen of So-and-So's plates of a particular size, and ask him to get them down for you. This ensures the plates being fresh.

Now to consider what you will take. It is as well to do the thing systematically, and we naturally start with the camera. Thoroughly overhaul this, examine the bellows for holes, and to do this turn back the focussing screen, cap the lens, insert a diaphragm, rack the bellows out to their fullest extension, place the head as near the back of the camera as possible, enveloping it and the camera back with the focussing cloth, and obtain the assistance of a sister, cousin, or aunt with a lighted candle, which must be held as near the bellows as possible without burning them. After a minute or two under the black cloth the eye will become accustomed to the darkness, and any light leakage will be at once detected. A small hole may be stopped by means of black court plaster or a piece of indiarubber cloth. Dust your camera out thoroughly with a stiff brush, and see that all parts work easily.

The dark slides also want wiping out, and the sliding portions, if necessary, eased by rubbing a little black lead along them. See that the hinges are not worn through and admit light. This is best tested for by placing a plate in the slide and exposing for about five minutes to diffused daylight, or for about half a minute to sunlight, the slide being of course closed. On developing it will be very easy to see whether light does make its way through anywhere.

The tripod or stand should be examined to see that the sliding portions of the legs run easily, and that any screws are not missing. The screw for the camera is best attached by means of a few inches of brass chain to one of the legs, and the legs should always be strapped together and a leather handle also attached for carrying It is an advantage to have straps for the legs sufficiently long to include an umbrella.

Lenses should be cleaned and provided with lens cases, these being preferably of stout leather or cardboard lined with wash leather, baize is an abomination, as the fluff from it gets on to the glasses, in the diaphragm slot, etc. In lieu of specially made cases, the ordinary cardboard postal tubes may be used, ends being fitted by means of discs of stout card or chip box lids. Naturally the stops, if of the Waterhouse or loose pattern, must not be omitted, and it is advisable to have them pinned together by means of a brass pin run through the tongues.

There are numerous little sundries that will be required. Instantaneous shutters, spirit level, focussing magnifier and cloth, a view meter, and, if you use isochromatic plates, the necessary colour screens. A note-book should never be forgotten, nor should maps, guides, and above all, permits to photograph in private parks, houses, etc. These last should be of course obtained beforehand, and as a rule they are readily granted, sometimes, however, on payment of a small fee, and generally more willingly if it be stated on application that you are an amateur only.

For changing plates it is always advisable to use the local dark room, but at the same time there are occasions when one may feel somewhat of the same mind as the cynical showman who, after a long yarn descriptive of what was to be seen inside his booth, wound up with "Step in, gentlemen, step in! Take my word for it, you will be highly delighted when you come out!" Then the convenience of being able to change plates at home is not to be despised. It is advisable, therefore, always to take two or three sheets of ruby paper and some half-dozen drawing pins; some number labels; a dusting brush and wrapping papers also should not be omitted.

If development is to be done, and not in the local dark room, then of course dishes, measures and chemicals will have to be taken, and in any case it is advisable to take a stock of one's own developer.

There are so many ways to carry a camera that one feels a sort of compunction in saying which is the best. Still, after many years' experience in outdoor photography and walking tours, it may be permitted to describe what is, perhaps, the most comfortable method of carrying one's baggage, the more especially as this is not a subject to be passed by as trivial, provided a camera of any size is to be carried, since even with small cameras the weight, on a good tramp, becomes burdensome.

Always divide your impedimenta into three lots, one including the camera, shutters, and lenses; another the dark slides; the

third the tripod and umbrella. A great deal depends, of course, upon the extent of the outfit, but with a whole-plate camera, six double dark slides, four lenses, and two shutters, they are divided as suggested above, and the camera packed in a water-proof canvas knapsack, which is carried on the back, the slides being relegated to a canvas case, which is carried in the hand.

Now a word or two about the knapsack. The side which is next to the back should be stiff, but the others limp and slightly expansive; whilst for the dark slides all the sides should be stiff, to protect them as much as possible from injury. The straps of the knapsack which go over the shoulder should be slipped through a broad oval piece of stiff leather, and this should be just broad enough to almost completely cover the shoulder and long enough to overlap the chest and back; then the strap cannot possibly cut. For the dark slide case the handle should be broad and of soft leather, so that it will double up and fit itself to the hand, and the edges should be shaved off, for it is wonderful how leather will cut and cramp the hand.

For small cameras and only one or two slides and one lens it is quite possible to carry the lot in one case, and this may be slung over the shoulder if the broad piece of leather be used. Never, however, should a square camera case be chosen, the long narrow ones are very much better, as they allow the arm to hang more naturally down at the side and are not always knocking against the legs.

Accidents may happen, of course; the focussing screen may be broken, and if away from any dealer, the tyro may be in a quandary as to what to do. Always, therefore, carry a sheet of stout matt celluloid, or if that is thought unnecessary, go to a glazier, and if he has any ground glass—it will probably be found that the grain is very coarse; never mind—get a piece cut to the right size and just rub a little oil or vaseline over it; this renders the grain almost invisible. But if in some out-of-the-way place where ground glass is not to be had, procure a piece of plain glass, borrow a lump of putty from your glazier, and dab it well all over the glass. This makes a fine surface for focussing on. One may, however, be in a place where the nearest glazier is four or five miles off and have nothing else. In such a case merely expose one of your plates to the bedroom candle for a few seconds and develop that till you get a general fog or deposit, then fix the plate, and thus obtain an excellent focussing screen.

The tripod screw is another thing that has sometimes a happy knack of losing itself when not chained up; frequently a bit of soft wood cut from any convenient hedge or tree may be, at a pinch, screwed home to hold the camera steady. Lens caps frequently mislay themselves, and then one must forage at the chemist's either for a big pill-box lid or else a chip box, though it is preferable to use the focussing cloth doubled three or four times.

Whatever may be the particular brand of plate you elect for use, be sure and see that they are backed. All the principal plate makers now issue their plates ready backed for a small extra charge, but if they do not it is such an easy operation, using the proper backing of caramel, that no one should now omit this.

It is, of course, an important question as to what speed of plates to use, and on this point there is no doubt that for landscape and general work the slower, ordinary or landscape plate is by far the best, and even for snapshots of not less than 1/20 to 1/30 of a second, in bright sunlight they are quite quick enough. On the other hand it is always as well to have some reserve force in hand, and therefore some extra rapid plates should always be carried, for they will come in useful for very rapid work or for dark interiors, where a slow plate would require a very long exposure. Carrying six double dark slides, if one has two extra rapid plates, that will be about right, unless of course as sometimes happens one is going to work on interiors the whole day; then carry all rapid plates.

One not insignificant point is the question of packing exposed plates, and whilst not original, the following plan is one that has proved itself over and over again. Obtain from Geo. Wheeler and Co., King Street, Manchester, some separating cardboards; these are thin pure card frames the size of the plate and just the width of the slide rebate. Also provide some long strips of paper exactly the width of the plate.

In opening a box of plates do not tear the brown paper off anyhow, but with a knife cut it all round the box at one end, thorw this end away and the box may then be slid out of the brown paper, which subsequently forms a little case for the box of exposed plates.

Number labels should always be carried; these may be obtained in perforated sheets, and the register of exposures should always be numbered consecutively right throughout the whole trip and not for each day; it is very much easier if this plan is adopted to tell when one gets home exactly what the subject is.

Now let us suppose that we have been out the whole day, made a bag, and recorded the exposures in the note-book; then when changing plates a number label corresponding with the exposure book should be stuck on the back of the plates in one corner. A plate should then be laid, film up, at one end of the long strip of paper, on the film a separator, then another plate, film downwarde, then another plate, film upwards, then a separator, then anothre plate, film downwards, and so on till all the exposed plates are lying in a heap. Now fold over and over in the paper, place back in the box, and the box in its little brown paper case, and either stick some stamp paper over the end or else score the label heavily through with a big X, which may stand for "exposed," and thus prevent one being in doubt as to whether the plates in that particular box have been exposed or not.

Finally, a few notes may be added indicating how to make holiday work satisfactory. It is always advisable to have one or two general views of the place one may be stopping in; they form lasting reminders of a pleasant holiday. But when on the search for material it is always advisable to take up one particular line of work. For instance, a study of all the churches, both exterior and interior, will be found extremely interesting, for to do this properly one must study a little architecture. There are three books which can be confidently recommended:—Parker's 'Concise Glossary to Architecture'; the 'Introduction to Gothic Architecture,' by the same author; and the 'Handbook to Gothic Architecture,' by the Rev. T. Perkins, which is written especially for photographers.

Many, naturally, will prefer to make studies of the hedgerows, wayside flowers, trees, etc., and it will be found that such studies, even if they consist of a few flowers, a branch, a single plant, will be far more interesting than wide stretches or panoramas, these latter being rarely satisfactory.

As regards exposure, the best thing is to procure an exposure meter. There are three which are satisfactory: Hurter and Driffield's Actinograph; Watkins' Exposure Meter; and Wynne's Meter. It is impossible to accurately gauge the exposure for every subject, and therefore one of the above should be used.

As regards a register of exposures, there are suitable books on the market, but one can easily be ruled by the worker himself on the following plan, examples of the register being given:—

Date.	No.	Subject.	Time.	Lens.	Stop.	Light.	Exposure	Plate	Remarks.
15/6/97.	1	Hastings Beach.	11 a.m.	8 in. Ross.	F/16	Bright Sun.	1/10 sec.	Inst. Iso.	
26/7/97.	14	Norwich Cathedral N. Aisle.	2 p.m.	6 in. W.A.	F/22	Very dark.	35 min.	Marion Instant	Very great contrasts, heavy shadows and light stone.

USEFUL WORKS ON PHOTOGRAPHY.

The following list has been submitted as being, on the whole, a more useful one than that published in the Photographic Supplement of April 2 last. The names preceded by an asterisk (*) are those of books which it is profitable for a dealer to stock.

ELEMENTARY BOOKS.

* 'Early Work in Photography,' by W. Ethelbert Henry, C.E. 1s. Cloth, 1s. 6d. Postage 2d.
* 'Photography for Amateurs,' by T. C. Hepworth. 1s. Cloth, 1s. 6d. Postage 2d.
'Modern Photography,' by W. K. Burton. 1s. Postage 2d.
* 'Everyone's Guide to Photography,' by E. J. Wall. 6d. Leather, 1s. Postage 1d.
'Practical Amateur Photography,' by C. C. Vevers. 6d. Postage 1d.

ADVANCED HANDBOOKS.

'Instruction in Photography,' by Capt. Abney. 3s. 6d. Post. 4d.
'Science and Practice of Photography,' by Chapman Jones. 2s. 6d. Postage 4d.
* 'Photography in a Nutshell,' by The Kernel. 1s. Postage 2d.
'Photography with Emulsions,' by Capt. Abney. 3s. Postage 3d.
'Practical Guide to Photography.' 2s. 6d. Postage 3d.

BOOKS ON SPECIAL SUBJECTS.

'Photo Ceramics,' by W. Ethelbert Henry. 1s. Cloth, 1s. 6d. Postage 2d.
* 'Photographic Enlargements,' by G. Wheeler. 1s. Postage 2d.
'Bromide Paper,' by Dr. E. A. Just. 1s. 6d. Postage 3d.
'The Lighting in Photographic Studios,' by P. C. Duchochois. 1s. Postage 1½d.
* 'Chemistry for Photographers,' by Chas. F. Townsend. Cloth, 1s. Postage 3d.
'Platinotype; Its Preparation and Manipulation,' by Capt. Abney and L. Clark. 2s. 6d. Postage 3d.
* 'Platinum Toning,' by A. Horsley Hinton. 1s. Postage 2d.
'Optics for Photographers,' by W. K. Burton. 1s. Postage 2d.
'The Studio and What to Do in It,' by H. P. Robinson. 2s. 6d. Postage 3d.
'Practical Photo-Micrography,' by A. Pringle. 5s. Postage 4d.
'Carbon Printing,' by E. J. Wall. 1s. Postage 2d.
'Photographic Chemistry,' by J. T. Taylor. 7s. 6d. Postage 3d.
'Cyclopædic Photography.' 12s. 6d. and 7s. 6d. Postage 6d.
'Encyclopædia of Photography,' by Walter E. Woodbury. 7s. 6d. Postage 6d.
'Dictionary of Photography,' by E. J. Wall. 7s. 6d. Postage 4d.
'Photographic Reference Book,' by W. A. Watts, M.A. 6s. Postage 4d.
'Photo Aquatint; or, Gum Bichromate Process,' by A. Maskell and R. Demachy. 1s. Postage 2d.
'The Photographic Studio,' by T. Bolas. 2s. Postage 3d.
'Animated Photography,' by Cecil Hepworth. 1s. Postage 2d.
'A History of Photography,' by W. Jerome Harrison. 1s. 6d. Postage 3d.
'The Elements of a Pictorial Photograph,' by H. P. Robinson. 3s. 6d. Postage 3d.
'Picture Making by Photography,' by H. P. Robinson. 2s. 6d. Postage 3d.
'Art Photography,' by H. P. Robinson. 1s. Postage 2d.
'Practical Essays on Art,' by John Burnet. 2s. 6d. Postage 6d.
'Pictorial Effect in Photography,' by H. P. Robinson. 3s. 6d. Postage 3d.
'Letters on Landscape Photography,' by H. P. Robinson. 1s. Postage 1d.
'The Bichromate Salts in Photography.' 1s. Postage 1d.
'The Stereoscopic Manual,' by W. I. Chadwick. 1s. Postage 2d.
'Wet Collodion Photography,' by Chas. W. Gamble. 1s. Postage 2d.
'Photo Aquatint and Photogravure,' by Thomas Huson. 2s. Postage 3d.
'Collotype and Photo Lithography,' by Dr. Julius Schnauss. 5s. Postage 4d.
'Photographic and Photo-Mechanical Printing,' by W. K. Burton. 4s. Postage 4d.
'Photo Engraving,' by H. D. Farquhar. 2s. 6d. Postage 3d.
'Photo Lithography,' by Georg Fritz. 3s. 6d. Postage 6d.
'Practical Radiography' (second edition), by A. W. Isenthal and H. Snowden Ward. 2s. 6d. Postage 3d.

LANTERN HANDBOOKS.

* 'Modern Magic Lanterns and their Management,' by R. Child Bayley. 1s. 2d.
'The Optical Lantern for Instruction and Amusement,' by Andrew Pringle. 2s. 6d. Postage 4d.

USEFUL PHOTOGRAPHIC FORMULÆ.

The following formulæ have all been tested in practice, and may be relied upon to yield satisfactory products :—

Glycin Developer.

Glycin or oxy-phenyl-glycin, $C_6H_4OH{\cdot}NH{\cdot}CH_2{\cdot}COOH$, is very slightly soluble in water, but more so in alkalies and alkaline sulphites, and it is better made up in the form of one-solution developer :—

Glycin	16 g.
Sodium Sulphite	40 g.
Sodium Carbonate	60 g.
Distilled Water	to 500 C.c.

For use dilute with three times the quantity of water.

Useful for negative and positive work.

Ortol Developer.

The latest developer is chemically a mixture of ortho-methyl-amido-phenol plus some hydroquinone. It is an extremely valuable developer, and is finding considerable favour :—

No. 1.

Ortol	15 g.
Potassium Metabisulphite	7·5 g.
Distilled Water	to 1000 C.c.

No. 2.

Sodium Carbonate	120 g.
,, Sulphite	130 g.
Distilled Water	to 1000 C.c.

For use mix in equal parts.

Useful alike for negative and positive work.

The Fixing Bath.

As a rule the amateur will be content to make up his own, but it might be useful to know that the best fixing bath for negatives, especially with pyro as a developer, is an acid one, which may be made as follows :—

Solution of Tartaric Acid, 50 per cent.	30 C.c.
,, ,, Sodium Sulphite, 25 per cent.	70 C.c.

Mix and add to

Solution of Hypo., 25 per cent.	1000 C.c.

Intensifiers.

The most satisfactory is that generally known as Monckhoven's :—

No. 1.

Mercuric Chloride	20 g.
Potassium Bromide	20 g.
Distilled Water	1000 C.c.

The negative must be thoroughly free from hypo. and soaked in the above till quite white, then well washed and immersed in the following till blackened right through, and then well washed and dried :—

Silver Nitrate	20 g.
Distilled Water	750 C.c.

Dissolve and add gradually *quant. suff.*

Potassium Cyanide	20 g.
Distilled Water	250 C.c.

This must be added and the mixture thoroughly shaken after each addition. At first a precipitate of silver cyanide is thrown down, which gradually re-dissolves in excess of potassium cyanide, but some of the flocculent cyanide should always be left floating in the bottle.

The Copper Intensifier.

This has lately been placed on the market, both as an intensifier and a reducer. It is prepared as follows :—

a.	Copper Sulphate	240 g.
	Distilled Water	500 C.c.
b.	Potassium Bromide	180 g.
	Distilled Water	500 C.c.

Mix. In this the well-washed negative should be bleached, then well washed. To intensify, the negative may be re-developed with any old developer, or for reduction only partially bleached and then refixed.

The Uranium Intensifier.

The action of this is so energetic that it is only applicable to very thin negatives.

Uranium Nitrate	5 g.
Potassium Ferricyanide	5 g.
Glacial Acetic Acid	10 g.
Distilled Water	to 500 C.c.

The negative must be thoroughly freed from hypo., and then immersed in the above solution till sufficiently dense. The colour of the image is a reddish-brown, which is far more non-actinic than it looks.

Great care must be exercised in mixing this, and it should be kept in the dark. The ferricyanide must be well rinsed in water prior to solution, or else the solution quickly spoils.

Reducers.

The best of these is undoubtedly Belitzski's ; it keeps well in the dark, and may be used over and over again till the solution turns yellow, and does not require the negative to be freed from hypo.

Potassium Ferric Oxalate	20 g.
Sodium Sulphite	20 g.
Distilled Water	250 C.c.

Dissolve, and add

Oxalic Acid (crystal)	7.5 g.

and shake till the blood-red solution turns green, decant from any undissolved acid, and filter, and add

Hypo	125 g.
Distilled Water	to make 1000 C.c.

This is applicable to negatives, transparencies, and bromide papers.

Varnishes.

Amateurs are not fond of varnishing, but the advantages are decidedly great as regards the permanency of the negatives. One of the greatest objections to the use of varnish is the necessity of heating the negative. Therefore, a cold varnish is preferable.

Gold Size Varnish.

Japanners' Gold Size (best) } Equal parts.
Benzole. }

This is to be applied cold, and sets in half an hour to a very hard resistant film.

Zapon Varnish.

Thin Transparent Celluloid	20 g.
Acetone	300 C.c.
Amyl Acetate	200 C.c.

The objection to this is the unpleasant smell and the time the varnish takes to thoroughly harden.

Film Varnish.

As the basis of all films is celluloid it is obvious that some varnish without a celluloid solvent as the vehicle must be used.

Bleached or pale Shellac (powdered)	125 g.
Liq. Ammonia fort	250 C.c.
Absolute Alcohol	250 C.c.

Macerate for 48 hours and then digest in a water bath till the shellac has dissolved, and add.

Distilled water	to 1000 C.c.

Filter.

This may be applied to the wet or dry films, and the best way is to put sufficient varnish in a dish and bodily immerse the films, and then hang up to dry.

Ordinary Negative Varnish.

Pale Yellow Shellac	150 g.
Sandarac	18 g.
Castor Oil	1 C.c.
Absolute Alcohol (or old Methylated)	1000 C.c.

The negative must be heated before this is applied.

Crystal Varnish (for transparencies).

Gum Dammar	50 g.
Benzole	1000 C.c.

This can be used cold. It is not so resistant as those given above.

Toning Baths.

For the old albumenised paper it is usual to employ neutral or alkaline baths, and acetate, phosphate, tungstate, or borate of soda are generally used. A typical formula is :—

Gold Chloride	0·4 g.
Sodium Acetate	16 g.
Distilled Water	to 1000 C.c.

Gelatino-Chloride or P.O.P. Toning Baths.

The best formula is the following ; it is suitable for all kinds of papers, though with some it yields finer tones than others—

Gold Chloride	1 g.
Potassium Sulphocyanide	2 g.
Distilled Water	180 C.c.

Dissolve and heat to the boiling point for 5 minutes, and add distilled water to make 200 C.c. For use mix 1 part of this with 15 parts of water.

Combined Toning and Fixing Baths.

Amateurs will have these, but their use should be discouraged as much as possible, but the following is a simple formula :—

No. 1.

Lead Nitrate	10 g.
Hypo	200 g.
Distilled Water	1000 C.c.

No. 2.

Chloride of Gold	10 g.
Distilled Water to	100 C.c.

This solution must be absolutely free from acid.

Just before use mix 5 parts of No. 2 with 1000 parts of No. 1. The prints must be bathed in a 1 per cent. solution of bicarbonate of soda, well washed, and then immersed in the toning bath.

A Combined Toning Bath Without Lead.

Hypo	240 g.
Ammonium Sulphocyanide	24 g.
Sodium Acetate (fused)	48 g.
Distilled Water to	1000 C.c.

To this just before use add 1 gramme of neutral chloride of gold.

Platinum Toning Baths.

The tones obtained on gelatino and collodio chloride papers with platinum are much in favour at the present time. The tones tend from warm sepia to brownish black. The most satisfactory is—

Potassium Chloroplatinite	2 g.
Dilute Phosphoric Acid	120 g.
Distilled Water to	1000 C.c.

This bath may be made up in concentrated form, the total bulk being made up to 200 C.c.

For black tones the procedure is somewhat more complicated, but so many amateurs want black tones on these papers that a set of baths that would give these ought to sell well.

No. 1.—A.

Sodium Acetate	10 g.
Borax	8 g.
Distilled Water to	100 C.c.

No. 1.—B.

Gold Chloride	1 g.
Distilled Water to	10 C.c.

For use mix 10 C.c. of A. and 0·2 C.c. of B, and water to 100 C.c.

No. 2.

Acid Phosph. Dil.	25 C.c.
Distilled Water to	100 C.c.
Potassium Chloroplatinite	2 g.

For use mix 1 part with 9 parts of water.

No. 3.

Ammonium Sulphocyanide	100 g.
Chloride of gold (neutral)	2 g.
Distilled Water to	1000 C.c.

Directions.—Print rather deeply and wash the prints in two changes of water for fifteen minutes. Immerse the washed prints in the gold bath No. 1 till they assume a brown tone, and then rinse in water and transfer to the platinum bath No. 2, in which they should be left till they assume a violet tone. Wash for ten minutes, and transfer to a 10 per cent. solution of hypo., in which they should be left for ten minutes, then well washed in four or five changes of water for twenty minutes, and if the tone is satisfactory (and it will be brownish), they may be mounted. If black, blue-black, or grey tones are required, wash the prints for five minutes only after fixing, and transfer to No. 3 solution, and in this they may be left till the desired tone is attained.

Developer for P.O.P.

It is not generally known that gelatino or collodio-chloride paper can be developed, and in the winter time or in summer, when a large number of prints have to be obtained. This is a great advantage. The paper should only be faintly printed, just sufficient to show all the details, and then developed with the following :—

No. 1.

Hydroquinone	10 g.
Alcohol	100 g.

No. 2.

Sodium Sulphite	100 g.
Citric Acid	5 g.
Distilled Water to	500 C.c.

For use mix 50 parts of No. 1, 50 parts of No. 2, and 1000 parts of water. Development will be complete in from 10 to 15 minutes, and the prints should be transferred to a 5 per cent. solution of salt, well washed, and then washed in the combined toning and fixing bath.

Mountants.

The following is a satisfactory mountant for all kinds of prints.

White Dextrin	75 g.
Alum (powdered)	4 g.
White Sugar	15 g.
Distilled Water	120 C.c.

Dissolve by heat, and when cool add

Alcohol Sol. Thymol (10 per cent.)	6 C.c.

Liquid Mountant.

Soft Gelatin	40 g.
Distilled Water	120 C.c.

Allow to soak for twenty-four hours and add

Chloral Hydrate	20 g.

Heat on a water bath till liquid or for about an hour, and then neutralise with a few drops of solution of carbonate of soda.

ROYAL PHOTOGRAPHIC SOCIETY'S INTERNATIONAL EXHIBITION.

The exhibition opened at the Crystal Palace on Monday, April 25, by H.R.H. the Prince of Wales was a decided success as an exhibition of everything appertaining to photography from the earliest photographs and apparatus down to the very latest developments in processes and materials. The general arrangement of the exhibition was good, but visitors, especially those strange to the Crystal Palace, at first experienced considerable difficulty in finding the whereabouts of the different sections, notwithstanding the possession of an excellent work of art in the form of a catalogue containing a plan of the exhibition, with a numbered list of exhibits. However, the situation once mastered, the visitor soon forgot the slight annoyance at being unable to immediately find the section required, and became absorbed in the extremely interesting Historical Collection, which consisted of photographs of well-known photographers who have crossed the border-line, to whom much of the present position of photography is due; early photographs and apparatus, including "the first camera photograph," taken by Nicephore Niepce in 1824, photo-etched plates and heliographic prints of some two years later; illustrations of the Daguerreotype, Talbotype, or Calotype processes, wet collodion processes, collodion emulsion, introduced in 1864 by Bolton and Sayce, and the gelatine-bromide process, which was well illustrated by several of the earliest negatives made in 1871 by Dr. Maddox. The various methods of carbon printing were shown, and the developments in photographic cameras, photographic engraving in intaglio, photo-lithography, collotype and photo-typographic engraving in relief. The section devoted to lenses was a fine exposition of the progress made in that direction, comprising as it did specimens of the earliest types of lenses down to the latest anastigmat lens.—Photography in its Scientific Applications was the next section that demanded attention. This section comprised engineering, astronomical, spectroscope, geological, meteorological, zoological, botanical, military, and X ray photography; photographic recording instruments and examples of the art of photo-micrography.—Photography in Colours was the title of the section that perhaps attracted the greatest number of visitors, and they were not disappointed, as the exhibit included specimens of the best work done by the various workers in this direction.—Other sections dealt with Photography as a Science, and General Technical Photography and Process Work.—The North and South Naves of the Palace were occupied by the stalls of exhibitors of apparatus and material for photographic and photo-mechanical processes. The space at disposal will not allow of a detailed description of the fifty or sixty exhibits, but brief reference may be made to one or two new articles that have not as yet become universally known.

The very latest addition to the stock of Messrs. Ross, Ltd., 111, New Bond Street, W., is the "Eclipse" Patent Arc Lamp, which promises to supersede all others of its kind. It is an electric lamp and has a specially good lateral motion, while the arc is always presented to the optic centre. There is no current in the lamp, consequently it can be handled with perfect impunity, there being no danger of getting a shock. It is exceedingly well made and is of solid construction, beautifully finished, and priced at £4 10*s*., subject to good discount. Another new thing is an Enlarging Lantern, having a remarkably smooth action, the tubes moving in and out with perfect freedom. It has been designed to meet the requirements of all climates, so that extreme heat or extreme cold do not affect the tubes in the slightest degree; consequently they preserve the easy motion so necessary if good results are required. The apparatus is very rigid in the front, and, whilst bearing a general resemblance to other instruments for the same purpose, differs from them in every essential detail, both optically and mechanically. An oil lamp giving a flame of great actinic power, and fitted with a patent lighting arrangement, is supplied with the instrument, but either an incandescent gas lamp or a limelight jet may be fitted to the apparatus. Ross' New Patent Science Lantern received much attention from those interested in scientific demonstration work. It is a high-class instrument, double fronted, each end carrying a triple condenser. One front is for parallel beam work, and will carry a microscope, polariscope, or any other desired optical arrangement. The other front takes slides, tanks, diagrams, etc., and may be used for either horizontal or vertical projection. The body of the instrument is built on a large and deep ring, working in a frame which is mounted on four stout pillars fixed to a circular base.—An interesting improvement in hand cameras is Ross' Portable Twin-lens Camera, being a new patent folding model, much more compact than the old pattern. Amongst lenses the New Planar is the latest production of Messrs. Ross. It is very rapid, and yields sharply-defined pictures; the rapidity varies from F/3·6 to F/6, according to the size and application of the lens, while the angle embraced by it varies from 62° to 72°. The Planars are superior in precision to the Anastigmats hitherto made, and are pre-eminently adapted for all kinds of copying processes, for the most rapid instantaneous exposures out of doors, and also for photo-micrographic enlargements and reductions, kinematograph pictures, etc.

The stall of Messrs. Geo. Houghton & Son, 88 and 89, High Holborn, W.C., was evidently one of the most attractive in the exhibition, the attraction being the many novelties in hand cameras, etc., and practical demonstrations of a new process—the "Radiotint"—for colouring photographs, which, judging from the results obtained, should prove a boon to photographers. This novel and charming process consists of three primary coloured liquids and a colourless basis liquid, which yield all possible gradations of tone. The colours are transparent, and, it is claimed, are absolutely permanent and cannot be washed away, nor are they liable to smudge when handled or affected in any way if the photograph be burnished after treatment. The liquids are immediately blotted off on application, the colours only applying themselves in intensity according to the original tone of the surface, the effect of application being instantaneous. Practically speaking, the process is simply a series of washings, and except for detail there is very little brush work.—Houghton's Patent Studio Shutter is specially constructed to work inside the camera, and owing to its shape, *i.e.*, square, and the opening being perfectly central, with a minimum of space for the working parts, the smallest size, giving an aperture of 3 in. square, can be fitted inside any ½-plate studio camera. The principle of working is entirely new, and should prove an advance on other kinds of studio shutters. It is perfectly silent in operating, and is fitted with pneumatic ball and tube with tap.—The "Victo" ½-plate camera set was greatly admired. It has a wide angle movement and double dark slide, rapid rectilinear achromatic lens, with Iris diaphragms and removable hood, is fitted with Thornton-Pickard shutter, and is sold complete with three-fold tripod stand at £3 10*s*.

Mr. J. E. Lockyer, chemist, 87, Evelyn Street, Deptford, S.E., exhibited his noted hydroquinone developer, also specimens of all chemicals used in photography and several specialties in the form of hand cameras, the principal being Lockyer's "Diamond" Camera, which can easily be carried in the pocket, and takes pictures $2\frac{1}{8}$ by $1\frac{5}{8}$ inches. It is on the magazine principle, holds six plates, and has two view finders. In striking contrast to this small camera stood the "Mammoth" process camera exhibited by Messrs. Penrose and Co., Upper Baker Street, W.C. This camera is believed to be the largest made for process work, and will take a plate 6 feet by 5 feet, for line work and ordinary copying. The back part is intended to be built into the partition wall of a dark room, which would form the dark slide. The inside of the camera forms a little room about 7 feet by 3 feet, in which two persons can stand and watch the operation of focussing the image and exposure. The full extension of the camera is 12 feet, and the lens fitted to it is of the symmetrical type, specially made for copying purposes by Messrs Ross, Ltd. It works at F/11, and has an equivalent focus of 60 inches.

Messrs. Salmon & Son, 169, Hampstead Road, N.W., exhibited their Patent Portable Magnesium Ribbon Lighting Apparatus for Portraiture and a New Dish Rocker, so constructed that several dishes may be rocked simultaneously, while it can be made stationary at will, forming a rigid table. Their Adjustable Vignetter, which was recently mentioned in the Journal (see p. 339), was greatly admired. It has been highly recommended in the photographic press, and certainly the results obtained justify the praise bestowed.

Numerous novelties were shown by other exhibitors, particulars of which are given in the catalogue of the Exhibition, a truly wonderful production, well worth the price charged (1*s*.), containing as it does information of excellent quality on various subjects, together with a host of remarkably fine illustrations. Of books and periodicals relating to photography there is a fine array, the stalls occupying nearly the whole of the North Nave, and altogether the Exhibition which is still open, is a great success.

PHOTOGRAPHING IN PUBLIC BUILDINGS, PARKS, OPEN SPACES, ETC.

As a rule, permission is readily given to photograph in public buildings, parks, open spaces, etc. When making written application, it is advisable to enclose a stamped addressed envelope.

In the Provinces.

CATHEDRALS.—Apply to the Deans.

CHURCHES.—Apply to the Vicars.

RUINS OF ABBEYS AND CASTLES.—Apply to the Stewards.

In London and Vicinity.

BATTERSEA PARK.—Apply to the Chief Officer, London County Council, Spring Gardens, London, S.W., as also for permission in the following cases :—Clissold Park, Finsbury Park, Victoria Park, Hackney Marsh, Dulwich Park, Blackheath, Plumstead Common, Battersea Park, Ravenscourt Park, Hammersmith, Waterlow Park, Albert Embankment Gardens, Hampstead Heath, Parliament Hill, Victoria Embankment Gardens, Brockwell Park, Kennington Park, Clapham Common, Chelsea Embankment Gardens, Streatham Common, Tooting Common, Wandsworth Common, Wormwood Scrubbs.

BETHNAL GREEN MUSEUM, E., for National Portraits.—Apply to the Curator, 20, Great George Street, Westminster, S.W. Objects belonging to the Science and Art Department same as for South Kensington.

BOTANICAL GARDENS, REGENT'S PARK.—Apply to the Secretary, The Gardens, Regent's Park.

BRITISH MUSEUM.—Apply to the Principal Librarian, British Museum, Great Russell Street, W.C.

BURNHAM BEECHES.—No restriction.

BUSHEY PARK.—See under "Parks."

CRYSTAL PALACE.—Messrs. Negretti and Zambra have exclusive rights.

EPPING FOREST, Wanstead Park, Burnham Beeches (Slough), Coulsdon Common, Highgate Wood, Queen's Park, Kilburn, West Wickham Common, St. Paul's Churchyard.—Apply to the Town Clerk, Guildhall, London, E.C.

FINSBURY PARK.—Apply to the County Council as above.

HOUSES OF PARLIAMENT.—Apply to the Secretary, the Lord Great Chamberlain's Office, House of Lords, S.W.

IMPERIAL INSTITUTE.—Apply to the Secretary.

KEW GARDENS.—Apply to the Director. The privilege is not available on Sundays, Christmas Day, Good Friday, or Bank Holidays.

NATIONAL GALLERY.—Apply to the Director. Permission is only granted to professional photographers.

PARKS.—St. James's Park, Green Park, Hyde Park, Kensington Gardens, Regent's Park, Greenwich Park, Richmond Park, Bushey Park, Hampton Court Park.—Apply to the Secretary, H.M. Office of Works, 12, Whitehall Place, S.W.

PUBLIC RECORD OFFICE.—Apply to the Secretary, Public Record Office, Chancery Lane, E.C.

ST. PAUL'S CATHEDRAL.—Apply to the Dean.

SOUTH KENSINGTON MUSEUM.—Apply to the Secretary, Science and Art Department, London, S.W.

TOWER OF LONDON.—Apply to the Constable of the Tower.

VICTORIA PARK.—Apply to the County Council.

VIRGINIA WATER.—Apply to Capt. Walter Campbell, Holly Grove, Windsor Park.

WANSTEAD PARK.—Apply to the Town Clerk, Guildhall, London, E.C.

WESTMINSTER ABBEY.—A form of recommendation can be obtained from the Chapter Clerk, the Sanctuary, Westminster, S.W. ; it must be signed by a member of Parliament, of the Royal Academy, a barrister or clergyman, and then sent to the Chapter Clerk as above.

WINDSOR GREEN PARK.—Apply to Capt. Walter Campbell, Holly Grove, Windsor Park.

ZOOLOGICAL GARDENS, REGENT'S PARK.—Apply to the Secretary, Zoological Society, 3, Hanover Square, London, W.

NEW IDEAS AND TRADE NOTES

PORTABLE MAGNESIUM LIGHTING APPARATUS.

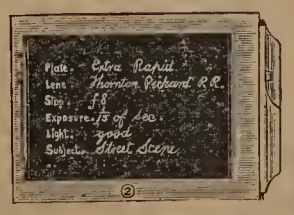
This apparatus, constructed by SALMON & SON, 169, Hampstead Road, N.W., which is being exhibited with their other novelties (Patent Vignetter and Dish Rocker) at the Photographic Exhibition, Crystal Palace, Stall No. 8, consists of specially constructed brass spirit lamps, and a series of arms, at the end of each of which two or more charges of magnesium ribbon are clipped. These are held together by a metal sheath, and can be fired simultaneously or consecutively, being actuated pneumatically by a rubber tube and ball, which brings the magnesium ribbon into contact with the flame of the spirit lamps. The whole is contained in a portable polished mahogany cabinet, 25 by 20 by 9 inches, with a door at the back for charging and recharging. There is a sliding panel front and corrugated glass light diffuser, also in a sliding frame, the whole forming a compact, well-made and elegant adjunct to the studio, and so constructed for portability that it can be set up where desired in less than five minutes, being entirely self-contained. The price of the apparatus is £10 10s. The telescopic chimney packs with the tripod stand.

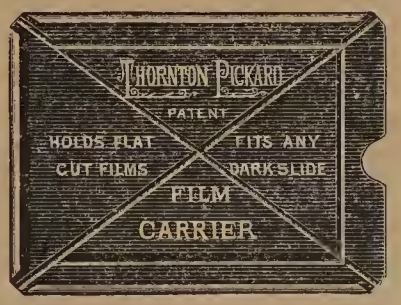
NEW PHOTOGRAPHIC PRICE-LIST.

MESSRS. BARCLAY & SONS, LTD., 95, Farringdon Street, London, E.C., send a new photographic price-list. The list is got up on the same lines as previously—that is to say, all the prices quoted are retail, so that chemists can show or give copies to their customers, and the trade discounts allowed are indicated by letters. The list is considerably enlarged, but there are no specially new features, with the exception of the list of chemicals, in which, in addition to prices per ounce and pound, a column is devoted to prices per kilo. Prices are quoted of measures graduated to cubic centimetres, also quotations for metric weights, which should be appreciated in places where those weights are used. Every chemist should possess a copy of this price-list, which is arranged alphabetically, and is therefore convenient and easy for reference. The well known Barclay's 50s. hand camera continues to be a great success, and dealers cannot do better than stock it.

THORNTON-PICKARD NOVELTIES.

THE THORNTON-PICKARD MANUFACTURING COMPANY, LTD., Altrincham, send a copy of the 1898 catalogue of cameras, shutters, and other specialties. The cameras are suitable for every imaginable class of work, as are also the various patterns of shutters, from studio work to the most extra-rapid instantaneous. The catalogue gives several good picture illustrations of work done with these shutters. A Patent Plate holder is now made with aluminium shutters which draw right out, and has an improved light trap, which effectually prevents any possibility of light reaching the plate when the shutter of the plate holder is drawn right out. These plate holders are not only suitable for the firm's own cameras but may be fitted to any other maker's cameras. They are very cheap indeed, ranging from 7s. in the quarter-plate size. A Film Carrier made by the firm combines the utmost stiffness and lightness possible, and is one of the best film carriers on the market. It is made of extremely thin sheet metal, strength and rigidity being obtained by indented ribs or corrugations that run in various directions. The film is simply pushed into the grooves formed by the three turned edges, then the carrier is placed in the dark slide just as though it were a plate. A notch at the end is provided, so that the film can be easily gripped by the finger and thumb for removal. The new Aluminium Shutter is made on the same principle as the firm's well-known Standard pattern shutters, but is cheaper to produce, and has been introduced to meet the demand for a cheaper article where purchasers cannot afford to pay the price of the better shutters.





AN EXCELLENT DARK ROOM LAMP.

THE Phœnix Dark-Room Lamp, made by Messrs. REYNOLDS & BRANSON, Leeds, is about as complete an arrangement for use with gas as an illuminant as could possibly be devised. It is rather less than a foot high by eight inches wide, and has a double casing, which secures a cool exterior and good ventilation, besides preventing any smell. But the most novel point about the lamp is the tap, which is a very ingenious contrivance, enabling the operator to obtain actinic or non-actinic light at will. By turning it to A, white light is obtained at the jet E; on turning it to C, non-actinic light proceeds from D; whilst placing the tap midway, at B, results in both jets being turned down to the non-luminous point. The price of the lamp is 15s., postage 1s. extra.

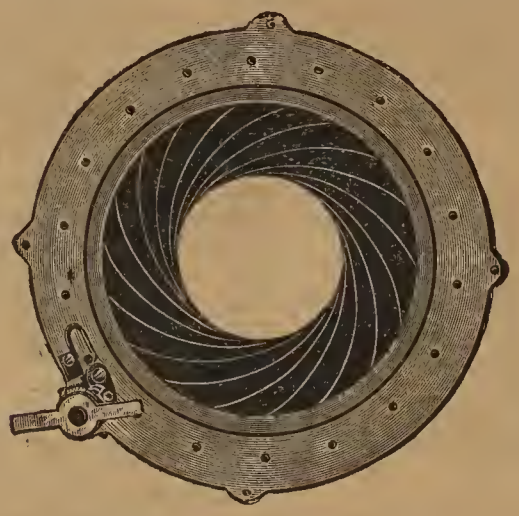
CHEMICALS FOR PHOTOGRAPHY.

MESSRS. HARRINGTON BROTHERS, 4, Oliver's Yard, City Road, London, E.C., send their wholesale price-list of chemicals for photography and radiography or Köntgen's experiments. Prices are quoted for chemicals for all the various photographic and photo-mechanical processes, and special terms for quantities of salts of the rare metals used for incandescent light purposes. The firm prepare and bottle photographic solutions of all kinds to suit the requirements of dealers, the greatest accuracy and secrecy being guaranteed in their preparation. For the convenience of

dealers photographic chemicals are put up in neatly-capped white glass bottles of all sizes, and labelled with dealers' own labels or with plain labels, as required, special prices being quoted on application. The complete list of chemicals for scientific and technical purposes will be sent to any photographic dealer upon application.

MESSRS. W. BUTCHER & SON'S NOVELTIES.

Messrs. W. Butcher and Son, Blackheath, S.E., send their new catalogue of cameras and apparatus, in which particulars are given of their new "Swift" Roller-Blind Shutters, all of which are fitted complete with speed indicator to show the relative speed at which the shutter is working, that is, between 1/15th and 1/90th of a second. These shutters are beautifully made and finished,



whilst their performance is excellent. The Universal Lens Adapter is another excellent piece of apparatus, although perhaps not in every-day demand. The ring is made in aluminium, with steel leaves, and is adjusted by means of a thumb screw on the slide, which is fitted with a racket, holding the lens very firmly until the screw is unwound. It takes lenses from 1 inch to 2½ inches diameter. A good line for chemists to stock is the 21s. ¼-plate outfit, consisting of camera, dark slide, lens, shutter, and stand. There are also several good lines of hand cameras ranging from 8s. up to £2 2s.

* From the 'Photographic Times.'
† From the 'Year Book of Photography.'

THE PHARMACIST AS A PHOTOGRAPHIC DEALER.

In continuation of previous articles dealing with the preparations which may be put up ready for sale, we now come to varnishes, etc.

The ordinary amateur is not, as a rule, an expert at varnishing in the ordinary method; that is to say, by heating the negative and flowing a thin varnish over it. In doing this he, as a rule, either pours as much up his sleeve and on the floor as remains on the negative. Still, to make these notes complete, a formula is included for the ordinary negative varnish, which is generally an alcoholic solution of shellac or shellac and sandarac.

I.

Orange Shellac	4 ozs.
Canada Balsam	60 grs.
Oil of Lavender	1 oz.
Methylated Spirit	16 ozs.

II.

Shellac	4 ozs.
Sandarac	12 ozs.
Venice Turpentine	4 fl. ozs.
Methylated Spirit	1 gallon.

There is not much to choose between these so far as efficacy is concerned, nor do they need much comment as to their manufacture; but should, however, there be found any difficulty in clearing them, the best thing to do is to shake a little pumice powder up in the bottles and allow to settle, and then filter. The old methylated spirit must be used, not the new mixture. The directions for using these varnishes are the same in both cases, viz., "Warm the negative in front of the fire till as hot as the hand can comfortably bear, then flow over with varnish and drain the excess into the stock bottle."

Cold varnishes are as a rule much preferred by amateurs, as they can be applied with a brush, such as a varnish mop or flat camel's-hair brush. Cold varnishes are of two principal kinds, either an aqueous solution of bleached shellac in carbonate or borate of soda, or else an ammoniacal spirit varnish. Of the two the latter is to be preferred, but neither of these gives so much protection to the negative as the so-called "zaponlack" or zapon varnish, which is practically a solution of celluloid.

Aqueous Shellac Varnish.

White Shellac	80 grs.
Borax	20 grs.
Water	2¼ ozs.

Dissolve the borax in the water with the aid of heat, and add the shellac in coarse powder and boil and stir till dissolved, then filter. This varnish is very suitable for celluloid films, which should be dipped bodily into it, and then hung up to dry.

Ammoniacal Varnish.

Ammonia-Alcohol (Absolute)	2¼ ozs.
Shellac, Pale Orange	100 grs.

Allow to soak with occasional agitation for twenty-four hours, and then heat carefully and gently on a water bath. This gives a good resistant film, but the generality of these varnishes now on the market are made by merely reducing the quantity of solvent in the ordinary negative varnish, and adding sufficient liq. ammon. ft. ·880 to give a clear solution.

Zapon or celluloid varnish can be made by dissolving pyroxylin in methylated spirit to which a little camphor has been added, in acetone, etc. The following is a good formula:—

Amyl Acetate	30 drachms.
Benzole	30 ,,
Acetone	16 ,,
Pyroxyline	125 grs.

Another good formula is:—

Pyroxyline	150 grs.
Acetone	2¼ ozs.

Allow to stand for an hour and add—

Amyl Acetate	4½ ozs.
Benzole	4½ ozs.

Shake well, allow to stand with occasional shaking for twelve hours, and then filter. If celluloid is used instead of the pyroxylin there is no need for filtration.

A patent was taken out in 1893 for the following:—

Methyl Alcohol or Acetone	15 gallons.
Petroleum Naphtha	50 ,,
Liquid Ketone	35 ,,
Pyroxylin	25 lbs.

or—

Liquid Ketone	50 gallons.
Petroleum Naphtha	50 ,,
Collodion	25 lbs.

Celluloid itself makes an excellent varnish, and may replace the pyroxylin in the above formulæ, though somewhat less has to be

used. Small waste pieces of transparent celluloid may be obtained sometimes, but if the varnish is to be prepared in any quantity it should be bought in the sheet.

The disadvantage of the above varnishes is the long time they take to dry, and the, to some people, extremely obnoxious smell of the amyl acetate, whilst even a short inhalation of the amyl fumes may cause nausea and headache, so that the following is preferable :—

Sandarac	120 grs.
Benzole	1 oz.
Acetone	1 oz.
Absolute alcohol	½ oz.

The sandarac should be covered with the alcohol, then left for about twelve hours, and the benzole and acetone added and allowed to stand with occasional agitation for at least a week, and then filtered. Whilst this takes some time to make, a much quicker and better method is to dissolve the sandarac in the alcohol as far as possible in a water bath, and then add the acetone ; continue the heat for a short time, and then add the benzole ; remove from the fire and allow to stand, and, if necessary, filter. Of course, great care has to be taken not to allow the spirituous vapours to catch fire.

Although not so much used by amateurs, still retouching varnish can be put up, and the following will be found satisfactory :—

Gum Dammar	100 grs.
Canada Balsam	50 ,,
Turpentine	10 ozs.

Directions for use : Moisten the end of the finger with the varnish and rub with a circular motion over the film of the negative.

A black varnish for the interior of cameras, dark slides, etc., is one that is likely to sell, and as it is essential that this should be without gloss, the following will be found to answer all requirements :—

Water	1 oz.
Borax	15 grs.
Shellac	30 ,,
Glycerin	15 ,,
Dissolve by boiling and add Aniline Black	60 ,,

Matt varnish is frequently used to coat the backs of negatives, so as to enable a little re-touching to be done on the same or to prevent one part printing too much. A good formula for this is :—.

Ether	10 ozs.
Sandarac	1 oz.
Gum Dammar	160 grs.
Dissolve and add Benzole	5 ozs.

For ordinary work a plain matt varnish is all that is required, but in special cases it may be necessary to colour it, and then this may be done either by using asphalt or some of the aniline colours, such as chrysoidine, aurantia, uranine, or fuchsine. The exact quantity is to a great extent a matter of taste, or rather requirements, as some require a pale varnish and others a deep coloured one. It must not be forgotten that the film of varnish is, when dry, very thin, and therefore the varnish must be fairly deeply coloured to give any protection at all ; it is preferable to use fuchsine and aurantia, about 5 grs. of each to the ounce, and to allow the varnish to macerate for a week or so with occasional agitation.

Lainer, of Vienna, suggests the following as improvements upon the above.

Sandarac	50 grs.
Ether	1 oz.

Dissolve and add.

Toluol	2½ drachms.

Another useful preparation which has had a fairly good sale, but which has to some extent been discounted now by the plate makers issuing plates already backed is "Backing" or "Antihalation" paste. This is a mixture of caramel and gum arabic, which is applied to the back of dry plates to prevent the occurrence of "halation," a defect which we need not enter into now. Caramel or saccharum ustum, as obtained from the wholesale house, is totally unsuitable, as it consists of a mixture of caramel, carameline and caramelane, and it is always slightly hygroscopic and never dries. It can be prepared for photographic use by pouring into twice its volume of methylated spirit, stirring well, decanting from the precipitate as closely as possible, and pouring the precipitate out into a dish and allowing to evaporate, and then dissolving in sufficient water with gum arabic powder to make a stiff paste. Far preferable to this, however, is the caramel powder as used by brewers, which can be obtained from Lichtenstein and Co., of the Silver Town Chemical Works, Stepney, E. An ounce of this with ½ oz. of powdered gum arabic made into a paste with water forms an efficient backing, which very quickly dries and does not require removal from the back of the plate prior to development.

We now come to the question of mountants for prints. The most general is a solution of gelatin mixed with methylated spirit, which, however, has the disadvantage of always requiring heating before use. Such a mountant is made as follows :—

Soft Gelatin	200 grs.
Distilled Water	6 ozs.

Allow to soak for an hour, then melt by the aid of a water bath, and add in small quantities at a time whilst stirring—

Methylated Spirit	2 ozs.
Carbolic Acid or Thymol	*q.s.*

A better formula is—

Arrowroot	150 grs.
Soft Gelatin	150 grs.
Distilled Water	3 ozs.

Allow the gelatin to soak for some hours, pour off the water and dissolve in it the arrowroot by boiling, add the gelatin, and continue the heat and stirring till dissolved. When cool, add—

Methylated Spirit	2½ drachms.
Carbolic Acid	3 minims.

The best mountant is, however, made with white dextrin, as follows :—

White Dextrin	280 grs.
White Sugar	60 ,,
Alum	16 ,,
Boiling Water	1 oz.
Carbolic Acid, 10 per cent. sol.	20 minims.

Rub the three powders together and then add the water, heat for about five minutes, and allow to cool, then either squeeze through fine linen, such as nainsook, or else rub up in a mortar and bottle. It is, of course, advisable to add a little antiseptic, and this may be either a little alcoholic solution of thymol or carbolic acid ; though many use salicylic acid and oil of wintergreen or cassia to cover, or try and cover, the characteristic smell of the dextrine. This requires no heating, and should rub up under the brush into a perfectly smooth unctuous film.

Indiarubber solution is sometimes used as a mountant, and to make this, about 10 grs. of pure masticated rubber should be dissolved in an ounce of benzole.

PHOTOGRAPHIC NOTES.

Diamido-resorcin as a Developer.

Diamido-resorcin is a new developer for photographic purposes brought into the market by Grandjean Zimermann and Co., of Brugg, Switzerland. The following mixture is used as a bath : Water, 100 ; anhydrous sodium sulphite, 3 ; diamido-resorcin, 1. The latter must only be added immediately before use or a concentrated stock solution may be kept.—*Pharm. Cent.*, xxxix., 85.

Recovery of Silver.

To recover silver from photographic baths in which it exists as the soluble silver sodium thiosulphate, boil first with ammonium sulphide, thus precipitating the metal as sulphide ; this is then collected, washed, dried, and reduced to the metallic state by heating with charcoal.—*Sci. Amer.*, lxxviii., 19.

Developing with Glycin.

Glycin is the hydrochloride of *p*-oxyphenol-amido-acetic acid. According to Hübl, it is best used by preparing a concentrated solution for permanent use. Twenty-five grammes sodium sulphite are dissolved in 40 C.c. of hot water, 10 grammes glycin added, heated to boiling, and then 50 grammes potassium carbonate are added. For a normal or short exposure, 1 part of this solution is diluted with 20 parts of water (temperature, 20 to 25° C.), and, if necessary, a little caustic soda solution, 1 to 10, is added. When developing plates of doubtful exposure, 1 part of the solution is diluted with 20 parts of water, or when exposing plates the sensitiveness of which are quite uncertain, 1 part of the solution is diluted with 80 parts of water. One to 2 C.c. of potassium bromide solution are added to 1 litre of the fluid, and the developer is cooled to 10° C. by ice. The development takes a very long time, but this method allows almost any errors in exposure to be corrected.—*Chem. Zeit. Repert.*, xxii., after *Wiener photo Bl.*, 5, 3.

Photographic Tourists' Guide.

IN the following list an asterisk (*) preceding the name of a town indicates inability to find that any chemist in the place has a dark-room, though there may be one or more who stock photographic materials. Where there is a dark-room, the fact is indicated by a capital "D" following the name and address, and except where the dark-room is at an hotel, it may mostly be taken for granted that plates and other photographic materials are stocked. The dark-rooms can, in some cases, be used for developing as well as changing, and even where there is not a dark-room, it is usually possible to get plates changed.

Melksham (Wilts).

J. E. Bush, Market Place D.

Melksham is an ancient little town situated in the Avon valley, about twelve miles from Bath, and seven from Devizes. It has a very interesting church, with a very beautiful reredos in alabaster representing the Nativity. Three miles distant, on the road to Chippenham, is the quaint and ancient village of Lacock, with its beautiful and perfect abbey, the birth-place of Talbot-type and the seat of C. H. Talbot, Esq., son of the eminent chemist. Visitors can see over the Abbey on the payment of 6d., which goes to the church restoration fund

Middlesborough (Yorks.)

R. Hall, Morton Rd.
P. J. Harrington, Newport Rd.
Middleton & Co., Linthorpe Rd. D.
J. C. Robson, 37, Linthorpe Rd. D.

Middlesborough is on the Tees, and has some very good rustic scenery. The whole Cleveland district is interesting. There are ship-building yards, docks, the South Gare breakwater, nearly 2½ miles long, and many large chemical and other works, besides other objects.

Middleton (Lancs).

S. W. Evans, 27, Long St. D.

Middleton has an old church, 1120, very richly carved on the south side of the building, with a quaint looking wooden steeple. Under the steeple is a curious Norman arch. The interior contains a fine old screen. "The Old Boar's Head," and a drinking fountain are worth taking. Hopwood Hall is near, and has some views about it.

Middlewich (Cheshire).

F. Brauer, Lower St. D.

Middlewich is an old-fashioned market town on the river Dane.

*Midhurst (Sussex).

F. Coze, Eastbourne Rd. D.

Midhurst is on the Rother. Cowdray House, built about 1530, is a beautiful ruin.

Milnrow (Lancs).

W. Nall, 41, Dale St. D.

Milnrow, near Rochdale, presents no object of interest. It is too smoky and barren.

Mirfield (Yorks).

C. Crook, Easthorpe. D.

Mirfield is in the midst of woodland scenery. Robin Hood's grave and Roe-head House, the school attended by Charlotte Bronte, are among the objects of interest.

*Mohill (Ireland).

Burns's Commercial Hotel. D.

Mohill is near Dromod, on the Cavan and Leitrim Railway.

Mold (Flints).

D. Hughes, 7, High St. D.

Mold is surrounded by some of the grandest scenery of North Wales. H. P. Robinson took most of his best pictures in this district.

*Monmouth (Mon.).

A. Collingdon, Angel Hotel. D.

Monmouth's chief features are John of Gaunt's Castle, in ruins; the parish church, fourteenth century, with graceful spire 200, feet high; the bridge over the Monnow, 1272, with its "Welsh Gate," and near it a small Norman chapel; the temple-crowned Kymin, 800 feet high; and the Buckstone, a rocking stone.

Montrose (Forfar).

A. Davidson, 172, High St. D.

Montrose is a very old town. The chief points of interest to the camerist are the fine tower and spire of parish church, Suspension Bridge, Scurdyness Lighthouse, Lunatic Asylum, the Docks, and river mouth, the latter especially during the herring fishing. In the immediate neighbourhood are Rossie, Dunninald, and Lunan Castles, and a variety of sea and cliff scenery.

Morecambe (Lancs).

G. P. Parker, 4, Winterdyke Ter. D.

Morecambe presents many good views. The West End pier and promenade, the town from the bay and piers, sea-scapes with yachts, snapshots on sands and the old stone jetty. Heysham is a quaint and picturesque village two miles distant.

Moretonhampstead (Devon).

C. E. Evans, Forder St. D.

Moretonhampstead has some varied scenery around it. It is near Dartmoor.

*Nairn (Scotland).

Photographer on Station Rd. D.
Chemist in High St.

Nairn presents good pictures. There is a view of the High Street from the Free Church, of the town and river from the railway bridge, also above Cawdor Road. Snapshots at pier and on golf links. Cawdor Castle, grounds, and glen, five miles off.

Nantwich (Cheshire).

B. Woolstencroft, 14, Hospital St. D.

Nantwich is on the Weaver, and has some quaint old timber houses, a fine cruciform church, Early English to Perpendicular, with central octagonal tower, 110 feet high, a Gothic town-hall, and other objects.

*Neath (Glamorgan).

J. G. Isaac, New St.

Neath Abbey ruins and the remains of an ancient castle may be noticed, but they are sadly decayed and begrimed by smoke and coal dust. Extensive copper and tin-plate works and iron-foundries are in the district.

*Nelson (Lancs).

S. Jessop, 96, Manchester Rd.

Nelson is not far from Burnley. It is in a manufacturing district, but is of no remarkable interest.

Newark (Notts).

J. H. Smith, 9, Bridge St. D.

Newark Castle is a fine old ruin by the side of the river Trent. Many very pretty pictures may be obtained by boating up the river. Herds of cattle, in the summer time, cooling themselves in the water. The old church, with its steeple, which can be seen miles away.

New Basford (Notts).

F. C. Coates, 56, Rawson St. D.

New Basford is a suburb of Nottingham, in and around which are many good subjects for the photographer.

*Newburgh (Fife).

A. W. Shirras.

Newburgh is on the River Tay, amidst beautiful scenery. Near it is the Benedictine Abbey of Lindores, circa 1196, also the famous Cross Macduff.

*Newbury (Berks).

Fielder & Co., 2 & 3, Northbrook St.
Hickman & Metcalf, Market Place.

Newbury abounds with views for photographers, the scenery around being charming. The old Donnington Castle (famous in the civil wars of Charles I.'s reign) is quite near, also Highclere Castle, the seat of the Earl of Carnarvon. The roads around Newbury are very good, and cycling photographers would do well to stay in the town for a few days if in the neighbourhood.

Newcastle-on-Tyne (Northumberland).

P. Hall, 17, Pilgrim St. D.
Mawson & Swan, 11, Mosley St. D.
F. Park, 25, Collingwood St. D.
J. Watson, 34, Grainger St. D.
Wilkinson and Simpson, Ltd., 24, Newgate St. D.

Newcastle has, in the old Castle, the most perfect example of a Norman fortress in the country. The Black Gate should be noticed. St. Nicholas Cathedral, built 1206, possesses a beautiful and unique steeple. Jesmond Dene is a lovely park. The view of the old Mill is almost perfect. The High-level Bridge and the Swing Bridge make a fine picture. There is much shipping on the river, and plenty of good scenery round about.

*Newmarket (Cambs).

H. R. Sherborn. D.

Newmarket is the "racing capital" of England. It contains an unusual number of hotels and fine private houses, belonging to the patrons of the turf. During race-time the snapshot man may be very busy.

New Mills (Derbyshire).

A. Livesley & Son. D.

New Mills rises from the right bank of the River Guyt to the height of several hundred feet, and extends along the crags and turnpike road. There is much good work to be done in the Peak district.

Newport (Isle of Wight).

Timothy White Co., 122, High St. D.

Newport is in the centre of the island, and is within a quarter of an hour's walk of the historic castle of Carisbrooke. The village of Carisbrooke, the old church, and the convent are worth taking, and many other pretty pictures may be obtained in the neighbourhood.

Newport (Mon.).

Garrett & Atkins, 33, Commercial St. D.
A. G. Williams, 102, Chepstow Rd. D.

Newport abounds with good subjects in its vicinity. St. Woolos' Church, Stow Hill, built in the sixth century, with fine Norman architecture of west-end and tower, stands on a steep hill. Permission of Vicar required by photographers. The river front of the old Castle is good. Christ Church, two and a half miles away, is a good specimen of Norman work, and there is an old house at the corner of the churchyard. Tintern Abbey is distant twenty-two miles.

*Newport Pagnell (Bucks).

F. W. Taylor, 36, High St.

Tourists cycling to the North will be well repaid by leaving the Holyhead Road at Hockliffe, and riding *via* Northampton, passing through Woburn and Newport Pagnell. A fine view will be obtained of Woburn Park and the abbey, the seat of the Duke of Bedford. Newport Pagnell is an ancient market town within easy riding distance of Bedford and Northampton. The Parish Church is well worth a visit, and many interesting views may be obtained in the town and district.

Newton-le-Willows (Lancs.).

A. Peake, High St.

Newton-le-Willows is situated near to Warrington, and is a good centre for camerists who are desirous of "doing" the ship canal and the scenery on the Cheshire side of the boundary line.

Newry (Ireland).

S. Connor & Sons, Apothecaries Hall. D.

Newry is a seaport in Counties Down and Armagh, at the head of Carlingford Lough.

New Southgate (Middlesex).

J. H. Cuff, The Pharmacy. D.

New Southgate is six and a half miles north of London, and there is pretty country in its neighbourhood. Alexandra Palace and Park are not far from it.

Newton Abbot (Devon).

G. A. Barnes, 14, Courtenay St. D.

Newton Abbot is a very good centre for tourists, it being a junction. There is no better scenery in England than round Newton Abbot. Ford House, a good Tudor building, has lodged both Charles I. and William of Orange.

Newtown (Montgomery).

E. Owen, 48, Broad St. D.

Newtown is on the Severn and Montgomery Canal. It has not much to interest photographers, there are only a few local views.

*Northampton (Northampton)

F. Kirby, 114, Abington St.
F. Wright, 58, Abington St. D.

Northampton has amongst its objects of interest Queen Eleanor's Cross; St. Sepulchre's Church, Norman and Decorated, one of the few remaining round churches in England; St. Peter's Church, Norman; a fine town hall; a county hall, with a good decorated ceiling.

*North Shields (North'd).

W. G. Irving, 102, Bedford St.

North Shields has plenty of scenery in its neighbourhood, the sea-side, Tynemouth, Cullercoats, and Whitley. There are good views to be obtained in Northumberland Park. The Fish Quay, the herring fleet entering and leaving the harbour, and a river view with training ship, etc., are worth plates.

Northwich (Cheshire).

J. W. Deakin, 36, Witton St. D

Northwich is on the river Weaver, and the old Watling Street. Many of the dwelling houses are of an antique type.

Norwich (Norfolk).

W. T. Dawson, 76, Prince of Wales's Rd. D.
Fuller and Co., Rampant Horse St.

Norwich Cathedral and ancient churches and other buildings are noteworthy. Many quaint bits of old domestic architecture exist in the district of Coslany. There are remains of a Roman camp at Caistor St. Edmund, 3 miles south. The Broads are easily accessible.

Norwood (Surrey).

J. G. Atkinson, 25, Westow Hill.
J. E. Jewell, 30, Church Rd. D.
H. H. Mason, Broadway. D.
T. R. Prime, 88, Westow Hill.

Norwood, West (Surrey).

H. H. Mason, Broadway. D.

Norwood has pretty hill country around it, and is close to the Crystal Palace.

*Nottingham (Nottingham).

H. W. Cowley, 18, Alfreton Rd.
Gray & Selby, 27, Pelham St. D.
Guy and Co., 6, High St. D.
Shepperley & Co., 58, Long Row.
J. Taylor, 11, Bridlesmith Gate. D.

Nottingham Castle from the Boulevard should be taken in the early morning, 7 o'clock. Market Place, with Exchange, 8. Guildhall and Law Courts, 8.30. University College, 9. Free Museum, 9.30. School of Art. 10. Arboretum, Pond. Aviary, Chinese Bell, etc., 10.30. Rock Cemetery, with Robin Hood's Caves, 12. Trent Bridge, Colwick Park, Hall, and Lake should also be taken.

*Nuneaton (Warwick).

Illiffe & Son, 29, Market Pl.
H. Lester & Son, 1, Bridge St.

Nuneaton has a good Gothic church, and some remains of a twelfth-century nunnery, with a modern church built thereon.

*Nunhead (Surrey).

C. J. G. Bunker, Stuart Rd.

Nunhead is on the outskirts of South London, with much pretty scenery a little beyond.

*Oakham (Rutland).

Crown Hotel. D.

Oakham Castle is in ruins, except the hall, which is used for county business. According to an old custom, every peer passing the castle had to give a horseshoe, to be nailed to the gate of the castle, or placed in some part of the building, these present a very interesting feature in the place. The parish church is a fine building with a lofty spire. The old stocks in the market place, and the old school in the Churchyard are worth taking. Many pretty photographs may be obtained at the village of Burley-on-the-Hill

Oban (Argyll).

S. Lawrence, 101, George St. D.

Oban and its neigbourhood teem with subjects of interest. There are ruins of castles, ancient burying-places, rivers, glens, waterfalls, mountains, yachts and steamers—in fact, everything in the way of sea or landscape. The islands of Staffa and Iona are easily accessible, and they are unique, both on account of their historical associations and remains and of their natural formation.

*Oldbury (Worcester).

F. J. Keene, Market Pl.

Oldbury, which is near Birmingham, has itself nothing particular of interest, except the ruins of Dudley Castle, three miles away.

*Oldham (Lancs).

J. and J. Thompson & Co., Ltd., 192, Manchester St.
C. G. Wood & Co., 30, High St.

Oldham is a large industrial town with huge works and factories. The Alexandra Park covers 72 acres.

*Ottery St. Mary (Devon).

H. D. Badcock, Broad St.

Ottery St. Mary collegiate church is a magnificent building, a reduced copy of the cathedral of Exeter, these two being the only possessors of transeptal towers in England.

Oxford (Oxford).

J. A. R. Burbank, 116, Walton St. D.
C. Clayton, 158 and 160, Cowley Rd.
G. C Druce, 118, High Street. D.
J. Squire, 41, Queen St. D.

Oxford has everything to interest photographers; the Colleges, Cathedral, Churches, and splendid river scenery. Lodgings are cheap and good in vacation.

*Oxton (Cheshire).

Burroughs & Co., 29, Christchurch Rd.

Oxton is a suburb of Birkenhead, which see.

*Paignton (Devon).

F Sarson, 2, Palace Avenue.

Paignton is near Torquay, where there are dark rooms belonging to several of the chemists. There are many beautiful views around.

*Paisley (Renfrew).

R. Love & Co., 103, High St. D.

Paisley Abbey is the only item of interest to the photographer. The building dates from the fourth century. The chief external feature is the west front. In the north transept there is a beautiful window 35 feet high.

Parkstone (Dorset).

J. H. Morris, Tennyson Bldgs., Upper Parkstone. D.

Parkstone is between Poole and Bournemouth.

Peckham (Surrey).

M. Howell & Son, 81, High St. D.

Peckham has a large and influential photographic society, "The South London P.S." The Rye may give some snap-shot pictures.

*Peebles (Tweeddale).

Lintine Hotel. D.

Peebles presents the following items of interest: Ruins of the Cross Church; the bridge over the Tweed, several centuries old; Chambers' Institute, in the courtyard of which stands the shaft of the Old Cross of Peebles; Neidpath Castle, one mile away, strikingly situated on the rock; Black Dwarf's Cottage, four and a half miles, and Stobo Castle, six miles.

*Pembroke (Pembroke).

R. H. Trewceks, Main St.

Pembroke Castle is a very imposing ruin, with a Norman keep, 75 feet high, and 52 fect in diameter. Beneath is a huge natural cavern, 70 by 50 feet. Monkton Priory is another interesting structure. At Pembroke Dock, two and a half miles N.W., is the naval dockyard and arsenal.

Pendleton (Lancs).

G. J. Blore, 281, Broad St. D.
J. L. Smith, 180, High Street.

Pendleton is a north-western suburb of Manchester, and is a continuation of the main street of Salford.

Penrith (Cumberland).

J. Cowper, 50, King St.
T. Edmondson, 6, Corn Market. D.

Penrith is the principal entrance to the lovely scenery of the Lake District, which is too well known to need comment.

Penzance (Cornwall).

A. H. Buckett, 22, Market Pl. D.
N. H. Symons, 1, Market Pl. D.

Penzance has scenery of the most beautiful character, both landscape and seascape. In the town may be noted Quay Street and Church, 7 a.m.; Market Jew Street and Town Hall, 10 a.m., but not on market days; Esplanade and Harbour, morning and afternoon.

Pershore (Worcester).

W. Dowty, High St. D.

Pershore has an abbey in the town and plenty of interesting places in the neighbourhood. The road to Worcester, nine miles, is splendid.

*Perth (Perth).

J. Campbell, 41, George St. D.
G. Grieve, 128, High St. D.

Perth (general view) can be best taken from the railway viaduct. The chief items of interest are the ancient church of St. John, statues of Sir Walter Scott and the Prince Consort, the Marshall monument, the house of the "Fair Maid" in Curfew Row, Scone Palace, two and a half miles off, Hunting Tower, Kinfauns and Methvens Castles, still further away.

Peterborough (Northampton).

J. W. Bodger, 18, Cowgate. D.
T. J. Calcutt, 46, Narrow St. D.
H. E. Noble, Midgate Bldgs., New Rd. D.
Sturton & Sons, 42, Bridge St. D.

Peterborough has, in addition to its cathedral, a fair surrounding neighbourhood for views, including the Fenland scenery. Crowland Abbey, Thorney Abbey, Sandringham, Hunstanton Hall, and Castle Rising are accessible.

*Pitlochry (Perth).

P. Cameron. D.

Pitlochry provides several good views, including the Pass of Killiecrankie, three miles away.

Plaistow (Essex).

W. R. Barnes, 10, Terrace Rd. D.

Plaistow is five miles from London. It has nothing of importance in its immediate neighbourhood.

Plymouth (Devon).

J. H Bailey, 77, Old Town St. D.
Plymouth Co-operative Drug Co., 20, Cornwall St. D.
S. B. Turney & Sons, 183, Union St. D.

Plymouth is a remarkably good centre for photographic work, both seascape and landscape. The rivers Tamar and Plym are rich in picturesque scenery. The shipping in the Sound and the wild grandeur of Dartmoor are additional attractions.

*Pontypridd (Glamorgan).

T. Forrest & Son, 14, Market St. D.

Pont-y-Prydd means Bridge of Beauty, referring to the remarkable bridge over the River Taff, consisting of an arch of singular elegance. There are many items of interest to photographers to be found about the place.

Port Erin (Isle of Man).

R. K. Kermode. D.

Port Erin has, as its principal attraction to amateurs, the bold headland Bradda Head, the coast generally being very grand and rugged. One mile north-east is a Runic monumental cross.

Portmadoc (Carnarvon).

T. Jenkins, 142, High St.
D. Morris, 73, High St. D.

Portmadoc is the terminus of the Festiniog Railway, the pioneer narrow gauge railway. Some of the most beautiful of the Welsh Mountain scenery is to be found here.

*Portpatrick (Wigtown).

J. M. Brownlee. D.

Portpatrick has a round tower, date 1622. Picturesque views of the town and ruins of harbour may be obtained. The rock scenery on the coast is magnificent and easily reached. There are many interesting places in the neighbourhood. Snapshots of waves can be got on this coast, even in summer weather, the swell on the shore being at all times heavy.

Port St. Mary (Isle of Man).

R. K. Kermode. D.

Port St. Mary is a growing watering place. There are magnificent cliffs along the coast, and the scenery generally is wild and beautiful.

*Portsea (Hants).

G. Donaldson, 122, Queen St.

Portsea is close to Portsmouth.

*Portsmouth (Hants).

R. Holttum, 84, High St.

Portsmouth:—There are forts, ships of the Royal Navy in the harbour, the splendid new Town Hall of Portsmouth, and other objects of interest. Snapshot work may be done in abundance in the neighbourhood, especially on Southsea beach, and the Canoe Lake, where children sail their model yachts.

Preston (Lancs).

W. J. T. Jackson, 55. Fishergate.
W. Newsham, 119, Moor Lane. D.
T. Patterson, 99, Ribbleton Lane.
G. Sharples, 7, Fishergate. D.

Preston has docks, the river, public buildings, and parks.

*Putney (Surrey).

S. J. Poole, 116, Upper Richmond Rd. D.

Putney is on the Thames, six miles from Waterloo.

*Rainham (Kent).

C. T. Pyke, High St.

Rainham is near Sittingbourne, on the great Dover road.

Ramsgate (Kent).

Arden & Minnikin, 58, High St.
E. Baily, 9, Queen St. D.
Pavey & Co., 104, High St. D.

Ramsgate is a very favourite sea-side resort, and offers many attractions to photographers. Plenty of shipping may be seen passing. The harbour is a good place. There are historic remains in the neighbourhood. Sandwich, seven miles distant, is a quaint old place, with a very ancient church and houses.

Rawtenstall (Lancs).

J. Taylor, Albion House. D.

Rawtenstall can boast of but little to interest photographers.

Reading (Berks).

F. C Emberton, 39, Friar St. D.
F. Tunbridge, 39, Castle St.

Reading is a good centre for photographers. It has an abbey in ruins, time of Edward IV., fine churches, and quaint houses. Strathfieldsaye, Silchester, and Eversley are accessible. There are many interesting places, both up and down the River Thames.

Redcar (Yorks).

T. F. Walker, 61, High St. D.

Redcar is considered by medical men to have the most bracing air of any watering-place on the north-east coast. Its sands are unrivalled, stretching for about ten miles in extent, and firm enough to cycle on. The sea bathing is excellent. Kirkleatham Museum, Wilton Castle, and other places of interest to photographers are inland.

Redhill (Surrey).

T. Padwick, Station Rd. D.

Redhill is in the midst of some of the prettiest country in the South of England. Reigate is close by.

Redruth (Cornwall).

W. M. Martin, Fore Street. D.

Redruth is a place of great antiquity, and contains many druidical remains. Good marine views are within easy distance.

*Reigate (Surrey).

M. M. Woodward, 53, London Rd.

Reigate parish church contains the tomb of Howard of Effingham, the defeater of the Spanish Armada. There are good village views, and in the neighbourhood, woodland and heath scenery.

*Rhayader (Radnor).

R. W. Jones, East St. D.

Rhayader is a small town on the River Wye.

Rhyl (Flint).

G. R. Lawrence, 20, High St. D.
E. L. Pugh, 52, High St. D.

Rhyl is probably the best centre from which to "do" North Wales. The principal objects of interest to photographers are Rhuddlaw Castle, St. Asaph Cathedral, Cefn Caves, Bodelwyddan Marble Church, and Dyserth waterfall, all of which are in the immediate neighbourhood. In addition to these the amateur will find plenty of beach scenes and shipping, whilst in the Vale of Clwyd are innumerable bits of the most charming scenery. The Irish Mail, which passes at noon, is a favourite snapshot.

Richmond (Surrey).

R. Blanchford, 34, Hill Rise. D.
J. Parrott, 50, Friars' Stile Rd. D.

Richmond is famous for unrivalled scenery and views suitable as photo subjects. The park is a perfect feast for the camera; the view from the terrace near the "Star and Garter" is lovely, especially towards sunset. Up and down the river good bits may be had. Kew Gardens are not far; permission to be obtained from the Director.

Richmond (Yorks).

Walton & Co. D.

Richmond is a really good centre for amateur photographers. The natural scenery is fine, and many beautiful pictures may be taken. There are also the ruins of a Norman Castle and Easby Abbey.

Ripley (Derby).

J. Wain, High St. D.

Ripley is ten miles from Derby, and has silk lace manufactories and large neighbouring collieries and ironworks.

Ripon (Yorks).

H. B. Rudd, 29, Westgate. D.

Ripon presents the following objects of interest:—The Cathedral (permission for the interior from the Dean); the Market Square, especially on Thursdays, when the open market is held; the old church of St. Mary's, and, not least, Fountains Abbey, the most complete Cistercian abbey in Yorkshire (admittance 1s., photography is allowed). The district around is full of work. Masham, Tanfield, and Aldborough all within easy reach. The country, which is well wooded and watered by several rivers, offers scope for the landscape photographer.

* Ripponden (Yorks).

L. A. Cocker, Central Pharmacy.

Ripponden is on the Rybourne, which is crossed by two stone bridges. The church is of the Tuscan order, with a tower.

Rochdale (Lancs).

Atkins & Co., 93, Yorkshire St. D.
J. W. Bamford (exors. of), 242, Yorkshire St. D.
E. J. Green, 24, High St. D.
J. Monk-Jones, 78, Yorkshire St. D.
J. J. Thomas & Son, 24, Yorkshire St.

Rochdale, although possessing some fine buildings, is beautiful only in site. The parish church, St. Chad's, which is on an eminence approached by a flight of 122 steps, dates from the 12th century, but is mainly Perpendicular in style. The town hall is a good building.

Rochester (Kent).

J. S. Hewitt, 97, Eastgate.
F. J. Muskett, Guildhall Pharmacy, D.
C. F. Wyatt, 24, High St. D.

Rochester is well placed for photographic work. In addition to the Castle and Cathedral, the river, and the neighbouring dockyard, there is plenty of good country in the neighbourhood.

Rock Ferry (Cheshire).

J. Dutton & Son, 502, New Chester Rd. D.

Rock Ferry is a suburb of Birkenhead, and is near to the entrance of the Manchester Ship Canal.

*Rodley (Yorks).

H. Crossley. D.

Rodley is near Leeds.

Romford (Essex).

J. W. Lasham, High St., D., and Victoria Rd. D.

Romford is in the neighbourhood of Havering atte Bower, of which the village green, the stocks, and the whipping post are interesting. There are many pretty rural spots and village churches round.

*Romsey (Hants).

T. Milnthorpe, 7, Market Place. D.
White Hart Hotel. D.

Romsey Abbey may be photographed by permission of the clergyman in charge. It is a fine cruciform structure, but with Transition, Early English, and Decorated features.

*Roscrea (Ireland).

W. H. Bourke, Castle St.

Roscrea is a very ancient market town in Tipperary. Considerable remains of a castle, a lofty round tower, and the ruins of two abbeys exist.

Ross (Hereford).

T. Matthews, "Man of Ross" House. D.
A. Porter, High St.

Ross has grand scenery on the banks of the Wye. There are several objects of interest in the town. Tintern Abbey and other places may be easily reached.

*Rotherham (Yorks).

H. & W. Green, 13, College St.
J. Leadbeater, 5 & 7, Frederick St. D.

Rotherham's chief glory is its magnificent cruciform church, Perpendicular in style, with crooketted spire and fine west front. There are other important buildings, and two parks. Roche Abbey, a ruin, eight miles E S E, was a Cistercian foundation; eight miles N.E. is Conisborough Castle.

Rothesay (I. of Bute).

W. B. Jamieson, 64, Montague St. D.
P. Leith, 43, Victoria St. D.

Rothesay presents a wide and varied field for lovers of either landscape or marine scenery. Fine paddle steamers and yachts may be seen in the bay. Fishing boats, fishermen and fishwives, make very good pictures. There are old castles and country churches. At Ettrick Bay fine sunsets can be seen.

*Royston (Herts).

F. R. Hinkins, Hill Side. D.

Royston is situated in a bleak country, at the intersection of Ickneldway and the Ermine Street.

*Rugby.

R. Taylor, 20, Sheep St.
Eagle Hotel. D.

Rugby School and Close, the parish church of St. Andrew, and pretty villages and country round are worth attention. It is within a drive of Stratford-on-Avon, Coventry, and Kenilworth.

Runcorn (Cheshire).

J. H. Weston, Devonshire Bldgs. D.

Runcorn Bridge, the old parish church, the Ship Canal, Norton Priory, and the remains of Halton Castle are the principal attractions.

Ryde (Isle of Wight).

J. E. Frost. 27, Union St.
T. Smith, Top of Union St. D.
W. Smith, 21, High St. D.

Ryde Pier, the principal route from the mainland, presents a very busy spectacle during the season. The beauties of the island do not need description.

*Saffron Walden (Essex).

W. Hobbs, Gold St. D.
Rose and Crown Hotel. D.

Saffron Walden has the remains of a Norman Castle, and, crowning a hill, a stately Perpendicular church, with a spire 108 feet high, and brasses and monuments. Audley End is a magnificent mansion 1½ miles south-west.

St. Albans (Herts).

W. Duplock, 1, Holywell Hill. D.
J. Willan, 2, Holywell Hill.

St. Albans Abbey Church may be photographed by permission of the Rector. "The Fighting Cocks," near the river, is the oldest licensed house in the kingdom. Pretty views can be got along the side of the river Ver, on the way to St. Michael's. Portions of the wall of the Roman city, Verulam, will be seen in the fields on the left. London Colney is a pretty village about four miles distant.

St. Andrews (Fife).

W. R. Kermath, Greyfriars' Garden. D.
Smith & Govan, 109, South St. D.

St. Andrews University; ecclesiastical ruins; a historic castle ruin at the sea side; and the famous golf-links, are among the items of interest.

St. Anne's-on-Sea (Lancs).

T. A. Stead, St. Anne's Rd. West. D.

St. Anne's has a lifeboat memorial on the South Promenade, lighthouse on Sand-hills, and the church, which, although modern, is worth a plate or two. Snapshots of farming occupations and good pictures of quaint old thatched houses can be had.

*St. Asaph (Flint).

Kimmel Hotel. D.

St. Asaph is a little cathedral city. The cathedral is the smallest in the kingdom, rebuilt after 1284, and is mainly Decorated in style.

*St. Bees (Cumberland).

R. W. Broomfield, Main St.

St. Bees is a good centre for the Lake district. St. Bees Head is composed of masses of red sandstone, the cliffs are bold, and there is a fine beach. Calder Abbey is in the neighbourhood.

*St. Columb (Cornwall).

E. Griffiths, Union Sq.

St. Columb Major is situated on the summit of an eminence, supposed to have been a Danish fortification. Two miles south-east is Castle an Dinas, a large elliptical encampment. A mile and a half further there is a fine cromlech. Three miles to the north-east are nine upright stones, called the "Nine Maidens." St. Columb Minor, five miles W. by S., has fine lofty cliffs.

*St. David's (Pembroke).

A. David, The Square.

St. David's Cathedral, St. Mary's College, and the Bishop's Palace, are the principal objects. There is a village cross, which should be taken at noon. The coast scenery from Caerdwy, along the cliffs to Ramsey Sound, is grand. Magnificent sunsets may be seen from Whitesound Bay and St. David's Head. *Genre* studies are numerous.

St. Helens (Lancs).

J. C. Cotton.
J. G. Wallbridge, 52, Liverpool Rd. D.

St. Helens is in a very busy part of Lancashire. It is a great seat of glass manufacture, and has a handsome town hall, with a public library.

St. Heliers (Jersey).

J. T. Baker, 27, Halkett Place.
F. De Faye, 21, David Place.
Drug Stores, 18, Burrard St.
T. J. Le Seelleur, 17½, Beresford St. D.
C. Le Sueur, Charing Cross.

St. Heliers is the port of entry for Jersey, an island which has many beautiful places in it. Hand camera should be taken on coach, as the stops at some lovely cliff scenery are very short.

*St. Ives (Cornwall).

W. Trevorrow, Tregenna Pl. D.

St. Ives is a fishing town, beautifully situated on the west shore of a bay. It has a 15th century granite church, with an ancient cross. On a hill, 500 feet high, is a pyramid, erected 1782.

St Leonards-on-S. (Sussex).

E. H Hasselby, Eversfield Pl
Jameson & Curtis, 5, Grand Parade.
T. W. Jones, 71, Bohemia Rd.

St. Leonards and Hastings have a great deal to interest photographers. Battle Abbey, Bodiam, Hurstmonceux, and other castles are within easy reach.

*Stowmarket (Suffolk).

T. Simpson & Son, Market Pl.

Stowmarket Church is a fine flint-work structure, and contains some interesting monuments.

*Sale (Cheshire).

A. Smith, School Rd.

Sale has nothing special of interest, it being on the great Cheshire plain.

Salford (Lancs).

J. Massey, 362, Regent Rd. D.

Salford adjoins Manchester. It has a fine park—Peel Park, with museum and library in it.

Salisbury (Wilts).

Atkins & Son, Market Pl. D.
W. S. Blinkhorn, The Canal. D.

Salisbury Cathedral will furnish a good many plates. The interior of the church of St. Thomas of Canterbury, is worth a plate. Stonehenge, about nine or ten miles away, is best about mid-day. Many picturesque bits may be obtained in the neighbourhood of Salisbury.

*Sandgate (Kent).

W. H. Jacob, 3, High St. D.

Sandgate is a small watering place on the south coast. The castle dates from 1539. Near by is Shorncliffe Camp.

*Sandown (I. of Wight).

J. Dore, 27, High St. D.
Hotels (several). D.

Sandown is a watering place. The pier, town, and parade are all worth notice. Shanklin Chine is not far away.

Scarborough (Yorks).

H. Chapman, 52, Newborough, and 76, Falsgrave Rd. D.
G. Coverdale, 46, Westborough, and 9, Gladstone Rd. D.
J. M. Crosby, Ltd. D.
E. Parker, 29, Ramshill Rd. D.
J. Whitfield, 113, Westborough, and The Spa. D.

Scarborough has some of the finest coast scenery in England. Inland, there are, northward, vast tracts of moorland; westward, some beautiful valleys; to the south, the Wold Hills. Shipping in the harbour, and plenty of snapshot work. Forge Valley is very beautiful.

*Sedbergh (Yorks).

Taylor & Co., Main St.

Sedbergh has plenty of good scenery. The church is Norman. The grammar school dates from 1551.

Settle (Yorks).

J. W. Shepherd, Market Pl. D.

Settle is on the Ribble, at the base of Castleberg Cliff, 300 feet high. It has around it waterfalls, glens, rocks, caves, and mountain scenery.

Sevenoaks (Kent).

R. Barrat, 2, The Terrace, St. John's Hill.
E. Pain, 52, High St. D.

Sevenoaks.—Knole House dates back to 1456. The best view is the north-west front after 12 mid-day. There are fine views in the Park, 1000 acres in extent, and well stocked with deer. Otford Castle, 1200, is three miles north. Ightam Mote, 1340, should not be missed on any account. Ightham Church and very quaint village may also be noted.

*Shanklin (Isle of Wight).

T. L. Waterman, High St. D.

Shanklin Village is old. There are also the beach, cliffs, parade, pier, and old church. On Shanklin Chine a dozen plates would not be wasted. After a rainfall some pretty photos may be obtained of the waterfall.

Sheerness (Kent).

J. E. Hudson, 71, High St. D.

Sheerness is a strongly fortified seaport and naval dockyard on the Isle of Sheppey. The sea-bathing is excellent, and there is good country within reach.

Sheffield (Yorks).

J. P. Gambling, 641, London Rd., Heeley. D.
J. Gardner, 485, Glossop Rd., Broomhill.
J. Preston, 56, Fargate, and 33, Church St. D.

Sheffield has a fine Parish Church, new Town Hall, Mappin Art Gallery, Ruskin Museum, Queen Mary's Tower, and Sheffield Manor. Weston Park and Endcliffe Woods afford good views. Chatsworth and Derbyshire scenery are within easy reach.

*Sherborne (Dorset).

W. M. Chaffin, Cheap St. D.

Sherborne is a pleasant, old-fashioned town in the vale of Blackmore, with a noble cruciform minster, full of beauty and historic associations. Sherborne Castle is a ruin.

*Shipley (Yorks).

A. Dobson, 8, Saltaire Rd. D.

Shipley is on the river Aire, in the West Riding, and ten miles from Leeds.

*Shrewsbury (Shropshire).

Adnitt & Naunton, The Square. D.
R. L. Bartlett, 38, Castle St. D.
J. Dellaporta & Co. D.
Hickin & Pyefinch, Mardol Head.

Shrewsbury, with its steep, narrow streets, and its wealth of black and white half-timbered houses, is picturesque, as very few English towns are. It has a good many objects worth taking, including the Norman Castle, churches, and the School. At Haughmond Abbey, four miles distant, there is a good view.

*Sidcup (Kent).

A. Dewey. D.

Sidcup is in a charming district, eleven miles from London.

Sidmouth (Devon).

H. B. Penberthy, Market Pl. D.

Sidmouth has plenty of fine scenery. It is a favourite watering place, fourteen miles from Exeter.

*Silloth (Cumberland).

H. J. Smith, Esk St.

Silloth is a seaport and watering place on the Solway Firth. It has shipping, but not much of anything else to interest.

*Sittingbourne (Kent).

London Photo Co., 21, Station St. D.

Sittingbourne, in olden days, was a great halting place for Canterbury Pilgrims and for kings and others on their way to the Continent. The church contains some curious ancient monuments.

Sleaford (Lincolnshire).

W. Spyvee, 36, Southgate. D.

Sleaford has principally churches as its objects of interest. The tower of the parish church was erected about 1150.

Slough (Bucks).

Griffith & Walden, High St. D.

Slough has Stoke Pogis, Burnham Beeches, and Windsor in its neighbourhood.

*Smethwick (Stafford).

H. G. Betts, Six Ways.

Smethwick is near Birmingham. It is noted principally for its manufactures.

*Solihull (Warwick).

E. Trinder, High St.

Solihull is a suburb of Birmingham. The church is a fine building, both inside and out.

Southampton (Hants).

W. Bates & Co., 50, Oxford St. D.
H. A. Carter, 56, London Rd. D.
W. Martin, 112, High St. D.

Southampton is a capital centre for photographers. In the town itself are many examples of architecture of olden times, Many snapshots may be obtained in the Docks. In the Solent there is plenty of yachting. Netley and Beaulieu Abbeys and the New Forest should also be visited.

Southend-on-Sea (Essex).

G. R. Dawson, 42, High St. D.

Southend has old churches, a ruined castle, and pretty country round about.

Southport (Lancs.).

H. Ball, 121, Lord St. D.
J. R. Cave, 52, Nevill St. D.
B. Wyles, 56, Hoghton St., and 10, Liverpool Rd., Birkdale. D.

Southport has very extensive sands and sand-dunes, favourable for sunset and other atmospheric effects. The esplanade commands views of the Welsh and Cumberland mountains. Good snapshots can be obtained on the shore and on the Marine Lake. In Hesketh Park the Carpet Gardens make rather a unique picture at 3 p.m. Some fine lake views can be secured at Churchtown. Ormskirk is an old-fashioned town in the neighbourhood.

Southsea (Hants).

H. C. Haggis & Co., 65, Russell St., Southsea, and 187, Arundel St., Landport. D.
T. Postlethwaite, 131, Fawcett Rd. D.

Southsea Castle and beach, Eastney barracks, forts, etc., and Portsmouth dockyard and shipping, are noteworthy.

South Shields (Durham).

W. Dennis, 38, Ocean Rd.
A. Mays, 3, Market Place. D.
B. Williamson & Co, 17, Market Place.

South Shields is a seaside town with a beautiful pier and parks. There is fine rock scenery along the coast and plenty of shipping.

*Southwark (Surrey).

C. J. G. Bunker, 135, Gt. Dover St.

Southwark, or "The Borough," is a portion of London on the southern side of the Thames. St. Saviour's Church is a fine building.

*Southwell (Notts).

A. J. Loughton, Market Place. D.

Southwell, on the ancient Ermine Street, has a stately cruciform minster, which, with its three towers, resembles York on a smaller scale, and dates from 1110 to 1300. There are picturesque ruins of the palace of the Archbishops of York, *circa* 1360.

*Southwold (Suffolk).

W. J. Hanner, Market Pl.
J. Martyn, 94, High St. D.

Southwold Church is a fine old building with splendid porches and magnificent interior. The town stocks are in a remarkably fine state of preservation. There is a large ancient pump in the centre of the curious old market place. There is plenty of material for good work in the neighbourhood.

Spalding (Lincs).

E. W. Bell, High Bridge.
M. Shadford, The Limes. D.

Spalding is in the midst of typical fenland scenery. There are magnificent churches in the neighbourhood, also Croyland Abbey, and the Three-way Bridge.

*Spilsby (Lincs.).

J. J. Rainey, Church St.

Spilsby is on the edge of the Wolds, and in Tennyson-land. There are monuments to the Willoughby family in the church, and a bronze statue of Sir John Franklin in the market-place.

Stafford (Stafford).

J. & H. A. Averill, Market Sq. D.

Stafford has picturesque scenery around it, with fine old churches, castle, and ruins.

Stalybridge (Cheshire).

D. Innes, 47, Melbourne St. D.

Stalybridge is on the River Tame, in a lovely mountainous country.

Stamford (Lincs).

F. Dickinson, 13, St. Mary's St. D.
C. Fields, 66, Scotgate. D.

Stamford has good roads and scenery. There are six churches of great historic interest. Close by is Burghley House. There are also interesting antiquarian remains.

Steyning (Sussex).

A. Smart, High St. D.

Steyning is a quaint old market town. It has a fine Norman church and is in the centre of lovely scenery. Bramber and Beeding, about one mile distant on the River Adur, should be visited.

*Stirling (Scotland).

T. Walker, Albert Pl.

Stirling Castle should be taken from the north. The old bridge over the River Forth, the Wallace and Martyrs' monuments, and Cambuskenneth Abbey may be particularised, but a whole day or more might be devoted to the objects of interest in and around Stirling.

Stockport (Cheshire).

J. C. Arnfield, 7 & 9, Lower Hillgate. D.
J. W. Buckley, 73, Shawheath. D.
B. N. Cooper, 54, Chestergate.

Stockport has a very fine district outside. The town is built on the slopes of a narrow gorge, where the Tame and the Goyt unite to form the Mersey.

Stockton-on-Tees (Durham).

Brayshay & Son, 38, High St.
W. Clarke, 153, High St. D.
F. A. Graham, Norton Rd.
T. W. Sudlow, 158, High St.

Stockton has an extensive park, and good scenery around it. Ship-building yards, blast-furnaces, foundries, engine works, potteries and ironworks are the mainstay of the place.

Stoke-upon-Trent (Staffs).

J. H. Adams & Co., High St. D.

Stoke is a modern place of no special interest. Trentham, which is interesting, is about three miles away.

*Stonehaven (Kincardine).

J. Wood & Co., 9, Market Sq.

Stonehaven is a fashionable seaside resort. The old town is very quaint and beautiful. There are magnificent rock-scenery and sea pieces. The harbour in the fishing season is an ideal place for snapshot work. Within a mile are the ruins of Dunottar Castle, celebrated in 'Old Mortality.' There is beautiful river scenery on the Carron and Cowie. Machalls, 4 miles distant, is noted for its wild grandeur, the sea dashing into chasms and rising into spray in stormy weather.

*Stornoway (Ross).

S. Lawrence, 29, Cromwell St.

Stornoway has not much of interest except the fisher people and the castle, a building in the Tudor style, built on elevated ground at the east end of the bay.

Stourbridge (Worcester).

F. W. Biggs, 151, High St. D.

Stourbridge is near the Clent Hills and Kinver Edge, both of them very popular pleasure resorts.

Photographic Tourists' Guide.

IN the following list an asterisk (*) preceding the name of a town indicates inability to find that any chemist in the place has a dark-room, though there may be one or more who stock photographic materials. Where there is a dark-room, the fact is indicated by a capital "D" following the name and address, and except where the dark-room is at an hotel, it may mostly be taken for granted that plates and other photographic materials are stocked. The dark-rooms can, in some cases, be used for developing as well as changing, and even where there is not a dark-room, it is usually possible to get plates changed.

St. Mary Church (Devon).

T. S. Waymouth, opposite the Church. D.

St. Mary Church is near Torquay. The scenery is very fine, and there are many picturesque bits.

Southborough (Kent).

B. Chatterton, 92, London Rd. D.

Southborough is in the midst of rural, quaint, and picturesque spots, such as the "Garden of England" only can produce. Numerous "seats" and places of interest in immediate neighbourhood, and its proximity to Tunbridge Wells is an additional attraction.

*Stranraer (Wigtown).

George Hotel. D.

Stranraer has not much attraction in itself. Castle Kennedy, three miles distant, is an ivy-clad ruin, built early in the sixteenth century. The surrounding grounds are well laid out, and though artificial the effects are very striking, not the least so being that of light and shade on the variously disposed terraces.

Stratford-on-Avon (Warwick)

R. Hawkes, 33, High St. D.

Stratford is full of interest, and may be made the headquarters of good work for a week at least. The Church, Shakespeare's House, Anne Hathaway's Cottage, and many quaint old houses are the principal features, but Warwick, Coventry, Kenilworth, Stoneleigh Abbey and Park, and many other places should be visited.

Streatham (Surrey).

J. J. Laws, 6, Commercial Ter. D.

Streatham has beautiful country, richly wooded, around it. Tooting Common is near. There is also an old church.

Stretford (Lancs).

S. Broadbent, 1177, Chester Rd. D.

Stretford is a suburb of Manchester.

Stroud (Gloucester).

S. J. Coley, 57, High St. D.
D. Smith, Market Pl. D.

Stroud stands in a charming valley in the midst of a most beautiful country. Stroud water is noted for its great use in dyeing scarlet and other grain colours.

Sunderland (Durham).

H. A. Brown, Roker.
A. D. Purse, 15, Salem St.
J. Walton & Son, High St. D.

Sunderland consists of Monkwearmouth and Bishopwearmouth. It has specimens of Saxon and Norman architecture. Pictures may be obtained on the river, in the ship-building yards, and at the seaside. Roker is a popular watering-place close to Monkwearmouth.

Surbiton (Surrey).

J. P. Jackson, 68, Brighton Rd. D.
C. Lowe & Co., 1, Claremont Rd. D.

Surbiton is a suburb of Kingston-on-Thames. Hampton Court Palace and Bushey Park are near.

*Swanage (Dorset).

W. Pouney, High St. D.

Swanage is on the Isle of Purbeck, where there is plenty of rugged coast scenery. It is easily accessible by steamer from Bournemouth.

Swansea (Glamorgan).

J. T. Davies, 13, Walter Rd.
N. M. Grose, 8, Temple St.
J. G. Isaac, Castle Sq.
H. H. Parlby, 9, Cradock St. D.

Swansea is surrounded by magnificent scenery. There are some waterfalls in the neighbourhood. It has a large harbour and docks.

Swindon (Wilts).

S. Daniel, 36, Regent St. D.
J. Green & Son, Wood St. D.

Swindon (Old) is a rather picturesque place, situated in the midst of quiet country scenery. New Swindon is mainly noted for the engineering works of the G.W. Railway.

*Tan-y-Bwlch (Merioneth).

Oakeley Arms Hotel. D.

Tan-y-Bwlch is on the Festiniog Railway, between Blaenau Festiniog and Penrhyn-deudraeth, in the neighbourhood of waterfalls and mountains.

*Tarporley (Cheshire).

A. V. Aston, The Terrace.

Tarporley has in its neighbourhood the ruins of Beeston Castle. Other views may also be obtained.

*Taunton (Somerset).

J. Chaffin & Sons, 65, East St. D.
Gregory & Wrenn, 15, East St.
A. J. Smith, 47, North St.

Taunton is a well-built town in the fair and fertile valley of the Tone. The great hall of the castle is fitted up as a museum. The church of St. Mary Magdalene has a noble Perpendicular tower, 153 feet high. The shire-hall is Elizabethan.

Tavistock (Devon).

H. T. Doble & Son, 49, Brook St. D.
T. E. Pearce, 1, West St. D.

Tavistock is well situated for the man who wishes to get a representative lot of "Devon Scenery" negatives. Dartmoor is on one side and the lovely valleys of the Tamar and Tavy are on the other. There are old Abbey buildings and a fine old church in the town.

*Taynuilt (Argyll).

S. Lawrence, near the Station.

Taynuilt stands at the base of Ben Cruachan (3670 feet high) and is about three miles from the old Bridge of Awe, which figures so prominently in Scott's 'Highland Widow.' Inverawe is the mansion house from which Argyll set out to plunder "the bonny house o' Airlie."

*Teignmouth (Devon).

Valentine & Sons, 9, Somerset Place. D.

Teignmouth and vicinity are rich in photographic attractions, among which may be mentioned the red sandstone irregular coast line and cliffs. At high tide the estuary of the Teign offers endless facilities for photographs of yachts, coasting traders, fishing boats, and fishermen, etc. The bridge over the Teign is the longest wooden bridge in England, and is over half a mile in length. The hills to the back of the town rise to the height of about 800 feet.

Tenbury (Worcester).

J. Slade, Teme St. D.

Tenbury is on the Teme, and has a charming neighbourhood and very pretty river scenery. It has also a spa, and St. Michael's College.

Tewkesbury (Gloucester).

A. Enoch, 124, High St. D.
L. L. Stroud, 131, High St. D.

Tewkesbury Abbey, of Norman architecture, with fine west front and massive central tower, and a great number of old timbered houses in the town, form the chief attractions. Telford's iron bridge over the Severn has a span of 176 feet.

*Thame (Oxon).

H. W. G. Morris, High St.

Thame is a market town of Roman origin, with a large, handsome, cruciform church. The scenery round is noted for picturesque beauty and richness.

*Thirsk (Yorks).

J. R. Clarke, Ingramgate. D.
C. M. R. Knaggs, Royal Oak Hotel

Thirsk is in the North Riding, in the vale of Mowbray on the Cod Beck. It has a fine Perpendicular church.

Thornaby-on-Tees (Yorks).

T. A. Ronchetti, 40, Mandale Rd. D.

Thornaby was formerly called South Stockton. There are several places of interest within a few miles.

Thornhill (Dumfries).

J. Fingland, 101, South Drumlanrig St. D.

Thornhill is a large and beautiful village situated in the centre of the finest scenery of Nithsdale. In the vicinity are Drumlanrig Castle, a seat of the Duke of Buccleuch; Closeburn Castle, the oldest inhabited house in Scotland; the fine ruin of Morton Castle; Crichope Linn, etc., etc.

Tillicoultry (Clackmannan).

T. Hetherington, High St. D.

Tillicoultry is a manufacturing village, the houses of which are mostly built of whinstone. Stirling Castle and town are nine miles westward.

Todmorden (Lancs).

H. B. Pare, 6, Water St. D.

Todmorden is on the border of Lancashire and Yorkshire, prettily situated among the hills on the Calder. It has a classical Town Hall, in front of which is a bronze statue of John Fielden, by Foley.

Tonbridge (Kent).

F. G. Abel, 124, High St. D.
H. R. Beckett, 5, Quarry Hill Rd. D.
S. F. Wardley, 132, High St. D.

Tonbridge Castle, by the River Medway, is worth notice. The Grammar School occupies handsome buildings, erected in 1865.

*Torcross (Devon).

W. Vickery, Torcross Hotel. D.

Torcross is on the coast near the Start Point, and not far from Dartmouth. Kingsbridge is the nearest station, reached by coach.

Torquay (Devon).

W. Bathe & Co., 24, Fleet St. D.
J. W. Cocks, 1, Madeira Pl. D.
F. March, Holloway's Stores, 31, Fleet St. D.
J. Taylor, 15, Lucius St. D.

Torquay is surrounded by marine and other scenery of exceptional beauty. There are many picturesque bits. The river Dart is within easy distance. Kent's Cavern is a mile distant.

Totnes (Devon).

W. E. Curtis, 37, Fore St. D.

Totnes is on the slope of a steep hill on the right bank of the Dart. Its old church, castle, and Butter Walk are worth notice. Bury Castle is another object of interest.

*Tring (Herts).

G. E. Jeffery, High St.

Tring Park, built by Wren for Henry Guy, is the seat of Lord Rothschild. The church is a handsome embattled structure, with a large tower.

Trowbridge (Wilts).

J. H. Aplin, 6, Silver St. D.

Trowbridge is situated on a rocky hill near the river Biss. The church, Perpendicular, 1475, has a spire 150 feet high.

*Truro (Cornwall).

T. B. Percy, 11, River St.
F. H. Tims, Cathedral Lane. D.

Truro River has beautiful scenery on its banks. The new cathedral is a fine building, an Early English granite structure, which incorporates a portion of the old parish church. The Cornish coast, rugged and grand, is accessible.

Tunbridge Wells (Kent).

Dunkley & Rogers, 55, High St. D.
H. S. Pearmund, 48, High St. D.
B. Whitrow, 15, St. John's Rd. D.

Tunbridge Wells is on the border of Kent and Sussex, and is a splendid centre for amateur photographers.

Among objects worth notice are:—Ye Pantyles Promenade, in the morning; Toad Rock, Loaf Rock, and High Rocks, at any time; panorama of town from the common, in the morning; cattle studies on the common, at any time; Bayham Abbey, six miles away, Mondays and Wednesdays; Penshurst Place, a perfect example of a wealthy gentleman's house of the time of Edward III., open three days weekly in the summer, also six miles distant.

Twickenham (Middlesex).

H. F. Peake, The Green. D.

Twickenham is on the north bank of the Thames, near Richmond and Teddington. Strawberry Hill is here.

Tynemouth (Northumberland).

T. O. Mawson, 12, Percy Park Rd. D.

Tynemouth is the chief watering-place of Northumberland. The Sands, Aquarium, Skating Rink, St. George's Church, and Cullercoats Village in the distance should be taken at 10 a.m. Among other objects of interest are Lord Collingwood's Monument and Spanish Battery; the Castle Yard, Old Abbey and Lighthouse, East Aspect, with Tynemouth Village in the background.

Uckfield (Sussex).

E. H. Farr, High St. D.

Uckfield is eight miles from Lewes, and has pretty scenery around it, but no special object of interest in itself.

Ulverston (Lancs).

H. W. Mackereth, Market Pl. D.
W. Porter, Queen St. D.

Ulverston is centrally situated for visitors to the English Lake District, being nine miles from the foot of Windermere, and also nine miles from Coniston Lake the home of Ruskin; it is only one mile from Morecambe Bay and nine from the Northern Brighton, namely, Grange-over-Sands. The famous Conishead Priory, now a Hydropathic Establishment, is two miles out of town, and Holker Hall (the seat of Mr. Victor Cavendish) about seven miles away. Ulverston is also the Railway Junction for Windermere.

Upper Bangor (Carnarvon).

H. R. Jones, 29, Holyhead Rd. D.

Upper Bangor has grand and beautiful scenery around it. The Cathedral of Bangor and the University College of North Wales are worthy of notice.

*Uppingham (Rutland).

W. J. W. Stocks, High St. D.

Uppingham School, founded 1584, is the principal feature of the place. It has a good schoolroom and decorated chapel, built in 1863, from designs by Street.

Uttoxeter (Stafford).

A. Parker, High St. D.

Uttoxeter has good woodland scenery close at hand. Alton Towers and Dovedale are within easy distance.

Uxbridge (Middlesex).

Rayner & Son, 39, High St. D.

Uxbridge has in its neighbourhood, along the River Colne, some splendid scenery and some of the most ancient of churches in the surrounding district, such as Hughenden and Hanfield.

Ventnor (Isle of Wight).

W. H. Littlefield, 30, High St. D.
C. A. Smith, 3, High St. D.

Ventnor is a charming town situate in the centre of the romantic scenery of the Undercliff. From the pier, and also from the cliffs, excellent and picturesque views of the town, east and west, may be obtained in morning and afternoon. The park affords some pretty bits. Just past the entrance from the seaside to the Park, there is a picturesque waterfall, generally overlooked. Steephill Castle affords a pretty object amongst the trees, and Steephill Cove should not be missed. There are numerous other places, all forming good subjects for the camera; and, for instantaneous work, the small yachts, passing ships, etc., are good.

Wakefield (Yorks).

J. L. Chaplin & Son, 55, Corn Market. D.

Wakefield Cathedral should be photographed from a neighbouring middle or top window, owing to the height of its spire. A good view of the interior would be best taken in the afternoon. On the eight-arch bridge over the Calder is an interesting chapel founded in 1357. The town-hall, erected in 1880, is a fine building in the French Renaissance style.

Walker-on-Tyne (Northumberland).

J. Brown, Byker St.

Walker is about three miles east of Newcastle. The great Roman wall terminates about half a mile east of the village.

Wallingford (Berks).

H. T. Holme, Market Place. D.

Wallingford is on the Thames, and has a very fine river view. It has also Roman earthworks, a fragment of a Norman Castle, and some old churches.

Walsall (Stafford).

Major, Ltd, 25, Park St. D.

Walsall is an easy railway journey from Lichfield Cathedral and district, where there are many beauties to attract the photographer.

*Walsingham (Norfolk).

A. Pickard, High St. D.

Walsingham has some ruins of an Augustinian priory, founded, according to tradition, in 1016. The town is situated in a vale, surrounded by bold heights presenting diversified scenery.

Waltham Abbey (Essex).

J. A. Marshall & Son, High Bridge St. D.

Waltham Abbey is noted for its historic old abbey, the supposed burial place of King Harold, adjacent to which is a very old bridge, known as Harold's Bridge, said to have been built by the King of that name; there is also a remarkably fine gateway in the immediate vicinity. Waltham Cross (one mile distant), takes its name from the cross erected there by King Edward I. in memory of his wife Eleanor, whose body rested there on its way to London. The old Temple Bar is pleasantly situated in Lady Meux's beautiful park.

*Walthamstow (Essex).

E. H. Hamilton, 19, St. James' St.

Walthamstow.—Some views can be obtained on the River Lea. Higham's Park is about two miles distant, and Epping Forest, by road or rail, is easily accessible.

Walton-on-Thames (Surrey).

F. Cherry, 3, The Broadway. D.

Walton Church has some interesting monuments. The country around is pretty.

*Walton-on-Naze (Essex).

Azulay's Studio, High St. D.

Walton Hall, the Tower on the Naze, the tidal wheel-mill, backwaters with windmill, and the coastguard with lifeboat station, all make good pictures.

*Wandsworth (Surrey).

T. T. Hora, 346, York Rd.

Wandsworth is four miles from London, at the junction of the River Wandle with the Thames.

*Warminster (Wilts).

Bath Arms Hotel. D.

Warminster is an ancient market town on the west border of Salisbury Plain. Longleat, four and a half miles south-west, is one of the noblest Elizabethan mansions in the Kingdom, with a fine collection of portraits and a magnificent park.

Warrington (Lancs).

M. Eckersley, 33, Bridge St. D.
Hill & Co., 62, Buttermarket St. D.
F. W. Knowles, 77, Bridge St. D.
J. Rymer Young, 40, Sankey St. D.

Warrington is in close proximity to the Manchester Ship Canal, Docks, and Locks. The town itself possesses a few old buildings, and an ancient church with a fine interior. Warrington is surrounded by pretty country, especially on the Cheshire side, and is near to several old villages and churches, country seats, etc., and offers good scope for landscape work.

*Warwick (Warwick).

Mrs. Halbeard, Woolpack Hotel. D.

Warwick offers subjects for at least three plates in its streets. A charming peep of the castle and river may be had from the bridge on the high road. St. Mary's Church has a Norman crypt, the superb Beauchamp Chapel (1464), and a wealth of interesting monuments. There is also Guy's Cliff, with its bewitching old mill amid sylvan surroundings, and bonny little bits on the high road to Kenilworth Castle.

Waterford (Ireland).

J. Carew, 46, John's Hill. D.
Poole's Co-operative Stores, 134, Quay. D.

Waterford is on the river Suir. It has several old ruins of abbeys and castles, and there are also seaside resorts within a short distance. Cyclists will find some very good roads in this district.

*Watford (Herts).

W. Coles, 60, Queen's Road. D.
E. Martindale, 211, High St. D.

Watford is a market town on the Colne. The Perpendicular Church contains some interesting monuments of the Earls of Essex, whose seat, Cassiobury, is close to the town.

Wellingborough (North'mt'n)

F. Simco, 23, Market St. D.

Wellingborough is on a declivity near the confluence of the Ise with the Nen, ten miles from Northampton. It has an imposing Parish Church, with elegant spire, and other public buildings.

Wellington (Salop).

James Bates, Ltd., Chemists. D.

Wellington, as a centre of pictorial interest, can scarcely be beaten. It has some splendid landscapes and numerous ruins, while the mountain scenery is very fine. The winding path of the Wrekin is simply studded with beauty spots.

*Wellington (Somerset).

W. Gregory, Fore St.

Wellington is seven miles from Taunton, near the Tone and the foot of the Black Downs (900 feet high), on the summit of which is a Wellington obelisk. In the church, which has an embattled tower, there is a Jacobean monument to Chief-Justice Popham.

*Wells (Somerset).

E. Norton, 15, High St.

Wells Cathedral, completed in 1239; the Chain Gate, at the entrance to the Vicar's Close; St. Cuthbert's Church, with one of the finest towers in the county; and the interior of the Chapter House, are all good objects. Wookey Hold, with views on the River Axe, two miles distant, Glastonbury, six miles, and the Cheddar Cliffs, eight miles, should be visited.

Weston-s.-Mare (Somerset).

S. Lupton, 5, Bristol Rd. D.
H. C. Parkes, 34, Upper Church Rd. D.

Weston is on the Bristol channel, and affords very fine scenery, both marine and landscape; it is within easy reach of the North Devon Towns. There are several fine buildings and cathedrals in the immediate neighbourhood. The sands will give plenty of employment to the hand-camera man.

*Weybridge (Surrey).

Boyce & Kennett, Church St.
Surrey Chemists' Co.

Weybridge is at the junction of the Wey and the Thames. It has in its vicinity many elegant seats, notably Oatlands, occupying the brow of an eminence near a fine sweep of the Thames.

Weymouth (Dorset).

A. H. Roberts, The Westham Pharmacy. D.
Targett & Wiseman, Bridge Pharmacy. D.

Weymouth is pleasantly situated on the shore of a fine open bay, and has some good marine views and grand landscape and bold coast scenery. The Isle of Portland and Chesil Beach are close by.

Whaley Bridge (Cheshire).

A. Livesley & Son, Chemists. D.

Whaley Bridge is near Stockport, and within easy distance of several pretty spots in Cheshire and Derbyshire.

Whitby (Yorks).

J. Brooks, 15, Flowergate. D.
Craven Bros., Skinner St. D.
J. Frank, Bridge St.
W. Ruff, West Cliff Pharmacy. D.

Whitby is a charming place for amateur or professional photographers on tour; the town is quaint and most interesting, and together with the harbour provides good work for the artistic camerist, while the landscape views in the surrounding country are abundant and unsurpassed.

Whitehaven (Cumberland).

F. B. Bennett, 37, King St. D.
G. C. Gass, 11, King St. D.
W. F. and H. Hunter, 5, Roper St. D.
F. T. Patman, King St.
Wilson and Kitchin, 27, King St. D.

Whitehaven is within easy distance of some of the finest lake and mountain scenery of Cumberland. It possesses a handsome pier, and in the neighbourhood are the ruins of an abbey, containing one of the best examples of a Norman arch in England.

*Widnes (Lancs).

J. W. Towers. D.

Widnes is principally noted for its iron foundries, copper-smelting works, and manufactures of soda, soap, etc. It is connected with Runcorn by a handsome railway bridge over the Mersey.

Wigan (Lancs).

W. Aspinall, 109, Scholes.
J. H. Atherton, 33, Newmarket.
A. H. Benson, 10, Darlington St. D.
Winstanley & Fairhurst, 9, Market St. D.

Wigan has not many objects of interest to photographers within the

town itself, but near to it is Haigh Park, the seat of the Earl of Crawford, President of the Royal Photographic Society, permission to photograph being obtained from the estate office. Lathom Hall, the seat of the Earl of Lathom, is also near.

*Wincanton (Somerset).

E. Goodfellow, 47, High St. D.
W. W. Harris, 12, North St. D.

Wincanton Town Hall and Market Square; the Parish Church (east) and ivy-covered cottages; also a south view; Balsan House, by permission; the Carmelite Priory Church, and some old thatched cottages should be photographed. Some old carving in the north porch of the parish church is well worth a plate. Many fine pictures on the Blackmoor Vale are obtainable, and the view from Bratton St. Maur Church is grand.

Winchester (Hants).

W. D. Gibb, 31, High St. D.

Winchester Cathedral can be photographed by permission of the Dean. In addition there are the municipal buildings; the Great Hall of Winchester Castle; the West Gate from High Street; a general view of the city from St. Giles' Hill; a view alongside the River Itchin, including the tower of the chapel of Winchester College; the Buttercross, and many other objects. St. Cross, which is beautifully situated a mile and a quarter away, should be visited. It was founded in 1132.

Windermere (Westmoreland).

R. H. Barker, Chemist (near Railway Station). D.

Windermere is in the midst of some of the most lovely lake and mountain scenery in England; the waterfalls also make pretty pictures, while the yacht races which occasionally take place there afford opportunities for snapshot work.

Windsor (Berks).

J. D. Harmer, 2, St. Mark's Rd. D.

Windsor Castle from the Brocas, including part of the Thames, and the Castle from the Home Park, are good. Permission to photograph within the Castle gates must be obtained from the Board of Works, and no view within the Cloisters or St. George's Chapel may be taken without special leave from the Dean. Eton Chapel, from the North Terrace of the Castle, makes a lovely picture. The tourist ought to visit Burnham Beeches and Virginia Water with his camera.

Wisbech (Cambs.).

M. Hill, 52, Norfolk St. East.
J. T. Maxey, 8, High St. D.
W. T. Oldham & Son, Market Pl. D.

Wisbech is in a neighbourhood which provides a variety of entertainment for tourists. The roads are good for cycling; the fen and marshland churches give particularly fine examples of Norman architecture for the photographer; there is also good fishing for sportsmen, while farmhouse lodging is remarkably cheap.

*Witham (Essex).

R. P. Green, Chemist.

Witham Parish Church dates from 1327, the Transition south door, however, being of the twelfth century. There are many old monuments inside the church.

Witney (Oxon).

J. T. Davy, 49, Market Sq. D.

Witney, on the Windrush, has good landscape and architectural views. The church is a fine cruciform, thirteenth-century structure, which was restored in 1867. The Market Cross was erected in 1683.

Wolverhampton (Stafford).

Reade Bros. & Co., Ltd., Victoria St.
F. J. Gibson, 93, Darlington St. D.

Wolverhampton and neighbourhood are rich in suitable subjects of a varied character. The old church, St. Peter's, is of great architectural beauty, and was founded more than nine hundred years ago. The Art Gallery and School of Art is a fine building. Interesting and amusing snapshots may be obtained in the wholesale open-air market.

Woodbridge (Suffolk).

Betts & Son, Thoroughfare. D.
E. J. Eaton, Church St. D.
A. Gall.

Woodbridge is on the tidal river Deben, and snapshots of shipping may be had. St. Mary's Church is a fine flint building. There is a Market Cross, and there are excellent views in the neighbourhood.

Woodford Green (Essex).

B. Broome, High St. D.

Woodford Green is on the outskirts of Epping Forest, the southern extremity.

*Wood Green (Middlesex).

G. Daniel, Chemist.

Wood Green is in the North London postal district, and is near the Alexandra Palace. The Wood Green cycle track affords many opportunities for snapshots during the racing season.

Woolston (Hants).

J. Pell, Victoria Rd. D.

Woolston is a suburb of Southampton. Not far away, at Netley, is the Royal Victoria Hospital. Netley Abbey, a Cistercian foundation of the time of Henry III., is in ruins.

*Woolwich (Kent).

B. H. Harwood, 69, New Rd.
A. J. Wing, 69, Powis St.

Woolwich is in the London, S.E., postal district, and is chiefly noted for its arsenal and dockyard. Interesting pictures may occasionally be obtained on the river, also at Bostal Woods and Heath.

Worcester (Worcester).

G. Acton & Son, Corn Market. D.
W. T. Horniblow, 33, Sidbury. D.
J. A. Steward, 27, High St.

Worcester Cathedral is worth photographing, but permission for interior work must be obtained from the canon in residence. There are also several old houses in New Street and Friar Street; the Commandery in Sidbury and an old house in Trinity. The River Severn provides some good views.

Worthing (Sussex).

A. B. Cortis, 30, South St. D.

Worthing sands and pier provide interesting snapshots. Within easy reach are Bramber, Chanctonbury King, Angmering, Goring Woods (one of the loveliest spots in Sussex), and many other places worth visiting. As a centre for the photographic cyclist Worthing can hardly be surpassed, for the roads in all directions are good.

*Wotton-under-Edge (Glos.).

A. Dunn.

Wotton is situated beneath a range of well-wooded hills. Its church is a handsome structure, and contains some curious sepulchral memorials.

Wrexham (Denbigh).

C. G. Caldecott, Regent St. D.
Francis & Co., 53, Hope St. D.

Wrexham has several old parish churches. It is called sometimes the metropolis of North Wales, and is situated in the heart of a mining district.

*Wymondham (Norfolk).

King's Head Hotel. D.

Wymondham has an example of "Magpie" architecture in the "Green Dragon." There is an abbey, of which both interior and exterior views are worth taking, an ancient cross, and an avenue of Scotch firs in the churchyard. The streets are very old-fashioned, and several good views in them can be obtained. Attleborough Church, five and a half miles distant, is worth a visit for its north porch and rood-screen.

*Yarmouth (I. of Wight).

Richardson & Son, High St.

Yarmouth has a fine monument, and there is a good specimen of the Stuart arms on the Castle. The scenery is splendid. The Needles are not far away.

Yarmouth, Great (Norfolk).

E. J. Pratt, 10, Regent St. D.

Yarmouth is a very popular seaside resort. The scene on the sands is very lively, and many good shapshots may be obtained. The Nelson monument is a fluted column, 130 feet high. The harbour and fishing fleet afford good scope to the photo-man. St. Nicholas Church is a fine building, one of the largest in the Kingdom; it was founded in the time of William Rufus. Up the Yare the Broads may be reached.

Yeovil (Somerset).

Gatward & Wright, 13, High St. D.
A. Newton, 75, Hendford. D.

Yeovil exhibits some fine specimens of church architecture, and there are picturesque ruins and beautiful scenery in the vicinity.

*York (Yorks).

J. M. Smith, 13, High Ousegate. D.
J. Winship, 36, Petergate.

York Minster is among the most magnificent of the English cathedrals. The walls of the city, mainly of the time of Edward III., are pierced by picturesque gates, locally called Bars, of which Boothan Bar and Micklegate Bar are especially well preserved. The castle, with Clifford's Tower, is situated close to the river. The fine Gothic structure of the guildhall belongs to the fifteenth century. The old ruins of St. Mary's Abbey are also very fine.

*Youghal (Cork).

Devonshire Arms Hotel. D.
Thomas & Sons, Rhine Studio. D.

Youghal is an old town at the mouth of the Blackwater. The objects which should be photographed are the Church of St. Mary, the North Abbey, Sir Walter Raleigh's house, the "watergate" and the "clockgate," the old town walls, some old doorways and windows in the town, and harbour views. The scenery is very good.

SUPPLEMENTARY LIST.

*Abergavenny (Monmouth).

H. Shackleton, 26, High St.

Abergavenny is situated on the river Usk, midway between Newport and Brecon. It is noted for some of the finest mountain scenery in South Wales.

Bagshot (Surrey).

H. H. Copestake, High Street. D.

Bagshot Heath, at one time famous for the numerous highway robberies committed on it, lies about ten miles from Windsor, and is still a good neighbourhood for "snap-shot" work.

Castletown (Isle of Man).

R. K. Kermode, Chemist.

Castletown is a seaport and former capital of the isle. Castle Rushen, now a prison, occupies the site of a Danish fortress of the tenth century. A small building still exists, in which the House of Keys met for 170 years. King William's College is near.

Enfield (Middlesex.)

Wilson & Davies, Enfield Lock.
F. Goldby, The Enfield Pharmacy. D.
Wilson & Davies, Enfield Wash.

Enfield. There are a number of very pretty views to be obtained on the river and in the country lanes in the neighbourhood. The old Temple Bar, Queen Eleanor's Cross, and Waltham Abbey are worth noticing.

Enniskillen (Fermanagh).

Adamson & Co., Ltd., Chemists. D.

Enniskillen is in a district singularly beautiful. It is built upon an island on the river, near to Lough Erne, and is a well-known military station. The town and its environs teem with historic associations, and no part of Ireland is more deserving of a visit than this district.

Everton (Lancs).

G. M. Sleggs, 44, Robson St. D.

Everton is a suburb of Liverpool.

*Fulham (Middlesex).

C. J. G. Bunker, 151, Lillie Rd.

Fulham on the Thames, has been the residence of the Bishops of London since 1141. The present palace is about a century old. The church is ancient, and contains the tombs of many of the Bishops.

Greenwich (Kent).

Leo Atkinson & Co., 193, Greenwich Rd. D.

Greenwich Park, the Observatory, Royal Naval College, the river, and Eltham Palace are amongst the chief places of interest at Greenwich.

Hackney (London N.E.).

W. Sharman, 186, Mare St. D.
G. J. Thomas & Co., 411, Mare St. D.

Hackney has lost much of the picturesqueness of former times, but there are still a few old buildings, notably the old church tower, which is left standing alone. The town hall is a fine building. Bordering on South Hackney is the Victoria Park.

*Hayfield (Derby).

A. Livesley & Son.

Hayfield is situated in the Peak district, which abounds in opportunities for the devotee of the camera.

Highbury (London N.).

J. Basdon-Smith, 51, Holloway Rd. D.

Highbury has in its neighbourhood the Metropolitan Cattle Market, which presents a very busy spectacle in the early morning on market days.

Kirkdale (Lancs).

G. M. Sleggs, 106, Walton Rd. D.

Kirkdale is a suburb of Liverpool.

Lewes (Sussex).

J. C. Lloyd, Town Hall Pharmacy D.

Lewes is the county town. The chief objects of interest are the ruins of the priory and castle. It is a good centre for the south coast, eastward to Eastbourne and Hastings; westward to Brighton and Portsmouth, and northward to the beautiful Sussex and Surrey country.

*Shoreditch (London N.E.).

G. Pasco & Son, 57, Hackney Rd.

Shoreditch church has a stately portico and a beautiful spire. The town hall is a good building. There are also old-fashioned almshouses, and the elaborate buildings erected by Baroness Burdett Coutts, and known as Columbia Market.

Messrs. Raimes, Clark & Co., Edinburgh, have published a list of preparations which were not in the B.P. 1885, but are official in the B.P. 1898, and those of which the composition or strength has been altered. It contains concise information regarding the variations in strength of the galenical preparations, enabling the reader to see at a glance what the changes are, and in each case the wholesale price of the preparation is appended.

Plymouth, Devonport, Stonehouse and District Chemists' Association (Junior Section).—Examinations in pharmacy and materia medica were held on Wednesday, the 4th inst., for prizes kindly offered by Messrs. J. Cocks (President), R. F. Roper, and J. K. Bond, B.A., B.Sc. The questions were set by Messrs. J. D. Turney, O. A. Reade, and J. R. Johnson. Mr. Lamble kindly assisted in carrying out the arrangements.—*Annual Outing*: The Annual Outing Committee met on Monday, the 9th inst. Messrs. C. J. Park and A. D. Breeze were elected Secretaries conjointly. It was decided to hold the annual outing on Wednesday, June 8, proceeding by train to Yealmpton, driving through Membland Drive, to the picturesque and interesting seat of Lord Revelstoke. Tickets, 6s. 6d. each.

A Milk Dealer was fined 40s., with £2 2s. costs, at the Marylebone Police Court, on Wednesday, May 11, for adding 1 oz. of boracic acid to 17 gallons of milk.

Several Doctors were charged at a Justice of the Peace Court, held at Elgin on Friday, May 6, with selling patent medicines without a licence. The Inland Revenue authorities prosecuted, and fines of 10s. or seven days were imposed.

Glycerin Adulterated with Glucose Syrup was sold by a grocer at Bramley, who, on his appearance at the Rotherham, West Riding, Police Court, on Monday, April 26, stated that the glycerin was served out as received from a wholesale chemist at Rotherham. A fine of 10s. and 19s. costs was inflicted, the magistrate remarking that it was a new form of adulteration.

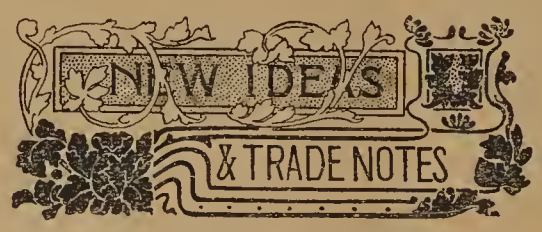
Mr. Joseph Ward, Pharmaceutical Chemist, 39, Eastgate Street, Gloucester, has been added to the Commission of the Peace for the City.

The Tzar of all the Russias is President of the Siberian Railway Committee, and takes the liveliest personal interest in the undertaking, and lately he commissioned Dr. Piassetsky to take a kinematographic picture of the whole of the line as far as it was completed. The result was very successful, and the Tzar was enabled to see precisely the same views as if he had made the journey by train.

The Fabwerke vorm. Meister, Lucius & Brüning ask us to state that their products will henceforth be supplied to the trade from the London premises, 46, St. Mary Axe, E.C., and not from 36, St. Mary-at-Hill, as stated last week.

Royal Institution.—A general monthly meeting of the members of the Royal Institution was held on the 9th inst., Sir James Crichton-Browne, M.D., F.R.S., Treasurer and Vice-President, presiding, and the following Vice-Presidents for the ensuing year were announced:—Sir William Crookes, Sir Edward Frankland, Sir William Huggins, Dr. Ludwig Mond, the Hon. Sir James Stirling, Sir H. Thompson, Sir James Crichton-Browne (Treasurer), and Sir Frederick Bramwell (Hon. Secretary). The Right Hon. Lord Rayleigh was re-elected Professor of Natural Philosophy in the Royal Institution.

Mr. H. Wippell Gadd, of Exeter, has undertaken the compilation of a pocket synopsis (of 160 pages) to the new British Pharmacopœia, with concise notes on the changes, particulars of new preparations, tables of doses, strengths, etc. The work is now in course of preparation, and it is hoped to have the book published on May 14, the publishers being Messrs. Baillière, Tindall & Cox, of 20, King William Street, Strand, W.C.



JOLLES' FERROMETER.

C. Reichert, of Vienna, has introduced two new forms of apparatus which should at the present time be worthy of notice when so much more attention is paid to the state of the blood in healthy and morbid conditions. Dr. Jolles' Ferrometer is used to determine the amount of iron in the blood, and it has the advantage that a very small quantity, viz, 0·05 C.c., of blood being required. This quantity is drawn by a special scalpel and pipette, is incinerated in a platinum crucible, and the ash heated with 0·1 G. of acid sulphate of potash, and the resulting flux dissolved in distilled water and placed in a small cylindrical vessel, another of precisely the same bore and capacity being filled with a special comparison liquid, and to each is added 1 Cm. of dilute hydrochloric acid and 4 C.c. of solution of ammonium sulphocyanide. The two cylinders are then placed in a colorimeter, which might be described as a wide microscope tube with a reflecting mirror underneath, and sufficient of the comparison liquid carefully drawn off into a graduated vessel till the two colours exactly match, and from a table issued with the instrument the number of grammes of iron per litre of blood may be read off. The operation is simple and the results to be relied upon. The instrument, complete with all accessories, costs £8, a simpler form costing £5 15s., whilst a still simpler set costs £4.

A NEW HÆMOGLOBINOMETER.

A new hæmoglobinometer has also been introduced by Herr Reichert, which is in appearance somewhat similar to a microscope foot and stage, and on the latter a cell is filled with blood of a known degree of concentration, and compared with glass wedges graded to match known strengths, and from the readings thus obtained and a calibrating table the amount of real hæmoglobin can be very readily calculated. The advantage of this new instrument, which is an improvement of the old Fleischl hæmometer devised by Professor Mesicher, of Bâle, consists chiefly in the fact that not only normal hæmoglobin can be readily read off as on the old hæmoglobinometer, but also the percentage of real hæmoglobin by means of the table added. The price of the instrument (complete) is £5 3s.

CREPE BANDAGES.

Messrs. Tremeer & Co., of Barnstaple, quote elastic bandages (*crêpe velpeau*) containing no indiarubber. These bandages are remarkably light, a bandage 6 yards long by $2\frac{3}{4}$ wide weighing only $1\frac{1}{4}$ ounce; they cost only about one-third the price of rubber bandages, elastic stockings, or webs; they may be washed as often as required without their elastic qualities being impaired; and they are very cool in wear, and such is their elasticity that they can be put at any required tension and will follow a swelling up or down. The bandages are sold in 5-yard lengths, 2, $2\frac{1}{2}$, 3, and 8 inches wide.

NEWCASTLE CHEMICAL REPORT.

May 11, 1898.

Rather more business is passing in heavy goods for the Baltic ports, owing to the now free navigation to many of the upper ports. Soda Crystals are more inquired after for home ports; prices, however, are unchanged, and are quoted as follow:—Bleaching Powder, £6 5s. to £6 10s.; Caustic Soda, 70 per cent. basis, £7 5s. to £7 10s.; Soda Crystals, basis, 45s. to 52s. 6d.; Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

May 11, 1898.

The Board of Trade returns for the past month do not point to any improvement in regard to the chemical trade, and so far as exports to the United States are concerned, they are distinctly discouraging, the quantity of Alkali being only 4692 tons as against 12,948 tons, corresponding period of last pear. Generally, Alkali shows a decrease of 40·4 per cent., and Bleach 0·5. A fairly good feeling, however, prevails in this district, and Bleaching Powder is firm, as is also Bicarbonate of Soda. Sulphate of Copper is steady at £17 to £17 10s. for best brands, delivered Manchester, but the quantity in second hands appears to materially affect the price. Brown Acetate of Lime is scarce, and makers will not offer under £6 5s. to £6 10s., Manchester. Glauber Salts are scarce and firm at 35s. per ton, *f.a.s.* Ship Canal, or on rails here.

PARLIAMENTARY NOTES.

The Select Committee on the Science and Art Museums has published a first report, in which it is urged that the first item of reform should be the removal of the Jermyn Street collection of geological exhibits to South Kensington. The Members of the Committee are agreed that the chief desiderata are (1) efficient management; (2) economic administration; (3) room for future development; and (4) proper arrangement of material with a view to enchancing its educational value. All these virtues are expected to arise by reserving the space available on the eastern side of Exhibition Road for art, and that on the western side for science. The whole of the science collections, the Science Library, and schools (except the Royal College of Science) are, therefore, to be provided for on the western side, and the "precious stones" of the Royal School of Mines are recommended for removal to the science side of the Kensington Museums, where they may be more profitably displayed and more economically maintained.

Registration of Trade Marks is the subject upon which Mr. Cawley (Prestwich, Lancs.) interrogated the President of the Board of Trade on the 6th inst. It appears that a recent case before Mr. Justice Romer revealed what had long been patent to the initiated, namely, that there were a number of smart persons in existence who carried on a fairly profitable business by trafficking in trade marks. That is to say, they registered marks solely for the purpose of subsequently wresting money from those who desired to register similar marks for *bonâ-fide* trading purposes. Mr. Ritchie, in reply, was good enough to say that the practice complained of was "open to objection," but he was advised that the present law, which gives any aggrieved person power to apply for the removal of the *mala-fide* mark from the Register, furnished an adequate remedy. It may be adequate, but it is expensive as well as troublesome, and occupies time—all of which considerations tend to operate in favour of the trafficker.

Private Members are beginning to kick at the hopelessnes of amateur legislation. The privilege accorded to members under the rules of the House of dealing out verbal damnation to one another's Bills is so largely exercised now-a-days that non-official business is well-nigh impossible. It was only a week ago that some of the less stoical victims protested against the disgraceful waste of time and energy in putting Bills on the order paper and having them regularly slaughtered by the weapon "I object." Sir T. Esmonde (Kerry W.) and Mr. Duncombe (Egremont) have both asked Mr. Balfour to consider whether a satisfactory remedy could not be devised whereby private members' Bills might be rescued from this hopeless impasse. The leader of the House, however, whilst admitting the existence of the disease, could not think of any remedy, and asked the House to bear the ills they have rather than interfere with the 12 o'clock rule and introduce evils they know not of. Sir T. Esmonde subsequently urged the appointment of a small committee to inquire into the procedure, and hinted that a modification of the Standing Orders might be advantageous. He was met with the reply that the investigation was of too immense a range to be advantageously embarked upon at present. The position is, therefore, unchanged, and A will continue to block B's Bills and B to revenge himself on A's proposals, whilst the member for Mid Cork will stop everything out of respect for the memory of his dear friend, Joseph Biggar!

A Select Committee on Telephones has been constituted with the following duties:—To inquire and report whether the telephone service ought to be undertaken by the municipal and other authorities, regard being had to local finance; and, if so, to define the relative powers and jurisdictions of the local and municipal authorities. The minutes of evidence of the 1895 Committee on the Telephone Service, and the report of the Commission and the evidence taken at the recent Glasgow inquiry on the subject, are to be placed at the disposal of the new Committee. The members are Messrs. Bartley (N. Islington), Griffith-Boscawen (Tonbridge), Cawley (S.E. Lancs.), Cohen (E. Islington), Colville (N.E. Lanark), Firbank (E. Hull), Fry (N. Bristol), Hanbury (Preston), J. Redmond (Waterford), J. Stuart (Hoxton), Tully (S. Leitrim), and Nicol (Argyll), with Sir H. Bullard (Norwich), Sir R. Hanson (City), Sir H. Howorth (S. Salford), Sir J. Joicey (Chester-le-Street), and Sir J. Woodhouse (Huddersfield).

The Disposal and Treatment of Sewage is to occupy the attention of a Royal Commission, consisting of Lord Iddesleigh, Sir R. Thorne Thorne, Professor Michael Foster, Professor W. Ramsay (the new Honorary Member of the Society), Major General Phipps Carey, Dr. J. B. Russell, Col. T. W. Harding, Mr. T. W. Killick, and Mr. C. P. Cotton. The Commission is to find out: (1) methods of treating and disposing of sewage (including liquid manufacturing refuse), legally, economically, and healthfully; (2) what rules in relation to the nature or volume of sewage, or the population to be served, or other varying circumstances should determine the particular method to be adopted; and (3) to make what recommendations they think desirable.

ANALYTICAL NOTES.

Distinction Between the Blood of Birds and Mammals.—The blood of birds is much richer in phosphorus than that of mammals, so that a chemical determination of this substance is capable of distinguishing the two. Woltering and Maas determine the proportion of phosphorus contained in the corpuscles. The procedure adopted is as follows:—0·01 gramme of blood is put into a small test-tube with a little 3 per cent. acetic acid, boiled, and centrifugated, the fluid poured off, and the process repeated. After drying, the residue is calcined with a little nitre, then dissolved in a little water, and the phosphoric acid determined in the usual manner with molybdate solution; 0·005 gramme of fowl's blood gave a distinct reaction, but the reaction did not occur with the blood of cattle.—*Pharm. Centralh.*, xxxviii., 515.

Pyridine as a Reagent for Blood.—The fact that pyridine gives a marked colour reaction with the colouring matter of blood is made use of by Donogany for the detection of that substance in the clinical examination of excretions, etc. In examining urine 10 C.c. are taken and mixed with 1 C.c. of ammonium sulphydrate and a little pyridine. If blood be present a more or less intense orange-red colour is developed. Excrement, sputum, or vomit is treated with a 20 per cent. solution of caustic soda and filtered. If necessary a little ammonium sulphydrate is added, and a trace of pyridine, when the red colour will appear if blood be present.—*Pharm. Centr.*, xxxviii., 473.

Detection of Blood Marks.—Schaer gives the following process for detecting blood stains on cloth. Put a very small piece of the cloth to be examined into a porcelain dish and moisten it with a drop of acetic acid it order to hasten the solution. Subsequently add a few drops of chloral hydrate and guaiacum resin solution, and stir a little until the colouring matter of the blood is dissolved. Put the clear solution thus obtained into a small test tube, cover with hydrogen peroxide, when the well-known blue coloration will be obtained at the point of contact.—*Ph. Ztg.*, xlii., 66.

Determination of Camphor in Spirit of Camphor.—Eschenburg determines the amount of camphor in an alcoholic solution thus:—50 grammes spirit of camphor were mixed with 200 grammes water, and 45 grammes benzene added of the sp. gr. of 0·716. The camphor dissolved immediately, and the solution had a sp. gr. of 0·739 at 13°, exactly the same as that of a 10 per cent. solution of camphor in benzene. The experiment was repeated with petroleum ether of the sp. gr. 0·651, the result being the same. The solution of camphor obtained had a sp. gr. of 0·673 at 15°, showing again an increase of 0 022. As this operation can be easily carried out in a medicine bottle, it deserves attention.—*Zeit. d. Allg. oest. Apoth. Ver.*, li., 668.

Testing Guaiacetin.—Guaiacetin is a white odourless powder which, according to Seigert, is acetic ester of pyrocatechol. The test for purity is as follows:—5 grammes are dissolved in 15 parts of water. The solution, which should be clear and neutral, is mixed with dilute sulphuric acid until completely precipitated. The separated acid is then shaken out with ether, the ethereal layer separated, washed with water, then evaporated. The residual guaiacetic acid is carefully dried and the melting-point taken, which should be between 130°-131° C. if the preparation is pure. If the acid is heated for some time to 140°-150° C. water separates, and the lactone of the acid is formed, having its melting-point at 56° C.—*Pharm. Zeit.*, xlii., 380.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

MAY 12, 1896.

Business has been quiet during past week, and there are few changes of importance to chronicle. Quicksilver is again dearer; there is, however, so far, no change in makers' prices for Mercurials. Quinine is dull, being offered from second hand, below maker's advanced prices. Opium is dearer, while Morphia has also moved upward to a slight extent, although so far by no means in proportion to the enhanced cost of the raw drug. Ipecacuanha is very firm, but buyers are so far not prepared to follow holders ideas. Acid Citric is firm on the spot, makers declining to sell forward. Phenacetin and Sulphonal unchanged, the latter article is, however, expected to advance. A rise is also looked for in American Oil of Peppermint, Cod-liver Oil dull. Glycerin quiet. Acid Carbolic rather more active. Belladonna Root very scarce and dear. Acid Tartaric and Cream of Tartar quiet. Cascara Sagrada firm, with a rising tendency. The following are prices actually ruling for articles of chief interest:—

ACETANILED—Is steady at 1s. 3d. to 1s. 4d. per lb. according to quantity and packing.

ACID BORACIC—Steady at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder* in large bulk.

ACID CARBOLIC.—Demand has been rather more active at 6¼d. to 6½d. per lb. for 35 to 36° C. *ice crystals* in bulk; other qualities and packing in proportion. *Crude*: 60° F., 2s. per gallon; 75° F., 2s. 6d. *Liquid*: 95 per cent., of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC—Is very strong at 12¾d. to 1s. 1d. per lb. according to make, makers declining to sell for forward delivery.

ACID OXALIC—Is steady at 3⅝d. per lb. on the spot.

ACID TARTARIC.—*English* on the spot is quoted 1s. 1d. per lb. *Foreign* 12¾d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* is dearer but closes quiet at £8 16s. 3d. per ton for grey prompt, London; Hull, £8 16s. 3d. per ton; Leith, £8 15s. per ton. *Bromide* steady at 2s. 2d. per lb. *Iodide* unchanged at 14s. 6d. per lb. *Oxalate* steady at 6d. per lb. *Sal Ammoniac* unchanged; sublimed firsts, 35s. per cwt.; seconds, 33s. per cwt. *Sulyhocyanide* quiet at 1s. 2d. per lb. *Chloride*: Free from metals, 98 per cent., 25s. to 26s. per cwt.: chemically pure, small crystals, 33s. per cwt.

ANTIMONY.—Price of *crude* has advanced considerably in sympathy with the higher prices of other metals. On the spot *Japan* is quoted 22s. per cwt., while for May-June shipment 21s. is asked.

ASAFŒTIDA.—A further business has been done for American account up to 62s. 6d. per cwt., and there are several enquiries on the market. Desirable quality is very scarce.

BELLADONNA ROOT is very scare and dear. None is offering on the spot, while to come forward 42s. 6d. to 45s. per cwt. *c.i.f.* is asked for fair to good root.

BLEACHING POWDER—Firm at £7 5s. per ton on the spot.

BORAX—Remains unchanged at 14s. per cwt. for lump, and 14s. 6d. for powder in large bulk.

BROMIDES—Are in brisk demand at 1s. 10d. for *Potass. Bromide*, *Bromine* being unchanged at 1s. 11d. per lb. for 20-case lots.

CAMPHOR—Is a very quiet market for *crude* on the spot, but for arrival *Japan* is quoted higher at 90s., *c.i.f.*, for May to June shipment; *China* same shipment is quoted 83s. 6d., *c.i.f.*, sellers.

CLOVES.—Privately *Zanzibar* are easy, and only moderate business passing. June to August delivery 3⅛d., August to October 4d. At auction 144 bales *Zanzibar* offered and 67 bales sold, good at 3⅞d., with one lot at 4d. 11 cases *Penang* bought in at 9d. 35 bales *Clove stems* sold at 1¾d.

COCAINE—Is apparently again on the move upwards, and while some of the makers have so far received no instructions, others, who were lately quoting as low as 9s. for 100-oz. lots in bulk, now ask 9s. 9d. per oz., stating, with a view, perhaps, of inducing business, that there is probability of a further advance.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial, 1s. 4d.; pure, 3s. per gallon. *Benzole*: 50 per cent., 1s. 3d. per gallon; 90 per cent., 1s. 2d. per gallon. *Crude Naphtha*: 30 per cent., at 120° C., 6d. per gallon. *Solvent naphtha*: 95 per cent., at 160° C., 1s. 8d. per gallon.

CODEIA—Is steady at 11s. 3d. to 11s. 6d. per oz. for quantity.

COD-LIVER OIL—Remains very quiet in spite of the apparently favourable statistical position of the article. Price for best non-congealing *Norwegian* oil in tin-lined barrels is nominally 82s. 6d. per barrel *f.o.b.* There is, however, practically nothing doing in the article at the moment.

CORIANDER SEED—Is in good supply, and the usual American demand is lacking, hence prices are by no means firm, and it would be possible to buy good *Morocco* at about 7s. 6d. per cwt.

CREAM OF TARTAR—Is very dull and inclined to be lower, although the Spanish exchange for the moment seems to have touched bottem. First white *crystals* on the spot are quoted 74s. 6d per cwt., whilst for new *B.P. crystals* 80s. per cwt. is asked. Ordinary *powder* is quoted 77s. to 78s. per cwt.; *B.P. powder*, 82s. 6d. per cwt.

GINGER.—*Cochin* continues dull, and of 477 bags rough only 29 bags sold; of cut kinds 93 cases ordinary roughly-cut sold firmly, A at 80s., C at 32s. 6d. to 44s. 160 bags limed *Japan* sold at 15s. to 17s. *Jamaica* met an active demand, and 644 barrels and 42 half-barrels all sold, realising rather higher prices: Common, 75s. 6d. to 77s.; low middling and small scraped, 80s. 6d. to 84s 6d.; middling to good middling, 85s. to 90s.; good and fine bright, 93s. 6d. to 100s.; fine and selected bright bold, partly in half-barrels, 105s. to 127s. 6d.

GLYCERIN—Is quiet at 52s. 6d. to 57s. 6d. per cwt., according to brand and quantity, for *German* white double distilled chemically pure, 1260 quality, in tins and cases, other qualities and packing in proportion. *English* can, however, be bought below these prices.

INSECT FLOWERS.—Open flowers are rather easier at 45s. per cwt.; half-open, 75s. per cwt.; and closed, 120s. per cwt. *c.i.f.*, London. Stocks are fairly large in Trieste.

IODIDES—In very active demand, prices being 9s. 9d. per lb. for *Potass. Iodide*, and 7½d. per oz. for *Iodine*, prices of other *Iodine* preparations being also unchanged.

IPECACUANHA.—Business has been done this week at 9s. per lb. for fair *Rio* for shipment to New York, whence the demand continues very active. For *Carthagena*, the supply of which is large, there is absolutely no demand; price nominally 5s. 6d. per lb.

JAPAN WAX.—Only a small business is doing at 35s. per cwt. on the spot.

MERCURIALS.—It is probable that makers will shortly advance their prices, which, however, so far remain unchanged at 2s. 2d per lb. for *Corrosive Sublimate*, and 2s. 6d for *Calomel* in half ton lots, the rise in price of *Quicksilver* being the cause of the expected advance in price of mercurials.

MENTHOL—Is quiet but spot price is fairly steady at 7s 3d. to 7s. 6d. per lb.

MORPHIA—Is dearer at 4s. 6d. per oz. for the *hydrochlorate* salt in powder for large contracts and in bulk packing, although the advanced price of opium would fully justify a much higher figure for both the alkaloid and its salts.

OILS (ESSENTIAL).—*Amydg. dulc. Ang.* is dearer at 1s. 4d. per lb., being an advance of 2d. per lb. *Peppermint H.G.H.* is steady at 5s. 7½d. to 5s. 9d. per lb. on the spot. *Wayne County* 4s. per lb. *Japan* dementholised 3s. per lb., 40 per cent. 4s. per lb. *Star aniseed* quiet at 6s. 4½d. to 6s. 6d. per lb. *Citronella*: 1s 1½d. to 1s. 2d. per lb. for drums and tins respectively. *Lemongrass* quiet 4½d. per oz. *Peppermint*: American. A New York report says that the high

price for wheat and other food products cannot but help to reduce the acreage under mint this year.

Oils (Fixed) and Spirits.—*Linseed* is again dearer, spot pipes, London, being now quoted £16 17s. 6d. ; barrels, £17 5s. *Rape* is lower at £23 for ordinary brown on the spot, and £24 5s. for refined, same position. *Cotton* is again lower and closes quiet; London, crude, spot, £14 5s. ; refined on the spot, £16 to £16 15s., according to make. *Olive* firm at £33 for both Spanish and Levant. *Coconut* is dearer and very firm at £24 10s. for Ceylon on the spot, and £29 10s. for Cochin, same position. Palm firm at £23 10s. *Turpentine*: Since our last values have still further declined; but the market closes dearer from the bottom, although still below last week's quotation. American spot 25s. 6d. per cwt. *Petroleum* firm but quiet. Russian spot 4½d. per gallon, American 5d. per gallon, Water White, 6⅛d. *Petroleum Spirit*: American 5⅜d. per gallon, deodorised 5¾d. per gallon.

Opium—Is decidedly firmer, 11s. 3d. to 11s. 6d. being now asked for good *Persian* while manufacturing stuff is quoted 10s 6d. per lb. on the spot it being reported that as much as 11s. 10d. has been paid for the same quality in Smyrna. The market is firm and appearances point to even higher prices for the article.

Orris Root.—The reported revolution in Italy will probably lead to higher values for this article, meantime prices is firm.

Phenacetin—Is somewhat firmer, best makes are, however, still obtainable at 3s. 9d. to 4s. 3d. per lb. in bulk packing, according to quantity for *crystals* and *powder*.

Potash Compounds.—*Chlorate* is very quiet at 3¼d. per lb. *Bromide* steady at 1s. 10d. per lb. *Iodide* firm at 10s. 3d. per lb. *Permanganate* remains quiet at 62s. 6d. per cwt. for small crystals, and 67s. 6d. per cwt. for large crystals. *Cyanide*: Cake, 98 to 100 per cent., is very firm at 1s. 2d. per lb. *Prussiate*: Yellow, 6¾d. to 7d. per lb. ; red, 1s. 2d. per lb. *Bicarbonate* firm at 30s. per cwt. for crystal or powder. *Bichromate*: 4d. to 4¼d. per lb.

Quicksilver—Is again higher and very firm at £7 10s. per bottle from importers, and 6d. less from second hands. The following figures illustrate the strength of the present position :—

Imports.

	1898. Bottles.	1897. Bottles.	1896. Bottles.	1895. Bottles.
April	5334	15,729	304	12.0
January to April	37,810	37,952	22,781	33,480

Exports.

	Bottles.	Bottles.	Bottles.	Bottles.
April	2939	1684	4305	4992
January to April	9802	7983	13,713	13,549

Average Price.

	£ s. d.	£ s. d.	£ s. d.	£ s. d.
April	7 0 0	7 3 6	6 14 6	6 13 6

Quince Seeds—Are in demand, but there are no *Cape* on the spot, which are quoted at 1s. 6d. per lb. to come forward.

Quinine.—Market has been quiet during the week, and against the makers' price of 1s. per oz. for best German brands of *Sulphate* in 1000-oz. lots in oz. tins ; there have been sellers from second hand at 11d. per oz., it would, however, be difficult to buy any large quantity at this lower figure. In spite of the advance of about 25 per cent. shown at the late Amsterdam Bark Sales, the position of Quinine appears to be somewhat doubtful. On the one hand there is quite a possibility of higher prices prevailing ere long, while on the other hand many people who should be qualified to judge fear that the large supplies of bark from Java, combined with the fear of further supplies of the manufactured article from that quarter, may easily exercise a depressing influence on the market.

Shellac—Is somewhat steadier, but the market is quiet. On the spot *Second Orange* sold on a basis of 61s. per cwt. for *TN*; for arrival April to June steamer there are buyers at 60s. per cwt., *c.i.f.* The Calcutta market is cabled very firm. For delivery prices are firmer, with further sales of *TN* August at 63s. 6d. per cwt., closing buyers at that price.

Soda Compounds.—*Crystals* steady at 55s. per ton. *Bicarbonate* £7 5s. per ton for the 98 per cent. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* 11s. 7d. per lb. *Hyposulphite* steady at 6s. to 8s. per cwt., according to brand and package. *Sulphite* 20s. to 22s. 6d. per cwt. *Caustic*: 70 per cent., white, £7 10s. ; 60 per cent. £6 10s. per ton. *Nitrate*: Refined, £7 15s. to £8 per ton.

Spermaceti. — American is dearer at 1s. 3d. per lb.

Spices (various).—*Black Pepper* : only 18 bags extra bold, heavy, clean Mangalore sold at 8d. ; Lampong bought in at 3⅞d. to 4d., and Singapore at 4⅛d. to 4¼d. *White Pepper*: Singapore bought in at 7⅞d. to 8d. *Chillies*: 22 bales good, fair Zanzibar sold at 31s. ; 10 bags rather dull Japan sold at 39s., fine bought in at 45s. *Capsicums*: 14 bales Bombay, small round red and brown off-stalk bought in at 25s. to 30s. ; 3 bales mixed Natal sold at 60s. to 65s. *Cassia Lignea*: 100 boxes sold at 50s. ; 200 bales broken bought in at 36s. *Cassia Buds*: 7 bags wild Tellicherry sold at 33s. *Cinnamon* ; 44 bags coarse broken bark sold at 5d. ; 327 bags Ceylon chips bought in at 3d. to 3¼d., except 30 bags quillings, which were sold at 8½d. to 9½d. *Mace:* 43 cases Penang bought in, pickings 1s. 5d., ordinary to middling 1s. 7d. to 2s., fine 2s. 6d. 3 packages West India sold at 1s. 3d. to 1s. 4d. *Nutmegs* dull. Penang bought in, 65's at 2s. 6d., 67's at 2s. 5d. 10 packages West India sold, 79's at 1s. 7d., 87's at 1s. 6d., 95's at 1s. 3d., 106's to 111's at 1s. 2d. *Pimento*: Only 60 bags offered and bought in at 4½d.

Sulphonal.—The chief outside maker in Germany having been prohibited from manufacturing the article, in consequence of the fearful stench caused thereby in the neighbourhood, the article appears now to be practically in the hands of the two principal makers, which may very possibly mean a decided advance in price in the not too distant future, and the more so in that it has been all along insisted that present price was not remunerative, makers are, however, meantime, still accepting orders for quite limited quantity, and from regular customers only at 7s. 3d. per lb. in bulk packing for both *crystals* and *powder*.

Sulphate of Copper—Is very dull at £15 17s. 6d. to £16 15s. per ton.

Turmeric.—*Bengal* is firm, with sales at 15s. per cwt., but buyers now ask 15s. 6d. per cwt. *Madras* firmer, ordinary finger sold at 20s. per cwt.

To-day's drug auctions passed off quietly, with, however, a moderate amount of business passing, Rio Ipecacuanha being held for higher figures, without, however, meeting with response on part of buyers. Turkish Colocynth sold at lower rates. The following are some of the prices which ruled :—

Aloes.—Good *Socotrine*, but rather softish held for 77s. 6d. per cwt. Coarse *Curacoa* in boxes for 21s., small gourds realising 28s. 10 boxes fine livery ditto sold at 40s. to 41s., and lower quality at 24s. to 29s. per cwt.

Annatto Seeds.—13 bags of fair quality were taken out at 4d. per lb.

Camphor.—9 cases refined *Japan* in squares sold at 1s. 2d. to 1s. 4d. per lb., according to size of tablets ; 1 case slabs bought in, price asked being 1s. 2½d. per lb.

Cardamoms.—For the 280 cases offered to-day the demand was fairly active, but prices fell on an average about 3d. per lb. Good bold bleached *Mysore* sold at 3s. 10d. per lb., the second size at 3s. 4d. per lb., good decorticated 3s. to 3s. 1d. per lb. *Mangalore*: Fine bold pale round 4s. per lb., bold dull 3s. 9d. to 3s. 10d., second size 3s. 4d. to 3s. 5d. per lb., small 3s. to 3s. 1d. per lb.

Cascarilla Bark.—13 bales part held at 35s., for fair bright thin ; 3 cases bolder quality realising 51s. per cwt.

Castor Oil.—20 cases, good firsts, were bought in at 4d. per lb. ; seconds, at 3½d., which shows easier values for the article.

Civet.—2 horns of fair quality bought in at 13s. 6d. per oz.

Cinchona Bark.—5 bales bold *Carthagena* sold at 4d per lb.

Colocynth.—12 cases small to medium broken *Turkey* sold at 10½d. per lb. which was cheap, looking at prices hitherto asked for the article ; 1 cask good pale *Spanish* fetching 11d.

Colombo Root.—102 bags very brown with stalk sold at 20s. to 21s. 10 bags fine bright small to bold washed bought in at 55s. per cwt.

Dragon's Blood.—10 cases were advertised, but 7 of these were not landed in time. For the remaining 3 cases dullish re-boiled saucers no bid could be obtained, £6 being the price required. Fine is much wanted, and long prices could be obtained.

Ergot of Rye.—Good bold Spanish, but slightly wormy, was bought in at 1s. 3d. per lb.

Essential Oils.—2 cases Oil of Limes bought in at 4s. 4d. per lb.

Cowage.—1 case very brown sold at 1d.

Galls.—26 cases *Japan* bought in at 56s. per cwt.

Gum Benjamin.—Good seconds *Sumatra* sold at £8 7s. 6d. per cwt down to £8 2s. 6d. for slightly inferior, and £6 for lower quality. Low seconds sold without reserve at 71s. to 77s. per cwt. Medium *Siam* realised £11 per cwt.

Gum Guaiacum.—2 cases fine glassy block were held for 2s. per lb., an offer of 1s. 11d. being declined.

Gum Kino.—8 boxes genuine small ruby were held for 10s., good *African* for 4s. 3d. per lb.

Gum Mastic.—2 cases pale sold at 1s. 10d. per lb.

Gum Myrrh.—1 case good native picked was held for £5 per cwt., poor and dusty sorts selling without reserve at 30s., and pickings at 4s. to 5s. 6d. per cwt.

Honey.—Fair *Jamaica* sold readily at 20s. to 22s. 6d. per cwt., inferior ditto at 15s. 29 cases *Australian* were taken out at 21s. Good *Californian* was held for 35s., 10 cases lower quality selling at 26s. per cwt.

Ipecacuanha.—24 bales *Rio* were offered, but buycrs were not prepared to pay the further advance asked, 9s. to 9s. 2d. per lb. being now the price. Of *Carthagena* quality, 63 packages were offered, but this grade is not wanted, and lower prices failed to tempt buyers.

Kola Nuts.—One case fair West Indian sold at 3½d. per lb.

Lemon Juice.—4 octaves were held for 11d. per gallon.

Musk.—5 caddies old-fashioned *Tonquin* held for 55s. per oz.

Orange Peel.—Fair new thin cut was held for 7d. to 7½d. per lb.

Rhubarb.—Good flat *Canton*, slightly rough, was bought in at 1s. 4d. per lb., round ditto being held for 1s. 3d. to 1s. 4d. for medium to good but rather rough, and trimming root for 1s. 5d. per lb., bold flat *high-dried* for 1s. 3d., second size fetching 1s. 1d.; 2 cases rough horny ditto, 7d. Dark-coated round *Canton* sold, subject to approval, at 1s. 1d. per lb; very rough stalky and woody round *Shensi* was held for 1s. 2d. per lb., only 1s. being bid, ditto flat selling at 1s.

Sarsaparilla.—19 bales *Jamaica* sold freely at 1s. 8d. to 1s. 10d per lb., 1 bale *Native* in rolls being bought in at 2s.

Scammony.—2 boxes were held for 20s. per lb., a bid of 17s. 6d. being declined.

Senna.—About 130 bales *Tinnevelly* were offered, the greater part being second hand holdings. The whole of the lots in the principal catalogue were withdrawn amid signs of impatience at the ridiculous prices asked. A few bales sold at 1½d. to 2¼d. per lb. for dark to medium green small. *Alexandrian*: Good leaf bought in at 7d. per lb.

Vanilloes.—187 tins were offered, mostly without result. A few tins *Seychelles* sold at 20s. to 20s. 6d. lb. for 7½ inch, 19s. lb. for 7 to 7½ inch, 18s. 6d. lb. for 7 inch and 17s. 6d. lb. for 6 to 6½ inch.

Vermilion.—6 cases *China* held for 1s. 11d. per lb.

Wax—Good *Jamaica* realised £7 2s. 6d. to £7 5s. per cwt. 2 cases *Japan* sold without reserve at 34s. 6d. per cwt.

LIVERPOOL REPORT.

May 11, 1898.

Ammonium Salts.—*Carbonate*: 3d. per lb. *Sal ammoniac*: 33s. and 35s. per cwt. *Sulphate*: Steady at £8 15s. per ton.

Bleaching Powder.—£5 10s. to £6 per ton. Business is somewhat slack.

Carnauba Wax.—60 bags of grey and medium sold on private terms.

Copperas.—Very firm at 38s. per ton for Lancashire and 36s. for Welsh.

Copper Sulphate—is firm at £16 10s. per ton.

Ginger.—About 900 bags of Sierra Leone rhizome sold at 18s. to 18s. 6d. per cwt. in store and in transit.

Gum Arabic.—"Sorts" have been selling at 75s. per cwt.

Honey.—Chilian Pile 3 sold to the extent of 86 barrels at 21s. per cwt.

Kola Nuts.—15 bags dried found buyers at 1¼d. per lb. ex quay.

Oils (Fixed) and Spirits.—*Castor* is steady both in price and demand, Calcutta "good seconds" at 3¼d. to 3⅜d. per lb., and French 1st pressure at 3¼d. per lb. *Olive*, of Spanish origin, is at an extremely low price, and a fair amount of trade is passing in Seville and Malaga varieties at £30 10s. to £31 per tun. *Linseed*, of Liverpool make, has been a shade easier since last week, but is now back to the old figure, 18s. to 18s. 6d. per cwt. *Cottonseed* is about 3d. per cwt. cheaper; 16s. 9d. to 17s. 3d. per cwt. *Spirits of turpentine* has dropped considerably since last report, and is now selling moderately at 27s. per cwt.

Potash Salts.—*Bicarbonate*: 30s. per cwt. *Bichromate*: 3¾d. per lb. *Chlorate* in brisk demand, good business having been done at 3¼d. per lb. *Cream of tartar* is still not much asked after at 75s. per cwt. *Pearlashes* are quiet at 37s. 6d. to 40s. per cwt. *Potashes*: 20s. 9d. per cwt. *Saltpetre* firm at 21s. per cwt.

Quillaya Bark.—140 bales of Chilian sold early in the week for £16 15s. per ton, and later 15 tons sold for a similar figure.

Seeds.—*Canaryseed* still rules high, prices being 29s. to 30s. per 464 lbs. for Turkish. 200 bags of 1897 crop for shipment sold at 28s. *Linseed* is very dead, neither buyers nor holders seeming inclined for trade.

Soda Salts.—*Bicarbonate*: £7 per ton. *Borax*: £13 to £13 5s. per ton, *Caustic*: 76 to 77 per cent., £8 15s. per ton; 70 per cent., £7 5s. per ton. *Crystals* firmer at £3 per ton. *Nitrate* in fair spot demand, and steady at 7s. 6d. to 7s. 7½d. per cwt.

Spermaceti.—*Crude*: 49 bags sold for 56s. per cwt.

PARTNERSHIP DISSOLVED.

(From the London Gazette.)

T. E. Butler, J. A. Butler, and H. M. Thornton (trading as Butler, Son & Co.), Chemists, Leicester.

RECEIVING ORDER IN BANKRUPTCY.

(From the London Gazette.)

Edward Joseph Dore, Physician and Surgeon, 32, Clytha Square, Newport, Mon.

Advertisement.

(Received too late for Classification).

VACANCY for an Apprentice will occur next month in a long-established firm of country Chemists, where a sound knowledge of every part of the business can be acquired. Youth must have passed the Preliminary examination of the Pharmaceutical Society, and be well recommended by his last schoolmaster. In-door. A premium will be required. Address, Chemist, care of T. B. Browne's Advertising Offices, 163, Queen Victoria St., E.C.

DIARY FOR THE WEEK.

Saturday, May 14.

Reynolds and Branson's Cricket Club v. Bainbridge, Ltd.

Tuesday, May 17.

Pharmaceutical Society, at 7 p.m.
Annual Dinner (Hotel Cecil).

Wednesday, May 18.

Pharmaceutical Society, at 12 noon.
Annual General Meeting.
Royal Microscopical Society, at 7.30 p.m.
Exhibition of Microscopic Aquatic Life.

Thursday, May 19.

Chemical Society, at 8 p.m.
"The Action of Formaldehyde on Amines of the Naphthalene Series," by G. T. Morgan.
"On the Constitution of Oleic Acid and its Derivatives" (Part I.), by F. G. Edmed.

Friday, May 20.

Royal Institution, at 9 p.m.
"The Early Life and Work of Shakespeare," by the Right Hon. D. H. Madden.

EXCHANGE.

OFFERED.

Miscellaneous.

Splendid St. Bernard Bitch.—Strong, and healthy, 11 months, grand pedigree, good-tempered and affectionate; sell, or exchange saleable patents.—Busby, Chemist, Stanley Bridge Post Office, Fulham.

30s.—Oppenheimer's globe nebuliser, perfect and clean, only used twice, take 15s.—Highton, Chemist, Blackburn.

Surplus Stock.—12 Williams', 12 Carter's, 6 Cockles', 6 Holloway's, 6 each Steedman's, 1s. 1½d. and 2s. 9d., £2 17s. 6d. Cash with order, or London reference if fresh customer.—Eastman, Forest Lane, Stratford.

For Sale.—Pneumatic Bicycle, £5. Write for particulars—A. Pollard, 82, Cambridge Gardens, Notting Hill, London, W.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

To clear.—1897 English Honey, pure and good, 1 ½lbs. for 5s.; offers for 1 cwt. New Combined Monocle and Stereoscope, cost 17s. 6d., price 9s.—Brampton, Sudbury, Suffolk.

Books.

Special.—The first twelve volumes 'Strand Magazine' quite new; bound publisher cases, £2 11s. 6d. Note.—The First 2 volumes are 21s. each at the publishers.—Pouteau, 44, Warden Road London, N.W.

Latest editions, nearly new. Squire (12s. 6d.), 7s.; Wills' 'Pharmacy,' 3s. 6d.; Gerrard (8s. 6d.), 4s. 6d.; Bentley's 15s. 'Manual,' 7s. 6d.; Pereira's 'Selecta,' 2s. 9d.; Oliver's 4s. 6d. 'Botany,' 2s. 9d. Carriage free.—Gower, Publisher, Waterloo, Liverpool.

WANTED.

Desideratum (28 lbs.) or similar powder mixer and sifter—"Sifter," 232, Portway, West Ham.

Wanted.—Munyon's Remedies. State kinds, quantity, and lowest price for cash to—Eastman, Forest Lane, Stratford.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

PHOTOGRAPHIC NOTES.

Snap-Shot Developer.—Solution A. Weigh 6 drachms of sulphite of soda, dissolve in 1½ ounces of water, then add 25 grains of citric acid; finally add 2 drachms of pyro, and make up to 2½ ounces of water. Solution B. A saturated solution of common washing soda. To use take one part of A to seven parts of B. This developer is only for snap-shots; time exposures would be hopelessly fogged.—J. S. Henderson in *Photo. News.*

Retouching Medium.—A very good retouching medium may be made by simply dissolving about 40 grains powdered resin in 1 ounce of turpentine.—A. E. L. in *Photo. News.*

Removal of Pyro Stains.—R. Ed. Liesegang finds that ammonium persulphate is an excellent means to remove this stain. The persulphates possess a very fair solvent action for this brown colouring matter. A little of the damp crystalline powder should be rubbed between the fingers and then rinsed off. The solution of ammonium persulphate can also be used for reducing negatives when the pyro stain makes them too dense. The still wet negative should be bathed after fixing and washing in a 10 per cent. solution of ammonium persulphate, and when the stain is sufficiently removed, the solution should be washed off. This clearing bath must not be allowed to act too long, or else the metallic silver of the image itself may be dissolved.

Heating the Dark Room.—Dark rooms built away from the house are, as a rule, either insufficiently ventilated or heated. In the winter months this is important, as the user generally finds it necessary to heat the room by means of a gas or oil stove. In either case this means of heating dries the atmosphere, and renders it disagreeable and fatiguing to work in for any considerable period. The remedy is simple—namely, place a tin containing water on the top of the stove, and the steam given off will assist in keeping the air of the dark room fresher than would otherwise be the case.—Phi-Phia in *Photo. News.*

Klondike Developer.—Every druggist should have developers put up in 8 or 12 ounce bottles, properly labelled, with directions, and over his own name. The developer I recommend as suitable to every brand of plates and almost every variety of amateur is the following:—

Metol	80 grs.
Hydroquinone	80 grs.
Potassium carbonate	28 grs.
Sodium sulphite	38 grs.
Water	12 ozs.

Dissolve the sodium sulphite first, then the metol and hydroquinone and potassium carbonate. Thus made, the developer will keep almost indefinitely, which is a very great advantage. Call it the Klondike, or something equally fancy. Directions: For snap-shots, dilute with twice as much water; for time exposures, dilute with four times as much water. After using, pour into a separate bottle, and use on next batch until exhausted. An old developer is best to use on over-exposed plates.—*American Druggist.*

A Fixing Bath comes next. A great many amateurs make their own by simply dissolving sodium hyposulphite in water; others prefer a ready-made one. The one I have put up and sold in 12 ounce panels at 15 cents is the Stanley Acid Fixing Bath.

Hyposulphite	2 lbs.
Alum	2 ozs.
Hot Water	4 qts.

Allow to stand twenty-four hours and filter clear. Directions: Allow the plate to stay in bath five minutes after becoming transparent, then wash fifteen minutes and dry.—*American Druggist.*

An Intensifier.—The best contains mercury bichloride.

Hydrarg. bichlor	4 drs.
Acid. hydrochlor.	1 dr.
Aquæ ad.	8 ozs.

Label as follows: Soak the plate fifteen minutes in water, then immerse in bath, and keep it there until more or less whitened (according to degree of intensification wanted), then wash ten minutes and place in water to which a very little ammonia has been added, until it darkens, then wash well and dry. Of course, it must be poison-labelled, and the user also cautioned regarding its poisonous nature, but as most all photographic chemicals are poisonous, equal care must be exercised with all.—*American Druggist.*

Flashlight Powder is a necessity, especially in winter. The kinds put up for sale do not give enough margin to pay for handling. It pays better to make your own after this formula:—

Magnesium	4 parts.
Potass. bichrom.	3 parts.
Potass. permang.	3 parts.

Pulverise separately and mix carefully. I have tried the various formulæ published for flashlight powder, but this is the only one that gives entire satisfaction. The majority of the others are so slow that the resulting picture is, perhaps, very amusing, but is also very disappointing. Most of the persons are shown with their eyes shut, while some are seen to be elevated an inch or so from the floor or seat, etc. With this powder it is impossible for the subject to move quick enough to blur the picture. I always advise a very rapid plate for use with the flashlight.—*American Druggist.*

Chloride of Gold.—Chloride of gold is so easy to produce in a perfectly pure state, ready to use, that anyone using a large quantity is very foolish not to make it. A $2·50 gold coin dissolved in aquæ regia neutralised with bicarbonate of soda until the copper alloy falls as green precipitate, then filtered, and then re-acidified with nitric acid, will keep indefinitely as a stock solution, and will tone more prints than $4 expended in the manufactured article. A little of it neutralised or made slightly alkaline with either borax, phosphate of soda, or acetate of soda and borax, will make as good a toning bath as any combination of patent mixtures or nostrums to be obtained.—D. Bachrach, in *Wilson's Photographic Magazine.*

Dull Black Varnish.—A useful varnish for blacking the interior of lantern bodies, lens tubes, etc., is made by mixing vegetable black or gas black with lacquer or French polish. Too much lacquer gives a shiny surface. Too little fails to make the black adherent. To ensure a smooth mixture, free from lumps, keep a few shot in the bottle containing the varnish and shake up before use.—G. E. B. in *Photo. News.*

Drying and Draining Plates.—A negative is often wanted to dry in a short time. Methylated spirits may be used, but there is always a risk of drops of spirit remaining on the film, and so causing a difference in density. The following is a remedy:—When the plate is taken from the last washing water, wipe it gently but firmly with a soft old, well-washed pocket-handkerchief, then place it in the alcohol. It is surprising how much careful wiping the film will stand. Or the following may be used as fixing bath:—Chrome alum, ¾ oz.; sulphite soda (powdered), 1 oz.; water, 8 oz. Dissolve and mix with hypo, ¼ lb.; water, 12 oz. Wash and then dry as quickly as you like. To keep the edges of plates free from dust, drain on a strip of corrugated paper.—L. L. O. in *Amateur Photographer.*

Mounting Gelatino Chloride Paper.—Much difficulty seems to be experienced in mounting prints, but the following plan is so simple that there need not be any if it is followed:—Lay the print face down on a clean piece of glass, paste it over, and rub the paste in with the fingers, or a bit of chamois leather, till the print lies quite smoothly, press out all air-bubbles, add a little more paste, and lay the print on its mount, place a piece of plain paper over it and squeegee down firmly. Do not touch it with any material; even silk leaves fluff behind. I use ordinary paste made with flour. It will keep two or three days and is very little trouble to make. I trim the prints after toning so as to leave an edge to hold them by during toning and fixing.—M. A. C. in *Amateur Photographer.*

To Prevent Curling of Prints.—This may be entirely avoided if the print is immersed in the following solution after their final washing:—

Water	1 part.
Alcohol	4 parts.
Glycerin	3 ,,

After this they will dry quite flat.—C. J. M. in *Photo. News.*

SELECTED FORMULÆ.

SUPPOSITORIES, PESSARIES, AND GYNECOLOGICAL CRAYONS.

For pessaries Delaye advises the use of a simple solution of gelatin in glycerin without previously softening the former in water, since he finds that, on keeping, articles made in the usual manner with water-softened gelatin lose their shape and consistence by gradual evaporation. He recommends the use of five bases, containing respectively 10, 8, 7, 6, and 5 parts by weight of sheet gelatin in 90, 92, 93, 94, and 95 parts of glycerin. The gelatin is simply dissolved in the glycerin by heating on the water-bath. The melted basis is mixed intimately with the medicament; when six pessaries are ordered, the requisite quantities for seven are weighed out, and the pessaries are left in the mould for at least twelve hours. When removed they are slightly oiled with olive oil or paraffin. For general use the mass containing 7 per cent. of gelatin is preferable for bodies which are soluble in glycerin and first dissolved in a portion of the solvent which is used to complete the weight. The basis containing 8 per cent. of gelatin is used for vegetable extracts and liquids, such as ichthyol, creolin, etc. The 10 per cent. basis is reserved for hygroscopic substances, such as potassium iodide, chloral, etc. In certain cases the irritant action of glycerin on the rectum contra-indicates its use for suppositories. When this is so a mass containing 25 to 30 parts of gelatin and 75 to 70 parts of water may be employed. Where no objection to the use of glycerin occurs, the suppository basis may be composed of similar proportions of gelatin and that solvent to those stated above, the basis, containing 30 per cent. of gelatin, being reserved for liquid or soft medicaments. These suppositories melt between 32° and 34° C. Where cacao butter is employed the author recommends the addition of 12½ per cent. of white wax, since theobroma oil alone melts too rapidly in the bowel. Gynecological crayons are best prepared with the following basis:—Sheet gelatin, 2; distilled water, 2; simple syrup (containing sugar, 5; water, 1), 1 part. The medication is first dissolved or suspended in the water. The mass thus obtained cannot be poured out, but must be shaped while warm by introducing between the open halves of the mould and closing with pressure. When cold, the superfluous mass is trimmed off with a scissors and dried by exposure to the air for two or three days in a dry place, and finally coated with a solution of gelatin, 20, in glycerin, 85.—*Journal de Pharm. d'Anvers*, liii., 255.

SYRUP OF IPECACUANHA.

Espagne recommends extr. ipecac., 10·0; alcohol (60 per cent.), 30·0; aq. destill., 340·0; sacch. albi., 630·0. For children and adults, 20 to 30 grm. to be used as an emetic (three to six years).—*Pharm. Zeitg.*, xlii., 354.

SYRUPUS FERRATUS.

Ferr. ammon. citr., 10·0; tinct. strychni, 5·0; syrup. cort. aurant, 385·0. M.D.S.—Three teaspoons per diem.—*Pharm. Zeitg.*, xlii., 354.

CHEMIOGRAPHIC INK.

Gawalowski states that ink of the following composition is used for secret dispatches, etc.:—Dissolve lead acetate, 1·0; uranium acetate, 0·1; bismuth citrate, 1·0; distilled water, 100·0. Add carefully a few drops of ammonia until the solution becomes clear. Then add a few drops of gum arabic or sugar. Characters written with this ink are quite invisible until they have been subjected to fumes of sulphuretted hydrogen, when they appear immediately as brownish-black. After a few minutes the characters fade to light brown; if moistened with highly diluted nitric acid they are regenerated and become quite clear again.—*Pharm. Post*, xxx., 534.

PREPARATION OF PICRIC ACID SOLUTION.

Saturated aqueous solution of picric acid is often required quickly for application to burns, and by mere solution takes time to prepare. Sochaczewski recommends the following rapid method:—Picric acid, 10; ether, 20; warm distilled water, 500. Dissolve the acid in the ether and pour into the warm water with constant stirring; the ether is quickly volatilised and leaves a supersaturated solution, 1 in 10, of picric acid.—*Petit. Monit. de Pharm.*, 47., 2613.

NEW REMEDIES.

LACTOPHENINE AS AN ANTINEURALGIC.—Clevenger finds that lactophenine in repeated doses of 30 to 60 centigrammes is the most effectual of all the antineuralgics, and is, at the same time, non-toxic.—*Bull. Gén. de Thérap.* (sec. Pharm.), ii., 540, after *Vratch.*

GUAETHOL.—This is a derivative of guaiacol, in which the methyl group is replaced by an ethyl radicle, $C_6H_4 \cdot OH \cdot OC_2H_5$. It forms an oily liquid, crystallising at low temperatures, insoluble in water and in glycerin, and dissolved by alcohol, chloroform, and ether. Its analgesic action is stated to be more marked than that of guaiacol. It is used for allaying pain by direct application, or as an ointment of 1 part of guaethol to 6 of vascline, or as a 10 per cent. emulsion in glycerin. Given internally it possesses no advantages over guaiacol.—*Therap. Woch.*, iv., 745.

CINNAMIC ACID IN TUBERCULOSIS.—Huesser confirms the opinion of Sanderer that cinnamic acid, by largely increasing the number of leucocytes, enables these organisms to surround the tubercular lesions, and ultimately, under favourable conditions, to destroy the specific bacilli. Under the influence of this acid, a wall of leucocytes surrounds the tubercle, and a process of aseptic inflammation is set up, which ultimately results in the disappearance of the morbid conditions, and is followed by a healthy cicatrisation. The method requires careful supervision, and is, moreover, not a rapid one, so the patient must be impressed with the fact that the treatment must be persevered in for some months before the full benefit can be expected to be derived. Huesser injects the acid into the gluteal region in the form of an emulsion, commencing with a dose of 1½ minim of a 5 per cent. emulsion and gradually increasing the dose every second day until the maximum of 15 grains is reached, the dose being regulated according to the observed effect on the patient. Generally the treatment must be continued for five or six months, and at the expiration of this period the sputum should be occasionally examined, and on the reappearance of bacilli the treatment should be resumed. Care should be taken that the injection does not penetrate the subdermal tissue or pain may result. The author has treated in this manner twenty-two cases, six of which were completely cured, twelve improved, one died, and in three the treatment was without result.—*Therap. Monats.*, xi., 451.

BENZOIN IN WHOOPING COUGH.—Of all remedies employed by Ecross in 874 cases of whooping cough, the insufflation of powdered benzoin was found to give the best results. In 60 per cent. of the cases there was a marked improvement, a lessening of the severity of the paroxysms and a shortening of the course of the disease. The powder should be blown into the pharynx as well as up the nostrils. Where no benefit is observed in four or five days, the method of treatment may be abandoned.—*Therap. Gaz.* [3], xiii., 67, after *Arch. of Pediat.*

ICHTHYOL IN CHYLURIA.—Moncorvo has found ichthyol to cure cases of chyluria of parasitic origin, a disease which is of common occurrence in the tropics, and which has often proved intractable to treatment with drugs. The ichthyol was given in the form of pills, commencing with a dose of ½ to 1 gramme, in twenty-four hours, increasing up to 2 grammes.—*Les nouveaux Rem.*, xiii., 719.

CRYSTALLINE DIGITALIN AS A SUBSTITUTE FOR DIGITALIS LEAVES.—On account of the highly variable potency of digitalis leaves in active principle, Huchard advocates the use, whenever practicable, of crystalline digitalin in their stead. For this purpose he prescribes digitalin (crystalline), 1 gramme; glycerin, 333 C.c.; water, 14·6 C.c.; alcohol (95 per cent.), to make up to 1 litre.—*Bull. Gén. de Thérap.*, cxxxiii, 382.

BALSAM OF PERU AND CASTOR OIL AS A DRESSING.—Gallant recommends (*Annals of Surgery*) the use of an admixture of 30 minims of Peruvian balsam to 1 fl. oz. of castor oil as a dressing. It permits of continuous drainage, and therefore causes no retention of secretions, epithelial growth takes place rapidly, and no irritation is occasioned, while perfect asepsis is maintained.—*Practitioner*, lix., 557.

List of the Principal Chemicals used in Photography.*

IN ENGLISH, LATIN, GERMAN, AND FRENCH.

ENGLISH.	LATIN.	GERMAN.	FRENCH.
Acid Acetic	Acidum aceticum	Essigsäure	Acide acétique.
Acid Acetic Glacial	Acidum aceticum glaciale.	Eisessig	Vinaigre glacial.
Acid Boric (Boracic).	Acidum boricum	Borsäure	Acide borique.
Acid Chromic	Acidum chromicum	Chromsäure	Acide chromique.
Acid Citric	Acidum citricum	Citronensäure	Acide citrique.
Acid Gallic	Acidum gallicum	Gallussäure	Acide gallique.
Acid Hydrochloric (Muriatic).	Acidum hydrochloricum.	Salzsäure	Acide chlorhydrique.
Acid Hydrofluoric	Acidum hydrofluoricum.	Fluss-säure	Acide fluorhydrique
Acid Nitric	Acidum nitricum	Salpetersäure	Acide nitrique (azotique).
Acid Oxalic	Acidum oxalicum	Oxalsäure	Acide oxalique.
Acid Pyrogallic (Pyrogallol).	Acidum pyrogallicum.	Pyrogallussäure or Pyrogallol.	Acide pyrogallique.
Acid Tannic (Tannin).	Acidum tannicum	Gerbsäure	Acide tannique.
Acid Tartaric	Acidum tartaricum	Weinsteinsäure	Acide tartarique
Acid Sulphuric	Acidum sulphuricum	Schwefelsäure	Acide sulfurique.
Alcohol Ethyl	Alcohol	Weingeist	Alcool.
Alcohol Wood	Alcohol methylicum.	Holzgeist	Alcool methylique.
Alum (Ammonia)	Aluminiii et ammonii sulphas.	Ammoniak-Alaun	Sulphate d'alumine et d'ammoniaque
Alum (Chrome)	Chromii et potassii sulphas.	Chrom-Alaun	Alun chromi-potassique.
Alum (Potash)	Aluminii et potassii sulphas.	Kali-Alaun	Sulfate d'alumine et de potasse.
Amidol (Diamidophenol Chlorhydrate)	Amidolum	Amidol	Amidol.
Ammonium Bichromate.	Ammonii bichromicum.	Doppeltchromsaures Ammon.	Bichromate d'ammoniaque.
Ammonium Bromide.	Ammonii bromidum.	Ammoniumbromid	Bromure d'ammonium.
Ammonium Carbonate.	Ammonii carbonas	Ammoniumcarbonat	Carbonate d'ammoniaque.
Ammonium Chloride.	Ammonii chloridum.	Ammoniumchlorid	Chlorure d'ammonium.
Ammonium Citrate	Ammonii citras	Ammoniumcitrat	Citrate d'ammoniaque.
Ammonium Iodide	Ammonii iodidum	Ammoniumiodid	Iodure d'ammonium.
Ammonium Hydrate, see Water of Ammonia.			
Ammonium Nitrate	Ammonii nitras	Ammoniumnitrat	Azotate d'ammoniaque.
Ammonium Salicylate	Ammonii salicylas	Ammoniumsalicylat	Salicylate d'ammoniaque.
Ammonium Succinate	Ammonii succinas	Ammoniumsuccinat	Succinate d'ammoniaque.
Ammonium Sulphocyanate	Ammonii sulphocyanas.	Rhodanam monium	Sulfcyanate d'ammoniaque.
Ammonium Sulphydrate or Sulphide Solution.	Liquor ammonii hydrosulphas.	Schwefelammoniumlösung, or Ammonium sulfhydrat	Sulfhydrate d'ammoniaque.
Barium Bromide	Barii bromidum	Baryumbromid	Bromure de baryum
Barium Chloride	Barii chloridum	Baryumchlorid	Chlorure de baryum
Barium Iodide	Barii iodidum	Baryumiodid	Iodure de baryum.
Barium Nitrate	Barii nitras	Baryumnitrat	Nitrate de baryte.
Benzin	Benzinum	Petroleumbenzin	Benzine.
Benzol	Benzolum	Benzol	Benzole.
Bromine	Bromum, or Bromium	Brom	Brome.
Cadmium (Metal)	Cadmium	Cadmium, or Kadmium.	Cadmium.
Cadmium Bromide	Cadmii bromidum	Kadmiumbromid, or Bromkadmium.	Bromure de cadmium.
Cadmium Chloride	Cadmii chloridum	Cadmiumchlorid	Chlorure de cadmium.
Cadmium Iodide	Cadmii iodidum	Kadmiumjodid, or Jodkodmium.	Iodure de cadmium
Cadmium Nitrate	Cadmii nitras	Cadmiumnitrat	Nitrate de cadmium
Calcium Bromide	Calcii bromidum	Bromcalcium	Bromure de calcium.
Calcium Carbonate	Calcii carbonas	Calciumcarbonat	Carbonate de chaux
Calcium Iodide	Calcii iodidum	Jodcalcium	Iodure de calcium.
Chloroform	Chloroformum	Chloroform	Chloroforme.
Collodion	Collodium	Collodion	Collodion.
Cobalt Chloride	Cobalti chloridum	Cobaltchlorid	Chlorure de cobalt.
Copper (Metal)	Cuprum	Kupfer	Cuivre.
Copper Bromide	Cupri bromidum	Kupferbromid	Bromure de cuivre.
Copper Chloride	Cupri chloridum	Kupferchlorid	Chlorure de cuivre.
Copper Nitrate	Cupri nitras	Kupfernitrat	Nitrate de cuivre.
Copper Sulphate	Cupri sulphas	Kupfersulphat	Sulfate de cuivre.
Dextrin	Dextrinum	Stärkegummi	Dextrine.
Eikonogen	Eikonogenum	Eikonogen	Eikonogen.
Ether (Sulphuric)	Aether (sulphuricus).	Aether, or Schwefelather.	Ether sulfurique.
Gelatin	Gelatina	Gelatin	Gelatine.
Glycerin	Glycerinum	Glycerin	Glycerine.
Glycin	Glycinum	Glycin	Glycine.
Gold	Aurum	Gold	Or.
Gold Chloride	Auri chloridum	Goldchlorid	Chlorure d'or.
Gold and Sodium Chloride.	Auri et sodii chloridum.	Natriumgoldchlorid.	Chlorure d'or et de Sodium.
Gum Arabic	Gummi Arabicum	Arabisches Gummi.	Gomme Arabique.
Hydrochinone (Hydroquinone).	Hydrochinonum	Hydrochinon	Hydrochinon.
Iodine	Iodum: Iodidium	Jod	Iode.
Iron (Metal)	Ferrum	Eisen	Fer.
Iron Ammonio-Sulphate (Ammonio-ferric Sulphate).	Ferri et ammonii sulphas.	Ferro-ammonium sulphat (Schwefelsaure Eisenoxydul-ammoniak).	Sulfate d'ammonii aque et de fer.
Iron Chloride (Ferrous), (Ferro Chloride).	Ferro chloridum	Eisenchlorür (Ferrochlorid).	Chlorure de fer (Chlorure ferreux).
Iron Chloride (Ferric), (Ferric Chloride).	Ferri chloridum (Ferri-sesquichloridum).	Eisenchlorid (Ferrichlorid).	Perchlorure de fer.
Iron Iodide	Ferri iodidum	Eisenjodid (Jodeisen, or Ferroiodid)	Iodure de fer.
Iron Oxalate (Ferrous).	Ferro-oxalas	Eisenoxalat	Oxalate de fer.
Iron Sulphate	Ferri sulphas	Ferrosulfat	Sulfate de fer.
Lavender Oil	Oleum Lavandulæ	Lavendelöl	Essence de Lavand.
Lead (Metal)	Plumbum	Blei	Plomb.
Lead Acetate	Plumbi acetas	Bleiacetat	Acetate de plomb.
Lead Chloride	Plumbi chloridum	Bleichlorid	Chlorure de plomb.
Lead Nitrate	Plumbi nitras	Bleinitrat	Nitrate de plomb.
Lithium Bromide	Lithii bromidum	Bromlithium	Bromure de lithium
Lithium Iodide	Lithii iodidum	Jodlithium	Iodure de lithium.
Magnesium, Bromide.	Magnesii bromidum	Brommagnesium	Bromure de magnesium.
Magnesium Iodide	Magnesii iodidum	Jodmagnesium	Iodure de magnesium
Magnesium Sulphate.	Magnesii sulphas	Magnesiumsulfat	Sulfate de magnesie.
Mercury Bichloride	Hydrargyri bichloridum.	Quecksilber chlorid.	Bihlorure de mercure
Metol (Monomethyl-paramido-meta-eresolate).	Metolum	Metol	Metole.
Para-amidophenol Hydrochlorate.	Para-amidophenol-hydrochloras.	Para-amidophenol-hydroehlorat.	Para-amidophenol-hydrochlorate.
Platinum Chloride	Platini chloridum.	Platinchlorid	Perchlorure de platine.
Platino-Potassium Chloride.	Platini et Potassii chloridum.	Kalium-platinchlorid.	Chlorure de platinum et de potassium.
Potash, Sulphurated, or Liver of Sulphur.	Potassa sulphurata	Schwefelleber	Sulfure de potasse.
Potassium Acetate	Potassii acetas	Kaliumacetat	Acetate de potasse.
Potassium Biehromate.	Potassii bichromas	Kaliumbichromat	Bichromate de potasse.
Potassium Bromide	Potassii bromidum	Kaliumbromid	Bromure de potassium.
Potassium Carbonate.	Potassii carbonas	Kaliumcarbonat	Carbonate de potasse.
Potassium Citrate	Potassii citras	Kaliumcitrat	Citrate de potasse.
Potassium Chloride	Potassii chloridum	Kaliumchlorid	Chlorure de potassium.
Potassium Cyanide	Potassii cyanidum	Cyankalium	Cyanure de potassium.
Potassium Ferricyanide.	Potassii ferricyanidum.	Ferridcynkalium	Forricyanure de potassium.
Potassium Ferrocyanide.	Potassii ferrocyanidum.	Ferrocyankalium	Ferrocyanure de potassium.
Potassium Hydroxide or Hydrate, or Potash.	Potassii hydras, or potassa.	Aetzkali	Potasse Caustique.
Potassium Iodide	Potassii iodidum.	Jodkalium	Iodure de potassium.
Potassium Metobisulphite.	Potassii metabisulphis.	Kalium-metabisulfit.	Metabisulfis de potassium
Potassium Nitrate	Potassii nitras	Kaliumnitrat	Nitrate de potasse.
Potassium Oxalate (Neutral).	Potassii oxalas	Kalium Oxalat, neutrales.	Oxalate de potasse.
Potassium, Permanganate	Potassii permanganas	Kaliumpermanganat	Permanganate de potasse.
Potassium Sulphite	Potassii sulphis	Kaliumsulfit	Sulfite de potassium.
Potassium Sulphocyanide	Potassii sulphocyanidum	Kalium sulfocyanat, or Rhodankalium.	Sulfocyanure de potassium.

Tannin, see Acid Tannic.			
Turpentine Oil	Oleum Terebinthinæ.	Terpintinöl	Essence Terebinthine.
Turpentine, Crude or White.	Terebinthina communis.	Geweiner Terpentin.	Terebenthine commune.
Uranium Bromide..	Uranii bromidum..	Bromuranium	Bromure d'uranium.
Uranium Nitrate ..	Uranii nitras.....	Salpetersaures Uranoxyd.	Nitrate d'uranc.
Water, Distilled....	Aqua destillata....	Destillirtes Wasser	Eau distillée.
Water of Ammonia	Aqua ammoniæ ..	Salmiakgeist or Ammoniak-Flussigkeit.	Eau d'ammoniaque.
Zinc Bromide.....	Zinci bromidum ..	Zinkbromid or Bromzink.	Bromure de zinc.
Zinc Chloride.....	Zinci chloridum ..	Chlorzink	Chlorure de zinc.
Zinc Iodide.....	Zinci iodidum	Zinkjodid, or Jodzink.	Iodure de zinc.

VETERINARY NOTES.

PICRIC ACID IN VETERINARY PRACTICE.—Picric acid in a 1 per cent. solution is a useful application to eczema in animals. It is applied every day until acute inflammation vanishes. It rapidly allays the itching. The following ointment: Picric acid, 1; vaseline, 7,. is good for eczema in the dog. The glycerole, containing picric acid, 1, and glycerin, 7, is also useful in auricular catarrh.—*La presse Veterinaire.*

FOLLICULAR MANGE IN DOGS.—The pustules should be opened with a lancet and the contents expressed. The affected parts are then to be rubbed with the following ointment:—Zinc sulphate, 6; flowers of sulphur, 30; mercurial ointment, 60; lard, 90; concrete bay oil, 90. Besides this the dogs were washed every day in a 10 per cent. solution of creolin.—*Veterin. Record*, after *Journ. Med. Vet. et Zootchen.*

PICRIC ACID FOR SORE BACKS IN HORSES.—Desine and Vairon, military veterinary surgeons in the French army, recommend the following solution in the treatment of sore backs, wounds, cracked heels, burnt sole and other affections in horses: Picric acid, 1; rectified spirit, 5; water, 100. A sheet of sterilised cotton is impregnated with the solution, then squeezed out and applied to the wound. It is a good antiseptic cicatrisant and analgesic, especially in the treatment of wounds caused by harness.—*Vet. Record*, x., 191, after *Rec. Med. Vet.*

ANALYTICAL NOTES.

DETECTION OF COBALT IN THE PRESENCE OF NICKEL.—Jaworswsky detects cobalt in the presence of nickel by the following method: The solution of cobalt and nickel salts is neutralised with sodium carbonate, if it contains free acid, and shaken with crystalline sodium pyrophosphate until the solution, which has become turbid, is again clear. It is then drawn off from the undissolved sodium pyrophosphate, and if it is coloured violet or reddish-violet it is diluted with water until almost colourless. Next, shake 6 to 8 C.c. of the solution to be examined with 1·0 to 1·5 gramme of sodium carbonate and a few drops (5 to 8) of bromine water. Even very slight traces of cobalt will colour the solution distinctly green. An excess of bromine must be avoided, as in that case the reaction is much less sensitive, or may not be obtained at all.—*Pharm. Zeit. f. Russl.*, xxxvi., 632.

DETERMINATION OF STROPHANTHIN IN STROPHANTHUS SEEDS.—Fromme gives the following method for determining the amount of active principle in a sample of strophanthus seeds. About 9 grammes of the seeds are finely comminuted in a metal mortar, 8 grammes of the powder are weighed out, and the fat extracted by percolation with petroleum ether. The fat free powder, after evaporating the adherent petroleum ether, is macerated with 80 grammes of absolute alcohol for six to twelve hours. 50·3 grammes of liquid are then run off and evaporated on the water-bath, the residue so obtained is taken up with 6 to 8 grammes of water. Three drops of basic lead acetate are now added to this solution, the precipitate is filtered out, and the filtrate freed from excess of lead by means of sulphuretted hydrogen solution. The lead sulphide is filtered out and washed with hot water, the filtrate evaporated to constant weight, and weighed as strophanthin. The weight thus obtained is the amount present in 5 grammes of the seeds.—*Pharm. Cent*, xxxviii., 703.

DETERMINATION OF IRON, CALCIUM AND ALUMINIUM IN THE PRESENCE OF PHOSPHATES.—In order to curtail the very tedious and not too exact process generally employed in the determination of these metals by oxidising the solution of ammonium citrate after the phosphoric radical has been precipitated as the magnesium salt, the filtrate from the phosphate is concentrated and then oxidised, as suggested by Villiers, by the addition of a trace of manganese salt, or better still, of vanadium oxychloride, in the presence of nitric acid. If a solution of vanadium salt of known strength is used, there is no need to separate this from the iron precipitate, as both are collected and weighed together, the known weight of the vanadium oxide being deducted from the total. According to Lindet, the separation of iron, alumina and calcium in the liquids in which the citric acid has been oxidised in this manner is easily effected in the ordinary way. This is a great improvement on the old method of calcining the mixed ammonio-citrates.—*Comptes Rendus*, cxxv., 246.

EXAMINATION OF ROSE OIL.—Dietze finds the saponification or ester number to be the most reliable factor in the examination of rose oil. It is obtained by boiling for half an hour an exactly weighed quantity of the oil with alcoholic $\frac{N}{2}$ potash solution and re-titration with $\frac{N}{2}$ sulphuric acid with phenolphthalein as indicator. The following numbers were obtained:—*German Rose Oil*, 8·6, *Bulgarian*, 9·2, *Turkish*, 8·9, *French Geranium Oil*, 59·1, *African*, 53·1, *Spanish*, 75·3, *Indian*, 32·5. On the strength of his examinations the author gives the following characters:—Pure rose oil, (1) that the specific gravity exceeds not 0·870 at 15°; (2) that it should not congeal below 15 to 20; (3) the rotation in 100 Mm. tube at 20° C. must not be more than −1° 30′; (4) the saponification number must not exceed 9 5 −10.—*Chemik. Ztg.*, xxi, 288.

OBITUARY.

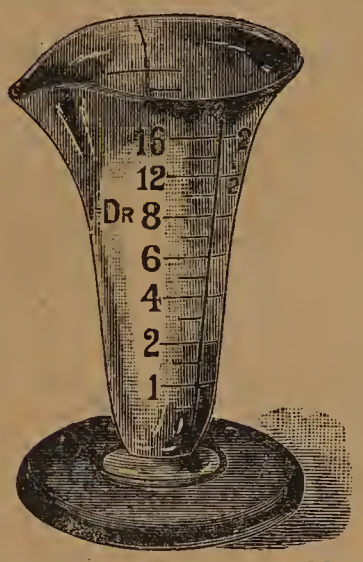
BULLEY.—On May 12, William Henry Bulley, Chemist and Druggist, Exeter. Age 59. Mr. Bulley was one of the oldest chemists in business in Exeter, and for over twenty years was dispenser to the Exeter Board of Guardians.

ELLIS.—On May 12, at Blakeney, Forest of Dean, Walter Ellis, Chemist and Druggist, late of Thornbury, Gloucester. Aged 55.

NEW IDEAS & TRADE NOTES

Messrs. Hora & Co., 47, Minories, London, direct attention to their seidlitz powders, which are of full weight, and well packed in boxes of good quality at the low price of 4s. 3d. per gross. The Health Salt supplied by the same firm in 4-oz. air-tight decorated tins is a pleasantly flavoured preparation, and the Lemonade Crystals in capsuled bottles makes an excellent and palatable drink.

Mr. A. B. Taffs, of the firm of Messrs. H. Gilbertson & Sons, Ltd., 9 and 11, St. Andrew Street, and Shoe Lane, Holborn Circus, London, directs attention to his patent foot protector for glass measures. The



protector is composed of a solid rubber base with a flexible cover which slips easily over the foot of the measure. The utility of the protector in preventing the breakage of measures when it is used is obvious.

Messrs. A. Gallenkamp & Co., 19 and 21, Sun Street, Finsbury Square, London, E.C., have laid in a good stock of balances, weights and measures, so as to be prepared to meet any possible demand in connection with preparations for the new Pharmacopœia.

The Sanitas Co., Ltd., write to point out that they have placed their "Sanitas" proprietary articles upon the P.A.T.A. list, subject to the important reservation that they remain at liberty to supply any firm, whether members of that Association or not, with their preparations, subject to receiving from them an undertaking to observe their fixed minimum retail prices, viz., 5½d. for 6d. articles and 10½d. for 1s. articles. Traders who are not members of the P.A.T.A. are required to sign an undertaking (1) not to list or sell by retail any "Sanitas" articles below the minimum retail prices, (2) not to supply the trade below the wholesale prices of 4s. 6d. per dozen for 6d. articles, 9s. per dozen for 1s. articles, and *pro rata* for the others, and (3) not to supply upon any terms whatsoever any firms whose names appear on the P.A.T.A. list of firms from whom supplies are to be withheld.

NEWS IN BRIEF

The Photographic Supplements to the *Pharmaceutical Journal* published on April 2 and May 7 respectively are still in print, and copies of the Journals containing them can be obtained from the publishers at 4½d. each, post free. The numerous formulæ for developers, intensifiers, etc., published in those Supplements have all been thoroughly tested in practice, whilst the mass of other information of the highest importance to chemists and druggists who do a photographic trade has been furnished by experts. As the Supplements cannot be reprinted, early application should be made for copies.

Plymouth, Devonport, Stonehouse and District Chemists' Association. — The annual outing of this Association is arranged for Wednesday, June 8, to the romantic and beautiful Membland Drives. The party will leave the Guildhall Square, Plymouth, at 1 p.m. in waggonettes and proceed to Yealmpton, thence through the delightful grounds of Membland, passing through some of the finest seascape and landscape scenery in the West of England. The party will be photographed, and high tea will be provided at Membland at 5.30 p.m. Persons requiring tickets (6s. 6d. each inclusive) must apply at once, either to the Hon. Secretaries—Mr. C. J. Park, Mutley Plain, and Mr. A. D. Breeze, Station Road, Union Street, Plymouth—or to any member of the Outing Committee. No application will be entertained later than June 1.

Lafar's 'Technical Mycology' has been translated by Mr. C. T. C. Salter, and the first of the two volumes is announced by Messrs. Charles Griffin and Co., Limited, London. The work deals with the utilisation of micro-organisms in the arts and manufactures, and the first volume, published at 15s., and freely illustrated, treats of schizomycetic fermentation.

The Atlas Chemical Co., Sunderland, submit the catalogue of their technical library for 1898. The subscription to this library is 25s. per annum, and each subscriber may receive 26 volumes a year, the proprietors paying outward postage or carriage. New technical works are added as published.

The Late Mr. James Watt, Jun., pharmaceutical chemist, of Haddington, whose death was announced in last week's Journal, was well known and was greatly esteemed by a wide circle of friends. He was a keen golfer, and his death was the result of a chill received while golfing, which was almost his only form of recreation. The keenest sympathy is felt in the burgh for his aged parents, widow, and two young children.

The Apothecaries' Society sued Thos. Hetherington, Marlborough Crescent, Newcastle, at the Newcastle County Court, on May 17, for £20, for having practised as an apothecary without having obtained a certificate from the Society, as required by statute.—The evidence was to the effect that the defendant had been consulted by two men suffering from no complaint whatever. For one of the men he compounded medicine, and to the other he gave a box of capsules. The charges were stated to have been distinctly excessive.— The defendant, who had already been fined £20 at the police court for misuse of title, stated, through his solicitor, that he had a United States certificate to practise as a doctor and that he was a qualified dentist.—Judgment was given for the plaintiff Society

Messrs. Ayrton & Saunders, Liverpool, have just fitted up completely a shop opened by Mr. A. H. Leach, chemist and druggist, at 3, Kay Street, Darwen.

Mr. A. Sidney Campkin, J.P., was recently re-elected for another triennial period as a member of the Cambridge Board of Guardians, a position he has now held for twenty-four years past, and on Thursday last he was re-elected as chairman of the Assessment Committee, a body composed of heads of the University and representatives appointed by the Town Council and Board of Guardians.

Inland Revenue Prosecution.—At the Norton (Malton) Court-house on Saturday, May 7, the Inland Revenue authorities prosecuted John Spanton, chemist and druggist, of Norton, for selling a certain medicine in bottles not having the necessary Government stamp.—It was alleged that defendant sold a "cough mixture" in bottles bearing a label which stated the mixture was a cure for coughs, colds, influenza, consumption, etc., and the words on the label brought the mixture within the provisions of the Act. If defendant had simply confined himself to the words "cough mixture," he would not have been interfered with.—Mr. Spanton said he had taken the precaution to submit his label to the local excise officer, Mr. Tremellin, before using it, and he was given to understand no stamp was requisite. —After argument, the Bench dismissed the case, on defendant paying costs.

Poisonous "Weed Killer," kept in an old barrel, has once again been mistaken by a thirsty man for beer, with a fatal result. The unfortunate individual in this case was an old man named Alexander Grant, of Ballinteem, who, it is stated, was a grand-nephew of the two brothers Grant, made famous as the "Cheeryble Brothers" in Dickens's 'Nicholas Nickleby.'

NEWCASTLE CHEMICAL REPORT.

May 18, 1898.

Fair business is still passing in heavy goods, principally for the upper Baltic ports. Still, there is no pressure felt to warrant any change in values, which are quoted as follows:—Bleaching Powder: £6 5s. to £6 10s. Soda Crystals: Basis, 45s. to 52s. 6d. Caustic Soda: 70 per cent., basis, £7 5s. to £7 10s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. per ton.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

MAY 19, 1898.

Business has been somewhat quiet during the past week, the changes having been a rise in Mercurials in sympathy with the advanced price of Quicksilver. Eserine (Physostigmine) has about doubled in price. Atropine and Homatropine are also decidedly dearer. Bismuth unchanged, as is also Lithia. Acid Citric is firm, as are also Iodides and Bromides. Cocaine is higher. Acetanilide dull. Phenacetin quiet. Sulphonal unchanged. Permanganate of Potash in somewhat better demand, and expected to advance in price. Quicksilver very firm, and expected to further advance, which would in turn influence the price of Mercurials. Glycerin is quiet. Cod-liver Oil dull. Opium firm. Morphia and Codeia unchanged. Sulphate of Ammonia is dearer. Ipecacuanha firm. Star Aniseed higher. Shellac firm. Ether and Spirits are dearer. Cream of Tartar very dull. Acid Tartaric steady. Star Aniseed Oil dearer. Borax and Acid Boracic quiet. Linseed Oil dearer and very firm. The following are prices actually ruling for articles of chief interest :—

ACETANILIDE—Is dull at 1s. 3d. to 1s. 4d. per lb.

ACID ACETIC—Continues in steady demand, the various strengths being quoted as follows :—30 per cent. or 1 to 7 14s. 6d. per cwt., 33 per cent. or B.P. 15s. 9d. per cwt., 50 per cent. 22s. per cwt., 60 per cent. 26s. per cwt., 74 per cent. 31s. per cwt., 90 per cent. 36s. per cwt., and 98 to 100 per cent., glacial, 40s. per cwt.

ACID BORACIC—Unchanged at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

ACID CARBOLIC—Is firm at 6½d. per lb. for 35° C. *crystals* in bulk packing, and 6¾d. to 7d. per lb. for 39° to 40° C. *crystals*; other packing in proportion more. *Crude*: 60° F., 2s. 1½d. to 2s. 2d. per gallon ; 75° F., 2s. 7d. to 2s. 7½d. per gallon. *Liquid*: Pale 95 per cent., 1s. 3d. per gallon, in 40-gallon casks.

ACID CHRYSOPHANIC—Quiet but steady at 12s. 6d. per lb.

ACID CITRIC—Is very firm at 12¾d. per lb. for *crystals*.

ACID OXALIC—Is unchanged at 3⅝d. per lb. on the spot.

ACID TARTARIC—Is steady at 1s. 1d. per lb. for *English* crystals on the spot, *foreign* 12¾d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* has had a good advance this week, price closing firm at £9 2s. 6d. per ton for grey prompt, 24 per cent., London. *Bromide* steady at 2s. 2d. per lb. *Iodide* firm at 14s. 6d. per lb. *Oxalate* unchanged at 6d. per lb. *Sal Ammoniac* steady at 35s. per cwt. for sublimed firsts, and 33s. per cwt. for seconds, crushed and powder in proportion more. *Sulphocyanide* firm at 1s. 2d. per lb.

ATROPINE.—Makers have, in consequence, it is stated, of continued scarcity and dearness of good raw material, again advanced their prices to 17s. 10d. per oz. for the *pure*, and to 15s. 6d. per oz. for the *Sulphate P.B.*

BALSAM PERU.—A fair business has been doing at rather higher prices—9s. to 9s. 3d. per lb. being now quoted in quantity.

BALSAM CANADA—Is offered from New York at 1s. per lb. in casks, and 1s. 2d. per lb. in tins and cases, both *c.i.f.* terms.

BALSAM COPAIBA—Is very quiet here, although from New York higher prices are spoken of. *Maranham* is quoted 2s. 1d. to 2s. 2d. per lb.

BALSAM TOLU—Is firm, and good quality is held for 1s. 10d. to 2s. 3d. per lb., with a few small sales.

BISMUTH—Still unchanged at 5s. per lb. for the *metal*, and 4s. 10d. per lb. for the *subnitrate*, in 5 cwt. lots.

BLEACHING POWDER.—Steady at £7 5s. per ton on the spot.

BORAX—Quiet at 14s. per cwt. for *lump*, and 14s. 6d. per cwt. for *powder*.

BROMIDES.—A good business is doing at makers' prices, which are 1s. 10d. per lb. for *Potass. Bromide*, and 2s. 2d. per lb. for *Ammon.* and *Soda Bromide*. *Bromine* also unchanged at 1s. 11d. per lb. in 20-case lots.

CAMPHOR.—Crude is very quiet, and we hear of no business on the spot. For arrival quotations come firmer at 90s. per cwt. for Japan, and 84s. 6d. for China, *c.i.f.*

CANTHARIDES.—*Russian* are quiet at 1s. 10d. to 2s. per lb. *Chinese* : There is no stock here.

CARAWAY SEED—Is again dearer, 24s. per cwt., having been paid for good Dutch.

CASCARA SAGRADA—Is quiet at 20s. to 25s. per cwt. People who are "in the know" are, however, looking for decidedly higher prices for the article ere long.

CINCHONA BARK.—The next London auctions will be held on the 24th inst. At present only a small quantity is advertised. The total exports from Ceylon from Jan. 1 to April 30 were : Season 1898, 284,400 lb. ; 1897, 273,823 lb. ; 1896, 306,198 lb. The exports from Java from Oct. 1 to April 20 were : Season 1897-98, 5,651,000 lb. ; 1896-97, 5,067,000 lb. ; and 1895-96, 5,539,127 Amsterdam lb.

CLOVES.—There is a quiet tone and practically no business passing privately in *Zanzibar* ; quotations are June-August delivery 3⅞d., and August-October, 4d. Of 99 bales *Zanzibar* offered at auction 20 bales sold at 3¾d. ; 76 bags *Amboyan* bought in at 6d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* : Commercial, 1s. 5d. ; pure, 3s. per gallon. *Crude Naphtha* : 30 per cent., at 160° C., 6d. per gallon. *Solvent naphtha* : 95 per cent., at 160° C., 1s. 8d. per gallon.

COCAINE. — Messrs. Boehringer and Soehne, whose brand is most in favour on this market, add who were last week booking orders for limited quantities of the article from regular customers, at 9s. per oz., in 100 oz. lots, have withdrawn their quotation, nearest price for good brands is now 9s. 6d. to 9s. 9d. per oz., with indications that price may very likely still further advance in the near future.

CODEIA—Appears to be scarce and makers are very firm in their price of 11s. 3d. to 11s. 6d. per oz. for quantity.

COD-LIVER OIL — Remains very quiet, nearest price being 80s. per barrel, *f.o.b.*, for best new non-congealing *Norwegian* oil, in tin-lined barrels.

COLOCYNTH. — Since the auctions last week, at which several cheap lots were cleared, holders have been rather firmer, but demand for the moment is satisfied. Prices are quoted from 11d. to 1s. 2d. per lb., according to quality, for Turkey kinds.

CORIANDER SEED—Is very dull of sale, the usual demand for the United States not having so far started. On the spot 7s. 3d. to 7s. 6d. per cwt. for good *Morocco* is the nearest value.

CREAM OF TARTAR—Is exceedingly dull, and lower quotations do not seem to bring the buyers out. Quotations : First white *crystals*, 73s. 6d. per cwt. ; *powder*, 76s. to 78s. per cwt. ; *B.P. crystals*, 79s. per cwt.

ETHERS AND SPIRITS—Are dearer, the following being now the quotations for wholesale quantities :—Æther P.B., s. g. 735, 4s. 6d. per lb. ; æther purif. P.B., s. g. 720, 5s. 2d. per lb. ; æther rect., s. g. 750, 4s. 4d. per lb. ; spirit. æther nit. P.B. 1898, s. g. 842, 2s. 7d. ; spirit ammon. arom. P.B. 1898, 2s. 1d.

ESERINE.—*Physostigmine* : Makers advanced their prices to 3s. per gramme for the *Sulphate* and *Salicylate*, and 4s. per gramme for the *other salts* and for the *pure*, reason given being that the prices previously ruling were not sufficiently remunerative in view of the troublesome and tedious mode of manufacture.

GALLS.—This is a firm market, although transactions are small, and these only in *blues*, for which 55s. per cwt. is asked for *Busreh*, and 50s. for *Smyrna* descriptions. *Green* are scarce, and for *white* there is no demand.

GENTIAN ROOT—Is quiet but steady at 20s. to 21s. per cwt. *f.o.b.* for really good dry root.

GINGER.—The demand for *Jamaica* continues active, and about 900 packages offered. Nearly all sold, realising again rather higher prices. Common lean dark *Rhatoon* sold at 76s. to 80s. ; low middling and small scraped, 82s. to 84s. 6d. ; middling to good middling washed, 85s. to 93s. 6d. ; good and fine bright and bold, 96s. ; to 102s. 6d., selected bold 107s. 6d. to 120s. *Cochin* remains dull and only 120 bags rough sold ; ordinary washed, without reserve, at 18s. 6d. to 19s., cuttings at 14s. 6d. Of cut kinds 21 cases sold, bold 80s. to 85s., bold and medium 71s. 6d. to 76s., rather small 47s. 6d., ends 26s. 6d.

GLYCERIN—Is quiet at unchanged prices, say 50s. to 52s. 6d. per cwt. *English* make,

and 52s. 6d. to 57s. 6d. per cwt. for *German* white double distilled, chemically pure, 1260 quality, in 2 cwt. cases, 4 tins to the case, according to quantity and brand.

Golden Seal Root.—There is very little stock available on the other side, and quotations range from 2s. 2d. to 2s. 3d. per lb., *c.i.f.* terms. It is thought that much higher prices will be seen.

Guaza—Is scarce, and from 5½d. to 6½d. per lb. is asked for fair quality.

Guarana—Is dull of sale at 1s. 8d. to 1s. 10d. per lb. for good.

Gum Guaiacum.—The fine bright lump which was bought in at last public sale, is reported to have been meantime sold privately at 2s. per lb.

Gum Mastic.—Good pale is in moderate supply, and is held for 2s. per lb.

Gum Tragacanth.—There is a continued good demand, mainly in fourths and lower grades. Quotations are as follows:—Baghdad: Firsts, £13 10s. per cwt.; seconds, £12 10s.; thirds, £11 5s.; fourths, £9 15s.; lower qualities, 40s. to £8 per cwt.

Homatropin.—Makers have raised price to 11s. 9d. per gramme for the *pure*, and 9s. 11d. per gramme for the *Hydrochlorate* and *other salts*.

Hypophosphites—Are in fair demand at 3s. 3d. per lb. for the *Potash*, *Lime*, and *Soda Salts* in half-ton lots.

Iodides—Are in very brisk demand at 9s. 9d. per lb. for *Potass Iodide* in 2 cwt. lots, and 13s. 4d. per lb. for *Iodoform*: *Iodine* being also unchanged in price at 7½d. per oz.

Ipecacuanha.—*Rio* is very firm at 9s. to 9s. 3d. per lb. as to quality, whilst the demand for *Carthagena* remains quiet.

Japan Wax—Is quiet, 35s. per cwt. being asked for good squares.

Jalap.—Small heavy Vera Cruz is held for 6d. per lb.

Kava Kava—Is quoted at 9d. per lb. on the spot.

Lithia—Is firm at 10s. 8d. per lb. for the *Carbonate* in 2-cwt. lots, 6s. 8d. per lb. for the *Citrate cryst.*, and 7s. 2d. per lb. for the *Citrate powder*.

Menthol—Is quiet at 7s. to 7s. 3d. per lb. on the spot.

Mercurials—Are dearer by 1d. per lb., the following being now the quotations:—

	Below 56 lb.	Not less than 56 lb. to 224 lb.
	s. d.	s. d.
Hyd. sub-chlor (Calomel) P.B.	2 10	2 9
,, perchlor. P.B.	2 6	2 5
,, oxid. rub.	3 2	3 1
,, ammon.	3 3	3 2
,, persulph.	2 3	2 2

Morphia—Is steady at 4s. 6d. per oz. for the *Hydrochlorate* salt in powder, and 2d. per oz. more for *crystals* in large quantity and in bulk packing. Looking at price actually ruling for *Opium*, price of *Morphia* should certainly be decidedly higher.

Musk—Is quiet at 75s. to 80s. per oz. for Pile I. thin blue skins in caddy lots.

Nitrate of Silver—Is weak at 1s. 5½d. per oz. for the crystals, the sticks being dearer in proportion.

Oils Essential.—*Star aniseed* has been advancing since our last and closes firm at 6s. 9d. to 7s. 3d. per lb., according to quantity *Carraway*: Owing to the advance in the price of the seeds, this is quoted dearer in all qualities. Foreign is quoted 3s. 6d. to 5s. per lb. *Cassia* is easier with moderate sale to arrive, including 70 to 75 per cent. at 4s. 0½d. per lb., and 75 to 80 per cent. at 4s. 1½d. per lb., *c.i.f.* On the spot there is no demand. *Citronelle* is quiet at last week's price. *Lemongrass* quiet but steady at 4¼d. per oz. *Peppermint* is firm at 5s. 7½d. to 5s. 9d. per lb. for *H.G.H.* Fine *Wayne County*, 3s. 9d. to 4s. per lb., *c.i.f.* terms. Japanese dementholised 3s. per lb., 40 per cent. 4s. per lb.

Oils (Fixed) and Spirits.—*Linseed* very firm at again higher prices. On the spot, pipes, London, £17 5s.; barrels, £17 15s. *Rape* dearer, closing very firm; ordinary brown on the spot £24, refined £25 10s. *Cotton* slightly dearer on last week's prices; London crude £14 10s., refined spot £16 5s. to £16 15s., according to make. *Olive* firm at £33 per ton for both Spanish and Levant. *Coconut* firm but unchanged. *Ceylon* on the spot £24 10s. *Cochin* spot £29 10s. *Palm* steady at £23 10s. *Turpentine*: The market is depressed and rather easier at 25s. 3d. per cwt. for American on the spot. *Petroleum Oil* is quiet but unchanged; Russian spot 4½d. per gallon, American 5d. per gallon, Water White 6¼d. per gallon. *Petroleum Spirit* dearer at 5⅝d. per gallon for American, deodorised 6d. per gallon.

Opium.—Market is very firm; there is, however, no change in price from last week, good manufacturing is quoted 10s. to 10s. 3d. per lb. on the spot, and about 3d. per lb. higher in Smyrnas. *Soft shipping*: Good to fine 11s. 6d. to 12s. Fine *Druggists'* 10s. to 10s. 6d. *Persian*: 10s. to 11s. 6d. per lb. Reports as to the prospects of the new crop continue unfavourable, which would point to the probability of a further advance in value, and the more so as existing stocks are believed to be very moderate.

Phenacetin is rather firmer, good makes can, however, still be bought at 3s. 9d. to 4s. 3d. per lb., according to quantity and packing for *crystals* and *powder*. *Bayers'* make is still held for the fancy price of 14s. 3d. per lb. in bulk.

Potash Compounds.—*Chlorate* is very dull at 3¼d, per lb. *Bromide* steady at 1s. 10d. per lb. *Iodide* firm at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bichromate* unchanged at 4d. to 4½d. per lb. according to quantity. *Bicarbonate* firm at 30s. per cwt. for both crystal and powder in large bulk. *Cyanide* is steady at 1s. 2d. per lb. for 98 to 100 per cent. cake. *Permanganate* is quiet but steady at 62s. 6d. per cwt. for small crystals, and 5s. per cwt. more for large crystals. *Prussiate*: *Yellow* is quiet at 6¾d. to 7¼d. per lb., according to quantity and package. *Red* is firm at 1s. 2d. per lb.

Quicksilver—Is very strong at £7 12s. 6d. per bottle from first hands; this marks an advance of 2s. 6d. on the week.

Quinine.—Market remains flat, with sellers of brands not most in favour as low as 10½d. per oz., makers' price remaining 1s. per oz. for 1000-oz. lots in 100-oz. tins. It would hardly be possible, however, to buy any considerable quantity from second hands at the lower price mentioned above, or even at 11d. per oz. It is difficult to foresee with any degree of certainty what the future course of the article will be.

Rhubarb.—Since the sales a small business has been done in medium round slightly rough *Canton* of fair fracture at 1s. 2d. to 1s. 3d. per lb.

Salicine—Remains steady and in good demand. Price ranges from 10s. to 10s. 6d. per lb., according to quantity.

Santonine—Is firm at 4s. 5¼d. per lb. in cwt. lots.

Sarsaparilla.—*Mexican* is very firm at 4½d. to 5d. per lb. *Honduras* is very scarce, with reported higher prices in New York; spot quotation is 1s. 8d. per lb. *Jamaica* firm at 1s. 9d. per lb.

Senna.—A moderate business has taken place since last week's auctions in *Tinnevelly* grades, 3d. per lb. being paid for fair green small leaf, slightly spotty, and 4d. per lb. for medium-sized leaf of fair colour. The last steamer from Bombay has brought 170 bales, and these will probably be in next auctions. In *Alexandrian* grades we do not hear of any business passing. The demand is slow, except for finest leaf, which is scarce.

Seneka Root—Is decidedly firmer, but good Western root can still be had at 1s. 2d. to 1s. 2½d. per lb.

Shellac.—Privately holders are very firm, and this has somewhat checked business. At the auctions on Tuesday supplies were small, and a fair demand prevailed for *Second Orange* at current rates, but sellers in most cases asked more money, which buyers were not ready to pay. For such lots as sold fully last week's rates were paid, the value of *TN* being now 61s. full. A total of 591 cases offered and 106 cases sold. *Second Orange*: Of 458 cases 55 sold, fine bright at 69s., flat flimsy reddish 61s., fair bright part blocky at 56s., dark claret blocky at 53s.; the remainder bought in, including fine *SG* in diamond at 79s., *PM* in double triangle at 78s., and *AA* in circle at 72s. *Garnet*: 19 cases offered and sold, common ruby hard block at 54s. to 55s. *Button*: Of 114 cases 32 sold, fair pale firsts at 77s., ordinary ditto at 70s., fine strong seconds at 71s., ordinary ditto at 65s., weak glassy ditto at 63s., broken at 60s.

Soda Compounds.—*Crystals* quiet at 55s. per ton. *Bicarbonate* firm at £7 10s. per ton for the 98 per cent., whilst the full bicarbonated quality is still to be had at 18s. to 19s. per cwt. *Bromide* steady at 2s. 2d. per lb. *Iodide* firm at 11s. 7d. per lb. *Hyposulphite* in good demand at 6s. to 8s. per cwt., according to brand. *Nitrate*: Ordinary on the spot £7 12s. 6d. per ton, refined £7 15s. per ton. *Caustic*: 70 per cent., white, £7 10s. per ton; 60 per cent., £6 10s. per ton.

Spermaceti.—*American* is very firm at 1s. 3d. per lb.

Spices (Various).—*Black Pepper*: 271 bags Singapore sold at 4d.; 146 bags Tellicherry bought in at 4¼d.; 25 bags Malabar sold at 4¼d. to 4⅜d.; 9 bags fine heavy bold clean Ceylon sold at 5⅜d. *White Pepper*: All bought in; Siam at 7¼d.; Penang at 6¾d. *Chillies*: 50 bags dull Zanzibar sold, without reserve, at 29s. to 29s. 6d.; 58 bags good Japan sold at 39s. to 41s. *Cinnamon*: 16 bales broken Tellicherry sold at 10d. to 10½d. *Cinnamon Chips*: 195 bags Ceylon coarse chips bought in at 3d., 14 bags coarse bark sold at 4d. *Mace*: 16

cases Peraing bought in, ordinary red 1s. 6d. to 1s. 6½d., pickings 1s. 5d.; 22 packages West Indian sold at 1s. 4d. to 1s. 7d. *Nutmegs* dull. *Pimento*: Of 270 bags offered only 100 bags sold in small lots at 4¼d. to 4½d.

STAR ANISEEDS—In very small supply on the spot, 110s. per cwt. being asked. New crop offered freely, but no business therein.

STROPHANTHUS SEEDS. — Good green *Kombé* are steady at 3s. 3d. per lb., and brown slightly weevily are quoted 10d. to 1s. per lb., both in original import packages.

SULPHATE OF COPPER—Quiet and rather easier at £15 17s. 6d., to £16 15s. per ton according to brand.

SULPHONAL.—The two chief makers have so far not raised their price, which remains at 7s. 3d. per lb. for *crystals* and *powder* in bulk packing.

TURMERIC—Is decidedly firm, but business is quiet. Small sales of *Bengal* at 15s. 6d. per cwt.; fair *Malabar* finger at 20s. per cwt., but 22s. 6d. per cwt. now asked; and *Cochin* split bulbs at 8s. 6d. per cwt.

LIVERPOOL REPORT.

MAY 18, 1898.

Business continues very steady, and though transactions have not been very numerous, the prices obtained are satisfactory. There has been no great fluctuation of price in any one article, the chief being an easier rate for olive oil, due to the alteration in the Spanish rate of exchange. Good sales of Fœnugrec, Ginger, Kola Nuts, and Peruvian Honey are reported. Among chemicals, Caustic Soda and Sulphate of Copper are lower, and Ammonia Sulphate a turn higher in price.

AMMONIUM SALTS.—*Sulphate*, £8 17s. 6d. to £9 per ton.

BEESWAX.—Sales of Chilian are reported at £6 15s. per cwt.

BLEACHING POWDER.—Continues dull at £5 10s. to £6 per ton.

COPPER SULPHATE—Is lower at £16 2s. 6d. to £16 5s. per ton.

FŒNUGREC.—About 5 tons of Egyptian sold for 10s. per cwt. ex quay.

GINGER.—30 bags good Sierra Leone sold for 18s. 6d. per cwt.

GUM ARABIC—Sorts continue to sell in small amount at 75s. per cwt.

HONEY—42 barrels of Peruvian made 21s. per cwt.

KOLA NUTS.—50 packages of dried sold at 1½d. per lb.

OILS (FIXED) AND SPIRITS. — *Castor* is offering at very steadily maintained prices for spot parcels, Calcutta at 3¼d. to 3⅝d. per lb., and French 1st pressure at 3¼d. per lb. *Olive* is steady at £28 15s. to £29 15s. per tun (for shipment) for Seville, and Malaga £30 per tun. *Linseed* is firmly held at last week's rates, viz., 18s. to 18s. 6d. per cwt. *Cottonseed*, Liverpool refined, is also unchanged, 16s. 9d. to 17s. 3d. per cwt. *Spirits of Turpentine* is somewhat quieter at 27s. 3d. per cwt.

SEEDS.—*Canaryseed* is unchanged as regards Turkish, viz., 28s. to 30s. per 464 lbs., but is somewhat neglected. *Linseed*: 250 tons of River Plate sold *ex* quay at 35s. per 416 lbs., and 25 tons Bombay at 39s. *ex* store. Spot parcels are fairly plentiful; "futures" scarcely offered.

MANCHESTER CHEMICAL REPORT.

MAY 18, 1898.

The market for heavy chemicals continues fairly firm, and Ammonia Alkali, 58 per cent., has an upward tendency, although at present there is no advance to be noted in this district, reports to the contrary notwithstanding. Chlorate of Potash is a fraction higher, but oxalic is rather lower, closing at 3⅜d. United Kingdom delivery. Sulphate of Ammonia has spurted, and sellers in this district are reluctant to sell under £8 17s. 6d. to £9 per ton on rails, bags. It is also noteworthy that Benzols are higher, owing to their increased use for gas enrichment, and the relative cheapness as compared with other materials. Creosote is firm at 2¾d. In the demand for Lancashire made green copperas there is no abatement, but manufacturers here have made no change in price for the present. Yellow Prussiate still firm at 6¾d. to 9d. Glaubers are scarce, but without change.

EXCHANGE.

OFFERED.

Miscellaneous.

Surplus Stock.—12 Williams', 12 Carter's, 6 Cockles', 6 Holloway's, 6 each Steedman's, 1s. 1½d. and 2s. 9d., £2 17s. 6d. Cash with order, or London reference if fresh customer.—Eastman, Forest Lane, Stratford.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

To clear.—1897 English Honey, pure and good, 12 lbs. for 5s.; offers for 1 cwt. New Combined Monocle and Stereoscope, cost 17s. 6d, price 9s.—Brampton, Sudbury, Suffolk.

Overstocked.—5 dozen enemas, seamless, new (Ingram's expired patent), enamelled black, hinged boxes, vagina pipes, leather shields, 30s. dozen; sample posted, 2s. 9d., cash.—Warnes, Chemist: 533, Gray's Inn Road, W.C.

Essential Oils to dispose of cheap. About 2 lbs. Citronelle (Fisher's); 40 ozs. Lemongrass; 2 lbs. Oil Bergamot; also 20 lbs. Bichromate of Potash.—Bromide, "Pharm. Journ." Office, 5, Serle Street, London, W.C.

Surplus Stock.—6 dozen Daisy Powders, 8s. 6d. per dozen; 28 lbs. Confect. Sennæ Nost., 6d. lb.; 3+1 lb. bots. Potas. Acetas, 10d. lb.; 2 lb. Aq. Anethi Conc., 1 to 40, 2s. lb.; 4 lbs. Ol. Succini Rect. (Schimmel's), 1s. lb.; 1 lb. Phosphorus in bot., 2s.; 2 lbs. Pulv. Canthaiides, 2s. lb.; 2 lbs. Pulv. Gum Ammoniac, 1s. lb.; 56 lbs. Tamarinds, 2d. lb. Prices marked are in Grimsby.—Reigo Company, Grimsby.

Two doz. each 2s. and 2s. 6d. North Lincolnshire Drug Co.'s Cattle-oil; what offers?—613, Romford Road, E.

Twelve Gibson's 1s 1½d. Top. Note Producers; 36 6d. Zomela Soap; 2 4s. 6d. Maltine; 12 1s. Pegamoid Silver Paint; 10 1s. 6d. Armour's Beef-Juice.—Lees, Drug Stores, Stalybridge.

Books.

Special.—The first twelve volumes 'Strand Magazine' quite new; bound publisher cases, £2 11s. 0d. Note.—The First 2 volumes are 21s. each at the publishers.—Pouteau, 44, Warden Road, London, N.W.

Students' and Chemists' books offered and wanted, for cash or exchange; purchasers write for list (post free); sellers send list, stating edition, date, condition, price required.—Gower, Publisher, Waterloo, Liverpool.

Proctor's 'Pharmacy,' Attfield's 'Chemistry,' Bentley's 'Systematic Botany,' all new; Southall's E Collection, 'Pharmaceutical Journal' for 1897, clean and entire; offers invited.—Morris, Winchmore Hill, N.

What offers?—'Pharmaceutical Journals,' 1846 to 1848, 1858 to 1859, 1859 to 1863; well bound.—Hoad, 20, Church Square, Rye.

'Cassell's Family Physician,' in four cloth volumes, with steel plates; and 'Ladies Physician'; carriage paid, for 20s.—Wallbridge, Chemist, St. Helens.

Pereira's 'Materia Medica,' 3 vols., 7s 6d. 'Beasley's Receipts and Prescriptions,' 3s. pair.—"Alpha," 34, Church Street, Preston.

Botany, Prantyl and Vines, fifth edition, in good condtiion, 5s.—Bryan, 109, St. James Street, Brighton; post free.

Sixty Volumes of Braithwaite's 'Retrospect of Medicine (30 years) what offers! No quack remedies.—Simsom, Chemist, Leamington.

Lewkowitch's 'Oils, Fats, and Waxes,' 11s. (21s. net); Pearmain and Moor's 'Applied Bacteriology,' 6s. 6d. (12s. 6d. net); Mackenzie's 'Dictionary of Applied Chemistry,' 8 vols., 20s. (£4).—Johnson, 155, Lea Road, Wolverhampton.

Optical and Photographic.

Whole-plate Tourist Camera, 3 double backs, ¼ RR lens, focussing cloth, walnut tripod stand, black leather case, belonged to gentleman, price £7, not half cost.—Wright & Co., Photo Chemists, Burnley.

Bargains.—No. 2 Xit Camera, six Edwards's double backs, two cases, slightly soiled, £2 15s.; No. 3. Junior Kodak and glass plate attachment, two leather cases, splendid order, cost £10 9s. 6d., price £6 15s.; Memo. Frena Camera, new condition, £2; Robinson's Luzo ¼-plate Hand Camera for roll films in leather case, good order, cost £8, price £4 15s.; Shew's Bamboo Stick Tripod, new condition, cost 25s., price 15s; Shew's Registered Case for Xit, new. 14s.; ¼-plate RR Lens, iris diaphragm, new, splendid definition, 12s. 6d. each, to clear.—Wright and Co., Photo chemists, Burnley.

WANTED.

Desideratum (28 lbs.) or similar powder mixer and sifter.—"Sifter," 232, Portway, West Ham.

Wanted.—Munyon's Remedies. State kinds, quantity, and lowest price for cash to—Eastman, Forest Lane, Stratford.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Wanted.—Muter's 'Handbook of Volumetric Analysis.'—Longley, Wombwell, Barnsley.

SATURDAY, MAY 21.

REYNOLDS AND BRANSON'S CRICKET CLUB v. Wakefield Asylum.

TUESDAY, MAY 24.

RECEPTION BY THE "THREE PRESIDENTS" at the Royal Institute of Painters in Water Colours, Piccadilly, at 8.30 p.m.

WEDNESDAY, MAY 25.

EDINBURGH PHARMACY ATHLETIC CLUB, at 6.45 p.m. Seventh Annual Amateur Athletic Sports at Powderhill Grounds.

NOTTINGHAM AND NOTTS. CHEMISTS' ASSOCIATION, at 9 p.m.
Annual Meeting for the Election of Officers and Council and other business. (Albert Hotel).

WESTERN CHEMISTS' ASSOCIATION (OF LONDON), Meeting at the Westbourne Restaurant, Craven Road, W., at 9 p.m.

THURSDAY, MAY 26.

ROYAL INSTITUTION, at 3 p.m.
"Natural Philosophy," by Lord Rayleigh.

FRIDAY, MAY 27.

ROYAL BOTANIC SOCIETY GARDENS (Museum), at 4 p.m.
"Mimicry in Plants," by the Rev. Professor Henslow, M.A.

ROYAL INSTITUTION, at 9 p.m.
"Sir Stamford Raffles and the Malay States," by Lieut.-Gen. the Hon. Sir Andrew Clarke.

SATURDAY, MAY 28.

ROYAL INSTITUTION, at 3 p.m.
"The Biology of Spring," by J. A. Thomson.

Western Chemists' Association (of London).—At a meeting of this Association, held on Wednesday, May 25, it was arranged to hold the annual summer outing on Thursday, July 21, when the party will proceed by train to Henley, then up the river in an electric launch, on board which luncheon and tea will be provided, subsequently returning to town by train from Henley. It was also decided to hold the annual dinner at the Café Royal, in November next.

Messrs. C. J. Hewlett & Son, Charlotte Street, E.C., have followed the example of other firms in publishing in book form 'Notes on the New British Pharmacopœia, 1898.' In the general arrangement of the compilation Mr. E. J. Millard appears to have followed the plan of the *P. J.* Synopsis, and the book is accordingly conveniently arranged.

Dr. George Watt, C.I.E., Reporter on Economic Products, Calcutta, has obtained eight months' leave from May 1. Mr. David Hooper, Curator of the Indian Museum, Economic and Art Section, will officiate as Reporter during Dr. Watt's absence.

Edinburgh District Chemists' Golf Club.—The second competition this year for the "Gibson Handicap Medal" was played last week over the Braids course, and resulted as follows:—1st, James Stott, 89 plus 4 equals 93; 2nd, A. M. Stewart, 106 less 5 equals 101; 3rd, D. N. Wylie, 106 less 4 equals 102. There was a good turn out of members.

Mr. J. S. Grant, dentist, of Aberdeen, on Thursday morning, May 19, was suddenly seized with illness, and in about half an hour expired. Deceased served an apprenticeship as a chemist and druggist in Aberdeen, after which he proceeded to Edinburgh, where he entered the service of Messrs. Duncan and Flockhart. He subsequently set up in business in Aberdeen, but about twenty years ago he removed to Brechin, where he set up as a dentist, a profession which he has practised ever since. Mr. Grant was of a kindly and happy disposition, and the news of his sudden demise has been heard of with general regret in the district.

The Working of the New B.P. at Birmingham.—The Birmingham Health Committee have had under consideration the question of the new B.P. Councillor Price, a member of the Midland Chemists' Association, urged upon the Committee the desirability of some notice being sent to the trade as to the course it was intended to follow in the new order of things. He suggested that for at least another six months no prosecution should be instituted in any case where the sample was found to conform with either the old or the new formulæ, pointing out that it would take chemists some time to get rid of their present stocks. The Committee delegated the matter to a sub-committee, who, in the course of a discussion, heard at length Mr. Price's views from the point of view of the trade. The sub committee declined, however, to give any definite undertaking, stating that each case would be taken on its merits. Their recommendation to this effect came before the Health Committee on Tuesday and was adopted.

Mr. Hugh M. Massingham, for many years senior dispenser to the Manchester Royal Infirmary, has been installed Worshipful Master of the De Grey and Ripon Lodge No. 1161 of Freemasons, held at the Freemasons' Hall, Cooper Street, Manchester.

Window Advertising and its Results.—At Lancaster Castle, on Saturday, May 21, Thomas Waddington, described as a chemist and druggist, of Morecambe, although his name does not appear on the Register of Chemists and Druggists, appeared under a warrant issued by the Bench because the defendant sent his assistant to answer a summons for obstruction. The action of the Bench caused considerable indignation, as the sending of the assistant implied a plea of guilty to the charge of obstruction caused by people watching an automatic figure in his window advertising headache powders. The defendant was fined 10s. and costs.

Edinburgh Pharmacy Athletic Club.—The seventh annual sports took place at Powderhall Grounds, on Wednesday, May 25, 1898. The weather conditions were perfect, and there was a large and representative attendance, including Messrs. J. Laidlaw Ewing, Chairman of the North British Branch Executive; John Bowman, President of the Chemists' Trade Association; J. Davies, of Raimes, Clark & Co.; D Mackenzie, of T. and H. Smith & Co.; C. F. Henry, Secretary Trade Association, etc. The principal officials were:—Judges: D. S Duncan and Thomas Fraser. Referee: F. A. Lumley. Judges of Confined Events: Geo. Coull, B.Sc., and D. B. Dott, F.I.C. Handicapper and Timekeeper: W. M. Lapsley. Football Referee: J. Grieve. Starter: J. Dalziel. Handicappers of Confined Events: G. F. Anderson, J. P. Gibb, and Geo. Somerville. Hon. Secretary: J. P. Gibb, 8, Cobden Crescent, Newington. An excellent programme opened with a One Mile Bicycle Handicap (confined to the trade): 1, D. S. Napier; 2, W. Arres. Other confined events were:—Five-a-Side Football Competition for Anderson Challenge Cup, presently held by John Mackay & Co.'s team. The final tie between teams from Raimes Clark & Co. and T. and H. Smith & Co. resulted in favour of the former with 3 goals to 1. 300 Yards Flat Race Handicap (confined to apprentice members of the Club): 1, J. B. Mitchell; 2, R. Wilson; 3, P. P. Dunn. 220 Yards Flat Race Handicap (confined to trade): 1, J. B. Mitchell; 2, R. Marshall; Half-mile Flat Race Handicap (confined to Club members): 1, J. Walker; 2, R. Marshall. All the events were keenly contested, and the gathering was a distinct success from an athletic point of view. At the conclusion of the sports Mr. J. Rutherford Hill, Honorary President, congratulated the Club and complimented the Honorary Secretary, Mr. Gibb, on the success of the seventh annual competition. The prizes were presented to the winners by Miss Macmillan, and on the motion of Mr. G. Somerville (President) a vote of thanks was awarded to Mr. Hill for presiding. The donors of prizes were Messrs. Anderson & Co., Messrs. Duncan, Flockhart & Co., Mr. J. P. Gibb, Mr. J. H. Haywood, Messrs. S. Maw, Son & Thompson, and Messrs. Raimes, Clark & Co.

Vitrol Throwing.—On Saturday, May 21, a man named Zerubbabel Baillie Balcarres (42), called at a house of a distant female relative at 9, Ingleston Street, Edinburgh, and asked to see her. She came to the door, and the man, it is alleged, took from his pocket a cup containing some dark brown liquid and threw the contents in her face. The woman had a duster in her hand at the time, and held it up in front of her face, with the result that it caught all the liquid except a few drops, which fell upon her arms and upon a little girl who was standing beside her. Feeling a burning sensation, the woman and the child at once went to a chemist who dressed the wounds with oil. Information was given to the police, and about half-past six on Saturday night the accused was arrested. He was taken to the High Street Police Office, and on being searched a gill bottle half-full of vitrol and a cup were found in his possession. Accused, who is a brushmaker by trade, was confined in Morningside Asylum about seven or eight years ago, and is supposed to be of unsound mind. He passed the bar of the City Police Court on Tuesday, and was remitted to higher authorities.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

Wm. Patterson, Wm. B. Fowle, and Henry Spencelayh (trading as Patterson & Co), Cork Cutters, Manufacturers, etc., 21, Turner's Road, Burdett Road, Bow. Debts will be received and paid by Henry Spencelayh.

Robert Gourlay and Joseph Law, Physicians and Surgeons, St. James's Terrace and 247 and 249, Ripponden Road, Oldham. Debts will be received and paid by Robert Gourlay, who will continue the practice on his own account.

Mould and Tod, Printers, etc., 3, St. James's Square, Edinburgh. The business has been transferred to Mr. W. A. G. Graham, who will continue it under the old style, and will receive and pay all debts.

RECEIVING ORDERS IN BANKRUPTCY.

(From the London Gazette.)

Geo. B. Filmer (trading with Arthur Ryden as Filmer & Co.), Mineral Water Manufacturer, Whitegate Mineral Works, Whitegate Lane, Blackpool.

Gilbert Thonger, Chemist, Harborne, Staffs., lately trading at Medical Hall Hagley Road, Edgbaston, Birmingham.

Walter Beaumont (trading as Jonas Beaumont), Manufacturing Chemist, 149, Pellon Lane, Halifax.

Chas. W. Flack, Chemist, High Street, Stevenage, Herts.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

MAY 26, 1898.

Business, as might have been expected in view of the fact of it being the Derby week, combined with the near approach of the Whitsuntide holidays, has been anything but brisk during past few days. Not only have transactions been limited, but changes of importance in values have also been conspicuous by their absence. Acid Boracic and Borax are quiet. Acid Citric and Tartaric firm. Camphor quiet. Balsam Peru dearer. Ipecacuanha very firm. Glycerin slightly dearer. Quicksilver and Mercurials, Iodine and Iodides, Bromine and Bromides unchanged. Cod-liver Oil dull. Sulphate of Ammonia again dearer. Cream of Tartar very dull of sale. Price of Methylated Ether has been advanced. Opium, Morphia, and Codeia steady. Quinine quiet. Sulphonal, Phenacetin, and Acetanilide unehanged. Cocaine dearer. The following are the prices ruling for article of principal interest:—

ACETANILIDE—Is quiet at 1s. 2d. to 1s. 3d. per lb., there being a rumour that price is likely to advance. Certainly the ruling figure is sufficiently low to apparently justify any such advance.

ACID BORACIC.—*Crystals* 23s. per cwt., *powder* 25s. per cwt., being unchanged with a steady demand.

ACID CARBOLIC—Is in fair demand at unchanged value, say 6¼d. to 6½d. per lb., according to make, for 35 to 36° C. *ice crystal* in quantity and bulk packing. Other qualities and packing in proportion. *Crude*: 60° F., 2s. 1d. per gallon; 75° F., 2s. 6d. *Liquid*: 95 per cent. of pale straw colour 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC—Very firm at 12¾d. to 1s. 1d. per lb. for *crystals*.

ACID OXALIC—Is steady at 3⅝d. to 3¾d. per lb. on the spot.

ACID TARTARIC—Is firm at 1s. 1d. per lb. for English *crystals*, and 12¾d. per lb. for foreign.

AMMONIA COMPOUNDS.—*Sulphate* dearer and closes firm at £9 5s. for grey prompt 24 per cent., London. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* firm at 14s. 6d. per lb. *Oxalate* 6d. per lb. *Sulphocyanide* steady at 1s. 2d. per lb. *Sal ammoniac* unchanged at 35s. per cwt. for sublimed firsts, and 33s. per cwt. for seconds.

BALSAM PERU.—Price continues to advance, 9s. 6d. to 9s. 9d. per lb. being now asked.

BISMUTH—Unchanged at 5s. per lb. for the *metal*, and 4s. 10d. per lb. for the *Subnitrate* in 5-cwt. lots.

BLEACHING POWDER.—A moderate business doing on the spot at £7 5s. per ton.

BORAX—Is quiet and unchanged at 14s. per cwt. for lump and 14s. 6d. per cwt. for powder.

BROMIDES—Unchanged at 1s. 10d. per lb. for *Potass. Bromide*.

CAMPHOR.—Crude continues very quiet; for arrival June-July steamer there are sellers of China at 82s. per cwt., and Japan at 89s. per cwt., *c.i.f.*

CINCHONA BARK.—The supplies at Tuesday's auctions in London were larger than for some time past, amounting to 4160 packages of all descriptions, the bulk of which was East Indian kinds. There was a fair demand, and for *Cinchonidine* yielding barks fully last rates were paid, but the *Ledger* and *Crown* barks sold at a decline of about 15s. per cwt. *African*: 174 bales sold, fair quill, 3¾d. to 4d.; broken ditto, 3¾d. to 4¼d. per lb. *Calisaya*: 81 bales fair quill sold, 5¼d. to 5¾d. per lb. *Ceylon*: Of 249 bales 169 sold. Ledgeriana, original stem, 4⅛d.; branch, 2⅜d.; crown, original stem, 2¾d. to 3d.; branch, 2½d.; bold red broken quill, 2⅝d.; twigs, 1⅝d. per lb. *East Indian*: Of 3300 packages 2165 sold, Ledgeriana original stem, 2⅞d. to 4d.; branch, 2d. to 3d.; bold quill, 5d.; root, 4⅜d.; crown, original stem, 1¾d. to 3¾d.; renewed, 2¾d. to 4⅜d.; red, original stem, 1¾d. to 2½d.; branch, 1⅝d. to 3⅜d.; renewed, 1¾d. to 2⅜d.; fair bold quill, 3¼d. to 6¼d.; broken quill, 2½d. to 3⅞d.; root, 2⅜d. to 3½d.; hybrid, original stem, 3¼d. to 3½d. per lb. *Java*: 351 bags retired.

CLOVES.—Privately the market for *Zanzibar* is steady. Sales include June to August delivery at 3¼d. to 3$\frac{25}{32}$d., August to October at 3⅞d., and October to December at 3$\frac{15}{16}$d. No public spice sales have been held this week.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial, 1s. 5d.; pure, 3s. per gallon. *Benzole*: 50 per cent., 1s. 3d.; 90 per cent., 1s. 2d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 6d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 8d. per gallon.

COCAINE—Is firmer, the agents for the brand most in favour here only being willing to book quite limited orders at 9s. 6d. to 9s. 9d. per oz., whereas a short time since they were selling at 9s. It is maintained that a further advance in price is probable.

COD-LIVER OIL.—Market remains exceedingly quiet, nominal price being 80s. per barrel for new non-congealing *Norwegian oil* in tin lined barrels.

CODEIA—Is firm at 11s. 3d. to 11s. 6d. per oz. for quantity and bulk packing.

CREAM OF TARTAR—Very quiet, the lower strengths being practically unsaleable. First white *cryttals* on the spot quoted 72s. 6d. per cwt.; *powder*, 75s. per cwt. B.P. quality is fairly firm a 78s. to 79s. per cwt. for *crystals*, and 81s. to 82s. per cwt. for *powder*.

CUTCH—Is very firm, with but little offering. Sales of fair slabs at 27s. 6d. per cwt.

ETHERS, METHYLATED. — Makers now quote the above as follows:—s.g. ·730, 8¼d. per lb.; s.g. ·725, 10¼d. per lb.; s.g. ·720, 12¼d. per lb.; and s.g. ·717 (absolute), 1s. 3¾d. per lb.

GLYCERIN.—*Crude* is dearer and rather more money has been paid for the *refined* article, which now seems in a strong position for a rise. White, double-distilled, chemically pure, 1260 s. g. quality in cases of 4 and 56-lb. tins is quoted 52s. to 53s. per cwt. for *English* make, and 55s. to 60s. per cwt. for *German* brands.

IODIDES—Are in very good demand at 9s. 9d. to 10s. 3d. for *Potass. Iodide* and 7½d. for *Iodine*.

ISINGLASS.—At the monthly auctions on Tuesday about 700 packages were offered as against 550 packages at the April sales. A quiet tone prevailed for all descriptions, and less than half found buyers at irregular prices. *Penang*: Leaf sold firmly, but tongue was cheaper; 149 packages offered and 108 sold (1 lot of good pale long leaf 5s. 7d.); leaf, good and fine pale 4s. 3d. to 4s. 8d., good yellow slightly red 3s. 10d. to 4s. 2d., fair reddish 3s. 6d. to 3s. 9d., dark part thin 3s. 2d. to 3s. 5d., small palish 3s., dark common 1s. 3d.; tongue, good and fine pale 4s. 2d., fair reddish 3s. 6d. to 3s. 10d., reddish mixed 3s. 1d. to 3s. 4d., dark mixed 2s. 4d. and 3s., small pale 2s. 10d.; purse, good bold pale 2s. 3d. reddish 1s. 2d. to 1s. 8d., floats large 2s. 2d. small 1s. 3d. to 1s. 6d. *Brazil*: sold slowly at about 1d. per lb. decline. *Bombay*: Sold steadily at about last rates.

JAPAN WAX—Is dearer for arrival, June-July steamer being quoted at 33s. 3d. per cwt. *c.i.f.* On the spot there are sellers of good squares at 35s. to 36s. per cwt.

MERCURIALS—Are without change at the advanced prices given last week.

MORPHIA—Is quiet but firm at unchanged prices, say 4s. 6d. per oz. for the *hydrochlorate* salt in powder.

OILS (ESSENTIAL).—*Star Aniseed* is very firm at 6s. 9d. to 7s. 3d. per lb. on the spot, whilst quotations from China come firmer. *Caraway* is dearer at 5s. 6d. per lb. for English, and 4s. 9d. to 5s. per lb. for foreign. *Cassia* is quiet, and demand on the spot is slow. *Cloves* firm at 2s. 10d. to 3s. per lb. according to quantity. *Peppermint*: American H.G.H. is quiet at 5s. 7½d. per lb. on the spot. Wayne County is rather dearer for fine qualities, 3s. 9d. to 4s. per lb. *c.i.f.* being the quotations.

OILS (FIXED) AND SPIRITS.—*Linseed* dull and lower at £16 15s. for pipes on the spot. *Rape* lower and with a downward tendeney—ordinary brown on the spot, £23 10s.; refined, £25. *Cotton* unchanged on last week's prices: London crude spot £14 10s.; refined spot £16 5s. to £16 15s., according to make. *Olive*: Spanish and Levant green oils £33 per ton; eating oils 4s. 6d. to 5s. 9d. per gallon. *Coconut* steady but quiet. Ceylon on the spot, £24 10s. *Cochin*, £29 10s. *Palm*: On the spot Lagos is quoted £23 15s., being the shade dearer. *Turpentine* steady at 25s. 3d. per cwt. for American on the spot. *Petroleum Oil* steady: Russian on the spot, 4⅝d. to 4¾d. per gallon; American spot, 5⅛d. per gallon; water white,

6¼d. per gallon. *Petroleum Spirit* : American, 5⅝d. per gallon ; deodorised, 6d. per gallon.

Opium.—Market is quiet but firm, price here being 10s. to 10s. 6d. per lb. for good *manufacturing*, while *Smyrna* price is now rather lower and about approaching the spot price here, whereas lately it had been 4d. to 6d. per lb. dearer.

Phenacetin—Is the turn harder at 3s. 9d. to 4s. 3d. per lb., according to quantity and make.

Podophyllin—Is firm at 12s. 6d. to 14s. per lb. for B.P. quality, according to holder. Partly insoluble qualities at 10s. to 11s. per lb.

Potash Compounds.—*Chlorate* : Dull at 3¼d. per lb. *Bromide* : Unchanged at 1s. 10d. per lb. *Iodide* : 9s. 9d. to 10s. 3d., according to quantity. *Bicarbonate* : Crystal and powder, both quoted 30s. per cwt. in large bulk. *Bichromate* : Steady at 4d. to 4½d. per lb. *Cyanide* : Very firm, and a good business passing at 1s. 2d. per lb. for 98 to 100 per cent. cake. *Permanganate* : Is in rather better inquiry at 62s. 6d. per cwt. for small and 67s. 6d. per cwt. for large crystals. *Prussiate* : Yellow 6¼d. to 7¼d. per lb., according to brand and package ; red firm at 1s. 2d. per lb.

Quassia Wood—Is dearer, good logs being held for £5 5s. per ton.

Quicksilver—Very firm at £7 12s. 6d. per bottle from importers.

Quinine.—Market remains in *statu quo*, *German* makers' price for best brands being still 1s. per oz., while from second hand a limited quantity could be bought at 10½d. to 11d.

Shellac.—A moderate business is passing at steady prices, including *Second Orange* on the basis of 61s. per cwt. for fair *TN*, and fine up to 78s. per cwt. For arrival there is very little doing, prices are unchanged at 60s. per cwt., *c.i.f.*, for *TN*, April to June steamer. There is more inquiry for speculation.

Soda Compounds.—*Crystals* unchanged at 55s. per ton. *Bicarbonate* steady at £7 10s. per ton for the 98 per cent., and 18s. to 19s. per cwt. for the fully bicarbonated quality. *Bromide* firm at 2s. 2d. per lb. *Iodide* steady at 11s. 7d. per lb. *Hyposulphite* is in active demand at 6s. to 8s. per cwt. according to brand. *Nitrate* : Ordinary on the spot £7 12s. 6d. per ton ; refined £7 15s. per ton. *Caustic* : 70 per cent. white £7 10s. per ton ; 60 per cent. £6 10s. per ton.

Sulphate of Copper—Quiet at last week's quotations, £15 17s. 6d. to £16 15s. per ton, according to brand.

Sulphonal—Can still be bought from the two principal makers at 7s. 3d. per lb. for bulk packing.

Turmeric—Continues firm, but business is of a retail character, including *Bengal* at 15s. 6d. per cwt., *Madras* finger 20s. to 21s. per cwt., *Cochin* split bulb at 9s. to 9s. 6d. per cwt.

To-day's Drug Sales went off quietly, only a moderate proportion of the offerings finding buyers, the chief point of interest being the continued firmness of Ipecacuanha and a rising tendency in price of Honey.

Aloes.—22 boxes *Curacoa* of low burnt quality were taken out, only 7s. per cwt. being bid. Good livery ditto realised 26s. per cwt. down to 15s. for capey. Softish but bright *Cape* sold at 24s., while good hard bright ditto was held for 26s. 6d. per cwt.

Aniseeds.—8 bags fair Spanish held for 28s. per cwt.

Annatto Seeds.—13 bags fair bright held for 4d. per lb., an offer of 3¾d. per lb. being refused.

Asphalt.—1 case *Egyptian* bought in at 85s. per cwt., 29 cases *Syrian* being also bought in.

Cactus Flowers.—The usual 10 bags of *Grandiflora* again made their appearance and were as usual again bought in, 8d. per lb. being the price named.

Camphor.—55 tubs *Japan* bought in at 92s. 6d. per cwt.

Cardamoms.—Demand was very slow, only a portion of the offerings finding buyers. The finer qualities sold up to 3s. 10d. per lb., these being fairly firm. The lower qualities were, however, about 3d. per lb. lower.

Cassia Fistula.—37 cases fair bold held for 11s. per cwt.

Castor Oil.—Good water white *Italian* held for 4½d. per lb., and good *French* at 4d. per lb.

Chiretta.—Good green is very scarce ; 2 bales in to-day's auctions realised 3¼d. per lb.

Cinchona Bark.—Serons *Crown and Grey* sold at 5½d. up to 11d. per lb. ; 31 bales *yellow* at 5¼d. to 7½d. ; 9 bales *red* at 3d. up to 3s. 7d. per lb. 10 cases *E. I. Cinchona* being bought in at 1s. 6d., and 1 case *Madras Cinchona* at 1s. 2d. per. lb.

Cinnamon Oil.—51 cases leaf oil were advertised "without reserve," but broker announced that he would only sell 1 case of each mark unless prices were satisfactory. It proved in the result that they were not satisfactory, for only 7 cases sold at 3d. to 3¾d. per lb., at which prices he declined to go on. A further parcel of 4 cases sold at 3d. to 3½d. per lb.

Colocynth.—4 cases and 2 bags *Turkish*, small to medium, part very seedy, sold at 10¾d. to 11d. per lb., good small apple being held for 1s. 2d. per lb.

Colombo Root.—237 bags fair brownish sorts sold at 20s. to 21s. per cwt., being rather easier.

Croton Seeds.—3 bales of good small seeds sold, with good competition at 87s. per cwt., being again dearer.

Cuttlefish.—25 cases sold at 1d. per lb. for broken, up to 3½d. for fairly bold.

Dragons' Blood.—9 cases dull reeds bought in at £9 per cwt.

Elaterium.—9 boxes *Maltese*, part rather unsightly, were taken out at 1s. 7d. per oz.

Ergot of Rye.—5 bags good bold sound *Russian* sold cheaply without reserve at 8¼d. per lb., weevily *Spanish* being bought in at 9d. per lb.

Gamboge.—1 case of medium quality sold at £6 10s. per cwt.

Gentian Root.—Good red chopped root sold at 22s. 6d. per cwt.

Golden Seal Root—Is firmly held on the spot at 2s. 5d. per lb., being very scarce both here and in New York, whence the quotation comes 2s. 1d. to 2s. 2d. per lb. *c.i.f.*

Gum Ammoniacum.—1 case part fair pale loose drop, part dark blocky, sold at 21s. 6d. per cwt.

Gum Arabic—Fair yellow sorts were bought in at 85s. per cwt., good grain selling at £6 10s. to £6 17s. 6d. per cwt.

Gum Asafetida.—7 cases good clean gum sold at 60s. per cwt., subject to approval.

Gum Benjamin.—Good seconds *Sumatra* held for £6 5s. to £8 10s., low ditto selling without reserve at 70s. to 80s. per cwt., fair yellow *Siam* part free part blocky held for £15 per cwt., low ditto sold at 97s. 6d.

Gum Galbanum.—2 bales part blocky held for 9d. per lb. ; 7½d. being refused ; 1 bale was held for 1s., good clean pale for 1s. 4d., and pickings for 4d. per lb.

Gum Kino.—8 boxes and 1 tin genuine red dust held for 10s. per lb. *African* was held for 7s., a bid of 4s. being refused.

Gum Mastic.—6 cases good clean pale held for 1s. 11d. per lb., 6 cases low *East Indian* being taken out at 6d. per lb.

Gum Myrrh.—14 cases sold very cheaply at 63s. to 64s. per cwt. for fine sorts. *Aden* picked, small pale siftings, realising 42s. Pickings were held for 36s., a bid of 28s. per cwt. being declined.

Honey.—40 cases *Californian* bought in at 40s. per cwt. for brownish liquid, down to 27s. for inferior. White *Italian* sold at 20s. to 29s. 6d. per cwt. Medium *Jamaica* at 20s. 6d. up to 22s. per cwt. for fair. From all appearances the article would appear likely to be dearer.

Ipecacuanha.—*Rio* very firmly held for 9s. to 9s. 3d. per lb., according to quality, but only 1 bale sold at 9s. 1d. per lb. *Carthagena* quality all bought in at from 4s. 6d. to 5s. 6d. per lb. according to holder.

Jalap Root—Is becoming scarce, and fair small heavy root is selling privately at 6d. per lb., which was the price asked for 26 bags in to-day's auctions, without, however, business resulting.

Liquorice Root.—50 bales rough *Syrian* held for 9s. 6d. per cwt.

Menthol Crystals.—3 cases good dry crystals *Kobayashi* brand held for 7s. per lb.

Nux Vomica.—32 bags sold, fair medium dull at 7s. 6d. per cwt., and small bright at 9s. 6d. per cwt.

Orange Peel.—Good new thin cut was held for 7½d. per lb.

Patchouli Leaves.—44 bales sold without reserve at from 2d. to 2½d. per lb. being cheap.

Pistachio Nuts.—2 cases fair *Syrian* held for 1s. 4d. per lb.

Rhubarb—Good bold round *Canton* was held for 1s. 4d. per lb., fair medium for 1s. 2d., bold flat for 1s. 6d., medium for 1s. 2d., good bold *high dried* for 1s. 2d. per lb. Fair round *Shensi* small to bold, fair colour bought in at 2s. 6d. to 3s. 3d. per lb.

Sarsaparilla.—1 bale native picked held for 2s. per lb.

Scammony. — 8 cases were bought in at 20s. to 28s. per lb., according to quality.

Scammony Root.—80 bales all bought in, 30s. per cwt. being figure named.

Senna.—*Tinnevelly*, the late arrival was not in time for to-day's auctions only second hand parcels, therefore, were offered. Holders had ideas of value far beyond those o buyers, and only a few bales sold at from 3½d. to 4½d. per lb. for medium sized leaf.

Alexandrian: Small sale of medium leaf at 5d. per lb.

WAX.—Fair *Madagascar* sold at £6 7s. 6d. to £6 10s, per cwt. Fair *Zanzibar* held for £6 12s. 6d., fair *Italian* fetched £6 12s. 6d. down to £5 15s., latter price being, however, subject to approval. Fair *Australian* realised £7 5s., white *Calcutta* was bought in at £6 10s. to £7 5s. *Mogador* at 85s. per cwt.

NEWCASTLE CHEMICAL REPORT.

MAY 25, 1898.

A steady business in heavy chemicals continues. More Baltic shipping orders are in circulation, still it is said such are scarcely up to an average for the season so far. Prices go unchanged and are quoted as follows:—Bleaching Powder: £6 5s. to £6 10s., according to markets. Soda Crystals: Basis, 45s. to 52s. 6d. Caustic Soda: 70 per cent., basis, £7 5s. to £7 10s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

MAY 25, 1898.

The market for heavy chemicals is steady with little variation in values In miscellaneous articles the changes to note are generally in a downward direction. Sulphate of copper may be bought at £16 15s. to £17 per best brands, delivered Manchester. This in face of the continued firmness of the metal is rather puzzling, but it is generally attributed to overproduction. Brown acetate is easier at £5 17s. 6d. per ton, Welsh or American here. Chlorate of Potash is a shade higher, and varies from 3¼d. to 3½d. Green Copperas is dull, but without change. Glycerin is a trifle lower, and for quantities it is thought that £1 to £1 10s. less will be accepted on last week's prices. Naphthas have advanced sharply, miscible being quoted at 4s. 3d. per gallon with but little offering, and solvent wood (white colourless) 2s. 9d. to 3s. Powdered Arsenic is very irregular, ranging from £17 10s. to £18, ex ship. Aniline Oil and Salt are advanced to 5½d. and 5d. respectively. In Sulphate of Ammonia a considerable forward business is reported. The oil trade in Manchester is rapidly increasing, and in future a steamer will always be at sea bound for this port. The forward shipments are estimated at about 400,000 tons of American oil alone, besides the large quantities of Russian petroleum coming on.

LIVERPOOL REPORT.

MAY 25, 1898.

AMMONIA SALTS.—*Carbonate*, 3d. per lb. *Sal Ammoniac*, 33s. and 35s. per cwt. *Sulphate* firm at £9 5s. per ton.

BEESWAX.—5 cases Peruvian sold at £7 2s. 6d. per cwt.

BLEACHING POWDER—Is dull of sale at £5 10s. to £6 per ton.

COPPERAS.—Lancashire, 38s. per ton; Welsh, 36s.

COPPER SULPHATE—£16 2s. 6d. per ton.

GINGER.—Sierra Leone: 845 bags brought 17s. 9d. to 18s. 3d. per cwt.; and 55 bags 18s. 6d. per cwt.

GUM.—5 tons of Brazilian Arabic changed hands at late rates.

KOLA NUTS—Have been selling at 1¼d. per lb. for dried.

OILS (FIXED) AND SPIRITS. — *Castor* is firm in tone, with somewhat low stocks here at present. Calcutta good seconds is firmly held for 3¼d. to 3⅜d. per lb., and French, first pressure, at 3¼d. per lb. *Olive* is firm on the spot at £30 to £32 per tun for Spanish oils, a little good Malaga having changed hands at the latter price. *Linseed* is steady at 18s. to 18s. 6d. per cwt. *Cotton-seed* has advanced slightly; present price, 17s. to 17s 6d. per cwt. *Spirits of Turpentine* is in moderate demand at 27s. per cwt.

POTASH SALTS.—*Bicarbonate*: 30s. per cwt. *Chlorate*: 3¼d. per lb. *Cream of Tartar* is slow of sale at 75s. per cwt. *Potashes*: 20s. 3d. per cwt. *Pearlashes*: 37s. 6d. per cwt. *Saltpetre*: 21s. 6d. per cwt.

SODA SALTS.—*Bicarbonate*: £7 per ton. *Caustic*: 75 to 77 per cent., £8 12s. 6d. to £8 15s. per ton; 70 per cent., £7 5s.; 60 per cent., £6 5s. *Borax*: £13 per ton. *Nitrate*: 7s. 4½d. to 7s. 7½d. per cwt.

SPERMACETI.—32 cases Chilian refined sold at 1s. 0¾d. per lb.

MARRIAGES.

JACKSON—FROST.—On May 19, at St. Barnabas, Sheffield, by the Rev. A. Wood. J. Gilbert Jackson, Chemist, to Florence, second daughter to the late Francis Frost.

DIARY FOR THE WEEK.

FRIDAY, MAY 27.

ROYAL BOTANIC SOCIETY GARDENS (Museum), at 4 p.m.
"Mimiery in Plants," by Rev. Professor Henslow.

SATURDAY, MAY 28.

REYNOLDS AND BRANSON'S CRICKET CLUB *v.* Leeds Y.M.C.A.

TUESDAY, MAY 31.

ROYAL INSTITUTION, at 3 p.m.
"Literary Criticism in Greece" (Lecture I.), by Prof. S. H. Butcher.

THURSDAY, JUNE 2.

CHEMICAL SOCIETY, at 8 p.m.
"The Action of Ether on Organic Acids and on Carbohydrates in Presence of Hydrogen Bromide," by H. J. H. Fenton and Mildred Gostling.

LINNEAN SOCIETY OF LONDON, at 8 p.m.
"Notes on Some Lories," by Prof. St. Geo. Mivart.
"A Revision of the genus Symblepharis," by E. J. Salmon.
"On the Food of the Uropoda," by Surg.-Capt. H. A. Cummins.

ROYAL INSTITUTION, at 3 p.m.
"Modern Methods and their Achievements in Bacteriology" (Lecture I.), by Edward E. Klein.

FRIDAY, JUNE 3.

ROYAL INSTITUTION, at 9 p.m.
"The Development of the Tomb in Egypt," by Professor W. M. Flinders Petrie.

EXCHANGE.

OFFERED.

Books.

'British Pharmacopœia,' 1885. 'Additions 1890; both new. Turpin's 'Inorganic Chemistry,' 'Medical Directory,' 1896; 'British Medical Journals, March 20 to June 19, 1897. What offers.? Alpha, 194, Greenfield Road, St. Helens, Lancs.

'Lancet,' unbound, last six years; what offers? —Taaffe, Londonderry.

What offers?—'Pharmaceutical Journals,' 1841 to 1846, 1858 to 1859, 1859 to 1863; well bound.—Hoad, 20, Church Square, Rye.

Knight's 'Illustrated Natural History,' thirteen volumes, £1 10s.—Hudson, Chemist, Cranbrook.

Miscellaneous.

Two 7-gallon Pear-shape Show Carboys, cut stoppers, York Glass Co.'s make, cost £3 10s., price £2; 2 modern massive carved and moulded baywood stands, similar to Fig. 5 Maw's catalogue, height 3 ft. 4 in., cost £8 10s., price £5.—J. Botham, Higher Broughton, Manchester.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Twelve 1-gall. upright store bottles, as 89, 232, Maw's Catalogue, with new gold labels attached, 15s. —Smith, 55, Hatcham Park Road, New Cross.

50 oz. sulphate of quinine, B.P., 11d. per oz., carriage paid.—Wells Wood, Chemist, 8, Albion Parade, Stoke Newington, N.

Electro-plated water-pressure accumulator fountain, 9-in. diameter, equal to new; free by parcel post on receipt of 12s. 6d.—Kneen, Anerley, London, S.E.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

BELFAST LETTER.

[*From our Special Correspondent.*]

British Law has a Poisons Act in force, the object of which is to prevent persons of suicidal or homicidal intent accomplishing their desires. Now it is well known that there is nothing more anomalous on the face of the earth than the British Constitution. This is the reason that the Frenchman, who is logical to a most painful degree, cannot comprehend the Anglo-Saxon. Here is a case in point. John Bull with most patient assiduity has blocked all the exits by which the poison fiend can escape—all—except one—and that by no means a harmless one. Carbolic acid still counts its slain by the tens and twenties. The chemist takes all due precautions in vending cocaine and laudanum, whilst he is scrupulously careful *in re* strychnine, etc. But all these safeguards are so much comedy, for a man can purchase a quart of crude carbolic and destroy a family—like an Irishman in Monaghan lately, who, having got drunk, purchased a bottle full of the stuff. He, with the greatest *bonhomie*, offered it to half a dozen people. There is not a doubt they would all have been poisoned but for the avidity of one man who died in five minutes. What little was left has prostrated another person, who consumed it in spite of the warning cries of deceased that "the devil was in the bottle."

The Danger has again been illustrated of allowing novices to dispense poisons as if they were sweetmeats. A total stranger came into a druggist's in Belfast and purchased some cyanide of potassium to "clean jewellery." Altogether it was a gross piece of laxity and illegality. The man, when shortly after seen, was under the influence of liquor, and must in any case have been half insane. The mistiness of the magisterial inquiry was due to the absence of H.M. coroner, who would have created the necessary interest in the case to warn others of the law *in re* the sale of poisons.

It is Calculated that the population of Belfast is increasing at the rate of 10,000 per annum. There is a constant rustic immigration going on, and as a consequence pharmacies are springing up rapidly. Nor is the advent of medical men behind, newly-fledged practitioners from Dublin are dotting the thoroughfares with brightly-burnished plates.

At the Beginning of 1897, the long-opposed Notification of Diseases Act was introduced into Belfast. A few months ago the notifications of typhoid fever were "fast and furious"; an investigation was made, and one city councillor declared that "eight cases of asiatic cholera were notified which were only diarrhœa"; another declared that a mishap from a bicycle accident was notified as enteric. A medical man informed me that nearly all the supposed cases of typhoid were influenza. I see that medical men are taking trouble to have a more independent position assured them under the new Local Government Bill. This is not to be wondered at. Any ignorant guardian can badger a doctor to any extent at present although he is a Government servant.

This is an Age when the maxim "Make money, by fair means if you can, but make it" is pretty generally acted upon. A publishing firm in the south of England has been annoying various chemists in the north of Ireland with offers of printing their almanacs. In one case the parcel came on (carriage unpaid); the almanacs contained nothing in accordance with the terms of agreement, and were returned. The publishers threatened legal proceedings, but ultimately thought better of it. It is rather a pity that these shrewd fellows should "even their wit" to small provincial pharmacists. It is, nevertheless, galling that they should not be able to realise even the amount of the carriage.

The Annual Meeting of the Belfast and District Branch of the Royal Medical Benevolent Fund Society of Ireland recently recalls the loss of one subscriber who had the interests of the Charity at heart—Mr. William Pratt, M.P.S.I. His death, which was sudden, took place last September. He was principal and proprietor of the long-established firm of Davidson and Leslie, Castle Place. He was President of the Ulster Pharmaceutical Association. His geniality and kindness were only known to those who came into personal touch with him. Being a native of East Scotland, he possessed in an eminent degree those firm business qualities which build up success. Some of his former employés have launched out in the same line, Mr. W. W. Cleland, of Duncairn Gardens, Mr. Stewart, Ormeau Road, and Mr. Murray, of Mountpottinger, are all flourishing pharmacists. Mr. Scott, who was an assistant in Davidson and Leslie's, it will be remembered went out some months ago to South Africa, and not finding circumstances there favourable to pharmacists, returned home, and is now in partnership as a house and land agent. *Sic transit gloria Pharmacopœae.*

Under the Auspices of the Chemico-Agricultural Society, Mr. S. F. W. Hodges, F.I.S., read a paper on the "Cultivation of Sugar Beet in Ireland," Friday, May 20. In so far as it interested chemists, it should be known that so far back as 1850 this question was under the consideration of the Society. Experiments were then made and analyses conducted of a large number of samples of home-grown beetroot. The beet can be made to yield 12 to 16 per cent. of sugar, in some instances 20 to 22 per cent. On the Continent farmers use 300 pounds of nitrate of soda and 400 pounds of superphosphate as manure per acre.

I do not Suppose there is anyone objects to fair and above-board advertising. It is a necessary adjunct nowadays of doing business, and largely replacing the commercial traveller. But there is a class of advertising of chemicals at present which strikes me as very un-English. We have reached a stage of "blatancy" very foreign indeed to the sound business principles which one usually associates with the commercial traditions of Britain. That it has the assistance of religious papers such as the *British Weekly* and *Methodist Times* is only a proof of the enormous financial power of the advertiser. Professional journals as they circulate among an educated constituency do not lend themselves to this victimising of the credulous and illiterate. The advertising of Pears, Cadbury, Burroughs, Wellcome and Co., and such is legitimate and praiseworthy, but columns of gush, "interviews," and miraculous cures which put even the old parody on the quack who declared that "a man blown to atoms in a boiler explosion was gathered together and cured by half a bottle" into the shade, are insufferable. There is an Irish advertiser, who, moreover, is a preacher, who pretends to cure "epilepsy." I understood the cure consists of that well-known drug bromide of potassium, administered in large doses. As our asylums and workhouses are filled with these unfortunates, charity might suggest the curing of them. One such gentleman died lately who had an infallible remedy for what even did not yield to Koch, and was referred to in the following terms by a local religious paper: "Built up a fortune by the sale of useful and popular medical remedies—chief promoter of a scheme for the building of a handsome chapel." His "sovran" cure could have been supplied by any pharmacist for a tenth of the price charged for it. Only lately a drug advertiser so far transgressed the canons of good taste as to include among a collection of hymns a parody on a sublime natal anthem adulatory of his own pills, and then generously forwarded a number of the books to a church. Somewhat in the same spirit another has issued cards, each containing a good lithographic drawing of an apostle, and on the reverse side a solicitation to use ——'s pills. Now that the polychrome Bible is out the day is not far distant when the Scriptures will be interpolated with texts which will tell of the drugs of the blatant advertiser. Now it is to the interest of the public and the pharmacist that advertising regarding drugs, etc., should be restricted to a legitimate area. The blight of American methods should be "sprayed" into harmlessness by the action of the Legislature. Fraudulent testimonials and absurd stories of curative treatment are not only affecting the province of pharmacy, but the province of morals as well.

A Few Weeks Ago a patient died in a Dublin hospital whilst undergoing an operation. "Her death," the doctor said, "was due to syncope, owing to some unascertained peculiarity in the action of the drug on her system." As Mrs. R. M. King, in the *Nineteenth Century*, declared, on the testimony of the Hyderabad Commission, that the deaths are directly due to that administration, it would seem that a serious difference of opinion exists on the question. Dr. Dudley Buxton, President of the Society of Anæsthetists, does not deny that many persons are suffocated needlessly by chloroform. He holds that doctors do not know how to administer chloroform, and that the anæsthetist is an expert. Professor Ramsay says that doctors frequently administer anæsthetics in an impure state. Both chloroform and ether can be easily purified. "A little slaked lime in the chloroform bottle and a little metallic mercury in the ether bottle are all that is required."

Dr. Conan Doyle, when asked by monthly magazine what was the most beneficent thing which had come to pass during the past sixty years, replied laconically, "Chloroform." It is, however, whilst a great assuager, evidently not without drawbacks.

WHEN THE ORDINARY LAY PERSON undertakes to write out his own prescription the difficultics of the pharmacist are not lessened, accustomed as hc is to the fearful caligraphy which passes for penmanship with some medical practitioners. The necessity for imagination is never more pressing. An aged person, who brought a prescription for some suppositories, after a few weeks sent a written mcssage indited thus: "Please send me another box of the jujubes I got on the 16th," etc. It was only after some thought that the chemist managed to grasp the situation.

A FRIEND OF MINE had a somewhat exciting experience last week, which should put chemists on their guard against being too precipitate in tasting promiscuous substances. An old gentleman submitted to his inspection a lump of some chemical, asking him what it was. The pharmacist put it in his mouth, and after a prolonged tasting, said he could not tell, but if he would leave it he would test it. The old man refused, and inquired "if it wasn't poison." This was startling. It turned out to be corrosive sublimate! My friend took an antidote and made a note of the occurrence. He conjectures that the old man has a fortune, and somebody has been acting Jonas Chuzzlewit.

AN AMERICAN went into a Belfast chemist's lately, and after receiving various medicines, asked for a "pair of crutches." "What?" asked the licentiate doubting if he had heard aright." "Crutches! Crutches! they're for a friend." We don't sell them," said the chemist. "Why," exclaimed the Yankee, "this is a most backward country, in the States you can get everything in one store." "Sorry," replied the chemist, "they may supply crutches with medicine in your country, we act differently here."

THE LONG HOURS which the chemist has to endure might be excused if they were unavoidable, but it is not so. The draper's assistant has found his lot ameliorated by large premises voluntarily closing at four o'clock on Saturday, but the pharmacist is still toiling seven hours after that. There is a widespread consensus of opinion that Sunday opening only turns a medical hall into a confectionery shop. One would be surprised in such a Sabbath-keeping city as Belfast at the scores that rush from church into the chemist's for the purchase of articles (postage stamps being in great demand) which by no stretch of imagination could be termed medicines. It is to be hoped that Sir Chas. Dilke will persevere in his endeavours to make shorter hours compulsory.

NEW REMEDIES.

GUAIAQUININE.—This compound, $C_6H_4 \cdot O_2CH_3 \cdot HSO_3 \cdot C_{20}H_{24}N_2O_2$, is obtained by the action of molecular proportions of guaiacolsulphonic acid on quinine. It forms a yellow powder with an acid bitter taste, readily soluble in alcohol, water, and dilute acid. It is odourless and non-caustic.—*Pharm. Centrall.*, xxxviii., 501.

GASTROMYXIN.—According to the *Pharm. Post* this is a newly introduced digestive prepared from the gastric juice of oxen. It is prepared as a brownish-yellow powder with a faint aromatic odour.

MAGNESIUM SULPHATE IN TROPICAL DYSENTERY.—Wyatt Smith states that large doses of magnesium sulphate in an acid mixture with sulphuric acid are promptly effective in curing tropical dysentery, far more so than either ipecacuanha or opium.—*B. M. J.*, Jan. 29, 1898.

EUCHINACEA ANGUSTIFOLIA IN SCARLET FEVER.—This drug has been tried by the American Institute of Homœopathy, and good results have been obtained in acute scarlet fever, combined with diphtheria. It was also successfully employed in the treatment of septic inflammation of the glands; 10 to 30 drops of the tincture were given in water at intervals of an hour, or else a mixture of 1 part tincture and 10 parts water or syrup.—*Pharm. Zeit. f. Russl.*, xxxvi., 627.

EXTRACTS FROM CONSULAR REPORTS.

A GERMAN SYNDICATE some years ago commenced to search for sulphur near Sassoferrato in the province of Ancona (Italy), and, according to the report of Vice-Consul Tomassini, after encountering great difficulties their efforts have now completely succeeded.

THE AMOUNT OF SENNA sent forward from Suakin during 1897 increased by about 115 tons at prices varying from 7*s.* up to 16*s.* 6*d.* per cwt., making an increase of £1200 in the returns.

THE PRINCIPAL CHEMICAL PRODUCTS exported from Bordeaux to the United Kingdom during 1897 were chestnut and other vegetable tannin extracts, amounting to 59,511 cwts., glycerin 2076 cwts., cream of tartar 38,048 cwts., raw tartar 12,626 cwts., and oxide of zinc 1836 cwts.

IT IS SATISFACTORY TO NOTE that although there was a great decrease last year in the total importation of chemical products into Bordeaux and district (817,245 cwt. as against 966,368 cwts. in 1896), there was a very substantial increase in those from the United Kingdom, the total British imports being 510,877 cwts. in 1896, and 570,321 cwts. in 1897. The principal items were: sulphate of copper, 263,455 cwts.; superphosphate of lime, 39,980 cwts.; chemical manures, 52,990 cwts.; and coal-tar products, 195,779 cwts. It is also interesting to note that all the ink (57 cwts.) and all the blacking (73 cwts.) were imported from the United Kingdom.

A MIXTURE OF NAPHTHALIN AND SULPHUR has been successfully tried in the French vineyards as a remedy for "cochylis," but Consul Hearn is of opinion that the best cure for "cochylis" and other insect pests is to put a stop to the wholesale destruction during the "chasse" of small birds which live almost exclusively on insects, and instead of destroying, to preserve and encourage the multiplication of the feathered tribe.

GINGER ALE imported into Chicago, according to a recent report, comes almost exclusively from the United Kingdom. The total importation for the United States in 1897 amounted to a value of £41,428, of which Chicago Customs received £893.

THE CULTIVATION OF FLOWERS for cutting and forwarding to all parts of Europe and for perfumery purposes is the principal agricultural industry in the consular district around Cannes. About 400 tons of cut flowers, it is estimated, are sent away during the winter months, while the quantities employed in the manufacture of perfumery are given in tons, as follows:—Parma violets, 100; mignonette, 15; orange flowers, 1500; roses, 1500; jasmine, 250; tuberose, 50; jonquils, 20; cassia, 30; geranium, 500; peppermint, 1000. In addition to these considerable quantities of mountain lavender, rosemary, thyme, and absinthe are used. It is calculated that the turn-over of the perfumery and distillation works may be put down as about £800,000 per year.

AFTER GREAT BRITAIN, France is reported to occupy the next place in the import trade of Syra, supplying amongst other goods, colours, soaps, perfumery, drugs and medicines. The gross value of the French imports in 1897 amounted to £59,320.

OF THE SULPHATE OF COPPER imported into Uruguay during 1897, Great Britain supplied £4000 worth, out of a total of £7000, but is reported to have lost ground in this article compared with former years. Germany is said to have advanced considerably, having sent £1700 against £400 worth in 1896. The United States increased her trade from £300 to £1200. In starch and blue, Germany leads the way, but in varnish Great Britain takes £2000, out of a total of £4000, the United States' share for the latter article being £800. Great Britain heads the list with paints, supplying £10,000 worth, out of £16,000, while she sends the whole supply of soda. France comes first in the supply of drugs with £40,500 worth, Germany, £8000; Great Britain, £7500; Italy, £6000, and the United States, £5000. The total value of drugs imported into Uruguay was £70,000. France is ahead in perfumery with a contribution of £10,000; Great Britain following with £4000.

MEDICAL, SURGICAL, AND HYGIENIC EXHIBITION.

During the past week an exhibition has been held at Queen's Hall, Langham Place, to which medical practitioners have been invited. Nearly one hundred firms had stands, most of whom are well known to our readers. Foods, beverages, disinfectants, surgical instruments and appliances, pharmaceutical preparations, and medical publications formed the attractions which induced a large number of doctors, nurses, and chemists to assemble each afternoon and evening. Amongst those firms exhibiting were the following:—Camwal, who occupied the vestibule, Idris & Co., Ingram & Royle, each of whom had their usual display of aërated and medicinal waters; Maw, Son & Thompson, whose display of surgical instruments when enumerated occupied about four pages in the catalogue; Southall Brothers & Barclay showed surgical dressings, sanitary towels, collections of materia medica, herbaria, microscopes, and table waters; the Berkefeld Filter Co. were in evidence with their household, service pressure, travelling, and large supply filters for chemists and aërated water manufacturers.

The only stand exclusively devoted to the display of soap was that of the Ovaline Soap Co. Mr. B. Kühn showed chinosol in its various forms—papain, ethyl chloride (Bengué), etc., etc. Cooper & Co., of South Kensington, had a very attractive display of pharmaceutical preparations, including "cachoids," emulsions, pastilles, suppositories, and mineral waters. J. F. Macfarlan & Co. exhibited their Listerian surgical dressings, anæsthetics, and Holyrood table waters. Parke, Davis & Co. were, as usual at these exhibitions, strongly in evidence with their chemists' specialties and physicians' requisites, so varied that we have only space to allude to them. The Liebig's Extract of Meat Co., Vimbos, and the Valentine Extract Co., each had stands displaying their meat extracts. Henri Nestlé exhibited Nestlé's food, condensed Swiss milk, and the "Viking" brand of condensed milk (without sugar). Cadbury Brothers showed their cocoa. Holloway's Wine Co. displayed coca wine, meat and malt wine, coca lozenges, and coca clixir. Newton Chambers & Co. exhibited "Izal" in its various forms. Fairchild Brothers & Foster (whose London agents are Messrs. Burroughs, Wellcome & Co.) had a large display of the Fairchild digestive products. Mr. Frank A. Rogers exhibited medical sprays, inhalers, and hypodermules, small sealed glass flasks for hypodermic medication, containing accurately measured doses of sterilised solution. The Sanitas Co.'s stand comprised the Sanitas disinfecting fluid, oils, inhalers, soaps, Kingzett's fumigating candles and sulphugators, sheep dips, etc., etc.

The exhibition was held under the direction of the Medical, Surgical, and Hygienic Exhibitors' Association, whose President is Mr. Fred. Weiss, of 287, Oxford Street, W., and the Hon. Sec. Mr. F. Blau, 29, New Bridge Street, E.C.

NEWS IN BRIEF

Mr. N. H. Martin, pharmaceutical chemist, has been appointed by the Lord Chancellor to serve on the Commission of the Peace for Newcastle-on-Tyne.

Chemists' Assistants' Association, 73, Newman Street, W. — The following officers have been elected for the season 1898-9. President: F. W. Gamble; Vice-Presidents: Geo. E. Pearson, F. Cooper; Hon. Vice-President: T. Morley Taylor; Hon. Treasurer: C. J. Strother; Hon. Secretaries: Literary—Harold Matthews; Financial—C. E. Pickering.

The Sale of Poisons.—Mr. John Troutbeck, Coroner, held an inquiry at Westminster, on Friday, May 20, respecting the death of Ellen Walker, aged 26 years, a domestic servant, who was found poisoned at St. Stephen's Club, where she was engaged. The evidence showed that the young woman had complained of feeling as if she was going silly, but never threatened suicide. On the 21st ult. she was found lying in bed dying, and by her side were two tins, which had contained "rat poison" and "vermin killer." Dr. Frederick Womack, analyst to St. Bartholomew's Hospital, now stated that he had concluded his analysis, and found that death was due to arsenic poisoning. In the rat poison he found arsenic to the extent of 11 per cent., and the tin was labelled "Poison." It could hardly be taken in mistake, owing to the nauseous taste. In the two tins there was enough poison to kill sixty persons. The Coroner spoke very strongly about such a poison being allowed to be about the place, and informed Mr. Taylor, who supplied the tins, that he appeared to be carrying on a system of trade which an Act of Parliament had purposely been passed to prevent, and he considered that every tin should be labelled in large letters, "Arsenic—Poison." No poison book was kept as required by the Act, yet the tins were handled by the employés of the club. Mr. Taylor denied that he conducted a retail business, and said he had a contract with the club. The Coroner remarked that he took a very serious view of this matter. Arsenic was a most deadly poison, yet here it was being sold contrary to the Act. The matter would certainly require the fullest investigation. Further evidence having been given, the Jury returned an open verdict, and suggested that the sale of such poisons should be prohibited.

"Like a Highly Respectable Country Chemist up in London for a few days' holiday," is the *Sunday Chronicle's* description of the Earl of Kimberley. At first glance this appears rather complimentary than otherwise to the country chemist, but due regard must be paid to the following description of his lordship's dress when strolling over Westminster Bridge:—"An old suit of shiny broadcloth, of a cut which was fashionable in the days of the crinoline and the antimacassar." Moreover, he walked along "swinging a clumsy old umbrella, and smiling to himself under the shade of a ten-year-old silk hat." The finishing touch to the resemblance between the Earl and the chemist is that both possess "a smug, quaint, old-fashioned cast of face."

Accidental Poisoning Cases. — Tom Bradley (53), labourer, of Penistone, was slightly addicted to drink, and after consuming a considerable quantity of whisky during the week, finished up on Saturday, May 21, with a "pull" at a bottle containing ammonia. At a subsequent inquest, a verdict of "Death by misadventure" was returned. — Medicine and a bottle of liniment were served out from a dispensary in Salford to Elizabeth Green (50), of Peel's buildings, Salford. On May 2, she made a mistake and drank some of the liniment instead of the medicine. She was taken to the Royal Hospital, where death occurred on May 19, caused by belladonna poisoning. — William Slater (63), farm labourer, of New Quarrington, had a partiality for laudanum, so much so that it was alleged he had been known to take as much as 12 ounces in a week. Since September last he had not been able to procure as much laudanum as formerly, but on Wednesday, May 18, he succumbed to the effects of an overdose taken on the preceding Monday, after purchasing an ounce of laudanum from a local chemist. "Misadventure" was the jury's verdict at the inquest.—A three-year-old child, named Thomas Crockall, who lived with its parents at Melincrythan, discovered a bottle of spirits of salts in a pantry, drank of its contents and died. "Death from poisoning," was the jury's comment.

Mr. George Johnson, one of the oldest chemists in the Midlands, is about to retire, having sold his business at Sutton Coldfield to Mr. T. Cattell, of Aston Road, Birmingham.

Exeter Union Dispensership.—At the weekly meeting of the Exeter Corporation of the Poor, on Tuesday afternoon last, the Finance Committee, in its report, stated that, after having considered the question of the remuneration to be offered for a dispenser of medicines for the outdoor poor in the place of Mr. Bulley, deceased, it recommended that a dispenser be advertised for at £50 per annum. On the proposition of Mr. W. Jarman (Chairman), the report was adopted.

The students of the Glasgow School of Pharmacy, under the guidance of Mr. Lothian, Principal, made a botanical excursion to the Waterworks at Milngavie last Saturday. The party was conducted over the grounds by Mr. Shand, Master of Works, who explained the construction of the reservoirs and aqueducts and the various mechanical contrivances for the regulation of the inlet from Loch Katrine and distribution into the conduit mains to Glasgow. The reservoirs at Milngavie are 45 feet below the level of Loch Katrine and 280 feet above the level of Glasgow. Mr. Shand mentioned that in the excavations of the new reservoir an interesting geological formation had been observed, the sandstone which was excavated down to the shale bed being in several

places fissured, and these fissures were completely filled, as well as the surface covered with igneous rock, clearly pointing to volcanic eruption. The surface rock is abraded as the result of glacier action. The new reservoir has an area of 90 acres, and its average depth is 50 feet. The total capacity of the two reservoirs is about 1,200,000,000 gallons, and the average daily consumption of Glasgow 50,000,000 gallons. The Lock Katrine water is not filtered through chalk or animal charcoal as stated in some text-books, nor is it in fact subjected to any treatment save one of simple aëration. There is no vegetative growth in the reservoirs, but a persistent growth of spirogyra on the sluice steps requires to be periodically removed. By an ingenious electrical contrivance in Mr. Shand's house the occurrence of a leakage in any of the six conduit pipes to Glasgow is immediately signalled by the ringing of an alarm bell. The influence of the prevailing winds on the habit of the young pine and spruce trees with which the policies are thickly studded was clearly shown. The vitality of a maple tree, half of whose roots had been completely severed in the construction of a new aqueduct, has apparently not suffered in the least. Among other plants obtained were:—*Digitalis purpurea*, *Marchantia polymorpha*, *Equisetum arvensis*, *Cardamine pratensis*, *Alchemilla vulgaris*, *Sanicula europæa*, *Prunus padus*, *Spirogyra vaucheria*, *Protococcus*, etc., etc.

MR. CROSS'S AMENDMENT ON THE PHARMACY ACT.—The monthly meeting of the Highland and Agricultural Society of Scotland was held on Wednesday, Sir John Gilmour, of Montrose, presiding. Mr. J. Macdonald, the Secretary, reported that in accordance with instructions from the Finance and Law Committee he had sent a copy of the Pharmacy Acts Amendment Bill and the notice of amendment which Mr. Cross, M.P., had given notice of to Messrs. Tods, Murray, and Jameson, their law agents, with the view of ascertaining, as was indicated at last meeting, whether the sale of sheep dips, insecticides, etc., was restricted to chemists. He read the following reply, which he had received:—

May 26, 1894.

Dear Sir,—We have perused the Amendment Bill of this session, along with Mr. Cross's two letters and the notice of his amendment on the Pharmacy Act, 1868, all of which we return. It has been decided in England (Pharmaceutical Society *v.* Piper and Co., 1893, 1 Q. B., 686) that a compound containing any of the poisons scheduled by the Act of 1868 in any appreciable quantity falls within the scope of the Act. In a subsequent case it was decided that a compound containing only an infinitesimal quantity of any of these poisons does not fall within the operation of the Act. We are therefore of opinion that sheep dips, insecticides, or any other compounds which contain any appreciable quantity of one or more of the poisons above referred to can only be legally sold by chemists who are members of the Pharmaceutical Society, and that they are subject to the restrictions imposed by the Pharmacy Act of 1868 on the sale of poisons.

The Directors affirmed their former decision to support Mr. Cross's amendment to the Bill.

PROPOSED SCHOOL OF PHARMACY IN ABERDEEN.—At a recent meeting of the Education Committee of the governors of Robert Gordon's College the convener, Mr. John Morgan, reported that he had, along with the convener of the Finance Committee Baillie Kemp) and the headmaster (Dr. Ogilvie) met with a committee of the Aberdeen Pharmaceutical Association for the purpose of considering the proposal submitted to last meeting that a School of Pharmacy be established in connection with the College. An estimate had been furnished by the architect of the probable cost of the structural alterations required to afford the necessary accommodation for, and the fitting up of, a pharmaceutical laboratory and balance room, etc., which estimate amounted to £65. The representatives of the Pharmaceutical Association had indicated that they were prepared to recommend to the Association that that body should contribute one-half of this initial expenditure, besides guaranteeing the salary of a competent teacher up to £120 per annum, provided that the salary shall be considered as a first charge against the income derived from students' fees. The Association would further hand over to the college the apparatus, etc., both chemical and pharmaceutical, belonging to them. The revenue of the school from fees would, according to an estimate furnished by the Association, amount to £180 a year or thereby, assuming which figure to be correct, a satisfactory balance would result to the College after allowing for ordinary working expenses. The committee, after fully considering the matter in all its details, resolved to recommend to the governors that the proposal for the institution of the School of Pharmacy should be adopted upon the footing of the Pharmaceutical Association granting an undertaking on the lines above narrated.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.—A special general meeting was held on Tuesday, May 31. The President (Mr. Jas. Cocks) presided. It was unanimously carried that the following resolution be printed and sent to every medical man in the neighbourhood:—

> That this meeting of the Three Towns' Association is of opinion that, in order to secure uniformity in dispensing the new British Pharmacopœia preparations, dispensing under the new Pharmacopœia should come into force on July 1, 1898.

It was also resolved that there should be printed on these circulars a list of the most potent alterations in strengths and formulæ. The annual outing, to be held on Wednesday next, promises to be a great success. The Secretaries (Messrs. A. D. Breeze and C. J. Park) announced that all the tickets had been taken, which ensures an attendance of over 70.

CHEMICAL SOCIETY'S BANQUET.—We are requested to state that the Chemical Society's banquet to the past presidents on June 9, and also Dr. Mond's garden party on June 10, are postponed in consequence of the death of Lord Playfair, the senior past president and the last surviving founder of the Society.

BRITISH PHARMACOPŒIA 1898.—Mr. G. Lunan, pharmaceutical chemist, 20, Queensferry Street, Edinburgh, has published, in very convenient form, notes of the more important additions and alterations in formulæ, strengths and doses of the 'British Pharmacopœia 1898.' This he is sending out to medical men, together with the more comprehensive *P.J.* Synopsis. He is suggesting July 1 as the date which will afford prescribers reasonable time to acquaint themselves with the new standards, and from that date he proposes to use only the preparations of the 1898 B.P., except when otherwise specified.—Mr. F. A. Rogers, pharmaceutical chemist, 327, Oxford Street, London, W., has also compiled an abridged list of the important alterations in the B. P. 1898, which should be very convenient for reference by medical men.

MR. CLARENCE H. JAMES, chemist and druggist, has purchased the business of the late Mr. S. F. Board, chemist, High Street, Cheltenham.

THE LORD MAYOR OF MANCHESTER (Alderman R. Gibson), who is a native of Carlton-on-Trent, and was formerly an apprentice at the shop now occupied by Mr. J. H. Smith, chemist, Bridge Street, Newark, entertained a number of his old friends at the Clinton Arms Hotel, Newark, on Wednesday, May 25, it being the eve of his visit to Sutton-on-Trent to unveil a Jubilee Memorial Lamp.

PARTNERSHIPS DISSOLVED.

(From the London Gazette.)

John A. Whiteley and John L. S. Jones (trading as the Sunfield Soap Co.), Kilshaw Lane, Horley Hill, Lancaster. Debts will be received and paid by J. L. S. Jones, who will continue the business under the old style.

William Jackson and Ambrose Walton (trading as Walton, Jackson & Co.), chemical manufacturers, 40, Blackfriars Street, Manchester. Debts will be received and paid by Ambrose Jackson.

Charles Rout and T. E. A. Pearman, medical practitioners, 28, Hornsey Park Road, and 2, Hillfield Avenue, Hornsey. Debts will be received and paid by T. E. A. Pearman.

John O. Davis and Albert Diaper, chemists and druggists, 3, Mornington Terrace, Wanstead, and at Rookery Chambers, George Lane, Woodford.

George Turley and Albert E. Law (trading as G. Turley & Co.), wholesale druggists, 59, Edgbaston Street, Birmingham. Debts will be received and paid by George Turley.

RECEIVING ORDER IN BANKRUPTCY.

(From the London Gazette.)

Thomas H. Summerhill, surgeon, Bodfer, Wellington Road, Rhyl, Flints.

MARRIAGES.

HARRISON—HUNT.—On May 18, at South Newton Church, near Salisbury, by the Rev. J. Bond, vicar, Fredk. J. Harrison, chemist and druggist, of Salisbury, to Mary Agnes Hunt, of Little Wishford.

NEW IDEAS & TRADE NOTES

Messrs. Ross, Limited, 111, New Bond Street, London, W., send copies of their price list and catalogue for 1898, and a copy of the price list printed in Spanish. The new catalogue, which will be sent to any part of the world on application, contains full particulars and prices of Ross' photographic lenses and shutters; field, studio and process cameras; new hand cameras; photographic apparatus of every kind; science, projection and enlarging lanterns; microscopes and objectives; sporting and naval telescopes; field, marine and opera glasses; barometers, thermometers, spectacles, eye-glasses, etc. The firm is also prepared to supply "Quadrant" cycles, together with a compact photographic outfit, which may be very conveniently carried in a light leather or canvas case attached to the cycle, as well as hand or stand cameras for cyclists.

Messrs. Ayrton & Saunders, 149, Duke Street, Liverpool, have drawn up a list of labels suitable for the complete fitting of an ordinary chemist's shop. Such a list should be extremely useful to any chemist about to open a new pharmacy, and a copy of the list will be sent to any address on application.

Messrs. Harker, Stagg & Morgan, 15, Laurence Pountney Lane, London, E.C., have introduced a concentrated Orchid Essence, an exquisite perfume distilled from the choicest flowers, also a concentrated Essence of May Blossom. These perfumes are put up in 4-oz., 8-oz., and 16-oz. white glass stoppered bottles, and may also be obtained in bulk.

Messrs. Barron, Harveys & Co., London, submit a specimen of "the latest thing in price list cases," a bright red, cloth-covered case, provided with a heavy silk cord to secure copies of the firm's prices current, and its list of soluble "sweet" coated pills. In the prices current an endeavour has been made to provide the information in a crisp and pointed manner, and to render it all-embracing. The new B.P. preparations are included, and the Latin names are given as full as possible.

Messrs. Potter & Clarke, Artillery Lane, E.C., are offering goods that should sell well in their Sensation Cachous and Royal Japanese Cachous, both being capital value. The first-mentioned are exquisitely perfumed, and supplied in neat packets to retail at 1d. each, the trade price being 7s. per gross on ¼-gross cards, or in ½-gross glass-top boxes. They can also be obtained in screw-top bottles to retail at 4d. each, at 2s. 9d. per dozen or 30s. per gross, the customer's name and address being added free on orders for not less than one gross. The Royal Japanese Cachous are put up in beautifully designed envelopes printed in colours, to retail at 2d. each, and they are offered at 14s. per gross. Samples sent free on application.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

June 2, 1898.

Business has been exceedingly quiet during the past week, caused no doubt to a certain extent by the Whitsuntide holidays. The changes in price which have taken place have also been quite unimportant. Quinine is somewhat firmer. Acid Citric very firm. Acid Tartaric and Cream of Tartar steady. Opium, Morphia, and Codeia quiet and unchanged. Quicksilver is very firm at importers' price. Mercurials without change. Cod-liver Oil very dull. Cocaine rather firmer, as is also Glycerin. Acetanilide, Cocaine, and Phenacetin unchanged. Balsam Peru dearer. Ipecacuanha is very firm. Acid Carbolic dearer, in consequence, it is stated, of demand for dynamite purposes. Sulphate of Ammonia is again higher. Shellac is firm. Crude Antimony dearer. The following are prices actually ruling for articles of chief interest:—

Acetanilide—Quiet with sellers at 1s. 2d. to 1s. 3d. per lb., according to quantity and make.

Acid Boracic—Is in good demand, but values are unchanged at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

Acid Carbolic.—One of the makers, whose article is generally preferred, has advanced his price to 7d. per lb. for the 35 to 36° *ice crystal* quality in 2½ cwt. drums and over-casks, quoting proportionately higher for other qualities and packing, stating that the very active demand for making *Acid Picric* for explosive purposes is the cause of the advance, which he states is likely to make further progress. Other makers do not, however, appear so far to have followed the advance to its full extent. *Crude*: 60° F., 2s. 1d.; 75°, 2s. 7d. per gallon. *Liquid*: 95 per cent. of pale colour 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

Acid Citric—Is dearer, 1s. 1d. per lb. being now the price for English *crystals* on the spot. The market is firm. Makers refuse to book for forward delivery.

Acid Tartaric—Quiet and without change at 1s. 1d. per lb. for *English* and 1s. 0¾d. per lb. for *Foreign*.

Ammonia Compounds.—*Sulphate* again dearer at £9 7s. 6d. per ton for grey prompt 24 per cent., London; Hull, prompt, £9 5s.; Leith, £9 7s. 6d. *Bromide* unchanged at 2s. 2d. per lb. *Iodide* steady at 14s. 6d. per lb. *Oxalate*: 6d. per lb. *Sulphocyanide*: A fair business passing at 1s. 1d. to 1s 2d. per lb. *Sal ammoniac* steady at 35s. and 33s. per cwt. for firsts and seconds sublimed respectively. *Chloride*: Chemically pure crystals, 32s. per cwt.; commercial, free from metals, 98 per cent., 25s. 6d. per cwt.

Antimony.—Price of crude *Japan* has advanced in sympathy with other metals, and 24s. per cwt. is now asked on the spot, a little being, however, still offered to arrive at 22s. per cwt. *c.i.f.*

Balsam Peru—Is again dearer at 10s. per lb., and the condition of the market points to higher prices.

Bleaching Powder—Steady at £7 5s. per ton on the spot.

Borax—Firm at 14s. per cwt. for lump, and 14s. 6d. per cwt. for powder.

Bromides—Steady at 1s. 10d. for *Potass. Bromide*, and 2s. 2d. per lb. for *Ammon.* and *Soda Bromide*, price for ½-ton lots being 1d. per lb. less.

Buchu Leaves.—Since the sale the 9 bales which were bought in have been sold at 4¼d. per lb., and a good quantity has changed hands privately, the market closing very firm with higher prices asked by second-hand holders. There have been no arrivals.

Camphor.—Crude is slow of sale, although prices are steady at 88s. per cwt. for *Japan*, and 82s. per cwt. for *China*, *c.i.f.*

Coal Tar Distillation Products.—*Toluol*: Commercial, 1s. 4d.; pure, 3s. per gallon. *Benzole*: 50 per cent., 1s. 3d.; 90 per cent., 1s. 2d. *Crude Naphtha*: 30 per cent. at 120° C., 6d. *Solvent Naphtha*: 95 per cent., 160° C., 1s. 8d. per gallon.

Cocaine.—Market remains fairly steady, makers quoting 9s. 6d. to 9s. 9d. per oz. in 25-oz. tins for the *Hydrochlorate*, according to the quantity and brand, while from second hand there are sellers at rather below these figures. The firmness of price of the crude still points to the probability of higher prices for the refined article.

Codeia—Is firm at 11s. 3d. to 11s. 6d. per oz., according to quantity.

Cod-Liver Oil.—Market is extremely quiet, nearest quotation being 80s. per barrel *f.o.b.* for best new non-congealing *Norwegian* oil in tin-lined barrels.

Cream of Tartar.—High strengths are in better demand, but prices do not improve; for quality suitable for the new B.P. requirements, 80s. per cwt. is asked for *crystals* in large bulk, and 83s. per cwt. for *powder*. The lower strengths are very dull and a shade weaker in value.

Cutch—Is firm, but very little is offering. Nominal value of *ACL* 25s. per cwt.

Glycerin.—Market is again rather harder in sympathy with the crude at 52s. 6d. to 60s. per cwt. for best *German* white double-distilled chemically-pure 1260 quality in cases, each 4×56 lb. tins, according to quantity and brand, *English* being offered at slightly below these prices.

Gum Asafœtida.—The sale of the 7 cases good quality at 60s. per cwt., which we reported in our last as being made at last week's auctions, subject to approval, was not confirmed, but the lot has since been sold at a good advance on that price.

Monthly Statement of Drugs, etc., Warehoused in London.—June 1, 1898.

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

IODIDES—Unchanged at 9s. 9d. to 10s. 3d. per lb. for *Potass. Iodide*, price of *Iodine* being also unchanged at 7½d. per oz.

IPECACUANHA.—*Rio* quality is very firm at from 9s 1d. to 9s. 3d. per lb., with small sales passing. *Carthagena* is firmer from 5s. to 5s. 3d. per lb. being now the quotation for fair to good root, the cheap lots lately offering seem to be cleared.

JALAP—Is very firm and small sales have been made at 6d. per lb.

JAPAN WAX—On the spot is quiet at 35s. per cwt., whilst for arrival the market is rather firmer.

MERCURIALS—Are without change at 2s. 9d. for *Calomel* and 2s. 5d. for *Corrosive sublimate* in ½-cwt. lots.

MORPHIA—Quiet but steady at 4s. 6d. per oz. for the *Hydrochlorate* salt in powder, makers stating that this price is by no means in accordance with the actual cost of *Opium*, as compared with which price of *Morphia* should be nearer 5s. than 4s. 6d. per oz.

NITRATE OF SODA—Is quoted £7 12s. 6d. to £7 15s. for *commercial*, and £8 per ton for *refined*.

OILS (ESSENTIAL). — *Star Aniseed* continues in good demand at firmer rates, 7s. to 7s. 3d. per lb. being obtainable on the spot, whilst for arrival June to July steamer business has been done at 6s. 6d., per lb., *c.i.f.* terms. *Cassia* firmer; 70 to 75 per cent. on the spot, 4s. 9d. to 4s. 10d. per lb. *Peppermint*: HGH firm at 5s. 7½d. to 5s. 9d. per lb.; Wayne County, 3s. 9d. to 3s. 10d. per lb., *c.i.f.* terms. *Citronelle* quiet at 1s. 2d. per lb. in tins or drums. *Lemongrass* very quiet at 4½d. per oz. *Cajeput* steady at 3s. 9d. to 4s. per bottle. *Eucalyptus* steady at 1s. 6d. to 2s. 6d. per lb., according to quality.

OILS (FIXED) AND SPIRITS. — *Linseed*: Since our last the market has been very weak, but closes decidedly firmer at £16 15s. for spot pipes London, barrels £17 5s. *Rape*: As anticipated in our last, this is lower at £23 for ordinary brown on the spot and £24 10s. for refined. *Cotton*: Quiet and unchanged, London crude spot £14 10s., refined £16 5s. to £16 15s., according to make. *Olive*: Green oils firm at £33 per ton, eating oils steady at 4s. 6d. to 5s. 9d. per gallon as to quality. *Coco-nut* unchanged at £24 10s. for Ceylon on the spot, and £29 for Cochin, same position. *Palm* again dearer, Lagos on the spot being now quoted £24. *Turpentine* quiet and rather lower at 25s. per cwt. for American on the spot. *Petroleum Oil* steady; Russian, 4¾d. per gallon; American, 5¼d. per gallon; water white, 6¼d. per gallon. *Petroleum Spirit*: American, 5⅝d. per gallon; deodorised, 6d. per gallon.

OPIUM.—Market is extremely quiet and without change from the prices lately reported, viz., *soft shipping*, 11s. to 12s.; druggists', 10s. to 10s. 9d.; *Persian*, 10s. to 11s. per lb.; while for good manufacturing 10s. to 10s. 3d. per lb. is asked on the spot. *Smyrna* is rather weaker at about parity of London prices.

PHENACETIN—Is steady at 3s. 9d. to 4s. 3d. per lb., according to quantity and make for both *crystals* and *powder*.

POTASH COMPOUNDS.—*Chlorate*: Rather firmer at 3¼d. to 3½d. per lb. *Bromide*: Steady at 1s. 10d. per lb. *Iodide*: Firm at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Bicarbonate*: Steady at 30s. per cwt., for both Crystal and powder in large bulk. *Cyanide*: Unchanged at 1s. 2d. per lb. for 98-100 per cent. cake. *Permanganate*: Is improving in value, but a certain quantity can still be obtained at 62s. 6d. per cwt. for small, and 67s. 6d. per cwt. for large crystals. *Prussiate*: Steady at 6¼d. to 7¼d. per lb. for *yellow*, and 1s. 2d. per lb. for *red*.

QUICKSILVER—Is a firm market, importers' price remains at £7 12s. 6d. per bottle, no cheaper offers being available from second hands, as is often the case, which points to the prospect of higher prices in the near future.

QUININE—Is slightly firmer, there being few sellers from second hand at 10½d. per oz. for the brands of *Sulphate* less in favour, 11d. being asked for best brands, in 1000 oz. lots, maker's price remaining unchanged at 1s. per oz.

SHELLAC.—The market is firm in all positions. A small but steady business is being done in *Second Orange* at 63s. per cwt., basis fair *TN*. For arrival there are buyers of *TN*, April to June steamer, at 61s. 6d. per cwt., *c.i.f.* Speculation is quiet but prices are firm. There are buyers of *TN*, August delivery at 67s. per cwt.

SODA COMPOUNDS.—*Crystals* firm at 55s. per ton. *Acetate*, chemically pure 35s. per cwt.; refined 13s. 6d. per cwt. *Hyposulphite* in good demand at 5s. 6d. to 8s. per cwt., according to quality and brand. *Bicarbonate* unchanged at £7 10s. per ton for the commercial 98 per cent. article, and 18s. to 19s. per cwt. for the free from mono-carbonate quality. *Bromide* firm at 2s. 2d. per lb. *Iodide* quiet at 11s. 7d. per lb. *Nitrate*: Ordinary £7 12s. 6d. to £7 15s. per ton, refined £7 17s. 6d. to £8 per ton.

SPICES.—*Pepper*: The market for Singapore is very strong, and prices have advanced. Demand is very active, and sales have been made at 4⅛d. per lb. for fair on the spot, June to August steamer 4⅜d., and July to September 4⅞d. per lb., and further buyers threat. *White Pepper* is also dearer and a very strong market for Penang, for which there is a good demand with business up to 6½d. per lb., and August to October steamer at 7d. per lb. Sellers of Singapore are scarce, and business is therefore limited. There are buyers of May to July steamer at 7⅞d. *Cloves*: Zanzibar are firmer with sales June to August delivery at 3 3/16d. per lb.

SULPHATE OF COPPER — Is easier at £15 10s. to £16 10s. per ton, according to brand.

SULPHONAL.—Price is unchanged at 7s. 3d. per lb. for bulk packing.

TURMERIC—Continues very firm at dearer rates with a small business doing in *Bengal* at 16s. 6d. per cwt., and *Madras* finger at 22s. to 24s. per cwt. according to quality.

LIVERPOOL REPORT.

JUNE 1, 1898.

AMMONIA SALTS—Are unchanged except sulphate which is slightly higher and scarce, £9 7s. 6d. per ton.

BEESWAX.—Sales of Peruvian are reported at £7 per cwt.

BLEACHING POWDER—Is still slow of sale at £5 10s. to £6 per ton.

COPPERAS.—Firm at 36s. to 38s. per ton.

COPPER SULPHATE. — Quiet at £16 to £16 2s. 6d. per ton.

GINGER.—1000 bags of Sierra Leone changed hands at 17s. 6d. per cwt.

HONEY.—15 barrels of pile 2 Chilian brought 23s. per cwt.

OILS (FIXED) AND SPIRITS. — *Castor* is steady in tone with a moderate amount of business doing in Calcutta at 3¼d. to 3⅝d. per lb., and French 1st pressure 3¾d. per lb. *Olive*: In Spanish oils there is a moderate business passing at £30 to £32 per tun on the spot. *Linseed* of Liverpool make is still quoted at 18s. to 18s. 6d. per cwt. *Cotton-seed*: Liverpool refined maintains its recent advance, and is offering at 17s. to 17s. 6d. per cwt. *Spirits of Turpentine* is steady at 27s. per cwt.

POTASH SALTS.—*Cream of Tartar* is offering at 70s. per cwt. *Pot.* and *Pearlashes* are quoted at 20s. 9d. and 37s. 6d. per cwt. respectively, but demand for the latter is very slack. Others unchanged.

SEEDS.—*Canaryseed* is dull at 27s. to 28s. per 464 lbs. for Turkish. *Linseed*: 25 tons of very good River Plate recently sold at 35s. per 416 lbs. ex quay.

NEWCASTLE CHEMICAL REPORT.

JUNE 1, 1898.

Steadiness prevails, if not much extra business is being pushed forward for heavy chemicals. Alkali of the ammonia class is in strong request Prices are firm and makers busy. Prices are:—Bleaching Powder: £6 5s. to £6 10s., Soda Crystals: basis, 45s. to 52s. 6d. Caustic Soda: 70 per cent., basis, £7 5s. to £7 10s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

JUNE 1, 1898.

This great northern centre is for the present week given up to holiday-making, and most of the works and shipping houses close to-night for the remainder of the week. The market closes fairly steady, but there appears to be no prospect of increased values. Indeed, with the large production of Caustic Soda by the new process that article is easy, and may be quoted £8 5s. to £8 10s. for 77 to 78 per cent. Ammonia Alkali, however, is firm at £4 5s. to £4 10s., bags on rails. Glycerin is lower for local makes, and ranges from £51 to £52, according to package, and £47 to £48 naked, large drums. Saltcake has advanced to 25s. per ton, in bulk, on rails. Sulphate of Copper is again somewhat lower, but Green Copperas is steady at late rates. In view of a proposed combine of Acetic Acid makers the article is firmer. Coal Tar Products are improving, especially Benzole, which are quoted 1s. 1d. for 90's., and 1s. 2d. for 50's. Pitch is 16s. 9d. to 17s. *f.a.s.* Manchester Ship Canal. In Sulphate of Ammonia £9 10s. has been reported for October to March delivery. Prussiate of Potash slightly easier at 6¾d. to 7d.

EXCHANGE.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Whole-plate and stereo camera, square brass-bound, 3 double slides, splendid ½-plate, Iris aplanat lens, 3-fold tripod; new; approval; £6 10s.—D.M., 346, York Road, Wandsworth, London.

Eastman's No. 4 Kodak, leather case and sling; perfect condition. Price £5.—A. Bellamy, Louth, Lincs.

Oleometer (J. L. & Co.) and Hardness of Water Test-Apparatus; good condition; what offers or exchange?—Perkins, Chemist, Devonport.

50 oz. sulphate of quinine, B.P., 11d. per oz., carriage paid.—Wells Wood, Chemist, 8, Albion Parade, Stoke Newington, N.

Soda-water Trolley.—A boy of eight can easily convey 3 dozen syphons and cases any distance; 35s., carriage paid.—Arthur & Co., Cambridge.

6-ft. wall-case; glass doors; 16 ft. run drawers, with lockers underneath and shelving above; offers wanted.—Schofield, Chemist, Brighouse.

2-cwt. thick dark glue, 24s. per cwt.; Field's cattle-oils, 18 2s., 4 5s., for 15s.; Dobson's black-leg drinks, 12 3s., 6 5s. 6d., for 10s.; Jeyes' indispensable toilet-boxes, a few 3s. 6d. walnut, 1s. 3d. each, cardboard ditto 6d. each.—Spyvee, Chemist, Sleaford.

25s., or offer; 2 yards Christia lint; 3 lbs. fol. coca 2000 Morstadt cachets, different sizes; unused filling apparatus C; offers for part.—Sydney, 15, Oxford Road, Wallington.

Books.

Latest Editions.—Squire, 6s. 6d.; Martindale, 4s. 6d.; Gerrard, 4s. 6d.; Bentley's Manual, 5s. 6d.; Pereira, 2s. 9d.; Wills' Pharmacy, 3s.; Advanced Materia, 4s.; Volumetric, 1s. 9d. All excellent condition. Carriage free.—Gower, Publisher, Waterloo, Liverpool.

'Chemist and Druggist,' vols. 32, 34, 44, 45, bound separately in cloth; offers in cash or saleable patents.—Birkbeck, Chemist, Bailgate, Lincoln.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Offers wanted for 5 5s. 6d., 21 3s., 13 1s. 6d. Dobson's Black-leg Drinks, in good condition; no reasonable offer refused.—Richardson & Co., Chemists, Hexham.

DIARY FOR THE WEEK.

SATURDAY, JUNE 4.

BURROUGHS, WELLCOME & Co.'s EXCURSION to Dover.

REYNOLDS AND BRANSON'S CRICKET CLUB *v.* 'Yorkshire Post.'

MONDAY, JUNE 6.

SOCIETY OF CHEMICAL INDUSTRY, at 8 p.m.
"The Conditions Existing in Acetylene Generators," by Prof. V. B. Lewes.

TUESDAY, JUNE 7.

ROYAL INSTITUTION, at 3 p.m.
"Literary Criticism in Greece" (Lecture II.), by Prof. S. H. Butcher.

WEDNESDAY, JUNE 8.

PHARMACEUTICAL SOCIETY, at 12 noon.
Meeting of Council.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION, at 1 p.m.
Annual outing (Membland Drives).

ROYAL SOCIETY.
Annual Conversazione.

FRIDAY, JUNE 10.

ROYAL BOTANIC SOCIETY, at 4 p.m.
"A Diseased Potato" (with Lantern Illustrations), by Professor W. B. Bottomley.
(Museum, in Gardens.)

SPECIMEN PAGE.

(37)

Tinctura Cinchonæ Composita.—The red cinchona bark is replaced by an equivalent quantity of tincture of cinchona, and the proof spirit by 70 p. c. alcohol. The orange peel should be well bruised and the serpentary in No. 40 powder. Macerate the solid ingredients for 7 days in a quantity of alcohol equal in volume to the tincture of cinchona, and mix the strained and expressed liquids with that tincture, after which add sufficient alcohol to make up the required volume. Filter after standing for 24 hours. Each 100 C.c. of the product should contain about 0·5 Gm. of alkaloids. Dose: ½ to 1 fl. dr. [*Now standardised*—1 *in* 50.]

Tinctura Cinnamomi.—Moisten cinnamon in No. 40 powder, 4, with 70 p. c. alcohol, 4, then percolate with that spirit to produce 20 of tincture. Dose: ½ to 1 fl. dr. [60 *p. c. stronger.*]

Tinctura Cocci.—Macerate powdered cochineal, 2, in 45 p. c. alcohol, 20. Dose: 5 to 15 minims. [20 *p. c. weaker.*]

Tinctura Colchici Seminum.—Moisten colchicum seeds in No. 30 powder, 4, with 45 p. c. alcohol, 2·5, and percolate with that menstruum so as to produce 20 of tincture. Dose: 5 to 15 minims. [60 *p. c. stronger.*]

Tinctura Conii.—Moisten conium fruit, recently reduced to No. 40 powder, 4, with 70 per cent. alcohol, 4, and percolate with that menstruum so as to produce 20 of tincture. Dose: ½ to 1 fl. dr. [60 *p. c. stronger.*]

Tinctura Croci.—Macerate saffron, 1, in 60 p. c. alcohol, 20. Dose: 5 to 15 minims.

Tinctura Cubebæ.—Moisten powdered cubebs, 4, with 90 p. c. alcohol, 2, and percolate with that menstruum so as to produce 20 of tincture. Dose: ½ to 1 fl. dr. [60 *p. c. stronger.*]

Tinctura Digitalis.—Moisten digitalis leaves in No. 20 powder, 2·5, with 60 p. c. alcohol, 2, and percolate with that menstruum so as to produce 20 of tincture. Dose: 5 to 15 minims.

Tinctura Ergotæ.—Omitted.

* **Tinctura Ergotæ Ammoniata.**—Moisten ergot in No. 20 powder, 5, with 2 parts of a mixture consisting of 2 of solution of ammonia, and 18 of 60 p. c. alcohol; then percolate with the rest of the mixture. Press the marc, mix the expressed liquid with the percolate, and add sufficient 60 p. c. alcohol to produce 20 of tincture. Dose: ½ to 1 fl. dr. [*Differs from B.P.C. formula.*]

Tinctura Ferri Acetatis.—Omitted.

Tinctura Ferri Perchloridi.—The rectified spirit is replaced by 90 p. c. alcohol. Dose: 5 to 15 minims.

Tinctura Gallæ.—Omitted.

Tinctura Gelsemii.—Moisten gelsemium root in No. 40 powder, 2, with 60 p. c. alcohol, 1, and percolate with that menstruum to produce 20 of tincture. Dose: 5 to 15 minims. [20 *p. c. weaker.*]

* Signifies new preparation.

News in Brief.

The 'Oesterreichische Chemiker Zeitung' is a new bi-monthly journal, published in Vienna, and edited by Drs. Hans Heger and Stiassny. It is the official organ of the "Verein Oesterreichischer Chemiker in Wien," and in its first number gives evidence of being a useful addition to chemical literature.

Royal Institution.—A general monthly meeting of the members of the Royal Institution was held on the 6th inst., Sir James Crichton-Browne, M.D., F.R.S., Treasurer and Vice-President, presiding. Mr. A. W. Horsburgh was elected a member. The special thanks of the members were returned for the following donations to the fund for the promotion of Experimental Research at Low Temperatures:—Mrs. G. J. Romanes, £5; Sir Frederick Bramwell, £100; Professor Dewar, £100; Dr. Ludwig Mond, £200; Charles Hawksley, Esq., £100; Sir David Salomons, Bart., £21; Dr. Rudolph Messil, £100.

Poison as an Aid to Suicide.—Dr. Whitcombe, medical superintendent at the Winson Green Asylum, Birmingham, has just issued an extremely interesting report on the year's work there, to which he adds particulars of 390 cases of suicides which he has collected during the year. There was much diversity in the death agent employed, the men favouring shooting and hanging and the women drowning and poisoning. No fewer than seventeen different poisons were used. Carbolic acid was responsible for 19 deaths; prussic acid, 9; hydrochloric acid, 4; oxalic acid, 4; laudanum, 3; chloral, 2; strychnine, 2; cyanide of potassium, 2; nitric acid, 2; vermin killer, 2; and sulphonal, paraffin, sulphuric acid, bichromate of potash, binoxalate of potash, ammonia, and arsenic each one, while in 16 cases the poison is not stated. The chief cause of suicide proved to be ill-health. Through bodily or mental ailment existence became unendurable to 53 persons, and the malady at whose door most of these deaths are to be laid is influenza. Drink claimed 29 victims, love disappointments were responsible for 20, domestic troubles accounted for 16, and money matters for 10. Commenting on these figures the *Birmingham Mail* says the indiscriminate sale of poisons is even a greater scandal than the sale of toy pistols. "Multitudes of chemists," it continues, "seem to exercise no discretion whatever, and will sell anyone who enters their shop enough poison to decimate a city. . . . Of course there are difficulties in the way of restricting such sales, but druggists are frequently too lax in the matter and do not thoroughly appreciate the responsibilities resting upon them. More care ought to be exercised and greater prudence shown. . . . When for a few coppers a forlorn and miserable being can purchase a draught which, without noise or prolonged agony, will put an end to earthly suffering it is tempting him to suicide. The chemist claims more victims than the canal."

We have not yet heard of any Birmingham chemists putting the *Mail* right in this matter, but it is to be hoped that some of them will do so.

Limited Companies as Chemists.—The Pharmaceutical Society of Ireland is about to present a petition to the Houses of Parliament on the subject of limited companies being registered as chemists, etc. The Society states that already not only are limited companies registered to transact the business of pharmaceutical chemists and chemists and druggists, but also as apothecaries, and in one case, if not more, to "carry on the business of physicians and surgeons." It is further stated that whether a company is promoted for a "lawful purpose" is not investigated by the Registrar of Joint-Stock Companies, or considered by him to be part of "the requirements of the Act," nor are there means of cancelling registration when it is effected. The petitioners pray that "No company may be registered to do acts for which a course of education and examination are required to qualify, unless each member of the company is qualified."

British Homœopathic Congress.—The annual congress of Homœopathic Practitioners was held at the London Homœopathic Hospital, Great Ormond Street, W.C., on June 3, when the chair was occupied by Dr. Eubulus Williams, of Clifton, the president, and there were present more than eighty medical men who have adopted homœopathic methods in their practice.—The president, in the course of his address, traced the history of medicine among the ancients, singling out the Egyptians for special comment. As early as 4366 B.C. Teta, a king of Egypt, wrote a treatise on anatomy, which showed that an advanced knowledge of the healing art had been attained in that country even at such a remote period. The practice of vivisection was widespread, but surgery was in a backward condition as compared with medicine, doubtless because of the reverence in which the human body was held after death as well as in life, which prevented a sound knowledge of anatomy being gained. Dentists and surgeons, physicians and midwives, were recognised factors in the social life of the ancient Egyptians. Dr. Williams then traced the introduction of medical science into Europe by Arabs from Egypt and India. On one occasion Galen cured a philosopher who had taken an overdose of theriacum by administering the same poison in proper measure. This was homœopathy, but Galen had stumbled on it only by accident, for this solitary instance was opposed to all his principles. He dealt exhaustively with the subject of homœopathy as a scientific law in therapeutics, and claimed that the next century would witness a triumph for the science of healing, as enunciated by Samuel Hahnemann, whose name was worthy of association with those of Hunter, Harvey, and Jenner, and other benefactors of the human race.—A paper was read by Dr. J. H. Clarke on "The Doctrine of Signatures and the Law of Similars," which was characterised by a number of speakers in the subsequent discussion as a relic of the childhood of the science of medicine.—In the afternoon Mr. Clement J. Wilkinson read a paper on "Associated Symptoms in Provings and Disease Without Obvious Pathological Basis."—The members of the Congress afterwards dined together at the Holborn Restaurant.

Photographic Dark Rooms.—Mr. J. Thomas, 26, Victoria Street, Paignton, intimates that there is a well-appointed dark room in connection with this establishment. The vicinity of Paignton affords exceptional opportunities for the photographer, being within easy distance of numerous interesting objects, *e.g.*, ruins, Berry Pomeroy Castle, Compton Castle, Palace of the Bishops. The ancient villages around make good subjects, and the vicinity of the Dart affords great scope for the camera.—Mr. A. Hill, Chemist and Druggist, 98, High Street, Cheltenham, intimates that he keeps a stock of photographic goods and has a dark room.

An Overdose of Antifebrin.—A double dose of medicine is often dangerous, in effect, said Mr. Coroner Robinson at an inquest on Albert Johnston (33), of Darwen, who, while suffering from neuralgia and pains in the head, took two headache powders which contained antifebrin. The two powders proved too much for him and he collapsed. The medical evidence was that an overdose of antifebrin was the cause of death. A juror wished to know if the powders were to be condemned, which called forth the remark mentioned above.

A New Aërated Water Manufactory has been started by Councillor R. B. Carruthers, chemist and druggist, of Dumfries, who has transformed the Old Brewery, Buccleuch Street, Dumfries, into an aërated water-works. The water is supplied by an artesian well in the yard of the Old Brewery, which is said to be 318 feet deep and to store an inexhaustible supply of water of great purity and excellent quality. The various machinery, made by the Riley Manufacturing Company, is driven by one of Crossley's (Manchester) gas engines.

Omniscient Shareholders.—There are companies to do most things, and amongst them to carry on the business of chemists and druggists and physicians and surgeons. Not unnaturally the Pharmaceutical Society of Ireland objects. It is presenting a petition to Parliament praying that no company may be registered to do acts for which a course of education and examination is required to qualify, unless each member of the company is qualified. Will every shareholder in the Civil Service Supply Association, Ltd., have to be a qualified chemist because the Store has a drug department? However, the petitioners have some justification on their side, and we would that every member of every company better understood the business in which he places his money. But it is to be hoped that the principle will not be carried too far. As

railways are not registered companies the stockholders cannot, perhaps, be expected to be able to build an engine or even to drive it. But breweries are registered, and the prospect is awful of shareholders having to be able to brew beer as well as drink it. And what qualifications would be required, or rather what qualifications will not be required, in a shareholder of Whiteley's, when later in the year the great business is floated as a limited liability company?—*Westminster Gazette.*

IMPERIAL COLLEGE OF PHARMACY.—On Monday, June 6, the students of the Imperial College of Pharmacy, under the direction of Mr. Frederick Davis, spent four profitable hours in viewing the materia medica and other specimens of pharmaceutical interest in the London and India Docks by permission of Mr. Braithwaite, the superintendent. Especial mention should be made of three thousand bales of fine cinnamon bark, five thousand pockets of Penang cloves; nutmegs, mace, cinchona barks of every variety; strophanthus, and pale catechu in tabular discs and cubes. Specimens of these drugs were presented to the students. From the drug warehouses a visit to the iodine wharf was made; here eighty thousand kegs were stacked, each keg being valued at about ninety pounds sterling. The mercury warehouse, with its thirty thousand bottles of mercury valued at seven pounds sterling each, will not be forgotten, for here the attendant exhibited a fifty-six pound weight floating on mercury. The museum afforded fine specimens of every drug imported, together with volatile oils of every kind. The gums, gum resins, and resins, including acacia, plum tree, myrrh, benzoin, gamboge, and mastich, were of especial interest. The wine vaults contained some beautiful specimens of the fungi varying in colour from white to black and every shade of colour from cream to bright scarlet.

CARBOLIC ACID was taken in mistake for elderberry wine on Saturday, June 4, by the wife of Isaac Thomas, brake driver of Gyfeillon, Hafod. She died the following day.—An overdose of laudanum was responsible for the death of Colonel W. E. Chambers (56), on Sunday, May 29, in a medical home at 36, Gloucester Gardens, Hyde Park. He had taken it to produce sleep.—Mary Sutherland (60), Grangetown, was more fortunate than the Colonel; she took an overdose of laudanum on June 3, but an emetic was administered and she recovered.—A bottle of poisonous liniment was mistaken for a bottle of medicine for internal use, by a man named King, of Rotherhithe, who took a dose accordingly. He was removed to the hospital, where the doctors are dubious of his recovery.—Another bottle containing poison was mistaken on Tuesday, June 7, for one containing medicine, by Ellen Bush (61), of Brynmawr, and she died as a result of the error.

MR. A. SIDNEY CAMPKIN, J.P., of Cambridge, represented the Cambridge district last week at the A. M. C. of the Manchester Unity at Oxford; over 600 delegates were present. Mr. Campkin, as one of the Board of Directors, moved several resolutions on their behalf, spoke in detail on the question of Women's Lodge, after which a resolution was carried by a large majority. He was also re-elected by a large majority on the first round of voting as one of the 10 members of the Board of Directors, a position he has held since 1884.

MESSRS. T. AND H. SMITH & CO.'S ANNUAL OUTING.—The employés of the warehouse and offices of the Duke Street, Edinburgh, establishment proceeded, on Saturday, June 4, in brakes by way of Swanston, Auchendinny, and Penicuick to the Moorfoot Hills, where sports, which included cricket, football, tug-of-war, etc., took place. The company returned to town *vid* Armiston, Temple, Cockpen, and Gilmerton. The weather was fortunately favourable, and Edinburgh was reached about 10 p.m., everyone having thoroughly enjoyed the day's outing provided by the firm.

CRICKET.—The following cricket match was played on Saturday last at Tooting Bec Common between the Metropolitan College of Pharmacy C.C. and Pharmaceutical C.C., which resulted in a win for the Metropolitan by 45 runs.—Allenburys' C.C. *v.* City Mills C.C.—The match between the employés of Messrs. Allen & Hanburys, Ltd., and Messrs. Howards, of Stratford, played at West Ham Park on Saturday, June 4, resulted in victory for the former, the scoring being 73 runs as against 36.

PROPRIETARY ARTICLES TRADE ASSOCIATION.—A Council Meeting will be held on Wednesday afternoon the 15th inst. at 3 p.m., at the Agricultural Hall, Islington, and the Annual Meeting on Thursday, the 16th inst., at 3 p.m., in the Berners Hall, Agricultural Hall. Any member of the Association can obtain a ticket admitting to the Annual Meeting on applying to the Secretary, 2 and 3, Stonecutter Street, or at the stands of the Association (Nos. 2 and 3), at the Chemists' Exhibition. The Annual Dinner of the Association will be held the same evening at 7 p.m., at the Agricultural Hall. Single tickets, 7s. 6d., double tickets (to admit lady and gentleman), 12s. 6d. Morning dress. As the accommodation is limited, it is requested that an early application for tickets should be made to the Secretary, 2 and 3, Stonecutter Street, London, E.C.

THE RIVERS COMMITTEE of the Manchester Corporation has selected three gentlemen to advise them in the matter of sewage disposal, namely, Dr. W. H. Perkin, Professor of Organic Chemistry at Owens College, Dr. Percy Frankland, Birmingham, and Mr. Baldwin Latham, C.E.

EXETER UNION DISPENSERSHIP.—At the weekly meeting of the Exeter Corporation of the Poor on Tuesday last, it was resolved, on the motion of Mr. Munro, seconded by Mr. Rice, that a vote of condolence be sent to the family of the late Mr. Bulley, for many years dispenser under the Board. The appointment of Mr. Bulley's successor, whose salary is to be £50 per annum, is to be made subject to the approval of the Local Government Board, and to the provisions of the Poor Law Officers' Superannuation Act, 1896. The person to be appointed must be a Licentiate of the Society of Apothecaries of London, or hold a certificate of that Society as to his qualification to act as an assistant in compounding and dispensing medicine, or has been duly registered under the Pharmacy Act, 1868. The hours for his attendance at the Board's dispensary are from 9 to 10 a.m.; 1 to 2 p.m.; and 6 to 7. Applications had to be sent in to the Board on or before Friday, the 10th inst. Under a general order of the Local Government Board, personal discharge of the duties is made imperative.

MIDLAND PHARMACEUTICAL ASSOCIATION.—The first meeting of the recently-elected Council of this Association was held on Tuesday at Mason University College, Birmingham. The retiring President, Mr. F. J. GIBSON, presided over the first part of the proceedings. Mr. Jeffrey Poole (Birmingham) was elected President for the ensuing year, and Mr. J. Barclay and Mr. F. H. Alcock Vice-Presidents. Mr. J. C. Mackenzie was appointed Hon. Treasurer, and at the request of the meeting Mr. J. Barclay undertook the office of Hon. Librarian. The Council received with considerable regret an intimation from Mr. H. S. Shorthouse that he was unable to continue the duties of Hon. Secretary, and several members referred to the highly efficient manner in which Mr. Shorthouse had served the Association during the past year. The appointment of a successor to Mr. Shorthouse was left in the hands of the new president. Messrs. T. L. Reeve and W. S. Bridgewood were elected honorary auditors, and the following were chosen as the Trade Committee:—Messrs. F. Adam, G. H. Brunt, R. D. Gibbs, F. J. Gibson (Wolverhampton), F. T. Gibson (Birmingham), W. Jones, J. Poole, F. H. Prosser, J. Wakefield, A. Southall and Councillor Price. The Hon. Secretary announced the receipt of a letter, written by Mr. W. S. Glyn-Jones, on behalf of the P.A.T.A. (see *ante*, p. 468). It was agreed to refer the letter to the Trade Committee. The retiring President mentioned that he had received a letter from the President of the Pharmaceutical Association (Mr. Hills) containing an expression of thanks to the Midland Pharmaceutical Association for the cordial welcome accorded him on his recent visit to Birmingham. Votes of thanks were afterwards passed to the retiring President and the retiring secretary, reference being made in each case to the value of the services rendered to the Association.

THE BRITISH PHARMACEUTICAL CONFERENCE programme of meetings and entertainments in connection with the Belfast meeting was finally agreed upon at a meeting of the Ulster Executive Committee, held at Belfast a few days ago, when Mr. J. C. C. Payne, J.P., occupied the chair, and there was a good attendance of members. The programme was presented for confirmation at a meeting of the Executive Committee, held at 17, Bloomsbury

Square, London, on Wednesday, which was presided over by Dr. Symes, President of the Conference. The Ulster Executive Committee is anxious that the Belfast meeting should be one of the finest on record, and is desirous that the chemists of England and Scotland should reserve the Conference week in Belfast for their 1898 holiday. With that idea there is little doubt many of the members of the Conference will cordially agree, and they may also be expected to act upon it.

Royal Society Conversazione.—The second conversazione of the year took place on Wednesday, June 8. The President, Lord Lister, F.R.C.S., D.C.L., entertained a large and brilliant company of Fellows and their friends, including many ladies, since this is generally recognised as the Ladies' Night. The exhibits represented the latest discoveries and inventions in nearly every science and application of science, among them being crypton, the very latest surprise in matters chemical.

Brighton Association of Pharmacy.—This Association held a meeting on Thursday, May 26, at 9.15 p.m., at the A.B.C. Rooms, King's Road, Brighton.—The chair was taken by the President, Mr. W. H. Gibson, and there were also present, amongst others, Messrs. W. W. Savage and C. G. Yates (Hon. Secretaries), Messrs. Farr (of London), Martin (of Lewes), J. R. Gwatkin, H. A. Costerton, C. S. Ashton, H. C. Thorne, A. P. Nosworthy, F. Jones, etc. The meeting was called "to receive important communications on future work of the P.A.T.A." and "to consider whether to invite the British Pharmaceutical Conference, 1899."—An animated discussion took place on the first item, in which most of those present participated, and it appeared to be the opinion of the majority that such a prohibitive fee as is required of manufacturers on placing their articles on the P.A.T.A. list is the reason why there is not a longer list than at present.—The following resolution was unanimously agreed to:—

> That this Association offers its moral support to the P.A.T.A., and allows its name to be used.

—The Conference invitation was next considered and freely discussed, and it was resolved to send a circular letter to every pharmacist in Sussex, asking for opinions and support.

Aberdeen Pharmaceutical Association.—At a meeting of this Association on Wednesday, Mr. James Clark, President, in the chair, the Convener (Mr. Giles) of the Education Committee read over the terms of agreement with the Governors of Robert Gordon's College, anent the equipping and carrying on of a School of Pharmacy at the college, a report of which appeared in last week's Journal. The Association unanimously adopted the Committee's report. The first session of the new school will commence in the beginning of September, meanwhile the Committee have been asked to nominate a teacher. It was also resolved to send a circular to the medical men, intimating to them that after July 1 all new prescriptions would be prepared according to the 1898 Pharmacopœia unless otherwise indicated. The Convener of the Social Committee reported that the Annual Drive was to take place on Wednesday, July 6. The route chosen this year being to Aboyne *viâ* Banchory and Forest of Birse. Strangers welcomed. Any such intending to be present should write to the Secretary, Mr. J. Cruickshank, 42, George St.

Personal Notes.

Messrs. Hedges and Son are opening branch premises at Stratford Road, Birmingham.

Mr. T. Cattell's business at Aston Road, which he has recently relinquished, has been acquired by Mr. G. C. James, who has been for some time with Messrs. Phillip Harris and Co., Birmingham.

Mr. R. Eaton, chemist and druggist, has just opened a new shop, the Trafford Bar Pharmacy, 468, Stretford Road, Manchester, which has been fitted throughout by Messrs. Ayrton & Saunders, of Duke Street, Liverpool.

Mr. R. Darton Gibbs has now definitely retired from the business which he has carried on at Oldbury, Birmingham, in partnership with Mr. Cuxson, and intends to carry on business independently as a manufacturer of surgical dressings.

Trade Notes.

Messrs. Southall Bros. & Barclay, Birmingham, are offering a new measure-glass, which has been especially designed by the firm for the easy preparation of the various alcohols of the new Pharmacopœia. It is graduated on one side like an ordinary 20-oz. measure, and on the opposite side as a 500-C.c. measure, whilst midway between the two sets of graduations are special graduations for use in diluting strong alcohol to the desired strength. Thus, to prepare 70 per cent. alcohol, all that is necessary is to fill up to the mark indicated with 90 per cent. alcohol, then add sufficient cold distilled water to make 1 pint of liquid at the ordinary temperature. In like manner it is possible to prepare 60, 45, or 20 per cent. alcohol as desired. The measure, which should prove a great convenience to retail pharmacists, is supplied to the trade at 3s. 6d., and a card of instructions accompanies it.

Mr. Max Schliephak, 90, Victoria Street, S.W., is offering amongst other novelties ointment jars with celluloid covers printed in colours, with any name and address. They can be obtained of various sizes, and printed in seven different colours, at very moderate prices. The Oriental Fumigating Powder is another attractive novelty, intended to supersede the old-fashioned pastilles, and beyond comparison as a substitute for the latter. A small quantity of the powder, when placed on a heated surface, suffices to perfume a large room.

PHARMACEUTICAL SOCIETY.

(NORTH BRITISH BRANCH.)

A meeting of the Members and Associates in Business of the Society, residing in Scotland, will be held in the Society's House, 36, York Place, Edinburgh, on Friday, June 17, at 11 a.m. precisely. The business of the meeting will commence with a statement by the Chairman, after which the Scrutineers' Report will be received, and followed by the election of Executive. The following are the names of persons eligible and willing for election:—

1. Ayre, George Martin, 75, High Street, Perth.
2. Boa, Peter, 119, George Street, Edinburgh.
*3. Bowman, John, 3, Duke Street, Leith.
4. Burley, William, 35, George Street, Edinburgh.
*5. Coull, George, 17, Smith's Place, Leith Walk, Edinburgh.
6. Cumming, Charles, 49, Reform Street, Dundee.
*7. Currie, William Little, 223, Byres Road, Dowanhill, Glasgow.
8. Dow, William, High Street, Kinross.
*9. Ewing, James Laidlaw, 9, Princes Street, Edinburgh.
10. Ferrier, David Hynd, 2, Hilltown, Dundee.
*11. Fisher, John Hutchison, 66, High Street, Dunfermline.
12. Graham, Alexander, 79, Main Street, Lochgelly.
*13. Hardy, James Miller, 68, High Street, Dundee.
14. Harley, Thomas, 21, High Street, Perth.
*15. Henry, Claude Francis, 1, Brandon Terrace, Edinburgh.
*16. Kermath, William Ramsay, Greyfriars Garden, St. Andrews.
*17. Kerr, Charles, 56, Nethergate, Dundee.
*18. M'Adam, Robert, 34, Virginia Street, Glasgow.
*19. M'Laren, David, 42, South Clerk Street, Edinburgh.
20. Macpherson, Collin Allen, 97, Dalry Road, Edinburgh.
*21. Mitchell, Donald, 30, Union Street, Inverness.
*22. Moir, James, 447, Victoria Road, Crosshill, Glasgow.
*23. Russell, James Anderson, 212, New City Road, Glasgow.
*24. Strachan, Alexander, 138, Rosemount Place, Aberdeen.
25. Swan, William, 92, Morninside Road, Edinburgh.
26. Thomson, John Hutchison, 102, High Street, Lochee, Dundee.
27. Watson, David, 558, Cathcart Road, Govanhill, Glasgow.

The names marked with an asterisk are those of members of the retiring Executive, who are eligible for re-election.

Partnerships Dissolved.

(From the London Gazette)

James Law & George F. Law (trading as Law Brothers) Chemical and Produce Brokers, Liverpool. Debts will be received and paid by James Law.

Charles John Bennett and Ernest A. Dent, Surgeons and Medical Practitioners, Cheltenham. Debts will be received and paid by Albert Dent, who will carry on the practice.

BURROUGHS, WELLCOME AND CO.'S ANNUAL OUTING.

WOULD-BE WEATHER PROPHETS had a splendid opportunity for prophetic exercise during last week in the neighbourhood of Snow Hill, Holborn, and at Dartford. Some of them did not fail to take advantage of it, and the various impressions created in the minds of the employés of Messrs. Burroughs, Wellcome and Co. were easily distinguished on Saturday morning, June 4, when a South-Eastern Railway Co.'s engine steamed into Cannon Street Station with a heavy freight of lads and lasses (mostly lasses) from Dartford. Those influenced by the gloomy prophecy were armed with umbrellas, mackintoshes and great coats, while the disciples of the genial prophet were attired in light summer dresses and straw hats. However, fickle as the "Mistress of the Weather" certainly is, she evidently had a warm corner in her heart for the Dartford and Snow Hill contingents, making a party of some 700 odd, which punctually at 8 o'clock, amidst bright sunshine, left Cannon Street, for the white cliffs of Dover. After a good run the engine pulled up at its destination shortly after ten o'clock, the aforesaid young lady continuing to smile upon the party, and although Londoners who stayed at home were threatened by dark thunder-clouds, all rain-clouds were banished from the neighbourhood of Dover, and bright beams of sunshine poured down to gladden the hearts and tan the faces of the happy company during the whole of the day.

DINNER AT THE TOWN HALL at 12 o'clock noon was one of the items on the programme, and as the time drew near the large hall gradually filled with a hungry assembly. A substantial repast had been provided by the caterer, and the stewards, Messrs. Astill, Davies, Francis, Scott, Johnson, and Soloman were indefatigable in their endeavours to see that each one was well supplied with good things. Mr. Henry S. Wellcome, principal of the firm, presided, and Mr. R. Clay Sudlow, general manager, occupied the vice-chair. At the Cross table several representatives of the press, the heads of departments, including Dr. Power, Dr. Jowett, Dr. Schryver, of the Wellcome Research Laboratories, Mr. J. Collett Smith, Mr. C. C. Weld, Mr. Lloyd Williams, and others, and the wives of members of the staff were entertained, but on this occasion no visitors, with the exception of the Press, were invited, owing to the difficulty of providing sufficient accommodation for the increased staff.

AFTER DINNER the usual loyal toast was proposed by Mr. Wellcome in a few choice and appropriate words. This was followed by "The Firm," proposed by Mr. Tindall, of the *Medical Press and Circular*, who, in the course of his remarks, referred to the time when the entire staff of the firm consisted of about a dozen employés, and he thought the large company present that day testified to the business abilities of the principals, who, with efficient helpers, had built up a business which extended its operations to all parts of the world. The number of employés had nearly doubled in the last three years. Although unfortunately Mr. Burroughs was no longer with them, they had in Mr. Wellcome a real live principal to carry on the business in which he threw his whole heart and soul. They were all glad to see Mr. Wellcome amongst them again, and were rejoiced to see him returned in good health.

MR. WELLCOME, in replying to the toast, said the progress made by the firm could not be denied. At their last outing they assembled about 500, whilst that day the company numbered 700. There had not only been an increase in numbers, but also a still greater increase in talent and skill employed in the manufacture of their products. The greatest difficulty during the year had not been to get orders, but to execute them. He hoped, however, when the new additional buildings were completed they would be better able to cope with the ever-increasing business. Mr. Wellcome then proposed the toast of "The Employés." Referring to the happy relations existing between principals and employed, he said how deeply touched he had been by their good wishes for his restoration to health expressed through the managers during his illness.

THE IMPORTANCE OF GOOD TECHNICAL EDUCATION was then touched upon by Mr. Wellcome. His firm, he said, were not only always seeking to secure the services of highly skilled men from outside, but were endeavouring to develop the men within their own ranks by technical education. When they read in the journals that the professions of pharmacy and chemistry were overrun they must not believe it. In their rapidly increasing business there were always positions ready for 100 per cent. men, and they were always willing to pay fair remuneration, and that for life, for their services. But the number of suitable candidates was very small; there was plenty of room for really first-class men who would take the trouble to perfect themselves. Mr. Wellcome's concluding remarks were greeted by appreciative applause, inasmuch as they referred to the establishment at Dartford of a well-arranged club for the mutual benefit of the people employed there, which it is expected will be opened in a few weeks. He coupled with the toast the name of Mr. R. Clay Sudlow the general manager.—That gentleman replied by a speech in which he expressed the satisfaction they all felt at seeing Mr. Wellcome so nearly restored to perfect health.—The Chairman then proposed "The Fair Sex," to which Miss M. Martin Leake, lady superintendent of the women's departments at the works, replied with a clever yet concise and witty speech.—This was followed by "The Press and Visitors," Mr. Peter MacEwan replying.—The stewards were then thanked for their services, and the company dispersed, some to take a two hours' sea trip in the steamer "Britannia," others to visit the numerous places of interest in the surrounding country. At 6.30 p.m. the company again assembled in the Town Hall for tea. Mr. Wellcome's hospitality and thoughtfulness for the comfort of his guests was demonstrated in numerous ways, and Mr. E. Linstead, chief of the literary department, ably seconded his principal's efforts to make the day's outing thoroughly enjoyable to the whole party. At 7.55 the special train was boarded *en route* for Cannon Street Station, which was reached some fifteen minutes before the time specified on the day's programme. Surely a record run for the South-Eastern! The train then proceeded to Dartford. Thus ended a most enjoyable outing, characterised by splendid organisation, generous hospitality, and ideal weather.

PHARMACY IN AUSTRALIA.

[*From our Melbourne Correspondent.*]

IN MATTERS PHARMACEUTICAL Victoria has had a long start of the other Australasian Colonies, not even excepting the parent one of New South Wales, owing no doubt in great measure to the fact that some half century ago several pharmacists of more than usual culture and ability were attracted from the old country to the growing city of Melbourne, who, following with eager interest every movement made in England, devoted themselves heart and soul to the establishment in Victoria of a pharmaceutical organisation recognised by the State in a similar or even more pronounced measure as that for which their old comrades were striving at home. In subsequent letters if your space will permit, I may have an opportunity of recounting a few reminiscences of these pioneers, few of whom, alas, are now left with us; but at present I must content myself by saying that on the foundation laid by them has been built a Society which for professional and social status and educational equipment (*vide* its College of Pharmacy, of which more anon) has perhaps few counterparts in the civilised world—outside Bloomsbury Square, of course. In one of your recent issues I noticed, in an article dealing with the growth of your noble Benevolent Fund, a generous tribute to the indefatigable energy and zeal of your old secretary, Mr. Elias Bremridge. What Mr. Bremridge was to you in the past our Mr. Shillinglaw has been and is to Victorian pharmacy. Not indeed to Victorian pharmacy alone, for being in himself a compendium of information as to pharmaceutical laws, privileges, and disabilities, his opinions and advice are sought from every pharmaceutical centre, and if ever we succeed in securing inter-colonial reciprocity it will be admittedly due in large measure to his untiring efforts in that direction for many years past.

WHEN WRITING TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN in June last, re-opening the old question of recognition of colonial certificates, I scarcely think that either Mr. Shillinglaw or many members of the Board and Society with which he is more especially identified, knowing the enterprise on which you had embarked with the view of consolidating your own ranks, entertained any very sanguine

hopes of success. But any disappointment that could legitimately be entertained at the reply was greatly discounted by the kindly tone in which it was worded and the evident interest displayed by the parent Society in the welfare of her Australasian offshoots. We fully recognise here the force of the paragraph in which the writer points out the difficulty of insuring in the different parts of the Empire "a practical uniformity in the scope and stringency of the technical examination." So far as Victoria particularly is concerned it is contended that the standard is fully equal to that in Great Britain, and that the advantages of reciprocity would lie principally on your side. As the President of the Pharmaceutical Association of Australasia recently expressed it, "Few, if any, Australian pharmacists are likely to exchange their conditions here for those of the old country. On the contrary, the more our free, sunny, and progressive colonies, with their many other advantages, become known, the more will enterprising young pharmacists of Great Britain be attracted to our shores." And in connection with your suggestion that a step in the required direction would be accomplished did the Colonial Pharmacy Board succeed in establishing uniform examinations as a basis of intercolonial reciprocity, it will interest you to note that during the recent negotiations between Victoria and New South Wales, a scheme to this effect met with practical acceptance from both parties. This provided for a future joint preliminary examination, the questions to be arranged and agreed to by two gentlemen, one to be appointed by each colony; that the examination in materia medica, botany, chemistry, and practical chemistry should be on the same basis as that required for the certificate of the Melbourne College of Pharmacy, and that the final qualifying examination should be in accordance with the syllabus in the regulations of the Medical Act of Victoria. It is deeply to be regretted that having successfully arranged this essential matter, other questions of a comparatively unimportant nature should have cropped up upon which neither colony seems inclined to give way, and which for the time at least have brought the negotiations to a standstill. The main points in dispute are (1) Victoria's objection, as an injustice to her own students, to the admission of persons in New South Wales who have served a period of three years' apprenticeship only, but have passed no examination; (2) Victoria's request that the term by apprenticeship in New South Wales should be extended from three to four years; and (3) Victoria's demand for the recognition by New South Wales of all persons now on the Victorian register who have been registered as holders of certificates from the Pharmaceutical Society of Great Britain.

The Pink Pills Case.—Mr. Justice Williams delivered the judgment of the Full Court in the case of Shillinglaw *v.* Taffs on Wednesday, March 9. The following is the full text, as read by His Honour:—"One Taffs was informed against for selling a poison, to wit, an admixture of arsenic called pink pills, contrary to the provisions of the Poisons Act, 1890. The admixture of arsenic, though small, was sufficient to bring the case within the Act, unless defendant could bring himself within the protection of Section 14, which, amongst other exceptions, excepts patent or proprietary medicines. The Bench dismissed the complaint, and it was not contended that their conclusion on the evidence that Pink Pills were a proprietary medicine was erroneous; but an order to review was obtained, on the ground that, assuming the pills to be a proprietary medicine, the proviso at the end of Section 14, requiring entry in a book and labelling as poison, applied to proprietary medicines, and that as there had been no such entry or labelling the decision was wrong. A decision of this Court, Shillinglaw *v.* Roberts, 17, V.L.K., p. 359, was referred to, which assumes that the concluding proviso of Section 14 applies to all the antecedent exceptions in the Section, though the point argued was not as to whether the proviso applied, but as to whether there had been a sufficient compliance with the proviso with regard to entry in a book. Having regard to this decision, the judge before whom the order to review came in the first instance referred it to the Full Court. We have had to consider a point which was not argued in the case referred to, and was not necessarily involved in the decision, as in that case the defendant relied upon the protection afforded to sales by wholesale dealers, to which the concluding proviso of Section 14 indisputably refers. Section 14 enacts that the Act shall not extend to the sale of any poison made up as a medicine, nor to the sale of patent or proprietary medicines, nor to the sale of medicines dispensed by veterinary surgeons, nor to the sale of fly poison or packets of poisonous mixtures for the destruction of vermin when duly marked as such. Then follow the words, 'nor shall it extend to any sales by wholesale dealers in the ordinary course of wholesale dealing if an order in writing, signed by the purchaser, shall be given for the supply of the same. Provided that all such sales shall be entered in a book, and that the bottle or other vessel, wrapper or cover, box or case, immediately containing the poison be labelled as required by this Act.' The question is, do the words 'all such sales' cover every sale before referred to, or only the last-named sales by wholesale dealers? The frame of the section is opposed to the view that the proviso attaches to each exception. The exception of wholesale dealers is introduced by new words of exclusion, 'nor shall it extend to any sales,' etc. The word 'sales' is used for the first time, and the proviso relates to all such 'sales,' not to every such 'sale' as before mentioned. But there are much stronger reasons for considering that the proviso was only intended to apply to sales by wholesale dealers when we see that the proviso requires that the bottle or other vessel, etc., immediately containing the poison shall be labelled as required by this Act. What this Act requires as to labelling is to be found in Section 7, which applies to all persons selling poison, either by wholesale or retail, and uses the same language as the proviso as to the bottle, vessel, wrapper, cover, box, or case, and requires that it shall bear the word 'Poison' printed conspicuously, together with the name of the article, and the name and address of the seller thereof. It could not be intended that a medicine made up from a physician's prescription should be labelled 'Poison,' or that the name of the article, if name could be given to it, should be written upon it. The proviso seems merely to have the effect of saying that the exception of sales by wholesale dealers from the general provisions of the Act shall not exempt them from the obligation of labelling contained in Section 7. We decide that the obligations of the concluding proviso of Section 14 do not attach to the sale of patent or proprietary medicine. The order to review will therefore be discharged with costs."

A chemist named Arthur Singleton Larcombe, said to be a native of England [But not registered there.—Ed. *P. J.*], recently arrived in the colony, committed suicide by prussic acid at Annandale, New South Wales, a few weeks ago. He had just previously been discharged from the position he held as branch manager for a Sydney chemist.

Marriages.

Gardiner—Mackay.—At Veitch Park, Haddington, on the 1st inst., by the Rev. R. L. Walker, M.A., David Gardiner, chemist, Haddington, to Eliza Wright, daughter af the late Bailie Mackay, ironfounder, Haddington.

Athey—Marshall.—At the Wesleyan Chapel, Morpeth, on May 24, by the Rev. W. O. Robinson, George Hedley Athey, Ph.C., Rothbury, third son of T. W. Athey, slater, Morpeth, to Grace Laidler (Daisey), third daughther of Mrs. Marshall and the late G. T. Marshall, chemist, Morpeth.

Walton—Gordon-Saunders.—On the 1st, at Holy Trinity Church, Finchley Road, by the Rev. Bonavia Hunt, Mus.D., assisted by the Rev. Frank Bevan, M.A., Samuel Archibald Walton, eldest son of Joseph Walton, King William Street and Frien Road, Dulwich, to Cecilia Gertrude, third daughter of Gordon-Saunders, Mus.D., of Greencroft Gardens, South Hampstead.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

JUNE 9, 1898.

Business has been extremely quiet during past week, and many complaints have been heard at the turn which things have taken. Opium, Morphia, and Codeia are quiet. Quinine dull pending result of to-day's Amsterdam bark sales, result of which had not become known up to time of going to press. Cocaine somewhat unsettled. Quicksilver and Mercurials firm. Glycerin and Cod-liver Oil rather higher. Sulphate of Ammonia weaker. Camphor quiet. Cream of Tartar very dull. Acid Tartaric steady. Acid Oxalic quiet, while Acid Citric remains very firm. Bismuth Salts and Lithia without change, as are also Iodine and Iodides, Bromine, and Bromides. Shellac in good demand at advanced rates. Borax and Acid Boracic very quiet. Acetanilide, Phenacetine, and Sulphonal unchanged. The following are the actual prices ruling:—

ACETANILIDE—Is quiet at 1s. 2d. to 1s. 4d. per lb., according to quantity.

ACID BORACIC—Quiet but steady; *crystals*, 23s. per cwt.; *powder*, 25s. per cwt.

ACID CARBOLIC—Is firm at 7d. per lb. for best make of 35° to 36° ice crystal in large bulk packing, other qualities and packing in proportion. *Crude*: 60° F., 2s. 2d.; 75° F., 2s. 7d. *Liquid*: 95 per cent. of pale straw colour, 1s. 1d. to 1s. 2d. per gallon in 40-gallon casks.

ACID CITRIC—Is very firm at 1s. 1d. per lb. for *English* for spot delivery.

ACID OXALIC—Steady at 3⅝d. per lb. on the spot.

ACID TARTARIC—Is steady at 1s. 1d. per lb. for *English* and 12¾d. per lb for *Foreign*.

AMMONIA COMPOUNDS.—*Sulphate* easier; grey prompt 24 per cent., London, £9 5s. per ton. Hull and Leith 2s. 6d. per ton less. Beckton £9 5s., Beckton terms £9. *Bromide* 2s. 2d. per lb., *Iodide* 14s. 6d., *Oxalate* 6d., *Sulphocyanide* 1s. 1d. to 1s. 2d., *Sal ammoniac*: Sublimed firsts 35s. per cwt, seconds 33s. *Chloride*: commercial 98 per cent,, free from metals, 26s. per cwt.; chemically pure 32s. to 33s.

ANTIMONY.—Market is firm at 24s. per cwt. for crude *Japan* on spot, while to arrive there are few offers at 22s. per cwt., *c.i.f.*, it being stated that quantity available for shipment is extremely limited. *Regulus* is quoted 35s. to 36s. per cwt. on the spot.

ATROPINE—Firm at 15s. 6d. for the *Sulphate P.B.*, and 17s. 10d. per oz. for the *pure*.

BALSAM TOLU—Is easier, good genuine being offered at 1s. 8d. per lb. in large tins.

BISMUTH.—Price of the *metal* remains at 5s. per lb., makers' price for the *Subnitrate*, being 4s. 10d. per lb. for 5-cwt. lots.

BLEACHING POWDER—Firm at £7 to £7 5s. per ton on the spot.

BORAX—Unchanged at 14s. per cwt. for lump and 14s. 6d. per cwt. for powder.

BROMINE and BROMIDES—Without change at 1s. 11d. per lb. for the former, 1s. 10d. per lb. for *Potass. Bromide*, and 2s. 2d. per lb. for *Ammon. Bromide* and *Soda Bromide*.

CAMPHOR.—The market for *crude* is very quiet, and no business is reported. *Japan* quotes 88s. per cwt., and *China* 82s. per cwt., *c.i.f.* terms.

CINCHONA BARK.—The sales taking place to-day in Amsterdam are heavy, but at the time of going to press we have no definite news of how they have gone. The exports of Java during May were 672,000 Amsterdam lbs. against 600,000 last year, and 768,000 in 1896. Total from January to May 3,884,000 Amsterdam lbs. against 2,584,000 in 1897, and 3,260,000 in 1896.

CINNAMON.—The quarterly auctions were held on Monday, the offerings being very small, only 959 bales *Ceylon*, against 1956 bales in April, and 1675 bales at the same time last year. Demand was very slow, about 660 bales finding buyers at a decline of 1d. to 2d. per lb. for good to fine qualities and at previous rates for the lower grades. Of 173 bales worked *Ceylon*, 74 bales First sort, good to fine 1s. to 1s. 4d., superior 1s. 10d.; 43 bales Second sort, medium 10½d., fine 1s. 1d. to 1s. 2d., superior 1s. 6d.; 26 bales Third sort, middling 9d., good 1s., superior 1s. 4d. to 1s. 2d. and 1s. 5d., and 33 bales Fourth sort, common 7½d., good 10½d. Of 786 bales unworked 460 bales sold, First sort, good to fine 1s. to 1s. 3d., medium, 10d., inferior coarse 9d.; Second sort, fair to good 10d. to 11½d., ordinary 8½d. to 9d., inferior coarse 8d. to 8½d.; Third sort, ordinary to good fair 8d. to 9½d., inferior 7d. to 7½d.; Fourth sort, ordinary to fair 7d. to 8d., inferior 6½d.

CLOVES.—Privately *Zanzibar* have been very quiet. June to August delivery quoted $3\frac{25}{32}$d. Small business done October to December delivery at $3\frac{15}{32}$d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*, commercial 1s. 4d., pure 3s. per gallon. *Benzole*. 50 per cent. 1s. 2d, 90 per cent. 1s. 1d. *Crude Naphtha*, 30 per cent. at 120° C., 6d. *Solvent Naphtha*, 95 per cent. at 160° C., 1s. 8d. per gallon.

COCAINE.—Market is quiet, makers' price for best brands being 9s. 6d. to 9s. 9d. per oz. for 100-oz. lots in 25-oz. tins. There are, however, sellers from second hand at rather lower figures.

COCOA BUTTER.—The monthly sales took place on Tuesday, when 60 tons of *Cadbury's* sold at an average price of 9⅞d. per lb., against 9⅝d. per lb. in May, 10½d. in April, and 9¾d. in March.

CODEIA—Steady at 11s. 3d. to 11s. 6d. per oz. for quantity.

COD-LIVER OIL.—The reports of the *Finmarken* fishery continue to be less and less favourable; the tone of the market is consequently firmer. There is, however, little doing, this being the season of the year when business in the article is usually very slack. Quotation is nominally 82s. 6d. to 85s. per barrel *f.o.b.* for new non-freezing in tin-lined barrels.

CREAM OF TARTAR—Is exceedingly dull. First white *crystals* on the spot are quoted 70s. 6d. to 71s. per cwt., *powder* 72s. 6d. to 73s. per cwt. High grades suitable for the new B.P. requirements are quoted 80s. per cwt.

GALLS.—*China* are quiet, fair quoted 57s. per cwt. In *Persian* blues a fair business is doing at 54s. per cwt.

GINGER.—*Cochin* continues quiet and easy, 2143 bags being offered and only 830 bags sold; low shrivelled pickings 11s., rough small and ends 15s. 6d. to 17s. 6d., fair rough Calicut 24s., small brown rough 26s. to 27s., small native limed part cut 33s. Of 172 cases only 59 sold; Calicut medium cut 56s. to 58s., one case fine bold cut 84s., medium native part cut 45s. to 47s. 100 bags limed *Japan* bought in at 19s. 27 bags ordinary *Liberian* bought in at 17s. 6d., of *Jamaica* a good supply found less demand, about 500 packages being sold at decline of 1s. to 5s. Good ordinary *Rhatoon* 78s. to 79s., low middling small scraped to middling washed, 80s. to 85s., good middling to fine bright 86s. to 92s. 6d., fine selected 95s. to 117s. 6d. 7 bags scraped *St. Lucia* sold at 77s. 6d.

GLYCERIN.—Market is decidedly firmer, the agents for one maker reporting an advance of 5s. per cwt. for *refined*; good *German* makes of *white* double distilled chemically pure 1260° are, however, still obtainable at 53s. 6d. to 62s. 6d. per cwt. in tins and cases, according to quantity and brand. *Crude* is very firm.

GUARANA—Is exceedingly quiet and good can be bought at 1s. 6d. per lb,

IODINE and IODIDES—In good demand at 7½d. per oz. for the former; 9s. 9d. per lb. for *Potass Iodide* in 2 cwt. lots, and 13s 4d. per lb. for *Iodoform*.

IPECACUANHA.—Sales have been made this week at 9s. 1d. per lb. for *Rio* and 4s. 10d. to 5s. per lb. for *Carthagena* according to quality and condition.

LICORICE ROOTS.—*Persian* decorticated selling in a small way at 20s. to 21s. per cwt.; ordinary rough at 8s. per cwt.

LITHIA—Is unchanged at 10s. 8d. per lb. for the *Carbonate* in 2-cwt. lots.

MENTHOL—*Japan* is steady at 7s. to 7s. 6d. per lb. for good dry white crystals in 5-lb. tins for quantity.

MERCURIALS—Are firm at the lately advanced prices, viz., 2s. 9d. for *Calomel*, and 2s. 5d. for *Corrosive Sublimate* in ½-cwt. lots

MORPHIA—Unchanged at 4s. 6d. per oz. for the *Hydrochlorate salt* in powder.

NITRATE OF SODA—Quiet but fairly steady at £7 15s. per ton for the *commercial* and £8 for *refined*.

OILS (ESSENTIAL).—*Star Aniseed* continues in good demand at again dearer rates for forward delivery, 6s. 7d. per lb. having been paid for June to July steamer, whilst on the spot price is firm at from 7s. to 7s. 3d. per lb. *Cassia* is very quiet, and prices are unchanged. *Citronelle* is quiet at 1s. 2d. per lb. in tins or drums. *Lemongrass* lower at 4d. per oz., closing very quiet. *Peppermint* slow of sale; HHG

is quoted 5s. 7½d. to 5s. 9d. per lb.; Wayne County, 3s. 9d. to 4s. per lb. *Japan*: Dementholised, 3s. per lb.; 40 per cent., 4s. per lb.

Oil (Fixed) and Spirits.—*Linseed* dearer at £17 2s. 6d. for pipes on the spot, and £17 10s. for barrels. *Rape* quiet; ordinary brown on the spot, £23; refined, £24 10s. *Cotton* quiet and lower at £14 for London crude, and £15 15s. to £16 10s. for refined, according to make. *Coconut* firm at £24 10s. for Ceylon on the spot, and £29 10s. for Cochin, same position. *Palm*: Lagos on the spot, £24. *Turpentine* lower, but closing steady at 24s. per cwt. for American on the spot. *Petroleum Oil* steady; American, 5⅛d. per gallon; Russian, 4⅝d. per gallon. *Petroleum Spirit*: American, 5⅝d. per gallon; deodorised, 6d. per gallon.

Opium—Very quiet at unchanged prices, values being as quoted in our last, but with practically nothing doing in the article at the moment.

Pilocarpine.—Makers still quote 33s. per oz. in 1-oz. lots.

Potash Compounds.—*Bicarbonate*, 30s. per cwt in bulk for *crystal* or *powder*. *Bichromate* 3½d. to 4d. per lb. *Bromide* 1s. 10d. per lb. *Chlorate* 3½d. per lb. *Cyanide* 1s. 1d. to 1s. 2d. per lb. for 98 per cent. cake, according to quantity and delivery. *Iodide* 9s. 9d. per lb. in 2-cwt. lots. *Permanganate* 65s. per cwt. for small and 70s. per cwt. for large crystals. *Prussiate*: *red* 1s. 2d. to 1s. 3d. per lb.; *yellow*: 6¾d. to 7d. per lb. for English.

Quicksilver.—Very firm at £7 12s. 6d. per bottle from importers and 6d. less from second hand.

Quinine.—Market is quiet and there have been a few sales from second-hand as low as 10d. per oz. for good brands, this price having been accepted in view of the large quantity of bark up in to-day's Amsterdam sales, the result of which had not transpired at the time of going to press. Makers' price remains nominally 1s. per oz. for 1000-oz. lots in 100-oz. tins.

Salicine—Is firm at 10s. to 10s. 6d. per lb. as to quantity.

Senna.—The "Arabia" steamer, due here on the 11th inst., brings a further 169 bales *Tinnevelly*. The stock at the present time is the smallest for many years, and even when the new crop arrives in August it is not anticipated that present high prices will decline, as demand is sure to be good.

Shellac.—After an interval of three weeks the auctions were resumed on Tuesday, when unusually small supplies of *Second Orange* were offered. These met with a good demand, but owing to the higher prices required only about one-half was disposed of, and these realised an advance of 3s. to 4s. per cwt. on last sales' prices. A total of 384 cases offered and 178 cases sold. *Second Orange*: Of 256 cases 154 sold, good strong curly matted at 64s., flat flimsy reddish free at 63s. to 64s., ordinary livery broken at 62s., shivered block worked at 62s., ordinary red blocky at 60s., common livery 57s. to 58s. *Garnet*: Of 25 cases 15 sold, common flat ruby at 56s. *Button*: Of 103 cases 9 sold, fine bold No. 1 at 91s., common weak seconds at 64s.

Spermaceti.—*American* is lower at 1s. 2½d. per lb.; supplies coming forward freely.

Soda Compounds.—*Crystals* steady at 55s. to 57s. 6d. per ton. *Acetate* refined 13s. 6d., chemically pure 35s. per cwt. *Bicarbonate* commercial 90 per cent. £7 10s. per ton, ditto free from mono-carbonate 18s. 6d. to 20s. per cwt. *Bromide* 2s. 2d. per lb. *Hyposulphite* 6s. to 8s. per cwt. *Iodide* 11s. 7d. per lb. *Nitrate* commercial £7 12s. 6d. to £7 15s., refined £7 17s. 6d. to £8 per ton. *Caustic*, white 70 per cent. £7 10s. per ton, 60 per cent. £6 10.

Spices (Various).—*Black Pepper*: Penang and Lampong bought in at 4d., Singapore at 4⅛d., and fine Wynaad at 4¼d.; 132 bags Tellicherry sold at 4⅛d. *White Pepper*: Penang bought in at 6⅞d.; 13 bags fine Ceylon sold at 8⅜d. *Chillies*: 7 bales dull Zanzibar sold at 27s. 6d.; 34 bags Japan sold without reserve at 34s. to 36s. 6d. *Capsicums*: 29 casks, each 220 lb., in brine, from Marseilles, partly sold at 35s. per cask. *Cassia Lignea*: 138 boxes bought in at 50s., 25 cases selected sold at 51s., and 15 cases selected chips at 44s. 115 bales broken bought in at 36s. *Mace*: 56 cases Penang mostly bought in, pickings and common at 1s. 3d. to 1s. 6d. 4 cases low middling slightly wormy sold at 1s. 7d. 1 case ordinary broken Bombay sold at 1s. 4d. 17 packages West India sold; low to middling red, 1s. 4d. to 1s. 7d.; good, 1s. 9d.; two lots good to fine bright pale, 2s. and 2s. 10d. *Nutmegs* dull at about previous rates. *Pimento*: Only 90 bags sold; fair, 4¼d.; one lot ordinary, 4⅛d.

Sulphate of Copper—Is quiet and lower at £15 5s. to £16 per ton on the spot.

Sulphonal—Still unchanged at 7s. 3d. per lb. for bulk packing.

Tonquin Beans.—*Angosturas* are lower at 6s. 6d. per lb. in 3-cwt. casks.

Turmeric—Is very firm, but owing to the long prices asked but little business has been done. *Bengal* quoted at 17s., fair *Malabar* finger 22s., and *Cochin* split bulbs 9s. 6d. per cwt.

To-day's drug sales passed off quietly. Ergot of Rye slightly wormy sold cheaply. Ipecacuanha was slightly easier. Cardamoms down about 6d. per lb. Rhubarb in large supply and dull of sale. The following are the particulars of the principal business done and prices required:—

Agar Agar or Japanese Isinglass.—This is very scarce at the moment. 10 bales of fair quality, slightly brown, were offered in to-day's sales, and held for 1s. 4d. per lb.

Aloes.—Fair *Socotrine* was held for 82s. 6d. per cwt. in kegs, and 75s. in boxes. 1 case *East Indian* bought in at 25s. Of 145 boxes fine livery *Curacoa* part sold at 29s. per cwt. balance being taken out at 40s. per cwt.

Anatto Seeds.—32 bags fair bright held for 5½d. per lb., showing an advanced value for the article.

Antimony.—17 cases crude *Japan* bought in at £24 per ton.

Asafetida.—220 cases were offered, but met with no demand beyond 1 case, which sold at 50s. per cwt. for fair brown block.

Balsam Copaibæ.—24 cases *Carthagena* sold with brisk demand at 1s. 5d. to 1s. 6d. per lb., the cheaper price being subject to approval.

Balsam Tolu.—4 cases of fair quality sold at 1s. 7d. per lb.

Buchu Leaves.—12 bales yellowish-green rounds sold at 4d. per lb., subject to approval.

Camphor.—70 cases *Japan* refined bought in at 1s. 3d. per lb. for 1 oz. tablets, 1s. 3¼d. for ½-oz., and 1s. 4d. per lb. for ¼-oz. tablets.

Camphor Oil.—100 cases white *Japan*, doubts as to the genuineness of which were expressed, all sold at 21s. per cwt, a fairly cheap price if the article is right.

Cardamoms.—167 cases were offered but demand was very slow, and where sales were made it was only by giving way about 6d. per lb. on last sale's rates. Decorticated were firm at 2s. 10d. per lb. for grey seed, and 3s. per lb. for good.

Castor Oil.—15 barrels bought in at £29 per ton, while for 15 cases 4¼d. per lb. was the price required.

Cascarilla Bark.—19 barrels siftings held for 19s. per cwt.

Chiretta.—10 bales brownish held for 4d. per lb., this article being very scarce.

Colocynth.—Small to medium part broken *Turkey* was held for 11d. per lb.

Colombo Root.—219 bags medium quality small to bold, somewhat brownish and stalky were held for 25s. per cwt.; 10 bags washed pickings being bought in at 40s.

Cubebs.—20 bags taken out at 26s. per cwt.

Cummin Seed.—*East Indian* was bought in at 14s. per cwt., while *Malta* of rather inferior quality was held for 20s.

Cuttle Fish.—92 mats fair pale medium size part broken were held for 3½d. per lb.

Dragon's Blood—Was represented by 7 cases, 4 of fair reeds, which are held for £8 15s. per cwt. 2 cases dullish seedy lump was held for £8 per cwt., whilst 1 small box of fair to good bright, picked out of the other 2 cases, realised the long price of £13 per cwt.

Ergot of Rye.—22 bags *Russian*, slightly weevily, sold cheaply at 4¼d. to 5d. per lb.

Fennel Seed.—20 bags of fair quality, but rather chaffy, bought in at 16s. per cwt., 15 bags medium quality selling cheaply at 12s. 6d. per cwt.

Galls.—165 bags blue *Persian* were held for 54s. per cwt.

Gamboge.—24 cases in all were offered, fair bright soft being held for £8 per cwt. 3 cases ricey *Saigon* pipe sold without reserve at the hitherto unheard of price of 50s. per cwt.

Guaza.—53 Robbins fair green but rather dusty tops were held for the Bombay limit of 7d. per lb., the article being reported very scarce and dear.

Gum Ammoniacum.—21 cases were bought in, good pale block part loose tears being held for 45s. per cwt. *Ditto* rather dark colour for 27s. 6d., dark seedy for 20s.

Gum Benjamin.—Ordinary seconds *Sumatra* were held for 100s. to 105s. per cwt., lower ditto for 95s., medium ditto for 130s. to 150s. *Palembang* held for 22s. 6d. per cwt. Of *Siam* 1 case fine marbly glassy block sold at £13 5s. per cwt. 10 cases small bright, pea size, slightly blocky, sold at £8 15s. 39 cases *Penang* offered without reserve sold at from 42s. to 57s. per cwt.

Gum Kino.—8 tins genuine were taken out at the somewhat fancy price of 12s. 6d. per lb.

GUM ARABIC.—10 cases *Karachi* held for 52s. 6d. per cwt.; 25 bags *Persian* for 25s.; 6 bales good sorts for 80s. per cwt.

GUM MYRRH—Fair sorts bought in at 55s. per cwt., good pale *ditto* at 65s.

HONEY.—21 cases *Chilian* bought in at 27s. per cwt. 43 cases *Honolulu* sold at 20s., which was cheap. Medium *Jamaica* held for 22s. to 25s. per cwt., part selling at 19s. 6d. to 20s., and 9 casks without reserve at 19s. per cwt.

IGNATIUS BEANS.—18 bags good sound fairly bold bought in at 3d. per lb.

IPECACUANHA.—Of the 29 bales *Rio* offered only 1 bale sold at 9s. per lb., the rest being bought in at that price. Of *Carthagena* 15 bags very woody sold at 4s. to 4s. 2d. per lb., the better qualities being held for 5s. per lb.

JABORANDI LEAVES.—10 bales fair green held for 6d. per lb.

KAMALA.—Fair bright was held for 10d. to 1s. per lb., while for 1 case dull and dusty 5d. per lb. would probably have been accepted.

KOLA NUTS.—10 bags washed, *African* sold cheaply at 2½d. per lb.

LIQUORICE JUICE.—2 cases fair quality in small sticks were bought in at 60s. per cwt.

LIQUORICE ROOT.—5 bales very rough decorticated. *Russian* bought in at 45s. per cwt.

MUSK.—12 caddies *Tonquin* were bought in at 55s. per tin, old fashioned ditto selling at 57s. 6d. per oz.

NUX VOMICA.—10 bags fair bright *Bombay* sold at 7s. 3d. per cwt.

OILS (ESSENTIAL).—5 bottles, each about 24 ozs. net, *Seville Orange* sold at 6s. 4d. per lb. Good *Cinnamon* bark oil was held for 4s. 6d. per oz., 2 cases *Cinnamon* leaf for 1s. 4d. per oz. 30 cases fair commercial *Eucalyptus* oil for 1s. per lb. 1 case West Indian distilled *Lime* oil sold at 3s. 9d. per oz. 3 casks *Aniseed* oil bought in at 6s. per lb. *Lemon-grass*: 35 cases were sold without reserve at 3d. to 3¼d. per oz., only one lot at latter price, which marks a decline in value.

ORANGE PEEL.—8 cases new thin cut part sold at 7d. per lb., slightly lower quality fetching 6d., which was cheap.

ORRIS ROOT.—Nothing sold. *Verona* being held for 26s. per cwt., and *Florentine* for 38s. to 43s. per cwt. according to quanlity.

QUINCE SEED.—2 bags of fair quality sold at 1s. 6d. per lb., a rather full price, the article appearing to be rather scarce.

RHUBARB—Was in large supply, part of new crop which is said to have come on the market earlier than usual. Demand, however, was exceedingly dull and only by giving way in values could sales be made. *Canton*: Fine bold flat realised the good price of 1s. 8d. per lb., but the second size fell off to 1s. 3d. per lb., whilst good small, part trimming, root sold at 1s. 1d. per lb. Rough pickings sold at 11d. per lb. *Shensi*: Good bold round pale coated greyish fracture sold at 2s. 6d. per lb., rough ditto at 1s. 4d. per lb. Very common rough horny high dried sold at 5¾d. to 6d. per lb.

SARSAPARILLA.—28 bales good fibrous *Jamaica* sold at 1s. 7d. to 1s. 8d. per lb.

SCAMMONY ROOT.—50 bags of fair quality held for 27s. 6d. per cwt.

SENNA.—*Tinnevelly* was offered to the extent of 260 bales, the bulk being in first hands consisting of small spotty leaves, these sold at slightly easier rates at from 1¾d. to 2¼d. per lb. Better qualities from second hands sold in part at 6¾d. per lb. for fair bold green leaves. *Alexandrian*: 2 cases good leaf sold at 6½d. per lb. subject to apprval.

STROPHANTHUS SEED,—4 bags *Kombé*, somewhat brown in colour, were held for 2s. 6d. per lb.

SOY.—20 casks *China* bought in at 1s. 5d. per gallon.

TAMARINDS.—Good *West Indian* sold at 14s. per cwt., fair *ditto* being bought in at 10s.

TONQUIN BEANS.—Good frosted *Angostura* sold at 6s. per lb., showing lower value; good frosted *Para* were held for 2s. per lb.

VERMILION.—4 cases fair *China* bought in at 2s. 2d. per lb.

WAX.—Medium *Zanzibar* held for £6 5s. to £6 7s. 6d. per cwt., part selling £5 15s. to £5 17s. 6d.; fair *East Indian* for £6 5s. to £6 10s.; 4 bags *Morocco* for £6 15s.; good *Jamaica* sold at £7 2s. 6d. to £7 7s. 6d.; 3 cases good *Australian* realised £7 5s. per cwt., which was quite a full price; 7 casks *Mogador* brought in at 90s.; fair *Madagascar* sold at £6 10s. to £6 12s. 6d. per cwt.

NEWCASTLE CHEMICAL REPORT.

The market for heavy goods is little changed in position. Shipments to Baltic and Mediterranean ports continue on a fair scale, but scarcely up to an average. Prices are:—Bleaching Powder, according to market, £6 5s. to £6 10s., Soda Crystals: basis, 45s. to 52s. 6d. Caustic Soda: 70 per cent., basis, £7 5s. to £7 10s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

MANCHESTER CHEMICAL REPORT.

The Board of Trade Returns are again of a most unsatisfactory character, the exports to the United States having still, so far as Alkali is concerned, almost reached vanishing point. Alkali shows a decrease of 35·9 per cent. in quantity and 32·2 in value, and Bleaching Powder 0·5 in quantity and 17·2 in value, while chemicals and chemical preparations show 10·2 of a decrease. In this market there has been little or no movement, owing to the holidays, but the tone is not by any means active. Caustic Soda for highest strength is quoted from £8 2s. 6d. to £8 7s. 6d. for home consumption, and Bleaching Powder varies from £5 2s. 6d. to £5 7s. 6d. per ton, soft-wood casks on rails. The better aspect of Naphthas and Benzols is well maintained.

LIVERPOOL REPORT.

AMMONIA SALTS.—Carbonate 3d. per lb. *Sal ammoniac* 33s. to 35s. per cwt. *Sulphate* easier in tone, £9 7s. 6d. per cwt.

BEESWAX.—8 packages of Sierra Leone wax found buyers at £6 10s. per cwt.

BLEACHING POWDER—Is dull at £5 10s. to £6 per ton.

COPPER SULPHATE—Still quoted at £16 to £16 2s. 6d. per ton, and quiet at that.

OILS (FIXED) AND SPIRITS.—*Castor* is selling steadily. Castor "good seconds" is quoted at 3¼d. to 3⅝d. per lb., and French 1st pressure at 3¼d. per lb. *Olive* of Spanish origin is easier in price, and may now be had at £29 to £30 per tun, ex-quay. *Linseed* of Liverpool pressure is on the advance, and is priced at 18s. 3d. to 18s. 9d. per cwt. *Cottonseed* has dropped a shade, being quoted now at 16s. 9d. to 17s. 3d. per cwt. *Spirits of Turpentine* has experienced a rapid fall in price, and is now selling in small amount at 25s. 6d. per cwt.

POTASH SALTS.—*Bichromate*: 3¾d. per lb. *Bicarbonate*: 39s. per cwt. *Chlorate*: 3¼d. to 3½d. per lb. *Pearlash* is very slow of sale at 35s. per cwt. *Potashes* are in moderate demand at 20s. 3d. per cwt. *Prussiate*: 6¼d. to 7d. per lb. *Saltpetre*: 21s. 6d. per cwt. *Tartar*: Fine cream is somewhat irregular, and is selling at 70s. to 77s. per cwt., according to assay.

SODA SALTS.—*Bicarbonate*: £6 15s. to £7 per ton. *Borax*: £13 per ton. *Caustic*: 76 per cent. and 77 per cent., £8 5s.; 70 per cent., £7 5s. *Crystals*: £3 per ton. *Nitrate* is in moderate demand at the steady rate of 7s. 6d. to 7s. 9d. per cwt.

EXCHANGE.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Overstocked.—Superfine Oil of Lemon, fine quality, 2×10 lb. coppers, 22s. 6d. each; sample pound free anywhere 2s. 9d. Willcox's No. 2 Gun Metal Pump, 25s.—Moss, 34, Avondale Road, Chorley.

New India-rubber Mat, 30 ins. by 24 ins.; cost 27s.; for best offer over 12s. 6d., cash; quantity glass measures, all sizes, about half list prices.—Chemist, 88, East Street, Walworth, S.E.

New ½-plate Camera, best polished mahogany, double-extension leather bellows, reversing back, with 3 double-dark slides, rapid rectilinear lens with Iris diaphragm, 4-fold tripod, complete 50s., a gigantic bargain.—Vincent, 460, Holloway Road, London.

Oil Peppermint Opt., 8 ozs.; oil rosemary, 8 ozs.; acid citric crystals, 7 lbs., 2-40 ozs., graduated glass measures, quart infusion pot (white), 6 pairs near-sight spectacles, 10s. the lot.—Medicus, 88, Sussex Road, Holloway.

'Pharmaceutical Journals' for sale, 1841-89, uniformly bound in half calf, and in first-rate condition. 1st series, 1841-59, 18 vols.; 2nd series, 1859-70, 11 vols.; 3rd series, 1870-89, 19 vols., and Index for 15 vols., 1841-55; Index for 12 vols., 1856-68; Index for 10 vols., 1868-78. **'Year Book of Pharmacy,'** 28 vols., in original cloth, 1864-96 (1864-9 bound in one volume), also General Index, 1864-85. No reasonable offer refused.—Lincoln, 'Pharm. Journal" Office, 5, Serle Street, W.C.

Books.

Proctor's 'Pharmacy,' Kanthack's 'Bacteriology,' B.P. (1885), Southall's E Collection, Official Materia Medica Collection, Osteology. What offers? Morris, Winchmore Hill, N.

Watts' Dictionary of Chemistry.—First edition, 5 vols.; quite new, £3 10s. or offers. 'Vibrating Motion and Sound,' Everitt, 3s. 'Demonstrations in Anatomy,' Ellis, 5s.—Dispenser, 128, Victoria Street, S.W.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Mahogany Cupboard, 5 ft. 3 in. wide and about 4 ft. 6 in. high, sliding doors preferred, for behind a counter.—Brisley, Bexhill, Sussex.

PHARMACY IN AUSTRALIA.

[*From our Melbourne Correspondent.*]

In his presidential address at the forty-first annual meeting of the Pharmaceutical Society of Australasia, held on March 24, Mr. Wm. Witt, one of the few surviving founders of the Society, felt justified in referring with some complacency to the great progress which had been made by it, more especially during the past twenty years. A very effective illustration of this is afforded by the College of Pharmacy, which is regarded with considerable pride not only by pharmacists but by Victorians generally. Built and arranged specially for the educational objects in view, it is fitted up with every requisite modern appliance, and affords accommodation not only for our pharmaceutical students, but also for those of the Medical School of the Melbourne University in connection with their practical pharmacy course, and for those connected with the recently established Australian College of Dentistry. It also affords very valuable facilities to students desirous of acquiring a knowledge of chemistry in its applications to manufactures, toxicology, brewing, analysis, or original research. The teaching staff is composed of men well known for their high attainments, some of whose names will no doubt meet with ready recognition from your readers, viz.:—Lecturer on Materia Medica, Mr. Sidney Plowman, F.R.C.S., F.I.C.; Lecturer on Botany, Mr. D. McAlpine; Lecturer on Chemistry and Practical Chemistry, and director of the Chemical Laboratory, Mr. W. A. Craig, M.A.; Lecturer on Practical Pharmacy to medical students of the Melbourne University, Mr. F. Hobill Cole, M.B., Ch.M. During the past year the income of the College from students' fee amounted to no less than £937 6*s.*, made up as follows:—Pharmaceutical, £532 7*s.*; Medical, £225 5*s.*; Dental, £42; Examination fees, £137 11*s.*; from all of which it will be seen how important a part the institution fills, and is likely to fill, in the educational economy of the colony. The past session, I may add, was rendered somewhat unique by the attendance of a lady student, Miss Wollen, who proved the capabilities of her sex by winning prizes in materia medica and botany at the terminal examination, and the gold medal in chemistry, materia medica, and botany, at the honour examination, thus securing the enviable position of Dux of the College.

A further proof of the generally satisfactory social and financial position of Victorian pharmacists is afforded by the fact that during the past year not a single application was made for assistance through the Benevolent Fund, which now shows a balance in hand of £408. It is to be regretted, however, that here, as in the old country, a considerable number of pharmacists remain outside the Society's ranks, while most of the practical work is thrown upon the shoulders of a comparatively small number of enthusiastic members. It is to be hoped that the position in which we now find ourselves through the reading of Section 14 of the Poisons Act, 1890, adopted by the Full Court in the "Pink Pills" case, which practically renders the Act inoperative, will serve to rally the craft to the Council's assistance in carrying an amended Act through Parliament. I presume that you have already noted the particulars and bearings of the very important case from your exchanges, but otherwise the text of the judgment delivered by Mr. Justice Williams, copy of which I annex, affords an admirable summary of the various points involved.

During the past year several special meetings of pharmacists were held in Melbourne to consider the "cutting" and other trade questions, and an effort was made to form a company to purchase special lines in large quantities and distribute to members according to their respective requirements, thus securing their supplies at lowest possible rates, and enabling them to defeat the tactics of unqualified competitors. The scheme, however, failed to secure adequate support, and fell through; but I believe that the principlo is acted upon on a smaller scale by a few friendly pharmacists here and there, who arrange among themselves for conjoint purchases, no doubt greatly to their mutual advantage.

In New South Wales the past year has been notable for the passing of a Pharmacy Bill, which, although admittedly not an ideal one, is at least a considerable step in the right direction. The Pharmaceutical Society of New South Wales, which has now been in existence for twenty-two years, has at length secured registration under the Companies Act, "with limited liability without the addition of the word limited to its name," and has entered on a career of growing importance and influence. In his address at the annual meeting on March 15, the President, Mr. L. P. Williams, referred in somewhat envious terms to the generous support afforded to the Melbourne College of Pharmacy by the Victorian Government—£1000 per annum originally, although now reduced by stress of hard times to £500—in comparison with the niggardly treatment they had received from the Government of New South Wales, the Premier of which had even refused to concedo them the use of a certain building considered suitable for the purposes of a college. New South Wales pharmacists are naturally anxious that in the matter of education the rising generation should stand on an equal footing with their neighbours, but the puzzle is how this is to be done unless the Government comes to the rescue. Meanwhile the Pharmacy Board has been kept hard at work dealing with applioations for registration under the new Act. Some of the applications made have been based on very amusing grounds, coming from wives, sisters, daughters, and other relatives of pharmacists who have lent an occasional hand at dispensing. Already somewhere about 600 applicants have been granted registration, and it is estimated that there still remains somewhere about 100 eligible persons to be dealt with.

In South Australia the recently passed Indecent Advertisements Act has found its first victim in the person of a chemist, Mr. A. L. Fry, of Bordertown, who was prosecuted in connection with a handbill advertisement of soluble pessaries, and fined £1 and costs. As an outcome of this case, the Council of the Pharmaceutical Society waited upon the Chief Secretary in order to ascertain the position of chemists selling many of the ordinary patents, the handbills of which might happen to contain some word or words infringing the Act, and were promised that definite information should be supplied on the subject by the Crown Solicitor. I may add that a somewhat similar Bill was introduced into the Victorian Legislature in December last, under the united auspices of the Australian Natives' Association and the Pharmaceutical Society, but had to be abandoned on account of pressure of public business. There is a growing feeling that the publication on our news-sheets or otherwise of advertisements relating to sexual complaints or to drugs openly recommended for purposes of abortion is a scandal to a civilised community, and must sooner or later be rendered illegal.

We have hitherto been remarkably free from fatalities arising out of dispensers' blunders, but a very sad mistake was recently made at Clifton Hill, a suburb of Melbourne, by a young pharmacist named J. W. Christopher, resulting in the death of Dr. S. I. Williams, a well-known medical man, and the almost fatal poisoning of one of his patients, a Mrs. Henry Turner. Dr. Williams was personally in the habit of using hypodermic injections of morphine, and apparently found it advisable to administer them to Mrs. Turner. Calling at Christopher's pharmacy for a supply of the drug, what transpired was thus related at the inquest by Mr. Christopher, sen. "When Dr. Williams called his son was in the shop. He came to the rear of the premises and asked where the sulphate of morphine was. Witness went to the shop and gave his son a box containing 9 or 10 bottles of alkaloid from the poison chest. Witness saw him take up a bottle on which he could only see the word 'sulph.,' and assumed that it was morphine. About half-an-hour later witness saw on the counter an empty bottle with the words 'Sulphate of atropine' on it. He saw that a mistake had been made and telephoned to Dr. Williams." But, alas, the drug had already been used with the results mentioned. Dr. Williams succumbing to the effects of the poison on the following day. The cononer's jury found a verdict of manslaughter against Christopher, who was then committed for trial at the Criminal sessions.

Mr. Ll. P. Williams, the president of the Pharmaceutical Society of New South Wales, is spoken of as a probable candidate for parliamentary honours at the next elections. He has all pharmacists' best wishes for his success.

At Melbourne, on March 29, John Nicholl, herbalist, and W. Moreno, masseur, were sentenced, the former to two years' hard labour and the latter to eighteen months, on a charge of administering noxious drugs for an illegal purpose. In a letter to Mr. Shillinglaw, the Victorian Registrar, the Chief Commissioner of Police tendered the thanks of the Department for the valuable aid afforded by him in the case.

BURGLARS effected an entrance, on April 8, to Messrs. Felton, Grimwade and Co.'s factory in Jeffcott Street, West Melbourne, and succeeded in removing a safe containing 250 ounces of refined silver, £8 in gold, some silver coins and a cheque.

IN A PAPER read at the recent annual meeting of the New Zealand Branch of the British Medical Association, the President, Dr. Fell, stated that cancer now causes 380 deaths annually in New Zealand alone, and is steadily increasing.

MR. R. AICKIN, son of the President of the New Zealand Pharmacy Board, has proceeded to Edinburgh to study for the medical profession.

AT THE last annual meeting of the Pharmaceutical Society of Australasia, a bye-law was adopted providing that any member who for a period of twenty-five years has been a continuous subscribing member of the Society, shall, upon application in writing to the Council, be entitled to have his name placed on an honorary retiring member's list, and shall be exempt from the payment of further subscription.

THE CHEMISTS' EXHIBITION, 1898.

The number of exhibits at the Agricultural Hall, Islington, this week was slightly in advance of last year, and several new features were introduced on this occasion, perhaps the most attractive being a museum of antiquities, curiosities, and other objects of interest organised and skilfully arranged by Mr. A. C. Merrin. Space will not permit of a description of the whole contents of the museum, but to give a general idea of its character and scope we quote from the catalogue descriptions of a few articles lent by one contributor, Mr. William Martindale, of 10, New Cavendish Street, W. :—"Sample of mandrake root from Damascus in form of human body," "Series of six old apothecaries' vases—Delft, Italian, and others," "Silver Egyptian inkstand with pen-case attached," "Three fools' jugs," "Mummy cloth used for embalming," "Egyptian scarabs, and four representative figures, Egyptian, buried with the deceased," "'The Golfers,' two bronzes by F. Taubman," "Autographs of celebrities (Pasteur, Huxley, Darwin, and Lister)," "Old Pewter Pot, found buried in a hole in the wall in Newman Street, W., bearing mark of 'Buffalo's Head'—the sign of a celebrated inn of the last century in Oxford Street, W., then called Oxford Road," "Series of the editions of the 'Extra Pharmacopœia,'" including an advance copy of the new ninth edition about to be published. The museum was an interesting addition to the exhibition, and those who paid their twopence for admission did not afterwards regret it, especially as the proceeds are to be devoted to the Benevolent Fund of the Pharmaceutical Society.

Messrs. **F. Darton & Co.**, opticians, 142, St. John Street, Clerkenwell, E.C., had on view a number of very compact and remarkably cheap small electric motors and batteries, a registering pocket counter, calculator, and a new cylindro-spherometer for measuring or testing lenses.—Messrs. **Maw, Son & Thompson**, 7-12, Aldersgate Street, E.C., had a general assortment of druggists' sundries, surgeon's instruments, and appliances, and exhibited for the first time a sideless belt and a feather-weight truss (3 oz.), said to be lighter than any other truss on the market. A special feature of their exhibit was the brass and glass cases for use in hospitals, and quite a new thing was the stethonoscope, a new instrument for ausculation. It is constructed on the same principle as the microphone, and can be attached to any ordinary binaural stethoscope, and when not in use can be carried in the waistcoat pocket.—**Aerators, Ltd.**, Broad Street Avenue, E.C., exhibited sparklets for the direct and instantaneous aëration by the user of water, milk, still wines, etc.—Messrs. **Allen & Hanburys, Ltd.**, Plough Court, Lombard Street, E.C., had a fine exhibit of the usual pharmaceutical preparations, the principal attraction being a series of put-up goods which chemists can adopt as their own specialties, comprising malt extracts, emulsions, etc.—Messrs. **Barclay & Sons, Ltd.**, 95, Farringdon Street, E.C., exhibited their new pressure filter and percolator, sets of metric weights and measures, hand and stand cameras, lenses and photographic apparatus generally.—Messrs. **Brand & Co., Ltd.**, Mayfair, and Vauxhall, S.W., had an exhibit of their specialties for invalids, and entrées of all descriptions.—One stand devoted to perfumery, toilet soaps, etc., got up in superior style, that of Messrs. **T. F. Bristow & Co.**, St. James's Walk, E.C., was especially attractive.—All kinds of "Tabloids and Soloids," known throughout the world as the products of Messrs. **Burroughs, Wellcome & Co.**, Snow Hill Buildings, E.C., were in evidence at Stand C in the central avenue, "Enile" rectal suppositories were also shown, and prominence was given to "Tabloid" photographic chemicals.

"**Camwal**" Gifford Street, Caledonian Road, N., had three stands, where their numerous aërated waters, ginger beer in stone bottles, and fruit essences were displayed. An enormous syphon was shown, measuring 23 ft. by 8 ft., and weighing a little over a ton.—The stand of Messrs. **Evans, Gadd & Co.**, Fore Street, Exeter, was devoted largely to the new and altered preparations of the 1898 Pharmacopœia, including all the standardised galenicals; copies of Wippell Gadd's Synopsis of the B.P., 1898, were also shown. "Ambrosia," put up in enlarged sizes, Food Preservative, a fine, white, granular preparation, Victoria Violet Soap, perfumery, etc.—Messrs. **Evans, Sons & Co.**, Liverpool, in addition to a model pharmacy, exhibited Savar's druggists' sundries and "Montserrat" lime fruit juice and its preparations.—Messrs. **Ford, Shapland & Co.**, 6, Great Turnstile, High Holborn, W.C., exhibited labels of all descriptions, circulars, prescription books, and all kinds of chemists' stationery, got up in the best styles.—**The Fromms Extract Co., Ltd.**, 5, White Street (Moorfields), E.C., had a fine stand of food specialties in the form of vegetable extracts and soup tablets.—Messrs. **Harrington Bros.**, Oliver's Yard, 53A, City Road, E.C., had a collection of chemicals used in photography and for scientific purposes, also hyposulphite of soda put up in 1 lb. packets, ready for retail.—Messrs. **Hearon, Squire, & Francis**, 38, Southwark Street, S.E., had a large display of select pharmaceutical preparations (B.P. 1898), rare and commercial specimens of drugs and fine chemicals, granular effervescent preparations, essences, perfumes, etc.—Leeds was represented by Messrs. **Hirst, Brook & Hirst., Ltd.**, who exhibited a choice selection of drugs, chemicals, pharmaceutical preparations, medicated wines, perfumes, chemists' specialties, etc.—**Holloway's Wine Co., Ltd.**, 61, New Oxford Street, W.C., in addition to a decorated stand of medicated wines, had a tastefully set out window display.—The stands of Messrs. **Idris & Co., Ltd.**, Pratt Street, Camden Town, N.W., exhibiting their table waters, fruit essences, meat delicacies, etc., were about as attractive as any in the Hall, and were well patronised.—Messrs. **Ingram & Royle, Ltd.**, 26, Upper Thames Street, E.C., had a very pretty exhibit of natural mineral waters, salts, and pastilles.

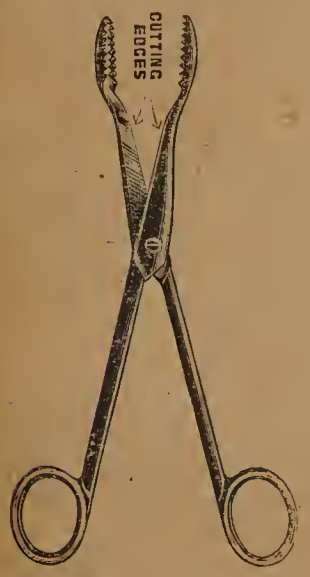
Messrs. **Johnson & Sons, Ltd.**, 23, Cross Street, Finsbury, E.C., exhibited their preparations of gold, silver, and platinum.—Messrs. **W. Kemp & Son**, Horncastle, had a complete exhibit of the new and altered preparations of the Pharmacopœia, 1898, in addition to their numerous laboratory preparations and packed goods, available for chemists' adoption as own specialties.—**Liebig's Extract of Meat Co., Ltd.**, 9, Fenchurch Avenue, E.C., showed their well-known preparations.—Photographic chemicals, developers, accessories, hand cameras, etc., were the principal items exhibited by Mr. **J. E. Lockyer**, 87, Evelyn Street, Deptford, S.E.—**Matto, Ltd.**, 32 and 34, Clerkenwell Road, E.C., displayed the "Matto Chain" for massage at home.—Messrs. **S. Myer & Co.**, 2, New North Road, City Road, N., had a cheap series of perfumes put up in an entirely new style, viz., single fancy boxes, floral cups, and a 6*d.* line, three in box. They also exhibited Cooper's liquors, L. Vigis's Fuller's earth, etc.—**Henri Nestlé**, 48, Cannon Street, E.C., was in evidence with the noted Nestlé's Swiss milk, a specialty being an unsweetened condensed milk.—Messrs. **Newball & Mason**, Nottingham, attracted many visitors with their dried herbs, extracts, and wine and coffee essences.—Messrs. **F. Newbery & Sons**, 1 and 3, King Edward Street, E.C., made a good show with their St. Paul's perfumes, soaps, etc., and also had an exhibit of their agency preparations, those of Messrs. W. R. Warner & Co., Philadelphia, being especially noticeable.—"Izal" preparations formed the principal exhibit of Messrs. **Newton, Chambers & Co.**, Thorncliffe, Sheffield.—Messrs. **Parke, Davis & Co.**, 21, North Audley Street, W., kept up their reputation as exhibitors of the first rank with their numerous pharmaceutical preparations and chemists' specialties.—A new and very pleasing exhibit was that of **Peacock's Ovaline Soap Co., Ltd.**, 203, High Holborn W.C., whose specialties are claimed to contain a large percentage of yolk of egg, a natural emollient for the skin.—Messrs. **Potter & Clarke**, 62 and 64, Artillery Lane, E.C., in addition to a large assortment

of packed goods, including many special lines, exhibited a complete set from A to Z of the new B.P. preparations.

The **Sanitas Co., Ltd.**, Bethnal Green, E., had a fine collection of their disinfecting fluids, soaps, powders, etc. — **Andreas Saxlehner**, Budapest, and Trafalgar Buildings, Charing Cross, W.C., exhibited the well-known "Hunyadi Janos" natural aperient waters.—The latest and every style of chemist's labels and general stationery was in evidence at the stall of **H. Silverlock**, 92, Blackfriars Road, S.E.—Birmingham was well represented by Messrs. **Southall Bros. & Barclay**, whose specialties and preparations are so universally known as to need no mention here.—The proprietors of Hall's wine, Messrs. **Stephen Smith & Co.**, Malmesbury Road, Bow, E., made a very neat and pretty exhibit of their medicated wines and wines for pharmaceutical purposes.—The Leicester firm of **A. de St. Dalmas & Co.**, exhibited their noted bandages, plasters, and sick-room requisites.—Messrs. **James Townsend & Son**, medical label printers, 2 and 3, Stonecutter Street, E.C., had a representative exhibit of the usual chemists' specialties in printing, making a special feature of bottle cartons.—**The Valentine Extract Co., Ltd.**, St. George's House, Eastcheap, E.C., exhibited their food preparations, as did also **Vimbos, Limited**, 130, Queen Victoria Street, E.C.; the Vimbos lozenges and fluid beef being largely patronised by visitors.—**The Vinolia Co., Ltd.**, Malden Crescent, N.W., had one of the finest exhibits in the Hall, their latest additions to the Vinolia toilet requisites are toilet vinegar and toilet water, while a very pretty line in perfumes is now put up in fancy Japanese caskets of 1, 2, and 3 bottles; Vinolia shaving cream for use without brush and water is one of their latest ideas.—Mr. **S. B. White**, chemist, Leicester, exhibited specimens of his medicated wines and sulphur tablets.—Messrs. **Wyleys, Limited**, Coventry, had a large display of pharmaceutical preparations, packed specialties, floral "Tropels," ophthalmic ointment, tubes, etc.

Trade Notes.

Messrs. Reynolds & Branson, Leeds, are manufacturing a new form of "scissors forceps," devised by Mr. H. de Paiva Veale, late House Surgeon, Leeds General Infirmary. As will be seen from the accompanying woodcut, the instrument combines in one the functions of surgical scissors and dressing forceps, whilst it may also be used as an emergency "clip" and sinus dilator. The blades of a medium-sized pair of dressing forceps (Spencer Wells' pattern) have been made broader and furnished with scissor edges between the terminals and the axis. At the same time a rib has been left on the unsharpened edges, which renders the instrument useable as a small sinus dilator. It can be obtained with or without detachable blades, is easily cleaned and sterilised, and is a convenient size for the pocket, being exactly 5 inches in length. The fact that the number of instruments on a chatelaine may now be reduced will recommend it to nurses, and house-surgeons and dressers will recognise the advantage of using a single instrument that can replace, without inconvenience, the necessity for carrying two.



Messrs. F. Newbery & Sons, 1 and 3, King Edward Street, Newgate Street, E.C., send a copy of their eighteenth annual catalogue. The entire list has been set in new type and in other ways improved, and it is as complete and correct a repertory of the goods it enumerates as any similar compilation extant. It forms a reliable and comprehensive price-book of druggists' sundries, proprietary medicines, perfumes, etc., and in addition gives legal information concerning the medical and poisons laws, lists of wines for the sale of which an Excise licence is required and of those not so affected, fixed selling prices established by proprietors, and regulations as to the free carriage of certain goods when sent direct. Altogether it is a most useful and convenient work for reference.

Messrs. R. and J. Beck, Ltd., 68, Cornhill, E.C., send a copy of their illustrated catalogue of microscopes, object glasses, and accessory apparatus. The microscopes specified in the catalogue are suitable for work in botany, chemistry, bacteriology, zoology, physiology, pathology, biology, etc. Included are also lists of staining solutions and mounting fluids, microtomes, object cabinets, etc. Copies will be sent free on application.

Messrs. Taylor, Taylor, & Hobson, Leicester, are planning a new factory which they hope to occupy before the end of this year. To meet their growing business, ground has been secured for a factory four times the size of their present works, and the portion to be built will have capacity for four hundred yards of benching and machinery. It will comprise glass-working, metal-working, and machine shops and stores; together with cloak-room and lavatories for the workpeople, and stores for cycles. The office building, separated from the factory by a fireproof staircase and elevator, will contain private offices, counting-house, drawing-office, experimental-room, testing-room, photographic studio, and stock-room. The buildings will be lighted electrically, and warmed and ventilated by a special plant in the basement, which will blow fresh air through flues to the various rooms, freeing it from dust, moistening it when too dry, automatically warming it to 60° Fahrenheit, and finally discharging through special turrets above the buildings. There will be in the factory a service of gas for heating, compressed air for blowing and cooling, and electricity for motors and other purposes. Power will be supplied by a 35 horse power gas motor.

Messrs. Lorimer and Moyes, Glasgow, the oldest druggists' sundriesmen in Scotland, announce that they have sold their business to Mr. William Dykes, on whose behalf they solicit the continuance of the support so cordially extended to them, and Mr. William Dykes intimates that all business transacted will be under his direct personal supervision. The entire stock has been carefully examined, and some necessary alterations in prices effected. Novelties have been added to stock and arrangements made to manufacture various articles on the premises. The firm will in future be represented in Ireland.

Ferru-Cocoa, as may be gathered from its name, is a preparation of cocoa in which iron constitutes one of the ingredients. It is stated to contain 0·3 per cent. of iron in the form of an organic compound, together with kola in such proportion that the amount of caffeine present corresponds to what is usually found in coffee, and a small proportion of malt. The preparation is highly spoken of as a food beverage, and the presence of iron in a readily assimilable form is doubtless advantageous.

Partnerships Dissolved.

(From the London Gazette)

H. B. Gill and Irwin B. Street, Dental Surgeons, Chester Villa, Belvedere Road, Upper Norwood, and 53, Harley Street, W. Debts will be received and paid by H. B. Gill.

H. Stiles and J. C. Coath, Aërated Water Manufacturers, North Street, Bridgend, Glam. Debts will be received and paid by H. Stiles.

Robert D. Gibbs, John Cuxson, and A. W. Gerrard (trading as Gibbs, Cuxson and Co.), Manufacturers of Surgical Dressings and Appliances and Druggists' Sundriesmen, Fountain Lane, Oldbury, Worcester, so far as concerns Robert D. Gibbs. Debts will be received and paid by the remaining partners, who will continue the business under the style of Cuxson, Gerrard and Co.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

John Day, Chemist, 9, Chapeltown Road, Leeds.

Thomas R. McPhail (carrying on business as T. R. McPhail and Co.), Chemical Broker, City Buildings, Old Hall Street, Liverpool.

News in Brief.

PHARMACY ACT CASE.—At Lambeth County Court, on Thursday, June 16, before His Honour, Judge Emden, John Langford, an unqualified assistant at 30, Lucas Road, Kennington, was sued for a penalty of £5 for selling laudanum. Judgment was given for the full penalty and costs.

CRICKET.—Metropolitan College of Pharmacy C.C. and South London School of Pharmacy C.C.: This game was played at Nunhead on Saturday last, and resulted in an easy win for the former by an innings and 7 runs. The following were the scores: M.C.P. 76 and South London 16 and 53.——A match was played on Thursday, June 9, between the Northern College of Pharmacy and the Manchester College of Pharmacy, resulting in a decisive victory for the Northerns, who won by 6 wickets (twelve aside) and 29 runs, there being two innings.——"Davy, Hills" C.C. *v.* "Allenburys'" C.C.: This match, played at Wadham Lodge, Walthamstow, on Saturday, June 11, resulted in a draw. "Davy, Hills" scoring 143 runs and "Allenburys" 62 for four wickets. The return match will be played at Brockley on September 10.

THE ASSISTANTS AND EMPLOYÉS of Messrs. Raimes & Co., wholesale druggists, York, held their annual "Stock-taking" excursion and dinner, provided by the firm, on Saturday last, in perfect weather. The party, which included the two partners, Messrs. Samuel Scruton and W. C. Berks, after being photographed on the premises, left Micklegate House in char-a-bancs for Buttercrambe Woods and Stamford Bridge, returning at 6.30 to an excellent dinner at the White Swan Hotel, York. After dinner a smoking concert was held under the presidency of Mr. Scruton, at which the greatest conviviality and good humour prevailed. A lengthy programme was carried through in first-class style, some of the songs being most artistically rendered. The toasts of "The Queen," "The Firm," and "The Employés" were duly honoured, and a most enjoyable afternoon and evening was closed by the singing of "God Save the Queen" and "Auld Lang Syne."

UNQUALIFIED ASSISTANTS AND DISPENSING.—At the weekly meeting of the Exeter Corporation of the Poor on Tuesday afternoon last the Clerk, Mr. A. Foote, reported that he had received two applications for the post of dispenser of the Union, rendered vacant by the death of Mr. W. H. Bulley, who had held the office for over twenty years. The applicants were Mr. Lemmon and Mr. Wynne Tighe, both in business in Exeter, and both had sent in their qualifications.—Before the Board proceeded with the appointment, Mr. F. G. Hodson commented adversely on the Board's present system of dispensing at the workhouse. It was necessary that some alteration should be made in the system. The dispensing and mixing was done by Mr. Forbes, an assistant, but the system had been condemned, and now was the proper time to make any alteration.—The Governor (Mr. H. P. O. Hamlin) remarked that the medical officer was responsible for the dispensing at the House.—Mr. Hodgson replied that the doctor was responsible in one sense of the word, but Mr. Forbes did a great deal of the dispensing.—The Governor pointed out that what Mr. Forbes did was with the doctor's approval.—Mr. W. Easton observed that the Board were there that day to elect a successor to Mr. Bulley; to make any alteration in the dispensing system. Any desirable alteration could be made afterwards.—Mr. Hodson replied that if any alteration was desirable, it should be made at the present time. That was his object in bringing the matter forward.—The Governor remarked that it was a pity the suggestion was not made before a successor to Mr. Bulley was advertised for.—Mr. Hodson stated that Mr. Forbes was not qualified to dispense, and he therefore ought not to dispense at all.—Mr. Easton: There is no one poisoned yet.—Mr. Chorley expressed the opinion that he did not think the doctor would let him dispense unless he was qualified.—Mr. Hodson: He is not qualified unless he holds a certificate from the Pharmaceutical Society.—The matter then dropped, and the Board proceeded to the election of the dispenser.—On a division, Mr. Lemmon received 14 votes and Mr. Wynne Tighe 12, the former being declared elected.—On the motion of Mr. Kelland, it was decided that the newly-appointed dispenser commence his duties at Midsummer.

BOTANY AT EXETER.—At the ninth summer assembly of the members of the National Home Reading Union, to be held in Exeter from July 23 to August 1 (inclusive), Sir George Kekewich, K.C.B., D.C.L., Secretary of the Education Department, will deliver the inaugural address. The programme of the lectures to be delivered includes a series of four by Mr. F. E. Weiss, B.Sc., Professor of Botany at Owens College, Manchester, on "Elementary Botany," with lantern illustrations; whilst Mr. Alan H. Ware, pharmaceutical chemist, in charge of tne pharmacy classes and Lecturer in Botany at the Exeter Technical and University Extension College, will also give four demonstrations in botany. Mr. Clayden, M.A., F.G.S., Principal of the Exeter Technical and University Extension College, is one of the local Hon. Secretaries.

'MEDICAL WORKS OF THE FOURTEENTH CENTURY' is to be the title of a transcript from four manuscripts contemporary with the works of Wiclif and Chaucer, by the Rev. Professor Henslow. The volume will be furnished with introduction and notes by the Rev. Professor W. W. Skeat, and be published shortly by Chapman and Hall. It will contain an alphabetical list of more than seven hundred medical and other plants mentioned in works of the fourteenth century compiled, and identified with their modern English and Latin equivalent names by Professor Henslow. These transcripts will be found to give excellent illustrations of the crude and quaint conceptions of the value of plants and drugs prevailing in the Middle Ages.

FIRE AT A CHEMIST'S.—A fire broke out on Tuesday morning, June 14, in a store-room belonging to Mr. William Lee, chemist and druggist, Castle Street, Northwich. The building was of wood, standing in a garden in the rear of the shop, and contained oils, drysaltery, etc. The store-house and contents, whioh were partially insured, were entirely destroyed.

DEWSBURY AND DISTRICT CHEMISTS' ASSOCIATION.—A meeting of the above Association was held in the Town Hall, Dewsbury, on Monday, June 6, Mr. A. Foster (President) in the chair. It was resolved that the Secretary should write to "Camwal," asking the firm to put its name on all syphons and bottles sent out. It was also resolved to suspend the monthly meetings until September.

Accidental Poisoning Cases.

AN OVERDOSE OF LAUDANUM taken accidentally on Tuesday, June 7, caused the death of Joseph Messenger (57), an inmate of Worcester Union, who was troubled with sleeplessness and had been in the habit of taking laudanum to obtain relief.

SOME PERCHLORIDE OF MERCURY TABLETS were found in a box labelled "poison" on a mantelpiece by Mary Hart (2½), daughter of an engineer at Chelmsford, whose wife was using them medicinally. The child swallowed one of the tablets, and on June 7 succumbed to the effects of the poison.

A BOTTLE OF CARBOLIC ACID stood side by side with one containing medicine. As a result, on June 7, the wife of William Walker (81), of Middlesbrough, picked up the wrong bottle and gave him a dessertspoonful of the poison instead of a dose of the medicine. He died shortly afterwards, and a verdict of "Accidental death" was arrived at in due course.—Another bottle containing liquid ammonia stood on a shelf in a scullery at Newington Butts, and on Tuesday, June 7, as the lady of the house, Mrs. Langridge, was moving the bottle it burst and burnt her face. She was taken to Guy's Hospital, where she died, the cause of death being attributed to bronchitis caused by inhaling the vapour of the ammonia. It was thought that probably the heat of a copper fire caused the ammonia to burst the bottle.

Personal Notes.

Mr. Donald Fowler, chemist and druggist, Tain, Local Secretary of the Pharmaceutical Society, has been unanimously elected Provost of the burgh.

The Ninth Wrangler in the Cambridge Mathematical Tripos is Mr. Stanley de Jersey Lenfestey, third son of Mr. W. Giffard Lenfestey, of The Central Pharmacy, Piccadilly Circus. He was educated at Kelly College, Tavistock, and the City of London School, and entered Peterhouse, of which he is a scholar and prizeman, in October, 1895. Mr. Lenfestey is to be congratulated upon this further proof of the ability of the members of his gifted family.

Mr. G. T. W. Newsholme, Chairman of the Sheffield Board of Guardians, has been unseated, together with two other members for St. Peter's Ward, because of an informality at the election in April last. A gentleman was then nominated as a candidate for St. Peter's Ward without his knowledge or consent, but on hearing that a nomination paper had been lodged on his behalf with the returning officer, he decided to go on with his candidature. When, however, the list of nominations was made public, two days after the time for nomination had closed, he found that his name had been omitted from the list. He therefore petitioned the High Court, Queen's Bench Division, to have the unopposed election of the other three candidates declared void, and on Saturday, June 11, Mr. Justice Lawrance granted the petition. This will necessitate a new election.

DENTAL NOTES.

Arkansas Stone.

This stone can be ground or cut to almost any desired shape with a carborundum wheel run quite dry, but it will grind or cut the carborundum if the wheel is fed with oil.—*Ash's Quarterly Circular.*

Carborundum Wheels.

These wheels can be trued with black diamond if saturated with oil; there is no fear of the diamond being injured if it be good and well set.—*Ash's Quarterly Circular.*

A New Local Anæsthetic.

Dr. Pize has found that by injecting guaiacol under the skin in small doses operations can be performed without pain.—*Dental Practitioner.*

Dead Teeth.

To force medicaments through dead teeth with fistulous openings place a pellet of soft unvulcanised rubber in the tooth cavity; thrust the needle of a hypodermic syringe through the pellet, holding the latter in place. This is cheaper and superior to an abscess syringe.—*Ohio Dental Journal.*

Red Rubber Plates.

Red rubber plates can be lined with black by coating the cast three or four times with black rubber dissolved in chloroform, allowing each coat to harden before the next is put on.

Oxyphosphate.

For some operations it is desirable to have oxyphosphate set more slowly than usual; the least sprinkling of finely powdered borax will do it. If it be desired to set rapidly, use a very small quantity of hydrochloric acid.

Air Chambers.

Drive common tacks into plaster models to make air chambers. Use them for some lower set. Do not leave them on your laboratory stool.—*Dominion Dent. Journal.*

Carbolic Acid and Similar Fluids.

Carbolic acid, etc., can be kept conveniently and safely by filling a wide-mouthed flat-bottomed bottle with cotton wool. Saturate it with any preparation you use, dip in a pellet, and you can get all you want without fear of spilling. If the bottle upsets nothing runs out.—"M. A.," *Dominion Dental Journal.*

PHOTOGRAPHIC NOTES.

Water-tight Preparation for Wooden Dishes.—Common brown resin, half pound; beeswax, two ounces. Melt together in tin pan (preserved meat tin will do); when quite fluid, run solution rapidly all over where required. Wood must be perfectly dry and warm.—*Photogram.*

Pyro-Acetone Developer for X-Ray Work.—For one purpose the pyro-acetone developer seems peculiarly well adapted, and that is for developing Röntgen ray negatives. To get the best possible results I have always preferred pyro-soda, but have generally used metol and hydroquinone, as, owing to the prolonged development necessary, I have found that pyro-soda produced negatives of such an extremely non-actinic character that printing became a very tedious operation. Pyro-acetone, however, produces negatives with all the good qualities of pyro-soda, *i.e.*, utmost detail with great density, yet at the same time rapidly printing negatives. One feature of this developer is that it produces a deposit right through the film, even with the thickly coated X-ray plates manufactured by Messrs. Lumieres, with which alone I have tried it. I generally use the developer as made up by Messrs. Fuerst Bros., diluting the normal developer with an equal quantity of water, and using no bromide. I used to be troubled with frilling, but since adopting acetone I have not had a symptom of it. If any of your readers will give it a trial I feel confident they will be pleased with the results. Only one caution is necessary—develop until the image is quite invisible by transmitted light in the dark room, and shows strongly on the back of the plate. With these plates and this developer I have been able to obtain much more contrast between the bones and flesh in the thickest parts of the body than hitherto.—Wilson Noble in *Amateur Photographer.*

Frequencies of Ether and Air Vibrations (Isenthal).

Complete Vibrations per Second.	Kind of Radiation.
288,224,000,000,000,000	Röntgen rays (Voller).
3,000,000,000,000,000	Photographic limit of ultra-violet light *in vacuo*.
1,053,000,000,000,000	Photographic limit of solar spectrum.
281,475,000,000,000	Photographic limit of infra-red light (Abney).
70,369,000,000,000	Heat rays, lowest part of solar spectrum.
8,590,000,000	Electric oscillation in small spheres (Righi).
32,768	Upper limit of sound.
4,096	Highest note of music.
32	Lowest note of music.

Waterproof Glue for Wooden Dishes.—Soak half-pound of best glue in cold water until quite soft, melt in the glue kettle. When quite dissolved, pour in one ounce of hot saturated solution of bichromate of potash, and stir well. It is now ready for use; apply with brush. Put the article so treated to dry in full daylight for a day or two, and then apply strong alum solution. The vessel is now ready for use, but must be washed first.—*Photogram.*

Colouring Brass.—To colour brass a blue-black steel colour, the articles should be well cleaned and immersed in a boiling solution of chloride of arsenic. If very carefully cleaned, the articles may be coloured azure blue by immersion in a concentrated solution of sulphite of soda. A deep blue-black may be produced by immersion in a solution of carbonate of copper and ammonia, and subsequent exposure to air. But hyposulphite of lead and soda will give many variations of colour. To 100 C.c. of a 10 per cent. solution of hyposulphite of soda 5 to 6 grammes of sugar of lead are added. Dissolve by heat, filter, and heat again to 70° C. When first plunged in this solution, brass assumes a golden colour, and then passes through various shades of orange, vermilion, scarlet, and violet, at last to azure blue. Further action will change the blue to a silver-grey colour. A matt black may be produced by immersing brass in a weak solution of chloride of platinum and nitrate of tin; bronze colour, by immersion in a boiling solution of sulphate of copper and alum. A golden colour may also be given by treatment with 4 parts of caustic soda, 4 parts of milk sugar, and 100 parts of water. In all cases, as soon as the requisite colour is attained, the articles are at once transferred to clean water and rinsed, After drying, they should be coated with celluloid varnish.—*Photographische Chronik.*

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

JUNE 16, 1898.

Business has been quiet during the past week and many complaints have been heard that there was so little doing. Chief event of the week has been a reduction of 2d per oz. in makers' price of Sulphate of Quinine, the result of the lower prices realised at last week's Amsterdam bark sales. Sulphate of Ammonia is weak and lower. Quicksilver and Mercurials, Iodine and Iodides, Bromine and Bromides are without change. Cocaine, Acetanilide, Phenacetin, and Sulphonal steady. Acid Citric not quite so firm a market in consequence of the dull weather causing a check in the demand. Acid Tartaric firm. Cream of Tartar higher. Opium dearer and very firm. Morphia and Codeia unchanged Cod-Liver Oil nominally dearer, with, however, practically nothing doing in the article. Glycerin again the turn harder. Acid Carbolic steady, Acid Boracic dull, and Borax rather lower for crystals. Cascara Sagrada expected to be dearer in consequence of probable shortage in the gathering in America this spring. Ipecacuanha quiet but steady. Rhubarb, a good business doing at lower prices than holders had hitherto been willing to accept. The following are actual prices ruling for articles of chief interest.

ACETANILIDE.—Market is quiet, with sellers from second hand at 1s. 2d. to 1s. 3d. per lb., according to quantity.

ACID ACETIC—Is in fair demand at 40s. per cwt. for the *glacial*, down to 15s. per cwt. for the 30 per cent. strength.

ACID BORACIC—Unchanged at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

ACID CARBOLIC.—Market quiet at 7d. per lb. for best make of 35 to 36° C. *ice crystal* in 2½ cwt. drums and over casks; price of 39 to 40° C. ditto being 7¾d., and 39 to 40° C detached crystals 8¾d. per lb. *Crude* steady at 2s. 1d. per gallon for the 60° F. and 2s. 6d. per gallon for the 75° F. *Liquid* 95 per cent. of pale straw colour is quoted 1s. 3d. to 1s. 4d. per gallon in 40-gallon casks and for quantity.

ACID CITRIC—Is fairly steady at 1s. 1d. per lb. on the spot for English crystals.

ACID LACTIC.—Makers' price for the *concentrated* 1210 quality is 2s. 4d. to 2s. 6d. per lb. for bulk quantities.

ACID OXALIC.—Firm at 3⅝d. to 3¾d. per lb. on the spot.

ACID TARTARIC—Is firm at 1s. 1d. per lb. for English crystals, whilst Foreign can be obtained at 12¾d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* weaker at £9 for grey prompt 24 per cent., London. *Bromide* steady at 2s. 2d. per lb. *Iodide* quiet at 14s. 6d. per lb. *Oxalate*: 6d. per lb. *Sulphocyanide* steady at 1s. 1d. to 1s. 2d. per lb. *Sal ammoniac*: Firsts sublimed 35s. per cwt., seconds 33s. per cwt. *Chloride*: Commercial 98 per cent., free from metals 26s. per cwt., chemically pure 32s. to 33s. per cwt.

ATROPINE—Firm at 17s. per oz. for the *pure*, and 15s. 6d. per oz. for the *sulphate P.B.*

BELLADONNA ROOT.—Somewhat inferior quality is offering at rather easier rates, say down to 36s., *c.i.f.* Good root is, however, scarce, and firmly held at 42s. 6d. per cwt. to arrive and 45s. on the spot, very little being, however, available.

BLEACHING POWDER—Steady at £7 5s. per ton in large bulk.

BORAX.—*Crystals* are a shade lower for large lots at 13s. 6d. per cwt., *powder* being unchanged at 14s. 6d. per cwt.

BROMIDES — Are in good demand at steady prices, say 1s. 10d. for *Potass. Bromide* and 2s. 2d. per lb. for *Ammon.* and *Soda Bromide*, the price of *Bromine* being also unchanged at 1s. 11d. per lb. for 20-case lots.

CAMPHOR—Continues very dull without any important business passing. *Crude* is slightly easier at 80s. per cwt. for China and 87s. 6d. per cwt. for Japan, both *c.i.f.* terms. *Refined* is unchanged.

CANTHARIDES. — *Russian* are firm at 1s. 10d. per lb. on the spot for good sifted.

CASCARA SAGRADA. — There is more inquiry for this article, which is quoted 20s. to 22s 6d. for new bark and 25s. to 26s. per. cwt. for old bark. Bearing in mind that, as is believed, very little has been collected in America this spring, it would appear probable that an important rise in price of the article is more than possible, especially in view of the fact that prices are now still at a very low level compared with that which formerly ruled for the article.

CINNAMON.—4 bales Ceylon sold, first sort 1s., third to fifth, 7d. to 9d. 76 bags Ceylon chips sold, fair 3¾d, with quillings, etc., 7½d to 8¾d. *Mace*: 3 cases Penang sold, ordinary red 1s. 5d. to 1s. 6d., good bold 2s. 36 packages West India sold, low to fair 1s. 3d. to 1s. 6d., good 1s. 9d. to 1s. 10d. *Nutmegs*: Rather dull, at about previous rates. *Pimento*: Flat, only 20 bags sold at 4⅛d. to 4¼d.

CLOVES.—Privately a dull market for *Zanzibar*, and prices lower. Quotations: June to August delivery, 3⅛d.; August to October, 3¾d.; and October to December, $3\frac{25}{32}$d., but practically no business doing. At auction of 97 bales *Zanzibar* 27 bales fair sold at 3¾d., 2 bags dark *Seychelles* sold at 3¼d., and 1 box *Ceylon* at 4⅝d. 40 bags *Amboyna* sold at 4d. to 5d.; 4 cases picked *Penang* bought in at 9d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial, 1s. 5d. per gallon; pure, 3s. *Benzole*: 50 per cent. 1s. 2d. per gallon; 90 per cent., 1s. 1d. *Crude Naphtha*: 30 per cent. at 160° C., 6d. per gallon. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 8d. per gallon; 90 per cent. at 160° C., 1s. 4d. per gallon; 90 per cent. at 190 C., 1s. 3d. per gallon.

COCAINE.—Market is quiet but steady, makers of the brands most in favour holding out for 9s. 6d. to 9s. 9d. per oz, whilst from second-hand it is possible to buy a little below these figures; it is also possible to buy brands less in favour at rather less money.

CODEIA—Is fairly steady at 11s. 3d. to 11s. 6d. per oz. for quantity.

COD LIVER OIL—Is quiet, there being but little doing; best new non-congealing *Norwegian* oil in tin-lined barrels is quoted 82s. 6d. to 85s. per barrel.

CREAM OF TARTAR—Has been rather firmer this week at 71s. to 72s. per cwt. for first white *crystals* on the spot, and *powder* 74s. to 75s. per cwt. High strengths are inquired for and are worth 80s. to 82s. per cwt.

ESERINE (PHYSOSTIGMINE).—Makers' price for the *Sulphate* and *Salicylate* is 3s. per gramme, and 4s. per gramme for the *other salts* and for the *pure*.

GENTIAN ROOT—Is firm at 22s. 6d. to 25s. per cwt., according to quality and quantity.

GINGER.—*Cochin* is flat and again rather lower; 246 bags rough sold, good ordinary dull 21s. 6d.; fair to good 24s. to 25s.; 87 cases cut kinds bought in, A 85s., B 65s., medium limed native part cut 50s. Of limed *Japan* 95 bags sold, without reserve, at 17s. 6d. *Jamaica* easier, only 51 barrels sold, middling to good middling washed at 80s. to 85s. 10 barrels washed rough *Barbadoes* sold at 73s. to 73s. 6d.

GLYCERIN.—The market for *crude* is firm, and the *refined* article continues to harden in sympathy, and the more so in that buyers will probably soon be looking round with a view of laying in their autumn and winter stock. The best *German* white double-distilled, chemically pure, 1260° quality, in tins and cases, is quoted 55s. to 62s. 6d. per cwt., while *English* is obtainable at rather less money.

HYPOPHOSPHITES—In fair demand at steady prices, say 3s. 6d. per lb. for the *Lime*, *Soda*, and *Potash* salts.

INSECT FLOWERS.—Closed flowers are scarce and 140s. per cwt. is asked; open are firm at 45s. per cwt.

IODIDES.—A good business is doing at unaltered prices, viz., 9s. 9d. to 10s. 3d. per lb. for *Potass. Iodide*, and 13s. 4d. to 13s. 7d. for *Iodoform cryst.*, *powder*, and *precipitate*. *Iodine* is unaltered at 7½d. per oz.

IPECACUANHA—Market is quiet at 9s. to 9s. 3d for fair *Rio*. and 5s. to 5s. 6d. for *Cartagena*. There is, however, but little doing in the article at the moment.

JAPAN WAX—Is dull of sale. Good squares quoted 35s. per cwt. on the spot.

MENTHOL—Quiet at 7s. per lb. on the spot.

MERCURIALS—Are firm at the late advance, say 2s. 9d. for *Calomel* and 2s. 5d. for *Corrosive sublimate* in 56-lb. lots. Other quicksilver preparations being quoted in proportion.

MORPHIA.—In spite of the firmness of *Opium* there is no change in price of *Morphia*, makers still quoting 4s. 6d. per oz. for the *Hydrochlorate salt* in powder, for quantity and in bulk packing. The price of the other salts and of the pure being in proportion. Taking actual present cost of raw material the price of *Morphia* should certainly be higher than figure given above.

NITRATE OF SODA—Steady at £7 12s. 6d. to £7 15s. per ton for the commercial quality and £8 per ton for *refined*.

OILS (ESSENTIAL.—*Star Aniseed* is firm at 7s. per lb. on the spot and 6s. 10d. *c.i.f. Cassia* is quoted at from 4s. to 5s. per lb., according to quality. *Lemongrass*: Since the cheap sales at last week's drug auctions the nominal price has fallen to 4d. per oz. *Citronelle* 1s. 1d. to 1s. 2d., as to packing. *Peppermint*: H. G. H. continues firm at 5s. 9d. per lb. on the spot. *Wayne County*: steady at 3s. 10d. to 4s. per lb. *Japanese*: quiet at 3s. for dementholised and 4s. for 40 per cent.

OILS (FIXED) AND SPIRITS.—*Linseed* is lower on the week at £17 for spot pipes, London; barrels, £17 5s. *Rape* lower, closing flat; ordinary brown on the spot, £22; refined, £23 10s. *Cotton* again lower at £13 12s. 6d. for London crude; refined spot, £15 10s. to £16 5s., according to make. *Olive* unchanged at last week's quotations. *Coconut* quiet but steady; Ceylon on the spot, £24 10s.; Cochin spot, £29 10s., but no business passing. *Palm*: £24 for Lagos on the spot. *Turpentine* dull and lower at 23s. 4½d. per cwt. for spot American, June 22s. 6d., and July to December 20s. 10½d. per cwt. *Petroleum Oil* steady. Russian spot 4⅝d. per gallon, American 5⅛d., and Water White 6¼d. per gallon. *Petroleum Spirit*: American 5⅝d. per gallon, deodorised 6d. per gallon.

OPIUM.—Market is very firm, it being reported from Smyrna that a good business has been done at 9s. 9d. to 9s. 10d. for current *tale quale*, at which prices about 100 cases are said to have changed hands for American. Here a fair business has been done in *Druggists'*, prices being about 3d. up, same being *soft shipping*, 10s. 9d, to 12s. 3d. per lb. *Druggists'* 10s. to 10s. 9d. *Persian* 10s. 3d. to 11s. 3d. Good *manufacture* not being available on the spot.

PERMANGANATE OF POTASH.—The expectation of a good demand during the summer months has so far hardly been realised, and makers are pressing sales at rather lower prices, although quotations remain nominally 62s. 6d. per cwt. for *small crystals*, and 67s. 6d. per cwt. for *large crystals* in 1-cwt. kegs.

PHENACETIN—Is steady at 3s. 9d. to 4s. 3d. per lb., according to quantity and brand.

POTASH COMPOUNDS.—*Bicarbonate* steady at 30s. per cwt. for both *crystal* and *powder*. *Bromide* firm at 1s. 10d. per lb. *Bichromate* unchanged at 3⅞d. to 4d. per lb. *Chlorate* very dull at 3¼d. per lb. *Cyanide*: 1s. 1d. to 1s. 2d. per lb. for 98 per cent. cake, according to quantity. *Iodide* steady at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Permanganate* quiet at 62s. 6d. per cwt. for small, and 67s. 6d. per cwt. for large crystals. *Prussiate*: *Red*, 1s. 2d. to 1s. 3d. per lb.; *yellow*, 6¾d. to 7d. per lb. for English.

QUICKSILVER.—Steady from importers at £7 12s. 6d. per bottle, whilst second hands are sellers at £7 12s.

QUININE.—In consequence of the lower prices realised in last week's Amsterdam Bark auction, which were from 20 to 25 per cent. lower than those paid at the previous sale, makers reduced their prices for *Sulphate of Quinine* 2d. per oz. Agents for the best *German* brands now quoting 10d. per oz. for 1000 oz. lots in 100 oz. tins, while, from second hand, sales have been made at 9½d. per oz. The market remains quiet, with a somewhat uncertain tendency.

RHUBARB.—Since the auctions a considerable business has been done in the article privately in *Shensi* at 1s. 6d. to 3s. per lb., *Canton* at 1s. 2d. per lb., *High dried* at 1s. to 1s. 2d. per lb., and *Rough round* at 7½d. per lb. One broker stating that he had had orders for more than 100 cases. This will no doubt be the result of more willingness on part of holders to meet the views of buyers as to price, the prices paid being more moderate than those required not long since in public sale.

SANTONINE—Is very quiet at unchanged price, viz., 4s. 5¼d. per lb. for 3-cwt. lots.

SENNA.—Of the new arrival of *Tinnevelly* advised in our last week's report, 46 bales are pods, the whole will probably appear in the next auctions. No advice has so far been received as to the new crop. *Alexandrian*: There have been a few small transactions, but except for really fine leaf, which is nominally worth 7d. per lb., there is very little demand.

SHELLAC—Is a quiet market with unimportant business in all positions. Prices on the spot are steady, cakey *TN Orange* selling at 62s. for fair, but for arrival prices are barely steady. A weaker tone is observable also in arrival prices, there being sellers of *TN Orange* near at hand at 62s. per cwt. *c.i.f.* terms.

SODA COMPOUNDS.—*Crystals* unchanged at 55s. per ton. *Acetate*: Refined, 13s. 6d. per cwt.; chemically pure, 35s. per cwt. *Bicarbonate*: Commercial, 98 per cent., £7 10s. per ton; free from mono-carbonate, 18s. 6d. per cwt. *Bromide*: 2s. 2d. per lb. *Iodide*: 11s. 7d. per lb. *Nitrate*: Commercial, £7 15s. per ton; refined, £8 per ton. *Hyposulphite* firm at 6s to 8s. per cwt., as to quality. *Caustic*: White, 70 per cent., £7 10s. per ton; 60 per cent., £6 10s.

SPICES (VARIOUS).—*Black Pepper*: 20 bags Singapore sold at 4d.; 325 bags Wynaad sold at 4d. to 4⅛d.; 32 bags Aleppy sold at 4⅛d.; 21 bags Coorg bought in at 4⅜d. *White Pepper*: 61 bags Penang bought in at 6⅞d.; 7 bags mixed Ceylon sold at 7⅝d. *Chillies*: 134 bales Zanzibar sold without reserve at 26s. 6d.; 40 bags good red Japan sold without reserve at 35s. 37s.

SULPHATE OF COPPER—Fairly steady at £15 5s. to £16s. 10s. per. ton, according to brand and package.

SULPHONAL.—There is no change, makers still accepting orders for limited quantity at 7s. 3d. per lb. in bulk for both *crystal* and *powder*.

TURMERIC—Is very firm, with sales of *Bengal* finger at 17s. 6d. cwt., and fair bright *Madras* finger at 23s. cwt.; *Cochin* split bulbs quoted 10s. cwt.

NEWCASTLE CHEMICAL REPORT.

June 15, 1898.

Shipments of heavy goods from this district are rather on the increase, but still below an average for the season. Prices are practically unchanged, and are quoted as follows:—Bleaching Powder: according to market, £6 5s. to £6 10s. Soda Crystals: basis, 45s. to 52s. 6d. Caustic Soda, 70 per cent., basis, £7 5s. to £7 10s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent. £5 5s. Sulphur £5 per ton.

MANCHESTER CHEMICAL REPORT.

JUNE 15, 1898.

The market remains somewhat depressed, and does not seem to have recovered its wonted elasticity after the holidays. There is some inquiry for Alkalies, but buyers do not at all fall in with sellers' ideas of price, and business is of "a hand to mouth" character. American freights have fallen, and consequently there is a corresponding reduction in Brown Acetate, which is now quoted £5 12s. 6d. per ton, *c.i.f.*, though for small quantities £5 15s. to £6 is asked. Sulphate of Copper varies from £16 5s. to £16 12s. 6d. per ton for best brands, delivered Manchester. Coal Tar products do not appear to have justified the hopes of a few weeks ago. Pitch is dull at 16s. 9d. per ton, *f.a.s.*, Ship Canal, and Benzols have dropped about a penny per gallon on last week. Naphthas are scarce and unchanged. Green Copperas is dull, and local-made Glycerine is in slow request. Yellow Prussiate is firm at 6¾d. to 7d. for best Lancashire make.

LIVERPOOL REPORT.

JUNE 15, 1898.

With the exception of a slight drop in the price of Spirits of Turpentine, quotations remain practically unchanged, both as regards drugs and heavy chemicals.

AMMONIA SALTS.—*Sulphate* per ton £9 2s. 6d. to £9 3s. 9d. Others unchanged.

COPPER SULPHATE.—Lower and very slow of sale, £16 per ton.

CARNAUBA WAX.—2 tons of yellow sold at 70s. per cwt.

CANARYSEED.—Turkish is only selling in retail quantities at 26s. to 27s. per 464 lbs.

KOLA NUTS.—Dried have been sold at auction for 1d. per lb.

LINSEED—Is dull and inactive. 250 tons of River Plate seed offered at auction received no bids.

OILS (FIXED) AND SPIRITS.—*Castor* commands a moderate amount of attention, selling fairly well at 3¼d. to 3⅜d. per lb. for "good seconds" Calcutta, and 3¼d. per lb. for French 1st pressure. *Olive*: Spanish is quiet at the unaltered quotation of £29 to £30 per tun. *Linseed* of Liverpool make is priced as last week, 18s. 3d. to 18s. 9d. per cwt. *Cottonseed*: Liverpool refined is dull at 16s. 6d. to 17s. per cwt. *Spirits of Turpentine* is easier by 3d. per cwt., and is quoted at 25s. to 25s. 3d. per cwt.

QUILLAYA BARK.—£18 10s. per ton ex quay.

TURMERIC.—Cochin bulb has been selling for 8s. 6d. per cwt.

Publications received.

"Aluminium as a Heating and Reducing Agent (in the Production of Chromium and Other Metals)," by Dr. Hans Goldschmidt and Claude Vautin.

THURSDAY, JUNE 23.

CHEMISTS' ASSISTANTS' UNION.
Meeting at the Horseshoe Hotel, Tottenham Court Road, W., at 8 p.m.

Exchange Offers & Wants

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for uso of the Serle Street address, including re-directio of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "PHARMACEUTICAL JOURNAL," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books.

'Chemical Receipts,' by Atlas Chemical Company; quite new. Offers to—Kirkpatrick, Chemist Taunton

Offers wanted for Martindale's 'Extra Pharmacopœia,' 6th edition; Squire s 'Companion,' 14th and 16th editions; *C. & D.* Diaries, 1885, 1888, 1889, and 1891 to 1897; 'U.S.A. Dispensatory,' 11th edition; Thomson's 'London Dispensatory,' 10th edition; Garrod's 'Materia Medica'; Lindley's 'School Botany,' 14th edition; B.P., 1885, additions 1890.—Lees, Chemist, Oldham.

Latest Editions.—Squire, nearly new, 6s. 6d.; Bentley's 'Manual,' nearly new, 7s. 6d.; Bentley's 'Systematic,' 2s. 3d.; Bentley's 'Materia,' 4s.; Gerrard's 'Materia and Pharmacy,' 4s.; Wills' 'Pharmacy,' 3s. Post free. Gower, Waterloo, Liverpool.

Miscellaneous.

Magic Lanterns, second-hand; triples and biunials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland N.

To Dispose of Cheap.—About 6 lbs. Mercury; 2-quart size Bichromate Battery; set of 6 Twaddels in case; Woolley's Medical Microscope with accessories.—Bromide, *Pharmaceutical Journal* Office, 5, Serle Street, W.C.

Surplus Stock.—12 William's, Carter's, Beecham's 1s. 1½d., 6 Holloway's, Steedman's powders 1s. 1½d. and 2s. 9d. Free for £3 3s. 6d. Cash with order, or London reference if fresh customer.—Eastman, Forest Lane, Stratford.

Overstocked.—Superfine Oil of Lemon, fine quality, 2×10 lb. coppers, 22s. 6d. each; sample pound free anywhere 2s. 9d. Willcox's No. 2 Gun Metal Pump, 25s.—Moss, 34, Avondale Road, Chorley.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Acetylene Apparatus Exhibition at the Imperial Institute.

ON Wednesday, June 15, an exhibition of apparatus for the manufacture of acetylene gas was opened at the Imperial Institute. The exhibits consisted mainly of generators and lamps of various devices. In view of the great possibilities in store for acetylene as an illuminant, we shall briefly draw attention to the principal forms of generators and lamps which have been invented in the hope that the information may be of use to our country readers. There are so many useful, safe, and comparatively cheap forms of apparatus on the market that a ready demand already exists for this form of illumination in country districts where coal-gas is expensive or unobtainable. Besides, no skill is required in the working of the apparatus, indeed, a gardener or porter can do all that is necessary. The price of calcium carbide is about £20 per ton, and the average price of the gas produced is 35s. per 1000 cubic feet. The advantages claimed for acetylene gas over ordinary coal-gas are numerous; among others we may mention that (1) the illuminating power of acetylene is so much in excess of ordinary coal-gas that the smallest burners, with a consumption of less than half a cubic foot per hour, give a greater light than is derived from burners generally used for coal-gas, and consuming about seven cubic feet per hour; (2) acetylene gas contains practically no sulphur, thus the injurious effects of ordinary coal-gas on ceilings, works of art, etc., are almost entirely avoided; (3) much less oxygen is taken from the air; (4) the acetylene light is steady

Fig. I.

and not the least flickering, burning with a pure white light, resembling in this respect the electric light, although softer and without the harmful effects of the latter on the eyesight; and (5) its rays are similar to those of the sun, so that all colours and shades appear as they do in daylight, hence its great use in picture galleries, etc. It may be added that ordinary gaspipes and fittings may be used, though pipes of smaller dimensions only are necessary.

Passing to the exhibits, we may notice the Fourchette's apparatus, made by the Acetylene Gas Corporation, Ltd., 100c, Queen Victoria Street, E.C. This form of apparatus is favourably reported on by Sir William Crookes and Professor Tichborne. The calcium carbide is divided over a number of separate, vertically-arranged trays, and the water, rising from below, floods only one compartment at a time. The acetylene is evolved in a cylinder surrounded by water, and on its way to the reservoir gets cooled by passing through water. The gas holder consists of a bell-shaped cover, arranged so as to rise and all when the volume of gas is increased or diminished. By a special device, similar to that in the well-known Kipp's apparatus, the water is put out of reach of the carbide compartments when a sufficient quantity of gas is generated. Under the Government regulations controlling the manufacture of acetylene gas, the limit of safety is fixed at slightly over 100 inches' pressure; with the Fourchette apparatus the pressure is only about 5 inches. The same firm showed the acetylene "Glow" cycle lamp, consisting of three parts: (1) The water reservoir with regulator tap, (2) the carbide chamber, (3) a perforated metal disc with spiral spring separating the water reservoir from the carbide cup. This lamp is compact, and is retailed at a guinea.

The Thornton-Scarth Automatic Lighting Syndicate, Ltd., Vittoria Street, Birmingham, turns out apparatus suitable for dwellings of all sizes, from the humblest cottage to a country mansion, having the great advantage of simplicity. The gas is automatically cooled and purified. The same main principle, that of the Kipp's apparatus, is applied, with slight modifications, in this and most other forms of generator. An ordinary household lighting apparatus of this make costs about 8 guineas. This firm compares the cost of acetylene gas with coal-gas and the electric light; thus, acetylene is on a par, light for light, with coal-gas at 2*s.* 4*d.* per 1000 cubic feet, and is much cheaper than electricity, in the ratio of 2*s.* 6*d.* to 6*s.* for equal amounts of light. The cost of an acetylene generating plant may be taken roughly to be 20*s.* for each 50 c.-p. light, and the cost of management and maintenance is almost *nil*. The theoretical yield from pure carbide is 5·58 cubic feet of gas per pound, inferior qualities, chiefly of Continental manufacture, producing

Fig. II.

barely 4 cubic feet per pound. To intending purchasers we can commend the 'Notes on Acetylene Lighting,' price 2*d.*, brought out by this firm.

Messrs. Thorn and Hoddle, New Tothill Street, Victoria Street, S.W., exhibited generators and fittings suitable for photographic and general lighting purposes.

A glance at Figs. I. and II. will explain the mechanism of the household "Incanto" generator (Pattern B); the makers guarantee the safety of this machine. Their "Incanto" Lantern Fitting, giving a light of 200 candle-power, is a useful appliance, and is sold at 7*s.* 6*d.* The "Incanto" generator is specially suited for use with the magic lantern, either for photographic enlargements or for lecture purposes. A cycle lamp and generator, weighing two pounds when charged, is cheap and gives a powerful light.

Messrs. Falk, Stadelmann and Co., Ltd., 85, Farringdon Road, London, E.C., displayed a varied assortment of lamps, suitable for street lighting, carriages, cycles, household and other uses.

The British Acetylene Gas Generator Company, 70, Chiswell Street, E.C., claims that their apparatus will produce a 50 c.-p. light at a cost of a little over one farthing per hour. Their generator is recommended by Professor Vivian Lewes on account of the arrangement by which the gas is effectually cooled. The Company recommends that the apparatus be kept in a wooden shed specially constructed to exclude frost, outside the main building, in order to comply with the regulations of some Insurance Companies; it is further pointed out that the addition of 3 oz. of glycerin to the water in the tank is an effectual preventive against freezing. The exhibit included apparatus specially designed for the use of photographers, thereby enabling them to use the light in conjunction with weak daylight or during the night in ball-rooms, etc., as well as for enlarging, copying, and even for printing on the ordinary papers. It is needless to describe these various generators in detail, inasmuch as few offer special points of difference.

Sardi's Patent Gas Generator Syndicate, Ltd., 25, New Broad Street, E.C., was showing generators in various sizes, ranging in price from £6 to £40.

The Manchester Acetylene Gas and Carbide Co., St. Simon Street, Salford, Manchester, had a stand which deserves special mention on account of the simplicity, safety, and durability of their generators; the cylinders being made of cast-iron, and the tanks and holders of heavy steel plates. By an ingenious arrangement the supply of gas is continuous, one part of the apparatus producing the gas while another part is being recharged with carbide. Their "Portable Lights," from 20 to 2000 c.-p., are useful for all underground work. A Patent Acetylene Photographic Outfit is made by this firm, by means of which photographs may be taken at any time independent of daylight. The generator is used in conjunction with a 4-ft. diam. special reflector and diffuser, adjustable to any angle or position. The total illumination of this apparatus is 1000 c.-p. This reflector diffuses the acetylene light, which is strongly actinic, to the best advantage.

On passing through the gallery in which this exhibition is held, one cannot fail to notice the enterprise which British firms are showing in this important departure in artificial lighting. The Safety Acetylene Gas Generator Co., Halifax, offers a large selection of apparatus, and sends skilled workmen to all parts of the country to fit up the same and leave it in good working order.

Messrs. Strode and Co., 188, Piccadilly, W., are bringing out a new patent "Sunburner," which is said to combine maximum illuminating power with minimum consumption of gas. By a special arrangement of cones heated air is introduced to support the combustion of the gas, thus ensuring an additional advantage, *i.e.*, complete ventilation, as the whole of the products of combustion are carried off through the perforations which surround the cones, and are discharged into the outer air by means of a flue. In their apparatus gas is generated by means of a wheel set in motion by water running upon it, which actuates a vessel containing carbide; the latter falls into water as the vessel revolves.

The apparatus shown by Messrs. Exley and Co., Byram Street, Huddersfield, deserves special praise. Their automatic generator is probably one of the simplest and most efficient automatic machines in existence. A double generator is provided, so that the working is continuous. They supply special portable machines suitable for magic lanterns, carriages, yachts, photographers, etc., and cater for medical men and hospitals. Pharmacists interested in the subject of acetylene illumination will do well to apply to this firm for one of their well-illustrated catalogues. One form of apparatus for use in hospitals consists of a generator, and portable stand for carrying burners, reflectors, etc. It is of great value to medical men in taking photographs at the bedside during night or day, as is necessary in the study of certain diseases in their several stages, as well as before and after operations. The firm sends out calcium carbide in iron drums at £20 per ton.

Most of the firms represented at the exhibition are remarkable for the length of their name; this is the case with the Calcium Carbide Company, Ltd., 53, Cheapside, E.C. Their generating apparatus is a marvel of simplicity, there being no valves, cog-wheels, etc., to get out of order. Another firm showing a well-made form of acetylene apparatus is the Midland Acetylene (Parent) Syndicate, Ltd., Cradley Heath, Staffs. The pressure of the gas is regulated by a syphon device and the carbide chamber is kept cool by a water jacket. By arranging several generating chambers at different levels in connection with the same holder, a machine may be kept running for a long time, and many lights kept burning.

One of the best stands was that of the International Industrial Syndicate, Ltd., 84, Bishopsgate Street Within, E.C. The "Buffington" generator made by this firm consists of a carbide holder (the carbide being packed in a telescopic cartridge), above which is the water tank with an automatic water valve in its lower part. The gas is stored in a separate holder. This firm has brought out several lamps, known as the "Buffington" lamps, which are well spoken of by Professor Silvanus Thompson, among them being useful students' and cycle lamps. All are charged with carbide cartridges, and are very cleanly. It is claimed that the cycle lamp cannot be blown or jolted out. Professor Thompson has purposely overturned these lamps, and tossed them through the air without risk of explosion or extinction. The reading lamp burns for eight hours, and is recharged by replacing the spent cartridge by a full one.

The Ideal Gas Co., Ltd., Blackburn, turns out an apparatus for which there is much to be said. It has the advantages of cleanliness, simplicity, strength and safety, and is recommended by Professor V. Lewes. The Abingdon Acetylene Illuminating Co., Ltd., 97, Great Hampton Street, Birmingham, manufactures a form of apparatus that is exceedingly simple and useful. Generally speaking, acetylene gas may be produced in two ways, either by submerging a quantity of carbide in water, and producing a quantity of gas, or by automatically generating the gas as it is required. The former method requires a larger and more expensive plant than the latter, and in addition is less safe. The Abingdon Safety Generator is of the latter type, and works on the float gasometer principle—that is to say, a rising and falling gas holder regulates the supply of gas by raising or lowering the generator, which contains the carbide. Various forms of apparatus were shown by this firm, adapted for domestic, lantern, and other uses. They supply a small generator for microscopic work 14 inches by 5 inches, at 25*s*.

Perhaps one of the simplest forms of apparatus shown was that of the British Pure Acetylene Gas Syndicate, Ltd, 19, Castle Street, Liverpool, as devised by Professor Raoul Pictet. There is nothing in it to get out of order. The following firms had attractive stands, showing various forms of generators, differing only slightly from the foregoing:—Messrs. Read, Holliday and Sons, Ltd., Huddersfield; the Sunlight Gas Co., Ltd., 18, Wellington Quay, Dublin; Messrs. Ehrich and Graetz, Berlin; the Acetylene Beacon Light Co., 59, Colmore Row, Birmingham; Messrs. Bailey and Clapham, Keighley, Yorks; and lastly, the Liver Acetylene Gas Co., Ltd., 14, Dale Street, Liverpool. The last-mentioned firm showed some ingenious forms of apparatus all containing the carbide in shallow trays, with perforated sides, placed vertically over each other. Their cycle-lamp apparatus is compact, and should prove a boon to cyclists. On leaving the exhibition one cannot fail to carry away the impression, that the ingenuity of man is surprising. Though all the generators mentioned are adapted for the preparation of acetylene by one method, viz., the action of water on calcium carbide, yet no two forms are nearly alike. Pharmacists who are looking out for side-lines may possibly do well to turn their attention, if they have not already done so, to calcium carbide and the various forms of apparatus employed in obtaining acetylene therefrom.

Partnerships Dissolved.

(*From the London Gazette*)

Arthur Lancaster Stobbs, William Alfred Wilson, and James William Pollard, Chemical and Colour Merchants, Billiter Buildings, Billiter Street, London, E.C. Debts will be received and paid by A. L. Stobbs and J. W. Pollard.

Karl Robert Schramm and Richard John Volz, Surgical Instrument Makers, 24, Great Castle Street, Regent's Circus, and 47 and 49, Belmont Street, Chalk Farm Road, London, N.W. Debts will be received and paid by Karl Robert Schramm.

Receiving Orders in Bankruptcy.

(*From the London Gazette.*)

Harry George Albert Nash, Mineral Water Manufacturer (trading as the Star Mineral Water Company), 7, Newick Road, Clapton, and 125, 126, and 127, High Street, Shadwell, London.

Charles Arthur Roe (also trading as Michael Royals), Mineral Water Manufacturer, Beacon Hill Road, Halifax.

Proprietary Articles Trade Association.

Council Meeting.

THE first meeting of the new Council of the P.A.T.A. was held at the Agricultural Hall on Wednesday, June 15. The following members were present:—Messrs. Charles Sanger (Lambert and Co.), E. Sanger (Sanger and Sons), W. F. Powell (Thomas Powell, Ltd.), B. Hirst (Hirst, Brooke and Hirst), H. J. Hall (Stephen Smith and Co.), A. Tebbutt (W. Sutton and Co.), G. R. Barclay (Barclay and Sons), Albert Cooper (South Kensington), F. Rowsell (Exeter), S. N. Pickard (Bradford), T. P. Garrett (Newport), W. R. Barnes (Upton Manor), and C. J. G. Bunker (Great Dover Street).—Mr. TEBBUTT, in the absence of the President, took the chair, and the election of the new President was then proceeded with.—In proposing the election of Mr. H. J. Hall, Mr. CHARLES SANGER explained that it had been decided at a former meeting of the Association that the manufacturers, wholesalers, and retailers of the Association should be represented in the presidential chair in rotation. This year it was the turn of the Manufacturers' Section, and he had pleasure in proposing that Mr. H. J. Hall be elected President for the forthcoming year.—This was seconded by Mr. G. R. BARCLAY, and unanimously carried.—Mr. HALL thereupon took the chair, and the remaining officers were then elected as follows: Vice-Presidents, Mr. Charles Sanger (Manufacturer), Mr. B. Hirst (Wholesaler), Mr. Albert Cooper (Retailer).—The SECRETARY explained that the Executive Committee consisted of the officers of the Association, to which were added two members of each section. The following gentlemen were elected to serve upon the Executive Committee:—Manufacturers, Messrs. Garratt and Gilligan; wholesalers, Messrs. Tebbutt and Edwards; retailers, Messrs. Barnes and Bunker.—The Council then fully considered the draft annual report to be submitted to the annual meeting, and upon the motion of the PRESIDENT, it was unanimously adopted.—The report from the meeting of the Retail Section of the Council, which had been held immediately before this meeting, was then fully discussed. Amongst other matters the report dealt with the action of the Guy's Tonic Co. and of the Charles A. Vogeler Co., the retailers recommending that the various local chemists' associations should be asked to consider what action, if any, should be taken in regard to these articles. In the report it was pointed out that recent changes had been made by the proprietors in the terms of supply which were exceedingly disadvantageous to the trade, and the Retail Committee thought that it would be well that the retail members should discuss as to whether the time had come for refusing to stock preparations which leave such ridiculous profits, and to ask the wholesale houses to take the same course. The meeting agreed that the matter should be referred to the various local associations affiliated with the P.A.T.A.—A recommendation was also made by the Retail Section that the Council should organise a Defence Fund confined to the drug trade. Briefly put, the suggestion was that the P.A.T.A. organisation might be made use of in administering the fund, but that provision should be made that the ordinary funds of the P.A.T.A. would not be available for the purposes of defence. The majority of the retail members spoke as to the need for some such fund, which would protect retail chemists from frivolous prosecutions under various trade Acts. The unanimous opinion of the Retail Committee was that numberless convictions were obtained by the authorities which would never have been obtained if the cases had been properly contested. The recommendation of the Retail Committee was that the Council meeting should approve of the proposal, and should ask the members at the annual meeting to consider the question and to decide by vote whether some such step should be taken.—Upon the motion of Mr. CHARLES SANGER, seconded by Mr. BARCLAY, the following resolution was unanimously agreed to:—

> That the Council sympathises with the suggestion from the Retail Committee that a Chemists' Defence Association be formed, and before further action requests the Annual Meeting to express its opinion by vote thereon.

—Mr. ROWSELL stated that at a meeting of the Exeter Association held a short time ago the members thought that it would be a good plan if the Protected List was printed now and again on a sheet handy for reference, and he had been instructed to bring the subject before the notice of the P.A.T.A. Council.—The SECRETARY explained that the Protected List would be published in pamphlet form as part of the Annual Report, and several members of the Council thought that this would meet the objection of the Exeter Association, and Mr. Rowsell thought that for the time being that arrangement would be satisfactory.—A vote of thanks to the Chairman brought the meeting to a close.

Annual Meeting.

The annual meeting was held at Berners' Hall, Islington, on Thursday, June 16, about one hundred members being present. The chair was taken by the new President of the Association, Mr. H. J. HALL. After a few congratulatory remarks by the Chairman, the annual report, which was taken as read, was explained by Mr. GLYN-JONES. He pointed out *inter alia* that the financial year had been made to terminate at the end of March instead of at the end of December, so as to correspond with the retirement of the Council. During the fifteen months covered by the report the income had been £1468, and the expenditure £25 less. It was pointed out that in return for that expenditure the whole trade had gained an increase of profit to the extent of something like £25,000, and substantial progress had been made with the work of the Association, both with relation to the control of cutting and to the increase of membership in the Retail and Manufacturers' Sections. About 1000 new retail members had been put on since the previous annual meeting, making a total of about 3000 at the present time. The increase of members in the Manufacturers' Section during the same period was 29, making a total of over 60. A small increase in the Wholesale Section was also reported, making a total of 2 0. Amongst the new articles placed upon the list had been several of much commercial importance, such as C. B. Chlorodyne, Izal, Sanitas, etc. Mr. Glyn-Jones referred to the ruses adopted by certain firms on the stop-list in order to try to obtain stocks of P.A.T.A. goods, and showed that the organisation of the Association was becoming more and more able, every month, to handle such cases. The portion of the report dealing with the Grocery and Photographic Sections was also commented on. With regard to the former, it was noted that the Grocery Council of Management had been formed, and that a preliminary list of protected articles in which grocers were interested was being published in a separate edition of the *Anti-Cutting Record*. He admitted that the Photographic Section had not yet come up to expectations. He reminded his hearers that a list of protected photographic articles was now published in the *Record*, and that possibly two-thirds of the retail members of the Association were interested in such goods. He advocated concerted action on the part of local associations with regard to trade improvement. He then read a letter received that morning from the Hon. Secretary of the P.A.T.A. in Blackpool, stating that a memorial had been signed by nearly every chemist in that town setting forth the reasonable expectations of the trade with regard to profits on advertised proprietaries. Copies of that letter had been sent from Blackpool to a number of proprietors. The speaker suggested that this example might very profitably be emulated by friends in other towns. After discussion by various members the report was unanimously adopted.—The PRESIDENT brought forward as a remit from the Council Meeting, held the previous day, a matter of great importance to the trade. He asked those present to discuss the advisability of forming a section of the Association dealing with the defence of chemists who might be prosecuted under the Food and Drugs Act.—Mr. GLYN-JONES suggested that if sufficient funds were raised, it might be the means of saving many chemists from unfortunate convictions, such as those in the Lime-Cream and Glycerin and other cases. He remarked that it would be well to keep the fund entirely separate from that devoted to the anti-cutting work, but thought that the work might very well be done by the P.A.T.A. staff, with, of course, the necessary legal assistance.—Mr. JONES, of Birmingham, recommended caution in proceeding with this recommendation. He stated that he had been intimately connected with the manage

ment of a similar defence fund on a national scale a number of years ago, and that the work and expense involved were both very considerable. He thought that nothing short of an annual subscription of £1 1s. would be of any practical use to those who were to share the benefits of the fund. He moved that the recommendation be sent back to the Council for further consideration, and suggested that the matter be ventilated between now and the next Council meeting, and this resolution was eventually carried after an interesting discussion.—A vote of thanks was passed to the Chairman for presiding, and a similar compliment was paid to Mr. Jones, the past President of the Association.

The Annual Dinner.

This function was held in the Grand Saloon of the Agricultural Hall on Thursday evening, June 16, there being between eighty and ninety persons present. Messrs. A. Probyn and Co., had charge of the menu, which was well served and heartily enjoyed. The usual loyal toast was duly honoured, and the PRESIDENT, Mr. H. J. Hall, took the opportunity while proposing "The Proprietary Articles Trade Association" to express his sense of the honour conferred upon him in electing him to the chair, and stated that he intended to do his best during his year of office to extend the membership and usefulness of the Association. He referred to the power which such an Association was capable of exerting if the members could but realise their combined strength. Speaking of those manufacturers and wholesalers who held aloft from the P.A.T.A. he mentioned that an adequate supply of show-cards and advertising matter to distribute amongst the 3000 chemists who are members of the Association would cost something like £4000, and pointed out that if the members were to refuse to do anything with that £4000 worth of show-cards, etc., unless the goods they referred to bore an adequate profit, the loss to such advertisers would very quickly bring them to their senses. He concluded his remarks by expressing a hope that during his year of office the number of members would increase from 3000 to 4500.—Mr. GLYN-JONES, in responding to the toast, pointed out that there was a time when the P.A.T.A. was not so much needed as at present. Then retail chemists got a fair profit on proprietaries, but in many instances such was not the case now, and they themselves were largely to blame for it. However, about 99 per cent. of the proprietary trade passed through the hands of members of the P.A.T.A., and that being so, it lay in the power of proprietors to help them to secure better profits. As an Association they were very much indebted to the two or three hundred active local secretaries throughout the country; in fact, they were the secret of the success of the Association, but the rank and file of the trade must back them up and endeavour to secure more of their retail friends as members. Although they had 3000 members, that number only represented about one-third of the chemists in business. It was easier to get sympathy than subscriptions, but if the members would act together they would carry the movement to a successful issue. Already there was a better spirit manifested in the retail trade, and he sincerely hoped that the future would show that "they builded better than they knew."—Mr. HARRY KEMP proposed "The Chemists' Exhibition," and spoke of the friendly spirit it, together with the P.A.T.A., had helped to create amongst members of the craft from all parts of the kingdom.—Mr. J. F. CANTWELL, one of the organisers of the Exhibition, replied.—Various other toasts were proposed, including "The Ladies," "The Trade Press," and "The President and Officers."—An excellent musical programme had been arranged, and under the direction of Mr. Arthur Weston, pleasantly occupied the time during the intervals between the toasts.

Manchester Chemical Report.

JUNE 22, 1898.

Great dullness prevails both in heavy chemicals and drysalteries, and there is a general complaint of a paucity of orders. The late hot weather has interfered with the production of Soda Crystals and Glauber Salts, and there has been some difficulty in effecting deliveries by local makers. Arsenic has dropped to £17 per ton, ex-ship Garston, and remains nominal at that figure. Yellow Prussiate is somewhat dearer owingto the scarcity of the article, and it is now 7d. per lb., although, of course, foreign can be had at about a halfpenny under. Reductions are to be noted in Brown Acetate of Lime, which ranges from £5 7s. 6d. to £5 10s. delivered Manchester.

PHOTOGRAPHIC NOTES.

MOUNTING PHOTOGRAPHS.—Put a dessert-spoonful of arrowroot in a breakfast cup with a little cold water, and rub it up well with a spoon until it is well mixed, then fill up the cup with hot water, well stirring, so as to keep it from getting lumpy, then put the cup (an iron enamelled cup for choice) on a slow fire, and stir well until the arrowroot clears, then let it stand to cool, after which strain through a piece of calico to free it from any lumps (squeeze it through). Now place the print, face down, on a clean sheet of paper, and with a good stiff hog's-bristle brush plaster the back of the print with the cold arrowroot until evenly covered, then rub the back.—J. S. H., in *Photographic News*.

MICRO-PHOTOGRAPHIC DEVELOPER.—As a developer for diapositives of micro-photographic negatives, Maid recommends rodinal, 5 C.c., water, 40 C.c., solution of potassium bromide, 1:10, 3 C.c.—*Intern. Photog. Monatschr.*, 1898, ii., 25.

PLATES FOR MICRO-PHOTOGRAPHY.—These plates are prepared in the following manner:—Ether, 400, alcohol, 400, soluble cotton, 3, ammonium iodide, 40, ammonium bromide, 10. The collodion must be used a little thinner than ordinary. The photographic plate is covered with the collodion and sensitised in a nitrate silver bath of 7 to 8 per cent. The plate is now washed and coated with the following solution:—Albumin, 150, water, 15, potassium iodide, 3, ammonium chloride, 5·0, sugar, 2, and a small crystal of iodine. It is now put into a bath prepared with water, 100, nitrate of silver, 10, acetic acid, 10, and then washed and dried. The developer is prepared as follows: Water, 100, gallic acid, 0·3, pyrogallic acid, 0·1, alcohol, 2·5. After remaining 10 to 20 seconds in this developer, 1 to 2 drops of a 2 per cent. solution of nitrate silver are added.—*Intern. Photog. Monatschr.*, 1898, ii., 34, after *Phot. Mitterl.*, 1897-8, 343.

PHOTOGRAPHIC ACTION OF GLOW-WORM'S LIGHT. — Muraska imprisoned 300 to a 1000 glow-worms in a box covered with a net and containing photographic dry plates, which were exposed either covered with a metal plate, cardboard or thin boards or unprotected. The dry plates were wrapped in several black papers and exposed for two nights in the box to the light of the glow-worms. When developed, they invariably proved to have been more or less affected. The author arrives at the following conclusions:—The behaviour of the light of glow-worms in its original state is the same as that of ordinary light. The light contains rays which penetrate cardboard and metal plates, the properties of which are similar to the Röntgen rays or analogous to Beccuerel's fluorescent rays. The dry plate when covered with cardboard discs presented an appearance resembling figures demonstrating the impenetrability of iron to the lines of magnetic force. The properties of these filtered rays appeared to be influenced by the materials through which they were passed. Refractive interference and polarisation could not be determined, but the author thinks it probable that they exist. The filtered rays appeared to resemble Beccuerel's fluorescent rays, their properties lying between the ultra-violet rays and Röntgen rays—*Chem. Zeit. Rept.*, xxii., 31, after *Anthony's Photo. Bull.*, 28, 350.

ALUMINIUM TO REPLACE MAGNESIUM.—M. E. Demole, in a communication to the Société Française, recommends aluminium as much superior to magnesium for flash-light work. He found that the reds and yellows in a bouquet of flowers came out in almost ortho-chromatic relation when aluminium was used as the illuminant—a much superior result to that with magnesium being secured. Although a mixture of potassium chlorate and magnesium or aluminium serves very well, M. Demole finds the following to be superior, the mixture burning with a rapidity which leaves nothing to be desired. If less permanganate be employed than the proportion recommended, the speed of combustion is less, and the smoke very much greater:—

Potassium Permanganate	2 parts
Aluminium	1 ,,

—*Photogram.*

GLOSSING PRINTS.—I find the following process satisfactory: A piece of beeswax rubbed a few times over the surface of a piece of plate-glass just as if marked with a slate pencil, then a few drops of turpentine applied by tow or cotton wool and the wax rubbed off.—"AMATEUR."

News in Brief.

Mr. W. Elborne has resigned his post as pharmacist at the University College Hospital, W.C. On the 16th inst. he took his M.A. degree (Trinity College, Cambridge).

Messrs. C. J. Hewlett & Son ask us to state that their warehouse and laboratories in Charlotte Street, E.C., will be closed on Saturday, June 25, on the occasion of the annual outing of the staff and employés.

Leicester Chemists' Social Union.—A half-day excursion to London to visit the Chemists' Exhibition was arranged for Thursday, June 16. The saloon engaged proved inadequate to accommodate all the party, so an extra compartment was reserved. Besides ladies, the party included the following chemists, managers, and assistants:—E. H. Butler, jun., Richardson, Goodess (Hon. Sec.), Biggs, Ellis, Hearnshaw, Hampden, Furnival, Dr. Gardiner, Wright, Jackson, Elmitt, Dunmur, Ward, Hodgson, Elliott, Brice, Thirlby, Cleaver, Dobson, Berry, Fisher, etc., thirty-five persons in all.

Cricket.—At a match played at Tooting Bec Common on Saturday June 18, between "Allenburys" C. C. *v.* "Metropolitan College of Pharmacy" C. C., the former team scored 88 as against 54. At a match played earlier in the season at Wadham Lodge, Walthamstow, between the same teams, "Allenburys" scored 61 against 24.

The Sale of Poisons.—George Frederick Handel Bartlett, chemist, Battersea Park Road, London, was charged at the South-Western Police Court on June 18 with selling potassium cyanide without recording the fact in a book kept for the purpose. Mr. Nichols defended. The prosecution was undertaken by the police at the instigation of Frederick Davis, photographer, St. Philip Street, Queen's Road, Battersea, who deposed that on Whit Monday he went to the defendant's place of business and was served by his manager with half an ounce of cyanide of potassium, which he used for the purposes of his trade. The manager made no entry in the book, and witness informed the police of the circumstance. No question was asked and he saw no entry made in a book.—Mr. Nichols said that the business was left in the hands of a qualified assistant, who forgot to make the entry, but the magistrate said the defendant could not relieve himself of responsibility by employing an assistant. He imposed a penalty of 20s., with 2s. costs. The witness Davis applied for his expenses, but the magistrate refused to grant any.

Photo Dark Room.—Mr. David Watson, chemist and druggist, 558, Cathcart Road, Glasgow, intimates that he has a well-equipped dark room, also a large stock of photographic goods.

Mr. G. J. Blore has opened a branch establishment at Langworthy Road, Seedley, Manchester, which has been fitted up by Messrs. Ayrton & Saunders, of Liverpool.

The Glasgow School of Pharmacy, under the guidance of Mr. Lothian, Principal, had a botanical excursion to Garelochead last Saturday. The outing proved most enjoyable and profitable, and the spot visited was a rich mine for the field-botanist.

Newcastle Chemical Report.

June 22, 1898.

The trade, although not brisk, is a shade more regular, shipment to the Baltic and Mediterranean ports being pushed more about. Prices, however, are unchanged andquoted as follow:—Bleaching Powder, according to market, £6 5s. to £6 10s. Soda Crystals: basis, 45s. to 52s. 6d. Caustic Soda: 70 per cent. basis, £7 5s. to £7 10s. Soda Ash: 52 per cent., £4 5s. Alkali; 52 per cent., £5 5s. Sulphur: £5 per ton.

Trade Notes.

Extract of Meat is now offered to the public in a variety of forms, for which many more or less supportable claims are entered, but few persons will be found to deny the undoubted convenience of the "Valtine" Meat Globules, prepared by the Valentine Extract Company, Limited. They consist essentially of gelatin capsules prepared by special treatment so as to contain fluid extract of meat, without any impairment of appearance or efficiency. The extract is manufactured by an improved process based on that of Liebig, and all that is necessary to prepare beef tea is to drop one of the globules into a cupful of boiling water and stir quickly. The liquid may be flavoured to taste by adding one of the "Valtine" Flavour Peloids, which are about the size of ordinary compressed tablets. The idea of thus presenting the flavouring agents is very ingenious, and in practice it works admirably. An excellent soup may be made in a few minutes by dissolving the globules in hot water, adding some stock, and flavouring with the peloids, which consist of vegetable extracts and can be obtained of greater or less piquancy as desired. A smaller size of the Meat Globules is specially prepared for the use of cyclists and other travellers. One or two, taken with a biscuit, will serve to keep off the pangs of hunger and maintain strength until a proper meal can be obtained. They are easily swallowed, and should be found useful as a stimulating agent. Both sizes of the globules are daintily packed in ornamental tin boxes which ought to sell readily.

Messrs. Cuxson, Gerrard & Co. intimate that the partnership lately subsisting between Robert Darton Gibbs, John Cuxson, and Alfred William Gerrard, in the business of surgical dressings and appliance manufacturers, and manufacturers, importers, and dealers of and in druggists' sundries, carried on by them at Fountain Lane, Oldbury, in the county of Worcester, and Holyhead Road, Wednesbury, in the county of Stafford, under the style of Gibbs, Cuxson & Co., was dissolved and determined by effluxion of time, on December 31 last, when the said Robert Darton Gibbs retired therefrom. All debts due to and from the said late partnership will be received and paid by the said John Cuxson and Alfred William Gerrard, by whom the said business has since been carried on, and who will continue to carry on the same as heretofore under the style of Cuxson, Gerrard & Co.

Messrs. Southall Brothers & Barclay, of Birmingham, have formed their business into a limited company with a capital of £200,000, divided into 70,000 five per cent. preference shares of £1 each and 130,000 ordinary shares of £1 each. The present issue is 70,000 preference shares of £1 each, which are cumulative as to interest and preferential as to capital, of which 23,333 are taken by the vendors and 80,000 ordinary shares of £1 each (none of the ordinary shares are offered to the public). The business was established seventy-eight years ago at Bull Street, Birmingham, and is now transferred for family reasons, and on account of extension and development, to the limited company as a going concern from January 1, 1898. The purchase will include freehold and leasehold properties, plant, machinery, fixtures, furniture and trade appliances, book debts (guaranteed), stock-in-trade, goodwill, patent rights, and trade marks. All the directors in the company are members of the old firm. The vendors take the whole of the ordinary shares and as many of the preference shares as possible after offering to the public a sufficient quantity to get a quotation on the Stock Exchange.

Marriage.

Jackson—Poole.—On June 22, at Kirkgate Wesleyan Chapel, Bradford, by the Rev. W. Scott-Page, William Kendall Jackson, chemist and druggist, youngest son of Mr. John Jackson (of the firm of Harrison, Parkinson & Co., chemists, Bradford), to Edith Mary, daughter of Mr. R. Poole, Bradford.

MARKET REPORT and Prices Current

Specially compiled for the Pharmaceutical Journal

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

LONDON REPORT.

JUNE 23, 1898.

Business has been extremely quiet during past week, while the changes in value which have taken place, either in an upward or downward direction, have been comparatively of little importance. Quinine is quiet. Quicksilver and Mercurials firm. Acid Citric, Acid Tartaric, and Cream of Tartar firm. Glycerin rather harder. Cod-liver Oil steady. Ipecacuanha firm. Cocaine, Phenacetin, and Sulphonal unchanged. Acetanilide weak. Opium firm and rather dearer in Smyrna. Morphia and Codeia without change. Borax and Acid Boracic quiet. Bromides and Iodides in good demand. Acid Carbolic firm and reported likely to be dearer. Same applies also to Permanganate of Potash and Santonine. The following are actual prices ruling for articles of chief interest:—

ACETANILIDE—Is weak, there being sellers from second hand at 1s. 1d. per lb. for half ton lots.

ACID BORACIC—Unchanged at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

ACID CARBOLIC—Market is firm at 7d. per lb. for 35 to 36° C. acid in bulk; other qualities and packing in proportion. *Crude* 60° F. 2s. 1d., 75 F. 2s. 7d. per gallon. *Liquid* 95 per cent. of pale straw colour 1s. 2d. to 1s. 3d. per gallon, according to quantity, in 40-gallon casks.

ACID CITRIC—Is steady with more business doing at 1s. 1d. per lb. for *crystals*.

ACID TARTARIC—Is firm at 1s. 1d. per lb. for *English* and 12¾d. per lb. for *Foreign crystals*.

AMMONIA COMPOUNDS.—*Muriate*, chemically pure B.P. 30s. per cwt. pure white 98 per cent. 26s. per cwt., ditto large crystals for batteries 27s. 6d. per cwt. *Sulphate* quiet at last week's prices, £9 for gray prompt 24 per cent., London. *Bromide* unchanged at 2s. 2d. per lb. *Iodide*: 14s. 6d. per lb. *Oxalate*: 6d. per lb. *Sulphocyanide* in good demand at 1s. 1d. to 1s. 2d. per lb. *Sal ammoniac* unchanged at 35s. per cwt. for "firsts," and 33s. per cwt. for "seconds" lump.

ARSENIC.—*Red* 26s. 6d. per cwt. for lump and 27s. per cwt. for powder. *Yellow*, lump 27s. 6d. per cwt., powder 28s. per cwt.

BLEACHING POWDER.—Steady at £7 per ton on the spot.

BROMIDES—Are a firm market at 1s. 10d. per lb. for *Potass. Bromide*, and 2s. 2d. per lb. for *Ammon.* and *Soda Bromide*. *Bromine* is unchanged at 1s. 11d. per lb. in 20 case lots.

CAMPHOR.—*Crude* is somewhat firmer and a moderate business has been done in Japan at 88s. cwt. and in China at 82s. per cwt., both *c.i.f.*

CASCARA SAGRADA.—Holders are firm in their ideas, and prices have an upward tendency, old bark being quoted 27s. 6d. per cwt., while last year's crop can be bought at 22s. 6d. to 25s. per cwt., according to quantity.

CINCHONA BARK.—At the monthly London sales, held on Tuesday, fair supplies were offered, amounting to 2700 packages of all descriptions, as compared with 4000 at the preceding sales. The greater part found buyers at steady prices, rather better than the Amsterdam auctions realised. In the case of cinchonidine-yielding barks very full prices were paid. *Calisaya*: 349 packages offered, and 126 sold (mostly damages); quills, 4¼d. to 4⅝d. per lb. *African*: 27 packages sold: medium quills, 3d. *Ceylon*: 224 packages offered, and 143 sold; red, chips 2d. to 4¼d.; Ledgeriana, broken quills and chips 2¾d., stem and chips 3½d., root 5d. *East Indian*: 1858 packages offered and 1736 sold: Crown, chips 3d., ditto renewed 2⅝d. to 3d.; Red, chips 1⅝d. to 3¼d., ditto renewed 2d. to 3¼d., broken quill and chips 2⅛d. to 3⅛d., root 2⅛d. to 3d.; Ledgerianal chips 3d. to 4½d., ditto renewed 1⅞d. to 4⅜d., broken quill and chips 2⅜d. to 2¾d., stem and chips 2¼d., chips and shavings 3½d. to 5d. *Java*: 223 packages offered and sold at 3¼d. to 4⅝d. for small chips.

CLOVES.—Privately the market for *Zanzibar* is flat with a declining tendency. Quotations are: Spot 3 7/32d., August to October delivery 3⅝d., October to December delivery 3⅝d. At auction 107 bales middling dark *Zanzibar* sold at 3½d.

COCAINE.—In view of the result of the late discussion as to the validity of the Maclagan test of the purity of this article, buyers are coming to the conclusion that it is preferable to buy only cocaine which fully answers above test, the consequence being that the well-known *B. & S.* brand, already so favourably known, is coming into even more exclusive demand. Makers' price of same is 9s. 6d. to 9s. 9d. per oz. for bulk packing, according to quantity, other makes being obtainable for rather less money.

CODEIA—Unchanged at 11s. 3d. to 11s. 9d. per oz., according to quantity.

COD-LIVER OIL—Remains very quiet. A better demand is, however, anticipated before long. The nominal quotation for best new non-freezing *Norwegian* oil, in tin-lined barrels, varies from 82s. 6d. to 90s. per barrel, according to quantity and brand. *Newfoundland* oil is practically a dead letter.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*, commercial, 1s. 4d., pure, 3s. per gallon. *Benzole*, 50 per cent., 1s. 1d., 90 per cent., 1s. per gallon. *Crude Naphtha* 30 per cent. at 120° C. 6d. per gallon. *Solvent Naphtha* 95 per cent. at 160° C. 1s. 8d. per gallon.

CREAM OF TARTAR.—Higher prices are asked by manufacturers which, at the moment prevent business, but the consumptive demand is slow. First White Crystals on the spot are quoted 71s. per cwt., powder 73s. to 74s. per cwt. For the higher strengths as now required by the B.P. 82s. per cwt. is asked for Crystals and 85s. per cwt. for powder.

GAMBOGE.—Privately this gum has been in better demand with sales of good bright pipe at £8 15s.

GINGER.—*Cochin* remains dull. Of 1304 bags rough kinds only 300 bags sold, chiefly without reserve, small and ends 16s. 6d., fair medium and small washed 23s. 6d., fair brown rough Calicut 24s. 6d. to 25s.; cut kinds also mostly bought in, bold A 85s.; 8 cases sold, bold and medium 70s. 100 bags limed *Japan* bought in at 18s. 27 bags *Liberian* bought in at 16s. Of *Jamaica* about 350 packages sold, low middling to middling at 77s. to 80s., good middling to good bright and plump 81s. to 90s.

GLYCERIN.—Market is firm both for *crude* and also for *refined*, the lowest price at which good *German* white double distilled chemically pure 1260 quality in 56 lb. tins, 4 in a case, can be bought being 53s. per cwt., while the agents for some of the best *German* brands ask as much as 62s. 6d. per cwt., *English* being obtainable at about the lower figure. The market looks very much like going dearer both in view of a possible increased demand for the manufacture of explosives, as also of the fact that the season when buyers will be laying in their stocks of *refined* for the winter consumption is gradually drawing nearer.

GUM MASTIC.—The demand is slow, and only small sales of good pale have been made at 1s. 11d. per lb.

INSECT POWDER.—Genuine Dalmation is quoted at from 1s. to 1s. 2d. per lb., with lower qualities at 7d. to 10d. per lb.

ISINGLASS.—The monthly auctions took place on Tuesday, when 576 packages were offered, as against 700 in May and 550 in April. Demand was generally slow, and a quiet tone prevailed, with irregular and, on the whole, rather lower prices. Nearly one-half consisted of *Bombay*, which was partly sold at steady rates. A good supply of *Penang* was chiefly sold at a decline of 1d. for *leaf*, and about 3d. for *tongue*. *Saigon* leaf met a decidedly slow demand, and only a small part sold at cheaper rates. The moderate supply of *Brazil* went off slowly at easier prices.

IODIDES—In good demand at unchanged prices, viz., 9s. 9d. per lb. for *Potass Iodide* in 2 cwt. lots, and 13s. 4d. per lb. for *Iodoform*. *Iodine* remains at 7½d. per oz.

JAPAN WAX—Very quiet; good squares quoted 34s. per cwt., but no business of importance has been reported.

MERCURIALS.—Makers' price is unchanged at 2s. 9d. per lb. for *Calomel*, and 2s. 5d. per lb. for *Corrosive Sublimate* in ½-cwt. lots.

MENTHOL—Steady at 7s. per lb. on the spot. For forward delivery the Japanese, after seeking low bids, decline to sell.

MORPHIA.—There is so far no change in makers' price, which remains at 4s. 6d. per oz. for the *Hydrochlorate* powder.

NITRATE OF SODA.—Market is quiet at £7 12s. 6d. to £7 15s. per ton for *commercial* and £8 to £8 2s. 6d. for *refined*.

OILS (ESSENTIAL).—*Peppermint*: American HGH is quiet at 5s. 7½d. per lb.; Wayne County steady at 3s. 9d. to 4s. per lb. *Japanese*; Dementholised, 3s. per lb.;

40 per cent., 4s. 6d. per lb. *Star Aniseed* quiet at 6s. 10½d. per lb. on the spot. *Citronelle* very dull at 12⅝d. per lb. in drums, and 1s. 1½d. per lb. in tins. *Lemongrass*: Business has been done at 4¾d. per oz., being firmer. *Cinnamon*: Fine sold at 2s. 4d.; middling, 11d.; leaf oil dull, with sellers at 2½d.

Oils (Fixed) and Spirits.—*Linseed* is again lower on the week at £16 10s. for spot pipes, and £16 17s. 6d. for barrels, *Rape*: Ordinary brown on spot, £22 5s.; refined, £23 10s. *Cotton* quiet but unchanged; London crude spot, £13 12s. 6d.; refined spot, £15 10s. to £16, according to package. *Olive* oils remain quiet and unchanged at last week's prices. *Coconut* very dull and a shade easier; Ceylon on the spot, pipes, £24 10s., hogsheads, £25 10s.; Cochin nominally £29 10s. *Palm* lower at £23 10s. for Lagos on the spot. *Turpentine* lower and very quiet, American spot 22s. 3d. per cwt. *Petroleum Oil* slightly easier at 4½d. to 4⅝d. for Russian on the spot, and 5d. to 5⅛d. per gallon for American. *Petroleum Spirit*: American 5⅝d. per gallon, deodorised 6d. per gallon.

Opium.—An advance is reported from Smyrna of about 2d. per lb. for good current *tale quale*, for which the price over there is now 10s. to 10s. 2d. per lb. Here the market is decidedly firm at 10s. 6d. to 10s. 9d. for fair to good *druggists*, 11s. to 13s. for *soft shipping*, and 10s. 9d. to 11s. 6d. for *Persian*.

Permanganate of Potash—Is in better demand in consequence of the advent of warmer weather, and we shall probably see higher values shortly. Price remains, however, at 62s. 6d. and 67s. 6d. per cwt. for small and large crystals respectively.

Phenacetin—Is quiet at 3s. 9d. to 4s. 3d. per lb., according to quantity.

Potash Compounds.—*Bichromate*, 4d. per lb.; *Bicarbonate* steady at 30s. per cwt. for both *crystals* and *powder*. *Carbonate*: Pure *B.P.* 55s. to 60s. per cwt., refined 80 to 82 per cent. 17s. per cwt. *Cyanide*: 98 to 100 per cent. 1s. 2d. per lb. *Bromide* steady at 1s. 10d. per lb. *Iodide* quiet at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Permanganate* steady at 62s. 6d. to 67s. 6d. per cwt. for small and large crystals respectively. *Prussiate*: *Red* steady at 1s. 2d. per lb.; *yellow* quiet at 6¾d. to 7d. per lb., for English. *Chlorate* unchanged at 3½d. per lb.

Quinine.—Market is very quiet, good German makes of *Sulphate* being obtainable at 9½d. per oz. for 1000-oz. lots in 100-oz. tins, the maker's price remaining unchanged at 10d. per oz. So far the good prices realised at Tuesday's bark sales have had little or no effect on the quinine market, the future of which remains somewhat of a puzzle, even to the best informed.

Santonin—Has been in more demand during the past few days, and the idea appears to be gaining ground that an advance in price, which is exceedingly low, viz., 4s. 5¼d. per lb. for 3-cwt. lots, is not improbable.

Scammony.—Fair sales of "seconds" have been made at 19s. to 21s. per lb. Demand for "firsts" is restricted owing to firmness of holders.

Shellac.—Privately prices are steady, but a quiet tone continues to prevail, business in all positions being unimportant. At the fortnightly auctions on Tuesday, there was good competition notwithstanding the larger supply, and about one-half found buyers at barely last sales' rates. We call the value of *TN Second Orange* about 64s. per cwt. A total of 1232 cases offered and 590 cases sold. *Fine Orange*: 1 case Octagon B offered and bought in, good pale of the mark at 93s. *Second Orange*: Of 1044 cases 424 sold, partly without reserve, good bright cakey at 70s., fair bright reddish at 63s. to 64s., dull palish flimsy part broken at 63s. to 64s., middling curly reddish at 62s., ordinary dark red at 60s. to 61s., weak livery at 59s. to 60s. *Garnet*: Of 12 cases 7 cases sold, fine blocky *OCC* at 62s. *Button*: Of 175 cases 159 sold, fine bold genuine 1sts at 91s. to 93s., fine pale coloury 1sts at 83s., ordinary to fair ditto at 73s. to 78s., good seconds 74s. to 75s., ordinary to fair circle 2's 64s. to 68s., ordinary glassy 3rds at 59s. to 60s., common glassy 4ths at 50s. to 53s., low dark at 25s. to 31s.

Soda Compounds.—*Crystals*: 55s. per ton. *Acetate*: 13s. per cwt. for refined; 35s. per cwt. for chemically pure. *Hyposulphite* steady at £6 to £8 per ton, according to brand. *Sulphide*, for tanners, £7 5s. per ton. *Bicarbonate*: Commercial, 98 per cent., £7 5s. per ton; full bicarbonated, 18s. 6d. per cwt. *Bromide*: 2s. 2d. per lb. *Iodide*: 11s. 7d. per lb.

Spices (Various).—*Black Pepper*: 300 bags Tellicherry bought in at 4¼d. *White Pepper*: 80 bags limed Penang bought in at 7d., also 30 bags fine Singapore at 9d. *Chillies*: 20 bales Zanzibar bought in at 35s., also 55 packages Japan at 40s. to 44s. *Cassia Lignea*: 12 boxes bought in at 50s. *Cinnamon Chips*: 80 bags Ceylon bought in at 3¼d. *Mace*: Of 47 cases Penang 4 cases good red sold at 2s. 2d., 19 packages West India sold at 1s. 4d. to 1s. 7d. *Nutmegs* remain dull at about previous rates. *Pimento*: Only 61 bags sold at 4d. to 4¼d.

Sulphate of Copper.—Fairly steady at £15 5s. to £16 10s. per ton according to brand.

Turmeric.—The high prices asked somewhat check business. A few parcels have been sold, including fair bright *Madras* finger, at 22s. per cwt. *Bengal* quoted 17s. 6d. per cwt.

To-day's drug auctions passed off quietly, a considerable number of the lots offered being bought in, while prices realised show no very important changes in either an upward or downward direction. The following are the particulars as far as same were available up to time of going to press:—

Aconite Root.—3 bags fair *Japan* bought in at 27s. 6d. per cwt.

Aloes.—1 case strained *Mocha* sold very cheaply at 17s. 6d. per cwt. *Socotrine*: Further arrivals have taken place in kegs, and holders are now not quite so firm in their ideas, and would probably accept 75s. per cwt. *Cape* are again somewhat dearer, fair bright hard selling at 26s. per cwt., down to 18s. to 20s. for drossy and inferior.

Arraroba.—36 cases brown woody were offered without reserve, subject to price realised paying the charges. There was, however, no bid, and the lot was withdrawn.

Balsam Peru.—1 case of good quality was held for 9s. 3d. per lb.

Balsam Copaibæ.—5 cases *Carthagena* fetched 1s. 4d. to 1s. 5d. per lb. 10 cases *Maracaibo*, which is now the B.P. quality, held for 1s. 8d. per lb.

Balsam Tolu.—25 cases of fair quality were bought in at 1s. 7d. to 1s. 8d. per lb.

Buchu Leaves.—9 bales fair green rounds realised 4½d. per lb.

Cardamoms.—In large supply, about 420 cases selling at irregular but on an average fairly steady prices. Very fine bold pale *Mysore* sold at 3s. 11d. per lb., other qualities down to 2s. 8d. per lb. 2 cases small brown *Ceylon* sold at 1s. 8d. per lb. Brown *Malabar* held 2s. 2d. per lb., and poor wild ditto for 1s. 9d. *Seeds* were cheaper at 2s. 8d. to 2s. 10d. per lb.

Castoreum.—1 keg bought in at 36s. per lb. for low pickings.

Cinchona Bark.—4 packages *red bark* bought in at 6d. to 1s. per lb. 11 packages *yellow bark* held for 1s. 3d. per lb. 27 bales *Carthagena* bought in at 5d. per lb.

Coca Leaves.—Fair green *Ceylon* sold at 7d. to 7½d. per lb.

Colombo Root.—64 bags fair sorts bought in at 20s. per cwt.

Colocynth.—4 cases small to boldish rather brown *Turkey* taken out at 1s. per lb.

Croton Seeds.—4 bags sold at 71s. for fair and 65s. per cwt. for rather dark. 23 bags good bright reeds were held for a very long price, say 90s. to 95s. per cwt., a bid of 85s. per cwt. for the lot being refused.

Cummin Seed.—15 bags *Malta*, of medium quality, were bought in at 22s. 6d. per cwt.

Cus Cus.—94 bales of exceedingly weighted root was bought in, sellers' idea of 5s. per cwt. being unobtainable.

Cuttlefish.—18 packages, part sold at 8d. for good bold, 3½d. per lb. for medium, and 1¼d. per lb. for small.

Elaterium.—1 box *Malta* of rather dark and irregular appearance bought in at 1s. per oz.

Ergot of Rye.—12 bags slightly weevily *Spanish* sold at 6¼d. per lb., which shows a decided drop in value. 1 case very weevily ditto sold at 5¼d. per lb., it being stated that the parcel originally cost 2s. 6d. per lb., so that the holder can hardly congratulate himself on the result of his venture.

Essential Oils.—30 cases fair commercial *Eucalyptus Oil* were held for 10d. per lb. 2 cases *Cinnamon Bark Oil* of good quality were bought in, price required being 7s. per oz. 26 cases *Lemongrass Oil* of fair quality held for 4½d. per oz. 1 case *Oil of Lemon* of rather doubtful quality was taken out at 1s. 6d. per lb. 1 case Dodge and Olcott's *Oil Wintergreen* bought in at 5s. 3d. per lb. 1 case *Cassia Oil* (76 per cent. *Cinnamic Aldehyde*) held for 4s. 9d. per lb. 20 cases *Cinnamon Oil* for 4d. per oz. 5 cases China *Star aniseed Oil* for 7s. per lb.

Gamboge.—17 cases fair, bright, softish sold well at £8 per cwt.

Golden Seal Root.—1 bale sold without reserve at 1s. 3d. per lb.

Gum Ammoniacum.—1 case dark blocky bought in at 17s. 6d. per cwt. 2 cases very fine small clean drop sold at 55s. per cwt.

Gum Arabic.—4 cases picked were

bought in at £6 15s. for grains, and £14 per cwt. for fair small to bold white gum.

GUM ELEMI.—8 cases fair pale held for 26s. per cwt.

GUM GUAIACUM.—For 10 cases drossy broken block there was no bid.

GUM MYRRH.—Fair sorts were held for 60s. per cwt., pickings and siftings selling at 10s. per cwt.

GUM BENJAMIN.—Fair seconds *Sumatra* sold at £6 per cwt., rather better quality being held for £7 to £7 10s.

GUARANA.—1 case of fair quality was bought in at 1s. 6d. per lb.

HONEY.—Fair pale *Jamaica* was held for 25s. to 26s. per cwt. 14 packages of not quite so good quality sold very cheaply at 20s. 6d. to 22s. 1 case inferior selling without reserve at 10s. per cwt.

IPECACUANHA.—*Rio* continues to be firmly held at 9s. to 9s. 1d. per lb., whilst *Carthagena* of fair quality was held for 4s. 6d. per lb.

JALAP.—20 bales small heavy tubers were mostly bought in at 6½d. to 7d. per lb., which shows a higher range of value. 3 bales slightly greasy and part slightly damaged by fire sold at 5d. per lb.

KOLA NUTS.—1 case *Ceylon* of fair quality sold cheaply at 2½d. per lb. 8 bags dull *West Indian* sold at same price.

LIQUORICE ROOT.—19 bales good *Syrian* root sold cheaply at 2s. 6d. to 3s. 6d. per cwt., this quality is selling privately at from 9s. 6d. to 10s. per cwt.

MANDRAKE ROOT.—1 bag sold at 17s. per cwt.

MUSK.—13 caddies *Tonquin* all bought in at 37s. 6d. to 50s. per oz., being price required for middling to fair quality, and 21s. per oz. for low inferior.

ORANGE PEEL.—23 packages thin cut were taken out at 8d. per lb. for good new, and 5½d. per lb. for the inferior old thin cut being held for 6½d. per lb.

ORRIS ROOT.—1 bale *Verona* bought in at 25s. per cwt. 15 cases *East Indian* sold at 5s. per cwt.

PODOPHYLLIN RESIN.—36 tins, each containing 5 lbs. nett, bearing the mark McKesson and Robbins, New York, were bought in at 8s. per lb.

RHUBARB.—Bold flat *high dried* of good colour was bought in at 1s. 2d. per lb.; ditto second size, not so good colour, held for 1s. 1d.; rough horny flat ditto selling at 6d. to 6¼d. per lb. 1 case *Canton* mixed round and flat sold at 1s. per lb. *Shensi*: Rather rough horny round of good colour held for 2s. 6d. per lb., rather boldish trimming root realising 2s. 4d. per lb., ordinary flat *Shensi* held for 2s. 6d.

SARSAPARILLA.—33 bales *Jamaica* sold readily at 1s. 8d. to 1s. 9d. per lb. for sound, and at 1s. 4d. to 1s. 7d. per lb. for damaged. 1 bale red and grey native country damaged sold very cheaply at 9½d. per lb., subject to approval, same price being offered for 14 bags sound red, grey, and yellow ditto, which were, however, taken out at 1s. 2d. per lb. 10 bales *Lima* sold at 1s. 1d. to 1s. 2d. per lb., down to 10d. per lb. for *ICSD*.

SENNA.—*Tinnevelly* in small supply and of low quality, which sold at 1½d. to 2d. per lb. for small spotty leaves, and pods at 1¼d. to 1½d. per lb. for dark to fair. *Alexandria* siftings sold at 2¾d. per lb. Other qualities bought in.

TAMARINDS.—32 barrels *West Indian* sold readily at 10s. 6d. per cwt.

VANILLA.—Over 300 tins were offered, quality being medium only, these sold well at about last sale's prices.

WAHOOS BARK.—1 bag sold without reserve at 2d. per lb.

WAX.—Fair to good *Jamaica* was bought in at £7 5s. to £7 10s. per cwt.

LIVERPOOL REPORT.

JUNE 22, 1898.

The quiet tone which has pervaded the market for some time still continues, and whilst the amount of business done is quite up to the average, there are no particularly noteworthy transactions to report. The only alterations in quotations are in oils, Linseed Oil and Cottonseed Oil having receded a little and Castor Oil, Calcutta variety, having advanced.

AMMONIA SALTS.—*Carbonate*: 3d. per lb. *Sal ammoniac*: 35s. and 33s. per cwt. *Sulphate*: Still quiet at £9 3s. 9d. per ton.

BEESWAX.—7 packages of Conatury sold at auction for £6 13s. 9d. per cwt.

BLEACHING POWDER.—£5 10s to £6 per ton.

CANARYSEED.—At present this is merely nominal at 25s. to 27s. 6d. per 464 lbs. for Turkish seed. The latter price applies to fine samples of old-crop seed, of which small amounts have changed hands. 150 bags of fair Turkish sold at 25s. 6d. per 464 lbs.

COPPERAS—Continues firm and in good demand at 38s. per ton for Lancashire, and 36s. for Welsh.

COPPER SULPHATE—Evinces a tendency to rise £16 per ton.

GINGER.—26 bags of Sierra Leone found buyers at 17s. 6d. per cwt.

HONEY.—Chilian Pile X has been selling at 24s. 6d. per cwt.

LINSEED—Is still dull; the only sales reported have been of River Plate at 34s. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor*: Calcutta "good seconds" is in good demand, all offering at 3¼d. per lb. having been bought up; 3⅜d. is now the price for the small amount in stock; French 1st pressure sells freely at 3¼d. per lb. *Olive* is steady at £28 10s. to £29 10s. for Seville and Malaga per tun. *Linseed* of Liverpool make is lower in price (18s. to 18s. 6d. per cwt.) *Cottonseed* of Liverpool refining offers at the easier rate of 16s. to 16s. 6d. per cwt. *Spirits of Turpentine* on the spot, 24s. 9d. is asked, and for one cargo near port 22s. 6d. per cwt. is wanted.

POTASH SALTS.—*Bichromate*: 3¾d. per lb. *Chlorate* firm at 3¼d. per lb. *Cream of Tartar* has risen to 78s. 6d. per cwt. on the spot, and a good amount of business has been concluded in Cream "to arrive" at better rates than those obtainable of late. *Pearlashes* continue only nominal at 35s. per cwt. *Potashes*: Demand limited at 20s. to 20s. 3d. per cwt. *Saltpetre*: 21s. 6d. per cwt.
