TRANSLATOR'S PREFACE.

In this volume I have used, though sparingly, the terms suggested in the preface to volume II - re-formate (formate), ad-formate, transformate. These are applied to single words, as on p. 30, Rem. 1. When a word is modified by the analogy of another, it is said to be an ad-formate of it (p. 29, line 7 from the bottom, is an example). In its new shape it is transformed from the old, or a transformate of it (p. 44, footnote). Absolutely regarded, it is a re-formate (sometimes, where there can be no mistake, the simple word formate Re-formation and transformation are used when not single words, but groups, come in question (as p. 90, line 6 from bottom); also when certain sound changes are exemplified by the words cited (as the z in sibunzo ahtozo, p. 40). These terms may by ugly, but they are so very convenient that their ugliness will, it is hoped, be forgiven.

In such words as *Pāli*, *Prākrit*, *Gāthic* the quantity has not always been marked. It seemed needless to do so when this had been indicated often enough to ensure its being remembered.

The word polysyllable is used to include dissyllables, unless otherwise implied.

I had hoped to get out this volume by Christmas last. The delay is due partly to the waste of time in sending proofs to and fro from Germany, and partly to the almost ceaseless pressure of other duties.

Mr. Conway's criticism and advice has been very useful all through, and I take the opportunity of thanking him for it.

W. H. D. ROUSE.

CHELTENHAM, May 30, 1892.

THE NUMERALS. 1)

§ 164. In the original Indo-Germanic language, the numerals 1 to 999 were expressed in one of three ways. Some were simple words, as *tri- 'three' (Skr. tri-); some were compounds, as

¹⁾ Bopp, Vergl. Gr. II 3 55 ff. Schleicher, Compend. 4 p. 477 ff. Bopp, Über die Zahlwörter im Sanskr., Griech., Lat., Litth., Goth. und Altslaw., Abh. der Berliner Akad. 1833 p. 163 ff. Lepsius, Über den Ursprung und die Verwandtschaft der Zahlwörter in der Indogerm, Semit. und der Koptischen Sprache, in 'Zwei sprachvergleichende Abhandlungen', Berlin 1836, p. 81 ff. J. Grimm, Geschichte der deutsch. Sprache 3 Pott, die quinare und vigesimale Zählmethode bei Völkern aller Welttheile, nebst ausführlichen Bemerkungen über die Zahlwörter Indogermanischen Stammes, Halle 1847. Id., Die Sprachverschiedenheit in Europa an den Zahlwörtern nachgewiesen, sowie die quinäre und vigesimale Zählmethode, Halle 1868. E. Schrader, Über den Ursprung und die Bedeutung der Zahlwörter in der indoeurop. Sprache, Stendal 1854. Zehetmayr, Verhalbedeutung der Zahlwörter, als Beitrag zur Be--leuchtung des ursprüngl. Verhältnisses der indogerm. Sprachen zum semit. Sprachstamme, Leipz. 1854. W. Wackernagel, Über Zahl und Ziffern, Michaelis' Ztschr. für Stenogr. 1855. Bernloew, Recherches l'origine des noms de nombre japhétiques et sémitiques, Giessen 1861. Krause, Über den Ursprung und die Bedeutung der Zahlwörter, Ztschr. für österr. Gymn. 1865 p. 867 f. J. Schmidt, Über einige numeralia multiplicativa, Kuhn's Ztschr. XVI 430 ff. - Ed. Müller, Sprachvergleichendes über die Numeralia, Fleckeisen's Jahrbücher für class. Phil. 97, p. 535 f. Ascoli, Über eine Gruppe indogermanischer Endungen, Krit. Osthoff, Formassociation bei Zahlwörtern, Morph. Unt. I J. Baunack, Formassociation bei den indogerm. Numeralien mit besonderer Berücksichtigung der griechischen, Kuhn's Ztschr. XXV J. Wackernagel, Zum Zahlwort, ibid. 260 ff. The Author, Die Bildung der Zehner und der Hunderter in den idg. Sprachen, Morph-Unt. V 1 ff., 138 ff., 268.

*duō-dekm 'twelve' (Skr. dvá-daśa); and some were expressed by phrases, as *trejes qe uškmti qe 'twenty-three' (Skr. tráyaś ca vįśatiś ca). Simple words existed only for the numbers 1 to 10, and 100.

We find in the second stage, when the various branches of the language had begun to develope on their own lines, simple words for 1000, as Skr. sa- $h\acute{a}sra$ -m, Gr. Lesb. $\chi \acute{e}\lambda \lambda$ - $\iota o\iota$; but it is uncertain whether a corresponding form * $\hat{g}heslo$ - existed in the proethnic period, or whether the phrase 'ten hundreds' (cp. Skr. $da\acute{s}a$ - $\acute{s}at\bar{\iota}$ f.) was the sole expression for this number. If the simple words for 1000 were not earlier than the second stage, the change was similar to one which took place in Greek, where Homer's $\delta \epsilon x \acute{a} - \chi \epsilon \iota \lambda o\iota$ '10,000' was replaced later by $\mu \iota \acute{\nu} \rho \iota o\iota$.

The word *dekm 'decem' played an important part in the Indo-Germanic decimal system. It is in the highest degree probable that the Indo-Germanic elements *-kmt- and *-komt- which appear in the expressions for multiples of ten (Gr. Dor. Fί-κατι and

Whitney, Sanskrit Grammar, p. 160 ff. Spiegel, Gramm. d. altbaktr. Spr. p. 176 ff. - G. Mever, Griech, Gr.2 p. 372 ff. Author, Gr. Gr. (Iwau Müller's Handb. II2) p. 135 ff. Holtzmann, Über das deutsche Duodecimalsystem, Germania I 217 ff. Id., Das Grosshundert bei den Gothen, ibid. II 424 f. Rumpelt. Die deutsch. Zahlwörter sprachvergleichend dargestellt, Bresl. 1864. I d., Die dentschen Pronomina und Zahlwörter, 1870. Scherer, Zur Gesch. der deutsch. Spr. 2576 ff. Kluge, Zu den german. Numeralien, Paul-Braune's Id., Paul's Grundriss I 402 ff. - Schleicher, Temy Beitr. VI 393 ff. imenŭ čislitelĭnychŭ vŭ litvo-slavjanskomŭ i německomŭ jazykachŭ (Priloženie kŭ X. tomu zapisokŭ Imp. Ak. Naukŭ), St. Petersburg 1866. Gr. p. 149 ff. Kurschat, Gr. der litt. Spr. p. 259 ff. Miklosich, Vergl. Gr. IV 51 ff. Leskien, Handb. der altbulg. Spr.2 p. 78 ff. -Reference may also be made to the discussion of the Lycian numerals by Deecke, Bezzenberger's Beitr. XIV 181 ff. (see especially p. 240 ff.).

τριά-κοντα, etc.), and the word *kmtó-m 'centum', were connected with *dekm, and came from *-dkmt- *-dkomt- and *dkmtό-m, syncope having taken place because the first syllable was unaccented (I § 310 p. 247); see Scherer Zur Gesch. der deutsch. Spr. 2 579, Bugge Bezz. Beitr. XIV 72.

We are in the dark as to the precise significance of the original Indo-Germanic words for 'two' and all the following numerals. Many conjectures have been put forward, some of them not at all amiss. It has been suggested, for example, that *ter- *tr-i- 'three' may have been a name for the middle finger, connected with Skr. tár-man- 'top of the sacrificial pillar' Gr. τέρ-θρο-ν 'end, point, top'; *penqe 'five' has been compared with Goth. figgr-s 'finger' (cp. O.H.G. fūst O.C.Sl. pestī 'fist' for *ppqsti-s, II § 101 p. 306), [and the slang phrase for a fist, bunch of fives]; and *dekm 'ten' with Gr. δέκομαι δέχομαι I receive' '). But many others are certainly far from the mark, as Zehetmayr's, in the work eited on the first page.

Our attention will be given first to Cardinal Numbers, to Abstract Numerals - so far only as they are used along with adjectival cardinal numbers in ordinary reckoning - and to the Ordinals. The Abstract Numerals are derived from the Cardinals by the suffixes -ti- and -t- (-d-), which serve as secondary suffixes in other abstract forms besides these (see II § 99 p. 293, § 101 p. 306 f., § 123 p. 390). Some of them were used in the proethnic period along with ordinary numerals; instead of 'ten men', for instance, the expression 'a ten of men' served equally well. Sometimes they even drove the cardinals out of the field altogether; in Balto-Slavonic *delim is not represented, but only $*de\hat{k}m-t(i)$ -, which appears in Lith. as deszimt(i)-, in Slav. as deset(i)-. The Ordinal Numerals contain -to- and -mo-, suffixes used in comparison; a conjecture as to the origin of these has been given in II § 72 Rem. p. 167 and § 81 Rem. 1 p. 242.

¹⁾ Scherer, op. cit. p. 578: "It therefore seems most natural to regard the word as an ancient expression for both hands held out to receive something".

CARDINALS, ABSTRACT NUMERALS, AND ORDINALS.

§ 165. One. In the original language, one or more derivatives from a pronominal stem oi- served to express one: cp. Gr. Ital. Kelt. Germ. Balto-Slav. *oi-no-s (Skr. has an enclitic $\bar{e}na$ - with the meaning 'he'), Iran. Gr. *oi-uo-s, Skr. *oi-qo-.

Aryan. Skr. έ-ka-s. Avest. ae-va- δi-va-, O.Pers. ai-va-. Greek. οἰ-νό-ς οἰ-νή 'ace, the number one on a die', οἰνη παρὰ τοῖς Ἰωσι μονάς (Pollux VII 204), οἰνίζειν τὸ μονάζειν κατὰ γλῶτταν and οἰνῶντα· μονήρη (Hesych.). Then there is the Homeric οἰέτης 'of the same age, contemporary', which Wackernagel (Kuhn's Ztschr. XXV 280) derives from *οἰξο-ξετης by syllabic dissimilation (I § 643 pp. 481 f.), whilst οἶο-ς Cypr. οἶ-ξο-ς meant 'alone'.

Italic. Lat. oi-no-s oeno-s ānu-s, Umbr. unu 'unum' Osc. úín sitú 'unita'.

Remark. Many scholars connect $\acute{e}-k\alpha$ -s with Lat. aequo-s and Gr. $\alpha i\sigma\alpha$ 'equal portion' (for $*\alpha i\varkappa^{u}_{L}\alpha$). If $*o\acute{z}$ - belongs to the stem o-, $*\alpha \acute{z}$ -might be connected with the feminine stem \ddot{a} - (§ 409). But at the same time such forms as Lat. auri-s: Gr. o \check{v} -ara suggest the possibility of a similar vowel variation here. — See Hübschmann, Das idg. Vocalsystem pp. 190 f.

Old Irish. oe-n.

Germanic. Goth. ái-n-s O.H.G. ei-n O.Icel. ei-nn.

Balto-Slavonic. Lith. v-ëna-s (cp. I § 666.1 p. 526), Pruss. acc. ai-na-n. O.C.Sl. i-nŭ (cp. I § 84 p. 82, § 666.3 p. 527), which in composition means 'one', as ino-rogŭ 'one-horned animal, unicorn'; elsewhere it has the meaning 'alter, alius'.

*sem- was another word for 'one' in the parent language. The idea originally conveyed by it was probably that of being together or united. This became the regular numeral in Armenian and Greek: Armen. mi (gen. mioj) for *sm-i (I § 560 p. 416); Gr. $\dot{\epsilon}\nu$ - instead of * $\dot{\epsilon}\mu$ -, nom. masc. in the dialect of Gortyn $\dot{\epsilon}\nu$ - ς Att. $\dot{\epsilon}\dot{\iota}\varsigma$, fem. $\mu\dot{\iota}a$ for * $\sigma\mu$ - ιu , $\mu\tilde{\omega}\nu\nu$ $\dot{\varsigma}$ 'one-hoofed' for * $\sigma\mu$ - $\omega\nu\nu$ $\dot{\varsigma}$ (II § 160 pp. 479 f.). Compare Skr. sa- $k\dot{\gamma}t$ 'once' Gr. $\ddot{\alpha}$ - $\pi\alpha\dot{\varsigma}$ 'once' - $\dot{\alpha}\pi\lambda\dot{o}$ - $\dot{\varsigma}$ 'single, simple', Lat. sim-plex, sin-gul $\ddot{\imath}$,

semel (see § 182), sem-per 'in one unbroken sequence, always', Goth. simlē 'once, once upon a time'.

Isolated forms, of doubtful origin, are Hom. Gort. lφ Lesb. Thess. ἴα (cp. Osthoff, Morph. Unt. IV 186 f.), and Slav. jedinŭ jedĭnŭ, the regular word for 'one' in that language.

First. In all periods, from the proethnic onwards, ordinals for this number were formed from the \sqrt{per} -, which is seen in Gr. $\pi \acute{e} \rho \bar{\alpha} v \ \pi \acute{e} \rho - v \sigma \iota \ \pi \rho \acute{o}$ etc. (Fick, Wörterb. I³ 140 ff.), by means of the suffixes -uo- (Ar., Gr., Slav.), -mo- (Ital., Germ., Balt.), $-t \eta \iota mo$ - (Ar.) and -isto- (West-Germ. and Norse).

*pr-uo-, * $p\bar{r}$ -uo-. The former became O.C.Sl. $pr\bar{i}$ - $v\bar{u}$, the latter is seen in Skr. $p\bar{u}rv$ - $iy\dot{a}$ -s $p\dot{u}rv$ -iya-s (also $p\dot{u}rva$ -s 'situated before'); Avest. pourviya- paoirya-; Gr. $\pi\varrho\bar{\omega}\tau o$ -s Dor. $\pi\varrho\bar{\omega}\tau o$ -s for * $\pi\varrho\omega F$ - $\alpha\tau o$ -s, besides which we have forms without the extension - $\alpha\tau o$ - (cp. $\tau\varrho\dot{\iota}\tau$ - $\alpha\tau o$ -s § 167), Dor. $\pi\varrho\dot{\alpha}\nu$ 'formerly' for * $\pi\varrho\omega$ - $F\bar{\alpha}$ - ν , and (with the suffix -i-o-) $\pi\varrho\dot{\omega}\eta\nu$ 'recently' for * $\pi\varrho\omega$ -F- $\iota\bar{\alpha}$ - ν . Cp. I § 306 p. 242, II § 63 p. 133, § 64 p. 134. Apparently we must assume a form *pr-uo- for Goth. $fr\dot{\alpha}uja$ 'lord', O.H.G. $fr\bar{o}$ 'lord' frouva (= Goth. * $fr\dot{\alpha}uj\bar{o}$) 'lady'; this *pr-uo- will be related to *pr-uo- in the same way as *pr-uo-to *pr-uo-.

*pṛ-mo-. Goth. fruma O.Sax. formo A.S. forma. Lith. pìrma-s. Cp. O.Ir. rem- 'ante, prae' II § 72 p. 168 and Lat. prandiu-m, which Osthoff is probably right in explaining as *pram-(e)d-iio-m 'early food' (cp. Morph. Unt. V p. III). *pro-mo- is seen in Umbr. prumum promom 'primum': cp. Gr. πρόμο-ς 'front man, front warrior, leader, prince' Goth. fram-aldrs 'advanced in age'. -mo- also occurs in Lat. prīmu-s Pelign. prismu 'primo' or 'primum' (I § 570 p. 427, II § 72 p. 168), which, like prīs-cu-s and prīs-tinu-s, is derived from a comparative form connected with prius (II § 135 pp. 433 f.).

-tymo-: Skr. pra-thamá- (for the th cp. II § 73 p. 178), Avest. fra-tema- O.Pers. fra-tama-. Cp. Avest. fra-tara- Gr. $\pi\rho\delta$ - $\tau\varepsilon\rho$ o- ς 'former, earlier'.

-isto-: O.H.G. furist A.S. fyrst O.Icel. fyrst-r. Cp. O.H.G. furiro 'earlier, superior'.

Alban. i-pare 'first' belongs to the same root as these words.

Words derived from other roots:

Skr. ādya-s from ā-dí-š 'beginning'; and later ādi-má-s.

Armen. nax and arajin, the latter from araj 'foremost side, front, origin, beginning' (cp. verj-in 'last' from verj 'end', ver-in 'highest' from ver 'above', and the like).

O.Ir. cēt-ne, in composition cēt-, Mod.Cymr. kyntaf, Gall. Cintu- in proper names, such as Cintu-gnātu-s ('primigenitus'); perhaps, as Thurneysen conjectures, this is connected with Goth. hindumist-s 'extreme, outermost' A.S. hindema 'last', since the ideas of 'first' and 'last' are easily interchanged. In Irish there is a further form oen-mad, used where larger numbers follow; here the termination -mad has come from sechtm-ad 'seventh' dechm-ad 'tenth', where m is part of the stem.

§ 166. Two.¹) The stem is *dyo- *duyo- (I § 117 p. 109); in composition and in some ordinary derivatives we have *dyi-, a form which recals *tr-i- 'three' (cp. II § 13 p. 28) and *y-i- 'two' in fi- $xa\tau\iota$ etc. (§ 177). I find it impossible to agree with Bartholomae (Ar. Forsch. III 39), who conjecturally restores * $dy\bar{o}i$ - *dyoi- *

Skr. $dv\bar{a}\dot{u}$ $dv\dot{a}$ $(duv\bar{a}\dot{u}$ $duv\dot{a})$, fem. neut. $dv\dot{e}$ $(duv\dot{e})$. Avest. dva, fem. $duy\bar{e}$ (cp. Bartholomae, Handb. § 92 p. 40).

Gr. $\delta \acute{\nu} \omega$ (used for both masc. and fem., like Lat. duo and Lith. dialectic $d\mathring{u}$, cp. also $\tau \omega$ $\sigma \tau \acute{\eta} \lambda \tilde{\alpha}$ § 426), $\delta \acute{\nu} o$ (which was perhaps originally the neuter, see § 293); $\delta \acute{\omega} - \delta \epsilon \kappa \alpha$ for $*\delta f \omega$. The Dor. and Later Att. $\delta \iota \sigma \acute{\iota}$ Lesb. $\delta \acute{\iota} \epsilon \sigma \iota$ or $\delta \iota \acute{\epsilon} \epsilon \sigma \iota$ Thess. $\delta \acute{\iota} \iota \iota \iota \iota$ are re-formates, apparently caused by $\delta \iota \iota \iota \iota$ ($\delta \iota \iota \iota \iota \iota$); the relation of $\tau \iota \iota \iota \iota \iota \iota$ made it seem natural to coin $\delta \iota \iota \iota \iota$ as dative to $\delta \iota \iota \iota \iota \iota$ $\delta \iota \iota \iota \iota$ made it seem natural to coin $\delta \iota \iota \iota \iota$ at a dative to $\delta \iota \iota \iota \iota$ $\delta \iota \iota \iota$ cannot be derived from $*d \iota \iota \iota \iota$ (cp. I § 130 pp. 117 f.); possibly it came from $*d \iota \iota \iota \iota$ cp. Skr. $d \iota \iota \iota$ double, twice and §§ 297, 311.

¹⁾ Benfey, Das indogerm. Thema des Zahlworts 'zwei' ist DU, Götting. 1876. — Zander, De vocabuli $\delta \dot{\nu}o$ usu Homerico Hesiodeoque et Attico, I, II, Königsberg 1834, 1845. — Meringer, Die Flexion der Zweizahl, Kuhn's Ztschr. XXVIII 234 ff.

Lat. duo, fem. duae (cp. §§ 285, 286), acc. duo, duōs, duās, dat. duō-bus, duā-bus. In Umbrian the inflexion is plural throughout: nom. masc. dur, acc. masc. fem. tuf, nom. acc. neut. tuva (cp. Lat. dua beside duo).

O.Ir. $dau\ d\bar{o}$, older $d\bar{a}u$, and also $d\bar{a}$ (§ 285), fem. $d\bar{\imath}$; O.Cymr. Mid.Bret. masc. dou.

Goth. $tv\acute{a}i$, neut. tva, fem. $tv\bar{o}s$; dat. $tv\acute{a}im$, gen. $tvaddj\bar{e}$ (see § 311). The Germanic dialects show various re-formates among the cases, as O.H.G. $zw\bar{e}ne$, which are not yet satisfactorily explained; the latest discussion of them is by Kluge in Paul's Grundriss I 403.

Lith. masc. $d\hat{u}$ for * $dv\hat{u}'$, fem. $dv\hat{i}$ for * $dv\acute{e}$, see I § 184 p. 160, § 664. 3 p. 523. O.C.Sl. dva $d\check{u}va$, fem. neut. $dv\check{e}$ $d\check{u}v\check{e}$.

*dui-. Examples of this base in composition are: Skr. dvi-pád- Gr. δί-πους Lat. bi-pēs A.S. twi-fēte 'two-footed', O.H.G. zwi-valt 'two-fold'. In derivatives: *dui-qo-: Skr. dvi-ka- 'consisting of two' Gr. δισσό-ς διττό-ς 'two-fold' for *δΓι-κ-μο-ς, O.H.G. zweho 'doubt' A.S. twiz 'twig, branch' (II § 86 p. 257). In Italic we find du- (as well as *dui-): Lat. du-plu-s du-plex du-centī (cp. § 180), Umbr. du-pursus 'bipedibus'; this was a re-formation, developed possibly with the aid of quadru- (II § 34 p. 61).

Remark 1. Side by side with Lat. bi-, dui- is found twice in composition, dui- $d\bar{e}ns$ and dui- $c\bar{e}nsus$ (Paul. Fest.). This, like O.Lat. duis = bis (§ 182), may have preserved an Idg. *duui- (cp. Ved. duvi) beside dvi), or it may simply be a modification of bi- on the analogy of duo (and of du-); I leave the matter undecided. In either case we may reject the view of Skutsch (De nominnm Latinorum compositione, Nissae 1888, p. 35), who holds that bi- arose from the dui- which is preserved in these two compounds. On the other hand, I agree with this scholar in regarding di- in late compounds (as di- $l\bar{v}$) as borrowed from the Greek di- (p. 36).

Armen. erku (gen. dat. erku-e), of uncertain origin. Bugge (Beitr. zur etym. Erläuterung der arm. Spr., 41 f.) derives the word from *ku- = Idg. * $du\bar{o}(u)$, with er- prefixed on the analogy of erek 'three'; a most daring suggestion. Fr. Müller would connect it with Suanian jeru Georgian ori 'two'.

Scond. For this numeral the different languages show very different forms.

Skr. dvi-tíya-s, Avest. bi-tya- Gāthic d^abi -tya- O.Pers. $d\bar{u}v\bar{v}tiya$ - (I § 159 p. 143).

Armen. erkir and erkr-ord (for *erkir-ord).

Remark 2. Perhaps erkir, like čorir 'fourth', was formed on the analogy of eri-r 'third'. The termination -ord, found in erkr-ord and all the numerals which follow, is very common in other words besides numerals: e. g. hanapaz-ord 'daily' from hanapaz 'always', parap-ord 'otiosus' from parap 'otium', ors-ord 'hunter' from ors 'hunt', lc-ord 'companion, σύζυγος' from luc 'yoke'. Petermann (Grammatica Linguae Armen. p. 162) and Bopp (Vergl. Gr. II³ 97 f.) offer very questionable conjectures as to its origin.

Gr. $\delta \varepsilon \dot{\nu} \tau \varepsilon \rho o \varsigma$ properly means 'removed to a distance from something, at a distance from it, coming after it in time or position' ($\delta \varepsilon \dot{\nu} \tau \alpha \tau o \varsigma$ is also found). It is etymologically connected with $\delta \varepsilon \dot{\nu} o \mu a \iota$ and the Sanskrit adj. $d \bar{u} - r \dot{a}$ 'far off, afar', and did not belong to the numerals until Greek had become a separate language. Its similarity in sound with $\delta \dot{\nu} \omega$ certainly had something to do with this new use. See the Author, Kuhn's Ztschr. XXV 298 ff.

Lat. secundu-s, connected with sequor; see II § 69 p. 161.

O.Ir. aile (Mid. Cymr. Mod. Bret. eil) = Lat. aliu-s, and $t\bar{a}nise$, which is connected with $imth\bar{a}nad$ 'change', though nothing further is known of its etymology.

Goth. an-par O.H.G. andar. Lith. añtra-s O.C.Sl. vătoră. Cp. II \S 75 p. 198. It possibly may be analysed vă-toră (cp. Skr. u- $bh\bar{a}$ á), see \S 285.

§ 167. Three. Idg. masc. neut. *tr-i-. The -i- was a suffix, as is proved by such forms as Skr. tr-tiya-s Gr. Lesb. $\tau \dot{\epsilon} \rho$ - $\tau \circ -\varsigma$.

Skr. tráy-as, loc. tri-šú. Avest. prāy-ō, loc. pri-šva.

Armen. ere-k, gen. dat. eri-c, instr. eri-vk, see I § 263 p. 213.

Gr. $\tau \varrho \epsilon \tilde{\iota} \varsigma$ Gortyn. $\tau \varrho \epsilon \epsilon \varsigma$ for * $\tau \varrho \epsilon \iota \epsilon \varsigma$, loc. $\tau \varrho \iota - \sigma \ell$; Hipponax has $\tau \varrho \iota o \tilde{\iota} \sigma \iota$, which was suggested by $\tau \varrho \iota \tilde{\omega} \nu$ ($\tau \varrho i \alpha$). The Boeot. $\tau \varrho \epsilon - \pi \epsilon \delta \delta \alpha$ (beside $\tau \varrho \iota - \pi o \nu \varsigma$ etc.), taken in conjunction with Lat. $tr \tilde{\epsilon} - cent \tilde{\iota}$, Lith. $tr \tilde{\epsilon} - czi \alpha - s$ O.C.Sl. $tr - t \tilde{\iota} j \tilde{\iota}$ 'third' Lith. $tr - j \tilde{\iota}$ 'three by three', seems to point to an old stem *tr - e- (*tr - o-).

Lat. trēs, dat. abl. tri-bus, Umbr. trif tref acc. 'tres' triia 'tria'.

O.Ir. $tr\bar{\imath}$ dat. tri-b.

Goth. preis dat. pri-m, O.H.G. drī dat. dri-m.

Lith. trỹs loc. tri-sè. O.C.Sl. trij-e trij-e loc. trì-chũ.

For the feminine there was a special form in the parent language, preserved only in Aryan and Keltic, *tiser-*tisr-: nom. Skr. tisr-ás (for the weak form of the stem see § 320) Avest. tišar-ō, O.Ir. teoir O.Cymr. teir (cp. I § 576 p. 431). It is conjectured that *tisr- came from *tri-sr- by dissimilation, and that its second part is identical with the second part of *sue-sor- 'sister'; see Bugge, Bezzenb. Beitr. XIV 75 f. Skr. cátasr-as is a similar formation (see § 168).

Third. The Indo-Germanic languages have forms with -to-; those without the -i- of *tr-i- may be considered the oldest: Skr. tr-tiya-s, Gr. Lesb. $t\epsilon\varrho-\tau o\varsigma$, Lat. ter-tiu-s Umbr. tertim 'tertium', Pruss. tir-ti-s acc. tir-tie-n (tir-=*tr-).

The following have *tr-i-. Avest. pri-tya- O.Pers. si-tiya-. Gr. Att. etc. $\tau \varrho i$ - τo - ς , and the Homeric $\tau \varrho i \tau - \alpha \tau o$ - ς on the analogy of $\varepsilon i \nu \alpha \tau o$ - ς de $\varepsilon \alpha \tau o$ - ς , ep. $\pi \varrho \omega \tau o$ - ς for * $\pi \varrho \omega F$ - $\alpha \tau o$ - ς § 165 p. 5 and $\varepsilon \beta \delta \delta \omega - \alpha \tau o$ - ς § 171. Lat. trit-avo-s, unless the true form of the word be strit-avo-s, see II § 81 p. 246. Mod.Cymr. trydydd for *tri-tiio- or for *tr-tiio-, we cannot tell which. With different suffixes: Armen. eri-r (and err-ord for *erir-ord, cp. § 166 Rem. 2) and O.Ir. tri-s, in composition tress- (see II § 81 p. 247).

For tr-e- in Lith. trēczia-s for *tretia-s and in O.C.Sl. tretiji, see last page.

The last-named forms make it doubtful whether Goth. *pridja* O.H.G. *dritto* are derived from *tri-tio-, or from *tre-tio- (according to I § 67.3 p. 57).

§ 168. Four. The Idg. stem masc. neut. *qetyer- *qetyor-had a variety of ablaut-forms; this was because there were several distinct weak-grade forms of the second syllable: *q(e)tur-*

G. Meyer, Gr. Gr. ² 376 f.; Osthoff, Phil. Rundsch. I 1592, Morph. Unt. IV 333; Kluge, Paul-Braune's Beitr. VIII 517 ff., Paul's Grundr. I 403 f.

The nom. plur. masc. in the original language would be *qetuor-es: Dor. $\tau \acute{\epsilon} \tau o_{\bar{\nu} \bar{\nu} \bar{\nu}}$ Lat. quattuor Skr. catvár-as; neut. *qetuōr *qetuōr-ə: Skr. catvári, Lat. quattuor, Goth. fidvōr, whose \bar{o} passed over into the masculine.

Skr. catvár-as acc. catúr-as; in composition catur- instead of pr. Ar. *catru-. Avest. caþwār-ō; catur-a- 'occurring four times'; in composition caþru-, as caþru-karana- 'four-cornered', and caþwar-, as caþwar-zangra- 'four-footed'; the latter was probably suggested by caþwar-sat- '40' (see §§ 176, 178, and the Author, Morph. Unt. V 30). For the ablaut in the first syllable cp. Avest. ā-xtūirya- 'occurring four times' and the ordinals Skr. túr-ya- tur-īya- Avest. tūirya- for *ktur- (I § 646 p. 491).

Armen. $\dot{c}or-\dot{k}$, gen. $\dot{c}or-i-c$, from *qetu $\bar{o}r$ - or *qetur-, see I § 455 p. 336. Also $ka\dot{r}$ -, in $ka\dot{r}$ -a-sun '40', probably from *(q)tu \bar{v} -, see §§ 176, 178.

Hesychius' explanation, το τριτημόριον, seems to be corrupt; read το τεταρτημόριον. It is not at all probable that this word has preserved a form ταρτο- belonging to Skr. tritiya-s Pruss. tirti-s 'third'.

for *(π) $\tau F \rho \alpha$ - (*qtuy-), F having been lost in proethnic Greek (the Author, Gr. Gr. ² pp. 43, 71). $\tau \varepsilon \tau \rho \omega' - \varkappa \sigma \nu \tau a$ for * $qetu\bar{y}$ -, see §§ 176, 178, 341. $Tv \rho \tau \alpha \bar{\alpha} \sigma \cdot \varsigma$, if Pott is right in adding this to the list (cp. $T \rho \iota \tau \alpha \bar{\alpha} \sigma \cdot \varsigma$), should be compared with Skr. $t \dot{\iota} r \cdot y a - \varsigma \tau v \rho$ - instead of * $\pi \tau v \rho$ - on the analogy of $\tau \rho v$ -. With Homer's $\tau \varepsilon \sigma \sigma \alpha \rho \dot{\alpha} - \beta \sigma \iota \sigma \varsigma$ (worth four oxen' compare another Homeric form, $\xi \varepsilon \iota \varkappa \sigma \sigma \dot{\alpha} - \beta \sigma \iota \sigma \varsigma$ (beside $\delta v \omega \varkappa \alpha \iota \iota \iota \iota \sigma \sigma \dot{\alpha} - \tau \rho \iota \nu \cdot \varsigma$).

Lat. quattuor, quadru- (in composition), quadrā-gintā instead of *quettuor, *quedru-, *quedrā-, being assimilated to quartu-s (see next page). quattuor, nom. pl. masc. and nom. acc. neut. (see last page), dropped its inflexions because the following numerals (quinque etc.) were not inflected. quadrā- stands for *qetuṣ̄-, see §§ 176, 178. -d- has taken the place of -t-, reminding us of a similar change of the breathed to the voiced sound in angulu-s for *awklo-, septin-gentī septuā-gintā (I § 499 p. 366, III § 177), Gr. ερδομο-ς O.C.Sl. sedmī (§ 171). Umbr. petur-pursus 'quadrupedibus', Osc. petora 'quattuor' (Fest.) and petiro-pert 'quater'.

O.Ir. cethir (dat. cethrib), O.Cymr. petguar. Gall. Petru--coriu-s and petor-ritum 'four-wheeled vehicle'.

Goth. fidvor for *fidvor-(i)z like stiur 'steer, ox' for *stiur(a)-z (I § 660. 6 p. 516, III § 194), dat. fidvori-m, see § 169; fidur--dogs 'lasting four days' (fidur-? or fidur- instead of *fidaúrbecause the second syllable was unaccented?). The t-sound which appears in Gothic is not found elsewhere, except in A.S. and O.Swed. compounds; e. g. A.S. fyder-fete 'four-footed' for pr. Germ. *fipur- (II § 19 p. 36). O.H.G. for O.Sax. fiwar A.S. feówer O.Icel. masc. fjörer neut. fjogor fjugur point to a form *kuekuor- *kuekur- before the great Sound-shifting (Lautverschiebung) in proethnic Germanic; for the change of -zuto -u- see I § 444 c p. 330. I assume that in *kuetuor-, -tuwas assimilated to the initial guttural (cp. *pempe Goth. fimf for *penge, § 169 p. 14); then *kuetur- followed suit, and became *kuekur-. In Gothic, on the other hand, fidur- held its ground, and $fidv\bar{o}r$ (instead of * $fi(z)v\bar{o}r$) has been assimilated to it.

Remark 1. I have discussed this -tu- in Morph. Unt. V 53 f. It has been differently explained by Kluge in Panl'Braune's Beitr. VIII 517 ff., and in Paul's Grundriss I 403; but I do not feel convinced by his arguments.

Remark 2. Even in pr. Germ. this numeral was declined as an *i*-stem; e. g. O.H.G. *fiorin* like Goth. *fidvori-m*. The same *i*-inflexion is seen in the numerals 5 to 12, as Goth. *fimfi-m* O.H.G. *finfin*. The origin of this inflexion is doubtful; perhaps the *i*-forms are to be traced to more than one source. See on this subject the Author, Morph. Unt. V 53 ff.

Lith. keturi, stem ketur-ja-, but acc. ketur-is, declined in the same way as the following numbers penki szeszi etc. Side by side with this is found ketveri (stem ketver-ja-), the distributive — used as a cardinal numeral with plural substantives —, whose termination -eri spread to the numerals which followed (penk-eri szesz-eri etc.). The same suffix -io- occurs in tre-ji, Avest. a-xtūirya- 'occurring four times', Gr. δοιοί δισσό-ς, and in many other numerals (cp. § 183). From ketver-i, -io- passed over to the proper cardinal numeral, but the acc. keturis = Skr. catúras Gr. πίσυρας (common ground-form *qetur-ns, § 333) was preserved by the aid of tris, and then the numerals which followed were declined precisely like keturi (cp. the Author, Morph. Unt. V 55 f.).

O.C.SI. četyr-e, gen. četyr-ŭ acc. četyr-i, fem. nom. acc. četyr-i. Distributive četver-o.

We trace an original fem. of *qetuer-, answering to *tiser-'three' (§ 167 p. 8), in Skr. cátasr-as Avest. cataær-ō (I § 558 p. 415) and Mod.Cymr. pedeir O.Ir. cetheoira cetheora. These justify the conjecture that -uer- in *qetuer- was a suffix of some kind.

Fourth. Skr. catur-thá-s and túr-ya-s tur-t̃ya-s, Avest. $t\overline{u}irya$ - (see p. 9).

Armen. čor-ir čorr-ord for *čorir-ord and kar-ord (cp. § 166 Rem. 2 p. 7).

Gr. τέταρ-το-ς Hom. τέτρα-το-ς Boeot. πέτρα-το-ς (π- as in πέτταρες), ground-form *qetyr-to-. ταρτο- ground-form *qtyr-to-in ταρτημόριον. Cp. p. 10.

Lat. quartu-s for *qtu\(\bar{q}\)-to- (I \ \ 306 p. 242), which no doubt became first *tuar-to-, and then quarto- through association with

quattuor. Prenest. Quorta (Schneider, Dial. Ital. I no. 217) is so isolated that I cannot venture on the strength of it to assume *qtux-to- as well as *qtux-to- for Italic; cp. Stolz, Lat. Gr. 2 p. 385. Osc. trutum 'quartum' trutas gen. 'quartae' (Bugge, Altital. Stud. 1878 p. 53 ff.) are formed from *qtr\vec{u}-.

O.Ir. cethramad formed after the analogy of sechtmad 'seventh' dechmad 'tenth'.

O.H.G. fior-do A.S. feór-đa beside O.H.G. fior, see p. 11. Lith. ketvir-ta-s O.C.Sl. četvr-tŭ ground-form *qetur-to-.

§ 169. Five. Idg. *penge. This number, along with the numbers 6 to 10, was indeclinable in the original language, and also more or less in Arvan, Armenian, Greek, Italic, Keltic, and Germanic during the historical period. We may conjecture that it is a survival from the time when the attributive adjective needed no case-endings. For example, Ved. páñca kṛṣṭíṣu, Gr. πέντε δακτύλων, Lat. quinque virōrum, Goth. fimf hláibans. But it came to be declined more or less frequently in all the different branches of Indo-Germanic except Italic: Skr. gen. pancanám, Armen. gen. hnqi-c, Gr. Lesb. πέμπων, Mid.Ir. cōic m-bō 'quinque vaccarum', O.H.G. dat. finfin (inflected only where it followed the substantive). In Lithuanian alone penki is invariably inflected from the earliest period at which we know the language (cp. last page). In Slavonic the adjectival numeral, along with those immediately following up to 10, had died out before the beginning of our record.

Skr. páñca, Avest. panca.

Armen. hing, see I § 330 p. 265, § 455 p. 336.

Remark 1. Two stems are found; πεμπάς like Skr. pañcát-, and a ti-stem with the same meaning, Skr. panktí-š O.Icel. fimt O C.Sl. petř. The

first two words are ad-formates of $\delta \epsilon \kappa \acute{\alpha}_{\varsigma}$ and $d \alpha \acute{s} \acute{\alpha} t$ - respectively; and considering how widely the suffix $-\alpha \delta$ - was used in Greek $-\mu o r \acute{\alpha}_{\varsigma}$, $\dot{\epsilon} r \acute{\alpha}_{\varsigma}$, $\delta v \acute{\alpha}_{\varsigma}$, $\tau \epsilon \iota \dot{\alpha}_{\varsigma}$, $\tau \epsilon \iota \dot{\alpha}_{\varsigma}$, $\dot{\epsilon} \epsilon \dot{\alpha}_{\varsigma}$, $\dot{\epsilon} \dot{\beta} \delta o \mu \acute{\alpha}_{\varsigma}$ (cp. $\dot{\epsilon} \beta \delta o \mu \acute{\eta} - \kappa o r \iota \alpha$) $\dot{\epsilon} \kappa \tau \dot{\alpha}_{\varsigma}$, $\dot{\epsilon} \gamma \delta o \acute{\alpha}_{\varsigma}$ (cp. $\dot{\delta} \gamma \delta o \acute{\eta} - \kappa o r \iota \alpha$) $\dot{\delta} \kappa \tau \dot{\alpha}_{\varsigma}$, $\dot{\epsilon} r r \epsilon \dot{\alpha}_{\varsigma}$, $\dot{\epsilon} r \tau \dot{\alpha}_{\varsigma}$, $\dot{\epsilon} \kappa \alpha \tau o r \tau \dot{\alpha}_{\varsigma}$, $\dot{\epsilon} \iota \iota \dot{$

Lat. quinque quinque (for $\bar{\imath}$, see Thurneysen in Kuhn's Ztschr. XXX 501 f.), Umbr. pumperias Osc. pumperias, equivalent to 'quintiliae' or 'quincuriae', Osc. Púmpaiians 'Pompeianus'. Pr.Ital. *kuenkue, see I § 336 p. 267. quincu-, in quincu-plex etc., through association with quadru-.

O.Ir. cōic, O.Cymr. pimp, Gall. πεμπεδουλα 'πεντάφυλλον' (Dioscor.), see I § 436 p. 324. Pr.Kelt. *kuerokue, see I § 339 p. 269.

Goth. fimf O.H.G. fimf finf (the u of O.H.G. funf is discussed below under the ordinal). Probably the second f is to be explained by supposing that *penkue became *pempe (cp. I § 444 Rem. 1 pp. 329 f.) as *kuetuor- became *kuekuor-(III § 168 p. 11). The i-inflexion, which we see in Goth. fimfim O.H.G. finfin, is discussed in § 168 Rem. 2 p. 12.

Lith. penkì and penk-erì, see § 168 p. 12.

In Slavonic, the cardinals 5 to 10 inclusive were represented by the abstract formation: petī 'fivefold character, the number five' (= Skr. panktí-š O.Icel. fimt) governing the gen. pl. of the thing. The old numerals were indeclinable, and this may have had something to do with their being dropped.

Remark 2. Be it observed in passing that the Albanian numerals 5 to 10 are based upon these same ti-abstracts: pese 'five', gašte 'six', štate 'seven', tete 'eight', nende 'nine', δtete δiete 'ten'. See G. Meyer, Albanes. Stud. II 50 ff.

Fifth. Idg. *ppq-to- (which can be traced with certainty in Germanic, but nowhere else); and perhaps *penq-to- too is proethnic (cp. *penqe).

Skr. pañcamá-s (following saptamá-s etc.) and pañca-tha-s (cp. O.Ir. $c\bar{o}iced$). Avest. $pux\bar{d}a$ - (for $-\bar{d}$ -, cp. $ux\bar{d}a$ - I § 475 p. 351), according to von Fierlinger (Kuhn's Ztschr. XXVII 194), comes from *pnqto-; but why should it have u and not a? The u reminds us of Gr. $\pi v\gamma \mu \eta'$ Lat. $p\bar{u}gnu$ -s. Besides $pux\bar{d}a$ -we find the further form Avest. pantanhe-m acc. 'one-fifth'.

Armen. hing-er-ord.

Remark 3. For -ord, see § 166 Rem. 2 p. 8. The -er- which precedes -ord in this and the succeeding numerals is still unexplained.

Gr. πέμπ-το-ς, Gortyn. πέντο-ς (I § 427 a p. 312).

Lat. quintu-s Quinctiu-s, Osc. Púntiis Πομπτιες 'Quinctius'. The ground-form may be either *penqto- or *ppqto-. Bartholomae (Kuhn's Ztschr. XXIX 503) conjectures that Lat. quint- Osc. pont- were the regular forms, while the cardinals were responsible for -c- in quinct- and -p- in pompt-.

O.Ir. cōiced O.Cymr. pimphet, see II § 81 p. 247.

Goth. fimfta in fimfta-taihunda 'fifteenth', O.H.G. fimfto finfto. A form *funxta-=*pnqto- must be assumed for pr. Germ. to explain Mod.H.G. Swab. fuchzē '15' fuft 'fifth', O.H.G. funfto funf, Mod.H.G. Rhine-Frank. fufzēn fufzich etc.; see Kauffmann, Paul-Braune's Beitr. XII 512. Compare too O.H.G. fūst (pr. Germ. *funxsti-z) O.C.Sl. pestĭ 'fist' common groundform *pnqsti-s, II § 101 p. 306 f.

Lith. $pe\tilde{n}kta$ -s. O.C.Sl. $pet\tilde{u}$ may stand for *pepg-to- or *peg-to-.

Both in the prehistoric parent language, and in the historic period of Aryan, Armenian, Greek, Italic, Keltic and Germanic, this word was indeclinable. For example: Avest. $x\dot{s}va\dot{s}$ satāiš 'with six hundred', Gr. $\dot{\epsilon}\xi$ $\dot{\eta}\mu\dot{\epsilon}\varrho\bar{\alpha}\varsigma$, Lat. sex $m\bar{\epsilon}nsibus$, Goth. afar dagans saihs 'after six days'. But it was sometimes inflected,

as Skr. ξαdbhíξ, Armen. gen. veç-i-ç, Gr. ξξασι or ξξάσι (in an inscr. of the fourth century A. D., C.I.G. no. 5128. 27 τοῖς ξξασι βασιλείσκοις) like τέτρασι, Mid.Ir. gen. se m-bō 'sex vaccarum', O.H.G. dat. sehsin (only used when the subst. precedes). The Latin word, sex, was never declined; the Lithuanian, szeszt, always.

Skr. šáš (šát, see I § 401 Rem. 2 p. 297); cp. šódaša '16' for *šaždaša, like vódhum for *važdhu-m (I § 404. 2 pp. 298 f.), and šašthá-s 'sixth'. Avest. xšvaš, also xštva-, which latter is regarded as standing for *xvšta-. Apparently it should be assumed that there were two forms in proethnic Aryan, *suaš and *saš, which became *šuaš and šaš by assimilation of the sibilant. These would become quite regularly Avest. xšvaš (see Bartholomae, Ar. Forsch. III 20) and Skr. šáš respectively.

Armen. vec doubtless represents *yeks; see I § 560 Rem. p. 417, § 589. 3 p. 446.

Gr. $f \not\in \xi$ Ex for *sue \hat{k} s. For $\hat{\epsilon}$ n ποδών, $\hat{\epsilon}$ γ δακτύλων, $\hat{\epsilon}$ κ-πλεθρο-ς $\hat{\epsilon}$ κ-μηνο-ς etc. see the Author's Gr. Gr. 2 p. 71. $\hat{\epsilon}$ ξα- in $\hat{\epsilon}$ ξα-κόσιοι and other compounds follows the type of $\tau \epsilon \tau \rho \alpha$ - $\hat{\epsilon}$ πτα- etc.

Lat. sex.

O.Ir. $s\bar{e}$ (cp. $m\bar{o}r$ -feser 'magnus seviratus') Mod.Cymr. chwech for *sue $\hat{k}s$, see I § 175 p. 154, § 517 p. 377, § 576 p. 432, § 657.10 p. 510. The second s has been preserved in the Irish ses-ca 'sixty' and sess-ed 'sixth'.

Goth. saihs O.H.G. sehs, ground-form *sehs. Cp. p. 18 footnote 1.

Lith. szesz-i (cp. ketur-i § 168 p. 12) doubtless represents *seszi, as szeszura-s represents *seszura-s (I § 587.2 p. 442). Pruss. wuscht-s uscht-s 'sixth'; probably we have a borrowed word in Lith. ŭszės beside szeszios pl. 'childbed'. Slavonic has the abstract, šesti: cp. Skr. šašti-š ('group of six tens, sixty') O.Icel. sētt. šesti brings us to *chesti at the first step backwards, and is doubtless one of the instances of ch- = s- (see I § 588 Rem. 3 p. 444); this change has not yet been satisfactorily explained.

Sixth. The parent language may have had the word *swek-to-s (*se-, *we-): cp. Skr. šašthá-s Avest. xštva- (see above),

Gr. Εκτο-ς, O.H.G. sehto O.Icel. sētte sētti, Lith. szēszta-s Pruss. wuscht-s O.C.Sl. šestū. And the -s- of Lat. sextu-s Umbr. sestentasiaru 'sextantariarum' Osc. Σεστες 'Sextius', Goth. saihsta O.H.G. sehsto (beside sehto) may have come from the cardinal. But it is uncertain whether or not pr. Idg. *suekto-s grew out of *sueks-to-s by a purely phonetic change. Who can tell whether the -s of *sueks was not an inflexional suffix? If so, it would not at first be found in the ordinal any more than (say) the -e of *penqe 'five' in *penqto-s. Cp. I § 589 Rem. 2 p. 446.

Armen. vec-er-ord.

O.Ir. sessed Mod.Cymr. chweched. As to the supposed origin of this re-formation see Zimmer, Kuhn's Ztschr. XXX 214.

§ 171. Seven. Pr. Idg. *sept´m; the accentuation is inferred from Skr. sapt´a, Gr. ἑπτ´a and Alban. šta-tε (G. Meyer, Alban. Stud. II 65). Another form of the same stem, *septom-, is perhaps to be inferred from Gr. ἑβδομήκοντα ἑβδομάς ἑβδομάκς O.Ir. sechtmoga (cp. *-dkom-t- beside *-dkm-t- § 164 pp. 2 f.), see § 178.

The word was originally indeclinable: examples are Ved. saptá síndhušu 'in septem fluminibus' Avest. hapta satāiš 'with seven hundred', Goth. sibun hláibans; and Gr. šnrá, Lat. septem, O.Ir. secht n- were never declined. Inflected forms are: Skr. dat. abl. saptá-bhyas, Armen. gen. evtan-ç, O.H.G. sibin-in (only used where the subst. precedes). In Lith. only the word is always inflected, septynì.

Skr. $sapt\acute{a}$, later $s\acute{a}pta$, Avest. hapta; we may conjecture that the Skr. word was originally * $sapt\acute{a}m$, but followed the lead of $n\acute{a}va$ and $d\acute{a}\dot{s}a$; see I § 226 p. 193, § 230 p. 196.

Armen. evtn, see I \S 330 p. 265, \S 560 p. 416. The final -n must be explained in the same way as that of tasn (\S 174).

Gr. $\xi \pi \tau \alpha$, which we may conjecture should have been * $\xi \pi \tau \alpha \nu$, but took its present shape under the influence of $\xi \nu \nu \xi \alpha$ and $\delta \xi \kappa \alpha$; see I § 226 p. 193, § 235 p. 198.

Lat. septem. In composition we find beside septem- the re-formation septu- septi-, like octu- octi-.

O.Ir. secht n- Mid.Cymr. seith; see I § 339 p. 269.
Brugmann, Elements. III.

Goth. O.H.G. sibun. For the retention of -n (on the analogy of the ordinal Goth. *sibunda O.H.G. sibunto, unless indeed it came from an older form *sibun-i), see the Author. Morph. Unt. V 551). As to the loss of -t- — we assume *septm to be the Idg. ground-form — we must certainly not ignore Ascoli's theory that the parent language possessed two forms, one with -t- (*septm), and one without (cp. Skr. asīti-š 'eightv' beside Idg. *oktōu) which was kept in Germanic (see Ascoli's Krit. Stud. 101). But it is more natural to assume that there were two forms in proethnic Germanic, *septmó- 'seventh' which became *sepmó- and then *sebmó-, and *septm, which became *seftum (this seems to be the form represented in the Salic Law by septun = seftun) and was then assimilated to *sebmó- and became *sebum; cp. Pruss. sepma-s beside septma-s 'seventh' and pr. Balto-Slav. *ošmo- 'eighth' for *oštmo- (§ 172). Sievers (Paul-Braune's Beitr. V 119) and Osthoff (Morph, Unt. II 51 f.) think that the m-form *septm could become *sepm in pr. Germ. by a direct phonetic change; cp. also Noreen, Urgermansk judl. p. 108.

Lith. septyn-ì, like devyn-ì 'nine' in its ending, and similar to asztûn-ì 'eight'. It may be conjectured that these three forms once were *septin(-ì) *devin(-ì) — cp. the ordinals septin-ta-s devin-ta-s — and *asztû(n-ì), and that their present shape is due to mutual assimilation. The long û caused the lengthening of i to y; similarly the long vowel of trýlika etc. caused the lengthening of the antepenult in vënů'lika (p. 28), and that of Idg. *trī- caused the lengthening in *qetur- *penqē- (§ 178); many other examples might be found. *septin-ì septin-ta-s instead of *septim-ì *septim-ta-s owe their n to *devin-ì *devin-ta-s.

O.C.Sl. sedmĭ, an abstract noun, beside sedmŭ 'seventh', was shaped on the analogy of šestĭ: šestŭ etc. (II § 97 p. 290). The

¹⁾ If it is assumed that there were proethnic forms, *sibun-i *niun-i *tehun-i, ad-formates of *fimfi = Idg. *penqe, it follows that O.H.G. sehs, which should have been *sihs, must be regarded as modelled upon the analogy of sehsto sehto. For on this assumption there must have been a pr. Germ. *sexs-i, which would then have become *sixsi.

pr. Idg. abstract would doubtless be *septm-ti-s: Skr. saptatí-š ('seventy'), O.Icel. sjaund.

Seventh. Idg. *septmó- (perhaps *sepdmó- *sebdmó- may be inferred from Gr. εβδομο-ς O.C.Sl. sedmű; see I § 469 p. 345) and *septmmó-. Possibly *septm-tó- may also be regarded as proethnic.

Skr. saptamá-s. Also saptátha-s Avest. haptaþa-.

Armen, evtn-er-ord.

Gr. ξβδομο-ς Epidaur. ἑβδεμαῖο-ς, cp. ἑβδομήκοντα Heracl. Delph. ἑβδεμήκοντα; Hom. ἑβδόμ-ατο-ς like πρῶτο-ς (*πρωF-ατο-ς) and τρίτ-ατο-ς, see § 167 p. 9. The history of ἑβδομο- is obscure. There seem to have once been two parallel forms, *έβδμο- = O.C.Sl. sedmo- and *έπταμο- = Skr. saptamá-; more we cannot say with certainty. Cp. § 178 for ἑβδομήκοντα, and the Author, Morph. Unt. V 36 ff.

Lat. septimu-s.

O.Ir. sechtmad Mid.Cymr. seithuet for *septym-eto-s, see II \S 72 p. 168.

O.H.G. sibunto.

Pruss. septma-s sepma-s. Lith. sẽkma-s (sèkma-s), see I § 345 p. 271, § 377 p. 286; the ordinary word now is septiñta-s (Lett. septitáis) instead of *septim-ta-s through assimilation to devin-ta-s. O.C.Sl. sedmu.

§ 172. Eight. Idg. *októ *októu. -t- must have been something of the nature of a suffix, as asi-tt-s 'eighty' seems to shew; this word is unintelligible if regarded as a derivative from *októu (astau).

Remark. It can hardly be a mere coincidence that the ending agrees with that of the nom. acc. du. masc. of o-stems (§ 285). *okī too, which we see in ašī-ti-š, may have been a dual, like *oqī 'the two eyes' (§ 295). Perhaps the meaning may have been 'two sets of four' (op. Mid.Cymr. deu-naw 'eighteen', properly 'two nines', etc.) It must be admitted that in that case the numeral 'two' might have been expected before *oktōw, as in Lat. vī-gintī 'two tens', du-centī, and so forth. Still this might have been dropped in course of time.

Uninflected in pr. Idg.: e. g. Avest. ašta satāiš 'with eight hundred'; and Gr. ἀκτώ, Lat. octō, O.Ir. ocht n- are always

indeclinable. Inflected forms are: Skr. instr. $a \not i t \bar{a}$ -bhi $\not i$, Armen. ut - i - c, O.H.G. dat. ahtow-en (only used when the substantive precedes). Inflexion is regular only in Lithuanian, asztůni.

Skr. aṣṭá aṣṭāú, Avest. aṣṭa. In Skr. we find also aṣṭá, loc. aṣṭá-su etc., an ad-formate of saptá. Compounds with aṣṭa-(cp. Lat. octi-) had not a little to do with giving currency to this form.

Armen. ut, for *uvt, and that for *optō(u), whose p came from the numeral seven (cp. El. $\delta n\tau \omega$); see Bugge, Beitr. zur etym. Erl. der arm. Spr. 43.

Gr. ὀκτώ. The numeral seven gave its rough breathing to Herael. ὀκτώ, its π to El. ὀπτώ, and its α to ὀκτα- in ὀκτα-κόσιοι (Lesb. ὀκτω-κόσιοι) ὀκτά-πους (beside ὀκτώ-πους: Skr. aṣṭā-pad-). Boeot. ὀκτό is like ὀνό, see §§ 166, 293.

Lat. octō. In composition octō- and octi- octu-, cp. Skr. aṣṭa- Avest. aṣṭa-. Osc. Úhtavis 'Octavius'.

O.Ir. ocht n- (see I § 517 p. 377) follows secht n-; for forms without the nasal see Stokes, Bezzenb. Beitr. XI 170. Mod.Cymr. wyth Mod.Bret. eiz for $*okt\bar{\imath}$, older $*okt\bar{\imath}$ $*okt\bar{\imath}$.

Goth. ahtáu; O.H.G. ahto, inflected dative ahtowen. See I § 659.3 p. 512, § 660.3 p. 515, § 661.3 p. 519.

Lith. asztů-n-ì, cp. § 171 p. 18.

O.C.Sl. osmĭ (ordinal osmĭ) follows sedmĭ, see § 171 p. 18. The original Idg. abstract numeral is represented by Skr. aśī-tí-ṣˇ ('eighty'), ep. p. 19.

Eighth. Idg. * $okt\bar{o}u$ - \acute{o} - or some such form. The moforms follow the example of the numeral seven, as do Skr. $navam\acute{a}$ -s Umbr. nuvime (§ 173 p. 22).

Skr. aštamá-s, Avest. aštema-.

Armen. ut-er-ord.

Gr. $\mathring{o}\gamma \delta oo - \varsigma$ for $\mathring{o}\gamma \delta o - Fo - \varsigma$ (in Homer also $\mathring{o}\gamma \delta \acute{o} - \alpha \tau o - \varsigma$, like $\mathring{\varepsilon}\beta \delta \acute{o}\mu - \alpha \tau o - \varsigma$), cp. $\mathring{o}\gamma \delta o - \acute{\gamma} - \varkappa o \gamma \tau \alpha$, $\mathring{o}\gamma \delta o - \acute{\alpha}\varsigma$. $-\gamma \delta -$ for $-\varkappa \tau -$ follows the $-\beta \delta -$ of 'seven'. In all other points the history of $\mathring{o}\gamma \delta o(F)o - \varsigma$ is obscure; see the Author, Morph. Unt. V 36 ff., and below § 311.

Lat. octāv-o-s, Osc. Úhtavis 'Octavius'; the ā is strange nor has it been satisfactorily explained even by the attempts of Thurneysen and Meringer (Kulın's Ztschr. XXVIII 154, 232). Cp. the vulgar Latin $octu\bar{a}-gint\bar{a}$, for *octov- \bar{a} -, which is like Gr. $\delta\gamma\delta_0(\mathcal{F})-\eta$ -. See the Author, loc. cit.

O.Ir. ocht-mad, Mid. Cymr. wyth-uet.

Goth. ahtu-da, O.H.G. ahto-do; O.Fris. ahtunda following sigunda niugunda.

Lith. ãszma-s (now growing obsolete), Pruss. acc. asma-n, O.C.Sl. osmŭ, pr. Balto-Slav. *oš(t)-mo-s. The Lith. has another word asztuñta-s, an ad-formate of septiñta-s deviñta-s.

§ 173. Nine. Idg. *néun and *énun, the latter in Armenian and Greek. Also *enuen-, which is preserved in Gr. ενεν-ήκοντα (§ 178). The final was -n -n, not -m -m, as we see from Gr. ενεν-ή-κοντα, Lat. nōn-ā-gintā nōn-u-s and Lith. deviñ-ta-s (contrast deszim-ta-s 'tenth').

In Indo-Germanie, it was not inflected; e. g. Avest. nava satāiš 'with nine hundred'; and in Greek, Latin, and Old Irish it is always indeclinable. Inflected forms: Skr. gen. navānām, Goth. gen. niun-ē, O.H.G. dat. niun-in (only when the substantive precedes). It is always declined in Lithuanian, devyn-i.

Skr. náva. Avest. nava.

Armen. inn, pl. inun-k or innun-k (cp. Osthoff, Morph. Unt. I 122), see I § 232 p. 197.

Gr. *ἐν̄̄̄α preserved in Ion. εἰνά-νυχες εἰνα-κόσιοι εἴνα-το-ς Att. ἐνα-κόσιοι ἔνα-το-ς, Hom. ἐνν-ῆμαο like ἐννή-κοντα (§ 178). Also ἐννέα, which should probably be explained with Wackernagel (Kulın's Ztschr. XXVIII 132 ff.) as *ἐν νε̄̄̄α 'nine in all, a good nine', this original meaning having been subsequently weakened; Heracl. ἑννέα, like ὁκτώ, following ἑπτά. ἐνεν-ή-κοντα 'ninety' preserves an original *enuen-, cp. § 178.

Lat. novem instead of *noven follows septem decem. -n is kept in $n\bar{o}n$ - \bar{a} -ginta $n\bar{o}n$ -u-s. noun-dinu-m $n\bar{o}n$ -dinu-m, usually $n\bar{u}n$ -dinu-m. Umbr. nuvis 'novies'.

O.Ir. nōi n-, Mod.Cymr. Corn. naw. But whence came this a? Goth. O.H.G. niun for *niuun, I § 179 p. 156. O.Sax. nigun A.S. nizon, where z is a transition-sound or glide (cp. Jellinek, Paul-Braune's Beitr. XIV 582). The ending -un is

to be explained in the same way as that of sibun, for which see § 171 p. 18.

Lith. devyn-i O.C.Sl. deveti instead of *navyni *noveti on the analogy of the initial de- of 'ten'; Pruss. newints ('ninth') has been influenced by the Germanic form. For the termination of devyn-i see § 171 p. 18. deveti is the Idg. abstract *newn-ti-s: cp. Skr. navati-š ('ninety'), Avest. navati-š ('nine' and 'ninety'), O.Icel. nīund.

Ninth. Idg. *neunn-ó- or *neun-tó- (*enunn-ó- or *enun-tó-), perhaps both.

Skr. navamá-s Avest. naoma- = *navema- (as ker*naom = *ker*navem, I § 158 p. 141) O.Pers. navama- instead of *navaná-, following (Skr.) saptamá- daśamá-, cp. Umbr. nuvime.

Armen. inn-er-ord.

Gr. Hom. εἴνα-το-ς, Att. Hom. ενα-το-ς for *εν Εα-το-ς.

Lat. $n\bar{o}n$ -u-s for *noven-o-. If the dzenoine of the Duenos inscription means 'die noni', its oi makes some difficulty, although not for the reasons which Pauli suggests (Altital. Stud. I 32 ff.). Umbr. nuvime 'nonum', where m is not original, but is like that of Lat. novem and Skr. navamá-s.

O.Ir. $n\bar{o}$ -mad, Mid.Cymr. naw-uet, re-formates like ocht-mad wyth-uet etc.

Goth. niun-da O.H.G. niun-to-, pr. Germ. *niuun-dá-n-.

Lith. deviñ-ta-s (Pruss. newīnt-s, see above), O.C.Sl. deve-tŭ. § 174. Ten. Idg. *deĥm. Originally indeclinable, and still so in Ved. dáša kakšiyābhiš 'with ten girdles', Gr. δέκα νανσί, Lat. decem nāvium, Goth. taihun skattans, O.H.G. stat zehen burgo 'Decapolis', and similar phrases. Inflected: Skr. instr. dašá-bhiš, Armen. instr. tasam-bk tasam-b, Gr. gen. δέκων in a Chian inscription (a trace of Lesbian influence), dat. Goth. taihun-im O.H.G. zehin-in (in O.H.G. only found where the substantive precedes). *deĥm has died out not only in Slavonic, but in Baltic too.

Skr. dáša, Avest. dasa.

Armen. tasn. If the acc. mard 'hominem' is a regular development from *myto-m, in which case original final -m was

dropped, tasn like evtn must be an ad-formate of in-n 'nine', cp. I § 202 p. 169, § 651.2 Rem. p. 497. But it is preferable to regard the ending of tasn as coming quite regularly from *dekm, and mard as being a nominative used for the accusative (see § 212).

Gr. δέκα. Arcad. δυό-δεκο (Bullet. de corresp. hellén., IV 1889 p. 281) like δέκοτο-ς (see p. 24).

Lat. decem. -decim in ūn-decim etc. is due to the accentuation, see I § 65 p. 53. Re-formates are decu-plu-s dec-enni-s dec--unx etc. beside decem-plex etc. Umbr. desen-duf 'duodecim' tekuries dequrier 'decuriis', Osc. dekmanniúís 'decumanis'.

O.Ir. deich n- (indeclinable, since deich and dech are meaningless variations in the mode of writing the same sounds), O.Cymr. dec.

Goth. taihun O.H.G. zehan. The final -n must be explained in the same way as that of sibun, see § 171 p. 18. We should not have expected the -a- which is found in O.H.G. zehan O.Sax. tehan; cp. O.H.G. zehanzo beside Goth. taihuntē(-hund) § 179. Possibly in words like drī-zehan, *-tehun became *-tehu and then -tehan, and the a passed thence into *téhun etc. (cp. O.H.G. Sigi-frid as contrasted with fridu). A different explanation is given by Noreen, Arkiv III 26.

In Balto-Slavonic the only forms left are the two Idg. abstracts: Lith. deszim-t- O.C.Sl. dese-t- and Lith. deszim-ti- O.C.Sl. dese-ti-: cp. Skr. daśát- Gr. δεκάς Goth. gen. pl. taihuntē (in taihuntē-hund '100', see § 179) and Skr. daśati-š ('tenfold character, group of ten', specialised to mean 'group of ten tens, hundred') O.Icel. tīund. In early Lithuanian deszimtis still an inflected singular substantive and is followed by the genitive; but now the inflexion is gone, and we have dēszimt (doubtless both acc. sing. = deseti and loc. sing. = desete) and dēszimts deszimts (doubtless nom. pl. = desete) 1), although still

¹⁾ The history of the plural form descrimts needs further investigation. Has it been influenced by dvideszimts 'twenty' trisdeszimts 'thirty' etc.? Or is it merely due to an idiom of the language which we find in the old books, whereby the abstract noun is used like an adjective with the

governing the genitive plural. O.C.Sl. desett is declined throughout as an *i*-stem; there is a parallel stem deset, e. g. in jedinu na desete (loc. sing.) 'eleven' = 'one upon ten'.

Tenth. Idg. * $de\hat{k}m$ -to- (* $de\hat{k}m$ -t-o-? see Π § 81 Rem. 1 p. 242) and *dekmm-o-.

Skr. daśamá-s. Avest. dasema-.

Armen, tasn-er-ord.

Gr. δέκατο-ς. Lesb. Arcad. δέκοτο-ς (cp. Arcad. δυό-δεκο), whose o follows -κοντα -κοστο-ς, cp. §§ 176, 177.

Lat. decimu-s, Osc. dekmanniúis 'decumanis'.

O.Ir. dechm-ad, Mid.Cymr. decu-et.

Goth. taihunda, O.H.G. zehanto (cp. p. 23).

Lith. deszimta-s, O.C.Sl. desetŭ.

§ 175. Eleven to Nineteen. When the units were added to multiples of ten in the parent language, both units and tens of the resulting number were independent in the sentence. The copula 'and' may have been generally used with them, as in the phrases Ved. ἐκα ca νιἐατί ca acc. '21', trάyaś ca trɨśάc ca '33', Gr. δύω καὶ πεντήκοντα '52', Lat. quattuor et ντ̄gint̄τ; but not always, as we infer from Ved. trɨśáta trɨn acc. '33', Gr. πεντήκοντα δύο, Lat. ντ̄gint̄τ quattuor etc. But in the cardinal numbers 11 to 19 there was a closer combination between the unit and the numeral 'ten' which followed it (see II § 16 pp. 31 f.). In the numbers 11 to 14 the unit was inflected, in 15 to 19 it was not; hence 15 to 19 readily became true compounds, whilst 11 to 14 may not have become compounds so soon, since their ending had first to become stereotyped.

Remark. There can be no doubt as to the reasons for this difference between the expressions for 11 to 19 and those for 21-29, 31-39 etc. The former group was more often used, for one thing; but the chief reason was that the words for 20 and the other multiples of ten were themselves compounds, and therefore it was less convenient to compound them again with other words.

name of the thing whose number is stated, and takes the case of it; as loc. deszimtisa mëstosu 'in decem urbibus' (cp. Bezzenberger, Beitr. zur Gesch. der lit. Spr. 178 f.)?

But the numbers 11 to 19 were not expressed in the parent language only by pairs of words in juxta-position, like Skr. dvá-daša Gr. δώ-δεκα. We are justified in regarding as original expressions like Gr. δέκα δύο, δέκα τρεῖς, Lat. decem duo, decem trēs. We may also believe that phrases of subtraction were used for the numbers immediately preceding twenty as well as for those immediately preceding thirty, forty and so forth; such, for example, as we find when the languages had begun to follow their own separate lines — Skr. ēkōnaviśati-š, ūnaviśati-š and ékān ná viśatí-š for 19, tryūnašašti-š for 57, Gr. ἐνὸς δέοντα εἴκοσιν ἔτη '19 years', μιᾶς δέονσαι τετταράκοντα νῆες '39 ships', Lat. ūn-dē-vīgintī duo-dē-trīgintā, A.S. twā læs twentiz for 18, ān læs twentiz for 19, H.G. dial. ains-min-zwainzich zwai-min-dreisich (Goth. 2 Cor. 11. 24 fidvōr tiguns áinamma vanans to translate τεσσαράκοντα παρὰ μίαν).

Of the different modes of expressing the ordinals which we find, the Latin for 13th to 19th, tertius decimus etc., occurs in Armenian, Greek, and Germanic besides. We may therefore fairly regard this as original.

Aryan. Cardinals. 11 Skr. Ékā-daśa; the first part of which crystallises the form of the instr. sing. masc. (Ved.) and nom. sing. fem.; the form thus chosen was suggested by dvá-daśa, ep. Avest. aevan-dasa- etc. '11th' below. 12 Skr. dvá-daśa duvá-daśa Avest. dva-dasa. 13 Skr. tráyō-daśa. 14 Skr. cátur-daśa, showing now the stem without inflexion, cp. Avest. capru-dasa- '14th'. 15 Skr. páñca-daśa, Avest. panca-dasa. 16 Skr. śō-daśa. 17 Skr. saptá-daśa. 18 Skr. aṣṭá-daśa. 19 Skr. náva-daśa, also ēkōnavṛṣʿati-ṣˇ (ēka-ūna-vṛṣʿati-ʿa score too little by one, a score less one'), or simply ūna-vṛṣʿati-ṣˇ, and ēkān (i. e. ékād) ná vṛṣʿati-ṣˇ (ep. Delb., Altind. Synt. pp. 112, 543).

Ordinals. In Sanskrit all the numbers have both -daśa-s and -daśama-s, cp. Lat. -decimu-s. 11^{th} Skr. $\bar{c}k\bar{a}daśa-s$, Avest. aevan-dasa-, aeva-dasa-, $aev\bar{o}-dasa-$; aeva-dasa- may be like dva-dasa- Skr. $dv\bar{a}-daśa-$, or is it the bare stem instead of a case, as in pri-dasa- capru-dasa-? cp. Il § 25 p. 41.

12th Skr. dvādašá-s (dvādašama-s like duodecimu-s), Avest. dvadasa-. 13th Skr. trayōdašá-s, Avest. pridasa- with the bare stem instead of a case. 14th Skr. caturdašá-s, Avest. caprudasa-, cp. the cardinal. 15th Skr. pañcadašá-s, Avest. pancadasa- and pancadasya-, the latter like tūirya- fourth bitya- second. 16th Skr. šōdašá-s, Avest. xšvašdasa-, etc. Side by side with Skr. navadašá-s (Avest. navadasa-) '19th' is found ēkōnaviša-s, ūnaviša-s and ēkānnavišá-s, cp. the ordinal.

Armenian. Ordinals. 11 me-tasan. 12 erko-tasan. 13 erek-tasan. 14 čorek-tasan. 15 hnge-tasan. 16 veš-tasan. These are all inflected as i-stems; e. g. gen. dat. metasanic, instr. metasanick (cp. ksan '20', gen. dat. ksanic). The numbers from 17 onwards have ev 'and', and inflect sometimes both parts, sometimes only tasn (cp. air-ev-ji II § 28 p. 46). 17 evtn-ev-tasn. 18 ut-ev-tasn. 19 inn-ev-tasn.

Ordinals. Two modes are used. tasn-erord ('tenth') may be followed by the ordinal of the unit, as tasnerord corrord 'decimus quartus'; or -er-ord may be simply added to the cardinal, as metasan-erord '11th' corektasan-erord '14th'.

Greek. Cardinals. 11 ἕν-δεκα (ἕν- is nom. acc. neut.), Delph. δέκα εἶς. 12 δώ-δεκα (Hom. δνώ-δεκα), Hom. δνο-καί-δεκα, and in Att. and Dor. δέκα δύο as well. 13 τρεῖς καὶ δέκα and (with the nom. τρεῖς crystallised) τρεις-καί-δεκα 1), Att. Dor. δέκα τρεῖς as well. 14 τέτταρες καὶ δέκα, τετταρεσ-καί-δεκα and δέκα τέτταρες, and so forth. As to the form of ἕξ in ἑκ-καί-δεκα beside Boeot. ἑσ-κη-δέκατος see the Author's Greek Grammar 2 § 59 p. 71. In Attic δέκα δύο, δέκα τρεῖς etc. were used when the substantive preceded; e. g. δραχμαὶ δέκα τρεῖς but τρεῖς καὶ δέκα δραχμαὶ (cp. Wackernagel, Kuhn's Ztschr. XXV pp. 284 f. and Philol. Anzeiger 1886 pp. 78 f.; Meisterhans, Gr. der att. Inschr.² pp. 126 f.).

Ordinals. 11th ένδέκατο-ς. 12th δωδέκατο-ς, epic δνωδέκατο-ς,

¹⁾ If the by-form $\tau_{\ell^1\sigma\kappa\alpha i}\delta_{\epsilon\kappa\alpha}$ is to be admitted (cp. Meisterhans, Gr. der att. Inschr.² p. 126), it contains the acc. $\tau_{\ell^2c} = *\tau_{\ell^2\nu}$ (Wheeler, Der gr. Nominalaceent 42) in a crystallised shape, or τ_{ℓ^2c} , the form it assumed in proethnic Greek before consonants (I § 204 p. 171).

Ion. δυοδέκατο-ς. From 13th onwards the usual mode of expression in classical Attic, followed consistently in the inscriptions, is τρίτος καὶ δέκατος, τέταρτος καὶ δέκατος etc. Homer has τρεισκαιδέκατο-ς ὀκτωκαιδέκατο-ς, and Herodotus τεσσαρεσκαιδέκατο-ς πεντεκαιδέκατο-ς, while we find ἐσκηδέκατο-ς in Boeotian.

Italic. Cardinals. The following is the ordinary Latin mode of expressing these. 11 $\bar{u}n$ -decim, the first part of which we may conjecture to have come from more than one case-form (cp. $\bar{u}n$ -de \bar{e} - $v\bar{v}gint\bar{v}$), cp. I § 633 p. 474, II § 36 p. 62. 12 duo-decim. 13 trēdecim for *trēz-decim (I § 594 p. 450); also trēdecim, perhaps following trècentē. 14 quattuor-decim. 15 quindecim for *quinqu(e)-decim, see I § 633 p. 474. 16 sē-decim for *segz-decim, see I § 594 p. 450. 17 septen-decim, see I § 207 p. 174. 18 duo-dē- $v\bar{v}gint\bar{v}$. 19 $\bar{u}n$ -dē- $v\bar{v}gint\bar{v}$, cp. $\bar{u}n$ -decim. Other expressions are interchanged with these, such as trēs et decem, octō et decem; decem duo, decem novem; decem et $\bar{u}nus$, decem et duo.

Umbr. desen-duf acc. 'decem duo', see I § 207 p. 174.

Lat. Ordinals. 11th ūndecimu-s. 12th duodecimu-s. 13th tertius decimus, 14th quartus decimus etc., rarely decimus tertius etc. 18th duodēvīcēsimu-s, rarely octāvos decimus. 19th ūndēvīcēsimus, rarely nōnus decimus.

Old Irish. In the cardinals we have the form deac, dissyllabic in the older language, in the later contracted into $d\bar{e}c$ (Mod.Ir. $d\acute{e}ag$). 11 oen — deac, 12 $d\bar{a}$ — deac, 13 $tr\bar{\iota}$ — deac etc., with the noun in between, as $d\bar{a}$ cath deac '12 battles'. deac $d\bar{e}c$ has nothing to do with deich n-; it was possibly a word meaning much the same as Skr. adhika- Goth. -lif Lith. -lika.

Ordinals. 11th oenmad — deac, 12th aile — deac etc.

Germanic. Cardinals. 11 and 12 contain -libi-. This is a noun stem connected with Goth. bi-leiban 'to remain' (\sqrt{leip} -, Skr. limpāmi 'I cleave, stick'), and it originally meant 'excess' or 'being inexcess' — elf would then be 'one in addition', i. e. to ten; cp. below Lith. -lika from \sqrt{leiq} -, and Skr. adhika- 'being

in excess' as used where 10 and its multiples are coupled with units, e. g. aṣṭādhikanavati-ṣˇ 'a ninety increased by eight' = '98'. Goth. áin-lif O.H.G. ein-lif, Goth. tva-lif O.H.G. zwe-lif appear inflected under the same conditions and in the same way as the numbers 4 to 10, e. g. tvalibi-m, zwelifin (O.Sax. elleban '11' nom., following tehan '12'). 13 O.H.G. drī-zehan, but also fone dien anderen drin zēnin (Graff, Ahd. Spr. V 628). 14 Goth. fidvōr-taihun, O.H.G. fior-zehan. 15 Goth. fimf-taihun O.H.G. finf-zehan. 16 O.H.G. sehs-zehan. 18 O.H.G. ahto-zehan. 19 O.H.G. niun-zehan.

Ordinals. 11th (fem.) O.H.G. einlit-to O.Icel. ellifte ellifti. 12th (fem.) O.H.G. zwelif-to O.Icel. tolfte tolfti. The following ordinals began by being phrases of the same type as Lat. tertius decimus; but their first member crystallised, it would seem, in proethnic Germanic, and they then conformed to the rules of stem-compounds. Goth. Luke 3.1 in jēra fimftataíhundin ἐν ἔτει πεντεκαιδεκάτω. O.H.G. dritto-zehanto, fiordo-zehanto etc., and also with -a- (later -e-) as the final of the first member. Another series, derived from the cardinal, was used in later O.H.G., as fierzēn-do sehszēn-do. Icelandic has a corresponding series, fim(m)tān-de sextān-de etc.

Balto-Slavonic. Lithuanian. 11 vënű-lika, 12 dvý-lika, 13 trý-lika, 14 keturió-lika, 15 penkió-lika, 16 szeszió-lika, 17 septynió-lika, 18 asztůnió-lika, 19 devynió-lika; 11th O.Lith. lika-s, 12th O.Lith. antras likas, but the words now used have -likta-s, as 11th vënű likta-s, 12th dvýlikta-s. trý-lika, keturió-lika etc. contain forms of the neut. pl. in both parts (§ 338), and accordingly O.Lith. has the dat. -likams and instr. -likais. When the neuter dropped out of use in Lithuanian (§ 403), -lika was treated as a nom. sing. fem.; and then it was declined gen. -likos etc. This inflexion is seen in Old Lithuanian, and is still found in dialects of the language. -lika came from an adjective *lika-s 'remaining over, being in excess', a by-form of the O.Lith. lika-s just mentioned; and to this day lika-s is in regular use in the sense of 'remaining over singly, odd'. The root is leiq- (Lat. linquo Gr. λείπω). Cp. Goth. áin-lif above. In

vënů'-lika and dvú-lika the final of the first member has assimilated itself to the numerals immediately following, and become long; cp. Skr. ékā-daša p. 25 and § 326. Cp. Bezzenberger, Beitr, zur Gesch. der lit. Spr. 179 ff.: Kurschat, Gram. p. 269; the Author, Lit. Volkslieder p. 309, and in Techmer's Internat. Ztschr. I 251 f.: Mahlow, Die langen Vocale 49: Joh. Schmidt, Pluralbild, 39, 42. - Slavonic. 11 jedinu na desete (loc. sing. of stem deset-) = 'one upon ten', 12 dŭva na desete 'two upon ten' etc. Cp. Lett. win-pa-dsmit '11' = 'one over ten' diw-pa-dsmit '12' etc., and Gr. Thess. τᾶ ἕκτα ἐπ' ἐκάδι (Collitz, Samml. der Gr. Dialektinschr., no. 345. 10). There are two types of ordinals. Sometimes only the unit takes the ordinal form, as osmuji na desete 'the eighth upon ten' = 18th; sometimes -ĭnŭ was used to make a derivative from the expression for the cardinal number. In the latter case the unit might either show the form of the nom. acc., as peti-na-desetinu '15th'; or be treated like the first member of a stem-compound, as peto-na-desetīnu, cp. II § 47 p. 86.

§ 176. Twenty to Ninety-nine.

The Indo-Germanic expressions for multiples of ten from 20 to 90 at first meant two, three, or the proper number of tens. Originally both parts of the phrase were inflected; both the unit (except the uninflected units 5 to 9, see §§ 169 ff.) and the word for a ten — a neuter *komt- *kmt- (for *dkomt- *dkmt-, see § 164 pp. 2 f.). '20' was a dual, *uī (?) kmt-i; the others plural, as '30' *trī komt-a. But these expressions for multiples of ten are not inflected in any language; in all of them the nom. acc. has become stereotyped. Some at least of the units in these phrases were stereotyped in the parent language itself. This is proved by *qetuī-komta (Gr. τετρώ-κοντα Lat. quadrā-gintā Avest. capwar²-sat- Armen. kar-a-sun) and *penqē-komta (Gr. πεντή-κοντα Skr. paūcā-śát-), which were ad-formates of *trī-komta. It is doubtful whether *kmti and *komta had also become crystallised so soon.

These forms of the nom. acc. pl. (du.) neut. became in the Indo-Germanic period the foundation upon which were built singular abstract nouns (collectives) of the feminine gender, and

ordinals whose first member was the nom.-acc. form. The abstract nouns were ad-formates of the feminine *delimit- 'group of ten'1): examples are Skr. triśát- 'group of 30', Gr. Boeot. Γικάς Att. εlκάς, O.Ir. fiche 'group of 20' gen. fichet. The ordinals were derived from these by the suffixes -to- and -t-mmo-. When these two groups of abstract nouns and ordinals sprang up, the expressions for the cardinal numerals, from which they were derived, had not yet fully become compounds. Thus *trīkomt- *trīkmt- 'τριακάς' and *trīkmt*to- *trīkmt*tmmo- 'τριακοστός' may have stood related to *trī komtə 'three tens' much in the same way as O.C.Sl. dūvadesetīnū '20th' to dūva deseti '20', and as Lat. quartadecumānī to quarta decuma, Sacraviēnsēs to sacra via etc. (II § 3 p. 5).

Remark 1. Perhaps the re-formates *qelu\(\vec{q}\)- and *peraq\(\vec{q}\)- first appeared only in collectives and ordinals, in which there was a closer connexion between the word for the unit and the word for the ten. This might explain certain pairs of forms, τετρώ-κοντα and τετταρά-κοντα in Greek, panc\(\vec{a}\)-sat- and panc\(\vec{a}\)-sat- in Avestic; and the difference hetween Avest. capwar\(\vec{e}\)-sat- and Skr. catv\(\vec{a}r\)-s\(\vec{e}\)-diff. Gr. τετρώκοντα would then be an ad-formate of τετρωκοστό-s; while τετταρακοστόs, on the contrary, would have followed τετταράκοντα.

The dual *kmt-i once had the weak stem in all its cases; hence come Avest. vī-saiti Armen. k-san Gr. Fί-κατι Lat. vī-gintī, hence also the collective with -kmt-: Gr. Fι-κάς εἰ-κάς O.Ir. fi-che (O.Cymr. u-ceint Corn. u-gans). But the nom. acc. pl. was *komt-ə, whence Armen. -sun Gr. -κοντα and the collectives Avest. pri-sas O.Ir. -cha -ga. In cardinals and collectives of the tens from 30 upwards *kmt- is also found (Lat. -gintā and Skr. tri-śát- Avest. pri-sat- etc., Gr. τριā-κάς). Two possible causes may be assigned for this. (1) Beside *komt-ə there may have once been weak cases with *kmt-, as loc. *kmt-su, or (2) the corresponding forms for the number 20 may have set the type. The ordinals had all of them doubtless *kmt- to begin with, as Gr. Boeot. Fι-καστό-ς Skr. tri-šattamá-s Lat. trī-cēsimu-s.

¹⁾ Words were formed later on the same principle in Old Icelandic, in Lithuanian, and in Greek. Examples: O.Icel. tvītog-t 'εἰκάς' prītog-t 'τριακάς' etc.; Lith. dvideszimti-s 'εἰκάς' (e. g. po dvideszimtës metu, in Bretken) from *dvì dẽszimti '20'; Gr. ἐνδεκάς δωδεκάς etc.

Remark 2. Avest. vīsastema- is an ad-formate of *prisastema- (which we may infer from prisas), which had itself taken the place of *prisastema-. In Greek, and doubtless in its proethnic period, -κοντα influenced the connected ordinals in *-καστο-ς. The change may have taken place in either of two different ways; (1) *-καστο-ς may have become *-κονστο-ς and then -κοστο-ς (cp. κεστό-ς for *κενστο-ς, I § 204 p. 171), or (2) *-καστο-ς may simply have taken over the o of -κοντα. The o then spread backwards to 20 and 10 (Ion. Att. εἶκοστό-ς εἴκοσι, Arcad. δέκοτο-ς δυό-δεκο), and forwards to 100 and its multiples (Arcad. ἐκοτόν-βοια and Ion. Att. -κόσιοι).

The old expressions for the cardinal numbers, consisting of an adjective with a substantive, remained in Armenian, Greek, and Latin, and in the Avestic word vīsaiti '20'. Arvan and in Keltic these were displaced by the group of singular abstract nouns; the only Aryan forms which recal the old type are Avest. vīsaiti, and indirectly Skr. višati-š (see § 177). But in Aryan these forms were themselves displaced in the numbers from 60 to 90 by a second group of abstracts, such as Skr. šaští-š (see § 178). In Germanic and Balto-Slavonic. both these expressions for the cardinal numerals and the singular abstracts had disappeared before the historical period begins. Their place was filled by other expressions which had really and truly the same etymological factors, and the same meaning, as the original Indo-Germanic expressions. Take for example 30, Goth. preis tigjus Lith. trys deszimtys O.C.Sl. tri deseti, where the substantive was the Indo-Germanic word for a group of ten, *dekmt- *dekmti-, still used independently.1) It is probable that *\hat \text{*\hat mt-} became obscured quite early in Germanic and Balto-Slavonic, as in the other languages, and sank to the level of a suffix; and the new expressions served to refresh somewhat the original meaning of the words. But then the same thing happened again, and the new words

¹⁾ Germ. *tezu- 'group of ten' must be derived from *dekmt- in the following manner. In the instr. pl. *tezund-mi and in an instr. dual form containing an m-suffix (in the expression for 20), -undm- became -unm-, -umm-, and -um- successively. Thus we have tigum, which gave the type for a new set of cases, Goth. tigjus etc. See §§ 379, 386. What may be the relation of forms with u in the root-syllable (O.H.G. -zug O.Icel. togr tugr) to *tezu- still remains an open question. — For the masc. gender of the word compare O.C.Sl. diva deseti.

were themselves obscured and became suffixes. For example, in Mid.H.G. drī-zic vier-zic Mod.H.G. drei-ssig vier-zig the final part was and is a mere suffix. no less than was that of Gr. τοιά-κοντα or that of Lat. trī-qintā at the beginning of the historical period of the classical languages. And in German [and English] these multiples of ten are used as adjectives agreeing in case with the substantive which follows, just as happened with the similar expressions which the Romans and the Greeks had inherited from the parent language: Mod.H.G. in vierzig wochen in forty weeks' as contrasted with O.H.G. feorzug wehhōno 'τετταρακοντάς έβδομάδων' and with Goth. dage fidvor tiguns 'ημερών τέτταρας δεκάδας, just like Gr. τριάκοντα άνδρες instead of *τρία κόντα ανδοών, Lat. trīqintā virī instead of *trī contā virōm. However, in Germanic these new expressions with *texu- held their ground only from 20 to 60, while the three others of the series - 70, 80, 90 — were displaced in proethnic Germanic by a new group formed on the analogy of an old expression for 100, Goth, taihunte-hund 'δεκάδων δεκάς'. This change will be discussed in § 178.

In the parent language there never was any very close connexion between the words for the various multiples of ten and any intermediate units which might be used with them (in numbers such as 21, 22, 31 and so forth). The unit always remained an independent word. See § 175 p. 24. also independent in the differentiated idioms of the different languages. Sanskrit is the only noteworthy exception. Along with the old method of expresssion, Vedic itself contains feminine words like tráyas-trišat- '33' cátus-trišat- '34', which follow the analogy of tráyō-daša '13' cátur-daša '14'. Later, these compound forms became the rule; and for other numbers besides 24, 34 etc. the bare stem was used in them; e.g. ēka--viśati-š '21' (but on the other hand ékādaśa), dvi-trįšat- '32'. Sanskrit always shows a marked preference for compound words (see II § 21 p. 37), and this new group only followed the general lines of the language.

Words formed on the principle of subtraction have been

already discussed (§ 175 p. 25). Examples are ēkōnatriśatūnatriśat- '29', pañcōna śatam '95', ékān ná śatám '99'.

§ 177. Twenty. The cardinal ended in *-kmti (Avest. $v\bar{\imath}$ -saiti Gr. fi-xa $\imath\imath$), which was nom. acc. du. neut. of the stem -kmt- (§ 294).

The first part was *uei- (Gr. Heracl, fei-xati 1) ei-xogi), *ui-(O.Ir. fi-che), *vim- or *vin- (Skr. vi-sati-s), perhaps also *vī-(Avest. vī-saiti, Gr. Fi-zarı with T?, Lat. vī-gintī, Armen. Isan for *ai-santi or *aī-santi). It would seem, then, that different case-forms were used; but we cannot get anything like a clear idea as to what the original method of expression was in Indo-Germanic. It seems certain that all these variations of *uei- meant 'two', and it is natural to connect them with two particles — (1) Skr. ví 'apart' vi-šu- vi-šva- 'on both sides, on different sides' (cp. Avest. pri-šva-) vi-tará-m 'further' Goth. vi-bra 'against, with- (in composition)' Lat. vi-tr-icu-s (II § 75 p. 191); and (2) u in Skr. u-bhāú O.C.Sl. vũ-torũ and in the nom. acc. du. Skr. dvā-ú. Then *u-i- 'two' will be like *tr-i-'three' and *dui- 'two' (§ 166 p. 6, § 311 Rem. 2). See the Author, Morph. Unt. V 23 ff., Bartholomae Stud. zur idg. Sprachgesch. I 74, and below §§ 285, 296.

The abstract ended in *- $\hat{k}mt$ -s (in the nom. sing.): Gr. $f\iota$ - $\kappa\dot{\alpha}\varsigma$ $\hat{\iota}$ - $\kappa\dot{\alpha}\varsigma$ $\hat{\epsilon}\hat{\iota}$ - $\kappa\dot{\alpha}\varsigma$ O.Ir. fi-che. The ordinal ended in *- $\hat{k}mt^sto$ -*- $\hat{k}mt^stmmo$ -: Gr. Boeot. $f\iota$ - $\kappa\alpha\sigma\tau\dot{\sigma}$ -s-Lat. $v\bar{\iota}$ - $c\bar{e}simu$ -s.

Aryan. Avest. vīsaiti. Skr. višatí-š is a singular abstract noun formed from the nom. acc. du. in *-šati, after the analogy of šaští-š '60', saptatí-š '70' etc.: people said višatyā hárīṇām, and with the case of the latter word assimilated višatyā hárībhiš 'with 20 bay steeds' just as they said šaštyā hárīnām and šaštyā hárībhiš 'with 60 bay steeds'. The later višat- seems to be merely an ad-formate of the numbers 30 to 50 trišát- etc.,

¹⁾ Danielsson (Epigraphica, Upsala 1890, p. 33) would now regard Heracl. Γείκατι as Γίκατι influenced by the form of Att. εἴκοσι, which he takes to stand for ἐΓικοσι. The diphtheng of Γει- has no real support whatever in the other Indo-Germanic languages; still I can see no valid reason for denying that it represents an original proethnic form.

as on the other hand v_i sati- \tilde{s} was the type for tr_i sati- \tilde{s} which was used in more recent times along with tr_i -sati- \tilde{s} Avest. v_i - may come from v_i -; see the Author, Morph. Unt. V 27.

20th. Avest. vīsastema- instead of *vīsastema-, see § 176 Rem. 2. Skr. vįšati-tamá-s, derived from vįšati- (cp. šašti-tamá-s § 178), and vįšá-s like ēkādašá-s 'eleventh' etc.

Armenian. ksan probably for *gsan *gšsan(ti) with g-= u-, -s-= -k-, -an-= -m-, see I § 232 p. 197. ksan, like the multiples of ten that followed it, received inflexion once more (as an i-stem), e. g. gen. dat. ksan-i-e; and later it was also declined in the singular. Ordinal ksan-erord.

Greek. Dor. Boeot. Γίχατι, and with ει Dor. Γείχατι Ion. Att. εἴχοσι Hom. ἐείχοσι. 20th Boeot. Γιχαστό-ς Att. εἰχοστός. Abstract: Boeot. Γιχάς Thess. ἰχάς Att. εἰχάς. The quantity of ι in the first syllable has not been ascertained. -o- in place of -α- was due to the following multiples of ten, its first source being the ending -χοντα; see § 176 Rem. 2 p. 31. Hesychius has preserved another form ἔχαντιν (MS. ἰχάντιν) with the -ν- of -χοντα. The ν ἐφελχυστιχόν may have been first added to εἴχοσι when it was used as a dative, cp. inscr. ἀνδοάσιν ἑνὶ χαὶ εἴχοσιν (Maassen, De littera ν paragogica, 1881, p. 34).

Italic. vī-gintī. vīcēsimu-s, rarely vīgēsimu-s. Whether vī-represents Idg. *uī- or *uei- is uncertain; we find veiginti in C.I.L. I 1194, later than 105 B.C. It is also doubtful why the final -ī of -gintī is long; was an original -i lengthened on the analogy of -ā in trīgintā etc., or was -oi or -ei, the ending of the nom. acc. du. neut. of o-stems (see § 293), substituted for it? The -g- Thurneysen holds to be correct phonetically in septingentī nōngentī (quadringentī octingentī), and then to have extended itself by analogy into other numbers (I § 499 p. 366); in considering this question, we must not forget that a media ĝ seems also to be indicated by the z- of Alban. -zet 'group of 20' (nɛ-zét 'one score', dü-zét 'two score' etc.) — see G. Meyer, Abh. zu M. Hertz' 70. Geburtstag 1888, pp. 90 f., and compare the mediae in Lat. quadru- § 168 p. 11, Gr. εβδομο-ς O.C.Sl. sedmü § 171 p. 19.

Old Irish. fi-che (gen. fichet dat. fichit) for *-kmt-s (I § 243 p. 201, § 620 p. 467, § 634 pp. 474 f., § 657. 6 p. 509, § 685 p. 552); possibly fi- took the place of *uī- or *uei- after the analogy of tricha. O.Cymr. u-ceint Corn. u-gans, the u of which has not been explained; cp. Thurneysen in Kuhn's Ztschr. XXVI 310 footnote 2. 20th Mid.Ir. fichet-mad (inferred from cōicet-mad).

Germanic. Goth. tváitigjus, dat. tváimtigum. O.H.G. zwein-zug O.Sax. twēn-tig, the first part being a crystallised dative. 20th O.H.G. zweinzug-ōsto. As to *tezu- for *deknt-see p. 31 footnote 1.

Balto-Slavonic. Lith. originally *dvì dēszimti (dual), hence dvì deszimt uninflected, and also a dialectic form dvì deszimts through assimilation to trìs deszimts etc.; 20th O.Lith. antra-s deszimta-s, modern dvì deszimta-s. O.C.Sl. dŭva deseti (dual, so deseti is masc.); 20th dŭva desetinŭ dva desetinŭ, and, following the fashion of stem-compounds, dvo desetinŭ (cp. peto-na-desetinŭ § 175 p. 29).

§ 178. Multiples of Ten, from Thirty to Ninety.

Aryan. Traces of the old neuter plural phrases *trī komtə etc. survive in the first components of Avest. capvare-sat- and Skr. pancā-sát- Avest. pancā-sat-, since these followed the analogy of *trī- (see § 176 p. 29), and also in the first part of Skr. catvāri-šát-, in which *catvāri- changed to catvāri- on the analogy of vi- and tri-. In proethnic Aryan the feminine singular abstract nouns displaced the old plural phrases, and in the same period these same forms, in the numbers from 60 to 90, were themselves displaced by abstract nouns derived from the units, Skr. šāšti-š Avest. xšvāšti-š 'a group of six' (i. e. six tens), and so forth.

In the second member of 30, 40, and 50 the weak stem *-kmt- = Skr. -sat- Avest. -sat- has levelled out the others; Skr. tri-sat- catvāri-sat- pancā-sat-, Avest. pri-sat- capwar--sat- pancā-sat-; *-komt- is found only in Avest. pri-sas, an indeclinable word, which corresponds to O.Ir. nom. sing. tri-cha (cp. Ascoli, Krit. Stud. 100). In Avestic the acc. in -sat-em was

used for the nom. as well, doubtless under the influence of the neuter sate-m '100'; hence the word was declined as an o-stem, gen. pl. prisatanam, pancāsata-gāya- 'space of 50 paces'. In Sanskrit the analogy of višatí-š gave rise to trįšati-s, which was used along with trįšát-.

With regard to the first member, the following are directly descended from Indo-Germanic forms: Avest. cabware- from *qetur- (cp. I § 306 p. 242) and Skr. panca- Avest. panca- from *penge-, see § 176 p. 29. Whether Skr. tri- represents pre-Arvan *trim-, or is an ad-formate of vi-, is a doubtful point; Skr. catvāri- instead of *catvāri- must count as an ad-formate of this kind. Avest. cabware-sat- was confused with compounds like ātare-carana-; hence alongside of cabru-māhya- adi, 'every four months, connected with four months', and the like, were coined such compounds as cabware-zawara- 'four-footed'. same cabware-sat- may therefore have suggested bri-sat- instead of *pri-sat- or *prisat-, and panca-sat- (beside panca--sat-). But the pri- of the MSS. may be an incorrect mode of writing pri- or pri- (see the Author, Morph. Unt. V 27), and panca-sat- may be a genuine product of the time when *perage komta was still spoken and had not yet been changed to *pengē komtə (see § 176 Rem. 1).

60 Skr. šašti-š Avest. xšvašti-š. 70 Skr. saptati-š Avest. haptāiti-š — the ā of the latter is due to that of aštāiti-; a is retained in haptaipi-vant- 'seventy-fold'. 80 Skr. ašīti-š (cp. § 172 Rem. p. 19), Avest. aštāiti-š. 90 Skr. navati-š Avest. navaiti-š. Skr. šašti-š and Avest. navaiti-š have not ceased to bear the more general sense of 'group of six', 'group of nine'.

Remark. We may assign a reason for the use of šašti-š etc. in place of corresponding abstracts of the same kind as tri-šāt-. Such a use suggests that in proethnic Aryan higher numbers could be expressed by a sexagesimal notation, in which the word šašti-š 'threescore' held the most prominent place. Even in historical times the ancient Persians had a remarkable liking for the number sixty and its multiples, as the Romans had for sexāgintā and sescentī (see Cantor, Mathemat. Beitr. zum Kulturleben der Völker, 1883, p. 361 f.) The original compound numeral for 60 was displaced by šašti-š in proethnic Aryan, and corresponding expressions for the following tens established themselves later by analogy.

In the phrases Skr. trisatā harīnām, sastyā harīnām 'with 30, 60 bay steeds' the cases were assimilated, giving trisatā harībhis, sastyā harībhis, and a further assimilation of the first word to the number of the second produced Skr. pancāsadbhir vāṇāis 'with 50 arrows', the numeral being now regarded as an adjective. The Avestic prisatanam bawrinam 'triginta fibrorum' is similar (cp. Lith. deszimtisa mēstosu p. 23 footnote 1, Lat. ducentī virī § 180). It is improbable that the latter construction is immediately connected with the original neut. pl. phrases *trī komta 'three tens' etc.

Ordinals. Skr. trįšat-tamá-s catvārįšat-tamá-s pañcāšat-tamá-s and trįšá-s catvārįšá-s pañcāšá-s like vįšá-s (§ 177 p. 33). šašti-tamá-s saptati-tamá-s ašīti-tamá-s navati-tamá-s and šaštá-s saptatá-s ašītá-s navatá-s (observe that t distinguishes these from šašthá-s 'sixth' saptátha-s 'seventh', which have th); the last three are to be compared with -šatá- '100th' (§ 179). In Avestic only prisata- '30th' is actually found.

Armenian. -sun came from the stem -komt- (I § 79 p. 70), and is probably shortened for *-sonta. Sometimes we have -a-, the 'vowel of composition', (cp. II § 28 p. 45). 30 eresun for *eri-a-sun. 40 kar-a-sun; kar- probably stands for *qtu\(\bar{v}\)- (cp. arm-ukn 'elbow' == Skr. \(\bar{v}\)-má- Avest. ar -ma-, I § 306 p. 241). 50 yi-sun, cp. I § 330 Rem. p. 265, and Bugge, Beitr. zur etym. Erläut. der armen. Sprache, p. 10; whether *penq\(\bar{v}\)- or *penqe- be the form contained in this word it is impossible to decide. 60 vat-sun, cp. vec 'six' and ve\(\bar{v}\)-tasan '16'. 70 evtan-a-sun. 80 ut-sun. 90 inn-sun. The numerals in -sun remained for a long time indeclinable, and afterwards, like ksan '20' (§ 177 p. 34), became inflected; they were declined as i-stems, e. g. gen. dat. eresn-i-c; later they were declined in the singular as well.

Ordinals: eresn-erord karasn-erord etc.

Greek. -ποντα was indeclinable from proethnic Greek onwards. Occasional exceptions to this rule, such as τεσσερακόντων (inser. of Chios), τριηκόντων (Hesiod), τριηκόντεσοι (Anthol.) are re-formates of a late period, and so are πέμπων (§ 169 p. 13) and δέκων (§ 174 p. 22).

- 30. $\tau \rho \iota \dot{\alpha}$ -κοντα Ion. $\tau \rho \iota \dot{\eta}$ -κοντα instead of * $\tau \rho \bar{\iota}$ -κοντα. * $\tau \rho \bar{\iota}$ -first gave place to * $\tau \rho \iota \dot{\alpha}$ -, since all nom. acc. pl. neut. took the termination - $\ddot{\alpha}$ from consonant-stems (§§ 337 ff.); then $\ddot{\alpha}$ was lengthened on the analogy of $\tau \epsilon \tau \rho \dot{\alpha}$ -κοντα and $\pi \epsilon \nu \tau \dot{\eta}$ -κοντα. Similarly we have $\tau \rho \iota \dot{\alpha}$ -κάς.
- 40. Dor. Ion. τετρώ-κοντα = Idg. *qetuğ-. Att. τετταρά-κοντα Ion. Arcad τεσσερά-κοντα Boeot. πετταρά-κοντα. Cp. § 176.
- 50. Att. Dor. etc. $\pi \epsilon \nu \tau \eta' \varkappa o \nu \tau \alpha = \text{Idg. }^* p \epsilon \nu q \bar{\epsilon}$. Cp. § 176 p. 29. The $-\eta$ of this word passed on to the following multiples of ten, as in Latin the \bar{a} of $quadr\bar{a}$ - $gint\bar{a}$ passed on to $quinqu\bar{a}$ - $gint\bar{a}$ $sex\bar{a}$ - $gint\bar{a}$ and the rest.
 - 60. Att. Dor. etc. έξ-ή-κοντα, Cret. Γεξήκοντα.
- 80. Hom. ὀγδοί-κοντα like Lat. $oct\bar{o}$ -gintā. Att. Lesb. ὀγδο-ή-κοντα Heracl. ὁγδοήκοντα (cp. Heracl. ὁκτω § 172 p. 20), like vulgar Latin $octu\bar{a}$ -gintā for * $octov\bar{a}$ -. ὀγδο- η (cp. ὀγδοάς and ὄγδοο- ς) presents the same difficulties as ξβδο μ - η -. See § 172 p. 20 for ὄγδοο- ς , and the Author, Morph. Unt. V 36 ff.

In the ordinals of the tens from 30 to 90 *-καστο-ς became -κοστό-ς through assimilation to -κοντα in proethnic Greek (§ 176 Rem. 2 pp. 30 f.). τριᾶκοστό-ς. τετρωκοστό-ς and τετταρακοστό-ς. πεντηκοστό-ς. ἔξηκοστό-ς. ἑβδομηκοστό-ς. ὀγδοηκοστό-ς. ἐνενηκοστό-ς.

Italic. No evidence is forthcoming except in Latin. -gintā instead of *-gontā owed the change of its final to the analogy of o-stems (cp. § 342); -i- (earlier -e-) instead of -o- may be due either to the vowel gradation seen in different cases of the Idg. neut. pl. *komt-o, or to the analogy of vī-gintī (§ 176 p. 30); as to -g- instead of -c-, the student may refer to § 177 p. 34. trī- is the old nom. acc. neut. quadrā- is the Idg. *getuṣ̄-; its -ā- passed on to the following tens, as the -η-of πεντή-κοντα did to ἐξή-κοντα and the rest. quinquā- (instead of *quinquē-). sexā-. septuā- has been assimilated to octuā-. octuā- for *octov-ā- (like Gr. ὀγδο-ή-κοντα) belongs to the popular language (cp. § 172 p. 21); the literary form is octō-(like Gr. ὀγδω-κοντα). It is uncertain whether nōn-ā- stands for pre-Italic *neuen-, like Gr. ἐν(f)εν-ή-κοντα, or for pre-Italic *neuen-, like Gr. ἐνεf-ή-κοντα (Hom. ἐννήκοντα).

Ordinals. $tr\bar{\iota}c\bar{e}simu$ -s (like $v\bar{\iota}c\bar{e}simu$ -s) and $tr\bar{\iota}$ - $g\bar{e}simu$ -s. Only - $g\bar{e}simu$ -s occurs in the rest of the series, $quadr\bar{u}g\bar{e}simu$ -s etc.

Old Irish. -cha -ga and -ca (see I § 514 pp. 375 f.) for *-komt-s, gen. -chat dat. -chit -chait. 30 tri-cha with original short i, as Bret. tregont shows; *trecha would be the regular form; the word may have taken its present shape under the influence partly of tri 'tria', which is used before substantives as an independent word, partly of fi-che '20'. tri- is the stem, in place of nom. acc. pl. neut. *trī-. 40 cethor-cha either for *cetura- (nom. acc. pl. neut., cp. Gr. τετταρά-κοντα) or for *cetru- (the stem, cp. Gall. Petru-corius and tri-cha); Mid.Ir. cethracha, which doubtless follows cethri 'four'. 50 cōica, perhaps by syllabic dissimilation (cp. Gall. Leucamulus for *Leuco-camulo-, I § 643 p. 483); is the contained unit *penagēor *penge-? see the Author, Morph. Unt. V 33. 60 ses-ca. 70 sechtmo-ga -go, which may stand for *sechtmm-u-cont- or for *sechtom-u-cont- (cp. cethorcha for *cetru-cont- [?] and O.Cymr. trimuceint '30'). Cp. the Author, Morph. Unt. V 38. 80 ochtmo--qa is certainly an ad-formate of sechtmo-qa. 90 Mid.Ir. nocha or nocha, O.Ir. perhaps *nōicha (cp. nōicht-ech 'of ninety years'); was *nō(i)ca the older form (see I § 212 pp. 178 f. and

§ 513 p. 375) and did tri-cha cause the change from c to ch, or was it * $n\bar{o}(i)ncha$, where ch instead of c would shew that a vowel had dropped between n and cha? It remains a doubtful point whether the contained unit is * $neu\eta$ - or *neuen- (cp. Gr. $\dot{\varepsilon}\nu(f)\varepsilon\nu-\dot{\eta}-\varkappa o\nu \tau a$).

The Ordinals end in -mad, as 50th cōicet-mad cōicat-mad. For expressions like tri deich '30', cōic deich '50' (cp. the Germanic and Balto-Slavonic) and dā fichit '40' tri fichit '60' (cp. Alban. dü-zét, tre-zét) see Stokes, Bezzenb. Beitr. XI 167 f., and Pott, Die quin. und vig. Zählm. 99 ff.

Germanic. Goth. 30 preis-tigjus, acc. prins-tiguns, gen. prijē-tigivē. 40 fidvōr-tigjus. 50 fimf-tigjus. 60 saihs-tigjus. O.H.G. drī-zug (the spirant z is due to the preceding vowel, see I \S 533 p. 390; yet on the analogy of zwein-zug and the following tens the word came to have z=ts, as the spelling trīcig etc. shews), fior-zug, finf-zug, sehzug sehzug (the latter a re-formate, cp. Lat. sescentī and sexcentī, \S 180). As regards the origin of tigu- and -zug, see p. 31 footnote 1.

For 70, 80, and 90 we have in Gothic sibunte-hund ahtáute--hund niunte-hund, which are mostly indeclinable, though once we find a gen. in -is, niuntehundis; in Old High German of the oldest period, sibunzo ahtozo (-z- instead of -z- is a re-formation) niunzo (not actually found, but this is a mere accident); in Old Saxon ant-sibunta ant-ahtoda: and in Anglo-Saxon hund- seofontiz hund-eahtatiz hund-nizontiz. These were all ad-formates of an original expression for 100, Goth. taihunte-hund O.H.G. zehanzo A.S. hund-teóntiz, which will be explained in § 179. Probably the Indo-Germanic expressions for 70, 80, and 90 which answered to Goth. Preis-tigjus etc. lost their original meanings in proethnic Germanic, and were then superseded by this new series which follows the analogy of taihunte-hund. Yet in West Germanic there was a kind of reaction to the older type, and O.H.G. sibunzo ahtozo niunzo during the ninth and succeeding centuries were gradually made to conform to the type of the preceding tens, and transformed into sibunzug ahtozug niunzug; and similarly, in Anglo-Saxon, *hund-seofonta became hund-seofontiz, and the others of this set were changed in like manner. Cp. the Author, Morph. Unt. V 49 f.

The forms in -zug and -zo were still regarded as substantives in O.H.G., since they governed a genitive case; as feorzug wehhōno, sibunzo wehhōno; the present type is in vierzig wochen in forty weeks, like Skr. pancāšadbhir vānāiš (§ 178 pp. 36 f).

No ordinals are found in Gothic. In O.H.G. we have $dr\bar{\imath}zug\bar{o}sto$ etc. like $zweinzug\bar{o}sto$.

Balto-Slavonic.

Lithuanian. 30 trūs deszimtus (stem deszimti-) and deszimts (stem deszimt-), like O.C.Sl. četyri deseti beside četyre desete. Each word of the expression was declined independently (with the gen. pl. of the word whose number was to be expressed), as acc. trìs deszimtis, gen. trijū deszimtū. Similarly 40 keturios deszimtus (deszimts), acc. ketures deszimtis, etc. These expressions are found in Old Lithuanian. survive as dialectic variants: but as a rule they became compounds, the unit coalescing with the ten. The accusative became the regular form in the first part, and in the second, -deszimts was crystallised in some dialects, as tris-deszimts ketures--deszimts etc.: whilst elsewhere (in the literary language) dvi--deszimt '20' set the type for the final member, and its -deszimt passed on to the rest of the series, as tris-deszimt etc. Other kinds of change in the older language are discussed by Bezzenberger, Beitr. zur Gesch. der lit. Spr., 181 f. - Ordinals. Old Lithuanian has such phrases as penkta-s deszimta-s (cp. antra-s deszimta-s'20th'), and such compounds as penkta-deszimta-s, '50th'. The forms now used, trisdeszimta-s keturesdeszimta-s etc., have been modified by association with the cardinal. Forms with the 'vowel of composition', like keturiā-deszimta-s '40th' septyniā--deszimta-s '70th', are also said to occur. See Bezzenberger, op. cit. 185 f.; Schleicher, Lit. Gr. 151 f.

Slavonic. 30 tri deseți. 40 četyri deseți, and masc. četyre desețe. 50 peti deseță = $\pi \epsilon \nu \tau \dot{\alpha} \zeta$ $\delta \epsilon \varkappa \dot{\alpha} \delta \omega \nu$, 60 šesti deseță etc. — The Ordinals end in -ină, tridesețină, četyridesețină pețidesețină

etc.; sometimes they contain the 'vowel of composition' -o-, as sed modesetinu beside sed midesetinu '70th'.

§ 179. Hundred. The Idg. cardinal was *kmtó-m for *dkmtó-m (§ 164 pp. 2 f.) 'group of ten (sc. tens)', a neuter subst. governing the gen. pl. In this word 'tens' is understood, as it is in Skr. daśatí-š, which means both 'decas' and 'centum'. But in Goth. taihuntē-hund 'δεκάδων δεκάς' the original expression seems to have been kept without abbreviation.

Skr. śatá-m. Various constructions are found, — śaténa hárīṇām, šaténa hárībhiş and šatá hárībhis 'with 100 bay steeds'; and the Veda has šatá púras as well as śatá púras '100 cities'. śata- in composition, as śatá-patra-s 'having 100 wings', but also śatám-ūti-ṣ 'offering a hundred helps, giving help an hundred-fold', Avest. sate-m.

Armen. hariur, of doubtful origin (cp. Ascoli, Kuhn-Schl. Beitr. V 212 f.).

Gr. ξκατόν, which has become indeclinable and is used always as an adjective, as ξκατόν ἀνδράσι. This is the sole form found in composition, ξκατο-having entirely disappeared; examples are ξκατόμ-βη ξκατόγ-χειρο-ς (ξκατόστομο-ς may be derived from *ξκατονστομο-ς, as laid down in I § 204 p. 171); — we even find such compounds as ξκατοντα-κάρηνο-ς (cp. ξκατοντάς ξκατοντάκις), following τριακοντά-ζυγο-ς and the like. Arcad. ξκοτόν-βοια like Ion. Att. -κόσιοι, cp. § 176 Rem. 2 p. 31. ξ-κατόν is probably a confusion of two modes of expression, *ά-κατό-ν (cp. Skr. sa-hásra-m 'one thousand') and *ξν κατόν (cp. Alban. hs kint O.H.G. ein hunt 'one hundred'), which were used interchangeably like Skr. dvi-ŝatá-m and dvé śaté '200'.

Lat. centum, like ἐκατόν, is crystallised and used as an adjective; but centi- (centu-) is found in compounds, as centi-manu-s, though we also have centum-pondiu-m centum-peda etc. (cp. Skutsch, De nominum Lat. compositione, p. 37).

O.Ir. cēt, declined as a neuter o-stem. Also cōic fichit.

Goth. hund O.H.G. hunt n. only in 200 and the following hundreds: Goth. tva hunda O.H.G. zwei hunt etc., whence ein hunt, but only in late O.H.G. The word for hundred in

Gothic was tai-huntē-hund (sometimes distorted into taihuntai--hund), in Anglo-Saxon hund-teóntiz instead of *-teónta, in the earliest Old High German zehanzo (hunt being dropped), lit. 'δεκάδων δεκάς'; taihunt- = δεκαδ-, common ground-form *dekmd., cp. Wheeler, Der griech, Nominalaccent p. 38, and in this work vol. I p. 199 footnote 1 and § 469.7 p. 346. gard this, as I have already said, as being the oldest Indo-Germanic mode of designating a hundred, and I consider the old Germanic expressions for 70, 80, and 90 to be re-formates following the analogy of the number 100, Goth. sibuntē- being equivalent to Gr. έπτάδων, and niunte- to Gr. εννεάδων. § 178 p. 40, and the Author, Morph. Unt. V 11 ff., 139 ff., and 268. O.H G. zehanzo with a like zehan, see § 174 p. 23. With regard to O.Sax. ant- in ant-sibunta, which is a distorted form of hund-, see the Author, op. cit. p. 142, and what is said in § 352 of this volume on Norse Runic bri-taunta.

Lith. sziñta-s (which has become masculine, see § 403) and O.C.Sl. sŭto are in living use as substantives. In sŭto the ŭ is strange; perhaps the word was borrowed (cp. the Author, Techmer's Internat. Ztschr. I 251; G. Meyer, Alban. Stud. II 13 f.); we should expect *sęto, which seems to be represented in tysęšta for *ty-sęt-ja; see § 181.

For the Ordinal, the original proethnic expression has not been clearly determined. Only two branches of the language agree in a formation which could be regarded as proethnic: Skr. -śatá- Lith. szimta-s.

Skr. $\dot{s}ata$ - $tam\acute{a}$ -s Avest. $sat\ddot{o}$ -tema- (for the - \bar{o} - cp. II § 73 p. 178). Sanskrit has also $\dot{s}at\acute{a}$ - in composition, as $\bar{e}ka\dot{s}at\acute{a}$ -s '101s'.

Armen. hariur-ord, hariur-erord.

Gr. ἐκατ-οστό-ς following τρι $\bar{\alpha}$ κοστό-ς etc., ep. also ἐκατοντα-κάρηνο-ς on the last page.

Lat. cent-ēsimu-s following trīcēsimu-s etc.

O.Ir. cēt-mad.

O.H.G. zehanzug-östo.

Lith. szimta-s (szimtàs-is); it is certainly wrong to assume

that this stands for *szimta-ta-s, as Bezzenberger does, or for *szimt-ta-s, with Pott and Schleicher. O.C.Sl. sŭt-ĭnŭ.

§ 180. Two Hundred to Nine Hundred.

Cardinal and Abstract Series. The parent language had two methods of expressing these multiples of a hundred. The unit might be prefixed to *kmtó-m, both being in the same case and in the dual or plural number; as *duoi kmtoi du. '200', *trī kmtā pl. '300' and so forth. This usage is found in Aryan, Irish, Germanic, and Balto-Slavonic. The other mode was to make a singular compound, whose first part was the stem of the unit; as *dui-kmtó-m 'the state of being 200', tri-kmtó-m, etc. This appears in Aryan, Greek, and Latin.

Aryan. Skr. 200 dvé šaté and dvi-šatá-m, and later a re-formate dvišatí f.¹), 300 tríņi šatáni and tri-šatá-m trišatí etc. Avest. 200 duyē saitē (for duyē see Bartholomae, Handb. § 92), 500 panca sata, 900 nava sata.

Armenian. 200 erku hariur and erkeriur, 300 erek-hariur, 400 çorek-hariur etc.

Greek. A group of compounds formed with -ματιο- (so Dor. and Boeot., -μασιο- Arcad., -μοσιο- Ion. Att., as to the first o of which see § 176 Rem. 2 p. 31 and § 179 p. 42) was derived from the neuter abstract series by adding -ηρο-. For example, τετρα-μάτ-ιο- 'connected with the state of being 400, consisting of 400' is derived from *τετραματο-ν 'the state of being 400'; cp. Skr.-sat-ya-, as šaštrįsacchatya-s 'consisting of 136' satín- (Ved.) 'forming a group of 100, hundredfold' (where -in- stands for from -io- -en-, see II § 115 pp. 357 f.); and cp. also Goth. Þūsundi O.C.Sl. tysešta '1000' (§ 181), which is probably to be derived from *tūs-kmt-jo- 'containing many hundreds', and the same suffix -ijo- in χίλ-ιο- Skr. sahasr-iya- (§ 181). Hence the use of the singular, for example, in Thucydides I 62 την δια-κοσίαν ηππον 'cavalry consisting of a group of 200' and Xenophon Cyr. IV 6 2 ηπον εχω δισχιλίαν τοιακοσίαν. This series of

¹⁾ Kluge holds that these compounds in -satī are original forms, of which the Greek and Latin words in -centī and -κάτιοι are trans-formates (Paul's Grdrss. I 406). This view is untenable.

derivatives in -10- then superseded constructions corresponding to Skr. dvé šaté and dvišatá-m, which must have once existed in Greek, precisely as γίλιοι has ousted *γεσλο-ν, which answered to the Skr. sahasra-m. 200 διακόσιοι: Ion. διηκόσιοι instead of *δι-χόσιοι by assimilation to 300 τρια-χόσιοι Ion. τριηχόσιοι. latter form itself may have arisen from a blending of *Toi--κόσιοι with *τρία κατά (Skr. trīni satāni), the a being lengthened after the analogy of τοιά-κοντα (cp. § 178 pp. 37 f.); or, as seems to me more probable, it was transformed from *rouχόσιοι after the analogy of τοιά-κοντα, as the Homeric πεντηχόσιοι undoubtedly has been assimilated to πεντή-χοντα. 400 τετρακόσιοι. 500 πεντακόσιοι instead of *πεντε-κόσιοι, like πεντά--πηχυς etc., see § 169 p. 13. 600 έξακόσιοι. like έξά-πολις etc.. see § 170 p. 16. 700 έπτακόσιοι. 800 οκτακόσιοι, like οκτά--nove etc., see § 172 p. 20. 900 гиахоонов. Ср. the Author, Morph. Unt. V 7 ff.

Italic. Only Latin has any examples. The neuter abstract series is represented by O.Lat. forms with -centum -gentum, du--centum 'a group of 200', etc. Their original character is seen most clearly when they govern the genitive case, in descriptions of weight and measure with aeris, aurī, frūmentī and the like, as argentī sescentum (Lucilius). And in one instance nongentum is used as a crystallised adjective, precisely as centum is, C. I. L. IV 1136 locantur balneum Venerium et nongentum tabernae perqulae cenacula. ducentum became the plural adjective ducentī in very much the same way as Gr. *δεκαγειλον ανδοών becomes δεκάγειλοι ἀνέρες (Hom.), and Skr. pancasatā vānānām becomes pańcāśadbhir vāṇāiš, etc. (§ 178 pp. 36 f.). nōngentu-s 'belonging to 900' (Plin. XXXIII 2 § 31) is an instructive form; it is related to nongentu-m as tri-viu-s 'connected with three ways' to tri-viu-m 'place where three ways meet'. du-centī like du-plex etc., § 166 p. 7. trĕ-centī, cp. § 167 p. 8. quadrin--genti instead of *quadru-, following septin-genti. (quincentum Fest.) for *quinque-cento-. sescentī like misceo for *mic-sceō (I § 503 p. 369), and, once more assimilated to sex, sexcenti, cp. O.H.G. sehs-zug '60' instead of sehzug, which is also found (§ 178 p. 40). septin-gent $\bar{\imath}$. octin-gent $\bar{\imath}$ instead of *octi- or *oct $\bar{\imath}$ - following septin-gent $\bar{\imath}$. $n\bar{\imath}$ n-gent $\bar{\imath}$, and in Columella $n\bar{\imath}$ n-in-gent $\bar{\imath}$ following septin-gent $\bar{\imath}$. The -g- and -c-have been discussed in § 177 p. 34, where we concluded that the sound represented by g is probably Idg. \hat{g} ; and that if the voiced character of the consonant is really so old, these Latin numerals are based upon proethnic stem-compounds, *dui-kntô-m and so forth. Cp. the Author, op. cit. 3 ff.

Old Irish. 200 dā cēt, dat. dib cētaib, 300 tri cēt etc.

Germanic. 200 Goth. tva hunda (dat. tváim hundam) O.H.G. zwei hunt, 300 Goth. prija hunda O.H.G. thriu hunt etc. O.H.G. also has such phrases as zwiro zehanzug 'twice 100', finfstunt zehanzug 'five times 100', cp. Gr. δισ-χίλιοι.

Lith. 200 dù szimtù or dùszimtu, 300 trỹs szimtaĩ or trỹ(s)szimtai etc. In Bretken we find szimtas crystallised in the singular form: du szimts vyru '200 men', szeszi szimtas vyru '600 men' etc. O.C.Sl. 200 dŭvě sŭtě, 300 tri sŭta and so forth.

Ordinals.

Sanskrit. Here the words are associated with the neuter abstracts: 200th dvišatá-s and dvišatatamá-s, 300th trišatá-s and trišatatamá-s etc.

Armen. 200th erkeriur-erord etc.

Gr. διάκοσι-οστό-ς, τριάκοσι-οστό-ς etc. are re-formates like έκατ-οστό-ς, see § 179 p. 43.

Lat. ducent-ēsimu-s trecent-ēsimu-s and so forth (besides nongentēsimu-s Priscian vouches for noningentēsimu-s, which is like noningentē, for which see above).

Remark. Priscian has preserved certain forms which do not occur elsewhere, namely ducēsimus trecēsimus quadrigēsimus quingēsimus sescēsimus septigēsimus octigēsimus nongēsimus. These cannot be really an old series, simply for the reason that -cēsimo- must represent *-cent+tumo-, and -cent- (instead of -cento-) cannot have been really an old expression for 100. They look as though the names for the multiples of ten, vī--cēsimu-s and the rest, had been altered by the stem being substituted for the old case or quasi-case, the meaning of so many hundreds being given to the new word.

O.Ir. and O.Germ. No forms preserved.

Lith. 200th duszimtàs-is etc. O.C.Sl. 200th dvosŭtĭnŭ (where the 'vowel of composition' has found its way into the word), 300th trisŭtīnŭ, and so forth.

§ 181. Thousand. The different languages do not agree in their modes of expressing a thousand; hence we cannot be sure how it was expressed in the parent language. See § 164 p. 2.

*âhéslo- is the form indicated by Skr. sa-hásra-m Avest. ha-zamre-m, Gr. Lesb. χέλλ-ιοι Dor. χήλιοι Ion. χείλιοι (Ι § 565 p. 423); Att. γίλιοι may come from Idg. *āhzló-, see Thurneysen, Kuhn's Ztschr. XXX 353. Skr. sa-hásram 'one thousand' like-Gr. ξ-κατόν 'one hundred', see § 179 p. 42; sahásram ýšīnām and sahásram íšayas '1000 bards', like šatám íšīnām and šatám ŕšayas; and, with the number assimilated, sahásrāny ádhirathāni '1000 waggonloads' like satá púras. In Greek, *ἐννεαχειλο-ν 'a group of 9000' and *δεκαγειλο-ν 'a group of 10,000' became plural adjectives: Hom. ἐννεάχειλοι, δεκάχειλοι (cp. § 180 p. 45), Idg. * qhesl-ijo- 'consisting of 1000': Skr. sa-hasr-iya- 'consisting of 1000, thousandfold', e. g. sahasriyō bhāgás 'a share consisting of a thousand, thousandfold share', Gr. χέλιο- χείλιο-, like ἵππος δισχιλία (see p. 44), and further χίλιοι ανδρες like τριαχόσιοι ανδοες (see p. 45). Ordinals: Skr. sahasra-tamá-s, Gr. Att. γιλι-οστό-ς.

Armen. hazar is borrowed from the Iranian.

Lat. mille mīlia (meilia in Lucilius); it is often connected with Gr. μύριοι (see L. Havet, Mém. de la Soc. de ling., III 415, and Thurneysen, Kuhn's Ztschr. XXX 353); but I do not consider that this connexion has, been proved. mill-ēsimu-s like cent--ēsimu-s.

O.Ir. mīle (I do not know whether the ordinal mīl-mad has been found) was probably borrowed from the Latin.

Goth. pūsundi f., in one place neuter, (in tva pūsundja '2000'; but this form may be regarded as a nom. du. fem. in Idg. *-ai, see § 286), O.H.G. dūsunt thūsunt f. and n. Lith. tūkstanti-s gen. -czio (Lett. tūkstūt-s), ordinal tukstantỹs-is; O.C.Sl. tysęšta tysašta f. for *-entiā *-ontiā, ordinal tysęštīnū. On the strength of the Frankish thūs-chunde thius-chunde (from

the dialect of the Salii, one of the three great branches of the Franks) O.Icel. būshundrađ and West-Goth. thyu-phadus 'chiliarch, leader of a thousand' (cp. būsundi-fabs in Wulfila), it has been prettily suggested that this word, common to Germanic and Balto-Slavonic, is a compound of an adjective *tūs- and the word for 100. *tūs- would be a word connected with Skr. tavás-'strong, strength' tuvíš-tama- 'strongest', showing the weak form of the stem, cp. Skr. instr. bhīš-á from bhiyás- 'fear'. meaning of this compound would be 'a group of many hundreds'; see Scherer, Zur Gesch, der deutsch, Spr. 2 590, Bugge in Paul-Braune's Beitr. XIII 327, and Kluge, Paul's Grundr. I 406. The -n- of the Lithuanian and Lettic words (cp. Pruss. tūsimto-ns acc. pl.) is enough to shew that some analogical transformation must have affected them; perhaps they were associated with the participle of the present (Lett.) tūkstu 'I swell'. Cp. the Author. Morph, Unt. V 10 f.

MULTIPLICATIVES AND DISTRIBUTIVES.

§ 182. Multiplicatives.

1. Numeral Adverbs and Adverbial expressions. The parent language had adverbs ending in -s for twice, thrice, and four times.

'Twice' *dui-s (*duui-s), cp. *dui- in composition and used independently § 166 p. 7. Skr. dviš, Ved. duviš, Avest. biš. Gr. dic. Lat. bis, O.Lat. duis also, see § 166 Rem. 1 p. 7. Goth. tvis- 'apart'. Mid.H.G. zwis, O.H.G. zwir-or zwir-o, O.Icel. tvis-var 'twice', and further O.H.G. zwis-k zwis-ki adj. 'twofold', O.Icel. tvis-t-r 'divided into two parts' Engl. twis-t, i. e. a cord or thread of two strands.

'Thrice' *tri-s. Skr. tríš, Avest. priš. Gr. τρίς. Lat. ter perhaps for *ters and this for *tris (I § 33 pp. 33 f.); beside which we find trīnu-s for *tris-no- (§ 183). O.Ir. tress- 'third. doubtless for *tris-to- (II § 81 p. 247). O.H.G. drir-or O.Icel' pris-var 'thrice', cp. zwir-or tvis-var above mentioned; O.H.G. dris-k dris-ki 'ternus'.

'Four times'. Skr. catúr for *catur\$ (I § 647. 7 pp. 493 f.)

Avest. caprus, cp. Skr. catur-daśa as contrasted with Avest. capru-dasa etc. discussed by Wackernagel in Kuhn's Ztschr. XXV 283 f. Lat. quater, the ending transformed by association with ter: cp. quaternu-s: ternu-s.

There seems to have been another mode of expression in the parent language, to which are due the following: Skr. sa-kft 'once, one time' pánca kftvas 'five times', Lith. vëna karat 'once' dù kartù 'twice' trìs kartùs 'three times' O.C.Sl. dŭva kraty 'twice' petī kratǔ 'five times'.

Uses peculiar to single languages:

Skr. ēka-vāram 'once' tri-vāram 'thrice' from vāra- 'the right moment for something, one's turn'. Avest. biž-vap 'twice' priž-vap 'thrice', neuters of forms with the suffix -uent- (cp. below, under 2); prisat-a-pwem '30 times' (suffix -tuo-).

Gr. ἄ-παξ 'once'; the second part is connected with πήγννμι 'I make fast, strengthen' πάσσαλο-ς 'peg', and probably had at first much the same meaning as another word belonging to the same root, namely O.H.G. fah 'part, portion' A.S. fæc 'space of time, time' (cp. Mid.H.G. zwi-vach, manec-vach.) The adverbs from 'four times' onwards end in -κι or -κις (Dor. -κιν): τετράκι, πεντάκι etc. The same -κι occurs in οὐ-κί πολλά-κι; it was doubtless a nom. acc. sing. neut. with the meaning 'hoc' (cp. Lith. szì-s O.C.Sl. sī 'hic', § 409); cp. Osthoff, Morph. Unt. IV 241 f., and the Author, Gr. Gr.² p. 131.¹)

Lat. semel; Wackernagel, Kuhn's Ztschr. XXX 316, conjectures that this word comes from *sm-mēli and is connected with Goth. mēl 'time' (Mod.H.G. -māl). The adverbs from 'five times' onwards end in -iēns -iēs: quinquiēs sexiēs etc. (and totiēs quotiēs), Umbr. nuvis 'novies'. Many conjectures have been made as to the origin of this ending; the most likely of them is Pott's, connecting it with Skr. kiyant- 'how great? how much? how manifold?' iyant 'so great, etc.' (cp. the Author, Morph.

¹⁾ If $-\varkappa_l$ were the interrogative pronoun *qi -, as is assumed by Wackernagel (Kuhn's Ztschr. XXV 286 f.) and J. Schmidt (Pluralb. 352), all the dialects but Thessalian must have had $-\tau_l$ in place of it. I therefore oppose this view. For Thess. $\varkappa l$ - ε , see my Gr. Gr. 2 pp. 54 f.

Unt. V 14). Thurneysen's view (Arch. für lat. Lexicogr., V 275 f.) as to -iens is probably to be accepted; he regards it as a proethnic Italic transformation of *-ient, so that kiyat, the neuter of the Sanskrit form, would exactly correspond to it. Osc. petiro--pert 'quater', cp. Lat. semper.

O.Ir. oen-fecht oenecht 'once' (fecht 'way, course'), fo $d\bar{\imath}$ 'twice', fo $thr\bar{\imath}$ 'thrice' etc.

Goth. áinamma sinþa 'once' tváim sinþam 'twice' etc. O.H.G. eines (gen. sing.) 'once', drīo-stunt fior-stunt etc. (stunta 'section of time'); also expressions with warb, as sibun warb (hwarba 'a turning round'); with spurt 'stadium', as drim spurtim; and with māl 'point of time', as z'einemo māle 'one time, once', zu drin mālen 'thrice'. And see further: J. Grimm, D. Gr. III 231 ff., and Rumpelt, Die deutsch. Pron. und Zahlw. 167 ff.

Lithuanian has also a set of phrases with $s\tilde{y}ki$ -s 'blow, stroke', as penkis sykius 'five times', cp. the Upper German schlag 'blow' = mal. O.C.Sl. has phrases with $-\tilde{s}(\tilde{\imath})di$ - $\tilde{z}di$ (from $\tilde{s}id$ - 'to go'): $dva\tilde{s}di$ 'twice' $tri\tilde{s}di$ 'thrice' etc. (cp. Leskien, Handbuch p. 95).

2. Adjectives.

With -uent- (Π § 127 p. 404): Avest. vīsaiti-vant- 'twenty-fold' prisap-want- 'thirtyfold' xšvašti-vant- 'sixtyfold', Gr. τετρᾶς -ᾶντος, a coin worth four χαλκοῖ, for *τετρα-Fεντ-, of which τριᾶς is an ad-formate.

be akin to $\pi\lambda o\tilde{v}$ - τ_0 - ς , and to have been early associated in the popular mind with $-\pi\lambda_0$ - ς .¹)

There remain a large number of other formations answering to Modern German adjectives in -fach -fältig '-fold'. Of these a few examples may be given. Skr. cátur-vaya- 'fourfold', dáša-gva- daša-gvin- 'tenfold', tri-vártu-š tri-výt- 'threefold', Gr. τρί-φατο-ς τρι-φάσιο-ς 'threefold'; Lith. dvì-linka-s 'twofold' (liñki-s, gen. liñkio, 'a bending'), O.C.Sl. dvo-gubī -gubĩnũ Lith. dvì-guba-s Pruss. dwi-gubbu-s 'twofold' (O.C.Sl. gũ(b)nati 'to bend, incline, fold, move', Lett. gub-stu 'I crouch, bow' Lith. guba 'stack, rick').

§ 183. Distributives. The oldest mode of expressing distributives was to repeat the numeral, as Skr. páñca-pañca 'five each' (Rig-Veda III 55 18), Éka-Ēka-s (Ékāika-s) 'one each, one at a time', púrvas-pūrva-s pūrva-pūrva-s 'the first on each occasion' (cp. II § 53 p. 99), dvan-dvá-m 'two at a time, a pair', Armen. mi mi 'singuli' tasn tasn 'deni', Aesch. Pers. 981 μυρία μυρία πεμπαστάν = κατὰ μυριάδας πεμπάζοντα. Cp. Pott, Ztschr. der deutsch. morg. Ges., XII 458 ff., Doppelung pp. 156 ff.; Lobeck, Pathol. I 184; Winer, Gr. des neutest. Sprachidioms ⁷ p. 234; Wölfflin, Zur distributiven Gemination, Archiv für lat. Lex. II 323.

Adverbs: Skr. - \dot{s} ás, as $\bar{e}ka$ - \dot{s} ás 'singly, one after another' dvi- \dot{s} ás 'by twos, in pairs' \dot{s} ata- \dot{s} ás 'by hundreds': cp. Gr. $\dot{\varepsilon}$ - $\kappa \dot{\alpha} \varsigma$ 'by itself, apart, afar' $\dot{\alpha} \nu \delta \varrho \alpha$ - $\kappa \dot{\alpha} \varsigma$ 'man by man'.

Adjectives with the suffix -no-. Lat. bīnu-s for *bis-no-, trīnu-s for *tris-no- and ter-nu-s, quater-nu-s, sēnu-s for *sexno-, etc. (cp. J. Baunack, Kuhn's Ztschr. XXV 257 ff.). O.Icel. has corresponding forms, tvenner prenner ferner pl. 'two, three, four at a time' for pr. Germ. *tuiz-na- etc., compare Mid.H.G. zwirn m. 'thread of two strands' O.H.G. zwirnēn zwirnōn 'to twist'. Goth. tvei-h-nái 'two at a time, two each', perhaps by a fusing of two suffixes -qo- and -no-. Lith. dvynù du. 'twins'.

¹⁾ In the derivation of $-\pi\lambda_0 - \varsigma$ from $-\pi\lambda_0 - \varsigma$ by 'hyphaeresis' I have no belief whatever. Cp. the Author, Ber. der sächs. Ges. der Wiss. 1889, pp. 51 and 52.

Lith., with the suffix -io-, tre-jì 'three at a time' ketver-ì 'four at a time', and by ad-formation penk-erì szesz-erì etc. Cp. Avest. tūirya- 'fourth' ā-xtūirya- 'to be spoken four times' (used of a certain prayer).

THE CASES.1)

General Remarks.

§ 184. A noun or pronoun can express Case, Number, and Gender.

¹⁾ On the Indo-Germanic cases in general: Bopp, Vergl. Gr. I 3 8 112 ff. p. 245 ff. Schleicher, Compendium 4 p. 497 ff. Fr. Müller, Grdr. der Sprachw. III 529 ff. Scherer, Zur Gesch. der deutschen Spr. 2 546 ff. Wilken, Zur deutschen Declination, Germania XIX 18 ff. Kluge, Noreen, Behaghel, Paul's Grdrss. der germ. Phil. I 384 ff., 490 ff.,

these seven heads. But since meaning, and not form, is the basis of this classification, it often happens that forms etymologically distinct are grouped together, as in the Lat. gen. sing. $eq\,u\,\bar{\imath}$ and (O.Lat.) $equ\,\bar{\imath}s$; whilst others which are really connected are separated, as in Skr. $m\bar{e}$ dat. and gen., or the bh-suffixes, which have one part, and that the most important, in common.

Details of case-usage will be found in the Syntax; this is the place only for a few general remarks. The Nominative implied that the noun idea was the central point of the action expressed by the verb. The Accusative brought the noun into some dependent relation to the verb, the exact relation being determined by the sense of the verb and noun in any given instance

Works and Essays treating of single cases will be cited below.

(accusative of object, of result, and so forth). The Genitive expressed some relation between noun and noun, this also being determined by their sense (genitive of origin, of object, and so forth); it also attached a noun to a verb in such a way that only a part (greater or less) and not the whole of it was affected or mastered by the action of the verb; and thirdly, it formed adverbs of time and place. The Ablative denoted that the noun was the source from which the verbal action came The Dative denoted that the noun was that for which the action of the verb held good, or to which it was directed. The Locative gave the sphere in which something was or some action took place, the goal of motion and the place where a moving thing comes to rest. Lastly, the Instrumental expressed that with which something was (accompaniment), or with which something was done (means).

The Vocative is traditionally classed with these as an eighth case. But this was merely a method of address, or call, standing outside the sentence as far as syntax was concerned, and therefore not properly a case at all.

Numbers. There were three numbers, Singular, Plural, and Dual. The Singular expressed unity, and this number served for both single and collective ideas. The Plural denoted a number of similar things, and was also used where the same thing had a variety of forms or phases (as Skr. mṛtyávas Gr. Đávava 'kinds of death'); it further denoted anything complicated, anything which consisted of parts or sections (e. g. Skr. Ved. dhāmāsas Lith. dūmai 'smoke'). The Dual was used of two complementary things, commonly where by nature or convention they formed a pair. Further discussion of these points will be found in the Syntax.

Genders. Lastly, there were three Genders in the parent language, Masculine, Feminine, and Neuter. The gender depended not so much on what we call case-suffixes as on the stem of the word, and it has accordingly been discussed under Formative Suffixes; see especially II § 57 Rem. p. 106, § 145 p. 458. More will be said of this in the Syntax.

§ 185. The manner in which particular relations of case. number and gender were expressed was in most instances the same: the stem received an accretion (sound of) which brought with it some one of these meanings. But we cannot always tell exactly what the accretion was. In a certain number of forms, the point where the new part joined on to the old is quite clear, so that we may use a hyphen to divide the ending from the stem; e. g. in the nom. sing. *nāu-s (= Skr. nāú-š Gr. $va\tilde{v}$ -s) and *ekuo-s (= Skr. $\acute{as}va$ -s Lat. equo-s), in the nom. sing. neut. *iuqo-m (= Skr. $uuq\acute{a}-m$ Lat. iuqu-m), and in the loc. pl. * $n\bar{a}u$ -su (= Skr. $n\bar{a}u$ -su, cp. Gr. vav-su). In others it is a moot point how far we are justified in making a division: examples are the dat. sing. * $e k u \bar{o} i$ (= Gr. $i \pi \pi \omega$, cp. Avest. $hao m \bar{a} i$ dat, 'the some plant') and in the nom, pl. * $e\hat{k}u\bar{o}s$ (= Skr. $\acute{a}s\dot{v}as$, cp. Goth. vulfos 'wolves'). These forms might, it is true, be analysed * $e\hat{k}u\bar{o}$ -i and * $e\hat{k}u\bar{o}$ -s, - \bar{o} - being explained as a lengthening of -o- (ablaut), and as a matter of fact the -i and the -s were no doubt regarded in the unreflecting consciousness of the speaker as exponents of the relation in which these words stood to their sentence, even though the length of the stem-vowel served as a further mark to distinguish these cases from others, as from the nom, and acc. sing. Still, there is no reason why they should not have come from *ekuoai and *ekuoes by vowel-contraction (cp. I § 115 p. 107). If so, -ai and -es would have been the proper case-endings at a period earlier than that which came just before the gradual dissolution of the parent language.1)

But these accretions to the stem were not indispensable; case, gender, or number could be expressed by the stem alone. For example, * $ek\bar{k}u\bar{a}$ (= Skr. $\acute{a}\acute{s}v\bar{a}$ Lat. equa) was nom. sing., cp. loc. pl. Skr. $\acute{a}\acute{s}v\bar{a}$ -su; *me (= Gr. $\mu\grave{e}$ Goth. mi-k) was acc., cp. Lat. mi- $h\bar{t}$ Skr. $m\acute{a}$ -hyam; * $dh\bar{e}men$ and * $dh\bar{e}men$ (= Skr.

¹⁾ Johansson (Bezz. Beitr. XIV 156) refuses to allow the rules for vowel contraction in the proethnic language which were given in the passage of the first volume of this work cited above. I freely admit that if that paragraph were to be written over again, I should state most of these contractions with more reserve.

dháman, Gr. infin. θέμεν) were loc. sing., cp. dat. sing. Skr. dháman-ē Gr. inf. θέμεν-αι; *pļlu (= Skr. purú O.Fris. fulu, cp. Gr. πολύ Goth. filu) and *dusmenes (= Skr. durmanas Gr. δνσμενές) were nom. acc. neut., cp. nom. sing. masc. Skr. purű-ξ Gr. πολύ-ς and acc. sing. masc. Skr. durmanas-am Gr. δνσμενέ-α.

was another mode of expressing these three This was by giving to the ending of the stem relations a particular grade of Ablaut. For example *pətēr (= Gr. πατήρ Lat. pater) and *dusmenēs (= Skr. durmanās Gr. δυσμενής) were singular nominatives, marked as such partly by the ē (-tēr- -ēsbeing one grade of the formative suffix) which is wanting to the other cases; *ĝenos (= Skr. jánas Gr. γένος) was distinguished as nom. acc. neut. partly by its o (the os-grade of the formative suffix), which at the same time showed that the form was a substantive, cp. Gr. ψεῦδος as contrasted with ψευδές, this instance, as in so many others, a difference which arose naturally from the working of what we call the Laws of Sound has been turned to account in distinguishing varieties of usage. The same remark holds good for some of the words whose form was distinguished by a special inflexional suffix. take an example: in *pəter-m and *pəter-es (= Skr. pitár-am pitár-as Gr. πατέρ-α πατέρ-ες), the acc. sing. and the nom. pl. were expressed partly by the inflexional suffix and partly by the ablaut-grade of the formative suffix -ter-, which distinguished them from other cases with -tr- -tr- -ter-. In rootnouns, in the same way, this or that case was marked partly by ablaut-differences in the root-syllable (see II § 160 pp. 479 ff.). Cp. II § 7 pp. 15 f.

Thus it becomes clear that in treating of declension, casesuffixes are by no means all we have to do with. We must also take account the different shapes of the stem.

The chief relations of ablaut within the stems of words, so far as they affect declension — this we may call Case-Ablaut — have already been considered under the head of Stem-Formation. To this part of the Grammar we shall often have occasion to refer in what follows.

One special point must be mentioned. Forms which show strong-grade vocalism have been called Strong, and those with vocalism of the weak grade have been called Weak. On the same principle, we speak of Strong and Weak Cases; the Strong including the nom. acc. and voc. of all numbers (excepting the nom. and acc. sing. and du. neut., and perchance the acc. pl. masc. and fem. as well; see § 325), and the loc. sing.; while all the other cases are Weak.

But two cautions should be given.

- 1. This classification of the cases holds only for consonant-stems; e. g. Skr. ukšán- Goth. aúhsan- 'ox', Skr. pitár- Gr. πατέρ- 'father'. It does not hold for stems in u, such as Skr. sūnú- 'son'.
- 2. It holds good primarily only for the proethnic stage of Indo-Germanic. Sanskrit has kept these old distinctions between the cases fairly well; but in the other languages form-association and re-formation have changed and effaced them to a great extent; compare, for example, Greek $\pi\alpha\tau\epsilon\rho\omega\nu$ for the older $\pi\alpha\tau\rho\omega\nu$.

Remark. In Sanskrit grammar, the Weak cases are subdivided into Middle and Weakest, according as the case-suffix begins with a consonant or a sonant; e. g. instr. pl. $uk\S\acute{a}-bhi\S$ $pit\acute{r}-bhi\S$ and instr. sing. $uk\S\rlap/n-\vec{a}$ $pitr-\vec{a}$. Cp. I \S 308 p. 245, $\S\S$ 311 f. pp. 247 ff.

Gender will of course be discussed in the following pages only in so far as it is expressed by peculiarities in the case-endings.

§ 186. One difficult question must not be entirely passed over in this place. How did the case-endings, as we are able to restore them for the end of the proethnic period, come to have the meaning which they had?

From the principles laid down in the first paragraphs of Volume II, we must assume that forms with a case-suffix, such as *ekuo-s *ekuo-m, are compounds which once were phrases. What the final of each word of this kind actually was, before it became the sign of a case and the type after which new words could be formed at will, we have not the means of discovering by etymological research; the forms which have been trans-

mitted from the parent language as fully developed cases do not give enough evidence. Conjectures there are in plenty, not a few of them reasonable enough to deserve mention here; principles which can be seen in action during later times often throw light upon what must have happened in times gone by.

The Cases.

In those cases which expressed some relation in space, the inflexion may have been generally a demonstrative with some local meaning.

With regard to the -m of the acc, sing, (* $e\bar{k}uo$ -m), we must remember that neuter forms which have it (as *iugo-m) serve for the nominative as well. Thus -m can hardly have had a proper accusative meaning to begin with. We may conjecture that -m was first used with o-stems only; that where an o-stem could have a form in -s (such as *ekuo-s), the m-form came to be contrasted with this in some vague indeterminate way, its meaning being narrowed to that of an accusative case; and that afterwards -m was regarded as an accusative-suffix proper, and used as such with other classes of stems. It is tempting to identify this with the particle -m which appears in so many Cases. especially in pronominal forms (as Skr. ahám 'ego' mám 'me'). See Gaedicke, Der Acc. in Veda, 171); Leskien, Ber. der sächs. Ges. der Wiss. 1884, p. 101; Torp, Beitr. zur Lehre von den geschlechtl. Pron. 1888, p. 23.

Remark. In a similar way, the nominative -s became a sign of the masculine. It certainly had nothing to do originally with the contrasting of masculine and feminine, but was used indifferently with either; then in the class of o-stems it was brought into contrast with the feminine, because words of that class had corresponding feminines without s ending in $-\bar{a}$ and -ī (*ekuo-s horse': *ekuā, and *ulqo-s wolf': *ulqī). It is clear that to the Greeks s denoted the masculine, because they added -s to old feminine nominatives, such as *νεᾶνια ('youth') when they were used to designate male persons, as rearias (§ 190 p. 67). Here -s came to denote the masculine gender, as we are supposing that -m came to denote the accusative case, and the masc. rearia; bore the same relation to the 'feminine' $\pi \acute{o} \varrho \tau \iota - \varsigma \pi \acute{o} \varrho \iota - \varsigma \nu \alpha \widetilde{\nu} - \varsigma$ as the acc. $i \pi \pi o - \nu$ to the 'nominative' $\zeta \nu \gamma \acute{o} - \nu$.

The -i of the nom. pl. *to-i (= Gr. το-i Skr. té) cannot

¹⁾ Gaedicke's suggestion for the origin of this -m (p. 18) seems to me improbable.

be separated from the -i- which precedes so many plural case-suffixes (Gr. $\tau o - \tilde{\imath} - \sigma \iota$ Skr. $t\tilde{e} - \tilde{s}u$, Goth. $p\tilde{\alpha} - i - m$ O.C.Sl. $t\tilde{e} - mi$ etc.). Thus it is an obvious conjecture that this -i was at first a sign of the plural, not of the nominative. J. Schmidt regards *toi as arising from the juxta-position of the two pronominal stems to- and i-: 'this' + 'that' = 'these, the (pl.)' (Kuhn's Ztschr., XXV 6). If so, *ekuois(u) (= Skr. áśvēšu Gr. $l\pi nou\sigma \iota$, cp. O.C.Sl. vlucechu) and similar noun-forms were suggested by the analogy of the pronouns.

Another element with a plural meaning was s. This is most clearly seen in the bh-suffixes, as *-bhis beside *-bhi, *-bhos beside *-bho, Skr. -bhyas beside -bhya (tileta-bhya 'tibi') and the m-suffixes which are connected with them. See §§ 367 and 379. It may be assumed without hesitation that this s is the same thing as the -es of the nominative plural (Gr. $\pi \delta \delta$ -es). On the other hand, it is a question whether -ns in the accusative plural has this s or not (§ 325); -ns is usually looked upon as the acc. sing. -m made plural by adding -s, but it has not been explained why -ms was not kept, as it should have been, in Lithuanian and Prussian (cp. Lith. dial. vilkuns Pruss. deiwans) 1). We may follow Torp in regarding the s of the Sanskrit pronouns nas, vas etc. as the same plural suffix (see § 436).

In several of the dual cases, u is found (e. g. Skr. $vfk\bar{a}u$ beside $vfk\bar{a}$). This may be regarded as having been an independent word meaning 'both, two'. See § 285.

It has often been conjectured that bh in the bh-suffixes above mentioned was something of the nature of a formative suffix. It may be worth while comparing a similar change in Middle High German, where in the gen. dat. sing. herzen (nom. acc. herze) the -en, which was originally a formative suffix (II § 114 p. 356), was changed to a case-ending. This bh- has been compared with the suffix -bho- treated in II § 78 pp. 216 ff. But considering $\mathring{a}\mu$ - $\varphi \mathring{\iota}$ beside $\mathring{a}\mu$ - $\varphi \omega$, whose second part cannot

¹⁾ The Prussian ending -mans for *-man-s (if this analysis is right) cannot be brought in evidence, since there are special circumstances in the case. See § 367.

be separated from Goth. $b\acute{a}i$ 'both', and remembering that bh-belonged specially to the suffix of the instrumental (sociative, comitative), we are forced to ask whether the dual $^*bh\bar{o}u$ $^*bh\bar{o}$ and these bh-suffixes should not all be derived from a root which had the sense of being paired or together. Cp. § 274.

Within the separate languages, adverbial words (postpositions and the like) often coalesced with fully formed cases so completely that they were absorbed into the case-ending. Examples are: Avest. loc. pl. vehrkaešv-a § 356, Gr. 'Αθήναζε i. e. 'Αθηναz--δε § 327, Lith. tamim-pi § 423, Goth. mi-k § 442. cesses, which are perfectly easy to recognise, support the following assumptions. (1) An adverb -e, perhaps connected with the Skr. postposition \vec{a} , is to be seen in Skr. dat. $v \hat{r} k \bar{a} y - a$ and in the loc. Lith. rankoj-e rankos-e O.C.Sl. kamen-e, see §§ 246, 257, 264, 356. — (2) -su and -si in the loc. pl., e. g. Skr. výkēšu Gr. λύκοισι, are merely the loc. pl. -s with the particles u and i affixed to it, see § 356. — (3) There are similar affixes in the nom. sing. Osc. poi 'qui' Lat. quī (ground-form *qo-i) and O.Pers. hauw Gr. ov-(70-c) (ground-form *so-u), see §§ 414 and 415. — (4) A particle *em *om *-m was attracted to certain fully formed cases. This was most frequent amongst the pronouns, and was not confined to one case. Examples are: loc. sing. Skr. áśvāyām (§ 264), instr. sing. O.C.Sl. raka (§ 276), instr. etc. Gr. 986-quv (§ 281), dat. instr. du. Skr. výkā-bhyām O.Ir. dib n- (§ 296), nom. Skr. ahám O.C.Sl. azŭ (§ 439) Skr. vau-ám (§ 441), acc. Skr. mám O.C.Sl. mę (§ 442). On page 60 we saw that it was natural to identify with this particle the -m of acc. nom. Skr. yugá-m Lat. jugu-m.

Where an Indo-Germanic case shows no accretion of any kind in the form of a suffix, as *ekūūā (§ 185 p. 57), we have no right whatever to assume that a suffix has dropped off.¹) The cases of nouns sprang up when these were used in phrases along with other words. But it was not always necessary that the

¹⁾ The vocative singular of course had no suffix. This is implied in what was said in § 184, p. 56.

relation of a noun to its sentence should be definitely expressed. Sometimes it was clear from the context without further aid, and then the stem, as we call it, could appear alone. The more generally case-suffixes joined themselves to words by composition, the more sharply defined became the use of forms without any suffix; and in the end they became cases as clearly marked as those which had a suffix, this result being possibly hastened by their having special grades of ablaut (as *potēr Gr. $\pi\alpha\tau\dot{\eta}\varrho$).

It may sometimes, however, be the case that what appear to be forms without proper case-suffixes are only so in appearance. In Modern High German, certain names of places, such as Baden, Bergen, Hohenbuchen and Unterwalden are really dative forms, the case-suffix -n having been carried back to the nominative and retained in other cases as though it belonged to the stem. Something of this kind may have happened with the suffixless locatives in -en -uen -men (Skr. mūrdhán etc.). These may really contain a case-suffix -n (-en or the like) with a locative meaning; then the original stems will have been some shorter form (Gr. alév being related to alfo- in much the same way as office to olvo-), these forms, really locatives, having been made the foundation of the other cases. Similarly, the -r of Skr. ušar 'in the morning', and the other forms of that kind, may have been a locative-suffix which eventually became part of the stem, as it is in Skr. gen. $u - \delta r$. Gr. loc. $\tilde{\eta} \varrho - \iota$ etc. Johansson, Bezz. Beitr. XIV 164 ff., and Bartholomae, ibid. XV 14 ff. and 25 ff.

§ 187. The case-endings of Masculine and Feminine Pronouns were in the parent language different from the corresponding endings of the noun; cp. e. g. nom. acc. neut. *to-d (= Skr. $t\acute{a}$ -d Gr. $\tau\acute{o}$) and nom. acc. neut. *neuo-m (= Skr. $n\acute{a}va$ -m Lat. novo-m). These two systems of cases, the Noun and the Pronoun, influenced each other in the proethnic period; and all through the subsequent history of the languages analogical re-adjustments of this kind have gone on in a greater or less degree.

Thus there was a distinction between the declension of

noun and pronoun; but still greater was the distinction between personal pronouns and nouns. In tracing the history of separate languages, it may often be seen that case-endings pass from nouns, and from pronouns masculine and feminine, to personal pronouns; but the reverse is hardly to be found.

In the present division of this work, which deals with the formation of the cases of nouns, reference will be made to pronouns so far as their cases influenced those of nouns by analogy. Secondly, where in any case-form there was no original difference between noun and pronoun, the pronominal form is cited wherever a particular language has kept the original ending in a pronoun only, or where the original ending is seen to best advantage in a pronoun because it may have suffered less from phonetic change (e. g. Goth. \bar{po} beside juka, § 338).

§ 188. The Functions of more than one case were often attached to one form. Thus in the proethnic language itself, there was in most classes of stems a single form for the genitive and ablative singular, as Skr. $n\bar{a}v$ - $\dot{a}s$ Gr. $v\eta$ - $\dot{o}\varsigma$ of a ship' and 'from a ship'; and in all stems only one form for the dative and ablative plural, as Skr. $n\bar{a}u$ -bhy $\dot{a}s$ Lat. $n\bar{a}v$ -ibus 'to ships' and 'from ships'; perhaps o-stems had no more than one form for the genitive and locative singular, as Lat. bell \bar{a} (§ 239). This multiplicity of functions was especially common in personal pronouns, as we shall see.

In later periods this often came about by what is termed syncretism; several different case-forms, each with its own meaning, are replaced by one, which unites the meanings of them all. Thus the case which in Greek grammar is called the dative includes the meanings of dative, locative, and instrumental; but the forms which are classed as datives in Greek are some of them genuine datives, as oixo, some locatives, as $v\eta$ - \ddot{v} , $v\alpha v$ -oi (oixo) in N.W. Greek, Boeotian, etc.), and some instrumental forms, as oixo, Thus certain dative forms served as locative and instrumental, certain locatives as dative and instrumental, and certain instrumentals as dative and locative, each over and above its own proper sense. Similarly in Latin,

the case which is called ablative combined the meanings of ablative, locative, and instrumental; whilst the forms classed as ablative were some of them, as $equ\bar{o}(d)$, true ablatives, some locative and instrumental forms, as homin-e. The origin of these syncretic or mixed cases lies almost entirely in the accidents of usage; we shall accordingly leave to the Syntax a detailed discussion of syncretic cases and kindred questions. But looking at the cases historically we must begin with the Indo-Germanic case-system, and discuss each form in the separate languages with reference to this. Thus we call Greek $\nu\eta$ -i 'locative', although the same form served as dative and instrumental besides.

As the singular form Skr. $nav-\acute{as}$ Gr. $\nu\eta-\acute{o\varsigma}$ was both genitive and ablative in the proethnic language, so there were instrumentals in -bhi, as Gr. $\nu\alpha \~{\nu}-\varphi\iota$, which served alike for singular and plural, both then and later; see §§ 274, 281, 379. The nom. acc. neut. too, in the proethnic stage, seems often to have had the same formation for singular and plural; see §§ 223, 337, 340, 342.

§ 189. The subject of Case Formation is not confined to cases proper, but includes adverbs as well. The history of Adverbs in their special uses will be set forth in the Syntax. We are here concerned with their form; and we shall discuss them after the following fashion.

There are two classes of adverbial words. One consists of words which once were ordinary cases, but became isolated and thus crystallised; as Gr. 'Αθήνησι, οἴκοι, ἄμα, τοὶ, Lat. meritō, modo, bene, facile, multum. Sometimes these are the sole evidence for a case-formation in some language or dialect; thus in Greek the old ablative in -ōd only survives in crystallised adverbial forms (§ 241). Then, but not otherwise, do they concern us here. The second class embraces words which never belonged to a regular paradigm; they were isolated words, used in such phrases as their meaning suited, but having no more than one or two other words at most connected with them closely enough to form such a grammatical group as we call a Paradigm. Most of them were built up on some pronominal

stem, as Gr. ἐν-τός ἐκ-τός. Lat. in-tus. Skr. kú-tas. However, these were often associated in meaning with the cases of certain complete systems, and raised to the rank of true cases; thus this same *-tos became a widely used abl.-gen. suffix in Sanskrit, Armenian, and Greek (§ 244). The suffixes of adverbs of this second class are accordingly included in the discussion which here follows, so far as they were in this way attached to any case-system.

This part of our subject also includes Infinitives. shall see in the Syntax how these forms, originally living cases, came to be used as they are. Here Infinitives belonging to anv of the separate languages must be cited at least when they represent cases which have dropped out of living use in that particular language, as Gr. Somev-an (§§ 245, 251) and Somev (§§ 256, 257).

THE CASES.1)

Nominative Singular Masculine and Feminine.²)

- § 190. I. Stems without any Case-suffix used as Nom. Sing. Masc. and Fem.
- 1. ā-stems. Pr.Idg. *eĥuā 'mare'. Skr. ášvā 'mare'; Avest. haena O.Pers. hainā 'hostile host'. Gr. χώοā 'land'. Lat. equa; Umbr. muta mutu 'multa', Osc. tovto 'civitas' (I § 105 pp. 98 f.,

In order to present before the student a complete paradigm of the cases of a given word, it has often been necessary to fill up gaps in the tradition by making certain forms after the analogy of other words. In a work like the present, I hold this to be not merely allowable but necessary.

¹⁾ One or two kinds of Indo-Germanic inflexion - e. g. that represented by Skr. $(dhiyq-)dh\bar{a}s$, dat. $-dh-\bar{e}$ — are themselves rare, and teach us nothing of the case-suffixes which cannot be learnt from the others. To avoid excessive detail, I have either passed these over entirely, or only just touched upon them by the way.

Avestic. Forms in $-\bar{e}$, as $kainik\bar{e}$ 'girl, virgin' $ber^ex\bar{d}\bar{e}$ 'blessed' and Prussian forms in -ai, such as mensai 'flesh, meat' (Lith. $mes\grave{a}$) show a pronominal ending; see § 414. Compare also § 202.

Greek. Masculines like $\nu\epsilon\bar{\alpha}\nu/\bar{\alpha}$ - ς 'young man' $\gamma\epsilon\nu\dot{\epsilon}\tau\eta$ - ς 'begetter' were originally feminine, and received their - ς through being assimilated to such nominatives as $\vartheta\epsilon\dot{\delta}$ - ς (II § 79 pp. 229 f., § 80 pp. 239 f., § 157 p. 472); cp. the corresponding re-formation in the gen. sing., § 229. But the form without - ς remained in use as a vocative, as $E\rho\mu\epsilon\dot{\alpha}$, $\alpha\dot{\nu}\alpha\rho\dot{\epsilon}\tau\eta$, cp. O.Ir. voc. pl. firu=* $\psi ir\bar{\sigma}s$ beside nom. pl. $fir=*\psi ir\sigma\dot{\varrho}$ (§ 314). This suggests the simplest mode of explaining masculine nominatives in - $\bar{\alpha}$ like Boeot. $K\alpha\lambda\lambda\dot{\alpha}$, $\delta\lambda\nu\mu\pi\iota\nu\dot{\nu}\dot{\nu}\dot{\alpha}$ and Leucad. $\Phi\iota\lambda\kappa\dot{\epsilon}\dot{\ell}\dot{\delta}\bar{\alpha}$ (cp. Megar. $\tau\sigma\dot{\nu}'A\rho\alpha\dot{\alpha}\dot{\alpha}\varsigma$, § 229); these may be called vocatives used as nominatives. Cp. the Author, Gr. Gr.² p. 117, and J. Schmidt, Pluralbildung 354. As regards such feminines as $\tau\delta\lambda\mu\ddot{\alpha}$ 'daring' $\mu\dot{\epsilon}\rho\mu\nu\alpha$ 'care', see the Author $\rho\rho$. cit. p. 102. Masculine forms like $i\pi\pi\dot{\sigma}\tau\ddot{\alpha}=i\pi\pi\dot{\sigma}\tau\gamma\varsigma$ 'charioteer' will be explained in § 202.

Some curious masculine nominatives have been preserved in Italic. These are Latin 'hosticapas' ('hostium captor') and 'paricidas' beside scrība agricola etc., and Oscan $K\alpha I\alpha\varsigma$ 'Caha' $M\alpha\varrho]\alpha\varsigma$ 'Mara' Tanas 'Tana' beside Santia 'Xanthia, $\Xi\alpha r\vartheta i\alpha\varsigma$ '. The record is too scanty to enable us to decide whether these were imitations of the Greek forms in $-\tilde{\alpha}$ - ς or independent of them.

Old High German shows traces of a few, but only a few of these nominatives in Idg. $-\bar{a}$: e. g. buoz, $hw\bar{\imath}l$ 'while'; most of them, however, are abstracts in $-ung\bar{o}$ -, as samanunc 'assembly, gathering', ep. also siu 'this, that (f.), she' like Skr. $siy\acute{a}$ $sy\acute{a}$. See I § 661. 1 and 2, pp. 516 ff. The common

forms in -a, as geba 'gift' sipp(e)a 'kinsman', are accusatives used as nominatives (§ 213).

§ 191. 2. $\bar{\imath}$ - $i\bar{\epsilon}$ -stems 1). Pr.Idg. *bhr \hat{g} hnt- $\bar{\imath}$, fem. of *bhr \hat{g} hont- 'projecting, exalted, high'. Skr. brhati, Avest. barenti 'ferens'. O.Ir. Brigit 'exalted lady' (= Skr. brhati), inis 'island', I § 657. 2 p. 507, cp. also s- $\bar{\imath}$ 'ea' = O.H.G. s- $\bar{\imath}$. Goth. frijōndi 'friend (f.)'. A.S. thiwi thiu 'maid' = Goth. pivi, O.H.G. herzohin 'duchess' wirtun wirtin 'hostess' (II § 110 p. 339), cp. also O.H.G. s- $\bar{\imath}$ s-i 'ea' (the latter, like Goth. si, shortened by being used in a position where it lost its accent). Lith. vežanti 'vehens' for *vežanti (cp. dial. geresný-ji 'better (f.)'); O.C.Sl. veząšti 'vehens' instead of *veząti (II § 110 p. 337).

Aryan. In Sanskrit, these stems occasionally followed the analogy of stems in $-\bar{\imath}$ - $i\dot{\imath}$ - (II § 109 p. 334): $v_{7}k\dot{\imath}$ - $\dot{\imath}$ 'she-wolf' $napt\dot{\imath}$ - $\dot{\imath}$ 'grand-daughter, daughter'. Similarly in O.Pers. we have $harauvati\dot{\imath}$ (i. e. $-\bar{\imath}$ - $\dot{\imath}$) 'Arachosia' as compared with Avest. haraxwaiti Skr. $s\acute{a}rasvat\bar{\imath}$.

Greek has lost the forms in $-\bar{\imath}$. Those which actually occur have $-\iota\alpha$ - $\iota\alpha$, as $\varphi \not\in \varrho o \nu \sigma \alpha$ 'ferens' for * $\varphi \not\in \varrho o \nu \tau - \iota \alpha$, $\pi \not\circ \tau \nu - \iota \alpha$ 'lady', $\mathring{\alpha} \lambda \mathring{\eta} \mathcal{F} \varepsilon \iota \alpha$ 'truth' for * $\mathring{\alpha} \lambda \bar{\alpha} \mathcal{F} \varepsilon \sigma - \iota \alpha$; these I hold to be reformates following the accusatives in $-\iota \alpha \nu - \iota \alpha \nu$ § 216).

Remark. J. Schmidt (in Kuhn's Ztschr. XXVII 291 and 309, Pluralb. 59 f.) sees in the Greek $-\mu\alpha$ $-\mu\alpha$ the original ending of the nom. sing. of

¹⁾ The strong-grade form of the suffix of which $-\bar{\imath}$ - was the weak grade in the Indo-Germanic declension is hard to determine, as I have already said (II § 109 p. 333), adding that $-i\bar{c}$ - seemed to me the most probable. But in numerous instances $-i\bar{a}$ - forms are found amongst the cases, — in Greek, Italic, Germanic, Balto-Slavonic, and possibly Keltic (gensing. inse, § 230); hence it is perhaps more correct to place the variation between $-i\bar{c}$ - and $-i\bar{a}$ - in the proethnic period. There is, however, another possibility. $-i\bar{a}$ - as well as $-i\bar{c}$ - might become -i- in unaccented syllables, so that perhaps our i- $i\bar{c}$ -class is to be split up into two original classes. Then the i-: $i\bar{a}$ -class would be parallel to the i-: $i\bar{o}$ -class (Lith. $m\bar{c}dis$ gen. $m\bar{c}d\check{z}io$). But in that case we should have to postulate two distinct declensions in $-i\bar{c}$ -, one varying between $-i\bar{c}$ - and -i-, the other having invariably $-i\bar{c}$ -. I leave others to investigate these difficult questions more closely. Johansson has tried, but comes to no certain conclusion whatever (Kuhn's Ztschr. XXX 398 ff.).

these stems, and believes that the $-\bar{\imath}$ of the other languages arose from a contraction of *-ia-. Against this view, see my Gr. Gr.² p. 102, and Morph. Unt. V 58 f.

Such words as these were often associated with stems in $-i\bar{\alpha}$ ($\sigma o \varphi i\bar{\alpha}$), and $-i\alpha$ gave way to $-i\bar{\alpha}$ $-i\bar{\alpha}$; e. g. $\hat{\epsilon} \tau \alpha l \rho \bar{\alpha}$ 'companion' instead of $\hat{\epsilon} \tau \alpha l \rho \alpha$ for * $\hat{\epsilon} \tau \alpha \rho - l \alpha$, fem. of $\hat{\epsilon} \tau \alpha \rho - l \alpha$, Att. $\hat{\alpha} \lambda \eta \vartheta \epsilon i\bar{\alpha}$ (Ion. $\hat{\alpha} \lambda \eta \vartheta \epsilon i \eta$) beside $\hat{\alpha} \lambda \dot{\eta} \vartheta \epsilon l \alpha$, and so on. Cp. in O.H.G. herzohinna instead of the older herzohin (see below).

Latin, too, has lost the $-\bar{\imath}$. In $faci\bar{e}$ -s $pauperi\bar{e}$ -s, $-i\bar{e}$ - has spread from the other cases, and -s has been added through assimilation to re- $qui\bar{e}$ -s $di\bar{e}$ -s $r\bar{e}$ -s. avia (from avo-s) is perhaps like $m\bar{a}ter$ -ia beside $m\bar{a}ter$ - $i\bar{e}$ -s (cp. II § 109 p. 333, and the footnote on the last page). As regards the fem. $su\bar{a}vi$ -s (Skr. $sv\bar{a}dv$ -i) see II § 109 p. 334: was $su\bar{a}vi$ -s the result of a form $*su\bar{a}vim$ for $*su\bar{a}dvim$ (cp. § 216)?

Germanic. O.H.G. herzohinna instead of herzohin, O.Sax. thiwa instead of thiwi, and similar forms were produced by an assimilation to the nominative of $i\bar{a}$ -stems (as O.H.G. sipp(e)a = Goth. sibja 'kin', see § 190 p. 68).

Lith. žēmė Lett. ſeme Pruss. semmē O. C. Sl. zemlja 'earth' pr. Balt.-Slav. *žem-įē arose by the intrusion of -įē- from the other cases.

§ 192. 3. All polysyllabic n- and r-stems show the formative suffix in the $3^{\rm rd}$ or $4^{\rm th}$ (strong) grade, which contrasted the nominative with the other cases, and so connected the difference in ablaut with a difference in case; e. g. Gr. $\pi \alpha \mu \eta \dot{\nu} \pi \alpha \tau \dot{\nu} \rho$ as against $\pi \alpha \mu \dot{\nu} \nu - \alpha \pi \alpha \tau \dot{\nu} \rho - \alpha$, and so on. We have to postulate even for the proethnic language pairs of forms, some ending in $-\dot{e}n$ $-\bar{o}n$ and $-\dot{e}r$ $-\bar{o}r$, others simply in $-\dot{e}$ $-\bar{o}$ in both classes of stems. The cause assigned has been the varying conditions of sentence position, -n and -r being supposed to disappear before certain consonants. But this theory is far from certain, in spite of Meringer's arguments (Zeitschr. für österr. Gymn. 1888, p. 137), especially in view of Johansson's new theory of the origin of n-stems and some of those in -r (Bezz.

Beitr. XIV 163 ff.) which has been mentioned already on page 63 of this volume.

a. n-stems.

Forms in Idg. -n. Pr.Idg. * $\hat{k}(u)u\bar{o}n$ 'dog'. Armen. šun 'dog' akn (gen. akan) 'eye' anjn (gen. anjin for *-en-os) 'soul' I § 651.1 p. 497). Gr. $\kappa'\omega\nu$ 'dog' $\pi ou\mu'\nu$ 'herdsman'. It is a question whether Lat. pecten lien flāmen are old n-nominatives or not; see II § 114 p. 352. O.H.G. gomo A.S. zuma m. 'man', and doubtless Norse Run. Haringa for *- $\bar{o}n$; Goth. tuggō O.Icel. tunga f. 'tongue' for *- $\bar{o}n$ (Goth. $ra\bar{p}j\bar{o}=$ Lat. $rati\bar{o}$), O.H.G. zunga A.S. tunze f. for *- $\bar{e}n$ (I § 659.5 p. 513, § 661.4 p. 519, and II § 115 pp. 361 f.).¹) Lith. dial. szun (beside $sz\tilde{u}$) 'dog' O.C.Sl. kany 'stone' (I § 92 pp. 86 f., § 663.1 p. 521, and § 665.2 p. 524).

Forms without -n. Pr.Idg. * $\hat{k}(u)u\bar{o}$ 'dog'. Skr. śvá śúvā²) Avest. $sp\bar{a}$ 'dog', O.Pers. $x\check{s}ay\bar{a}r\check{s}a$ 'Xerxes' ($x\check{s}aya$ - 'ruler' and aršan- 'mas'). Dubious relics of this kind are seen in Gr. $\epsilon l \varkappa \omega'$ and beside $\epsilon l \varkappa \omega' \nu'$ 'image' $a \eta \delta \omega' \nu'$ 'nightingale', and so forth; the genitives belonging to these nominatives, $\epsilon l \varkappa o \tilde{v}_S u \eta \delta o \tilde{v}_S$ etc., would then be ad-formates of the class $\Lambda \eta \tau \omega' \Lambda \eta \tau o \tilde{v}_S$ (G. Meyer, Gr. Gr.² pp. 315 f.). Lat. homō homo, Umbr. karu 'pars' = Lat. $car\bar{o}$, tribřišu i. e. *tri- $priki\bar{o}$ 'triplicitas' (abl. tribrisine).3) O.Ir.

¹⁾ Kluge (Paul's Grundr. I 366) equates O.H.G. -a A.S. -e with pr. Germ. *- $\bar{o}n$, and O.H.G. -o A.S. -a with pr. Germ. *- $\bar{e}n$, admitting at the same time that the phonetics of this are 'strange'. Possibly he was driven to postulate these changes by the acc. O.H.G. geba A.S. giefe; for Osthoff's hypothesis that $-i\bar{o}$ - had become $-i\bar{e}$ - in proethnic Germanic — a hypothesis which effered a possible explanation of these forms (sunt-ia for *- $i\bar{o}$ -n and hence geba) — has toe slight a foundation to build upon. I hope to settle the question of geba giefe in a different way (§ 213), and so I am content with the equation O.H.G. -a A.S. -e = pr. Germ. *- $\bar{e}n$, O.H.G. -o A.S. -a = pr. Germ. *- $\bar{o}n$.

²⁾ The accentuation of the Vedic Šúvā du. Šúvānāu (the texts have Švā Švānāu with the $ud\bar{a}ttu$) is to be restored not only on the authority of Gr. $\varkappa \nu \omega r$, but from the accent of Šún-as Šún-ē eto., Šún- heing related to Šúvān- as yűn- to yűvān-. In both words the accent, which in the weak cases fell upon the suffix (orig. *Šun-ás like Gr. $\varkappa \nu \nu - o$ s, and *yūn-ás) was changed on the analogy of the strong cases.

³⁾ See also the Author, Ber. der sächs. Ges. der Wiss., 1890, p. 207.

 $c\bar{u}$ Mod.Cymr. ci 'dog' (for a disyllabic * $ku\bar{o}$ through the intermediate stage of * $ku\bar{u}$), O.Ir. esc-ung 'eel' air-mitiu 'honour' = Lat. $menti\bar{o}$ (I § 657. 2 and 3, p. 507); Gall. Frontu Alingu. Goth. guma 'mau' should doubtless be derived from * $gum\bar{e}$ (not * $gum\bar{o}$) on account of O.Icel. gume gumi. Lith. $sz\tilde{u}$ 'dog' $akm\tilde{u}$ 'stone'.

In the following words we have re-formates in place of original *- $i\bar{o}(n)$ *- $i\bar{e}(n)$, the suffix having been levelled down to the weak form of it: Skr. $arc\hat{i}$ (stem $arc\hat{i}n$ - 'beaming') Avest. kaini (stem kainin- 'girl'), Gr. $\delta\epsilon\lambda\varphi\hat{i}v$ (stem $\delta\epsilon\lambda\varphi\bar{i}v$ - 'bellyfish, dolphin'), Goth. managei (stem managein- 'crowd'). See II § 115 pp. 358 ff.

In several languages there were re-formations following the analogy of nominatives in -s. Avestic: e. g. $ver^e pra-j \tilde{a}$ 'victorious' beside $-ja = \text{Skr. } vrtra-h \hat{a}$ (note that an old nom. *- $gh\bar{v}$ -s would necessarily have become *- $\gamma \hat{a}$); cp. Bartholomae, Ar. Forsch. I 31, Handbuch § 215 Anm. 2, § 220. Greek: e. g. Lac. $\tilde{a}\rho\sigma\eta\varsigma = \tilde{a}\rho\sigma\eta\nu$ 'male', $\delta\epsilon\lambda\varphi\dot{t}\varsigma$ beside $\delta\epsilon\lambda\varphi\dot{t}\nu$ (cp. II § 115 p. 359). Lat. sangu \bar{i} s for *sangu \bar{i} s 'instead of sanguen. Osc. úíttiuf 'usio, usus' and statíf 'statio, statua', for *- $i\bar{o}$ ns and *ins according to II § 115 pp. 359 f. O.Ir. \bar{a} ru 'kidney' doubtless for *- \bar{o} ns, menme 'mens' for *-ens; see II § 114 pp. 352 f., § 117 pp. 373 f. Similar re-formations of r-stems are described on the next page.

b. r-stems.

Forms in Idg. -r. Pr. Idg. *mātér 'mother', *dốtōr 'giver'. Armen. mair 'mother'. Gr. μήτηο, δώτωο. Lat. māter, soror dator; Umbr. Iu-pater 'Juppiter' ař-fertur 'infertor, flamen', Osc. censtur 'censor'. O.Ir. māthir 'mother', siur 'sister' (I § 657. 6 p. 509). In Germanic, with *ēr-, O.Icel. mođer mođir, and probably O.H.G. muoter; also Goth. fadar 'father' if Streitberg is right in holding that pr. Germ. -ēr became -ar in Gothic, as -ēi -ēu became -ai -au (cp. § 263 Rem.). ¹) The explanation

¹⁾ Streitberg, D. germ. Compar. auf $-\bar{o}z$ -, pp. 22 f. This law would enable us to explain Goth. adv. $\bar{p}ar$ as compared with O.H.G. $d\bar{a}r$, unaccented der, as follows. Starting from pr. Germ. * $p\bar{e}r$, we should have

of Goth. svistar A.S. sweostor 'soror', Goth. $br\bar{o}par$ A.S. $br\bar{o}dor$ O.H.G. bruadar 'brother' (Gr. $\varphi \rho \hat{a} \tau \omega \rho$) is doubtful. These may have come from $-\bar{o}r$, or perhaps they were accusative or vocative forms; cp. II § 122 pp. 381 f.

Remark 1. In any case, A.S. mōdor dohtor O.Swed. fapur mōpor are re-formates. I take this opportunity to call attention to a question which appears to me to need more thorough investigation. How far did Idg. -er- in unaccented final syllables become -ar-; and where -ar- seems to correspond to Idg. -er-, ought we not sometimes to assume that it came from -or- (or -ar-)? See the Author, Curt. Stud. IX 374 and 378; Paul in his Beitr. VI 246 f. and 253 f.; J. Schmidt, Pluralb. 197 f.; Kluge, Paul's Grundr. I 361.

Forms without -r. Pr. Idg. *māté, *dốtō. Skr. mātá Avest. māta 'mother', Skr. bhrátā O.Pers. brātā 'brother', Skr. dātá dátā Avest. dāta 'giver', Skr. hantá 'murderer' O.Pers. ja(n)tā 'slayer, foe'. Lith. motē móte 'woman, wife' sesñ 'sister', O.C.Sl. mati 'mother'.

Remark 2. Joh. Schmidt and other scholars assume that -r was dropped in Balto-Slavonic (Schmidt, in Kuhn's Ztschr. XXV 22, Pluralbild. 193 f.). I am still unable to regard this as proved. Cp. I § 663 Rem. pp. 521 f.

Re-formation in the separate languages gave rise to Avest. $\bar{a}tar$ -š 'fire' (II § 122 p. 383), Gr. $\mu \acute{\alpha} \varkappa \alpha \varrho$ - ς instead of $\mu \acute{\alpha} \varkappa \bar{\alpha} \varrho$ 'blessed'. There were similar re-formations in the n-stems, for which see last page.

§ 193. 4. Polysyllabic s-stems show in the formative suffix the same case-ablaut as do stems in n and r; but it would appear that in the proethnic speech the -s of the formative suffix was never missing. The ending in s-stems will then be $-\bar{e}s$ as opposed to $-\bar{e}n$ $-\bar{e}$, $\bar{e}r$ \bar{e} in the others.

Pr. Idg. *dus-menēs 'ill-disposed'. Skr. durmanās 'dejected, troubled', Avest. dušmanā 'thinking evil', O.Pers. aspacanā (doubtless connected with Skr. cánas- n. 'pleasure'), Skr. yašās 'glorious' (I § 649.7 p. 496). Gr. δυσμενής 'ill-

Goth. par (cp. also $j\acute{a}inar$ aljar) and O.H.G. der as equivalents. The form par would then have driven the accented * $p\bar{e}r$ from the field in Gothic. O.H.G. gen. $uns\bar{e}r$ follows $jen\bar{e}r$, § 455.

disposed, hostile $\psi_{\ell\nu}\delta\dot{\eta}_{\varsigma}$ 'false, deceitful'. Lat. $p\bar{u}b\bar{e}s$ $p\bar{u}ber$, $d\bar{e}$ -gener (with -r for -s from the other cases).

Pr. Idg. * $\bar{a}us\bar{o}s$ 'dawn'. Skr. $us\hat{a}s$. Gr. Hom. $\eta'\omega_{\zeta}$ Att. $\bar{\epsilon}\omega_{\zeta}$. Lat. honos honor (with -r from the other cases).

Pr. Idg. comp. $*\bar{o}\hat{k}(i)i\bar{o}s$ 'quicker'. Avest. $\bar{a}sy\hat{a}$. Lat. $\bar{o}cior$ (-r from the other cases). O.Ir. siniu 'older' $m\bar{a}o$ $m\bar{o}$ 'larger'. For Skr. $\acute{a}s\bar{i}y\bar{q}s$ $\acute{a}s\bar{i}y\bar{q}n$ instead of $*\acute{a}s\bar{i}y\bar{a}s$ and O.C.Sl. $sla\check{z}d\check{i}\check{j}\check{i}$ 'sweeter' instead of $*slad\check{i}ja$, see II § 135 p. 430.

Pr. Idg. part. perf. act. *uėįduōs or *uidués 'knowing'. Avest. vīđvā. Gr. εἰδώς. By re-formation, Skr. vid-vās vid-vān instead of *-vās, Lith. dã-ves 'having given' mìr-es 'dead' instead of -*ves *-es and O.C.Sl. da-vũ mĭr-ũ instead of *-va *-a (or *-vě *-vi, *-ě *-i). Along with these the parent language seems to have had a nominative in *-us: Skr. Ved. vidúš Avest. vīđuš, with which may be classed Osc. sipus 'sciens' and O.C.Sl. mĭrū. See II § 136 pp. 439 ff.

Remark. It remains doubtful whether the proethnic language had nominatives without s belonging to stems in dental explosives, as well as the above. See § 198 p. 79.

§ 194. II. Forms with -s as the sign of the Nominative.

1. o-stems. Pr. Idg. *ulqo-s 'wolf'. Skr. vfka-s, Avest. vehrkō (vehrkas-ca 'lupusque'), O.Pers. kāra 'people, host' (see I § 556.3 pp. 411 f., § 558.4 p. 415, § 646.3 pp. 490 f., and Bartholomae in Kuhn's Ztschr. XXIX 572 f.). Armen. gail, mard 'homo' = Skr. mrtá-s (I § 651 p. 497). Gr. λύχο-ς. Lat. lupu-s; equo-s, vir for *vir(o)-s, satur for *satur(o)-s, morti-fer and -feru-s (the latter being a re-formate), ager for *agr(o)-s; Umbr. pihaz 'piatus' Ikuvins 'Iguvinus', ager 'ager' katel 'catulus', Osc. húrz 'hortus' Púmpaiians 'Pompeianus', famel 'famulus'; see I § 655.5 and 9, pp. 505 and 508 (the conditions of syncopation in Latin have not yet been properly made out, cp. mors for *mort(i)-s and the like, § 195). O.Ir. fer 'man' for *uiro-s, aile 'alius' for *ali(i)o-s (I § 34 p. 34, § 139 Rem. p. 125, § 657.3, 5 and 10, pp. 508 and 509 f.), Gall. tarvo-s 'bull', Andecamulo-s.

Goth. vulf-s, vair 'man' for *uir(a)-z, O.H.G. wolf, acchar 'tilled land' = Goth. akr-s (I § 660.6 p. 516¹), § 661.2 and 5, pp. 517 and 519), cp. also Goth. hva-s O.H.G. hwa-r wa-r 'who?'; in the Salic Law focla = *fogla-(z) 'bird', Norse Run. daga-z 'day' = O.Icel. dag-r Goth. dag-s; Goth. harji-s 'host' for *haria-z, which became *hari-z and took j afresh from the oblique cases (I § 660 Rem. 3 p. 515; Kauffmann, Paul-Braune's Beitr. XII 539; Streitberg ibid. XIV 181). Lith. vilka-z; for the loss of -a- in the last syllable, see I § 664.2 pp. 522 f. On O.C.Sl. vliki, see below.

Stems in -io- sometimes made their nom. sing. in -i-s -ī-s (-i- -ī- are weak-grade forms of -io-), and the corresponding acc. sing. masc. and neut. in -i-m (§§ 212, 227). O.Lat. ali-s Cornēli-s beside aliu-s Cornēliu-s, Osc. Pakis 'Pacius'. Goth. un-nuts 'useless' for *-nuti-z, hairdei-s 'herdsman'; A.S. secz 'man' instead of pr. Germ. *sazi-z. Lith. žōdi-s 'word' mōji-s 'sign' gaidy-s 'cock' beside vēja-s 'wind' svēczia-s 'guest' and the like. We should doubtless class here O.C.Sl. krajī 'rim, edge', and konjī 'horse' instead of *konī, the n having been softened (palatalised) on the analogy of the genitive and other cases. Cp. II § 63 p. 122, and Streitberg, as cited, 166 ff.

Remark 1. The student will observe that in Slavonic there is nothing to represent the nominative in *-io-s (as Lith. vėja-s Lat. aliu-s). This ending would regularly become *-ie, which has the look of a vocative; and this is perhaps the reason for its absence. Cp. § 201 Rem. 2.

Remark 2. Perhaps such *i*-stems as Skr. sārathi-š 'charioteer' Avest. māzdayasni-š 'belonging to the worshippers of Mazda' Lat. decemjugi-s (II § 93 p. 284) were originally <u>i</u>o-stems.

O.C.Sl. vlŭkŭ is an accusative form, which took the place of *vlŭko. The nom. and acc. in -io-, -i-, and -u-stems

¹⁾ Braune (Goth. Gr. ³ § 78 Anm. 2) has a different theory of the phonetic law affecting Goth. vair. This view has recently received the support of W. Schulze (Kuhn's Ztschr. XXIX 271), who explains stiur as a dissyllable. But this explanation is unsupported by the evidence (see Osthoff Paul-Braune's Beitr. XIII 454 f.), and furthermore it is opposed by the form fidvor for *fidvor-(i)z (§ 320), whilst akrs, which Braune himself holds to be dissyllabic (§ 27), should not have been brought in evidence at all. I therefore keep to may own explanation, as above cited.

came eventually to be the same, *-i-s and *-i-m becoming -ī, and *-u-s and *-u-m becoming -ū; and this appears to have caused the substitution of vlūkū for *vlūko. There may have been another factor in the change. If the -o (standing doubtless for *-o-d) which we find as the ending of the nom. acc. neut. of adjectival stems in -o- appeared in this language before the nom. sing. masc. *-o(s) had given place to -ū, the nom. masc. and the nom. acc. neut. must both have come to end in -o; and the wish to keep the two genders distinct may have been an additional reason for substituting -ū for -o in the nom. masc.; cp. § 227. Another explanation of -ū, by no means convincing, is given by Kozlovskij in the Archiv für slav. Phil. X 657.

§ 195. 2. i-stems. Pr. Idg. *oui-s 'sheep'. Skr. ávi-š; Avest. aži-š 'snake, dragon', O.Pers. šiyāti-š 'place of pleasure, dwelling-place' (= Lat. quies, gen. quietis). Armen. sirt 'heart' = Lith. szirdì-s, iž 'viper' = Skr. áhi-š (I § 651 p. 497). Gr. οφι-ς 'snake, dragon'. Lat. ovi-s, turri-s; acer for *acri-s, and by the side of it a re-formate acri-s, mors = Skr. mrti-š 'death' - this syncopation of -i- is common in the final syllables of ti-stems (its conditions have not been fully made out, nor have those of syncope in o-stems, as has been pointed out in § 194, p. 73); Umbr. pacer 'pacatus, propitius', Osc. cevs 'civis' aídil 'aedilis', see I § 33 pp. 33 f., § 633 pp. 472 f., § 655. 5 and 9, p. 503 and pp. 504 f. O.Ir. faith 'vates' for *uati-s (I § 657. 5 and 10, pp. 508 ff.); Gall. rati-s 'fern' = Ir. raith. Goth. anst-s 'favour' baúr 'son' for *bur(i)-z (like vair § 194 p. 73), O.H.G. anst 'favour' chumi 'approach, coming' = Goth. qum-s, O.H.G. wini 'friend', but Fridu-win Liob-win (I § 660. 1 p. 514, § 661. 2 and 5, pp. 517 and 519); Norse Run. gasti-R 'guest' = O.Icel. gest-r Goth. gast-s. Lith. naktì-s O.C.Sl. noštř 'night' (I § 665. 4 p. 525).

Observe Skr. $v\acute{e}$ - \check{s} 'bird' beside $v\acute{\imath}$ - \check{s} Lat. avi-s, and these root-nouns of corresponding structure — Avest. yao- \check{s} 'leagued, confederate, friendly, allied' yao- \check{s} 'crying aloud'. And perhaps we should add Lat. ei-s $\bar{\imath}$ -s eis-dem beside $\bar{\imath}$ -s = Goth. i-s; see § 416.

§ 196. 3. u-stems. Pr. Idg. *s \breve{u} nu-s 'son'. Skr. $s\bar{u}$ nu-§; Avest. $b\bar{u}zu$ -§ 'arm', O.Pers. $k\bar{u}r\bar{u}$ -§ (read $k\bar{u}ru$ §) 'Cyrus'. Armen. zard 'ornament', marh 'death' (II § 105 p. 319), see I § 651 p. 497. Gr. $n\tilde{\eta}\chi v$ - ς 'lower arm' $\dot{\eta}$ 6 \dot{v} - ς 'sweet'. Lat. manu-s. O.Ir. bith 'world' (I § 657. 5 and 10, pp. 508 ff.); Gall. Esu-s (cp. Esu-nertus). Goth. sunu-s, O.H.G. sunu suno, situ sito 'custom' (= Goth. sidu-s), fridu frido 'peace', without -u or -o Sigi-frid, hand 'hand' (= Goth. handu-s), cp. the i-stems § 195. Lith. sunu-s 'son' saldu-s 'sweet', O.C.Sl. synu 'son' (I § 665. 4 p. 525).

In Iranian there are by-forms in $-\bar{a}u$ - \check{s} (with corresponding acc. sing. $-\bar{a}vam$ and nom. acc. pl. $-\bar{a}vas$), such as Avest. $b\bar{a}z\bar{a}u$ - \check{s} , O.Pers. $dahy\bar{a}u$ - \check{s} 'neighbourhood'; these we may conjecture to be re-formates containing the loc. sing. in $-\bar{a}u$; see § 261. For Avest. $per^en\bar{a}yu$ beside $per^en\bar{a}yu$ - \check{s} and the like, see Bartholomae Ar. Forsch. I 36 and J. Schmidt Pluralbild. 76 ff.

§ 197. 4. \bar{u} - uu- and $\bar{\imath}$ - ii- stems (cp. II § 109 p. 334). Pr. Idg. * $bhr\bar{u}$ -s 'eyebrow' * $sue\bar{k}r\bar{u}$ -s 'socrus'. Skr. $bhr\bar{u}$ -š, śvaśru-š, tanu-š, 'body', $dh\bar{i}$ -š 'thought', $nad\bar{i}$ -š 'river'; Avest. ber^ezai - $d\bar{i}$ -š (acc. $-d\bar{\imath}$ -m) 'having great insight'. Gr. $\dot{o}\varphi o\bar{\imath}$ -s, $\dot{\nu}\dot{\epsilon}\bar{\nu}\bar{\nu}$ - $\bar{\nu}$ 'corpse', $\dot{\nu}\bar{\epsilon}\bar{\nu}$ 'weevil', $\dot{n}\dot{o}\lambda\bar{\imath}$ - $\bar{\nu}$ 'city'. Lat. $s\bar{u}$ -s, $v\bar{\imath}$ -s; socru-s has become a u-stem, because stems in $-\bar{u}$ - and those in -u- had the same endings in the acc. gen. and dat. singular (§§ 217, 233, 254). O.Icel. $s\bar{y}$ -r O.H.G. $s\bar{u}$ 'sow' (I § 661. 5 p. 519); polysyllables are treated as u-stems, O.H.G. swigar 'socrus' (also swiger following muoter), Goth. asilu-qairnu-s f. ' $u\dot{\nu}\lambda o_{\mathcal{S}}$ o $vu\dot{\nu}\dot{o}_{\mathcal{S}}$, millstone' O.H.G. quirn as contrasted with O.C.Sl. zrimy f. 'mill'. O.Pol. kry Mod.Slov. kri 'blood' = O.C.Sl. *kry (whose place was taken by $kr\bar{u}v$ - \bar{i}), O.C.Sl. svekry (I § 665. 4 p. 525).

Nominatives formed in the same way from stems in $-\bar{q}$ - ηn - ηn - $-\bar{l}$ --ll-, and $-\bar{q}$ - $-\gamma r$ - (I § 312 pp. 250 f., II § 160 pp. 485 f.). Skr. $j\acute{a}$ -s 'being' for $*\bar{g}\bar{q}$ -s, $g\bar{o}$ - $s\acute{a}$ -s 'winning cattle', Avest. $x\mathring{a}$ 'spring, source' (cp. acc. Ved. $kh\acute{a}m$ § 217), Skr. $p\acute{u}r$ 'stronghold' for $*p\bar{l}$ -s, $g\acute{v}r$ 'praise' for $*g\bar{r}$ -s. No doubt Gr. $\mathring{\omega}\mu o$ - $\beta \varrho \omega \acute{s}$, $\chi \varrho \omega \acute{s}$ are further examples.

§ 198. 5. Stems whose suffix ends in an explosive. a. The Suffixes -t--tāt--tūt-. Skr. viśva-ji-t 'gaining everything by victory' sarvá-tāt 'completeness' (I § 647.7 pp. 493 f.), Avest. haurva-tās 'wholeness, a being in good condition (I § 473.2 p. 349). Gr. $\vartheta\eta_S$ 'hired labourer' for $*\vartheta\eta$ - τ - ς , vi- ξ 'night' for *vvx- τ - ς , $\delta\lambda\delta$ - $\tau\eta_S$ 'wholeness, completeness'. Lat. com-es (gen. com-i-t-is) nox (gen. noc-t-is), novi-tās, juven-tūs. O.Ir. cing (gen. cinged) 'hero, warrior' = Gall. *Cinges (stem Cinget-), O.Ir. δ itiu 'youth' for $*(\dot{z})$ ov \bar{c} tū(s) = Lat. juventūs.

In Germanic, such forms as Goth. naht-s 'night' mēnōþs 'month' O.H.G. naht mānōd are re-formates, since -ts became -ss (-s) in proethnic Germanic (I § 527 p. 382). They may have been due to an attempt to restore the stem, which had been preserved in the other cases; cp. Goth. instr. pl. frijōnd-am beside tigum, § 379. As regards nominatives like O.H.G. nefo for *nefō(đ), see p. 79.

The Suffix -nt-. Pr. Idg. -nt-s, -nt-s¹), as *bhrghont-s, possibly *bhrghent-s (see II § 125 Rem. 2 pp. 395 f.) 'prominent high'. Skr. brhán Avest. berezas (I § 647. 7 pp. 493 f.; Bartholomae, Kuhn's Ztschr. XXIX 501 ff. and 517); Skr. dádat 'giving' for *dadat-s Avest. stavas 'praising' for *stavat-s. Gr. ἄεις 'blowing' = Skr. νάn, common ground-form *μēnt-s, ὀδούς 'tooth'; as to -ων in φέρων and the like, see below. Lat. ferēns, dēns, stans = Gr. στάς; Umbr. zeřef serse 'sedens' (I § 655.9 p. 504). O.Ir. care cara 'friend' (gen. carat), cp. tri-cha 'group of 30' (gen. tri-chat) = Avest. Þri-sas (I § 657. 10 pp. 509 f.). Lith. vežās 'vehens' dial. vežans vežus, Pruss. sīdans sīdons 'sitting'; O.C.Sl. vezy 'vehens', in the first instance for *vezuns, according to I § 84 p. 80, § 92 pp. 86 f., § 219 pp. 186 f.

In Sanskrit, *iyān* 'tantus' *kiyān* 'quantus' are re-formates which followed certain words of kindred meaning, such as *tvá*-

¹⁾ An error must be corrected in II § 125, p. 395. In that place, following the traditional view, I wrongly allowed myself to regard *- $\bar{o}n$ as an original nominative ending as well as *-o-nts. This correction I have already made in my Greek Grammar 2 p. 109.

- $v\bar{a}n$ one who is as thou art' (see below). In Avestic participles, besides -as (*-ants) and -as (*-ats), we find - \bar{o} = Ar. *-as, which is the commonest ending of such participles as concern us here; e. g. $per^es\bar{o}$ 'asking' $hi\check{s}t\bar{o}$ 'standing'. Bartholomae (Kuhn's Ztschr. XXIX 557 ff.) considers this formation in the light of Vedic forms like pra- $mrn\acute{a}$ -s beside pra- $mrn\acute{a}$ n' destroying' $vi\check{s}vam$ - $inv\acute{a}$ -s 'penetrating everything' beside invan, and assumes that a certain number of adjectival compounds in Idg. *- δ -s, used like participles, were brought into close relation with the corresponding verbs, the result being that true participles in -nt- took the ending of these adjectives through association with them. The analogy seems to have gone further; and, in Avestic, nominatives in - $v\bar{o}$ were formed even from stems in -vant-, as par^ena - $v\bar{o}$ 'furnished with a feather' (see Geldner, Kuhn's Ztschr. XXX 515).

Greek has forms like $\varphi \acute{\epsilon} \varrho \omega \nu$ 'bearing' $i \delta \omega \acute{\nu}$ 'seeing', besides those in $-o\acute{\nu}\varsigma$ (for *-oντ- ς). Now -ων can come neither from *-ont-s or *-ōnt-s nor from *-ōnt, and for *-ōn as an Idg. ending in nt-stems there is no further evidence that can be trusted.\(^1) I therefore offer the following conjecture as to its origin. I suggest that there were two influences at work. (1) The relation of the masc. $i\emph{O}\mu\omega\nu$ $n\emph{t}\omega\nu$, and similar forms, to the neuter in -oν, $i\emph{O}\mu\omega\nu$ $n\emph{T}o\nu$, caused a masc. $-\omega\nu$ to spring up in connexion with -oν (for *-oντ), beginning with participles used strictly as nouns, e. g. $\mu\acute{\epsilon}\lambda\lambda\omega\nu$ 'future' $\acute{\epsilon}\kappa\dot{\omega}\nu$ 'willing'. (2) The relation of the vocative to the nominative in $\kappa\dot{\nu}\omega\nu$ $\delta a i\mu\omega\nu$ and the like, voc. $\kappa\dot{\nu}o\nu$ $\delta a i\mu\omega\nu$, gave rise to substantival nominatives like $\gamma\dot{\epsilon}\rho\omega\nu$ (voc. $\gamma\dot{\epsilon}\varrho\sigma\nu$ for *-oντ).

In Germanic, forms like Goth. frijōnd-s O.H.G. friunt 'friend' are re-formates of the same kind as Goth. mēnōþs O.H.G. mānōd; see last page. Similarly, Pruss. dīlant-s 'working' and Lett. áugůt-s 'growing', for *-ant(i)-s.

The Suffix -uent-. Skr. $tv\acute{a}-v\bar{q}s$ - $v\bar{a}n$ Avest. $\bar{p}w\bar{a}-v\bar{q}s$ 'one like thee', Skr. $\acute{a}ma-v\bar{q}s$ - $v\bar{a}n$ 'pressing on mightily, powerful' for

¹⁾ Lith. sėdun and Lett. sėdu (J. Schmidt, Kuhn's Ztschr. XXVII 392) cannot be quoted as proving that Idg. had this ending.

*- $v\bar{a}ns$, but Avest. ama- $v\hat{a}$ for *- $v\bar{a}s$. Pr. Ar. *- $v\bar{a}ns$ in * $tv\bar{a}$ - $v\bar{a}ns$, we may conjecture, took the place of *- $v\bar{a}s$ under the influence of -vant-am -vant-as; but pr. Ar. *- $u\bar{a}s$, which was preserved in Avest. ama- $v\hat{a}$, belongs to the suffix - $u\bar{e}s$ -- $u\bar{e}s$ -. Cp. II § 127 p. 405, § 136 p. 441, § 208. Gr. $\sigma\tau\sigma\nu\delta$ - $\varepsilon\iota\varsigma$ 'wailing, lamentable' for *- $F\varepsilon\nu\tau$ - ς .

Remark 1. Bartholomae (Kuhn's Ztschr. XXIX 499 ff., 518 f.) postulates Idg. *-yēnt-s; in which I cannot follow him. It may be remarked in passing that, granted pr. Ar. nom. *-vās, the change of -vant- to -vanstems (Skr. ½k-vant- and ½k-van- 'singing' Avest. ama-vant- and ama-van-, and so forth) is more easily explained than it is on Bartholomae's theory, pp. 540 f.: -vās had another form -vā, its sentence doublet, and this resembled the ending of stems in -van- (§ 391). Cp. the reverse process in Ved. varimát-ā from the nom. varimā (stem varimán-) 'width, distance'.

Suffixes in -d, pr. Idg. nominative ending -ts. Skr. śarát 'autumn', stem śarad-. Gr. $\varphi v y \acute{a} \varsigma$ 'fugitive', stem $\varphi v y a \acute{b}$ -, $\mathring{a} \sigma \pi i \acute{\varsigma}$ 'shield', stem $\mathring{a} \sigma \pi i \acute{\delta}$ -. Lat. lapis, stem lapid-, $pal\bar{u}s$ stem $pal\bar{u}d$ -.

All these examples ended in pr. Idg. -ts. But we have also certain forms, especially in Germanic, which seem unquestionably to point to a proethnic nominative singular without s. Such are Goth, mēna O.H.G. māno, and doubtless Lith, menu for *menot beside Goth. mēnōħ-s O.H.G. mānōd (II § 123 pp. 393 f.), O.H.G. nefo for pr. Germ. *néfod beside Lat. nepos (see loc. cit.), A.S. hæle for pr. Germ. * valéb beside hæled (loc. cit.), O.H.G. zan 'tooth' for pr. Germ. *tanb (in I § 527 p. 382 erroneously traced back to pr. Germ. *tan(t)-s) beside Skr. dán Gr. odovc. Other examples are given by Kluge, Paul's Grundr. I 390 f. Here there are two possibilities between which I do not feel able to decide at present. There may have been double forms from the very first, one with s and one without; this view may be supported by the ablaut in *xalēb (in consideration of this, Kluge op. cit. p. 385 even postulates an Idg. nom. *pod beside acc. *pod-m). Or s may have disappeared when the words were used in this or that environment in the sentence (cp. the disappearance of s in such sound-groups as st-, I § 589.3 pp. 445 f., § 645 p. 490). And compare Bartholomae, Stud. zur idg. Sprachgeschichte, I 65.

Remark 2. If -u in O.H.G. hwemu is the direct and regular representative of pr. Germ. *- $\bar{o}t$ = Idg. *- $\bar{o}d$ (§ 241), the -o of $m\bar{a}no$ neformust have arisen by an assimilation of these words to the nominative ending of n-stems, such as gomo.

b. Suffixes in -k and -g. Skr. $u\acute{s}ik$ - (stem $u\acute{s}ij$ -) 'demanding', Avest. $usix \acute{s}$ (stem usij-) a kind of demon; for Skr. $sp\acute{a}t$ 'spy' and the like see I § 401 Rem. 2 p. 297, § 404 Rem. 3 p. 299. Gr. $\mu e\~iga \acute{s}$ (stem $\mu e \iota ga \varkappa$ -) 'girl' $q\acute{a}\lambda a\gamma \acute{s}$ (stem $qa\lambda a\gamma \gamma$ -) 'phalanx'. Lat. senex (stem senec-) $bib\~ax$ (stem $bib\~ac$ -). O.Ir. aire 'princeps' for *ariak-s, gen. airech, ail 'rock, stone' for *alek-s, gen. ailech, nathir 'water-snake' gen. nathrach; Gall. esox = Mid.Ir. eu (gen. iach) 'salmon' (I § 657. 10 pp. 509 f.).

§ 199. 6. Perhaps all Root-Nouns had -s in the proethnic language (cp. § 197). Examples:

Pr. Idg. * $n\bar{a}u$ -s 'navis': Skr. $n\bar{a}u$ - \check{s} Gr. $va\tilde{v}$ - ς . * $d(i)i\bar{e}u$ -s 'heaven, daylight': Skr. $d(i)y\bar{a}u$ - \check{s} , Gr. $Z\epsilon\check{v}$ - ς , O.H.G. Zio for *t(i)eu(z) (Streitberg, Die germ. Comp. auf $-\bar{o}z$ -, 18). * $g\bar{o}u$ -s 'ox, cow': Skr. $g\bar{a}u$ - \check{s} Avest. $g\bar{a}u$ - \check{s} , Gr. $\beta o\tilde{v}$ - ς , O.Ir. $b\bar{o}$ (I § 657. 10 pp. 509 f.). I leave it an open question whether Gr. $Z\eta'\varsigma$, Lat. $di\bar{e}s$ and Gr. Dor. $\beta o\tilde{o}\varsigma$, Lat. $b\bar{o}s$ O.H.G. kuo O.Sax. $k\bar{o}$ ') were framed on the model of the acc. sing. (§ 221), or whether they represent proethnic sentence doublets * $d(i)i\bar{e}s$ and * $g\bar{o}s$. See II § 160 p. 481 f., and Streitberg op. cit. 12. In composition we have Skr. -gu- \check{s} , as su-gu'- \check{s} 'having fine cattle', inflected as a u-stem, e. g. nom. pl. su-ga'vas du. su-gu'.

* $u\bar{o}q$ -s 'voice, speech': Skr. $v\acute{a}k$ Avest. $v\bar{a}x$ - \check{s} , Gr. $\check{o}\psi$, Lat. $v\bar{o}x$. * $r\bar{e}k$ -s ($\sqrt{r\bar{e}g}$ -) 'ruler, king': Skr. $r\acute{a}t$ (like $sp\acute{a}t$ § 198), Lat. $r\bar{e}x$ O.Ir. $r\bar{\imath}$ (gen. $r\bar{\imath}g$, Gall. nom. Dumno- $r\bar{\imath}x$); Goth. reik-s (nom. pl. reik-s) instead of *reihs (I § 527 p. 381) is doubtless borrowed from the Keltic. Avest. $bar^e\check{s}$ 'height, high' (gen. bar^ez - \bar{o} ber^ez - \bar{o}), O.Ir. $br\bar{\imath}$ (gen. breg) 'mountain', Goth. $ba\acute{u}rg$ -s 'stronghold, fort, town' (gen. $ba\acute{u}rg$ -s) instead of the regular * $ba\acute{u}rhs$, from $\sqrt{bher}\hat{g}h$ -. Skr. $\acute{a}p\bar{a}m$ Avest. $apa\check{s}$

¹⁾ A.S. $c\bar{u}$ O.Icel. $k\bar{y}r$ must be added to this list, if in these \bar{u} stands for yo. But cp. II § 160 p. 482.

for pr. Ar. *apānk-š 'turned backwards' (I § 647.7 pp. 493 f.; Bartholomae, Kuhn's Ztschr. XXIX 501 ff. und 517 f.). Avest. āf-š (stem ap-) 'water', Skr. stúp (stem stubh-) 'roaring'.

We may doubtless add * $m\bar{u}s$ -s 'mouse', which became * $m\bar{u}s$ in the proethnic stage (§ 356 Rem.): Gr. $\mu\bar{v}_{\varsigma}$ Lat. $m\bar{u}s$ (II § 160 p. 485).

The Greek $\chi \vartheta \omega' \nu$ 'earth' (cp. Skr. $k \xi \mathring{a}$ -s, II § 160 p. 482) may be an ad-formate of $\tau \varrho \bar{\nu} \gamma \omega' \nu$ and the like; $\chi \mathring{\alpha} \nu \chi \mathring{\eta} \nu$ 'goose' and $\mu \mathring{\eta} \nu$ 'month' are undoubtedly re-formates, taking the place of $*\chi \alpha \nu_S *\chi \bar{\alpha}_S$ and Ion. etc. $\mu \varepsilon i_S$ for $*\mu \eta \nu_S$ respectively (II § 132 p. 415, § 160 p. 485); similarly $\varphi \omega' \varrho$ 'thief' $\chi \mathring{\eta} \varrho$ 'hedgehog' on the analogy of $\delta \omega' \tau \omega \varrho \delta \sigma \tau \mathring{\eta} \varrho$ etc.

For the ground-form of Skr. $p\tilde{a}t$ Gr. Dor. $\pi\tilde{\omega}_{\varsigma}$ $\pi\acute{o}_{\varsigma}$ (Hom. $\tau\varrho\acute{\iota}-\pio_{\varsigma}$) Att. $\pio\acute{\iota}_{\varsigma}$ Lat. $p\bar{e}s$ 'foot', see § 198 p. 79: were there once parallel forms * $p\bar{o}d$ (* $p\bar{e}d$) and *pot-s (*pet-s)? ov in $\pio\acute{\iota}_{\varsigma}$ has not yet been satisfactorily explained.

Vocative Singular Masculine and Feminine.1)

§ 200. No special vocative forms are found in the Indo-Germanic languages except for singular nouns masculine or feminine. From the proethnic period onwards, the nominative has served for the vocative in the plural and dual, whilst in the neuter gender the form used for nominative and accusative has been used for the vocative in all three numbers.

Genuine singular vocatives naturally enough had no case-sign at all; see § 184 p. 56. In the proethnic language the accent was thrown back to the first syllable of the word, as *måter 'mother' = Skr. måtar Gr. $\mu \tilde{\eta} \tau \epsilon \varrho$; this remains a general rule in Sanskrit, but in no other language. But the forms had a word accent of their own only when they stood first in a clause. In any other position it is probable that they were often enclitic, which is the rule in Sanskrit; e. g.

¹⁾ Benfey, Über die Entstehung des indogerm. Vocativs, Abhandl. der Ges. der Wiss. zn Gött. XVII (1872) pp. 3 ff. Bezzenberger, Zur lett. Declination: Einige Vocativformen; in his Beiträge, XV, 296 ff.

Brugmann, Elements. III.

 $id\acute{a}m$ indra šrņuhi 'Hear this, Indra!' See I § 669 p. 534, and § 672 p. 538.

In all other branches of the language but the Aryan this practice of accenting the first syllable underwent many changes. Sometimes it was overborne by special rules in special languages. Thus in Greek and Latin certain changes were necessary in order that words should conform to the trisyllabic law; hence Gr. Ayámemov instead of *Ayamemov, Lat. alimne, amplissume instead of *álumne, ámplissume (I § 676 p. 541, § 681 p. 548). Or the accent followed that of other cases from the same stem; thus Gr. δαϊφρον instead of *δάιφρον follows δαϊφρον (intelligent') δαϊφρονος etc., αὐτοκράτος instead of *αὐτοκράτος follows ἀντοκράτως ('having unlimited power') αὐτοκράτοςς etc., διογενές instead of *διόγενες follows διογενής ('born of a god') διογενέος etc. Elsewhere other factors less easy to detect may have been at work, as in the accentuation of the Lithuanian vocative — e. g. vilkè ('wolf'), naktě ('night').¹)

But even in the singular the parent language would seem to have sometimes used the nominative form as a mode of address: compare, for example, Skr. Ved. (Rig-V. I. 2. 5), váyav indraś ca cētathaḥ 'Vāyu and Indra, ye take care', Gr. Hom. (Γ 276) Ζεῦ πάτερ . . . 'Ηἐλιός τε . . , ὑμεῖς μάρτνροί ἐστε. And in most languages the forms of the nominative usurped more and more the place of the vocative; sometimes the proethnic vocative form belonging to some class of stems died out completely before the date of the oldest extant specimens of a given language. This happened in Latin to the vocative of ā-stems. The genuine vocative forms are most faithfully preserved in Sanskrit. Yet even there in certain monosyllabic stems the vocative was regularly expressed by the nominative form, although accented as a vocative would be; e. g. díyāu-š, written dyāùš (nom. diyāú-š),²) as contrasted with Gr. Zeῦ; bhú-š ('earth'),

Bezzenberger's conjectures given in the essay cited in the footnote on the last page seem to me highly uncertain.

For this accentuation, see Bartholomae, Stud. zur idg. Sprachg.,
 I 82 f.

but Gr. $i\chi \vartheta \tilde{v}$ ('fish'). Perhaps we may follow Collitz (Bezz. Beitr. X 32) in recognising the Idg. vocative of $g\bar{u}\acute{u}-\check{s}$ in the voc. $-g\bar{o}$, only found in composition (e. g. $bh\bar{u}r\dot{i}-g\bar{o}$).

Remark. In Sanskrit, the rules regulating the accent of the vocative singular held good for plural and dual nominative forms when these were used as vocatives (cp. the sing. $diy\bar{a}u$ - \bar{s} just cited); e. g. pitaras (nom. pitaras 'fathers'). There is no reason why this should not be regarded as a genuine proethnic tradition, although it is true that no such practice can be proved for any European language: in Attic $\tilde{\omega}$ $\pi a' \tau \epsilon \rho \epsilon \bar{s}$, for example, might have been expected, since we have $\tilde{\omega}$ $\pi a' \tau \epsilon \rho$.

§ 201. 1. o-stems. Pr. Idg. *ulqe. Skr. vfka; Avest. vehrka, O.Pers. $martiy\bar{a}$ 'homo' (I § 649.1 p. 495). Gr. $\lambda \dot{v} \times s$, $\check{a}\delta \varepsilon \lambda \varphi \varepsilon$ beside $\check{a}\delta \varepsilon \lambda \varphi \acute{o} - \varsigma$ 'brother', $\delta u\iota \mu \acute{o} n \varepsilon$ 'wonderful one'. Lat. $lupe\ puere$, $filie\ and\ fili$ from filiu-s (cp. below); Umbr. Tefre, Fisovie. O.Ir. $fir\ for\ *uire$, $maicc\ `son'\ for\ *makue$, $c\bar{e}li\ `comrade'\ doubtless\ for\ *c\bar{e}li\dot{e}\ (I\ §\ 657.3\ p.\ 500)$. Goth. vulf, $hairdi\ `herdsman'$, O.H.G. wolf. Lith. $vilk\dot{e}$, $\check{z}\check{o}di\ (\check{z}\check{o}di$ - $s\ `word')\ gaid\~y\ (gaid\~y$ - $s\ `cock'$), cp. below; O.C.Sl. $vl\check{u}\check{e}e$.

Remark 1. As regards -ā instead of -a in Vedic, as výšabhā 'bull', see Lanman, Noun-Inflection p. 339, Oldenberg, Die Hymnen des Rigveda, I 393 ff., Wackernagel, Das Dehnungsgesetz der griech. Compp. (Basel 1889) pp. 12 f., Bezzenberger in his Beiträge XV 296 f.

It cannot be proved that in the Latin vocatives from iostems $-\bar{\imath}$ is contracted from -ie. Probably we have here the weak-grade $-\bar{\imath}$ -, as we certainly have in Lith. voc. $gaid\tilde{y}$ and in the Italic nominatives in -i-s -\bar{\imath}-s. Cp. II § 63 p. 122, III § 194 p. 74, and Streitberg, Paul-Braune's Beitr. XIV 201.

In Lithuanian the ending -ai is also found. This occurs in names of men, as tëvai 'father' Jõnai 'Johannes' (cp. Bezzenberger in his Beiträge, XV 299). Can it be that -i is the same particle as we see in pronominal nominatives in -oi (§ 414)? Avest. voc. haenē: nom. pwōi (§ 202) points to this conclusion. Brückner (Archiv für slav. Phil. III 276) compares the emphasising -ai in tas-aī toks-aī gražūs-ai, and the like.

For O.C.Sl. juniče beside nom. junici 'young bull', etc., see I § 147 p. 134. jo-stems whose nominative did not end in -c'i

-zī, had the ending of u-stems in the vocative (§ 203), as kraju (nom. krajī 'border') mažu (nom. mažī 'man').

Remark 2. The following may be suggested as a conceivable reason for the latter change of inflexion. Nominatives such as kraji konji are parallel to the Lith. $m\tilde{o}ji$ -s $z\tilde{o}di$ -s and to the Lat. ali-s. Can there have been nominatives in *-ie = Idg. *-io-s in O.C.Sl., corresponding to Lithuanian nominatives like $v\tilde{e}ja$ -s ('wind') $sv\tilde{e}czia$ -s ('gnest'), and to aliu-s and the like in Latin? Then the vocative in *-ie will have been transformed in order to avoid confusion with the nominative which had the same ending, while this nominative afterwards took the ending of that class of nouns whose nominative ended in -(ie)i-s. Cp. § 194 p. 74.

§ 202. 2. \bar{a} -stems. Pr. Idg. * $e\bar{k}\mu\bar{a}$, cp. II § 59 pp. 108 f. Skr. $\acute{a}mba$ 'mother' doubtless belongs here; for the Ar. voc. in *- $a\bar{i}$ (Skr. $-\bar{e}$ Avest. $-\bar{e}$) see below. Gr. Hom. $\nu\nu\mu\rho\bar{a}$ 'nymph'; $-\bar{a}$ is more commonly kept in masculine words, as $\delta\dot{\epsilon}\sigma n\sigma\tau a$ 'master' $\sigma\nu\beta\bar{\omega}\tau a$ 'swineherd'. O.C.Sl. rako. And probably we must place in this class Lith. $rank\bar{a}$, and with -a dropped, $m\acute{o}tyn$ from nom. $m\acute{o}tyna$ 'mother', $M\acute{a}riuk$ from nom. $Mariuk\bar{a}$, and the like; see I § 664 p. 522, and J. Schmidt, Kuhn's Ztschr. XXVII 382.

In Aryan the common ending was *- $a\dot{i}$: Skr. $\dot{a}\dot{s}v\bar{e}$ Avest. $haen\bar{e}$. The origin of this ending is uncertain. I think it most probable that a deictic particle has attached itself to this case, — the same deictic -i which is found in the nom. sing. in - $a\dot{i}$, Avest. $pw\bar{o}i\ ber^ex\bar{d}\bar{e}$ Pruss. $stai\ mensai$ (see § 190 p. 67, § 414). Cp. Lith. $t\dot{e}vai$ § 201.

Remark 1. Bopp (Vergl. Gr. I³ 297) and J. Schmidt (Kuhn's Ztschr. XXVII 381 f.) compare Skr. $d\hat{s}v\bar{e}$ with Gr. $Hv\bar{s}o\bar{i}$. Others assume a re-formation on the analogy of i-stems (Skr. $\dot{a}v\bar{e}$).

Another fact may have had something to do with the practically complete disuse of -a in the vocative of Aryan \bar{a} -stems. In Aryan, Idg. -a and -e both became -a; hence the same form represented both $*e\hat{k}ya$ f. and $*e\hat{k}ue$ m.

In Greek, such forms as $E_{Q}\mu\epsilon i\bar{\alpha}$ alvagé $\tau\eta$, which were properly nominative, came to be regarded as vocative in contradistinction to nominatives with s, $E_{Q}\mu\epsilon i\bar{\alpha}$ -g alvagé $\tau\eta$ -g, and were used as such. See § 190 p. 67.

Masc. vocatives in $-\ddot{\alpha}$ were sometimes used as nominatives, e. g. $in\pi\acute{\sigma} t\ddot{\alpha}$ 'horse-driver', $\Theta v\acute{\epsilon}\sigma t\ddot{\alpha}$; cp. the Lat. vocative $J\bar{u}$ -piter Juppiter (§ 210), which also passed current as a nominative. See

the Author, Morph. Unt. II 199 f., Curt. Stud. IX 259 ff., G. Meyer Gr. Gr.² pp. 318 f.

Remark 2. Other explanations, to my mind not convincing, of ἱππότᾶ are given by Fick and Bezzenberger in Bezz. Beitr. III 159 and 174, and by Johansson in Kuhn's Ztschr. XXX 426. J. Schmidt (Pluralb. 401 ff.) assents to my view, provided that there was at least one stem which originally had -a in both nom. and voc. properly without the action of form-association; otherwise he thinks the explanation impossible. indispensable stem he sees in εὐρύοπα, originally, as he thinks, a neuter substantive meaning 'wide-eye'; εὐρύοπα Ζεύς would then mean 'wide-eye heaven', the meaning being afterwards changed to 'wide-seer Zeus'. This ingenious explanation of $\epsilon \dot{v}_{\rho\nu\sigma\sigma\alpha}$ is probably right; but the Lat. $J\bar{u}_{piter}$ proves that it is wrong to suppose that the nominative use of vocatives like ἱππότα must have begun with this particular word. should rather be assumed; it is more likely that the change of meaning in εὐούοπα Ζεύς to 'wide-seer Zeus' was made easier by a previous use of vocatives like νεφεληγερέτα, μητίετα and so forth before Zeύς as though they were nominative; the same thing preserved the ending of εὐούοπα before Zεύς from being inflected in any way, whilst εὐρύοπα before Zην was doubtless preserved by the analogy of the masc. accusative in $-\alpha$, as αϊθοπ-α.

From $\Sigma \tau \rho \epsilon \psi \iota \acute{\alpha} \delta \eta - \varsigma$ in Attic we have the voc. $\Sigma \tau \rho \epsilon \psi \iota \iota \acute{\alpha} \delta \epsilon \varsigma$ on the analogy of vocatives of es-stems like $\Sigma \acute{\omega} \iota \varrho \alpha \tau \epsilon \varsigma$ (§ 209). Cp. in the gen. sing. $-\acute{\alpha} \delta o \nu \varsigma$ instead of $-\acute{\alpha} \delta o \nu$ (§ 229).

Italic. Lat. equa is a nominative form. Perhaps the reason why the vocative in Idg. *-a was dropped in Latin is that *-a became -e, and thus -ā-stems had the same ending as those in -o- (I § 97.3 p. 91). Again, Umbr. Tursa (a goddess) must be a nominative form if the instrumental -e of Umbrian, e. g. in pure 'igne', represents Idg. *-a; see § 274.

Whether the Irish tuath is a true vocative, representing $t\bar{t}$ or a nominative, cannot be determined.

Goth. giba O.H.G. geba are nom. or acc.; see § 190 p. 67.

- § 203. 3. i- and u-stems. The ending varied. Sometimes it was *-oi or *ei and *-ou or *-eu, sometimes *-i and *-u.
- a. *-oi or *-ei: Skr. $\acute{a}v\bar{e}$ Avest. $a\check{z}\bar{e}$ (beside $a\check{z}i$); Lith. $nakt\tilde{e}$ O.C.Sl. $no\check{s}ti$. *-i: Avest. $a\check{z}i$ (beside $a\check{z}\bar{e}$); Gr. $\check{o}q\iota$; Goth. O.H.G. anst.
- O.Ir. fāith may represent either of the two ground-forms (see I § 657.1 and 4, pp. 507 f.).

b. *-ou or *-eu: Skr. sūnō; Lith. sūnaū, O.C.Sl. synu. *-u: Avest. būzu: Gr. $\pi\tilde{\eta}\chi v$, Goth. sunu, O.H.G. situ sito. And we should follow Wackernagel (Kuhn's Ztschr. XXIV 301 ff.) in referring Gr. $i\pi\pi\epsilon\tilde{v}$ to * $i\pi\pi\epsilon\dot{v}v$, and comparing it with Skr. ášvayō (nom. ašvayū-š 'craving horses'). As regards $i\pi\pi\tilde{\eta}(F)og$ and so forth see § 261.

For Avestic heteroclite forms in $-\bar{o}$, as $ra\check{s}nuv\bar{o}$ (stem $ra\check{s}nu$ -'righteousness, justice'), see Bartholomae Ar. Forsch. I 56 f.

In Gothic -au is common beside -u. But the MSS show a peculiar liability to confuse u and au in all the singular cases, which points to a transition from \check{u} to \check{o} ($a\acute{u}$); hence it is not safe to infer a vocative form - $\acute{a}u$ = *-ou or *-eu. Cp. Leo Meyer, Got. Spr. p. 574; Leskien, Die Decl. im Slav.-Lit. und Germ. 76; Braune, Got. Gr. 3 p. 44.

§ 204. 4. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68 footnote 1). The forms to be considered are Skr. $b\hat{r}hati$ Avest. barenti, Gr. $\phi \dot{\epsilon} \phi ov \sigma \alpha$, Goth. $frij\bar{o}ndi$, which are hardly enough to enable us to restore the proethnic form. Ar. -i from nom. - $\bar{\imath}$, as in \bar{a} -stems -a is the voc. ending from nom. - \bar{a} . O.C.Sl. zemlje from nom. zemlja like rako: raka.

§ 205. 5. $\bar{\imath}$ - $i\dot{\imath}$ - stems and \bar{u} - $u\dot{u}$ -stems. The proethnic type is perhaps represented by Gr. $i\chi \vartheta \tilde{v}$ Hom. $\Theta \dot{\epsilon} \tau \tilde{\iota}$ and O.C.Sl. svekry; O.H.G. $s\bar{u}$ and swigar (for $*sue\hat{k}r\bar{u}$) may also be genuine vocatives.

Ved. $n\acute{a}di$ ($nad\acute{t}$ - \check{s} 'river') and $\acute{s}v\acute{a}\acute{s}ru$, like $b\acute{r}hati$ (§ 204). In monosyllabic stems the nominative was regularly used as vocative, e. g. $dh\acute{t}$ - \check{s} , $bh\acute{t}$ - \check{s} (§ 200 p. 82).

§ 206. 6. n-stems. Pr. Idg. * $\hat{k}(u)uon$. Skr. śván. Gr. xíov, " $A\pi$ o $\lambda\lambda$ ov.

In the Avesta, where -m is written instead of -n, the reason is probably to be found in sentence-position and varying surroundings (cp. Bartholomae, Bezz. Beitr. XV 40 and Stud. zur idg. Sprachgesch. I 72). Examples: pri-zafem (pri-zafan- 'having three mouths'), apraom instead of apravem (I § 158 p. 141) = Skr. átharvan 'fire-priest'.

In Greek we find $-o\nu$ only in barytone stems; and even its these the nominative form may be used, as it must be in stems which are oxytone. Nor do we ever meet with $-\varepsilon\nu$, but always $-\eta\nu$, the ending of the nominative.

The Lithuanian vocative is the nominative form, $sz\tilde{u}$ 'dog', $p\ddot{e}m\tilde{u}$ 'herd-boy'; also $szun\tilde{e}$ $p\ddot{e}men\tilde{e}$, declined as i-stems.

§ 207. 7. r-stems. Pr. Idg. *māter. Skr. mátar, Avest. mātar Gr. μῆτερ. Lat. māter, Jūpiter Juppiter. O.Ir. māthir. O.H.G. muoter. Pr. Idg. *bhrātor, *dōtor. Skr. dátar, Avest. dātar Gr. φράτορ, δώτορ. Goth. brōḥar, O.H.G. bruodar.

Whether the Germanic forms are really vocative and not nominative, as Lat. *dator*, *soror* and O.Ir. *siur* were, cannot be decided. As to the Germanic forms, cp. § 192 b. with Rem. 1 pp. 71 f.

§ 208. 8. Stems ending in an explosive.

nt-stems. Pr. Idg. *bhrĝhont. Skr. býhan, dádat for *dednt (I § 647.7 pp. 493 f., III § 198 p. 77). Gr. γέρον.

A vest. ber^eza from the nom. sing. in $-\bar{o}$; see § 198 pp. 77 f. Greek. Like $\gamma \dot{\epsilon} \rho o \nu$ we have $A \bar{t} a \nu$, from nom. $A \bar{t} \bar{a} \varsigma$ for * $A \bar{t} F a \nu \tau - \varsigma$. Hom. $A o \nu \lambda \nu \delta \dot{a} \mu \bar{a}$ was formed from the nom. $A o \nu \lambda \nu - \delta \dot{a} \mu \bar{a} \varsigma$ (for * $-\delta a \mu a \nu \tau - \varsigma$) on the model of $a \nu a \rho \dot{\epsilon} \tau \eta$: $a \nu a \rho \dot{\epsilon} \tau \eta \varsigma$ and the like.

Goth. $frij\bar{o}nd$ O.H.G. friunt as though they were o-stems, cp. nom. $frij\bar{o}nd$ -s friunt § 198 p. 78.

Stems made with the suffix -yent-. In Aryan, the vocative of these stems like the nominative has -yes- in place of -yent-: Skr. Ved. áma-vas Avest. ama-vō (this form is not actually found, but it is to be inferred on the strength of drvō = druvō for *drug-vō, from Gāthic drug-vant- 'deceitful', see I § 453 p. 335). It was not until a later period that -van drove out -vas in Sanskrit. Cp. § 198 p. 78, and also II § 127 p. 405, § 136 p. 441, Bartholomae Kuhn's Ztschr. XXIX 519 and 531 f. In Greek, fevr-stems had no special form for the vocative, but the nominative was used.

As regards the other explosive stems; in Sanskrit it is impossible to say whether the forms in question are vocative

or not, since they may equally well be regarded as nominative. Examples are: márut (wind-god) púru-kṛt 'rich in deeds' ákṛtta-ruk 'possessing uninterrupted brilliancy'. Iranian apparently offers us no forms which can pass for vocatives; the nominative is used instead, e. g. in Yasna 33. 8 haurvatās (safety, weal'). Turning to the European languages, we find no language but Greek that has clearly marked vocative forms, and even Greek has only one or two: ἄνα for *ἀνακ (*ἀνακτ) from ἄναξ 'lord', γύναι for *γυναικ beside acc. γυναῖκ-α 'woman'. The following may really belong to i-stems: παῖ (παιδ-, παδιδ- 'child') and τυραννί (τυραννίδ- 'royalty').

§ 209. 9. s-stems.

Pr. Idg. *dus-menes. Skr. dúrmanas, Avest. dušmanō. Gr. $\delta v\sigma$ - $\mu \varepsilon \nu \varepsilon \zeta$, $\Sigma \omega$ - $\nu \varepsilon \alpha \tau \varepsilon \zeta$; Lesb. $\Theta \varepsilon \omega \varepsilon \nu \varepsilon$ on the analogy of - \tilde{a} in the voc. of \tilde{a} -stems, cp. § 237 a.

Stem *āusos- 'dawn': Skr. usas. The Gr. η 0î like ald0î, followed the feminines in $-\omega'$ $-\omega$.

Comparative: pr. Idg. * $\delta \hat{k}(i)$ ios: Skr. Ved. áśīyas. Part. perf. act. pr. Idg. *yeid-yes: Skr. Ved. vidvas.\footnote{1}) Later Sanskrit has the re-formates áś \bar{s} yan, vidvan, see II \ 135 p. 429, \ 136 p. 441. Lat. \bar{o} cior is nominative in form.

§ 210. 10. Pr. Idg. *d(i) ie \underline{u} 'heaven': Gr. $Z\varepsilon\overline{v}$, Lat. $J\overline{u}$ -piter Juppiter (used also as nom.); but in Sanskrit we find $dy\overline{u}\dot{u}$ - $\dot{\xi}$ $diy\overline{u}u$ - $\dot{\xi}$, the nominative form, $diy\overline{u}u$ - $\dot{\xi}$ having taken the accent of a vocative. Cp. Gr. $l\chi\partial\overline{v}$ as contrasted with Skr. $bh\dot{u}$ - $\dot{\xi}$ § 205. For Skr. $-g\overline{v}$ from nom. $g\overline{u}\dot{u}$ - $\dot{\xi}$, see § 200 p. 83.

Accusative Singular Masculine and Feminine.2)

§ 211. In the parent language there was only one suffix for this case, the suffix -m, consonant or sonant as the case might require (cp. I § 645.2 p. 489).

¹⁾ For $bh\bar{o}\S$ $bhag\bar{o}\S$, which do not belong here, see Bartholomae, Kuhn's Ztschr. XXIX 531.

²⁾ Lindfors, Dissert de accusativo Latinorum, Lund. 1841. Gaedicke, Der Accusativ im Veda, 1880.

To illustrate:

-m in pr. Idg. *ulqo-m 'lupum': Skr. vfka-m, Gr. λύκο-ν (I § 652.3 p. 498), Lat. lupu-m, O.Ir. fer n- 'virum' (I § 657.5 and 8, pp. 508 f.), Goth. vulf for pr. Germ. *uulfa-n, but also pan(-a) = Skr. tá-m 'the, that' with pr. Idg. -n retained (I § 214 p. 182, § 659.5 p. 513, § 660.1 p. 514, III § 417)¹), Lith. vilka, but also dialectic ta-n = Skr. tá-m and the like (I § 218 p. 185), O.C.Sl. vlükü (I § 219 p. 187).

-m in pr. Idg. *bheront-m 'ferentem': Gr. $\varphi \not\in \varphi \circ v \tau - \alpha$ (I § 233 pp. 197 f.), Lat. ferent-em (I § 238 p. 199), O.Ir. carit n- (I § 243 p. 201, § 657.5 and 8, pp. 508 f.), Goth. tunp-u 'dentem' for pr. Germ. *-un (I § 214 p. 182, § 244 p. 202, § 659.5 p. 513), Lith. $v \not\in \varepsilon \circ ant - i$ 'vehentem' (I § 249 p. 204), O.C.Sl. kamen- $i \circ v \circ ant \circ a$

Wheeler (Der griech. Nominalaccent, 20 f.) conjectures that there was $-\bar{\eta}n$ as well as $-\eta n$, which he sees in Skr. $p\acute{a}r-\bar{a}$ 'forth, further, beyond, over' = Gr. $n\acute{e}\varrho-\bar{a}$ 'ultra', and in other adverbial words.

§ 212. 1. o-stems. Pr. Idg. *μlqo-m. Skr. vyka-m: Avest. vehrke-m, O.Pers. kāra-m 'people, host'. Gr. λύκο-ν. Lat. lupu-m, equo-m; Umbr. poplom puplum puplu 'populum',

¹⁾ In the first volume of this work **uulfa *zasti *sunu were assumed as forms of the last stage of the proethnic period in Germanic. Perhaps we should rather say **uulfa *zasti *sunu, with a nasalised vowel. The reason is that Runic inscriptions show forms like horna, staina etc., but where pr. Germ. -a had no nasal following, it has already dropped. See Kluge, Paul's Grundr. I 359.

²⁾ In vol. I \S 219 p. 186 and \S 665. 2 p. 525 I have erred in stating that -e is the regular form assumed by Idg. - η . It should be - $\tilde{\imath}$. As regards matere 'matrem' see \S 218 p. 95.

³⁾ Another reason for discarding pr. Ar. *-a- = *-m may have been a fear of confusion with the instrumental, which would come to be the same in form with the accusative in those systems of declension which had no ablant.

Osc. húrtúm 'hortum' τανρομ 'taurum'. O.Ir. fer n- 'virum' (I § 34 p. 34), aile n- 'alium' (cp. aile nom. § 194). Goth. vulf, O.H.G. wolf; Norse Run. staina = Goth. stáin 'stone'; Goth. ban-a O.H.G. de-n 'the, that' with the sign of the acc, retained (§ 417). Lith, vilka (dial. ta-n 'the, that', etc.), O.C.Sl. vluku.

io-stems in the accusative, as in the nom, and voc. sing. (§§ 194, 201), sometimes show the weak-grade form -\(\tilde{t}\)- instead of -io-. Lat. Corneli-m. Umbr. Fisim 'Fisium'. Goth. hairdi? Lith. žõdi, gaīdi, O.C.Sl. krajī, konjī, the latter instead of *konī with n palatalised on the analogy of the genitive and other cases.

Armenian z gail, z mard (z is a prefix) I now regard with Osthoff as nominative forms on account of tasn 'ten': 1) see § 174 pp. 22 f. In the same way, the accusative of all stems in this language is doubtless really a nominative form.

2. \bar{a} -stems. Pr. Idg. * $e \hat{k} u \bar{a}$ -m. Skr. $\acute{a} \dot{s} v \bar{a}$ -m; Avest. haenam O.Pers. hainā-m. Gr. χώρā-ν. Lat. equa-m (I § 655.4 p. 503); Umbr. totam tota Osc. tovtam 'civitatem' Osc. víam vía 'viam'. Gall. loga-n 'tumulum'. Lith. rañka. O.C.Sl. raka.

O.Ir. tuaith n- is ambiguous.

Remark 1. This points to a palatal vowel in the ending, and the case may originally have ended in *-i-m *-m or *-ī-m. In any case the gen. tuaithe took its ending from stems in $-i\bar{a}$ - and -i- $-i\bar{e}$ - (soillse and inse; see § 229). It is conceivable, then, that tuaith n- has been re-formed on the analogy of inis n-, which perhaps contains Idg. *-im, whose by-form. too, insi n-, matches with soillsi n- (§ 216). But there is a more likely hypothesis, which Thurneysen suggests. In many stems, amongst which are these very stems in $-i\bar{a}$ and -i - $i\bar{e}$, the dative and accusative (leaving aside the n- of the latter) came to have the same form; this may have caused the dative tuaith to pass for an accusative as well, whilst the like ending of tuaithe and soillse inse (which was doubtless older) gave a further stimulus to the process. This view is supported by acc. mnāi nbeside dat. mnāi. It seems certain that soillsi n-, nūi n- ('novam') do not stand for *-iān, but took their ending from insi n-, which may be compared with Gr. πότνιαν and Lith. žemę (§ 216).

In Germanic, some would trace -ā-m in such adverbs as Goth. ga-leikō O.H.G. gi-līhho 'similar, like'; see Osthoff, Kuhn's

¹⁾ In so doing I give up the view set forth in vol. I § 202 p. 169, § 651 p. 497, and by Hübschmann, Armen. Stud. I 88.

Ztschr. XXIII 90 ff., Morph. Unt. I 271. But there are other explanations of these adverbs more likely to be true; see §§ 275, 276. In Gothic, the case in actual use, giba, was really a nominative form '); as genuine accusatives may be given $p\bar{o}$ f. 'the, that', $hv\bar{o}$ f. 'which?', $\acute{a}in\bar{o}$ -hun f. 'any one' (cp. $hveil\bar{o}$ -hun 'lasting an hour'). Perhaps the nominative giba came to be used as accusative just because these two cases assumed the same form in $p\bar{o}$ etc.; as in Russian the fem. nom. in -a was used instead of the acc. in -n (O.C.Sl. -a) because nominative and accusative singular were identical in other classes (Vetter, Zur Gesch. der nom. Decl. im Russ., 45 f.).

O.H.G. geba A.S. ziefe pre-suppose *zebēn. None of the explanations hitherto offered seems to me satisfactory. I conjecture that Idg. -iē- is hidden in the ending of O.H.G. gutinne (later gutinna) A.S. zydenne 'goddess' O.H.G. sunte 'sin' (later suntea suntia). Of this -iē- the weak form -ē- is found in O.West.Ger. Vatvē-ms 'Vatviabus', and perhaps in O.H.G. digēm dat. pl. 'prayers' etc., see § 382. These forms, gutinne and so on, will then have the ending *-iē-m which is contained in Lith. žēmę O.C.Sl. zemlja, and possibly in Lat. faciem Mid.Ir. insi n-(§ 216), and geba ziefe are ad-formates of these. For -e in gutinne cp. Braune, Ahd. Gr. § 58 Anm. 1, and § 209 Rem. 3. The genitive singular shows a similar instance of form association, § 229: so also the nominative plural, § 315.

Remark 2. West-Germ. $-\bar{a}$ may stand for pr. Germ. unaccented \bar{e} only if the vowel came to be the final sound of the word through the West Germanic loss of the consonant (cp. also the 1st. and 3rd. sing. O.H.G. $salb\bar{o}ta$). We have \bar{e} , not \bar{a} , in O.H.G. $chiminner\bar{o}d\bar{e}s$ etc.; see Kluge in Paul's Grundr. I 363. And compare what is said above, p. 70 footnote 1.

§ 214. 3. *i*-stems. Pr. Idg. *oui-m. Skr. ávi-m; Avest. aži-m, O.Pers. šiyāti-m 'dwelling-place'. Gr. ŏqι-ν. Lat. turrim;

¹⁾ Burghauser (Germ. Nominalflex. 21) conjectures that pr. Goth. *gebon first lost its nasal on the analogy of *vulfa *ansti sunu, and then became giba quite regularly. This must surely fall to the ground, since we have to assume nasalised forms in proethnic Gothic for these words too: they will be *vulfan *anstin *sunun (or *vulfa *ansti *sunun). See p. 89 footnote 1.

Umbr. ahtim-em 'in actionem' uvem 'ovem' (I § 33 p. 33). O.Ir. fāith n- (I § 657.5 pp. 508 f.); Gall. Ucueti-n. Goth. anst, O.H.G. anst chumi; cp. Goth. i-n-a O.H.G. i-n 'eum', like pa-n-a de-n (§ 212). Lith. nāktį (dial. szi-n 'hune'), O.C.Sl. noštī.

Armen. (z) sirt is a nom. form, like (z) gail and (z) zard §§ 212, 215.

In Latin *i*-stems and consonant stems were fused into one class (II § 93 p. 281, III § 396); which caused the ending -*i*-m to give way to -em = Idg. *-m, except in a few survivals of the old type (besides turri-m there are e. g. siti-m, tussi-m, resti-m): e. g. ovem, mentem through assimilation to comit-em nāv-em and so forth (I § 33 Rem. 1 p. 33).

§ 215. 4. u-stems. Pr.Idg. *s \breve{u} nu-m. Skr. $s\bar{u}$ n \acute{u} -m; Avest. $b\bar{u}$ zu-m, O.Pers. $mag\bar{u}$ -m (read magu-m) 'magician'. Gr. $\pi \tilde{\eta} \chi v$ -v, $\tilde{\eta} \delta \dot{v}$ -v. Lat. manu-m; Umbr. trifo trifu 'tribum' (I § 49 p. 42). O.Ir. bith n- (I § 657. 5 p. 508). Goth. sunu, O.H.G. situ sito. Lith. $s\acute{u}$ nu, O.C.Sl. $syn\breve{u}$.

Avest. nasāum 'corpse' i. e. nasāvem, cp. the nom. -āu-š (§ 196 p. 76), probably a re-formate containing the loc. sing. in -āu, see § 261. O.Pers. dahyāum (beside dahyum), which was influenced by association with the nom. dahyāu-š, at least to begin with, as in Greek $\nu\alpha\tilde{v}$ - ν follows $\nu\alpha\tilde{v}$ - ν c, etc. (§ 221).

Armen. (2) zard is nom., like (2) gail and (2) sirt; §§ 212, 214.

Greek. Hom. $\varepsilon \dot{v} \dot{\rho} \dot{\varepsilon}(f) a$ 'broad' instead of $\varepsilon \dot{v} \dot{\rho} \dot{v} - \nu$ on the analogy of the acc. pl. $\varepsilon \dot{v} \dot{\rho} \dot{\varepsilon}(f) - \alpha \varsigma$.

§ 216. 5. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68 footnote 1). Three endings are met with: (1) $-\bar{\imath}$ -m: Skr. $b\gamma$ hat $\bar{\imath}$ -m, Avest. $barent\bar{\imath}$ -m O.Pers. harauvatim i. e. $-\bar{\imath}m$ 'Arachosia' (= Skr. $s\acute{a}rasvat\bar{\imath}$ -m); Gr. $\pi\acute{o}\lambda\bar{\imath}$ - ν ; and perhaps Mid.Ir. inis n-. (2) -iim -i-m: Gr. $\pi\acute{o}vv$ - αv , $q\acute{e}\rho ov\sigma \alpha v$ $q\acute{e}\rho ov\tau_{\ell}$ - αv (cp. below). (3) $-i\bar{e}$ -m: Lith. $\check{e}\check{e}me$ O.C.Sl. zemlja; and we must doubtless add O.H.G. gutinne A.S. zydenne (§ 213). — Lat. faciem and Mid.Ir. insi n-, Brigti n- may belong to either (2) or (3); then Ir. -i n-= *-iiin = Gr. $-i\alpha v$, or it may = *- $ii\bar{\imath}n$ ($\bar{\imath}$ = \bar{e}). Lat. $su\bar{a}vem$

must have been preceded by *svāvi-m: was this for *svāvī-m? Cp. socrum 8 217.

We may fairly suppose that two forms only came down from the parent language, $-\bar{\imath}-m$ and -(i)i-m, the first where a sonant began the following word, the second before a consonant (cp. 3. pl. opt. *s-(i)i-nt = 0.Lat. sient beside *s- \bar{i} - in $s\bar{i}$ mus and *s-(i)ie- in sies). Possibly this -(i)im gave rise to -(i)ins in the acc. pl. (§ 328). In the same way, stems in $-\bar{i}$ - ii have sometimes -i-m (Gr. $\varkappa i-\nu$) and sometimes -i-m (Skr. dhiyam) in the acc. sing., see § 217. In Greek -iim -im became -ιαν -ιαν, -v being added on the analogy of $-\bar{\iota}\nu$ $-\bar{\alpha}\nu = -\bar{\iota}-m$ $-\bar{a}-m$ etc. And as we assumed in § 191 (p. 68), -iav -jav called into existence nominatives in $-i\alpha$, where such are found in place of those in *-7.

The third ending $-i\bar{e}-m$ arose because $-i\bar{e}$ - forced its way in from other cases. An acc. in -ie-m sprang up by the side of the gen. in -ies and so on, because id-stems had acc. -id-m beside gen. -iā-s.

Goth. frijondja (nom. frijondi) is a re-formate following sibja 'kindship' (nom. sibja) and qiba, cp. gen. frijondjos like sibiōs gibōs, frijōndiái like sibiái gibái. Thus the relation of O.H.G. qutinne and Goth. frijondja is similar to the relation of Gr. ἀλήθειαν to ἀληθείαν (gen. ἀληθείας), and of Lith. žeme (nom. žẽmė) to vė̃žanczia (nom. vežanti). Cp. p. 68 footnote 1.

- § 217. 6. $\bar{\imath}$ ii- and $\bar{\imath}$ $u\underline{\nu}$ -stems and stems in $-\bar{r}$, $-\bar{l}$, $-\bar{w}$. In pr. Idg. $-\bar{\imath}m$ $-\bar{u}$ -m before a sonant, -ii-m -uu-mbefore a consonant in the following word.
- 1. -ī-m -ū-m. Skr. Ved. tanū-m Avest. tanū-m 'body' (beside Skr. tanúv-am Avest. tan(u)vēm), Avest. ber zai-dīm 'having great insight'. Gr. $\varkappa \tilde{\iota} - \nu \pi \delta \lambda \bar{\iota} - \nu$, $\delta \varphi_0 \tilde{v} - \nu \nu \varepsilon \varkappa \bar{v} - \nu$. Lat. vi-m(I § 655.4 p. 503), Umbr. sim 'suem' (I § 57 p. 46); Lat. socrum, too, may quite regularly stand for *socrū-m cp. § 197 O.H.G. O.Icel. sū 'sow'. O.C.Sl. ljuby 'love' in the phrase ljuby dějati (tvoriti) 'to commit adultery' may belong here.

Remark. I should offer this explanation of *ljuby* with greater confidence, but that the masculine nominatives *kamy* and *plamy* (stem *kamen*-'stone', *plamen*-'flame') are used for the accusative as well, where there can certainly be no question of original neuters in *-ōn. In Russian, *svekry* is found as an accusative (Vetter, Zur Gesch. der nom. Decl. im Russ., 67); but this may be explained like *starina* and similar forms used as accusasatives (*ibid.* 45).

2. -ii-m -uu-m. Skr. dhíy-am 'thought' bhrúv-am 'eyebrow', Ved. nadíy-am 'river' tanúv-am Avest. tan(u)v-ēm 'body' (beside Skr. tanú-m Avest. tanū-m), O.Pers. (h)izuv-am 'tongue' (see Bartholomae, Bezz. Beitr. XIV 245 f.). Gr. ἰχθύα (Theocr.) ὀφρύα (Oppian) and the like; these certainly reproduce the type of formation which we are discussing, but they may be later ad-formates of ἰχθύας ὀφρύας, as Hom. εὐρέα follows εὐρέας (§ 215). Lat. su-em. Lith. žùv-į 'fish'; O.C.Sl. krūv-ĭ 'blood' (cp. nom. O.Pol. kry § 197 p. 76), svekrūv-ĭ 'socrum' (beside svekrūv-e, the genitive form, cp. mater-e § 218).

A similar double formation should be assumed to have originally belonged to stems ending in long sonant liquids and nasals (II § 160.4 pp. 485 f.). Skr. gir-am 'praise' for *gqr-m (cp. gih Rig-V. X 99.11 in Lanman, Noun-Inflection p. 488), pir-am 'stronghold' for *pll-m; but ja-m 'being' for * $g\bar{q}$ -m, similarly kha-m 'source' $g\bar{o}$ -sa-a-a 'winning cattle'. It is easy to see why in the first set of instances the form in -m (* $g\bar{q}$ -m, * $p\bar{l}$ -m) gave way, and in the others the form in -m (* $g\bar{q}$ -m).

 \S 218. 7. n- and r-stems.

Pr. Idg. * $\hat{k}(u)uon-m$. Skr. śván-am; Avest. spān-em (sometimes the stem takes a weak form, following some of its other cases, as aršn-em beside aršān-em 'male, man'), O.Pers. asmān-am 'heaven'. Gr. xv'v-a (instead of *xvov-a, following xvv-ó ς etc.), $\tau \dot{\varepsilon} x \tau o v - a$ 'carpenter', $\pi o \iota \mu \dot{\varepsilon} v - a$ 'herdsman'. Lat. homin-em homōn-em, edōn-em; carn-em follows carn-is etc. O.Ir. coin n-, ārain n-. Lith. szùn-i (like Gr. xv'v-a), ãkmen-i; O.C.Sl. kamen-ŏ.

Pr. Idg. * $m\bar{a}t\acute{e}r$ -m * $d\acute{o}tor$ -m. Skr. $m\bar{a}t\acute{a}r$ -am d $\acute{a}t\bar{a}r$ -am, Avest. $m\bar{a}tar$ -em d $\bar{a}t\bar{a}r$ -em, O.Pers. fra- $m\bar{a}t\bar{a}r$ -am 'ruler'; in Avestic the stems may take the weak form on the analogy of other of their cases, $m\bar{a}pr$ -em d $\bar{a}pr$ -em, $\bar{a}tr\bar{e}m$ with t instead of

p following $\bar{a}tar$ - (Bartholomae, Ar. Forsch. II 132 f.). Gr. $u\eta\tau\dot{\epsilon}\rho$ - α (Hom. $θ\dot{\nu}\gamma\alpha\tau\rho$ - α following $θ\nu\gamma\alpha\tau\rho$ - $\dot{\alpha}$, etc. beside $θ\nu\gamma\alpha$ - $\tau\dot{\epsilon}\rho$ - α), $δ\dot{\omega}\tau\rho\rho$ - α . Lat. $m\bar{a}tr$ -em (like Avest. $m\bar{a}pr$ -em), $dat\bar{o}r$ -em. O.Ir. $m\bar{a}thir$ n-. Lith. $m\dot{\alpha}ter$ - $\dot{\epsilon}$, O.C.Sl. mater- $\dot{\epsilon}$.

Armen. (2) okn and (2) mair, (2) dustr are doubtless nominative forms; see § 212 p. 90.

For Greek Thess, πίον-αν Cypr. λιᾶτῆο-αν see § 211 p. 89.

In these, as in the other consonant stems, Umbro-Samnitic has not -em as we should expect, but -om, the ending of stems in -o-: Osc. medicatin-om 'iudicationem', Umbr. ars-fertur-o 'infertorem, flaminem' uhtur-u 'auctorem'. The student should observe that the two classes of stems have a like ending in the gen. pl. (§§ 344 ff.) and in the gen. sing. (§ 239), and that the early loss of o in the ending -o-s (I § 655.5 p. 503) caused them both to coincide to some extent even in the form of the nom. sing. (Umbr. *patro(m): pater = katlu(m): katel).

The Germanic forms are obscure: Goth. guman, rapjon 'rationem', bropar, O.H.G. gomon gomun, zungūn 'tongue' (for the formative suffix cp. Streitberg Paul-Braune's Beitr. XIV 218 f.), muoter, bruodar, A.S. zuman, brodor beside A.S. dur-u 'door' (ground-form *dhur-m).

Remark. The O.Icel. acc. $fq\bar{d}or$ $fq\bar{d}ur$ does not help us to a decision. There are three possible explanations. (1) We start from $-\eta=$ pr. Germ. -un. Then in Gothic, where we find forms like tunp-u, -u must have been dropped in words of three or more syllables. This might be granted without more ado for West Germanic languages (cp. Kahle, Zur Entw. der cons. Decl. im Germ. pp. 3 f., Burghauser, Germ. Nominalflexion pp. 21 f.). But what of Goth. ulbandu = Gr. ilequar-a? - (2) Besides the ordinary forms $*\hat{k}(u)uon-m *m\bar{u}ter-m$, there may once have been forms with -m $*\hat{k}(u)uon-m *m\bar{u}ter-m$, used before a sonant, which developed quite regularly into those which we find in Germanic. Cp. I § 192 p. 164, § 645. 2 p. 489, and Kluge, Paul's Grundr. I 385. — (3) If it could be proved that Goth. $frij\bar{o}nd$ O.H.G. friunt, Goth. $m\bar{e}n\bar{o}p$ O.H.G. $m\bar{a}n\bar{o}d$, Goth. $veitv\bar{o}d$ once ended in -o-m, the question would arise whether the prehistoric ground-forms were not *Juman-a-n etc. (cp. above, the Umbro-Samn. -o-m).

For Old Church Slavonic kamen-ī, mater-ī see p. 89 footnote 2. I follow Scholvin in regarding as genitive forms the variants mater-e, svekrūv-e (§ 217); see Scholvin, Die Decl.

pp. 41 f. The use of a genitive form for the accusative depends upon a peculiarity of Slavonic syntax (Miklosich, Vergl. Gr. IV 495 ff.; Vetter, Zur Gesch. der nom. Decl. im Russ. pp. 18 ff.).

§ 219. 8. Stems ending in Explosives.

Pr. Idg. *bhṛĝhont-m. Skr. bṛhánt-am, Avest. berezant-em. Gr. φέροντ-α. Lat. ferent-em. O.Ir. carit n-. Goth. tunp-u A.S. tōđ 'dentem'; Goth. ulband-u 'camel' = Gr. ἐλέφαντ-α? Lith. νēžant-į, O.C.Sl. νεząšti instead of *νεząti, š having come from the other cases which had -io- (cp. νεząšte § 321, νεząšti § 191 p. 68).

Skr. sarvá-tāt-am 'completeness', Avest. haurva-tāt-em 'safety, weal'. Gr. ὁλό-τητ-α. Lat. novi-tāt-em. With the suffix -tūt- Lat. juventūt-em, O.Ir. bethid n- 'life' (nom. beothu).

Skr. śarád-am 'autumn'. Gr. $\varphi v \gamma \acute{a} \delta - \alpha$ 'fugitive'. Lat. lapid-em. O.Ir. druid n- 'Druid'. A.S. hnit-u 'nit, egg of a louse or small insect'. Pr. Idg. *pod-m 'foot': Skr. $p\acute{a}d$ -am Avest. $p\bar{a}d$ -em, O.Pers. pati-pad-am ('to one's place'); Gr. $\pi \acute{o} \delta - \alpha$; Lat. ped-em; Goth. f ot-u.

Skr. $u\acute{s}ij$ -am 'craving'. Gr. $\mu \acute{\epsilon}l\varrho\alpha x$ - α 'girl', $\delta\varrho\tau vx$ - α ' $\varrho\tau vy$ - α 'quail'. Lat. $bib\bar{a}c$ -em. O.Ir. nathraig n- 'water-snake'. Pr. Idg. * $u\varrho q$ -m 'voice, speech': Skr. $v\acute{a}c$ -am Avest. $v\bar{a}c$ -em, Gr. δn -a, Lat. $v\bar{c}c$ -em. Pr. Idg. * $r\bar{e}g$ -m 'regem': Skr. $r\acute{a}j$ -am, Lat. $r\bar{e}g$ -em, O.Ir. $r\bar{\iota}g$ n-. Lat. $hall\bar{\iota}ac$ -em 'great toe' for *halo- or *hali-doic-, O.Icel. $t\bar{\iota}q$ 'toe' for *taih-u (J. Schmidt, Pluralb. 183; Kluge, Paul's Grundr. I 385).

Skr. áp-am Avest. ap-em 'water'. Gr. κλιῦπ-α 'thief'. Lat. dap-em.

For Greek Cypr. ἀ(ν)δριά(ν)τ-αν and βρούκαν i. e. βρίκ-αν (Meister, Gr. Dial. II 231 f.), see § 211 p. 89.

For Umbrian capirs-o 'capidem' curnac-o 'cornicem' see § 218 p. 95.

Germanic. It is doubtful how we should explain Goth. frijōnd O.H.G. friunt A.S. freónd, Goth. mēnōp O.H.G. mānōd 'month', Goth. veitvōd 'witness' (cp. Gr. εἰδότ-α, Π § 136 p. 440).

Remark. Are these forms like those of o-stems, and was the pr. Germ. ending *-a-n? Or pr. Germ. *-un = Idg. -m? See § 218

Rem. p. 95. We can hardly find support for ground-forms in *-nt-m (like *māter-m, above) used before sonants only, as Kluge seems to assume (Paul's Grundr. I 385). If there had been such forms, *-ntm would have become *-nm, op. tigum §§ 379. 2 and 386.

Goth. baúrg 'stronghold' brust 'breast' (gen. sing. baúrg-s brust-s) may have had the inflexion of i-stems, cp. the dat. pl. baúrgi-m brusti-m.

§ 220. 9. s-stems.

Pr.Idg. *dus-menes- η . Skr. durmanas-am, Avest. dus-manar-b-em. Gr. $\delta v \sigma \mu \varepsilon r \acute{\epsilon}$ - α - $\tilde{\gamma}$. Lat. $d\bar{e}$ -gener-em.

Skr. $u \dot{\xi} \dot{a}s - am$ ($u \dot{\xi} \dot{a}s - am$) Avest. $u \dot{\xi} \dot{a} \dot{v} h - em$, Gr. Hom. $\dot{\eta} \tilde{\omega}$ for $*\dot{\eta} \dot{o}(\sigma) - \alpha$ 'auroram' (perhaps $\dot{\eta} \dot{o} a$ was the real Homeric form); Lat. $hon\bar{o}r - em$ (for the length of vowel in the formative suffix, see II § 133 pp. 423 f.).

The nominative in -ēs -ōs occasioned a re-formation of the accusative in Aryan, Greek, and Latin. Skr. uṣám Avest. uṣám are formed on the model of -sthá-s:-sthá-m, Avest. raþaṣ-stå:-stam and the like. See § 391, and Collitz in Bezz. Beitr. X 24 f. with the works cited in that place. Att. Σωνράτην instead of Σωνράτην (cp. § 272), Cypr. ἀτελήν instead of ἀτελίμα, Lesb. δᾶμιοτέλην, Boeot. Διογένειν etc. (G. Meyer, Gr. Gr.² p. 321; R. Meister, Ber. der sächs. Ges. der Wiss. 1889 pp. 93 f.) on the analogy of νεᾶνία-ς: νεᾶνία-ν etc.; analogy has produced the opposite effect in Herod. δεσποτέα Γύγεα, which are treated as if they were εσ-stems; cp. § 395. Lat. ρlēbem famem (plēbei famē) from plēbēs famēs on the model of acie-m: aciēs.

Pr. Idg. comparative $*\bar{o}\hat{k}(i)\dot{i}os-\eta$. Skr. $\acute{a}\dot{s}\bar{\imath}y\bar{a}s-am$ (for the nasalised formative suffix, cp. II § 135 p. 430), in post-Vedic Sanskrit sometimes $-\bar{\imath}yas-am$ following the other cases (cp. nom. pl. § 322), Avest. $\bar{a}sy\dot{\bar{a}}mh-em$. Gr. $\acute{\eta}\delta\dot{\bar{\imath}}\omega$ for $*-\bar{\imath}o(\sigma)\alpha$. Lat. $\bar{o}ci\bar{o}r-em$.

Pr. Idg. part. perf. act. **ueid-uos-n. Skr. vidvās-am (for nasalised formative suffix see II § 136 p. 441), and sometimes -uṣ-am, where the weak form of the formative suffix has ousted the strong (cp. nom. pl. § 322); Avest. vīdvānh-em. Lith. mirus-i O.C.Sl. miruši (doubtless for *miruch-i, according to Brugmann, Elements. III.

I § 588. 2 p. 443), the weak formative suffix having taken the place of the strong, unless these forms are to be characterised as an extension of -ues- by -io- (cp. II § 136 pp. 441 f.). For Gr. $sl\delta \acute{o}\tau$ - α see II § 136 p. 440.

Pr. Idg. * $m\bar{u}s-\eta$. Skr. $m\tilde{u}\dot{s}-am$. Lat. $m\bar{u}r-em$. Further, O.H.G. A.S. O.Icel. $m\bar{u}s$ (cp. dat. pl. $m\bar{u}sum$) and O.C.Sl. $my\dot{s}\ddot{\imath}$ may possibly be regular descendants of the proethnic form. Gr. $\mu\tilde{\nu}\nu$ instead of * $\mu\tilde{\nu}-a$ follows $\sigma\tilde{\nu}-\nu$ and the like; see II § 160 p. 485.

O.Pers. acc. nāh-am 'nose', Lat. nār-em, A.S. nos-u 'nose'.

§ 221. 10. Monosyllabic Stems in -i- -u- -m-.

Pr. Idg. * $n\bar{\alpha}u$ -m 'ship': Skr. $n\bar{\alpha}v$ -am, Hom. $v\bar{\eta}$ - α (Att. $v\alpha\bar{v}v$ is a re-formate following $v\alpha\bar{v}$ - ς), Lat. $n\bar{\alpha}v$ -em.

In many instances, the stem-final was dropped before the case-ending -m in the parent language itself. Pr. Idg. *aom. stem *qou- 'head of cattle': Skr. qam Avest, qam, Hom. Dor. βων, Umbr. bum 'bovem', O.Sax. kō O.H.G. kuo chuo (A.S. cū O.Icel kū for *kuō? see p. 80 footnote). I leave it an open question whether Avest. qāum, i. e. qāvem, and Lat. bovem are reformates in these several languages, or whether there ever was a proethnic form *qou-m used before consonants. Att. $\beta o \tilde{v} v$ is certainly a re-formate, and follows $\beta o \tilde{v} - \zeta$. Pr. Idg. * $d(i) i \bar{e} m$, stem *d(i)ieu- 'heaven, daylight': Skr. dyám diyám, Gr. $Z\tilde{\eta}\nu$, Lat. diem; while alongside of these we find Jov-em, and (with the weak form of the stem substituted for the strong) Skr. div--am Gr. Δl-a; Gr. Zñv became the starting point for a new series of forms, $Z\tilde{\eta}\nu\alpha$ $Z\eta\nu\delta\varsigma$ $Z\eta\nu\delta$, just as * $\tau\delta$ - ν 'quem?' = Idg. *qi-m gave rise to τίνα τίνος etc. (cp. § 314 Rem. 2; Osthoff, Morph. Unt. IV 235 f.; Collitz, Bezz. Beitr. X 49; a new but not convincing explanation is offered by Johansson, ibid. XVI 158). In a similar way it would seem that O.Ir. boin n-(dat. loc. sing. and nom. acc. du. boin) was founded upon a form boin = Lat. bovem, aided (as Thurneysen points out to me) by the analogy of coin, from nom. sing. cū 'dog'. Pr. Idg. *rēm 'property, thing' (cp. Skr. nom. pl. ráy-as): Skr.

rám (also ráy-am), Lat. rem. Skr. kṣám Avest. zam 'earth' beside Gr. γθόν-α instead of *γθομ-α. See II § 160 pp. 481 ff.

Nominative and Accusative Singular Neuter. 1)

§ 222. From the earliest stage of Indo-Germanic which concerns us, the bare stem has served for the nominative and accusative singular neuter. An exception must be made of stems in -o-, which use for these cases the stem with -m added, the same form which does duty for the accusative singular masculine. A conjecture has already been offered as to the origin of this twofold function of forms with -m (§ 186 p. 60).

The pronominal ending -d (§ 417) spread to nominal adjectives, but apparently only when they were o-stems (§ 227). This is not proethnic, but belongs to the period of separate growth, and particularly to the Germanic and Balto-Slavonic branches.

- § 223. I. Stems without any Suffix used as nom. and acc. sing. neut.
- 1. i-stems. Pr. Idg. *oqi 'eye'. Skr. ákši 'eye' śúci 'pure'; Avest. arezahi the name of the western karshvar or region of the world, būiri = Skr. bhūri 'multum'. Gr. ἴδοι 'clever, knowing'. Lat. mare leve, Umbr. sakre 'sacre, hostia' (I § 33 p. 33). O.Ir. muir n-, where, as in mid n- (see 2), n- is added on the analogy of the same cases of stems in -o- and -n-.2) O.H.G. meri 'mare', a unique survival in West-Germanic; Goth. fōn 'fire' doubtless for *fōn-i (heteroclite gen. funins); adj. Goth. ga-máin 'commune' hráin 'purum'.
- 2. u-stems. Pr. Idg. *medhu 'sweetness'. Skr. mádhu 'sweetness, honey' svādú 'suave' (for such forms as Ved. purú beside purú see below), Avest. mađu 'honey' pouru =

¹⁾ J. Schmidt, Die Pluralbildungen der idg. Neutra, 1889. W. Meyer, Die Schicksale des lat. Neutrums im Roman., 1883.

Cp. Avest. vohu-m beside vohu 'bonum'. Similarly in mediaeval Greek, neut. πολύ-r. γράμμα-r etc. by assimilation to -o-r.

Skr. $pur\acute{u}$ 'multum'; Avest. vohum beside vohu 'bonum' on the analogy of stems in -o-. Gr. $\mu\acute{e}\vartheta v$ 'intoxicating drink, wine' $\acute{\eta}\delta v$ 'suave'. Lat. pecu genu (for $pec\bar{u}$ and the like see below). O.Ir. mid n- 'mead, wine' with n- affixed (cp. muir n-under 1). Goth. $fa\acute{i}hu$ 'money' filu 'multum', O.H.G. fihu fiho 'cattle' filo filu 'multum' (these are almost the only survivals in O.H.G.).\frac{1}{1} Lith. $gra\check{z}\grave{u}$ 'beautiful' $sa\check{t}du$ 'sweet', Pruss. pecku 'cattle' = Goth. $fa\acute{t}hu$ (cp. I § 467. 2 p. 343); O.C.Sl. $med\check{u}$ 'honey', whose form probably belongs here, although it became masculine in prehistoric times (cp. nom. acc. $syn\check{u}$ 'son').

3. n- and m-stems. Pr. Idg. *dhē-mņ 'a placing, τὸ θεῖναι'. Skr. dhắma 'θέσις, statute, ordinance, dwelling-place' Avest. dāma 'creation', Skr. nắma Avest. nāma (nama) O.Pers. nāmā 'name'; for Ved. -ā beside -a see below. Gr. θέμα, ὄνομα (cp. II § 82 p. 250). Lat. nōmen, unguen Umbr. numem nome 'nomen' umen 'unguen' (I § 209 p. 177). O.Ir. ainm n- 'name' sruaim n- 'stream, current' imb n- 'butter'; Gall. curmen = O.Ir. cuirm n- 'beer'.

We likewise find the ending *-ōn *-ēn, as in the nom. sing. masc. and fem. (§ 192 pp. 69 f.) and in the nom. and acc. pl. neut. (§ 340), in Germanic and Slavonic. -ōn: Goth. namō and O.H.G. O.Sax. namo and A.S. nama 'name' (which have become masculine), Goth. hairtō O.Icel. hjarta 'heart'. -ēn: O.H.G. herza O.Sax. herta 'heart' A.S. eáre 'ear'; O.C.Sl. imē 'name', and perhaps Pruss. semen 'seed, sowing' (O.C.Sl. sěmē). If we are to assume that any of such Germanic and Lithuanian masculines as Goth. stōma 'stuff, substance' Lith. stomū 'stature' (II § 117 p. 375), and of Lithuanian feminines such as dermē 'agreement, bargain' (Skr. dhárman- n.) gësmē 'song', were originally neuter, we should have not only *-ōn *-ēn but *-ō *-ē, as in the masc. fem. How the formations in *-ō(n) *-ē(n) which

¹⁾ Can Goth. tagr 'tear, lacruma' (O.H.G. zahar O.Icel. $t\bar{a}r$) come regularly from *tagru (cp. Gr. $\delta axgu$, II § 107 p. 322), in spite of the form faihu, -u after a long syllable being perhaps differently treated from -u after a short syllable? See Johansson, Behaghel-Neumann's Literaturbl. 1889 col. 370.

served as nom. sing. masc. fem. came to do duty for the neuter is a doubtful point. We may refer to J. Schmidt's theories (Pluralb. 82 ff. and 117 ff.), remarking at the same time that this *-ēn is identical in form with the loc. sing. in *-ēn (§§ 256, 257; similarly Skr. nom. acc. dhāma: loc. kṣāma, § 257 c.); nor should it be forgotten that Johansson believes -n to have originally been a locative suffix (§ 186 p. 63). —

Another formation is used for the nom, acc, sing, neut, in Vedic Sanskrit, adjectives ending in -ū; e. g. purū in purū vásu 'much goods'. This lengthening of the -u was merely rhythmical (Lanman, Noun Inflection p. 406; J. Schmidt, Pluralb. 50 f.). Wackernagel (Das Dehnungsgesetz der griech. Compp., pp. 12 ff.) gives reason for holding this lengthening to be proethnic; hence we must regard the Latin by-forms in -ū. pecul veru genu cornu, as being of the same kind. The latter forms may, however, be called plural, as J. Schmidt does call them (Pluralb. pp. 49 f., 53; cp. § 339 below). But one very doubtful question remains. It is quite conceivable that the neuter plural in -ī grew 'out of a collective singular feminine (II § 109 pp. 332 ff.). Was there really, as Schmidt believes, an original neuter plural in $-\bar{u}$ as well, which arose in the same way from singular feminine forms in -a? But no such forms as these singular feminines in -u seem to have existed at all in the proethnic language; and the series of neuter plurals in -u may be nothing more than a re-formation on the analogy of those in $-\overline{\iota}$. And if the variation between -u and $-i\overline{\iota}$ which, as we saw, is a question of rhythm - was to be found in the proethnic stage, we have the result that there were neuter forms in -v which were at once singular and plural.

Along with $dh \tilde{a} m a$ we find such forms as $dh \tilde{a} m \bar{a}$ in the Vedas (Lanman, p. 531). This lengthening, like the last, is probably due to rhythm. If, as we must assume, this too is of proethnic origin, the parent language had $-\bar{a}$ beside -a as it had $-\bar{a}$ beside -a. Now these forms in $-\bar{a}$ are plural as well as singular in Vedic. Thus the following question arises. Does the plural $dh \hat{a} m \bar{a}$, as Schmidt supposes (pp. 82 ff.), represent an

Idg. * $dh\bar{e}m\bar{o}$, i. e. a form like the nom. sing. masc. fem. (Lat. serm \bar{o} etc.), being thus related to Avest. $d\bar{a}man$ (§ 340) as Lat. serm \bar{o} to Gr. $angle x\mu\omega\nu$? Is it not more likely that the original form was * $dh\bar{e}m\bar{v}$, forms in $-\bar{v}$ being made on the analogy of those in $-\bar{\tau}$; or, it may be, because the relation of $-\bar{\tau}$ (in the plural) to -i (in the singular) caused a series of singular byforms in $-\bar{v}$ to be used for the plural as well?

Remark 1. It seems to me that we are not yet in a position to answer this question. It would be decided in favour of $dh\tilde{a}m\bar{a}=*dh\bar{e}m\bar{q}$, if it could really be proved that Gr. $\hat{\gamma}$ $\hat{\epsilon}\tilde{v}\mu\eta$, $\hat{\gamma}$ $\hat{\lambda}\tilde{v}\mu\eta$, $\hat{\gamma}$ $\hat{\epsilon}\pi\iota$ - $\sigma r\hat{\eta}\mu\eta$, Cret. gen. $f\eta'\mu\bar{a}$; (' $\hat{\epsilon}\tilde{\iota}\mu\alpha\tau\sigma_s$ ') and the like were once neuters in $-\bar{a}$ (cp. $\hat{\epsilon}\tilde{v}\mu\alpha$, $\hat{\lambda}\tilde{v}\mu\alpha$, $\hat{\epsilon}\tilde{\iota}\mu\alpha$). This would be the same analogical change of stem which is seen in O.Pers. $taum\bar{a}$ f. 'family' as contrasted with Skr. $t\delta kman$ - μ . and Avest. $ta\alpha xman$ - μ . (II § 117 Rem. 2 p. 369); cp. also Pol. gen. brzemia instead of brzemienia from nom. brzemie 'burden' on the analogy of pola: pole (Baudouin de Courtenay, Kuhn-Schl. Beitr. VI 61).

Remark 2. Vedic neuter singular forms in -i -u and -a (= *-u) are also used for the plural, but almost always in conjunction with a nom. acc. pl. neut.: e. g. bhūri . . . ánnā 'abundant food', yōjanā purū 'many yojanas' (a measure of distance), priyā nāma 'dear names'. See Schmidt, op. cit. 276 ff. According to this scholar, the usage began at a stage in the proethnic language when qualifying words, unless indeed they were o-stems, were added to the nouns which they qualified without being inflected, precisely as happens in the case of numeral adjectives like *penge 'five': yōjanā purú will then be the same in principle as páñca krštišu (§ 169 p. 13). The use of a bare stem for the plural, he continues, must have spread from adjectives to substantives: purú dhấmā (dhāmāni), which is correct, suggesting dhāma purūni, which is not. But a simpler explanation would be possible if there were parallel groups of forms in the singular: $-\bar{u}$ $-\bar{n}$ (and $-\bar{i}$) alongside of -u -n (and -i). Then we should have (1) $-\bar{u}$ $-\bar{a}$ (and $-\bar{i}$) used for both numbers in proethnic Aryan, and consequently (2) the short vowels used for both alike.

m-stem. *sem 'unum': Gr. $\mathcal{E}\nu$, Lat. sem-per 'in one unbroken sequence, always' (II § 160 p. 479).

Remark 3. It is not certain whether Gr. $\delta\tilde{\omega}$ 'house' belongs here. Solmsen (Kuhn's Ztschr. XXIX 329) and Schmidt (Plur. 222) postulate an Idg. $*d\bar{\sigma}m$, with a variant $*d\bar{\sigma}$ related to it as $*\hat{k}(u)y\bar{\sigma}=$ Skr. $\check{s}v\check{\sigma}$ is to $*\hat{k}(u)y\bar{\sigma}n=$ Gr. $*z'\bar{\omega}v$. A different view is taken by Bartholomae (Kuhn's Ztschr. XXIX 497). One more explanation may be mentioned, due to I know not whom, by which $\delta\tilde{\omega}$ is identified with Germ. $*t\bar{\sigma}$ 'to', a by-form of $-\delta\varepsilon$. According to this conjecture, $\check{\eta}u\check{\epsilon}\tau\varepsilon\varrho\sigma v$ $\delta\tilde{\omega}=\check{\eta}u\check{\epsilon}\tau\varepsilon\varrho\sigma v$ $\delta\varepsilon$, but the meaning of phrases of this kind together with the resemblance of $\delta\tilde{\omega}$ to $\delta\tilde{\omega}\mu\alpha$ gave $\delta\tilde{\omega}$ itself the meaning of 'house'.

- § 224. 4. r-stems.
- a. No language but Sanskrit has any certain examples of neuter forms from noun-stems in -er- -ter- (II § 119 pp. 376 ff.): examples are sthat? 'standing' Ved. sthatůr (I § 285 p. 228). Probably we have here a Sanskrit re-formation, as we certainly have in the nom. acc. pl. in $-\bar{r}ni$ (§ 341); see Whitney, Sanskrit Grammar § 375. In Greek it is doubtless a mere accident that no such forms are found as $\vec{\alpha} n \vec{\alpha} \tau o \rho$ from masc. $\vec{\alpha} n \vec{\alpha} \tau \omega \rho$. Possibly $\vec{\eta} \tau o \rho$ 'heart' is an example in point.

b. There is a special group of neuter words in -r which have had a heteroclite system of declension from the proethnic period onwards; e. g. Skr. údhar gen. údhn-as. These shew all kinds of different forms, very difficult to explain. In Aryan we find -ar, as Skr. údhar, Avest. karšvare, the name of the seven divisions of the earth. But besides this we find in Sanskrit words with two other endings: (1) yákrt 'liver' gen. yakn-ás (Avest. $y\bar{a}kar^e$, Gr. $\bar{\eta}\pi a\varrho$ Lat. jecur), $\dot{s}\acute{a}krt$ 'dirt, stercus' gen. šakn-ás; (2) ásrk (ásrg) 'blood' gen. asn-ás (Gr. ĕao Lat. assir asser). Armenian albeur 'source, spring' gen. alber (Gr. φοέαο for *φοη Fαρ, gen. φρέατος for *φοη Fατος). Greek -αρ and more rarely $-\omega \rho$, as $o \vartheta \alpha \rho$ and $\vartheta \delta \omega \rho$ 'water' (O.H.G. wazzar); and perhaps we should add -00, \$\tilde{\eta}\tau00\$ heart'. Lat. -er and -ur, as über and jecur. Old High German -ar: wazzar (Gr. νδωρ), tenar (which has become masc.) 'flat of the hand' (Gr. θένας). Balto-Slavonic: possibly Lith. vandu undu (m.) O.C.Sl. voda (f.) 'water' and Lith. keke (f.) 'bunch of grapes', which may be related to Gr. ΰδωρ and Lat. cicer as Lith. sesũ motẽ O.C.Sl. mati to Lat. soror mater (§ 192).

How this great variety of forms came about it is impossible to say with anything like confidence. All that can be done at present is to offer conjectures more or less uncertain.

Remark. See II § 118 pp. 375 f., and de Saussure, Mém. sur le Syst. prim. pp. 18, 28, 225; the Author, Morph. Unt. II 224 ff., 231 ff.; J. Schmidt, Kuhn's Ztschr. XXV 22 ff.; Osthoff, Morph. Unt. IV 196 ff.; Noreen, Arkiv IV 110; G. Meyer, Gr. Gr.² pp. 325 f.; Zimmer, Kuhn's Ztschr. XXX 231; Johansson, Bezz. Beitr. XIV 163 ff.; Bartholomae, *ibid*. XV 39 ff.; J. Schmidt, Pluralb. 172 ff.

A few points may be mentioned which it is of the first importance to bear in mind.

1. A comparison of the vowel gradation in Gr. $\tilde{\eta}_{\mu\alpha\rho}: \hat{\eta}_{\mu\ell\rho\bar{\alpha}}, n\bar{\imath}\alpha\rho: n\bar{\imath}\epsilon\rho\dot{\alpha}-\varsigma$ etc. makes it probable that Gr. $-\alpha\rho$ came from Idg. $-\varsigma$, and not from $-\alpha r$; and this suits Lat. jecur femur. Lat. $\bar{u}ber$ may contain Idg. *-er; but according to I § 97.3 p. 91 it may also come from * $\bar{u}bar$, and - αr , along with Avest. $-\alpha r^e$ Gr. $-\alpha \rho$ O.H.G. $-\alpha r$, may represent Idg. *- $\bar{\tau}$.

O.Icel. ædr 'vein' lifr 'liver' do not go far to prove that the Idg.

ending was *-er.

Aryan -ar (Skr. $\tilde{u}dhar$) may be either *-er or *-or (cp. Gr. $\tilde{\eta}\tau o\varrho$ O.H.G. wazzar).

- 2. But on the other hand it seems natural to place Gr. $"i \delta \omega \varrho = 0$.H.G. wazzar Lith. $vand\~u kek\~e on$ the same level as Gr. $\varphi \varrho \~a \tau \omega \varrho = 0$.H.G. bruodar Lith. $ses\~u mot\~e (\S 192 pp. 69 ff.)$, in which case we should have *- $\bar{o}(r)$ *- $\bar{e}(r)$ as the Idg. endings. There may have been *-r along with these (Gr. $o\~v \Im \alpha \varrho$), as *-r0 along with *- $\bar{o}n$ *- $\bar{e}n$ (§ 223.3 p. 100). If O.C.Sl. voda (f.) was originally a neuter in *- $\bar{o}(r)$, we may with Schmidt connect Skr. $s\'am\~a$ f. 'half-year, season, year' and Avest. hama 'in summer' directly with O.H.G. sumar A.S. sumor 'summer'; the pr. Idg. form will then be * $smm\~o(r)$, i. e. Skr. $s\'am\~a$ will be like $d\~at\~a$ 'dator' (further examples for this Ar. - $\~a$ are given by Schmidt Plnr. pp. 212 ff., but they are less certain).
- 3. In discussing the nom. acc. sing. neut. in $-\bar{o}n \bar{e}n$ and -n, we drew attention to the same endings in the loc. sing. (pp. 100 f.). Here too the locative enters into the question. Johansson and Bartholomae regard the -r of these neuter forms as simply and solely a locative suffix, a view which is indeed supported by Gr. νύκτωρ 'by night' (Avest. hama 'in summer') and other words of the same kind. Compare too Ved. údhar 'at the udder' (Lanman, Noun-Inflection 488) Avest. zafare 'in the month'. Idg. forms with -er (Skr. $\tilde{u}dhar$ Lat. $\tilde{u}ber$?) are naturally compared with $\tilde{v}\pi\varepsilon\rho$ Lat. super, Idg. loc. *poter (§§ 256, 258). Bartholomae assumes that the parent language had locative forms with -r and with -n, like Skr. údhar and ûdhan, used indifferently with the same meaning. "The first consequence was that r-locatives sprang up in n-stems, and n-locatives in rstems, in addition to the ordinary locative of each class. But this new locative could not fail to produce a transformation of other cases of the stem; and thus it is often hardly possible to decide whether any given forms come from original nasal or liquid stems. In any case, this apparent variety of stems here as elsewhere is not original" (p. 42).
- 4. For Gr. $\tilde{\eta}\pi\alpha\varrho$ Lat. jecur the Idg. ending *-rt might be assumed on the strength of Skr. ydkrt. Schmidt adds to our list Armen. leard 'liver' on account of its d = t, and he would connect Skr. $\tilde{s}dkrt$ and Lat. $m\bar{u}s$ -(s)cerda, postulating for the latter an old form *scerd or *scord (final -d for -t). Still, this comparison is very doubtful; the Skr. word seems rather to belong to Gr. $z\acute{\alpha}\eta\varrho_{o-s}$. But we may follow Schmidt in tracing Gr. $\tilde{\epsilon}\alpha\varrho$ Epic $\tilde{\eta}\alpha\varrho$ ($\epsilon\tilde{\iota}\alpha\varrho$) back to * $\eta\dot{\alpha}\varrho\gamma$, and Lat. asser to *asserg, on the strength of Skr. dsrk (dsrg).

§ 225. 5. Stems ending in Explosives.

Participial nt-stems.¹) The original ending was -nt or -nt. But it is not clear how participles of each particular tense stem ended in the original language. In Aryan, -at = -nt came to be the regular ending; it is original (e. g.) in Skr. $d\acute{a}dat$ (pr. Idg. $*d\acute{e}$ -d-nt from $\sqrt{d\bar{o}}$ - 'dare'). Cp. Bartholomae, Kuhn's Ztschr. XXIX 552, 554. Couversely, in Greek $*-\ddot{\alpha}$ - τ , the equivalent of *-nt, was dropped, whilst $-\alpha nt$ (§ II 126 p. 398), $\delta \alpha nt$ -nt from $\delta \alpha nt$ -nt-nt, and the like, whence the aorist gives e. g. $n\acute{e}$ nt instead of nt-nt-nt. Along with this series, Greek has the ending -o-nt-nt (see pp. 106 f.) may represent not only Idg. *-nt or *-nt but Idg. *-nt, which is actually contained in Lith. $d\acute{u}$ se \acute{o} $\delta \omega \sigma o nt$ (cp. below, footnote 1).

¹⁾ In the light of Schmidt's shewing (Plur. 422 ff.), I see that I was right in my former representation of the ablaut in the Idg. case system of nt-stems (II § 125 p. 395); I should not have given up this view, as I did in my Gr. Gr.² p. 108, in favour of that of Bartholomae, who holds that in participial forms with a thematic vowel preceding, the original suffix was always -nt- with consonant n (Kuhn's Zeitschr. XXIX 548 ff.). But I still think, Schmidt notwithstanding, that the thematic vowel in the participle was sometimes -o- and sometimes -e-. I hold to the belief that Lith. düses represents an original *dō-sie-nt- (Skr. dāsyānt-), until Schmidt, who explains the form as an aorist participle, has shewn how this view can be justified by usage. This he tries to do on page 427 of his work; but düsime is not, as he imagines, an optative form; rather, as tur-iù: tior-i-me shews, it contains the weak grade of the suffix -io-, and so it is a future indicative. Hence his attempt is quite unsatisfactory.

uent-stems have the same rules as nt-participles. Skr. áma-vat Avest. ama-vaþ from ama-vant- 'acting with violence, powerful' (cp. Bartholomae, Kuhn's Ztschr. XXIX 544). Gr. χαφίεν from χαφι-(f)εντ- 'graceful'; σκιόειν in Ap. Rhod. following the masc. in -όεις (see the Author, Gr. Gr.² p. 119). For neut. $\tau \tilde{\eta} \sigma_{\varsigma}$ $\tau \acute{\epsilon} \omega_{\varsigma}$, formed like Skr. Ved. neut. $gn\acute{a}$ -vas 'rich in women or wives' (perhaps also like kýt-vas, see Bartholomae Kuhn's Ztschr. XXIX 536), see II § 127 p. 405.

Remark 1. J. Schmidt is mistaken in his explanation of $\tau \tilde{\eta} \circ \varsigma$ as being for ${}^*\tau \bar{\alpha} - f_{\alpha \tau}$ (Plur. 356 f.). See Bartholomae, Stud. zur idg. Spr. I 17 f. Schmidt imagines that Idg. -t becomes - ς in Greek; but see § 241 Rem. 1.

Other Stems ending in Explosives.

Aryan. Skr. $vi\acute{s}va-j\acute{i}-t$ 'all-conquering' $tri-v\acute{r}t$ 'threefold', $dvi-p\acute{a}d$ 'bipes'. Skr. post-Vedic hrd 'cor', Avest. zar^es-ca 'corque' for * zar^et-ca i. e. * zar^ed+ca (I § 473. 2 p. 349). Avest. as-ca 'ŏs-que', as for *ast, cp. pl. ast-i. Skr. $praty-\acute{a}k$ 'turned backwards, westerly' (stem $praty-\acute{a}nc-$), $su-y\acute{u}g$ adv. 'well equipped or furnished'.

Greek. μέλι 'honey' for *μελιτ, gen. μέλιτ-ος, Latin mel perhaps for *mel(i)d (gen. mellis for *meld-es according to I § 369 p. 280) and this for *melit, doubtless also O.Ir. mil 'honey' (stem meli-) for *melit; see W. Meyer, Kuhn's Ztschr. XXVIII 171; J. Schmidt, Pluralb. 248 f. Gr. γάλα 'milk' for *γαλαπτ, gen. γάλαπτ-ος, Lat. lac for *lact, gen. lact-is (Varro's lact is doubtless the grammarian's own invention). Gr. πῆο 'heart' for *πηοδ (II § 160 p. 479), Lat. cor for *cord, gen. cord-is. Gr. ὑπό-δοα adv. 'looking from under' for *δραπ; perhaps δεῦρο 'hither' for *δε-Γροπ or *δευ-Γροπ (II § 163 p. 493, and the Author, Gr. Gr.² p. 116). Lat. allec hallec (beside m. f. allex hallex), gen. (h)allēc-is. Umbr. tu-plak *δ/προυν ξύλον vel δ/πρανον' according to Bücheler, Umbrica p. 154.

Latin adjectival stems ending in explosives show the form of the masculine, not only classes of words like ferēns bi-dēns, but also bi-pēs audāx prīnceps and so forth. The forms in -ns may be regarded as genuine neuters with pr. Ital. -ns for -nt, and so may quotiēns: Skr. kiyat 'how much, how far'.

This view is proposed by Thurneysen (Archiv für lat. Lex., V 575 f.), who holds that bi- $p\bar{e}s$ $aud\bar{a}x$ etc. were used for the neuter simply because in nt-stems there was a confluence of neuter and masculine.

Remark 2. In Kuhn's Zeitschr., XXIV 42 f., I offered a conjecture with which J. Schmidt agrees (Plur. 89, 403). I suggested that in such phrases as ferrum bidēns, the second word may have been originally a substantive masculine or feminine (cp. domus vetus), which in becoming an adjective did not adopt the neuter form when used as neuter, but retained its own. J. Schmidt (pp. 87 ff.) supports this hypothesis by a reference to the same kind of thing in the Veda, where such forms as $rak \frac{1}{2} - h \hat{a}$ 'killing the Rakshas' $dvi-p\hat{a}d$ 'bipes' (neut. $dvip\hat{a}d$) *sata-s\hat{a}-s\hat{a}-s\hat{a} 'gaining hundred-fold wealth', which are masculine, are used for the neuter as well. May not both causes have worked together to develope the regular Latin usage — both the change of -nt to -us, and some such idiom as that suggested here?

Old Irish. traig 'foot' for *traget or *tragit, ep. dat. pl. traigth-ib.

Old Church Slavonic. tele 'calf' (gen. telet-e) is probably not a real but an apparent example; its nom. acc. seems to be an original n-stem, see § 244.

§ 226. 6. s-stems.

a. Pr. Idg. *menos 'mind'. Skr. mánas; Avest. manō, O.Pers. rauta 'stream' = Skr. srōtas (ep. O.Pers. kāra § 194. 1 p. 73). Gr. μένος; an exceptional form showing -ες instead of -ος (ε perhaps from the other cases) is τέμενες on an Inser. of Megalopolis (Le Bas-Foucart no. 331. 31 and 42). Lat. opos opus, genus; Umbr. mers 'ius, fas' for *med(o)s (I § 633 p. 474), ep. Lat. modes-tu-s. O.Ir. tech teg 'house' = Gr. στέγος τέγος 'roof' (ep. fer for *μiro-s, § 194. 1 p. 73), transformed to tech n-, a re-formation like muir n- § 223 p. 99; Gall. Οὐινδό-μαγος = O.Ir. mag n. 'plain'. O.H.G. lamb 'lamb' A.S. hrāw 'corpse' (ep. next page). Lith. ākas 'ice-hole', which like all similar forms has become an o-stem (ep. § 403); O.C.Sl. slovo 'word' = Skr. śrávas Gr. κλέ-σς 'report, fame'.')

¹⁾ Whilst this volume was in the press, I received Wiedemann's work Das litauische Präteritum, in which (I 14) he assumes that O.C.Sl. -o does not come from *-os, which he says became $-\ddot{u}$, but that it answers to the Greek $-\alpha_5$. His arguments do not convince me.

Lat. aes instead of older *a(i)-os (= Skr. áyas 'metal, bronze') on the analogy of aer-is etc., see II § 132 p. 418.

For Germanic see II § 132 pp. 419 ff. We find two forms for the nom. acc. sing. neuter, one the old ending *-os (ep. the Finnic loan-words lammas mallas = O.H.G. lamb malz), the other *-iz = *-es, as in A.S. lemb (beside lomb) = lammi Lex Sal., and possibly in (masc.) forms with a short root-syllable like O.H.G. sigi A.S. size 'victory' (ep. II § 132 p. 421). This *-es iustead of *-os doubtless came from the other cases of the substantive, not from adjectives (ep. Gr. ψευδές), compare Gr. τέμενες above (conversely, -os alone in Lat. tempor-is etc. II § 132 pp. 418 f.). Another factor in the change from s-stem to i-stem (O.H.G. gen. siges etc., like quites) was perhaps an instr. pl. in -im(m) for *-es-mi (§ 387). Cp. Michels, Zum Wechsel des Nominalgeschl. I 13 ff.

b. Pr. Idg. *dus-menes 'ill-disposed'. Skr. durmanas, Avest. dušmanō. Gr. $\delta v \sigma \mu \varepsilon r \dot{\varepsilon} \varsigma$. Lat. $d\bar{e}$ -gener (-r instead of -s from the other cases).

The difference of the vowels in the final syllable of $\mu\acute{\epsilon}vo\varsigma$ $\psi \epsilon \widetilde{v} \delta o\varsigma$: $\delta vo\mu \epsilon v \acute{\epsilon}\varsigma$ $\psi \epsilon v \delta \acute{\epsilon}\varsigma$ here, as elsewhere, doubtless went with some difference in the word-accent; compare Skr. $\acute{a}pas$ 'work' $dv \widetilde{\epsilon} \mathring{s} as$ 'enmity': $ap\acute{a}s$ 'active' $a-dv \overline{\epsilon} \mathring{s} \acute{a}s$ 'without enmity'.

Vedic Sanskrit has some forms in -ās instead of -as, as dēvá-vyacās 'having room for gods'. These were probably a re-formation following the analogy of a group of forms used for the neuter mentioned in § 225 Rem. 2, of which śata-sás is an example (cp. Lanman, Noun Infl. 560; J. Schmidt, Plur. 132 ff.).

- c. Pr. Idg. *qreyes 'flesh': Skr. kraviš Gr. $x o \epsilon(F) a g$. Compare II § 134 p. 425.
- d. Pr. Idg. comparative $*\bar{o}\hat{k}(i)ios$ 'ocius'. Skr. $\hat{a}\dot{s}\bar{\imath}yas$, Avest. $\bar{a}sy\bar{o}$. Lat. $\bar{o}cius$. Goth. $h\acute{a}uh$ -is adv. 'higher' for pr. Germ. *-iaz. O.C.Sl. $sla\check{z}de$ 'sweeter' for pr. Slav. *sold-io(s) (I § 84 pp. 79 f., § 665. 4 p. 525).

In Greek, this formation may be represented by $\Pi \Delta O \Sigma$ ($\pi \lambda o \varphi$ or $\pi \lambda \omega \varphi$?) in the sense of $\pi \lambda \acute{e}o \nu$, found in one Arcadian

inscription. Meister transliterates the word $\pi\lambda\tilde{\omega}_{\mathcal{S}}$, and derives this from $*\pi\lambda\omega$ - $\iota_{\mathcal{O}\mathcal{S}}$ (Ber. der sächs. Ges. der Wiss., 1889 pp. 89 f.). But see Danielsson's Epigraphica, Upsala 1890, pp. 51 sqq.

In Old Latin we meet with phrases like posterior bellum. There are two alternatives, and the choice is doubtful. The r of the other cases may have taken the place of -s in the nom. acc. neut. in $-\breve{o}s$, as it did in the nom. masc. in * $-\bar{o}s$; or this posterior may be the masculine form.

Along with the forms in *-ios were used others in *-is, which served as adverbs. This formation is earlier than the time when the branches of the language began to develope on their own account. Gr. ποεῖσ- 'earlier' in Cret. ποεῖσ-γυ-ς Thess. ποεῖσ-βυ-ς beside Ion. ποέσ-βυ-ς (see II § 135 p. 433, and the Author in Ber. der sächs. Ges. der Wiss., 1889 pp. 53 f.). Lat. magis, nimis; Osc. mais 'magis' = Goth. máis. Goth. mins O.H.G. min 'less' for *minu-iz, Goth. vaírs O.H.G. wirs 'worse' for *wirs-iz. See II § 135 pp. 428 ff. Johansson (De der. verb. contr. 177) and Streitberg (Die germ. Comp. auf -ōz-, 30) would place here Lat. plūs, which they derive from *plōis (for ō cp. Arc. ΠΛΟΣ above); plūs is differently explained by the Author, Gr. Gr. 2 p. 96 footnote 2, and Danielsson, Epigraphica p. 52.

e. Pr. Idg. part. perf. act. *μeid-μos 'knowing': Gr. εἰδός. For Skr. vid-vát, Lith. mìr-ę and O.C.Sl. nom. mĭr-ŭ acc. mĭrŭše see II § 136 pp. 440 ff.

§ 227. II. The ending -o-m in o-stems.

Pr. Idg. *jugo-m 'yoke'. Skr. yugá-m, Avest. xšafre-m O.Pers. xšasa-m 'lordship, realm' = Skr. kšatrá-m. Gr. ζυγό-ν. Lat. jugu-m, nōn = O.Lat. n'oenum (nōn comes from this word used before vowels); Umbr. ortom 'ortum' kuratu 'curatum', Osc. sakaraklúm 'sacellum' comonom 'comitium'. O.Ir. dliged n-'law', nemed n-= Gall. νεμητο-ν 'temple', O.Ir. orbe n- orpe n-'heritage, inheritance' = Goth. arbi O.H.G. arbi erbi 'inheritance' (II § 63 p. 129). Goth. juk O.H.G. joh. Pruss. lunka-n 'bast, inside bark'; O.C.Sl. polje 'field' (? see below).

*-i-m beside *-io-m: Umbr. tertim terti 'tertium' Osc. medicim 'magisterium'. See § 194 p. 74, § 212 pp. 89, 90.

In Baltic, the only traces of *-o-m which are now left are one or two examples from Prussian (see last page, and Pauli in Kuhn-Schleicher's Beitr. VII 201 f.). stems have become masculine in Lithuanian and Lettic; e.g. Lith, linka-s = Pruss, lunka-n O.C.Sl. luko 'bast, inner bark' (§ 403). Neuter forms of the Lithuanian adjectives, such as qera 'good' (cp. gražù 'beautiful' § 223. 2 p. 100), can only be used under certain conditions. These cannot be explained as standing for -a = -o-m, since dialects which change the -a of the acc. sing. masc. into -u have $q\tilde{e}ra$, like the others, and not *geru. Bopp assumed that gera has been re-modelled on the analogy of gražù (Vergl. Gr. I3 p. 321), which would be a re-formation the reverse of that which gives us Avest, neut. volum instead of volu (§ 223.2 p. 99). But a more obvious suggestion is that the ending $-\alpha$ comes from the pronominal ending *-o-d (§ 406).

Remark. Some, however, of the Lithuanian "neuters' in -a are in all probability really abstract feminine substantives; e. g. szeñdën szaltà means 'there is cold to-day', not 'it is cold' (szaltà: szálta-s = geltà 'yellowness': gelta-s 'yellow', II § 158 p. 474).

In Slavonic this neuter *-o-m (*- \check{u}) is perhaps as hopelessly lost.

It is not quite clear how we are to regard forms such as igo 'iugum' novo 'novum', whose ending cannot represent *-om. It is natural to suppose that adjectives of this kind have taken over -o from the pronouns, cp. to 'that' = Skr. $t\acute{a}$ -d. Thus it is possible that -o first obtained foothold in adjectives, and was then extended to substantives by association with substantives in -o = *-os (e. g. slovo = Gr. $*\lambda \acute{\epsilon} Fos$ § 226).

But it is quite possible that polje 'field' has a different origin. The ending of this word may come from *-ie-n *-io-n according to the principles laid down in Vol. I § 219 p. 187 (and compare Leskien Handb.² p. 19); for the gen. pl. polji kraji see § 345. polje would be related to a supposed *igü as the acc. pl. masc. kraję to vlūky (§ 326). Still, it is also possible to assume an older *poljo parallel to igo. I

prefer the latter view, since we have the acc. sing. masc. kraji konji with the suffix -(i)i- instead of -io- (§ 212 p. 90), and consequently we should expect a neuter polji (cp. p. 109 Osc. neut. medicim).

Genitive (-Ablative) Singular.1)

- § 228. Two suffixes have been transmitted from the parent language to its several branches, -es -os -s and -sio (-so).
- 1. It is probable that -es -os and -s were ablaut-variants of one suffix. In the separate branches of Indo-Germanic, even in historical times, may be observed a variation between -es and -os, as Lat. aer-is and aer-us; this seems to depend upon a difference of proethnic accentuation, similar to that in Skr.

tudat-ás 'tudentis' pad-ás 'pedis' (Idg. -és) in contrast with bhárat-as 'ferentis' jánas-as 'generis' (Idg. -os), just as the two forms of the suffix of the 1st. pl. act., *-mes and *-mos, may be explained as arising from two several modes of accentuation which are exemplified in Skr. i-más 'imus' and bhárā-mas 'ferimus'. See I § 311 ff. pp. 247 ff.

Idg. -es is found in Italic, Germanic, and Balto-Slavonic, 1) -os in Greek, Italic, Keltic (and possibly Germanic). Aryan -as may of course represent either Idg. -es or -os; we have not enough evidence from the historical period to shew how far the various forms are to be referred to this or that. No theory can be based upon forms which have a palatal instead of a guttural, like Skr. vāc-ás 'vocis' (cp. I § 445 p. 331), since it is always possible to suppose that the palatal is due to analogy.

Where -os drove -es out of the field (in Greek, that is, and Keltic), there may have been an instinctive desire to make some clearer distinction between the genitive singular and the nominative plural in -es (§ 313); for where all ablaut-variations in the stem disappeared, the two cases would become identical in form. The same desire after clearness may have had a different effect in Latin, by helping to drive out -ĕs from the nom. pl., replacing it by *-eies -ēs, the ending of i-stems (see § 319).

-s is perhaps the same element which is found in such particles as Gr. $\ddot{a}\psi$ Lat. abs. It is most commonly seen in *i*-and *u*-stems. More rarely it is added to consonant stems; as Skr. $d\acute{a}n$ Gr. $\delta\epsilon\sigma(-\pi\acute{o}\tau\eta\varsigma)$ for *dem-s, O.Ir. an-me for *-men-s (§ 234). It may be contained in $-\bar{a}s$ and $-i\bar{e}s$, the endings of stems in $-\bar{a}$ - and $-i\bar{e}$ - (§§ 229, 230); but it is also possible that in these the stem-final has been contracted with -es -os.

Genitive forms in -es -os -s were also used for the ablative in the parent language and later; thus Skr. $n\bar{a}v$ -ás Gr. $\nu\eta$ -óς

¹⁾ $\pi \varrho \varepsilon_s$ in $\pi \varrho ' \sigma - \gamma v - \varsigma$ $\pi \varrho \varepsilon \sigma - \beta v - \varsigma$ is possibly a relic of the form -es in Greek. It many have been a by-form of $\pi \acute{a}\varrho - o\varsigma$ Skr. pur-ás. See II p. 433 Footnote 1.

 $v\varepsilon$ - $\omega'\varsigma$ means 'of a ship' and 'from a ship'. It can no longer be determined how this double use arose.

2. -sio is found with noun-stems, but only those in -o-. It is the proper form of the genitive of these stems in Aryan, Armenian (but cp. § 239), and Greek as we have them; cp. also Lycian -hä -h, Messapian -hi -he -h, Venetian -h (Deecke, Bezz. Beitr. XII 153). It belonged originally to the pronouns, whence it spread to noun stems; see Benfey, Über die idg. Endungen des Gen. Sing. 22 ff., and Leskien, Die Decl. 37 f.

In the Latin and Keltic noun we find the ending $-\bar{\imath}$ ($-e\dot{\imath}$? $-o\dot{\imath}$?) This will be discussed in § 239 h. The question is — does it represent the old nominal genitive ending which gave way to the pronominal ending $-e-s\dot{\imath}o$ $-o-s\dot{\imath}o$? To this no decisive answer can be given, since another possibility has to be taken into account. In other points than this a close connexion may be observed between Italic and Keltic (the latest contribution to this subject is that of Von Bradke, in his Beiträge zur Kenntniss der vorhistorischen Entwickelung unseres Sprachstammes, 1888, pp. 31 ff.) It is therefore possible that this $-\bar{\imath}$ is an Italo-Keltic formation, beginning at some period later than the break-up of the parent speech.

In Germanic we have -so, which we may assume, with even more confidence than in the case of -sio, to have been borrowed from the pronouns.

In Balto-Slavonic, noun stems in -o- have a form which we cannot hut take to be the Indo-Germanic ablative in $-\bar{o}d$: Lith. $vi\tilde{t}ko$ O.C.Sl. $vl\tilde{u}ka$ 'lupi' (§ 241). Beside these there are also pronominal endings: Pruss. ste-sse ste-ssei (nom. sta-s 'that') O.C.Sl. $c\tilde{v}-so$ $c\tilde{e}-so$ (nom. $c\tilde{v}-to$ 'quid'). The reason why the ablative did the work of genitive and ablative both was that forms in Idg. -es-s (O.C.Sl. mater-e 'matris' nosti 'noctis') had originally both these functions. The same reason produced the opposite effect in Greek, where the genitive in -sio had the meaning of an ablative as well as its own.

All this makes it probable, that when the parent speech Brugmann, Elements. III.

branched off in different directions, the genitive singular of noun stems in -o- was not represented by any one invariable formation. Even then the pronominal ending had begun to pass over to nouns, although perhaps not to the same extent in all districts of the Indo-Germanic area. It is just possible that Italic and Keltic -7 (-ei -oi) was the ending with which the pronominal ending came into conflict. Then the latter will have been wholly driven out of the noun system in Italic and Keltic, where -ī won the day; in Balto-Slavonic, both disappeared together. Cp. § 239, b. In Germanic, *-so passed over to the nouns, which is in all probability a peculiarity of the Germanic branch; cp. § 239, a. If the "genitives" Goth, meina peina seina O.H.G. min etc. are ablative forms like the similar forms in Lithuanian, mãno këno (§ 452), then before *-so passed on to noun stems there may have been a period in Germanic, as there was in Balto-Slavonic, when the ablative in *-ōd *-ēd had, at least to some extent, the function of the genitive besides its own.

§ 229. I. The Endings -es -os -s (cp. § 228 pp. 111 f.).

1. ā-stems. Pr. Idg. *ekūās 'equae'. Gr. χώρᾶς. O.Lat. viās, fortūnās (pater familiās survives in the classical period); Umbr. tutas totar 'civitatis', Osc. eituas 'pecuniae'. O.Ir. mnā 'mulieris' Idg. *gnās, an isolated survival (cp. the article inna § 420). Goth. gibōs O.Icel. gjafar. Lith. rankos.

Idg. - $\bar{a}s$, if it carried the word-accent, was circumflexed: cp. Gr. $\tau \bar{\iota} \mu \tilde{\eta}_s$ 'honoris' Lith. mergõs 'puellae' (I § 671 p. 536).

Sanskrit. gnās-pāti-š 'husband of a divine wife' (stem gnā-) is a dubious survival of this formation; it may be a reformate following jās-pāti-š (§ 233) and nouns in -as-pati-š (cp. II § 24 pp. 39 f.). The same may be said of Avest. vairyā (stem vairyā- f. 'desirable'), since it may have come from *vairyayā by syllabic dissimilation (cp. I § 643 p. 482). The regular endings were Skr. -āyās Avest. -ayā (= -*aiās) O.Pers. -āyā (= *-āiās), as Skr. ášvāyās 'equae' Avest. haēnayā 'of a hostile army' O.Pers. taumāyā 'of a family'. -iās came from stems in -ī- -iē- (Skr. bṛhatyās, dēviyās dēvyās, § 230), as did

the dative Skr. $-\bar{a}y\bar{a}i$ Avest. $-ay\bar{a}i$ instead of $-\bar{a}i$ (§ 247); the Avest. $-ay\bar{a}$ and $-ay\bar{a}i$ have -a- instead of $-\bar{a}$ - doubtless because the instr. in $-aya = \text{Skr.} -ay\bar{a}$ had the short vowel (§ 276). The starting point for these re-formations was the loc. sing.; in pr. Ar. the loc. sing. of \bar{a} -stems ended in $*-\bar{a}j\bar{a}$, and that of $i\bar{e}$ -stems in $*-j\bar{a}$ (see § 264). Another factor in transforming the old genitive singular in $*-\bar{a}s$ was probably a desire to distinguish its form from that of the nom. acc. pl. (Skr. $\acute{a}\dot{s}v\bar{a}s$), which was the same.

Remark 1. With the re-formation $\dot{a}\dot{s}v\bar{a}-y\bar{a}s$ following $b_{I}hat-y\dot{a}s$, compare gen. pl. $\dot{a}\dot{s}v\bar{a}-n\bar{a}m$ following the n-stems, § 345; Umbr. porta-ia portet' following hab-ia 'habeat' fas-ia 'faciat'; Osc. censa-um 'censere' following ez-um 'esse'; O.Sax. 1st. 2rd. and 3rd. pl. scouuo-iad instead of scouuod following ner-iad $s\bar{a}k$ -iad (Danielsson, Stud. Gram. p. 53; the Author, Morph. Unt. III 45, 89 f.); Lat. gen. $vi\bar{a}$ - \bar{i} following equ \bar{i} (see the following page).

Remark 2. A different view of Skr. -āuās etc. is taken by J. Schmidt (Kuhn's Ztschr. XXVII 381 ff.), who assumes that the endings have come from oz-stems. First, he thinks, were formed the gen, *-ai-as and dat. *-ai-ai. Then these forms gave way to *-aias *-aiai for one of two reasons: either they were influenced by stems in -i-, which made by haty as brhatyāi; or there was a contamination of two pairs of original forms, gen. *-aias and *-ās together producing Ar. *-aiās, and dat. *-aiai and *-āi producing Ar. *- $ai\bar{a}i$, each with the quantity of the \bar{a} -stem ending. The a of the penultimate, he continues, was kept short in Avestic, whilst in Sanskrit and Old Persian the long vowel of the strong cases crept into the weak. Two remarks may be offered on this. First, the forms here assumed as types are questionable enough in themselves; and secondly, not to dwell upon that, we may well ask why the instr. Skr. ášvayā did not become * $a\dot{s}v\bar{a}y\bar{a}$ if the $-\bar{a}$ - of the penultimate came from the strong cases. It cannot be shewn that this alleged re-formation was earlier than the time when the pronominal $-ay\bar{a}$ had invaded the instrumental (the same form is seen in Avest. haenaya).

In Sanskrit, the Brāhmanas give us examples of the dative in -āyāi used in place of a genitive, as yājyāyāi of the sacrificial formula'; cp. striyāi used as gen. § 230. This reformation seems hardly likely to be due to syntax alone.

In Greek, \bar{a} -stems which had become masculine took the ending of stems in -o- (§ 239); cp. the nom. sing. in $-\bar{a}$ - ς § 190. Hom. (Aeol.) $A\tau \varrho \epsilon i \delta \bar{a}$ Boeot. $T\epsilon \lambda \dot{\epsilon} \sigma \tau \bar{a}$ 0 like Ep. $Al \dot{o} \lambda \sigma o$ 0. Lesb.

and Dor. contract to $-\bar{\alpha}$. Ion. $-\varepsilon\omega$ for *- ηo , and $-\varepsilon\omega$ is contracted to $-\omega$; also $-\varepsilon v = -\varepsilon o$, see the Author Gr. Gr.² p. 39. Aread. and Cypr. $-\alpha v$, which is doubtless to be read $-\bar{\alpha}u$. Att. -ov may have either of two origins. It may be the ov of $in\pi ov$ taken over bodily; or else $-\bar{\alpha}o$ became $-\varepsilon\omega$ (regular), and $-\varepsilon\omega$ was transformed to $-\varepsilon o$ on the analogy of $in\pi oo$, when this was the genitive; lastly $-\varepsilon o$ would become -ov.

In Arcadian $-\alpha v$ passed into feminine stems, as $\zeta \bar{\alpha} \mu i \alpha v$ in contrast to Att. $\zeta \eta \mu i \bar{\alpha} \zeta$, from $\dot{\eta} \zeta \eta \mu i \alpha$ 'loss, punishment'. On the other hand, the fem. ending $-\bar{\alpha} \zeta$ returns to masc. stems in Megarian and Thessalian, as $A \rho \alpha i \bar{\alpha} \zeta$, $N \bar{\iota} \iota l \bar{\alpha} \zeta$ as opposed to Att. -lov; this re-formation was due to the fact that genitive and nominative had each the same ending (the gen. $-\bar{\alpha}$ contracted from $-\bar{\alpha} o$), cp. § 190 p. 67.

Att. Καλλιάδους (nom. -ιάδη-ς) follows the analogy of the genitive of stems in -εσ-, as Σωνράτους. Cp. voc. Στρεψlαδες § 202 p. 85. The Rhodian genitive of proper nouns of this kind, Σαμιάδευς for example, followed naturally enough from the nom. in -ης borrowed from the Ionic dialect; a nom. Σαμιάδης has been found in Rhodes (C.I.G. 2534). As to εν for εσ cp. I § 603 pp. 456 f.

In Latin the ending $-\bar{a}\bar{\imath}$, as in $vi\bar{a}\bar{\imath}$, was early framed on the analogy of the genitive of stems in -o- ($equ\bar{\imath}$ and the like). It may be conjectured that $-\bar{a}\bar{\imath}$ first found place in masculine \bar{a} -stems, whence it afterwards spread to the feminine; cp. Arcad. -av mentioned above, which was first masculine and then feminine too. Whether the ordinary classical forms $scr\bar{\imath}bae$, equae etc. come from this $-\bar{a}\bar{\imath}$ by regular phonetic change, untouched by side influences, or whether the analogy of the locdat. -ae had anything to do with it, is hard to say; especially as in the forms which are found on inscriptions (as Lavarnai C.I.L. I no. 47) we have no means of determining the quantity of the two sounds which make up -ai, or of knowing whether they made one syllable or two.

Old Irish tuaithe seems to have taken over the ending of stems in $-i\bar{a}$ - and in $-\bar{\imath}$ - $-i\bar{c}$ - (soillse and inse).

Remark 3. The gen. Erce (nom. Erc) appears on an Ogam inscription as Ercias (Stokes, Bezz. Beitr. XI 151, cp. p. 79). This points to *-ias as the older shape of the -e of tuaithe and soillse; and then inse (1 $i\bar{e}$ -stem) would be parallel, and be a form like Goth. $frij\bar{o}ndj\bar{o}s$ from nom. frijondi (§ 230). Still, Ercias proves nothing unless we assume masculines in -a, as Stokes does. But in an Ogam inscription lately found in Wales (see Arch, Cambr. 5th. Series VI no. 23), there is the genitive Avittoriaes. whose q is perhaps meant to express the sound of j (Latinised nom. Avitoria). What is to be said of this? It is worth considering whether -ē may not have been regularly kept in pre-Keltic *-ēs (elsewhere in Keltic \bar{e} becomes \bar{i}), especially as -the (-tha), the suffix of the 2nd person sing., seems to answer to Skr. -thās = Gr. Dor. -9ns. This would make it probable that Keltic also had the Idg. gen. -ies (i- ie-stems), and inse must be compared with the Lat. gen. facies. These questions have been suggested by certain communications which I have received from Thurneysen; I leave them for others to decide. D'Arbois de Jubainville is I believe mistaken in his view of the matter (Mém. III 80).

O.H.G. geba A.S. ziefe, O.H.G. sippe (sippea) A.S. sibbe (cp. nom. Goth. sibja 'kindred'), probably with the ending pr. Germ. *-ēz, i. e. sippe sibbe is an ad-formate of gutinne zydenne (with Idg. *-iēs, § 230), and carried geba ziefe along with it. The stem was changed to an ā-stem without i in Old High German, before *-iēz became -e (cp. Braune Ahd. Gramm. § 58 Anm. 1, § 209 Anm. 3). The acc. sing. (§ 213 p. 91) and the nom. pl. (§ 315) were modified by analogy in the same way.

Quite early in O.H.G. the dative form gebu gebo is sometimes found instead of geba, and in the tenth century it gets the upper hand.

Old Church Slavonic raky 'of a hand' and duse 'of a soul' pre-suppose a ground-form with *-ans or *-ons; cp. the same form in the acc. pl., where the original ending was *-ans. See I § 219 p. 187. Scherer and many others have assumed that the gen. sing. raky really is this acc. pl. form; it is said that because the acc. pl. took the place of the nom. pl. in *-as, therefore it also took the place of the gen. sing., which had the same form. This is hard to believe. In any case there was a connexion between this -y -e and the ending of the gen. sing. fem. in the pronominal form toje (nom. ta f. 'this') — see

§ 420; but it remains uncertain whether this ending properly belonged to pronouns alone, and only spread to nouns afterwards.

§ 230. 2. $\bar{\imath}$ - $\underline{i}\bar{e}$ -stems (cp. p. 68 footnote 1). Pr. Idg. * $bhr\hat{g}h\eta t(i)\underline{i}\bar{e}s$ 'celsae'. Skr. $brhaty\acute{a}s$, $d\bar{e}viy\acute{a}s$ d $\bar{e}vy\acute{a}s$ 'deae'; Avest. $barenty\mathring{a}$. Lat. $faci\bar{e}s$, $rabi\bar{e}s$. O.H.G. gutinne A.S. $\exists y$ -denne 'deae', cp. § 229, last page. Lith. $\check{z}\tilde{e}m\dot{e}s$.

Along with these are forms which follow the *iā*-class: Gr. *φερούσης*, ποτνίας; Lat. māteriae (nom. māteriēs and māteria); Goth. frijōndjōs (like sibjōs, nom. sibja kinship'); Lith. vežancziōs, marcziōs (nom. martì 'bride'). Whether O.Ir. inse, Brigte contain Idg. *-iēs or *-iās is uncertain; see § 229 Rem. 3 on the last page.

In Sanskrit, the Brāhmana language has the dative in place of the genitive, as striyāi instead of striyās (nom. strī 'woman'). Cp. yājyāyāi § 229 p. 115. In Avestic forms are occasionally found which have been influenced by the analogy of stems in $-\bar{\imath}$ - $-i\bar{\imath}$ and in -i: e. g. harai \bar{p} jō (harait $\bar{\imath}$ -, the name of a mountain range).

In Latin we have $-i\bar{e}\bar{\imath}$ beside $-i\bar{e}s$, $faci\bar{e}\bar{\imath}$, $aci\bar{e}\bar{\imath}$ — a reformation of the same kind as $vi\bar{a}\bar{\imath}$ (§ 229). Further, we find $-i\bar{\imath}$, $faci\bar{\imath}$, $progeni\bar{\imath}$, $luxuri\bar{\imath}$; $-i\bar{\imath}:i\bar{e}\bar{\imath}=-ae:-a\bar{\imath}$ (cp. § 248). Lastly $-i\bar{e}$, down to the classical period, as $faci\bar{e}$ — probably the dat.-loc. form (§§ 248, 265).

The Irish genitive inseo (i. e. inseo) is framed on the model of an i-stem. Cp. dat. inis § 248.

Old Church Slavonic zemlję and vezaštę like dušę (§ 229).

§ 231. 3. i-stems. Here we have two types, $-e\dot{i}$ -s $-o\dot{i}$ -s and $-\dot{i}$ -es $-\dot{i}$ -os $-i\dot{i}$ -es $-i\dot{i}$ -os. Of these the former certainly and the latter most probably is proethnic. But at the same time it is not clear how the two types were originally distributed.

a. -ei-s and -oi-s. Which of these was used in a given word would be originally determined, as we may conjecture, by the accent of the word: say, *mntéi-s 'mentis', *όμοί-s 'ovis'. Ar. *-ai-š (= *-eis or *-ois?): Skr. áνē-š; Avest. αžōi-š, O.Pers. fravartai-š 'of Phraortes'. Gr. Pamphyl. Νεγοπόλεις

(= Att. Nεοπόλεως), if correctly preserved, is the only form of this kind in Greek. Umbr. punes 'poscae' ocrer 'ocris, montis', Osc. Herentateís 'Veneris, Volupiae' 1), pointing to pr. Ital. *-ei-s. Germanic has only fem. substantives: Goth. anstáis for *-ois, O.H.G. ensti A.S. ēste for *-eis, or for *-ii-es (b.) or *-ei-es (cp. Hom. πόλεος), like the loc. ensti perhaps for *-ei-i (§ 266). Lith. naktēs, O.C.Sl. nošti, common ground-form *-eis or *-ois?

b. -i-es -i-os. -ii-es -ii-os. Skr. -y-as -iy-as beside -ē-š in the masc, and neut,, as ávyas, ariyás 'of a pious man'. In Avestic there are a few examples of the ending -yōiš, as jainyōiš (stem jaini- 'woman', cp. Bartholomae Ar. Forsch, III 64). But this may well have arisen by contamination of -ōiš and *-yas: cp. Goth. kinnáus 'of a cheek' i. e. *kinyays (§ 232). Armen. srti, perhaps for *-iies or *-iies (cp. zardu § 232). In all dialects of Greek except Ionic and Attic the only type is owioc. φύσιος, which formation is also found in Ionic beside that with pr. Gr. *-ei-os which will be described anon (cp. nom. pl. οσιες § 317); πόλιος may be referred to the nom. πόλι-ς (§ 233). It is a question whether Toranias, found in an Irish Ogam inscription, belongs here; cp. Ercias § 229 Rem. 3 p. 117. The ending of German masc. i-stems, Goth. gastis O.H.G. gastes O.Icel. gests, need not have been borrowed entirely from stems in -o-. A pr. Germ. *-i-az or *-i-iz must have become *-iz, and this could easily have become perfectly assimilated to *-e-s(o) (§ 239), especially if the historic form of the "dative" of these i-stems was originally a genuine i-case (§ 260).

This second formation seems to be related to the first as Skr. n'amn-as to O.Ir. anme 'nominis' (for *-mens), Avest. $hamaestr-\bar{o}$ 'of an antagonist' to $s\bar{a}star-\check{s}$ 'of a ruler', Gr. $\raiv \delta \varrho - \'o \varsigma$ to Avest. $nar-\check{s}$ 'of a man', Skr. $div-\acute{a}s$ to $dy\'o-\check{s}$ 'of

¹⁾ Of course it is a question whether this form belongs to a stem with $-t\bar{a}ti$ - or with $-t\bar{a}ti$ - for its suffix (see II § 102 p. 310). It belongs here in any case, since the -eis of all consonant-stems came from those in -i-. It so happens that no genitive from an undoubted original i-stem has been preserved.

heaven', Gr. * βo_S in $B \acute{o} \sigma - \pi o \rho o_S$ for * $g \rlap/ u - o_S$ to Skr. $g \acute{o} - \mathring{s}$ 'bovis'. But even if it be proethnic, it is possible that in one or other branch of the original language it is partly due to the analogy of $\bar{\imath}$ - $i \rlap/ z$ -stems with the Idg. ending *- $i \rlap/ z$ -es *- $i \rlap/ z$ -os. For Greek, in particular, this suggestion can hardly be rejected, in view of the other cases of the paradigm in dialects where the formation is found.

c. Feminine forms in Sanskrit have $-y\bar{a}s$ as well as $-\bar{e}\S$, e. g. $\acute{a}vy\bar{a}s$. This is a re-formation on the lines of the $\bar{\imath}$ - $\acute{z}\bar{e}$ -class (§ 230), and it becomes more and more common in the course of the history of this language. We find a corresponding dat. in $-y\bar{a}i$ (§ 249) and loc. in $-y\bar{a}m$ (§ 266). The point of contact between these two classes of stems was the instr. sing., $\acute{a}vy\bar{a}:brhaty\acute{a}$ (§ 278); hence the re-formation arose. Avest. vay- \bar{o} , contrast Skr. $v\bar{e}$ - \S ($v\acute{t}$ - 'avis'), is a re-formate; the stem is monosyllabic, which had something to do with the change. Compare (1) gen. pl. vay-am, pray-am 'trium' (§ 348), with the strong stem, and (2) as monosyllabic stems, gen. sing. Ved. $n\acute{a}r$ -as (following $n\acute{a}r$ -i): Avest. nar- \S (§ 235), Ved. $g\acute{a}v$ -as (following $g\acute{a}v$ -i): $g\acute{o}$ - \S (§ 238).

Skr. pátyur 'of a husband' and jányur 'of a wife' follow the form of pitúr mātúr (§ 235); cp. dat. páty-ē like pitr-é (§ 249), instr. páty-ā like pitr-á (§ 278). See Wackernagel, Kuhn's Zeitschr. XXV 289 f.

Attic $\sigma_{\varphi \varepsilon o \varsigma}$, $\varphi v \sigma_{\varepsilon o \varsigma}$, $\pi \delta \lambda \varepsilon o \varsigma$ (the last, which in found in Homer and Theognis too, comes from the stem $\pi o \lambda \iota$ - nom. $\pi \delta \lambda \bar{\iota}$ - ς , a by-form of the stem $\pi o \lambda \bar{\iota}$ - nom. $\pi o \lambda \bar{\iota}$ - ς). These cannot rank as regular developements from proethnic Greek forms in *- $\varepsilon o \varsigma$ for *- $\varepsilon \iota$ - $o \varsigma$, because - εo - is uncontracted. Possibly - $\varepsilon (\iota)$ - $o \varsigma$ was affected by the analogy of - $\varepsilon (\digamma)$ - $o \varsigma$ in ι -stems (J. Schmidt, Kuhn's Zeitschr. XXVII 301 f.). Cp. $\sigma \varphi \varepsilon \iota$ § 266, $\sigma \varphi \iota \varsigma$ § 317, $\sigma \varphi \varepsilon \omega v$ § 348.

The loc. πόληι (§ 260) gave rise to Hom. πόληος; and by quantitative metathesis (I § 611 p. 462) -ηος became -εως, the Attic variant, as πόλεως, ὄφεως.

In Latin, no example of the Umbro-Samnitic and pro-

ethnic Italic ending -eis can be found. The forms ending in -is -us which are found (as ovis, partis, partus) are due to the same confusion of i-stems with consonant stems which we saw in ovem, § 214 p. 92. We are not justified by the known laws of sound in assuming that ovis stands for *ovjis and answers to Skr. ávyas (Froehde, Bezz. Beitr. XIV 114).

In Old Irish, substantives have -o -a, as fātho fātha, which is to be referred in the first instance to *-ōs, because of Ivacattos (or Evacattos) and Suvallos, which occur in Ogam inscriptions. The formation is not clear.

Remark. It is quite possible that the ending came from u-stems (§ 232), as in Old Icelandic the -ar of u-stems passed over to masc. stems in -i- (e. g. pular from nom. pulr 'speaker, orator'). But one can see no sufficient cause for such a process at so early a stage; on the other hand, it is certain that the gen. pl. $bithe\ n$ - was built on the analogy of $f\overline{a}the\ n$ - (§ 349). A ground-form *- $o(\underline{i})$ -os, a transformation of *- $o\underline{i}s$, would satisfy the phonetic conditions; but it is in itself hardly probable (in spite of d'Arbois de Jubainville, Mém. VI 54). That *- $o\underline{i}s$ could become $-\overline{o}s$ in the regular course of sound-change may be said to be out of the question.

§ 232. 4. *u*-stems. Pr. Idg. -e*u*-s -o*u*-s and -*u*-es -*u*-os -*uu*-es -u*u*-os, answering to the *i*-stem types (§ 231). It is true that -e*u*-s, which is here assumed to be a by-form of -o*u*-s, cannot be definitely shewn to have existed, but it is fairly inferred from the analogy of stems in -*i*- (Osc. castrovs: Herentateís).

a. -ey-s and -oy-s, the one belonging to original forms accented like *sūnéy-s 'filii', the other (say) to *médhoy-s 'mellis'. Ar. *-ay-š (== *-ey-s or *-oy-s?): Skr. sūnō-š; Avest. bāzēu-š bāzao-š, O.Pers. kūrau-š 'Cyri'. Lat. manūs; Umbr. trifor 'tribus', Osc. castrovs 'fundi'; arguing from the analogy of the Umbr. Osc. *-ei-s in i-stems, we may derive Ital. *-oys from *-ey-s (I § 65 p. 52). O.Ir. betho -a, Ogam inscr. Trenalugos, Bruscos (doubtless with ō) for Idg. *-eys or *-oys; in the -u of Trenagusu, Nettasagru on Ogam inscriptions from Wales (Stokes, Bezz. Beitr. XI 145) Thurneysen conjectures a dialectic transformation of *-ōs. Goth. sunáus, O.H.G. fridō frido 'of peace', O.Icel. sonar pr. Norse *sunōx, pr. Germ. *-ays = Idg.

*-ou-s. Lith. sūnaūs O.C.Sl. synu, common ground-form *-eu-s or *-ou-s?

b. -u-es -u-os. -uu-es -uu-os. Skr. -v-as -uv-as beside -ō-š in the masculine and neuter, as paśv-ás 'pecoris' mádhv-as mádhuv-as 'mellis'. Similarly in Avest. -v-ō beside -ēuš -aoš, as $xra\hbar w - \bar{o}$ (xratu- 'will, power, intent') = Skr. $kr\acute{a}tv$ -as. Armen. zardu, perhaps for *-uu-es or *-uu-os (cp. srti § 231 p. 119). Greek Ion. youro's for *youf-os (from nom. yo'ru 'genu', cp. the Author, Gr. Gr. § 70 b. Rem. p. 100), γέννος (from nom. γένν-ς 'chiu' = Skr. hánu-š). Lat. senātuis O.Lat. senātuos, cornuis, Falisc. zenātuo (-s dropped) may have come from either of two groups of forms — (1) from *-uu-es *-uu-os or *-u-es *-u-os, or (2) from *-eu-es *-eu-os or *-ou-es *-ou-os; cp. dat. senātu-ī § 250. In Germanic are found a few forms in -nn- for -nu-(I § 180 p. 158): Goth. mans O.H.G. man 'of a man' for *manniz *many-iz or *mannaz *many-az = Skr. *mány-as (assumed by-form of mán-ōš) 1); Goth. kinnáus 'of a cheek'. a composite form arising from contamination of *kinauz = Skr. hánōš and *kinuiz *kinniz = Gr. γέννος (cp. Avest. jainyōiš § 231 p. 119), whence by analogy comes the nom. kinnu-s instead of *kinus = Skr. hánu-š etc.

Here, as with the *i*-stems (cp. § 231 pp. 119 f.), it is doubtful how far the second type represents an original formation. The analogy of \bar{u} - uu-stems, which had the pr. Idg. ending -uu-es -uu-os, may have acted in some instances.

c. Sanskrit. The feminine has a further ending $-v\bar{a}s$, as $dh\bar{e}nv$ -ds from $dh\bar{e}nu$ -'milch cow' (so also dat. $-v\bar{a}i$, loc. $-v\bar{a}m$), parallel to the $-y\bar{a}s$ in feminine i-stems (§ 231 p. 120). Compare § 279. Avest. $b\bar{a}z\bar{a}u\check{s}$ with the same $\bar{a}u$ as the nom. sing. etc., see § 261.

Greek. Adjectives and some substantives have $-\varepsilon(F)$ -og, as $\dot{\eta}\delta\dot{\varepsilon}$ og, Ion. Att. $\pi\dot{\eta}\chi\varepsilon$ og, $\ddot{\alpha}\sigma\tau\varepsilon$ og ($\ddot{\alpha}\sigma\tau\nu$ n. 'city'), Boeot. $F\dot{\alpha}\sigma\tau$ iog

¹⁾ A different explanation of Goth. mans mannē mannam etc. — which, however, does not convince me — is given by Bezzenberger in the Deutsche Literaturzeitung 1890 p. 14. He assumes two forms of the stem, man- and manan-.

for *Fαστεος (I § 64 p. 51), Cret. νίέος (νἰν΄-ς 'son'). Also Att. πήχεως, ἄστεως on the analogy of ὄφεως πόλεως (§ 231 p. 120).

Latin has from its earliest stage another set of forms such as $quaest\bar{\imath}$ $sumpt\bar{\imath}$. Later on the other cases were often formed as though from o-stems, and in the end this declension absorbed all u-stems. It seems to me a dubious point whether the genitive in $-\bar{\imath}$ was first suggested by the change of -os to -us in the nominative of o-stems (cp. $d\bar{\epsilon}nsu$ -s torru-s declined as o-stems, whilst Gr. $\delta\alpha\sigma\dot{v}$ - ς Skr. $t\gamma\dot{\imath}\dot{u}$ - $\dot{\imath}$ are stems in -u-, Osthoff, Morph. Unt. IV 78).

§ 233. 5. $\bar{\imath}$ - $i\bar{\imath}$ - and \bar{u} - $u\underline{u}$ -stems and stems in $-\bar{\imath}$, $-\bar{\imath}$, $-\bar{\imath}$. Pr. Idg. -ii-es -ii-os, -uu-es -uu-os, e. g. *bhruu-es -os (nom. *bhrū-s 'brow'). Skr. dhiy-ás 'of thought', Ved. nadiy-as 'of a river', bhruv-ás, Ved. śvaśrúv-as 'socrus', Avest. tan(u)-vō 'of a body'. There is a second group of forms with the sign of the feminine, Skr. dhiyás nadiyás bhruvás švašruvás (like the dat. in $-\bar{a}i$ and loc. in $-\bar{a}m$; this is analogous to what we see in fem. stems in -i- and -u- (§ 231 p. 120, § 232 last page). The point of contact with $\bar{\imath}$ - $i\bar{e}$ -stems where this series of forms began was the instr. sing., dhiy-å as compared with dēviyā and so forth; see § 280. Gr. πόλιος from nom. $\pi \delta \lambda \bar{\iota}$ -c (cp. § 231 p. 119), $\nu \delta c$ 'suis', $\delta c \rho \rho \nu \delta c$, $\nu \epsilon \kappa \nu \delta c$ (from nom. νέκυ-ς). Lat. suis socruis (also socrūs as though a u-stem); it is not probable that $v\bar{\imath}s$ came from * $vi\bar{\imath}$ -es by simple phonetic change (the view of Stolz, Lat. Gr.² p. 337); it is better to explain $v\bar{\imath}s$ by proportional analogy, as being related to nom. vīs acc. vim as dies facies (gen.): dies (nom.): diem. O.Icel. gen. $s\bar{y}r$ 'suis' doubtless for * $s\bar{u}$ -iz (cp. gen. pl. $s\bar{u}a$), having taken $s\bar{u}$ - instead of suy- from cases whose suffix began with a consonant. Another explanation of Lat. $v\bar{\imath}s$ O.Icel. $s\bar{y}r$ will be given in the next paragraph. O.C.Sl. kruv-e 'of blood', svekruv-e 'socrus'.

Stems ending in a long sonant liquid or nasal (II § 160.4 pp. 485 f.) are treated in a similar way. Skr. gir-ás 'of praise' = *grr-es -os, pur-ás 'of a stronghold' = *pţl-es -os, gō-šáṇ-as

(nom. $g\bar{o}$ - $\dot{s}\dot{a}$ -s 'gaining cattle') for *-syn-es-os. If an old independent gen. $j\bar{a}s$ be contained in $j\dot{a}s$ - $p\dot{a}ti$ - \dot{s} 'master of the house or family', this would be a formation with -s for the sign of the genitive; and we should then perhaps compare Lat. $v\bar{\imath}s$ O.Icel. $s\bar{\imath}r$ directly with $j\bar{a}s$.

§ 234. 6. Stems ending in a Nasal. Most of these have -es -os. -s is seen in Irish neuters formed with -en- and -men-, in Avest. xwēng 'of the sun', and in the root-noun *dem-'domus'.

Remark. Polysyllabic en-stems thus show the genitive in -en-s only in one branch of the Indo-Germanic languages. This is not really so strange as it might seem; we have but to remember in how many languages -ns was bound to change in accordance with their phonetic laws, and how easy it was for the forms thus changed to be sacrificed to the feeling for uniformity which causes case-systems to be levelled down to one type. — J. Schmidt (Pluralb. 100) thinks that Avest. ayan is a genitive in -ns; which is not very prohable, hecause of the long vowel in the last syllable (-an = -an). I believe the form to be a locative singular used for other cases (§ 257). Bartholomae is more likely to he right in calling the Vedic phrase $trir \ ahan(n)$ 'thrice in the day' a genitive (Stud. zur idg. Sprachg. I 104).

a. Stems in -n. Pr. Idg. * $\hat{k}un$ -es -os 'canis' (* $\hat{k}un$ -és, cp. § 228 pp. 111 f.).

Skr. śún-as (for the accent see p. 70 footnote 2) Avest. sūn-ō, Skr. aryamn-ás (arya-mán- 'comrade, friend') Avest. airyamn-ō (airya-man- 'obedient'), Skr. áśman-as Avest. asman-ō (áśman- asman- 'stone, heaven'). Sometimes this or that dialect would show preference for strong forms of the stem, as Ved. vṛṣ̌an-as beside vṛṣ̌n-as 'of a bull', Avest. airyaman-ō beside airyamn-ō, and cp. II § 117 Rem. 1 p. 366, and III § 251. With -s we have Avest. xwēng 'of the sun' = pr. Ar. *suan-s, a by-form of hvar- = Ved. suvar-, cp. II § 118 pp. 375 f., III § 224 pp. 103 f.

Armen. akan (nom. akn 'eye'), elin (nom. eln 'stag'), like O.C.Sl. jelen-e 'of a stag' Gr. $\dot{a}\delta\dot{\epsilon}\nu$ -og. The original weak stem is seen in arn 'of a man', like Avest. $ar\tilde{s}n$ - \bar{o} .

Greek $\varkappa v v - \acute{o}\varsigma$, $\mathring{a}\varrho v - \acute{o}\varsigma$, and with the strong stem $\tau \acute{e}\varkappa \tau o v - o \varsigma$, $\pi o \iota \mu \acute{e} v - o \varsigma$, $\mathring{a} \gamma \widetilde{\omega} v - o \varsigma$, $\pi \varepsilon v \vartheta \widetilde{\eta} v - o \varsigma$.

Lat. carn-is, and, with the strong stem, homin-is homin-us, edōn-is, Sab. neriēn-is (II § 115 p. 360); the old ending -es occurs in Apolones 'Apollinis', C.I.L. vol. I no. 187. In Umbro-Samnitic all consonantal stems took the ending of i-stems in the genitive, doubtless owing to a confluence of the nom. and gen. sing. in a certain number of words. So here we find the -eis of i-stems: Umbr. nomner 'nominis', Osc. carneis 'partis'.

O.Ir. con 'canis' for *cun-os, and similarly dercon (nom. derucc 'acorn'), āran (nom. āru 'kidney'), toimten (nom. toimtiu 'opinion'); in Ogam inscriptions Segamon-as, Inission-as. On the other hand, neuter n-stems show in Old Irish the ending *-en-s (*-ens *-ēs -e, cp. I § 657. 6 p. 509), as imbe (nom. imb n- 'butter'), anme (nom. ainm n- 'name'); *-en-s: *-n-es *-n-os = *-ei-s: *-i-es *-i-os, see § 231 p. 119.

Goth. gumin-s O.H.G. gomen gomin 'of a man' (as to -en -in see Bremer, Ztschr. für deutsche Phil., XXII 249 f.), Goth. tuggōn-s O.H.G. zungūn 'of a tongue' (cp. § 218 p. 95). With the weak stem Goth. managein-s 'of a crowd' (II § 115 p. 362). It cannot be determined to what extent *-iz = Idg. *-es was the ending, and whether such an ending as *-az = Idg. *-os was or was not used along with it.

Lith. szuñ-s, and, with the strong stem, akmeñ-s, besides other examples; -s stands for *-es according to vol. I § 664.2 p. 522. O.C.Sl. din-e 'of a day' (II § 114 p. 356), and, with the strong stem, kamen-e, with other examples; -e is for *-es according to I § 665.4 p. 525.

b. Root-nouns in -m. Pr. Idg. *dem-s 'of a house': Skr. $d\acute{a}n$ Avest. $d\~{e}ng$, Gr. $\delta \epsilon \sigma$ -, for * $\delta \epsilon \mu \varsigma$ * $\delta \epsilon \nu \varsigma$, in $\delta \epsilon \sigma$ - $n\acute{o}\tau \eta$ - ς 'master of the house' (I § 204 p. 171, II § 160 p. 483). Skr. $k\~{s}m$ - $\acute{a}s$ gm- $\acute{a}s$ Avest. $z\'{e}m$ - $\~{o}$, Gr. $\chi \vartheta o \nu \acute{o} \varsigma$ transformed from * $\chi \vartheta o \mu$ - $o \varsigma$ 'of the earth' (II § 160 p. 482).

§ 235. 7. Stems with suffixes in -r. Most of these have -es -os, along with which -s is found in Aryan, and as it would seem in Germanic too.

Skr. regularly has -ur, as mātúr dátur, probably for *-ty-s,

see I § 288 p. 2301); in Avestic, to correspond, we find ner's for *nṛ-s, stem n-ar- 'man'. With the strong stem and -s, Avest. nar-š, sāstar-š 'of a ruler', cp. ātar'-car-š 'of him who produces fire'. Two Sanskrit words have been supposed to contain a genitive of this latter kind — Ved. mātar-išvan- 'he who is lord over his mother', by Bartholomae (Bezz. Beitr. XIII 92), and Ved. svàr (súvar) 'of light' for *suṇar-š (I § 647.7 pp. 493 f.) according to the conjecture of J. Schmidt (Pluralb. 223). The usual Avestic type is weak stem + -as -ō, as brāpr-ō 'fratris', hamaestr-ō 'of an opponent'; similarly in O.Pers. piša 'patris' (I § 558.4 p. 415). Avest. sāstar-š: hamaestr-ō = Skr. ávē-š: ávy-as and the like, see § 231 p. 119. The re-formate nár-as 'of a man' is due partly to its being from a monosyllabic stem n-ar-; cp. § 231 p. 120.

Armen. maur 'matris' for *mātr-es or *mātr-os, ker 'sororis' for *suesr-es or *suesr-os (I § 360 p. 276, § 561 p. 417). But dster 'of a daughter' has the strong stem, like Gr. Hom. θυγατέρ-ος beside θυγατρ-ός.

Gr. $\mu\eta\tau\varrho$ - $\delta\varsigma$; Homer uses forms such as $\mu\eta\tau\dot{\epsilon}\varrho\sigma\varsigma$ $\pi\alpha\tau\dot{\epsilon}\varrho\sigma\varsigma$ $\dot{\alpha}r\dot{\epsilon}\varrho\sigma\varsigma$ as well, which follow the strong cases (cp. Skr. $n\dot{\alpha}r$ -as following $n\dot{\alpha}r$ -i, § 231 p. 120). $\delta\omega\dot{\tau}\varrho$ - $\sigma\varsigma$ instead of * $\delta\omega\tau\varrho$ - $\sigma\varsigma$ follows $\delta\omega\dot{\tau}\varrho$ - $\sigma\varsigma$ and $\delta\sigma\tau\dot{\eta}\varrho$ - $\sigma\varsigma$ instead of * $\delta\sigma\tau\varrho$ - $\sigma\varsigma$ follows $\delta\sigma\dot{\tau}\varrho$ - $\sigma\varsigma$ follows $\delta\sigma\dot{\tau}\varrho$ - $\sigma\varsigma$ follows $\delta\sigma\dot{\tau}\varrho$ - $\sigma\varsigma$ follows $\delta\sigma\dot{\tau}\varrho$ - σ

Lat. patr-is patr-us, mātr-is, frātr-is; datōr-is instead of *datr-is follows the nominative. In Umbro-Samnitic these stems have borrowed -eis from the i-stems (cp. § 234 p. 125): Umbr. matrer Osc. maatreis 'matris'.

O.Ir. māthar for *mātr-os or *māter-os (I § 77 p. 67).

Goth. $br\bar{o}pr$ -s fadr-s, O.Icel. $br\bar{o}dr$ fedr; the "mutated" vowel in the latter forms points to original *-tr-es. Secondly, A.S. $br\bar{o}dor$ feadur, O.Icel. fqdor fqdur, whose ending, like Skr. -ur, may be derived from *-x-s. Thirdly, A.S. fader O.H.G. fater have taken -er from the strong cases, like Gr. Hom. $\pi art e o$ -os.

¹⁾ In this view of the forms in -ur I follow Bartholomae, Ar. Forsch. II 110. Others are mentioned by Collitz in Bezzenberger's Beiträge X 10; but they all have less to recommend them than this.

Other forms of the same kind as these last are Lith. moter-s and O.C.Sl. mater-e.

§ 236. 8. Stems ending in Explosives. These regularly have -es -os.

Remark. There is no trustworthy ground for adding -s as another ending of these stems. In Vāj.-Sah. 20.2 the form $vidy\delta t$ is used as an ablative (= $vidy\delta t$ -as); and this is supposed to represent * $vidy\delta t$ -s by J. Schmidt (Plur. 223), see however Weber, Kuhn-Schl. Beitr. III 389, Böhtlingk and Roth's Sanskrit Dict. s. v., Lanman, Noun-Inflection 468, Bartholomae, Stud. zur idg. Spr. I 77. The Latin genitive nox (XII Tables) is supposed by Stolz, Lat. Gr.² 337, to contain this ending.

Pr. Idg. *bhṛghṇt-es -os (*bhṛghṇt-és, cp. § 228 pp. 111 f.). Skr. bṛhat-ás, Avest. berezat-ō and with the strong stem berezant-ō; Skr. bhárat-as 'ferentis'. Gr. ιδόντ-ος φέροντ-ος, with strong stem. Lat. rudent-is, ferent-is, praesent-is; it is doubtful to what extent -ent- is a simple phonetic developement from Idg. -nt- (II § 125 pp. 395 f., III p. 105 footnote 1). O.Ir. lōchet 'of lightning', carat 'of a friend', pr. Kelt. *-os. — In Germanic, this is the ending of ostems: Goth. frijōndi-s O.H.G. friunt-es. Balto-Slavonic has a żo- suffix: Lith. vēžanczio, O.C.Sl. veząšta.

Skr. sarvátāt-as 'of completeness', Avest. $haurvatāt-\bar{o}$ 'of safety'. Gr. $\delta\lambda\delta\tau\eta\tau$ -os 'of wholeness'. Lat. novitāt-is juventūt-is, cp. O.Lat. inser. Salut-es. O.Ir. bethad 'of life', pr. Kelt. *-os. Goth. $mita\bar{p}$ -s 'of measure'.

Skr. śarád-as 'of autumn'. Gr. φυγάδ-ος 'fugacis'. Lat. lapid-is. O.Ir. druad 'of a Druid' pr. Kelt. *-os; Irish Ogam inscr. Deccedd-as. Skr. pad-ás Gr. ποδ-ός Lat. ped-is 'of a foot'.

Skr. $u\dot{s}ij$ -as, stem $u\dot{s}ij$ - 'desiring'. Gr. $\mu\iota\dot{\iota}o\mu z$ -o ς 'of a girl', $\delta \sigma \tau vz$ -o ς ' $\delta \sigma \tau vy$ -o ς 'of a quail'. Lat. $bib\bar{a}c$ -is. O.Ir. nathrach 'of a water-snake' pr. Kelt. *-os, Irish Ogam Lugudecc-as = O.Ir. Luigdech (nom. Lugaid). Skr. $v\bar{a}c$ -ás Gr. $\delta \pi$ - $\delta \varsigma$ Lat. $v\bar{o}c$ -is 'of a voice, speech'. Skr. $-r\bar{a}j$ -as Lat. $r\bar{e}g$ -is O.Ir. $r\bar{\iota}g$ (pr. Kelt. *-os) 'of a ruler'.

Skr. ap-ás Avest. ap- \bar{o} $\bar{a}p$ - \bar{o} 'of water'. Gr. $\varkappa\lambda\omega\pi$ -ó ς 'of a thief'. Lat. dap-is.

In Germanic, genitives of this kind are on the whole

rare; most of those which occur belong to monosyllabic stems. We may cite as further examples the following: Goth. naht-s O.H.G. naht A.S. niht O.Icel. næt-r 'of night' for pr. Germ. *naxt-iz = Lat. noct-is; Goth. baúrg-s O.H.G. burg A.S. byrz 'of a stronghold, city' for *burz-iz = Avest. ber^ez-\(\overline{o}\) (bar^ez-\(\overline{o}\)) 'alti' O.Ir. breg (*brig-os) 'of a mountain'; Goth. vaiht-s 'of a thing'; A.S. b\(\overline{e}\)c 'of a book' for *b\(\overline{b}\)k-iz. Paul, in his Beitr\(\overline{a}\)ge VI 550, has put forth a conjecture which is worth considering although quite uncertain. He suggests that the Idg. ending *-es has been preserved by the acute accent in such forms as O.H.G. nahtes adv. 'by night, of a night'. The e of -es would then be due to the influence of the o-stem ending (\§ 239; and cp. Kluge, Paul's Grundr. I 354, 361, 385).

For O.C.Sl. telete from nom. acc. tele 'calf', see § 244.

§ 237. 9. Stems in -s. The regular ending is -es -os.

Remark. Here, as in the preceding class (see § 236 Rem.), there are only uncertain traces of -s. The Vedic gen. $u \S \acute{a}s$ 'of dawn', which we took to represent * $u \S - \S - as^1$), is regarded by J. Schmidt as standing for * $u \S \acute{a}s$ -s, and in the same way he refers $\acute{a}has$ -Rig-V. VI. 3. 1 to *ahas-s (Plur. 223). Against this explanation, see Bartholomae Stud. zur idg. Spr. 77 ff., and cp. § 356 Rem. below.

a. Pr. Idg. *menes-es -os 'of a mind'; *ménes-os according to § 228 pp. 111 f.; for the ablaut grade of the formative suffix, see II § 132 p. 413. Skr. mánas-as, durmanas-as; Avest. manaph-ō dušmanaph-ō. Gr. Ion. μένε-ος Att. μένους; Ion. δυσμενέ-ος Att. δυσμενοῦς. Lat. gener-is, Vener-is Vener-us; dēgener-is; tempor-is with -o- from the nom. acc. sing. neut. (II § 132 pp. 418 f.). O.Ir. tige (nom. tech teg 'house') = Gr. στέγεος τέγεος. Goth. hatis 'of hatred', see below. O.C.Sl. sloves-e 'of a word' = Skr. śrávas-as.

Other forms have a weak grade of formative suffix, as * $m\bar{e}n$ -s-es-os 'mensis': Gr. Lesb. $\mu\tilde{\eta}\nu\nu$ -os Att. $\mu\eta\nu$ -os, Lat. $m\bar{e}ns$ -is, O.Ir. $m\bar{i}s$. Cp. II § 132 p. 415.

Greek Att. Σωκράτον beside Σωκράτονς and the like, following πολίτον, ep. acc. Σωκράτην instead of Σωκράτη § 220

¹⁾ Above, II § 133 p. 423. And compare Bartholomae Stud. zur idg. Spr. I 20, 55.

p. 97, dat. Σωκράτη § 272. Also Lesb. Θεογένη on the model of stems in \bar{a} , like voc. -γένε (§ 209), acc. -γένην (§ 220), dat. -γένη (§ 272).

Gothic. hatis is once found, Ephes. 2. 3 barna hatis 'τέκνα ὀργῆς' in Ambr. B., whilst Ambr. A. has barna hatizē. The forms hatiz-is, agis-is (agis 'fear') etc. follow the o-stems. So also O.H.G. ahir-es (ahir 'ear of corn'); beside which are found kalbes (cp. Kelbiris-bach) lambes, which were made on the model of worte-s after the nom. acc. kalb lamb etc. had come, in the regular course of sound-change, to belong apparently to the same class as wort.

Perhaps Goth. lambis and like forms are to be classed with hatis. Because these words, like neuter o-stems, made their gen. sing. in -is, they came to be declined like them in other cases: nom. lamb etc. (Michels, Zum Wechsel des Nominalgeschlechts, I 17). To this one other factor may have contributed; namely, the practice of representing es-stems in composition by a corresponding form in -o- (Goth. hráiva-, Norse Run. hlewa- = ×lso-, see Burg, Runeninschr. 19, O.West.Germ. requa-, cp. II § 12 p. 28, § 40 Rem. 5 pp. 73 f.).

Old Church Slavonic. slova beside sloves-e, a reformation like O.H.G. kalbes, see II § 132 p. 422.

b. The gen. sing. belonging to the nom. in Idg. *- $\bar{o}s$ has this ending. Skr. $u\bar{s}\acute{a}s$ -as Gr. $\mathring{\eta}o\tilde{v}_{\varsigma}$ for * $\mathring{\eta}\acute{o}(\sigma)$ - o_{ς} 'of dawn'. Lat. $hon\bar{o}r$ -is with \bar{o} taken from the nom., like $dat\bar{o}r$ -is § 285 p. 126.

c. Pr. Idg. *qreuəs-es -os n. 'of flesh': Skr. kraviṣ-as,
 Gr. Att. κρέως for *κρεα(σ)-ος.

d. Pr. Idg. comparative * $\bar{o}kis$ -es -os 'ocioris' (cp. II § 135 p. 429): Skr. $\hat{a}\dot{s}\bar{\imath}yas$ -as Avest. $\bar{a}syanh$ - \bar{o} , Lat. $\bar{o}ci\bar{o}r$ -is (like hon $\bar{o}r$ -is, in b. above). In Greek we have $\eta\delta lov$ -os with -ien-. O.C.Sl. $sla\check{z}d\check{\imath}\check{s}a$, extended by the suffix -io-.

e. Pr. Idg. part. perf. act. *ueidus-es -os 'of him who knows': Skr. vidúš-as Avest. vīduš-ō. Greek ειδότ-ος, with -uet-. Balto-Slavonic: Lith. mirusio O.C.Sl. mĭrŭša, extended by -io-.

f. Root-Nouns. Skr. nas-ás 'of a nose', Lat. $n\bar{a}r$ -is. Skr. $\bar{a}s$ -ás Avest. $\hat{a}mh$ - \bar{o} 'oris', Lat. $\bar{o}r$ -is. Skr. $m\bar{u}$ - \bar{s} -as (inferred from the nom. pl. $m\hat{u}$ - \bar{s} -as) Gr. $\mu\nu\delta_S$ (instead of the strictly regular * $\mu\bar{v}\delta_S$, see II § 160 p. 485) Lat. $m\bar{u}r$ -is 'of a mouse'.

§ 238. 10. Lastly, the genitive of certain root-nouns whose root ends in y or j may be cited.

Skr. $n\bar{a}v$ -ás Gr. $v\eta$ -óς $v\epsilon$ ώς (I § 611 p. 462) Lat. $n\bar{a}v$ -is 'of a ship'.

Skr. $r\bar{a}y$ -ás from $r\acute{a}$ -s 'goods, wealth', Lat. $r\bar{e}\bar{\imath}$ (cp. dat. $r\bar{e}\bar{\imath}$) a re-formate like $faci\bar{e}\bar{\imath}$ § 230 p. 118.

Skr. div- $\acute{a}s$ $dy\acute{o}$ - \check{s} , Gr. $\Delta\iota F$ - $\acute{o}\varsigma$, Lat. Jov-is, from nom. Skr. $dy\acute{a}\acute{u}$ - \check{s} 'daylight', $Zs\acute{v}\varsigma$; O.H.G. Zios perhaps for $*d(\check{\iota})ev$ -s = Skr. $dy\acute{o}$ - \check{s} (cp. nom. Zio § 199 p. 80) and A.S. $T\~{\iota}ves$ = $*di(\check{\iota})ev$ -es. Skr. $g\acute{o}$ - \check{s} , and in the Veda $g\acute{a}v$ -as as well, Avest. $g\~{e}v$ - \check{s} gao- \check{s} , Gr. $\beta o(F)$ - $\acute{o}\varsigma$ and a by-form $\beta o\varsigma$ in $B\acute{o}\sigma$ - $no\varrho$ - $o\varsigma$ for *gu-os, Lat. bov-is, O.Ir. bou (later $b\~{o}$) for *bov-os, from *gev-*gov- 'head of cattle'; O.H.G. kuo, and possibly A.S. $c\~{v}$ (p. 80 footnote 1) from a form of the stem to be inferred from the acc. sing. and perhaps from the nom. sing. too (H.G. kuo- A.S. $c\~{u}$ -), see § 199 p. 80, § 221 p. 98. Skr. div- $a\acute{s}$ Gr. $\Delta\iota F$ - $a\acute{s}$ $Bo\sigma$ -: Skr. $dy\acute{o}$ - $a\acute{s}$ $g\acute{o}$ - $a\acute{s}$ = Avest. hamaestr- $a\acute{o}$: $s\~{a}star$ - $a\acute{s}$, see § 231 pp. 119 f. Later re-formates are Lat. Jov- $a\acute{s}$ A.S. $T\~{v}w$ - $a\acute{s}$ Gr. $g\acute{o}$ - $a\acute{s}$ Gr. $f\acute{o}$ - $f\acute{$

§ 239. II. Formation of the Genitive in o-stems (cp. § 228 pp. 113 f.).

a. The Pronominal Endings -sio and -so. Pr.Idg. *ulqo-sio 'lupi' (had nouns *-e-sio beside *-o-sio, as pronouns had? see §§ 418, 450). Skr. vfkα-sya; Avest. vehrkα-he, Gāthic vehrka-hyā (I § 125 p. 115), O.Pers. kāra-hyā 'of a people, host'. Armen. gailo-y (I § 561 p. 417); the ending -ay in proper names, as Trdatay (nom. Trdat) Maremay (nom. Mariam) is perhaps the Iran. -a-hia borrowed; however, it is not quite certain that Armen. -oy -ay have the origin here suggested; see below. Gr. Hom. λύκοιο; and, side by side with

this kind, forms like Δίόλοο are shewn by the metre to be necessary (the MSS. have Δίόλου), Hom. Πηνελέωο (nom. Πηνέλεω-ς) for *-ηοο (I § 611 p. 462), Ion. Att. λύχου, Dor. λύχω.

Armen. -oy may or may not be one of these endings. What makes it uncertain is this. The ablative -oy can be referred to *-o-tos (ep. Skr. mukha-tás), and it might then be assumed that the ablative form was used as genitive owing to the relation between pairs of forms like abl. i zardu: gen. zardu. Cp. § 244 p. 142.

In the Cyprian dialect of Greek occurs the ending $-\omega \nu$, as $\partial \varrho \gamma \dot{\nu} \varrho \omega \nu = \text{Att. } \partial \varrho \gamma \dot{\nu} \varrho \omega \nu$. It is usual to connect this with Arcad. $\tau \omega - \nu i$ 'huius', in which case the ending will have been borrowed from the pronoun. But there are difficulties in the way of this view. Some assume that the ending $-\omega$ which is found in some parts of Thessaly (e. g. $\chi \varrho \dot{\nu} \omega i$, $\tau o \dot{i}$) comes from $-\omega i$. This is hardly likely; it is far more probable that these were locatives used in the genitive sense (§ 263); see below, b.

*-e-so *-o-so in Germanic. Examples of its use with pronouns are Goth. pi-s 'of this' hvi-s 'of which?' (§ 419). It doubtless did not pass on to the noun until the independent growth of Germanic had begun. The position of the word accent in the pronominal forms, *pé-so, *xué-so, explains the breathed s (O.H.G. wulfes O.Icel. ulf-s) and the e (not i) of the ending -es in West Germanic (the i of Goth. -is did not arise until Gothic had split off and become independent). In Goth. and O.H.G. *-e-so, Goth. vulfis O.H.G. wolfes. Old Norse *-o-so, Norse Run. Gōdagas O.Icel. ulfs (beside pess 'of the, of this'). In the oldest documents of A.S., and still later dialectically, we find -æs = *-o-so, as dæzæs 'of a day', elsewhere -es = *-e-so, dæzes; so also in pronouns, dæs and des.

b. Latin and Keltic $-\bar{\imath}$. Lat. $lup\bar{\imath}$. The oldest specimens of the language have $-\bar{\imath}$; later we find both $-\bar{\imath}$ and -ei, but the latter may be nothing more than another mode of writing the sound of $-\bar{\imath}$, as it is in veivos (I § 41 p. 38). The ending $-\bar{\imath}$ in $\underline{i}o$ -stems dates back to the prehistoric period; e. g. $f\bar{\imath}l\bar{\imath}$ (nom. $f\bar{\imath}liu$ -s), so also Falisc. $-\bar{\imath}$, as $C\bar{e}s\bar{\imath}$ 'Caesii'

(Deecke, Die Fal., p. 264). The ending $-i\bar{\imath}$ is later, and due to -i- passing into the genitive from the other cases; it first appeared in adjectives, afterwards in substantives. O.Ir. fir 'viri', maicc 'filii', Irish Ogam inser. maqi $(-\bar{\imath}?) = maicc$, Gall. Ategnati (nom. Ategnato-s), and like forms. $\underline{i}o$ -stems: O.Ir. $c\bar{\imath}li$ 'socii' for *- $i(\underline{\imath})\bar{\imath}$. In Umbro-Samnitic o-stems show the ending $-e\underline{i}s$: Umbr. popler 'populi', Osc. sakarakleis 'sacelli'.

Two considerations make it not improbable a priori that this noun-genitive is a locative formation. These are (1) that in pronouns the Idg. locative in -i (-e-i -o-i) is used from the proethnic stage onwards not only as a locative, but as a genitive (Skr. mē Gr. uoi etc., see § 447), and in particular the genitives Lat. istīus Osc. eizeis can be shewn to be transformations of original forms in e-i (§ 419); (2) Thessal. 200701 is a locative (see last page). It is quite permissible to refer Kelt. -i, i. e. $-\bar{\imath}$, to *-ei, especially as examples of Gall. -i ($-\bar{\imath}$). for *-ai, have been preserved (§ 247). This may perhaps explain the phonetic difficulties of the Latin forms. filz, a genitive in function, is locative in form, the suffix being Ide. -ī (-ī- is the weak grade form of -io- -iio-, as in the voc. fīlī and elsewhere, see § 201 p. 83); this formation would give an easy explanation of Lith. -vie in žõdvie (nom. žõdi-s 'word'). At the same time proethnic Latin had *lupei in use, and the -ei of this, by association with $f\bar{\imath}l\bar{\imath}$, became $-\bar{\imath}$ earlier than the same change took place elsewhere in the language; hence it is that -i is the regular mode of writing this termination in the earliest records of Latin. But in the Umbro-Samnitic branch -ei was kept, although it was extended, as it was in pronouns, by adding -s, and thus became -eis (cp. O.Lat. gen. $m\bar{\imath}$ -s $t\bar{\imath}$ -s § 447); the result was that there was a confluence of o- and i-stems here (cp. Lottner, Kuhn-Schleicher's Beitr. II 311 f.).

Remark. Not much stress must be laid on the form Zextoi 'Sexti' found in a Faliscan inscription (Deecke, Die Fal., p. 180). In the two other proper names found in this inscription, Voltio 'Voltius' and Folcozeo 'Folcosius', s has dropped; and the same may have happened to Zextoi. *Zextois would be parallel to Ceises 'Caesii' Calitenes 'Calitenii'. Or it

is quite conceivable that -oi is formed on the analogy of the -ai in \bar{a} -stems, as Voltai 'Voltas', in the same way as Lat. $equ\bar{a}rum$ follows the analogy of $equ\bar{a}rum$ (§ 345), and loo. pl. Lat. Sabell. $-\bar{a}s$ follows $-\bar{a}s$ (§ 357). Lastly, there is the possibility that the engraver has made a mistake.

c. Lith. vilko, O.C.Sl. vlika, doubtless an ablative form (§ 241). Side by side with this occur the following pronominal forms, Pruss. ste-sse O.C.Sl. \check{ce} -so (§ 418).

Ablative Singular.1)

§ 240. This case had no form proper to itself in the parent language, except with o-stems. In these the ablative ended in $-\bar{e}d$ and $-\bar{o}d$; in other stems the genitive and ablative had the same ending (§ 228 pp. 112 f.).

-ēd and -ōd are related in the same way as -e-sio and o-sio in the genitive singular, -ei and -oi in the locative singular, and -ē and -ō in the instrumental singular. Probably the e-vowel was originally used where the syllable carried the chief word accent (I § 311 pp. 248 f.). Oxytone ablative adverbs of the parent language ending in -ēd (lat. facillimē, cp. Skr. apākād 'from afar' from ápāka- 'distant') kept the e-vowel and its accent down to the time when the languages had begun to develope independently, just as in Greek we find the loc. adv. ἀμαχεί beside ἄμαχο-ς, in Armenian the instr. adv. ardare-v 'άληθῶς'

¹⁾ Delbrück, Ablativ, Localis, Instrumentalis im Altind., Lat., Griech. und Deutschen, 1867. Zeyss, Über die in Ablativform erscheinenden italischen Präpositionen, Kuhn's Zeitschr. XVI 371 ff. Ritschl, Neue plautinische Excurse: Auslautendes d im alten Lat., 1869. Bergk, Beiträge zur lat. Gramm. I, Auslautendes d im alten Lat., 1870. Max Müller, Über Ablative auf d mit Locativbedeutung, Fleckeisen's Jahrbb. B. 113 (1876) S. 689 ff. M. Ruge, De ablativi in veteribus linguis Italicis forma et usu locali, Curtius' Stud. X 383 ff. Havet, L'ablatif des radicaux consonantiques (en latin), Mém. de la Soc. de lingu. VI 105 sqq. J. Schmidt, Die lat. Adverbia auf e von o-Stämmen und die Singulardative der germanischen Pronomina, Festgruss an Böhtlingk, 1888, S. 100 ff. Paul, Der Ablativ im German., in s. Beitr. II 339 ff. Bezzenberger, Lettische Ablative, in s. Beitr. IX 248 ff.

beside the living instrumental ardaro-v from the stem ardaro-'just, right' (cp. J. Schmidt, Festgruss an Böhtlingk, pp. 100 ff.). But the case was different where the forms were not adverbs. Then $-\bar{e}d$ and $-\bar{o}d$ may have become independent of the difference in accent, which was originally the condition of the double form, even before the parent language split up at all.

In such pronominal forms as Skr. $m\acute{a}-d$ 'a me', -d is the ablative suffix; so it is possible to analyse thus — * $ulq\bar{e}-d$, and to regard $-\bar{e}$ as the third form of the strong grade (I § 311 p. 247). (Note that Johansson calls 'the formation in $-\bar{e}d$ $-\bar{o}d$ an instrumental in $-\bar{e}$ $-\bar{o}$ to which a further suffix -d has been added, Bezz. Beitr. XVI 136.) But it is also possible that $-\bar{e}d$ $-\bar{o}d$ first came about by contraction of the stem-final -e -o with $-a^*d$, whatever that may have been; and that $-a^*d$ and -d were parallel forms bearing much the same relation to one another as -es -os and -s in the genitive singular (I § 115 p. 108).

The ablative of o-stems, as a noun-case proper, is fertile in Aryan and Italic; and also in Germanic and Balto-Slavonic, if Goth. vulfa and Lith. vilko O.C.Sl. vlüka are really ablative forms. In Greek the only forms which preserve it are adverbs. In Armenian and Keltic it seems to have vanished utterly at the beginning of the historical period.

In Avestic and in Italic, the ablatives in $-\bar{e}d$ $-\bar{o}d$ which belonged to stems in -o- gave rise by analogy to d-ablatives in the other stems. This made it possible to make a distinction in form between the genitive and ablative of these stems, which had come down from the original language having the same suffix (-es -os -s).

In some languages the ablatival -tos, which belonged to adverbs, made its way into the noun system and became a fertile case suffix. This happened in Sanskrit, Armenian, and Greek, perhaps also in Slavonic. Cp. § 189 p. 66.

§ 241. I. Original ablatives of o-stems ending in $-\bar{e}d$ $-\bar{o}d$.

Pr.Idg. * $u i q \bar{o} d$ (* $u i q \bar{e} d$) from *u i q o- 'wolf', * $j u g \dot{e} d$ (* $j u - g \dot{o} d$) from * $j u g \dot{o}$ - 'yoke', ep. § 240. Skr. $v f k \bar{a} d$ $y u g \dot{a} d$;

Avest. vehrkāb O.Pers. kārā (I § 649.6 p. 496) from kāra- 'people, host'. The ending -od (not -ed) is indicated by Avest. naskab 'behind, along after' with k as compared with instr. pasca = Skr. $pa\dot{s}c\dot{a}$ with c, which therefore contains the Idg. ending $-\bar{e}$ (§ 275). Greek: pronominal adverbs, Locr. $\vec{\phi}$ $\ddot{\phi}\pi\omega$ Cret. $\vec{\phi}$ $\ddot{\phi}\pi\omega$ 'unde'. Latin: old inscr. Gnaivod meritod, in the later language Gnaeo meritō lupō jugō, and many adverbs in -ō; Umbr. pihaclu 'piaculo' somo 'summo'. Osc. sakaraklúd 'sacello': -ēd in Italic only occurs in adverbs (cp. § 240), Lat. older inscr. facilumed i. e. facillumēd, later facillumē rectē Falisc, rectēd, Umbr, rehte 'recte' Osc. amprufid 'improbe' (ē becoming ī as in liqud 'lege' licitud 'liceto'). The following Germanic words may quite regularly represent ablative forms (see below): Goth. vulfa juka. O.Icel. ulfe ulfi. O.H.G. wolfu -o; and possibly we should class along with these ablatives Goth, meina O.H.G. mīn 'mine, my' (from the poss. meina-), which is genitive in use; see § 452. Lith. viłko O.C.Sl. vluka, see below.

In Avestic occurs $-\bar{a}da$ as well as $-\bar{a}b$, as $x\bar{s}apr\bar{a}da$ from $x\bar{s}apra$ -n. 'lordship'; this was produced by accretion of the postposition $\bar{a} = \text{Skr. } d$, cp. the loc. pl. in -hv-a § 356. $-\bar{a}b$ has been superseded by the ending of consonant stems (§ 242) in yimab (yima-, a proper name), cp. Skr. $yam\bar{a}d$.

Two explanations are possible of Greek adverbs of manner, such as $\tau \dot{\omega} c$ 'thus' (cp. Skr. $t \dot{a} d$ 'thus'), $\dot{\omega} - \delta \varepsilon$, $\dot{\omega} c$, $o \ddot{v} \tau \omega$ ούτως, καλώς, after the analogy of which were built up similar adverbs from stems which had another final than -o-, as διαφερόντ-ως, βαρέ(F)-ως, σαφέ(σ)-ως σαφῶς. They may be ablatives of the kind which we are now discussing, or they may be the instr. sing. in Idg. $-\bar{o}$ (§ 275). It is hard to choose between these, since the meaning may be explained equally well on either supposition. If it were necessary to regard the g- which appears in some of these forms as derived from Idg. -d, it could only be ablative. But it has never yet been proved that in any word -g represents original -t -d. In all probability, -s is a later addition, identical with the -s of αψ Lat. abs, αμφίς beside αμφί, O.Pers.

abi-š beside abiy 'to', pati-š beside patiy 'against' (cp. § 228 p. 112). See the Author, Kuhn's Ztschr. XXIV 74 f., XXVII 417; G. Meyer, Gr. Gr.² 294; Osthoff, Morph. Unt. IL 53 f., IV 243.

Remark 1. I have hitherto been hostile to the view of Curtius (Stud. X 218 ff.) that in proethnic Greek *οῦτωτ (*οῦτωδ) became οῦτως before τ - and σ -, and that this form then came to be used regularly, no matter what sound followed. My reasons were as follows. (1) οὕτως (2) When $-\tau$ (- δ) is usual before vowels, but before consonants οὖτω. Such words as a nacro-s love are no exceptions, since the sounds heard in these words would be $-t^st$, or something of the kind, even in the pre-Greek period (I § 469.4 p. 345, § 490 p. 361), and I did not venture to derive (say) τως τό from pr. Idg. *toto*tod, i. e. tod tod. (3) *ούτωτ σοι would become *ούτωσοοι, as *πατοαοθαι becomes πάσοασθαι, and it seems to me incredible that this would be regarded as οῦτως + σοί; since oo for the living language was a lengthened s and nothing more. But now Joh. Schmidt takes up the cudgels again for Curtius (Pluralb. 352 f.)1); and I must once more urge, against this theory, that so far the change of $-\tau$ (- δ) to -c has not been made credible in any single For Schmidt's own opinion - that Hom. Thos is derived regularly from $\tau_{\bar{\alpha}} F_{\alpha \zeta}$, and so coincides with Skr. $t \hat{\alpha} v a t$ — is indefensible; see § 225 Rem. 1 p. 106. I do not deny that it is possible that this * $t \acute{o} t^{s} t \acute{o} d$, or its like, once existed in the parent language, and that $\tau \acute{\omega} \varsigma$ may be derived from it. But my own hypothesis still seems to me to have far greater probability: namely, that we have here an adverbial sign -5, which came down from the original language in certain forms. and in Greek overstepped its original limits. Schmidt himself admits the high antiquity of this -s e. g. in augul-5, which (following Fick, Wörterb. I3 18) he compares with O.Pers. abi-š. For our present purpose, it is all one whether this -s is called, as Schmidt calls it, a neuter formative suffix, or compared, as it is in the text, with the sign of the gen.-abl. case. Yet another attempt to explain this -s has been recently made by Bartholomae, Stud. zur idg. Sprachgesch., I 75 f.

It is doubtful whether Gr. $\xi\xi$ Lat. ex is one of the forms which contain this adverbial -s, because it is possible that ξ_x and ec, wherever they occur, are simply short forms of $\xi\xi$ and ex made necessary by the sounds which happen to come next them (cp. the Author's Gr. Gr.²

¹⁾ Schmidt says that in Kuhn's Ztschr. XXIV 74 I have "passed over in silence the carefully considered view of Curtius". He has not observed that my essay is earlier than that of Curtius, since it appeared as early as May 1877 (it was the *Habilitationsschrift* for my appointment as Privat-docent). Schmidt says that "no one has yet assailed it": here he is wrong again, for I have indicated its weak points in Kuhn's Ztschr. XXVII 417.

pp. 71, 219). But in any case I am firmly convinced that the analogy of \$E gave rise to \$\varepsilon_c (\varepsilon_c) as a by-form of \$\varepsilon_r\$. Schmidt contests this point too; but how he can say, as he does on page 358, that I have not explained why there is a difference in meaning between \$\epsilon_{\gamma}\$ and \$\epsilon_{\gamma}\$, or how he can speak as if I had given as the origin of ève beside èv simply and solely the analogy of the relation between at and ar, is a mystery to me; for in the very passage which he cites (Ber. der sächs. Ges. der Wiss., 1883, pp. 190, 194 f.) I have expressly said that ex; was coined as the opposite to Et as used with verbs of motion, to which definition only iv with the accusative answers. The form of iv was affected in only one of its meanings, just as Skr. páti-, for example, makes the genitive patyur when it means 'husband', but not when it means 'lord' (§ 231 p. 120); and cp. Gr. veāviās : veāviā § 190 p. 67, and Kuhn's Ztschr. XXVII 412. Ers may have been formed on the analogy of Ex, even if Ex had already its sentence-doublet is in use by its side; and the use of the pair of forms, $\hat{\epsilon}_{\nu_{5}}$ and $\hat{\epsilon}_{\nu_{7}}$, was not regulated by the use of $\hat{\epsilon}_{5}$: $\hat{\epsilon}_{\kappa_{7}}$ because the newly coined eve meant something different from ev with the dative.

Goth. vulfa O.Icel. ulfe ulfi may be derived, without violating any ascertained law of sound-change, not only from the abl. in *- $\bar{e}d$, but from the loc. in *- $o\dot{\varrho}$ (§ 263), the instr. in *- \bar{e} (§ 275), or the dat. in *- $\bar{e}(\dot{\varrho})$ (§ 246); the Icelandic form may also be a dative in *- $\bar{o}\dot{\varrho}$ (§ 246); and lastly O.H.G. vulfu may be instr. in - \bar{o} (§ 275). In these, and in other cases of the same kind, it must not be forgotten that a form may have had more than one origin, since as sound-change goes on, there is often a confluence of several inflected forms into one. But we can hardly doubt that a more thorough examination of the Syntax will often narrow the limits of choice, and shew that a given form has not so many different origins as we imagined.

Gothic adverbs in -ba, as ubila-ba 'evilly, ill' hardu-ba 'hard, very' if they belong to the same group as Skr. $sth\overline{u}la-bh\acute{a}-s$ 'huge, massive' and the like (II § 78 pp. 216 ff.), are either abl. sing. or instr. sing. (§ 275). But it is a question whether -ba be not a particle (= Gr. $\phi\acute{\eta}$ 'how, as', cp. Höfer's Ztschr. II 204, Fick's Wörterb. I³ 686), added to the acc. sing. neut. used adverbially, and meaning 'somewhat, $n\omega\varsigma$ ' or something of the kind.

The following pronominal forms are ablative: Goth. hvamma 'to whom' hvammē-h 'to each' (*-ēd) and O.H.G. hwemu

(*- $\bar{o}d$): Skr. $k\acute{a}sm\bar{a}d^{1}$); the Gothic form may also be regarded as an Idg. dat. in *- $\bar{e}(i)$ (§ 246). Cp. § 423.

The Balto-Slavonic forms vilko and vlika have the meaning of a genitive as well as an ablative; see § 228 p. 113, § 239 p. 133. The derivation of Lith. vilko (-a in some dialects, Lett. -a) from Idg. *ulqōd is not without its difficulties. -ō makes us hesitate; -û would have been expected (I § 92 p. 86). But there is no cogent reason for deriving it from *ulqād, which would at once satisfy the known phonetic laws; and the last word has not yet been said on the representation of Idg. ō in Baltic. As we have also instances like tvorà: tveriù, žolē: želù, it seems best to put the matter provisionally thus: there is a confluence of Idg. ō and Idg. ā in Lithuanian and Lettic, under certain conditions unknown.

Remark 2. Bezzenberger's assumption (Bezz. Beitr. IX 248 ff.), that Lettic genitives such as $t\tilde{o}$ beside $t\hat{a}$ (= Lith. $t\tilde{o}$), tiltu beside tilta (= Lith. tilto) contain an Idg. ablative in $-\bar{o}d$, is doubtless right. Leskien calls my attention to a double formation in the Lithuanian dialect of Velûna, which should be compared with this: namely $t\hat{a}$, $katr\hat{u}$ beside d^evu .

- \S 242. II. Extended Use of the d-ablative in Avestic and Italic.
- 1. Avestic. vehrkāp beside instr. vehrka dat. vehrkāi became the model, in prehistoric times, for the ablatives barentyāp haenayāp from the stems which make instr. barentya haenaya dat. barentyāi haenayāi. Now these same stems had gen. *barentyāh *haenayāh (which appear in the historical language as barentyā haenayā); accordingly, in connexion with the genitives *sūn-ah *māpr-ah *berezat-ah *mananh-ah (in the historical language sūn-ō māpr-ō etc.) sprang up the ablativesp sūna māprap berezatap mananhap; in the same way bāzvap and bāzaop were formed beside *bāzv-ah (bāzv-ō) and bāzao-š, and ažōip beside ažōi-š. Cp. Bartholomae, Ar. Forsch. I 74 f.

¹⁾ For -u in hwemu, cp. § 198 Rem. 2 p. 80.

In these forms too we find $-\vec{a}-a$ instead of $-\vec{p}$; cp. § 241 p. 135.

Remark. It is not clear whether these analogical formations existed in Old Persian. In this language both -d and -s (-h) dropped (I § 649 p. 496); thus if there ever were such re-formations in -d, they could not be distinguished from gen.-abl. forms in -s. $taum\bar{a}y\bar{a}$ ($taum\bar{a}$ -'family'), which is used as an ablative, may be derived from either *- $\bar{a}y\bar{a}d$ or *- $\bar{a}y\bar{a}s$, as far as form goes. The two forms were only distinguished in i- and u-stems, which made the gen. in $-ai\check{s}$ and $-au\check{s}$; but in these stems no forms occur which could decide the question.

 \S 243. 2. In Italic it is probable that at least the beginning of the spread of the d-suffix dates from the proethnic period.

-ād: Lat. old inscr. praidād sententiād, later praedā sententiā; Umbr. tota 'civitate', Osc. tovtad 'civitate' suvad 'sua'.

-iēd (in Lat. and Umbr. this -iēd and the ending -iē of the instr. etc. have run together; see § 277): Lat. faciē, Umbr. uhtretie 'auctoritate', and similarly Lat. rē Umbr. ri 're' re-per 'pro re'. -īd: Lat. marīd (it is true that the authority for this form is the Columna Rostrata, but the word is correctly formed) marī omnī (-ei in the inscr. forms omnei partei is merely a way of writing the sound of ī, as it is in veivos I § 41 p. 38); Umbr. puni poni pone 'posca' Osc. slaagid 'loco, regione' Pelign. fertlid 'fertili'. It would seem that -īd spread from i-stems to consonant-stems in proethnic Italic: Lat. e. g. air-īd cōventiōn-īd bov-īd portiōn-ī, corporī, Falisc. op-īd 'ope', Umbr. per-i 'pede', Osc. praesent-id 'praesente'.

This re-formation in $-\bar{a}d$ $-\bar{e}d$ $-\bar{i}d$ sprang up in the same way as the Latin gen. pl. $-\bar{o}rum$ on the analogy of $-\bar{a}rum$ (§ 345), and the Sanskrit nom. acc. pl. neut. $-\bar{i}ni$ $-\bar{u}ni$ on the analogy of $-\bar{a}ni$ (§ 339). At the same time, another circumstance seems to have aided this development: the ablative and instrumental had already run together. In o-stems the ablative was used for abl. and instr., e. g. Lat. cum $f\bar{i}li\bar{o}$ Osc. com preivatud 'cum privato (reo)'; and in consonantal stems the instrumental was used for instr. and abl., e. g. Lat.

(Gnaivod) patre prognātus, Umbr. pure (in pure-to) 'ab igne' (cp. below). But in the plural also, instrumental and ablative had run together, and this may have had some influence how much we cannot tell - upon the use of the singular. Suppose then that the $-\bar{o}d$ of o-stems had added the function of the instrumental to its own (the genuine instr. in $-\bar{o}$ can no longer be traced except in adverbs, Lat. modo and the like, § 275); it was a natural step to a new group of forms in -ad -ēd -īd beside the original instrumentals in -ā -ē -ī (§§ 276. 277, 278), the new forms being used for both ablative and instrumental. This hypothesis agrees well with the fact that in \bar{a} -stems as well as in o-stems the genuine instrumental is not found except in adverbial forms (§ 276). It was also all the easier for this re-formation in -d to spread, because in the plural, as well as in the singular, there were distinct forms for the genitive and the ablative (abl.-instr.).

In consonant stems, during the historical period, there was a struggle for the mastery between the abl.-instr. re-formation in $-\bar{\imath}d$ and the instrumental (also used for abl.) in (Lat. Umbr.) -e. In Latin, the forms in -ī grew gradually rarer, and gave place to those in -e (e. g. instead of airīd we find later only aere); but -e itself quite early came to be used with i-stems. as ove parte from the stems ovi- parti- (cp. acc. ovem following ped-em § 214 p. 92 and gen. ovis following ped-is § 231 By degrees one or other of these two endings became regular for certain groups of nouns. But neither in consonant stems nor in i-stems did the exceptions quite disappear; and the rules laid down by Caesar and other grammarians only shew how impossible it is to get at the facts of a living language by studying the books of theorists. Umbrian, at the date to which the existing monuments belong, the ending -e, which was also a locative suffix (§ 269), was the more common of the two; e.g. nomne 'nomine' curnase answering to the Latin 'cornice'. In Oscan, on the other hand, beside praesentid there are forms in -od, lig-ud 'lege' tangin-úd tangin-ud 'sententia, consulto'. This

is the ending of o-stems, which has spread further; clearly because the two stems already agreed in the acc. sing. (-om) and gen. sing. (-eis). (See § 218 p. 95, § 231 pp. 118 f., § 239 pp. 131 f.).

Remark. It can hardly be that Latin consonant stems ever had an ablative ending $-\bar{e}d$ (which, if it ever existed, must have been a contamination of $-\bar{i}d$ and $-\bar{e}$). dictatored on the Col. Rostr., may be a false archaism (but as to the language of this inscription reference may now be made to Wölfflin, Sitzungsber. der k. bayer. Akad., 1890 pp. 293 ff.); and the length of the -e in poetry (Bücheler-Windekilde Grundr. der lat. Decl. 97) may be due to metrical reasons.

As regards u-stems, there are wide differences in the Italic languages. Lat. $-\bar{u}d$: $magistr\bar{u}t\bar{u}d$, later $magistr\bar{u}t\bar{u}d$. But Umbr.-Samn. has the ending of i-stems: Umbr. trefi 'tribu' fratrecate 'magisterio', Osc. castrid 'fundo' from the stem whose the genitive is castrovs. Or did \bar{u} become $\bar{\imath}$ under certain conditions in proethnic Umbro-Samnitic? It is doubtful how we are to regard Umbr. maronato beside maronatei 'magistratu' (see Bücheler, Umbr. pp. 173 sq.).

One more point remains to be noted. In Umbrian, fully formed ablatives, both singular and plural, often have -tu -ta -to affixed to them: as akru-tu 'ab agro' pure-to 'ab igne' vapersus-to 'a sellis'. A -tu -ta is also affixed in the imperative plural. Both are equally obscure.

§ 244. III. The Adverbial Ending -tos used as a Suffix of the Ablative Case (cp. § 189 pp. 65, 66).

Sanskrit. Adverbs like tá-tas 'thence' i-tás 'hence' gave the type first of all for noun forms such as mukha-tás from mukhá-m' mouth' (cp. Lat. coeli-tus from coelu-m). Now pronominal adverbs in -tas could be used as an ordinary case, e. g. tátah ṣaṣṭhád 'from this sixth part'; hence nominal adverbs such as mukha-tás became part of the case system, and were used as ablatives. In Epic poetry they have become exactly parallel to the ordinary ablative, and could be used for singular and plural alike, as their adverbial origin would have led us to expect: e. g. gurur garīyān pitṛtō mātṛtas ca

'the teacher is more honourable than father or mother', bhayq daṣੱṭribhyaḥ śatrutaḥ 'fear of snakes, of enemies'. In Prākrit the use of this ablative formation $(-d\bar{o} - du = \text{Skr.} - t\bar{o})$ spread still more widely; see Lassen, Inst. linguae Pracr. pp. 302 sq.

Armenian. Examples of the ablative from stems in i, u, and consonants are: i srtē (srti- 'heart'), i zardē (zardu- 'ornament'), y akanē (akan- 'eye'), i maurē (maur- 'mother'. The ending of these according to Hübschmann (Armen. Stud. I 89) comes from *-e-tos by an intermediate stage of *-ey (I § 483 p. 357). In the same way, the -oy of o-stems, as i gailoy, may contain *-tos, -oy being for *-o-tos. Further, the genitive gailoy may have the same origin (cp. Gr. -9ev used as a genitive, Rem. 2 below). However, it is possible to derive -oy from *-o-sio, and so the uncertainty does not at once disappear. Cp. § 239 p. 131.

The Greek gen.-abl. $\delta v \delta \mu \alpha \tau \sigma_S$ corresponds to the Sanskrit $n \dot{\alpha} m \alpha - t \alpha s$; but it was attracted to the stem $\delta v \sigma \mu \alpha - \tau \sigma_S$ ($\delta v \delta \mu \alpha \tau \alpha$, $\delta v \sigma \mu \dot{\alpha} \tau \omega v$), which contains the formative suffix $-\tau \sigma_S$, and together with it formed a system of τ -cases. See II § 82 p. 250. $\delta v \delta \alpha \tau \sigma_S = \delta v \delta \sigma_$

Remark 1. J. Schmidt gives an explanation of the τ -cases of $\delta ro\mu\alpha$ which seems to me very unlikely (Pluralb. 187 ff.). He denies altogether the connexion of these with the suffix -tos and the Idg. to-extension of neuter n-stems. He believes that the nom. acc. sing. $\delta ro\mu\alpha={\rm Skr.}~n\bar{\alpha}m\alpha$, and $*\varphi \epsilon \rho\alpha$ (the older form of $\varphi \epsilon \rho\sigma ro\mu\alpha$) = Skr. $bh\dot{\alpha}r\alpha t$ eventually came to have the same ending; and that hence $\partial r\dot{\sigma}\mu\alpha\tau c\varsigma$ $\partial r\dot{\sigma}\mu\alpha\tau c$ etc. were coined on the analogy of $*\varphi \epsilon \rho\alpha\tau c\varsigma$.

Balto-Slavonic. Slavonic neuters in -e, gen. -ete, as tele 'calf', may belong to this class. -t- did not originally belong to

the inflexion of these words, as is shewn by certain parallel forms such as Russ. telen-ok 'calf' == O.C.Sl. *telenŭkŭ, mladen-ici 'youth, minor' (Pruss. malden-iki-s 'child') as compared with mlade 'child'. We should have to assume that *-tos made its way into the case system, and that the result was a series of t-forms, at some period when there were parallel genitives in *-es and *-os. As the ending *-es became regular for the genitive, *teleto(s) was transformed to *telete(s). Cp. also Pruss. smunen-t-s 'human being', acc. pl. smunen-t-ins beside smunen-isku dat. 'human'.

Dative Singular.1)

§ 245. The suffix of this case was a diphthong consisting of some short vowel followed by i. With consonant stems it appears as $-\vec{e}$ in Sanskrit, as $-\alpha i$ in Greek (infinitives, as $i\delta\mu\epsilon\nu-\alpha i$, and we may conjecture in some adverbs with the ending $-\alpha i$, as $\pi\alpha\varrho-\alpha i$ beside loc. $\pi\dot{e}\varrho-i$ instr. $\pi\alpha\varrho-\dot{\alpha}$ gen. $\pi\dot{\alpha}\varrho-o\varsigma$), as -i in O.C.Sl. (synov-i = Skr. $s\bar{u}n\dot{\alpha}v-\bar{e}$, -i standing for *- \check{e} , ep. I § 84 p. 82, and to the works there cited, add Jagić, Archiv für slav. Phil X 191). From these we restore *- $\alpha\dot{z}$ (or *- $\alpha\dot{z}$? see I § 109 pp. 100 ff.) as the proethnic suffix. It is

¹⁾ Delbrück, Über den indogermanischen, speciell den vedischen Dativ, Kuhn's Zeitschr. XVIII 81 ff. Bartholomae, Zur Bildung des dat. sing. der [ar.] α-Stämme, Bezzenberger's Beitr. XV 221 ff. Gerland, Über den altgriech. Dativ, zunächst des Singularis, Marburg 1859. Höfer, Der lat. Dat.-Locativ; in his Zeitschr. für die Wissenschaft der Sprache II 192 ff. Förstemann, Zur Geschichte altdeutscher Declin.: der dat. sing., Kuhn's Zeitschr. XVII 54 ff.

not quite so certain that $-\bar{\imath}$ in Lat. $patr-\bar{\imath}$ represents this dative *- $a\underline{i}$ (§ 249). It is also doubtful whether the Irish dat.-loc.-instr. forms, such as coin 'cani', are datives in *- $a\underline{i}$ (§ 251); perhaps they are all locatives in origin (cp. Gr. **uv-i). Lastly, it is uncertain how we should regard the Lith. gerundive forms in the dative absolute, as $m\acute{a}n\ be-m\acute{e}gant(i)$ 'whilst I slept' $m\acute{a}n\ par\acute{e}jus(i)$ 'when I came home'. J. Schmidt would have them to be Idg. datives (Kuhn's Zeitschr. XXVI 260 f.); *- $a\underline{i}$ would have become *- \ddot{e} , and this -i according to I § 664. 3 pp. 523 f.

Stems in o, \bar{a} , and $i\bar{e}$ in the proethnic period had the endings *- $\bar{o}i$ (*- $\bar{e}i$), *- $\bar{a}i$, *- $i\bar{e}i$, contracted from -o+ai (-e+ai), - $\bar{a}+ai$ (or -a+ai), - $i\bar{e}+ai$ (cp. I pp. 106 f.). In \bar{a} -stems and $i\bar{e}$ -stems dat. and loc. sing. had run together even then (§§ 264, 265).

Not all of the forms in Greek, Italic, Keltic, and Germanic which are classed as singular datives in the grammars are really dative. In both form and use there has been confusion with the locative, instrumental, or ablative. Hence great complications have arisen (cp. § 188); and many points in the history of the Indo-Germanic dative, locative, and instrumental forms in these languages remain dark for the present. When this is so, care will be taken that as complete a list as possible shall be given of all the possible ways in which any given form may be explained.

§ 246. 1. o-stems. Pr. Idg. * $ulq\bar{o}i^1$), and doubtless *- $\ell(i)$ also, as in the abl. sing. there were both *- $\bar{o}d$ and *- ℓd , in the loc. sing. *-oi and *- ℓi , in the instr. sing. both *- \bar{o} and

¹⁾ I do not consider it proved that a presumed * $u_i^lq\bar{o}_i$ could become * $u_i^lq\bar{o}_i$ in Idg. Lat. $lup\bar{o}_i$ cannot be derived from such a form as * $u_l^lq\bar{o}_i$, if only for the reason that the Lat. dative $-\bar{o}_i$ always remained long. I assume a loss of $-i_i$ only for $-\bar{e}_i$ (and that perhaps only at the end of a sentence or clause); where the reason was that the two vowels of this diphthong were closely connected (cp. I § 645.1 p. 489). But I do not deny that i_i may have dropped in \bar{o}_i as well in the parent language. These sounds may have been differently treated at different periods, or when their position in a word was different. See I § 150 pp. 137 f.

*- \dot{e} (§§ 240, 263, 275). Skr. - $\dot{a}i$ in the infinitive, e.g. the infin. in -dhyāi, as bhára-dhyāi, from the stem -dhya- (this ending is also pronominal, as tásmāi dat. of 'this'); Avest. -āi regularly, as vehrkāi. Sanskrit and Avestic have another ending $-\bar{a} = \text{Idg. } *-\bar{e}(\underline{i})$, as Skr. $sakhy\dot{a}$ from $sakhy\dot{a}-m$ 'friendship' Avest. aša from aše-m 'what is just, justice'; see Bartholomae, Bezz. Beitr. XV 221 ff., J. Schmidt, Pluralb. 234 f. For Skr. vrkāva see below. Gr. ίππω; -ωι later on (in Attic in the second century B. C. or thereabouts) became -ω, Thess. -ov (I § 84 p. 84, § 132 p. 120); for the forms in -or used in several dialects for the dative, see § 247. O.Lat. Numasiōi inser., populōi Rōmānōi mentioned by Marius Victorinus; later on $-\bar{o}_i$ became $-\bar{o}$, $lup\bar{o}$ $juq\bar{o}$ (I § 136 p. 123); Osc. Abellanúí 'Abellano', Umbr. Tefre Tefri Tefrei 'Tefro (deo)', cp. below. O.H.G. wolfe, O.Icel. ulfe ulfi, cp. below. Pruss. wirdai 'verbo' with $-a\underline{i} = -o\underline{i}$, for * $-\overline{o}\underline{i}$; Lith. vilkui, cp. below.

In Sanskrit, nouns usually have $-\bar{a}ya$, as $vfk\bar{a}ya$. Bartholomae (Handb. p. 95, Ar. Forsch. II 169, III 63) regards this as the old dative extended by -a, a byform of the postposition \acute{a} , cp. Avest. $fradap\bar{a}i$ \bar{a} 'for assistance'. He conjectures that the same -a is contained in the locative ending Avest. -hv-a O.Pers. $-uv-\bar{a}$, although of course an original \bar{a} may be contained here (§ 356); and it may be the same as the affix -e in such locatives as Lith. $ra\~nkoj-e$ O.C.Sl. kamen-e (§§ 257, 264) 1), ep. § 186 p. 62.

Umbro-Samnitic. Two things are possible. (1) It may be that in pr. Ital. $-\bar{o}_{\hat{i}}$ became $-o_{\hat{i}}$ before consonants (cp. Ital.

¹⁾ Bartholomae (loc. cit.) takes a to be a proclitic by-form of \bar{a} in Avest. verbal compounds, such as $a-s\bar{a}s$. In exactly the same way, Wackernagel now holds that \bar{c} - in $\bar{c}-\varphi\epsilon\lambda c\bar{c}$ $\bar{c}-\epsilon\dot{\epsilon}\lambda\lambda\omega$ is the weak grade of \bar{a} - in $\bar{a}-\varphi\epsilon\lambda\dot{\epsilon}\omega$ (Das Dehnungsgesetz, Basel 1889, p. 50). If so, $\bar{\epsilon}$ - in $\bar{\epsilon}\cdot\varphi\epsilon\lambda\omega$ and words like it might belong to the same class. Are we then to postulate that this prefix in Idg. had four forms, $\bar{e}:e$ and $\bar{c}:o$? That would doubtless mean \bar{e} \dot{e} and \dot{c} \dot{c} \dot{c} \dot{c} for \dot{c} and \dot{c} could hardly be the weak grades of \bar{e} and \bar{c} .

-di and -ai in \bar{a} -stems, § 247), and that oi became the regular ending in Umbr.-Samn. If so, Umbr. -e -i -ei is related to Osc. -úí as the instr. pl. Umbr. -es -ir -eir is to Osc. -úí s (§ 380). (2) Or - $\bar{o}i$ became Umbr. -e -i -ei Osc. -úí in the Umbr.-Samn. period, and not before; in which connexion it should be remembered that ú may be read as \bar{o} or \bar{o} . It is probable that the Umbr. dative ending did not become identical with the locative ending which answered to Osc. eí, since the loc. is consistently written -e -e, e. g. uze onse in umero' (§ 263).

For the Irish fur, used as a dative, see § 275.

Germanic. O.H.G. wolfe O.Icel. ulfe ulfi for *uulfai, -ai for -oi -ōi, as in ā-stems -ai comes from -āi (§ 247). But it is possible to explain the O.Icel. form, along with Goth. vulfa, as a dative by deriving it from an Idg. -ē for -ēi. ulfe and vulfa may also be the ablative in *-ēd (§ 241 p. 135) or the instr. in *-ē (§ 275); wolfe and ulfe, and doubtless Goth. vulfa, may be loc. in *-oi as well (§ 263).

Goth. hvamma dat. of 'who' blindamma dat. of 'blind' (cp. hvammē-h dat. 'each') may contain the Idg. dative ending $-\bar{e}(\underline{i})$ (cp. Skr. kásmāi); but they may also be ablative like O.H.G. hvemu blintemu (§ 241 pp. 137 f.).

Balto-Slavonic. Lith. -ui in vilkui arose (1) either at the end of a clause or sentence and when a sonant was the next sound following (cp. vilkais = Idg. *ulqōis § 380), or (2) in accordance with Leskien's Law of Shortening, stated in vol. I § 664.3 pp. 523 f.

The O.C.Sl. dative vlŭku (pronouns also have -u, as tomu) cannot be derived from anything but pr. Slav. *-ou so far as we can tell from what is at present known of sound change in Slavonic. I do not know what to make of this form.¹) It recals the adverbs tu 'there' onu-de 'èueî'.

§ 247. 2. \bar{a} -stems. Pr. Idg. * $e\bar{k}u\bar{a}i$. Skr. Ved. suv-apaty $\bar{a}i$ from suv-apaty \bar{a} - 'a woman who has fair offspring'; but

¹⁾ Wiedemann derives this -u from Idg. $-\bar{o}i$ (Das litau. Präteritum I 47). How this is to be supported I do not see.

cp. below. Gr. $\chi \omega' \varrho \alpha$; the -i of $-\bar{\alpha}i$ dropped later on, just as did that of $-\omega i$ (§ 246, last page). O.Lat. $M\bar{\alpha}t\bar{u}t\bar{\alpha}$, later equae; Umbr. tute tote 'civitati' Osc. deívaí 'divae'. O.Ir. $mn\bar{a}i$ from nom. ben; tuaith, *- $\bar{\alpha}i$ becoming first *- $\bar{\alpha}i$ and then *- $\bar{\imath}$ (-i in soillsi was previously *- $i\bar{\imath}$); it is worth remarking that $-\bar{\imath}$ is found even in Gallic, $B\eta\lambda\eta\sigma\alpha\mu\iota$ from nom. Belisama (cp. § 239 p. 132). Goth. gibái A.S. $\bar{\jmath}$ iefe, and cp. the pron. Goth. $\bar{\jmath}$ izái dat. fem. of 'this' as contrasted with Skr. $t\acute{a}sy\bar{a}i$ (cp. § 263 Rem.). Lith. $ra\bar{n}kai$ O.C.Sl. $rac\check{e}$ (I § 84 p. 82, § 664. 4 p. 524, § 665. 3 p. 525).

Aryan. The usual ending is Skr. $-\bar{a}y\bar{a}i$, Avest. $-ay\bar{a}i$, as $\acute{a}\dot{s}v\bar{a}y\bar{a}i$ $haenay\bar{a}i$, a re-formation of the same kind as the gen. sing. Skr. $-\bar{a}y\bar{a}s$ Avest. $-ay\bar{a}$, see § 229 p. 115, § 264. The shorter ending $-\bar{a}i$ is only found in $i\bar{a}$ -stems. In Avest. $-y\bar{a}i$, $gaepy\bar{a}i$ from $gaepy\bar{a}$ - f. 'earthly', there need be no scruple whatever in assuming that $-yay\bar{a}i$ has been shortened by dissimilation; and the only question is whether in Vedic $suvapaty\bar{a}i$, $-y\bar{a}i$ has not been shortened from $-y\bar{a}y\bar{a}i$ in the same way (see I § 643 p. 482, and J. Schmidt, Kuhn's Ztschr. XXVII 383); cp. also gen. loc. du. $y\bar{o}\bar{s}$ beside $y\dot{a}y\bar{o}\bar{s}$ etc. in § 307 and § 422. But in any case the old ending $-\bar{a}i$ was kept by pronouns: Skr. $k\dot{a}sy\bar{a}i$ Avest. $kahy\bar{a}i$ (§ 425).

In Greek we find $-\bar{\alpha}i$ in place of $-\bar{\alpha}i$ as we find $-\alphai$, the locative ending, in place of $-\omega i$. This $-\alpha i$ is found in Boeot. ($-\alpha i$, $-\bar{v}$, see I § 80 p. 72), Arcad.-Cypr., Elean, and N.-W. Greek; $-\bar{\alpha}i$ is certain for Boeotian ($II\lambda\alpha\dot{\nu}\chi\alpha\dot{\epsilon}$, $F\epsilon\lambda\alpha\dot{\nu}i\eta$, see I § 96 p. 90), and so it was doubtless found in the other dialects which had $-\alpha i$ instead of $-\alpha i$; it should be remembered that -AI may represent either $-\bar{\alpha}i$ or $\bar{\alpha}i$, as far as the letters go. In proethnic Greek, o-stems had $-\bar{o}i$ (Idg. dat. form) for dat. and instr., and -oi (Idg. loc. form) for locative; but $\bar{\alpha}$ -stems had $-\bar{a}i$ (Idg. dat. and loc.) for both dative and locative (the ending of the instr. was doubtless the Idg. form in $-\bar{\alpha}$, see § 276). $-\bar{\alpha}i$ and $-\bar{\alpha}i$ became -oi and -ai in pr. Greek before words beginning with a consonant (I § 611 p. 461); and thus in o-stems the dat. (-instr.) form became sometimes

identical with the locative, whilst the \bar{a} -stems developed a form which seemed to be of the same kind as the Idg. locative in -oi, and this accordingly absorbed the special locative uses.¹) By this time the boundary line between dat. (-instr.) and loc. was partly 'obliterated in o-stems, and in \bar{a} -stems the state of things was much the same. After this both classes of stems moved on side by side in the same direction: in one group of dialects, as Ion.-Att., $-\omega$ and $-\alpha$ absorbed $-\omega$ and $-\tilde{a}$ in the declensions, so that these survived only in adverbs and certain fossil forms (e. g. oino, $\Theta\eta\beta\omega$ - $\gamma\varepsilon\nu\eta'$ ς); while elsewhere, as in Boeotian, $-\omega$ and $-\tilde{\alpha}\iota$ gained the day.

Italic. O.Lat. $M\bar{a}t\bar{u}t\bar{a}$ for pr. Ital. $-\bar{a}i$, which answers to $-\bar{o}i$ in $Numasi\bar{o}i$. Whether Menervai and similar forms of the oldest inscriptions have preserved this diphthong it is impossible to decide, because -AI may be differently read. $-\check{a}i$ -ae, the regular ending in classical Latin (e. g. equae), is the anteconsonantal form of proethnic Italic (I § 612 p. 462), and was also the ending of the locative (§ 264). This form $-\check{a}i$ has become the regular ending in Umbr.-Samn. also; and here too it is impossible to trace any distinction in form between dative and the locative (see § 264).

Ennius has $terr \bar{a}\bar{\imath}$ as a dative (cp. $-\bar{a}\bar{\imath}$ gen., § 229 p. 116); apparently in consequence of the use of the same form in $-\bar{e}\bar{\imath}$ ($\dot{\imath}\bar{e}$ -stems) for both genitive and dative (§ 230 p. 118, § 248).

§ 248. 3. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68 footnote 1). Pr. Idg. * $bhr\bar{g}h\eta t$ -(i) $i\bar{e}i$, and doubtless -(i) $i\bar{e}$ at the same time, 'celsae' (cp. the locative § 265). Skr. $brhaty\bar{a}i$, Avest. $barenty\bar{a}i$. Lat. $faci\bar{e}$, Umbr. kvestretie 'quaesturae' (and therefore O.Lat. $r\bar{e}$

¹⁾ $-\bar{\alpha}\iota$ before sonants, and $-\bar{\alpha}\iota$ before consonants, survived side by side: just as in certain dialects we find both $-o\nu_5 - \bar{\alpha}\nu_5$ before sonants, and $-o_5 - \bar{\alpha}\nu_5$ before consonants, in the acc. pl. of stems in o and $\bar{\alpha}$ (§§ 326, 327).

Umbr. ri 'rei') can be explained as coming from Idg. *-(i) $\underline{i}\overline{v}$, ep. § 265; a second form is $faci\overline{\imath}$ (as in the gen. sing., § 230 p. 118), whose $-i\overline{\imath}$ may be from pr. Ital. *-(i) $\underline{i}\underline{e}\underline{i}$, for *-(i) $\underline{i}\underline{e}\underline{i}$, just as $-a\underline{i}$ in \overline{a} -stems came from $-\overline{a}\underline{i}$ (§ 247, last page); for the third form $faci\overline{e}\overline{\imath}$ see below. Mid.Ir. Brigti, insi; -i for *- $i\overline{\imath}$, and this for -*(i) $\underline{i}\underline{e}\underline{i}$ or *-(i) $\underline{i}\underline{e}$; the form may also be regarded as locative (§ 265) or instrumental (§ 277). Lith. $\underline{z}\underline{e}mei$ O.C.Sl. zemlji for *- $\underline{i}\underline{e}\underline{i}$ (I § 68 p. 60, § 147 p. 131), and this for *- $\underline{i}\underline{e}\underline{i}$, just as in \overline{a} -stems *- $a\underline{i}$ comes from $-\overline{a}\underline{i}$ (§ 247 pp. 147 f.).

Italic. Side by side with Lat. $faci\bar{e}$ and $faci\bar{\imath}$ is the form $faci\bar{e}\bar{\imath}$, which has got the ending $-\bar{\imath}$ from consonant stems, perhaps following $r\bar{e}\bar{\imath}$ (cp. Skr. $r\bar{a}y$ - \hat{e}). Are we to regard Osc. Kerrí Pelign. Cerri 'Cereri' as the dative of a similar stem?

O.Ir. inis beside insi is an i-stem form (§§ 260, 278), like the gen. sing. inseo (§ 230 p. 118).

Goth. $frij\bar{o}ndjai$ could no doubt be derived from *- $i\bar{e}i$ (cp. anstai § 260); but it must surely be a $i\bar{a}$ -stem form like other cases, e. g. gen. $frij\bar{o}ndj\bar{o}s$. Greek Att. $\varphi \varepsilon \varrho o v' \sigma \eta$ $a\lambda \eta \vartheta \varepsilon i a$ and Lith. $v\tilde{e}\check{e}ancziai$ must certainly be assumed to be $i\bar{a}$ -forms. Cp. p. 68 footnote 1.

§ 249. 4. *i*-stems. Different endings are found in different branches of the language: $-e\underline{i}-a\underline{i}$, $-(i)\underline{i}-a\underline{i}$, $-\overline{i}$. But how these are historically related is not clear; nor is it clear how matters stood in the parent language. Probably $-e\underline{i}-a\underline{i}$: $-\underline{i}-a\underline{i} = -men-a\underline{i}: -mn-a\underline{i}$ (§ 251).

Aryan. Skr. ávay-ē Avest. ažayae-ca ažēē (cp. Bartholomae, Handb. § 93 p. 40, § 224 p. 89); in the infinitive, Skr. $p\bar{\imath}$ -táyē 'to drink' Avest. ker^{\imath} -tēē 'to complete' (II § 100 p. 298), etc. Some exceptional forms have -½-a½: Skr. páty-ē 'husband' (dat.) Avest. paipyae(-ca) 'lord, ruler' (dat.), an irregularity which must be explained along with the irregular Skr. instr. pátyā loc. pátyāu gen. pátyur; see § 231 p. 120, §§ 260, 278.

In Ved. and Avest. are feminines with $-\bar{\imath}$: Ved. $\bar{\imath}tt\hat{\imath}$ from $\bar{\imath}tt\hat{\imath}$ - 'help' Avest. fra- $mr\bar{\imath}tit$ 'for recitation', obviously the instr. form (§ 278). Bartholomae fixes pr. Aryan as the period in which this form got a dative meaning (Bezz. Beitr. XV 245 f.); but it appears to have had this meaning, as well as that of the instr., in the parent language. O.C.Sl. $-\bar{\imath}$ in $no\check{s}ti$, pqti ($pqt\check{\imath}$ m. 'way') cannot be explained without violence in any other way than by referring it to this $-\bar{\imath}$; the same may be said of O.Lith. $v\check{e}sz$ -paty (stem $v\check{e}sz$ -pati- 'lord'). Again, we must doubtless see Idg. $-\bar{\imath}$ in such forms as Lesb. Boeot. Dor. Ion. $\beta\acute{a}\sigma\bar{\imath}$ $\pi\acute{o}\lambda\bar{\imath}$ (cp. §§ 266, 278), which are used for the dative amongst other things; besides which Lat. $ov\bar{\imath}$ and O.Ir. $f\bar{a}ith$ may have the same (see below).

In Sanskrit there are feminine forms in $-y\bar{a}i$, $\dot{a}vy\bar{a}i$, a re-formation like gen. $\dot{a}vy\bar{a}s$ (§ 231 p. 120), loc. $\dot{a}vy\bar{a}m$ (§ 260). Compare § 278.

Lastly, we may perhaps add Avest. $mr\bar{u}it\bar{e}$ $\bar{a}rae-c\bar{a}$ instead of $mr\bar{u}it\bar{e}\bar{e}$ $\bar{a}rayae-c\bar{a}$, and the like (Geldner, Kuhn's Ztschr. XXVII 226 ff.).

Remark. (1) Did this ending arise by syllabic dissimilation before words beginning with a sonant $(-a\underline{i} \text{ for } -a\underline{i}a\underline{i})$? (2) Or was it a reformation on the model of consonant stems, dating from some period when there were nouns declined both as consonant stems and as *i*-stems, such as abstract nouns in $-t\overline{a}t(i)$ - II § 102 p. 309 (cp. Lat. gen. ov-is mort-is § 231 p. 121, Lith. gen. $kr\overline{u}t$ - \overline{u} §§ 348, 402, and the like)? (3) Or lastly, is Bartholomae right in explaining the forms as locative (Kuhu's Ztschr. XXVIII 21, Bczz. Beitr. XV 241)? Cp. § 260 Rem.

In Greek, there are no examples of real datives of i-stems. For Lesb. etc. $\beta\acute{a}\sigma\bar{\iota}$ see above.

Italic. In explaining the forms called dative according to the traditional classification of the grammars, consonant stems and *i*-stems must be considered together, since no line can now be drawn between them in this respect in any Italic dialect. Latin from the earliest period has -ei $-\bar{\imath}$, as ovei ov $\bar{\imath}$ from the stem ovi-, patrei patr $\bar{\imath}$ from the stem patr-. Also -e (quantity doubtful) in the oldest remains of Latin; but amongst the examples found — Salūte patre etc. — there is

none which can with certainty be referred to an *i*-stem. Umbr. -e, more rarely -i: Tarsinate 'Tadinati' (stem. Tarsinati') patr-e 'patri', Marti 'Marti' Invi-p. 'Iovi patri'. Osc. -eí, as Herentateí 'Veneri, Volupiae', Diúv-eí 'Jovi'; but not a word amongst them which can be certainly regarded as an *i*-stem (for Herentateí cp. p. 119, footnote).

Of these endings the Osc. -ei is the least obscure. It is the locative ending of the i-declension, derived from Idg. *-ēi (§ 260) or *-e(i)-i (§ 266) — the spelling 'Απελλουν-ηι 'Apollini' does not prove that the e of -ei is long. -ei passed on to consonant stems in the same way as -eis in the gen. maatr-eis (§ 235 p. 126) etc. Umbr. -e -i may be identified with Osc. -eí; and considering the similar genitive formation in the two dialects (Umbr. matrer = Osc. maatreis) this view is in itself the most probable, although it is possible that -e in karn-e 'carni' nomn-e 'nomini' etc. may come from *-ai, the dative suffix (for the phonetics of this cp. the loc. sate 'in sancta' §§ 247, 264), and -e in ocre-m ocre 'in ocre' from the loc. *-ē (§ 260). And Latin -ei -ī may be the same ending as Osc. -ei. But if infinitives such as $ag-\bar{\iota}$ $da-r-\bar{\iota}$ are datives like Skr. -áj-ē ji-š-é (II § 162 p. 490), and the 2nd. pl. imper. legimin-ī answers to the Gr. inf. λεγέμεν-αι (ΙΙ § 117 p. 373), then patr-ī, su-ī, socru-ī cannot be separated from Skr. pitr-ē, bhruv-é, śvaśrúv-ē. They would then be datives in Idg. *-ai.1) Now comes the question whether -7 has a different origin in ovī and patrī. Is it the locative of an i-stem in ovī, the dative in patrī; or was ovī an ad-formate of patrī as were the gen. sing. ov-is of patr-is and the acc. sing. ov-em of patr-em (§ 231 p. 121)? There is another possibility: -ī in $ov\bar{\imath}$ may be the same as $-\bar{\imath}$ in Skr. $\bar{u}t\hat{\imath}$, see p. 150. O.Lat. -e

¹⁾ I prefer to keep to the view that Lat. $a\underline{i}$ in final syllables under certain conditions became $\overline{\imath}$, Torp's protest notwithstanding (Torp, Beitr. zur Lehre von den geschlechtlosen Pronomen, 1888, pp. 15 ff.). At the same time, I admit that Osthoff's statement of the phonetic laws upon which this depends may perhaps be incorrect (see Zur Gesch. des Perf., 193 ff.).

may be regarded as Idg. $-\bar{e}(\underline{i})$, the ending of the locative in i-stems; a view which is supported by the adverb *peregre* (stem *peregri*-); see § 260.

O.Ir. fāith, if it is the dative, can be compared only with Skr. ūtī (see p. 150). Cp. §§3260, 278.

Lith. fem. $n\tilde{a}kcziai$ $n\tilde{a}kczei$ certainly has not the Idg. dative -i-ai; but here we have a re-formation after the analogy of $-i\bar{a}$ -stems, e. g. $va\tilde{l}d\check{z}iai$ $va\tilde{l}d\check{z}ei$ from nom. $vald\check{z}i\grave{a}i$ $vald\check{z}e$ 'government' (§ 247 p. 147), in the same way as the masc. $v\tilde{a}giui$ (nom. $vag\hat{i}$ -s 'thief') followed the model of a stem in -io-. O.Lith. $v\ddot{e}sz$ -paty beside Skr. $\bar{u}ti$, similarly O.C.Sl. $no\check{s}ti$ pati, see p. 150.

§ 250. 5. *u*-stems. Of these much the same may be said as of *i*-stems, see § 249. The endings are $-e\mu-a\dot{\mu}-(u)\mu-a\dot{\mu}$.

Remark. No probability can be made out for the theory that the Idg. instr. in $-\bar{u}$ could be used as a dative even in the parent language. As to the dative use of Lat. $man\bar{u}$ $\bar{u}s\bar{u}$ O.Ir. biuth, see §§ 261, 279.

Aryan. Skr. $s\bar{u}n\acute{a}v-\bar{e}$ Avest. $b\bar{a}zav-\bar{e}$ like O.C.Sl. synov-i; infin. Ved. $\acute{s}r\acute{o}-tav\bar{e}$ 'to hear', and the like (II § 108 p. 327). More rarely *- $u-a\dot{i}$: Ved. $\acute{s}\acute{i}\acute{s}v-\bar{e}$ ($\acute{s}\acute{i}\acute{s}u-$ 'child, young creature'), $sah\acute{a}srab\bar{a}huv-\bar{e}$ ($sah\acute{a}srab\bar{a}hu-$ 'thousand-armed'), Avest. $xra\bar{p}w-\bar{e}$ (xratu- 'will, strength') = Ved. $kr\acute{a}tv-\bar{e}$. Skr. feminine forms in $-v-\bar{a}i$, $dh\bar{e}nv-\bar{a}i$, a re-formation like gen. $dh\bar{e}nv-\acute{a}s$ loc. $dh\bar{e}nv-\acute{a}m$ (§ 232 p. 122), ep. § 279.

Lat. manuī (inscr. senātuei) for *-eu-ai (pr. Ital. *-ou-ai, see I § 65 p. 52, § 172. 1 p. 152) or for *-u-ai (see I § 170 p. 149). Cp. senātu-is § 232 p. 122, manu-um § 349.

Lith. súnui doubtless follows vilkui (§ 246 p. 146), as the loc. pl. sūnůsè follows vilkůsè (§ 326 Rem., and § 360). O.C.Sl. synov-i with -ou- for -eu- (I § 68 p. 59) = Skr. sūnáv-ē.

§ 251. Nasal Stems.

Stems with *n*-suffixes have usually the weak grade form. But the *men*- and *yen*-stems from which infinitives are made

seem to have had strong-grade forms even in the proethnic period: Skr. dά-man-ē Gr. δό-μεν-αι Lat. 2. pl. imper. da-min-ē, Skr. vid-mán-ē Gr. ἴδ-μεν-αι, Skr. dā-ván-ē Gr. Cypr. δο-Fεν-αι Att. δοῦναι, Avest. vīd-van-ōi Gr. εἰδ-έν-αι; see II § 116 p. 363, § 117 pp. 366, 367, 371, 373, and for the accent, Wheeler Der griech. Nominalaccent pp. 57, 58. Compare the Idg. strong-grade stem in -ei-ai (i-stems) and -eu-ai (u-stems), §§ 249 and 250; and -es-ai in es-stems (§ 254). Observe also that these are just the endings which are found in infinitives: Skr. pī-táy-ē Avest. ker-tēē, Skr. śró-tav-ē, bhiy-ás-ē dōh-ás-ē. The strong stem may have come from the locative, which was also sometimes used for the infinitive; e. g. Gr. δόμεν Skr. ἑūṣán-i, Lat. vēver-e,

Pr. Idg. *kun-áj 'cani', *uid-mén-ai 'for learning'.

Skr. śún-ē (for the accent, see p. 70 footnote 2), Avest. sūn-ē. Skr. tákṣṇ-ē Avest. taṣn-ē (tákṣ̞an- taṣan- 'sculptor, carpenter'). Skr. áṣman-ē Avest. asman-ē (áṣman- asman-'stone, heaven'). Skr. inf. vid-mán-ē 'for learning, for knowing', dā-ván-ē 'for giving', see above. Sometimes the strong stem took the place of the weak, even at a later period, e. g. Ved. aryamáṇ-ē beside the earlier aryamṇ-é (aryamán- 'friend, comrade'), and similarly Avest. airya-mainē (airya-man- 'tractable'), also Avest. urvān-ē beside urun-ē (urvan- 'soul'). Cp. § 234 p. 124.

In Greek, datives of this kind survived only as infinitives. Inf. in - $\mu\epsilon\nu$ - $\alpha\iota$, Epic and Lesbian, as $i\delta\mu\epsilon\nu\alpha\iota$ $\zeta\epsilon\nu\gamma\nu\nu\dot{\nu}\mu\epsilon\nu\alpha\iota$, II § 117 p. 371. Inf. in - $F\epsilon\nu$ - $\alpha\iota$ is more general (II § 116 p. 363): Cypr. $\delta\sigma F\epsilon\nu\alpha\iota$ (accent uncertain) Att. $\delta\sigma\bar{\nu}\nu\alpha\iota$, also $i\epsilon\nu\alpha\iota$ for *i- $F\epsilon\nu\alpha\iota$, $\dot{\alpha}\bar{\eta}\nu\alpha\iota$ for * $\dot{\alpha}\eta$ - $F\epsilon\nu\alpha\iota$: from these - $\nu\alpha\iota$ was detached, as though it were the inflexional ending, and this, spreading most widely in Ion.-Att., ended by usurping the place of - $\mu\epsilon\nu(\alpha\iota)$; thus arose e. g. $\delta\bar{\nu}$ - $\nu\alpha\iota$ $\delta\iota\delta\dot{\sigma}$ - $\nu\alpha\iota$ $\tau\epsilon\vartheta\nu\dot{\alpha}$ - $\nu\alpha\iota$; $\epsilon\bar{\ell}\nu\alpha\iota$ Arcad. $\bar{\eta}\nu\alpha\iota$ is not for * $\dot{\epsilon}\sigma\nu\alpha\iota$, but $\epsilon\bar{\ell}\mu\epsilon\nu$ $\bar{\eta}\mu\epsilon\nu$ (for * $\dot{\epsilon}\sigma$ - $\mu\epsilon\nu$) has been transformed at one step into $\epsilon\bar{\ell}\nu\alpha\iota$ $\bar{\eta}\nu\alpha\iota$ through the analogy of this set of forms. $\epsilon\bar{\ell}\partial\dot{\epsilon}\nu\alpha\iota$ is doubtless equivalent to Avest. $\nu\bar{\iota}d$ - $\nu\alpha n$ - $\bar{\iota}i$, but the perfect ending - $\dot{\epsilon}\nu\alpha\iota$ may in some words

belong to Idg. -en-stems, say in εἰκέναι cp. εἰκών (the Author, Morph. Unt. III 19 ff.; Johansson, De der. verb. contr., 202 sq.) 1).

Lat. carn-\(\bar{\tau}\), and, with the strong stem, homin-\(\bar{\tau}\) ed\(\bar{\tau}\)n-\(\bar{\tau}\) menti\(\bar{\tau}\)n-\(\bar{\tau}\). The 2nd. pl. imperative in -min\(\bar{\tau}\), as sequimin\(\bar{\tau}\), was doubtless an infinitival dative; see II \§ 117 p. 373. It is not at all probable that Umbr. karn-e 'carni' and the like have this formation; see \§ 249 p. 151.

O.Ir. coin 'cani' may come from *cun-ai, and similarly arain (aru) 'kidney' etc. But the same forms may be explained as locatives (§ 269).

Lith. szù n-iui follows the analogy of stems in -io- and -i-(§ 246 pp. 145 f., § 249 p. 152), and so do $\tilde{a}kmen$ -iui etc. Whether O.C.Sl. kamen-i contains the dative suffix -ai (cp. synov-i § 250 p. 152) or the ending of i-stems (§ 249 pp. 149, 151), is not clear.

It so happens that no example of the dative of any root-noun in -m has been preserved in Aryan. We are justified in inferring that there were such forms as Skr. $gm-\tilde{e}$ $jm-\tilde{e}$ Avest. $z^em-\bar{e}$ from Skr. $k\tilde{s}am$ - Avest. zam- 'earth', Avest. $zim-\bar{e}$ from zyam- 'winter' cp. Lat $hiem-\bar{e}$; see II § 160 pp. 482 f.

§ 252. 7. r-stems. Pr. Idg. *mātr-ái 'matri', *dótr-ai 'datori'. Skr. mātr-é dátr-ē, Avest. māpr-ē dāpr-ē. Lat. mātr-ī datōr-ī (-ōr- comes from the nom. sing.); it is not very probable that Umbr. ař-fertur-e 'infertori, flamini' belongs to the same class, see § 249 p. 151. O.Ir. māthir may be derived either from *mātr-ai or from *māter-ai, and it may also be explained as locative (§ 269). O.C.Sl. mater-i is obscure just as kamen-i is; see § 251, above.

Lith. m'oter-iai m'oter-ei follows the analogy of $i\bar{a}$ -stems (§ 247 p. 147).

§ 253. 8. Stems ending in Explosives.

Pr. Idg. * $bhr\hat{g}h\eta t$ -di 'celso'. Skr. $b\gamma hat$ - \acute{e} , Avest. $ber^ezait\bar{e}$ and (with the strong stem) $ber^ezant\bar{e}$; Skr. $bh\acute{a}rat$ - \bar{e} 'ferenti'.

¹⁾ The same dative suffix is found in $\varphi \neq \varphi \neq \vartheta - \alpha \iota$ ($-\vartheta - \alpha \iota = Skr. - dh - \bar{e}$) according to Bartholomae's convincing explanation (Rhein. Mus. XLV 151 ff.).

Lat. rudent-ī ferent-ī prae-sent-ī — but it is not certain how far this -ent- was directly derived from Idg. -nt- (II § 125 pp. 395 f., III p. 105 footnote 1). O.Ir. carit 'amico' dat. and loc. (§ 269). O.C.Sl. telet-i (from tele neut. 'calf', cp. § 244 pp. 142 f.) like kamen-i, see § 251, last page.

Skr. sarvátāt-ē 'to or for completeness', Avest. haurvatāit-ē 'to or for safety'. Lat. novitāt-ī, juventūt-ī. O.Ir. bethid (from beothu 'life') dat. and loc. (§ 269).

Skr. $\dot{s}ar\dot{a}d$ - \bar{e} 'to or for autumn', Avest. armae- $\ddot{s}aid$ - \bar{e} from armae- $\ddot{s}ad$ - 'sitting still'. Lat. lapid- $\bar{\iota}$. O.Ir. druid 'to or for a Druid' dat. and loc. (§ 269). Skr. pad- \dot{e} Lat. ped- $\bar{\iota}$.

Skr. $u\dot{s}ij-\bar{e}$, stem $u\dot{s}ij$ - 'desirous'. Lat. $bib\bar{a}c-\bar{\imath}$. O.Ir. nathraig 'water-snake' dat. and loc. (§ 269). Skr. $v\bar{a}c-\bar{e}$, Lat. $v\bar{o}c-\bar{\imath}$. Skr. $-r\bar{a}j-\bar{e}$ Lat. $r\bar{e}g-\bar{\imath}$, O.Ir. (dat. and loc.) $r\bar{\imath}g$.

§ 254. 9. Stems in -s.

Pr. Idg. *menes-ai 'to or for the mind' (for the form of the stem, § 251 p. 153): Skr. mánas-ē Avest. mananh-ē, Lat. gener-ī; O.C.Sl. sloves-i like kamen-i § 251 p. 154.

For Skr. infinitives like bhiyás- \bar{e} dohás- \bar{e} see II § 132 pp. 412 f. and III § 251 p. 153. And doubtless the following forms, with an original weak grade of the es-suffix, have the same formation: Skr. jišé 'for victory', Gr. $\gamma\rho\acute{a}\psi\alpha\iota$ 'to write' (one of the forms connected with the σ -aorist) and Lat. dar $\bar{\iota}$ fer- $\bar{\iota}$, see II § 162 p. 490, and the Author, Gr. Gr.² p. 116. An original weak stem is also contained in Lat. $m\bar{e}ns-\bar{\iota}$ O.Ir. (dat. and loc.) $m\bar{\iota}$ s, Idg. * $m\bar{e}$ -ns- $a\dot{\iota}$ (II § 132 p. 415).

For O.Ir. taig (nom. tech teg 'house'), see § 259 p. 159.

Pr. Idg. comparative $*\bar{o}\hat{k}is-a\underline{i}$ 'ociori' (cp. II § 135 p. 429): Skr. $\acute{a}\dot{s}\bar{\imath}yas-\bar{e}$ Avest. $\bar{a}syanh-\bar{e}$, Lat. $\bar{o}ci\bar{o}r-\bar{\imath}$.

Pr. Idg. part. perf. act. *ueidus-ai 'sìðó τi ': Skr. $vidúš-\bar{e}$ Avest. $v\bar{t}du\bar{s}-\bar{e}$.

Skr. nas- \acute{e} 'to the nose' Lat. $n\bar{a}r$ - $\bar{\imath}$. Skr. $\bar{a}s$ - \acute{e} 'ori' Lat. $\bar{o}r$ - $\bar{\imath}$. Skr. $m\bar{u}$ - \acute{s} - \acute{e} (inferred from nom. pl. $m\dot{u}$ - \acute{s} -as), Lat. $m\bar{u}r$ - $\bar{\imath}$.

§ 255. 10. Stems in $-\bar{\imath}$ $-i\underline{i}$, $-\bar{u}$ $-u\underline{u}$, and in $-\bar{\jmath}$ $-\bar{l}$ $-\bar{v}$, and Root-Nouns in -u and -i.

Pr. Idg. -ii-ai -uu-ai, e. g. *bhruu-ai from nom. *bhrū-s 'brow'. Skr. dhiy-ē 'to or for meditation' Ved. nadiy-ē 'to a river'; bhruv-ē, Ved. śvaśrúv-ē 'socrui', Avest. tanuyē i. e. -uv-ē 'to a body'. Also, with the feminine marked by the ending, Skr. dhiy-āi nadiy-āi bhruv-āi śvaśruv-āi, cp. § 233 p. 123, § 280. Lat. su-ī, socru-ī, cp. § 197 p. 76; vī may be contracted from *vii-ī. O.C.Sl. krūv-i 'sanguini', svekrūv-i 'socrui'.

Similarly Skr. $gir-\acute{e}$ 'for praise' $pur-\acute{e}$ 'to a stronghold' = *grr-ai *pll-ai, and $g\bar{o}-\check{s}an-\bar{e}$ (inferred from $g\bar{o}-\check{s}an-as$, from nom. $g\bar{o}-\check{s}\acute{a}-s$ 'gaining cattle') = *-syn-ai. Cp. § 233 p. 123.

Skr. $n\bar{a}v$ -é 'navi', Lat. $n\bar{a}v$ - $\bar{\imath}$. Skr. $r\bar{a}y$ -é from nom. $r\acute{a}$ -s 'property, riches', Lat. $r\bar{e}\bar{\imath}$. Skr. div-é (nom. $dy\bar{a}\acute{u}$ - $\dot{\imath}$ 'daylight'). Lat. Jov- $\bar{\imath}$ Diov- $\bar{\imath}$. Skr. $g\acute{a}v$ - \bar{e} Avest. gav- \bar{e} , Lat. bov- $\bar{\imath}$; the ground-form was *guu- $\acute{a}\acute{\iota}$ *gu- $\acute{a}\acute{\iota}$, and the barytone Skr. word is an ad-formate of $g\acute{a}v$ -i like the gen. $g\acute{a}v$ -as (§ 238 p. 130), cp. II § 160 p. 482; O.Ir. boin (dat. and loc.) is an ad-formate of coin, see § 221 p. 98.

Locative Singular.1)

§ 256. There are two proethnic formations.

1. In certain consonantal stems, and in i- and u-stems, the stem by itself was used for the locative. In such locatives forms

¹⁾ J. Schmidt, Der locativus singularis und die griech. i-Declination, Kuhn's Zeitschr. XXVII 287 ff. W. Schulze, Zum idg. Locativ singul. der consonantischen Stämme, ibid. pp. 546 f. Bezzenberger, Die idg. Endung des Loc. Sing. der u-Declination, Nachr. v. d. Gött. Ges. d. Wiss. 1885 pp. 160 ff. Bartholomae, Zur Bildung des loc. sing. der fem. aj- [i-]Stämme, Ar. Forsch. II 100 ff. G. Petroni, Dei casi nelle lingue classiche e particolarmente del locativo, Neapel 1878. Schneidewind, De casus locativi vestigiis apud Homerum et Hesiodum, Halle 1863. Ebel, Ein griech. Genetiv-Locativ, Kuhn's Zeitschr. XIII 446 ff. Höfer, Der lateinische Dativ-Locativ, in his Zeitschr. f. die Wissenschaft d. Sprache II 192 ff. C. Wagener, De locativi Latini usu, Jena 1871. Deecke, Über den lat. Lokativ, a 'Programm'-essay sent in at Mühlhausen i. E., 1890, pp. 31 ff. L. Havet, Le locatif

the formative suffix had an e-grade vowel; sometimes the first strong grade -e- (as Hom. $\delta \acute{o}$ - $\mu \epsilon \nu$), and sometimes the third, -ē- (as Cret. $\delta \acute{o}$ - $\mu \eta \nu$). Forms with the third strong grade became indistinguishable from those of the nom. sing. masc. fem. and the nom. acc. sing. neuter: compare e. g. $\delta \acute{o}$ - $\mu \eta \nu$ with $\pi o \iota$ - $\mu \acute{\eta} \nu$ O.C.Sl. i- $m \acute{e}$ (§ 223 p. 100). As a matter of fact, both these formations are doubtless the same, and the only difference is in their use in the sentence.

- 2. The second is a commoner formation, found in all stems. It had the case-ending -i, which seems to have been the same as the -i in the loc. pl. -s-i (Gr. $-\sigma$); see § 356. This -i once had a more general local meaning, as is shewn by the personal pronouns which contain it, § 447; cp. § 239 p. 132 and § 424.
- -i added to o- and \bar{a} -stems contracted with their final into the diphtongs -oi -ei and $-\bar{a}i$. Elsewhere the sound remained a vowel, forming a separate syllable; this happened in Aryan (-i), Greek (-i), and Italic (Lat. Umbr. -e), now and then in Germanic (A.S. hnyte, § 272), and perhaps in Keltic (Gall. $-r\bar{\iota}gi$, see § 271); in the two last branches it has left behind many traces in the numerous umlaut ("mutated") forms, i. e. those with modified vowels. In Balto-Slavonic it can be seen only in the diphthongs of o- and \bar{a} -stems.

Along with -i we have $-\bar{\imath}$ in Greek and Sanskrit, Hom. $\pi \alpha \tau \dot{\epsilon} \varrho - \bar{\imath}$ and the like (Hartel, Hom. Stud. I 2 56 ff.), Ved. $vakt \dot{\alpha}r - \bar{\imath}$ and the like (Lanman, Noun Inflection 411, 426). Wackernagel, however, looks upon this as a rhythmical lengthening which dates from the parent language itself (Das Dehnungsgesetz der gr. Compp., 12 ff.).

In stems which show ablaut variation in their cases, the strong stem is found before -i (-i) from the proethnic period onwards. Thus it is natural to suppose that -i was added to

ombrien, Mém. de la Soc. de lingu. II 391 sq. Smith, Litauisches: über den Singularlocativ der Pronomina und Adjectiva, Kuhn-Schleicher's Beitr. I 506 f.

forms which were used for the locative even without it; cp. e. g. Skr. mūrdhán-i beside (mūrdhn-i and) mūrdhán. But it must not be forgotten that this theory is not absolutely borne out by i- and u-stems. In these stems, -ei-i and -eu-i are proethnic endings; but we cannot say for certain that there were parallel endings -ei and -eu, although we do find -ēi and -ēu (§§ 260 Rem. and 261 Rem.). Nor is it clear whether such forms as Skr. mūrdhn-i Gr. ἀρν-i, Gr. πατρ-i Goth. fadr, Skr. div-i Gr. Δι-i are older than Skr. mūrdhán-i Gr. ποιμέν-ι, Skr. pitár-i Gr. πατέρ-ι, Skr. dyáv-i; or whether they are really later (even then they may be proethnic), and followed other cases which had a weak grade of vowel, e. g. the dative singular. These questions I content myself with suggesting.

Remark. Bartholomae (Bezz. Beitr. XV 23) attempts to establish an Idg. locative suffix -u beside -i, e. g. in Skr. múh-u 'immediately'. But the forms concerned are only adverbs. Cp. § 356.

§ 257. I. Stems without any case-suffix used as Locative Singular.

1. n-stems. Cp. § 186 pp. 62 f.

Forms in -en. Ved. $m\bar{u}rdh\acute{a}n$ ($m\bar{u}rdh$ - $\acute{a}n$ - 'point, head'), $ud\acute{a}n$ (ud- $\acute{a}n$ - 'water'), $k\acute{a}rman$ ($k\acute{a}r$ -man- 'work, action') and the like; O.Pers. $x\check{s}apa$ - $v\bar{a}$ 'or at night' i. e. $x\check{s}apa$ - $v\bar{a}$ (stem $x\check{s}apan$ -), see Bartholomae Handb. § 35 Rem. p. 22. Gr. $a\dot{l}(F)\acute{e}v$ adv. 'always', from $a\dot{l}(F)\acute{\omega}v$ 'space of time, eternity'; in the same group we place the infinitives in $-\mu \epsilon v$, found in Homer and in many dialects of Greek, such as $\delta\acute{o}\mu \epsilon v$ $i\delta\mu \epsilon v$ $i\delta\mu \epsilon v$ $i\delta\mu \epsilon v$ (Cret. El. $i\eta \mu \epsilon v$, N.W. Greek $i\bar{l}\mu \epsilon v$), which served as the model for $i\partial v\dot{v}\mu \epsilon v$, $i\partial v\dot{\epsilon}\mu \epsilon v$, O.C.Sl. kamen-e (stem kamen- 'stone') probably has the same obscure -e which occurs in the Lith. loc. sing. rainkoj-e $i\partial v\dot{\epsilon}\mu e v$ (§§ 264, 265), cp. § 186 p. 62, § 246 p. 145 and § 409. A different explanation of kamen-e is offered by J. Schmidt, Kuhn's Zeitschr. XXVII 307.

Forms in $-\bar{e}n$. Avest. $ca\check{s}man$ (I § 200 p. 168) stem $ca\check{s}man$ — 'a look, eye'. Gr. Cret. inf. $\delta\acute{o}$ - $\mu\eta\nu$.

Skr. Ved. kṣáma beside kṣáman 'on the earth' is regarded as a form in -p by Bartholomae (Bezz. Beitr. XV 39).

Lastly, we place here O.Ir. toimte beside toimtin (Zeuss-Ebel p. 266), nom. toimtin 'cogitatio' (Thurneysen, Bezz. Beitr. VIII 269); -e stands doubtless for *-ion, and that for *-ion.

§ 259. 3. s-stems.

W. Schulze (Kuhn's Zeitschr. XXVII 546) cites Skr. sa-dívas 'at once' pūrvē-dyúš 'on the day before, early in the morning', and with the latter he connects Lat. dius (noctū diusque). Another form is doubtless śv-ás 'to-morrow' (cp. Avest. sū-ra- adj. 'belonging to the morning'; Geldner, Kuhn's Zeitschr. XXVII 253, 261). Gr. Dor. aleç 'always' beside acc. alῶ for *alFo(σ)-α (II § 133 p. 423). Lat. penes beside penus-oris (II § 132 p. 419). Also O.Ir. dat.-loc. sing. of neut. es-stems, as taig Mid.Ir. tig, from nom. tech teg 'house' (Thurneysen, Bezz. Beitr. VIII 269). Lastly, Slav. sloves-e, with affixed -e like kamen-e, see § 257 pp. 158 f.

§ 260. 4. *i*-stems. Pr. Idg. had parallel endings, $-\bar{e}_{i}$ and $-\bar{e}$ with $-\bar{i}$ dropped (I § 645 p. 489).

Skr. has only *-ē. Skr. Ved. $\acute{a}v\bar{a}$, $agn\acute{a}$ ($agn\acute{i}$ -§ 'fire'); the variants $\acute{a}v\bar{a}u$, $agn\bar{a}\acute{u}$, which in the later language were used exclusively, took their -āu from u-stems, as $s\bar{u}n\bar{a}\acute{u}$ (§ 261). $p\acute{a}ty\bar{a}u$ ($p\acute{a}ti$ -§ 'husband') took the place of $p\acute{a}t\bar{a}u$

owing to the influence of $p\acute{a}ty\bar{e}$ $p\acute{a}ty\bar{a}$ (see § 231 p. 120, § 249 p. 149), just as Goth. $kinn\acute{a}u$ instead of * $kin\acute{a}u$ got -nn- == *-nu- by analogy (§ 261). Avest. $a\check{z}a$, O.Pers. ahi- $fra\check{s}t\bar{a}$ (ahi- $fra\check{s}ti$ - 'punishment by the sword').

In Greek $-\bar{e}_{i}$ or $-\bar{e}$ was extended by the loc suffix -i, and became $-\bar{e}_{i}$ or $-\bar{e}$ i, whence Hom. $\pi \acute{o} \lambda \eta$ Att. $\pi \acute{o} \lambda \eta$ from the stem $\pi \acute{o} \lambda \iota$. Cp. acc. sing. $Z\tilde{\eta}\nu$ - α built up on $Z\tilde{\eta}\nu$ § 221 p. 98, gen. $\dot{\epsilon}\mu\epsilon$ - $\tilde{\iota}$ 0 and acc. $\dot{\eta}\mu\dot{\epsilon}$ - $\alpha\varsigma$ built up on * $\dot{\epsilon}\mu\epsilon$ and * $\dot{\eta}\mu\epsilon$ = Dor. $\dot{\alpha}\mu\dot{\epsilon}$ §§ 443, 450. $\pi \acute{o} \lambda \eta$ 1 suggested $\pi \acute{o} \lambda \eta \circ \sigma \acute{o} \lambda \eta \circ \sigma$

The Old Latin "dative" in -e, as Salūte patre, and the adverb peregre may possibly have this Idg. -ē; but -e may also be Idg. *-i, the loc. suffix of consonant stems (cp. rūr-e, Carthāgin-e), taken over by i-stems. The ending -ēi may be contained in the Osc. "dative" in -ei, as Herentatei 'Veneri, Volupiae', and in the Umbr. in -e -i, as Tarsinate 'Tadinati' Marti 'Marti' (§ 249 pp. 151 f.); but -ei may be derived from -ei-i (§ 266). Lat. ovī peregrī too, and the like, may contain Idg. -ēi, as we saw on pp. 151 f. In the same passage it is mentioned that it is quite possible for the -e of Umbr. ocre-m ocre 'in ocre' to be the locative ending *-ē (cp. Sab. Flusare 'in Florali').

O.Ir. fāith used as a locative (cp. neut. muir 'in mari') may have been either *uātēi or *uātē originally. Cp. § 249 pp. 151 f., and § 278. Perhaps Gall. Ucuete belongs to the same class (Bezz. Beitr. XI 131, 153).

Goth. quma 'for coming', for *kumē? If so, the confluence of this case with the "dative" of o-stems (vulfa, see § 241 p. 137, § 246 p. 146) was merely one of form, and did not extend to use. (In § 231, page 119, we saw that the ending of the gen. sing. of masc. i-stems need not depend entirely upon borrowing from stems in -o-). However, great doubts as to the correctness of this explanation are suggested by O.H.G. chume beside wolfe.

Goth. anstái ('favour', dat.) may come from -ēi, and Streitberg sees the same ending in O.H.G. ensti; he assumes

that the first change of pr. Germ. $-\bar{e}_i$ in West-Germ. was to *- \bar{e}_i (cp. § 263 Rem. pp. 165 f.), just as he derives Goth. sunáu O.H.G. suniu from the same ground-form *- \bar{e}_i . But other views of ensti and suniu are not excluded (see the Rem. below, § 261 and Rem., §§ 266, 267, 278); and in anstái and sunáu it is at least possible that a is due to the gen. sing. (anstáis sunáus) — cp. A.S. zuman as contrasted with Goth. gumin § 269, and the like.

Old Lithuanian had an infinitive in -të, which still survives in some parts: e. g. dèk-të trans. and intrans. 'to burn' (beside nom. dekti-s, seen in ugnā-dekti-s f. 'stinging cold', cp. II § 100 pp. 304 ff.). This doubtless comes from *- $t\bar{e}i$: *- $\bar{e}i$ became first *-ei (I § 615 p. 465) and then - \ddot{e} (I & 68 p. 60). There is another series of infinitive forms ending in -tè, which are added to cognate verbs to express an intensive meaning, as dektè dega 'it burns up clear': -tè may be derived from *-té according to I § 664.3 pp. 523 f. Thus both the Idg. endings $-\bar{e}i$ and $-\bar{e}$ were kept in use together, but they were differentiated in use. With dektè we may possibly compare the adverbial form szalè 'at the side' (beside nom. szali-s 'side'). As to Lith. naktyje, see § 264. Slav. -i in the loc. of i-stems, as O.C.Sl. nošti, žiti (žitī 'life'), and in the infinitive, as ži-ti 'to live' (Lith. qý-të qú-ti 'to revive, become well') may be derived either from *-ēį (*- $\bar{e}i$, *-ei, *-i, I § 68 p. 60) or from *- \bar{e} (I § 76 p. 66).

Remark. We have already several times assumed a change of $-\bar{e}\underline{i}$ (before consonants) to $-e\underline{i}$ in the European languages, in Osc. Herentate i Umbr. Tarsinate Lat. peregr \bar{i} , Lith. dèktë O.C.Sl. nošti, and cp. Streitberg's explanation of O.H.G. ensti. Now since in men-stems, -mēn and -men are both proethnic locative endings, it is at least a fair question to ask whether $-e\underline{i}$ was not really $-\bar{e}\underline{i}$, and not $-\bar{e}\underline{i}$, in Indo-Germanic. Bartholomae would regard Avestic infin. like $mr\bar{w}it\bar{e}$ as forms of this kind with $-e\underline{i}$, see § 249 p. 150. The same question must be asked with regard to u-stems (§ 261 Rem.). Cp. § 256 p. 158.

§ 261. 5. u-stems. Pr. Idg. -ēu, *sūnēu 'in filio'.

Skr. sūnāú. Avest. bāzāu (O.Pers. bābirauv stem bābiru-'Babylon', cp. the Remark, below). It may be conjectured Brugmann, Elements. III. that this ending $-\bar{a}u$ served as a foundation for the Iranian nom. sing. in $-\bar{a}u$ - \check{s} , acc. sing. in $-\bar{a}v$ -am, gen. sing. in $-\bar{a}u$ - \check{s} , nom. acc. pl. in $-\bar{a}v$ -as, as Avest. $b\bar{a}z\bar{a}u$ - \check{s} O.Pers. $dahy\bar{a}u$ - \check{s} etc. (§ 196 p. 76, § 215 p. 92, § 232 p. 122, § 318).

Greek. Perhaps we should place here the locative of nouns in -εν'ς, as ίππεψς χαλκεψς, whose connexion with Skr. adjectives such as aśvayú-š 'desiring horses' dēvayú-š 'reverencing the gods' Wackernagel tries to make probable, without having fully mastered the phonetic difficulties (see II § 105 p. 319 and the Author's Gr. Gr.² p. 100). Supposing the existence of pr. Gr. *hippe(i) $\bar{e}u = Skr. \, a\dot{s}vay\bar{a}\dot{u}$, it might have been extended to *hippe(\underline{i}) $\bar{e}\underline{v}$ -i, as in $\pi\delta\lambda\eta\iota$ Idg. *- $\bar{e}\underline{i}$ or *- \bar{e} was extended by -i, whence arose - \bar{e} -i in the Greek form (§ 260 p. 160). And as $\pi \delta \lambda m$ gave rise to the forms $\pi \delta \lambda m c$ $\pi \delta \lambda \eta \epsilon_S$ etc., so * $i\pi \pi \epsilon \eta F$ - ι gave rise to * $i\pi \pi \epsilon \eta F$ - ι 0 \circ 0 * $i\pi \pi \epsilon \eta F$ - ι 2 \circ 0 etc. (cp. above Avest. bāzāu-š etc. following the loc. bāzāu). $-\varepsilon\eta$ - was everywhere contracted into $-\eta$ -, whence $i\pi\pi\tilde{\eta}F$ - ι $i\pi\pi\tilde{n}F$ -oc etc. Why this re-formation was confined to nouns in $-\varepsilon \dot{v}_S$ and did not affect stems like $\pi \tilde{\eta} \gamma v - s$ and $\dot{\eta} \delta \dot{v} - s$. I must admit that I do not know. But the corresponding re-formation in i-stems did not affect all words any more than this did. $\pi \delta \lambda \iota g$ is the only word in which it appears; but the reason for the limitation is quite obscure. As to the re-formed nom. sing. γραφής and its like, see Meister, Gr. Dial. II 110, 272, Zum el., arkad., und kypr. Dial. 40 f.; Johansson, Bezz. Beitr. XV 178.

Lat. adv. noctū (cp. Skr. aktāú 'by night') and Umbr. manuv-e 'in manu' must be placed here; so must doubtless the forms, used as datives, Lat. manū ūsū Umbr. trifo 'tribui'. *-ēu in pr. Italic became *-eu before consonants, and this became -ou (I § 65 p. 52, § 612 p. 462). On manū ūsū § 279 may also be compared.

Gall. Tagavoov (Taranou) from Taranu- 'god of thunder'

¹⁾ The adjectives in $-\eta(f)-\iota_0-\varsigma$ may have been formed directly from the old locative, e. g. $-\epsilon\iota_0-\varsigma$ for *- $e\dot{\iota}_1$ - $\dot{\iota}_0$ -s and the like (II § 63 Rem. 2 p. 128; Johansson, Bezz. Beitr. XV 179).

(cp. Taranu-cno-), where too -ou comes from *-eu, *-eu, to (I § 66 p. 56). The same ground-form may be assumed for O.Ir. biuth.

Goth. sunáu may come from -ēu, and according to Streitberg so may O.H.G. suniu sitiu, Norse Run. Kunimu(n)diu O.Icel. syni 'to a son'. But there are other possibilities; see § 260 p. 161.

O.C.Sl. synu for *- $\bar{e}u$ through the intermediate stages *-eu -ou (I § 68 p. 59, § 615 p. 465). For Lith $s\bar{u}n\bar{u}j\dot{e}$ see § 264.

It may be that this same case-ending lurks in many adverbial forms: e.g. in Gr. $\check{u}r\varepsilon v$ 'without' O.C.Sl. $v\check{u}nu$ 'forth, out' (both of these have -eu, the form assumed by -ēu before consonants) beside Goth. inu O.H.G. $\bar{u}no$ 'without' (cp. the Author, Gr.—Gr.² p. 218). Bartholomae (Bezz. Beitr. XV 16) connects $\check{u}r\varepsilon v$ with Skr. $sanu-t\acute{u}r$, but he too regards it as the loc. of a u-stem.

Remark. In the European languages, we have often assumed a change of $-\bar{e}\psi$ (before consonants) to $-e\psi$, as in Lat. $noct\bar{u}$ Umbr. manu-ve, Gall. Tagaroov, O.H.G. suniu O.Icel. syni, O.C.Sl. synu (Gr. $\check{a}vev$). Here, as with i-stems (§ 260, Rem.) the question arises whether there was not a proethnic ending $-e\psi$ with short -e. Bartholomae, loc. cit., cites, in support of this, Avest. $per^et\bar{o}$ O.Pers. babirauv (Skr. Ved, $s\bar{a}n\bar{o}$ proves nothing), to which we add Avest. anhav-a $g\bar{a}tav-a$ (Caland. Kuhn's Ztschr. XXX 539 f.; Jackson, Am. Or. Soc. Proceed., 1889, p. CXXV).

§ 262. 6. All remaining stems.

Avest. dam from the stem dam- 'house', Idg. *dém. According to a conjecture of Bartholomae's in Kuhn's Ztschr. XXIX 497 f., there is a similar locative formation contained in the adverbs Skr. kam Avest. kam, whose ground-meaning he would have to be 'at pleasure, for one's pleasure' (cp. Skr. kám-a-s 'desire').

Skr. parut adv. 'last year' beside Gr. πέρνοι O.Icel. fjorđ fjorđ adv. 'last year' O.Ir. onn-urid 'ab anno priore'. Is parut due to a confusion of *per-uti and *per-uet? In II § 4 p. 9 we connected the word with Gr. Fέτος; but it must be admitted

that this hypothesis is not quite free from doubt. Cp. Feist, Grundriss der got. Etym., pp. 30 f.

 $\bar{\imath}$ - $i\dot{\imath}$ - and $\bar{\imath}$ - $u\dot{\imath}$ -stems, in addition to $-i\dot{\imath}$ -i and $-u\dot{\imath}$ -i (§ 268), have $-\bar{\imath}$ and $-\bar{\imath}$: Skr. Ved. $g\bar{a}ur\dot{\tau}$, from $g\bar{a}ur\dot{\tau}$ - $\dot{\imath}$ 'the cow of the species Bos Gaurus', $cam\dot{u}$ from $cam\dot{u}$ - $\dot{\imath}$ 'dish, platter'. It is very unsafe to assume this formation for Greek and Latin merely on the strength of Gr. Aeol. Dor. Ion. $\pi\dot{o}\lambda\bar{\iota}$ and Lat. $v\bar{\imath}$; for $\pi\dot{o}\lambda\bar{\iota}$ need not come from $\pi\dot{o}\lambda\bar{\iota}$ -s, but may come from $\pi\dot{o}\lambda\dot{\iota}$ -s (§ 249 p. 150), and $v\bar{\imath}$ may be explained as being for * $vi\dot{\imath}$ -i (§ 268). Nor need we postulate *svekry to explain the existence of $svekr\dot{u}v$ -e; see § 268.

Remark. Bartholomae (Kuhn's Ztschr. XXIX 583) conjectures that $g\bar{a}ur\hat{i}$ $cam\hat{u}$ were coined beside the loc. pl. $g\bar{a}ur\hat{i}$ - $\hat{i}u$ $cam\hat{u}$ - $\hat{i}u$ the relation between them being suggested by $v\hat{i}k\bar{e}$: $v\hat{i}k\bar{e}$ - $\hat{i}u$.

In Irish, locatives without -i might be looked for in cathir beside cathraig (nom. cathir 'town'), bethu beside bethaid (bethu 'life'), and similar words; cp. toimte § 257 p. 159, taig § 259 p. 159, biuth § 261 p. 160. However, many of these short "datives" were doubtless first made from words whose nom. and dat. had run together, such as athir 'father'. Datives like toimtiu (beside toimte toimtin, see Zeuss-Ebel p. 266) give special support to this theory, because they can be explained on no other.

§ 263. II. Locative Forms with the suffix -i.

1. o-stems. Pr. Idg. * $u \not q o - i$ 'in lupo', and also $-\ell - i$, as * $j u g \ell - i$, cp. § 240 p. 133. Perhaps this formation served for the genitive too even in Idg., see § 239 p. 132.

Skr. $vfk\bar{e}$. Avest. $vehrk\bar{e}$, O.Pers. $p\bar{a}rsaiy$ ($p\bar{a}rsa$ - 'Persian, Persia'); with the postposition \bar{a} (or its unaccented by-form a, see § 246 p. 145) Avest. zastay-a 'in manu' (cp. § 308 for O.Pers. dastay- \bar{a}).

Gr. Att. oixou 'at home', 'Io $\theta\mu$ oī. Since in Attic the only remaining examples of forms in -ou are adverbs (compare the pronominal adverbs $\pi o i$, o i and so forth), similar adverbs were made from other stems, as K_{ixvvv} -o i from η K_{ixvvv} . But in Bocot., Arcad.-Cypr., Elean, and N.W. Greek, -ou did not

cease to be a living case-ending, and it became completely confused with the dative in orig. $-\delta i$ (§ 247 pp. 147 f.). In Thessalian the loc. in $-\omega$ was used for the genitive as well (see § 239 p. 131), for which the use of $\mu\omega$ of instead of a possessive genitive is primarily responsible (§ 447). The ending $-\varepsilon\iota$ is never a case-ending in any Greek dialect, but it is only found in adverbs; as Att. oinet, alsi aei dei (with instr. $ul\eta$, § 275) beside Lat. aevo-m, auaxei beside auaxo-s, Cret. $\delta\iota n\lambda\epsilon$ etc., cp. the pronouns Dor. $n\epsilon$ one and others.

In Italic, -ei is clear in Osc. múíníkeí tereí in communi terra' comenei in comitio. Latin has the locative only in adverbs, which had doubtless orig. -ei, e. g. bellī, domī, spelt sometimes with -ei in early Latin; the explanation of -e, as in die quinte, is doubtful. As regards Umbr. uze onse in umero, cp. § 246 p. 146. Falisc. Zextoi Sexti is a very dubious relic of Idg. -oi, see § 239 Rem. pp. 132 f.

O.Ir. cinn 'at the end, after' (nom. cenn 'point, head, end') for *kuennei or *kuennoi (Gall. Penno-).

Germanic. $-e\underline{i}$, pr. Germ. $-i\underline{i}$ $-\overline{\imath}$ (I § 67. 2 pp. 57 f.), is seen in A.S. $d\alpha zi$ ($d\alpha z$ 'day'), and, with -i dropped, $h\bar{a}m$ ($h\bar{a}m$ 'home'), and in O.Swed. $d\alpha ghi$ O.Icel. dege (ep. the pronouns $p\bar{\imath}$, $hv\bar{\imath}$), and doubtless, as Kögel says, in O.H.G. adverbs like nidari, heimi beside nidare, heime (Kögel, Ztschr. für deutsch. Alt., 1884, pp. 118 f.). $-o\bar{\imath}$ is seen in O.H.G. tage, wolfe A.S. $d\alpha ze$, O.Icel. ulfe, ulfi, and doubtless Goth. daga vulfa (cp. Rem.); though ulfe, vulfa may be dative in $-\bar{e}(\underline{i})$ (§ 246 p. 146), ablative in $-\bar{e}d$ (§ 241 p. 135), or instr. in $-\bar{e}$ (§ 275), and the West-Germ. and O.Icel. forms may also be the dative in $-\bar{o}i$ (§ 246 p. 146).

Remark. It has been proposed to derive Goth. daga from *dagai. Hitherto, in view of Goth. gibái (I § 659.3 p. 512), I have felt disinclined to believe that in words of more than one syllable -ai became -a in pro-ethnic Gothic — a theory, by the way, which is by no means adequately supported even by the distinction between -ai with the acute and with the circumflex (Hanssen, Kuhn's Ztschr. XXVII 612 ff.; Sievers, Paul's Grundr. I 403). But Streitberg (Germ. Comp. auf -ōz-, pp. 22 ff.) has made it probable

that the shortening of the long vowels in pr. Germ. $-\bar{e}\underline{i}$ $-\bar{e}\mu$ $-\bar{o}\mu$ $-\bar{o}\mu$ took place not in pr. Germ., but only in the separate dialects of Germanic. If this be so, the theory in question is not barred by $gib\dot{a}i$ for pr. Germ. $-\bar{o}\underline{i}$. It must be admitted that Streitberg's view is not certain; for O.H.G. ensti suniu O.Icel. fundi syni may contain Idg. $-e\underline{i}$ $-e\underline{\mu}$ (not $-\bar{e}\underline{i}$ $-\bar{e}\mu$), see § 260 Rem., § 261 Rem. It is quite possible to explain Goth. bairāi (3rd. sing. opt.) as re-formation of *baira following the other persons.

Lith. -ë, now only adverbial, namë 'at home'; more widely used in O.Lith., as dëvë-p 'with God' (spelt diewiep). O.Lith. spellings like dieweie paneie (Bezzenberger, Zur Gesch. der lit. Spr., 133) are meant to express the sounds -eie, and not -eje, they must contain the ending -ei, to which has been affixed the same -e as rankoj-e has (§ 264). -ë may be the same as the first part of -ej-e (see I § 68 pp. 59 f.); but it may represent Idg. -oi (I § 84 p. 81). How to dispose of the ordinary ending in modern literary Lithuanian, -e (as vilkè), is a doubtful question. Leskien (Decl. p. 47) and Brückner (Arch. für slav. Phil. III 277) conjecture that earlier -ë was changed to -e on the analogy of -je, which I cannot agree with. We shall return to vilke in § 424. At present all io-stems have -vie, the same ending as those in -i- (§ 264); thus we have not only žõdyje, gaidyjè from the nom. žõdi-s 'word', gaidy-s 'cock', but also svetujè from nom, sveczia-s. In forms of the same kind as this last, -yje is comparatively late; in O.Litb. kravieie and kravie are the forms which come from kravja-s 'blood', and so forth. We have already offered a conjecture (§ 239 p. 132) that žõdyje is the transformation of an original locative in $-\bar{\imath}$ (cp. Lat. $f\bar{\imath}l\bar{\imath}$ used as gen. sing.).

O.C.Sl. vlũcẽ for *vlqoi. But it is not clear why the ending is -ẽ, and not -i as it is in the nom. pl. vlũci = Gr. $\lambda \dot{\nu} z o i$. Little is gained by assuming that vlũcẽ is an ad-formate of the fem. racé (§ 247 p. 147, § 264). Compare I § 84 pp. 81 f., and to the authorities cited in Rem. 3 add Jagić, Arch. für slav. Phil. X 191.

264. 2. ā-stems. Even in proethnic Idg., locative and dative had become the same in form (§ 247 pp. 146 f.). Pr. Idg. *ekūāi. Skr. ášvāy-ām O.Pers. arbirāy-ā, stem

arbirā- 'Arbela'. Gr. Ion. Θηβαι-γενής 'born in Thebes' El. 'Ολυμπίαι 'in Olympia'. Lat. Rōmae, on early inser. Romai; Umbr. sate sahate 'in sancta', Osc. víaí 'in via', cp. § 247 p. 148. O.Ir. mnāi, tuaith, see § 247 p. 147. Goth. gibái A.S. ziefe (cp. § 263). Lith. rañkoj-e, O.C.Sl. racĕ.

Proethnic Aryan had *-āi-ā with the postposition ā. This ending remained in O.Pers., whilst in Sanskrit a further affix *em was added to it (see § 186 p. 62), as in brhatyām (§ 265). In Avestic the ā of the penultimate was shortened after the analogy of the instrumental ending -aya, whence haenaya (cp. § 229 p. 115). The fusion of the particle ā with this case in pr. Aryan distinguished it from the dative in -āi; and we may follow Streitberg in assuming that in the same period the resemblance between *aṣuāiā and *bhrūhyt(i)ia (Avest. ber*zantya O.Pers. harauvatiyā, Skr. brhatyām) caused ā-stems to acquire the endings gen. -āiās dat. -āiāi; see § 229 p. 115, § 247 p. 147.

In proethnic Greek $-\bar{a}_i$ became $-a_i$ before consonants $(\Theta\eta\beta\check{a}_i-\gamma\epsilon\nu\acute{\eta}\varsigma,\ \chi\check{\omega}\varrho\check{a}_i\ \tau\iota\nu\acute{o}\varsigma)$, but remained unchanged before sonants and at the end of a sentence. For further details see § 247 pp. 147 f.

In Umbr. totem-e 'in civitate' (beside tote), L. Havet equates -em with the Skr. ending -āyām (Mém. de la soc. de ling., II 391 foll.). But Bücheler Umbr. p. 185 has a more satisfactory explanation of it. He holds that totem = tote + en 'in' (I § 209 p. 177); and to this he says -e(n) was added again, by assimilation to words in which -e(n) remained a distinct syllable, e. g. manuv-e 'in manu'. Cp. Prākrit tumam instead of tum 'thou' (Skr. tvám) following aham 'I'; Lith. dial. jūke-sis 'they mock', because -si and -s are both used for this part of the verb (thus it is a contamination of jūkesi and jūkes); Skr. Ved. 3rd. pl. mid. duduhriré instead of duduhré after the analogy of jagmiré; and other instances of the same kind which I have collected elsewhere (Morph. Unt. III 67 ff.).

Lith. rankoj-e like žemėj-e (§ 265) and perhaps dëvej-e

(§ 263 p. 166) with the same particle of uncertain origin which is in the loc. pl. rañkos-e (§ 356) and in the O.C.Sl. loc. sing. kamen-e, possibly the -a of Skr. dat. vfkāy-a (§ 186 p. 62, § 246 p. 145, § 257 p. 158, § 409). rañkoje žēmėje were incorrectly analysed, and the ending was imagined to be -je; hence such re-formations as naktyjè (naktì-s 'night') and sūnūjè (sūnù-s 'son'). These forms lost their -e before vowels in pre-historic times, and thus arose rañkoj raňko, žēmė, naktỹ, sūnuĩ.

§ 265. 3. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68 footnote 1). Locative and dative had become identical in form in proethnic Indo-Germanic (§ 248 pp. 148 f.). Pr. Idg. *bhrāhrt(i)iēi and -(i)iē in celsa'. Avest. barentya, O.Pers. harauvatiyā 'in Arachosia' (as to the nom. harauvatiš see § 191 p. 68); Skr. brhatyām with the particle *-em (cp. áśvāyām § 264 pp. 166 f., O.C.SI. instr. toja § 276), so also we have Avest. -yam beside -ya (Bartholomae, Ar. Forsch. II 104). Lat. faciē, cp. § 248 pp. 148 f. Mid.Ir. Brigti insi; -i for *-iī, and this for *-(i)iē; or *-(i)iē, cp. loc. cit. Lith. žēmėj-e žēmė, cp. § 264; O.C.SI. zemlji, cp. § 248 p. 149.

In proethnic Aryan the dat.-loc. forms *- $i\bar{a}i$ and *- $i\bar{a}$ were differentiated in use: *- $i\bar{a}i$ was appropriated to the dative, *- $i\bar{a}$ to the locative. The loc. use of *- $i\bar{a}$ was natural, because - \bar{a} was the loc. ending of i-stems (§ 260 pp. 161 f.), and other loc. forms had the postposition \bar{a} tacked on to them; while - $\bar{a}i$ recalled the dative ending of \bar{a} - and o-stems (§ 246 p. 145, § 247 pp. 146 f.).

Lith. *věžanczioj-e* follows the *ia-*stems; so probably Goth. frijōndjai (cp. § 248 p. 149).

§ 266. 4. *i*-stems. -*eį*-*i* beside - $\bar{e}(i)$ (§ 260 pp. 161 ff.), cp. dat. -*eį*-*aį* § 249 p. 149.

In the Veda, a few forms in -ayi, on the analogy of $s\bar{u}n\dot{a}vi$, have been restored by conjecture in place of the $-\bar{a}u$ of the texts, which violates the metre: e. g. $\bar{a}j\dot{a}yi$ ($\bar{a}ji-\dot{s}$ 'contest'). See Lanman, Noun Inflexion pp. 387 f. As regards the fem. $\dot{a}vy\bar{a}m$, see § 231 p. 120, § 278 pp. 181 f.

Greek Hom. $\pi \delta \sigma \epsilon i \pi r \delta \lambda \epsilon i$, Att. $\pi \delta \sigma \epsilon \iota \pi \delta \lambda \epsilon \iota$; it must not be forgotten that (1) Att. η and $\epsilon \iota$ expressed the same sound by the beginning of the fourth century B. C. (the Author, Gr. Gr.² p. 36), and so (2) we cannot tell whether $-\epsilon \iota$ was not meant to express the old formation in $-\eta \iota -\eta$ (§ 260 p. 159). Ion. Dor. Lesb. Boeot $-\bar{\iota}$, as $\beta \acute{\alpha} \sigma \bar{\iota}$, can hardly be contracted from $-\iota \iota$ (cp. $\varkappa \iota \iota$), but contain the Idg. ending $-\bar{\imath}$, see § 249 pp. 149 f., § 278. Cypr. $\pi \tau \acute{\alpha} \lambda \iota \digamma \iota$ doubtless follows $\beta \alpha \sigma \iota \lambda \tilde{\eta} \digamma \iota$, as gen. $T\iota \iota \iota \iota \iota \iota \iota \iota$ for follows $\beta \alpha \sigma \iota \lambda \tilde{\eta} \digamma \iota$ as gen. $T\iota \iota \iota \iota \iota \iota$ for follows $\beta \alpha \sigma \iota \lambda \tilde{\eta} \digamma \iota$ as gen. 1889, p. 748; Meister, Zum el. ark. und kypr. Dial., 37.

-ei-i is perhaps contained in Osc. Herentatei Lat. $ov\bar{i}$, see § 249 p. 150, § 260 p. 160.

O.H.G. ensti A.S. ēste may be derived from pr. Germ. *anstei-i -ii-i (I § 67.2 pp. 57 f.), as O.H.G. suniu from *suneu-i (§ 267). Other possibilities are suggested in § 260 p. 161, § 278.

For Lith. naktyjè naktỹ, see § 264 p. 168.

§ 267. 5. *u*-stems. $-e \underline{u}$ -*i* beside $-\bar{e} \underline{u}$ (§ 261 pp. 161 ff.), cp. dat. $-e \underline{u}$ -*a* \underline{i} § 250 p. 152.

Ved. -av-i, $s\bar{u}n\acute{a}v$ -i, rarer than - $\bar{a}u$. For the fem. $dh\bar{e}nv\acute{a}m$ see § 232 p. 122, § 279.

Gr. Hom. $\dot{\eta}\delta\dot{\epsilon}\iota$ $\ddot{u}\sigma\tau\dot{\epsilon}\iota$ Att. $\dot{\eta}\delta\dot{\epsilon}\iota$ $\ddot{u}\sigma\tau\dot{\epsilon}\iota$ $\pi\dot{\eta}\chi\dot{\epsilon}\iota$. A non-original re-formation in -u-i is Ion. $\delta ovoi$ Att. $\delta ovoi$ ($\delta \dot{\phi} ov$ n. 'wood, shaft, spear') for * $\delta ovoi$ - ι (I § 166 pp. 146 f.), following the analogy of the gen. $\delta ovoi$ - δovo

O.H.G. suniu sitiu Norse Run. Kunimu(n)diu O.Icel. syni may belong to the same group (pr. Germ. *-eu-i *-iu-i, see I § 67.3 p. 57); another possible explanation is given in § 260 p. 161. A non-original formation in -u-i is Goth. mann O.H.G. man A.S. men(n) for *manni earlier *manu-i, which follows the analogy of the gen. Goth. mans etc. for *manu-iz or *manu-az (see § 232 b p. 122). Cp. above, Gr. δουρί δορί.

For Lith. sūnŭjè sunuĭ see § 264 p. 168. — Did the û of dialectic forms in -ûje -û, as danguoje Wilnuo, come from the loc. pl. in -ûse (§ 357)? Other suggestions are offered

by Bezzenberger, Nachr. von der Ges. der Wiss. zu Gött., 1885, pp. 161 f., and lately by Wiedemann on p. 35 of his Litauisches Praeteritum.

§ 268. 6. τ- ii- and τ- uu-stems; stems in -τ, -t, -v.

The ending is -ii-i -uu-i (beside -τ -τ, see § 262 p. 164). Skr. dhiy-i bhruv-i, Ved. śvaśrúv-i. Also, with the fem. endings, dhiyám bhruvám śvaśruvám, see § 233 p. 123, § 280. Gr. ui vi ὀφονι νέκνι (nom. νέκτ-ς). Lat. su-e, and perhaps vī for *vii-i (§ 262 p. 164). O.C.Sl. svekrŭv-e may have once been *svekrŭv-τ, and -τ have given place to -e (cp. kamen-e etc., § 257 p. 158). The forms svekrŭv-i krŭv-i follow the analogy of i-stems, § 260 p. 161.

Similarly, Skr. gir-i pur-i gō-ṣan-i; see § 255 p. 156.

§ 269. 7. n-stems. Pr. Idg. -en-i -n-i beside -en - $\bar{e}n$ (§ 257 p. 158). Cp. § 256 pp. 156 ff.

Skr. $m\bar{u}rdh\acute{a}n-i$ $m\bar{u}rdhn-i$, $\acute{a}sman-i$; the forms with a weak stem are very rare in Vedic (see Lanman, Noun Infl. 535). Avest. $G\bar{a}thic\ casmain\bar{\iota}$ from stem casman- 'eye'; asn-i from azan- 'day' like Skr. $\acute{a}hn$ -i.

Gr. $\pi o \iota \mu \acute{e} \nu - \iota$, $\mathring{a} \varrho \nu - \acute{\iota}$ $\varkappa \nu \nu - \acute{\iota}$ (Skr. $\acute{e} \acute{u} n - \acute{\iota}$); and with other strong grade forms by analogy, $\tau \acute{e} \varkappa \tau o \nu - \iota$, $\pi e \nu \vartheta \widetilde{\eta} \nu - \iota$, $\mathring{a} \gamma \widetilde{u} \nu - \iota$.

Lat. homin-e Carthāgin-e, carn-e; with other strong grade forms substituted, edōn-e mentiōne. Umbr. menzn-e 'mense', cp. nom. acc. neut. sakre 'sacre' for *sakri. In Lat. and Umbr., locative and instrumental forms had become identical, see § 274.

In Irish there was bound to be a confluence of loc. and dat., as coin (Gr. zvv-i), ārain, see § 251 p. 154.

Goth. gumin aúhsin (Skr. ukšán-i), O.H.G. gomen gomin. In Anglo-Saxon and Norse, this case has taken -an- = Idg. -on- from the other cases: A.S. zuman, Norse Run. -halaiban 'socio' O.Icel. guma; along with this, there are traces in Norse of -in- = Idg. -en-; see Noreen, Paul's Grundr. I 494. Goth. gōdein (nom. gōdei 'kindness'), cp. Gr. ωδῦν-ι. Goth. tuggōn raþjōn like Gr. ανῶν-ι Lat. ratiōn-e.

Lith. $szun-yj\grave{e}$ akmen- $yj\grave{e}$ follow the analogy of *i*-stems (§ 266 p. 169).

§ 270. 8. r-stems. Pr. Idg. -er-i -r-i, ep. § 256 pp. 157 f., § 258 p. 159.

Skr. mātár-i Avest. mātairi, Skr. nár-i Avest. nairi = Gr. àrio-i, Skr. dātár-i dátar-i Avest. dātair-i.

Gr. Hom. $\mu\eta\tau\dot{\epsilon}_{Q^{-1}}$ $\dot{a}r\dot{\epsilon}_{Q^{-1}}$ Hom. Att. $\mu\eta\tau_{Q^{-1}}$ $\dot{a}r\delta_{Q^{-1}}$. $\delta\dot{\omega}\tau_{QQ^{-1}}$ follows $\delta\dot{\omega}\tau_{QQ^{-1}}$ etc., $\delta\sigma\tau\dot{\eta}_{Q^{-1}}$ follows $\delta\sigma\tau\dot{\eta}_{Q}$. $\phi\rho\dot{a}\tau\epsilon_{Q^{-1}}$ belonged originally to the same set of forms as $\phi\rho\dot{a}\tau\sigma_{Q}a$, as Skr. $d\dot{a}tar$ -i belongs to $d\dot{a}t\bar{a}r$ -am. Cp. II § 120 p. 379.

Lat. matr-e; dator-e with -or- following the nom. sing.

O.Ir. $m\bar{a}thir$ for * $m\bar{a}ter-i$ or * $m\bar{a}tr-i$, which is dative too; see § 252 p. 154.

Goth. $fadr = Gr. \pi a \tau \varrho i$. O.Icel. $m \bar{\varrho} dr$ A.S. $m \bar{e} der$ O.H.G. $muoter = Gr. \mu \eta \tau \varrho i$.

Lith. $moter-yj\grave{e}$ and O.C.Sl. mater-i are modelled upon the i-stems (§ 260 p. 161, § 266 p. 169).

§ 271. 9. Stems ending in an Explosive. How far there was originally a strong stem in these, analogous to the endings -en-i -er-i, is not clear. In another place we have conjecturally restored such forms as *dént-i 'in dente' *uéq-i 'in voce' (II pp. 395, 480), cp. § 262 pp. 163 f., on Skr. par-ut.

Skr. brhat-i; Avest. astvaiti astvainti from ast-vant having bones. Gr. $i\delta \acute{o}\nu \tau - \iota$ $\varphi \acute{e}\varrho o\nu \tau - \iota$, in which the original form of the stem has been changed. Lat. rudent-e ferent-e prae-sent-e, where it is doubtful how far -ent- is derived directly from $-\eta t$ - (II § 125 pp. 395 f., and footnote 1 on p. 105 of this volume). O.Ir. carit, also dative, see § 253 p. 155. Goth. $frij\bar{o}nd$ O.H.G. friunt; A.S. $t\bar{e}d$ (= Gr. $\delta \delta \acute{o}\nu \tau - \iota$) with the i-mutation, nom. $t\bar{o}d$.

Skr. sarvátāt-i 'in completeness', Gr. όλότητ-ι. Lat. novitāt-e juventūt-e. O.Ir. bethid from nom. beothu 'life', also dative, see § 253 p. 155. Goth. mēnōħ A.S. mōnaā beside nom. Goth. mēnōħ-s 'month' (cp. Kluge, Paul's Grundr. I 360); Goth. O.H.G. naht beside nom. Goth. naht-s 'night'.

Skr. śarád-i 'in autumn'. Gr. φυγάδ-ι. Lat. lapid-e. O.Ir. druid, also dative, see § 253 p. 155. Skr. pad-i O.Pers. nipadīy i. e. nipad-i 'on the foot, at once', Gr. ποδ-l, Lat. ped-e, A.S. fēt for *fōt-i. A.S. hnyte for *hnut-i (nom. hnut-u 'nut'), in which the locative ending has not ceased to be a separate syllable, because the stem-syllable is short (I § 661.2 pp. 517 f.).

Skr. $u\dot{s}ij$ -i, stem $u\dot{s}ij$ - 'desiring'. Gr. $\mu \iota i \rho \alpha \kappa \iota \iota$, $\ddot{o}\rho \tau \nu \kappa \iota \iota$ $\ddot{o}\rho \tau \nu \gamma \iota \iota$. Lat. $bib\bar{a}c$ -e. Skr. $v\bar{a}c$ -i Gr. $\dot{o}\pi$ -i Lat. $v\bar{o}c$ -e, see II § 160 p. 480. Skr. $-r\bar{a}j$ -i, Lat. $r\bar{e}g$ -e, Goth. reik. O.H.G. buoh A.S. $b\bar{e}c$ (with i-mutation) 'libro'. O.Ir. nathraig (nom. nathir 'water-snake'), $r\bar{e}g$ 'regi' are also dative; but we cannot say that Gall. -rigi, in proper names, contains a loc. in -i, because for all we know the dative ending -ai may have become -i (-i) in some Gallic dialects (cp. $B\eta \lambda \eta \sigma \alpha \mu u$ § 247 p. 147).

Skr. ap-i Avest. aipya i. e. aipi + the postposition \bar{a} , stem ap- 'water'. Gr. $\varkappa \lambda \omega \pi - i$. Lat. dap-e.

§ 272. 10. Stems in -s.

a. Pr. Idg. *menes-i 'in mente'. Skr. mánas-i dur-manas-i, Avest. manah-i duš-manah-i. Gr. Ion. μένει δυσ-μενεί Att. μένει δυσ-μενεί (cp. the Author, Gr. Gr.² § 17 pp. 36 f.). Lat. gener-e dē-gener-e, rūr-e; infinitives like vīver-e (cp. Skr. dat. jīvás-ē), see II § 132 p. 418; tempor-e with -o- from the nom. acc. sing. neut., see II § 132 pp. 418 f. Perhaps the A.S. dat. loc. sizor from nom. sizor, beside Northumbr. eher from nom. eher 'ear of corn', is of the same kind as Lat. tempor-e (cp. Kluge, Paul's Grundr. I 360.4).

With a weak grade of the es-suffix, * $m\bar{e}$ -ns-i: Gr. Att. $\mu\eta\nu i$ Lat. $m\bar{e}ns$ -e O.Ir. $m\bar{e}s$, cp. II § 132 p. 415.

In Attic, beside Σωνράτει there are found a few examples of -κράτη following the model of ā-stems (cp. acc. -κράτην gen. -κράτον, § 220 p. 97, § 237 p. 128). It must of course be remembered that there was a confluence of η and ει in Attic as early as the 4th century B. C. (see the Author's

- Gr. Gr.² p. 36). This fact may have done a great deal to help the constant spread of the forms -κράτην -κράτου (Meisterhans, Gr. der att. Inschr.² pp. 105 ff.). Lesb. Θεογένη too follows the ā-stems, see § 237 p. 129.
- b. Pr. Idg. comparative $*\bar{o}\bar{k}(i)\dot{z}es-i$ 'in ociore': Skr. $\acute{a}\bar{s}iyas-i$, Lat. $\bar{o}ci\bar{o}r-e$ ($-i\bar{o}s-$ from the nom. sing.). In Greek, with the suffix $-\dot{z}en-$, $\acute{\eta}\acute{\delta}iov-\iota$.
- Pr. Idg. part. perf. act. *ueid-ues-i (stem *ueid-ues-i'knowing'). Skr. $vid\acute{u}-i$. In Greek, with the suffix -uet-i, $eid\acute{u}-i$.
- c. Root Nouns. Skr. $\bar{a}s$ -i Lat. $\bar{o}r$ -e. Skr. $m\bar{u}$ - \bar{s} -i (inferred from nom. pl. $m\bar{u}$ - \bar{s} -as), Gr. $\mu\nu\bar{\nu}$ instead of * $\mu\bar{\nu}$ -i, which would have been the regular form (see II § 160 p. 485), Lat. $m\bar{u}r$ -e, A.S. $m\bar{y}s$.
 - § 273. 11. Certain Root Nouns.

Skr. nāv-i, Gr. νηϊ, Lat. nāv-e. *d(i) iéu-i *diu-i 'in daylight': Skr. dyáv-i Lat. Jov-e, Skr. div-i, Gr. Δι-- Διί, cp. II § 160 p. 481. *géu-i 'in bove': Skr. gáv-i Lat. bov-e; — Gr. βο-ϊ O.Ir. boin are re-formates (§ 255 p. 156). Skr. kṣám-i 'in terra', Idg. *ĝzhém-i, see II § 160 pp. 482 f. Avest. barez-i berez-i 'in alto' (not actually found, but inferred from cases of the word which are), O.Ir. brig, Goth. baúrg O.H.G. burg, see II § 160 p. 479.

Instrumental Singular.1)

- \S 274. There are two distinct methods of forming the Instrumental.
- 1. All noun-stems from the proethnic period onwards have had a suffix, whose original form may have been -a or -e, but which, is a vexed question. In considering what form to

¹⁾ Schleicher, Die beiden Instrumentale des Indogermanischen, Kuhn-Schleicher's Beitr. II 454 ff. (= Compendium pp. 560 ff.). Moller, Über den Instr. im Heliand und das homer. Suffix -\(\varphi\), Danzig 1874. Lissner, Zur Erklärung des Gebrauches des Casussuffixes \(\varphi\)\(\varphi\) v bei Homer, Olmütz 1865. J. Grimm, Der deutsche Instrumentalis, Germania III 151 ff.

restore as original, the following have to be taken into account: Skr. gerund prati-bhidy-a 'with splitting' (§ 278), Gr. $\pi\varepsilon\delta$ -à $\pi\alpha_0$ -à $\tilde{\alpha}\mu$ -a and the like (§ 280), Lat. ped-e Umbr. pure 'igne' (Iguvine Tables, I. b. 20). In the present state of the question I consider -a the more likely of the two.

Remark. -a is supported by Osthoff, Zur Gesch. des Perf., 574 ff.; -e by J. Schmidt, Kuhn's Ztschr. XXVII 292 f., Pluralb. 41 f. Schmidt thinks that he has proved that the Idg. form of the suffix was -e and not -a; but here he makes a mistake. He says that the Idg. feminine formative suffix $-\bar{a}$ - arose by contraction of the ending of o-stems with a certain a which forms feminine stems. He infers that $-\bar{e}$ $-\bar{o}$, the instr. ending of o-stems, cannot contain a case suffix -a. But this supposed feminine a is an entirely imaginary quantity. And even supposing that $-i\alpha$ in $\pi \dot{\sigma} \tau \nu - i\alpha$ is the same as the sound-group from which comes -iin Skr. pátn-ī, which I deny (see § 191 p. 68, and Morph. Unt. V 29), even then, before refusing to admit an instr. suffix -a, a scholar would have to prove that the α of $-i\alpha$ represents Idg. α and not α . By far the simplest explanation of the above named Greek adverbs πεδ-ά παο-ά $\mu \varepsilon \tau - \alpha'$ is to suppose them to be instrumental $(\pi \varepsilon \delta \alpha') = \text{Mid.H.G. bet-}$ according to Bugge, Paul-Braune's Beitr. XII 419 f.); and if Dor. xovoa Att. xουφη, like πάντη, are to be classed with the instr. Att. πη ταύτη (§ 276), which has more to say for itself then Schmidt's view that they are nom.-acc. pl. neut. (Pluralb., pp. 40 f.), then $\varkappa \varrho \nu \psi \ddot{\alpha}$ too will be instrumental. No hesitation need be felt in deriving Lat. ped-e from *ped-a; it is quite possible phonetically (see I § 97 p. 91). There would be more cause for doubt in deriving Umbr. -e from *-a, because of words in which a has not been weakened, as tu-plak (see § 225 p. 106) procanurent '*procinuerint' prehabia 'praehibeat'. But these forms prove nothing for final -a. No other examples are found which can explain the treatment of pr. Ital, unaccented final *-a: but it is important to notice that *-o becomes -e, in ere 'is' = Skr. ēšá Idg. *ei-so (§ 413) and in este for *esto, *estod = Lat. istu-d (§ 417). When we remember, too, that *-i becomes -e when final, but not otherwise, as in the nom. acc. neut. sakre and in ote (Osc. avti), we see that there is no need to hesitate in assuming that *-a became -e in Umbr., and that pure comes from *pura. This is not the only instance of special laws affecting the vowels of final syllables in Umbrian; others are the fluctuation between \bar{o} (u) and \bar{a} (I § 105 p. 98), and between a and e in ocar pacer, from the stems ocri- pacri-.

Perhaps Keltic may throw some light on the question. As far as I can see, -e in Gall. are- ande- ate- may come from i, notwithstanding ambi-. What is the relation of the O.Ir. proclitic ar and ad- at- to air and aith-? Are we to gather that pretonic -e has become -a (*ara- *ata-)?

With the final -o and -e of o-stems this ending became

 $-\bar{o}$ or $-\bar{e}$ in the parent language; with the ending of \bar{a} -stems it contracted to $-\bar{a}$, with that of $\underline{i}\bar{e}$ -stems to $-\underline{i}\bar{e}$. i- and u-stems show $-\bar{\imath}$ and $-\bar{u}$; Osthoff (Morph. Unt. II 139 f., Perf. 573) explains these as due to "proportional analogy", following the endings $-\bar{o}$ $-\bar{e}$, $-\bar{a}$; that is, that given -o -e: $-\bar{o}$ $-\bar{e}$, and a: \bar{a} , it was natural to suppose that i and -u would have $-\bar{\imath}$ and $-\bar{n}$ for the corresponding ending.

2. Secondly, the suffixes *-bhi and *-mi are used for the instrumental of nouns in various Idg. languages; *-bhi in Armenian and Greek, *-mi in Aryan, Balto-Slavonic, and doubtless in Germanic; besides which one example of each is found in Keltic. The same suffixes are used in pronouns. They are connected etymologically with other bh- and m-suffixes which from the proethnic period onwards have formed various cases of nouns and pronouns in all three numbers. Examples are: Skr. dat.-abl.-instr. dual áśvā-bhyām dat.-abl. pl. áśvā-bhyas instr. pl. áśvā-bhiš from áśvā- 'equa', dat. tú-bhyam 'tibi' asmá-bhyam 'nobis', O.C.Sl. dat.-instr. dual pati-ma dat. pl. pati-mi instr. pl. pati-mi from pati 'way' (instr. sing. patī-mī), dat. loc. te-bě instr. to-boja from ty 'thou'.

A number of words contain elements which remind us of the suffixes with bh, but have nothing to do with forming eases; and I would offer the conjecture that the two groups are etymologically connected. The -qu in σ-φί στρατό-qu is the same as in au-wi, and with this are connected au-qui Lat. am-bō Skr. u-bhāú Goth. bái, and perhaps Skr. sa-bhá 'assembly, place of assembly, court' Goth. si-b-ja 'kin', Gr. q ί-λο-ς and some other words. Cp. Johansson, Bezz. Beitr. XIII Since bh belonged specially to the instrumental, whose original meaning was sociative and comitative, one would be inclined to suggest that the original meaning of this root was that of being paired or together (this has been put forward already, § 186 pp. 61 f.). There will have been parallel forms *bho- and *bhi-, related somewhat in the same way as *qo- and *qi- (§ 410). Then bh spread from the instrumental to other eases, as in pronouns

-sm- (e. g. Skr. tásmin) and -si- (e. g. Skr. tásyās) spread from one case to the others which show them (§§ 424, 425). The m-suffixes, -mi etc., are to be set down to another root. It may be conjectured that in the parent language these two elements came in contact at some point, and had some one use in common, which made them influence each other in form. But what the exact forms and uses of each were to begin with can no longer be made out. Generally speaking, the bh-forms are preferred in Aryan, Armenian, Greek, Italic, and Keltic, and the m-forms in Germanic, Baltic, and Slavonic. For a general discussion of these suffixes the following references may be given: Sievers, Paul-Braune's Beitr. IV 391; Bartholomae, Handb. der altiran. Dial. p. 68 footnote 1; the Author, Techmer's Internat. Zeitschr. für allgem. Sprachwiss., I 241 f.; Henry, Mém. de la Soc. de ling., VI 102 ff.; Strachan, Bezz. Beitr. XIV 174 f.

§ 275. I. Instrumental forms with the Suffix - α (-e).

1. o-stems. Pr. Idg. * $u_{\bar{q}}q\bar{o}$ 'with a wolf'; and side by side with $-\bar{o}$ is $-\acute{e}$, as * $j_{\bar{q}}u_{\bar{q}}\acute{e}$ 'with a yoke'; cp. § 240 p. 133.

Skr. Ved. $v \hat{f} k \bar{a}$, Avest. v e h r k a O.Pers. $k \bar{a} r \bar{a}$ 'with a people or host'. In Greek only adverbs are left: $-\bar{o}$, the pronominal $\pi \omega$ in $o \tilde{v} \pi \omega$ etc. (O.Sax. $h w \bar{o}$ 'how, in what degree'), whilst it is doubtful whether any adverbs like $o \tilde{v} \tau \omega \times \alpha \lambda \tilde{\omega} \zeta$ fall in this class, and if so, which of them (see § 241 p. 135); $-\bar{e}$, Tarent. $\alpha i \tilde{\eta}$ beside loc. $\alpha l \epsilon i$ (§ 263 p. 165) 1), and in adverbs from pronoun-stems such as Lac. $\pi \dot{\eta} - \pi o \kappa \alpha$ (cp. Att. $\pi \dot{\omega} - \pi o \tau \epsilon$), Gort. $\bar{\eta}$ $\ddot{o} - \pi \eta$ (cp. Goth. $h v \bar{e}$ 'with which, for how much, perhaps'), Cret. Heracl. Cypr. Att. $\dot{\eta}$ 'if' beside (loc.) ϵi 'if''). In Latin, certain adverbs come into this class, as $q u \bar{o}$

¹⁾ The old grammarians accent the word wrongly $al\eta'$, on the analogy of $al\epsilon\iota$.

²⁾ In Attic, $\hat{\eta}$ is contained in $\hat{\epsilon}\hat{\alpha}_{\nu}$ and $\hat{\alpha}_{\nu}$ for $\hat{\eta}-\hat{\alpha}_{\nu}$, whilst $\hat{\epsilon}\hat{\epsilon}-\hat{\alpha}_{\nu}$ became $\hat{\epsilon}(\underline{\epsilon})\hat{\alpha}_{\nu}$ $\hat{\eta}^{\prime}\nu$. However, $\hat{\epsilon}(\underline{\epsilon})\hat{\alpha}_{\nu}$ may possibly have become $\hat{\alpha}_{\nu}$ after $\alpha \alpha t$ and like words, cp. $\hat{\nu}_{\gamma t}\hat{\alpha}$ beside $\sigma \alpha q \eta \hat{\eta}$ for $-\epsilon(\sigma)\alpha$ (the Author, Gr. Gr. § 10 p. 27).

(cp. Umbr. sei-podruh-pei 'utroque' ulo ulu 'illo. illuc') cito modo, bene male: and it seems best to add ārē āre in ārē--bam are-facio (facit are), suē- in suē-bam -suē-facio and the like (Wiedemanu, Beitr, zur altbulg, Conj. 125 f., and Bartholomae, Bezz, Beitr, XII 91). O.Ir, fiur for *firu, cēliu, see below. O.H.G. tagu, later tago; from words with a long initial syllable regular forms are only occasionally met with, e. g. $h\bar{u}s$ (I § 661.2 pp. 517 f.), for they usually have the ending of forms with a short initial syllable as wolfu wolfo (cp. gebu: wīs: erdu § 276); ō is kept in O.Sax. hwō 'how'; in Gothic we find $-\bar{e}$, $hv\bar{e} = Gr$. Lac. $\pi\eta' - \pi o \times \alpha$; see below. Lith. $vilk\hat{u}$, cp. gerű-ju beside gerù, I § 664.3 pp. 523 f. In Slavonic, the instr. in $-\bar{e}$ is contained in comparatives in $-\dot{e}-j\bar{\imath}$, as O.C.Sl. nově-ni (II § 135 p. 437) and in the first part of the periphrastic imperfect, as nesě-achŭ from nès-ti 'to carry' (see Wiedemann, loc. cit.).

In Aryan, the ending Idg. $-\bar{e}$ (not $-\bar{o}$) seems to be vouched for by Skr. $pa\dot{s}c\dot{a}$ 'behind' Avest. pasca 'after, afterwards' with c, as compared with the abl. Avest. $pask\bar{a}p$ 'behind, afterwards' with k (I \S 445 p. 331); the latter form therefore has Idg. $-\bar{o}d$ (\S 241 pp. 134 f.).

In Sanskrit the ending $-\bar{e}na$ as $vfk\bar{e}na$ is commoner than $-\bar{a}$ in the Veda, and is universal in the classical language; This is a re-formation following the pronouns, see § 421. Vedic has also $-\bar{e}n\bar{a}$ instead of $-\bar{e}na$, as $s\tilde{u}riy\bar{e}n\bar{a}$, $t\tilde{e}n\bar{a}$, which is probably due to the influence of the older instrumental formation in $-\bar{a}$, as $vfk\bar{a}$ (J. Schmidt, Kuhn's Ztschr. XXVII 292; Wackernagel, Das Dehnungsgesetz der gr. Compp., 13).

Keltic. Forms like fur cēliu (Gall. e. g. Alisanu) must be instrumental. This is proved by the way in which they are used. Without a preposition, they always have the instrumental meaning (for even with comparatives they are doubtless instr. and not abl.).

Remark. five has often been taken for a dative in orig. $-\bar{\nu}_{i}$. This assumption can hardly be made good, because the dat. of \bar{u} -stems, Brugmann, Elements. III.

tuaith, must be derived from *teutāi, whether we choose to regard this form as dative or locative (§ 249 p. 147, § 264 p. 167), and -āi must have been intermediate between this ground-form and the form actually found (cp. I p. footnote 1). I make this observation on account of what is said by Strachan, Bezz. Beitr. XIII 131.

Germanic. O.H.G. tagu may also be explained as abl. in $-\bar{o}d$ (§ 241 pp. 134 f.). demu is certainly ablative, see § 423.

Goth. vulfa may be considered an instr., in Idg. $-\bar{o}$ or $-\bar{e}$, without doing violence to any phonetic law. But it may also be abl. in $-\bar{e}d$ (§ 241 pp. 134 f.), dat. in $-\bar{e}(\underline{i})$ (§ 246 p. 146), or loc. in $-o\underline{i}$ (§ 263 p. 165). Cp. \underline{pamma} , which may be taken for either abl. in $-\bar{e}d$ (cp. Skr. $t\acute{a}sm\bar{a}d$) or dat. in $-\bar{e}(\underline{i})$ (cp. Skr. $t\acute{a}sm\bar{a}i$); see § 423.

Should we add to this class Goth. adverbs like ubila-ba (see § 241 p. 137)?

Streitberg (Die germ. Comp. auf $-\bar{o}z$ -, p. 37) explains such adverbs as Goth. ga-lei $k\bar{o}$ O.H.G. gi-l $\bar{\iota}hho$ 'similar, like' and Goth. $svar\bar{e}$ 'in vain' as being forms in *- $\bar{o}m$ and *- $\bar{e}m$, that is $-\bar{o}$ and $-\bar{e}$ + the particle *em. But ga-lei $k\bar{o}$ gi-l $\bar{\iota}hho$ may also come from Idg. $-\bar{a}m$; see § 276 p. 180. A third explanation was mentioned in § 213 p. 90. Views by no means to be adopted are set forth by Mahlow, Die langen Vocale 54, 131, and Hanssen, Kuhn's Ztschr. XXVII 614.

Lithuanian. In dialects and in O.Lith. is found also vilkum, an extension of vilku by -mi like tû-mi, § 421.

§ 276. 2. \bar{a} -stems. Pr. Idg. * $e\bar{k}\mu\bar{a}$ 'with a mare'. Skr. Ved. $\acute{a}\dot{s}v\bar{a}$, Avest. haena, see below. Greek Cypr. $\acute{a}\varrho\tilde{a}$ 'ex voto' and the like, see below; all other examples are adverbs (from nouns or pronouus): Ion. Att. $\varkappa\varrho\nu\varrho\eta\tilde{\eta}$ $\lambda\acute{a}\vartheta\varrho\eta$ (Att. $\lambda\acute{a}\vartheta\varrho\bar{a}$) $n\acute{a}\nu\tau\eta$ $n\tilde{\eta}$, Lesb. $\check{a}\lambda\lambda\bar{a}$ $\check{o}\pi$ - $n\bar{a}$, Dor. $\varkappa\varrho\nu\varrho\tilde{a}$ $\tau a\nu\tau\tilde{a}$ \check{a} - $\tau\varepsilon$; the adverbial crystallisation is clearly shown in the re-formate $n\acute{a}\nu\tau$ - η (cp. $K\iota\varkappa\nu\nu\nu\epsilon\tilde{o}$ § 263 p. 164) 1); cp. below. O.H.G. gebu,

¹⁾ J. Schmidt's conjecture (Pluralb. 40) that $\pi \dot{\alpha} r \tau \eta$ is a nom. acc. pl. neut., is opposed to the meaning of the word, which cannot be separated from $\eta \bar{\eta}$, $\tau \alpha \dot{\nu} \tau \eta$ and so forth.

later gebo; with -u dropped after a long initial syllable $w\bar{\imath}s$ ('manner, wise'), and with the ending assimilated to gebu we have erdu (earth') slahtu ('kind, species') etc.; ep. $tagu:h\bar{u}s:wolfu$ § 275 p. 177; O.Icel. drotningo ('queen') fiqdr ('feather'), ep. Noreen, Paul's Grundr. I 491. On Lith. ranka O.C.Sl. raka, see below.

Aryan. In Vedic $-ay\bar{a}$ is found with nouns, but more rarely than $-\bar{a}$, e. g. $a\dot{s}vay\bar{a}$; and this became universal in the later language. In Avestic haenaya is far commoner than haena. $-ay\bar{a}$ came from the pronouns $(t\dot{a}y\bar{a})$, see § 422), and was doubtless intended to avoid the same ending in the instr. and nom. sing. Cp. O.C.Sl. rakoja (beside raka), also an adformate of the pronouns (toja); see below.

Remark 1. There is a group of Sanskrit adverbial forms from o-stems, ending in $-ay\tilde{a}$, as $\gamma tay\tilde{a}$ 'rightly' (stem $\gamma t\tilde{a}$ -) $svapnay\tilde{a}$ 'in a dream' ($sv\tilde{a}pna$ -). Perhaps these are modelled upon the pronominal adverb $ay\tilde{a}$ 'in this way'. See J. Schmidt, Pluralb. 212 ff., where however only those adverbs which are built up on adjective stems, as $\gamma tay\tilde{a}$, are so explained. Another explanation is offered by Bartholomae in Bezz. Beitr. XV 20 f. Cp. § 279 Rem.

Greek. In Cyprian the old form in -ā seems to have remained in use as an ordinary ease, and the dative forms in $-\bar{a}i$ $(-\bar{\alpha}i)$ seem to have lacked the instrumental meaning (Meister, Gr. Dial. II 295 f.). In the other dialects, instrumental uses had all passed over to the dative form, and the instr. form in $-\bar{\alpha}$ survived only as fossilised in adverbs. But in time these very adverbs in $-\bar{\alpha}$, and the dative in $-\bar{\alpha}i$, ran together into one form. In Attic inscriptions of the classical period they have almost always the ending of the dative, as $l\delta(a, \tilde{p})$, and similarly in Gortynian \tilde{a} , $\tilde{a}\lambda\lambda a$. Forms in $-\bar{\alpha}$ are related to these in the same way as e.g. adv. o $\tilde{\nu}$ to adv. κύκλω, adv. Πλαταιᾶσι to adv. Πλαταιαῖς (the Author, Gr. Gr. 2 p. 210). Later on $-\bar{\alpha}i$ and $-\bar{\alpha}$ ran together in the regular course of things, see I § 132 p. 120. In Homer λάθοη $\pi \acute{a}r\tau \eta$, the true instrumental, are still used; which is proved by the fact that in thesis before vowels η is always shortened, but η as a rule is not (J. Schmidt, Plur. 40).

Remark 2. In Attie, η and η represented different sounds even as late as the Christian era; but ϵ_{t} was written sometimes instead of η (the Author, Gr. Gr.² p. 36). Now adverbs like $\tilde{\eta}$, $\kappa oir\tilde{\eta}$, $\pi air oin \tilde{\eta}$ are sometimes written with ϵ_{t} (Meisterhans, Gr. der att. Inschr.² p. 114); which proves beyond a doubt that the iota adscript in η_{t} is right, and therefore that the form is dative.

Whether any of the Latin adverbs in $-\bar{a}$, such as $h\bar{a}-c$ $\bar{u}n\bar{a}$ rect \bar{a} dextr \bar{a} , are instrumental cannot be made out. fr \bar{u} str \bar{a} contr \bar{a} may possibly be so, but the short vowel must then be due to analogy (I § 655. 2 pp. 502 f.) 1).

Lith. rankà (for *rankā, the original long vowel kept in qerá-ja beside qerà 'cum bona') is pronounced in some dialects runku, in Lettic růku, which gives *rankān or *rankām as the Baltic ground-form. This is confirmed by O.C.Sl. raka, a form rare, it is true, in the remains of O.C.Sl., but also found in West-Slavonic, and therefore proethnic in that branch of the language. The usual instr. of O.C.Sl. is rakoja, an adformate of pronouns like toją (§ 422), cp. Skr. ášvayā following táyā. Afterwards the analogy of rakoja suggested noštija and materija (§§ 278, 282). The difference between Skr. ášvā táyā ášvayā and O.C.Sl. raka Lith. rankà O.C.Sl. toją rąkoją is merely that the latter group have another affix *em, which we saw in the Skr. locative ending -yam §§ 264, 265 pp. 167 f.; cp. § 186 p. 62. It still remains a question whether the instr. ending -ām is also represented by adverbs such as Skr. uttarám 'further' Gr. artisiny Lat. palam perperam and Goth. ga-leikō O.H.G. gi-līhho (cp. § 275 p. 178).

In Lith. there is a re-formation with -mi, as kalbumi (kalbà 'speech'), duonomi (di'na 'bread'), according to Mikuckij (Kuhn-Schleicher's Beitr. I 240 f.), cp. vilkumi § 275 p. 178.

§ 277. 3. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68 footnote 1). Pr.Idg. * $bhr\hat{g}h\eta t(i)i\bar{e}$. Skr. $brhaty\acute{a}$ $d\bar{e}viy\acute{a}$, Avest. barentya. Lat. $faci\bar{e}$ Umbr. uhtretie 'auctoritate', but these may be regarded

¹⁾ O.Ir. echtar 'extra' (Mid.Cymr. eithyr) has often been derived from *echtrā (cp. briathar I § 634 p. 475). But more probably it had the same ending as eter. -ar because of -cht-, see Thurneysen, Kuhn's Ztschr. XXVI 311 footnote 1.

as ablative, see § 243 p. 139. Mid.Ir. insi (-i for *-ii, and a step further back *-iie), but this may be dat. (§ 248 p. 149) or loc. (§ 265 p. 168). Lith. žemė, see below.

Ve die has a few examples with $-\bar{\imath}$ (-i), on the analogy of i-stems (§ 278), as $\dot{s}\dot{a}m\bar{\imath}$ ($\dot{s}\dot{a}mi$) from nom. $\dot{s}\dot{a}m\bar{\imath}$ work'. A few scattered examples of the same kind are found in Avestic: $az\bar{\imath}$, stem $azy\bar{a}$ - $az\bar{\imath}$ - 'cow'.

O.H.G. kuninginnu following sipp(i)u gebu, see § 276 pp. 178 f.

Lith. žemè, O.C.SI. zemlją (-ją = *-jēm as in the acc. sing., see § 216 p. 92) zemljeją are to be explained in the same way as rankà, raka rakoja § 276, preceding page. Be it observed, also, that in Lith. dialectic -i instead of -e points to an older *-ēn with just as much certainty as runku instead of rankà points to *rankān.

§ 278. 4. *i*-stems. Pr.Idg. * $ou\bar{\imath}$ from * $ou\bar{\imath}$ -s 'ovis', which seems to have been used as a dative even then, see § 249 p. 150. Skr. Ved. $mat\hat{\imath}$ from $mat\hat{\imath}$ - $\hat{\imath}$ 'mind, spirit, devotion'; Avest. $a\check{z}i$. It is more probable that Lesb. Boeot. Dor. Ion. $\beta\acute{a}\sigma\bar{\imath}$, $\pi\acute{o}\lambda\bar{\imath}$ have Idg. - $\bar{\imath}$, than that they come from -u (loc.), see § 266 p. 169. Lat. $turr\bar{\imath}$, Umbr. poni puni pone 'posca', but these may be ablative in pr. Ital. - $\bar{\imath}d$ (§ 243 p. 139); ep. pronominal adverb $qu\bar{\imath}$ from qui-s (§ 421). O.Ir. $f\bar{a}ith$ for * $u\bar{\imath}t\bar{\imath}$, see below. O.H.G. ensti, steti (stat 'place'), see below. Litb. dial. $ak\hat{\imath}$, see below.

Aryan. Only the Veda has $-\bar{\imath}$ in feminines; this is shortened to -i before a vowel or at the end of a 'pāda' (see Lanman, Noun Infl. 380 f.). Side by side with $-\bar{\imath}$ -i the following endings are found in Sanskrit:

1. $-y\bar{a}^{\,1}$) in Vedic both masc. and fem., later almost exclusively fem. It is probable that this ending is the weak *i*-stem + instr. suffix $-\bar{a}$ (§ 280), cp. $kr\acute{a}tv-\bar{a}$ = Avest. Gāthic $xrapv-\bar{a}$ (§ 279), and was not borrowed from (fem.)

¹⁾ Possibly O.Pers. $\bar{\alpha}piy\bar{\alpha}$, Beh. I 95, is such a form. The passage is mutilated, and the form may be loc. sing.

- $\bar{\imath}$ $i\bar{e}$ -stems ($byhaty\hat{a}$). But since the same ending $-y\bar{a}$ is found in fem. $\bar{\imath}$ $i\bar{e}$ -stems, it was gradually restricted to feminines among the i-stems; and the point of contact thus gained betwen these two classes of stems doubtless suggested the further step of coining gen. $\dot{a}vy\bar{a}s$ dat. $\dot{a}vy\bar{a}i$ loc. $\dot{a}vy\bar{a}m$ (§ 231 p. 120, § 249 p. 150, § 266 p. 168); compare the re-formates dhiy- $\dot{a}s$ dhiy- $\dot{a}i$ dhiy- $\dot{a}m$ beside dhiy- \dot{a} (§ 280). The only masc. in $y\bar{a}$ which held its ground in later Sanskrit is $p\dot{a}ty\bar{a}$, which was preserved by the dat. $p\dot{a}ty\bar{e}$ see § 231 p. 120, § 249 p. 149.
- 2. -y-a in "gerunds" from verbs compounded with a prefix; as prati-bhid-y-a (orig. 'with splitting'): Germ. *biti- 'bite, bit' O.Sax. biti O.H.G. biz; $\bar{a}-gam-y-a$ ('with approaching'): Germ. *kumi- 'a coming' O.Sax. kumi O.H.G. chumi; $\bar{a}-ga-ty-a$ ('with approaching') beside $g\acute{a}-ti$ - \S Gr. $\beta\acute{a}-\sigma -\varsigma$. When this formation was produced, consonantal stems must still have had -a, not yet changed to $-\bar{a}$ (§ 280). It is therefore very closely connected with (1) $-y-\bar{a}$; -a being kept because the ordinary case meaning had sunk out of sight in these verbal nouns (on the same principle, old case-endings remain in the Greek infinitives $\delta\acute{o}-\mu\epsilon\nu$ § 257 p. 158 and $\delta\acute{o}-\mu\epsilon\nu-a\iota$ § 251 p. 135). In the Veda, gerunds often end in $-y\bar{a}$ as well as -ya; the reason being not so much the analogy of the living instrumental case, as that of gerunds in $-tv\acute{a}$ (§ 279).
- 3. $-in\bar{a}$, $\acute{a}vin\bar{a}$. This formation is due to the analogy of n-stems (cp. § 393). Even in the Veda, it is the commonest instr. for the masc.-neut., and is found in a few feminine words; in later Sanskrit it is the regular ending of the masc.-neut. instrumental.

Old Irish fāith is probably instrumental, simply because has the form without a preposition only the instr. meaning (cp. § 275 p. 177). But as far as form goes, it might be locative, cp. § 260 p. 160.

Old High German feminines, such as *ensti* (anst 'favour'), which may be loc. in orig. *-ēi or *ei-i (§ 260 pp. 160 f., § 266 p. 169), may also be the instr. in -ī. -i is regular only

in words whose first syllable is short, as steti; although most forms with a long first syllable, as ensti, have -i too, yet a few remain in which developement has been regular, as anst (mit dinera anst 'with thy favour'). Compare von Bahder, Die Verbalabstracta, pp. 19 f.; Osthoff, Paul-Braune's Beitr., VIII 262. -i is found in a very few masculine words, as quidi ('law-suit'); see Kögel, Über das Keron. Gloss. p. 158, and Osthoff, loc. cit. The usual masc. ending is -iu, which follows the jo-stems (hirtin hirtu), e. g. gastin gastu; cp. the pronoun hin in hin-tu 'to-day' beside Goth. hi-mma as compared with din from the stem dia- (II § 4 p. 10, III §§ 409, 421).

In Lithuanian, the original formation is perhaps represented by dialectic forms such as aki from aki-s 'eye'. Elsewhere the ending is -mi, as nakti-mi aki-mi (§ 282); compare the pronoun mani beside manimi § 449. In Slavonic, the datives pati nošti are specimens of the old type, if we were right in conjecturing that they are instrumental (§ 249 p. 150); compare pron. instr. či (Mod.Slov. 'if' Czech. 'whether') beside či-to 'quid' (§ 421). With instr. meaning we have masc. pati-mi (§ 282), fem. noštija noštija, the latter of which is an ad-formate of rakoja (§ 276 p. 180).

§ 279. 5. u-stems. Pr.Idg. $*s\bar{u}n\bar{u}$ from $*s\bar{u}nu$ -s 'son'. Avest. $b\bar{u}zu$. Lat. $man\bar{u}$, in which there has been a confluence of the instr. and the ablative in $-\bar{u}d$ (§ 243 p. 141). O.Ir. biuth.

Aryan. In both branches of Aryan we meet with a formation which is modelled upon consonant stems. Vedic: fem. and masc.-neut.: hánv-ā hánvv-ā (hánv- f. 'jawbone') krátv-ā krátuv-ā (krátu- m. 'strength, will, understanding'), mádhv-ā (mádhu- n. 'sweetness'). Of the same kind are instr. from masc. tu-stems which are used as gerunds, e.g. šru-tvā orig. 'with the hearing', see II § 108 p. 327. In Avestic, we find not only bāzu but bazv-ā, (fāthic xrapv-ā.

In later Sanskrit the ending $-v\bar{a}$, like $-y\bar{a}$ in i-stems, is confined to the feminine and the gerunds; and corresponding to the re-formates $\dot{a}vy\bar{a}s$ $\dot{a}vy\bar{a}i$ $\dot{a}vy\bar{a}m$ in i-stems there is

a similar set of u-forms, as dhēnvās dhēnvāi dhēnvām from dhēnú- 'milch cow' (§ 232 p. 122, § 250 p. 152, § 267 p. 169); compare the re-formates bhruv-ās bhruv-āi bhruv-ām beside bhruv-ā (§ 280). An ending -unā, produced by the analogy of n-stems (§ 393), is the only one used with masculine and neuter words in later Sanskrit, e. g. sūnúnā. Even in the Veda this is by far the commonest ending for masc. and neut. instr.

Remark. As regards the Aryan adverbs in -uyā, as Skr. āšuyā Avest. āsuyā(-ca) 'quickly' (from āšū-āsu-'quick'), the student may consult J. Schmidt, Pluralb. 213. Perhaps, as he suggests, these are adformates of amuyā 'in that wise'. A different view is taken by Bartholomae, Bezz. Beitr. XV 21. Cp. § 276 Rem. 1.

Germanic. Perhaps we should place here O.Icel. suffixless datives which have suffered a u-modification or "umlaut" of the root vowel, as vond from nom. vondr 'branch'. O.H.G. instr. in -iu -u, as sitiu situ, are really locative forms (§ 267 p. 169) which have added the instrumental meaning to their own through being associated with the instr. sing. of i-stems (gastiu gastu, (see § 278 p. 183).

§ 280. 6. All remaining Stems.

Aryan. In Sanskrit the regular ending is $-\bar{a}$, the stem having usually the same weak form as the dative singular. This $-\bar{a}$ came originally from stems in -o-, also the source of the ending of the nom.-acc. dual, $-\bar{a}u$ $-\bar{a}$ (§ 289). Why the original short -a (cp. -bhidy-a) was altered cannot be made out. However, it is not by any means clear whether the Iranian endings Avest. $-\bar{a}$ O.Pers. \bar{a} - represent pr.Ar. -a or *- \bar{a} ; if the latter, the change of -a to $-\bar{a}$ will be proethnic Aryan; cp. I § 21 p. 25, § 649 p. 495. A consideration of the Sanskrit gerund in -ya would incline one to believe that it is only in Sanskrit that this ending was borrowed from o-stems.

Skr. $\dot{s}\acute{u}n$ - \ddot{a} $\dot{a}\dot{s}man$ - \ddot{a} Avest. $s\vec{u}n$ -a asman-a; on Ved. $pr\bar{e}n\acute{a}$ from $pr\bar{e}m\acute{a}n$ - 'love', $bh\bar{u}n\acute{a}$ from $bh\bar{u}m\acute{a}n$ - 'plenty, crowd' see Streitberg, Paul-Braune's Beitr. XIV 205 f. Skr. $m\bar{a}tr$ - \dot{a} $d\acute{a}tr$ - \bar{a} Avest. $m\bar{a}pr$ -a $d\bar{a}pr$ -a. Skr. brhat- \dot{a}

Avest. berezat-a berezant-a. Skr. mánas-ā Avest. mananh-a; Skr. ášīyas-ā Avest. āsyanh-a; Skr. vidúṣ-ā Avest. vīduṣ-a. Skr. dhiy-á bhruv-á; the likeness of dhiy-á to dēviyá etc. (§ 277 p. 180) produced a new set of forms, dhiyás dhiyāi dhiyām beside dhiy-ás dhiy-é dhiy-í, bhruvās bhruv-ám beside bhruv-ás bhruv-é bhruv-í (§ 233 p. 123, § 255 p. 156, § 268 p. 170), cp. ávyās dhēnvās and similar words § 278 p. 182, § 279 p. 184. Skr. tanúv-ā Avest. tan(u)v-ā. Skr. nāv-ā, gáv-ā Avest. gav-a. Skr. viṣ-ā (viṣ- 'settlement, house, community, stock, family'), Avest. vīs-a O.Pers. vīp-ā (vīsvīp- 'village community, clan').

In Greek stems such as we are now discussing, locative forms took over the instrumental uses. Only fossil instr. forms survive in certain adverbs, as $\pi \varepsilon \delta - \alpha = \alpha - \alpha$; see § 274 There were sufficient reasons for the disuse of such instrumental forms. The accusative singular masc. fem. had come to have the same ending $-\alpha$ (= -m); and besides, the original difference in stem between these two cases had disappeared long before in proethnic Greek. πεδ-ά. used in Aeolic and Doric with the same meaning as μετ-ά, meant originally 'with one's foot' = 'at one's foot, immediately behind or with one', cp. Armen. het yet 'behind, after, with' from the same root-noun. $\pi \alpha \rho - \alpha'$ beside dat. $\pi \alpha \rho - \alpha'$ gen. abl. πάρ-ος and loc. πέρ-ι. άμ-α from είς for *sem-s 'unus', cp. Dor. $\alpha u \tilde{\alpha}$ which follows the analogy of instr. adverbs from \bar{a} -stems (§ 276 p. 178). *Fex-a in Elvena Evena on account of (for έν-Fεκα, I § 166 p. 146) and in έκά-εργο-ς 'working at one's own will, with unhampered judgement' beside O.Pers. loc. vas-iy 'much, very', properly 'in choice or liking, at pleasure' (unless we are to read vasaiy, loc. from a stem vasa- = Skr. váša-). Cp. Osthoff, Zur Gesch. der Perf., 334 ff. and 574 ff.

Italic. In Latin the ending is -e; there has been a confluence of the instr. and the locative in Idg. *-i: carn-e homin-e, mātr-e datōr-e, ferent-e prae-sent-e, gener-e ōciōr-e, su-e, nāv-e, bov-e. These forms added the ablative function to their own, and are consequently called ablative in the

grammars; cp. § 243 pp. 140 f. Umbrian too seems to possess the instr. with the ending -e, see § 274 with the Rem. p. 174.

From Keltic no undoubted examples can be cited. But it must be observed, that if the Idg. ending was really -e and not -a, there is no phonetic difficulty in regarding as instr. the forms which we have already explained as dat. or loc. (§§ 251 ff. and 269 ff.), e. g. coin, māthir, carit.

Neither can any certain examples be found in Germanic. But, as in Keltic, some or all of the forms which we regarded as loc. in *-i may be instrumental too: all, if *-e was the Idg. ending (for *-e became *-i in proethnic Germanic, see I § 67.4 p. 58), some at least, if it was *-a. Examples of such possible instrumentals are Goth. frijond O.H.G. friunt.

§ 281. II. Instrumental Forms with the Suffix -bhi or -mi. A general account of these suffixes has been given already, in § 274 pp. 175 f.

a. The Suffix -bhi.

Armenian. -b, becoming -v after a vowel (I § 485 p. 358), cp. instr. pl. -bk -vk § 379. o-stems: gailo-v from nom. gail 'wolf', cp. Gr. $9\varepsilon \delta -\varphi \iota$. Proper names have -a-v, as Trdata-v, compare what is said on the gen. Trdatay in § 239 p. 130. i-stems: srti-v from nom. sirt 'heart'. u-stems: srtu-u for *startu-v (cp. instr. pl. startu-v from nom. start 'eye', -startu-v' from nom. start 'adornment'. startu-v' from nom. startu-v' from nom. startu-v' from nom. startu-v' from nom. startu-v' adornment'. startu-v' from nom. startu-v' from startu-v' adornment'. startu-v' from nom. startu-v' from startu-v' fro

Old Irish. Neuter n-stems have *-bhi, as an-mimm an-maimm, if we are to take *-mn-bhi as the ground-form (1 § 243 p. 201, § 520 p. 378, § 657.1 p. 506); cp. -b n-and -b in the instr. dual and plural (§§ 296 and 379). But the ground-form may be *-mn-mi; cp. what is said in § 379 on the Avestic instr. sing. nāmēnī.

Greek. Beside $-q\iota$ we find $-q\iota\nu$ (as σ - $q\iota\nu$ beside σ - $q\iota$, § 449), which may represent an Idg. *-bhi-m (§ 186 p. 62; Leskien, Ber. der sächs. Ges. der Wiss., 1884, p. 102; and

the Author's Gr. Gr. 2 p. 134). o-stems: $\vartheta \varepsilon \delta - \varphi \iota(v)$. \overline{a} -stems: $\mathring{a}\gamma \varepsilon \lambda \eta - \varphi \iota(v)$. es-stems: $\mathring{o}\varrho \varepsilon \sigma - \varphi \iota(v)$. $\overline{\iota}$ - $i \dot{\iota}$ -stems: $\overline{\iota}$ - $\varphi \iota$. $v \alpha \overline{v}$ - $\varphi \iota(v)$. $v \varrho \alpha \overline{v} - \varepsilon \sigma \varphi \iota(v)$ is a re-formate like $\varphi \varepsilon \varrho \delta v \tau - \varepsilon \sigma \sigma \iota$, $v \sigma \tau v \lambda \eta \delta \sigma v - \delta \varphi \iota$ another like $\varphi \varepsilon \varrho \delta v \tau - \sigma \iota \varsigma$ (§ 360). Then there are the adverbs $\varepsilon' v v \eta - \varphi \iota(v)$, $v \delta \sigma \varphi \iota(v)$, $\lambda \iota \varkappa \varrho \iota - \varphi \iota' - \varsigma$, the last extended by the same $-\varsigma$ which is seen in $\mathring{a}\mu - \varphi \iota' - \varsigma$ (§ 241 pp. 135 f.); $\mathring{a}\mu - \varphi \iota' - \varsigma$ too must be added to the list.

Such of these forms as are not adverbs were living cases in the language of Homer and his imitators, but now here else. They were used for the instrumental, locative, or ablative; and no difference at all was felt between them and the other forms which were used for these cases, as is clear from phrases like αμ' ηοῖ φαινομένηφι. Now and then Homer has them in the sense of dative or genitive; but this was because they had by that time become archaisms, and the linguistic instinct of those who then used them could not clearly distinguish the meanings which they might legitimately have. To extend their applicability thus was an easy matter. In their instrumental use they were associated with the instr. $i\pi\pi\omega$ $\chi\omega\rho\alpha$ etc., which might also be dative: and in their ablative use with the abl. $i\pi\pi\sigma\sigma\nu$ $\chi\omega\rho\bar{\alpha}\varsigma$ etc., which might be genitive (cp. εμέ-θεν used as gen., § 244 Rem. 2 p. 143). How these forms came to be used for instrumental, locative, and ablative (no distinction is made between -quv and -qu as case-suffixes) is uncertain. The qu-cases could be either singular or plural; e. g. Θ 474 παρά ναῦφι 'beside the ships', et saepe (for details see Kühner, Ausf. Gr. I2 pp. 380 f.). So, too, in Gallic, -bo is used in the sense of Lat. -bos -bus, and in Germanic -m for *-mi (or *-mo) can be used for the plural, on which matter see § 367; and be it remembered that σ - $\varphi i(\nu)$ is not restricted to one number. It appears that in Indo-Germanic itself the instr. -bhi, -mi, and the corresponding suffix of the dat.-abl., were not yet completely pluralised by the addition of -s.

§ 282. b. The Suffix -mi.

Sanskrit and Germanic afford but scanty materials for tracing this suffix. Skr. sanē-mi adv. 'from olden days'

from sána- 'old', formed like O.C.Sl. tě-mǐ from to- 'the, that'; with the stem final cp. instr. pl. sánē-bhiš (§ 380). In Germanic -mi is conjectured to be the suffix of O.H.G. zi houbitan Mod.H.G. zu häupten, O.Icel. at hofdum, A.S. mioleum beside mioluc dat. of mioluc 'milk' (see Kluge, Paul's Grundr. I 386); a safer example is O.Icel. pei-m A.S. dæ-m (§ 421). Of Irish words, annimm may possibly contain -mi, see § 281 p. 186.

Remark. -mi is said to be the suffix of the Latin pronominal adverbs olim, interim, istim istin-c, hin-c and so forth; the orig. ending is supposed to be *-e-mi (cp. Armen. ardare-v adv. beside ardaro-v, pp. 133 f.), which became *-imi -im. But all this is thoroughly uncertain.

-mi is a living case suffix only in Balto-Slavonic, where from the proethnic Balto-Slavonic period onwards it has made the instr. sing. of i- and u-stems. Lith. nakti-mi (dial. nakti. see § 278 p. 183), O.C.Sl. masc. pati-mi (while feminine words have the re-formation -ija following -oja, as noštija noštija, see § 276 p. 180). Lith, sūnu-mì, O.C.Sl. sunomi for *synŭ-mi, which by a mere chance is not actually found (I § 52 p. 44). In the proethnic stage of Balto-Slav, the ending -i-mi was borrowed from i-stems by stems in n, r, and s (the same thing happened to the corresponding endings of the dual and plural m-cases, § 402): Lith. akmen-imi O.C.Sl. kamen-imi: Lith. moter-imi, but Slav., instead of *mater-imi, has mater-iia mater-ija, just as it has noštija noštija instead of *noštimi for the feminine (see above); Lith. debes-imi (cp. II § 132 p. 422) O.C.Sl. sloves-imi. In Slavonic -mi is found with o-stems as well, as vlŭko-mi, also vlŭkŭ-mi on the analogy of u-stems (cp. Vetter, Zur Gesch. der nom. Decl. im Russ., pp. 22 f.); zŭlo-dějimi (beside -dějemi) with the old weak grade form of the suffix -io-, see § 368. Compare further Lith. dial. vilkumi and kalbumi, § 275 p. 178, § 276 p. 180.

Nominative and Accusative Dual Masculine and Feminine. 1)

§ 283. The Indo-Germanic system of dual cases was probably fuller than any of those which have been preserved in separate offshoots of the original language. It is true, there is reason to believe that there was only one form for the nominative, accusative, and vocative dual in each class of stems; but it is improbable that there were no more than two besides - one for dative, ablative, and instrumental, and one for genitive and locative. For one thing, the genitive and locative have different forms in Avestic (gen. -å, loc. -ō); but if there were no other reason, it would be improbable simply because in the different languages we find the same meaning given to endings which can neither be connected phonetically, nor be so manipulated as to suggest that one of them is original, and one due to analogy. No single ground-form can be given for these endings of the dat. (abl.) instr.: Skr. -bhyām Avest. -byam, Avest. -bya, O.Ir. -b n- (in dib n-), Lith. -m (after which something must have dropped) and O.C.Sl. -ma, even if we disregard the different initial of the suffix, now bh and now m, and take off the affix *em (see § 296). drawn to conjecture that there was originally a different ending for the dat. (abl.) and the instr. But here we meet

¹⁾ For the Dual, see the following authorities: W. von Humboldt, Über den Dualis, Berl. 1828 (Ges. Werke VI 562 ff.). Silberstein, Über den Dualis in dem idg. Sprachstamm etc., Jahn's Jahrbb. Suppl. XV (1849) pp. 372 ff. Fr. Müller, Der Dual im indogerm. und semit. Sprachgebiet, Wien 1860. Meringer, Über den indogerm. Dual der o-Stämme, Kuhn's Ztschr. XXVIII 217 ff. Osthoff, Über den nom.-acc.-voc. dual. der i-und u-Stämme, Morph. Unt. II 132 ff. Fritzsche, De formis quibusdam numeri dualis in lingua Graeca, Rostock 1837. Bieber, De duali numero apud epicos, lyricos, Atticos, Jena 1864. Ohler, Über den Gebrauch des Dual bei Homer, Mainz 1884. Keck, Über den Dual bei den griech. Rednern mit Berücksichtigung der att. Inschr., Würzburg 1882 (M. Schanz' Beitr. zur hist. Synt. der gr. Spr. II). Doerwald, De duali numero in dialectis Aeolicis et Doricis quae dicuntur, Rostock 1881. Danielsson, Alte Dualformen im Latein, Pauli's Altital. Stud. III 187 ff. Ebel, Über den celtischen Dualis, Kuhn-Schleicher's Beitr. II 70 ff.

with a fresh difficulty. It is always possible that a given case had different endings in different stems, one of which was kept in one language, another in another. Thus we are as far from certainty as ever.

Remark. Following Benfey (Abh. der Gött. Ges. der Wiss., XIX 142 ff.), Mahlow and Meringer assume that Sanskrit has inherited from the parent language a special dual vocative in -a (Mahlow, Die langen Voc. 130; Meringer, Kuhn's Zeitschr. XXVIII 233). Meringer thinks that Gr. Juo may be an example of this formation. I believe that these forms must be otherwise explained; see § 289 Rem., § 293.

We shall see anon (§§ 285 and 311) that some dual forms have the look of singular eases, and that the dual idea is conveyed not by the case ending, but by the part of the word immediately preceding it, that is, by the stem.

A fairly large variety of dual noun forms may be seen in the oldest stages of Aryan, Greek, and Irish; and the dual is still living in some Lithuanian dialects, and in some Slavonic languages. Very few traces, if any, are to be found in Armenian, Italic, or Germanic, even in the earliest remains of these languages. In Italie and Germanie, the only words which can be so regarded are a few dual inflexions of the words two and both, and several noun forms which are explained, more or less hypothetically, as dual cases (see Danielsson's essay eited in the footnote to the preceding page, Kluge, Paul's Grundr. I 384, and Bartholomae, Stud. zur idg. Sprachgesch. I 61). Of Armenian words, erku 'two' and ut' 'eight' (ep. Skr. dvāú aṣṭāú) may perhaps have dual endings which have undergone only regular change (cp. § 166 p. 7, § 172 p. 20). 1)

§ 284. Let us now turn to a special consideration of the nominative and accusative masculine and feminine. The first thing to notice is that this form, like the nom. pl.,

¹⁾ The gradual decay of the dual, and the way in which it is absorbed into the plural, can be best traced in Lithuanian and Slavonic. But this very instructive piece of study cannot be gone into here. For the Lithuanian, see Brückner, Archiv für slav. Phil., III 262 f.; for Polish, Bandouin de Courtenay, Kuhn-Schl. Beitr., VI 63 ff.

could be used for the vocative; and when it was so used, like the nom. pl., the first syllable carried the accent in Sanskrit. Cp. § 200 pp. 82, 83.

Five proethnic types of formation may be distinguished, each belonging to a special stem or stems. (I) $-\bar{o}\underline{u}$ $-\bar{o}$ in o-stems: (II) $-a\underline{i}$ in \bar{a} -stems: (III) $-\bar{\imath}$ in $\bar{\imath}$ - $\underline{i}\bar{e}$ -stems: (IV) $-\bar{\imath}$ and $-\bar{u}$ in i- and u-stems: (V) -e in consonant stems, stems in $-\bar{\imath}$ - $-i\underline{i}$ -, and stems in $-\bar{\imath}$ - -uu-.

§ 285. I. Masculine o-stems have the endings $-\bar{o}\mu$ and $-\bar{o}$, $*\mu l q \bar{o}\mu *\mu l q \bar{o}$. Different explanations are given of these doublet forms.

Remark. Osthoff (Morph. Unt. IV 259), supported by Torp (Beitr. zur Lehre von den geschlechtlosen Pronomen, pp. 45 f.), holds that -o was the original case-ending ($-\bar{v}$ for -o + e, the ending of Gr. $\pi \alpha \tau \dot{\epsilon} \rho - \epsilon$, or merely the snffix o lengthened, compare the $-\bar{\imath}$ and $-\bar{\imath}$ of stems in -iand -u-, § 288); $-\bar{\sigma}u$ he believes to he this $-\bar{\sigma} + u$ particle \bar{n} . Both these endings, the older $-\bar{o}$ and the later $-\bar{o}y$, be regards as having originated during the separate growth of separate languages; the former being used in Vedic by preference before consonants, and the latter before sonants. merely because it was easier to pronounce them so. Quite another view is taken by Meringer (Kuhn's Ztschr. XXVIII 217 ff.). Taking his stand upon the use of $-\bar{a}$ and $-\bar{a}u$ in Vedic (see I § 645 p. 488), he assumes that the original case ending was $-\bar{o}u$, which became $-\bar{o}$ before consonants in the parent language. Perhaps both these explanations may becombined as follows. We may suppose u to have really been an independent particle which became attached to the case ending $-\bar{o}$; but that the historical $-\bar{o}$ (Skr. which we have $-\bar{a}$ Gr. $-\omega$ etc.) is not directly descended from the unextended $-\bar{o}$ which became $-\bar{o}\psi$ in the manner suggested, but is the shape assumed by $-\bar{o}y$ before consonants, as Meringer holds $(-\bar{o}$ for $-\bar{o}y$ like $-\bar{e}$ for $-\bar{e}i$, see § 246 pp. 144 f.). u may be compared with u 'two' in *u-i- *u-o- (seen in Lat. vī-gintī etc., see § 177, and Morph. Unt. V 23 ff.) and Skr. u- $bh\bar{a}\dot{u}$ 'both' (cp. Goth. $b\dot{a}i$); 1) and then we might compare e. g. * $t\bar{o}$ - ψ (= Skr. $t\bar{a}\dot{u}$) with Lith. $t\tilde{u}$ -du, the dual of $t\hat{a}s$ 'the, that'. If the proethnic ending of the gen. dual of o-stems was *-ous or *-eus (Skr. -ōš O.C.Sl. -u), the same u might be contained in the

¹⁾ If the u- of u- $bh\bar{a}\dot{u}$ once meant 'two' or something of the kind, it is natural to connect the first part of Gr. \ddot{a}_{μ} - g_{ν} Lat. am- $b\bar{a}$ with Goth. an-par Lith. $a\bar{n}$ -tra-s, and to compare as follows: Skr. u- $bh\bar{a}\dot{u}$: Gr. \ddot{a}_{μ} - g_{ν} = $v\ddot{u}$ - $tor\ddot{u}$: Goth. an-bar.

genitive and we might regard -s as the singular genitive suffix. The Avestic loc. dual in $-\bar{o} = \text{Idg.}$ *-o ψ or *-e ψ would be a form without any case suffix, just like, say, Gr. loc. $\delta \delta - \mu \epsilon \nu$ beside nom. $\pi o \iota - \mu \dot{\eta} \nu$ Compare Meringer, as cited, p. 233, and § 311 of this volume. We must, however, be careful not to infer from these facts that all dual cases were once formed by adding singular case endings to a dual stem. To explain such suffixes as O.C.Sl. -ma Skr. -bhyām as originally belonging to the singular would be an arbitrary assumption. It is quite likely that the cases of the dual are formed upon more than one principle.

Aryan. Skr. Ved. $vfk\bar{a}u$ $vfk\bar{a}$; in the later language only $vfk\bar{a}u$, although the ending $-\bar{a}$ is kept in compounds, as $dv\acute{a}-da\acute{s}a$ 'duodecim'. Avest. vehrka ($-\bar{a}u$ cannot be found, see Bartholomae in Bezz. Beitr. IX 307); O.Pers. $gau\check{s}\bar{a}$ from $gau\check{s}a$ - 'ear'.

In Armenian, erku 'two' and ut 'octo' may be isolated examples of this case ending; see § 283, page 190.

Greek λύκω, δύω; on δύο see § 293 pp. 197 f.

Latiu has no dual form left except $amb\bar{o}$, $oct\bar{o}$, duo (I § 655.2 p. 502). Umbr. dur 'duo' has the plural flexion throughout; ep. § 166 p. 7.

Both endings are shwon in Irish. O.Ir. dau do, older $d\bar{a}u$, O.Cymr. Mid.Bret. dou 'two' = Skr. $dv\bar{a}u$, and O.Ir. $d\bar{a}$ (before substantives) = Skr. $dv\hat{a}$ (I § 90 p. 85). In the unaccented final syllables of other dual words no trace can be found of the two endings side by side. O.Ir. has $d\bar{a}$ fer, whose origin is not quite clear (one would expect *da fiur like the instr. sing. $fiur = *vir\bar{o}$; the form looks like a nom. sing. It is true that there was a confluence of the nom. dual and the nom. plural in i- and u-stems and r-stems (faith, bith, see § 288; mathir, see § 289); but it seems to me not at all probable that the form of the nom. sing. was used for the dual in masc. o-stems simply on this analogy. I may be allowed to suggest that the $-\bar{o}$ of $*du\bar{o}$ in $*du\bar{o}$ uir \bar{o} prevented *uirō from becoming *uirū, or changed it by backward assimilation, so that the phrase became $*du\bar{a}$ uir \bar{a} and then $d\bar{a}$ fer; while, conversely, in the feminine, $d\hat{i}$ was assimilated forwards to the ending of the substantive (§ 286). Thus the nom. sing, and nom, acc. dual came to have the same form in

o-stems, which had happened before in all other stems in the regular course of phonetic change; and it was in this way that the sing. masc. tene ('fire') and the sing. neut. dliged, tech, ainm eame by the dual meaning which they have (as in dā thene, and so forth).

It is a question whether Gall. verco-breto, eited by Stokes, Bezz. Beitr. XI 142, 152, is to be translated 'the two judges', and to be regarded as an instance of the old dual formation. See Ernault, Mém. de la Soc. de ling., VI 158 ff.

Germanic. The only clear survivals of this dual form are O.Icel. tvau 'two' (which has become neut., see Streitberg Die germ. Compar. auf $-\bar{o}z$ - p. 33) = Skr. $dv\bar{a}u$, tottogo 'twenty' = $^*t\bar{o}$ -tugu = Skr. $dv\dot{a}$, and Goth. $aht\dot{a}u$ O.H.G. ahto = Skr. $a\bar{s}t\bar{a}u$. Kluge, in Paul-Braune's Beitr. VIII 506 ff., conjectures that a few Germanic substantival forms contain Idg. $-\bar{o}$, as A.S. (nom. acc. sing.) nosu 'nose' (gen. nosa), compare Paul's Grundr. I 334 and 609; this change from dual to singular, if correctly assumed, should be compared with the change of the Skr. dual forms $n\dot{a}s-\bar{a}$ $r\dot{o}das-\bar{\iota}$ to fem. sing. Bartholomae would explain Goth. $baj\bar{o}p$ -s 'both' as a dual derived from $^*baj\bar{o}$ $p\bar{o}$ 'both these' (Stud. zur idg. Sprachgesch., I 61).

Balto-Slavonic shows only Idg. *-ō: Lith. vilkù, gerű'-ju beside gerù (I § 664.3 p. 523), O.C.Sl. vlŭka.

§ 286. II. \bar{a} -stems had pr.Idg. *- $a\dot{i}$, * $e\hat{k}ua\dot{i}$. The formative suffix appears as -a-, which may be compared with that of the pronominal nom. sing. iu - $a\dot{i}$ (§ 414), and the voc. sing. in -a (I § 318 p. 257, II § 59 p. 108). The case suffix is apparently the same as in the ending - $o\dot{i}$ of neuter o-stems (§ 293), and this cannot be separated from -i in the neuter *kmt-i 'two tens' (§ 294). This -i- has become part of the stem in Avest. dvae-ibya O.C.Sl. $dv\check{e}$ -ma, Skr. $dv\acute{a}y$ - \bar{o} § O.C.Sl. dvoj-u (see §§ 297 and 311).

Aryan. Skr. áśvē; Avest. haṇṇ. In Avestic there are a few seattered examples with -a, the masculine ending; see Bartholomae, Bezz. Beitr. IX 303. Skr. aṣṭāú aṣṭā 'eight' is also used for the feminine, in all periods.

Greek. $\chi\tilde{\omega}_0\alpha\iota$, used for the nom. pl., seems to represent the Idg. dual, and to have been misunderstood and regarded as a plural owing to the ending -oi in the nom. pl. masculine; see the Author, Kuhn's Ztschr. XXVII 199 ff. 1) But the dual forms Att. $\chi\dot{\omega}_0\bar{\alpha}$, $\nu\dot{\nu}\mu\varphi\bar{\alpha}$ follow the analogy of the masc. in - ω ; Homer has no duals in - $\bar{\alpha}$ except those coming from masculine \bar{a} -stems.

The Latin equae, duae (cp. Ved. $duv\acute{e}$), like Gr. $\chi \hat{\omega} \varrho ai$, seem to represent the Idg. dual ending $-a\acute{z}$; see the Author, loc. cit.

Old Irish tuaith, and beside it $d\bar{\imath}$ 'duae' = Skr. $dv\bar{e}$, see I § 657. 4 p. 508. $d\bar{\imath}$, instead of *dai *dae, has been assimilated to * $t\bar{\imath}$ (ep. § 285 p. 192).

Germanic. A dubious survival of this formation is Goth. tva $p\bar{u}sundja$ 'two thousand', which is usually regarded as neut. pl. (on -a for pr. Goth. -a½, see § 263 Rem. pp. 165 f.). Compare Noreen on Norse Run. $pai-a\pi$, in Paul's Grundr. I 501 f.

Balto-Slavonic. Lith. ranki, gerë-ji beside geri, see I § 664.3 p. 523. O.C.Sl. racë, but zmiji (zmija 'snake') with *-įō for *-įeį, earlier *-įoį, Idg. *-įaį, see I § 100 p. 95.

§ 287. III. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. footnote 1 on page 68) probably had pr. Idg. $-\bar{\imath}$, *bhr $\hat{g}hvt-\bar{\imath}$, which may be explained like -ai in \bar{a} -stems, and derived from $-\bar{\imath}$ -i.

This may be legitimately regarded as the ground-form of Skr. brhat-\(\tilde{\tau}\), Avest. G\(\tilde{a}\)thic barent-\(\tilde{\tau}\), O.Ir. inis, Lith. \(\tilde{z}\)emi (I \(\xi\) 664. 3 p. 523).

In Vedic Sanskrit these forms were assimilated to $\bar{\imath}$ - ii-stems (§ 291), whence $braty\bar{a}\hat{u}$, the only form used in the later language (cp. nom. pl. $braty\hat{a}s$ § 316).

¹⁾ Something just like this has happened in Polish. When the dual number fell out of use, the loc dual reku 'in both hands' (§ 311) was regarded as loc sing mass by mistake, so that there arose phrases like w mojim reku 'in my hand'. See Baudouin de Courtenay, Kuhn-Schleicher's Beitr. VI 77, 81.

Gr. $\varphi \varepsilon \rho o \dot{v} \sigma \bar{\sigma}$ follows the $i\bar{a}$ -stems (§ 286). So also O.C.Sl. zemlji (§ 286), but zemlji may be a transformation of * $zem\bar{v}$ with Idg. $-\bar{v}$, cp. nom. sing. $vez a \dot{s}ti$ instead of *vez a ti § 191 p. 68.

§ 288. IV. i- and u-stems had pr. Idg. $-\bar{\imath}$ and $-\bar{u}$, $*o \mu \bar{\imath}$ and $*s \bar{u} n \bar{u}$. If Idg. $-\bar{o} \mu$ is an extension of $-\bar{o}$ (§ 285 Rem. p. 191), it is natural to assume that this $-\bar{o}$ and the above $-\bar{\iota}$ were related in the same way as the corresponding endings of the instr. sing.; cp. § 274 pp. 174 f., Osthoff, Morph. Unt. II 132 ff., and J. Schmidt, Kuhn's Zeitschr. XXVII 291 f.

Skr. $\dot{a}v\bar{\imath}$, Avest. $a\check{z}i$. O.Ir. $f\bar{a}ith$ for * $u\bar{a}t\bar{\imath}$. Lith. $nakt\hat{\imath}$ (I § 664. 3 p. 523), O.C.Sl. $no\check{s}ti$.

Skr. sūnú, Avest. bāzu, beside bāzv-a which follows the consonant stems (§ 289). O.Ir. bith. Lith. súnu for *sūnū (I § 664.3 p. 523), O.C.Sl. syny.

In Greek nothing is to be found but re-formations which follow the consonant stems (§ 289). *i*-stems: Att. inser. $\dot{\alpha}\lambda\dot{v}\sigma\epsilon\iota$ with $-\epsilon\iota$ for *- $\epsilon(\underline{\iota})$ - ϵ , MSS. $\pi\dot{o}\lambda\epsilon\iota$ and $\pi\dot{o}\lambda\epsilon\epsilon$ ($\pi\dot{o}\lambda\check{\iota}$ - ϵ), the latter of which should be compared with $\pi\dot{o}\lambda\epsilon\circ\varsigma$, which apparently remained uncontracted (§ 231 p. 120). $\iota\iota$ -stems: Hom. $\pi\dot{\eta}\chi\epsilon(f)$ - ϵ $\tau\iota\chi\dot{\epsilon}(f)$ - ϵ , Att. inser. $v\dot{\iota}\epsilon\check{\iota}$.

§ 289. V. All other stems had pr. Idg. -e preceded by the strong stem, as *pətér-e = Gr. $\pi\alpha\tau\acute{e}\varrho$ - ϵ . This type remained in Greek and Irish, and there are a few questionable traces of it in Sanskrit, Germanic, and Lithuanian.

Remark 1. In the Vedas, instead of $-\bar{a}$, which must be assumed for the Idg. ending of o-stems, we often meet with the shortened termination -a; and $m\bar{a}tara-pitar\bar{a}u$ (instead of $m\bar{a}tar\bar{a}-pitar\bar{a}u$) is cited from later Sanskrit. See Benfey, Sāmavēda p. LXIII; Abhandl. der Gött. Ges. der Wiss., XIX 142 ff.; Mahlow, Die l. Voc. 130; Lanman, Nom.-Infl. p. 342. It is quite possible (cp. Osthoff Morph. Unt. I 226 f.) that this -a was the -a = Gr. $-\epsilon$ which belonged originally to consonant stems only; that it was kept in certain instances, and was then, by a mistake, extended to other stems; and in particular, by a reminiscence of the vocative singular in -a, was used for the vocative; e. g. R.-V. I 151 4 asura. I have no belief in the view held by Meringer (Kuhn's Ztschr. XXVIII 233) that

there was an Idg. dual voc. in *-0 = Skr. -a; Meringer would even call Gr. $\delta \dot{vo}$ an example of this! But compare what he says on pp. 230 f.

A dual form *kunūn-e is conjecturally restored by E. Brate as the origin of Old Swedish kunu 'two women' (Bezz. Beitr. XIII 42 f.).

J. Schmidt (Kuhn's Ztschr. XXVI 360) believes that he has found this suffix -e in Lithuanian dialectic participial forms such as isz-geruse instead of isz-gerusiu (isz-geriu 'I drink up'). But in my opinion it is quite possible, in spite of Schmidt's assurance to the contrary, that here -iu has become -e regularly.

In Sanskrit, $-\bar{a}u$, $-\bar{a}$, the ending of o-stems, was borrowed in the prehistoric period by consonant stems, just as the instr. sing. $-\bar{a}$ spread from o-stems to consonant stems (§ 280 p. 184). It is impossible to make out whether the Iranian endings of consonant stems, Avest. $-\bar{a}$ O.Pers. $-\bar{a}$, represent pr. Iran. *- \bar{a} = Skr. $-\bar{a}$, or pr. Iran. *- \bar{a} = Gr. $-\varepsilon$ — whether, for example, Avest. nar-a = Skr. $n\acute{a}r-\bar{a}$ or Gr. $\acute{a}v\acute{e}q-\varepsilon$. If the former, the ending of o-stems became universal in the proethnic stage of Aryan. The same doubt meets us in considering the endings of the instr. sing. Avest. $-\bar{a}$ O.Pers. $-\bar{a}$ § 280 p. 184.

- § 290. 1. n-stems. Pr. Idg. * $\hat{k}(u) \mu o n$ -e. Gr. $\kappa \acute{v} \nu$ - ε instead of * $\kappa \nu o \nu$ - ε * $\pi o \nu$ - ε , and similarly $\kappa \acute{v} \nu$ - α * $\kappa \acute{v} \nu$ - ε \$ have adopted the weak stem; $\tau \acute{\varepsilon} \kappa \tau o \nu$ - ε , $\pi o \iota \mu \acute{\varepsilon} \nu$ - ε , $\mathring{\alpha} \gamma \widetilde{\omega} \nu$ - ε . Mid.Ir. coin, $\bar{\alpha} rain$. Skr. * $\dot{v} \acute{a} n$ - $\bar{a} u$ - \bar{a} , Avest. $sp\bar{a} n$ -a. Lith. szun-iu * $\tilde{a} kmen$ -iu following the io-stems, O.C.Sl. kamen-i following the i-stems.
- 2. r-stems. Pr. Idg. * $m\bar{a}t\acute{e}r$ -e, * $d\acute{o}tor$ -e. Gr. $\mu\eta\tau\acute{e}\varrho$ - ϵ , $\delta\acute{\omega}\tau\varrho$ - ϵ ; $\check{\alpha}\nu\delta\varrho$ - ϵ (Hom. has also $\mathring{a}\nu\acute{e}\varrho$ - ϵ) like $\mathring{a}\nu\delta\varrho$ - α § 218 pp. 94 f., $\delta\circ\tau\widetilde{\eta}\varrho$ - ϵ following $\delta\circ\tau\widetilde{\eta}\varrho$. Mid.Ir. $m\bar{a}thir$, Mid.Ir. siair (cp. II § 120 p. 379). Skr. $m\bar{a}t\acute{a}r$ - $\bar{a}u$ - \bar{a} , $d\acute{a}t\bar{a}r$ - $\bar{a}u$ - \bar{a} ; Avest. $m\bar{a}tar$ -a and by re-formation $m\bar{a}pr$ -a, $d\~{a}t\bar{a}r$ -a. Lith. $m\acute{o}ter$ -i O.C.Sl. mater-i follow the i-stems.
- 3. Stems ending in explosives. Pr. Idg. *bhr ghont-e. Gr. φέφοντ-ε, O.Ir. carit. Skr. bγhánt-āu -ā, Avest. ber zant-a. Lith. νēžancziu(-du) O.C.Sl. vezašta following the jo-flexion.

Gr. φυγάδ-ε, μείρακ-ε. O.Ir. druid 'Druids' rīg 'kings'.

4. s-stems.

Pr. Idg. *dus-menes-e. Gr. δυσμενεῖ, to be explained in the same way as $\tau \omega$ σχέλει (§ 294). — Skr. durmanas-āu -ā, Avest. dušmanarəh-a.

Pr. Idg. compar. $*\bar{o}\hat{k}(i)ios-e$, modified by analogy in all languages. Skr. $\acute{a}\check{s}iy\bar{q}s-\bar{a}u$ - \bar{a} like the acc. $\acute{a}\check{s}iy\bar{q}s-\bar{a}m$ (§ 220 p. 97), Avest. $\bar{a}syanh-a$ instead of $*\bar{a}syanh-a$, cp. acc. sing. $\bar{a}syanh-em$ (loc. cit.). O.C.Sl. $sla\check{z}di\check{z}a$, declined as a io-stem. Gr. $\acute{\eta}\delta\acute{t}o\nu$ - ε with the formative suffix -ien-.

Pr. Idg. part. perf. act. *ueiduos-e, modified by analogy in all languages. Skr. vidvas-au -a like acc. sing. vidvas-am (§ 220 pp. 97 f.). Lith. mirusiu(-du) O.C.Sl. mirusa, declined as io-stems. Gr. $\epsilon lb \acute{o}\tau-\epsilon$ with the formative suffix -uet.

§ 291. 5. Stems in $-\bar{\imath}$ $-i\dot{\imath}$, $-\bar{\imath}$ $-u\dot{\imath}$, and certain Root Nouns.

Gr. $\varkappa i-\varepsilon$, $\partial \varphi \varrho v'-\varepsilon$ $\sigma v'-\varepsilon$; Skr. $dhiy-\bar{a}u$ $-\bar{a}$, $bhr\dot{u}v-\bar{a}u$ $-\bar{a}$.

Gr. $\nu \tilde{\eta} \varepsilon$ (inferred, but not actually found) for $\nu \alpha F - \varepsilon$; Skr. $n \tilde{\alpha} v - \tilde{\alpha} u - \tilde{\alpha}$. Pr. Idg. $\nu g \omega v - c : Gr. \beta \delta - \varepsilon$; Skr. $\nu g \omega v - \tilde{\alpha} u - \tilde{\alpha}$; O.Ir. boin following coin (§ 290 p. 196), cp. § 221 pp. 98.

Nominative and Accusative Dual Neuter.1)

§ 292. o-stems had -oi, and doubtless -oi also; consonant stems had -i or $-\overline{\imath}$, and i-stems had $-\overline{\imath}$. It is a doubtful point whether or no $-\overline{\imath}$ was the original suffix for all stems; see § 294.

Consonant stems which admitted of vowel gradation had always a weak grade of stem.

§ 293. 1. o-stems. Pr. Idg. -oį and doubtless -ėį also; for the difference between these cp. § 240 p. 133.

Skr. yugé, dvé; Avest. xšaþrē from nom. acc. sing. xšaþre-m 'lordship, realm'. Skr. aṣṭāú aṣṭā may always be neuter.

The Greek $F\varepsilon\iota$ - 'two', in $F\varepsilon\iota$ -κατι $\varepsilon\iota$ -κασι 'two tens', is probably the dual of a stem * $\iota\iota$ 0-; according to a guess of Thurneysen's, we should recognise the same * $\iota\iota$ 0. Cymr. ι 1-ceint (Kuhn's Zeitschr. XXVI 310). I add another guess, that $\delta\iota$ 0 (beside $\delta\iota$ 0) is the old neuter, and is the form assumed by * $\delta\iota$ 00 when the next word began with a sonant;

¹⁾ References are given in the footnote on page 189.

perhaps Lac. $\delta\dot{\nu}\varepsilon$ comes from * $\delta\nu\varepsilon\iota$ in the same way, cp. Att. $\delta\nu\varepsilon\tilde{\iota}\nu$, which seems to point to * $\delta\nu\varepsilon\iota$ - $\iota\nu$ (§ 312). Cp. the Author, Gr. Gr.² p. 79 footnote 1, p. 124; Morph. Unt. V 23 ff. Similarly we find Boeot. $\delta\varkappa\tau\delta$ beside $\delta\varkappa\tau\omega$ in the other Greek dialects. Elsewhere in Greek the masc. ending - ω has taken the place of the neuter, as $\tau\omega$ $\zeta\nu\gamma\omega$ like $\tau\omega$ $\zeta\eta\eta\omega$.

Lat. $v\bar{\imath}$ -gint $\bar{\imath}$ may contain in both parts the neuter ending *-ei or *-oi. See the Author, Morph. Unt. V 22 f., 24, and below, § 294 of this volume. The masc. forms duo ambō octō, like Gr. $\delta v\omega$, are used for the neuter as well as masculine.

There seems to be no trace left in Irish of this formation. $d\bar{a}$, the masc. form, is used with neuter substantives; but when so used -n is added, as $d\bar{a}$ n-gruad 'duae genae', which can hardly be due to any cause except the analogy of the nom. acc. sing. neuter (cp. Windisch, Paul-Braune's Beitr. IV 223). dliged is probably a singular form used as dual, see § 285 p. 193 (sing. dliged n- 'law').

Germanic examples are doubtless to be recognised in the following neuter words: O.Sax. $tw\bar{e}$ A.S. $tw\bar{a}$ = O.C.Sl. $dv\check{e}$ Idg. *duoi, while Goth. tva, as well as masc. $tv\acute{a}i$ and fem. $tv\bar{o}s$, is plural in form. But it is possible to regard $tv\acute{a}i$ as the neuter form, turned into a masculine by association with $p\acute{a}i$ etc.

O.C.Sl. $iz\check{e}=\operatorname{Idg.}\ ^*jugo\check{e},\ \text{from}\ igo\ \text{`iugum'}\ (I\ \S\ 84\ \operatorname{pp.}\ 81\ \text{f.}).$ Also $polji\ (\text{from}\ polje\ '\text{field'})\ \text{for}\ ^*-\underline{i}e\check{e},\ \operatorname{earlier}\ ^*-\underline{i}o\check{e}\ (I\ \S\ 84\ \operatorname{pp.}\ 80\ \operatorname{and}\ 82).$

§ 294. 2. Consonant stems. The case-suffix -i with the weak stem is found in Idg. *kmt-i 'two tens' (§ 176 pp. 29 f.): Gr. Fεί-κατι, Armen. ksan for *ḡt-santi just as beren 'they carry' = Skr. bháranti (§ 177 p. 34), Avest. vīsaiti, but Skr. vįšati-š, which arose as follows: *vįšati became indeclinable, and was then attracted by the analogy of šašti-š '60' etc., and became fem. sing.

Elsewhere the Sanskrit consonantal and u-stems regularly show not -i but $-\bar{\imath}$, as $dh\acute{a}mn-\bar{\imath}$ $dh\acute{a}man-\bar{\imath}$, $brhat-\hat{\imath}$, $m\acute{a}nas-\bar{\imath}$ $\acute{a}\dot{s}\bar{\imath}yas-\bar{\imath}$ $vid\acute{u}\dot{s}-\bar{\imath}$, $m\acute{a}dhv-\bar{\imath}$ ($m\acute{a}dhun-\bar{\imath}$, see § 393). Now Old

Church Slavonic has -i (side by side with the commoner $-\check{e}$), as *imen-i sloves-i*. Putting this and that together, we may allow ourselves to believe that $-\bar{\imath}$ as well as -i was used for a suffix of the nom. acc. dual neuter in the parent language. If so, it is not necessary to derive the final $-\bar{\imath}$ of $vigint\bar{\imath}$ from $-e\bar{\imath}$ or $-o\bar{\imath}$ (see § 293, last page). But can $-\bar{\imath}$ in Skr. and O.C.Sl. have been borrowed from the case-system of i-stems? (see § 295).

The Avesta seems to give us but one form, $v\bar{\imath}saiti$, which belongs to this class.

Just so in Greek the only trace of the formation is Fi-zati. In all other instances, $-\varepsilon$ has been borrowed from masc. and fem. nouns, just as neuter o-stems borrowed $-\omega$ from the masculine (§ 293 p. 198). Att. inscr. $\sigma \varkappa \dot{\epsilon} \lambda \varepsilon \iota$ for $*\sigma \varkappa \dot{\epsilon} \lambda \dot{\epsilon} \iota$ for $*\sigma \varkappa \dot{\epsilon} \lambda \dot{\epsilon} \iota$ for $*\sigma \varkappa \dot{\epsilon} \lambda \dot{\epsilon} \iota$ forms in $-\varepsilon \varepsilon$, as $\gamma \dot{\epsilon} \nu \varepsilon \dot{\epsilon}$, found in Attic writers, are a re-formation following those words in which $-\varepsilon$ has not been contracted. Compare the adoption of ε by the neuter $\ddot{\sigma} \sigma \sigma \varepsilon$ § 295. $\gamma \dot{\epsilon} \nu \eta$ in phrases like $\gamma \dot{\epsilon} \nu \eta$ $\delta \dot{\nu} o$ is the plural, as is $\ddot{\alpha} \sigma \tau \eta$ in $\ddot{\alpha} \sigma \tau \eta$ $\delta \dot{\nu} o$ (§ 295).

Irish. ainm and tech, like dliged (§ 293), are probably singular forms used for the dual; see § 285 p. 193.

Remark. J. Schmidt, Pluralb. 52, would apparently derive ainm from *an-mn-\(\tilde{\epsilon}\); against which there is a great deal to be said. Nor should we admit Stokes's derivation from a pr. Kelt. *an-men-e (Bezz. Beitr. XI 166).

Old Chnrch Slavonic -ĕ, borrowed from o-stems (§ 293, last page): imen-ĕ, sloves-ĕ. Also -i, whose origin has just been discussed.

§ 295. 3. i- and u-stems.

In *i*-stems the proethnic Idg. termination was -τ. Skr. akṣ̄t Avest. aši 'the eyes', šūcτ from stem šūci- 'pure, clean'. O.C.Sl. oči (oko 'eye') and uši (ucho 'ear'); Lith. akì ausì, which have become feminine. If there was an Idg. *μτ-knti 'twenty', *μτ was nom. acc. dual neut. of the stem *μi- (§ 177 p. 33). Re-formates: Skr. śucin-τ (§ 393) and Gr. ŏσσε 'the eyes' for *ἀμ-ε (other cases are ὅσσων ὄσσοισι, with plural endings).

This Idg. $-\overline{\imath}$ was doubtless a contraction of the stem-final -i- with the case-ending -i (or $-\overline{\imath}$).

Ved. $m\acute{a}dhv-\bar{\iota}$ is either (1) the regular descendant of the Idg. ground-form, or (2) *madhv-i re-formed, -i having been replaced by the ending of i-stems; cp. § 294. Gr. $\ddot{\alpha}\sigma\tau\eta$ in phrases like $\ddot{\alpha}\sigma\tau\eta$ $\delta\dot{v}o$ is really plural, cp. $\gamma\dot{\varepsilon}v\eta$ § 294.

Dative, Ablative, and Instrumental Dual.1)

§ 296. The different languages have such diverse modes of formation that it is impossible to restore the Indo-Germanic flexion with any certainty. Compare § 283, page 189. -bhyām, and -bhiyām very rarely in the Vedas. The Avesta has one example of -byam, in the word brvad-byam from the stem brvat- 'eyebrow', elsewhere -bya, Gāthic -byā, with the variant -we (the difference is merely phonetic, and quite regular see I § 125 p. 115, § 481 p. 355). O.Ir. gives dib n- (from $d\vec{a}$ 'duo'), for * $d(y)o-b\vec{i}n$, for whose suffix more than one ground-form is possible, for instance *-bhēm or *-bhēn. O.C.Sl. -ma, the -a of which (= pr. Slav. - \bar{a}) must represent Idg. -ō or -ā, and may have lost a final -s. Lith. -m, after which something must have dropped; if the last syllable is accented, the form has the incisive accent when it is dative, and the gliding accent when instrumental (I § 691 pp. 558 ff., and II § 90 p. 274 with the footnote); e. g. abëm vilkám to both wolves', but sù abem vilkam 'with both wolves', dat. naktim This variation of accent - given by Kurschat, instr. naktim. though nothing definite is known as to how widely it is recognised in the Lithuanian dialects - has come in through association of these forms with the corresponding plural cases (e. g. dat. naktims instr. naktims); and in the same way other dual forms have been assimilated to the plural in this language.

The affix *em may have become attached to Skr. -bhyām Avest. -byam and O.Ir. -b n-, cp. Skr. tú-bhyam beside tú-bhya

¹⁾ References are given in the footnote on p. 189.

Avest. Gāth. taibya 'tibi', and the like, § 186 p. 62. The agreement of Aryan with Keltic in having bh- seems to make it certain that initial bh- is older than the Balto-Slav. initial m- (cp. § 274 pp. 175 f.). But be it observed that the -m of Goth. tvái-m O.H.G. zwei-m may possibly represent the old dual suffix (although there can be no mistake about the plural suffix in O.Icel. tvei-mr), and perhaps *vi-m, implied in Skr. vi-sati- '20', is another dual case belonging to this class, so that we should have to compare O.H.G. zwein-zug, with a crystallised dative dual for its first part (§ 177 p. 35).

-b n- seems to have disappeared from Irish, except in dib n-; elsewhere we find -b, as in the plural (§ 380), cp. in dib n-uarib deac 'duodecim horis' instead of *uarib n-deac. The reason why -b n- gave place to -b is that some of the dual endings had been worn down into the same sounds as the plural (Windisch, Paul-Braune's Beitr. IV 225 f.). Compare § 297.

For the Greek endings -our -our -air etc. see § 312.

§ 297. 1. o-stems. Skr. výkā-bhyām, yugá-bhyām, dvá-bhyām, pronom. tá-bhyām; Avest. vehrkae-ibya vehrkae-wē, dvae-ibya: no pronominal forms found. O.Ir. feraib may be derived from pr. Kelt. *uiro-bhīn, cp. § 296; dib n- (once written deib) for *dyo-bīn, with i in the first syllable because of the word's being proclitic. Lith. dat. vilká-m instr. vilka-m, O.C.Sl. vlūko-ma igo-ma (on zūlo-dějī-ma see § 368), but Lith. dat. dvē-m instr. dvē-m dat. tē-m(-dvēm) instr. tē-m(-dvēm), O.C.Sl. dvē-ma tě-ma.

The stem-final -oi- or -ei- is certainly original here in the numeral 'two' and in pronouns, as it is in the gen. loc. dual, e. g. Skr. dváy-ōš táy-ōš O.C.Sl. dvoj-u toj-u (§ 311). I conjecture that it was also used in the dat. abl. instr. of substautives — we actually find it in Avest. vehrkae-ibya — and that this stem in -oi -ei was the ending of the acc. dual neuter of the word, which similarly belonged to both nouns and pronouns originally. Cp. e. g. O.C.Sl. dvě-ma: dvě (§ 293 pp. 197 f.), and Skr. akší-bhyām O.C.Sl. oči-ma beside akší

oči (§ 300). In Sanskrit the diphthong (*vykē-bhyām) was exchanged for the ending of the nom. acc. masc., výkā = Gr. λύνω (cp. Bartholomae, Kuhn's Ztschr. XXIX 582 and Bezz. Beitr. XV 38, where Avest. nånhā-bya is taken to be another such form); in the European languages the dual was influenced by the corresponding cases of the plural: O.Ir. feraib like dat. pl. feraib for *uiro-bis (cp. § 296 p. 201, § 380), Lith. vilká-m like dat. pl. vilká-ms, O.C.Sl. vlūko-ma like dat. pl. vlūko-mū.

Remark 1. Meringer's assumption that this dual form ended in Idg. 'u-(bhyām?)' or 'ou-(bhyām?)' I hold to be unfounded (Meringer, Zeitschr. für d. österr. Gymn., 1889, p. 1017). The forms of the dual cases, as I have already insisted in § 285 Rem., page 192, need not all be of the same kind.

Remark 2. The way in which the form of the nom. acc. dual becomes a base for the other dual cases is well illustrated by what happens in the Lithuanian dialects, as described by Brückner, Archiv für slav. Phil., III 308 f.

§ 298. 2. ā-stems. -ā- was the stem-final in pr. Idg. Skr. áśvā-bhyām dvá-bhyām, pron. tá-bhyām. O.Ir. tuathaib, and, with the length of the stem-final kept, mnāib from ben, gen. mnā, 'woman' (cp. § 296 p. 201, § 381). Lith. rañko-m (dat. mergó-m instr. mergō-m from mergà 'girl'), pron. dat. tó-m(-dvēm) instr. tō-m(-dvēm), O.C.Sl. raka-ma.

Is it possible that the numeral two originally had no special feminine form in $-\bar{a}$ -? O.Ir. dib n-, Lith. dvë-m dvë-m, O.C.Sl. dvě-ma are both masc. and fem., and so are the gen. loc. O.C.Sl. dvoj-u Skr. dváy-ōš (cp. too Lith. dvějū used for the feminine). Compare § 311 p. 209. Skr. dvá-bhyām would in that case be an Aryan re-formate. The fem. use of O.C.Sl. tě-ma may be a consequence of that of the pl. tě-mǔ tě-mi, and of the fact that toju, gen. loc. du., could be used from early times to express all genders (§§ 310 and 311).

§ 299. 3. $\bar{\imath}$ - $\underline{i}\bar{e}$ -stems (cp. p. 68, footnote 1). $-\bar{\imath}$ - was the pr. Idg. stem-final. Skr. $brhat\bar{i}$ - $bhy\bar{a}m$, Avest. barenti-bhya ($i=\bar{\imath}$). O.Ir. insi-b (cp. § 296 p. 201, § 382).

In Balto-Slavonic we find -iē- instead of -ī- (cp. dat. instr. pl. §§ 370, 382): Lith. žēmė-m (dat. katě-m instr. katě-m

from $kat\tilde{e}$ 'cat'), O.C.Sl. zemlja-ma. Following stems in -ia-i: Lith. dat. $ve\check{z}anczi\acute{o}-m(-dv\ddot{e}m)$ instr. $ve\check{z}anczi\acute{o}-m(-dv\ddot{e}m)$, O.C.Sl. $veza\check{s}ta-ma$.

§ 300. 4. i-stems. Skr. ávi-bhyām, Skr. aži-bya. O.Ir. fāithi-b (cp. § 296 p. 201, § 383). Lith. dat. naktī-m instr. naktī-m, O.C.Sl. noštī-ma.

With neuter *i*-stems it would appear that as far back as pr. Idg. the form of the nom. acc. dual in $-\bar{\imath}$ was used for the stem in this form: Skr. $ak\bar{\imath}i$ -bhyām O.C.Sl. $o\check{c}i$ -ma beside $ak\bar{\imath}i$ o $\check{c}i$ 'the two eyes', and so also O.C.Sl. $u\check{s}i$ -ma from $u\check{s}i$ 'the two ears' (cp. Osthoff, Morph. Unt. II 132 f.; J. Schmidt, Kuhn's Zeitschr. XXVI 17). Of o-stems, O.C.Sl. $dv\check{e}$ -ma, for example, bears the same relation to $dv\check{e}$; see § 297 p. 201.

§ 301. 5. u-stems. Skr. sūnú-bhyām, Avest. bāzu-bya. Lith. dat. sūnù-m instr. sūnu-m, O.C.Sl. synŭ-ma.

O.Ir. bethaib like instr. pl. bethaib (cp. \S 296 p. 201, \S 383).

§ 302. 6. Stems ending in -n and -r.

The stem was weak in pr. Idg., as it was in the same cases of the plural (§§ 373, 374, 384, 385). It remains weak in Skr. śvá-bhyām tákṣa-bhyām, mātṛ-bhyām dátṛ-bhyām, Avest. ner^{ε} -bya (nom. nar-a = Gr. $\mathring{a}v\acute{\epsilon}\varrho$ - ε).

In Irish and Balto-Slavonic, these cases of the dual, like the same cases in the plural, have taken the forms of the vowel-declensions (§§ 356.2 and 402). O.Ir. conaib fiadnaib, māthr-ib (cp. § 296 p. 201, §§ 384 and 385). Lith. dat. szun-ì-m akmen-ì-m moter-ì-m instr. szun-i-m akmen-i-m moter-i-m; O.C.Sl. kamen-ī-ma mater-ī-ma.

§ 303. 7. Stems ending in an Explosive. These had the weak stem in pr. Idg., as also in the corresponding plural cases (§§ 367.2 and 379.2). Skr. brhád-bhyām, Avest. berezað-bya berezað-bya and (with a change to the strong stem) berezan-bya; for the stem-final see the sections just cited, and § 356.2. Avest. brvað-byam, as has been said already (§ 296), is the only form with -byam in the Avesta.

O.Ir. cairt-ib and O.C.Sl. telet- $\tilde{\imath}$ -ma (from tele n. 'calf', cp. § 225 p. 107, § 244 pp. 142 f.), may be understood by referring to § 302.

§ 304. 8. Stems in -s.

Arvan. Skr. mánō-bhyām should regularly be *manadbhyām, but it has been influenced by the nom, acc. sing. mánō ('mind, thought'), like the pl. mánō-bhiš; see § 356.2. Hence durmanō-bhyām and the compar. áśīyō-bhyām from nom. sing. masc. dur-manās áśīyān neut. dur-manō áśīyō. Similarly, havir-bhyām cákšur-bhyām have been affected by the nom. acc. sing. havir (havis) 'libation' cákšur (cákšuš) 'eye', and have -rbh- instead of the strictly regular -dbh-(I § 591 p. 448). But the regular -d- is found in the part. perf. act. vidvád-bhyām like vidvád-bhiš, only in these the formative suffix is strong, and the weak -us- is gone, see I § 591 p. 448, II § 136 pp. 440 f.). Other regular forms are Avest. snaibiž-bya from snaibiš n. 'sword', and the part. perf. act. $v\bar{\imath}d\bar{u}\dot{z}$ -bya to be inferred from $v\bar{\imath}d\bar{u}\dot{z}$ -biš. No form from any es-stem is found; but reasoning from the pl. mane--biš, which is built up on the form of the nom, acc. sing, neut. in -ē (in the Gāthās manē), we may venture to restore *manē--bya *āsyē-bya (see §§ 376, 387).

O.Ir. tigib (tech n. 'house' for *(s)tegos) perhaps for *teges-o-bi-, cp. instr. pl. § 387.

Balto-Slavonic again shows a change to the *i*-flexion (cp. §§ 302, 303): Lith dat debes-i-m instr. debes-i- \tilde{m} (nom. sing. debes-i-s 'cloud', II § 132 p. 422), O.C.Sl. sloves-i-ma.

§ 305. 9. $\bar{\imath}$ - ii-, $\bar{\imath}i$ - uu-stems and Root Nouns in -u.

Skr. $dh\bar{\imath}$ -bhyám $bhr\bar{\imath\imath}$ -bhyám (similarly $p\bar{\imath}\imath$ r-bhyám, see II § 160.4 pp. 485 f.). In Old Church Slavonic the corresponding form of svekry and the like is not recorded. Skr. $n\bar{\imath}u$ -bhyám, $g\delta$ -bhyám.

Genitive and Locative Dual. 1)

§ 306. With these cases as with the others, it is difficult to make out what forms the parent language had. It is probable that the two cases were not expressed by one form, but that they were regularly distinguished.

First of all will be given the facts gathered from each branch of the parent speech; this will be followed in § 311 by an examination of the previous history of the recorded forms, as far as it can be made out. Lastly, in § 312 the Greek forms for the genitive, locative, and other cases of the dual will be described.

§ 307. Sanskrit. Both cases have the same ending, $-\bar{o}\dot{s} = \text{pr. Ar. }^*-au\dot{s}$.

Stems in -o- and -ā- end in -ayōṣ, e. g. v f k a y ōṣ from v f k a-s 'wolf', y u g a y oṣ from y u g a-m 'yoke', a s v a y oṣ from a s v a 'mare'. Side by side with this formation are Ved. e n oṣ (also e n a y oṣ) from e n a- 'he' and e v oṣ from e v a v a- 'this', as in O.C.Sl. e v u u v a- 'this', as in O.C.Sl. e v u u v a- 'this', as in O.C.Sl.

Remark. No trustworthy evidence for the shorter formation is to be got from Ved. $y\delta\S$ beside $y\delta y\delta\S$ from $y\delta$ - 'qui', $niniy\delta\S$ from $niniy\delta$ - 'inside, hidden', $pastiy\delta\S$ from pastiya- n. 'habitation, lodging', $pa\Siy\delta\S$ from $pa\Siya$ - n. 'pressing-stone'. In all these -ay- may have dropped out by syllabic dissimilation (I § 643 p. 482), as $-\bar{a}y$ - seems to have done in $suvapaty\delta$ i § 247 p. 147.

 $\bar{\imath}$ - $\dot{\imath}\bar{e}$ -stems: $b\gamma haty-\acute{o}$ $\dot{\imath}$.

i- and u-stems: ávy-ōš, sūnv-óš.

Consonant stems (with the weak form of the stem): $\dot{s}\dot{u}n-\bar{o}\dot{s}$ (for the accent see p. 70 footnote 2), $r\dot{a}j\bar{n}-\bar{o}\dot{s}$ from $r\dot{a}jan$ -'king', $m\bar{a}tr-\dot{o}\dot{s}$ $d\dot{a}tr-\bar{o}\dot{s}$, $brat-\dot{o}\dot{s}$, $m\dot{a}nas-\bar{o}\dot{s}$ $\dot{a}\dot{s}\bar{v}yas-\bar{o}\dot{s}$ $vid\dot{u}\dot{s}-\bar{o}\dot{s}$.

 $dhiy\text{-}\acute{o}\S$ $bhruv\text{-}\acute{o}\S,$ $n\bar{a}v\text{-}\acute{o}\S,$ $g\acute{a}v\text{-}\bar{o}\S$ (cp. gen. sing. Ved. $g\acute{a}v\text{-}as$ § 231 p. 120).

§ 308. Iranian.

In the Avesta, the genitive dual ends in $-\hat{a}$ $-\hat{a}s(-ca) =$ pr. Ar. *- $\bar{a}s$, the loc. dual in $-\bar{o}$, which may be derived

¹⁾ For references on this subject, see the footnote on page 189.

regularly from either pr. Ar. *-as or pr. Ar. *-au (ep. Bartholomae in Bezz. Beitr. IX 208, 312 f., XIII 83).

Stems in -o- and -ā- have gen. -ayå, as in Sanskrit both stems have -ayōṣ (§ 307): vehrkayå from vehrka- m. 'wolf', haenayå from haenā- f. hostile host', and similarly in pronouns yayå from ya-, aetayå from aeta-, ayå from a-. This case is found without the syllable -ay- in Dvandva phrases, e. g. fratīrā baeṣātastīrā 'of F. and B.', a pair of brothers (stem fratīra- and baeṣੱatastīra-); fratīrā : vehrkayå = Skr. ēnōṣ : ēnayōṣ. Of the locative ending -ayō, examples are only found with o-stems: vehrkayō, ubayō from uba 'both'.

u-stems: gen. bāzv-å loc. bāzv-ō.

n- and r-stems: gen. $s\bar{u}n$ - \mathring{a} , nar- \mathring{a} ; the strong stem of nar- \mathring{a} is not original.

nt-stems: gen. berezant-å, with non-original strong stem.

 $t\bar{a}t$ -stems: gen. $amar^et\bar{a}t$ -å from $amar^et[a-t]\bar{a}t$ - (I § 643 p. 482) 'genius of immortality'. \hat{g} -stem: $hvar^ez$ -å from $hvar^ez$ -i. e. hu- var^ez - 'doing good'.

Old Persian. Spiegel and Osthoff regard $dastay\bar{a}$ (from dasta- 'hand') and $duvaray\bar{a}$ (from duvara- 'door, gate, court') as loc. dual. They may of course be regarded, if we please, as loc. sing. with the postposition \bar{a} , $dastay-\bar{a}$ = Avest. zastay-a (§ 263 p. 164); this notwithstanding Osthoff's objections set forth in Morph. Unt. II 100 f.

§ 309. In Irish the genitive dual has a special form. Several classes of stems furnish no examples earlier than Middle Irish.

o-stems: $d\bar{a}$ ('duorum'), fer, $c\bar{e}le$. \bar{a} -stems: tuath, ban. i-stems: $f\bar{a}tho$ $f\bar{a}tha$. u-stems: betho -a. n-stems: con, $\bar{a}ran$. r-stems: $m\bar{a}thar$. nt-stems: carat. es-stems: tige. $b\bar{o}$ 'of two kine'.

The "aspiration" of the initial of a following word (I § 658.1 pp. 510 f.) has no very strong support in Old Irish; in Middle Irish, the practice varies apparently without reason, and sounds are sometimes aspirated, sometimes left alone.

The original ending of the formation therefore still remains to be discovered. In some instances the gen. loc. dual seems to have been affected by the analogy of the genitive singular. Compare further Ascoli, Note Irlandesi p. 32.

§ 310. Lithuanian dialects use a form in -ms with the meaning of a gen. dual, as žodiu-ms sunu-ms dukterė-ms tů-du-ms (of both), fem. anë-dvi-ms (of those two). See Geitler, Lit. Stud. 56, Beitr. zur lit. Dialektologie 38; and Brückner, Arch. für slav. Phil. III 309 f. With Brückner, we must regard the form as an extension of the dat. instr. in -m by the gen. sing. -s; compare these genitive forms built up on mu-m ju-m: — muma juma (the ending doubtless assimilated to mana tava = mãno tãvo) and O.Lith. mumu jumu (-ū, gen. pl.), cp. § 458.

Slavonic gives -u as the ending of gen. and loc.; this brings as back to *-ou in the first instance; after it -s may have dropped (I § 185 p. 161, § 588.7 p. 445). o-stems: vlūku, but dvoju toju. ā-stems: raku, but dvoju toju. i-stems: patīju patiju (-īj--ij- as in the gen. pl. patīj-ī pati-jī, § 348). u-stems: synov-u (-ov- as in the gen. pl. synov-ū, § 349). n-stems: kamen-u. t-stems: telet-u. s-stems: sloves-u.

- § 311. We may now take a general view of the forms which have been given in the last four sections, for the purpose of comparison. At two points we are ou firm ground: (1) Skr. $-\bar{o}\dot{\xi}$: O.C.Sl. -u; and (2) the i-diphthong before the suffix in o-stems, as Skr. $t\dot{a}y$ - $\bar{o}\dot{\xi}$, Avest. $a\dot{e}tay$ - $\dot{a}ubay$ - \bar{o} : O.C.Sl. toj-u.
- 1. The proethnic ending of the genitive dual may have been *-o- μ -s or *-e- μ -s, consisting of the ending of the o-stems, the μ of the nom. acc. masc. in $-\bar{o}\mu$ (Idg. * $d\mu\bar{o}\mu$ = Skr. $dv\bar{a}\hat{u}$), and -s, the suffix of the genitive singular (§ 228 pp. 111 f.). The Avestic locative ending $-\bar{o}$, if derived from Idg. *- $o\mu$ or *- $e\mu$ 1), would be the dual stem without any case-

¹⁾ It may be that this case is to be recognised in the Sanskrit word *durō-nas 'within our (two) doors, at home with us', which is inferred from durōná- by Bartholomae Bezz. Beitr. XV 198 f.

suffix, to be compared with singular locatives like Skr. kárman Gr. Sousy (§ 285 Rem. p. 191). Some form of this kind might be used to explain -o.f- in the Greek ονδο(F)-ο-ς ονδο(F)-ή--κοντα, although there are other possible explanations of it (the Author, Morph. Unt. V 36 ff.).1) O.C.Sl. vlŭku as a genitive may be derived from *-ous *-eus, and as a locative from *-ou *-eu. These proethnic endings spread beyond their own proper sphere in two directions: they passed (1) into the ā-class (O.C.Sl, raku, certainly not containing Idg. *-au, cp. gen, pl. rakŭ like vlŭkŭ); and (2) into the consonant, i-, and u-classes (Skr. rájn-ōš ávy-ōš etc., O.C.Sl. kamen-u patij-u etc.). The absence of -s final from the original form of O.C.Sl. loc. raku is established, as Leskien points out to me, by Lith. pusiaŭ 'half, in twain' (beside the subst. pùsė 'half'), cp. O.C.Sl. meždu 'between', lit. 'within the bounds', loc. dual of mežda 'middle, boundary'.

Remark 1. Danielsson, starting from this assumed pr. Idg. *-ous (*-eus), has made an attempt to shew how certain nouns in Italic have been absorbed into the u-class (Pauli's Altital. Stud., III 187 ff.). He supposes that e.g. the gen. cornūs was originally a genitive dual from the stem corno- = Goth. haūrna-, and gen. manūs the same case of a stem man- (man-ceps); it would then be possible to see original locatives of the dual in cornū manū. Similarly Kluge (Paul-Braune's Beitr. VIII 509) identifies the A.S. gen. sing. nosa (nom. nosu 'nose') with the Skr. gen. loc. dual nas-ōš; if this were correct, *-ous and not *-eus must have been the original ending. These and other like conjectures and comparisons, ingenious though they be, are not to be trusted, as any one may see; the u-flexion of such stems can be always explained in other ways.

As regards Avest. $\tilde{a}=\text{pr. Ar. *-}\bar{a}s$, two questions offer themselves for consideration. (1) Was it properly the ending of \bar{a} -stems, which spread at some later period to those in -o-; (2) does its \bar{a} -vowel represent the Idg. - \bar{o} of the nom. acc. masc. of o-stems (Avest. vehrka)? Osthoff's conjecture (Morph.

¹⁾ This would offer a possible means of connecting $\delta \epsilon \dot{\nu} \tau \epsilon \varrho o_5$ directly with $\delta \dot{\nu} \omega$, by deriving both from * $\delta \mathcal{F} \epsilon \nu$. All the same, I hold fast to my own explanation of the ordinal as by far the more probable (§ 166 p. 8).

Unt. II 93) that Avest. -ayå is a re-formation of *-ayaos on the analogy of the gen. sing. haenayå (§ 229 p. 114) I cannot accept. O.Pers. -ay-ā, locative in meaning, if indeed we are to allow the form at all (§ 308), is also obscure. It is quite possible to compare -ayā with the Avest. gen. -ayå.

2. The i-diphthong of Skr. dváy-ōš táy-ōš etc. is without doubt connected with that of Avest. dvae-ibya Lith. dve-m $dv\tilde{e}$ -m O.C.Sl. $dv\tilde{e}$ -ma (§ 297 p. 201). Not only these languages, but apparently Germanic and Baltic, have it in this same case; for there are certain forms which seem to have taken a plural case-ending instead of the dual, but to have kept the dual type in the stem to which the suffixes were attached. These forms are Goth. tvaddiē O.Icel. tvegqja O.H.G. zweijo 'duorum' O.Icel. beggja 'amborum' (for the treatment of -i- between sonants in these Germanic forms see I § 142 p. 127), and Lith. dvējā abējā (cp. Skr. ubháy-ōš O.C.Sl. oboi-u): the Lith, words were doubtless previously * $dvai-\bar{u}$ * $abai-\bar{u}$ or * $dvei-\bar{u}$ * $abei-\bar{u}$, which became $dv\tilde{e}i-\bar{u}$ $ab\tilde{e}j$ - \bar{u} because influenced by the analogy of $dv\tilde{e}$ -m $dv\tilde{e}$ -m. This same original i-diphthong of the dual is doubtless to be traced in O.Sax. twe-ne from *duoi-no- (cp. Meringer as cited, p. 235), in Gr. δοιοί from *duoi-io-, and in Skr. dvē-dhā 'twofold, on two occasions'.

It is very probable indeed that the *i*-diphthong of the gen. loc. was used with ā-stems in the parent language itself; and it is therefore hard to make out whether these did not have -ai- (cp. nom. dual fem. *tai), so that it would be necessary to derive e. g. the O.C.Sl. masc. toju from *tojou(s), but the fem. toju from *taiou(s), cp. Gr. κόραιν beside γπποιν (§ 312). It may also be asked whether Skr. tay- in the masculine may not represent Idg. *tei- (cp. Att. δνεῖν and the rest, § 293 pp. 197 f.).

Remark 2. If Idg. o in open syllables became \bar{a} in pr. Ar. (I § 78 p. 69), the masc. Skr. * $t\bar{a}y\bar{o}\tilde{s}$, not $t\acute{a}y\bar{o}\tilde{s}$, would answer to O.C.Sl. toju. Then what would $t\acute{a}y\bar{o}\tilde{s}$ be: the feminine form, with Idg. *- $a\dot{i}$ - (cp. § 422 Rem., on the instr. sing. Skr. $t\acute{a}y\bar{a}$ O.C.Sl. toja) or a masc. form with Brugmann, Elements. III.

*-ei-? Compare Meringer, Zeitschr. für österr. Gymn. 1889, pp. 1017 f. Meringer's conjecture, that the stem *dui- in Skr. dvi-púd- etc. was once closely connected with the nom. dual fem. *duai neut. *duoi and with Skr. dváy-ōš etc., seems to me improbable, because the i-diphthong was most certainly not peculiar to the word two, nor can it be shewn that it first appeared in this word, and afterwards spread to all other stems. On *dui-, see § 166 p. 7, § 177 p. 33.

Keltic genitives such as $d\bar{a}$, fer, tuath and so forth (§ 309 pp. 206 f.), remain obscure.

§ 312. Gen. Abl. Dat. Loc. Instr. Dual in Greek.

Hom. -ouv, Att. -ouv (contracted from -ouv), found in all stems but the \bar{a} -class, $\tilde{\imath}\pi\pi\sigma\iota\nu$ $\tilde{\imath}\pi\pi\sigma\iota\nu$ from $\tilde{\imath}\pi\pi\sigma$ -, $\pi\sigma\delta\sigma\tilde{\imath}\nu$ $\pi\sigma\delta\sigma\tilde{\imath}\nu$ from $\pi\sigma\delta$ - etc. A variant found on Attic inscriptions is -ou, for *-ou, as $\vartheta \alpha\nu\delta\nu\tau\sigma\iota$, and similarly in inser. from Argos, as $\tau\sigma\tilde{\imath}$ $\vartheta \alpha\nu\delta\nu\sigma\iota$. Elean -oloig, $\vartheta \nu\sigma\delta\iota$ $\vartheta \alpha\nu\sigma\delta\iota$ (for this - ϱ see I § 653 p. 500). Attic \bar{a} -stems have $-\alpha\iota\nu$, $\kappa\delta\varrho\alpha\iota\nu$.

Attempts to explain the suffixes have been made by Fick, Bezz. Beitr. I 67 f.; J. Baunack, Mém. de la Soc. de ling., V 25 ff., Die Inschrift von Gortyn 70 f., Stud. auf dem Gebiete des Gr. und der ar. Sprachen, I 174 f.; Thurneysen, Kuhn's Zeitschr. XXVII 177; Torp, Zur Lehre von den geschlechtl. Pron. 47 f.; and the Author in his Greek Grammar, ed. 2, p. 124.

No doubt the relation of $\tilde{\imath}\pi\pi\sigma\iota\iota\nu$ $\tilde{\imath}\pi\pi\sigma\iota\nu$ to $\nu\tilde{\omega}$ - $\iota\nu$ $\sigma\varphi\tilde{\omega}$ - $\iota\nu$, $\nu\tilde{\imath}\nu$ $\sigma\varphi\tilde{\omega}$ (nom. $\nu\tilde{\omega}$ $\sigma\varphi\tilde{\omega}$) is the same as that of Avest. vehrkae--ibya to Skr. $vfk\bar{a}$ - $bhy\bar{a}m$. Then we have in Greek the same diphthong (-ei- beside -oi- is seen in Att. $\delta\nu\epsilon\tilde{\imath}\nu$) as we saw in the dat. abl. instr. and gen. loc. of the other languages, which we regarded as identical with the ending of the nom. acc. neuter (§§ 297 and 311). If the fem. Skr. $t\acute{a}y\bar{o}\check{s}$ O.C.Sl. toju comes from Idg. *tai-ois (§ 311, last page), $*\delta\rho\alpha\nu$ for $**xop\alpha\iota$ - $\iota\nu$ would be parallel to it. In considering these comparisons, it should be borne in mind that apparently forms are found in Greek which retain the endings -oi (- ϵi) and $-\alpha i$, for the nom. acc. neuter of o-stems and the nom. acc. of \bar{a} -stems; see § 286 p. 194 and § 293 pp. 197 f.

Elean -oi-oig is without doubt a late re-formation following the dative plural, which in this dialect has -oig in place of -oi, as $\partial \gamma \omega' \nu$ -oig (§§ 360, 361). The change perhaps belongs to a time when -oii had become -oi, so as to cause confusion between this case and the loc.-dat. singular in -oi (§ 263 pp. 164 f.). Similarly the Polish loc. dual diving 'duobus' obu 'ambobus' were changed into dwith obuch by adding the -ch of the loc. plural, trzech 'tribus' etc. (Baudouin de Courtenay, Kuhn-Schleicher's Beitr. VI 79 f.).

The doublets -oi-iv and *-oi-i recal Lesb. aum-iv vum-iv and αμμ-ι νμμ-ι (compare too Gort, ο-τιμι), also σ-ωίν and σ-φί, τοῖ-σιν and τοῖ-σι. But how are we to proceed? Does -ιν - represent a pr. Idg. dual case-ending, say *-ui(m), which Greek alone retained; or is it a special Greek formation? question has not yet been answered. In any case one hypothesis deserves mention. According to this, some dual suffix, which began with a consonant, but of which nothing further is known, gave place to the plural locative suffix -σι -σιν; hence arose $\nu\omega$ - $\sigma\iota\nu$ like $du\bar{\sigma}$ -bus, $\tau\sigma\bar{\iota}$ - $\sigma\iota(\nu)$ like O.Icel. tvei-mr(compare too gen. Goth. tvaddj- \bar{e} Lith. $dv\tilde{e}j$ - \bar{u} § 311 p. 209); -σ- dropped according to rule (I § 564 p. 420), but in the corresponding plural forms it was preserved, or restored, by the analogy of φύλακ-σι(ν) and the like. This hypothesis certainly does not explain why the final nasal is differently treated in dual and plural. Of course xóρων might be a late formation following the analogy επποι: κόραι. Of νῶιν something more will be said in § 458.

Nominative Plural Masculine and Feminine.1)

§ 313. Consonantal stems, and those in -i- and -u-, had in the parent language the case-suffix -es, which was perhaps

¹⁾ W. Schulze, Das Snffix des nom. pl. masc. und fem., Kuhn's Zeitschr. XXVIII 275 ff. The Author, Der nom. pl. der ā-Stämme im Griech. und Lat., *ibid.* XXVII 199 ff. Zeyss, Über den nom. plur. der consonantischen Declin. im Umbr., *ibid.* XVII 421 ff. Förstemann, Zur Gesch. altdeutscher Declin.: der nom. plur., *ibid.* XIV 161 ff.

originally only a sign of the plural (§ 186 p. 60). There is no reason why we should not see the same suffix in $-\bar{o}s$, $-\bar{a}s$, and $-i\bar{e}s$, the Idg. endings of the o-, \bar{a} -, and $\bar{\imath}$ - $i\bar{e}$ -classes respectively; see I § 115 pp. 107 f., II § 185 p. 57.

o-stems have in Aryan, beside pr. Ar. $-\bar{a}s = \text{Idg. } -\bar{o}s$, pr. Ar. $-\bar{a}sas$, which we may conjecture to be an Aryan re-formation.

The nom. plural, like the nom. dual (§ 284 pp. 190 f.), served in all periods for the vocative, and in Sanskrit both numbers when so used were accented upon the first syllable (§ 200 p. 83).

§ 314. 1. o-stems. Pr. Idg. * $u_l q \bar{o}s$ 'lupi'. Skr. $v_l k \bar{a}s$; Avest. - \bar{a} very rare, $ame s \bar{a} = \text{Skr. } am l t \bar{a}s$ 'immortales'; on O.Pers. $martiy\bar{a}$ 'homines' see below. Armen. gail k, see § 313. Umbr. prinuvatus prinuvatu prinvatur 'legati' screihtor 'scripti', Osc. Núvlanús. O.Ir. voc. \bar{a} legati' cp. below. Goth. $vulf \bar{o}s$ O.Icel. ulfar with pr. Germ. *- $\bar{o}s$, O.Sax. legati days' with pr. Germ. *-legati see I § 581 p. 434, § 661. 5 p. 519, and Paul in Paul-Braune's Beitr. VI 550 f.

Remark 1. There is no sure foundation for an Idg. $-\bar{e}s$ beside $-\bar{o}s$ (cp. abl. sing. $-\bar{e}d:\bar{o}d$ and the like, § 240 p. 133). Lat. magistres is doubtless an ad-formate of the *i*-class, and O.H.G. $wolf\bar{a}$ -a of the \bar{a} -class; see below p. 214.

1. Aryan. Pr. Ar. -āsas beside -ās: Skr. Ved. vṛkāsas (Pāli -āse); Avest. vehrkānhō, O.Pers. bagāha 'gods'. Outside of the Aryan languages no credible proof has been given of

the existence of this ending. We are accordingly drawn to conjecture, with Bopp (Vergl. Gr. I³ 450), that the Idg. suffix -ās has been extended by the -as of the consonant-class.

Remark 2. It is a very common thing to find a second case-suffix added to a fully formed case. The most obvious comparison is that of Pāli nom. pl. kannay beside kanna = Skr. kanyas 'maidens': from rattiyo (sing. ratti) and vadhuyo (sing. vadhu) it was imagined that -yo was a nom. pl. suffix, and this was used to extend kanna. In § 312 p. 211 we noticed El. $\delta vot-oi$ Pol. dwu-ch. Again, nom. pl. masc. O.Icel. pei-r 'the, these' (Runic pai-R) = Goth. pai Gr. vot has taken -r (for -z) from substantives. Gr. acc. $Z_{i}^{r}v-\alpha$ (§ 221 p. 98). Gen. Dor. $\hat{\epsilon}_{\mu}\dot{\epsilon}_{0}-\epsilon_{5}$, § 450. Lith. instr. $t\hat{u}-m\hat{i}$. Mod.H.G. den-en in place of den, and the like (the Author, Morph. Unt. III 70).\(^1) Examples from Russian are collected by Vetter zur Gesch. der nom. Decl. im Russ. pp. 36, 37.

Since Scherer, it has often been maintained that O.Sax. dagos A.S. dagas contain a suffix which answers to Skr. -āsas; see, for example, Mahlow Die l. Voc. 128, W. Schulze in Kuhn's Zeitschr. XXVIII 275. But this cannot be proved. It would be preferable to assume this suffix for O.Fris. dagar (see Möller, Paul-Braune's Beitr. VII 505), but the ending of dagar may equally well be derived from *-ōz (cp. O.H.G. ir I § 661.5 p. 519). To say that forms corresponding to the Skr. -āsas are to be found in the O.Ir. plurals in -a from the pret. pass. in -t, such as do-bretha (sing. do-breth, II § 79 p. 232) is conjecture run wild. To support it we should at least need to show -ai used side by side with -a.

If, in spite of all considerations to the contrary, Skr. $-\bar{a}sas$ should prove to be proethnic, I would connect Idg. *- $\bar{o}s$, in Skr. $v_f^*k\bar{a}s$ etc., with Skr. $-\bar{a}sas$ in the following manner: I would assume a pr. Idg. termination *- $\bar{o}ss$ side by side with *- $\bar{a}ses$ or *- $\bar{a}sos$ (cp. the gen. sing. -s beside -es -os), whose-ss would in all languages be treated just like Idg. -s (cp. § 356 Rem.).

In Avestic, -a (Gāth. $-\bar{a}$), as *vehrka*, is very common beside $-\bar{a}$ and $-\bar{a}nh\bar{o}$. The form is also used for the acc. plural. Its origin is doubtful.

Remark 3. Since Bopp, scholars have usually regarded this -a as the ending of the nom. acc. neuter. J. Schmidt, who agrees, compares Gr. $\tau \alpha$ $\sigma i \tau \alpha$ from δ $\sigma i \tau \sigma - \varepsilon$, Lat. loca from locu-s, etc. (Pluralb. 7 f.). Osthoff's view has at least as much in its favour (Morph. Unt. II 93 f.). He regards these forms as dual (cp. nom. dual Gr. $\chi \omega_{\ell} \alpha$. Lat. equae used for the plural, § 315). On this view, forms in -a from consonantal stems, as nar-a 'men' vac-a 'voices', can be understood at once; Bopp's explanation makes it necessary to suppose that -a spread to these stems from the nom. pl. vehrka.

¹⁾ The conjecture offered in this place — that Skr. - $\bar{a}sas$ was first used with \bar{a} -stems — can hardly be right (cp. § 315).

Whether O.Pers. forms like $martiy\bar{a}$ (see above) are to be compared with Avest. $-\hat{a}$ (Skr. $-\bar{a}s$), or with Avest. -a, cannot be decided.

Old Irish. The form in *-ōs, which became -u (I § 657.6 p. 509) held its ground only in the vocative use, and its place in the nominative was taken by the pronominal ending *-oi (see below, under 2); cp. Gr. voc.-nom. Equetā beside Equetā-ç § 190 p. 67. The confluence in form of the nom. in -ōs, used for the voc., and the acc. plural (§ 326) caused the acc. pl. of other stems to be used as a vocative, e. g. cairtea acc. voc. beside nom. carit (§ 334).

Old High German. I regard $wolf\bar{a}$ -a and hirte 'herdsmen' (io-stem) as adformates of feminine forms like $geb\bar{a}$ -a and sunte (§ 315).

2. In five groups of languages the pronominal ending *-oi has spread to nouns (the reverse is found in Umbro-Samnitic, as Osc. pús 'qui'): these are —

Greek. λύκοι like τοί.

Latin. O.Lat. poploe, pīlumnoe, later populī, lupī (I § 81 p. 74). An ending found on inscriptions of the sixth and seventh century of the city, in Plautus, and elsewhere, — -ēs (-eis -īs), as magistrēs — is taken from the i-class (§ 317). It was suggested by variant forms in the pronouns, quēs (stem qui-) and quī (stem quo-), heis and hī. Also Falise. magistreis.

Remark 4. deivos, in the Duenos inscription, has been repeatedly explained as nom. plural (the latest attempt is by Conway, in the American Journ. of Phil., X 452). It is more likely to be locative plural, see § 357.

Old Irish. fir 'viri', eich 'equi', cēli 'comrades' (io-stems) for *-iī; Gallic retaius -oi, Tanotaliknoi. See I § 82 p. 77, § 657.4 p. 508.

Germanic. This ending has been borrowed by adjectives only: Goth. blindái O.H.G. blinte pl. of 'blind' (I § 661.6 p. 520); Goth. blindái doubtless for the regular *blinda on the analogy of the monosyllabic pái (§ 263 Rem. pp. 165 f.).

Balto-Slavonic. Lith. vilkai, geri and gerë-ji, beside

which we have $t\tilde{e}$, see I § 84 pp. 80 f., § 664.3 p. 523, § 671 p. 536, II § 406, Morph. Unt. V 57 footnote 1. O.C.Sl. $vl\tilde{u}ci$, novi 'novi', ti (I § 84 p. 82).

§ 315. 2. ā-stems. Pr. Idg. *eĥwās. Skr. áśvās, Avest. haṣnā. Umbr. urtas 'ortae' iuvengar 'iuvencae', Osc. scriftas 'scriptae', Marruc. asignas 'hostiae' (or some meaning of the kind); Latin seems to have preserved this type in the form matrona found on two inscriptions of Pisaurum (C. I. L. I 173, 177; cp. I § 655.9 p. 505). O.Ir. nom. voc. tuatha, mnā 'women' (I § 106 p. 99, § 657.6 p. 509). Goth. gibōs, O.H.G. Alemann. kebo (on O.H.G. gebā -a, see below) A.S. ziefa, O.Icel. gjafar, pr. Ger. *-ōz. Lith. rankos.

Sanskrit. The Veda has not only -ās but -āsas, áśvāsas, as with the o-class (§ 314). It is much rarer with ā- them with o-stems, and in Iranian it is never found with ā-stems at all; hence it would seem to have spread from o-stems to those in -ā-. Now and then -āsas from an ā-stem has the meaning of the accusative (Lanman, Noun Infl. p. 363); the reason being that in this class nom. and acc. have always had the same ending, -ās.

Greek and Latin have $-a\underline{i}$ both in nouns and pronouns: Gr. $\chi \tilde{\omega} \varrho a u$, $\tau a i$, Lat. equae, istae (O.Lat. inscr. tabelai datai and the like). These forms are probably not a re-formation following the $-o\underline{i}$ of the o-class, but the Idg. dual, whose value was changed to match them with $-o\underline{i}$; see § 286 p. 194.

Old High German gebā -a and sippe sippeā sippiā -a (iā-stem) took their ending, we may conjecture, from the ī-iē-class (as gutinne, gutinnā -a), which had *-iēs as their original ending (§ 316). Before *-iā (*-ia) = pr. West Germ. *-iēz became -e (Braune, Ahd. Gr. § 58 Anm. 1), -ā (-a) spread to ā-stems which had no -i-, and afterwards was restored from these to the i-stems again (cp. Braune, op. cit. § 209 Anm. 3). There is the same form-transference in the accusative singular, § 213 p. 91, and in the genitive singular, § 229 p. 117. In Anglo-Saxon levelling took place in the opposite

direction, and $\exists ydenna$ was due to the analogy of $\exists iefa \ sibba = Goth. \ gib\bar{o}s \ sibj\bar{o}s$. The Idg. ending $-\bar{a}s$ is preserved in pronouns, $deo\ dio\ = Skr.\ ty\acute{a}s$.

Old Church Slavonic raky and zmije (zmija 'snake') are accusative plural (§ 327). The use of this form was perhaps caused by the fact that the old form of the nom. pl. *ronkās, when the -s dropped (I § 588.7 p. 445) became identical with the nom. sing. (raka); and it was helped on by the singular nominative and accusative having so frequently the same form (in Russian, the masc. acc. in -y is found used as nom. from the 13^{th} or 14^{th} century onwards).

§ 316. 3. $\bar{\imath}$ - $\underline{i}\bar{e}$ -stems (cp. p. 68, footnote 1). The Pr. Idg. form was doubtless *bhr \hat{g} hņ $t(i)\underline{i}\bar{e}s$. Lat. faci $\bar{e}s$. It is doubtful whether O.Ir. insi is of this class (-i for *-i $\bar{\imath}$ (s) with $-\bar{\imath}$ for $-\bar{e}$), see § 229 Rem. 3 p. 117. O.H.G. gutinne, later -inn \bar{a} -a, see § 315. Lith. $\underline{\check{z}}$ emés.

In Aryan there has been a twofold re-formation. (1) Skr. Ved. brhatíš Avest. barentīš, with a weak stem, like the acc. pl. (§ 328), whence arose a symmetrical group brhatí: brhatím: brhatíš matching with ášvā: ášvām: nom. acc. ášvās. (2) Skr. brhatyàs Ved. -íyas (only brhatyàs in post-Vedic Sanskrit) and Avest. barentyō, daevyō (read daeviyō) 'she-devils', following the ī- ii-class (§ 323), cp. nom. acc. dual Skr. brhatyāù § 287 p. 194. Once in the Avesta occurs -yå, bāminyå 'lucidae', certainly not the direct representative of pre-Aryan *-iēs, but following the iā-class (§ 315).

Greek too has the formation which follows the iā-class, φέρονσαι; and so have Germanic — Goth. frijōndjōs A.S. zydenna (see § 315) — and Lithuanian, vēžanczios. Compare p. 68, footnote 1.

Old Church Slavonic. zemlję veząštę are accusative forms like rąky zmiję (§ 315).

§ 317. 4. i-stems. Pr. Idg. *ouei-es. Skr. $\acute{a}vay$ -as, $tr\acute{a}y$ -as 'three'; Avest. $a\check{z}ay$ - \bar{o} , $tr\bar{a}y$ - \bar{o} with non-original \bar{a} . Armen. erek 'three' for *tre(i)-es, see § 313 p. 212. Greek Att. $\breve{o}\varphi\epsilon\iota\varsigma$ for *- $\epsilon(\iota)$ - $\epsilon\varsigma$; Ion. Att. $\tau\varrho\epsilon\check{\iota}\varsigma$ Lesb. $\tau\varrho\check{\eta}\varsigma$ Cret. $\tau\varrho\acute{\epsilon}\epsilon\varsigma$.

Lat. ovēs turrēs trēs, Umbr. puntes 'pontes' pacrer 'propitii', -ēs for *-e(i)-es I \ 134 p. 121. O.Ir. fāithi, trī, see below. Goth. ansteis preis, O.H.G. ensti drī (I \ 142 pp. 125 f.). O.C.Sl. patīj-e patij-e m. (I \ 68 p. 60, \ 146 p. 131).

Aryan. Isolated examples of -i-as are found. Ved. ary--ás (ari- 'active, eager, pious'), cp. acc. pl. and gen. sing. ary--ás; also vṛṣṭy-as (M.Bh.) from vṛṣṭi- 'rain', Avest. fravaṣyō beside fravaṣayō, female genii.

The ending contained in Armenian sirtk is doubtful (cp. § 313 p. 212).

Greek. All dialects have *-e½-es in $\tau\varrho\epsilon\tilde{\iota}_S$ (see above), but Heracl. acc. $\tau\varrho\tilde{\iota}_S$ (§ 330) is used for the nom. and acc. both. Substantives, except in Attic, have - $\iota\epsilon_S$, $\delta\varrho\iota\epsilon_S$ (§ 323), cp. the gen. sing. $\delta\varrho\iota_S$ § 231 p. 119. As regards Hom. $\pi\delta\lambda\eta\epsilon_S$ see § 260 p. 160.

Italic. Lat. has -is beside $-\bar{e}s$, $ov\bar{i}s$ oveis, which I regard as the form of the acc. pl. (§ 330). The use of $-\bar{e}s$ and $-\bar{\imath}s$ together was natural when once $-\bar{e}s$ had found its way into the accusative plural on the analogy of $ped-\bar{e}s$, and was used along with $-\bar{\imath}s$ for the accusative. The explanation of Osc. aídilis 'aediles', with $-is = -\bar{\imath}s$, is uncertain, owing to the scanty remains of the language.

Old Irish. $tr\bar{\iota}$ (Cymr. tri) may be derived from *tre(i)es by supposing that -ee- became $-\bar{e}$ - in proethnic Keltic; $*tr\bar{e}s$ thus formed would become regularly $tr\bar{\iota}$ (I § 74 p. 64); or we might assume that *-ees became $*-e\bar{\imath}s$, $*-i\bar{\imath}s$, $*-\bar{\imath}s$ and lastly $-\bar{\imath}s$. I think it not so probable that the ending contained in it is $*-i\bar{\imath}es$, or that the form should be the accusative plural.

Balto-Slavonic. Lith. $n\tilde{a}ktys$ $tr\tilde{y}s$ may be derived from *- $i\tilde{y}$ -(e)s, as $s\tilde{u}n\tilde{u}s$ from *- $u\tilde{u}$ -(e)s; but whence came these assumed endings? They can hardly be original. Did i and u come from the other eases of the plural, and take the place of e and a (for *- $e\tilde{u}$ -es would have become - $a\tilde{u}$ -(e)s, I § 68 p. 59)? O.C.Sl. $no\tilde{s}ti$ (fem.) is the form of the acc. pl., like fem. raky § 315 p. 216.

§ 318. 5. u-stems. Pr. Idg. *sūneu-es. Skr. sūnáv-as, Avest. bāzav-ō. Gr. Ion. $\pi\eta\chi\acute{\epsilon}\epsilon\varsigma$ $\acute{\eta}\delta\acute{\epsilon}\epsilon\varsigma$ Att. $\pi\acute{\eta}\chi\epsilon\iota\varsigma$ $\acute{\eta}\delta\acute{\epsilon}\i\varsigma$. Lat. manūs can be explained as *manou-(e)s (-ou- for -eu- according to I § 65 p. 52)); but see below. O.Ir. mogʻ'i (mugʻservant'), O.Corn. lichouʻswamps', Gall. Lugoves; *-eu-es first became *-ou-es according to I § 66 p. 56, and then Irish *-o(u)i(s), British -ou. Goth. sunjus O.Icel. syner synir for pr. Germ. *-iu-iz (I § 179 p. 156, § 660.1 p. 516). O.C.Sl. synov-e (I § 68 pp. 59 f.).

Aryan. Sometimes -v-as in the Veda, as $\dot{s}ata-kratv-as$, effecting an hundredfold', similarly Avest. $y\bar{a}tv-\bar{o}$ 'magicians'; ep. acc. pl. Skr. -v-as Avest. $-v-\bar{o}$ beside $-\bar{u}n$ $-\bar{u}\dot{s}$, $-\bar{u}\dot{s}$ (§ 331), and gen. sing. Skr. -v-as Avest. $-v-\bar{o}$ beside $-\bar{o}\dot{s}$ $-ao\dot{s}$ (§ 232 p. 122). As to the re-formation Avest. $da\dot{n}h\bar{a}v-\bar{o}$ = O.Pers. $dahy\bar{a}v-a$ 'lands, regions' see § 261 pp. 161 f.

It is a question what termination we are to see in Armenian zardk (cp. § 313 p. 212).

Lat. manūs (see above) may also be the form of the accusative plural. This use of the accusative would have resulted from the relation between nom. ovēs: acc. ovēs, nom. ped-ēs: acc. ped-ēs. manūs in Plautus is shortened metrically, like canēs and similar words (§ 319).

Germ. Goth. mans O.H.G. man A.S. men 'men' for *manu-iz, like the gen. sing. Goth. mans (§ 232 p. 122). O.H.G. siti follows the i-flexion.

Lith. súnūs like nāktys, see § 317, last page.

§ 319. 6. Nasal stems.

a. n-stems. Pr. Idg. * $\hat{k}(u)uon\text{-}es$ 'canes'. Skr. * $\hat{s}v$ an-as, Avest. span- \bar{o} ; with the weak stem substituted Ved. maghan-as beside maghavan-as 'dispensers, givers, offerers', Avest. asaun- \bar{o} beside asavan-o pl. 'holy, pious'. Armen. *sunk, akank akunk, $e\lambda ink$ 'stags' (cp. Bartholomae, Bezz. Beitr. X 294), see § 313

¹⁾ The syncope of the e of the final syllable would be later than the contraction of the two e 's in *oue(\dot{e})-es (§ 317).

p. 212. Gr. $\varkappa v'v - \varepsilon \zeta$ instead of $*\varkappa vov - \varepsilon \zeta$ $*\pi ov - \varepsilon \zeta$ (cp. $\varkappa v'v \alpha$ § 218 p. 94), $\tau \dot{\varepsilon} \varkappa \tau ov - \varepsilon \zeta$ $\pi ou \dot{\varepsilon} \dot{v} - \varepsilon \zeta$, $\dot{\alpha} \gamma \ddot{\omega} v - \varepsilon \zeta$ $\pi \varepsilon v \vartheta \tilde{\eta} v - \varepsilon \zeta$; $\dot{\alpha} \varrho v - \varepsilon \zeta$ like $\varkappa \dot{v} v - \varepsilon \zeta$. Osc. humun-s (\bar{u} in the last syllable) 'homines', cp. Lat. homon- $\bar{e}s$ and Umbr. homon-us 'hominibus' with $-\bar{o}n$ -, II § 114 p. 351. O.Ir. coin, $\bar{a}rain$. Goth. guman-s, O.H.G. gomon gomun; A.S. $\alpha \varkappa en$ exen O.Icel. yxn 'oxen' for $*u\chi sn$ -iz (Skr. $uk \dot{s} \dot{\alpha} \dot{n} - as$) like Norse Run. dohtr- $i\kappa$ § 320; Goth. $tugg\bar{o}n$ -s O.H.G. $zung\bar{u}n$; on the formative suffix in O.H.G. gomon gomun, $zung\bar{u}n$ cp. Streitberg Paul-Braune's Beitr. XIV 218 ff. Lith. $sz\dot{u}n$ -s like Gr. $\varkappa \dot{v}v$ - $\varepsilon \zeta$, $\bar{a}kmen$ -s. O.C.Sl. jelen-e 'stags', dine 'days' with weak stem (II § 114 p. 356), zemljan-e 'countrymen' (II § 115 p. 362).

Avestic has also -a instead of $-\bar{o}$, $x\check{s}afn-a$ 'nights', see § 314 p. 213.

Latin. With this as with all the classes which follow, the old ending *-ĕs gave place to -ēs (the ending of i-stems, § 317) before the Latin tradition begins: can-ēs homin-ēs $ed\bar{o}n$ -ēs. This gave the means of distinguishing nom. pl. from gen. sing., but caused confusion with the acc. pl., but perhaps $-\bar{e}s = *-e(i)$ -es and $-\bar{e}s = *-vs$ were still distinct at the time when this change of ending took place. Survivals of Idg. -ĕs are seen in quattuor and perhaps foris (§ 320). Plautine scansions like canĕs turbinĕs are due to metrical shortening, as also is manĭs, § 318 (see A. Spengel, Reformvorschläge zur Metrik der lyr. Versarten bei Plautus, 309 ff.); original *-ĕs must needs have become -is, as it did in the genitive singular.

Balto-Slavonic. Lith. szùn-ys, following the i-flexion (§ 317), beside szùn-s. Similarly O.C.Sl. kamen-ije -ije (kamen-e is not found) and din-ije -ije beside din-e.

b. m-stems. Skr. k ildes am-as from k ildes am- 'earth'; Gr. should have $\chi ildes \delta \nu - \varepsilon_S$ instead of $\chi ildes \delta \omega - \varepsilon_S$ (I § 204 p. 172), but it is hardly likely that the form ever occurs. Avest. zim-a from zy ildea 'winter frost' (weak stem instead of strong, and -a instead of- \bar{o} , § 314 p. 213), Gr. $\chi \iota \acute{o} \nu - \varepsilon_S$ 'falls of snow' instead of $\chi \iota \iota \omega - \varepsilon_S$ (I § 204 p. 172), Lat. hiem- $\bar{e}s$ (- $\bar{e}s$ instead of - $\bar{e}s$, see above). Compare II § 160 pp. 482 f.

7. r-stems. Pr. Idg. *mātér-es. *dótor-es. *qetwor-es 'quattuor'. Skr. mātár-as dátār-as, Avest, mātar-ō dātār-ō; Skr. catvār-as Avest. cabwār-ō; the feminine of this is Skr. cátasr-as Avest, catapr-ō, with non-original weak stem like Skr. tisr-ás f. 'three': that the weak stem is not original is clear from Avest. tišar-ō and O.Ir. teoir, cetheoira cetheora (with -a following inna etc.); see § 167 pp. 8 f.1). Armen. mark, dsterk 'daughters', čork 'quattuor', durk 'doors', see § 313 p. 212. Gr. μητέρ-ες θυγατέρ-ες Hom. ανέρ-ες (Hom. θύγατο--ες Hom. Att. ανδο-ες are re-formates). δώτορ-ες: δοτῆρ-ες: Dor. τέτορ-ες Ion. τέσσερ-ες, with weak stem Att. τέτταρ-ες Lesb. πέσνο-ες. Lat. quattuor. Osc. ke enzstur censtur 'censores' Umbr. frater 'fratres' (cp. the Remark) with -r for -r(e)s according to I § 655.9 p. 506. O.Ir. mathir, cethir, fem. teoir (I § 657.5 p. 508). O.H.G. muoter, Norse Run. dohtr-iz O.Icel. dotr A.S. dehter 'daughters' like Hom. θύγατρ-ες; Goth. fidvor (o doubtless from the neuter) O.H.G. for quattuor' (§ 168 pp. 9-11); O.H.G. turi f. 'door' was perhaps originally nom. pl. = Skr. dúr-as, -i = *-is *-es according to I § 661.2 Lith. móter-s; O.C.Sl. datel-e 'datores' (II § 122 p. 389), četyr-e m. 'quattuor'.

Avest. nar-a beside nar- \bar{o} 'avé $\varrho \varepsilon \varsigma$ ' and the like, see § 314 p. 213.

Italic. Perhaps Lat. foris f. 'door', since the word may really be a nom. pl. from for-, like O.H.G. turi above. In any other case it will be needful to assume that a singular for-is was coined at some period to correspond to the plural for-ēs, on the analogy of ovēs: ovis. mātr-ēs datōr-ēs follow the i-class, see § 319 p. 219.

Remark. Beside frater frater in Umbrian, frateer is found once, Tab. V. b 16. It should hardly be compared with Gr. $g_{\ell}\bar{\alpha}\tau\eta_{\ell}-\epsilon$; (beside $g_{\ell}\bar{\alpha}\tau\varrho\epsilon_{\ell}$; $g_{\ell}\bar{\alpha}\tau\epsilon_{\ell}\epsilon_{\ell}$;) $\delta\sigma\tau\eta_{\ell}\epsilon_{\ell}$ (II § 120 p. 379), although the word, in Umbrian as in Greek, bears only the sense of 'comrades'. The reasons

¹⁾ The change of stem from strong to weak in the nominative was due to the absence of singular and dual cases, so that the nominative was the only case which had the strong stem at all.

for not allowing this form are: (1) In line 11 we read frat.er, with the fifth letter erased. It was doubtless e; and if so it seems that we have here a mistake made twice, and only corrected once. (2) Along with this nominative the gen. fratrom and dat. fratrus are in use. But a stem $fr\bar{a}t\bar{e}r$ - would doubtless have been carried through all the cases, as are those in $-t\bar{o}r$ - $(ars\text{-}fert\bar{u}r\text{-}\text{'flamen'})$. Nor do I see any means of supporting the view that an older Umbr. nom. pl. $fr\bar{a}t\bar{e}r$ has lengthened its e in order to draw a line between nom. pl. and nom. sing. (Bücheler, Umbr. pp. 180 and 191). I therefore consider frateer to be nothing but an oversight. The form $fr\bar{a}t\bar{e}r$ may be explained as $*fr\bar{a}tr-(\bar{e})s$ (cp. Lat. $fr\bar{a}tr-\bar{e}s$), compare ager for *agr(o)-s, I \S 655. 9 p. 506.

Germanic. Goth. $br\bar{o}prjus$ follows sunjus because of the resemblance between $br\bar{o}prum$ and sunum (II § 122 p. 388). O.H.G. $bruoder\bar{a}$ -a and $tohter\bar{a}$ -a (cp. Braune, Ahd. Gr. pp. 171 f.), following o- and \bar{a} -stems (§§ 314, 315).

Old Church Slavonic materi follows the i-class (§ 317 p. 217).

§ 321. 8. Stems ending in an Explosive.

Pr. Idg. *bhrāhont-es. Skr. brhánt-as, Avest. berezant-ō. Gr. φέροντ-ες. O.Ir. carit. Goth. frijōnd-s O.H.G. friunt. O.C.Sl. vezašte instead of *vezate, the š coming from cases which had -io-, cp. vezaštī § 219 p. 96.

The nt-participles in Lithuanian show a double formation. One group of dialects has vēžantys after the analogy of i-stems (cp. dial. ākmenys beside ākmens, and the like); the other group (High Lithuanian) has vežā, which can hardly be anything else but the form of the nom. acc. neuter (cp. § 225 p. 105, and § 342); but how it came to be so used is still unknown (cp. Joh. Schmidt in Kuhn's Zeitschr. XXVI 362 f., and Pluralb. 162 f.).

Gr. νύχτ-ες, Goth. naht-s A.S. niht 'nights'. Skr. daśát-as Lith. deszimt-s O.C.Sl. deset-e 'tens' (cp. § 174 p. 23).

Skr. śarád-as 'autumns'. Gr. $\varphi v \gamma \acute{a} \delta$ - $\varepsilon \varsigma$. O.Ir. druid 'Druids'. A.S. hnit-e (-e = pr. Germ. *-iz) beside acc. sing. hnit-u 'nit, louse's egg' (§ 219 p. 96), similarly A.S. hnyt-e 'nuts' = O.Icel. hnøt-r. Pr. Idg. *pod-es 'feet': Skr. påd-as,

Armen. ot-k (cp. § 313 p. 212), Gr. $\pi \acute{o}\delta$ - $\epsilon \varsigma$, A.S. $f\bar{e}t$ O.Icel. $f\bar{e}t$ -r pr. Germ. * $f\bar{o}t$ -iz, cp. II § 160 p. 480.

Skr. uśij-as 'those who are desirous', Avest. miprō-druj-ō they who deceive Mithra'. Gr. μείραχ-ες, ὄρτνχ-ες ὄρτνγ-ες. O.Ir. na-thraig 'water-snakes'. Skr. spáś-as Avest. spas-ō 'spies, inspectors' (Lat. au-spic-ēs). Skr. vác-as Avest. vāc-ō, Gr. *ὅπ-ες (Lat. νōc-ēs). Skr. ráj-as O.Ir. rīg (Lat. rēg-ēs) Goth. reik-s (I § 74 p. 64), Idg. *rēĝ-es 'rulers'. Osc. medix 'meddices' for *med-dik-es, cp. Lat. jū-dic-ēs and Skr. díś-as 'directions, indications, instructions'. O.Ir. brig 'mountains', Goth. baúrg-s O.H.G. burg A.S. byrʒ 'fortresses, cities', Avest. bar²z-ō or ber²z-ō (inferred from the other cases which are found), cp. II § 160 p. 479. O.H.G. buoh A.S. bēc 'books', pr. Germ. *bōk-iz.

Skr. dp-as Avest. dp-d 'waters'. Gr. $\varkappa\lambda\tilde{\omega}\pi$ - $\varepsilon\varsigma$ 'thieves'.

Avestic also has -a instead of - \bar{o} , as vac-a beside $v\bar{a}c$ - \bar{o} , see § 314 p. 214.

Lat. $-\bar{e}s$, ferent- $\bar{e}s$ lapid- $\bar{e}s$ ped- $\bar{e}s$ bibāc- $\bar{e}s$ vōc- $\bar{e}s$ rēg- $\bar{e}s$ dap- $\bar{e}s$, following the i-class, see § 319 p. 219.

§ 322. 9. s-stems.

Pr. Idg. *dus-menes-es. Skr. durmanas-as, Avest. $dušmananh-\bar{o}$. Gr. $\delta v\sigma \mu \varepsilon v \dot{\varepsilon} \varepsilon \zeta$ - $\varepsilon i \zeta$. — Skr. $u\check{s} \dot{a}s-as$ $u\check{s} \dot{a}s-as$, cp. § 220 p. 97. — Gr. $\mu \tilde{\eta} v - \varepsilon \zeta$ Lesb. $\mu \tilde{\eta} v v - \varepsilon \zeta$, (Lat. $m\bar{e}ns-\bar{e}s$,) O.Ir. $m\bar{s}s$, cp. II § 132 p. 415; Skr. $m \dot{a}s-as$ Avest. $m \dot{a}nh-\bar{o}$ 'months', cp. II § 134 pp. 424 f.

Pr. Idg. comparative $*\bar{o}\hat{k}(i)ios$ -es 'ociores'. Skr. áś $\bar{i}y\bar{q}$ -as, for the nasalised formative suffix see II § 135 p. 430; in the post-Vedic language rarely $-\bar{i}yas$ -as, like the acc. sing. $-\bar{i}yas$ -am § 220 p. 97. Gr. $\dot{\eta}\delta\dot{i}ov\varsigma$ for $*-\bar{i}o(\sigma)$ - $\varepsilon\varsigma$; with the weak stem, Hom. $\pi\lambda\dot{\epsilon}\varepsilon\varsigma$ Cret. $\pi\lambda\dot{\epsilon}\varepsilon\varsigma$ for $*\pi\lambda\eta\iota\sigma$ - $\varepsilon\varsigma$ (II § 135 pp. 429 and 432). O.C.Sl. $sla\check{z}d\check{i}\check{s}e$ perhaps for $*-\check{i}che$, earlier *-is-es according to I § 588. 2 p. 443; \check{s} may also have come from $-s\dot{i}$ -, with -i- from the cases which had $-i\sigma$ -, cp. $veza\check{s}te$ § 321 p. 221.

Pr. Idg. part. perf. act. *ueiduos-es. Skr. vidvás-as (for \bar{q} , see II § 136 p. 441); in the Veda and later we sometimes

meet with the weak formative suffifix $-i\mathring{\xi}-as$, $vid\mathring{u}\mathring{\xi}-as$ (ep. acc. sing. § 220 p. 97); Avest. $v\vec{\iota}dv\mathring{a}nh-\bar{o}$. O.C.Sl. $m\breve{\iota}r\breve{u}\check{s}e$, to be explained in the same way as $sla\check{z}d\check{\iota}\check{s}e$, above; and compare the acc. sing. $m\breve{\iota}r\breve{u}\check{s}\check{\iota}$ (§ 220 p. 97). In regard to Gr. $\epsilon l\delta\acute{o}\iota-\epsilon \varsigma$, see II § 136 p. 440. Lith. $m\grave{\iota}re$ following $ve\check{z}\check{q}$ (§ 321 p. 221), compare the nom. sing. $m\grave{\iota}re$: $ve\check{z}\check{q}s$ (II § 136 p. 441, III § 193 p. 73); a dialectic variant is -usys, like -antys.

Pr. Idg. * $m\bar{u}s$ -es 'mures': Skr. $m\acute{u}\acute{s}$ -as; Gr. $\mu \~{v}$ - $\epsilon \varsigma$ and $\mu \'{v}$ - $\epsilon \varsigma$, the latter following stems in - \bar{u} - - $u\mu$ - (II § 160 p. 485); A.S. $m\bar{y}s$ O.Icel. $m\bar{y}s$ -s.

Latin. -ēs, dēgener-ēs honōr-ēs mēns-ēs, ōciōr-ēs, mūr-ēs, following the *i*-class, see § 319 p. 219.

§ 323. 10. $\bar{\imath}$ - $i\bar{\iota}$ - and \bar{u} - uu- stems, and stems ending in $-\bar{\imath}$, $-\bar{\imath}$, $-\bar{\imath}$.

Pr. Idg. *-ii-es, *-uu-es, e. g. *bhruu-es (nom. sing. * $bhr\bar{u}$ -s 'brow'). Skr. dhiy-as 'thoughts, meditations' Ved. nadiy-as 'rivers', bhru-as Ved. $\dot{s}va\dot{s}ru$ -as 'mothers-in-law'. In Avestic *-ii-es is represented by certain forms of $\bar{\imath}$ - $i\bar{e}$ -stems, which follow the analogy of this class, e. g. $daevy\bar{o}$ i. e. daeviy- \bar{o} (§ 316 p. 216); and *-uu-es by tan(u)v- \bar{o} 'bodies'. Gr. ui- $\varepsilon \varepsilon$ ui- $\varepsilon \varepsilon$ (from ui)-ui0, ui0, ui0, ui0.

Lat. su- $\bar{e}s$, with i-flexion, see § 319 p. 219; $v\bar{\imath}s$ (beside $v\bar{\imath}r\bar{e}s$), to be explained like the gen. sing. $v\bar{\imath}s$ § 233 p. 123. O.Icel. $s\bar{y}r$ 'sues' like gen. sing. $s\bar{y}r$, see § 233 p. 123. O.C.Sl. $kr\bar{u}v$ -i f., $svekr\bar{u}v$ -i f. following the i-class (§ 317 p. 217).

Skr. gir-as 'songs of praise' = *grr-es, piras 'strongholds' = *pll-es, gošán-as pl. 'gaining kine' = *-sn-es. Compare II § 160. 4 pp. 485 f.

§ 324. Certain Root Nouns in -u and -i.

Pr. Idg. * $n\bar{a}u$ -es 'naves': Skr. $n\acute{a}v$ -as, Gr. $v\~{a}$ - $\varepsilon\varsigma$ $v\~{\eta}$ - $\varepsilon\varsigma$ $v\acute{\varepsilon}$ - $\varepsilon\varsigma$ (I § 610 p. 461); Lat. $n\bar{a}v$ - $\bar{e}s$ follows the i-class, see § 319 p. 219.

Pr. Idg. *gou-es: Skr. gav-as, Gr. $\beta o'-\epsilon \zeta$, and perhaps Mid.Ir. bai (ai and oi are confused in Middle Irish);

Lat. bov-ēs like $n\bar{a}v$ -ēs; O.H.G. kuo A.S. $c\bar{y}$ O.Icel. $k\bar{y}r$ are re-formates, see § 199 p. 80, § 221 p. 98, § 238 p. 130.

Skr. $r\acute{a}y$ -as 'treasures, goods', Avest. $r\acute{a}y$ - \bar{o} . Lat. $r\bar{e}s$ for ${}^*r\bar{e}(i)$ - $\check{e}s$, or an Italic re-formate.

Accusative Plural Masculine and Feminine.1)

§ 325. The general ending in the parent language for this case was -ns. The view which assumes -ms as the ending is opposed by what we find in Baltic; see § 186, page 61.

1. -ns was pronounced -ys after stems ending with a consonant. From -ys come Ar. -as, Armen. -s, Gr. -ag, Lat. -ēs Umbr. -f, Goth. -uns, Lith. -is. {See I § 224 p. 192, § 232 p. 197, § 233 p. 197, § 238 p. 200, § 244 p. 202, § 249 p. 204; as to Armen. -s for -*a(n)s, see further I § 202 p. 169, § 651.3 p. 497; for Umbr. -f, I § 209 p. 177 and Duvau's essay (see footnote 1); as regards Lith. -is for *-is, I § 664.3 p. 523.

O.Ir. shows the ending -a, as con-a 'canes' $aithr^ea$. The ending is -as in Gallic, Lingon-as Bitwing-as (it is true we know the forms only as Roman authors have preserved them), and Windisch (Paul-Braune's Beitr., IV 215) would have it that -a has come from the \bar{a} -class. But so long as the history of y in Irish has not been made clear in all points, we shall have to regard -a provisionally as directly representing *-ys. Perhaps -ys, becoming first *-ans, passed very early into *- \bar{a}^ns *- $\bar{a}s$; for in tracing the suffix of the acc. pl. of o-stems, -u (§ 326), we come to *- $\bar{u}s$ at the first step, and this brings

¹⁾ Bartholomae, Der arische acc. plur. masc. der ½-, ½- und r-Stämme, Kuhn's Zeitschr. XXIX 483 ff. Curtius, Der griech. acc. plur., ibid. I 258 f. O. Keller, Der Acc. auf is der 3. Decl. bei den august. Dichtern, Rhein. Mus. XXI 241 ff. L. Duvau, Le group final *-ys à l'acc. plur. des thèmes consonantiques de l'ombrien, Mém. de la Soc. de lingu. VI 223 ff. Stokes, Der acc. plur. in den britischen Sprachen, Kuhn-Schleicher's Beitr. VII 69 ff.

us to *-ōs and lastly to *-ŏns, which points to a very early loss of the nasal. Cp. Lat. pedēs for *-ens as contrasted with ēnsi-s (earlier ĕnsi-s), I § 208 p. 175.

Stems that show vowel gradation, such as Skr. $uk\S\acute{a}n$ -Goth. $a\acute{u}hsan$ - 'ox', have generally a weak stem in Sanskrit, and a strong stem in Greek. As to which of the two reproduces the older form, probability is on the side of Sanskrit (cp. $cat\acute{u}r$ -as = Lith. $k\~{e}tur$ -is Gr. Aeol. $nl\sigma v\varrho$ - αg); but the matter is still an open question. Since \acute{v} in Aryan and Greek became an av (I \S 226 p. 193), it must be provisionally assumed that Ar. -as is regular only in such forms as Skr. $t\acute{a}k\~{s}n$ -as $bh\acute{a}rat$ -as $bhr\acute{u}v$ -as, and spread thence to $uk\~{s}n$ -as brhat-as etc.

2. Whether or not o-, i-, and u-stems had -o-ns, i-ns, and -u-ns respectively in pr. Idg., is uncertain; not that Lith. $ger\mathring{u}'s$ -ius makes it so (see § 326), but because of Skr. $-\bar{q}s$ $-\bar{u}n$, $-\bar{q}r$ $-\bar{u}n$, $-\bar{q}r$ $-\bar{u}n$, whose long vowel we must doubtless regard as belong to the proethnic period of Aryan at the latest (§ 327).

Remark. If we take Idg. -ons as our starting point (cp. Hanssen in Kuhn's Ztschr. XXVII 615, and Bremer, Berl. phil. Wochenschr. 1887 p. 502), we should have to assume a shortening of the vowel for the Enropean languages, according to the principles laid down in I §§ 611 ff. -ons would be related to -ns as abl. sing. -od to the -d of Skr. má-d 'a me' (§ 240 p. 134): $-\bar{\imath}ns$ $-\bar{\imath}ns$ might be regarded as an Arvan re-formation following -ons - Skr. -rr -rn and Avest. -eraš in r-stems certainly are an Aryan re-formation; or if they were held to be original, -ons would bear the same relation to $-\bar{\imath}ns$ $-\bar{\imath}ns$ as the instr. sing. Skr. $v\hat{\imath}k\bar{a}$ to Skr. matí Avest. bāzu (§§ 274 ff.), or as the nom. acc. dual Skr. výkā to $\dot{a}v\bar{\imath} \ sun\dot{\bar{u}} \ (\S\S\ 284\ \text{ff.})$ But it is quite possible to regard the Aryan forms with a long vowel as an Aryan analogical formation: it may be supposed that *-ans followed the nom. pl. in -as, being influenced by the fem. acc. nom. pl. $-\bar{a}s$, and that the long vowel thus produced in o-stems influenced those in -i- and -u-, and finally those in -r-. Compare Bartholomae, Stud. zur idg. Sprachg., I 37 f.

3. \bar{a} -stems had pr. Idg. $-\bar{a}s$, as in the nominative plural. J. Schmidt's theory that this ending came from $-\bar{a}ns$ (see I § 220 p. 188) is unsafe enough.

§ 326. 1. o-stems. Pr. Idg. *ulqo-ns (*ulqōns? see § 325). Skr. vfkās vfkān for *-āns (see I § 647.7 p. 494); vfkānt before s-, as we must assume with Whitney, is simply -ān s- with parasitic t serving as a transition sound, or glide 1). Avest. vehrkan vehrkas(-ca), cp. below. Armen. gail-s. Gr. Cret. λύκονς Dor. Boeot. -ως Ion. Att. Dor. -ονς Lesb. -οις, with the variant (pr. Greek and onwards) -ος for -ονς, see I § 204 p. 171, § 205 p. 172. Lat. lupōs (I § 208 p. 175); Umbr. abrof 'apros' Osc. feíhúss 'fines' (I § 209 p. 177). O.Ir. firu, cēliu 'socios' (I § 212 pp. 178 f., § 657.6 and 10, pp. 509, 510, III § 325 p. 224); also inna (the article, from *sen + to-), for *-dās, earlier *-tōs, when used before an accented syllable (cp. inna n- § 429). Goth. vulfans O.Icel. ulfa. Pruss. deiwans 'deos', O.C.Sl. vlūky, kraję from krajī 'edge, rim' (I § 84 p. 80, § 219. 4 p. 187, § 665. 4 p. 525).

Aryan. Seeing that Avestic a represents nasalised a both long and short (I § 21 p. 24, § 200 pp. 168 f.), it is impossible to say whether *-ans or *- \bar{a} ns is to be assumed as the parent form. An attempt will be made in § 330, Remark, page 231, to shew that it is more likely to have been *- \bar{a} ns.

The Avestic variants vehrka Gāth. vehrkā are to be explained like the same forms used for the nominative plural, see § 314 p. 213. We further find Avest. $-\mathring{a}$, e. g. amešā 'immortales', which we conjecture to be the nom. form (= Skr. amṛtās, § 314 p. 212); its use as an accusative grew up from the use of acc.-nom. vehrka (cp. Skr. acc. fem. $-\bar{a}sas$, § 315 p. 215); yet be it observed that the nom. acc. pl. neuter also had variants $-\mathring{a}$ and -a (§ 338).

The Old Persian martiyā 'homines' cannot be accurately estimated. In this dialect, sounds are most inadequately represented in writing; it should be noted in particular that nasalised vowels are not distinguished from others in writing (I § 200 p. 168). Moreover, the record of Old Persian is too

¹⁾ Compare the Author, Litau. Volksl. und Märch., 289; Bartholomae, Stud. zur idg. Spr., I 36 f. The conjecture offered in vol. I of this work, § 557.1 p. 412, cannot hold water.

scanty to give any satisfactory knowledge of the laws for final syllables. Compare what is said in § 314, p. 214, on nom. pl. $martiy\bar{a}$.

In West-Germanic the nominative did duty as accusative: O.H.G. $tag\bar{a}$ -a O.Sax. dagos A.S. dagas (§ 314 pp. 212, 214). The same is true of the other classes of stems, and in some degree of all Germanic languages. The cause of this syncretism may have been that from a very early period acc. and nom. pl. had been represented by the same form in \bar{a} - and $\bar{\imath}$ - $i\bar{e}$ -stems (§§ 327, 328).

Lith. vilkùs (dial. vilkuns), gerů's-ius (dial. geruns-ius) and gerùs, tû's and tùs (cp. instr. sing. fem. tá and tà, on which variation of accent Bezzenberger offers a conjecture which deserves consideration, Bezz. Beitr. X 204); similarly Lett. wi'lkus and tōs ($\bar{o} = \dot{u}$ with the 'lengthened' or 'drawled' accent). It cannot be shewn that the Lith.-Lettic group \bar{u} ns (Idg. * \bar{o} ns) became High Lith. \hat{u} s; and to take as a starting point Lith.-Lettic *- \hat{u} ns *- \bar{o} ns = Idg. *- \bar{o} ns is out of the question, because Idg. *- \bar{o} ns becomes - \bar{u} ns (I § 615 p. 465). I therefore assume that the \hat{u} \bar{o} of the ending *- \hat{u} ns *- \bar{o} ns (for the shortening to Lith. - \hat{u} (n)s see I § 664. 3 p. 523) came from other cases, first of all from the loc. plural in - \hat{u} su - \hat{u} se (Lett. - \hat{u} s).

Remark. Before going on it may be well to follow out this matter to the end. In the locative plural, then, the old ending *-aisu *-èsu = O.C.Sl. -èchǔ Skr. -ēṣu (see § 357) was transformed to -ûsu by proportional analogy, to match *-āsu -ōsu in the ā-class and *-iēsu -ėsu in the $\bar{\imath}$ - $\dot{\imath}$ eclass, and similarly *-isu = O.C.Sl. -ichǔ Skr. -iṣu (i-stems) became -isu (nakty-su -sè); compare loc. pl. Ital. -ōs following -ās (§ 357), Lat. istōrum, equōrum following istārum, equārum (§ 345), Gr. dual rύμφα (instead of rύμφαι) following $\lambda \dot{\imath} x \omega$ (§ 286 p. 194). This change was very old, as we know from Lett. -ûs -is (beside -ás -és)¹). The adoption of \dot{u} \ddot{o} into the acc. pl. was all the easier because there was a close similarity of meaning between the acc. pl. with -na affixed (e. g. namūs-nà 'homewards') and the loc. pl., and the fem. accusative endings -ōs -ės (-ōs-na -ės-na) had always had a long vowel. Once the re-formation *-ûns was established, its influence was felt in three ways. (1) A dialectic

¹⁾ Lith. vënů-lika dvý-lika seem also to have been assimilated to trŷ-lika, keturió-lika and the rest (compounds with the nom. acc. pl. neuter as first member) by proportional analogy. See § 175 pp. 28 f.

loc. vilkunse appeared, which followed the acc. vilkuns vilkuns-na. (2) The confluence of o- and u-stems in acc. and gen. plural (acc. dangùs 'caela', -us = Goth. -uns etc.; gen. dangũ for *dangu-ũ § 349) produced the re-formates dangůs-nà and dangůsè. (3) An intrusive n appeared in the acc. of pronominal \bar{a} -stems with Lith.-Lett. $-\bar{a}s$ ($-\bar{o}s$) = Idg. $-\bar{a}s$ (§ 327): O.Lith. and dial. pirmans-es (Mod.High Lith. -ás-es) 'has primas'.

The loc. pl. Lith. -yse Lett. -is at once suggests the conjecture that in Lith.-Lett. not only *- $\check{o}ns$ (o-stems), but *-ins (\check{i} -stems), and it may be also *-uns (u-stems) lengthened the vowel. No direct evidence for prehistoric *- $\bar{i}ns$ *- $\bar{u}ns$ is forthcoming.

- § 327. 2. ā-stems. Pr. Idg. *ekūās (cp. § 325. 3 p. 225). Skr. ášvās, Avest. haṭnā. Lat. equās, but compare (2) below. O.Ir. tuatha, mnā 'mulieres', but cp. (2) below. Goth. gibōs, O.H.G. Alemann. kebo, A.S. ziefa, O.Icel. gjafar. Lith. rankàs, rankos-nà 'into the hands', Lett. růkas, cp. (1) below.
- 1. As to Vedic -āsas beside -ās (arangamāsas from arangamā- 'expectant, offering oneself'), see § 315 p. 215.
- O.H.G. $geb\bar{a}$ -a and sippe $sippe\bar{a}$ $sippi\bar{a}$ -a are to be explained in the same way as the same forms when used for the nom., see § 315 p. 215. Compare gutinne -innā -a § 328.

Lith. rankàs never contained a nasal, which is proved by the use of this form in those modern dialects which show -uns as the o-stem ending.1) -ans-es occurs only in pronouns; it is a re-formation, see (2) below, and § 326 Rem. p. 227.

2. In the following branches, Idg. $-\bar{a}s$ was driven out by some form with -ns, through assimilation to the other classes of stems. It is doubtful whether this first took the shape of *- $\bar{a}ns$, and the \bar{a} was then shortened according to I §§ 611 ff., or whether the ending became *- $\bar{a}ns$ at once.

Greek. Argive and Cretan -ἄνς, as Arg. ἀλεξανδρείανς Cret. πρειγευτάνς (Att. πρεσβευτάς), Dor. Boeot. Ion. Att. -άς, Lesb. -αις. A variant dating from proethnic Greek was -ἄς for -ἄνς, as -ος for -ονς (§ 326 p. 226). See I § 204 p. 171, § 205 p. 172.

¹⁾ Moreover, if *-ans were the parent ending, the Lettic form must have been *rûkus.

Italic. Umbr. vitlaf 'vitulas', Osc. víass 'vias' (I § 209 p. 177). Since there is no question that these forms come from *-ans, the equation Lat. $equ\bar{a}s = \text{Skr.} \, \acute{a}\acute{s}v\bar{a}s$ (see preceding page) is at least doubtful (see I § 208 p. 175).

Old Irish. tuatha, $mn\bar{a}$ may be derived from either *- $\bar{a}s$ or *-ans (I § 212 pp. 178 f., § 657. 6 and 10, pp. 509 f.). Gall. artvass 'gravestones' (see Stokes, Bezz. Beitr. XI 115) would be decisive in favour of *-ans, if $\triangleright \triangleleft$, the last symbol in the word, is really to be read as ss.

Balto-Slavonic. Pruss. gennans 'mulieres' like masc. deiwans; the similarity here caused the formation of nom. pl. gennai after the analogy of the masc. -ai (unless indeed the masc. ending -ai instead of -ās is simply due to carelessness on the part of the translator; see Brückner, Archiv für slav. Phil., IV 28). O.Lith. and dial. pirmans-es, see above. O.C.Sl. raky zmije (zmija 'snake') for pr. Slav. *-ŏns (I § 219 pp. 185 f., § 615 p. 465); if the re-formation is later than the confluence of Idg. a and o, the endings -y -e were always like those of the masc. rliky and kraje.

§ 328. 3. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68, footnote). The original ending is not clear.

Skr. byhatis Avest. barentiš, with rare variants -iyas -yàs) and Avest. $-y\bar{o}$, as with the $\bar{\imath}$ - $i\dot{\imath}$ -class (§ 329).

O.H.G. gutinne, later $-\bar{a}$ -a, and Lith. žemės-nà ('into the countries') žemės certainly have original - $i\bar{e}s$, like the nom. pl. gutinne and žẽmės (§ 316 p. 216). In Lat. facies is the same ending, unless it be -ns like Umbr. iovie(f) 'iuniores', which seems to have developed out of an old abstract noun (as Lat. $pr\bar{o}$ -geni \bar{e} -s, II § 111 p. 339): a different explanation may be found in Bechtel's paper, Bezz. Beitr. VII 4 ff.

Gr. φερούσᾶς, Goth. frijōndjōs, Lith. vēžanczias, and perhaps O.C.Sl. zemlje following the iā-class.

O.Ir. insi is ambiguous.

Remark. If we were right in assuming *-(i)in as a proethnic variant of *- $\bar{\imath}m$ in the acc. sing. (§ 216 p. 93), there may have been Idg. *-(i)ins in the plural. From this might be derived Lat. $faci\bar{e}s$, Umbr.

iovie(f), O.C.Sl. zemljė, Ved. -iyas Avest. -yo. Then the question would arise — have not Gr. $-\iota_{\underline{L}\check{\alpha}\nu\varsigma} - \iota_{\underline{L}\check{\alpha}\nu\varsigma}$ suffered some analogical change following the $i\bar{\alpha}$ -stems, their previous form having been $-\iota_{\underline{L}\check{\alpha}\varsigma} - \iota_{\underline{L}\check{\alpha}\varsigma} = \mathrm{Idg.} *-ii\eta s$ *- $ii\eta s$? Then the older $-(\iota)\iota_{\underline{L}\check{\alpha}\varsigma}$ may be still represented by the pr. Gr. variant of $-(\iota)\iota_{\underline{L}\check{\alpha}\nu\varsigma}$ used before consonants (cp. $-\check{\alpha}\varsigma$ beside $-\check{\alpha}\nu\varsigma$, § 327).

§ 329. 4. $\bar{\imath}$ - $i\dot{\imath}$ - and $\bar{\imath}$ - $u\dot{\imath}$ -stems and stems in $-\bar{\imath}$ - $\bar{\imath}$ - $\bar{\imath}$.

Pr. Idg. *-ii-ηs *-uu-ηs, e. g. *bhruu-ηs (nom. sing. *bhrū-s 'e yebrow'). Skr. dhíy-as Ved. nadíy-as, bhrūv-as Ved. ἐναἐτὐν-as. Gr. κίας πόλιας (from πόλι-ς), ὀφρύας λχθύας νέχνας (from νέκν-ς); Herod. πόλις from πόλι-ς following the i-class (§ 330), Hom. Herod. Att. ὀφρῦς Hom. νέκνς following the u-class (§ 331). Lat. su-ēs; vīs (beside vīrēs) like nom. pl. vīs (§ 323 p. 223). Lith. žuv-ìs = λχθνάς.

O.Icel. $s\bar{y}r$ is the nom. form (§ 323 p. 223). O.C.Sl. $kr\ \bar{u}v$ - $i\ svekr\ \bar{u}v$ - $i\ follow$ the i-class (§ 330).

Skr. gír-as 'hymns' = *grr- η s, púr-as 'strongholds' = *p η l- η s, gō-šán-as pl. 'gaining cattle' = *-s η n- η s. Compare II § 160.4 pp. 485 f.

§ 330. 5. i-stems. Pr. Idg. *oui-ns, *tri-ns 'tres' (*ouins *trins? see § 325 p. 225). Skr. masc. avir avin, avint s- like vikant s- § 326 p. 226; Avest. masc. azis), see below. Armen. sirts; and eris, which retains the i (I § 202 p. 169). Gr. Hom. ois Ion. πois Dor. Boeot. τois . Lat. turris ovis tris, also written turreis etc.; Umbr. avif aveif 'aves' trif treif 'tres'. O.Ir. faithi, tri. Goth. gastins anstins prins, O.Icel. geste. Lith. naktis tris perhaps representing a re-formation in *-ins, see § 326 Rem. p. 227; O.C.Sl. pati nosti tri (I § 219.4 p. 187).

Aryan. In Sanskrit, answering to $-\bar{\imath}n$ and $-\bar{\imath}n$, the endings of masc. i- and u-stems, feminines have $-\bar{\imath}\xi$ ($\acute{a}v\bar{\imath}\xi$) and $-\bar{\imath}\xi$ ($dh\bar{e}n\acute{u}\xi$), which are re-formations following $\acute{a}\mathring{s}v\bar{a}s$ (§ 327) and $b\gamma hat\tilde{\imath}\xi$ (§ 328); but in Avestic both genders

¹⁾ There seems to have been no Avestic variant in -i, as there was no variant -u beside $-\bar{u}\check{s}$ in u-stems. See Bartholomae, Kuhn's Ztschr. XXIX 486 f.

show the endings $-\bar{\imath}\check{s}$ and $-\bar{\imath}\check{s}$ (fem. $\bar{\imath}\check{s}t\bar{\imath}\check{s}$ 'riches', $bar^e\check{s}n\bar{\imath}\check{u}\check{s}$ 'heights').

Remark. Skr. $-\bar{\imath}r$, $-\bar{\imath}u$, $-\bar{\imath}r$ from i-, u-, and r-stems, for earlier *- $\bar{\imath}n\check{s}$, *- $\bar{\imath}n\check{s}$, *- $\bar{\imath}n\check{s}$. In vol. I of this work, § 647. 7. p. 494, it was conjectured that $-\check{s}$ was due to the influence of the i- u- and r-sounds, in spite of the preceding nasal; we assumed that a nasal, coming before -s when it did not stand at the end of a clause, and following a long sonant, was reduced to a mere nasalising of the sonant earlier than when it followed a short sonant, namely in proethnic Aryan (cp. I § 199 Rem. 1 p. 167). Now - \check{s} in Avest. $nera\check{s}$ cannot be separated from the ending of Skr. $n\check{r}r$; so the Avestic form must be derived from * $n\bar{\imath}n\check{s}$, and not * $n\bar{\imath}n\check{s}$. On the same reasoning Avest. $a\check{z}i\check{s}$ and $b\check{a}z\check{u}\check{s}$, if they have or ever had a nasal sound in the last syllable, come from * $-\bar{\imath}n\check{s}$ and * $-\bar{\imath}un\check{s}$, not * $-in\check{s}$ * $-un\check{s}$. This would prove that these various classes had a long vowel in the acc. plural in pr. Aryan.

But Avest. $-i\check{s}$ and $\bar{u}\check{s}$ in fem. i- and u-stems may be phonetically identified with Skr. $-i\check{s}$ and $-\bar{u}\check{s}$ in the same stems, and it is possible to assume that $-\check{s}$ first belonged to these endings $-i\check{s}$ and $-\bar{u}\check{s}$, whence in pr. Aryan it spread to the masculine forms (ending with -ns); cp. Bartholomae, Kuhn's Zeitschr. XXIX 483 ff., and Stud. zur idg. Spr., I 37 ff. In that case we should have no proof that the Skr. -ir -ir had a long sonant as early as the proethnic Aryan period. But considering that Skr. fem. $m\bar{u}t\hat{r}\check{s}$ has in Avestic the nasalised $m\bar{u}terq\check{s}$ answering to it 1), it becomes more probable that the Avestic fem. endings $-i\check{s}$ $-i\check{u}\check{s}$ also contained a nasal, and that the Skr. fem. $-i\check{s}$ $-ir\check{s}$ are Sanskrit reformations. But if these endings $-i\check{s}$ $-ir\check{s}$ are not so old as pr. Aryan, pr. Ar. $-n\check{s}$ could not have obtained its \check{s} by analogy; and then our supposition that \check{s} is phonetic and nothing more gains in probability.

If then we are to postulate for proethnic Aryan *- $\bar{\imath}n\ddot{s}$ *- $\bar{\imath}n\ddot{s}$ *- $\bar{\imath}n\ddot{s}$, or, to write the sounds more exactly, *- $\bar{\imath}^n s$ *- $\bar{\imath}^n s$, the o-stems too most certainly had a long yowel at this period, and their ending was *- $\bar{\alpha}^n s$.

Skr. aryás like nom. aryás, see § 317 p. 217. Avest. garayō 'hills' is clearly nom., like the acc. gātav-ō § 331 (compare further Th. Baunack, Stud. auf dem Gebiet des Gr. etc., I 456 footnote 1).

Greek. Hom. πόσιας Lesb. κτήσιας following the τ- iż-class (§ 329). Att. τρεῖς ὄφεις βάσεις are nom. So too the

¹⁾ R.-V. X 352 mātýn does not come into consideration in this place, because it is joined with masculine substantives in apposition, something like an adjective: mātýnt sindhūn párvatān 'motherly streams and hills' The form has often suggested wrong inferences.

Latin forms in -ēs, as turrēs, and those of West Germanic like O.H.G. gesti ensti drī. See § 317 pp. 216 f.

§ 331. 6. u-stems. Pr. Idg. $*s\bar{u}nu$ -ns ($*s\bar{u}n\bar{u}ns$? see § 325 p. 225). Skr. masc. $s\bar{u}n\hat{u}r$ $s\bar{u}n\hat{u}n$, $s\bar{u}n\hat{u}nt$ s- like $vfk\bar{u}nt$ s- § 326 p. 226; Avest. masc. $b\bar{u}z\bar{u}s$. Armen. zard-s. Gr. Cret. $vl\dot{v}v\varsigma$ 'filios', Hom. $\kappa\lambda\omega v\tilde{v}\varsigma$ $\gamma\dot{e}v\bar{v}\varsigma$. Lat. $man\bar{u}s$. O.Ir. bithu. Goth. sununs, O.Icel. sunu suno. Lith. $s\dot{u}nus$, $dang\dot{u}s$ 'caela', perhaps containing a re-formation *- $\dot{u}ns$, see § 326 Rem. p. 227; O.C.Sl. syny (I § 219.4 p. 187).

Aryan. Fem. Skr. -ūš, dhēnúš, like fem. ávīš, similarly Avest. -ūš, bar šnūš 'heights', like fem. īštīš, see § 330 with the Remark.

Vedic also shows -v-as (m. and f.), as $pa\dot{s}v-\dot{a}s$ 'pecora', and in Avestic there is $-v-\bar{o}$ to correspond, e. g. $pasv-\bar{o}$, as in the nom. plural, see § 318 p. 218. Avest. $g\bar{a}tav-\bar{o}$ 'places, seats, thrones' is a clear nom., like $garay-\bar{o}$ just above (§ 330); and so also Avest. $da\check{n}h\bar{a}v-\bar{o}=0$. Pers. $dahy\bar{a}v-a$, see § 318 p. 218.

Greek. Hom. $\gamma \lambda \nu \varkappa \dot{\epsilon} u_{\varsigma}$ Herod. $\pi \dot{\eta} \chi \varepsilon u_{\varsigma}$, a re-formation following the nom. in $-\varepsilon \varepsilon_{\varsigma}$. Att. $\dot{\eta} \delta \varepsilon \tilde{\iota}_{\varsigma}$ $\pi \dot{\eta} \chi \varepsilon \iota_{\varsigma}$ are nom. (§ 318 p. 218) like $\ddot{\delta} \varphi \varepsilon \iota_{\varsigma}$ (§ 330).

Umbr. kastruvuf castruo 'fundos' from kastru- (cp. Osc. castrovs, § 232 p. 121) following o-stems, perhaps because of the nom. acc. pl. neut. in -uva -uo and the gen. pl. in *-uvom.

Germanic. Goth. mans O.H.G. man 'men', the nom. form (§ 318 p. 218).

ārn-a, see § 325 p. 224. O.Icel. orn-u 'eagles' bjorn-u 'bears' (owing to this form and to the dat. instr. pl., § 384, these nouns came to be declined as u-stems) beside nom. sing. O.H.G. aro bero (O.Icel. Are O.Swed. Bjari survive as proper names); with these we should probably compare Goth. auhsnuns, since the form auhsunns, recorded in 1st Cor. 9.9, seems to need emendation, see I p. 203, footnote.¹) Lith. szun-ìs ākmen-is.

Greek. Cret. $-\alpha v_S$ as well as $-\alpha_S$, e. g. $\kappa \alpha \rho \tau \delta v - \alpha v_S$ (Att. $\kappa \rho \epsilon \delta \tau \tau \sigma v \alpha c_S$), a re-formation caused by the existence of doublets $-\alpha v_S$ and $-\alpha c_S$ in α -stems (§ 327 p. 228).

Germanic. Goth. gumans O.H.G. gomon -un are nom. forms (§ 319 p. 219).

O.C.Slav. kamen-i following the i-class (§ 330 p. 230).

§ 333. 8. r-stems. Pr. Idg. * $m\bar{a}tr$ - ηs * $d\bar{o}tr$ - ηs or * $m\bar{a}ter$ - ηs d $\bar{o}tor$ - ηs . Skr. usr-as from $u\S ar$ - 'dawn', cat ur-as m. cat asr-as f. 'four'; Avest. $m\bar{a}tar$ - \bar{o} d $\bar{a}t\bar{a}r$ - \bar{o} Gath. $f^*\bar{d}r$ - \bar{o} 'patres' (also -a instead of - \bar{o} , § 314 p. 213). Armen. mar-s dster-s. Gr. $u\eta \tau \dot{\epsilon} \varrho$ - $a \varepsilon$, Hom. $\vartheta \dot{\nu} \gamma a \tau \varrho$ - $a \varepsilon$ and $\vartheta \nu \gamma a \tau \dot{\epsilon} \varrho$ - $a \varepsilon$, Hom. Att. $\check{a} \nu \vartheta \varrho a \varepsilon$ beside Hom. $\check{a} \dot{\kappa} \dot{\epsilon} \varrho$ - $a \varepsilon$; $\delta \dot{\omega} \tau \varrho$ - $a \varepsilon$, d $\sigma \tau \dot{\eta} \varrho$ - $a \varepsilon$. Lat. $m\bar{a}tr$ - $\bar{e}s$, $dat \bar{o}r$ - $\bar{e}s$; Umbr. ner-f ' $a \nu \vartheta \varrho a \varepsilon$, proceres' (ep. man-f § 332). O.Ir. $aithr^e a$, § 325 p. 224. Goth. $br \bar{o}pr$ -uns 'fratres', vintr-uns 'winters' (declined as a u-stem), and perhaps A.S. $br \bar{o} \dot{a}r$ -u wintr-u (beside $br \bar{o} \dot{d}or$ vinter); cp. nom. Norse Run. dohtr- $i\pi$ § 320 p. 220. Lith. moter-is (dial.), $k\bar{e}tur$ -is 'four' (cp. Skr. cat ur-as Gr. Aeol. $\pi i \sigma \nu \varrho$ - $a \varepsilon$), dur-is 'door' (cp. gen. dur-u § 351, anp Skr. acc. dur-as dur-as).

Aryan. In pr. Aryan the analogy of stems in -o-, -i-, and -u- caused the ending *- $\bar{r}n\tilde{s}$ to be used with r-stems, Skr. $-\bar{r}r$ - $\bar{r}n$ and Avest. -er $q\tilde{s}$ (monosyllabic), whose pro-

¹⁾ If we read auhsuns (cp. Bernhardt Vulfila p. LVII, Braune Got. Gr. § 80 Anm. 1, § 108 Anm. 1), this must be regarded as a re-formate following a form *uhsum = uksu-mi (see § 384). But even though this instrumental formation must once have existed, it can hardly have lasted out the pr. Germ. period, but it will doubtless have given way to a new one with -n- inserted; see loc. cit.

nunciation cannot be exactly defined (cp. Bartholomae, Kuhn's Zeitschr. XXIX 483): Skr. pitýn, nýn, Avest. māteraš neraš (cp. Jackson, Amer. Journ. of Phil., X 346 f.). Skr. has $-\bar{x}$ š for the fem., $m\bar{a}t'$ jš, like $-\bar{\imath}$ š. See § 330 Rem. p. 231.

pitaras, found in the Mahā-Bhārata (12924) is a reformate due to the likeness of nom. and acc. pl. in other stems.

Greek. Cret. θυγατέρ-ανς like καρτόν-ανς, § 332 p. 233.

West-Germanic. O.H.G. muoter fater \bar{a} -a and the like, O.Sax. wintar A.S. winter etc., are nom., see § 320 pp. 220 f.

Balto-Slavonic. High Lith. móteres following $\bar{\imath}$ - $i\bar{e}$ stems; and so too we have in the dialects nom. pl. móter-és
(beside móter-s), instr. sing. móter-e (beside moter-imi), and
the like. O.C.Sl. materi follows i-stems, § 330 p. 230.

§ 334. 9. Stems ending in an Explosive.

Pr. Idg. *bhṛāhṛt-ṛs or *bhṛāhont-ṛs. Skr. bṛhat-ás, Avest. ber ezat-ō ber zant-ō. Gr. φ \(\tilde{\rho}\)ov\(\tau\)o\(\tau\) (Cret. β allóv\(\tau\)-av\(\rho\) like κ a ρ \(\tau\)o'\(\tau\)-av\(\rho\), \(\frac{\rho}{332}\) p. 233). Lat. ferent-\(\bar{e}s\). O.Ir. cairt a, see \(\frac{\rho}{325}\). Goth. tun\(\bar{p}\)-uns 'dentes' (declined as a u-stem), Lith. dant-\(\hat{i}\)s (cp. gen. dant-\(\walde{u}\)). — Lith. v\(\bar{e}\)zanczius O.C.Sl. vez\(\frac{\rho}{3}\)te following the \(\bar{i}\)o-declension (\(\frac{\rho}{326}\)).

Skr. $\dot{s}ar\dot{a}d$ -as 'autumns'. Gr. $\phi v\gamma\dot{a}\delta$ - $\alpha\varsigma$. Lat. lapid- $\bar{e}s$, Umbr. capif kapi 'capides' for *capid-f, like man-f (§ 332 p. 232). Mid.Ir. druide (-e = -ea), see § 325 p. 224. Skr. pad- $\dot{a}s$ Avest. $pa\bar{d}$ - \bar{o} Gr. $\pi\dot{o}\delta$ - $\alpha\varsigma$ Lat. ped- $\bar{e}s$ Goth. $f\bar{o}t$ -uns 'feet' (II § 160 p. 480).

Skr. $u\dot{s}ij$ -as pl. of 'desirous'. Gr. $\mu \dot{s}i\rho \alpha x - \alpha \zeta$ ő $\rho \tau v \gamma - \alpha \zeta$. Lat. $bib\bar{a}c$ - $\bar{e}s$ $fr\bar{u}g$ - $\bar{e}s$, Umbr. frif fri 'fruges, frumenta' for * $fr\bar{v}g$ -f ($\bar{v}=\bar{u}$, see I § 57 p. 46), unless we follow Pauli in connecting it with Lat. frit and deriving it from *frit-f (cp. II § 161 p. 488). O.Ir. nathrach-a, see § 325 p. 224. Skr. $v\dot{a}c$ -as Avest. vac- \bar{o} $v\bar{a}c$ - \bar{o} , Gr. * $\ddot{o}\pi$ - $\alpha \zeta$, Lat. $v\bar{o}c$ - $\bar{e}s$ (II § 160 p. 480). Skr. $r\dot{a}j$ -as Lat. $r\bar{e}g$ - $\bar{e}s$, O.Ir. $r\bar{\iota}g$ -a (§ 325 p. 224).

Skr. ap- $\acute{a}s$, Ved. also $\acute{a}\rho$ -as, Avest. ap- \bar{o} $\bar{a}p$ - \bar{o} 'waters'. Gr. $\varkappa \lambda \check{\omega} \pi$ - $\alpha \varsigma$. Lat. dap- $\bar{e}s$.

Avestic has also -a instead of $-\bar{a}$, as $v\bar{a}c$ -a 'voces', see § 314 p. 213.

Germanic. Goth. frijond-s O.H.G. friunt, Goth. mēnop-s 'months' reik-s 'rulers', baúrg-s O.H.G. burg A.S. byrz are nom., see § 321 p. 222.

§ 335. 10. s-stems.

Pr. Idg. *dus-menes- η s: Skr. durmanas-as, Avest. duš-manash- \bar{o} ; Gr. Ion. $\delta v \sigma \mu \bar{\epsilon} v \dot{\epsilon} a \bar{\epsilon}$ (Att. $\delta v \sigma \mu \bar{\epsilon} v \bar{\epsilon} \bar{\epsilon}$ is nom. in form, § 322 p. 222); Lat. $d\bar{e}gener-\bar{e}s$. — Skr. $u\ddot{s}\dot{a}s$ -as. Lat. $hon\bar{o}r-\bar{e}s$. — Gr. $\mu \bar{\eta} \nu - a \bar{\epsilon}$ Lesb. $\mu \bar{\eta} \nu \nu - a \bar{\epsilon}$, Lat. $m\bar{e}ns-\bar{e}s$, O.Ir. $m\bar{v}s$ -a (see § 325 p. 224), cp. II § 132 p. 415; Skr. $m\bar{a}s$ - $a\dot{s}s$ Avest. $m\bar{a}nh-\bar{o}s$ 'menses', cp. II § 134 p. 425.

Pr. Idg. compar. $*\bar{o}\hat{k}is-\eta s$ or $*\bar{o}\hat{k}(i)\underline{i}os-\eta s$. Skr. $\acute{a}\dot{s}\bar{\imath}\gamma as-as$. Gr. Hom. $\pi\lambda\dot{\epsilon}\alpha\varsigma$ (Cret. $\pi\lambda\dot{l}\alpha\nu\varsigma$ like $\varkappa\alpha\varsigma\tau\dot{o}\nu-\alpha\nu\varsigma$ § 332 p. 233) for $*\pi\lambda\eta\iota\sigma-\alpha\varsigma$ (II § 135 pp. 429 and 432); Att. $\acute{\eta}\delta\dot{l}o\nu\varsigma$ is nom. (§ 322 p. 222). Lat. $\bar{o}ci\bar{o}r-\bar{e}s$. O.C.Sl. $sla\check{z}d\check{\imath}\check{s}\varepsilon$, as if from a $\acute{i}o$ -stem (§ 326).

Pr. Idg. part. perf. act. * $yeidus-\eta s$ or * $yeiduos-\eta s$: Skr. vidúš-as Avest. $v\bar{\imath}du\bar{s}-\bar{o}$. Lith. mirus-ius O.C.Sl. $m\bar{\imath}r\bar{\imath}u\bar{s}e$ following the io-class (§ 326). As to Gr. $\epsilon i\delta \acute{o}\tau$ - $\alpha \varsigma$ see II § 136 p. 440.

Pr. Idg. * $m\bar{u}s$ - ηs 'mures': Skr. $m\bar{u}\tilde{s}$ -as, inferred from nom. $m\tilde{u}\tilde{s}$ -as, Lat. $m\bar{u}r$ - $\bar{e}s$. Gr. $\mu\tilde{v}a\varsigma$ $\mu\tilde{v}\varsigma$, a re-formate following $\partial\varphi\varrho\tilde{v}a\varsigma$ $\partial\varphi\varrho\tilde{v}\varsigma$ (§ 329 p. 230). A.S. $m\bar{y}s$ O.C.Sl. $m\bar{y}s$ -s are nom. (§ 322 p. 223).

§ 336. 11. Certain Root Nouns.

Pr. Idg. * $n\bar{a}u$ - ηs 'naves': Skr. $n\bar{a}v$ -as, Gr. Hom. $v\tilde{\eta}a\varsigma$ Herod. $v\dot{\epsilon}a\varsigma$ (Att. $v\alpha\tilde{v}\varsigma$ a re-formate like $v\alpha\tilde{v}v$, § 221 p. 98), Lat. $n\bar{a}v$ - $\bar{e}s$.

Gr. Hom. $\beta \acute{o}$ - $\alpha \varsigma$, Lat. bov- $\bar{e}s$; in Skr., the regular form is $g \acute{a}s$, beside which occur $g \acute{a}vas$ in the Rig-Veda (the text has $g \acute{a}s$, which will not scan), and $g \bar{a}v$ -as in the Tāittirīya Brāhmana. I hold it probable that Skr. $g \acute{a}s$ Avest. $g \acute{a}$ and

Gr. $\beta \tilde{w}_{\mathcal{G}}$ (Theor.) do not represent an Idg. * $g\bar{o}s$, but are r formates in these languages following the acc. sing. (Sk $g\acute{a}m$ etc., § 221 p. 98), like Att. $\beta o\tilde{v}_{\mathcal{G}}$ following $\beta o\tilde{v}v$: and th in spite of W. Schulze, Kuhn's Zeitschr. XXVII 429, ar Meringer, Zeitschr. für öst. Gymn., 1889, p. 1019; compare th footnote on page 428 of volume II. On Mid.Ir. $b\bar{u}$ Thurneyse says: "If the nom. bai comes from *boi, which would stand fo *bou-es" — see § 324 p. 223 — " $b\bar{u}$ = * $b\bar{u}s$ may have bee formed on the analogy of * $mogoues: mog\bar{u}s$ ($mog^ai: mogu$)".

Skr. $r\bar{a}y$ -ás and $r\dot{a}y$ -as 'goods, treasures', Avest. $r\bar{a}y$ -ialso Skr. $r\bar{a}s$ following $r\dot{a}m$; Lat. $r\bar{e}s$ for * $r\bar{e}(\underline{i})$ - $\bar{e}s$ -ens?

Nominative and Accusative Plural Neuter. 1)

§ 337. The ending as shown in consonant stems is $-\vartheta = \text{Skr.}$ -i Gr. $-\alpha$ (I § 110 p. 105, Morph. Unt. V 52 ff.) The Idg. endings $-\overline{\imath}$ and $-\overline{\imath}$ (i- and u-stems) might also be analyse into $-i+\vartheta$ and $-u+\vartheta$.

The o-stem ending $-\bar{a}$ is identified, rightly in a probability, with $-\bar{a}$ in the nom. sing. fem.²); then such a wor as *jugā (= Lat. juga) would originally mean, if we ma coin a word, 'yokedom' or something of the sort. Compai II § 158 pp. 473 ff. In favour of this view much evident may be adduced; for example, the use of the singular of the predicative verb with a nom. pl. neuter as subject, an idio: which is as old as the parent language: e. g. R.-V. I 162

¹⁾ L. Havet, La désinence des pluriels neutres, Mém. de la Soc. c lingu. IV 275 f. V. Henry, Le nominatif-accusatif pluriel neutre dans le langues indo-europ., Le Muséon VI 558 ff. J. Schmidt, Die Plura bildungen der idg. Neutra, 1889. The Author, Zur Bildung des non acc. plur. neutr., Morphol. Unters. V 52 ff. Bartholomae, Zur Bildung des nom.-acc. plur. der as-Stämme, Ar. Forsch. II 105 ff. W. Meye Die Schicksale des lat. Neutrums im Romau., 1883.

²⁾ In addition to J. Schmidt, Pluralb. p. 10 footnote 1, so Windisch, Curtius' Stud. II 265; de Saussure, Mém. sur le syst. prin p. 92; Johansson, Kuhn's Zeitschr. XXX 400; und Hanssen, Commentationes in honorem Guilelmi Studemund, 1889 pp. 116 f.

sárvā tấ... astu 'omnia haec sunto', Hom. ι 438 ἐξέσσντο ἄρσενα $\mu\eta\lambda\alpha$. If the o-class got its neuter plural thus from stems in $-\bar{a}$ -, it would be possible that the i-class got its neuter plural with the ending $-\bar{\imath}$ from the nominative singular of $\bar{\imath}$ - $\underline{\imath}\bar{e}$ -stems (II § 109 p. 332).

Before the use of this form as a plural case, which was soon followed by a re-formation of the gen. into * $jug\bar{o}m$ 'iugorum', and the loc. into *jugois(u) 'jugis', and so forth, there must have been a real neuter plural having $-\partial$ in the nominative and accusative.

In consonant stems, along with the forms in -ə, there is used the bare stem, with a formative suffix of the 3rd. or 4th. strong grade as its case-sign, e. g. *dhēmōn == Avest. dāman from the stem *dhēmen-. This *dhēmōn in formation resembles a nom.-acc. neuter singular of which we have an example in Goth. namō 'nomen' for *-mōn (§ 223 p. 100), and the nom. sing. masc. fem. Gr. $\tau \acute{e} \rho \mu \omega \nu$ Goth. $tugg\bar{o}$ and the like (§ 192 p. 70). Hence J. Schmidt assumes that this neuter plural series, like the last, was once a series of feminine collective nouns.

It is a fair conjecture that $-\partial$ at first belonged to some one group of consonant stems, and that it afterwards spread to others. Between Avest. $d\bar{a}man$ and Skr. dhaman-i Avest. $a\bar{s}aon-i$ there was, we may suppose, much the same relation as between certain variant forms of the locative singular, Skr. $m\bar{u}rdhan$ and $m\bar{u}rdhan-i$ $m\bar{u}rdhn-i$ (§ 256 pp. 156 ff.); and in the parent language there will have been not only $-\bar{o}n$ ($-\bar{e}n$) and $-\bar{o}n-\partial$ ($-\bar{e}n-\partial$) but also forms with a weak grade of stem.

§ 338. 1. o-stems. Pr. Idg. *jugā 'iuga', cp. § 337. Skr. Ved. yugā; Avest. xšapra O.Pers. hamaranā 'battles'. Lat. juga; Umbr. veskla vesklu 'vascula' supa sopo 'supina' Osc. teremenniú 'termina' comono 'comitia' (I § 105 pp. 98 f.). O.Ir. trī chēt '300' = Ved. trī śatā, trāth 'hours' nert 'powers' and the like, cp. next page; Gall. perhaps καντενα. Goth. juka, pō 'the, those' (I § 659.1 p. 512, § 660.2 p. 515);

O.H.G. wort 'verba', whence joh instead of *johhu (-u retain in cunniu cunnu 'families', especially in East Frankish, bes cunni), O.Sax. A.S. fatu 'casks' (I § 661 p. 518). Li keturió-lika '14' penkió-lika '15' (§ 175 p. 28), Pruss. slu 'sleighs' from sing. slaya-n sleigh, sledge' warto 'door' (-o = as in the nom. sing. fem. e. g. mergo = Lith. mergà 'gir O.C.Sl. iga.

Aryan. A Sanskrit variant ending is -āni, yugáni, fou in Vedic, and exclusively used in the post-Vedic language. is a re-formation following námān-i 'nomina'. So too Ave Gāth. vīspēng (vīspa- 'all') yan yam (ya-, pronoun) have their model *-ān, the n-stem ending, as haxmēng nāman - (§ 340); the same re-formation is said to be found in Ve Sanskrit, e. g. tápūṣi patangán 'winged flames' R. V. IV 4 (Ludwig, Rig-Veda IV 313; Bartholomae, Ar. Forsch. II 11 Stud. zur idg. Spr. I 73). The point of contact which we the beginning of these changes is the similar ending of t plural, Skr. Ved. nāmā Avest. nāma (§ 340) and Skr. Ve yugá Avest. xšapra.

Another termination found in Avestic is $-\mathring{a}$, the ending es-stems (§ 342), as $visp\mathring{a}$. There are also forms in $-\bar{a}i\check{s}$, $v\bar{i}sp\bar{a}i\check{s}$, which like $n\bar{a}m\bar{e}n\bar{i}\check{s}$ (§ 340) seem to be really is strumental (§§ 379, 380), although it has not yet been madelear how they came to be used for the nominative (a Bartholomae, Stud. I 75).

Greek. $-\bar{\alpha}$, $\zeta v \gamma \alpha'$, follows consonantal stems. It is verification unsafe to say that $-\bar{\alpha}$ has been kept in adverbs like $z \varrho v \bar{\nu}$. Dor. $z \varrho v \bar{\rho} \bar{\alpha}$; see § 274 Rem. p. 174. But I conjecture the we have a real instance of $-\bar{\alpha}$ in $i \pi i - \tau \eta \delta \varepsilon - \varsigma$ 'just for this, purpose' (Buttmann compared the word with $i \pi i \tau \dot{\alpha} \delta \varepsilon$, Lex I 46). Another piece of evidence for the old ending $-\bar{\alpha}$ found in phrases like $i \alpha \dot{\nu} \dot{\nu} \alpha \tau \dot{\alpha} \dot{\varepsilon} \sigma \tau \iota$ 'it is impossible'; s J. Schmidt, Pluralb. 32 ff., and § 158 of the vol. II of t present work, pp. 473 ff.

In Old Irish the usual ending is -a, as dligeda, whi is explained very reasonably by Windisch (Paul-Braune's Bei

IV 214 f. and 231) as a re-formation following the nom. and acc. plural of \bar{a} -stems (§ 315 p. 215, § 327 p. 229); we must follow Thurneyseu in looking for the point of contact in the article, where inna represents both *sen-das and *sen-da (§ 428).

Lithuanian. Besides the forms already given, piktà in taī piktà 'haec mala (sunt)' and the like may belong to this place. The plural form must necessarily have run into one with the singular (Idg. *-o-d).

§ 339. 2. i- and u-stems. Pr. Idg. ${}^*tr\bar{\imath}$ 'tria', ${}^*medh\bar{u}$ 'sweetnesses, sweet things', cp. § 337. Skr. Ved. $tr\bar{\imath}$, $\dot{s}\dot{u}c\bar{\imath}$ 'splendida, pura', $m\dot{a}dh\bar{u}$, $pur\dot{u}$ 'multa'; Avest. hu-bao $d\bar{u}$ 'bene olentia', $c\bar{\imath}$ 'quae' in $c\bar{\imath}$ -ca, pouru 'multa', $G\bar{a}th$. $voh\bar{u}$ 'bona'. Lat. $tr\bar{\imath}$ (- $gint\bar{a}$). O.Ir. $tr\bar{\imath}$ tri; and perhaps mind 'insignia', rind 'constellations', see below. Lith. $tr\dot{y}$ -lika '13' (cp. $keturi\acute{o}$ -lika § 338); O.C.Sl. tri, and doubtless si 'haec' from nom. sing. masc. $s\bar{\imath}$.

Aryan. A Sanskrit variant is $-\bar{\imath}ni$ $-\bar{\imath}ni$, $tr\bar{\imath}ni$ $\dot{s}\dot{\imath}u\bar{c}\bar{\imath}ni$, $m\dot{a}dh\bar{\imath}ni$ $pur\dot{\imath}ni$, found in Vedic and exclusively used in later Sanskrit; compare $-\bar{a}ni$ § 338. In the Avesta we might expect to find forms in * $-\bar{\imath}n$ * $-\bar{\imath}n$, * $-\bar{\imath}$ *- \imath - \imath , parallel to $v\bar{\imath}sp\bar{\imath}ng$ (§ 338); and since the Avestic language had no means of writing nasalised i- and u-vowels, it is quite possible that such forms are really there, though disguised by being written with $-\bar{\imath}$ and $-\bar{\imath}$ (Bartholomae, Stud. I 73 f.).

In Greek there are re-formations with the suffix $-\ddot{\alpha}$: $\tau \varrho i a$, $i \delta \varrho a$; Hom. $\gamma \varrho \tilde{\nu} \nu a$ Lesb. $\gamma \varrho \nu \nu a$ for * $\gamma \varrho \nu F - a$ Hom. Att. $i \beta \dot{\epsilon} a$, Att. $i \sigma \tau \eta$ $i \mu l \sigma \eta$ (for the contraction see Wackernagel, Kuhn's Zeitschr. XXV 272).

Italic. Re-formations with the o-stem ending; Lat. tria maria, genua cornua; Umbr. triia 'tria' triiu-per trio-per 'ter', berva 'verua' vatuva vatuvu vatuo (meaning unknown).

In Old Irish *-iā -e (cp. the Italic) was perhaps the regular ending of substantives, mure 'maria'.

Remark. "Three formations are found. (1) Without any termination, mind rind (the latter was perhaps originally a neuter u-stem, to judge from rendaib). (2) With -e: mure. (3) With -a (esp. in Mid.Ir.): mora, renna. It is unfortunate that all three agree with some plural form of the two chief neuter classes, the o- and s-stems. The ending -a is certainly due to the analogy of the o-class, and mora is a direct imitation of dligeda. mind may represent an old form with $-\bar{\imath}$, like $tr\bar{\imath}$; but it may equally well be an ad-formate of o-stems, cp. dliged beside the later dligeda. -e may be either *-ia or *-ia, and also a re-formation following the s-class (§ 343). I should prefer to regard -e as the genuine ending of neuter i-stems". Thurneysen.

Adjectives have dropped the neuter form altogether; for the nom. acc. the masc.-fem. form is used, e. g. mathi (maith 'good').

Germanic. Goth. prija O.H.G. driu follows the o-class (§ 338). Of the same kind is perhaps Goth. kniv-a O.H.G. kneo 'knees' (J. Schmidt, Plur. 49). O.H.G. fihiu 'pecora', if there was such a word (see Braune, Ahd. Gr. p. 171), admits of different explanations.

§ 340. 3. n-stems, cp. § 337.

a. $-\bar{o}n$ ($-\bar{e}n$): Avest. $d\bar{a}mqn$ $n\bar{a}mqn$, $haxm\bar{e}ng$ (haxman-friendship'). In Sanskrit, such a form as $patang\bar{a}n$ would be indirect evidence for pr. Ar. $-\bar{a}n$; see § 338 p. 238.

Ved. $dh\acute{a}m\bar{a}$ $n\acute{a}m\bar{a}$, Avest. dama show a pr. Ar. $-m\bar{a}$, whether from Idg. *- $m\bar{o}$ (*- $m\bar{e}$) or Idg. *- $m\bar{p}$ (cp. * $quetu\bar{q}$ -'four' in § 341) is a doubtful matter; if from Idg. *- $m\bar{o}$ (*- $m\bar{e}$), then pr. Ar. * $dh\bar{a}m\bar{a}$: * $dh\bar{a}m\bar{a}$ n as Lat. $term\bar{o}$: Gr. $\tau\acute{e}\rho\mu\omega\nu$. See § 223 pp. 101 f.

Remark 1. O.H.G. herza and auga (§ 223 p. 100) are used now and then for the plural. The plural use of these words is certainly not old, but, as in the case of feho, arose because singular and plural had run into one in the o-class, e. g. wort.

b. $-n-\partial$ $-\bar{o}n-\partial$ $(-\bar{e}n-\partial)$ remain only in Sanskrit and Germanic: Skr. $dh\bar{a}m\bar{a}n-i$ $\acute{a}h\bar{a}n-i$, Goth. $ha\acute{i}rt\bar{o}n-a$ O.H.G. Upper-G. herzon 'hearts' (O.H.G. Frank. herzon, cp. Streitberg, Paul-Braune's Beitr. XIV 218 ff.) with the o-stem ending taken in place of \breve{a} = Idg. $-\partial$. Weaker forms of

stem are seen in Avest. $n\bar{a}m\bar{e}n$ - \bar{i} ($\bar{e}=$ Ar. a, see I § 94 Rem. p. 89, and Bartholomae Stud. zur idg. Spr. I 76 f.) $a\check{s}aon$ -i 'sacra, pia', Gr. πtov - α $\check{a}\varrho\varrho\epsilon v$ - α , and with the $-\bar{a}$ of o-stems Avest. daeman-a 'eyes' (like mananh-a § 343), Lat. $n\bar{o}min$ -a, Goth. namn-a O.H.G. Upper-G. herzon O.C.Sl. imen-a.

O.Ir. anmann 'nomina' may have lost $-\ddot{a} = \text{Idg. } -a$, or -a, the o-stem ending; but its double n, which recals that of goba 'father' gen. gobann (Gall. Gobannitio, Old British place-name Gobannium), has not yet been explained.

Remark 2. Thurneysen throws out the question whether gobannwas not originally *gobann- and the nom. goba modelled upon it; and whether annann- may not be a transformation of *anann- = *anann-, m having been restored to it. Compare Skr. bhūmnā instead of bhūnā, Gr. åqván instead of *åqan and the like (II § 117 Rem. 1 p. 366, III § 361, Streitberg, Paul-Braune's Beitr. XIV 205 f.).

Avest. $n\bar{a}m\bar{e}n\bar{i}\tilde{s}$ is the instr. form, like $v\bar{i}sp\bar{a}i\tilde{s}$ (§ 338), see § 379.

§ 341. 4. r-stems. *qetyōr-ə 'τέτταρα' may be the form from which come Skr. catvār-i Lat. quattuor Goth. fidvōr, but the last two may come from *qetyōr, cp. § 168 pp. 10 and 11; perhaps we should add to this list Osc. petora (quantity of o unknown). Weaker forms of the stem are seen in Gr. Dor. τέτορ-α Ion. τέσσερ-α Att. τέτταρ-α Boeot. πέτταρ-α Lesb. πίσυρ-α, Osc. petiro-pert (petiru-pert); this Osc. word has the o-stem ending. O.Ir. cethir is doubtless the masc. form; the word which follows suffers "aspiration" (cethir chēt '400') after the fashion of real neuter forms, as trī chēt etc. (compare the feminine gender marked by "aspiration" after the nom. sing. of fem. i-stems, e. g. sūil chairech 'oculus ovis', following the rule of ā-stems). It is also conceivable that the neuter trī caused *qetrī to be coined, and that from this comes cethir.

Idg. *qetūr- is represented in Gr. Dor. τετρώ-κοντα 'forty' etc., see § 176 p. 29 and § 178 pp. 35 ff.

A Sanskrit re-formation, following -āni -īni -āni, is -īni, Brugmann, Elements. III.

e. g. bhartfni from bhartár- 'upholder, upholding'. Compa § 224 a pp. 102 f.

- § 342. 5. Stems ending in an Explosive.
- a. nt-stems.
- (a) -nt: Avest. $m\bar{\imath}\bar{z}davan$ pl. 'possessed of rewa afsmaniva pl. 'containing verses', -an -a = pr. Ar. * $-\bar{a}n$ Perhaps another example is Lith. $ve\bar{z}\bar{a}$, which is used for a nom. pl. masc., see § 321 p. 221; it should be remember that, according to I § 615 p. 465, Idg. * $-\bar{o}nt$ and * $-\bar{o}nt$ wo necessarily run into one if the practice of shortening vowels older than the loss of the -t.
- (β) -nt-ə. Skr. R.-V. ghrtávānt-i ('fatty') sắnti ('being'), later portions of the Vedas and in the post-Vedic langua ghrtávant-i sánt-i brhánt-i, post-Vedic dádant-i beside dáda ('giving'). Gr. χαρίεντ-α φέροντ-α. Lat. silent-a with t ending of o-stems, ferent-ia following the i-class, li ferentium § 352. O.C.Sl. veząšta as though from a żo-ste

The Aryan endings $-\bar{a}nt$ $-\bar{a}nt$ -i may have lengthened to vowel on the analogy of $-\bar{a}n$ $-\bar{a}n$ -i and $-\bar{a}s$ $-\bar{a}s$ -i. We more provisionally regard this lengthening as derived from to parent language, and in that case $s\acute{a}nti$ may be regard as $= *s\acute{n}ti$. Compare $*qetu\bar{r}$ - $*penq\bar{e}$ -following $*tr\bar{\imath}$ 'trigingly 176 p. 29.

Avest. savanhaitiš ('useful') sarascantīš ('trickling') li $n\bar{a}m\bar{e}n\bar{t}$ š § 340 p. 241, § 379.

b. Skr. praty-ánc-i 'retroversa'. Avest. ast-i 'ossa'. From the time of the Brāhmanas we meet with Sanskrit forms what a nasal in the penult, where there should have strictly be none, as tri-vṛnti from tri-vṛt- 'threefold', -hunti from -hu 'offering', -bhānji from -bhāj- 'sharing, having a share', hṛn from hṛd- 'heart'. The same thing is seen in s-stems, a here even the Rig-Veda has it: mánāṣi havīṣi áyūṣi (§ 34). The nasal first appeared in nt-stems, which had the endinti, and in áṣīyāṣi and vidvāṣi, although even here it wo not earlier than the proethnic period of Sanskrit (II § 1

p. 430, § 136 p. 441). From these it spread by analogy (perhaps even in $d\acute{a}danti$ the n is due to a similar cause), and produced a feeling that there was some natural connexion between -i and a preceding nasal. Last of all, it came about that no -i was to be found at all without a nasal (compare $-\bar{a}ni$ $-\bar{i}ni$ $-\bar{i}ni$ $-\bar{i}ni$), with the single exception of $catv\acute{a}ri$. In considering the intrusion of a nasal into *manāsi it must be remembered that this alone of all cases of the word had its suffix in the form $-\bar{a}s$.

Remark. A new explanation of the nasal in $m\acute{a}n\bar{q}si$ is given by J. Schmidt, Pluralb. 155 ff., 236. It is very far-fetched indeed, and is anything but convincing.

Gr. πένητ-α, φυγάδ-α, ἄρπαγ-α.

Lat. capit-a cord-a with the -a (= *- \bar{a}) of o-stems, adjectives teret-ia discord-ia $aud\bar{a}c-ia$ $victr\bar{i}c-ia$ following the i-class.

§ 343. 6. s-stems.

a. *-ōs (*-ēs): Avest. manā from manah- 'thought, mind'. Perhaps A.S. lombor -ur 'lambs' calfur 'calves', see J. Schmidt Plur. 149 ff.

b. *- $\bar{o}s$ - ϑ , quite regularly changed in a unique Gāthic form, Y. 32. 14, $var^ec\bar{a}h\bar{\imath}(-c\bar{a})$ (cp. Skr. $v\acute{a}rc\bar{a}s\acute{\imath}$), according to Bartholomae's happy conjecture (Ar. Forsch. II 105 ff.). There is a nasal due to analogy in Skr. $m\acute{a}n\bar{a}si$; and the nasal is also analogical in the comparative $\acute{a}\dot{s}\bar{\imath}y\bar{a}si$ and participle $vidv\acute{a}si$, although here it is not restricted to the neuter plural (see § 342). Gr. $\acute{\eta}\delta$ - $\acute{\iota}\omega$ for *- $\iota\omega(\sigma)$ - α , notwithstanding $\acute{\eta}\delta$ - $\acute{\iota}ov\varsigma$ = *- $\iota o(\sigma)$ - $\varepsilon\varsigma$? And is there a genuine proethnic - $i\bar{o}s$ - in Lat. $\bar{o}ci\bar{o}r$ -a (-a from the o-stems)? Weaker stems are seen in Gr. Ion. $\mu\acute{\epsilon}v\varepsilon$ - α Att. $\mu\acute{\epsilon}v\eta$ and (with the - \bar{a} of o-stems) Avest. -avah-a (i. e. *-as- \bar{a}), as manavah-a (like daeman-a § 340 p. 241), Lat. gener-a, Goth. agis-a ' $\varphi\acute{o}\betaoi$ ' O.H.G. kelbir (A.S. cealfru) 'calves' 1) (these Germanic words likewise form the rest of their cases after the o-type, cp. Lat. $holer\bar{o}rum$ from holer-a, and the like),

¹⁾ O.H.G. kelbir for *kálbìru, A.S. cealfru for *kálborù.

O.C.Sl. sloves-a. Whether O.Ir. tige comes from *(s)teges- \bar{a} cannot be made out.

Skr. havį́ši from havį́š- 'libation', $\acute{a}y\bar{u}$ ši from $\acute{a}yu$ š- 'lifepower'. Gr. Hom. $\tau\acute{e}\rho\alpha$ - α Att. $\tau\acute{e}o\bar{\alpha}$.

Genitive Plural. 1)

§ 344. The suffix of this case was probably *-om. To this view, which I share with Osthoff and others, I shall adhere until some tenable hypothesis has been found on which -\vec{u} in O.C.Sl. mater-\vec{u} sloves-\vec{u} etc. may be regarded as naturally representing Idg. *-om. The question of the origin of this assumed *-om may be left alone (see Leskien, Ber. der s\vec{a}chs. Ges. der Wiss., 1884, p. 104).

- $\bar{o}m$ was contracted with the stem-final of the o-class into $-\bar{o}m$ or $-\bar{e}m$ according as that was -o- or -e- (cp. § 240 p. 133). These two forms are kept distinct in Germanic; ²) elsewhere $-\bar{o}m$ has become the only ending. In Aryan, Greek, Italic, Germanic, and Baltic the o-stem ending spreads to consonant stems and to those in $-\bar{\iota}-i\dot$

¹⁾ Schleicher, -s-ām-s, Suffix des gen. plur. in der idg. Ursprache, Kuhn's Zeitschr. XI 319 f. Osthoff, Die Bildung des gen. plur. im Idg., Morph. Unters. I 207 ff. Bezzenberger, Die Genitivendung -nām, in his Beitr. II 130 ff. Osthoff, Über den gen. plur. der ā-Declin., Morph. Unters. II 111 ff. Bartholomae, Zu den ai. gen. plur. auf -ān, -īn, -ūn, -īn, Stud. z. idg. Sprachg. I 117 ff. Bréal, Le génitif pluriel en latin, Mélanges Renier, 1887, p. 234. Förstemann, Zur Gesch. altdeutscher Declination: der gen. plur., Knhn's Zeitschr. XV 161 ff. (with additional matter by Pctters, ibid. XVI 385 ff.). Osthoff, Der gen. plur. im German., Morph. Unters. I 232 ff. Möhl, Histoire du gén. plur. en serbe, Mém. de la Soc. de lingu. VI 187 ff.

²⁾ Deecke (Bezz. Beitr. XII 340) says that Lye. -he answers to Goth. - $z\bar{e}$ in i- $z\bar{e}$.

of dialect during the same period may have had something to do with the fact that $-\check{o}m$ held its ground so firmly in Balto-Slavonic that afterwards, when Slavonic had begun its independent course, it is found without a rival.

Italic and Keltic have little importance in this controversy. Pr. Lat. - δm pr. Ir. *- δn may quite well have come from either Idg. *- δm or Idg. *- δm ; for both languages shortened a long vowel before -m in prehistoric times. Again, in Umbro-Samuitic and Gallic - δm the quantity of δm is unknown. It is possible, then, that Slavonic - δm does not stand alone.

The proethnic ending of \bar{a} - and $\bar{\imath}$ - $i\bar{e}$ -stems cannot be made out with any certainty. Osthoff (Morph. Unt. II 126) conjectures $-\bar{a}m$ in both classes. In any case, both will have had -m as the final sound, as all other stems had.

Now as regards the distribution of $-\bar{o}m$ and $-\bar{e}m$ in Germanic, it appears that in proethnic Germanic only o-stems showed both endings, while all other stems had $-\bar{o}m$ alone. In North and West Germanic $-\bar{e}m$ gave way, only a few traces being left of it (see § 345); while in Gothic $-\bar{c}m$ became the regular ending for o-stems, and furthermore found its way into other stems as well, e. g. $gast\bar{e}$ m. $anst\bar{e}$ f. (i-stems), $reik-\bar{e}$ m. $ba\acute{u}rg-\bar{e}$ f., $suniv-\bar{e}$ m., $guman-\bar{e}$ m. etc.; $-\bar{o} = *-\bar{o}m$ in Gothic was retained only for certain feminine classes, e. g. $gib\bar{o}$ $sibj\bar{o}$ $frij\bar{o}ndj\bar{o}$ $tugg\bar{o}n-\bar{o}$.

The Armenian ending -¢ (gen., loc., dat., and abl.) has not been properly explained: examples are gailo¢, srti¢, zardu¢, akan¢, mar¢, aster¢ and dstera¢. Bugge (Beitr. zur ctym. Erl. der armen. Spr., 47 f.) conjectures that -¢ represents the Idg. locative ending -si with the postposition en, — thus srti¢ = -i-sį + en. But if that were so the nasal of -en must have been kept; so it is preferable to compare Lith. -e (as rañkoj-e rañkos-e, § 264 pp. 167 f.) or Ar. -ā (Avest. loc. pl. in -hv-ā, § 356).

Consonant stems that admitted of gradation, as *poter'pater', had their weak form in this case from the parent
language onwards.

§ 345. 1. o-stems. Pr. Idg. *ulqom 'luporum', *iuqém 'iugorum', cp. § 240 pp. 133 f. In Arvan comparatively few instances remain (cp. Hanusz, Sitzungsb. der Wiener Ak. 1885 pp. 7 f.: Bartholomae, Stud. zur idg. Spr. I 47 f., 97. 117 ff.): Skr. Ved. výkām, dēvám 'deorum'; Avest. vehrkam. Gr. λύκων; on Dor. φιλῶν (Att. φίλων) see the Author, Gr. Gr.² p. 126. In Latin, -om -um, but comparatively rare: deum, fabrum, modium, inser, Romanom: Umbr. pihaklu 'piaculorum' proseseto 'prosectorum', Osc. Núvlanúm 'Nolanorum', Volsc. Velestrom 'Veliternorum': it is not certain that the ending -om in the Italic languages was Idg. *-om, see § 344. O.Ir. fer n-, cele n- 'sociorum' for *-ijom (cp. I § 139 pp. 124 f.), Ogam inser. maga (before Mailagni) 'filiorum'; it is not certain that the Keltic ending *-om is Idg. *-om, see § 344. Goth, vulfe. hairdje 'of herdsmen' with *-em, O.H.G. wolfo hirteo, also O.Sax. -o A.S. -a O.Icel. -a for *-ōm; *-ēm is still seen in West-Germ. in O.Sax. kinda, Hrodbertinga and the like (Kögel, Paul-Braune's Beitr., XIV 114) and in O.Sax. ūsa O.Fris. use 'of us', and also according to Kögel, loc. cit., in place-names which end with -inga etc., where it was no longer regarded as a genitive. Lith. vilkū (I § 92 p. 86).

Aryan. Usually -ānām: Skr. vfkānām dēvánām, the sole ending in post-Vedic language; Avest. vehrkanam (a shortening of -ā in the penult is indicated by the dissyllabic form γ^e nanam i. e. γ^e nānām 'of murderers')'), O.Pers. bagānām 'deorum'. The same ending, borrowed from n-stems, is shown by those in -ā- (§ 346), and it seems that these are the stems which first used the formation in Aryan, perhaps to distinguish the geu. plural from the acc. singular. The forms *ātma-bhiš *ātma-bhias *ātma-su made it natural to analyse *ātmanām into *ātma-nām; on which type were moulded such genitives as *sainā-nām (Skr. sēnānām) instead of *sainām in connexion with *sainā-bhiš etc. This view (cp. Hanusz as cited, p. 11)

¹⁾ This shortening may be compared with that in anhanam acc. sing, fem. from anhana, datarem-ca beside datarem, and the like.

is supported by the following genitives which belong to the special Sanskrit period: $bhr\bar{u}-n\acute{a}m$ beside $bhr\bar{u}-bh\acute{i}\check{s}$, $g\acute{o}-n\bar{a}m$ beside $g\acute{o}-bh\acute{i}\check{s}$, $n_f-n\acute{a}m$ catasf- $bh\acute{i}\check{s}$, catur- $n\acute{a}m$ beside $cat\acute{u}r$ - $bh\acute{i}\check{s}$, $\check{s}ann\acute{a}m$ = * $\check{s}ad$ - $n\acute{a}m$ beside $\check{s}adbh\acute{i}\check{s}$; and it is also supported by the similar re-formation in West-Germanic: (O.H.G.) $geb\bar{o}$ -no (Goth. $gib\bar{o}$) beside $gib\bar{o}$ -m following $zung\bar{o}n$ -o beside $zung\bar{o}m$ (§ 346). Compare further § 229 Rem. 1 p. 115.

Italic. In Latin the common form from the earliest times has been -ōrum, as lupōrum, istōrum, C.I.L. no. 32 duonoro = bonōrum, a re-formation following -ārum (§ 346). Osc. Safinim 'Safinorum, Samnitium' Aisernim 'Aeserniorum' (but Kluvatiium 'Cluatiorum'), a re-formation following the nom. and acc. sing. with \bar{i} , see II § 63 p. 122, III § 194 p. 74, § 212 p. 90, and Streitberg in Paul-Br. Beitr. XIV 189, 198; cp. below, O.C.Sl. kraji.

Balto-Slavonic. O.C.Sl. vlŭkŭ follows the analogy of consonant stems, see § 344. Instead of krajī we should have expected *kraje, to represent Idg. *-įŏm (cp. § 227 pp. 110 f.). Either -ŭ was borrowed from vlŭkŭ, and then *krajŭ became krajī, or else perhaps the ending was *-im, a re-formation following the nom. acc. sing. krajī with original *-is *-im (§ 194 pp. 74 f., § 212 p. 90), cp. Osc. Safinim above. If the second alternative is true, patījī must have borrowed its -ī from krajī, in order to distinguish the genitive from the nom. patīje. — For the sake of clearness -ovū, the u-stem ending (§ 349), was adopted in most of the Slavonic languages in place of the -ū in o-stems; and -ovū afterwards spread over most other stems, to all of them in Lower Sorbian.

Remark. Lett. $t\tilde{o}$ * $\tau\tilde{\omega}\nu$ ' ($\tilde{o}=\tilde{u}$ with the gedehnt or drawled accent) makes it necessary to ask whether the law laid down in I § 92 p. 86, stating that * $-\bar{o}m$ became * $-\bar{u}m$, held good only for words of more than one syllable. It is also possible to assume that \tilde{o} (\tilde{u}) was horrowed from the accusative ($t\tilde{o}s$) and the locative ($t\tilde{u}s$), precisely as the analogy of schi-s and the like gave rise to a form schim beside scham 'hnic' (Lith. $szi\tilde{a}m$). The latter supposition has more in its favour.

 \S 346. 2. \vec{a} -stems. The proethnic ending is uncertain; see \S 344 p. 245.

Pr. Aryan -ām is perhaps preserved in a few Avestie genitives, as vanam 'of trees' (and compare the pronoun kam). -ānām was in existence in proethnic Aryan: Skr. áśvānām; Avest. haenanam (for *-ānām), O.Pers. parūvzanānām ('populous', gen. pl.). As regards the origin of this ending, see § 345, page 246.

Gr. *- $\bar{\alpha}(\sigma)\omega\nu$, following the pronominal declension (Hom. $\tau\check{\alpha}\omega\nu$ = Skr. $t\check{\alpha}s\bar{\alpha}m$ § 429). Hom. $\vartheta\epsilon\check{\alpha}\omega\nu$, Boeot. $\vartheta\varrho\alpha\chi\mu\check{\alpha}\omega\nu$, Thess. - $\check{\alpha}\upsilon\nu$ and - $\check{\alpha}\upsilon\nu$, Dor. Lesb. - $\check{\alpha}\upsilon\nu$, Ion. - $\check{\epsilon}\omega\upsilon$ Att. - $\check{\omega}\upsilon$. Att. adj. $\varphi\iota\lambda\omega\nu$ instead of $\varphi\iota\lambda\check{\omega}\upsilon$ (Ion. $\varphi\iota\lambda\check{\epsilon}\omega\upsilon$ Dor. $\varphi\iota\lambda\check{\alpha}\upsilon$) by analogy of the masc. $\varphi\iota\lambda\omega\upsilon$, cp. fem. $\tau\upsilon\dot{\tau}\omega\upsilon$ in contrast with Dor. Lesb. $\tau\alpha\upsilon\tau\check{\alpha}\upsilon$.

Italic has the same re-formation: Lat. equārum; Umbr. hapinaru (meaning uncertain) pracatarum 'munitarum', Osc. egmazum 'rerum'. Lat. masculines like agricolum omnigenum in the poets perhaps have not really the ending which gave place to -ārum, but are re-formates, suggested by Gangaridum Aeneadum and so forth.

O.Ir. tuath n-, ban n-, soillse n-, cp. fer n- $c\bar{c}le$ n-(§ 345).

Goth. $gib\bar{o}$, A.S. ziefa; in O.H.G. we only find in Otfrid a few instances of -o, as $\bar{a}leibo$ 'of remnants'. West-Germanic shows a re-formation on the lines of n-stems, O.H.G. $geb\bar{o}no$ O.Sax. gebono A.S. ziefena, caused by the likeness of the dat. $geb\bar{o}m$ O.Sax. gebon A.S. ziefum to $zung\bar{o}m$ tungon tunzum (nom. pl. $zung\bar{u}n$ and so forth). So also A.S. $c\bar{u}-na$ 'of cows' beside $c\bar{u}-a$ (dat. $c\bar{u}-m$), like Skr $g\bar{o}-n\bar{a}m$ (instr. $g\bar{o}-bhi\bar{s}$). Compare § 345 pp. 246 f.

Lith. $ra\bar{n}k\bar{u}$ édži \bar{u} (nom. pl. édžios 'rack'), O.C.Sl. $rak\bar{u}$ zmij \bar{i} (zmija 'snake'), cp. $vilk\bar{u}$, $vl\bar{u}k\bar{u}$ $kraj\bar{i}$ § 345 p. 247.

§ 347. 3. $i-i\bar{e}$ -stems (cp. p. 68 footnote 1). The proethnic ending is uncertain, most likely $-(i)i\bar{o}m$, compare Irish, Germanic, Balto-Slavonic.

Skr. Ved. byhatīnām, -inām, Avest. barentinam (the

quantity of the Avest. i and u is uncertain), an Aryan re-formation which must be connected with the parallels (Skr.) byhat \hat{t} : $\dot{a}\dot{s}v\bar{a}$, byhat \hat{t} - $\dot{s}u$: $\dot{a}\dot{s}v\bar{a}su$ etc., cp. §§ 345, 346. Gr. $\varphi\varepsilon\varrho ov\sigma\tilde{\omega}v$ Hom. $\mu ov\sigma\dot{\alpha}\omega v$ following the $i\bar{a}$ -class (§ 346). Lat. faciërum, like $-\bar{o}rum$ (§ 345), is due to the analogy of $-\bar{a}rum$. O.Ir. inse n- (cp. soillse n- § 346). Goth. frij $\bar{o}ndj\bar{o}$, O.H.G. gutinn $\bar{o}no$ (kuninginno is isolated), cp. the $i\bar{a}$ -stems, Goth. $sibj\bar{o}$ O.H.G. $sippe\bar{o}no$, § 346; perhaps we may add O.H.G. $dig\bar{v}no$ of prayers' (cp. dat. instr. pl. $dig\bar{v}$ -m § 382). Lith. $\check{z}\bar{e}mi\bar{u}$ $ve\check{z}anczi\bar{u}$, O.C.Sl. $zemlj\bar{v}$ $veza\check{s}t\bar{v}$, cp. $\check{e}d\check{z}i\bar{u}$ $zmij\bar{v}$ § 346.

§ 348. 4. i-stems. Pr. Idg. -(i)iŏm, *ouiŏm 'ovium' *trijŏm 'trium', see § 344. Avest. kaoyam for *kauiām (I § 160 p. 144) from kavi-, the name of a demon. Gr. τριῶν, ὁίων, see below. Lat. ovium turrium trium; Umbr. peracrio (meaning uncertain), Osc. Tiiatium 'Teatium, Teatinorum' a]íttíúm 'portionum' (gen. sing. aeteis). O.Ir. fāthe n- for *-iŏm, Ogam inscr. tria (before maqa) 'trium'; Gall. Brivatiom ('pontilium' Stokes, Bezz. Beitr. XI 129). Goth. prij-ē (instead of -ō, § 344) O.H.G. drīo (ī following drī), O.H.G. gesteo -io m., ensteo -io f., O.Icel. elgja (elgr 'elk'). Lith. nakcziū; O.C.Sl. patījī noštījī -ijī (see § 345, page 247), but compare what is said below.

Aryan. Avest. vay-am pray-am (Ved. $v\bar{v}n\acute{a}m$ $tr\bar{v}n\acute{a}m$) with strong stem like gen. sing. vay- \bar{o} , see § 231 p. 120, and compare nar-am = Ved. nar-ám § 351. Considering that Avest. vayanam is a transformation of vayam on the analogy of o-stems, we may infer from Skr. trayanam an older tray-am tray), and the same form is indirect evidence for tray-am = Avest. tray-am, and the like.

Skr. ávīnām Ved. trīnám Avest. ažinam, like -ānām, see § 345 p. 246. The first formed in pr. Aryan was perhaps

¹⁾ Similarly the Lith. gen. $trij\tilde{u}$, because of its agreement with the $-\tilde{u}$ of o-stems (as $keturi\tilde{u}$), called forth the dialectic loc. $trij\tilde{u}s\hat{e}$ instead of $tri-s\hat{e}$.

*-i-nām beside *-i-bhiš and similar cases; and i was lengthed partly through the influence of -ānām, but partly, no dot through that of the nom. acc. pl. neuter (§ 339 p. 239); considering Avest. ažinām, as with bāzunām (§ 349), it must be remembered that the quantity of the Avest. i and u uncertain. In Vedic arose the further ending -īm, analog to -ām, as sūrīm from sūrī-š 'shining', and in a similar vaīm and -īm beside -ūnām and -īmām (§§ 349, 351), Bartholomae in Bezz. Beitr. XV 208, and his Stud. zur i Spr. I 47 f., 97 ff.

Greek has $-\iota\omega\nu$ in substantives in all dialects but At as $\beta\alpha\sigma'\iota\omega\nu$ ($\pi\sigma\lambda'\iota\omega\nu$ may come from $\pi\dot{\sigma}\lambda\bar{\iota}$ - ε , see § 354); $\tau\varrho$ is Attic too. Att. $\beta\dot{\alpha}\sigma\varepsilon\omega\nu$ $\ddot{\sigma}\varphi\varepsilon\omega\nu$ with ε from the strong stand with the accent of $\beta\dot{\alpha}\sigma\varepsilon\sigma\varepsilon$ $\beta\dot{\alpha}\sigma\varepsilon\omega\varepsilon$, see § 231 p. 1: compare $\beta\dot{\alpha}\sigma\varepsilon\sigma\iota$ instead of $\beta\dot{\alpha}\sigma\iota\sigma\iota$ (§ 360).

In Latin, -ium has spread widely amongst consonant sterparticularly nt-participles (see below). The resulting particularly nt-participles (see below). The resulting particularly nt-participles (see below). The resulting participant of forms, and an uncertainty as to certain other stems, reach back to the pre-Italic period, by which we have (say) civat -um along with civitāt-ium (II § 102 p. 310), combined produce a few instances of -um in original i-stems, which out to have -ium; e. g. apum vātum beside api-um vāti-um. -iōri instead of -ium, in neuter genitives like vectīgāliōrum ancīliōr was called forth by -ia in the nom. acc.

O.Ir. fathe n-, as far as its form goes, might be derived from *-e(i)- $\bar{o}m$ without difficulty: but I see no sufficient ground for doing it. $tr\bar{\imath}$ n- 'trium' has not been developed by sown change merely; it has been assimilated to the nom. according above, O.H.G. $dr\bar{\imath}o$, and § 345 p. 247 on Osc. Safini

Goth. masc. $gast\bar{e}$ 'of guests' follows $vulf\bar{e}$ (cp. ga gasta: vulfis vulfa); the fem. $anst\bar{e}$ is doubtless chiefly due $ba\acute{u}rg-\bar{e}$ (O.H.G. burg-o) beside $ba\acute{u}rg-m$ (O.H.G. burg-n) ϵ the like (cp. Lat. apum instead of api-um, Lith. $kr\bar{u}t\tilde{u}$ instead of $kr\bar{u}czi\tilde{u}$). The fem., as $n\acute{a}itein\bar{o}$ (nom. sing. $n\acute{a}itein-s$ 'reviliblasphemy'), follows $managein-\bar{o}$ (nom. sing. managei 'crow which caused the coining of nom. pl. $n\acute{a}itein\bar{o}s$ on the analogous transfer of the superior of the supe

of qibos; once we meet with a dat, pl. -om, unkaúreinom 'in all unburdensomeness' (dat. pl.), a mistranslation of ἐν παντὶ άβαρη (υμίν έμαυτον έτήρησα), II Cor. 11. 9, on the analogy of aibōm.

As to Lith. $kr\bar{u}t\tilde{u}$ from $kr\bar{u}t\hat{u}$ -s and the like, see § 402. O.C.Sl. patiji may be derived from either *-ii-om or *-ei-om (cp. p. 247), compare patije § 317 p. 217 and synov-ŭ § 349.

5. u-stems. Pr. Idg. $-(u)u\bar{o}m$, * $s\bar{u}n(u)u\bar{o}m$ 'filiorum', see § 344. Avest. yābw-am from yātu- 'magician'. and the like. Gr. Hom. γούνων δούρων for *γον Ε-ων *δοο Ε-ων. Lat. manuum (also contracted, passūm currūm etc.), more likely from *-(u)u- $\tilde{o}m$ than from *-eu- $\tilde{o}m$ (through the intermediate stage *-ou-om). Goth. manne (instead of -o, § 344) O.H.G. O.Sax. $manno = *manu-\bar{o}m$. Lith. $s\bar{u}-n\bar{u}$ for $*s\bar{u}nu\bar{u}$ like $sz\tilde{u}$ for * $szu\tilde{u}$ (I § 184 p. 160).

Arvan. Skr. sūnūnām, Avest. bāzunam, O.Pers. parūvnām 'multorum' (cp. Bartholomae, Bezz. Beitr. XIII 70) dahyunām 'regionum', to be explained like -tnām (§ 348). The Vedas have also -ūm, dasyūm from dásyu-š 'unbeliever', like -īm; see § 348.

Greek. $\eta \delta \dot{\epsilon} \omega \nu$ and $\pi \dot{\eta} \gamma \epsilon \omega \nu$ (accented to match $\pi \dot{\eta} \chi \epsilon \omega \varsigma$), with strong stem, following ήδέες etc., cp. Att. βάσεων § 348.

Old Irish. bithe n-, a re-formation following i-stems. It is not allowable to derive the ending from *-eu-om (as Windisch does, Paul-Braune's Beitr. IV 250), since -eu- would have become -ou- (I § 66 p. 56).

Germanic. Goth. suniv-ē following sunjus (*suniu-iz). Similarly perhaps O.H.G. siteo, cuniu 'of the knees' for *-eu- $\bar{o}(n)$, and on account of the likeness to gesteo we have the nom. acc. siti and dat. siti-m following the i-flexion.

O.C.Sl. synov-ŭ, following nom. synov-e.

6. *n*-stems. Pr. Idg. *kun-om 'canum', see Skr. śún-ām ukšn-ám ášman-ām; Avest. sūn-ām ašaon-am (ašavan- 'holy, pious') taoxman-am (taoxman-'kinship'). Gr. κυν-ῶν ἀρν-ῶν, τεκτόν-ων ποιμέν-ων, ἀγών-ων Lat. homin-um juven-um, inscr. poumilion-om. πευθήν-ων.

O.Ir. con n-, $\bar{a}ran$ n-. Goth. $a\acute{u}hsn$ - \bar{e} A.S. oxn-a O.Icel. yxn-a oxn-a 'of oxen', Goth. abn- \bar{e} 'of men', guman- \bar{e} $ha\acute{t}rtan$ - \bar{e} 'of hearts' (- \bar{e} instead of - \bar{o} , § 344), $tugg\bar{o}n$ - \bar{o} 'of tongues' managein- \bar{o} 'of crowds'; O.H.G. $gom\bar{o}n$ -o herz $\bar{o}n$ -o with the stem transformed on the analogy of $zung\bar{o}n$ -o, cp. $gom\bar{o}m$ herz $\bar{o}m$ (§ 384). Lith. dial. szun- \bar{u} , akmen- \bar{u} ; O.C.Sl. $d\acute{u}n$ - \ddot{u} 'of days' (II § 114 p. 356), kamen- \ddot{u} , zemljan- \ddot{u} 'of countrymen' (II § 115 p. 362).

Latin. Rarely -ium, following i-stems; as carn-ium.

Balto-Slavonic. Lith. akmen-ũ was the starting point for other formations of the type of o-stems, akmen-aĩ etc. (the Author, Lit. Volksl. und Märch., 301). High Lith. has only szun-iũ akmen-iũ, following i-stems. So also O.C.Sl. dĩn--iũ -iũ, beside dĩn-ũ.

§ 351. 7. r-stems. Pr. Idg. *mātr-ŏm 'matrum' *dōtr-ŏm 'datorum', see § 344. Skr. Ved. svásr-ām (unique), often nar-ám = Avest. nar-am like gen. sing. nár-as (§ 235 p. 126), cp. Avest. vay-am § 348 p. 249. Avest. māþr-am dāþr-am, str-am and stār-am from star- 'star', tišr-am f. 'trium'. Gr. Hom. πατο-ῶν θυγατο-ῶν Att. ἀνδο-ῶν, and by re-formation Att. πατέο-ων μητέρ-ων (like ήδέ-ων and the like); δωτόρ-ων, δοτήρ-ων. Lat. mātr-um, datōr-um; Umbr. fratrum fratrom 'fratrum'. Osc. fratrúm 'fratrum' nerum 'principum, nobilium'. O.Ir, māthar n- brāthar n- for *-tr-ŏm or *-ter-ŏm. Goth. brōþr-ē (instead of -ō, § 344), O.H.G. muoter-o. Lith. dial. moter-ũ, O.C.Sl. mater-ũ, datel-ũ 'datorum' (H § 122 p. 389).

*qetuer- 'four' doubtless had gen. pl. *qetur-ŏm: cp. Skr. catur-ṇām instead of *catur-ām (§ 345 p. 247), Gr. Lesb. $\pi \varepsilon \sigma \dot{\nu} \rho - \omega \nu$, O.Icel. fjugurra with pronominal ending (cp. § 168 p. 11); O.C.Sl. četyr-ŭ ($y = \bar{u}$).

Skr. dur- $\bar{a}m$ (d- instead of dh-, see I § 480 p. 354) O.H.G. dur-o O.Icel. dur-a Lith. dur- \bar{u} (and dur- $i\bar{u}$, Schleicher Lit. Gr. 188) 'of doors'.

Aryan. Special Skr. re-formations are mātīṇām, dátīṇām dātīṇām, more rarely with -ṛṇām; nṛṇām nṛṇām 'ἀνδοῶν'; catasṛṇām catasṣṇām f. caturṇām m. 'τεττάρων' see § 345

p. 247. In Veda we also find $n\bar{r}m$, like $-\bar{\iota}m$, see § 348 p. 250. Avest. $ti\check{s}ranam$ instead of $ti\check{s}ram$ (which is also used), like vayanam, § 348 p. 249.

Old Irish, in addition to the old formation, has -thre n-, brāthre n-, a re-formation following the i-declension, cp. brāthrib like fāithib § 385. The fem. teor-a n- ('three') cetheor-a n- ('four') follows inna n- (§ 429); see Windisch in Paul-Br. Beitr. IV 224.

Balto-Slavonic. High Lith. $moter-i\tilde{u}$ following the *i*-deelension, so also O.C.Sl. $d\tilde{u}$ ster- \tilde{i} j \tilde{i} , isolated in O.C.Sl.

§ 352. 8. Stems ending in an Explosive.

Pr. Idg. *bhrāhnt-ŏm (see § 344). Skr. brhat-ám, Avest. ber zat-ām ber zant-ām. Gr. φερόντ-ων. Lat. ferent-um prae-sent-um sonant-um, also ferent-ium etc. (Bücheler-Windekilde, Grundr. 83) like nom. acc. pl. neut. ferent-ia (§ 342 p. 242). O.Ir. carat n-. Goth. frijōnd-ē (instead of -ō, see § 344), O.H.G. friunt-o. With a io-suffix, Lith. vežancziū O.C.Sl. vezāštī. Skr. dat-ām, Gr. δδόντ-ων, Lat. dent-um (more commonly dent-ium), A.S. tōā-a O.Icel. tann-a, Lith. dant-ū 'dentium'. — Skr. dašát-ām Lith. deszimt-ū O.C.Sl. deset-ŭ 'decadum'. — Osc. liímítú[m 'limitum'. O.C.Sl. telet-ŭ 'of calves' (cp. § 244 pp. 142 f.).

Skr. śarád-ām 'of autumns'. Gr. $qv\gamma\acute{a}\delta$ - ωv . Lat. lapid-um. O.Ir. druad n- 'druidum'. Goth. $ta\acute{t}hunt$ - \bar{e} (instead of $-\bar{o}$, § 344) in $ta\acute{t}hunt\bar{e}$ -hund '100', O.H.G. zehanzo '100' = Gr. $\delta \varepsilon \varkappa \acute{a}\delta$ - ωv , see § 179 p. 43; in Norse, too, there may once have been a word *tehunta-hund.¹) Skr. pad- $\acute{a}m$, Gr. $\pi o\delta$ - $\~ov$, Lat. ped-um, O.H.G. fuaz-o O.Icel. fot-a 'pedum'.

¹⁾ This would explain the unexpected a-vewel in Norse Run. pri-taunta and O.Icel. prettān prettānde etc. The form *tehunta-hund may have been wrongly analysed into *tehun-tahund; indeed, the analogical form tahuntahund shows that tahuntēhund was misundersteed in Gothic. This mistake once made, its a might pass ever to the numbers 13 and so forth, taking the place of their e; even as happened when o spread from -κοντα in Greek, § 176 Rem. 2 p. 31. In this case Noreen (Arkiv für nord. filel. III 26, Paul's Grundr. I 508) weuld be

Skr. uśij-ām ('desirous'). Gr. μειράκ-ων, ὀρτύκ-ων ὀρτύγ--ων. Lat. meretrīc-um, and with -ium meretrīc-ium felīc-ium

right in assuming *- $t\bar{a}hund$ = Goth. $-t\bar{e}hund$ for Norse, but wrong in assuming an old ablaut $e:\bar{e}$ in the first syllable of * $de\bar{k}m$.

After the discussion of the Numerals in this volume (pp. 1-52) was finished, appeared J. Schmidt's work Die Urheimath der Indogermanen und das europ. Zahlsustem (Berlin 1890). In this work he discusses Goth. taihuntehund O.H.G. zehanzo and all connected with them on wholly different principles. He analyses taihun-tēhund, and explains the West-Germanic expressions by a supposed Goth. *hund taihuntev 'tenfold hundred', which he believes to have been levelled with taihun-tehund in different directions. 1 cannot here thrash out this interesting question; but I would say that in my opinion the view suggested above (pp. 40 ff.) well bears comparison with Schmidt's. Schmidt (p. 39) sees three main difficulties in it. (1) That the second part of O.Sax. ant--sibunta cannot be gen. pl., or it must have ended in -o. - This statement is disproved by the genitives friunda kinda etc. (§ 345 p. 246). (2) That O.H.G. zehanzo Goth, taihuntē- do not answer to Skr. dašát-ām Gr. Sezás- $-\omega r$. — This statement could only be instified were it proved that the interchange of tenuis and media in the parent language never took place at all, or that the argument could not be used here. To this change I drew attention in Morph. Unt. V 13; compare § 177 p. 34, above. It is well known, and attested by many examples at the present day. The assertion (p. 27 of Schmidt's work) that the inflexion of which derac -άδος instead of *-ατος is an example sprang from the analogy of Ellas $-\alpha \delta o_{S}$ and the like, is a mere assertion, nothing more. (3) That Skr. šatám etc., which I compare with hund in taihunte-hund, never means 'δεκάς', the abstract of 'ten', in any language. — This is very natural, since my assumption is that taihunte-hund 'δεκάδων δεκάς' is the very phrase which has been abbreviated into Skr. satá-m etc. 'a group of ten (tens)' etc. Nor is Schmidt the right person to lay stress on a 'difficulty' which is inseparable from his own explanation; he assumes a form $t\bar{e}hunda-=*d\bar{e}k\bar{m}to-$, of which not a trace can be found in any other Indo-Germanic language; Vriddhi in derivatives is not Germanic, although it is Aryan. Which is the simpler of the two explanations? poses an immediate connexion between Goth. taihunte-hund O.Sax, ant--sibunta O.H.G. zehanzo, each of them containing a genitive of the same kind as Goth. frijonde O.Sax. friunda O.H.G. friunto; the other -Schmidt's - treats the Gothic and West Germanic expressions quite different in principle, and has to regard the ending of O.Sax. ant--sibunta as distinct from that of O.H.G. zehanzo. No one can hesitate to allow that the first is simpler; which of them is correct, or whether another he correct and these both wrong, may be left for decision by further investigation of those who know the facts.

etc. O.Ir. nathrach n- 'of water-snakes'. Skr. $v\bar{a}c$ - $\hat{a}m$ Avest. vac-am, Gr. * δn - δv , Lat. $v\bar{o}c$ -am. Skr. $-r\bar{a}j$ -am, Lat. $r\bar{e}g$ -am, O.Ir. $r\bar{\imath}g$ n-, Goth. reik- \bar{e} (instead of $-\bar{o}$). O.Ir. breg n- 'of mountains', Goth. $ba\acute{u}rg$ - \bar{e} (instead of $-\bar{o}$) O.H.G. burg-o 'of strongholds, of towns' (Avest. ber^ezam not found).

Skr. ap- $\acute{a}m$ Avest. ap-am 'aquarum'. Gr. $\varkappa\lambda\omega\pi$ - $\~{\omega}\nu$. Lat. dap-um, $pr\bar{\imath}ncip$ -um (also -ium).

§ 353. 9. Stems in -s.

Pr. Idg. *menes-ŏm (§ 344) from *menos n. 'mind'. Skr. mánas-ām durmanas-ām, Avest. mananh-ām dušmananh-ām. Gr. Ion. μενέων δυσμενέων Att. -ῶν. Lat. gener-um. O.Ir. tige n-. O.H.G. kelbir-o. Lith. debes-ũ (beside debes-iũ) from debes-ì-s 'cloud'; O.C.Sl. sloves-ũ. — *mēns-ōm 'of months' (see II § 132 p. 415): Gr. μην-ῶν, Lat. mēns-um (and -ium), O.Ir. mīs n-. With s in the suffix doubtless A.S. zōs-a O.Icel. gās-a Lith. dial. žās-ũ Gr. χην-ῶν 'anserum', cp. II § 160 p. 485.

Skr. ušás-ām, Lat. honor-um (II § 133 p. 423).

Pr. Idg. comparative $*\bar{o}\hat{k}is-\bar{o}m$ 'ociorum' (cp. II § 135 p. 429). Skr. $\acute{a}\dot{s}\bar{v}yas-\bar{a}m$ Avest. $\bar{a}syanh$ -am, Lat. $\bar{o}ci\bar{o}r$ -um. With - $\dot{i}o$ - O.C.Sl. $sla\dot{z}d\tilde{i}\check{s}\tilde{i}$. With - $\dot{i}en$ - instead of - $\dot{i}es$ -, Gr. $\acute{\eta}\dot{\sigma}$ - $\iota\acute{o}\nu$ - $\iota\acute{o}\nu$.

Pr. Idg. part. perf. act. * $yeidus-\check{o}m$. Skr. $vid\check{u}\check{s}-\bar{a}m$ Avest. $v\bar{\imath}du\check{s}-am$. With $-\check{\imath}o$ - Lith. $mirus-i\bar{\imath}\bar{\imath}$ O.C.Sl. $m\bar{\imath}r\check{\imath}\check{s}\check{\imath}$. With -yet- instead of -yes-, Gr. $\varepsilon i \delta' \acute{o} \tau - \omega v$.

* $m\bar{u}s$ - $\bar{o}m$ 'of mice': Skr. $m\bar{u}$, $\bar{a}m$ (nom. pl. $m\tilde{u}$, $\bar{a}s$ is found), Gr. $\mu\nu\bar{\omega}\nu$ instead of * $\mu\bar{\nu}\bar{\omega}\nu$ (§ 160 p. 485), Lat. $m\bar{u}r$ -um (and -ium), O.H.G. $m\bar{u}s$ -o O.Icel. $m\bar{u}s$ -a.

§ 354. 10. i- $i\bar{i}$ - and \bar{u} - $u\bar{u}$ -stems, and stems ending in $-\bar{t}$, $-\bar{t}$, $-\bar{t}$.

Pr. Idg. *-ii- $\check{o}m$, *-uu- $\check{o}m$ (§ 344), e. g. *bhruu- $\check{o}m$ (nom. sing. * $bhr\bar{u}$ -s 'brow'). Skr. dhiy-s dhruv-s dh-s $dh\bar{u}$ dh-s dh-s

p. 123). Lith. dial. $\check{z}uv$ - \check{u} 'of fishes' = Gr. $l\chi\vartheta\dot{v}$ - ωv (cp. $\check{z}\dot{u}v$ - \check{i} § 217 p. 94, $\check{z}uv$ - $\check{i}s$ § 329 p. 230); O.C.Sl. $svekr\check{u}v$ - \check{u} , also $kr\check{u}v$ - $\check{i}\check{j}i$.

Skr. gir-ám pur-ám $g\bar{o}$ -šaṇ-ām like gen. sing. gir-ás etc., § 233 p. 123.

§ 355. 11. Certain Root Nouns. * $n\bar{a}u$ - δm 'navium' (§ 344): Skr. $n\bar{a}v$ - δm , Gr. $v\bar{a}$ - δv $v\eta \delta v$ $v\epsilon \delta v$ (I § 611 p. 462). — Skr. $g\delta v$ - δm , also $g\delta v$ - δm (§ 345 p. 247), Gr. δv - δv

Locative Plural.1)

§ 356. 1. The Suffix of the Locative Plural. An Idg. ending -su is indicated for this case by Aryan and Balto-Slavonic, Skr. -su Avest. -hu, O.Lith. -su O.C.Sl. -chŭ. As regards Gr. μεταξύ, which is generally adduced as an argument for the same ending, see the Remark on the next page. That Gr. -σι is also original is probable on account of the Avest. loc. pl. haf-ši and tanu-ši (Bartholomae, Bezz. Beitr. XIII 84 f.); and compare Bugge's explanation of Armen. -c as being for *-si (above, page 245). It is also very probable that -s was used as well as -su and si. If so, these two will be extensions of -s, the proper case-suffix, by

¹⁾ Osthoff, Die Bildung des loc. plur. im Idg. und Verwandtes, Morph. Unt. II 1 ff. Gerland, Über den dat. plur. des Altgriechischen, Kuhn's Zeitschr. IX 36 ff. Warncke, De dativo pluralis Graeco, Lips. 1880. Ceci, Il Dativo Plur. greco, Scritti glottologici I (1882) pp. 7 ff. Weck, Der altgriech. Dativ Plur., Philologus XLIII 32 ff. Τοεφέπης, Ή δοτική πληθ. τῆς Ἑλληνικῆς γλώσσης, Μελετήματα Ἰνδικὰ καὶ γλωσσολογικά, Athen 1888 pp. 25 ff. Aufrecht, Der dat. plur. auf -εσσι, Kuhn's Zeitschr. I 117 f. J. Stschasliwzjew, Über den griech. Dat. Plur. Journ. d. kais. russ. Min. f. Volksaufklärung 1885, 3, pp. 417—458 ff. (only known to me through Ziemer's Jahresbericht über Sprachwissenschaft, Berl. 1889, p. 150). Kögel, Althochdeutsche Locative, Zeitschr. f. deutsche Altert. XXVIII (1884) 110 ff.

accretion of adverbial particles: -u, perhaps meaning 'there', may have been the same as the -u of Skr. $m\dot{u}h$ -u and similar words (see § 256 Rem. p. 158) and that of Gr. $o\bar{v}(\tau o_S)$ and the like (see § 415); -i perhaps meant 'here', and may have been the same as -i in the loc. sing. (§ 256 p. 157) and in the Lat. nom. sing. qo-i $qu\bar{\imath}$ (§ 414). See Thurneysen, Kuhn's Zeitschr. XXVII 177.

-s has been kept unextended in the following instances. (1) Lat. dēvās Corniscās, C.I.L. I no. 814, and with ō instead of of Lat. Sabell. -os (§§ 357, 358).1) (2) Gr. γποις, which also represents the Idg. instr. pl. in -ois (§ 380); the effect of "πποις on the one hand and φύλαχ-σι etc. on the other was to prevent the loss of -σ- in ἵπποισι, βάσισι, φρασί φρεσί etc., or perhaps we may say to restore it; $-\sigma$ - should have dropped according to I § 564 p. 420; similarly in later times Att. δώτορσι, which should properly have become *δώτοροι, was kept safe by φύλαξι etc. (§ 362). It is not so certain that Lat. oloes lupīs Osc. Núvlanúis, beside Lat. Sabell, loc. -ōs. represent Idg. loc. -ois as well as instr. -ois. (3) -s is represented in Baltic, and not -s-u alone; it is true, this cannot be supported by such forms as Lith, ranko-s szirdű-s Lett. růká-s si'rdí-s, as if these had always ended with -s, but it may be considered fairly proved by O.Lith. -se -sa beside -su. It would be as wrong to suppose that rankose is rankosu transformed on the analogy of rankoje, loc. sing., as to suppose that *φυλαχ-συ became φύλαξι on the analogy of the loc, sing.

¹⁾ Schmidt (Pluralb. 50) assumes that Lat. $d\bar{e}v\bar{a}s$ represents *- $\bar{a}su$; this is opposed by the fact that $-\bar{o}s$ is found in Sabellian. I cannot allow even after the attempt of V. Henry (Mém., VI 377) that a loss of -u has been proved either for prehistoric Latin or for proethnic Italic. Schmidt regards as two other plural locatives $\bar{e}minus$ and comminus (from manu-). But how this is to be reconciled with the meaning I cannot see. We must surely derive these from adjective stems $\bar{e}-minu$ - com-minu- or -min-o- (from -man-, the shorter form of manu-). Cp. ad-versus. Can it be that they were originally acc. sing. neuter, * \bar{e} -minu *ad-versu, afterwards extended by -s like Gr. e0 θ 0 θ 0 θ 0. Compare further Bréal-Bailly, Dict. étym. lat. 2, s. v. cominus.

φύλαμ; the real explanation is that an original *rankās (cp. $d\bar{e}v\bar{a}s$), like original *rankāi, had the particle -e attached (see § 264 pp. 167 f.); in the actually found forms rankos rankas -e has been lost again, just as *-āi-e was shortened, producing rankoj (ranko) ranka. O.Lith. -sa (as namasà 'at home'), if its -a be not merely a mistake for -e in the spelling, has been transformed from -se in connexion with the forms ending with -sna (namas-nà 'homewards', acc. pl. with the postposition -na); conversely, -sne follows -se.

Remark. A further piece of evidence in support of -s may perhaps be found in the forms Skr. Ved. mánasu (beside mánas-su) Avest. manahu from Ar. manas- n., and the like (§ 364). -s-, and not -ss-, in these forms is shewn to be Idg. by Skr. ási Avest. ahi = Gr. si for #2(a), thou art' from Ves-. See Hübschmann, Kuhn's Zeitschr. XXVII 329: Bartholomae, Stud. zur idg. Spr., I 20 ff., 55 f., 67 f. of ss to s was doubtless proethnic when final, but not otherwise (all languages have -s for Idg. *-ss, even Skr., as a-ghas 2nd sing. pret. 'thou atest' = *a-ghas + s, see Bartholomae, op. cit. 21 f.); and the origin of *menesu *menesi was that u and i were affixed to *menes = menes-s; similarly *esi 'thou art' = *es (for es-s) + i. Of the examples by which Bartholomae seeks to prove a change of Idg. -ss- to -s-, apparently the only ones which are correct are such as allow of an explanation like this. If the view here suggested is right, such forms as Gr. Elegoa Lat. gessī need not be due to re-formation. Skr. mánas-su Gr. uéveg-gi êg-gi have been formed on the analogy of stems which ended in some other consonant than s; and there is nothing to prevent our believing them to be proethnic themselves.

But it is most unsafe to try to support the assumption of the loc. pl. -s by reference to Gr. $\partial \gamma \kappa \dot{\alpha}_{\varsigma}$ beside $\partial \gamma \kappa \dot{\alpha}_{r}$; see J. Schmidt, Kuhn's Zeitschr. XXV 39, and the Author, Morph. Unt. III 69. The same may be said of adverbs in -s, as Gr. $\pi \dot{v} \dot{\xi} \ \mu \dot{\alpha} \psi \ \ddot{\alpha} \pi \dot{\alpha} \dot{\xi}$ Lat. $mox \ vix$ O.Ir. $m\bar{o}$ mo- mos- 'mox' (for *moks) Skr. $hur\dot{u}k$ $h\dot{r}uk$ (-k for *-k\delta), notwith-standing Skr. $mak \dot{\xi} \dot{u}$ Gr. $\mu \epsilon \tau \dot{\alpha} \dot{\xi} \dot{v}$. The -s of these adverbs seems more likely to be the same as that of $\ddot{\alpha} \psi \ \dot{\alpha} \mu \rho \dot{t}_{\dot{\tau}}$ Lat. cis Avest. us (ud+s) O.Pers. $abi\dot{s}$ etc., which we are hardly justified in regarding as a plural locative suffix. $mak \dot{\xi} - \dot{u} \mu \epsilon \tau \dot{\alpha} \dot{\xi} - \dot{v}$ moreover prove nothing, because the particle u attaches itself to other forms besides plural locatives. Nor can any stress be laid on Boeot. $\tau \ddot{v}_{\dot{\tau}} \gamma o r \epsilon \ddot{v}_{\dot{\tau}} (= \tau o \ddot{v}_{\dot{\tau}} \gamma o r \epsilon \ddot{v}_{\dot{\tau}})$, Collitz Gr. Dialektinschr. no. 391. 5; probably we should read with Fick $\gamma o r \dot{\epsilon} \ddot{v}_{\dot{\tau}} = \gamma o r \dot{\epsilon} - o \iota \dot{\zeta}$.

How -s- s-u and -s-i were distributed in the parent language (for we can hardly suppose that every word formed

three distinct locatives, all of which were used together) can no longer be made out. The general preference for -su and -si rather than -s is explained by the fact that these s-forms often were exactly the same as the nominative singular.

In Iranian the postposition \bar{a} (or its unaccented by-form a, see § 246 p. 145) attached itself to locative plurals in -su: in Old Persian there is no other ending but $-uv-\bar{a}$ $-suv-\bar{a}$, while Avestic has $-hv-\bar{a}$ $-sv-\bar{a}$ along with $-h\bar{a}$ $-s\bar{a}$. Compare Skr. Ved. $nad\bar{i}\bar{s}v$ \bar{a} 'in the streams' $m\dot{a}rty\bar{e}\bar{s}v$ \bar{a} 'among mortals' and the like; also pr. Ar. * $a\dot{s}u\bar{a}\dot{i}-\bar{a}$ 'in equa' § 264 p. 167.

In Armenian we find -c, as in the gen., dat., and abl.; Bugge sees Idg. *-si in -c, see § 344 p. 245.

Greek. $-\sigma v$ beside $-\sigma v$ like $-\varphi vv$ beside $-\varphi v$. Compare § 186 p. 62, § 281 pp. 186 f., and the Author, Gr. Gr.² § 64 Anm. 3 p. 80.

In Keltic and Germanic the locative plural had fallen out of living use before the date of the earliest remains of those languages. Whether it survives in adverbs, still remains to be discovered (on O.Ir. $m\bar{o}$ 'mox' see the Remark above). As regards alleged locatives like O.H.G. $\bar{O}tingas$ see § 357.

2. The Form of the Stem. This was weak, from the proethnic period onwards, in consonant stems which had gradation.

In Aryan, the loc. pl. and cases with a bh-suffix (Skr. -bhyas, -bhiš, -bhyām) often show the form of the nominative singular instead of the stem. The occurrence of such groups of words as (Skr.) dhāma: dhāma-su -bhyas etc., ášvā: ášvā-su -bhyas etc., bṛhatī: bṛhatī-ṣu -bhyas etc. suggested some necessary connexion between the form of what are called the "Middle Cases" with that of the nominative singular; hence Skr. mānah-su mānō-bhyas -bhiš -bhyām following mānah mānō instead of mānassu (mānasu) *manad-bhyas etc., havīh-ṣu havīr-bhyas following havīh havīr instead of havīṣṣu *havīdbhyas, Avest. ravō-hu instead of ravahu following ravō, O.Pers. rauca-biš from rauca, Avest. berezap-byō instead of berezap following berezap (§§ 303 f. pp. 203 f., §§ 364, 367,

375, 376, 386, and 387). Compare Osthoff, Morph. Unt. II 3 f.; Wackernagel, Das Dehnungsgesetz der gr. Comp., 7 f.; Bartholomae, Kuhn's Zeitschr. XXIX 581 f.

In Balto-Slavonic, the loc. plural along with the other middle cases was attracted into the *i*-declension, as Lith. akmen-ysè, earlier *-i-se, O.C.Sl. kamen-ĭ-chŭ, like akmen-ì-ms kamen-ĭ-mŭ, akmen-i-mìs kamen-ĭ-mi, sing. akmen-i-mì kamen-ĭ-mĭ, dual akmen-ì-m -i-m̃ kamen-ĭ-ma. See § 402. But we still find O.Slav. poljachŭ (O.Czech Polás) poljamŭ poljami from poljan-(see I § 585.3 p. 440, II § 115 p. 362, III §§ 361, 367, 404), with which we should perhaps compare Lith. dial. žmoymis (oy = û) from nom. sing. žmū (Fortunatov, Bezz. Beitr. III 72).

§ 357. 1. o-stems. Pr. Idg. * $u_l q o \dot{q} - s - s u - s i$ in lupis'; the stem-final - $o \dot{q}$ - is borrowed from the pronoun (§ 430). Skr. $v_l k \bar{e} - \dot{s} u$; Avest. $v_l k a e - \dot{s} u - \dot{s} v - a$, O.Pers. $m \bar{a} d a i \dot{s} u v - \bar{a}$ in Medis'. Armen. gailo c, if -c is Idg. *-s i (§ 344 p. 245); if so, -o- has displaced *- $o \dot{q}$ - on the analogy of gailo - v k. Gr. $\lambda \dot{v} z o \iota - c$ - $o \iota$; - $o \iota$ in Attic gave way gradually before -s from 450 B. c. onwards. O.C.Sl. $v l \ddot{u} c \dot{c} c h \ddot{u}$ (I § 462 p. 338).

Italic. It is a question whether Lat. lupīs O.Lat. oloes 'illis', Umbr. veskles vesclir 'vasculis' alfer 'albis' Osc. Núvlanúís 'Nolanis' nesimois 'proximis', and so forth, represent the Idg. locative and instrumental, or instrumental only; see § 356 p. 257. On the analogy of -ās (ā-stems) was coined a loc. pl. series in -ōs, instead of -ois, which seems to be as early as the proethnic stage of Italic (cp. Lat. -ōrum following -ārum § 345 p. 247, and Lith. -ûsu Lett. -ûs following -ōsu -ás, see below): O.Lat. (Dvenos inscription) deivōs 'deis', ') Marruc. aisos Mars. esos 'deis'.

¹⁾ It should be mentioned that the latest discussion of the Dvenos inscription, by R. S. Conway (Am. Journ. Phil. X 452, 458), explains deivos as nom. pl. (cp. Umbr.-Samn. $-\bar{o}s$). — Written after the above had been printed.

Remark. It is doubtful whether we are to agree with Kögel in regarding as locative plural the West Germanic place-names in -as, as O.H.G. Otingas (assumed to = *Audingá-su 'among the sons of Oto'). See Kögel, Zeitschr. für d. Alt. XXVIII 110 ff., Paul-Braune's Beitr. XIV 115 ff. Henning (Deutsche Lit.-Zeit. 1888 p. 16) and Behaghel (Paul's Grundr. I 609) regard -as as the Latin acousative ending (ad Otingas). If Kögel is right, the -a- of -a-s is far more likely to be an analogical transformation of Idg. -oi-, as we have just assumed the -o- of Armen. gailoc to be, than the pr. Idg. ending of noun-stems for this case, which must then be assumed to have been exchanged for the -oi- of pronouns in Aryan etc., but at no earlier period: observe O.C.SI. těchů Lith. tůsè: vlůcěchů vílkůsè in contrast with dat. těmů těms: vlůkomů vilkáms. Compare further Kluge, Paul's Grundr. I 387.

Baltic. Lith. vilkůsu -sè (-sa) - \tilde{u} s Lett. wi'lkůs on the analogy of the *- \bar{a} -su -se of \bar{a} -stems, like Lat. $deiv\bar{v}$ s following $d\bar{e}v\bar{a}s$ (see above). Lith. dial. vilkunse following the acc. pl. vilkuns-na. See § 326 Rem. pp. 227 f.

§ 358. 2. \bar{a} -stems. Pr. Idg. * $\hat{e}ku\bar{a}$ -s -su -si 'in equabus'. Skr. $\hat{a}\dot{s}v\bar{a}$ -su; Avest. $\hat{h}a\hat{e}n\bar{a}$ -hu -hv-a, O.Pers. aniyāuv-ā 'in aliis' for *- \bar{a} -hu-ā (I § 558 pp. 413 ff.). Gr. inser. $\hat{\delta}o\alpha\chi\mu\tilde{\eta}\sigma\iota$ $\tau\alpha\mu\dot{\iota}\bar{a}\sigma\iota$ etc., from about 420 b. c. only surviving petrified in adverbs, as $\hat{\vartheta}v\bar{\varrho}\bar{a}\sigma\iota$ ' $A\hat{\vartheta}\eta\nu\eta\sigma\iota$. O.Lat. $d\bar{e}v\bar{a}s$, see § 356 p. 257. Lith. ranko-su -se -s Lett. $ruk\acute{a}$ -s; O.C.Sl. raka-chu.

Greek. Ion. Att. $\nu\nu\mu\rho\eta\sigma$ Att. Lesb. $\nu\nu\mu\rho\alpha\sigma$ are reformations on the lines of $-\omega\sigma$. To banish from the text of Homer and other authors all forms in $-\eta s$, which happens never to occur on inscriptions, and to replace them with others in $-\omega s$ except only where $-\eta\sigma$ can be read, is a rather arbitrary fiat of modern critics. They may be explained as a transformation of * $-\bar{\alpha}s$ $-\eta s$ by analogy; and perhaps $-\eta s$ was still used in the age of Homer.

Latin. Besides $d\bar{e}v\bar{a}s$, are we to cite $for\bar{a}s$ 'outside, out of doors' ($for\bar{a}s$ 'out, outwards' is acc.), and $ali\bar{a}s$ $alter\bar{a}s$ (sc. vicibus or $occ\bar{a}si\bar{o}nibus$)?

§ 359. 3. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68, footnote). Pr. Idg. probably * $b\,h_{\bar{x}}\,\hat{g}\,h_{\bar{u}}\,t\,\bar{\imath}$ -s-su-si. Skr. $b\gamma$ hat \bar{t} -su Avest. barenti-su-sv-a. Lith. $z\tilde{e}m\dot{e}$ -su-se O.C.Sl. zembja-ch \bar{u} with $-i\bar{e}$ -instead of $-\bar{\imath}$ -.

Gr. φερούσησι, -ησι -αισι on the lines of iā-stems (cp. the footnote on page 68). So too Lith. vežanczio-su -sè -ō-s O.C.Sl. vezašta-chŭ.

§ 360. 4. i- and u-stems.

Pr. Idg. *oui-s -su -si. Skr. $\acute{a}vi$ - $\r{s}u$. Uncertain: Armen. srti-c; see § 344 p. 245. Gr. Ion. Att. etc. $\tau \rho \iota$ - $\sigma \iota$, Dor. $\r{o}\varphi \iota$ - $\sigma \iota$. Lat. tri-su - $s\grave{e}$ 'in tribus', O.C.Sl. $no\check{s}t\check{\iota}$ - $ch\check{u}$.

Pr. Idg. * $s\bar{u}nu$ -s-su-si. Skr. $s\bar{u}n\acute{u}$ - $\check{s}u$, Avest. $b\bar{u}zu$ - $\check{s}u$ - $\check{s}v$ -a. Uncertain: Armen. zarduc; see § 344 p. 245. Gr. $\gamma o \nu \varepsilon \bar{v}$ - $\sigma \iota$, cp. below. O.C.Sl. $syn\breve{u}$ - $ch\breve{u}$ (not found, but this is a mere accident).

Greek. ὄφι-σι became ὄφεσι (Hom. Att. Arcad.) by association with ὄφεις (*ὄφε-ες) ὄφεων. So *πηχν-σι *ήδν-σι became πήχε-σι ήδέ-σι by association with πήχεες etc. -ν-σι remained only in γονεῦσι for *-εμν-σι = Skr. -αγυ-ξυ, see § 261 p. 162; but later on there were coined sporadically such forms as τοχέσι following ήδέσι, like nom. pl. τοχεῖς instead of τοχῆς following ήδεῖς.

Hom. $\delta \epsilon \delta \sigma \iota$ ($\delta \iota - \varsigma$) and $\pi \epsilon \lambda \epsilon \epsilon \epsilon \sigma \iota$ $\pi \delta \lambda \epsilon \sigma \iota$ ($\pi \epsilon \lambda \epsilon \epsilon \tau \upsilon - \varsigma$ $\pi \delta \lambda \upsilon - \varsigma$) owe their $\sigma \sigma$ to the poetic use of doublets like $\epsilon \pi \epsilon \sigma \sigma \iota$ and $\epsilon \pi \epsilon \sigma \iota$ side by side.

The es-stem ending $-\varepsilon\sigma\sigma\iota$ $-\varepsilon\sigma\iota$ was adopted not only by all consonant stems and by $\bar{\imath}$ - $i\dot{\imath}$ - and $\bar{\imath}$ - $u\dot{\imath}$ -stems, but by stems in -i- and -u- in the Aeolic dialects (in Homeric too), in N. W. Greek, and in parts of the Doric area; e. g. Hom. $\delta\iota$ - $\varepsilon\sigma\sigma\iota$ $\delta\iota$ - $\varepsilon\sigma\iota$ Lesb. $\delta\iota\iota\lambda\nu\sigma\iota$ - $\varepsilon\sigma\sigma\iota$ Hom. $\tau\alpha\chi\dot{\epsilon}$ - $\varepsilon\sigma\sigma\iota$. But again, the o-stem ending $-\iota\iota\varsigma$ $-\iota\iota\sigma\iota$ spread in like manner in N. W. Greek and in certain divisions of the Peloponnese; e. g. $\tau\varrho\iota$ - $\iota\sigma\iota$ $-\iota\sigma\iota$ $-\iota\sigma\iota$

Lith. nakty-su $-s\grave{e}$ $-\tilde{y}-s$ Lett. $nakt\ell-s$ and Lith. $s\bar{u}n\mathring{u}-su$ $-s\grave{e}$ $-\mathring{u}-s$. *-i-su *-u-su became *- $\bar{\iota}-su$ *- $\bar{u}-su$ by association

with $*-\bar{a}-su$, and $*-\bar{u}-su$ then became $-\dot{u}-su$ by association with stems in -o-. See § 326 Rem. pp. 227 f.

§ 361. 5. n-stems. Pr. Idg. * $\hat{k}(u)u\eta$ -s -su -si. Skr. $\dot{s}v\dot{a}$ -su $\dot{a}\dot{s}ma$ -su, Avest. $d\bar{a}mo$ -hu -hv-a ($d\bar{a}man$ - 'creature') = Skr. $dh\dot{a}ma$ -su (I § 94 p. 88). Uncertain: Armen. akanc anjanc, see § 344 p. 245. Gr. Cret. $\pi\lambda\dot{i}\alpha$ -oi (Att. $\pi\lambda\dot{\epsilon}o\sigma i$, nom. sing. $\pi\lambda\dot{\epsilon}\omega\nu$, cp. § 364 Rem.), Attic and Pindaric $\varphi\rho\alpha$ -oi (Att. usually has $\varphi\rho\varepsilon$ -oi, nom. sing. $\varphi\rho\dot{\eta}\nu$), Att. etc. $\dot{o}\nu\dot{o}\mu\alpha$ -oi (nom. sing. $\ddot{o}\nu\dot{o}\mu\dot{a}$) = Skr. $n\dot{a}ma$ -su (II § 82 p. 250). Then Armen. anjan-c: anjin- \dot{k} = Gr. $\varphi\rho\alpha$ -oi: $\varphi\rho\dot{\epsilon}\nu$ - $\epsilon\varsigma$. Old Czech Polás, elsewhere O.Slav. poljachŭ with -ch- on the analogy of the other stems, beside nom. pl. O.C.Sl. poljan-e, see § 356 p. 260.

Greek. ἀρνάσι instead of *ἀρα-σι with v from the other cases. πλέο-σι φρε-σί ἄχμο-σι ποιμέ-σι ἀγῶ-σι have taken o, ε, or ω instead of α from the other cases, cp. ὄφε-σι ήθέ-σι § 360 p. 262. On the analogy of φρε-σί: φρένες, ἄχμο-σι: ἄχμονες was coined χυσί instead of *χνα-σι (*πα-σι) beside χύνες. With -εσσι: Hom. ήγεμόν-εσσι λιμέν-εσσι χύν-εσσι Μegar. λαγόν-εσσι etc. With -οις: N.-W. Gr. μειόν-οις ἀγών-οις El. ἀγών-οιο, etc.; see § 360 p. 262.

Lith. szun-y-su -sè akmen-y-su -sè and O.C.Sl. kamen--ĕ-chŭ, following the i-class: see § 356 p. 260.

§ 362. 6. r-stems. Pr. Idg. * $m\bar{a}t\gamma$ -s* * $d\bar{o}t\gamma$ -s-su-si. Skr. $m\bar{a}t\gamma$ -su dá $t\gamma$ -su. Uncertain: Armen. $mar\varphi$, and with strong stem $dster\varphi$ (or $dstera\varphi$); see § 344 p. 245. Gr. $\mu\eta\tau\varphi\acute{a}$ - $\sigma\iota$, $\mathring{a}\nu\delta\varphi\acute{a}$ - $\sigma\iota$, and with strong stem $\delta\omega\acute{\tau}\sigma\varrho$ - $\sigma\iota$ $\delta\sigma\imath\check{\eta}\varrho$ - $\sigma\iota$.

Greek. It is due to the force of association with connected forms that δώτοροι keeps -ρο- in later Attic, instead of becoming -ρρ- (I § 563.3 p. 419). With -εσοι: Hom. Βοεοτ. ἄνδρ-εσοι Hom. θυγατέρ-εσοι. With -οις: N.-W. Gr. ἄνδρ-οις and so forth, see § 356 p. 262.

Lith. moter-y-su -sè and O.C.Sl. $mater-i-ch \breve{u}$ following the i-class; see § 356 p. 260.

§ 363. 7. Stems ending in an Explosive.

Pr. Idg. *bhṛĝhṇt-s -su -si. Skr. bṛhát-su bhárat-su, Avest. ber zasu (I § 473.2 p. 349). Gr. Cret. ἐλόνσι βάλλονσι

ντικάσανσι Att. έλοῦσι βάλλονσι ντικήσασι. The old ending -ἄσσι = *-ατ-σι *-ŋt-si is still seen in Heracl. πρασσόντ-ασσι ἔντ-ασσι, which took the place of *πρασσάσσι *άσσι (cp. Skr. sat-su = *s-ηt-su), the stem of πρασσάσοντ-ες ἔντ-ες etc. having been substituted for the proper stem in these latter forms; compare ἀρνάσι instead of *άρα-σι, § 361, last page. νήφοσι (Theogn.) from νήφω 'I am sober' instead of *νήφασι, with σ from νήφωντ-ες etc., compare χαρί-εσι following χαρί-εντ-ες (below). With -εσσι: Hom. ἀνονόντ-εσσι Lesb. φερόντ-εσσι Hom. N.W. Gr. πάντ-εσσι. With -οις: N.-W. Gr. ἀγγελλόντ-οις ὄντ-οις and the like, see § 360, last page. O.C.Sl. telet-τελιά following the i-flexion, cp. § 244 pp. 142 f. — Lith. νeĕancziû-su -se O.C.Sl. veząšti-chǎų, as though a iσ-stem.

Skr. ápa-vat-su (ápa-vant- 'watery'), Gr. $\chi \alpha \rho i$ - $\varepsilon \sigma i$ instead of *- $F \alpha \tau$ - σi (cp. $\nu \gamma' \rho \sigma \sigma i$, above); see II § 127 p. 404.

Avest. nafšu = pr. Ar. *napt-su from Ar. $nap\bar{a}t$ - napt-'descendant'; see I § 471 p. 348.

d-stems. Skr. śarát-su 'in autumns'. Gr. φυγάσι (νιφάδ-εσσι -οις). Skr. pat-sú, Gr. ποσί Hom. ποσσί (πόδ-εσσι ποδ-οῖς).

Skr. uśikṣu, stem uśij- 'desirous', Avest. tuxsv-a, stem tuc- 'covering, mat'. Gr. μείραξι ὄρτυξι (σκυλάκ-εσσι πτερύγ-εσσι, φυλάκ-οις).

Skr. ap-sú 'in waters'. Gr. κλωψί (γέπ-εσσι).

§ 364. 8. s-stems.

Pr. Idg. *menes -esu -esi, -es-su -es-si from nom. acc. sing. *menos 'mind', see § 356 Rem. p. 258. Skr. mánas-su, Ved. mánasu also, Avest. manahu -hv-a; on Skr. mánah-su see below. Gr. μ éveo. Hom. μ éveo-o. Lith. debes-y-su-sè O.C.Sl. sloves-ĭ-chŭ, see § 356 p. 260. — Gr. Cret. $\mu\eta$ roí Att. $\mu\eta$ oí instead of * μ evo. Att. * μ eo, which it should have been, cp. nom. sing. μ eíç (I § 611 p. 462, II § 132 p. 415, III § 199 p. 81); so - η - came from the other cases; observe that Idg. *mensi would have become Att. * $\mu\eta$ n. Similarly Att. $\chi\eta$ oí instead of * χ āoı = * χ āvo-oı. — Skr. māsú, later mās-su, from más 'mensis', see II § 132 p. 415, § 134 p. 425.

Skr. haviş-şu (havih-şu, see below) like mánas-su. Gr. δ έ $\pi a\sigma$ ι Hom. δ έ $\pi a\sigma$ - σ ι ,

Comparative * $\bar{o}kis$ -isu -isi, -is-su -is-si 'in ocioribus'. Skr. astronomean (astronomean). O.C.Sl. slažatši- $ch\check{u}$ as though a io-stem.

Remark. Gr. $\tilde{\eta}\delta loo_{\ell}$ $\pi l\acute{\epsilon}o\sigma_{\ell}$ are not for *- $\iota o\sigma$ - σ_{ℓ} , but have a $\underline{l}en$ -suffix, like Cret. $\pi l\acute{\iota}(\alpha-\sigma_{\ell})$ (§ 361 p. 263). The weak cases seem never to have had $-\iota o\sigma_{\ell}$ in Greek; see II § 135 Rem. p. 429. Hence we find no * $\underline{l}\eta\delta loo_{\ell}$ like $\tilde{\epsilon}\pi\epsilon\sigma_{\ell}-\sigma_{\ell}$; and, although $\pi l\dot{\epsilon}\acute{o}\nu$ - $\epsilon\sigma\sigma_{\ell}$ $\mu\epsilon i\acute{o}\nu$ - σ_{ℓ} do occur, we never see * $\pi l\dot{\epsilon}\acute{o}$ - $\epsilon\sigma\sigma_{\ell}$ - σ_{ℓ} like $\tilde{\epsilon}\pi\acute{\epsilon}$ - $\epsilon\sigma\sigma_{\ell}$ - σ_{ℓ} ; and $\delta\epsilon\pi\acute{a}$ - $\epsilon\sigma\sigma_{\ell}$.

Part. perf. act. *μeidus -usu -usi, -us-su -us-si. Everywhere we meet with re-formations. Skr. vidvátsu has t from vidvád-bhyas etc., where -dbh- comes regularly from *-zbh-, see II § 136 p. 441.¹) Gr. εἰδόσι doubtless belongs to a μet-stem, and so stands for *-For-σι (II § 136 p. 440), cp. N.W.Gr. γεγονότ-οις. Lith. mirusiû-su -se O.C.Sl. mirūši-chū, as though a żo-stem.

Gr. $\mu\bar{\nu}\sigma i$ (preserved by Herodian, and in the Batrachomyomachia 260), with variant $\mu\bar{\nu}\sigma i$, by re-formation; see II § 160 p. 485. O.C.Sl. $my\bar{s}\bar{\iota}ch\bar{u}$ following the i-declension. Skr. $m\bar{u}\bar{s}$ - $\bar{s}u$ not found.

Aryan. With nom. sing. form substituted for the stem: Skr. mánaḥ-su áṣ̄tyaḥ-su haviḥ-ṣ̄u, Avest. ravō-hu from ravah'happiness, joy'. See § 356 p. 259.

Greek. -εσσι: Hom. ἐπέ-εσσι ὁμηγερί-εσσι Lesb. ἐτέ-εσσι, Hom. δεπά-εσσι; -οις: N.-W. Gr. ἐτέ-οις Messen. εὐσεβέ-οις, see § 360 p. 262. -εσσι was of course taken from forms like ἔπεσ-σι; and it was not until -εσσι had become naturalised in other consonant stems that such a word as ἐπέ-εσσι could be coined.

§ 365. 9. $\bar{\imath}$ - $i\dot{\imath}$ - and \bar{u} - $u\dot{\imath}$ -stems, stems in $-\bar{r}$, $-\bar{l}$, and $-\bar{v}$.

Pr. Idg. $-\bar{\imath}$ -s -su -si, $-\bar{u}$ -s -su -si; e. g. $*b\,h\,r\,\bar{u}$ -s $-s\,u$ $-s\,i$ from nom. $*bhr\,\bar{u}$ -s 'brow'. Skr. $dh\,\bar{\imath}$ -šú $nad\,\hat{\imath}$ -šu, $bhr\,\bar{u}$ -šú

¹⁾ In writing this passage I was under the mistake of supposing that *-vas-su would regularly become -vatsu. Against this see Bartholomae, Stud. zur idg. Spr., I 9 ff.

svaśrń-ṣu. Gr. κἴ-σί ποἰλἴ-σι (from ποίλῖ-ς), ὀφρύ-σι ὑ-σί νέκὔ-σι (from νέκῦ-ς) with τ ϔ following κἴ-ες etc. It is possible that where we now read νέκνσσι γέννσσι πίτνσσι forms ending in -ῦσι once stood in the text of Homer. -εσσι: Hom. σύ-εσσι νεκὐ-εσσι, see § 360 p. 262. Lith. ἔuν-y-su -sè O.C.Sl. krŭν--ἴ-chŭ (not actually found) following the i-flexion; but svekrŭν-a-chŭ follows the \bar{a} -flexion (cp. gen. pl. svekrŭν \bar{a} : rakŭ).

Skr. $g\bar{\imath}r$ - $\dot{\imath}\acute{u}$, $p\bar{\imath}r$ - $\dot{\imath}\acute{u}$, $g\bar{o}$ - $\dot{\imath}\ddot{a}$ -su (the last not actually found) like nom. sing. $g\acute{\imath}r$ etc., see § 197 p. 76 above.

§ 366. 10. Pr. Idg. * $n\bar{a}u$ -s-su -si 'in navibus': Skr. $n\bar{a}u$ -si Gr. $\nu\alpha\nu$ - σ i; Homer uses the re-formate $\nu\eta\nu$ - σ i, like $\nu\eta\bar{\nu}_S$, following $\nu\eta$ - $\delta\varsigma$ etc. (I § 611 p. 462), but he also has the regular form in the compound $\nu\alpha\nu\sigma$ i- $\nu\lambda\nu\tau\delta_S$. Skr. $g\bar{\sigma}$ -su, Gr. $\beta\sigma$ v- σ i.

Hom. νή-εσσι νέεσσι, βό-εσσι Boeot. βού-εσσι, N.-W. Gr. βό--οις; see § 360 p. 263.

Dative-Ablative Plural.1)

§ 367. 1. The Suffix. Since both the Aryan forms in -bhias and the Latin in -bus are used for dative and ablative alike, we must suppose that this twofold function is as old as the parent lauguage. Then the use of the genitive plural with ablative sense in Greek and Balto-Slavonic is a later development, due to the use of the singular genitive in -es -os -s with this sense, which was also proethnic. We need hardly find a difficulty in the initial of the dative plural suffix in Balto-Slavonic, which is m- and not bh- (Lith. -mus O.C.Sl. -mū). As the bh- suffix had both meanings, we may fairly infer the same of the m-suffix.

¹⁾ V. Henry, Essai de systématisation des désinences en *-bhdans la langue latine, Mém. de l. Soc. d. lingu. VI 102 ff. L. Havet,
Datifs-ablatifs plur. en -ibus [en latin], ibid. III 412 ff. L. Duvau,
Datif plur. de l'ombrien, ibid. VI 104. Förstemann Zur Geschichte
altdeutscher Declination: Der dat. plur., Kuhn's Zeitschr. XVI 81 ff.
Much, Germanische Dative aus der Römerzeit, Zeitschr. f. deutsch.
Altert. XXXI 354 ff. J. Schmidt, Der altpreuss. dat. pl. auf -mans,
Kuhu-Schleicher's Beitr. IV 268 ff.

The endings which have to be compared in order to restore the Indo-Germanic suffix are the following: Skr. -bhyas (-bhiyas frequently in Vedic) Avest. -byō = pr. Ar. *-bhias (*-bhiias); Lat. -bos -bus Osc. -fs -ss Umbr. -s = pr. Ital. *-fos *-bhos; \(^1\)) Gall. -bo; \(^2\)) O.Lith. -mus, modern -ms, Pruss. -mans -mas, O.C.Sl. -m\(^1\). On the variation between -bh- and -m-see \(^3\) 274 pp. 175 f. We have no right to assume that the \(^i\) which follows the initial of the suffix in Aryan has been dropped in the other languages, and to derive (say) Ital. *-fos from *-fios. Whence comes the \(^i\) of -bhyas, or of -bhya -bhyam -bhyam, is an obscure point.

Gall. -bo is related to Lat. -bo-s as Skr. -bhya (tú-bhya 'tibi') to -bhya-s, and as instr. *-bhi (sing. and pl. in Greek, elsewhere only sing., § 274 p. 175, § 281 pp. 186 f.) to Skr. -bhi-\(\delta\). This suggests the question whether the wide-spread Lith. -m found along with -mus, and Lett. -m (e. g. Lith. ra\(\tike\)bo-m Lett. r\(\delta\)k\(\delta\)-m beside Lith. ra\(\tike\)ko-mus -ms) does not represent a form *-mo without s, like Gall. -bo.\(\delta\)) This view seems to be supported by an instr. pl. -mi instead of -mis, found in the Godlewa district of Lithuanian and in Lettic folk-songs (e. g. Godl. nakti-m\(\delta\) = nakti-m\(\delta\)s, Lett. k\(\delta\)j\(\delta\)-mis); see § 379. Then again the -m of the Germ. "dative" plural has to be considered. It is conceivable that O.W.Germ. -ms and Norse -mr (§ 379) represent an instr. suffix *-mis; only it must perhaps be granted that *-mz sometimes came

¹⁾ It should be mentioned that the Umbr.-Osc. ending might without irregularity be derived from *-fis = Skr. -bhiš (instr. pl.).

²⁾ Only found in one inscription, which is wrongly denied to be Keltic by d'Arbois de Jubainville (Rev. Celt. XI 249). — We are not justified in seeing this Gall. -bo in O.Ir. na-b, as Windisch does (Paul-Braune's Beitr. IV 221). In this there has doubtless been merely loss of the palatal sound, first taking place before non-palatals, as dinab gabalib. (Thurneysen.)

³⁾ In Lit. Volksl. und Märch., pp. 297 f., I explained rankom, with Brückner, as the dual form used in the plural. This is unquestionably possible; compare the Russian instr. dual in -ma with plural meaning (Vetter, Zur Gesch. der nom. Decl. im Russ., 50 f.).

from a dative in *-mos. But no one has proved the existence of any sound-law by which the -m of all Germanic dialects — even in O.Icel. we find e. g. pri-m beside pri-mr 'tribus', and others — could be derived from *-mz (there is no manner of need to derive the Goth. 1st. pl. baira-m from *-mz). I therefore conjecture that Germanic, like Baltic, inherited from the parent speech a plural *-mi (cp. sing. O.H.G. zi houbitun A.S. de-m § 282 p. 188), and perhaps *-mo as well. It follows that the pluralising of bh- and m-suffixes by adding -s was not complete in the parent language.

Remark. It is perhaps allowable to analyse Pruss. -mans into *-mom + s (*-mom beside *-mo like Skr. -bhyam: bhya, Gr. $-\varphi v : -\varphi v$), notwithstanding amsis 'people' gimsenin 'birth', on the strength of mensa menso 'flesh, meat'. This word answers to Goth. mimza-, and there is no reason to suppose that it was a Slavonic loan-word (meso); doubtless in mensa menso m became n by dissimilation, and the same process might change *-mams to -mans. *-mom might be compared with O.C.Sl. -mu. But doubts are suggested by Lith. -mus -ms, which cannot be derived from *-mans (on the acc. Lith. dëvùs: Pruss. deivans see § 326 p. 227); and the question arises whether -mas in Prussian (e. g. nou-mas 'nobis') were not the older form. Pruss. -mas and Lith. -mus might be connected with original *-mos, and -mans may really be due to association with the acc. pl. in -ans. Lith. -mus, with O.C.Sl. -mu, may however be derived from Idg. *-mus. Ergo, non liquet. Compare further Osthoff, Morph. Unt. II 31 f.; Leskien, Ber. der sächs. Ges. der Wiss., 1884, pp. 101 f.

Armenian has -c, as in the gen. and loc., see § 344 p. 245. In Greek the form ceased to be used at all; its dative meaning was expressed by the locative and instrumental, and its ablative meaning, as already stated, by the genitive. Old Irish dropped it in favour of the instrumental.

2. Form of the Stem. This was weak, right down from the proethnic period, in consonant stems which admitted of gradation, as *poter- 'pater'.

Aryan often shews the nom. sing. form where the stem should be, as Skr. mánō-bhyas Avest. manē-byō. See on this point § 356 pp. 259 f.

In Latin and Oscan consonant stems show the *i*-stem ending, as Lat. mātr-ibus ferent-ibus like ovi-bus tri-bus,

Osc. *lig-is* 'legibus'. But Umbr. -us in *fratrus* aset-us etc. seems to have been taken from *u*-stems (beru-s 'verubus').

As regards the stem in Germanic see § 379.2.

In Balto-Slavonic the *i*-stem ending has become the regular one, as it did in the other *m*-cases and in the locative plural; e. g. Lith. *akmen-i-ms* O.C.Sl. *kamen-i-mŭ*. But we still find O.Slav. *poljamŭ* = *poljam+mŭ, see § 356 p. 260.

§ 368. 1. o-stems. Pr. Idg. * $u_{\bar{b}}qo$ -bh- (-m-). Skr. $v_{\bar{f}}k\bar{e}$ -bhyas Avest. $vehrkaeiby\bar{o}$ with pr. Ar. - $a\dot{i}$ - instead of -a-following pronouns like $t\acute{e}$ -bhyas $taeiby\bar{o}$. (Goth. vulfa-m O.H.G. wolfum beside $p\acute{a}i$ -m d \bar{e} -m, cp. § 367 p. 267 f. and § 380). Lith. vilka-mns - \acute{a} -ms O.C.Sl. $vl\breve{u}ko$ - $m\breve{u}$ beside $t\acute{e}$ -ms $t\acute{e}$ - $m\breve{u}$.

Latin forms in -ibus from o-stems, as amīeibus suibus (see Bücheler-Windekilde, Grundr. pp. 126 f.) are later reformates instead of the forms in $-\bar{\imath}s$ (§ 380). But the pronouns $\bar{\imath}$ -bus 'eis' (ep. Skr. \bar{e} -bhyás), variant $\bar{\imath}$ -bus (i-stem like qu $\bar{\imath}$ -bus), and $h\bar{\imath}$ -bus 'his', may be regarded as proethnic.

Remark. In O.C.Sl., jo-stems show not only -ie-mu but -imu -iīmu, as zulodējīmu, and similarly instr. sing. zulodējīmi dat. instr. dual -jīma. We may regard i (after sonants -ii-) as the weak grade of the suffix -io- (cp. O.H.G. hirti-m § 380), the š of glagoljaštimu as taken from the other cases, and occasional forms like stražije (nom. pl.) 'watchers' as later re-formates on the lines of the i-declension. -dějímů: -dějemů Lith. gaidžiá-ms (gaidỹ-s 'cock') = O.H.G. hirtim: Goth. hairdjam. This would make it easier to see why so many masc. neut. consonant stems became jo-stems in Balto-Slavonic; for example, part. gen. Lith. věžanczio O.C.Sl. vezašta 'vehentis', O.C.Sl. dateljí 'dator'. That is to say, if there was an -i- in the m-cases of jo-stems in pr. Balt.-Slav., their ending was the same as that of consonant stems, which already formed these cases after the model of stems in -i- (§ 402); it was easy enough, for example, to form cases from *wežont-jo- when there was a form *wežont-i-m-. Another point remains to be investigated. What was the cause of the very common transfer of i-stems to the ioclass in older Lithuanian (as krý-/i-s II § 100 p. 306): may not forms analogous to O.H.G. hirtim have helped the change, and not merely the similar ending of the nom. acc. singular?

§ 369. 2. \bar{a} -stems. Pr. Idg. * $e\bar{h}u\bar{a}$ -bh- (-m-). Skr. \acute{a} s $v\bar{a}$ -bhyas, Avest. $haen\bar{a}$ - $by\bar{o}$. Lat. $equ\bar{a}$ -bus; - \bar{a} -bus was more widely spread in the oldest Latin (e. g. manibus dextrabus),

but used later only to distinguish genders (as $fili\bar{s}$ and $fili\bar{a}bus$), and in the re-formates $du\bar{a}bus$ ambābus (plural suffix instead of dual). Gall. $va\mu\alpha v\sigma v\bar{\alpha}-\beta o$, used attributively with $\mu\bar{\alpha}\tau\rho\epsilon\beta o$ 'matribus'. (Goth. $gib\bar{o}-m$ O.H.G. $geb\bar{o}-m$, see § 367 pp. 267 f., § 381). Lith. $ra\bar{n}ko-mus-ms$, O.C.Sl. $raka-m\bar{u}$.

§ 370. 3. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. p. 68, footnote). Pr. Idg. *bhrāhņtī-bh- (-m-). Skr. brhatī-bhyas, Avest. barenti-byō. (O.H.G. $dig\bar{\imath}$ -m 'to prayers', see § 367 pp. 267 f. and § 382). With $-i\bar{e}$ - instead of $-\bar{\imath}$ -: Lat. $faci\bar{e}$ -bus, Umbr. iovies for *- $i\bar{e}$ -fs beside the acc. pl. iovie(f) § 328 p. 229. So also Lith. $\check{z}\check{e}m\dot{e}$ -mus -ms, O.C.Sl. zemlja-m \check{u} ; but others have $i\bar{a}$ -flexion (cp. footnote on p. 68), Lith. $v\check{e}\check{z}anczio$ -ms, O.C.Sl. $veza\check{s}ta$ -m \check{u} .

§ 371. 4. i-stems. Pr. Idg. *oui-bh- (-m-). Skr. ávi-bhyas, Avest. aži-byō. Lat. tri-bus ovi-bus turri-bus; Umbr. tris 'tribus' avis aves aveis 'avibus', Osc. luisari-fs (Bücheler, Rhein. Mus. XLIV 328), cp. teremn-iss 'terminibus' § 373; the vowel of the last syllable was long in Umbrian; would this be "compensatory lengthening", or the analogy of the accusative plural? (Goth. ansti-m O.H.G. ensti-m, see § 367 pp. 267 f., § 383). Lith. nakti-mus -ì-ms, O.C.Sl. noštī-mū.

§ 372. 5. u-stems. Pr. Idg. *sūnu-bh- (-m-). Skr. sūnú-bhyas, Avest. bāzu-byō. Lat. manu-bus mani-bus lacu-bus laci-bus, see I § 49 pp. 41 f. and Bücheler-Windekilde pp. 124 f.; Umbr. beru-s 'verubus'. (Goth. sunu-m, see § 367 pp. 267 f., § 383). Lith. sūnu-mus -ù-ms, O.C.Sl. synomū for *synū-mū, which by some chance is never found, nor is *synū-mī (§ 282 p. 189).

§ 373. 6. n-stems. Pr. Idg. * $\hat{k}(u)uv$ -bh- (-m-), possibly assimilated * $\hat{k}(u)uv$ -bh-, see I § 222 p. 190. Skr. $\hat{s}v\dot{a}$ -bhyas $\hat{a}\dot{s}ma$ -bhyas, Avest. $d\bar{a}ma$ - $by\bar{o}$ and $draom\bar{e}$ - $by\bar{o}$ (draoman-'assault, onset') with - \bar{e} - from the es-stems ($man\bar{e}$ - $by\bar{o}$, § 376) by reason of the identical loc. ending in the two classes ($d\bar{a}mohu = *d\bar{a}mahu$ like manahu, § 361 p. 263). Lat. homin-i-bus Osc. teremn-i-ss 'terminibus', but Umbr. k arn-u-s

'carnibus', homon-u-s 'hominibus', see § 367, p. 268. Lith. szun-i-mus akmen-i-mus -i-ms, O.C.Sl. kamen-ī-mū following i-flexion, but O.C.Sl. keeps poljamū for *poljān-mū (I § 219 pp. 185 f.), see § 367 p. 269.

§ 374. 7. r-stems. Pr. Idg. *mātṛ-bh- *dōtṛ-bh- (-m-). Skr. mātṛ-bhyas dắtṛ-bhyas, Avest. māter-byō dāter-byō. Lat. mātr-i-bus datōr-i-bus, Umbr. fratr-u-s fratr-u-s fratribus' ner-u-s 'proceribus'. Gall. mātre-bo (ματρεβο) 'matribus'; it is not certain whether -re- = Idg. -ṛ- (-re- instead of O.Kelt. -ri- I § 298 p. 236, as in vergo-bretu-s beside O.Ir. breth f. 'sentence, judgement' = Idg. *bhṛ-tā), or if the word once was *mātr-i-bo, and has changed to mātrebo under the influence of i-stems; ep. O.Ir. instr. māthraib māithrib § 385. (Goth. brō̄pru-m, O.H.G. muoterum, see § 367 pp. 267 f., § 385). Lith. moter-i-mus -ì-ms O.C.Sl. mater-ĭ-mū, following the i-class.

§ 375. 8. Stems ending in an Explosive.

Pr. Idg. *bhrĝhųd-bh- (-ųt-m-), from the stem *bhrĝhont-. Skr. brhád-bhyas; Avest. ber zad-byō, ber zanbyō with substitution of the strong stem, and ber zapbyō with the nom. acc. sing. in place of the stem (§ 356 p. 259). Lat. ferent-i-bus, Umbr. aset-u-s 'agentibus', see § 367 p. 268. (Goth. frijōnd-a-m tunp-u-m etc., see § 386.) Lith. vēžantē-ms (pronominal ending), O.C.Sl. vezašte-mŭ like a jo-stem; Lith. dant-ì-ms 'dentibus', O.C.Sl. telet-ĭ-mŭ (see § 244 pp. 142 f.).

Skr. Ved. $n\acute{a}dbhyas$ for *nabd-bhyas from $n\acute{a}p\bar{a}t$ -napt-'descendant', cp. Avest. loc. $naf\check{s}u$ § 363 p. 264. (Goth. tigum 'decadibus' for pr. Germ. *tezun(d)-m-, see § 386).

d-stems. Skr. śarád-bhyas 'to autumns'. Skr. pad-bhyás Avest. pad-byō, Lat. ped-i-bus Umbr. du-purs-u-s 'bipedibus' (§ 367 p. 268). (Goth. fōt-u-m, § 386).

Skr. $v\bar{a}g$ - $bhy\acute{a}s$ 'vocibus', Avest. $v\bar{a}\gamma \check{z}^eby\bar{o}$ from a base not found elsewhere, $v\bar{a}c(a)h$ -, or it may contain the nom. $v\bar{a}x\check{s}$ instead of the stem (§ 356 p. 259), Lat. $v\bar{o}c$ -i-bus following the i-declension. Skr. $vi\dot{q}$ - $bhy\acute{a}s$ Avest. $v\bar{\imath}\check{z}$ - $by\bar{o}$ pr. Ar. * $ui\check{z}$ - $bhi\acute{a}s$ from $vi\dot{s}$ - $v\bar{\imath}s$ - 'clan, village community' (I § 404 p. 299), but contrariwise Skr. dig- $bhy\acute{a}s$ (stem $di\dot{s}$ - 'direction') instead of

*diḍbhyas follows dikṣú and dik (§ 356 p. 259). Lat. lēg-i-bus Osc. lig-i-s 'legibus' following the i-class.

Skr. $adbhy\acute{a}s$ Avest. $aiwy\bar{o}$ from the stem ap- 'water', see I § 328 p. 265.

§ 376. 9. s-stems. Pr. Idg. *menez-bh- (-es-m-) from nom. sing. *menos. Skr. mánō-bhyas instead of *manadbhyas following mánō, similarly Avest. manē-byō instead of *manaz-byō following Gāthic manē, see § 356 p. 259 and Bartholomae Kuhn's Zeitschr. XXIX 572 f. and 582, Stud. zur idg. Spr. I 2 f. Lat. gener-i-bus follows the i-class. (O.H.G. kelbir-um, see § 387). Lith. debes-ì-ms O.C.Sl. sloves-ĭ-mŭ following the i-class.

Skr. sudábhyas Avest. hudåbyō (stem su-dás- hu-dāh- 'giving richly'), instead of *sudādbh- *hudāzb-, following the nom. sudá hudå (§ 356 p. 259). But there are some regular forms, as Ved. mādbhyás (later mābhyás) from mās 'mensis', and uṣádbhyas (later uṣóbhyas) from uṣás- 'dawn'. Lat. mēns-i-bus, ep. O.Ir. mīs-i-b § 387.

Skr. havír-bhyas instead of *havídbhyas (cp. viprúdbhyas from vipruš- 'drop, crumb') following the nom. havír 'libation'; but Avest. snaiþiž-byō is regular (inferred from snaiþiž-bya § 304 p. 204).

Comparative. Pr. Idg. $*\bar{o}\hat{k}iz-bh-(-is-m-)$. Skr. $\acute{a}\dot{s}\bar{\imath}y\bar{o}-bhyas$ like $m\acute{a}n\bar{o}-bhyas$. Lat. $\bar{o}ci\bar{o}r-i-bus$ like an i-stem. O.C.Sl. $sla\check{z}d\check{\imath}\dot{s}e-m\check{\imath}$ like a i-stem.

Part. perf. act. Pr. Idg. *ueiduz-bh- (-us-m-). Skr. vidvád-bhyas with the strong suffix -vas-, Avest. vīđūžbyō. Lith. mirusë-ms (pronominal ending), O.C.Sl. mĭrŭše-mŭ like a io-stem.

Lat. $m\bar{u}r$ -i-bus and O.C.Sl. $my\check{s}\check{\imath}$ - $m\check{u}$ declined in the i-class, pr. Idg. * $m\bar{u}z$ -bh- * $m\bar{u}s$ -m-.

§ 377. 10. $\bar{\imath}$ - $i\dot{\jmath}$ - and \bar{u} - uu-stems, and stems in $-\bar{\imath}$, $-\bar{\jmath}$, $-\bar{\imath}$.

Pr. Idg. $-\bar{\imath}-bh$ - $-\bar{\imath}-bh$ -, $-\bar{\imath}-m$ - - $\bar{\imath}-m$ -. Skr. $dh\bar{\imath}-bhy\acute{a}s$ $nad\acute{\imath}-bhyas$, $bhr\ddot{\imath}-bhy\acute{a}s$ $\acute{s}va\acute{s}r\acute{u}-bhyas$. Lat. $s\bar{\imath}-bus$, also $s\breve{u}-bus$, doubtless because of $s\breve{u}-is$ etc. (cp. Gr. $\acute{v}a\acute{s}$ § 365 pp. 265 f.),

and su-i-bus. (O.Icel. $s\bar{u}$ -m, see § 388.) Lith. $\dot{z}uv$ -i-ms O.C.Sl. $kr\ddot{u}v$ -i- $m\ddot{u}$ in the i-class, but $svekr\ddot{u}va$ - $m\ddot{u}$ in the \bar{a} -class (cp. $svekr\ddot{u}va$ - $ch\ddot{u}$ § 365 p. 266).

Skr. $g\bar{\imath}r$ -bhyás, $p\bar{\imath}r$ -bhyás, $g\bar{o}$ -ṣã-bhyas (the last not actually found) for * $g\bar{\imath}$ -bh- etc., like nom. sing. $g\hat{\imath}r$ etc., see § 197 p. 76.

§ 378. 11. Skr. $n\bar{a}u$ - $bhy\acute{a}s$, Lat. $n\bar{a}v$ -i-bus in the i-class. Skr. $g\acute{o}$ -bhyas, Lat. $b\bar{u}$ -bus $b\bar{o}$ -bus. Skr. $r\bar{a}$ - $bhy\acute{a}s$, Lat. $r\bar{e}$ -bus.

Instrumental Plural.1)

§ 379. 1. The Suffix. Stems in -o- had for their ending $-\bar{o}is$, which may perhaps be analysed $-o + a^x is$ (I § 150 p. 136); on O.C.Sl. -y see § 380. The other classes show the following endings: Skr. -bhiš Avest. -biš O.Pers. -biš = pr. Ar. *-bhiš: Armen. -bk -vk (which Bugge conjectures to be *-bhis-u, as he supposes -k in the nom. pl. to be *-(e)s-u, see § 313 p. 212); Gr. $-\varphi_{i} - \varphi_{i} v$; O.Ir. -b = pr. Kelt. *-bis (-i- has left its mark in the palatal vowel of the preceding syllable. and -s in the usual absence of any spirant as the initial of the following word, see I § 576 p. 432, § 658.1 p. 510; Windisch, Paul-Braune's Beitr. IV 221); Germ. *-miz (O.Icel. -mr, as bri-mr \\$ 383, O.West-Germ. Vatv\bar{\tau}-ms \\$ 382) and *-mi: Lith. -mis dial. -mi, O.C.Sl. -mi. Lith. dial. pl. -mi beside sing. -m (see the Author, Lit. Volksl. und Märch., p. 297) and Lett. -mi (§ 367 pp. 267 f.) point to *-mī; similarly, Lett. wită-mis 'here and there' from wita 'place' (Bielenstein, Die lett. Spr., II 34) doubtless points to *-mīs.2) Consequently

¹⁾ Compare the footnotes on pp. 173, 256, and 266.

²⁾ The area over which the Lith. pl. -mi extends has yet to he determined. It seems to be as early as Bretken, in the form sunumi, see Bezzenberger Beitr. zur Gesch. der lit. Spr., 149. The ending cannot be the same as the sing. -mi, because the sing. suffix always appears as -m in Godlewa. It is not probable that -mi and the Lett. pl. -mi have lost -s through heing used before spirants, and that the forms thus produced became the only ones. Lett. -mi, if Lettic alone be taken into account, might as a last resort be regarded as the singular form; compare abbu rûku 'with both hands', in Bielenstein II 23, also singular in form. But it may not be separated from the Lith. pl. -mi. Lastly, as to the

Lith. -mis will represent an older *- $m\bar{\imath}s$, and O.C.Sl. -mi an older *- $m\bar{\imath}$ or *- $m\bar{\imath}s$. It follows that we may regard as proethnic *-bhi(s) and *-mi(s), perhaps also the same forms with a long -i, *- $bh\bar{\imath}(s)$ *- $m\bar{\imath}(s)$. If -mi and - $m\bar{\imath}$ were both proethnic, the different quantity has been turned to account in Baltic, and possibly in Slavonic (that is, if -mi never had an -s) to distinguish singular and plural. On the whole question compare § 367 pp. 267 f.

The Avesta contains plural instrumentals in -is from consonant stems, as $n\bar{a}m\bar{e}n-\bar{i}\dot{s}$ $a\dot{s}aon-\bar{i}s$ $savarehat-i\dot{s}$ (savarehant-'useful'), which, like the instr. in -āiš and sporadically those in -bīš, are used sometimes as nom. acc. neuter. No trustworthy evidence of these forms has been found in other languages; Bartholomae's comparison of Gr. ans also zoois is very dibious; compare further Curtius Grundr. 5 650, and Strachan in Bezz. Beitr. XIV 176. So long as this is the case, and their extended use has not been explained, we must hesitate to regard them as being original instrumental forms, tempting though it may be to suppose that this -is is related to the ending $-ois = -o + a^x is$ as the abl. -d of Skr. ma-d to $-\bar{o}d = -o + a^{x}d$ (§ 240 pp. 133 f.). See Bartholomae, Bezz. Beitr. XV 16 f., Stud. zur idg. Spr., I 75 f. Perhaps Bartholomae's comparison of the instrumental sing. nāmēn-ī takes us a step further. For this suggests the obvious conjecture that $n\bar{a}m\bar{e}n$ - \bar{i} \bar{i} $n\bar{a}m\bar{e}n$ - \bar{i} (\bar{e} = Ar. α) are instead of *nāma-mīš *nāma-mī (cp. Skr. sanē-mi § 282 pp. 187 f., and also O.Ir. annimm § 281 p. 186); when the m-suffixes were in course of dying out, m might easily be replaced by n taken from the other cases, and then $n\bar{a}m\bar{e}n\bar{i}\dot{s}$ might be regarded as containing a suffix -iš.

2. Form of the Stem. The remarks made in § 367.2 (pp. 268 f. above) apply here.

quantity of i in Lett. -mi -mis, the Lith. pl. -mi = *-mi and O.C.Sl. -mi support the view that the vowel was once long, and gives no countenance to a supposed exception to regular rule, whereby original short i should be kept in popular poetry against the recognised laws affecting final syllables.

In Old Irish the consonant-stem ending -ib was borrowed by some of the i-stems and some of those in -o- or -ā-. The forms were related to mnāib just as Lat. homin-i-bus mātr-i-bus etc. to equā-bus.

Germanic. The suffix of consonant stems was *-mi(s), not *-mi(s) or *-mi(s) as assumed by Kluge and others; which we are doubtless to infer from tigum for *tezun(d)-mi = Skr. daśád-bhiš (§ 386).¹) The -um of Goth. A.S. O.Sax. fōt-um, Goth. mēnōp-um etc. arose from A.S. earnu-m (§ 384), Goth. brōpru-m (§ 385), sunu-m (§ 383); and the spread of this -um, along with the -a-m of o-stems (Goth. frijōnd-am reik-am) and the -i-m of i-stems (Goth. baúrg-im) was due to the same desire after uniformity of stem which produced φερόντ-εσσι -oις to take the place of φέρονσι (§ 360 p. 262). -am was naturally suggested by the analogy of the gen. pl.; e. g. frijōndē: vulfē.

§ 380. 1. o-stems. Pr. Idg. *ulqōis; the European languages have -ois for -ōis in accordance with I §§ 611 ff. Skr. vṛkāiṣ, Avest. vehrkāiṣ. Gr. λύzοις, also locative (§ 356 p. 257, § 357 p. 260). Lat. lupīs O.Lat. oloes 'illis' (I § 81 p. 74), Umbr. veskles vesclir 'vasculis' vereir 'porta' alfer 'albis' (I § 81 p. 75), Osc. Núvlanúſs 'Nolanis' nesimois 'proximis': cp. § 357 p. 260. Lith. vilkaīs.

¹⁾ The comparison of tigum with Skr. dašá-bhiš, which has lately found another champion in J. Schmidt (Urheimath der Indog., pp. 25 f.), is not to my mind convincing; for $*de\hat{k}m$ was an adjective and not an abstract substantive. Schmidt cites a passage from a Lithuanian tale, in which he translates isz trijú devyniú stukéliu 'of three nines of pieces', and says the phrase illustrates the transition from the adj. 'ten' to the subst. 'ten'. This is not to be admitted, because the expression is something quite strange to Lithuanian; and the context, which refers to a superstitious belief, should first itself have been explained. Schmidt scores a point against us in remarking that no Germanic t-stem has lost this explosive in the dat.-instr. pl. as I assume. This is true enough; but neither is there any other form in -um from a nasal stem which Schmidt can place by the side of his tigum = daśábhiš. From this, then, no conclusion can be drawn which could be decisive for one or other of these two explanations. My view has the support of Kluge (Paul's Grundr., I 404).

Since o-stems had -bhi and -mi in the instr. singular (\$\\$ 281, 282 pp. 186 ff.) it is not surprising that we find bhand m-suffixes in the plural along with -ois. Skr. Ved. výke--bhiš, Avest. vehrkae-ibiš O.Pers. martiyai-biš 'mortalibus'; cp. dat. vrkē-bhuas vehrkae-ibuō \$ 368 p. 269, and instr. sing. Skr. sanē-mi \$ 282 pp. 187 f. Armen, gailo-vk, cp. sing, gailo-v. Gr. παρ' αὐτό-φι 'with them', cp. ἀπὸ στρατό-φι 'from the host of ships'. O.Ir. feraib for *uiro-bis. Goth. vulfa-m O.H.G. wolfum wolfom O.Icel, ulfum, cp. O.H.G. zi houbitun § 282 p. 188. Is West-Germ, and Norse -um = Goth. -a-m, or is it an extended use of the -um discussed in § 379 p. 275? O.H.G. -im, as in hirtin beside hirtum (Goth. hairdiam). appears to show -i-, the weak-grade form of the suffix -io-(Streitberg, Paul-Br. Beitr. XIV 189), and the same view may be taken of i in O.Ir. $c\bar{e}lib$ (beside $c\bar{e}le$ 'comrade'), cp. O.C.Sl. dat. pl. žŭlodějimů § 368 Rem. p. 269, and O.H.G. diaīm § 382.

An isolated form is seen in O.C.Sl. $vl\bar{u}ky$, kraji (kraji border') with $-j\bar{\imath}$ for *-jy (I § 60 p. 47). The same ending occurs with consonant stems, but only in the neuter, as imen-y § 384; which suggests a conjecture that in o-stems also it was originally peculiar to the neuter. We are still in the dark as to the origin of this -y. So far as we can tell from the Slavonic sound-laws discovered thus far, it cannot be compared with the Idg. ending *- $\bar{o}is$, notwithstanding W. Schulze's paper in Kuhn's Zeitschr. XXVII 421, and the new discussion of Wiedemann, Das litau. Praet., p. 47. We may conjecture that *- $\bar{o}is$ would become first *-ois and then an -i or -i.

Remark. I should like to throw out the question whether the adverbial ending -y, as in maly 'little', is the $*-\bar{u}$ of the acc. pl. of u-stems (§ 339 p. 239), so that maly originally meant 'pauca'. If such adverbs as this became equivalent in use to those in -mi (cp. Miklosich, IV 712), -y might come to be added to the instr. pl. It would then have crept into the regular case-system just as the adv. ending *-tos did in Sanskrit and Armenian (§ 244 pp. 141 f.). If *- $\bar{o}is$ finally became *- \check{e} or *-i, a desire to differentiate once again cases which had run together in form may have caused -y to become the regular ending.

§ 381. 2. \bar{a} -stems. Pr. Idg. * $e\hat{k}\psi\bar{a}$ - $bh\bar{i}$ (s) (- $m\bar{i}$ -(s)). Skr. $\acute{a}\acute{s}v\bar{a}$ - $bhi\check{s}$, Avest. $haen\bar{a}$ - $bi\check{s}$. (Gr. $\acute{a}\gamma\acute{s}\lambda\eta$ - $\varphi\iota$ and so forth only in the singular.) O.Ir. $mn\bar{a}ib$ tuath aib . Goth. $gib\bar{o}$ -m, O.H.G. $geb\bar{o}$ -m. Lith. $ra\bar{n}ko$ -mis dial. -mi, O.C.Sl. raka-mi.

Gr. χώραις, Lat. mēnsīs Umbr. anzeriates aseriater 'observatis' Osc. Diumpaís ('nymphis') are re-formates on the model of -ois, the o-stem ending.

§ 382. 3. $\bar{\imath}$ - $i\bar{e}$ -stems (cp. footnote to page 68). Pr. Idg. * $bh\bar{\gamma}\hat{g}h\bar{\gamma}t\bar{\imath}$ - $bh\bar{\imath}(s)$ (- $m\bar{\imath}(s)$). Skr. $b\gamma hat\bar{\imath}$ - $bhi\bar{s}$, Avest. barenti- $bi\bar{s}$. O.Ir. insib. O.West-Germ. inscr. $Vatv\bar{\imath}$ -ms $Aft\bar{\imath}$ -ms beside the Latinised forms $Vatvi\bar{a}$ -bus $Alfi\bar{a}$ -bus in the period shortly after the commencement of our era (Much, Zeitschr. für deutsch. Alt. XXXI 354 ff.); perhaps examples may be found in some of the O.H.G. $\bar{\imath}$ -abstracts, such as $dig\bar{\imath}$ -m 'to prayers', cp. the gen. pl. § 347 p. 249. With $-i\bar{\imath}$ -: Lith. $\check{\imath}$ emė-mis dial. -mi, O.C.Sl. zemlja-mi.

Gr. φερούσαις, Goth. frijōndjō-m O.H.G. kuninginnō-m, Lith. vežanczio-mis -mi O.C.Sl. veząšta-mi as if ā-stems (cp. footnote on page 68).

§ 383. 4. i- and u-stems.

Pr. Idg. *oui-bhǐ(s) (-mǐ(s)). Skr. ávi-bhiś. Armen. srti-vk. O.Ir. fāithi-b tri-b. Goth. ansti-m O.H.G. ensti-m; O.Icel. pri-mr ('three') — the Runic gestuma ('guests') follows the o-class, cp. Noreen in Paul's Grundr. I 493, Burg, Die ält. nord. Runeninschr., 77. Lith. nakti-mìs dial. -mì, O.C.Sl. noštĭ-mi.

Pr. Idg. $*s\bar{u}nu-bh\bar{i}(s)$ (- $m\bar{i}(s)$). Skr. $s\bar{u}n\acute{u}-bhi\check{s}$, Avest. $b\bar{u}zu-bi\check{s}$. Armen. zardu-k for *-uv-k. Goth. sunu-m, O.H.G. sitim as though an i-stem. Lith. $s\bar{u}nu-mis$ dial. -mi, O.C.Sl. $syn\check{u}-mi$. How to regard O.Ir. $beth^aib$ is uncertain.

Remark. In Irish we are struck with the almost universal 'breaking' or 'infection' of the vowel of the stem, as fedaib mogaib; since *vidu-bis would have become fiduib fidib or something of that kind. Breaking has been caused either by the influence of o-stems or by a coincidence of ui and ai in unaccented syllables.

§ 384. 5. n-stems. Pr. Idg. * $\hat{k}(u)uv$ - $bh\bar{i}(s)$ or * $\hat{k}(u)uv$ - $-bh\bar{i}(s)$ I § 222 p. 190 (- $m\bar{i}(s)$). Skr. $\dot{s}v\dot{a}$ - $bh\dot{s}$ $\dot{a}\dot{s}ma$ - $bh\dot{s}$.

Avest. dāma-bīš, dāmē-bīš like draomē-byō § 373 p. 270. Armen. akam-bīk. Gr. χοτνληδον-ό-φι instead of *χοτνληδο-φι *χοτνληδο-φι like μειόν-οις instead of μείο-σι *μεια-σι (§ 361 p. 263). O.Ir. con²-ib, fiadn²-ib (fiadu 'witness'), toimten²-ib, see § 379 p. 275. A.S. oxnum O.Icel. yxnum ('oxen') A.S. earnum O.Icel. qrnum ('eagles') O.Icel. bjqrnum ('bears'): here-n- was borrowed from the gen. pl. and acc. pl., but *-um came from -η-m- (earlier -η-m-), cp. § 332 p. 233; thus the principle is the same as gave rise to Gr. ἀρνάσι, earlier *ἀρα-σι (§ 361 p. 263). This shews that there once was in Germanic an instr. in *-umi from a nom. in *-an-iz, like Armen. akam-bīk anjam-bīk from akun-īk anjin-īk, Gr. φρα-σί from φρέν-ες and so forth. Lith. szun-i-mīs akmen-i-mīs dial. -mī, O.C.Sl. kamen-ī-mī as though an i-stem, O.Slav. polja-mī like polja-mī § 373 p. 271; O.C.Sl. neut. imen-y like igy § 380 p. 276.

Germanic. Goth. gumam = *guman-mi, like tuggōm manageim O.H.G. zungōm menigīm for *-ōn-mi *-īn-mi; O.H.G. gomōn a re-formate like gomōno § 350 p. 252. The old ending is seen varied in another way in Goth. aúhsnam ('oxen') abnam ('men'), neut. vatnam (nom. acc. vatna), cp. gen. aúhsnē: vulfē; similarly frijōndam because of frijōndē, see § 379 p. 275.

- § 385. 6. r-stems. Pr. Idg. * $m\bar{a}t\gamma$ - $bh\bar{i}(s)$ * $d\bar{o}t\gamma$ - $bh\bar{i}(s)$ (- $m\bar{i}(s)$. Skr. $m\bar{a}t\gamma$ - $bhi\bar{s}$ dát γ - $bhi\bar{s}$, Avest. $m\bar{a}ter^e$ - $bi\bar{s}$ dāt er^e - $bi\bar{s}$ (inferred from the dat. plural). Armen. mar-bk dster-bk. O.Ir. $m\bar{a}thr^a$ -ib $m\bar{a}ithrib$ is just as ambiguous as Gall. $\mu\bar{a}\tau\rho\varepsilon\beta\sigma$, see § 374 p. 271. Goth. $br\bar{o}pru$ -m, O.H.G. muoterum. Lith. moter-i-mis -mi, O.C.Sl. mater- \bar{i} -mi following the i-class.
- § 386. 7. Stems ending in an Explosive. Pr. Idg. *bhrĝhyd-bhis(s) (-yt-mis(s)). Skr. brhád-bhis; Avest. berezad-bis, with strong stem berezanbis, and with the nom. acc. sing. neut. form in place of the stem berezap-bis (§ 356 pp. 259 f.). O.Ir. cairti-b, see § 379 p. 275. Goth. frijond-am O.H.G. friunt-um, Goth. tunp-um A.S. tod-um O.Icel. tonn-um (cp. Skr. dad-bhis, Lith. dant-i-mis -i-mi), see § 379 p. 275.

Lith. vežancziais O.C.Sl. vezašti as through jo-stems; O.C.Sl. telet-y (tele n. 'calf', see § 244 pp. 142 f.) like igy § 380 p. 276.

Avest. azd°-bīš from ast- u. bone'. Goth. tigum 'decadibus' for *tezun(d)-mi like Skr. daśád-bhiš, Idg. *dekmd-bh- *dekmt-m-, cp. § 379 p. 275.

d-stems. Skr. śarád-bhiş. O.Ir. druidi-b, see § 379 p. 275. Skr. pad-bhiş,¹) Avest. Gāthic pad e -b $\bar{\imath}$ s, Goth. O.Sax. fōt-um O.H.G. fuaz-um (§ 379 p. 275).

Skr. $v\bar{a}g$ -bhíš from $v\acute{a}c$ - 'vox'. As to Skr. vidbhíš- $r\bar{a}dbhiš$ and digbhíš, see § 375 p. 271. Avest. maz- $b\bar{i}š$ (maz-'great') instead of * $ma\check{z}$ - $b\bar{i}š$ following the dat. sing. maz- $\bar{o}i$ etc. Beside Avest. $v\bar{i}\check{z}$ - $by\bar{o}$ Skr. vid- $bh\acute{i}\check{s}$ we find O.Pers. $v\bar{i}pibi\check{s}$ (as we should read, not $v\bar{i}paibi\check{s}$), but we know too little of the language to pronounce upon it. Goth. reikam, but $ba\acute{u}rg$ -im, see § 379 p. 275.

Skr. adbhíš from ap- 'water' like adbhyás § 375 p. 272.

§ 387. 8. s-stems. Pr. Idg. *menez-bhī(s) (-es-mī(s)). Skr. mánō-bhiṣ, Avest. manē-biš (= Pāli manē-(b)hi? vid. Bloomfield, Am. Journ. Phil. III 36), see § 376 p. 272; similarly O.Pers. rauca-biš following the nom. acc. rauca 'day' (Avest. raocō). Gr. ὄρεσ-φι. O.Ir. tigib perhaps for *teges-o-bis, as in the dual, see § 304 p. 204. Goth. agis-am O.H.G. kelbir-um, cp. § 343 p. 243; does O.H.G. sigim stand for *sezes-mi? compare § 226 p. 108. Lith. debes-i-mis dial. -mì after the i-flexion, O.C.Sl. sloves-y like igy § 380 p. 276.

Skr. $sud\acute{a}$ -bhi§ Avest. $hud\mathring{a}$ - $b\bar{\imath}$ §, Skr. $m\bar{a}d$ -bhi§ $m\bar{a}$ -bhi§ u§ $\acute{a}d$ -bhi§ like the answering dative forms, § 376 p. 272. O.Ir. $m\bar{\imath}s^a$ -ib for * $m\bar{\imath}s$ -o-bis (§ 379 p. 275), cp. Lat. dat. $m\bar{e}ns$ -i-bus.

Skr. havír-bhiš Avest. snaiþiž-biš, comparative Skr. ášīyō-bhiš, participle Skr. vidvád-bhiš Avest. vīdūž-bīš, like the dative forms § 376 p. 272. O.C.Sl. slaždīši, Lith. mirusiais O.C.Sl. mīrūši as though jo-stems.

There never was a form padbhis from pad-, see Bartholomae, Bezz. Beitr. XV 3 ff.

A.S. O.Icel. *mūs-um* O.C.Sl. *myšī-mi* from **mūs-* 'mouse', see § 376 p. 272, § 379 p. 275.

§ 388. 9. $\bar{\imath}$ - $i\dot{\imath}$ - and $\bar{\imath}$ - uu-stems, stems in $-\bar{\imath}$, $-\bar{\iota}$, $-\bar{\imath}$.

Skr. $dh\bar{\imath}$ - $bhi\check{\imath}$ $nad\acute{\imath}$ - $bhi\check{\imath}$ $bhr\bar{\imath}$ - $bhi\check{\imath}$ \dot{s} va \dot{s} r $\dot{\imath}$ - $bhi\check{\imath}$. (Gr. sing. $\tilde{\imath}$ - $\varphi\iota$.) O.Icel. $s\bar{\imath}$ -m ('sows'). Lith. \check{z} uv-i-mis dial. -mi, O.C.Sl. $kr\check{\imath}$ uv- $\check{\imath}$ -mi after the system of i-stems, but sve $kr\check{\imath}$ uv- α -mi like a stem in $-\bar{\alpha}$ - (cp. svekr $\check{\imath}$ uv- α -ch $\check{\imath}$ § 365 p. 266). Compare § 377 pp. 272 f.

Skr. $g\bar{\imath}r$ - $bhi\dot{\imath}$, $p\bar{\imath}r$ - $bhi\dot{\imath}$, $g\bar{\jmath}-\dot{\imath}a$ - $bhi\dot{\imath}$ (the last not found), for $*g\bar{\imath}-bh$ - etc., like the nom. sing. $g\dot{\imath}r$ etc., see § 197 p. 74.

Skr. g δ -bhí \S Avest. gao- $b\bar{i}s$; Mid.Ir. buaib doubtless not for $*b\bar{o}$ -bis, but originally a dissyllable bu-aib for *bo-aib (Thurneysen); O.Icel. $k\bar{u}$ -m A.S. $c\bar{u}$ -m O.Low-Frankish cuon. Skr. $r\bar{a}$ -bhí \S . Compare § 378 p. 273.

The Influence of Analogy as seen in the Transformation of whole Case-Systems in the separate languages (Metaplastic series).

§ 390. In the foregoing paragraphs (§§ 190 to 389) the history of each single case has been traced through the separate languages of our group; and in so doing we have often come across cases, or even whole systems of cases, which have been affected by metaplasm. But it was impossible to present a sufficiently wide survey of such forms when they were not single cases, but groups; and a large number of them have not been mentioned at all. Our next task then is to collect and supplement these examples. Still, we must give up the idea of giving a complete list; mention will be made only of what is remarkable or characteristic.

Remark 1. A more exhaustive study would show, particularly if it dealt with later or quite modern periods, 1) how often similar

¹⁾ Compare, for example, Torp, die Flexion des Pali, Christiania 1881; Vetter, Zur Gesch. der nomin. Decl. im Russ., Lpz. 1883; Baudouin

causes have produced exactly the same effects in different languages for example, the disuse of the consonant flexion and the adoption of vowel flexion instead. It is true always, as it is true here, that where we can trace certain principles acting in later periods, we may use these as our guides in dealing with prehistoric times.

Remark 2. The mutations of form which we are now to discuss arose chiefly from proportional analogy; that is, the likeness of two forms of a form-system caused others, hitherto unlike, to be assimilated to each other. To suppose (as certain scholars do) that all arose in this way, and could arise in no other, is wrong: one out of many proofs that this is a mistake is Ar. napāt-'descendant', which takes the flexion of kinship names such as bhrātar- 'brother', e. g. Skr. nápty-bhyas beside ná(b)d-bhyas, Avest. naptūr-em beside napāt-em; the two case-groups had had no point of contact before this assimilation took place. Compare the general remarks on the principles involved, by the Author, Liter. Centralbl. 1880 p. 944; Paul, Principien 95; Wackernagel, Kuhn's Zeitschr. XXV 289 f.; Wheeler, Analogy (Ithaca, N. Y. 1887) pp. 9 ff.; Bartholomae, Kuhn's Zeitschr. XXIX 524 ff.; Michels, Zum Wechsel des Nominalgeschlechts, I (1889) pp. 10 f.; Bojunga, Die Entwicklung der nhd. Substantivflexion, pp. 1 ff.

Lastly, we shall give a few systems of declension for which no certain connexion has been proved with any Indo-Germanic case-system.

§ 391. I. In proethnic Aryan sprang up a new type of inflexion, in which weak and strong cases of <code>ien</code>-stems, with the suffix -in-, were united into one case-group with cases from i-stems, the latter dropping those of their weak cases which had a formative suffix beginning in a consonant, and the nom. acc. sing. neuter. The model for these groups was found in such as vártman-ē: vártma-bhyas vártma. Non-neuter stems then evolved a nom. sing. in -ī on the model of áśmā. Compare Skr. arcín- 'shining, beaming': arcí arcí arcín-am arcín-ē arcí-bhyas, Avest. kainīn- 'girl': kaini kainin-em kainīn-ō kaini-byō, O.Pers. vīþin- 'belonging to a clan, native': vīþi-biš; the nom. acc. sing. neut. in -i is not actually found in Iranian. In Sanskrit, nom. acc. pl. neut. arcíni, following vártmāni, was added to the list. The pr. Ar. nom. sing. in -iā -iāā is

de Courtenay, Einige Fälle der Wirkung der Analogie in der poln. Decl., Kuhn-Schleicher's Beitr. VI 19 ff.; K. Bojunga, Die Entwicklung der nbd. Substantivflexion, Lpz. 1890.

perhaps preserved in Skr. kanyà (kaniyā) Avest. kaine (-e = -ya) 'girl, maiden', which kept its ā-flexion because it was feminine (cp. below, Skr. yōṣā and the like). Compare II § 115 pp. 357 ff.; Streitberg, Paul-Braune's Beitr. XIV 210 ff.; Zubaty, Kuhn's Zeitschr. XXXI 51 f.

In the same period began the transfer of consonant stems to the o-class, caused by both having the same ending in the acc. sing. (-am), gen. pl. (-ām), and possibly the instr. sing. and the nom. acc. dual (-ā and -āu -ā § 280 p. 184, § 289 p. 196); this went still further in Avestic. Examples: Skr. pād-a-s pādās Avest. pādae-ibya beside the acc. pād-am pād-em pedem, Skr. Ved. pūṣáṇ-a-s beside acc. pūṣáṇ-am (the name of a god), dánt-a-s beside acc. dánt-am 'tooth', áṣnāiṣ beside instr. sing. áṣn-ā, stem áṣan- 'stone', Avest. ātarāiṣ beside acc. ātar-em 'fire'. More examples from the Avesta are given by Bartholomae, Ar. Forsch. I 94 f., and in his Handbuch, pp. 100 f. In India, this process made great strides in the popular dialects, and had a great deal to do with the loss of consonant declensions in this group; see Lassen, Inst. Ling. Pracr., pp. 314 ff.; E. Kuhn, Beitr. zur Pali Gr., pp. 67 ff.

Again, in Aryan were formed from *ušās = Skr. uṣās 'dawn' (s-stem) the acc. sing. *ušām = Skr. uṣām Avest. ušām and acc. pl. *ušās = Skr. uṣās Avest. ušā, on the analogy of stems with ā in the root (cp. e. g. Skr. -sthā-s 'standing': -sthā-m -sthās). Similarly, we find Skr. jarām jarāyāi from jarās- 'age', and others. Compare further Skr. acc. yōṣām dual yōṣā from nom. yōṣā 'maiden', which is an n-stem (pl. yōṣān-as), following the stem áṣvā-; O.Pers. taumā-'family' beside Avest. taoxman-, and the like, II § 114 Rem. 1 p. 348, § 117 Rem. 2 p. 369; but conversely the Avest. nom. sing. šōipra-pā 'guardian of the land' (pr. Ar. -pās and -pā, I § 556.3 p. 411), because it had the same ending as the nom. sing. of n-stems, was the origin of the nom. pl. -pān-ō.

Similarly, vant-stems changed into van-stems (e. g. Skr. fk-vant- and fk-van- 'singing' Avest. ama-vant- and ama-van- 'powerful' (see Bartholomae Kuhn's Zeitschr. XXIX 540 f.)

because the pr. Ar. nominative ending *- $v\bar{a}s$ had a variant *- $v\bar{a}$, a sentence-doublet. See § 198 pp. 78 f. Again, we have Ved. $vidv\acute{a}n$ -as from nom. sing. $vidv\acute{a}s$ $vidv\acute{a}n$ 'knowing' because of a prehistoric * $vidv\acute{a}$, a sentence doublet of * $vidv\acute{a}s$ (§ 193 p. 73), and others of the same sort.

The pr. Ar. ending *-uš in the nom. sing. (§ 193 p. 73) drew some cases of the perf. part. act. over to the u-flexion; e. g. Skr. pērú-m from pērúš 'pressing through' jigyú-bhiš from jigyúš 'victorious', Avest. jagāurū-m from jagāurūš 'watchful'.

The Aryan napāt- 'descendant' became gradually more and more completely assimilated in flexion to other names of kindred, such as bhrātar- 'brother', see § 390 Rem. 2; with this change compare Skr. gen. sing. pátyur 'of a husband' (páti-) jányur 'of a wife' (jáni-), following bhrātur mātúr etc.

§ 392. In Sanskrit, $\bar{\imath}$ - $i\dot{\imath}$ -stems, \bar{u} - $u\dot{\imath}$ -stems, and feminine i- and u-stems followed the track of $\bar{\imath}$ - $i\bar{e}$ -stems in some of their cases. Sing. gen. $dhiy\dot{a}s$ $nadiy\dot{a}s$ $bhruv\dot{a}s$ $\dot{s}va\dot{s}ruv\dot{a}s$, dat. $dhiy\bar{a}i$ etc., loc. $dhiy\dot{a}m$ etc.; and $\dot{a}vy\bar{a}s$ $\dot{a}vy\bar{a}i$ $\dot{a}vy\bar{a}m$, $dh\bar{e}nv\dot{a}s$ $dh\bar{e}nv\dot{a}i$ $dh\bar{e}nv\dot{a}m$. See §§ 231—233, 249—250, 255, 266—268. The cause of these re-formations was that the instr. sing. had the same formation in these classes, as $dhiy\dot{a}$ $\dot{a}vy\bar{a}$ like $d\bar{e}viy\dot{a}$ $brhaty\dot{a}$ (nom. $d\bar{e}vi$ brhati). Compare further the acc. pl. $\dot{a}v\bar{i}s$ $dh\bar{e}nis$ like brhatis (§§ 330—331) and the gen. pl. $dh\bar{\imath}n\dot{a}m$ $bhr\bar{\imath}n\dot{a}m$ $nadin\bar{\imath}n\bar{a}m$ $\dot{s}va\dot{s}r\bar{\imath}n\bar{\imath}m\bar{a}m$ like $brhat\bar{\imath}n\dot{a}m$ $-in\bar{a}m$ (§ 354). Thus, by proportional analogy, fem. i- and u-stems kept in these cases a sign of their gender.

Remark. I give only the $\bar{\imath}$ - $\underline{i}\bar{e}$ -stems as the model for this formation because I do not consider it has been proved that the pre-Aryan period possessed \bar{u} - $u\bar{e}$ -stems made on the same lines. A different account is given by J. Schmidt, Pluralb. 54 ff.

§ 393. A large number of Sanskrit i-, u-, and r-stems inserted between stem and inflexion an -n-, which came from Indo-Germanic n-stems. The n-stems had brought about in proethnic Indo-Germanic a transformation of the gen. pl. of \bar{a} -, o-, and $\bar{\imath}$ - $i\bar{e}$ -stems and of the nom. acc. pl. nenter of o-stems, which then spread to the i-, u-, and r-stems:

pr. Ar. -ānām and -īnām (iē-stems), then -īnām (i-stems), -ūnām, Skr. -īnām (§§ 345—349, 351): Skr. -āni -īni -ūni -rni, Avest. -eng (§§ 338-339, 341). Then again, Sanskrit i- and u-stems along with their instr. sing. in - $u\bar{a}$ and - $v\bar{a}$ adopted another in -inā and -unā, herein following the type of forms from ien- and uen-stems, as the masc. neut. arcin-a neut. áyun-ā. This was all the more natural because from an early period there had been some few pairs of stems, parallel and having the same meaning, one in -i- or -u- and one in -ien- or -uen-: e. g. auu- and auun- (*aivan-). There was a reason why the n-ending should gradually take the place of -vā -vā in the masculine and neuter instrumental (the change is not complete in Vedic, where there is variation still; see §§ 278—279 pp. 181 ff.). The reason was that -ya and -vā, viewed in connexion with forms like ávyās -yāi -yām dēnvās -vāi -vām, was taken to beloug to the feminine (cn. § 392); and -inā -unā were welcome as distinguishing the masculine and neuter from them. The -n- spread still further in the cases of the neuter, and here it included r-stems, as sing. gen. abl. śúcin-as cárun-as dhātŕn-as, dat. śúcin-ē etc., loc. śúcin-i etc., dual nom. acc. śúcin-ī etc., gen. loc. śúcin-ōš etc.; this formation is the regular one for i- and u-stems in classical Sanskrit. The reason for this mutation of form is to be found in the nom. acc. singular and plural: on noticing the parallelism of śúci cáru (dhātý) śúcīni cárūni (dhātṛni) and (e.g.) arci arcini, vártma vártmāni, what more natural than to supplement instr. neut. śúcinā cáruṇā (dhātṛṇā) by the other cases enumerated, on the analogy of arcin-as vártman-as etc.? Thus in this instance the n-flexion becomes a sign of the neuter. Compare J. Hanusz, Über das allmälige Umsichgreifen der n-Declination im Altindischen, Vienna 1885.

§ 394. II. Armenian. A characteristic of this language is the disappearance of the special neuter case-forms and of the feminine declensions (such as nu, gen. nuo-y, 'daughter-

in-law' beside Skr. $snu\check{s}\check{a}$). How these losses came about is not clear; and no less obscure are many heteroclite forms, and mutations of stem running through whole case-systems: e. g. (1) heteroclites: nom. pokr 'little' gen. poku pl. nom. pokun-k; (2) Stems changed: amis 'month' hur 'fire' are declined in the o-class, contrast Gr. $\mu\eta\nu(v)$ - and $\pi\tilde{v}_0$.

§ 395. III. Greek. (1) In \bar{i} - $i\bar{e}$ -stems, $-i\bar{a}$ - takes the place of $-i\bar{e}$ - (cp. the footnote on p. 68), as gen. $\delta t \bar{\alpha} \varsigma$ Ion. $\delta t \eta \varsigma$ (nom. δĩa), μιᾶς (nom. μία) in contrast with Lith, dëves: this change in later times went further, and caused the nom. acc. sing. to be assimilated to iā-stems, εταίρā instead of *εταιρα etc. (II § 109 p. 333, III § 191 p. 69). (2) We see new paradigms like ονομα ονόματος etc., ήπαρ ήπατος etc. (II § 82 p. 250, § 144 p. 350, § 116 pp. 364 f., § 117 p. 370, III § 244 p. 142); and a wider application of the τ - and of the δ - and θ -flexion, the history of which is not yet fully cleared up, e. g. τέρατbeside τέρας τεράων, γέλωτ- beside γέλως γελάσ-σαι (ΙΙ § 134 p. 425) following $d\gamma\nu\omega\zeta$ - $\tilde{\omega}\tau$ -os, $\tilde{\iota}\delta\rho\iota\delta$ - beside $\tilde{\iota}\delta\rho\iota$ -s $\tilde{\iota}\delta\rho\iota$ -v, $\tilde{\epsilon}\rho\iota\delta$ beside ξ_{0i-g} ξ_{0i-v} , $\delta_{0}v\bar{\imath}\vartheta$ - beside $\delta_{0}v\bar{\imath}$ -g. (3) In the comparative, ien-cases find favour at the expense of those with -ies-, as ηδίων (II § 135 pp. 429 f.). (4) ues- and uet-cases are combined to make up the system of the perfect participle active (II § 136 pp. 439 f.; 443 f.). (5) In *ien*-stems, the weak form $-\bar{\iota}\nu$ - becomes the only one, as $\delta \epsilon \lambda \varphi \bar{\iota} \nu$, and there are new singular nominatives in -īς and -īν (II § 115 p. 359). (6) The declension λέων -οντος instead of *λέονος, following φέρων -οντος and the rest (II § 114 p. 350; compare III § 198 p. 78). (7) Cases from masc. es-stems are made like a-stem cases, and vice versa, — due to the nom. sing. $(-\bar{e}s:-\bar{a}s)$: as Att. $\sum_{\omega \times \rho} \acute{a}\tau \eta \nu - \times \rho \acute{a}\tau \sigma v$ (\sum_{ω} -χρατες-), Lesb. Έρμο-γένης -η -η -ην -ε (Έρμο-γενεσ-), like 'Ορέστας etc.; and for the opposite process Att. Στρεψιάδους Στρεψίαδες (Στρεψιαδά-), Ιου. δεσπότεα (δεσποτά-) (see § 209 p. 88, § 220 p. 97, § 229 pp. 115 f., § 237 pp. 128 f.); and the Lesb. Boeot. Dor. feminines in -ώ -ψ (Δατώ) take the

α-flexion $(-\bar{\alpha} - \bar{\alpha}\varsigma - \bar{\alpha} - \bar{\alpha}v)$. (8) $\mu \dot{\epsilon} \gamma \alpha \varsigma$ and $\mu \dot{\epsilon} \gamma \alpha v$ beside the neut. $\mu \dot{\epsilon} \gamma \alpha$ (whether this be from *megn or *megn), following $\dot{\gamma} \delta \dot{v} - \varsigma \dot{\gamma} \delta \dot{v} - v : \dot{\gamma} \delta \dot{v}, \ \dot{\iota} \delta \rho \iota - \varsigma \ \dot{\iota} \delta \rho \iota - v : \dot{\iota} \delta \rho \iota$.

The class of feminines in $-\omega' - \omega'$ mentioned just above show very many varieties of flexion (voc. $\Lambda\eta\tau\sigma\tilde{i}$, acc. Cret. $\Lambda\bar{a}\tau\omega'r$ Ion. $\Lambda\eta\tau\sigma\tilde{i}r$ Att. $\Lambda\eta\tau\omega'$). They are regarded by some as being originally $\bar{\sigma}i$ -stems. Hitherto nothing has been found outside the Greek language with which they may be connected. Compare Danielsson, Om de grekiska substantiverna med nominativändelsen $-\omega$, Upsala univ. årsskrift 1883; J. Schmidt, Kuhn's Zeitschr. XXVII 374 ff.

§ 396. IV. Italic.1) A characteristic of this branch is the mixing and confusion of consonantal with i-stems. This was caused by ancient doublet stems, as noct- nocti- civitātcivitāti- (II § 102 pp. 308 ff.). Beginning in proethnic Italic, this confusion went on in Latin for centuries after the Christian era. Examples: i-stem forms are abl. sing. Lat. air-īd bov-īd praesent-ī Umbr. peř-i pers-i 'pede' Osc. praesent-id 'praesente', dat. abl. pl. Lat. ferent-ibus Osc. lig-is 'legibus', Lat. nom. ferent-ēs ferent-ia gen. ferent-ium, nom. carn-i-s beside caro. iuven-i-s, loc. Osc. Diúv-eí (cp. § 249 p. 151), gen. Osc. maatr-eis Umbr. matr-er 'matris'; while from consonant stems we have Lat. acc. ovem gen. ovis abl. ove beside nom. ovi-s, gen. opum vātum beside api-um vāti-um. See II § 93 p. 281, and III §§ 211 ff. under the separate cases. In Latin, abl. -7 gen. -ium nom. acc. -ia were most favoured by adjectives, but even in adjectives there was a good deal of irregularity. A clear resumé of the most important facts is given in the Latin Grammar of Schweizer-Sidler and Surber, I2 pp. 105 ff.

§ 397. Lat. vetus (acc. veter-em), an attribute of masc. and fem. substantives, was originally a neuter substantive (II § 132 p. 417). A new explanation is given by Thurneysen, Kuhn's Zeitschr. XXX 485 f., but to my mind not convincing. Compare Venus (Venerem) f., originally neuter, 'charm of love'.

¹⁾ Ásbóth, Die Umwandlung der Themen im Lat., Gött. 1875.

There are a number of metaplastic forms which follow the es-stems; c. g. su-er-is su-er-e beside su-em, bov-er-um beside bov-em, lapid-er-um nuc-er-um and others, recalling āns-er-and the spread of -es- in Germanic (II § 132 pp. 419 ff.).

Remark 1. Perhaps the following is the explanation of $\bar{u}ns-er$. There may have been in pr. Lat. both *hans- and *hanes- used together (cp. II § 132 pp. 412 f., § 160 p. 485), and the acc. (h)anser-em may have been made through the influence of (say) a gen. *(h)ans-is and an acc. *(h)aner-em. -er- may easily have spread to other words before the declension of $\bar{u}nser$ was fixed as we have it.

The endings $-\bar{o}rum$ and $-\bar{a}rum$ may have helped to make -er- a favourite suffix in the gen. plural, as it was (boverum etc.).

The plurals $sp\bar{e}r-\bar{e}s$ $v\bar{v}r-\bar{e}s$ (perhaps pre-Italic s-stems; see II § 134 p. 424; Kretschmer, Kuhn's Zeitschr. XXIX 170; J. Schmidt, Pluralb. 385) were coined for the sing. $sp\bar{e}-s$ $v\bar{v}-s$, because the plural nominatives which belonged to these, $sp\bar{e}s$ $v\bar{v}s$, need not be plural, as far as form went, and so often failed to convey a clear meaning (cp. Osthoff, M. U. IV 238 f.). The heteroclite flexion was supported by $fl\bar{o}s$ $fl\bar{o}r-\bar{e}s$ (stem $fl\bar{o}s-$), and other like forms.

jecur, jecinor-is instead of *jecin-is, iter, itiner-is instead of *itin-is. Compare II § 114 pp. 346 f., and p. 352.

No sufficiently clear explanation has yet been found of the origin of $s\bar{e}d\bar{e}s$ -is, $p\bar{u}b\bar{e}s$ -is (es-stem in the nom. sing.), as contrasted with $Cer\bar{e}s$ -er-is, $p\bar{u}b\bar{e}s$ -er-is.

Remark 2. The accusatives plebem famem, ad-formates of aciem, should be noted; see § 220 p. 97. Further, if the Vedic genitives ušás áhas have really lost a gen. suffix -s (see § 237 Rem. p. 128), the question must needs be asked — is the -is of gen. pūbis for *-es-s? Lastly, it must be remembered that the word sēdēs apparently contaminates two stems, sĕdes- and sēdi- (the Author, Kuhn's Zeitschr. XXIV 44, J. Schmidt, Plur. 146). Compare also Thurneysen, Kuhn's Zeitschr. XXX 489; he opposes, and rightly, Schmidt's hypothesis that -ibus cames from *-ez-blos, but he can hardly be right in his own conjecture that in proethnic Indo-Germanic es-stems had an acc. in -ēm which had grown up in the same way as *d(i)iēm grew out of *d(i)iēu+m (see § 221 p. 98).

By degrees the whole u-declension was absorbed into the o-declension; see § 232 p. 123.

§ 398. V. In Irish, bh-cases from consonant stems followed the analogy of the vowel inflexion in prehistoric times, much as happened in Italic (§ 367 pp. 268 f., § 396 p. 286). Compare § 302 p. 203, § 379.2 pp. 274 f. The original type is still preserved only in the instr. sing. anmimm, in which it is indeed not certain whether the ending be *- $m\eta$ -bhi or *- $m\eta$ -mi (§ 281 p. 186). It is also uncertain how we are to regard Gall. dat. pl. $\mu\bar{\alpha}\tau\rho\varepsilon$ - $\beta\sigma$ (§ 374 p. 271).

Adjectival and substantival *i*-stems became separated, in as much as the gen. sing. of the adjectives took the form of *o*-stems; e. g. masc. neut. maith 'boni' fem. maithe 'bonae', following mairb mairbe from marb 'dead'. Adjectival u-stems had a tendency to pass into the *i*-declension; their plural was declined in this fashion throughout, and the change was doubtless completed even in Old Irish. Just how it came about has yet to be investigated.

We saw that the "dative" cathir beside cathraig was doubtless due to the analogy of athir (§ 262 p. 164); but these guttural stems in their turn influenced the names of kindred, so that we find e. g. pl. uasal-athraig 'high fathers, patriarchs' instead of -athir.

§ 399. VI. In the pre-dialect period of Germanic, a new type of declension arose by the levelling of <code>ien</code>-stems down to the weak form <code>-īn-</code>; e. g. Goth. <code>gamáinī</code> O.H.G. <code>gimeinī</code> 'community' (cp. Lat. <code>commūniō</code>). The nom. sing. pr. Germ. *-īn follows the model of *tungōn. Compare II § 115 pp. 361 f.; Streitberg, Paul-Braune's Beitr. XIV 221 ff. This <code>ien</code>-class perhaps absorbed old <code>iē</code>-stems in West Germanic, by reason of their having some endings in common, e. g. the dat. <code>digī-m</code> gen. <code>digīno</code> (see § 347 p. 249, § 382 p. 277) as compared with <code>gimeinīm</code> <code>gimeinīno</code>.

In the same period the $\bar{\imath}$ - $i\bar{e}$ -stems had not only cases with $-\bar{\imath}$ - (Goth. nom. sing. -i etc.), but doubtless cases with $-i\bar{e}$ - also. Gothic dropped these entirely, replacing them by forms with $-i\bar{a}$ -, as mavi 'girl' $m\acute{a}uj\bar{o}s$ etc. like Gr. $\acute{\eta}\delta s\tilde{\imath}a$

ήδεί $\bar{\alpha}$ ς etc. (cp. footnote on p. 68). On the other hand, the $i\bar{e}$ -cases were sometimes kept in West Germanic; e. g. O.H.G. sing. acc. gen. kuninginne -a pl. nom. acc. -ā, and it is only here that the old dat. instr. pl. in - $\bar{\imath}$ -m seems to survive. Compare the fluctuation between $-i\bar{e}$ - and $-i\bar{a}$ - in Latin, as intemperies -iem $-i\bar{e}$, but gen. dat. sing. -iae, pl. -iae -iarum etc.

Root Nouns ending in a consonant, and nouns of more than one syllable ending in an explosive, have in all dialects their old consonantal flexion intermixed with o-, u-, or i-cases; as Goth, frijond-a-m beside nom. pl. frijond-s 'friends', A.S. O.Sax. fot-u-m O.H.G. fuaz-u-m (and O.Sax, fuot-i-n O.H.G. fuaz--i-m) beside nom. pl. A.S. fēt O.H.G. foaz 'feet', Goth. baúrg--i-m beside nom. pl. baúrg-s 'fortresses, cities'. words of this kind will be absorbed entirely into some vowel declension, as Goth. fot-u-s, whose inflexion in the historic period cannot be in any way distinguished from that of sumu-s. A great many facts bearing on this point are collected by Kahle, Zur Entwickelung der consonantischen Declination. Berlin 1887. The point of contact with the o-class was the gen. pl., as Goth. frijond-e O.H.G. friunt-o, and perhaps the acc. sing. (see § 219 pp. 96 f.), and in West Germanic the gen. sing. in -es as well; contact with the u-class took place in the acc. sing. and pl. in -u(n) -uns, as Goth. fot-u fot-uns. But the origin of i-cases which dated from the oldest period is doubtless to be sought in the fact that certain nouns had always shown double forms of the formative suffix, -ti- and -t-(perhaps Goth. baúrgi- is also an original variant of baúrg-, cp. Gall. brigi- in Brigiani etc.); besides which, in later times different cases had come to possess the same ending as i-stems had for those cases; then came in O.H.G. the transfer of u-stems to the i-class, which did not except even those u-cases which were themselves due to analogy. The earliest change — as early as proethnic Germanic - was the transfer of nom. sing. and dat. instr. pl. of consonant stem into the vowel class, which was caused by a desire to restore the agreement of the stem with the other cases after it had become disgnised by phonetic

change; compare, for example, Goth. frijōnd-s instead of *frijōns, reik-s instead of *reihs, tunp-um instead of *tum for *tun(d)-mi *tumm(i) (cp. tigum 'decadibus' for *tezun(d)-mi, § 379 p. 275). The pr. Germ. re-formation of the instr. pl. in -um(i) on the analogy of -un (acc. sing.) and -uns (acc. pl.) was natural enough because r-stems had both -ru-m(i) (= -r-mi) and -r-uns in their case-sytem. The systems of cases which were produced on the lines here indicated, which had consonant-cases and vowel-cases intermixed, sometimes reacted upon systems consisting wholly of vowel-cases and caused consonant-cases to appear amongst them: Goth. gen. pl. anstē (stem ansti-) following baūrg-ē naht-ē, O.H.G. gen. dat. sing. anst (beside ensti) following naht; more of the same kind may be found in Anglo-Saxon, as zāt 'goat' etc. Compare Lith. gen. pl. krūt-ũ beside krūtì-s and the like, § 402.

Far fewer metaplastic cases are to be found in polysyllabic n- and r-stems; examples are Goth. $a\acute{u}hsn$ -a-m following $a\acute{u}hsn$ - $\bar{e}:vulf\bar{e}:vulfa$ -m (cp. Lith. dial. $akmen\acute{a}m:akmena\~i$ following akmen- $\~i$ § 350 p. 252), $br\~oprjus$ following $br\~opru$ -m:sunu-m:sunjus.

The nom. sing. Goth. $m\bar{e}na$ O.H.G. $m\bar{e}no$ and O.H.G. nefo, which came from forms ending in *- $\bar{o}t$ (§ 198 p. 79) drew all the other cases into the n-class. The same kind of thing may be seen in Pali; see E. Kuhn, Beitr. zur Pali-Gr. 69, Torp. Die Flexion des Pali p. 25: for example, the nom. sing. maru = Skr. maru brought all the cases of this stem into the u-class (nom. pl. $mar\bar{u}$).

§ 400. Adjectives combine forms from i- and io-stems. Hence the inflexion of Goth. masc. fem. hráins neut. hráin, masc. gen. hráinis acc. hráinjana dat. hráinjamma etc. The nom. sing. fem. neuter and gen. sing. masculine are distinct i-forms, and hráinjana and the rest distinct io-forms. The amalgamation of these two stems was due to the fact that in the nom. (acc.) sing. masc. io-stems like un-nutja- 'useless' had the weak form of the suffix, and the ending *-i-s (*-i-m

in the acc.) coincided with that of *i*-stems. In West Germanic the *io*-declension absorbs the other.

Side by side with the proethnic Germanic system of adj. i-stems developed the adj. u-stems, as Goth. kaŭru-s = Skr. gurŭ-š. In the feminine, *kuru-jō-*kuriō- became Goth. kaŭrjō-(II § 110 pp. 334 f.), and a masc.-neut. *kuria- = Goth. kaŭrja-was formed as part of the same system (cp. bērusjōs II § 110 p. 338). Following the masc. nom. hráins acc. hráinjana and neut. hráin we have the group kaŭrus kaŭrjana kaŭru, and as hráins could be used for the feminine, kaŭrus now came to be used in the same way instead of *kaŭrvi, unless indeed this use is proethnic (cp. II § 110 pp. 334 f.). These stems too are declined in West-Germanic according to the io-class.

§ 401. Another characteristic system of West Germanic is that exemplified by O.H.G. kalb kalbes pl. kalbir, A.S. cealf cealfes pl. cealfru (cp. Russ. čudo pl. čudesa § 404). See II § 132 pp. 420 f.

On certain metaplastic processes connected with change of gender, consult V. Michels, Zum Wechsel des Nominalgeschlechts im Deutschen, I, Strassb. 1889.

§ 402. VII. Balto-Slavonic. Here too it is remarkable how the consonant declension has been absorbed into the vocalic. Even in the earliest records of the language this change may be seen already far advanced. Russian, for example, has been for centuries without a single case of the old consonant declension, with the exception of the s-stem nom. acc. in -o, and the n-stem nom. acc. in $-j\alpha$ (O.C.Sl. -e). And certain Lithuanian dialects in their present state have scarcely any consonantal forms left.

With a few scattered exceptions, the loc. pl., and the eases with *m*-suffixes, from consonant stems, were inflected as *i*-stems in proethnic Balto-Slavonic: e. g. Lith. akmen-y-sè (earlier *-i-se) O.C.Sl. kamen-i-chŭ, akmen-i-mì kamen-i-mi, -ì-m -i-m̄ -i-ma, -ì-ms -i-mū, -i-mìs -i-mi. Here, as in so many other reformations (cp. for example § 360 p. 262), something is

certainly due to the desire to keep the stem final distinct, and the change of consonant stems to i-stems was suggested by the occurrence of certain words which had had consonant stems and i-stems as variants from an early period, such as Lith. deszimt-O.C.Sl. deset- beside deszimti- deseti- 'decas', Lith. nakt- (gen. pl. O.Lith. and in the modern dialect of Godlewa nakt-ũ) beside nakti- 'nox' (II § 101 p. 306, § 123 p. 390). Starting from these cases, the i-flexion next found its way into others, and sometimes it included all of them, its progress being aided by the identity of ending of the two classes in the acc. sing., which was regular, and in Baltic in the acc. plural too (Lith. -i -is, O.C.Sl. -i), e. g. Lith. dant-i-s 'tooth' O.C.Sl. ielen-i 'stag' (II § 93 pp. 283 f.) Since there were a certain number of nonns which made some of their cases from a and some from an i-stem, it sometimes consonant-stem happened that these caused old i-stems to form consonantal cases; e. g. Lith. dial. gen. pl. krūtū pažastū from krūtì-s 'mother's breast' pažasti-s 'armpit' (cp. also Bezzenberger, Beitr. zur Gesch. der lit. Spr., 143 f.), O.C.Sl. nom. pl. pečat-e from pečati 'signet, seal' (II § 123 Rem. 3 p. 394). Compare Goth, gen. pl. anst-ē from the stem ansti, and the like, § 399 p. 290.

The -iē- of ī- iē-stems is often interchanged with -iā-, and this is especially common in adjectives and participles; e. g. acc. Lith. vēžanczią O.C.Sl. veząštą from nom. Lith. vežanti O.C.Sl. veząšti (cp. the footnote on page 68). In connexion with these sprang up, in the masculine and neuter, cases extended by -io-, if the stem ended in a consonant, as gen. vēžanczio O.C.Sl. veząšta from nom. vežąs vezy, mirusio mirūša from miręs mīrū, O.C.Sl. slaždīša from slaždījī (n. slaždē). Compare § 368 Rem. p. 269.

§ 403. The first characteristic of Lithuanian which should be mentioned here is the loss of all neuter substantives, most of which became masculine: e. g. lùnka-s 'bast, inner bark' = Pruss. lunka-n O.C.Sl. lyko; akì-s f. 'eye' = Skr. ákṣi; medù-s m. 'honey' = Pruss. meddo Gr. μέθν; sėmū́ (now

only used in pl.) m. 'seed' = O.C.Sl. sěme Lat. sēmen; $vand\tilde{u}$ und \tilde{u} m. 'water' = Goth. $vat\bar{o}$ Gr. $\tilde{v}\delta\omega_0$: debes-i-s(gen. pl. still debes- \tilde{u}) m. f. 'cloud' = O.C.Sl. nebo. certain number of words gender may have changed because the ending of the nom, acc, neuter was the same as in masculine words. This is the case with semu vandu m.. following $akm\tilde{u}$ and words like it (§ 223 p. 100, § 224 p. 103), as O.H.G. namo sāmo became masc. (Goth. namō n.) by the influence of masculines that had the same ending. Certain masculine words with nom. -as, gen. $-\bar{o}$, correspond to Idg. neuters in *-os: menas 'moon' beside menes-io etc. (II § 132 p. 415), $\tilde{a}kas$ 'ice-hole' = O.C.Sl. oko, and others (W. Meyer, Die Schicksale des lat. Neutr. 31; J. Schmidt, Plur. 195). Another is perhaps medùs beside Skr. mádhuš (by-form of mádhu) Gr. μεθνσ-θηναι. It is a reasonable conjecture that the stock of neuter words first began to thin in this way, and that afterwards the similarity of inflexion in most of the oblique cases affected the nom. acc. even when they differed in masc, and neut., and replaced the neuter form by one which was masculine or feminine.

The agreement of the dat. sing., nom. acc. dual, acc. gen. pl. dañgui dangù dangùs dangũ (u-stem) with viłkui viłkù viłkùs viłkū (o-stem) produced the re-formates dangūs-nà and loc. dangūsè (§ 326 pp. 227 f.). This change from u- to o-declension was carried further in dialects: e.g. sūnaī sūnáms sūnaīs (cp. Brückner, Arch. für slav. Phil. III 252 f.; the Author, Lit. Volksl. und Märch. 300). In the same way Lettic u-stems came to form their plural in the o-declension.

r-stems, which had a nom. sing. in -ė, followed the analogy of ī- iē-stems, which has the same ending; e. g. intė 'brother's wife' (Skr. yātar-) gen. intės. See II § 122 Rem. p. 383. Similarly perhaps is to be explained kekė -ės 'dove', as being originally a neuter *kekē(r) (cp. Lat. cicer), see § 224 p. 103.

§ 404. In Slavonic, nomina agentis in -tel- (Idg. -ter-) have kept to the old consonantal declension only in the nom. and gen. plural, and not consistently even there; e. g. datel-e (also

datelje with j from the other cases which have -lj-) and datel- \check{u} ; on the analogy of datel- \check{u} we then have instr. datel-y in the o-declension. Otherwise they are io-stems, nom. sing. $-telj\check{\imath}$ and so forth. Cases like datel $\check{\imath}$ m \check{u} may be regarded as the original forms answering to forms like kamen- $\check{\imath}$ -m \check{u} (§ 402), which are responsible for the change from consonant to io-stem. See § 368 Rem. p. 269.

The relation between tele and gen. telete seems to have been much the same as between Gr. ὄνομα and ὄνόματος. See § 244 pp. 142 f.

From graždan-e 'burghers, eitizens' gen. graždan-ŭ (II § 115 p. 362), was formed in O.C.Sl. the acc. instr. graždany following vlūky, like the instr. dately. In the older remains of several Slavonic languages occur plural dat. instr. loc. forms in -jamŭ -jami -jachŭ (O.Czech Polás), still retaining the old inflexion, in place of O.C.Sl. -janīmŭ -jany -janīchŭ; see vol. I § 585 p. 441, III § 356 p. 260, § 367 p. 269. The singular of these nouns is extended by -ino-, as graždaninŭ.

In fem. \bar{u} - uu-stems, the similarity between the ending of gen. $svekr\bar{u}v$ - \bar{u} and that of $rak\bar{u}$ produced forms like $svekr\bar{u}v$ - $am\bar{u}$ - $am\bar{u}$ - $ach\bar{u}$, following raka- $m\bar{u}$ etc.

voda f. 'water' was doubtless originally a neuter in $-\bar{o}(r)$, see § 224 p. 103.

The ending -o, nom. acc. sing. of neuter es- and o-stems, caused a confusion of forms between these two classes, and in particular made es-stems pass into the o-class, as gen. slova instead of sloves-e from slovo = Gr. κλέος, děles-e instead of děla from dělo 'work'. This has made the s-declension disappear from modern Slavonic languages, all but a few traces. The declension of the Russian words čudo 'wonder' nebo 'heaven' should be noticed: sing. čudo gen. čuda etc. like selo, but pl. čudesa gen. čudesă etc. like sela, that is, they are like O.H.G. kalb pl. kalbir (§ 401).

Similarly, u and o-stems became mixed owing to their like endings in the nom. acc. sing.; and thus all u-stems have some o-cases, as gen. syna instead of synu, from $syn\ddot{u}$ 'son' = Lith.

 $s\bar{u}n\dot{u}$ -s; the reverse is rarer, e. g. $dl\bar{u}gu$ instead of $dl\bar{u}ga$, from $dl\bar{u}g\bar{u}$ 'duty' = Goth. dulg-s. In most of the modern Slavonic languages the u-stems have in this way been almost entirely absorbed into the more numerous o-class.

[Tables of Noun Declension to illustrate §§ 190-404 are given below, pp. 296-319.]

Case-endings transferred from Pronouns to Adjectives.

§ 405. From the proethnic period downwards, there has never been any hard and fast line of demarcation between masculine and feminine pronouns in -o, as *to- 'this, the' (which had in some of their eases different endings from nouns), and nominal adjectives with o-stems.

To what extent pronominal endings had spread in the parent language cannot now be made out. Two questions have to be answered. First, was the pronominal inflexion used in any of the forms of certain adjectives, purely nominal in origin, such as Skr. víšva- 'each' sárva- 'all' Lat. solu-s O.C.Sl. visi 'omnis'; and if so, in which? secondly, where adjectives had formative suffixes which were used with both pronouns and nouns, how far were they declined after the noun system? For example, although the parent forms of Skr. an-yά-s Gr. άλλο-ς Lat. al-iu-s etc. must have belonged to the pronominal declension (we may conjecture that $an-y\acute{a}$ -s is simply ana-+ya-, as tya- is ta-+ya-, see § 409), it is wholly doubtful how the comparative of *qo- 'quis' formed with -tero- was then declined (Skr. katará-s Gr. πότερο-ς etc.)

§ 406. It is certain at any rate that neither in Greek nor in Irish has the pronoun declension spread beyond the area it filled in the parent language. Indeed, in these languages the pronouns actually lost the greater number of their proper inflexions.

In Latin, Slavonic, and Arvan, side by side with pronouns strictly so called, are found a number of derivatives from pronouns, and adjectives derived from nouns, forming their cases as pronouns do. Take as examples Lat. *ū-nu-s al-ter u-ter* sōlu-s tōtu-s, although the genitive singular of these words — the only case which concerns us in them - had the noun ending as well, as gen. solī Lūciī, dat. nullo ūsui, dat. mihi solae (for the gen. in -ī ep. § 419). O.C.Sl. tvojī 'thy' ta-kŭ 'talis' to--likū 'tantus' mūnoaŭ 'multus' druaŭ 'alius'. Skr. ka-tará-s 'uter' superl. ka-tamá-s, é-ka-s 'unus' Avest. ae-va 'unus'. Skr. víšva-s Avest. vīspa- Skr. sárva- 'all' dákšina-s 'right. of the right hand, southerly' madhyamá-s'midmost' Avest, abdō--tema- 'deepest' (a-bda- properly 'footless'); but the Aryan words of this class also have the noun flexion, some of them often, others rarely, as R.-V. dat. víšvāya beside víšvasmāi, Avest, gen. vīspanam beside vīspaešam.

But in Germanic, Lithuanian, and Armenian we see the inflexion of pronouns applied to any adjective at will.

In Germanic grammar this kind of adjectival flexion 1) is called the Strong Declension, as opposed to what is called the Weak, the latter of which has arisen by the transfer of stems to the n-class; examples are Goth. nom. pl. blindái like pái (cp. § 314 p. 214), beside which is blindans like gumans. The former is the older, and is the rule when the adjective is used predicatively or as an attribute without an accompanying article; the latter arose when the stems were made substantives by means of the suffix -en-, and it is used after the article and mostly where the adjective has the value of a substantive (see II § 114 p. 353). Declined like pronouns: Goth. masc. blindamma midjamma hráinjamma hardjamma (nom. blind-s midji-s hráin-s hardu-s) following pamma, also blindái following pái,

¹⁾ Leo Meyer, Über die Adjectiva im Deutschen, Berl. 1863; Das Deutsche, insb. gotische Adjectivum, Germania IX 137 ff.; Zur Lehre von der deutschen Adjectivflexion, Zeitschr. deutsch. Phil. IX 1 ff. Holtzmann, Das got. Adjectivum, Germania VIII 257 ff. Sievers, Die starke Adjectivdeolination, Paul-Braune's Beitr. II 98 ff.

blindáizē following *páizē (pizē is used instead of this), blindáim following báim, neut. blindat-a following bat-a (also, with nounflexion, blind, like hráin hardu), fem. blindáizōs following *Þáizōs (Þizōs is the form used), blindáizō following *Þáizō (the form used is bizō): O.H.G. blintemu blinte blintero blintēm, blintaz, blintera blintero. As regards such variations as $blind\acute{a}iz\bar{e}: biz\bar{e}$ see §§ 420. 429. The acc. blindan-a (O.H.G. blintan) follows the noun declension in its suffix -an, but the particle -a affixed to it assimilates the ending to the pronouns, cp. pan-a (§ 417). In O.H.G. other forms were drawn into the circle of attraction, blinter like jener (§ 414), blintiu There is some strangeness in Goth, dat. sing, fem. blindái like gibái beside bizái; but O.H.G. blinteru O.Icel. blindre are pronominal forms, and doubtless fairly reproduce those used in proethnic Germanic.

In Lithuanian, where the endings peculiar to pronouns are found only in the masculine (neuter), it results that adjectives differ from nouns only in this gender. Masc. sing. gerám geramè, pl. gerëms, dual gerëm gerëm, like tám tamè, tëms, tëm(-dvëm) tem(-dvëm). The nom. pl. is geri for *gerë (cp. qerë-ji) as against të anë (the latter accented like the subst. vilkai), where the difference in accent is remarkable, cp. the dual masc. $qer\hat{u}$ fem. $qer\hat{i}$ as contrasted with $t\tilde{u}-du$ $t\tilde{e}$ -dvi; the accentuation of *qerë is proved to be older by Gr. τοί, καλοί (I § 671 p. 536); on this difference in accent, see Bezzenberger in his Beiträge X 204. We should add the neut. sing. $g\tilde{e}ra$ for *-a-d following *ta(-d) = Pruss. s-ta (§ 227 p. 110), and the neut. pl. gerai following tai, e. g. tai gerai 'haec bona (sunt)', see § 428; usually these adjective forms in -ai are used as adverbs. From saldù-s 'sweet': saldžiám saldėms like tuszcziám tusztėms (nom. sing. tùszczia-s 'empty'), by association with the fem. saldi saldžios (II § 110 p. 334); cp. Goth. masc. hardu-s pl. hardjái beside fem. pl. The reason why the nom. pl. masc. is $sa\tilde{t}d\bar{u}s$, and not saldi, like tuszti, is that at the time we are now describing, when the case-endings spread from pronouns to adjectives, the

pronominal nom. pl. masc. suffix *-o \dot{i} had already driven out the original ending *- $\bar{o}s$ from all noun stems (§ 314 pp. 214 f.), and thus *-o \dot{i} was not regarded as a special ending of the pronouns.

In Armenian the pronominal endings -um (dat. loc.) and -mē (abl. sing.) could be used with any adjective, as srbum (surb 'holy') following orum ('which') ailum ('other'). (In Mod.E.Arm. -um extends to substantives, as mardum, cp. Lett. grékam in the following Remark.) Compare Hübschmann, Ztschr. der deutsch. morg. Ges. XXXVI 123 ff.

Remark. The application of the endings of the pronouns to adjectives must be kept distinct from other examples of these endings transferred to nouns in general, such as Skr. výkēṇa návēṇa following téṇa, Pali loc. lōkasmiṃ (instead of lōkē) following tasmiṃ, abl. lōkasmā (instead of lōkā) following tasmā, Gr. unto, xalot following rot, Lat. mēnsārum bonārum following istārum, O.C.Sl. rakoja novoja following toja. Of course we cannot know whether the adjectives were not sometimes or always the first to adopt this inflexion in these instances, as elsewhere, and then passed it on to substanstives. This was certainly the case in the Lettic dat. instr. sing. grēkam dat. instr. pl. grēkīm (grēk-s 'sin') following the adj. labbam labbīm (lab-s 'good') and the pronoun tam tēm (ta-s 'that').

PRONOUNS.1)

§ 407. The main difference between Pronouns and the great majority of Nouns is that they are formed from peculiar roots, which are called Pronominal Roots. But they also have

¹⁾ Many of the works and essays cited in the footnote to page 52, and under the various noun-cases, include a discussion of pronominal forms. We may add here, as dealing with the whole subject of Pronouns, the following.

On the Indo-Germanic Pronouns in general: Bopp, Vergleich. Gramm. II³ §§ 326 ff. pp. 101 ff. Schleicher, Compendium pp. 608 ff. Fr. Müller, Grundriss der Sprachw. III 563 ff. Pott, Das idg. Pronomen, Zeitschr. der deutsch. morg. Ges. XXXIII 1 ff. Günther, Üb. die Bedeutung und Eintheilung der Pronomina mit bes. Beziehung auf die lat. und gr. Spr., Seebode's Miscell. crit. I 113 ff. Kvičala, Untersuchungen auf dem Geb. der Pron., bes. der latein., Sitzungsber. der Wiener Ak., 1870, pp. 77 ff. E. Müller, Von dem Pronomen, ein Beitrag zur allgemeinen Sprachlehre, Philol. V 225 ff.

many peculiarities of inflexion, which are accordingly named the Pronominal Declension.

These peculiarities are of three kinds.

1. The Case Ending is usually different from that of the nouns. Compare, for example, the nom. acc. sing. neut. Skr. $t\acute{a}$ -d Lat. istu-d as contrasted with $yug\acute{a}$ -m jugu-m. In particular, it is far more common with pronouns than with nouns to give the function of some distinct case to an uninflected form, such as Skr. $m\ddot{a}$ Gr. $\mu\grave{\epsilon}$ 'me' (cp. § 185 pp. 57 f.).

Works treating specially of pronouns with gender distinguished, or of personal pronouns, will be cited in notes to § 408 and § 433.

These differences in flexion were clearly more or less connected with a certain vagueness which is seen in the cases of pronouns. Pronominal forms were not originally so minutely subdivided or so clearly defined as were the cases of the noun. It was only the constant endeavour to express similar uses by similar forms which brought about the more ocmplete agreement of pronouns with nouns, as we see it in the historical developement of different languages.

2. A number of cases from pronoun stems have always been extended by certain suffixes which were placed before the case-ending, to aid in distinguishing the cases. In these the case-ending is sometimes one peculiar to pronouns, and sometimes it is common to them with nouns. The most important of the elements thus interwoven into the cases of pronouns are -sm- and -si- -s-. Examples: Skr. loc. tá-sm-in abl. tá-sm-ād (cp. vṛkād), although the acc. is tá-m 'that' (cp. vṛka-m); Avest. abl. yū-šm-ap, but nom. yū-š 'vos'; dat. Skr. tá-sy-āi Goth. pi-z-ái (cp. Ved. suvapatyāi Goth. gibái), but acc. Skr. tá-m Goth. pō f. 'the, this, that' (cp. Skr. ášvā-m).

How these particles got into the words can generally be seen without difficulty. We shall explain the forms in detail in the succeeding paragraphs. Such a word as "insertion" cannot properly be used of any them.

3. Cases of pronouns, more frequently than nouns, attract certain particles which become affixed to them (cp. § 186 p. 62). For example: *-em *-om *-m in Skr. id-ám 'id, hoc' im-ám 'eum, hunc', vay-ám 'nos'; -u in the nom.-sing. O.Pers. ha-uw Gr. *o-v' 'that yonder' (in οὖ-τος); -i in the nom. sing. Lat. qo-i qū, O.Sax. A.S. sē 'that' for *so-i, and others. If we turn to recorded languages, we find actually used such affixes as Gr. -ī in οὖτοσ-t, Lat. -ce (-c) in h̄s-ce, with a deictic or emphatic meaning. Just so must the former affixes have once had their own proper meaning, although we are now in the dark as to what it originally was. After their ground-meaning became weakened and obscured they became

no more and no less than case-suffixes; the stock example is Goth. mi-k O.H.G. mi-h = Gr. $\hat{\epsilon}\mu\hat{\epsilon}-\gamma\epsilon$ (beside $\hat{\epsilon}\mu\hat{\epsilon}$ $\mu\hat{\epsilon}$).

Remark. It may be pointed out in passing that the principle exemplified in the attaching of these affixes, deictic, emphatic, and so forth, to words is well suited to throw light on the origin of the proethnic Indo-Germanic case-forms. The principles on which the older cases were built up must be the same as those which we can trace in these later forms. The formation of cases is not something which took place once for all at a definite point in the proethnic period; it has always been going on afresh, although to a much smaller extent in historical times than in prehistoric. At this very day we can see the beginnings of inflected cases, as Mod.H.G. heimat-wärts 'home-wards', stadt-wärts 'town-wards', thal-wärts 'vale-wards', and the like.

Pronouns are usually classified thus: those with distinguishable Gender (Demonstrative, Relative etc.), and those without distinguishable Gender, or Personal Pronouns. We discuss Possessive Pronouns along with the Personal Pronouns (§§ 450 ff.), because the two are so closely connected, especially in the forms of the genitive case.

Pronouns in which the Gender in distinguished.1)

§ 408. A number of these pronouns did not form all their cases in the original language from the same stem, but filled up certain gaps from others: for example, *so- and *-to-

together made up the cases of 'this, the' (Gr. nom. δ gen. $\tau o \tilde{v}$ etc.). In the separate languages these heteroclite forms were levelled down and assimilated more or less, so that the groups became more homogeneous. These levellings, together with the composition of simple original pronoun stems with each other or with deictic and other particles, produced a large number of analogical forms in the different branches of Indo-Germanic; and pronoun forms as we have them are

often separated from their Indo-Germanic prototype by one long line of re-formations due to analogy.

It is impossible withein the limits of this work to describe with any degree of completeness all these analogical formations in the various languages of our group. We can only give a general summary of the stems which are found in several languages, and which are therefore to be regarded as proethnic, subjoining their most important inflexions.

1. Etymology and Morphology of Pronouns with Gender.

§ 409. Demonstratives.

The Stems $*so-*s\bar{a}$ and $*to-*t\bar{a}$. In the parent language the s-stem probably made only the nom. sing. masc. and fem., and the t-stem all other cases. By degrees one or other invaded the other's ground; examples are Ved. loc. sásmin instead of tásmin, Gr. nom. oi ai instead of τοί ταί, and conversely Lith, nom, tà-s tà instead of *so(-s) *sā. Arvan: nom. sing. masc. Skr. sá sá-s Avest. hō fem. Skr. sá Avest. hā; acc. sing. masc. Skr. tá-m Avest. te-m fem. Skr. tá-m Avest tam. Armen -d, a demonstrative affix, beside Idg. *to-, e. g. ter-d 'the master, this master', da 'this' do-in 'the same'; d-, for t-, is doubtless strictly regular only after r and n (cp. I § 483 p. 357), as in du 'thou' (§ 440). Gr. δ η ; $\tau \acute{o}$ - ν $\tau \acute{\eta}$ - ν . O.Lat. sa-psa 'ipsa', also *so- in ip-se ip-sa(§ 413); *to- in topper = *tod per, and tam; in Italic the stem *e-so- (e- as in Skr. α-sāú Gr. ἐ-κεῖ Osc. e-ko- 'hic' Lat. e-quidem Osc. e-tanto 'tanta') combined with *to- and formed *es-to-, as in Baltic *ko- + *to- made *k-to- (Lith. sztáí Pruss. s-ta-s), whence Umbr. estu 'istum', with which Lat. istois closely connected, if not identical.1) O.Ir. so a demonstrative

¹⁾ No satisfactory explanation has been suggested for i- in iste. Since, however, e- is doubtless the same stem as the pronominal stem *o-which is shortly to be described (see next page), it is quite possible that i- in iste is the stem of i-s 'he'. This stem has also been identified with the locative suffix -i, in $\pi \circ \iota \mu \not \circ \nu_{-i}$ etc.; and if this is correct, the

particle meaning 'here', Gall. so-sin nemeton 'hoc sacellum'; the stem to- is found in ua-d 'ab eo' ua-di 'ab ea' ua-dib 'ab eis' and others like them, and in the article in-d for *sen + to- (cp. Windisch, Revue Celt. V 462; *to- doubtless became do- in syllables coming just before the accent, cp. vol. I p. 510, and Thurneysen, Rev. Celt. VI 321, footnote 1). Goth. sa sō 'this, the' m. f. O.Sax. A.S. sō m. 'the, this' O.H.G. de-se m. 'this'; Goth. pana O.H.G. den acc. m. 'this, the'. Lith. tā O.C.Sl. tā 'the, this' m., Lith. tā O.C.Sl. tā 'the, this' f.

The Stems *sio- *sia- and *tio- *tia- (also found with -ii- instead of -i-). In Aryan, they were distributed among the cases in the same way as *so- *to-. Skr. nom. syá suấ acc. tyá-m tuấ-m nom. acc. tyá-d, O.Pers. nom. hya hyā acc. tua-m tuā-m. O.Ir. co-se 'ad hoc, adhuc' re-siu 'hitherto'. O.H.G. $siu = Skr. sy\acute{a}$, instr. sing. neut. diu, nom. acc. pl. neut. diu, nom. pl. fem. deo dio. Whether the -io- of *s-io-*t-io- be called the same as the suffix of comparison -io-. discussed in II § 63 pp. 132 f. (*t-io-: *to- = Skr. $an-y\acute{a}$ -: $an\acute{a}$ -). or identified with the demonstrative pronoun stem (pp. 331 f.), compounded here with other stems, it all comes to the same thing. Compare also the nom. sing. fem. in -ī Goth. s-i O.Ir. s-ī 'ea' (II § 110 p. 339), perhaps connected with Sophocles' i (cp. the Author, Ein Problem der hom. Textkr., 125 ff.; Meister, Gr. Dial. II 281), beside which we have the fem. *ī in Skr. iy-ám etc. (p. 332); — here the same thing looked at from different points of view, and occurring at different stages of the growth of language, might be called variously a suffix or part of a compound word. 1)

following equation holds good: — Umbr. e-sto-: Lat. i-sto- = loc. Gr. $\pi o\iota \mu \acute{e}\nu -\iota$: O.C.Sl. kamen-e (compare also Lith. rankoj-e Skr. výkāy-a); on this postposition -e, see further § 186 p. 62, § 246 p. 145, § 257 pp. 158 f. The two positions of the stem in these compounds may be illustrated by Lat. ce-do: $h\bar{\imath}$ -ce.

¹⁾ Whether -io- in the Indo-Germanic languages (see II § 63 pp. 122 ff.) is always identical with the pronoun *io- I leave an entirely open question. For the present I assume merely a resemblance between the pronoun and the -io- of comparison.

The Stem *o- *ā-. Arvan: dat. sing. masc. Skr. a-smāí Avest, a-hmāi dat, abl. pl. fem. Skr. ā-bhuás Avest, ā-buō. O.Ir. ē 'he' see § 414, gen. ai ae 'eius' see § 418. Germ. gen. sing. Goth. i-s O.H.G. e-s: cp. Skr. a-suá. Elsewhere it is not found as part of a living case-system. Greek loc. ε-i (in clauses expressing a wish or a condition) and instr. (Heracl. Cret. etc.) $\vec{\eta}$ 'if', $\varepsilon \vec{i} - \tau \alpha$ 'then'. The same loc. *e-i is doubtless contained in Idg. *ei-so *ei-sā, meaning 'this here' or something to that effect, acc. *ei-to-m etc.: Skr. ē-šá ē-šá Avest, ae-ša ae-ša, acc. ē-tá-m ae-te-m, Umbr.-Osc. *ei-zo- (the -z- of the nom. sing. masc. fem. was carried through all the cases). Umbr. ere 'is' for *ē-ro (§ 274 Rem. p. 174), eru-ku 'cum eo' era-k abl. 'ea' Osc. eisúd 'eo' eizois 'eis' eisa-k eiza-c abl. 'ea'. The bare stem, e. may be contained in Lat. e-quidem and other words of the same sort: in the loc. O.C.Sl. kamen-e and the like, see p. 327 with the footnote; and in the augment, as Gr. έ-φερον; compare loc. *te § 424 p. 349.

The Stem *eno- *enā-, *ono- *onā-. Ar. ana- 'this, that, he': instr. sing. Skr. anéna anáyā Avest. ana. Lith. anà-s añs 'that' fem. anà, O.C.Sl. onĭ 'that, he' fem. ona. Also, doubtless, the Armenian article -n, e. g. tēr-n 'the lord' beside no-in 'the same', and in-kn 'ipse', for *eno-.

The Stem *a*uo- *a*uā-. Ar. ava- 'that, that yonder': Skr. gen. dual avōš, nom. pl. Avest. avē avā O.Pers. avaiy avā (cp. Bartholomae, Kuhn's Zeitschr. XXIX 498). O.C.Sl. ovŭ 'this'. Wackernagel conjectures that this same stem is contained in Lat. ō-lim (ibid., XXVIII 139), with which should be connected Umbr. ulo ulu 'illuc'.

The Stems * $\hat{k}o$ - * $\hat{k}i$ - * $\hat{k}io$ -.

* $\hat{k}o$ -. Gr. loc. $\hat{\epsilon}$ - $\kappa \epsilon$ - $\tilde{\iota}$ 'there' $\kappa \epsilon \tilde{\iota} \nu o$ - ς Dor. $\kappa \tilde{\eta} \nu o$ - ς 'that' (cp. II § 67 Rem. p. 150, Prellwitz, Bezz. Beitr. XV 154 ff.). Osc. e-kas 'hae' e-cu-c neut. 'hoc'; of Latin forms we may doubtless add ce in ce-do $h\bar{\iota}$ -ce $h\bar{\iota}$ -c (cp. Osc. ce-bnust); e- in $\hat{\epsilon}$ - $\kappa \epsilon \tilde{\iota}$ e-kas as in Osc. e-tanto 'tanta' etc., p. 327. O.Icel. hann 'he' hon 'she', O.Sax. $h\bar{\epsilon}$ hie O.H.G. $h\bar{\epsilon}$ her 'he', unless the last-named were made from the stem hi- on the analogy

of $th\bar{e}$ etc. (§ 414). Also Lith. $sz\tilde{e}n$ and $sz\dot{e}$ 'hither' may belong to this same group; but it is just as likely that they come from *szien *szie (I § 147 p. 131) and belong to the stem szia- (see below), being made on the analogy of the forms $t\tilde{e}n$ $t\dot{e}$.\(\frac{1}{2}\).

* $\hat{k}i$ -. In Greek, we may conjecture that this form is to be seen in the $\varkappa i$ of $o\mathring{v}$ - $\varkappa i$, $\pi o\lambda\lambda\acute{a}$ - $\varkappa i$ and other words; see § 182 p. 49. Lat. ci-ter ci-tr \ddot{a} , Umbr. $\grave{s}i$ -mu 'ad citima, retro'. O.Ir. $c\ddot{e}$ 'on this side'. Goth. hi-mma 'to this'. Lith. $sz\grave{i}$ -s O.C.Sl. $s\breve{i}$ 'this'. Cp. also Alban. si- $vi\acute{e}t$ 'in this year'.

Whether the Armenian affix -s, as $t\bar{e}r$ -s 'the lord, this lord', belongs to * $\hat{k}o$ - or * $\hat{k}i$ -, cannot be decided.

*kio- (compare *tio- beside *to-, above) may also be an old form: Gr. $\sigma \acute{\eta} \mu \epsilon \rho o \nu$ Att. $\tau \acute{\eta} \mu \epsilon \rho o \nu$ adv. 'to-day' for * $\kappa \iota (o)$ - $\bar{\alpha} \mu \epsilon \rho o \nu$ (known phonetic laws give no justification for deriving this from *tio-); O.H.G. instr. hiu-tu O.Sax. hiu-diga 'on this day, to-day'; gen. sing. Lith. $szi\check{o}$ O.C.Sl. sego instead of * $\check{s}ego$ following $s\check{\iota}$. Compare also the fem. formation A.S. $h\bar{\iota}$ Lith. szi O.C.Sl. si for * $\hat{k}\bar{\iota}$, like O.Ir. $s\bar{\iota}$ Goth. si (see p. 328).

A contamination of * $\hat{k}o$ - and *to- produced Balt. * \hat{k} -to-, represented by Lith. $szt\acute{a}i$ 'see here' (its opposite is $ant\acute{a}i$ 'see there' from $an\grave{a}$ -s 'that yonder') and Pruss. s-ta-s. sz-ta-: ta- = sz-ia-: ja-2). Lith. szita-s is a re-formate of later date, following szi-s. In a similar way arose in Oscan, by contamination of eko- and eso- (eseí $\acute{e}oo$ r etc.) a stem ekso- (exac hac' etc.), a form which sprang up during the period of separate dialects (for pr. Umbr.-Samn. *ekso- would have become *ehso-*esso-, cp. nom. sing. medíss 'meddix').

Remark 1. If there was in pr. Idg. a variation between tenues and tenues aspiratae analogous to the variation of mediae and mediae aspiratae (I § 469.8 pp. 346 f.) in favour of which view might be adduced Gr. $\pi \lambda a \tau \dot{\nu}_{-\varsigma}$ beside $\pi \lambda \dot{a} \dot{\sigma} a v_{-\nu}$ Skr. $p_r^r t \dot{u}_{-\tilde{\varsigma}}$, Gr. $\tau \dot{\epsilon} \tau a \varrho_{-\tau} \tau_{-\varsigma}$, Lat. quar-tu-s beside Skr. $catur-th\dot{a}$ -s, Gr. $\pi \dot{\alpha} \tau_{0-\varsigma}$ $\pi \dot{\sigma} \tau_{0-\varsigma}$ beside Skr. path- $p\dot{\alpha} n t h \bar{\alpha}$ -, Gr. $\ddot{\epsilon} \sigma \tau_{\eta-\nu}$

¹⁾ Conversely, Lith. $te\bar{\imath}p$ beside $ta\bar{\imath}-p$ 'so' was modelled after $sze\bar{\imath}-p$ i. e. $szia\bar{\imath}-p$ (neut. pl., see § 428).

²⁾ The suggestion that s in s-ta-s is the same as s in Lat. iste (I p. 425 footnote 2) in less probable.

beside Skr. ásthā-m etc. — the Lat. pronoun ho- $(h\bar{\imath}-c)$ could be added in this place. It would be derived from * \hat{k} ho-. But then the question would arise whether we should not derive Goth. hi- from * \hat{k} hi-, Gr. o- τ - in $\sigma \dot{\eta} \mu e \rho o \nu$ from * \hat{k} hi-o-, and other words from similar forms.

The Stem *i- *ei- (*i-o- *ei-o-). Arvan: neut. Skr. i-d(adv.), $i-d-\acute{a}m$ with the particle $-\acute{a}m$ affixed. Avest, i-b (adv.), acc. sing. masc. Skr. i-m-ám Avest. imem O.Pers. imam also with the particle -am: the association of this accusative form with ētá-m aete-m etc. suggested a number of analogical forms: fem. Skr. imá-m Avest. imam O.Pers. imām, neut. Skr. imá-d Avest. imab O.Pers. ima, pl. Skr. imé Avest. imē O.Pers. imaiy etc. In Greek there are only isolated forms: acc. "-v 'eum' $\mu i \nu$ for $*\sigma \mu$ ' $i \nu$ ($\sigma \mu$ ' = Skr. sma), $\nu i \nu$ for $*\nu F$ $i \nu$ ($*\nu F$ = vv'), see Thumb, in Fleckeisen's Jahrb. 1887 pp. 641 ff.; adv. (instr.) Tva, used in relative sentences (§ 410), instead of *i-va (§ 421), which took its rough breathing from the relative ő-, as Lith. jì-s instead of *i-s took its initial from ja- (see below). Lat. i-s i-d, eo ea-m, Umbr. eam 'eam' eaf 'eas' Osc. 10-k 'ea', Ital. eo- eā- for *eio- *eiā- (I § 134 p. 121): on Lat. iī iīs beside eī eīs see Thurneysen, Kuhn's Zeitschr. XXX 499 f. Whether O.Ir. ed 'it' should be added to the list will remain doubtful so long as its ending is not explained.1) Goth. i-s O.H.G. i-r 'he', Goth. ija 'eam'; and doubtless Goth. jáin-s and O.H.G. jener 'that yonder', although the construction of their stems is not quite clear (cp. I § 123 p. 113, Holthausen in Paul-Braune's Beitr. XI 552 f., Singer ibid. XII 211, Lidén in the Arkiv f. nord. fil. III 242 f., Johansson in Bezz. Beitr. XVI 154 ff., who gives references to other works on the subject). In Balto-Slavonic we have *io- in the gen. Lith. jo O.C.Sl. jego

¹⁾ A ground-form id-om might be inferred from edn-on-oen 'the very same', but that there is no nasal in ed-on (used with the meaning of Lat. 'id est'). The inserted pronoun (pronomen infixum) -d- (-id-?), used for all genders and numbers — if we are right in placing it here — causes aspiration, and therefore ended in a vowel originally. A ground-form * $id\bar{o}$ is hardly possible, since before -u (for - \bar{o}) the i would have been preserved. (Based on Thurneysen.)

'cius' etc. beside nom. Lith. jì-s O.C.Sl. -jī (in dobrŭ-jĭ and the like, but i in i-že 'qui') instead of *i-s (= Lat. i-s) with j- from the other cases; cp. I § 84 Rem. 1 p. 80; Streitberg, Paul-Braune's Beitr, XIV 195 f.; J. Schmidt, Pluralb. 43.

Remark 2. The pronoun jis ji (declined) was affixed to inflected adjectives in Balto-Slavonic; and out of this grew what is called the 'definite adjective', as Lith. geràs-is O.C.Sl. dobrū-ji dobryji 'the good (man, etc.)' (I § 84 p. 80). Form-association brought about a variety of changes in the case-systems of these words. See Leskien, Decl. pp. 131 ff.

* $\bar{\imath}$, a fem. of *i-s, is preserved in Skr. iy- $\acute{a}m$ Avest. $\bar{\imath}m$ i. e. iy-em and in Lith. ji instead of *i, earlier * $\acute{\imath}$, as ji-s stands instead of *i-s; perhaps also in Cypr. \acute{i} - ν ' $\alpha \acute{\nu} \tau \eta$ " (Meister, Gr. Dial. II 281), with the particle -m.\(^1\) Compare * $\acute{k}\bar{\imath}$ beside * $\acute{k}i$ -s, on the last page.

§ 410. The Relative. From the proethnic period *io- has been used for the relative pronoun. Skr. yá-s yá-d yá, Avest. $u\bar{o}$ ua-b $u\bar{a}$. Gr. \ddot{o} -c \ddot{o} \ddot{v} . Connected with it are adverbs like Goth. ja-bái Lith. jéi jeĩ 'if', and derivative adjectives such as Gr. οίο-ς 'qualis' σσο-ς 'quautus' O.C.Sl. jakŭ 'qualis' jelikŭ 'quantus'. There can be no doubt that this *io- is the same as the anaphoric *io- and *i- discussed in § 409 above. The identity of these is made clear in Gr. "Iva for *i-na (see above). for $i\nu\alpha: \vec{o} - \vec{s}$ = Lith. (j) $i - s: j\vec{o}$. Thus *io- came to be used as a relative in the proethnic language without losing its purely anaphoric value. The chief reason why the anaphoric use survived in Balto-Slavonic was doubtless the association in use with nom. *i-s acc. *i-m (Lith. j-i-s j-i O.C.Sl. j-i), which were always demonstrative. Whether the Goth. relative particle ei in sa-ei etc. is Idg. * $\bar{\imath}$, the instr. of *i-s (§ 421), or *e-i, the loc. of *o- (p. 329), I leave undecided.

The relative use of *qo and *to- in several languages came in later. See the Syntax.

¹⁾ Mid.Ir. $\bar{\imath}$ was coined beside $s\bar{\imath}$ because of other pairs of forms — \bar{e} and $s\bar{e}$, iat and siat. (Based on Thurneysen.)

§ 411. Interrogative and Indefinite Pronouns. The stems *qo- *qi- *qu-, from the proethnic stage onwards, had an interrogative meaning with the acute accent, and were indefinite when unaccented. The use of these pronouns for the relative, as was but now remarked (§ 410), is later in origin.

* $q \, o - *q \, \bar{a} - .$ Skr. $k \acute{a} - s \, k \acute{a}$, Avest. $k \bar{o} \, k \bar{a}$. Gr. gen. Hom. $\tau \acute{e} - o$ Att. $\tau o \widetilde{v} =$ Avest. $ca - hy \bar{a}$, and such adverbs as $\pi o \widetilde{v} \, \pi o \widetilde{v}$, Dor. $\pi \widetilde{a}$ Att. $\pi \widetilde{\eta}$. Lat. $quo - d \, qu \bar{a}$, Umbr. $poei \, poi \, 'qui' \, paf - e \, 'quas'$ Osc. $pod \, 'quod' \, paam \, 'quam'$. O.Ir. $cia \, \text{Mod.Cymr. } pwy \, 'who? \, what?' \, for \, *kue - i \, (\S \, 414) \, , \, \text{O.Ir. } c\bar{a} - ch \, \text{O.Cymr. } pau - p \, quivis'$. Goth. $hva - s \, hv \bar{o}$, gen. $hvi - s \, \text{O.H.G. } hwe - s$. Lith. $k \grave{a} - s \, \text{O.C.Sl. } k \breve{u} - to \, 'who?' \, \text{Uninflected } *qe \, 'how' \, (indefinite \, 'somehow', and 'as also' = 'and'): Skr. Avest. <math>ca \, \text{Gr. } \tau \in \text{Lat. } -que \, \text{Goth. } -h.$

*qi-. Aryan: neut. Skr. ci-d Avest. ci\$ O.Pers. ciy generalising particle 'any', masc. Avest. ci-š O.Pers. ciš-ciy; Skr. ki-m 'what?' nά-ki-š 'no one' with k- instead of c- taken from ka-, see I § 448 Rem. p. 333. Gr. τi-ς τi. Lat. qui-s qui-d, Umbr. sve-pis 'si quis' pif-i 'quos' Osc. pi-s 'qui' pí-d 'quid'; Lat. quem doubtless instead of *quim = Osc. pim by analogy of ovem: ovi-s (§ 214 p. 92), and similarly em instead of im, and used side by side with it, from i-s (J. Schmidt explains differently, Plur. p. 62 footnote 1). O.Ir. ce ci 'which?' may belong to this stem, or it may be cia (*cē) shortened by a pretonic position. Germ. hvi- perhaps in Goth. hvi-leiks A.S. hwi-lc 'how constituted?' O.C.Sl. či-to 'quid?'

*qu-. Skr. $k\acute{u}$ -tra Avest. ku-pra 'where? whither?', Skr. $k\acute{u}$ -tas 'whence?' We may suggest that this is the root of O.C.Sl. -gda for * $k(\widetilde{u})$ - $d\overline{a}$ in $t\widecheck{u}$ -gda 'then' and other words (Kozlovsky, Arch. für slav. Ph. X 658). There is great doubt whether it has anything to do with Lith. ku- \widetilde{r} 'where, whither' and Lat. ali-cubi Umbr. pu-fe Osc. pu-f 'ubi'.

Remark. The etymology of Armen. o 'who?' i 'what?' and Lat. u-bi-u-ter has so far not been explained. Bugge (Beitr. zur etym. Erl. der arm. Spr., 28 f.) would postulate Idg. *go- *gi- as by-forms of *qo- *qi-But by this nothing would be gained as far as Armenian is concerned, since *go- would have become ko-, cp. kov 'cow' etc. I § 456 p. 336,

§ 484 p. 338. On the *u*- of the Latin words see further I § 431 Rem. 3 p. 321; Deecke in a Programm of Colmar, 1887, pp. 37 f.; Kozlovsky, Kuhn's Zeitschr. XXX 563 f.; and Stolz, Lat. Gr. 2 § 46 Rem. 1 p. 290.

Indefinite *smmo- 'some one' (connected with *sem- 'unus'): Skr. sama- Gr. άμό- Goth. suma-.

2. Cases of Pronouns in which Gender is Distinguished.

§ 412. In the preceding pages it has often been pointed out how many inflexions pass from pronouns to nouns. This, as we have seen, happened in some instances as early as the proethnic period. *Vice versa*, case endings sometimes pass from nouns to pronouns. This happens particularly in Greek and Keltic. In the historical period of these languages very few pronouns remain which show the special suffixes which they had in the parent language.

It is certain that in some of their cases pronouns varied in their endings, sometimes having the same ending as a noun, and sometimes a different one. Take as examples nom. sing. *so (Skr. sá) beside *qo-s (Skr. ká-s), abl. sing. *tesmõd (Skr. tásmād) beside *tõd (Skr. tád). In instances we have no right to assume that the pronominal ending was once exclusively used, and that the noun ending only came in by analogy. On the contrary, as we shall see, it can be made probable that in many cases the ending was originally the same in both noun and pronoun, and that the varying inflexion belongs to a later date. It seems, for instance, that in *tōd: *ulqōd (Skr. tád: výkād) the agreement is original, while *tesmod (Skr. $t\acute{a}sm\bar{a}d$) is * $t\bar{o}d$ transformed by association with the locative *tesme *tesmin (Lith. tamè Skr. tásmin); see § 424 p. 349.

We may now consider the special pronominal endings in detail. The acc. sing. masc. fem. and the acc. pl. masc. fem. may be passed over, since in these cases nouns and pronouns always had the same endings. All that is needed is a note

upon Goth. pan-a 'the, that', which will be found in § 417 Rem. On O.Ir. acc. pl. masc. inna cp. § 326 p. 226 and p. 355 footnote 1.

Nominative Singular Masculine and Feminine.

- § 413. Side by side with masc. forms in -o-s as *qo-s 'who?' (= Skr. $k\acute{a}$ -s, O.Ir. ne-ch for *ne-kyo-s, Goth. hva-s, Lith. $k\grave{a}$ -s) was *so 'this, that': Skr. $s\acute{a}$, Avest. $h\bar{a}$ and ae- $\check{s}a$ = Skr. \bar{e} - $\check{s}\acute{a}$ (Jackson, Am. Or. Soc. Proc. 1889 p. cxxvi), Gr. \acute{o} , Goth. sa, probably also Lat. ip-se for *-so, iste instead of *isse for *is-so and the like (I § 81 pp. 73, § 568 p. 425), Umbr. ere 'is' = * $e\acute{z}$ -so Skr. \bar{e} - $\check{s}\acute{a}$ (cp. § 409 p. 329). Perhaps even in the parent language there was a form *so-s: ep. Skr. $s\acute{a}$ -s Gr. \acute{o} -s ($\check{\eta}$) \acute{o} 's and the like) Lat. ip-su-s beside ip-se. The fem. was * $s\bar{a}$: Skr. $s\acute{a}$ Gr. $\acute{\eta}$ Lat. ip-s \bar{a} Goth. $s\bar{o}$.
- § 414. There were forms from o- and \bar{a} stems ending in $-o\underline{i}$ - $e\underline{i}$ and $-a\underline{i}$, in which $-\underline{i}$ was a deictic element, which we may conjecture to be the same as $-\overline{i}$ in the loc. sing. and pl., see § 256 p. 157, § 356 pp. 256 f. Compare too the Lith. masc. vocative in -ai, as $t\acute{e}vai$, and the Skr. fem. voc. in $-\bar{e}$, as $a\acute{s}v\bar{e}$ (§§ 201, 202 pp. 83 f.).
- 1. The stem o-. Skr. $ay(-\acute{a}m)$ Avest. aem i. e. ay(-em) this, cp. Skr. $sva-y(-\acute{a}m)$ oneself and $va-y(-\acute{a}m)$ we' § 441. To this stem probably belong O.Ir. \bar{e} he' for * $e-\acute{p}$ (but cp. § 416), and perhaps Gr. $\acute{o}\acute{b}\tilde{e}\tilde{i}\nu = \acute{o}\acute{o}'$ $e\tilde{l}-\nu$ with the particle -m ($e\tilde{l}-\nu$: Skr. $ay-\acute{a}m =$ Boeot. $\tau o\acute{v}-\nu$ Hom. $\tau\acute{v}-\nu-\eta$: Skr. $tuv-\acute{a}m$ $tv-\acute{a}m$), with which are connected $\tau ov\acute{o}\acute{e}\tilde{i}vo\varsigma$ etc., later analogical formations (cp. J. Baunack, Stud. auf dem Geb. des Gr. I 46 ff.).

The stem *qo- (interrog. and indef.). Lat. $qu\bar{\imath}$, O.Lat. (Dvenos-inser.) qoi Osc. poi 'qui'; but Umbr. poei poi poe is a dissyllable, and so doubtless a compound of *poi with -ei -i (cp. nom. pl. pur-i pur-e etc.). O.Ir. cia (for *cē) Mod.Cymr.

pwy 'who' for *kue-i; cp. the frequent occurrence of "initial aspiration" (I § 658.1 pp. 510 f.) in cia chruth 'how?' properly 'what (is) the kind?' and in Mod.Cymr. pwy bynnac 'whosoever (pynnac)'.

Lat. $h\bar{\imath}$ -c for *hoi-ce, like $qu\bar{\imath}$.

O.Sax. A.S. sē 'this, that, the', identical with the indeclinable Goth, sái, which is an unaccented affix in O.H.G. de-se 'this' (gen. des-se) Norse Run. sa-si 'this' (fem. su-si neut. Dat-si). O.Sax. O.H.G. the thie A.S. De instead of se by association with the stem to- (cp. Lith. tà-s instead of Idg. *so *so-s and the like). Further, O.Sax, he hie O.H.G. he. cp. § 409 p. 327. O.H.G. jenē-r was made by adding to -c = *-oi the nom. sign -r = *-z (cp. i-r e-r = Goth. i-s) this explanation of -er makes it possible to see why it was not shortened to -er, op. muoter for pr. Germ. *moder § 192 p. 71; — from this analogy came blinter, see § 406 p. 321: as to unser gen, unseres beside blinter gen, blintes see § 455. A different explanation of jener is given by Johansson in Bezz. Beitr. XVI 121 ff., where other older explanations are cited and criticised. O.H.G. der, her are not shortened forms of $*d\bar{e}r$, $*h\bar{e}r$. Two origins are possible. (1) To de, he $= th\bar{e}$, $h\bar{e}$, which arose in a position where they had no accent (though afterwards they could be used with the accent too) was added the nom. -r (cp. O.H.G. de-se as contrasted with A.S. $d\bar{e}$ -s 'this'). (2) Or der took the place of *dar = Lith, tà-s, taking e from the gen, des etc., as did the acc. de-n. The latter view is favoured by hwer wer (acc. we-n) beside Goth, hva-s.

Lith. $tasa\tilde{\imath}$ 'this' is doubtless for tas+sai, not tas+ai (cp. Bezzenberger, Beitr. zur Gesch. der lit. Spr., 174).

2. Feminine forms ending in Idg. *- $a\dot{i}$, as the nom. acc. pl. neuter (§ 428). Avest. $pw\bar{o}i$ 'tua' xwae(-ca) f. 'one's own' (Bartholomae, Ar. Forsch. II 173), which suggested noun forms like $ber^ex\bar{d}\bar{e}$ f. 'blessed' (§ 190 p. 67). Perhaps this $-a\dot{i}$ is the same as the Ar. ending for the voc. sing. of \bar{a} -stems (Skr. $a\dot{s}v\bar{e}$), see § 202 p. 84. Lat. hae-c, quae beside

sī quā, aliqua, Osc. paí pae. Another form of this class is probably Pruss. stai beside sta f. 'the, this' (Lith. tà tó-ji) quai quoi f. 'which', whence we have substantival forms by analogy, mensai 'meat' (Lith. mėsà) deiwutiskai 'blessedness' among others (J. Schmidt has a different explanation, Kuhn's Zeitschr. XXVII 389 ff.).

§ 415. Forms with the particle -u, doubtless the same as appears in the loc. pl. -s-u (§ 356 p. 257). Ide. *so-u in Skr. số O.Pers. hauw Gr. oỗ-roc. Skr. a-sāú (for its a- see § 409 p. 327) and Avest, $h\bar{a}u$ are remarkable, being used for both masc. and fem.; conversely O.Pers. hauw is used for both genders; the obvious conclusion to draw is that in the first pair the Idg. fem. *sā-u is used instead of *so-u, and in the latter group *so-u is used instead of *sā-u, cp. O.Pers, fem. iyam =Skr. iyám used for the masc. However, the masc. a-sāú hāu along with Ved. masc. sá may be derived from an Idg. *sō beside *so (Bartholomae, Bezz, Beitr. IX 310, Kuhn's Zeitschr. XXIX 498, cp. also Wackernagel, E. Kuhn's Litteraturblatt, III 55, and Johansson in Bezz. Beitr. XVI 129), and O.Pers. hauw from an Idg. *sa-u with the same grade of ablaut as is shown by the Idg. fem. *qa-i (§ 414) (cp. Wackernagel, Das Dehnungsgesetz p. 65). Gr. αΰ-τη may be derived from either * $s\bar{a}u$ - or *sau- (I § 611 p. 461), and $o\bar{v}$ - vo_{ζ} might also be connected with Avest, $h\bar{a}u$ and derived from * $s\bar{o}u$ -.

Avest. masc. avāu beside aom i. e. avem 'that yonder' is like hāu, see Bartholomae, Kuhn's Zeitschr. XXIX 498.

§ 416. The relation between Skr. nom. $v\acute{e}$ - \check{s} and $v\acute{i}$ - \check{s} avis' and like pairs (§ 195 p. 75) suggests that Lat. eis $\bar{\imath}s$

and eis-dem (Bücheler-Windekilde, Grundr. p. 28), beside i-s = Goth. i-s, is to be derived from an original strong-grade nominative *ei-s, which may also be the source of O.Ir. ē (cp. § 414 p. 335). But it is quite conceivable that eis is a contamination of *e-i (§ 414) and i-s, cp. O.H.G. jenē-r p. 336.

Remark. It seems to me a very dubious supposition that eis, which occurs three times in C.I. no. 198, is each time a blunder (Danielsson, Stud. Gram. p. 23). It is preferable to regard eisdem as a contamination of $\bar{\imath}dem = *izdem$, and isdem (restored on the analogy of is). But this view is needless, if there was a form eis $\bar{\imath}s$.

Nominative and Accusative Singular Neuter.

§ 417. The mark of these cases is -d, answering to -miu nominal o-stems (as *jugo-m 'iugum'), and to a suffixless stem in the other classes of nouns (as *peku 'pecu'); e.g. *to-d 'that' *qo-d *qi-d 'what'. Skr. tá-d Avest. ta-p O.Pers. ai-ta = Avest. ae-tab; Skr. ci-d Avest. ci-b O.Pers. ciy 'any, at all'. Gr. το ποδ-από-ς (II § 32 p. 56) Thess. πόκκι for *πόδ κι; the particle *Foδ in Gr. ὅττι ὅππως and the like was probably the neuter of *suo- 'suus' (the Author, Gr. Gr.2 pp. 134, 231) and not the abl. sing. like Skr. mád (§ 474), cp. Avest. ma-b 'meum'; $\tau i \tau i = Skr. ci-d$. Lat. is-tud quo-d qui-d, Umbr. este 'istud' for *es-to(d) (cp. § 274 Rem. p. 174) piř-i pirs-i 'quid, quodcunque', Osc. po-d 'quod' pí-d pi-d 'quid'. O.Ir. ce ci 'quid' in ced cid 'what (is)' for ce ed ci ed; whether ed 'it' is connected with Lat. i-d, is doubtful, see § 409 pp. 331 f. Goth. hva, pa-t-a i-t-a with -a for -\(\bar{o}\), as is shewn by hvarjato-h 'each' and other similar forms, O.H.G. da-z e-z, cp. the Remark. Pruss. s-ta, ka, O.C.Sl. to, je = Skr. yá-d and $\tilde{c}i$ -to (-to is a particle), ni- $\tilde{c}i$ - $\tilde{z}e$ 'nihil'; in Lith. * $t\dot{\alpha}$ = *to-d was driven out of the field by the neut. pl. taī (§ 428), see J. Schmidt, Plur. pp. 228 f.; but the d-ending remained in adjectives like gera, to which it had spread before this happened (§ 227 p. 110).

Remark. Hitherto the final vowel of Goth. pata etc. has been explained as an affixed particle, like that in acc. masc. $pana = \text{Skr. } t\acute{a}-m$. But Johansson (Bezz. Beitr. XVI 129, 161) sees in Goth. -ta a fuller form

of the suffix -d (ablaut *- $d\tilde{a}^x$: *- d^2), and equates $\hbar ata$ with Skr. $tad\tilde{a}$ Lith, $tad\dot{a}$, ita with Skr. $id\dot{a}$ and the like. He sees another grade (-de)of the same suffix in Gr. $i-\delta \epsilon' \tau \phi - \delta \epsilon$ Lat. ide-m. But he will not allow that Goth. Dana is an acc. with -m; he makes it the same as Dana- in Dana-máis 'further, still', and derives it from *tonē. This last derivation does not convince me in the slightest degree; for the form in question is masculine, and there is nothing in its use to suggest a derivation from any such adverb. The accepted explanation of $\overline{pan-a}$ has in my opinion no difficulties at all. O.H.G. den, with e instead of a taken from the other cases, may be the unextended form, which keeps the nasal like the preposition in = Gr. ∂r and the particle Goth, an = Gr. ∂r Lat. an. Johansson's explanation of pata is less objectionable in itself. But pata cannot be separated from pana; and unless pana is merely a re-formate moulded after pata when pata had come to be regarded as a simple uncompounded word - which there is nothing to shew - we must adhere to the old explanation of pata. O.H.G. day is doubtless the unextended form, which kept the final dental, as it should do, before a vowel initial in the following word, just as den kept its -n.

Re-formations in the separate languages with the -m of noun-stems in -o-. Skr. ki-m (cp. Gaedicke, Acc. in Veda pp. 6, 16) Pali tam Avest. ke-m yi-m aom. Gr. ταὐτό-ν instead of ταὐτό. Lat. ipsu-m Umbr. esom-e 'in hoc'. Another is doubtless O.Ir. (s)a n-, neuter of the article and relative pronoun.

Genitive Singular.

§ 418. In the Masc. Neut. there are two endings, which passed very early into the noun-system: *-sio and *-so, see § 228 pp. 113 f., § 239 pp. 130 f.

*sio-. Skr. tá-sya Avest. ae-tahe; Skr. a-syá Avest. ahe aňhe (ňh taken from the fem. aňhā = Skr. asyás, cp. § 420); Gāthic ahyā aáyā (I § 558.3 p. 415); O.Pers. ava-hyā Avest. avaňhe (ňh as in aňhe); Skr. amúšya. Armen. oroy from or which; but cp. § 239 p. 131. Gr. Hom. τ o-ĩo Att. τ o \tilde{v} = *to-sio; Hom. τ éo Att. τ o \tilde{v} = Avest. cahyā, common ground-form *qe-sio. O.Ir. ai ae, unaccented ā a (with "aspiration" of the following initial) 'eius', I would suggest for *e-sio, cp. Skr. a-syá Goth. i-s O.II.G. e-s.¹) Lastly *-sio is probably the suffix of

¹⁾ To avoid separating things which are really closely connected, I may add here a few general remarks upon Irish possessives of the third person. These will be based upon Stokes's Celtic Declension

Pruss. s-te-ssei s-tei-sei s-te-sse s-tei-se s-tei-si (stei- has been taken from the gen. pl. stei-son) of this, of the, aine-ssa aina-ssei of one, of a, although the uncertainty of the spelling makes it impossible to draw a certain conclusion (cp. Leskien, Decl. 113 f.).

*-so. Goth. pi-s O.H.G. de-s = * $t\acute{e}$ -so, A.S. dae-s (beside de-s) = * $t\acute{o}$ -so (cp. Gr. $\tau\acute{e}$ o beside $\pi o v)$; Goth. i-s O.H.G. neut. e-s. Compare § 239 p. 131. O.C.Sl. e-so = Goth. hvi-s O.H.G. hve-s, e-so (beside e-to 'quid'). There is no need that I can see to assume that Greek had *-so (as well as *-sio), Johansson notwithstanding (De der. verb. contr., p. 215).

In the separate languages there were frequent levellings between pronominal forms of the gen. sing. and the gen. pl.: O.Ir. ai 'eorum' = *esiom following ai 'eius' = *esio; Lat. cuium following cuius, see footnote on preceding page; Pruss. steisei instead of stessei following steison, see above; Goth. pizē instead of *páizē (cp. A.S. dāra O.Icel. peira) following pis; Avest. aeṭanham instead of aeṭaeṣam following aeṭahe, § 429. This suggests a conjecture that *-so in Goth.

⁽pp. 104 f.), and upon communications which I have received from Thurneysen. The above named forms ai ae \bar{a} a can be used for the feminine (' $avr\tilde{\eta}s'$), but then \bar{a} a do not cause aspiration, and so they are doubtless connected with Skr. asyás. Further, ai ae are the accented gen. pl. (and dual) 'eorum, earum' the unaccented being \bar{a} n-, a n-. In explaining these forms we have to consider (1) the sing. masc. fem. Mid.Cymr. Corn. y Bret. e (pl. Mid.Cymr. eu Bret. ho = pr. Brit. *ou? § 438); (2) the Irish substantival word for 'that which belongs to him, or them' (all genders): ai ae, acc. pl. masc. aii, dat. pl. aiib, with which is doubtless connected Mid.Cymr. eidaw 'that which is his', eidi 'that poss. which is hers', eidunt 'that which is theirs'; also used along with the pronoun: ā-aii 'suos' Cymr. y eidaw 'his own' (masc.). A conjecture may be offered that *esio and *esiās, in proethnic insular Keltic, when in pre-tonic position became *asio *asiās (cp. Ir. as- beside és- 'ex' I § 66 p. 55), and the a- passed from these to the accented forms. The gen. pl. which grew out of these forms, *asiom = O.Ir. ai ae, a na n-, may be compared with Lat. cuium (Charisius) following cuius, which took the place of quorum or quium (Cato) (compare Hom. huelwr beside \$\frac{2}{\epsilon} \cong 454), but the subst. ai ae is naturally compared with Lat. cuiu-s 'belonging to whom' which comes from the gen. cuius (§ 419). The substantival acc. pl. aii shows that this stem had i-flexion.

pi-s O.C.Sl. če-so etc. has been transformed from *-sio on the analogy of the gen. pl. *-sŏm (§ 429). Similarly in the feminine there is *-sās (Goth. pizōs) for *-siās (Skr. tásyās).

§ 419. Some of the Armenian pronouns have r as the genitive suffix, which is certainly to be connected with the genitive r- in the personal pronouns me-r 'nostri' je-r 'vestri' iu-r 'sui' (§ 455): oir from o 'who'; nor-in from no-in 'the same', and others. Compare further O.Icel. $v\bar{a}r$ O.H.G. $uns\bar{e}r$ § 455.

The much-discussed Italic forms 1) contain a locative in -e-i; and this formation may be suggested as an explanation of the gen. sing. of noun stems in o (§ 239 pp. 131 f.). The loc. in -e-i was used in pr. Ital. for loc., dat., or gen., as the form *me-i *mo-i in the personal pronoun had been used right on from the parent language (§ 447); we may suggest that *te-i when used for the genitive had at first only the possessive meaning, and did not come till later to be quite coextensive with this case. Compare Thess. loc. τοῦ and χοόνοι used as gen. A desire to mark off the genitive from the other cases led to different results in different dialects of Italic. In Latin an association with the gen. in -us (homin-us) produced such forms as istī-us, eiius eius i. e. eei+us (cp. loc. dat. eei eī); but the gen. suffix -s was added in Umbr. erer irer Osc. eiseis eizeis 'eius' and the like (cp. subst. Umbr. popler Osc. sakarakleis), the latter of which are exactly parallel to O.Lat. gen. $m\bar{\imath}$ -s $t\bar{\imath}$ -s instead of $m\bar{\imath}$ $t\bar{\imath}$ (§ 447). The re-formates istīus eius were used for the feminine as well, but istae utrae and like forms are also found, as in Umbr. erar 'eius'. The older -ei (*istei) survived in composition beside -ei-us (istīus), as $ist\bar{\imath}mod\bar{\imath}$ (cp. quoi-quoi- $mod\bar{\imath}$, below); but $neutr\bar{\imath}$, in $neutr\bar{\imath}$ generis etc., has doubtless borrowed -ī from the nouns (similarly Lith, masc, $t\tilde{o}$ fem. $t\tilde{o}s$).

¹⁾ In addition to the references given by Stolz, Lat. Gr.² 348, see Merguet, Die Entwickel. der lat. Formenb. 83 ff., 92 f.; Danielsson, Studia gramm. 1879 pp. 1 sqq.; Bersu, Die Gutturalen p. 136; W. Meyer, Zeitschr. für rom. Philol. X 174; Henry, Précis de grammaire comp., p. 248; Luchs, Studemund's Stud., I 316 ff.

The genitives quoius hoius, cuius huius must be discussed in connexion with quoiei quoi hoi-ce, cui hui-c and Osc. pieis--um 'cuiuspiam' piei 'cui'. not forgetting Osc. poizad abl. 'qua' pullad adv. 'qua' Umbr. pora abl. 'qua'. As far back as proethnic Italic a fossil case of the stem *qo-, say *kuō or *kuoi, was used instead of the inflected pronoun as an interrogative or relative particle, the case which it was intended to represent being made clear by an inflected demonstrative pronoun which was used with it; cp. Lith. dial. tàs cécorius, kùr iszválnino jó dùkteri 'the prince, where he has freed his daughter' = 'whose daughter he has freed' (the Author, Lit. Volksl. p. 305). 1) Thus Lat. quoiei = $q\bar{o} + eei$, to which was later added quoius as a distinctly marked genitive (though quoi-quoi-modī cui-cui-modī remain unchanged), Osc. poizad = $p\bar{o} + eiz\bar{a}d$ (eizo- 'is'), púllad = $p\bar{o} + oll\bar{a}d$ (cp. Lat. olle), Umbr. pora doubtless = $p\bar{o} + or\bar{a}$ (orer 'illius') rather than $p\bar{o} + \bar{e}r\bar{a}$ (erer 'eius' = Osc. eizeis).2) Osc. piei (gen. pieis- in the comp. pieis-um 'cuiuspiam') is doubtless derived from a combination of the adverb * $p\bar{\imath}$ = Lat. $qu\bar{\imath}$ from the stem *qi- (§ 421) with e(i)ei, although it might possibly have come into existence by attraction of pi- to the o-class. Ou the analogy of quoi quoius the Lat. hoi-ce hoi-us were made, like the nom. pl. hēs following quēs (§ 427); the similarity once existing between these stems in the nom. sing. (quī and $h\bar{\imath}$ -c(e), § 414 p. 336) may have helped in this result.

Remark. The Lat. adj. quoiu-s cuiu-s 'belonging to whom', to judge from its meaning, seems to have arisen from the possessive genitive quoius, which looked like an adjective; if so, it has an exact parallel in Avest. na- 'noster', formed from the genitive $n\bar{o} = \text{Skr. } nas$; see the end of \S 454.

The same idiom is found in Modern Greek, as αὐτὸς εἰναι ὁ ἄνδιας ποῦ τὸν εἰδα, beside ποῦ εἰδα, 'that is the man whom I saw'; in Keltic; and in High German.

²⁾ Osc. púiiu, in Zvetaieff, Inscr. It. inf. no. 103, seems to be one of this group of forms (I would derive it from * $p\bar{o} + eio$ -); but the meaning of the passage in which it occurs is obscure.

Old Irish has also *-\bar{\tau} as in nouns, ind athar 'of a father' for *sen-t\bar{\tau}, like Lat. ist\bar{\tau}-mod\bar{\ta} Gr. Thess. \tau\bar{\tau}.

Lithuanian. With noun flexion, $t\tilde{o}$, $j\tilde{o}$ etc. Old Church Slavonic to-go je-go, etc., a re-formation which has not yet been satisfactorily explained, see Leskien, Decl. 109 ff.

§ 420. Feminines belonging to o-stems had in the parent language the masculine stem with the ending *-sids for the genitive singular. Ar. -asyās: Skr. tásyās asyās. Avest. ae--taňhå aňhå. O.Pers. ahyāyā instead of *ahyā, following taumāyā (§ 229 p. 114), just as Pali assa = Skr. asyás was extended to assāya on the analogy of kaññāya; ending exactly as a noun, Avest. aetayå (following haenayå) beside aetanhå. Skr. amú-šyās like amú-šya. O.Ir. ai ae for *e-siās, see p. 339 footnote. Pruss. s-tessias stessies stesses steises (ei on the analogy of masc. steisei, § 418 p. 340). Germanic *-siās and *-sās. A.S. $d\overline{w}re = pr. Germ. *paizioz, Goth. pizos and blindáizos$ (§ 406 p. 321), O.H.G. dera, O.Icel, beirar = pr. Germ. *baizāz. This $\dot{a}i$ has come from the gen. pl., where it spread from the masc. to the fem. (§ 429). But the loss of i in Goth. Dizōs etc. is to be explained like the same loss in the masc., see § 418 p. 340. As regards -s- becoming -z-, see Kluge, Paul's Grundr, I 347.

This Idg. feminine formation in *-siās was produced under the influence of the masc. in *-sio. Either there was once a fem. *tās like *ekūās, which was transformed to *tesiās by association with *tesio; or else *tesio at first served for all genders, and afterwards the feminine was distinguished by the transformation *tesiās. From the gen. in *-siās, si (s) spread to the dative and locative in the proethnic period; see § 425.

O.C.Sl. toję contains the -ę of dušę, standing for *-ans or *-ons. See § 229 pp. 117 f. Since the dat. loc. toji borrowed the sounds -oj- from the instr. toją = Skr. táyā (§ 425), toję itself may have followed the same analogy.

Endings the same as those of nouns. Greek $\tau \hat{\eta}_{S}$. Latin illae beside illīus etc., Umbr. erar 'eius'. Old Irish

inna for *sen-tās, cacha cecha, nacha, ep. mnā § 229 p. 114. Lith tās.

Instrumental Singular.

§ 421. A suffix proper to pronouns was -na, the same (we may suggest) as the ending of certain adverbs; for instance, Skr. caná Goth. -hun O.H.G. -gin 'any', Skr. hiná 'then', Lat. pōne superne, Goth. pan 'then' Lith. tēn 'there'. Examples: Avest. ka-na O.Pers. tya-nā aniya-nā, Skr. ké-na té-na ē-na; the latter, like Skr. sanē-mi O.C.Sl. tě-mī (see below), have doubtless the same diphthong which is seen in the nom. sing. Lat. qo-i quī etc. (see § 422 Rem.), and they also remind one of Skr. ē-vá Ved. ē-vá ē-vá 'so' Goth. hvái-va 'how'. With Skr. kéna: Avest. kana ep. Lith. gen. kënō: kenō (kanō) § 451 pp. 391 f. -ēna was borrowed by the nouns, whence vſkēṇa etc., see § 275 p. 177. Gr. ĩ-va, ep. § 409 p. 331. A lost form *ci-na (nom. ci-š) seems to have suggested the making of the Avestic acc. cinem.

Forms from o-stems ending in *-oi-mi. Skr. sanē-mi 'from of yore'. A.S. $d\overline{x}$ -m O.Icel. pei-m beside subst. A.S. mioleum (as in the pl., Goth. pái-m beside subst. vulfa-m). O.C.Sl. te-mi ji-mi. Compare the Pruss. sen maim 'cum meo' = 'mecum' (see §§ 449, 452), which is doubtless not to be derived from Idg. *moj-mi (cp. Avest. ma-Gr. ¿uó- 'meus'), but belongs to the stem maia-, and has undergone a contraction like the gen. maisei (beside stessei steisei ainassei), and the nom. mais = O.C.Sl. moji; however, I leave it undecided whether *maiai-m(i) became maim in the natural course of things, or by association with maiā-smu maia-n became first *maia-m(i), and then maim (cp. twaismu beside twaiasmu). Compare § 282 pp. 187 f. Armenian: with -v for *-bhi oro-v, from or 'which', following the subst., gailo-v; similarly i-v 'with or through what?' from i 'what?' like subst. srti-v, see § 281 p. 186.

There also seem to have been in the parent language, and to have come down from it, an instrumental series from o-

and *i*-stems made noun-fashion, ending in $-\bar{o}$ $-\bar{e}$ and $-\bar{\imath}$. Avest. $t\bar{a}$ $y\bar{a}$ ana. Gr. $\pi\omega$ ($ov-\pi\omega$), Lac. $\pi\dot{n}-\pi\sigma\alpha$. Lat. $\sigma u\bar{\sigma}-\sigma\sigma$ -modo, quō 'whither', Umbr. sei-podruh-pei 'utroque': Lat. quī 'how' from qui-s. O.Ir. cach (gen. caich) O.Cvmr. nau-n 'auivis, each' no doubt = $*q\bar{o}$ -qos, properly 'where who, how who, somewhere or somehow someone' as Thurneysen conjectures; neuch neoch for *ne-qo, cossind 'with that' for *con sen-tu. A.S. hwō 'how' O.H.G. diu, hiu-tu 'to-day' (§ 409 p. 330). Goth. hvē 'with which' be 'by so much': hī (beside Goth. hi--mma) in O.H.G. hī-naht 'this night'. Lith, the 'with that, at once in by that, by so much: the suffix -mi was added to this series, and produced tu-mi ku-mi, just as in nouns -u-mi (vilkumi) was produced in some dialects, see § 275 p. 178; Pruss. s-tu ku. Mod. Slov. či 'if' Czech či 'whether' = Lat. $qu\bar{\imath}$, and with -mi added O.C.Sl. či-mi used as instr. to či-to. According to this analogy, the particle *ī. Ved. ī (also seen in \(\bar{\tau}\)-df\(\delta\)- 'such as this') Gr. -\(\bar{\tau}\) in ούτοσ-\(\bar{\tau}\) Umbr. pors-\(\epsi\) nom. pl. 'qui', may be the instr. to Lat. i-s: if so, the nasal in Ved. $\bar{\imath}m$ Gr. $o\dot{\imath}\tau o\sigma - \dot{\imath}\nu$ is the particle -m.

§ 422. ā-stems had -aiā. Skr. táyā Avest. ae-taya, Skr. ayā Avest. ayā āya. O.C.Sl. toja (with the particle -m), compare O.Lith. taja, in modern dialects taī (J. Schmidt, Kuhn's Zeitschr. XXVII 386 f.); for a different explanation of taī see Brückner, Arch. slav. Phil. VI 272.

In Aryan, this ending spread into the noun-system: Skr. ášvayā instead of ášvā, Avest. haenaya instead of haena: similarly O.C.Sl. rakoja instead of raka. In Lithuanian we find, vice versa, the pronoun assimilated to the noun, ta following ranka; and similarly Gr. η Dor. $\tau av \tau a$ and doubtless Lat. ha-c etc. See § 276 pp. 178 ff. It is uncertain whether Ved. tya instead of tyaya and Avest. ya ka beside aetaya have followed the noun type, or whether tya and ya are due to syllabic dissimilation, and ka to the analogy of ya (compare similar changes in § 247 p. 147, § 307 Rem. p. 205).

Skr. amúyā beside amúšyās follows the lead of -ayā.

Remark. Schmidt (Kuhu's Zeitschr. XXVII 386) analyses Skr. aud thus - au-a, and derives it from the stem i-; he then assumes that ayā; asyās first suggested the formation of táyā. This commends itself to me as little as his view (ibid., p. 292) that \bar{e} -na also comes from i-. and that it was the relation of ena: asyá that produced téna beside tásya. There is a much safer way of regarding these. Schmidt himself tells us (Kuhn's Zeitschr. XXV 5 f.), and I believe it to be true, that -i- in certain plural forms (Goth. Dá-i-m O.C.Sl. tě-mi Skr. té-bhiš, Gr. 70-1-qu O.C.Sl. tě-chữ Skr. tế-šu) is the same as -i in the nom, plural (Gr. 70-i Skr. té etc.); and further, we have concluded that the i-diphthongs in oblique cases of the dual, as O.C.Sl. tě-ma Skr. táy-ōš, contain the same -i as the nom. acc. dual neuter and feminine (Idg. *to-i and *ta-i); see § 297 pp. 201 f., § 311 pp. 209 f. If these assumptions are correct, we can hardly go wrong in connecting the diphthong of Skr. \(\bar{c}\)-na \(t\bar{e}\)-na and \(san\bar{e}\)-mi O.C.Sl. \(t\bar{e}\)-mi with that in the nom. sing. masc., e. g. Skr. ay(-ám) Lat. qo-i quī Osc. poi etc., and similarly the i of Skr. $ay\bar{a}$ táyā O.C.Sl. toja with that of the nom. sing. fem., as Avest. pwoi Lat. quae (§ 414 p. 336). It is true that Skr. aya might be derived from the stem $*ei\bar{a}$ - (Lat. $e\bar{a}$ - Goth. $ii\bar{o}$ -); but there is no reason to separate it from táyā etc.

Ablative, Dative, and Locative Singular.

§ 423. In the masc.-neut., the stem is often extended by -sm-; the same particle which appears, without any inflexional ending, in the acc. Avest. ahma Lesb. $\ddot{a}\mu\mu\varepsilon$ (§§ 436, 443).

Skr. tásmād tásmāi tásmin, asmād asmāi asmin, Avest. ae-tahmāþ ae-tahmāi ae-tahmi, cahmāi with *qe- like O.C.Sl. loc. če-mī. Skr. re-formates, amūšmād amūšmāi amūšmin. Armen. abl. y umē dat. loc. um from o 'who', y ormē, orum from or 'which'; -um- for -osm- I § 561 p. 417. Gr. Gortyn. loc. ὅ-τιμι i. e. doubtless -τīμι for *τι-σμι. (On the dative τέμμαι 'cui', assumed by some, see Solmsen Kuhn's Zeitschr. XXIX 79). Umbr. e-smi-k 'ei' esmei esme 'huic', pu-sme 'cui'. Goth. pa-mma hwa-mma i-mma. Pruss. dat. s-te-smu (steismu, cp. gen. steisei § 418) ka-smu, antersmu (stem antera-), schi-smu (schi-s 'this').

In Germanic and Balto-Slavonic there is another series which has -m- instead of -sm-. O.H.G. demu hwemu. Lith. dat. támui tám loc. tamim-pi tami tamè tam, O.C.Sl. dat. tomu loc. tomĭ; Lith. szimè beside sziamè from szì-s. These forms

have certainly dropped s on the analogy of the cases whose suffix began with m: cp. O.H.G. pl. $d\bar{e}$ -m, sing. pl. A.S. $d\bar{e}$ -m O.Icel. pei-m, Lith. pl. $t\bar{e}$ -ms dual $t\bar{e}$ m- $dv\bar{e}$ m $t\bar{e}$ m- $dv\bar{e}$ m O.C.Sl. sing. $t\bar{e}$ -m \bar{i} pl. $t\bar{e}$ -m \bar{i} dual $t\bar{e}$ -ma. For a different explanation of O.H.G. -m-, see Kluge, Paul's Grundr. I 347.

As regards the case suffixes, that of the locative was a special pronominal ending. This case had the endings *-smin and *-smi, cp. Gr. ἄμμιν ἔμμιν απα ἄμμι ἔμμι § 448. *-smin: Skr. tásmin, Lith. tamin in tamim-pi, although it is true that -mpi may have come from the gen. pl., in which case we must analyse the word tami-mpi (see Brückner, Arch. Slav. Phil., III 279 f.; Osthoff, Morph. Unt. II 9).¹) *-smi in Avest. -tahmi Gr. ŏ-ττμι. Lith. tami O.C.Sl. tomī may be explained as having either *-(s)min or *-(s)mi; if the former, Lith. tami should be written tami. O.Lith. jamije like diewije. O.Lith. Mod.Lith. tamè, whence tam̄, has the same ending as loc. vilkè; a conjecture as to the origin of tamè is given in § 424, pp. 349 f.

The ablative and dative, on the other hand, originally had the same suffix as the nouns. Skr. tásmād tásmāi Avest. -tahmāp -tahmāi like vfkād vehrkāp vehrkāi. Armen. y umē like y akanē, cp. § 244 p. 142; what may have been the ending of um we can hardly now hope to ascertain. Umbr. esmi-k esmei esme like Tefri Tefrei Tefre Tefro deo', cp. § 246 pp. 145 f.; in pusme it is a question whether the particle -e -ei (cp. puř-e 'quid') has not become attached to the ending. Goth. hvamma; here -a, to judge from hvammē-h 'to each', came first from *-ē, but it may represent the abl. *-ēd or the dat. *-ē(i); O.H.G. hvemu seems to be an abl. in *-ōd, cp. § 241 pp. 137 f., § 246 p. 146.

¹⁾ The form tami-pi does not prevent our explaining tamimpi as tamin+pi. Both forms, tami and *tamin, may originally have existed side by side. Or *tamin may have become tami, and after the uncompounded word had thus changed, -pi may have been added again. This can be paralleled by tam-pi, which does not come from tame-pi, but after tame had become tami, -pi was added again to the new word.

Lith. támui (shortened to tám) O.C.Sl. tomu like vilkui vluku; Pruss. stesmu like waldniku 'regi'.

§ 424. Side by side with the forms cited in the last section is a series without -sm-

Ablative. Skr. ád tád vád Avest. āb, all adverbs. Gr. & $\ddot{o}\pi\omega$ 'unde'. Lat. $ist\bar{o}$ $gu\bar{o}$, Osc. e's ú d'eo'. Lith. $t\tilde{o}$. The abl. *tod 'thence, then' is said, doubtless correctly, to be the ending of the imperative Skr. bhára-tād Gr. φερέ-τω Lat. fer-tō and similar forms (Gaedicke, Acc, im Veda 225; Thurnevsen, Kuhu's Zeitschr. XXVII 179 f.). — An Italic re-formate is Lat, *quīd from qui-s in ab aliquī etc. (Bücheler-Windekilde, Grundr. 121 f.), cp. marī(d) § 243 p. 139.

Dative. Gr. $\tau \tilde{\omega}$. Lat. istō nullō beside istī etc. A late re-formate is Lith, dialectic mirusiou-jui = High Lith. mirusiám-jām, part. pret. of mir-ti 'to die' (Geitler, Beitr. lit. Dialektologie, 27).

Locative. Gr. Att. $\pi o \tilde{i}$ Dor. $\pi \epsilon \tilde{i}$, $\tilde{\epsilon} - \varkappa \epsilon \tilde{i}$. Lat. hei-c $h \tilde{\iota} - c$, Osc. eíseí in eo' alttreí in altero'. Goth, pei O.Icel. pī = Gr. $\tau \epsilon \tilde{i} - \delta \epsilon$, O.Icel. $h v \tilde{i} = Gr. \pi \epsilon \tilde{i}$; see Bechtel, Zeitschr. deutsch. Alt. XXIX 366 f. A loc. from the stem o- may be contained in Gr. εὶ εἶ-τα (beside ή instr. in Heraclean etc., see the Author, Gr. Gr. 2 p. 225) and in Skr. ē-ša- ē-ta- Osc. ei-zo-, see § 409 p. 329.

Certain forms used for the dative are really locatives of the same kind: Osc. altrei 'alteri' piei 'cui', Lat. istei istī, eei ei (also spelt eiei, like dat. abl. pl. eieis beside eeis eis), quoiei quoi cui, the latter for quō (or *quoi) + eei (see § 419 p. 342); Lat. hoi-ce hui-c is a re-formate following quoi cui. These same forms, as we assumed in § 419, once had the meaning of a genitive as well (cp. Idg. *mo-i loc. dat. gen. § 447), and, as genitives, were extended in Latin by -us, whilst in Umbro-Samnitic -ei became -eis by analogical transformation. The use of istī etc. for the feminine was doubtless due to the likeness between the ending -ei $-\bar{i}$ and that of $m\bar{i}$ $mih\bar{i}$ $tib\bar{\imath}$ $sib\bar{\imath}$, used for all genders, and of the dative of *i*-stems; the endings of both sets were considered to have the same character. A comparison of the forms cited in this section with those containing -sm- (§ 423) makes it probable that it was only the locative which had two original formations. In the locative there will have been parallel endings -smin -smi (Skr. tásmin Avest. -tahmi) and -½ (Gr. $\pi o \cdot \hat{\iota}$); later on, but before the end of the proethnic period, -sm- spread to the ablative and dative, which hitherto had had the same endings as nouns. Ablative adverbs like Skr. $t\hat{a}d$ are older than this change; and being adverbs they were not affected by intrusion of -sm-. But such forms as Lat. $ist\bar{o}(d)$ and Greek $\tau \hat{\psi}$ may or may not be original; it is possible that they were produced by some tendency of a later date which brought them again under the influence of the noun system.

This -sm- is usually identified (and doubtless rightly so) with the particle Skr. sma, which follows pronouns by way of emphasising them: e.g. tásya sma. Now it will be seen anon (§ 443.2) that Gr. Lesb. auus Avest. ahma probably consist of *ns + sme, i. e. the ground-form of Goth. uns with a particle *sme added; and that from this combination were produced the forms for which it is usual to assume the stem *nsme- *nsmo- (Gr. auuo- Skr. asma-). Thus this particle must have originally been added to a fully formed case of the pronouns which distinguish genders as well as to those already cited; this case will be the locative. And there is nothing to bar our starting from *te + sme, and calling the first of these a locative. Compare Lith. tè 'there!' O.C.Sl. te 'and' beside *te-i (*to-i); Lat. ce in ce-do Osc. ce in ce-bnust (-bnust 'venerit') Lith, szè 'hence' (but cp. § 409 p. 330) beside Gr. ἐ-κεῖ κεῖ-νο-ς; Lith. nè Goth. ni Skr. ná 'not' beside *ne-į in Lith. neī nē-ka-s Avest. nae-ciš Lat. nei nī; Lith. be-, a particle which denotes duration of an action, beside bei 'and'; O.C.Sl. kŭde beside kŭdě 'where'; and the like.1)

¹⁾ Beside *te, * $\hat{k}e$, *ne the parent language had also * $t\bar{e}$, * $\hat{k}\bar{e}$, * $n\bar{e}$ (Gr. $\tau\tilde{\eta}$ 'there!' Dor. $\tau\tilde{\eta}$ -ro- ς 'iste, ille'; Dor. $x\tilde{\eta}$ -ro- ς 'ille'; Skr. $n\tilde{a}$ O.Ir. $n\bar{e}$); the variation in quantity has parallels, * $m\bar{e}$: me 'me' etc. See on this matter see § 415 Rem. p. 337.

and *te-i were parallel locatives like Gr. δό-μεν and ποιμέν-ι, see §§ 256 ff. pp. 156 ff. The ending of *tesme meets us still in Baltic, in Lith. tamè (geramè), which has taken the place of *tesme, because, by association with case-suffixes whose first sound was m-, s was dropped, and -e- gave place to -a-; cp. Pruss. ste-smu as contrasted with Lith. támui, § 423 p. 346. On the analogy of támui: tamè the form vilkè, as I believe, was produced beside vilkui, and the same principle acting in the opposite way produced O.Lith. jamije on the analogy of diewije; cp. § 263 p. 166. Idg. had *tesmi(n) = Skr. tásmin etc. beside *tesme, as it had *yssmi(n) = Lesb. ἄμμν ἄμμι beside *yssme. Perhaps there were originally two variants *sm-i and *sm-e, both extensions of *sem-, which would make it unnecessary to assume that *tesmi(n) was formed from *tesme.

Remark. The above comparisons are based on the belief that those scholars who hold that Lith. tame and vilke come from *tamen and *vilken have not proved their case. In such forms as geramen-je -je (Arch. slav. Phil. IV 592, Kuhn's Zeitschr. XXVII 385, Bezz. Beitr. X 312, and elsewhere), which are made the chief ground for assuming -en, it is strange above all things that the second part has not the pronominal form, as would have been expected (-jame -jam), but a noun ending, like jamije amszinameje etc. (Bezz., Zur Gesch. lit. Spr. 154, 168). Hence Leskien suggests that an earlier *geramejem(e) was shortened to *geramem, and to this was added -je, which was regarded as the locative ending in the nouns; when -je was added -m became n. No argument can be based upon the spelling of these words with -je instead of -je; it might be a re-formation following noun-locatives in -e. Nor is the alleged -en proved by East Lith. forms in -i, as miszki 'in the wood'. It is possible phonetically to derive -i from -en, but there is no need for this; rather the reverse, since there has hitherto been found no such form as an E.Lith. -im-p(i) for -em-p(i) -en-p(i); no * $d\ddot{e}vim-p(i)$, but only $d\ddot{e}v\ddot{e}-p(i)$. See Leskien, Ber. sächs. Ges. Wiss., 1884 pp. 96 f. Besides the explanation suggested by Leskien, that miski comes from miszke, there is another which should be considered - that miszki followed the analogy of tami (with Idg. *-smi), as miszkè that of tamè.

But suppose the supporters of the theory here criticised were really to make out a decent case for their *tamen *geramen and *vilken,¹) there would be little to change in the general principle. I would all the same

¹⁾ Is Pruss. schisman, Ench. 89, anything more than a piece of carelessness?

derive Lith. tam_{ℓ} (as these scholars write it) from Lith. *tesme, and explain -n as the same postposition which makes the difference between Lith. tamim-pi Skr. $t\acute{a}smin$ and Gr. $\breve{o}-\tau \bar{\iota}\mu$, and which is doubtless contained in Lith. $t\ddot{e}-n$ $t\ddot{e}$, $sz\ddot{e}$ n $sz\ddot{e}$ (extended to $t\ddot{e}nai$ $t\ddot{e}nais$ etc.) beside $t\dot{e}$ $sz\dot{e}$ (= Lett. te sche).

- § 425. In a-stems we find sometimes complete agreement with nouns, sometimes the genitive $-s\dot{z}$ or -s- before the case ending (§ 420). We begin with the latter kind.
- 1. The Ablative and Genitive had the same form from the Idg. period onwards, e. g. Skr. gen. abl. tásyās, see § 420. Re-formations: Avest. aňhāþ avaňhāþ yeňhāð-a (beside gen. aňhå etc.), like barentyāþ haệnayāþ, see § 242 p. 138.

Dative. Skr. kásyāi asyāi Avest. kahyāi aňhāi aúyāi, cp. Ved. suvapatyāi § 247 p. 147. Goth. pizái izái like gibái, but O.H.G. deru dero iru iro following gebu gebo with instrending, see § 276 pp. 178 f. Pruss. stessiei stessei and (with -ei- from the gen. pl. steison) steisiei steisei, cp. gen. steises § 420 p. 343, O.Icel. dat. peiri beside gen. peirar.

Locative. Skr. kásyām asyám, cp. ášvāyām; Avest. kaňhę aňhę with -ę = pr. Ar. -iā (I § 125 p. 115) and ňh from the gen.-abl. (kaňhå), cp. Avest. haęnaya O.Pers. arbirāyā § 264 pp. 166 f. These pronoun cases were influenced by such forms as Skr. bṛhatyám Avest. barentya: kásyām kaňhe: kásyās kaňhā and kásyāi kahyāi = bṛhatyám barentya: bṛhatyás barentyå and bṛhatyāi barentyāi. Goth. Þizái like qibái.

Sanskrit. Re-formates: amúšyās amúšyāi amúšyām.

2. Forms without -si- or -s-.

Ablative like the genitive, Gr. $\tau\eta\tilde{g}$ etc. In Italic, a re-formation in $-\bar{a}d$: Lat. $ist\bar{a}(d)$ $h\bar{a}$ -c, Umbr. era-k 'ea' Osc. ekad 'hac' eiza-c eisa-k 'ea', like Lat. $equ\bar{a}(d)$ § 243 p. 139.

Dative. Gr. τῆ Dor. τῆ like χώρα. Lat. istae illae (beside istī illī) like equae; Umbr. -e Osc. -aí are not found. O.Ir. -ind for *sen-ti like tuaith. Lith. taī like rankai; Slav. toji beside smiji racĕ has taken -oj- from the instr. toja,

just as gen. toje is probably *ty transformed in the same way (§ 420 p. 343).

Locative: always ends in $-\bar{\alpha}i$ like the dative. Gr. Boeot. $\tau \alpha \tilde{\epsilon}$ $\tau \tilde{\eta}$, Arcad. etc. $\tau a \tilde{\iota}$ like Boeot. $II\lambda \alpha \dot{\nu} \chi \alpha \epsilon$, see § 247 pp. 146 ff., § 264 p. 167. Osc. e]ísaí 'in ea' like víaí 'in via'. O.Ir. issind f. 'in the, that' = *in sen-ti, like tuaith. Lith. toj-è like $ra\tilde{n}koj$ -e, see § 264 pp. 167 f.; O.C.Sl. toji like dat. toji, see above. —

If the fem. gen.-abl. in -siās was really, as our view assumes, produced by association with the masc.-neut. gen. in -sio, then -si--s- spread from the gen.-abl. to the dat. and loc.: beside *tesiās was formed *tesiāi following *ekūāi: *ekūās (§ 420 p. 343). In a similar way were made Lith. mánei (mán), Pruss. mennei, O.C.Sl. mīně in connexion with the gen. Lith. manè (manēs), O.C.Sl. mene (§ 445).

Cases of the Dual.

§ 426. The Case-Suffixes peculiar to the Dual were originally, and always continued to be, the same in Pronouns as in Nouns.

Nom. Acc. In Greek the fem. $\tau \alpha i$ was turned into a plural (§ 286 p. 194), and in its stead was used the masc. $\tau \omega$; e. g. $\tau \omega$ $\sigma \tau \eta \lambda \bar{\alpha}$, cp. Gr. $\delta i \omega$ Lat. duo Lith. dial. $d\hat{n}$ used for masc. and fem. alike.

Dat. Abl. Instr. On the difference of stem in masc. Lith. $t\ddot{e}$ - $m(-dv\ddot{e}m)$ $t\tilde{e}$ - $m(-dv\ddot{e}m)$: $vilk\acute{a}$ -m $vilk\acute{a}$ - \tilde{m} and O.C.Sl. $t\check{e}$ -ma: $vl\ddot{u}ko$ -ma igo-ma, see § 297 pp. 201 f.; on the difference of stem in fem. O.C.Sl. $t\check{e}$ -ma: raka-ma, see § 298 p. 202.

Gen. Loc. On the difference of stem in O.C.Sl. toj-u: vlŭku raku see §§ 310, 311 pp. 207 ff.

In Greek, $\tau o \tilde{i} \nu$ is used for fem. as well as masc., like $\tau \omega'$, see § 312 pp. 210 f.

Nominative Plural Masculine and Feminine.

§ 427. o-stems had -oi, as against $-\bar{o}s$ in the nouns. On the presumable origin of -i here, see § 186 pp. 60 f. Skr. $t\hat{e}$ $im\hat{e}$, Avest. $t\bar{e}$ $t\bar{o}i$, $im\bar{e}$, O.Pers. imaiy. Gr. τoi oi.

Lat. $ist\bar{\imath}$ $h\bar{\imath}$ $qu\bar{\imath}$. O.Ir. ind = *sen-ti. Goth. $p\acute{a}i$, O.H.G. $d\bar{e}$ dia die; Norse Run. $p\acute{a}i$ - κ O.Icel. $p\acute{e}i$ -r took their - κ (= pr. Germ. -z) from the nouns. Lith. $t\check{e}$ Pruss. stai quai quoi (see J. Schmidt, Kuhn's Zeitschr. XXVII 391), O.C.Sl. ti. In five branches of the Indo-Germanic parent stock, as we have seen in § 314 p. 214, this pronominal - $o\acute{i}$ has passed over to the noun system.

On the other hand, $-\bar{o}s$ sometimes passed from nouns to pronouns. Osc. pús Umbr. pur-e pur-i 'qui', Osc. pútúrús-píd 'utrique', Umbr. eur-ont 'iidem'. Also in Armen., ork 'which' nok-a 'they' no-ink 'the same', if Bugge is right in explaining the -k as -s+u (see § 313 p. 212).

Remark. As regards Ir. ē (Cymr. -wy in hwynt-wy, Corn. Bret. y) Thurneysen holds it to be possible that the word is the masc. sing. \bar{e} (§ 414 pp. 335 f.), and that its use for the plural was due to the analogy of the interrogative. However, it must be considered whether there was not in Idg. a form *e-i used for the plural. Seeing that -o-i and -e-i are both found in the nom. sing. (§ 414 p. 335), the same variation may be expected in the plural (compare *ue-i 'we' § 441). Moreover, Pruss. gen. pl. stei-son seems to pre-suppose a nom. *stei, for we are not justified in deriving its ei from an Idg. oi (see Braune, Kuhn-Schleicher's Beitr., VIII 95). As to the Irish plural variants iat eat and siat seat: in Old Irish these are found only in olseat-som 'say they' beside the singular olse-som 'says he', and similarly, we may conjecture, cateet coteet 'what are' beside sing. cate cote 'what is'. These have the ending of the 3rd. pl. of the verb (cp. Ital. eglino); later on, iat siat were detached and began an independent existence. See Zeuss-Ebel Gramm. Celt. 2 p. 372; Schuchardt, Zeitschr. rom. Phil., IV 153.

Nom. pl. $qu\bar{e}s$ from qui-s, like $ov\bar{e}$ -s. Hence also $h\bar{e}s$ heis beside $h\bar{\imath}$, which in their turn produced such plurals as $magistr\bar{e}s$. See § 314 p. 214.

An obscure form is Skr. $am\tilde{\iota}$. Its $-\bar{\iota}$ passed into the other cases of the plural, all except the accusative $(am\tilde{u}n)$: thus $am\tilde{\iota}$ - $\tilde{\xi}am$ - $\tilde{\xi}u$ -bhyas - $bhi\tilde{\xi}$.

ā-stems had -ās, like the nouns. Skr. tás Avest. tå. Osc. pas pas 'quae'. O.Ir. inna = *sen-tās. Goth. pōs, O.H.G. deo dio (= Skr. tyás). Lith. tōs. O.C.Sl. ty acc. like rąky. As regards Gr. τωί Lat. istae, see § 315 p. 215.

Skr. amúš, following imás.

Nominative and Accusative Plural Neuter.

§ 428. o-stems have two endings, $-\bar{a}$ and -ai, corresponding to $-\bar{a}$ and -ai in the nom. sing. of \bar{a} -stems (§ 414 p. 336). Examples of -ā (which is also found in nouns) are: Skr. Ved. tā Avest, tā (Skr. táni Avest, van vam and vå see § 338 p. 238). Gr. $\tau \bar{\alpha}$ in $\vec{\epsilon} \pi \vec{l} - \tau \eta \delta \vec{\epsilon} - c$ ($\tau \dot{\alpha}$, see p. 238), Lat. ista, $s\bar{\imath}$ quā Umbr. eu 'ea', O.Ir, inna for *sen-tā (-ā possibly borrowed from na = *sna, see p. 355 footnote). Goth, $b\bar{o}$ O.H.G. diu (= Skr. Ved. $ty\hat{a}$), The following are examples of -ai: Lat. quai O.C.Sl. ta. quae, hai-ce hae-c, istae-c. A.S. đã O.Icel. þē and O.H.G. Up. G. dei, which is perhaps a shortened form of *dei-u. itself a re-formate which has taken -u from diu (but compare the dual zwei beside A.S. twā O.Sax. twē for *duoi, § 293 p. 198). Lith. taī 'the, that' which has taken the place of the singular neuter * $t\dot{a} = *to-d$ (§ 417 p. 338), Pruss. kai 'what'. Others of the same kind would seem to be the adverbs Lith. kaī kaī-p 'how' Pruss. kai-gi kāi-gi 'how' (this spelling does not justify our deriving the ending from orig. -āi, cp. māim instead of maim and like forms), and further Gr. xai and O.C.Sl. ce, which also meant originally 'how, as' (the Author, Gr. Gr. 2 § 35 Anm. p. 54, § 201 p. 223); also Lith. szeī-p 'so' = sziai-p, following which the language coined teip in place of $ta\tilde{\imath}$ -p.

This formation in $-a\underline{i}$ has not been proved for Aryan. (On the supposed Avestic nom. acc. pl. neut. $v\overline{a}str\overline{a}i$ in J. Schmidt's Pluralb. pp. 232 f., see Bartholomae, Stud. zur idg. Spr., I 75). Thus it would be possible to start from Idg. $-a\underline{i}$; this being shortened to $-a\underline{i}$ in the European languages. But it is hardly permissible to separate this formation from the similar one in the nom. sing. fem.; and since for the latter $-a\underline{i}$ is proved by Aryan to be original, we must assume Idg. $-a\underline{i}$ for the other as well.

The *i*-stem *q*i*- went along with the nouns. Avest. $c\bar{\iota}$. Greek Meg. $\sigma\alpha$ 'quae?' and enclitic Ion. $\sigma\sigma\alpha$ Att. $\tau\tau\alpha$ (see

I § 654 Rem. p. 501). Lat. adv. quia beside quae quā like masc. quēs beside quī. See § 339 p. 239.

Genitive Plural.

§ 429. The o-stem ending was pr. Idg. *-oi-sŏm, with a variant, as we may suggest, *-ei-sŏm (cp. Pruss. steison § 427 Rem. p. 353); on the quantity of the vowel in the final syllable, cp. § 344 pp. 244 f. -oi and ei, which precede the ending -sŏm, were the endings of the nom. pl. masc. Skr. téṣām ēṣām Avest. ae-taeṣām aeṣām, Avest. avaeṣām O.Pers. avaiṣām; with the isolated Avest. ae-tanham, influenced by the gen. sing. ae-tahe, as Goth. pizē instead of *páizē has been influenced by pis. A.S. đāra O.Icel. peira; Goth. gives pizē, but the diphthong remains in blindáizē which was modelled on the now lost *páizē (§ 406 p. 321), O.H.G. dero. Pruss. steison, O.C.Sl. těchŭ; Lithuanian once had this formation, as we may assume from músū júsū, see § 456.

On O.Ir. ai ae and a n- a n- see p. 339 footnote.

With the noun ending. Avest. kqm. Gr. $\tau \tilde{\omega} \nu$. Lat. eum, Umbr. erom ero 'eorum' from the stem ero: and Lat. $e\bar{\sigma}rum$ ist $\bar{\sigma}rum$ etc. must be placed in the same class, because the ending $-\bar{\sigma}rum$ (common to nouns and pronouns) was coined to match with $-\bar{\alpha}rum$ at a time when $-\bar{\alpha}rum$ was the ending of nouns and pronouns alike, see § 345 p. 247. O.Ir. inna n-doubtless for *sen-tan = *tom, beside fer n-1) Lith. $t\bar{u}$.

The Idg. ā-stem ending was *-ā-sŏm. Skr. tásām āsām Avest. ånham; on this analogy, Skr. amúšām.

¹⁾ Thurneysen writes: "I should prefer to derive the gen. pl. masc. and neut. inna n- from *- $d\bar{a}n$ for * $t\bar{o}m$, cp. acc. pl. masc. inna ,from *- $d\bar{a}s$ for * $t\bar{o}s$. For the pronouns it is necessary to assume that accented and unaccented forms have become confused; and I imagine that in the pre-tenic *sen-do-, the rather strong secondary accent was conditioned by the ending which the word once had. If the ending consisted of long vowel + consonant, it was rather more strongly accented; etherwise the stronger accent fell upon the first element of the word; cp. the Spanish article, sing. el, but pl. los. It is also possible that the neut. pl. comes from na (= *sna) by analogy".

Gr. Hom. τάων Att. τῶν Dor. τᾶν. Lat. istārum, Osc. eizazun-c 'earum'. In Germanic and Slavonic the forms have been influenced by the masc.-neut.: A.S. đāra O.Icel. peira; Goth. pizō first for *páizō following pizōs (but blindáizō has not been changed) like masc. pizē following pis (but blindáizē), similarly O.H.G. dero like sing. dera; O.C.Sl. těchũ; cp. Att. τον'των fem. as well as masc., but Dor. ταντᾶν, § 346 p. 248.

We see that in the classical languages nouns have borrowed the pronominal ending (§ 346 p. 248). The reverse process gives us pronouns with the noun ending in Avestic kam like vanam, Old Irish inna n- like masc. inna n- (of course the fem. form might also be explained as coming from *- $\bar{a}s\bar{o}m$), and Lithuanian $t\bar{u}$ like $ra\bar{n}k\bar{u}$.

The i-stem *qi-: Lat. quium, like ovium, beside quōrum.

Locative, Dative-Ablative, and Instrumental Plural.

§ 430. The Suffixes were the same as in the Nouns.

The ending -o-i in the nom. plural masc. of pronouns seems to shew that the ending of the Locative of o-stems, -oi-s (-su -si), Skr. tëšu etc., was once in the parent language confined to pronouns, whence it passed into the noun system; see § 186 pp. 60 f., § 357 p. 260. Armen. oro-c no-c-a, with -o- instead of -oi-, following gailo-c, see l. c.

Skr. tá-su from fem. *tā- like áśvā-su etc. But in Slavonic the form of the masc.-neut., těchŭ, did duty for the fem. as well, just as happened in the gen. pl. (§ 429).

Gr. $\tau i - \sigma i$ is either related to $\tau i - \varsigma$ as $\sigma \varphi i - \sigma i$ to $\sigma \varphi i - \varsigma$, or else it was coined in connexion with $\tau i \nu - \epsilon \varsigma$ to pair with $\tau \epsilon \varkappa \tau \sigma \nu - \epsilon \varsigma$: $\tau \epsilon \varkappa \tau \sigma \sigma \iota$ etc. (cp. § 361 p. 263, on $\varkappa \nu \sigma \iota$).

§ 431. In the Dative-Ablative there seems to have been a difference between noun stems and pronouns before the first separation of the Indo-Germanic peoples. The o-stems if pronouns had -oi- (Pruss. shows -ei-, as in stei-son, § 429), and if nouns, had -o-. This distinction was kept in Balto-Slavonic, and possibly in Germanic (that is to 2007, if Germ. -m

is something more than a mere instrumental suffix, see § 367 pp. 267 f.). Skr. $t\bar{e}$ -bhyas Avest. $ta\bar{e}iby\bar{o}$, whence $vfk\bar{e}$ -bhyas $vehrkaeiby\bar{o}$. Lat. $h\bar{\imath}$ -bus, $\bar{\imath}$ -bus = Skr. \bar{e} -bhyás. On the above supposition, we should add Goth. $p\acute{a}i$ -m O.H.G. $d\bar{e}$ -m, beside vulfa-m volfum. Lith. $t\ddot{e}$ -ms O.C.Sl. $t\breve{e}$ - $m\breve{u}$, beside $vilk\acute{a}$ -ms $vl\breve{u}ko$ - $m\breve{u}$, Pruss. s-tei-mans beside waika-mmans 'to the boys, or retainers'. Compare § 368 p. 269.

Skr. $t\acute{a}$ -bhyas Avest. $av\bar{a}$ -by \bar{o} , Lat. $e\bar{a}$ -bus, Lith. $t\acute{o}$ -ms like Skr. $\acute{a}\acute{s}v\bar{a}$ -bhyas Avest. $haen\bar{a}$ -by \bar{o} Lat. $equ\bar{a}$ -bus, Lith. $ra\bar{n}ko$ -ms. But the masc.-neut. Goth. $p\acute{a}i$ -m O.H.G. $d\bar{e}$ -m and O.C.Sl. $t\acute{e}$ - $n\breve{u}$ were used for the fem. as well.

Lat. qui-bus like ovi-bus, Goth. O.H.G. i-m like ansti-m ensti-m.

- § 432. In the Instrumental of o-stems there are two distinct suffixes, as was the case with nouns.
- The ending -ōis in exact agreement with the nouns:
 Skr. tāiš Avest. tāiš, Gr. τοῖς, Lat. hīs eīs oloes ('illis')
 Umbr. esis-co 'cum eis' Osc. eizois 'eis', Lith. taīs. Compare § 380 p. 275.
- 2. The Suffixes -bhī(s) -mī(s), originally preceded, as in the dat.-abl., by -oi- in pronouns and -o- in nouns. The distinction was kept in Germanic. Skr. Ved. té-bhiş Ved. class. ē-bhiş, Avest. aeibis, whence Skr. Ved. vṛkē-bhiş Avest. vehrkaci-bis O.Pers. martiyai-bis. Goth. pái-m O.H.G. dē-m A.S. dæ-m beside Goth. vulfa-m etc., just as in the instr. sing. A.S. dæm O.Icel. peim beside A.S. miolcum O.Icel. at hofdum (§ 282 p. 188, § 421 p. 344). O.C.Sl. tě-mi. -oi- has given place to the -o- of the nouns in Armen. oro-vk cp. gailo-vk (as in the instr. sing. orov: gailo-v, § 281 p. 186, § 421 p. 344), Gr. avró-qu cp. \$\psi\phi-\eta_{\text{c}}\$, O.Ir. cosnaib 'with the, or those' i. e. *con sen-tobis, cp. feraib.') ā-stems: Skr. tá-bhiş ā-bhís, Avest. ā-bīs,

¹⁾ The form $\bar{\imath}b$ ib, given by Stokes in the paradigm of \bar{e} (Celt. Deol. 105), does not exist. Stokes has taken the ending of Mid.Ir. $donaf\bar{\imath}b$ dona hib to be an independent word. The origin of this, as Thurneysen informs me, is as follows. In Middle Irish, the component parts of O.Ir. donaib- $(h)\bar{\imath}$ — $-(h)\bar{\imath}$ is a particle — became so completely one, that the

O.Ir. cosnaib. Lith. to-mis as with nouns. Masc. form used for fem.: Goth. Þái-m O.H.G. dē-m, O.C.Sl. tě-mi. — Goth. O.H.G. i-m like ansti-m ensti-m

[Tables of Pronoun Declension to illustrate §§ 412-432 are given below, pp. 360-363.]

Personal Pronouns which do not distinguish Gender, with their Possessives.1)

§ 433. As in the Pronouns which distinguish masculine and feminine, so here, a single paradigm includes forms from

dative ending could be added to its final -ī: hence donafī-b, or by the usual substitution of dona h- for O.Ir. donaib, dona hīb. about as much right to an independent existence as deag, in Greek τοὶσὖεσσι.

stems etymologically distinct; e. g. Skr. nom. vayám 'we' acc. asmán 'us'.

With this class of personal pronouns, far more commonly than elsewhere, we find forms having no recognisable casesuffix used with the meaning of some special case, e. g. Gr. εμέ $u\hat{\epsilon}$ used as an accusative: and forms which combine the meanings of more than one case, as *mo-i *me-i (Skr. mé mē, and so forth), which can express the meaning of locative, dative, or genitive. This poverty of inflexions shows that this class of pronouns keeps up the usage of a high antiquity. But when the languages had started each on its separate course, all manner of inflexional distinctions were made anew in this group of pronouns, and it was more closely assimilated to the other pronouns and the nouns. Thus the form of these pronouns was run into the mould sometimes of a masculine case-form, sometimes of a feminine, but at the same time no special gender was implied in the re-modelled words.1) Examples are (1) where the case-ending is masculine: Skr. acc. asmán following tán, áśvān (§ 443.2), Gr. gen. ἐμε-το following το-ῖο ἵππο-ιο (§ 450); (2) where it is feminine: Skr. loc. asmā-su following tā-su, áśvā-su (§ 448), O.C.Sl. instr. munoją following toją, rąkoją (§ 449).

It is certain that in several cases the pronouns we and you had a singular ending (not, however, as we may conjecture, without expressing the plural by some sign; see § 436, with Rem. 2). But in the end their collective meaning, and their frequent use in apposition or predication with forms having a plural inflexion, caused them to take a plural ending themselves;

e. g. in Ion.-Att. $\dot{\eta}\mu\dot{\epsilon}\alpha\varsigma$ takes the place of $\dot{\epsilon}\dot{\eta}\mu\epsilon$ = Lesb. $\ddot{\alpha}\mu\mu\epsilon$ (cp. $\dot{\epsilon}\mu\dot{\epsilon}$).

By the pluralised ending, the forms of we and you were carried away from those of I and thou; but the two pairs were brought in touch again by the action of analogy. For example, * $t\breve{u}$ 'thou', has influenced $du\breve{k}$ 'you' in Armenian, and tumhe 'you' in Pali (compare Ved. $yu\check{s}m\acute{e}$). See § 437.

In the parent language, these pronouns had few points of contact with the other pronouns or the nouns, and formed a little world by themselves. Thus their history is more instructive than that of other classes of words, if we wish to observe the working of association, and the kaleidoscopic changes which its influence produces. This will be clear even in spite of the cut and dried form of presentment made necessary by the plan of the present work, in which the historical method, that is, the true scientific method, has to give place to lists and catalogues with little more than hints to explain them.

1. Etymology of the Pronouns; the Formation of the Stem.

- \S 434. The pronoun I shows the following forms.
- 1. Nom. * $e\hat{g}h$ and * $e\hat{g}$ (for the variants $\hat{g}h$: \hat{g} see I § 469.8 pp. 346 f.). Skr. $ah\acute{a}m$ Avest. azem. Armen. es is obscure; we cannot say whether it should be derived from * $e\hat{g}h$ or * $e\hat{g}$ -.1)

¹⁾ From *e $\hat{g}h$ - one would have expected *ez, cp. lizum: Skr. léhmi I § 410 p. 301. *ez may have become es before a breathed initial in the following word; but certainly we have to face the question why this sandhi-form has become universal in this particular word, and not in kez, for example. Idg. *e \hat{g} - one would expect to become *ec to begin with (I § 409 p. 301). But there may have been s as well as c in Armenian, as we find z beside $j = \hat{g}h$, a point which needs closer investigation (op. Von Fierlinger, Kuhn's Zeitschr. XXVII 479). Anyhow the laws of Armenian which touch this matter must be more exactly worked out before it is safe to venture on taking the step which Bartholomae takes. He derives es from an Idg. *e \hat{k} , which be believes to be the form assumed by *e \hat{g} at the end of a sentence (Bezz. Beitr. XIII 54). I do not believe

The consonant of $*e\hat{g}h$ - is found again in the dat. Skr. $m\acute{a}hyam$, Lat. $mih\bar{\imath}$ Umbr. mehe, Armen. inj (for $*eme\hat{g}h$ -). The forms appear to have been made up thus: $e+\hat{g}h$ - and $me+\hat{g}h$ - ($eme+\hat{g}h$ -). But perhaps the dative once began with $*e\hat{g}h$ -, and its initial was afterwards changed on the analogy of the other oblique cases.

2. *eme- *emo-, *me- *mo-. It cannot be determined whether *eme- was the original form, and *me- is an ablaut weakening of it (cp. *teue- *teuo-: *tue- *tuo-, § 435); or whether *eme- is a combination of the pronominal stems e-and me- (cp. Gr. è-reī Lat. e-quidem and the like, § 409 pp. 327 ff., and what is said on *egh- above, subdivision 1). Skr. mē Avest. mē O.Pers. maiy; gen. Skr. máma perhaps instead of *ama, see § 450. Armen. gen. im for *eme; *me-in mek 'we' (§ 437.1, a). Gr. èuoi and uoì. Lat. mī. O.Ir. mē. Goth. mi-k O.H.G. mi-h. Lith. manē, O.C.Sl. mę.

 \S 435. The pronoun thou shows the following stems, all closely connected together:

that any such form for the nominative of this pronoun, without any vowel following the palatal stop, can be proved for the parent language; see § 439.

- 1. *teue- *teuo-. Skr. táva Avest. tava. Gr. τεϊν τεό-ς. Lat. tovo-s tuo-s. O.Ir. do- Mid.Cym. teu. Lith. tavè tãva-s.
- 2. *tue- *tuo-. Skr. tvám Avest. þwam O.Pers. þuvam. Armen. kez ko (I § 360 p. 276). Gr. σέ σοί. Pruss. twais O.C.Sl. tvojī.
- 3. *te- *to-. Skr. tē Avest. tē O.Pers. taiy. Gr. τοὶ. Lat. tē tibī. O.Ir. uait 'from thee' for *ua ti (or for *ua tui?). Goth. peina, O.H.G. di-h. O.Lith. ti Pruss. tebbei, O.C.Sl. ti tebě.
- 4. *tu * $t\bar{u}$, nom. and acc., Skr. $tuv(-\acute{a}m)$ Gr. $\sigma\acute{v}$ etc., see §§ 440, 442.

Similar variants are found of the reflexive stem, § 438: *seye-, *see-, *se-, but there is no *s\vec{u}- among the cases to be parallel to *t\vec{u}\$ (Torp, Beitr. zur Lehre von den geschl. Pr. 14, conjectures that this grade of the stem is the prefix Skr. suetc. 'good', but it is more likely that su- contains the suffix -u- of $\eta\delta$ -\vec{v}- and the like). There is an ablaut-connexion between *teye- *seye-: *tye- *sye-: *t\vec{u}\$. But the relation of *te- *se- to these forms is doubtful.

Remark. In view of doublets like $f \in \xi = *_{\sigma} f \in \xi$ and Latin sex (§ 170 p. 16, above), it might be assumed that u was dropped by *tue-*sue- in the parent language when these stems were used in the neighbourhood of some particular sound or sounds in a sentence. Whether this happened to them when used as enclitics, as I have followed Wackernagel in assuming above (vol. I § 187 p. 162) is doubtful. Torp's objection (op. cit., p. 10) that there is no u in Avest. taibya, which is accented, but that u is found in Skr. $tr\bar{a}$ u, which is not, is easily met by assuming that the original relations were upset by analogy; besides, it is possible that the form Skr. $tv\bar{a}$ came to be used without the accent at some period when the law under which u dropped was no longer effective. (pp. 5, 9, 12) and Johansson (Bezz. Beitr. XV 313 f., XVI 163) think that *teue and *seue, which were weakened by some ablaut process to *tue sue *tu *su, were compounds consisting of *te *se + *ye (Torp identifies *ue with the stem of Skr. vas Lat. vos, just as he connects *-ne in the gen. O.C.Sl. me-ne Avest. ma-na with Skr. nas Lat. nos); and that these unextended ground-forms are still forthcoming in Skr. te Prākr. sē etc., as representing *te- *to- *se- *so-. This view would be supported by Gr. σ - φ i, if it could be proved that its σ - is an ablant-grade of the se- in O.C.Sl. se-bě Lat. si-bī etc.; but this is hardly likely ever to be proved.

- § 436. The pronoun we shows the following stems:
- 1. *ue- *uo-. Skr. vay-ám, Avest. vaem. Goth. veis O.H.G. wir. Also in the dual: Goth. vi-t, Lith. vè-du, O.C.Sl. vě.
- 2. *ne- *no-, *ne-s- *no-s-; the s is probably the same as the sign of the plural found in nouns, since it only appears in the plural of the pronoun (and of *ue-s- *uo-s- 'you') and never in the dual. Skr. nas, Avest. nō. Lat. nōs. O.Ir. ni; on sni see Rem. 2, below. Goth. uns = *ys. O.C.Sl. nasŭ. Also in the dual: Skr. nāu, Gr. vῶι, O.Ir. nāthar, Goth. ugk = *y-ke (cp. mi-k), O.C.Sl. na; the ā- of Skr. āvám may come from *\bar{v}, and its -vam may have been borrowed from $yuvám = y\bar{u} + am$, see § 457.

Further, we have *y-sme, or rather *ys-sme (cp. Rem. 2), which contains the same particle which we noticed in Skr. $t\acute{a}$ -smād etc., § 424 p. 349. Skr. $asm\acute{a}n$ Avest. ahma, Gr. Lesb. $\check{a}\mu\mu\varepsilon$ Att. $\acute{\eta}\mu\check{a}\varsigma$.

The pronoun you shows the following stems:

- 1. *iu-. Skr. yūyám, Avest. yūš. Armen. jez with e on the analogy of mez 'nobis'. Goth. jūs. Lith. jūs. Also in the dual: Skr. yuvám, Goth. *ju-t (§ 457 p. 397), Lith. jù-du.
- 2. *ue- *uo- and *ue-s *uo-s- (cp. *ne-s- *no-s- above). Skr. vas, Avest. vō. Lat. vōs. Pruss. wans, O.C.Sl. vy vasŭ. Also in the dual: Skr. vām, O.C.Sl. va.

Thurneysen is doubtless right in assuming *usme, *us-sme (cp. Rem. 2) parallel to *usme, *us-sme in the first person (Kuhn's Zeitschr. XXVII 175). Hence come Lesb. $"u\mu \varepsilon$ Att. $"u\tilde{\mu} "u "s$, also Skr. yu "s "m "an Avest. y "u "s "m "ai-bya, which have taken y-from being associated with the nom. Skr. y "u "y "ai Avest. y "u"si (cp. O.Dan. vos(s) beside os(s) 'us' following the nom. v "a 'we').

Remark 1. Since Avest. $y\bar{u}\bar{s}ma$ - is always written with \bar{u} , perhaps more weight should be given to the fact that the vowel is written long here than in other instances: \bar{u} was borrowed from the nom. $y\bar{u}\bar{s}$ $y\bar{u}\bar{z}em$. The relation of the variant $x\bar{s}ma$ - to $y\bar{u}\bar{s}ma$ is obscure (cp. Bartholomae, Ar. Forsch. III 19 f.).

Remark 2. There is more to be said for taking *ns-sme and *us-sme than for taking *n-sme and *u-sme to be the ground-forms; for

Skr. tásmin and the like (§§ 423 f. pp. 346 ff.) prove that -sme implied no particular number, and the forms of *ne- and *ye- which are not compounded with it seem to have once had -s, the plural sign, added to them in all other instances when they were not dual but plural. It is therefore incorrect to say that forms like Avest. ahma Lesb. $\tilde{a}\mu\mu\epsilon$ had no plural sign; they did have one, but it came before -sme, and the acc. *yssme was simply *ys = Goth. acc. uns + a particle *sme. Compare what is said above on deriving Lith. tamè from an Idg. loc. *te-sme (§ 424 p. 350).

3. There may have been a close connexion in origin between Gr. dual σ - $\varphi \omega$ 'you two', O.Ir. si (-b in old enclitic position) = Cymr. chwi for *s-ues, and Goth. iz-vis. They all have s, which seems to represent another distinct stem.

On this view, the parts of the words preceding * $\psi e(s)$ had nothing to do with expressing the meaning of the 2nd person; and this would make it not far-fetched to connect $\sigma - \varphi \dot{\omega}$ with $\sigma - \varphi \iota \nu$, (cp. Wackernagel, Kuhn's Ztschr. XXVIII 139 f.).

Torp's theory (op. cit., 35) that *iswi- is *ius+ue-, is quite as mistaken on phonetic grounds as his assumption that in West-Germanic the z of Goth. izv, becoming r, disappeared first in the gen. O.H.G. $iuw\bar{e}r$ O.Sax. iwar by dissimilation, and then the acc. O.H.G. *irwih became *iuwih on their analogy.

As regards the Keltic form, it would certainly be possible to hold that s- in pr. Keltic was detached from the ending of the 2nd. person plural of the verb, and then was tacked on to the pronoun (Torp, p. 40); the only thing is that we do not know whether this personal ending was \cdot -tes in Keltic at all (cp. Lat. legitis). The s- of Ir. s-ni has not been found in the British dialects of Keltic. It may come from the frequent combination of the word with is, issni being supposed by the speakers to consist of is+sni, just as in Mid.Ir. the nom. $s\bar{e}$ instead of \bar{e} grew out of $iss\bar{e}$ $is\bar{e}$ 'est is' $= is\ \bar{e}$, and perhaps at the same time out of olse 'inquit'

(Thurneysen). But it may have been due to the analogy of 's-ue-'vos', and this may have happened in the period before insular Keltic split up into its several dialects (cp. § 437). The student should however compare O.Ir. forms without s, nāthar nār 'of us two'.

- § 437. In the various languages, the stems of these pronouns suffered many changes by assimilation of one to the other. Some of these have been already touched upon. We subjoin a conspectus of the whole.
 - 1. We assimilated to I, you to thou.
- a. We assimilated to I. Pali mayam instead of Skr. vayám. Armen. mek; from this nominative, m- passed into the other cases, driving out n-, e. g. instr. me-vk, just as in Lith. e. g. dat. *nu-mus became mu-mus on the analogy of mēs (see below). Mod. Gr. ἐμεῖς instead of ἡμεῖς. Lat. enōs (Arval Song), instead of nōs, follows ego (Stolz Lat. Gr.² p. 346), unless e- is a prefixed particle (like e-quidem etc.). Lith. mēs O.C.Sl. my (whence Lith. has m- in the dual too, mù-du). In Baltic the m- passed first from nom. to acc.: Lith. mùs Pruss. mans (but O.C.Sl. ny unchanged); then m- spread to the other cases in Lithuanian, músū mùms mumìs mūsyjè, but Pruss. nouson noumans are unchanged (O.C.Sl. nasũ namũ namì).

Remark 1. m- in O.Icel. $m\bar{e}r$ instead of $v\bar{e}r$, and in H.G. dial. $mir\ mer$ instead of wir, comes from the final consonant of the verb which preceded. The dental of O.Icel. $p\bar{e}r\ d\bar{e}r$ and H.G. $dir\ der$ 'vos' has the same origin.

b. You assimilated to thou. Pali tumbe instead of Ved. yuṣ̃mē. Armen. duk (but j-remained in the other cases; in the 1st person, on the other hand, n- was displaced by the m- of the nom.). Mod.Gr. $\hat{\epsilon}\sigma\epsilon\tilde{\iota}g$ following $\hat{\epsilon}\sigma\dot{v}$ (with $\hat{\epsilon}$ - on the analogy of $\hat{\epsilon}\gamma\dot{\omega}$).

Remark 2. The reverse change — I and thou following we and you — can only be found in the case endings: e. g. Pali gen. mamam tavam instead of mama tava following amhākam tumhākam, Avest. dat. taibyō following yūšmaoyō (§ 445), Mid.H.G. gen. mīner dīner instead of mīn dīn following unser inwer.

- 2. I assimilated to thou, we to you, and vice versa.
- a. I assimilated to thou. O.Ir. gen. (poss.) mo mu Mid.Cymr. meu following do du Mid.Cymr. teu. Lith. gen.

 Brugmann, Elements. III.

man\(\tilde{\epsilon}\) doubtless has a instead of e (cp. O.C.Sl. mene) on the analogy of $tav\(\tilde{\epsilon}\)$ (a different explanation is offered by Br\(\tilde{\epsilon}\) ckner, Archiv IV 17). West-Germ. *\(\tilde{\epsilon}\) k 'I' O.C.Sl. (j)az\(\tilde{\epsilon}\) with long vowel on the analogy of *\(ta\tilde{\epsilon}\), see § 434 p. 365.

- b. Thou assimilated to I. Mod. Gr. $\dot{\epsilon}\sigma\dot{v}$ following $\dot{\epsilon}\gamma\dot{\omega}$. Perhaps Umbr. tion follows *mion (vice versa, we have French mon following ton), see § 442. Cymr. dy follows my (n-).
- c. We assimilated to you. Skr. dual $\bar{a}v\acute{a}m$ may have taken -van from yuv- $\acute{a}m$, as we would conjecture; see § 436 p. 367. Gr. Dor. $\dot{\bar{a}}\mu\acute{e}\varsigma$ Att. $\dot{\eta}\mu\epsilon \widetilde{\imath}\varsigma$ has taken the rough breathing from $\dot{v}\mu\acute{e}\varsigma$ $\dot{v}\mu\epsilon \widetilde{\imath}\varsigma$. O.Ir. s-ni beside ni perhaps follows *s-ue-, see § 436 pp. 368 f. In Baltic, the \breve{u} of $j\breve{u}$ was borrowed: Pruss. nou-son nou-mans (ou = \bar{u}) following iou-son iou-mans (cp. O.C.Sl. na-s \breve{u} na-m \breve{u}), Lith. m \acute{u} -s \bar{u} m \dot{u} -ms etc. (with m- instead of n-, see under 1. a above), following $j\acute{u}$ -s \bar{u} $j\acute{u}$ -ms etc. Lith. m \acute{e} s instead of *m \breve{e} s doubtless follows $j\ddot{u}$ s.
- d. You assimilated to we. Skr. yūy-ám takes its -y- from vay-ám. Armen. jez jer etc. take e from mez mer etc., in place of u. O.H.G. ir A.S. zĕ O.Icel. ēr following wir wĕ vēr (Goth. jūs), and similarly in the dual A.S. zit O.Icel. it following wit vit (Goth. *ju-t). Again, Goth. igqis O.Icel. ykkr H.G. ink enk A.S. inc follow Goth. ugkis O.Icel. okkr A.S. unc: parallel to the acc. ugk = *v-ke (§ 436 p. 367) there may once have been *u-k(e), in which u- is the weak grade of *ue-; this would become *ink- *inku-, because the relation of uns-: izv- (West-Germ. iu-) suggested that i- was the characteristic of the second person (cp. Torp, op. cit., p. 49; Johansson, Bezz. Beitr. XVI 144).
- § 438. The Reflexive Stems were *seque- *seque- *seque- *seque- *seque- *tque- *tque- *tque- *tque- *tque- *tque- *tque- *seque- *sequ
- 1. *seye- *seyo-. Avest. hava- 'own'. Armen. gen. iu-r, ep. vol. I § 560 p. 416. Gr. $\dot{\epsilon}\dot{\epsilon}'$ $\dot{\epsilon}'$ ιv , $\dot{\epsilon}\dot{o}$ - ς . Lat. sovo-s suo-s, Osc. suveis gen. 'sui'. It is not certain whether we ought to add Mid.Cymr. eu Bret. ho 'you', plural of y e 'eius' (footnote

on pp. 339 f.), Kelt. *souo- for *seuo- according to I § 66 p. 56, thus the stems which represent the singular and the other numbers would be just the reverse of what is seen in the French representatives of suus and illorum; it would be also possible to connect en and ho with Ar. ava- O.C.Sl. ovü (§ 409 p. 329); or again, to regard them as dual genitives of y e answering to Skr. ayóş (cp. Bavar. dual ez and enk used for the plural as equivalent to Mod.H.G. ihr and euch). Lith. savè sãva-s.

- 2. *sue- *suo-. Skr. svá-s Avest. Gāthic hva- O.Pers. uva-'own' (I § 558.3 p. 414). Armen. in-kn 'ipse', gen. in-kean. Gr. ξ, ő-ς. Umbr. svesu 'suum'. O.Ir. fēin fodēin 'self'. Goth. svēs (gen. svēsis) 'own'. Pruss. swais O.C.Sl. svojī 'suus, own'.
- 3. *se-. Prakr. $s\bar{e}$, Avest. $h\bar{e}$ š \bar{e} O.Pers. šaiy; the variation h- š- in Iranian depended upon the final sound of the word preceding (cp. I § 556.1 p. 410), but by levelling one or other form came to be used generally, the Gatha dialect discarding the forms with š-, and Old Persian those with h-. Gr. $\tilde{\epsilon}$ o $\tilde{\iota}$ for * $\sigma\epsilon$ * $\sigma\iota$ beside f- ϵ f- $\sigma\iota$? Lat. $s\bar{e}$ $sib\bar{\iota}$, Umbr. se-so 'sibi' Osc. sífeí 'sibi'. Goth. si-k O.H.G. si-h. Pruss. sebbei O.C.Sl. $seb\tilde{e}$ 'sibi'.

No sufficient explanation has been given of the etymology of Gr. $\sigma\varphio\tilde{v}$ $\sigma\varphi\ell(v)$ etc. This stem seems to have started from $\sigma-\varphi\ell(v)$ (with the case-suffix $-\varphi\iota-\varphi\iota v$); $\sigma-\varphi\ell(v)$ being associated with $\dot{\epsilon}\mu\dot{\ell}v$ $\ddot{\alpha}\mu\mu\nu$ and the like, produced $\sigma\varphi\dot{\epsilon}$ $\sigma\varphio\tilde{v}$, etc. to match $\dot{\epsilon}\mu\dot{\epsilon}$ $\dot{\alpha}\dot{\nu}\dot{\epsilon}$, $\dot{\epsilon}\mu o\tilde{v}$ etc. See the Author, Kuhn's Zeitschr. XXVII 399 f., Gr. Gr. 2 p. 134; Wackernagel, Kuhn's Zeitschr. XXVIII 139 ff.; and in the present volume, \S 435 Rem. p. 366, \S 436 Rem. 3 p. 368.

The Reflexive shared in the analogical changes described in § 437. Sometimes it affected other stems; for example, the reflexive and the pronoun of the 2nd person together caused changes in the forms of the 1st person, as Lith. manè, which took a from tavè and savè. Or again, it was itself subject to change on the analogy of the other pronouns; e.g. Gr. Lesb.

ἄσφι ἄσφι (if indeed these forms are to be allowed at all, on which matter see Wackernagel as cited above, p. 141), which took $\dot{\alpha}$ - from $\ddot{\alpha}\mu\mu$ $\ddot{\alpha}\mu\mu$ ε.

2. Personal Pronouns: their Cases. 1)

a. I and thou, the plurals we and ye, the Reflexive, and their Possessives.

Nominative.

- § 439. I. The proethnic form may be conjecturally restored $*e\hat{g}(h)o$ and $*e\hat{g}(h)\bar{o}$ (cp. *so and $*s\bar{o}$, § 415 p. 337), sometimes extended by the particle -m.
- 1. *e\(\hat{g}(h)\)o. Pr. Germ. *eka, which, after undergoing certain modifications due to varying accent and varying position in its clause, becomes Goth. ik, O.H.G. ihha ih 'h, Norse Run. 'ka 'k 'ga ek ik O.Icel. ek O.Swed. iak; cp. Noreen Arch. Nord. Phil. I 175 ff., and Paul's Grundr. I 498; Brate, Bezz. Beitr. XI 174 f.; Burg, Die ält. nord. Runeninschr. 20 f., 51; Kluge, Paul's Grundr. I 347, 359 f., 394; Bremer, Zeitschr. deutsch. Phil. XXII 249; Johansson, Bezz. Beitr. XVI 166, 169 f. Lith. esz àsz Pruss. es as Lett. es. Perhaps Armen. es. *e\(\hat{g}(h)\)om. Skr. ah\(\alpha\)m Avest. azem O.Pers. adam. O.C.Sl. az\(\alpha\); as to the ja of the modern dialects see Solmsen, Kuhn's Zeitschr. XXIX 79.
- 2. $e\hat{g}h\bar{o}$. Gr. $\hat{\epsilon}\gamma\omega$. Lat. ego. Perhaps Armen. es. $*e\hat{g}(h)\bar{o}m$. Gr. $\hat{\epsilon}\gamma\omega$ Boeot. $l\omega\nu$ $l\omega\nu$ (cp. the Author, Gr. Gr.² p. 132).

In Old Irish the acc. form does duty for the nom. in singular and plural; sing. $m\bar{e}$ me-sse 'I' (§ 442), cp. pl. ni and si-ssi si-b, which have driven out the old Idg. nominatives *uei and *iūs (§§ 441, 443). Be it observed that in the second person tū tu-*-tu stand for both nom. and acc. (§ 440, below).

¹⁾ In this chapter the forms belonging to the separate languages, and those which are probably to be assumed for the parent language, are less easily taken in at a glance than has been the case in the two previous (chapters pp. 66 ff., 334 ff.). We therefore call special attention to the reference tables at the end.

- § 440. Thou. Pr. Idg. *tu and * $t\bar{u}$ (cp. § 415 Rem. p. 337), also with the particle -m.
- 2. * $t\bar{u}$. Skr. $t\acute{u}$ (like $t\acute{u}$, see under 1). Lat. $t\bar{u}$. O.H.G. $d\bar{u}$ O.Icel. $p\bar{u}$. Pruss. tou ($ou=\bar{u}$), O.C.Sl. ty.

In the following instances, the original quantity cannot be determined. Avest. $t\bar{u}$. Armen. du (d- doubtless when -n and -r preceded, then fixed as the type, see Bartholomae Lit. Centr. 1890 col. 321, and cp. -d 'the' § 409 p. 327). O.Ir. $t\bar{u}$, which might be orig. * $t\bar{u}$, because monosyllables bearing the accent, if they ended in a short vowel, lengthened it (Thurneysen, Kuhn's Zeitschr. XXXI 91), cp. $m\bar{e}$ for *me § 442. Goth. $\bar{p}u$ (cp. $\bar{p}u$ -s $\bar{p}u$ -k with \bar{u}). Lith. $t\bar{u}$.

With the m-particle: Skr. $tuv\acute{a}m = t\bar{u} + am$, $tv\acute{a}m = tu + am$, Avest. Gāthic $tv\bar{e}m$ later Avest. $t\bar{u}m$ O.Pers. $t\bar{u}vam$ (read tuvam) all three = Ved. $tuv\acute{a}m$; Gr. Hom. $\tau\acute{v}v - \eta$ Boeot. $\tauo\acute{v}v$ Lac. $\tauo\acute{v}v - \eta$ (quantity of ov in the last two is uncertain). The ending of the particle has obvious resemblance to the ending of the 1st person (cp. Skr. $ah\acute{a}m$ and Gr. $\dot{e}\gamma\acute{\omega}v$), and thus J. Schmidt, perhaps correctly, explains Skr. $tuv\acute{a}m$ Hom. $\tau\acute{v}v - \eta$ etc. as later formations following the analogy of the first person; this is supported by the fact that the Aryan

^{1) -}su -so (after palatal vowels -siu -seo) is the "particula augeus" of the 2nd person, as -sa (after palatal vowels -se) is that of the 1st person, in me-sse 'I'. Both particles are suffixed to these persons of the verb, but they are not found in verbs and pronouns only. They were certainly cases of pronouns or adverbs, and connected with -sin and -som, cp. Gall. sosin 'of this'. As regards the relation of -sa -se and -su -siu to the various persons, Thurneysen writes: "It seems to me quite possible that -su in verbs was originally the pronoun -tu (this is supported by the British dialects), e. g. do-bir-siu for *do-beres-tu *do-beressu, and that -tu then became confused with the deictic particle -su. The result of this may have been that -sa -se were appropriated to the 1st person, as in Italian vi = ibi and vos caused the use of ci for 'us'."

forms for 'you' which have -am took this element only on the analogy of vay- $\acute{a}m$ (§ 441).

The form $t\bar{u}$ is also used for the accusative in three branches of Indo-Germanic, see § 442.

On Osc. tiium tiú 'tu', see § 442.

§ 441. We and you.

Idg. *iū-s 'you' (is this the singular or plural -s? see above). Avest. yūš, also yūž-em with -em following vaem i. e. vayem (why -em was added to just this sentence-doublet *yūž, I § 646.3 p. 491, and not to yūš, is obscure); Skr. yūyám follows vayám. Goth. jūs; beside this, A.S. ze zē, O.Sax. gi ge, O.H.G. ir, O.Icel. ēr following we wē, wi we, wir, vēr (as in the dual A.S. zi-t O.Icel. i-t follow wi-t vi-t, § 457): first *įū-z became *ie-z, and afterwards in O.H.G. and Norse, the initial i- itself was changed, perhaps by the influence of iuwēr and yūvar etc. Lith. jūs Pruss. ious.

Armen. mek and duk, whose initial is borrowed from the pronouns I and thou (§ 437.1 p. 369), doubtless took the place of *vek or *gek (I § 162 p. 145), and *juk. On the -k, see § 313 p. 212. *vek would answer to O.H.G. wir.

Greek. Lesb. $\ddot{\alpha}\mu\mu\epsilon$ - ς $\ddot{\nu}\mu\mu\epsilon$ - ς Dor. $\dot{\tilde{\alpha}}\mu\dot{\epsilon}$ - ς $\dot{\nu}\mu\dot{\epsilon}$ - ς are re-formates following the other cases, acc. Lesb. $\ddot{\alpha}\mu\mu\epsilon$ $\ddot{\nu}\mu\mu\epsilon$

etc. In Ion.-Att., * $\dot{\eta}\mu\epsilon\varsigma$ * $\dot{v}\mu\epsilon\varsigma$ became $\dot{\eta}\mu\epsilon\tilde{\iota}\varsigma$ $\dot{v}\mu\epsilon\tilde{\iota}\varsigma$ on the analogy of such forms as $\sigma\alpha\varphi\epsilon\tilde{\iota}\varsigma$, because of the resemblance between $\dot{\eta}\mu\epsilon\dot{\omega}\nu$ $\dot{v}\mu\epsilon\dot{\omega}\nu$: $\sigma\alpha\varphi\epsilon\dot{\omega}\nu$; so also $\sigma\varphi\epsilon\tilde{\iota}\varsigma$ beside $\sigma\varphi\epsilon\dot{\omega}\nu$.

Lat. $n\bar{o}s$ $v\bar{o}s$ (Pelign. vus 'vos' is dubious, see Bugge, Altital. Stud. 75) are the acc. form = Avest. $n\mathring{a}$ $v\mathring{a}$. So also O.Ir. ni si-ssi, = Skr. nas vas. See § 443.

Lith. $m\tilde{e}s$ Pruss. mes (beside $j\tilde{u}s$ ious) doubtless stands for *ues (§ 437.1, a. p. 369, and 2, c. p. 370) = O.H.G. wir. O.C.Sl. my vy are probably the acc. ny vy (my has m-through being confused with a formation answering to the Baltic), and were used for the nom. because rqky was so used (§ 315 p. 216, ny vy: $nam\tilde{u}$ $vam\tilde{u}$ nami vami = rqky: $rqkam\tilde{u}$ $rqkam\tilde{u}$). At least this is more probable than that there was a nom. *ius = Lith. jus, which on the analogy of the other cases became *us = the vs of our texts, and then this became vs (cp. Lith. vs = vs Pruss. vs = vs =

Accusative.

§ 442. I and thou and the Reflexive. Pr.Idg. *eme *me, *tue *te, *sue *se, and *mē, *tuē *tē, *sē (cp. § 415 Rem. p. 337), the last four also with the m-particle.

1. *eme *me, *tue *te, *sue *se and perhaps *seue. Armen. z is, z kez probably for *eme- \hat{g} he *tue- \hat{g} he, see below. Gr. $\hat{\epsilon}\mu\hat{\epsilon}$ $\mu\hat{\epsilon}$, Cret. $\tau F\hat{\epsilon}$ (in Hesychius, where it is incorrectly written $\tau \varrho\hat{\epsilon}$) Ion. Att. $\sigma\hat{\epsilon}$ Dor. $\tau\hat{\epsilon}$, $F\hat{\epsilon}$ $\tilde{\epsilon}$, Hom. $\hat{\epsilon}\hat{\epsilon}$ (= Idg. *seue?); Cypr. $\mu\hat{\epsilon}$ - ν , and $\hat{\epsilon}\mu\hat{\epsilon}\nu$ on a late metrical inscription (214 A.D.), which doubtless has not the particle -m of Skr. $m\hat{\epsilon}m$ etc., but the sign of the accusative. O.Ir. me-sse (on -sse see p. 373 footnote 1) and $m\bar{\epsilon}$, with non-original lengthening of ϵ (cp. what it is said of $t\bar{u}$ § 440 p. 373), which were also used for the nominative (§ 439 p. 372); unaccented *me e. g. in fri-m 'contra me'; unaccented *te cannot be inferred with any certainty from fri-t (beside friut) and the like, see the Remark on page 377. Goth. mi-k si-k, O.H.G. mi-h di-h si-h,

O.Icel. mi-k pi-k si-k, -k = Gr. $-\gamma \varepsilon$ in $\dot{\epsilon} \mu \dot{\epsilon} - \gamma \varepsilon$ and the like; on Goth. pu-k, see page 377.

Armenian. is doubtless for *ims (I § 202 p. 169) instead of *inj, the form which might have been expected, as we have in the dat. inj beside kez. Since nom. and acc. ran together in nouns and in pronouns which distinguish gender, it is not too bold to conjecture that -s has come from the nom. es (cp. § 434 p. 364). Then the *-j -z of the acc. is doubtless the particle *ghe = Skr. ha (cp. I § 410 p. 301), so z is is like Gr. è μ é- γ e and z kez like Gr. σ é γ e O.Icel. pi-k. The -j -z of the dative I compare with the endings of Lat. mi-hī Skr. má-hyam (§ 446).

2. *mē, *tuē *tē, *sē. Skr. mā tvā, Avest. mā pwā. Lat. mē tē sē; the old Lat. acc. mēd tēd sēd are doubtless really ablatives (§ 444); these must first have been used for the accusative because -d dropped before consonants (cp. sē-grego beside sēd-itio), and thus the forms in the accusative and ablative became to some extent identical (abl. mē and acc. mē), whilst the instinct of the speaker could not distinguish between them; see Osthoff, Perf. 127 f., and Stolz, Lat. Gr. pp. 345 f. A less probable theory is supported by M. Müller (Fleckeisen's Jahrb. cxiii 702 f.) and Torp (op. cit., 10). These scholars hold that the acc. mēd etc. belong to a period when the ablative suffix -d of the personal pronouns was less restricted in its use than it afterwards came to be, and that the acc. mēd is therefore a very old form.

With the m-particle, Idg. *mēm etc. Skr. mám tvám, Avest. mam pwam O.Pers. mām puvām (i. e. pvām, I § 473.2 p. 349). O.C.Sl. me te se, Pruss. mien tien sien sin (ie and i represent a closed ē). But Lith has mane tave save instead of *mē *tē *sē (the vowel shortened according to I § 664.3 p. 523) following the genitive (see § 450), for such original accusatives as *teuēm *seuēm are hardly to be thought of; the dialectic mane tave save (Kurschat, Gramm. pp. 234 f.; Bezz. in his Beiträge X 310) follow the i-declension on the analogy of manyjè manime etc. (§ 448).

* $t\bar{u}$ as an accusative: Gr. Dor. τv , O.Ir. $t\bar{u}$ tu-ssu (on the particle -su see p. 373 footnote) friut 'contra te' for *fri(th)-tu, Goth. pu-t (= Gr. nom. σv) $\gamma \varepsilon$).

Remark. One observation may be made in connexion with friut. There has been in Irish a vast deal of levelling in phrases consisting of a preposition with a personal preneun. The different preneuns, the different cases (acc. and dat.), and the different prepositions have influenced each ether. Thus, u in liumm beside lemm limm 'through me' (le- is the preposition as accented, pre-tonic it is la-) and in friumm beside frimm 'against me' (fri-) seems to have been taken from the 2nd person; perhaps before the law which affects final vewels had come in, these had formed an ending *-mu fellowing *-tu (cp. gen. mo mu following do du § 450). New since the aec. and dat. of the preneun I (originally *-me and *-moi *-mei) had early run into the same form, and since in the preneuns we and you the ferms -n and -b (for *nes and *:-ues) were from the very first acc, and dat, both, it can hardly cause surprise that we find dom dam = *do-mu instead of *doim = *do mi 'te me' (do with the dat.), which would have been expected. In producing liumm friumm and the like, however, another word may have had some influence - ocum 'with me' (the preposition is oc(u)-), cp. ocut: friut torut (tar 'trans') immut (imb 'circa'), and ethers. (This is Thurneysen's suggestion.)

Umbro-Samnitic. Umbr. tiom teio tio tiu 'te' and Osc. siom 'se' are doubtless nom. acc. neut. of the possessive. This would be quite certain if Bücheler should prove to be right in regarding Osc. tiium and tiú as nom. ('tu'); his theory is attacked by Bugge, Altit. Stud. 32 f. We shall meet again with possessives representing personal pronouns, in other languages (see below, § 452). It remains a question whether tiom siom are to be regarded as ad-formates of *miom = Lat. meu-m (the Author, Kuhn's Ztschr. XXVII 403 f.), or whether beside Ital. *meio- there were original stems *teio- *seio-, which the Umbro-Samnitic branch preserved along with tovo-sovo- (Torp, op. ćit. p. 28).

- § 443. We and you, and the plural forms of the Reflexive. Two distinct expressions for 'nos' 'vos' may claim to be considered original:
- 1. Forms from *ne- *no- and from *ue- *uo- ending in -s (§ 436 p. 367), in three different grades of ablaut. These

forms had at first no special accusative meaning, as their wider use in different branches of Indo-Germanic clearly shews. Their use for the nominative, however, is doubtless later than the break-up of the parent speech, and belongs to the special Latin and Keltic periods, see § 441 p. 375.

- a. Avest. $n\tilde{a}$ $v\tilde{a}$ = pr. Ar. * $n\bar{a}s$ * $v\bar{a}s$. Lat. $n\bar{o}s$ $v\bar{o}s$, also nom.; this nom. use may have begun in proethnic Latin, when the nom. pl. of noun o-stems still ended in * $-\bar{o}s$ and their accusative ending *-ons had become * $-\bar{o}s$ too. Cp. also O.C.Sl. gen. loc. $nas\bar{u}$ $vas\bar{u}$ for * $n\bar{a}s-s\bar{u}$ * $v\bar{a}s-s\bar{u}$ (§ 448).
- b. Skr. nas vas, Avest. $n\bar{o}$ $v\bar{o}$, also used as dat. and gen. O.Ir. ni s-ni 'nos', si-ssi 'vos' (when originally enclitic, these have become -n and -b), Cymr. Corn. Bret. ni ny 'nos', Cymr. chwi Corn. why Mid.Bret. hui 'vos' doubtless for pr. Kelt. *nes and *s-ues, cp. § 436.3 with Rem. 3, pp. 368 f.; these forms are also used as nom. Goth. izvis O.Icel. yār 'vos' pr. Germ. *i-z-uiz = *e-s-ues, cp. ibid. These forms are also used as dative, like O.H.G. iu A.S. eów for *i-uuiz = *e-ues. The last syllable of Goth. izvis retained i under the influence of mis sis or perhaps because of an accentuation izvis.
- c. Goth. uns, O.Swed. $\bar{o}s$ $\bar{u}s$ for * ηs ; these forms are also used for the dative, like the corresponding O.H.G. uns A.S. $\bar{u}s$. On the analogy of izvis $y\bar{d}r$ and also of the dative mis etc., were produced the acc.-dat. Goth. unsis O.Icel. sss, whilst the acc. O.H.G. unsih A.S. $\bar{u}sic$ (like iuwih eówic) followed the analogy of mih mec etc. (cp. Armen. z jez 'vos' following z kez 'te').

The Balto-Slavonic accusatives come from the forms *nōs *uōs, which followed the analogy of the acc. plural of nouns and of pronouns with gender. That *nōs *uōs were proethnic in the Balto-Slavonic branch is proved by O.C.Sl. nasū vasū etc. (§ 448). Prussian mans 'nos', for *nans at the first step backwards (it follows the nom. mes), and wans 'vos'. Similarly, Old Church Slavonic ny vy, like

raky vlŭky (§ 326 p. 226, § 327 p. 229); like raky, these forms (with a change of ny to my) are also used for the nom., see § 441 p. 375; they were also used for the dative, because of the acc. dat. dual na and va (§ 457). Lithuanian jùs 'vos' beside nom. jūs following sūnūs: sūnus, also dial. gen. jun-dvijun following sūnun; on the analogy of jùs, a form for 'us' answering to the Pruss. mans was transformed into mùs (§ 437.2, c p. 370).

2. Pr. Idg. *ηs-sme *us-sme, differing from the formation described under 1. c. only in having a particle *sme added to it. See § 436 with Rem. 2 pp. 367 f. Gr. Lesb. ἄμμε ἔμμε Βοεοτ. Dor. ἁμέ Βοεοτ. οὐμέ Dor. ὑμέ; with the ending pluralised Ion. Att. ἡμέας ἡμᾶς, ὑμέας ὑμᾶς (cp. nom. ἡμεῖς ὑμεῖς) and ἡμας ὑμας (cp. nom. Dor. ἀμές ὑμές). Avest. ahma; Skr. asmán yuṣmán following the acc. plural of o-stems. Since Avest. ahma can be derived, if need be, from pr. Ar. *asmā, the question arises whether there was not an assimilation to mā tvā in pr. Aryan (cp. abl. Skr. asmád: mád); or there may even have been pr. Idg. doublets *η(s)sme *η(s)smē, *u(s)sme *u(s)smē.

Distinct from all accusative forms hitherto cited are Armen. z mez 'nos' z jez 'vos'. These are modelled after *z in-j (z is) 'me' and z ke-z 'te', like as O.H.G. unsih iuwih after mih di-h.

Reflexive. Gr. $\sigma\varphi\acute{a}_{\mathcal{G}}$ $\sigma\varphi\check{a}_{\mathcal{G}}$ beside $\sigma\varphi\acute{e}$ like $\acute{\eta}\mu\acute{e}a_{\mathcal{G}}$ beside $\acute{e}\mu\acute{e}$. Armen. iureans.

Ablative.

§ 444. Ablative Forms with -d in Aryan and Italic.

Skr. $m\acute{a}d$ $tv\acute{a}d$, Avest. $ma\rlap{/}p$ $pwa\rlap{/}p$, O.Pers. ma and reflexive $\check{s}a$ (§ 438.3 p. 371). Lat. $m\bar{e}(d)$ $t\bar{e}(d)$ $s\bar{e}(d)$; Umbr. sei-podruhpei separatim utroque' se-pse 'singillatim' (cp. Lat. acc. $s\bar{e}$ -pse 'sese, semet'). Lat. $s\check{e}$ -d conjunction, = O.Pers. $\check{s}a$. It is doubtful whether there were Idg. doublets *med and *m\bar{e}d etc., or whether in pr. Italic *med etc. lengthened the vowel (\bar{e}) on

the analogy of the accusative, impelled also by the other ablative forms which had a long vowel followed by -d ($-\bar{e}d$ $-\bar{o}d$, $-\bar{a}d$, $-\bar{a}d$): Lat. $s\bar{e}d$ kept clear of these influences by its isolation in point of meaning. There is the same doubt in Avest. $maiby\bar{a}: r.\bar{a}-vya \S 445$ p. 381.

Skr. $asm\acute{a}d$ $yu\check{s}m\acute{a}d$, Avest. $ahma\rlap/p$ $y\bar{u}\check{s}ma\rlap/p$ $x\check{s}ma\rlap/p$. These might be considered Idg. if it were certain that the post-Homeric $\acute{\eta}\mu\epsilon\delta\alpha\pi\acute{o}$ -s $\acute{v}\mu\epsilon\delta\alpha\pi\acute{o}$ -s 'born in our or your land' are anything more than mere adformates of $\acute{a}\lambda\lambda\sigma\acute{o}$ - $\alpha\pi\acute{o}$ -s and the like (II § 32 p. 56).

We seem to be justified in inferring from Skr. mad-iya-s 'my' asmad-iya-s 'our' mát-sakhi-š 'my comrade' and the like (Whitney, Skr. Gr. §§ 494, 1098) that the d-formation had originally a wider signification. The -d has often been identified with -d in the nom. acc. sing. neut. of pronouns with gender (Lat. quo-d qui-d).

The following are obscure: Armen. abl. y $in\bar{e}n$ (perhaps $in\bar{e}n$ and instr. inev instead of * $im\bar{e}n$ *imev following inj, as Lat. $v\bar{e}n\bar{\imath}$ Osc. kúm-bened have n instead of m because of -ventu-s venio, cp. I §§ 207, 208 pp. 174 f.) i $k\bar{e}n$ and i $m\bar{e}n\bar{\jmath}$ i $j\bar{e}n\bar{\jmath}$ (for -j, cp. the loc. i telvoj abl. i $telvoj\bar{e}$ gen. dat. knoj abl. i $knoj\bar{e}$). Compare Torp, op. cit., 27.

Forms with adverbial suffixes (cp. § 244 pp. 141 ff.). Skr. mat-tás tvat-tás asmat-tás yuṣ̃mat-tás, compare above, mad-tya-s etc. Gr. ἐμέ-θεν σέ-θεν ξ-θεν, used also for the gen., because there was a confusion of gen. and abl. elsewhere (§ 244 Rem. 2 p. 143).

Dative.

§ 445. Skr. $m\acute{a}hyam$, Ved. this and $m\acute{a}hya$, Armen. $in\acute{j}$ for * $im\acute{j}$ = * $eme\~gh$ - and Lat. $mih\~t$ Umbr. mehe point to an Idg. ground-form with * $(e)me\~gh$ -, where $\~gh$ (the same as $\~gh$ in the nom., Skr. $ah\acute{a}m$ etc.) took the place which bh held in the bh-suffix of 'tibi'. The case-ending of the Idg. form cannot be made out, because assimilation has taken place with

the ending of the bh-suffixes. Avest, $maiby\bar{a}$ $m\bar{a}vya$ (for the \bar{a} of this form, see below) $maiby\bar{o}$ show a still more thoroughgoing assimilation to the 2^{nd} person.

Skr. tú-bhyam, asmá-bhyam, yušmá-bhyam, in Vedic also forms with -bhya. Avest. taibyā taibyō, ahmaibyā, yūšmaibyā xšmaibyā xšmā-vya yūšmaoyō (= *-a-vyō, I § 160 p. 144),First as regards the stem: Avest, taibuā seems to be more ancient than Skr. tú-bhya(m), cp. Umbr. te-fe O.C.Sl. te-bě; túbhya(m) may have got u from tuvám tuvám tuvá, cp. Goth. pus following pu-k (pu). The ā of hvā-vya xšmā-vua, and mā-vua mentioned above, is uncertain. It may be an Iranian re-formation instead of a (cp. acc. mam $m\bar{a}$, and possibly ahma = pr. Ar. *asmā § 443. 2 p. 379, ahmākem); or there may have been doublets for 'mihi', 'tibi', 'sibi' in pr. Idg., one with e and the other with \bar{e} , and these may have occasioned a variation in quantity in the forms of ahma $y\bar{u}\check{s}ma$; but which, can no longer be made out. The same doubt meets us in Lat. se-d se-(d), § 444 pp. 379 f. The suffixes Ved. -bhya Avest. -byă are to be compared with Gall. -bo § 367 p. 267. Skr. -bhyam has the m-particle. Avest. -byō was first produced in *ahmaoyō and *yūšmaoyō, to mark these cases as plural (it is true that these particular forms are not found in the Gāthā dialect), and on this analogy maibyō taibyō (cp. § 437 Rem. 2 p. 369).

Very closely connected are Lat. ti-bei ti-bī si-bei si-bī (it is simplest to explain i in the first syllable as due to the use of the word without an accent, cp. plicō igitur and the like I § 65 Rem. 2 p. 53, § 679 p. 546), Umbr. tefe tefe 'tibi' Osc. sífeí Pelign. sefei and Pruss. te-bbei se-bbei; Lith. távei sávei (Schleicher in Kuhn-Schl. Beitr. I 238, mánei Leskien-Brugmann Lit. Volksl. p. 49 n. 83) with -av- instead of -eb- following the gen. tavè savè. These forms show after -bh- the ending of the Idg. loc. dat. gen. *mei *t(w)ei *s(w)ei (§ 447), and that of the Ital. loc. dat. of pronominal o-stems with gender, as Osc. alttreí 'in altero' altrei 'alteri' (§ 424 p. 348). Difficulties are suggested by the variety

of the forms found in Lithuanian dialects: we have not only -ei, but manë tavë savë (cp. Bezzenberger, in his Beitr. XV 301) like namē (§ 263 p. 166), máni távi sávi like mi ti si (§ 447, but compare Bezzenherger as cited), and further mán má, táv táu, sáv sáu. Even in the oldest Lithuanian these datives, which were originally locative as well, underwent certain changes due to their locative use on the analogy of the locative of substantives. O.Lith. taweie like dieweie, modern tavyjè like naktyjè etc. (cp. § 263 p. 166, § 448). O.C.Sl. dat. loc. te-bě se-bě, where -bě cannot be derived from *-bhei, may be of the same class as *moi *t(u)oi *s(u)oi, the doublets of *mej etc. (see § 447), cp. loc. vluce = *ulgoi § 263 p. 166; on their relation to the instrumental, toboja soboja, see § 449. We might therefore call *tebhei and *tebhoi a compromise between a form like the Avestic taibuā and those shorter loc, dat, forms in -ei and -oi. It is also quite possible that the parent language had at the same time *meqhei *meqhoi (Lat. mihī) and *te-bio *se-bio or like forms (Avest. taibyā hvā-vya), and that these were assimilated in different directions by the various languages: Skr. máhyam instead of *mahē following túbhyam, Lat. tibei instead of *tebie, or the like, following mihei etc.

Lat. $n\bar{o}b\bar{\imath}s\ v\bar{o}b\bar{\imath}s^{1}$) cannot be derived from such ground-forms as * $n\bar{o}z-bh-$ * $u\bar{o}z-bh-$, since -zbh- would have become -sp-. In any case - $b\bar{\imath}s$ was coined as plural complement to - $b\bar{\imath}s$ on the analogy of the endings of $ist\bar{\imath}:ist\bar{\imath}s$. Either the forms were new-cast to match with the plural $n\bar{o}s\ v\bar{o}s$, or they are dual forms (orig. $n\bar{o}-b-v\bar{o}-b-$) which have received the mark of the plural in the suffix only (cp. § 458).

Pruss. mennei Lith. mánei (máni etc.) O.C.Sl. mǐně with -n- following the gen. Lith. manè O.C.Sl. mene (§ 450). Pruss. nou-mans nou-mas iou-mans iou-mas Lith. mù-ms jù-ms, O.C.Sl. na-mũ va-mũ with the noun-suffix of the

¹⁾ Pelign. vus 'vobis' for $v\bar{o}$ -fs is doubtful; Bugge, Altit. Stud. 75, 77.

dative plural (§ 367 pp. 267 f.). One reason why these forms, like the instr. O.C.Sl. nami vami, had no s before the case-suffix, while there was one in the gen. and loc. pr. Balt.-Slav. *nōs-sŏm *uōs-sŏm and *nōs-su *uōs-su (§ 448), was that the corresponding dual cases had none (Lith. mum jum O.C.Sl. nama vama, § 458), and they influenced the form of these; -s- in -sm- could not properly have been dropped (I § 585.2 p. 301). In Baltic, *iū- came from the nom. and drove out *uō-, and then in Lithuanian the analogy of the u-stems came in, as with jūs and jumis; for the other changes in the stem see § 437.1, a and 2, c, pp. 369 f. Lith. mū-ms, mu-mìs served as the foundation for the dialectic locative mumyse instr. mumim(s) acc. mumis, cp. dual gen. mumu etc. § 458.

§ 446. Armen. inj is to be connected with Skr. $m\acute{a}hyam$ Lat. $mih\bar{\imath}$, as we saw in § 445 p. 380. Its ending spread to the other pronouns, whence kez 'tibi' mez 'nobis' jez 'vobis' (for the interchange of -j:-z see I § 410 p. 301), the reverse of what took place with Avest. $maiby\bar{a}$, which follows $taiby\bar{a}$. Reflexive: sing. iu-r plur. iureanc, like the gen., see § 455.

The Germanic forms with -s Goth. mis pus (doubtless for *pis following puk, cp. Skr. tú-bhyam § 445 p. 381) sis, O.H.G. mir dir, A.S. me mē de dē (for the phonetics, see Sievers Ags. Gr.² § 121, Behaghel Germania XXXI 381), O.Icel. mēr pēr sēr, are all doubtless ad-formates of *nes 'nobis' *yes 'vobis'; outside of the Germanic dialects these are represented only by Skr. nas vas, Avest. nō vō, and by O.Ir. -n -b for *nes *s-yes (e. g. uain 'a nobis' uaib 'a vobis'), and the latter, *yes, is contained in other Germanic words, Goth. izvis O.H.G. iu A.S. eów, while *nes is only represented by Goth. uns, which comes from *ys, an Idg. doublet of *nes (§ 443 p. 378). Perhaps the form first produced was sis (plural and singular), which was followed by mis and *pis. Compare Gr. èμίν following ἄμμιν § 448.

The Possessive used for the Personal Pronoun: Avest.

 $ahm\bar{a}i$, related to Gr. loc. $\Hau\mu\mu\nu$ as Skr. $t\'asm\bar{a}i$ to t'asmin; see §§ 448, 452.

Locative.

§ 447. Forms in -i, which had at the same time the function of the dative and of the possessive genitive: *mei* *t(u)ei**s(u)ei*, *moi**t(u)oi**s(u)oi. These are very closely connected with pr. Ital. *alt(e)rei*, which was loc., dat., and gen. all at once (see § 419 pp. 341 f., § 424 p. 348). They may be fairly derived from the possessive stems *mo- etc. (cp. § 452).

Skr. loc. Ved. $m\acute{e}$ $tv\acute{e}$, dat. gen. $m\bar{e}$ $t\bar{e}$ Prākr. $s\bar{e}$ ($s\bar{e}$ in Vedic also? a very questionable point, see Bartholomae, Stud. zur idg. Spr. I 114), Avest. loc. $\not{p}w\bar{o}i$, dat. gen. $m\bar{e}$ $m\bar{o}i$, $t\bar{e}$ $t\bar{o}i$, $h\bar{e}$ $h\bar{o}i$ $s\bar{e}$ (§ 438.3 p. 371), O.Pers. dat. gen. maiy dat. taiy. Skr. $m\bar{e}$ $t\bar{e}$ in Vedic are probably used for the accusative also (Delbrück, Synt. Forsch. V 205 f.); this wider use may be due to the wider use of nas vas and $n\bar{e}u$ $v\bar{e}m$; compare Lith. mi ti (p. 385), and Gr. τlv $\dot{\epsilon}lv$ (p. 387), all used for the accusative.

Gr. loc. dat. $\dot{\epsilon}\mu o l$ $\mu o i$, $\sigma o l$ for $\tau \tau Fo l$ beside pr. Gr. $\tau o i$ (now a particle), Fo i o i o i (we may conjecture, for pr. Gr. $\tau \sigma Fo l$ and $\tau \sigma l$, although there are no certain grounds for believing in the latter, cp. the Author, Gr. Gr. τl p. 134), Hom. has these and also $\dot{\epsilon}o i$ i. e. $\tau \sigma \epsilon Fo l$. These datives are found often in the poets with the sense of a possessive genitive, as βl ℓl

Lat. $m\bar{\imath}$ dat. beside $mih\bar{\imath}$, used as a possessive genitive in $m\bar{\imath}$ $f\bar{\imath}l\bar{\imath}$, anime $m\bar{\imath}$, $m\bar{\imath}$ domina, $m\bar{\imath}$ hospites and the like; the so-called vocative $m\bar{\imath}$ is always derived from *me(i)e (the latest supporter of this is Thurneysen, Kuhn's Zeitschr. XXX 500), but this cannot be supported by what is known of the phonetic laws. The gen. $m\bar{\imath}$ and *t $\bar{\imath}$ served as bases for the O.Lat. gen. $m\bar{\imath}s$ $t\bar{\imath}s$, which were formed by adding -s or -es ou on to them (cp. $ist\bar{\imath}us = *istei + os$ § 419 p. 341,

and Dor. ἐμέος instead of ἐμέο (§ 450). To the same group belongs sei sī, now a conjunction. Umbrian gives us se-so 'sibi', since its final portion must surely be an affixed particle (cp. the Irish "particulae augentes" or intensive particles, -su -sa -som). And further, two other forms from the same dialect, sve-su and sve-so, in which sve- is certainly a poss. gen., may contain the same particle -so as se-so 'sibi' does, or we may assume for them an inflected stem sve-so-, with Bücheler (Bücheler takes sve-su in I b 45, II a 44 as 'snum', and sveso in VII b 1 as abl. 'suo'); if the latter be correct, we have a combination of the poss. gen. with so- 'suus' (O.Lat. su-m sa-m sōs), cp. Lat. suo sibi gladio hunc iugulo, O.C.Sl. pisachą svoją si rěčī s cribebant suam linguam' and the like (the Author, Ein Problem der hom. Textkr., 132 ff.).

O.Ir. -m -t, e. g. uaim 'a me' uait 'a te'.

Lith. dat. and acc. unaccented mi ti si (in the first instance for $*m\ddot{e}$ etc., according to I § 664.3 p. 523), e. g. $saug\acute{o}k$ -mi 'preserve me' $s\dot{u}ka$ -si 'sika-si 'se' and 'sibi torquet'; and compare Pruss. -si, e. g. (sien) $gr\bar{\iota}ki$ -si 'they fall into sin' (reflexive), beside -sin = sien ($-si = *-s\bar{e}$?). Its use for the accusative is secondary, cp. Ved. acc. $m\bar{e}$ $t\bar{e}$ on page 384, and Gr. acc. $\tau i\nu$ $\acute{e}t\nu$ on pages 386—7. (It is not permissible to assume that the acc. Lith. mi comes from $*me = Gr. \mu\acute{e}$). O.C.Sl. unaccented mi ti si, dat. and possessive (the so-called "possessive dative"), as $drug\check{u}$ mi ' $\varphi i\lambda o_S$ μov '.

Other locative forms in -i:

Skr. Ved. asmé yuṣmé, also used for dat. and gen. (cp. Delbrück, Synt. Forsch. V 206 f.), doubtless represent the Idg. ground-forms. Further, Skr. máyi tváyi beside Ved. mé tvé, which are due to a desire to mark the forms more distinctly as locative, and so to distinguish them from the dat. gen. (acc.) mē tē; máy-i: instr. máyā following dhiy-i: dhiy-á, and the like (Wackernagel, Kuhn's Zeitschr. XXVIII 138).

O.C.Sl. mīně tebě sebě, see \S 445 p. 382.

§ 448. Lith. manyjè tavyjè savyjè like instr. manimì etc. following the i-class. 1) Compare § 445 p. 382.

Skr. asmásu yušmásu, instead of asmé yušmé, were made in connexion with the instr. asmá-bhiš yušmá-bhiš on the analogy of ášvā-su: ášvā-bhiš. Instead of these, Pali and Prakrit have amhesu tumhesu on the analogy of pronouus with gender and of noun-stems in -o-.

O.C.Sl. nasŭ vasŭ, O.Lith. and modern dialects mūsŭ $j\bar{u}s\bar{u}$ (as to $m\bar{u}$ - $j\bar{u}$ - instead of pr. Balt.-Slav. * $n\bar{o}$ - *- $u\bar{o}$ -, see § 437. 1, a and 2. c, pp. 369 f.), come from pr. Balt.-Slav. *nos--su *uōs-su, as the gen, O.C.Sl. nasŭ vasŭ Pruss. nouson iouson Lith. músū júsū from *nōs-sŏm *yōs-sŏm. We may conjecture that *nos *uos in pr. Balt.-Slav., besides being acc. (§ 443. 1, a p. 378), were also gen. (cp. Skr. acc. gen. nas vas), and then on the analogy of Pruss. stei-son O.C.Sl. tě-chữ added the ending *-sốm, in the same way as Gr. έμε, used for the genitive, was extended to *έμε-σμο έμεῖο (§ 450), Skr. $m\dot{e}$, once locative, to $m\dot{a}y$ -i (§ 447), and Lat. *istei in its genitive use to *istei-os istīus (§ 449 p. 388); there are others of the same kind. The new genitive formation then produced a locative on the analogy of The Lithuanian locative forms suffered many O.C.Sl. tě-chŭ. changes, since as the case-system developed they lost their distinctness, and by that time the locative of nouns helped them no whit: O.Lith. musuie iusuie (cp. sūnŭiè), later mūsyiè jūsyjė (cp. manyjė etc.), mūsimė jūsimė (cp. szimė), mūsůsė $j\bar{u}s\hat{u}s\hat{e}$ (: $m\acute{u}s\bar{u} = vilk\mathring{u}s\hat{e} : vilk\~{u}$).

Greek, with its endings $-\iota \nu$ $-\iota$ and $-\bar{\iota} \nu$, stands quite by itself. Dor. $\dot{\epsilon}\mu\dot{\iota}\nu$ $\dot{\epsilon}\mu\dot{\iota}\nu$ $\tau\dot{\iota}\nu$ $\tau\dot{\iota}\nu$, Tarent. $\dot{\epsilon}\mu\dot{\iota}\nu-\eta$ $\tau\dot{\iota}\nu-\eta$ (ep. $\dot{\epsilon}\gamma\dot{\iota}\dot{\nu}\nu-\eta$), Hom. $\tau\dot{\epsilon}\dot{\iota}\nu$ for * $\tau\dot{\epsilon}F\iota\nu$, Gort. $F\dot{\iota}\nu$, Boeot. $\dot{\epsilon}\dot{\iota}\nu$ for * $\sigma\dot{\epsilon}F\iota\nu$.

¹⁾ This re-formation is not, as is often stated, due to any assimilation of mánei to ākei; for the latter is ākiai, cp. § 249 p. 152. But O.Lith. manēje tavēje, if ever there were such forms (Leskien Decl. 141, Bezzenberger Beitr. zur Gesch. der lit. Spr. 161) may have been made alongside of mánei on the analogy of žēmēje: žēmei; cp. Brūckner, Arch. slav. Phil. IV 17.

Lesb. auniv vuniv. Dor. aur aufv autv vuiv vutv. Ion. Att. กุ้นเข กุ่นเข ขึ้นเข ข้นเข. Hom, also ก็นเข ข็นเข: the retrograde accent in these forms (except the Lesbian) is a substitute for enclisis (I § 676 pp. 544 ff.). Without -v. Lesb. Hom. auu $\ddot{\nu}\mu\mu$. It is natural to suppose that there is a connexion with the forms examined in §§ 423 f. pp. 346 ff., as Skr. tásmin Avest. aetahmi Gr. o-tīu. The relation of *ns(s)mi *ns(s)min *us(s)mi * $us(s)min = \ddot{a}\mu\mu \ddot{a}\mu\nu \ddot{a}\mu\nu \ddot{a}\mu\nu$ to *ns(s)me*us(s)me = "uue "uue is the same as that of *tesmi *tesmin = Avest, aetahni Skr. tásmin to *tesme = Lith. tamè (instead of *tesmè); and further, "uuuv is to Avest, ahmāi as Skr. tásmin to tásmāi. Since it is only in -smin that proof has so far been shown for -in as an Idg. locative suffix, 1) I hold ἄμμιν ἔμμιν to be older than ἐμίν τίν Fίν. The analogy of αμμιν: αμμε suggested εμίν beside εμέ, and so with the others. Perhaps σ - φ i ν , used for both sing. and pl., helped in this; viewed in conjunction with autur it would be analysed as $\sigma \varphi - i \nu$ (§ 438 p. 371, § 449), that is to say if its association with αμμιν υμμιν was earlier than the existence of ξμίν τίν Fly; cp. pr. Germ. *piz 'tibi' on the analogy of *izviz 'vobis' (§ 446 p. 383), and § 437 Rem. 2 p. 369. But this does not explain the \(\bar{\epsilon}\) of \(\eta\ullet\ullet\ullet\vert\) etc.

Remark. One possibility — not the only one — is that the deictic particle $-t\nu$ became attached to **anµ (cp. ovtroσ- $t\nu$ beside ovtroσ-t). Cp. Dor. tµε-t' τε-t', and Cypr. u' me' (Meister, Gr. Dial. II 211) which may be regarded as μ '. Then the difference in the meaning of **aσμ $t\nu$ and **aσμtν **uσμtν will have faded away afterwards.

The forms $\tau i\nu$ and $\dot{\epsilon}i\nu$ are also found with the meaning of the acc., which seems to have come about from the analogy of $\mu i\nu$ $\nu i\nu$ (and cp. $\chi \dot{\alpha} \rho i\nu$ $\beta \dot{\alpha} \sigma i\nu$ etc.). Compare too Ved. $m\bar{e}$ $t\bar{e}$ and Lith. mi ti si as accusatives, § 447 pp. 384 f.

¹⁾ All that Bartholomae brings forward in Bezz. Beitr. XV 18 is extremely uncertain. On $\pi \varrho \ell \nu$ ne $\ell \nu$ see II § 135 p. 430. Even Avest. $\bar{p} \nu \bar{v}$, cited by Bartholomae Ar. Forsch. III 28, does not obviously vitiate my view of the origin of $\tau \ell \nu$ $\tau \epsilon \ell \nu$.

With plural ending added: Lesb. $\ddot{a}\mu\mu\epsilon\sigma\nu$, similar to $\sigma\varphi$ i- $\sigma\iota$ § 449.

The Instrumental.

§ 449. Skr. máyā tváyā, Ved. these and tvá tuvá. The history of máyā tváyā is doubtful. They may have been formed in connexion with mám tvám on the analogy of ášvayā: ášvām (cp. asmásu beside asmábhiš following ášvāsu: ášvābhiš, § 448 p. 386); or perhaps they come from the possessive stems *meio- *tueio- (cp. Lat. meu-s O.C.Sl. tvojī). Ved. yušmá-datta- 'given by you' like tvá-datta-; by adding to *asmá yušmá the instr. pl. suffix we have asmá-bhiš yušmá-bhiš. Skr. tvá yušmá may be derived from the possessive stems *tuo- *(i)u(s)smo-, like tvé etc., § 447 p. 384. In Avestic, personal pronouns dropped the instrumental case (Bartholomae, Ar. Forsch. II 127).

Armen. ine-v (instead of *ime-v following inj? cp. § 444 p. 380). ke-v, me-vk je-vk. Reflexive sing. iure-v.

Gr. σ - φ i ν and σ - φ i. On the case-suffixes see § 281 pp. 186 f., on the stem, § 436 Rem. 3 p. 368. From $\sigma\varphi$ i was formed a plural $\sigma\varphi$ i- σ i, as Skr. yu ξ m $\hat{\sigma}$ -bhi ξ from yu ξ m $\hat{\sigma}$, and others.

Lith. manimi tavimi savimi following the i-class, like the loc. manyjè etc., § 448 p. 386; in dialects also mani tavi savi like aki (§ 278 pp. 181, 183). O.C.Sl. mŭnoja toboja soboja were made beside the loc. dat. mĭně tebě sebě (§ 445 p. 382) to match with rakoja: racě. Lith. mu-mis mu-mì, ju-mìs ju-mì O.C.Sl. na-mi va-mi like dat. mù-ms jù-ms na-mǔ va-mǔ, § 445 pp. 382 f.

Pruss. sen maim 'mecum' is properly 'cum meo' (§ 421 p. 344), cp. gen. maisei § 452.

The Genitive, and the Possessive Adjectives.

§ 450. From the original language and onwards there has been a very close connexion between the genitive case of pronouns and their possessives. The possessives were for the most part built up on forms which were used with a genitive meaning; and here all will be treated together.

I. Idg. *eme *tewe *sewe, the bare stem, like acc. sing. Gr. $\dot{\epsilon}\mu\dot{\epsilon}$ etc. Beside *eme there was another stem *me-ne, whose ending recals Skr. ca-ná Avest. ka-na (§ 421 p. 344) and the like; compare Torp's hypothesis mentioned already, § 435 Rem. page 366.

Armen. im. Avest. ma-na O.Pers. ma-nā; Cymr. my n-; Lith. manè (instead of *me-nè on the analogy of tavè savè) Pruss. *me-ne (inferred from dat. mennei), O.C.Sl. me-ne.

Skr. táva Avest. tava (the Avest. possessive hava- comes from pr. Ar. *sava, § 451); Armen. ko, which doubtless began originally with t- (d-), but took k- = *tu- from the other cases, — in other respects the word is treated like nor 'new' (II § 75 p. 192); Mid.Cymr. teu (pr. British *tou), O.Ir. do du first from *tou *tō with accent (on the variants do- and t-, do-māthir and co-t-māthir, see vol. I p. 551); Lith. tavè savè, O.C.Sl. tebe sebe instead of *tove *sove on the combined analogy of tebě sebě and mene.

Sanskrit máma is either ma reduplicated (cp. tvá-tvam and the like, II § 54 p. 100), in which case we must assume Idg. *me as well as *eme (cp. Avest. ma-, § 451); or it was *ama = Armen. im transformed by the analogy of mā mē. Compare the Author, Kuhn's Zeitschr. XXVII 401; Torp. op. cit. 20 f.; Wackernagel, Kuhn's Zeitschr. XXVIII 138.

In Greek the genitives were extended by $-\sigma_{\ell 0}$, $*\hat{\epsilon}_{\mu\epsilon}-\sigma_{\ell 0}$ etc., which served to keep them distinct from the accusative. $\hat{\epsilon}_{\mu\epsilon\hat{0}}$ $\hat{\epsilon}_{\mu\epsilon\hat{0}}$ was added, producing such genitives as Dor. $\hat{\epsilon}_{\mu\epsilon\hat{0}}$ $\hat{\epsilon}_{\mu\epsilon\hat{0}}$, $\hat{\epsilon}_{\ell\hat{0}}$, $\hat{\epsilon}_{\ell\hat$

The formation of these Greek genitives seems to throw light on Armenian ko-y, gen. koyoy, 'tuus'. It is possible that the kernel of this is ko, explained above; this would be extended to *ko-y, and from this would grow out the possessive koy in exactly the same way as the possessive imo- was made from im (§ 451). But it is also possible to regard the kernel of this word as being the gen. *tyo-sio, i. e. the gen. of the

possessive which had taken the place of the original substantival genitive (§ 452).

Latin met tut sut and Lithuanian mano tavo savo (also accented mano tavo savo) are obscure. We cannot tell whether they are direct transformations of the pr. Idg. gen. of substantival personal pronouns, or whether they were originally gen. of the possessive pronouns (Lat. meu-m etc., Lith. mana-s etc.) which at a late period took the place of these; Lat. nostrī vestrī are undoubtedly possessives.

In Keltic the pronouns of the 1st and 2nd persons influenced each other's form. In Irish we see mo mu following do du (cp. O.Ir. friumm following friut § 442 Rem. p. 377), and similarly in Mid.Cymr. meu following teu. On the other hand it may be conjectured that Cymr. dy (pre-tonic) follows my (n-), cp. Bret. da and ma (but Corn. de and ow).

In Balto-Slavonic, genitives of this class were the foundation for re-modelled forms in the other cases: Lith. manę mánei manyjè manimi, tavę etc., Pruss. dat. mennei, O.C.Sl. mĭně mŭnoją. Compare Prakr. acc. mamam loc. mamammi abl. mamādō from the gen. máma, O.C.Sl. dat. česomu loc. česomǐ (beside čemǐ) from the gen. česo 'cuius'.

§ 451. The genitives mentioned in § 450 were inflected as o-stems to form possessive pronouns.

*eme- *me- *mene: Avest. ma-, Armen. im gen. imoy,¹) Gr. $\dot{\epsilon}\mu\dot{o}$ - ϵ , Lith. mãna-s (with a in the first syllable on the analogy of $t\bar{a}va$ -s $s\bar{a}va$ -s).

*teue- *seue: with the variants *tue- *sue-2) *se-. Avest. hava-; Skr. tvá-s svá-s Avest. hwa- hva- O.Pers. uva-.

¹⁾ Whether the nom. im is an unchanged im = Idg. *eme, as in Old Saxon the gen. pl. $\bar{u}sa$ iwu were used unchanged for the nom. sing. of the possessive (§ 455), or whether im once had a nominative sign, is a question which cannot be decided.

^{2) *}sye doubtless in *syé-sor- 'sister' and *syé-kuro- 'father-in-law'. Are we justified, on the strength of Mid.H.G. $sw\bar{a}$ -ger, in assuming *syē as a variant of *sye for Idg., like Skr. $m\bar{a}$ beside Gr. μ s and the like?

Another class of possessives is formed with secondary suffixes, from genitives or from other forms:

Skr. máma-ka-s māmaká-s tāvaká-s (the two last are Vriddhi derivatives, ep. II § 60 pp. 112 f.) from máma táva, see II § 86 p. 257. mad-íya-s tvad-íya-s from mád tvád (cp. § 444 p. 380), see II § 63 p. 133.

Two explanations are possible of Latin meu-s for *meio-s (on miīs = meīs and the like see Thurneysen, Kuhn's Zeitschr. XXX 500), Pruss. mais, acc. pl. maia-ns, twais swais, O.C.Sl. mojī tvojī svojī. They may contain the suffix -io-, like O.C.Sl. našī vašī for *nās-io- *vās-io- (see II § 63 pp. 132 f.); or, as is assumed by Lidén (Ark. nord. fil. III 242) and Johansson (Bezz. Beitr. XIV 171, XVI 135), the possessives *mei *moi (§ 447 pp. 384 ff.) were attracted to the o-class and became *meio- *moio-. On the last view, compare O.H.G. Frank. uns-a- O.Sax. ūs-a- Pruss. nous-a- our' and the like, § 454. I leave the matter undecided.

O.Ir. mui 'mine' (all genders), *tui (Mid.Ir. tāi) 'thine' (all genders) are modelled upon ai ae 'his', used for all genders (p. 339, footnote). In this statement I follow Thurneysen.

As before, two origins are possible for Gothic mein-s pein-s sein-s O.H.G. mīn dīn sīn, and I leave the question open. They may have the Suffix -īno- (II § 68 p. 158), or, as Lidén assumes (loc. cit.), they may be the possessive *mei etc. + the suffix -no- (cp. Skr. purā-ná- 'former' and the like II § 66 pp. 142 ff.). In favour of the former view might be adduced Lith. kēnō 'whose' from a form kēna- 'belonging to whom', which seems to contain -ëna-, a suffix very closely related to -īno- (II § 68 p. 160). But some dialects show

kenő (kanő) (the Author, Lit. Volksl. 304), which resembles the variation of Skr. kéna and Avest. kana (§ 421 p. 344); cp. Johansson, Bezz. Beitr. XVI 158.

§ 452. We have often noticed that instead of 'ego, 'tu', and so forth the equivalents of 'meum', 'tuum', etc. were used, substituting for the idea of personality the more concrete expression denoting what belongs to the person and makes up his environment. Thus we find Umbr. tiom 'te' § 442 p. 377, Pruss. sen main 'mecum' § 449 p. 388, Avest. ahmāi 'nobis' § 446 pp. 383 f., and perhaps Gr. Lesb. äµµur 'nobis' § 448 p. 387. Such expressions as these came the more naturally because there were forms which could be regarded as either a subst. personal pronoun or a neuter possessive used as a subst.; for example, loc. Skr. tvé (cp. své 'in suo'). 1)

Thus it may be seen how the genitive of the possessive often came to be used instead of the gen. of the personal pronouns. Gr. τεοῖο τεοῦ ἐοιο ἑοῦ from τεό-ν ἑό-ν, and with -ς added (cp. ἐμέο-ς § 450 p. 389) Dor. τεοῦ-ς ἐμοῦ-ς Βοεοτ. τεοῦ-ς ταῦ-ς (the Author, Kuhn's Zeitschr. XXVII 407 f., 414 ff.). Pruss. maisi twaisei. Possibly of this sort are Armen. *koy, the kernel of koy 'tuus', and Lat. meī tuī suī Lith. māno tāvo sāvo (see § 450 pp. 389 f.). The suggested derivation of these Lith. forms from māna- 'meum' etc. is supported by kēnō 'whose', if it is derived from a poss. adj. k-ēna- (§ 451, above).

A case of the possessive may also be expected in Goth. meina peina seina O.H.G. $m\bar{\imath}n$ $d\bar{\imath}n$ $s\bar{\imath}n$. But which case is it?

Remark. Bezzenberger's view is that meina is ablative (Unters. über die got. Adv., 7); its ground-form would then be $*m\bar{n}n\bar{o}d$ or $*m\bar{n}n\bar{e}d$, and it would answer to Lith. $m\bar{a}no$, cp. § 228 p. 114, § 241 p. 135. Dr. K. Bojunga holds it to be the nom. acc. pl. neuter (cp. Skr. $asm\bar{a}ka-m$). Johansson, Bezz. Beitr. XVI 163 f., explains meina as $*mei-n\bar{a}^x$, which

¹⁾ However, it is still unknown in what way the adj. Skr. sra- and Avest. hva- 'own, my, thy, his' came to be used for the subst. pronoun, whence we have $sv\acute{a}$ -s $hv\~{o}$ 'he himself' $sv\acute{a}$ 'she herself'. This use must surely be a secondary developement. We might believe that the Idg. reflexive pronoun subst. (Gr. $\~{\epsilon}$ Lat. $s\~{e}$ etc.) adopted the inflexion of the possessive, and in this way got a nominative case.

he calls "a loc.-instr. ease with the meaning by or with me, or something of the kind; or, more precisely, a locative (mei-moi-mi), strengthened by an n-suffix (=asmi-:asmi-n), or, vice versa, jman:jmani)"; eompare his view of unsara, in the volume cited above, pages 136 f.

§ 453. On Armen. iur 'sui', see § 455.

Lith. manę̃s tarę̃s sarę̃s, beside manè turè sarè, are still an unsolved problem; they recal O.C.Sl. toję raky dušę (§ 229 pp. 117 f., § 420 p. 343). There is another group, manès tarès sarès, which look like an extension of manè etc. by -s similar to Gr. ἐμεο-ς (§ 450 p. 389), or a kind of compromise between manè and manę̃s etc.; another is manës tarës sarës, coined for the benefit of manimì manyjè etc. Cp. Brückner, Arch. slav. Phil. IV 11 ff.

Lastly, the student must be reminded that forms like Skr. $m\bar{e}$, locative in form, were originally possessives, and are still used as such in the separate languages; they may also be called possessive genitive. See § 447 pp. 384 ff.

§ 454. II. If the acc. *nsme (= Gr. αμωε) was a combination of the acc. *ns (= Goth. uns) with the particle *sme (§ 443.2 p. 379), we might expect *nsme to be sometimes used for the genitive, considering that Skr. nas can be so used. Then the Greek *aμμε-το *ύμμε-το, later with plural suffix ἀμμείων *ύμμείων (Hom. ημείων ὑμέων ἡμέων ὑμέων, Att. ημῶν ὑμῶν, Dor. ἀμέων ὑμέων ὑμίων) bear the same relation to Idg. gen. *nsme as ἐμε-το to Idg. gen. *eme. On the analogy of these genitives in -είων was formed σφείων σφιῶν. We add as further examples the possessives Avest. ahma- Lesb. ἄμμο-ς ὑμω-ς Dor. ἀμό-ς ὑμό-ς, and Avest. ma- Gr. ἐμό-ς.

A certain amount of support for this view may be had from the Balto-Slavonic and some Germanic forms. As has already been said (§ 448 p. 386), O.C.Sl. nasŭ vasŭ Pruss. nouson iouson Lith. músū júsū have doubtless been built up on *nōs *uōs used for the genitive. These passed into the o-class, and gave rise to the poss. adj. Pruss. nous-a-ious-a- (masc. dat. nousesmu acc. iousan, fem. nom. nousā iousā etc.) and Lith. mūsàs-is jūsàs-is fem. mūsó-ji jūsó-ji,

whilst O.C.Sl. naši vaši, for *nas-jo- *vas-jo-, have the suffix -jo-. Similarly we have poss. adj. W.Germ. unsa- 'our' from uns = *ns, e. g. Frank. gen. unses, and O.Sax. $\bar{u}sa$ O.Fris. $\bar{u}se$ gen. pl. (§ 345 p. 246) like Lat. nostrum beside $nostr\bar{\imath}$, and again on this analogy iwa- 'your'; Germ. uns-era- beside unsa- like Gr. $\acute{\eta}u\acute{\epsilon}-\tau \epsilon go-\varsigma$ beside $\acute{a}\mu\acute{o}-\varsigma$ (§ 455).

The origin of Avest. na- 'our' was as follows. The possessive genitive $n\bar{o} = \text{Skr. } nas$, when dependent upon a nom. sing. masc., was regarded as the nom. of an adj. stem in -o- (such as ma- 'meus') and was then declined in other cases on this supposition. Cp. Lat. cuiu-s 'belonging to whom' from $cuius \S 419 p. 342$.

§ 455. An r-suffix is seen in the gen. O.Icel. vār 'our' for *uēr, beside Goth, veis 'we', and O.H.G. unsēr iuwēr. We may conjecture that this is the same element which is seen in Armenian pronouns with gender (§ 419 p. 341), and which we find here in personal pronouns: sing. iur 'sui', with plural inflexion added iureanc, and mer 'nostri' jer 'vestri'. Perhaps r in these is the same as in adverbs like Goth. $h\bar{e}r$ 'here' par 'there' (cp. p. 71 footnote), so that the original meaning of * $u\bar{e}r$ will be 'by, beside us' or something of the kind, and its use for the genitive might be compared with that of Skr. loc. mē and the like (see Johansson, Bezz. Beitr. XVI 123 ff., especially pp. 134 and 143). The reason why -ēr in O.H.G. unsēr iuwēr was never shortened (as it was in fater for pr. Germ. *fader) is that these forms, which, like O.Sax. gen. pl. ūsa iwa (§ 454), were also used directly for the nom. sing, of the possessive adjective, fell under the influence of forms like jenēr blintēr, whose -ēr came from *-aj-z (§ 414 p. 336); observe the different origin of the endings in unser and unserer. Armen iur mer jer are also poss. adj., gen. iuroy meroy jeroy (cp. § 450 p. 389), and O.Icel. var-r 'noster' from the gen. $v\bar{a}r$.

With a comparative suffix Gr. ήμέ-τερο-ς υμέ-τερο-ς and reflexive σηέ-τερο-ς (used for both plural and singular) and Lat. nos-ter ves-ter (voster doubtless simply on the analogy of

noster), Umbr. vestra abl. 'vestra', cp. II § 75 pp. 193, 195, § 139 p. 450. And as $\eta \mu \epsilon \tau \epsilon \rho \sigma v$ can hardly be distinguished in sense from $\eta \mu \tilde{\omega} v$ (the Author, Kuhn's Zeitschr. XXVII 403, 410, cp. $\tau \epsilon \sigma \tilde{\sigma}$ § 452 p. 392), so nostrī vestrī along with the pluralised nostrum vestrum (first doubtless in phrases like multī nostrum) became the gen. of $n\bar{\sigma}s$ $v\bar{\sigma}s$. The same -terois seen in the O.Ir. dual $n\bar{\sigma}-thar$ and other words, § 459.

Remark. The different vowel in noster and vester is doubtless original. (If Osc. nistrus, Zvet. no. 129.2, is to be explained with Bugge as 'nostros' — not so according to Bücheler, see I § 65 p. 54 — it must come from *nestro-, and that must be regarded as an adformate of vestro-. Perhaps the difference in O.Ir. gen. 1st person nā-thar beside 2nd person se-thar (se- = *s-ye-) is similar, compare § 457 on Skr. nāu: vām.

These forms with -t(e)ro will serve to shew that the second comparative suffix -(e)ro- (II § 75 pp. 188 ff.) is to be seen in the following forms. O.Ir. gen. ar n- and far n- with the gen. pl. ending like Lat. nostrum, used for the possessive; ar n- probably (according to Torp, as cited, p. 41) for *esro-= *ns-ro- (with -r- for -sr- cp. $m\bar{\imath}r$ for *mensr-, I § 574 p. 430) with the vowel of the first syllable weakened to a in proclitic position (explained differently by Thurneysen, see vol. II § 75 p. 196 footnote); and far n- similarly either for *s-ues-ro- or for *s-ue-ro-, — if the latter it must have been originally dual like sethar 'vester' (pl.), see § 459. Goth. unsar izvar, O.Icel. yd(v)ar-r, O.H.G. with strong ending unserer iuwerer, compare the gen. of the person. pron., Goth. unsara izvara O.Icel. yd(v)ar, like Goth. meina beside mein-s, O.Icel. mīn beside min-n (§ 452 with the Rem. pp. 392 f.); since izvar iuwerēr cannot be derived from *es--ues-ro- *e-ues-ro-, they were either dual at first, as O.Ir. far n- may have been, or else they are simply due to the analogy of unsar unserer.

These forms with -(e)ro- and the subst. O.Icel. $v\bar{a}r$ O.H.G. unser seem to be related in much the same way as Gr. $\ddot{v}\pi\varepsilon\varrho o$ - ς Lat. s-uperu-s and $\dot{v}\pi\dot{\varepsilon}\varrho$ s-uper, or the like (II § 75 pp. 188 ff., III § 258 p. 159).

§ 456. A formative suffix -aka- is shown in the Arvan genitives: Skr. asmákam vušmákam. Ved. also asmáka vušmáka doubtless following máma táva (conversely, Pali mamam tavam follow amhākam tumhākam): Avest. ahmākem xšmākem O.Pers, amāxam (on this -x- see Bartholomae, Ar. Forsch. I 79). Connected with these are the possessives Skr. asmáka-s yušmáka-s, Avest, ahmāka- yūšmāka- xšmāka-. The forms in -akam can hardly be anything but the nom. acc. sing. neuter, although the reason why this form was pitched upon is still unexplained; cp. yuváku, used for the gen. dual, beside the adj. yuváku-š (§§ 458, 459). Cp. II § 36 pp. 257 f., § 89 p. 272 f.; Benfey, Abh. der Gött. Ges. der Wiss. XIX 4, 46; the Author, Kuhu's Zeitschr. XXVII 400 ff.; Torp, op. cit. p. 31. A different view - but one which if I may say so, smacks too much of the old "glottogonic" school — is taken by Johansson, Bezz. Beitr. XVI 139 f.

Remark. It is quite possible that asmākam was originally adverbial, with some meaning like 'on our side, by us'. Then the attributive use with nouns, e.g. asmāka gāyatrāh 'our song', was the same as in tā imē vidūra lokāh Çat. Brāh. 1. 4. 1. 23 'these are the far-sundered (lit. far apart, adv.) worlds', Gr. ô rīv χρόνος etc. (see Goedicke, Acc. in Veda 233; Delbrück, Synt. Forsch. V 72, 203; Paul, Princ.² 314). The use of māma tāva Avest. mana tava would also have had something to do with this idiom.

For the possessive, Sanskrit has also asmad-íya-s yuşmad--íya-s, cp. mad-íya-s tvad-íya-s § 451 p. 391.

b. The Dual of we and you and of the Reflexive, together with their several Possessives.

Nominative and Accusative.

§ 457. The main characteristic of the dual cases was the absence of the s of the forms used for the plural, Skr. $n\alpha$ -s $v\alpha$ -s etc.

Answering to the plural nom. *ue-i 'we' the dual had *ue * $u\bar{e}$ (cp. *me * $m\bar{e}$ Gr. $u\hat{e}$ Skr. $m\bar{a}$ and the like, § 415 Rem. p. 337). *ue: Goth. O.Icel. vi-t A.S. wi-t, Lith. dial. $v\hat{e}$ -du fem. $v\hat{e}$ -dvi, but in H.Lith. $m\hat{u}$ -du -dvi ($v\hat{e}$ -du was orig. only

nom., $m\dot{u}$ -du only acc.; in one set of dialects $m\dot{u}du$ was entirely levelled out, and $v\dot{e}du$ in the other); Lith. -du and Goth. -t must both have been connected with the numeral two (Goth. $tv\dot{a}i$), but the manner in which the Goth. form was shortened to -t is not clear. * $u\ddot{e}$: O.C.Sl. $v\check{e}$, Skr. Ved. $v\acute{a}m$ with the particle -m.

Answering to the plural nom. * $i\bar{u}s$ 'you' the dual had *iu * $i\bar{u}$ (cp. *tu $t\bar{u}$ 'thou' and the like, § 415 Rem. p. 337). *iu: Lith. $j\dot{u}$ -du (also used as acc.), Goth. *ju-t (by an accident, not actually found), instead of which in other dialects we find A.S. zit O.Sax. git H.G. Bavar. ez O.Icel. it influenced by wit vit (cp. § 441 p. 374). * $i\bar{u}$: Skr. $yuv\acute{a}m = y\bar{u} + am$.

In place of the plural acc. etc. Skr. nas Lat. $n\bar{o}s$ etc. the following forms appear in the dual: Skr. enclitic $n\bar{a}u$, acc. gen. dat. like nas; Gr. $v\omega$ acc. nom., beside which in Homer is $r\bar{\omega}$ - ι perhaps with the deictic - ι (cp. the Author, Gr. Gr. 2 p. 132); O.C.Sl. na acc. dat. Thus there was in Idg. an enclitic $^*n\bar{o}$ ($^*n\bar{o}u$), which in Greek, accented, took the place of the nom. as well, just as the plural Lat. $n\bar{o}s$ came to be used for the nominative too. And as the plural had *vs (Goth. uns) beside $^*n\bar{o}s$, so the dual had *vs beside $^*n\bar{o}s$, in acc. Goth. ug-vs A.S. un-vs with the particle *k like mi-ss. Another form which must doubtless be added to the list is Skr. Ved. $\bar{a}vas$ which may be derived from \bar{a} -ss \bar{vs} , by assuming that it was extended on the analogy of yuvas, cp. below.

In place of the plural acc. etc. Skr. vas Lat. $v\bar{o}s$ etc. the following forms appear: Skr. enclitic $v\bar{a}m$ (with the m-particle) acc. gen. dat. like vas; O.C.Sl. va acc. dat. nom. (its use for the nom. is not original). Does the contrast between Skr. $n\bar{a}u:v\bar{a}m$ indicate that the ground-form of the 2^{nd} person was ${}^*u\bar{e}$, not ${}^*u\bar{o}$? (cp. § 455 Rem. p. 395). Answering to *u (Goth. ug-k) there may have been a *u in Germanic, acc. *u -ke, which could become A.S. inc etc. by analogical change, see § 437. 2, d p. 370.

Skr. Ved. 1^{st} person nom. $\bar{a}v\acute{a}m$ acc. $\bar{a}v\acute{a}m$, 2^{nd} person nom. $yuv\acute{a}m$ acc. $yuv\acute{a}m$; in later Sanskrit the acc. forms

Distinct from all the forms hitherto mentioned is Gr. $\sigma\varphi\omega$ 'you two', Hom. $\sigma\varphi\varpi\iota$ (like $\nu\varpi\iota$ above). A conjecture on its origin is given in § 436 Rem. 3 page 368.

Reflexive: Hom. acc. $\sigma\varphi\omega\dot{\epsilon}$, a kind of dualisation of $\sigma\varphi\dot{\epsilon}$ by intrusion of ω , like $\sigma\varphi\omega\dot{\epsilon}\nu$ following $\sigma\varphi\dot{\epsilon}\nu$.

The Remaining Cases, and the Possessives.

§ 458. Arvan. There is nothing of the dual in the case ending of any of the following forms: Ablative Skr. Ved. āvád yuvád: cp. tvád. Instrumental yuvá in Ved. yuvá-datta-s: cp. tvá-datta-s yušmá-datta-s. Genitive Avest. yuvākem, like yūšmākem, but Skr. Ved. yuváku yuvákuš with the adj. uuváku-š as contrasted with uušmákam with yušmāka-s: this āku-formation and the use of the adjective yuváku-š suggest that there may be some close connexion between these and yuvāyú-š yuvayú-š tvāyú-s and the like (cp. § 456 p. 396, and the references there given). the other hand, dual inflexion is seen in gen. loc. aváyōš yuváyōš (beside which Vedic has yuvóš), to be explained as we have explained ēnōš: ēnayōš (§ 307 p. 205), or else as being derived straight from ${}^*y\bar{u}$, the form from which $yuv\acute{a}m$ comes (cp. sūnú: sūnv-ōṣ); and in dat.-abl. instr. āvá-bhyām yuvá-bhyām beside yuvá-bhyām (cp. J. Schmidt, Pluralb. 20).

Greek. Hom. $r\tilde{\omega}i\nu$ $\sigma q\tilde{\omega}i\nu$ Att. $r\tilde{\varphi}\nu$ $\sigma q\tilde{\varphi}\nu$. Cp. $\tau \tilde{\omega}i\nu$ § 312 p. 211. Does $r\tilde{\omega}i\nu$ come from $r\tilde{\omega}i\nu$? It is also

possible that $\nu\tilde{\omega}i\nu$ like $\dot{\epsilon}\mu\dot{i}\nu$ was modelled upon $\ddot{a}\mu\mu\nu$, and being associated with $\tau\tilde{o}i\nu$ $in\pi ou\nu$ came to have the same functions.

Lat. $n\bar{o}$ - $b\bar{\imath}s$ $v\bar{o}$ - $b\bar{\imath}s$ may be regarded as old dual cases (cp. O.C.Sl. na-ma va-ma) whose suffix has been pluralised by association with the type of $ist\bar{\imath}s$, see § 445 p. 382. This is not the only instance of a form passing into the plural system when the dual has died out: a parallel is Bavar. ez enk used for the plural. Much the same thing is seen in Norse dialects; see Johansson, Kuhn's Zeitschr. XXX 551. Compare the Latin dual duae, equae used for the plural, § 286 p. 194, § 315 p. 215.1)

O.Ir. gen. nāthar nār Mid.Ir. fathar sar, see § 459.

Germanic. Round about the form *un-ke = Goth. ugk (§ 457), whose k was regarded as parallel to the s of uns and so lumped together with the stem, were produced Goth. ugkis ugkara following unsis unsara, O.Sax. gen. unkero gen. pl. of the possessive like $\bar{u}sa$, dat. unk for *unkiz like iu for *iyyiz, O.H.G. gen. unker following unser. Similarly in the 2nd person Goth. igqis igqara (-kū-following -zv- in izvis izvara) O.Sax. ink. A.S. acc. uncit incit, beside dat. unc inc, with -it following the nom. wit zit.

Balto-Slavonic. O.C.Sl. na-ma va-ma like raka-ma, but na-ju va-ju as contrasted with raku toju. Lithuanian shows a multitude of forms distributed among the different dialects. Dat. instr. mu-m ju-m beside mù-du jù-du (§ 457 pp. 396 f.), as in the plural mù-ms jù-ms and mu-mìs ju-mìs; also mum-dvëm jum-dvëm. Then mum and jum served as a kernel for the gen. O.Lith. mumu jumu with the -ū of the gen. plural (cp. gen. dual dvëmu, Brückner, Arch. slav. Phil., III 310), and for the dat. mumëm; there are also gen. mùma jùma (used as the poss. gen.), which are found in districts where mãno tãvo have regularly become mãna tãva, and therefore are without doubt modelled after them. Elsewhere

¹⁾ So now Bartholomae, Stud. zur idg. Spr., I 7.

the case-system is filled up by a form made up of ve-, mu-, or ju-+-du, but not always in the same way. High Lith. gen. $m\dot{u}$ - $dv\ddot{e}j\bar{u}$ $j\dot{u}$ - $dv\ddot{e}j\bar{u}$ dat. instr. $m\dot{u}$ - $dv\ddot{e}m$ $j\dot{u}$ - $dv\ddot{e}m$ loc. $m\dot{u}$ - $dv\ddot{e}se$ $j\dot{u}$ - $dv\ddot{e}se$. But in other parts the structure of $v\dot{e}$ -du $m\dot{u}$ -du and $j\dot{u}$ -du became so much obscured, that they came under the influence of $s\dot{u}nu$ as though they were $v\dot{e}d$ -u etc.: hence gen. $v\dot{e}dums$ $m\dot{u}dums$, $j\dot{u}dums$ (cp. $s\ddot{u}nu$ -ms § 310 p. 207), dat. instr. $v\dot{e}dum$ $m\dot{u}dum$, $j\dot{u}dum$; so too we find in the same neighbourhoods gen. $t\ddot{u}dums$ dat. instr. $t\dot{u}dum$ from nom. $t\dot{u}$ -du (beside $t\dot{u}$ -s 'the, that').

§ 459. Possessives. Skr. Ved. yuvåku-š. Gr. Hom. vωi- $\tau \varepsilon \varrho o$ - ς $\sigma \varphi \omega$ i- $\tau \varepsilon \varrho o$ - ς , cp. $\eta \mu \varepsilon$ - $\tau \varepsilon \varrho o$ - ς . O.Ir. $n\bar{a}$ -thar and $n\bar{a}$ -r in cechtar $n\bar{a}$ thar, cechtar $n\bar{a}$ r 'each of us two', which we may conjecture to be gen. pl. like ar n- (§ 455 p. 395); $n\bar{a}$ - for * $n\bar{o}$ -. So too the O.Ir. se-thar — sethar(-si) Wb. 1^b is glossed accentuated 'vestram', plural — which is connected with *s- μe -, must originally have been dual, as is still Mid.Ir. nechthar fathar 'one of you two' (fathar is doubtless a transformation of sethar on the analogy of far), and possibly Mid.Ir. sar in indala-sar 'one of you two' and the possessive genitive far n-(cp. loc. cit.). Gothic igqar (ugkar not found, but may be assumed from gen. ugkara), O.Icel. okkar-r ykkar-r, O.Sax. gen. pl. unkero.
