SIERRA LEONE, GUINEA and now also LIBERIA are officially EBOLA-FREE

SITUATION

- 14 January marks the end of the **42nd day Ebola** case-free period in **Liberia**, which implies that Liberia is now officially **Ebola-free** again.
- As **Sierra Leone** and **Guinea** have already recently been declared **Ebola-free**, this means that the West Africa Ebola epidemic is now technically over. However, each country will embark on a **90 day period** of heightened vigilance whereby, for example, the safe burial and testing of suspicious cases will continue.
- Each country is also developing a programme to follow up survivors and establish a robust surveillance and response system.
- ECHO** will **continue to monitor** these developments on the ground.
