

Merden Duillier

First of all, many people have learnt a lot about Sir Isaac Newton's fabulous experiments and in schools many historians and many lecturers talk only about Sir Isaac Newton the scientist and Sir Charles Newton who was the lawyer in United States of America.

Well have you learnt about the real life of Professor Merden Duillier, he was born is 1933 December 31, He had a twin brother called Jerden who was born in 1934 January 1. Merden means a person who brings a lot of success in a team or organization, after the death of Sir Charles Newton who was the lawyer, Merden's father began to explore the world until one day in Alaska he fall in love with a lady and they had twins Merden and Jerden.

Merden took after his father in terms of exploring the world and one day in 1956 he went on vacation in Britain, England. His grandfather Nicolas Fatio de Duillier was the best friend to Sir Isaac Newton. Merden was just a simple kid who loved to explore the world and also loved much of being a scientist hoping that one day he could be one.

Well in 1962 he discovered that the earth is very much unground and he could change lives of the people around the world but many people thought he was mad. He then turned himself into a zygote and transfer it to South Africa in Johannesburg. His project could only last for 37 years. So we assumed in 2001 he could be reborn but until now we don't know if he died or if he was reborn.

Nicolas Fatio de Duillier FRS (also spelled Faccio or Facio; 16 February 1664 – 10 May 1753) was a mathematician, natural philosopher, astronomer, inventor, and religious campaigner. Born in Basel, Switzerland
