5 August 1949

Monthly Civil Affairs Activities Report
for Period 1 - 31 July 1949

PUBLIC HEALTH SECTION

(Capt James A. Enger, MSC)

ANNEX B - 1:

1. Administration:

a. Administration of national hospitals and sanatoria in the prefecture is good. The tuberculosis sanatoria are increasing bed capacities by discharging patients to "home care" as early as possible.

b. Health centers show poor administration. The health department was advised to carry out inspections of the health centers and to spot check activities in the communicable disease control programs.

c. A check was made with prefectural health officials, of larger isolation facilities with regard to utilizing the beds for hospitalization of tuberculosis patients. Prefectural officials are of the opinion that 200 beds can be made available for tuberculosis cases.

d. The Saga Prefectural Hospital, owing to improper administration, is in a fairly deplorable state of affairs. A campaign is being launched by the health department to effect changes and make it into a model hospital.

e. Under the auspices of the health department an exhibition on sex and venereal disease is being staged in Saga City. Popularity of this exhibition is shown by an average daily attendance of 1,200 people.

f. The prefectural health department examined the water of the streams and rivers in Saga City to check on the suitability for swimming purposes. The results showed heavy pollution from sewage. The health department prohibited swimming in this area and instituted a similar campaign in other communities throughout the prefecture.

Restricted

Con't. Annex B-1 Monthly Report (1-31 July 49) Saga CA Team

2. Veterinary Affairs:

a. Animal barn DDT spraying is 100% complete. No cases of equine encephalomyelitis were reported. Information leaflets on prevention of equine encephalomyelitis were distributed of farmers.

b. Bovine tuberculosis testing is 13% complete. Trichomonas testing is 9% complete. Swine cholera immunizations are 49% complete.

c. Sanitation in the fish markets, tea rooms and ice candy shops continues to be poor. Conferences with operators of these establishments conducted by the health department on this program are fruitless. Recommendations are still being made to enforce the food sanitation law by imposing the penalties provided on the violators.

3. Nursing Affairs:

a. The prefectural health department is planning a refresher course on tuberculosis public health nursing. A graduate of the course conducted in Tokyo will be responsible for presentation of the curriculum.

4. Pharmaceutical Affairs:

a. Assays for the detection of inferior drugs are in progress, and several items have been discovered to be unfit for use.

b. Routine narcotic inspections revealed two narcotic addicts. Among the narcotic handlers inspected no violations have been discovered.

5. Preventive Medicine:

a. Communicable diseases:

(1) An outbreak of dysentery occurred within a welfare collective housing unit Kyoraku-en. Immediate isolation of cases was accomplished, and close checks were made of the unit. No deaths were reported and all 23 cases have been discharged. No further cases have been reported.

(2) Statistical studies made by the health department revealed that Sumiyoshi-mura has the

highest number of typhoid cases each year. An investigation was made by the health department, and two typhoid carriers were discovered. Necessary measures were taken by the health department.

b. Immunizations:

(1) No vaccines have been received for smallpox and typhoid-paratyphoid immunizations. The status of immunizations remain unchanged.

c. Tuberculosis control:

(1) National sanatoria are evolving plans to effect rapid turnover of patients in order to overcome the shortage of beds.

(2) Liaison will be maintained with health centers in the after-care of patients discharged from sanatoria.

(3) Posters, newspaper articles and radio broadcasts were included in preparation for tuberculosis prevention week.

d. Venereal disease control:

(1) The health department is beginning to realize the importance of education in the public health field. With the staging of the exhibition in sex science and venereal diseases several lectures, debates and radio broadcasts were held by the health department and Saga Health Center.

6. Nutritional Affairs:

a. Preparations have been completed for the nutrition survey which will begin in August.

7. Sanitary Engineering:

a. Emphasis on mosquito and fly control is the main objective of the insect and rodent control program. Shortage of sanitary personnel in the health centers to render assistance and instructions to assistant sanitary inspectors is hampering progress.

5 July 1949

Monthly Military Government Activities Report
for Period 1 - 30 June 1949

PUBLIC HEALTH SECTION

Dr. K. WAKAKI (J.N.)

Lt Col J. J. Roth (N.Q.)
Acting PHO

ANNEX B - 1:

1. Administration:

A conference was held with the director and section chiefs of the Prefectural Health Department with the object of pointing out the over-all deficiencies in the health centers. Although minor excuses were brought up, the main difficulty seems to be the lack of personnel. A personnel increase in the number specified by the Welfare Ministry is expected to take place next month and it is hoped to ameliorate the situation.

Medical Social Service Workers in the health centers were experiencing difficulties on account of an unco-operative attitude of the welfare workers. The Welfare Section of this team took measures to correct the misunderstanding and agreed to undertake the task of establishing a co-operative liaison between the medical social service workers and the minsei-iin.

Kashima Health Center has acquired the services of two more doctors. They will be in charge of TB control and maternity and child health. This brings the number of doctors in this health center to three.

It is expected that a health center will be established in Takeo in the near future. The proposed building and site are suitable, and rehabilitation work will start as soon as and if funds become available.

An Oral Hygiene Week was held from 1 to 7 June during which information was disseminated to the general public on dental and oral hygiene. Prizes were given to school children with sound teeth. Private dentists co-operated by giving free consultations to the public during the week.

Restricted

During the period 22 to 24 June, under the joint sponsorship of the Health Department and the Nishi Nippon Press, a publicity campaign on the prevention of summer infectious diseases was carried out. A news-car equipped with loud-speaker toured the whole prefecture, and lectures and paper shows were given by health officials and public health nurses.

Inspection of some of the communicable disease isolation wards of the cities and towns showed that no proper care is being taken of these buildings. The principal reason is that these wards are seldom used and then only for the isolation of cases of dangerous infectious diseases. It was suggested that the Health Department make use of the larger wards to relieve the shortage of TB beds.

2. Veterinary Affairs:

Six cases of bovine tuberculosis were reported this month, and all six have been reported to have been slaughtered. Swine cholera immunization is being carried out and is 28% complete. Immunization against equine encephelomyelitis for 4-year old horses is 100% complete. As an added precaution, 972 horses of over 5 years near the prefectural border were immunized.

Preparations are being made for a large scale stray dog apprehension program.

Several slaughter houses, milk plants, dairies, meat and fish shops were inspected by this section this month. It was found that thorough inspections were not being made by the prefectural inspectors. Corrective action has been taken by this section.

3. Nursing Affairs:

The new prefectural five-month course in public health nursing has been started. There were 30 applicants of whom 25 were selected following an examination.

Plans are being made by the prefectural Health Department to start a clinical nurses' training course, using as instructors, those nurses who have attended refresher courses.

4. Pharmaceutical Affairs:

In accordance with Welfare Ministry directive investigation into the quality of drugs is in progress, and inferior drugs are immediately reported to the Welfare Ministry.

Narcotic Control:

Prefectural narcotic inspectors discovered five narcotic addicts this month.

The narcotic inspectors ordered excessive narcotics found stocked in hospitals and retail drug stores to be returned to the Welfare Ministry.

Twenty-seven doctors and narcotic handlers were inspected this month by prefectural inspectors, and two minor violations as to the storage of narcotics were disclosed. Corrective action has been taken by the prefectural officials.

5. Preventive Medicine:

Communicable Diseases:

One case of scarlatina was reported from Karatsu City. All preventive measures were taken, and no further cases were reported.

The isolation wards of the cities, towns and villages are in a deplorable state. The Prefectural Health Department was instructed to make the necessary corrections.

Immunizations:

Directives from Welfare Ministry regarding smallpox vaccination of the whole nation have just been received by the Health Department. The program will be started immediately upon receipt of vaccine. Periodic vaccination program is 78.8% complete.

TAB vaccine allocation by the Welfare Ministry is insufficient for early completion of typhoid paratyphoid immunizations. The percentage completion up to date is 8.4%.

TB Control:

Dr. Dickinson, SCAP TB Control Officer, checked on the TB control program in this prefecture. It was pointed out that the number of visits made by public health nurses to TB patients is far too low. In all the health centers the figure is less than one visit per tuberculous death per year. Moreover, the records are not kept in a manner to facilitate contact tracing and follow up on cases. These are in the process of rectification.

The TB sanatoria are maintaining close liaison with the health centers, but too often far advanced cases are sent to the

sanatoria necessitating a long period of sanatorium care. This not only hampers the program of rapid turnover of patients, but also causes the early cases, in which cures can be effected, to be neglected. Dr. Dickinson suggested that priority be given to early cases whose stay in the sanatoria will be short and whose chances of recovery great. A follow-through on this will be made.

VD Control:

A film on venereal disease was thrown open to the public to persons over eighteen years of age during the period 1 to 6 June.

Plans are being made by the prefectural Health Department to hold an exhibition on venereal disease and sex next month.

Records kept on VD cases reported to the health centers are very inadequate. Reports on the progress of VD patients are not forthcoming from the private doctors, and as a result accurate checks on cases are not made. This has been pointed out to the Health Department, and corrections will be made.

6. Nutritional Affairs:

The results of the nutritional survey carried out in May were as follows:

	Karatsu City	Magarikawa-mura
Protein	69 gms	59 gms
Fat	16 gms	10 gms
Carbohydrate	443 gms	384 gms
Calorie Intake	2,171 cal	1,775 cal

Four meetings were held by the Health Department on nutrition with regard to the school lunch program.

7. Sanitary Engineering:

Insect and Rodent Control:

During inspections it was found that certain towns and villages still maintain sanitary teams knowing full well that no national or prefectural subsidies are forthcoming this year for such teams. They seem willing to maintain them at their own expense. However this year's program was explained to them and their co-operation was requested.

SAGA PREFECTURAL GOVERNMENT

27 March, 1950

SUBJECT: Recommendation of Hotels, and Theatres for "On Limits" for Foreign Nationals.

TO : Chief, Kyushu Civil Affairs Region.

We sent a document like a attached paper dated 16 Jan., 1950, subj; Recommendation of Hotels, and Theatres for "On Limits" for Foreign Nationals. We have received none of information about it from you. May we ask your favor telling us some good news in near future?

G. Okimori

GEN-ICHI OKIMORI
Governor of Saga Prefecture.

SAGA PREFECTURAL GOVERNMENT

16 Jan., 1950

SUBJECT: Recommendation of Hotels, and Teatres for "On Limits" for Foreign Nationals.

TO : Chief, Kyushu Civil Affairs Region.

According to the directive Ei-hatsu No. 1124 dated 8 November 1949, from the Director, Public Health Bureau, Welfare Ministry regarding, the inspection of hotels and theatres to be put on the "On limits" for Foreign Nationals, this prefecture from 8 November 1949, carried out a thorough inspection and maintained strict surveillance on all hotels and theatres on the two phases of environmental sanitation and food sanitation. All the hotels and theatres had previously been "Off Limits" according to the direction of the Chief of Saga Civil Affairs Team. As a result of this inspection, the following hotels and theatres are found to be suitable to be put "On Limits" for foreign nationals and are recommended.

Hotels:

2 看護婦学校に関する重要なる事項

Important matters in regard to nurses' training school

12月19日佐賀保健所にて保健婦養成講習会受講者試験施行した

Examination for attendance at public health nurses training course was held on December 19 at the Saga Health Center.

12月20日佐賀保健所にて保健婦養成講習会開講式を挙行した

The opening ceremony of public health nurses training course was held on December 20 at the Saga Health Center.

3 助産婦、保健婦、看護婦協会の活動

Activities of Midwives, Public Health Nurses and Nurses Association

12月17日 佐賀市役所にて保健婦部会評議員会開催
協議事項　代議員選出について
保健婦による一般民衆への衛生教育実施方法について
保健婦制服の統一について
看護の本の購入について

Dec.17, at Saga Municipal Office
Public Health Nurses Section Council
Matters deliberated on:
Election of representatives
Means of public health education to be carried out by public health nurses
Unification of uniforms of public health nurses
Purchase of books on nursing

12月12日　佐賀保健所にて佐賀保健所管内保健婦常会開催
内容　妊産婦保健指導法、デモストレイション　乳児水浴方法.

Dec.12, at the Saga Health Center, regular meeting of public health nurses with the jurisdiction of Saga Health Center
Substance: Guidance in health of maternity cases; demonstration; bathing of sucklings

(Supplement to Page 19) E. Pharmaceutical Affairs:

Pharmaceutical affairs inspection:

In accordance with notification from Chief of Pharmaceutical and Supply Bureau, Welfare Ministry concerning all-round control over pharmaceuticals, etc., thoroughgoing control was carried out in the prefecture.

Spot inspection was conducted at 92 places comprising 29 dispensaries, 7 pharmacies, 30 drug-stores, 24 hospitals and clinics and 2 others.

Pharmaceuticals we picked up amounted to 65 items consisting of the following articles:

Santonin anthelmintic.....	15	Calcium choloride injection...	9
"Sulso-bloca" sugar injection	5	Grape sugar injection.....	13
Vitamin B_1 injection.....	19	Others.....	4

Out of the above-mentioned medicines, santonin anthelmintic and vitamin B_1 injection were, in accordance with the instructions from the Welfare Ministry, sent to the Ministry for test. The others are being subjected to test at the Prefectural Hygenic Laboratory.

Narcotic control:

Violators:

We dealt out administrative punishment to the following person who failed to administrate narcotic perfectly:

Masanao MIZOGUCHI, registered narcotic administrator No. 67,
Nishiki Mining Station Hospital, 1841, Kitagata-machi, Nishima-gun,
Saga Ken

We dealt out administrative punishment to the following persons who failed to keep records of narcotic through carelessness without any criminal intent:

Zenku SHIMOMURA, registered narcotic user No. 397,
765, Nitta, Kubota-mura, Saga-gun, Saga Ken

Shun'itsu TAKASHIMA, registered narcotic user No, 380,
133, Kihara, Kitakawasoe-mura, Saga-gun, Saga Ken

Kaworu KIHARA, registered narcotic user No. 386,
111, Ushijima, Kose-mura, Saga-gun, Saga Ken

Investigation of the following person has been proceeding since last month:

Renzo MASUDA, registered narcotic user No. 377,
Kawara-machi, Hyogo-mura, Saga-gun, Saga Ken

E 藥務関係事項 Pharmaceutical Affairs:

定期配給 Routine distribution :	昭和24年度4半期指定医薬品衛生材料の割当通知に基き取扱者に購入通帳を発給した。 In accordance with the notified allotments of designated pharmaceuticals and medical supplies for the 4th quarter of 1949-50 fiscal year, official pass-books were issued for the dealers.
特殊医薬品衛生材料の配給につき特記事項 Special matters concerning distribution of specific pharmaceuticals and medical supplies:	出産用衛生材料の購入切符を11月中の届出妊産婦295名に発給した。 Official pass-books of medical supplies for delivery were issued for 295 maternity cases reported during the month of November. According to the 2nd allotment, imported streptomycin was distributed to the Prefectural Hospital and 8 other hospitals for general use.

Number of permits for artificial abortion according to the Eugenic Protection Law:

其他
Others: None.

3 其他 Others: None.

The model insect and rodent control program in Saga City is progressing favourably.

General Sanitation:

Every endeavor is being made by the Health Department to enforce the Filth Cleaning Law. Results are beginning to show up.

Routine inspections of public buildings, bath houses, barber shops and hotels are bing carried out to determine whether the minimum standards in sanitation demanded by the health authorities are being met.

Water plant sanitation is improving, but constant surveillance has to be made on chlorination and the keeping of records.

8. Laboratory Affairs:

Laboratory facilities in the health centers are improving, and extensions are being made in some of them. About 20% of the tests carried out in the health centers are requests from private practitioners.

One laboratory technician from the Saga Health Center will be sent up to Tokyo next month for the first refresher course in laboratory affairs.

PUBLIC HEALTH ACTIVITIES

Dr. K. WAKAKI (J.N.)

Lt Col J. J. Roth (N.Q.)
Acting PHO

ANNEX B - 1:

1. Administration:

A thorough inspection was made of all the health centers in this prefecture. It was found that there is too great a difference between the operating efficiency of the Karatsu Model Health Center and the other health centers. It is believed that the other health centers are being neglected by the Prefectural Health Department. The prefectural officials have been instructed to make every effort in bringing the other health centers up to the standard set by the model health center. Most of the important health programs and practices are being attempted, but owing to the shortage of personnel and funds they are only superficially touched upon, and no depth was seen in any of the programs with the exception of the more important ones such as TB control, communicable disease control and immunizations.

All national sanatoria and hospitals were inspected by this section. The sanitary improvements have shown greater progress than the administrative functions. The hospitals still adhere to their old system of running polyclinics and the necessity that the director should do clinical work. Unless changes are made in the present system of assignment of work load of the doctors within the hospitals, not much progress will take place in administration.

During the period 20 to 26 May an exhibition entitled "Modern Life" was held in Karatsu City, and the Karatsu HC took advantage of the opportunity to display posters publicizing the health center and its functions along with other materials of health interest.

Restricted

Simultaneously, under the joint sponsorship of the Prefectural Pharmaceutical Association and the Prefectural Pharmaceutical Affairs Section, an exhibition on "Drugs in Daily Life" was held in Saga City.

An investigation into the intern education program by this section revealed that the interns are not as a whole given much opportunity to obtain clinical experience. In some of the hospitals which are training interns the real significance of such training is not fully grasped by the staff doctors. Closer surveillance will be kept on this aspect of hospital training for interns.

The Prefectural Nurses' and Midwives' Association held a general meeting on 14 and 15 May for the election of officers for this year. This meeting was supervised by Miss Baca, Regional PH nurse. Miss Randles of the Women's Affairs Section of this team spoke on the democratic operation of an association.

All training courses which are held on national and regional levels have been attended by representatives from this prefecture. This month representatives have been sent up to Tokyo for nutrition, statistics and veterinary affairs courses.

2. Veterinary Affairs:

Equine encephalitis vaccination for horses of three years and under is 100% complete. Four year olds will also be vaccinated upon arrival of more vaccine.

Repeated requests to the Welfare Ministry for rabies vaccine have been made by the prefectural officials, but owing to the stated shortage, this prefecture will not receive further supplies until after July. At present rabies control is limited to the apprehension of stray dogs.

3. Nursing Affairs:

Public health nursing is steadily improving, but clinical nurses have made very little, if any, progress. Clinical nurses who have attended courses are given very little opportunity to put into practice what they have learned, due to the attitude of the doctors who still lack understanding. The elevation of the prestige of the nursing profession is thus being hampered. This section has brought the matter to the attention of the Health Department and will follow through.

4. Pharmaceutical Affairs:

Routine inspections by the prefectural officials resulted in the confiscation of several drugs which had deteriorated, and

these have been carefully disposed of.

Narcotic inspectors carried out eighteen inspections disclosing no violations.

Santonin and glycerin remain critically short.

5. Preventive Medicine:

Communicable diseases:

A suspected case of smallpox was reported from Tamashimamura on 11 May. It later turned out to be a case of chicken pox. However, all preventive measures for smallpox were rigidly enforced.

A case of scarlatina was reported from Shirota-mura, Kanzaki-gun. Isolation and quarantine procedures were immediately installed. No further cases have been reported from this area.

Immunizations:

Immunizations for smallpox are 14.6% complete, and typhoid paratyphoid is 0.51% complete. Prefectural officials were instructed to complete the immunizations as early as possible.

TB Control:

Information received from the Welfare Ministry by the Prefectural Health Department concerning the distribution and use of imported streptomycin in the treatment of tuberculosis is being disseminated to the institutions which will be using the drugs.

A tuberculosis prevention and care committee has been organized in each of the five health center districts. It is hoped that these will function well and not prove to be committees in name only.

A prize competition of posters, slogans and essays on TB control was held to obtain material for a forthcoming health exhibition.

VD Control:

Facilities for Wasserman Reaction have been completed in the prefectural laboratory and the Karatsu Model Health Center laboratory. The importance of performing this test was stressed to the prefectural officials by this section.

6. Nutritional Affairs:

The second nutritional survey carried out in Karatsu City and Magarikawa-mura has been completed. The results are not available for this month's report.

7. Sanitary Engineering:

Insect and Rodent Control:

Changes in the organization of sanitary teams in compliance with the 1949 insect and rodent control policy have been almost completed. This prefecture will have a total of 21 teams and 129 assistant sanitary inspectors. Mr. Alexander, Sanitary Engineer, Kyushu Region, held meetings with prefectural and city officials with a view to establishing a model insect and rodent control program in Saga City.

General Sanitation:

The nation-wide general cleaning program was carried out throughout the prefecture from 14 to 24 May. Ditches, streams, public buildings and parks were effectively cleaned.

Sanitation in and around the water plants is satisfactory, but chlorination levels were not adequately maintained. Corrective action has been taken by this section.

PUBLIC HEALTH SECTION

Dr. K. WAKAKI (J.N.)

Lt Col J. J. Roth (N.Q.)
Acting PHO

ANNEX B - 1:

1. Administration:

The long delayed construction of the new Saga Health Center will begin soon and is expected to be completed in July. This health center will be the next model health center in the prefecture.

The prefectural health officials and this section participated in the training of instructors in the Adult Education program.

Saga National TB Sanatorium has started on the establishment of a model ward within the hospital. The importance of good bed-side nursing and the smooth operation of a ward were stressed by this section.

Tne present interpretation of the Medical Practice Law by the Prefectural Health Department is hampering the public health program due to the misunderstanding that the health center clinics cannot be publicized. This is now in the process of clarification

The Nine Point Economic Rehabilitation Program is causing some unrest among the health officials with regard to the future of the Health Dept. Capt. Wallace, PH officer, Kyushu Region, discussed this matter with prefectural health officials.

Representatives have been sent up to Tokyo to attend refresher courses in medicine, pharmacy, veterinary medicine, nursing and sanitation.

Restricted

2. Veterinary affairs:

Preventive vaccination for equine encephalitis has been started. Some 3,600 horses are expected to be immunized. Plans are also made for vaccination against swine erysipelas. No vaccines have been received yet for rabies vaccination.

A follow up check on the Imari slaughter house showed a 100% improvement in the establishment.

3. Nursing Affairs:

9 representatives from this prefecture attended a three month clinical nursing course in Fukuoka and Oita prefecture.

4. Pharmaceutical Affairs:

The prefectural pharmaceutical section is carrying out an investigation on the requirements for the more important medical and drug supplies in this prefecture as specified by the Welfare Ministry. 30 hospitals have been selected for the investigation and the report will be submitted to the Welfare Ministry next month.

5. Preventive Medicine:

Communicable Diseases:

An epidemic control exercise was carried out throughout the prefecture with the health centers as centers of operation. All governmental health organizations participated in the exercise.

Checks on illegal entrants are being enforced for epidemic prevention.

The epidemic of diphtheria at Ureshino has apparently subsided as no further reports are forthcoming.

Immunizations:

As re-assayed vaccines are obtained, the prefecture is pursuing typhus, typhoid and paratyphoid immunizations, starting with areas which are regarded as potentially dangerous e.g. coal mines.

TB Control:

600 vials of imported streptomycin is expected to be made available to this prefecture. A committee for the distribution of

Restricted

this drug for the treatment of TB is to be formed and the results obtained from the use of the drug will be reported. The actual quantity allocated to this prefecture is yet not official.

VD Control:

VD reporting is not being carried out satisfactorily and non-availability of drugs to the public is hampering the program. Prefectural officials were instructed to enforce the laws pertaining to the reporting of diseases and the sale of drugs.

6. Nutritional Affairs:

Preparations have been completed for the second nutritional survey which will begin on 1 May.

7. Sanitary Engineering:

Insect and Rodent Control:

The insect and rodent control procedures for this year have been changed and Mr. Alexander, Sanitary Engineer, Kyushu Region, held a meeting with prefectural insect and rodent control officials to discuss the new program.

General Sanitation:

The seasonal cleaning program was started on 1 April and house to house inspections were carried out by sanitary inspectors

Restricted

PUBLIC HEALTH ACTIVITIES

(Capt. William H. Earl)

ANNEX B - 1:

1. Administration:

When fire destroyed the Prefectural Office building three sections of the Prefectural Health Department were destroyed. The Pharmaceutical Affairs Section and the Laboratory being housed in separate buildings were not affected. The destroyed sections have temporary offices established and are in the process of assembling the necessary records and documents which were destroyed. Health Centers are being asked and urged to carry the brunt of the health work until such time as the Health Department can again operate satisfactorily.

During the week of February 14-19 the Health Department and Health Centers carried out a Health Center propaganda program. The mission, function, and facilities of health centers were publicized via newspaper, radio, lecture, handbill, and paper shows. Free physical examination stations were set up in busy public areas to help further the public's interest.

Representatives were sent to Tokyo for the purpose of attending the TB Control Officer course, the Medical Social Service course, the nutrition course, and the Public Health Nurse Instructors course.

All National Hospitals were inspected this month. The most marked deficiencies noted were in general sanitation and lack of nursing care. Sanitation deficiencies were usually minor and due to neglect. Appointment of one responsible sanitarian at each hospital was recommended. Institution of nursing principles is progressing but it is a slow process. The greatest advances are being made in model wards, so the establishment of these wards is being encouraged.

Investigation of building and construction laws has revealed no or very few provisions concerning sanitary facilities. The Health Department, having no legal authority, is thus hampered

Restricted

in their desire to have sanitary standards met in new construction.

2. Veterinary Affairs:

Concerning January's report on establishment of low degree pasteurization plants in Saga and Karatsu City the reasons for the recommendation are complicated but are within keeping of all existing directives.

The Imari-machi Mayor and Health Section at the request of the Prefectural Health Department is taking measures to correct the unsanitary condition of the city slaughter house (mentioned in January report).

Inspection by the Food Sanitation Section of retail shops selling artificial sugars and ferment products revealed 87 of these products on sale failed to meet the minimum standards. Appropriate action will be taken.

3. Nursing Affairs:

Seven private gynecologists along with Health Center officials and the Prefectural Nursing Affairs Division conducted a lecture meeting for midwives throughout the prefecture. Explanation of the Medical Treatment Act plus infant and pre and postpartum care were covered.

The Model Health Center held a lecture course for all health nurses at which the CIE film Home Visiting of TB Patients was shown.

4. Pharmaceutical Affairs:

The prefectural inspectors discovered imitation Ephedrin tablets on sale at a Karatsu city drug store. Analysis showed them to consist of starch with no Ephedrin. Appropriate action is being taken.

5. <u>Preventive Medicine</u>:

Communicable diseases -

Measles occurred in epidemic proportion in primary school children at Kubota-mura and Saga City. Quarantine with discontinuance of the classes exposed has curbed the outbreak. The Health Department maintained good control measures.

A small diphtheria epidemic is at this writing occurring at Ureshino-machi. Quarantine procedures are in effect,

antitoxin is on its way, and culture examination for possible carriers is being conducted.

Immunizations -

Meetings and demonstrations have been held at all Health Centers to explain accepted immunization techniques. Health Center personnel, school physicians, and private physicians were in attendance.

TB Control -

National Hospitals have completed surveys concerning the proposed increase of TB beds. An increase of some 350 beds can be accomplished in Government Operated Institutions in this prefecture at minimal expense.

VD Control -

Courses for case tracers were held in an attempt to better methods and activities in this aspect of the work.

6. Inspect and Rodent Control:

Intensive training courses have been started for the team members in preparation for the coming insect season. This is taken as an encouraging sign. The existing program is progressing without change.

7. Miscellaneous:

Mr. E. A. Turner and Dr. C. M. Wheeler, SCAP Public Health & Welfare Section visited the team during this report period for conferences with the Health Department officials concerning Insect and Rodent Control, Typhus Control, and Health Education.

Monthly Military Government Activities Report
for Period 1 - 31 January 1949

PUBLIC HEALTH ACTIVITIES

(Capt. William H. Earl)

ANNEX B - 1:

1. Administration:

The official ceremony opening the completed Model Health Center at Karatsu was held on 27 January. The success of the Health Center was greatly enhanced by the presence and inspirational speeches of Col. Mollahan of GHQ, Miss Johnson of Eighth Army, Capt. Harrower and Miss Baca of Kyushu Region. The ceremony included a two-day open house for the general public. Free examinations, X-rays, and blood tests were offered.

Bids for the construction of the new Saga Health Center will be made early next month. Construction will take longer than was originally expected as a piling foundation will be necessary.

Investigation of three so-called Red Cross Clinics was carried out this month by prefectural officials and employees of this section. In general the results were as follows:

a. The clinics were set up for the purpose of making medical facilities available to isolated areas (mountainous areas, islands, and etc).

b. They have little or no connection with the Red Cross.

c. Each clinic is under the supervision of a licenced physician who does not live in the area. His supervision consists of an occasional visit.

d. The clinic is operated by a so-called assistant referred to as daishin or joshu. He has no formal medical training. He diagnoses, treats, and dispenses. The legal basis for his actions is as a rule maintained by using the name stamp of the supervising physician.

e. This condition was first referred to in November 1948.

Indications are that this practice exists throughout Japan.

This month seven officials from various sections of the Prefectural Health Department and Health Centers were sent to Tokyo for refresher courses.

2. Veterinary Affairs:

The Prefectural Health Department has recommended that milk plants constructed in the future in Karatsu and Saga City shall use low degree pasteurization methods. Why these two areas were singled out is not clear. Investigation will be carried out

Investigation of the Imari Slaughter House revealed an almost complete breakdown of sanitary precautions and facilities. Instructions regarding procedures in such cases were given to the accompanying health center inspector and also to the prefectural officials. This was an unusual occurrence as progress in meat sanitation has been quite favorable as a rule.

3. Nursing Affairs:

The Prefectural Employment Security Section held two meetings encouraging dispatch nurses to register with the Employment Offices. Publicity was also carried out in local district offices. A total of 32 nurses has registered to date.

4. Pharmaceutical Affairs:

Plans are being made and necessary props being secured for a prefecturally sponsored pharmaceutical products exhibit to be held in March. The purpose is to acquaint the general public with new advances in pharmacy and to point out ethical products and advertising methods.

5. Preventive Medicine:

Immunization -

Status of all immunizations is the same as last month with the exception of typhus. 200 typhus immunizations were giver to residents in an area where a suspect typhus case occurred. Approved material was used.

TB Control -

Case finding is being encouraged, and the general program is being carried out in spite of the restriction on use of BCG.

VD Control -

Study of weekly case reports brought to light the existence of apparent laxity in reporting from certain areas. The plan for correction of this condition is as follows:

a. Remind once again all physicians of the provisions of the VD Control Law with emphasis on the penal provisions.

b. Make as convenient as possible, for practicing physicians, all diagnostic procedures necessary.

6. Insect and Rodent Control:

Rodent poisoning programs, which constitute the main effort at present, are fairly successful.

Insect control has been extended so that families of louse or flea-infested individuals are examined and treated accordingly. This was not done previously, so reinfestations were common.

7. General Sanitation:

General cleaning was carried out in Karatsu and Saga Cities. Saga City has purchased a truck to aid in collecting garbage.

In regard to water sanitation residual chlorine testing sets were purchased. These sets are simple in performance and more accurate than the old method used. They have been placed in all plants which chlorinate.

APO 929

WHE

5 January 1949

Monthly Military Government Activities Report
for Period 1 - 31 December 1948

PUBLIC HEALTH ACTIVITIES

(Capt., William H. Earl)

ANNEX B - 1:

1. Administration:

The Model Health Center building has been completed. An opening ceremony for this occasion will be held 27 January 1949.

The Welfare Ministry has given approval for the establishment of two new health centers in Saga Prefecture. These will be located at Takeo-machi and Ogi-machi.

The Model Health Center has added a doctor to its staff, bringing the total number to 4.

The governor on the recommendation of the Prefectural Health Department has given approval for a 1,000 yen monthly field allowance to be paid doctors doing health center work. This should help to attract applicants for the many vacancies that exist in the Health Centers.

Ureshino National Hospital Nursing School was to have been a Class A School but has been omitted from the official list. This leaves Saga Prefecture with no Class A Schools. This will create a personnel problem in that nurses leaving this Prefecture for training, as a rule, seldom return.

The investigation of medical practice in the Red Cross Clinics is still being carried out.

2. Veterinary Affairs:

A conference was held by this section and the Prefectural Veterinary Section with fish and shell-fish dealers. An attempt was made to point out the dangers of improper handling of these items. Also the responsibility these dealers should have in regard to the health of the consumers was emphasized.

Restricted

Restricted

3. Nursing Affairs:

The Saga National Hospital Director in his attempts to set up a Model Ward found the nurses inadequately trained in the nursing procedures necessary to this end. He has therefore set up a training course to correct this deficiency. Nurses that have attended refresher courses will be used as instructors.

4. Pharmaceutical Affairs:

With the increase in production the pressing difficulties of this section have largely disappeared.

5. Preventive Medicine:

All immunizations were ordered stopped as of 1 January. The status of immunizations at the present time is as follows:

Typhoid	completed in October 1948
Cholera	completed in December 1948
Smallpox	47.2%
Pertussis	13.1%
Diphtheria	11.9%
Typhus	0.83%
BCG	75.3%

TB Control -

Repatriate families are slowly moving out of the Class B wards of Ureshino National Hospital. This section is urging that these wards be used for TB patients when they are vacated.

Investigation of the effectiveness of BCG is underway at the Saga Health Center.

VD Control -

The utilization of the evening clinics at the Saga VD Clinic is steadily increasing.

Numerous conferences were held this month (December) in an attempt to find means for increasing the attendance at the VD clinics.

Courses concerning better diagnostic methods are now being prepared by the doctor who recently returned from Public Health Institute in Tokyo.

Restricted

6. General Sanitation:

Inspecting teams have been touring the towns of Karatsu and Saga checking on environment sanitation.

Tosu-machi was inspected by this section and the Mayor was urged to set up a permanent sanitation program.

Insect and Rodent Control -

The number of rodents exterminated this month was approximately 3,000 less than last month.

Children in 158 schools were examined for lice.

7. Narcotic Control:

A theft occurred at Iwaya Coal Mine. The storage safe was protected by 3 locks all of which were broken.
