REGISTRAR GENERAL

Foreword

I take pleasure in presenting the 98th Vital Statistics Report compiled by the Office of the Registrar General. This report is prepared in two parts.

Part I indicates the trend over the past years in the general state of health of the people of Ontario. Such general trends emphasize certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1967.

In conclusion, may I state that, while this report is primarily of interest to certain professions and agencies, it will give other interested persons an insight into the vital statistics concerning births, marriages and deaths in the Province of Ontario.

*Previous to 1962 stillbirths of 28 weeks' gestation and over were registered. As of January 1962 stillbirths of 20 weeks and over were registered. For the years 1962-1965 figures for 28 weeks and over may be obtained from Table 22 in the reports for those years and for 1966 and 1967 from Table 12.

Infant Mortality

Shown in Table I are the numbers of infant deaths by age at death over the ten-year period 1958 to 1967. The steadily decreasing neonatal and infant death rate and the stillbirth rate are shown in Chart 3.

(1) Per cent of total deaths.

(2) Rates per 100,000 population.

(3) The former method of coding tuberculosis deaths was amended effective January 1st, 1962, by the Dominion Bureau of Statistics in order to comply with the mortality classification under the International Classification of Diseases. This has resulted in a considerable increase in the number of deaths when compared with the method of coding deaths in previous years.
