THE

ECONOMIST,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette, and Railway Monitor :

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

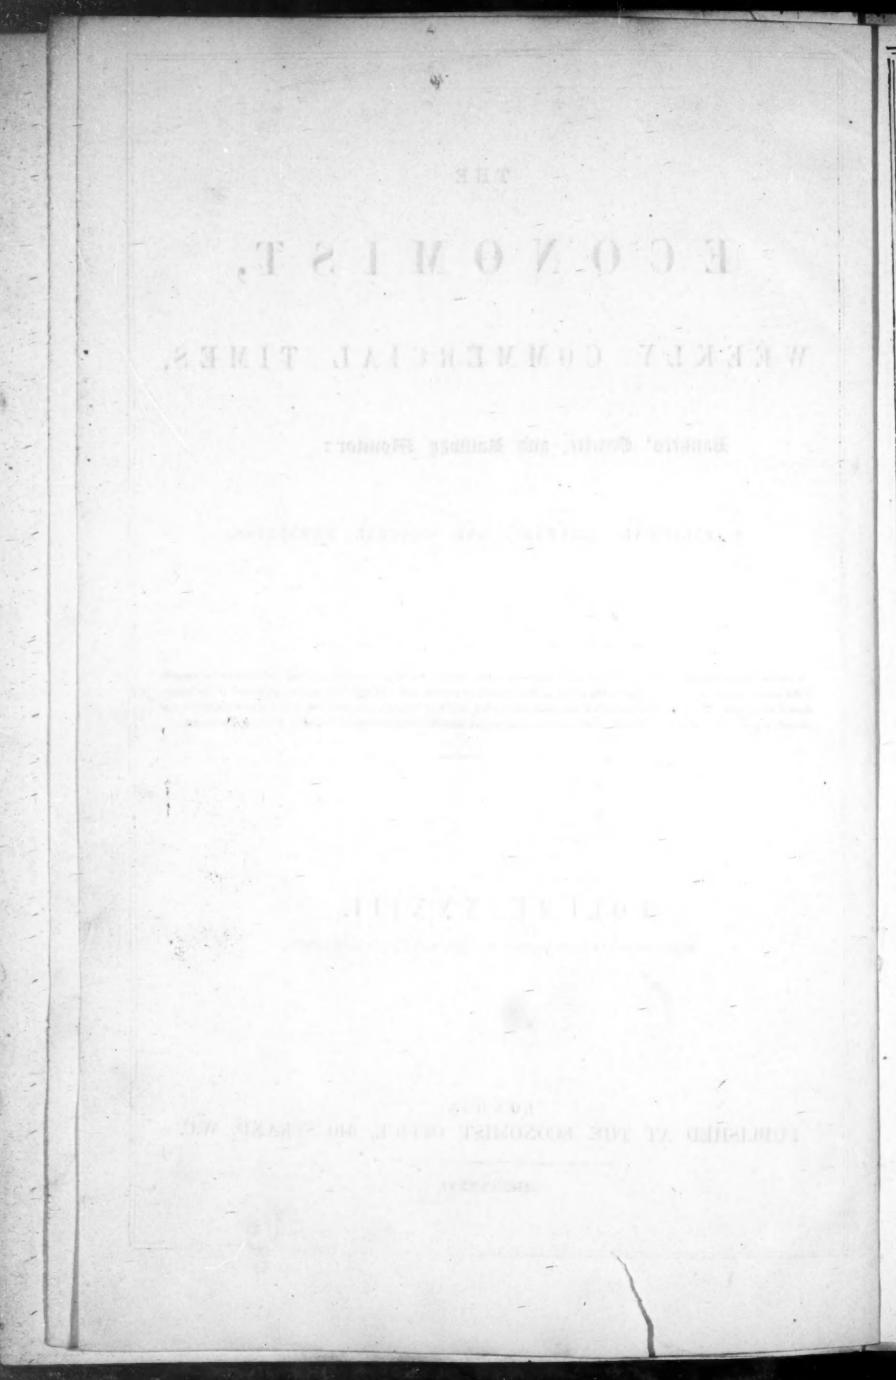

"If we make ourselves too httle for the sphere of our duty—if, on the contrary, we do not stretch and expand our minds to the compass of the object—be well assured that everything about us will dwindle by degrees, until at length our concerns are shrunk to the dimensions of our minds. It is not a predilection to mean, sordid, home-bred cares that will avent the consequences of a false estimation of our interest, or prevent the shameful dilapidation into which a great empire must fall by mean reparation upon mighty ruins."—BURKE.

VOLUME XXXIII.

BEING FROM JANUARY 2ND, 1875, TO DECEMBER 25TH, 1875, INCLUSIVE.

THE ECONOMIST.

action; he has known less than most politicians of what Lord Macaulay called "the grinding, the invidious, the "closely-watched slavery, which is marked by the name of "power."

We must consider what the work of the Premier is. The most authentic description (though by no means a complete one) was that given by Sir R. Peel in 1850 :--- " Take the case " of the Prime Minister. You must presume that he reads "every important despatch from every foreign Court. He "cannot consult with the Secretary of State for Foreign " Affairs, and exercise the influence which he ought to have " with respect to the conduct of foreign affairs, unless he be "master of everything of real importance passing in that department. It is the same with respect to other departments, India, for instarce ; how can the Prime Minister be " able to judge of the course of policy with regard to India " unless he be cognisant of all the current important corre-" spondence ? In the case of Ireland and the Home Depart-"ment, it is the same. Then the Prime Minister has the patronage of the Crown to exercise, which you say, and justly say, is of so much importance and of such value; he " has to make inquiries into the qualifications of the persons "who are candidates; he has to conduct the whole of the communications with the Sovereign; he has to write, pro-bably with his own hand, the letters in reply to all persons of station who address themselves to him ; he has to receive deputations on public business ; during the sitting of Parlia-60 "ment he is expected to attend six or seven hours a day, "while Parliament is sitting, for four or five days in the "week; at least, he is blamed if he is absent."

And though in some respects the work of a Prime Minister has perhaps been somewhat altered since then, probably now he would scarcely be expected to overlook-so much as Sir R. Peel thought necessary—such a department as India. But on the whole his work has rather increased than diminished. Sir R. Peel explained that it had increased between 1830 and 1850. He was asked by Cobden : "You " alluded to the increased labour to which the Ministers are " subject at the present time, as compared with the middle " and end of the last century, but do you not think that in " all classes of the community there is much more active and " continuous labour in all pursuits than there was at that time?" And he answers : "There probably is, but that activity " reacts, I think, upon the duties of the Minister; that " tendency to increased labour throughout all classes adds to "tendency to increased labour throughout all classes adds to "the public business; it would be important that the Com-"mittee should ascertain the progressive increase of business "in each department, caused by a combination of many "circumstances. Probably the penny post has had its "influence. There is a greater disposition to write to "Ministers; to send suggestions; and it is very useful that "there should be that free voluntary communication prop. all " there should be that free voluntary communication upon all " matters of public concern; but it greatly increases the " business of the public offices.

And this is a process which has gone on augmenting from 1850 till now, till it must make the miscellaneous work of a Prime Minister most teasing and vexing. And independently of that, and considering only the principal points, if we con-sider what it must be to lead the House of Commons; to consult with, and often control, colleagues; to be chair-man of the Cabinet; to compose the quarrels of the Cabinet; to write to the Queen in the careful, delicate way necessary in dealing with a superior ; to dispense the most critical patronage ; to form some kind of idea of the legislative plans proposed and contemplated-we shall wonder how any man can be equal to so much. And even this is scarcely all, for the Prime Minister is at the head of our business, and, like every head of a business, he ought to have mind in reserve. He must be able to take a fresh view of new contingencies, and keep an animated curiosity as to coming events. If he suffer himself to be involved in minutize, some great change in the world, some Franco-German war, may break out, like a thief in the night, and if he has no elastic thought and no spare energy, he may make the worst errors. A great Premier must add the vivacity of an idle man to the assiduity of a very laborious one.

We cannot but doubt how long Mr Disraeli's frame can stand such fatigues as these. The strongest man of business might well shrink from them; and he has never been a man of business, and is not now strong. There are, undoubtedly, those who say, "Oh, you need not mind, Dizzy takes things

very easily. He will pull along very well." But we do not believe that Mr Disraeli would neglect any matter which he considered of national importance. In his way he was a singularly conscientious leader of Opposition. No doubt there is much of Parliamentary life which he regards as a mere game, which he thinks may go anyhow without hurting the nation, and this part he manipulated as he thought best for his party and for himself. But on other parts of politics—on the larger issues of foreign policy especially—Mr Disraeli has for many years shown an amount of self-restraint and of conscientiousness which men professedly much more scrupulous might well envy. During the very many years in which he led the Opposition, it would be hard to find even a single instance in which he hurtfully hampered Government on a great inter-national question. And in many cases—particularly through-out the American civil war, and the other day on the Geneva arbitration-he not only did not harass the Government himself, when it would have been easy to do so, and when it would have been a party advantage, but also held back his followers, whose sympathies were eager and whose passions awakened. A statesman who has acted with so much conscience in the irresponsible regions of Opposition, is not likely to lose much of it in the more congenial region of office. We may be sure that there is much of the work of a Prime Minister which Mr Disraeli would never neglect, and to which he would apply the whole of his discriminating observation and delicate thinking. There is, no doubt, a sort of cant of indifference about him, but so there was about Lord Melbourne, who is now known to have been a most thinking, careful Minister, and whose brain was found after death to show the signs usually indicative of Labitual anxiety. So far from expecting Mr Disraeli to shield himself from the higher responsibilities by constant neglect, we cannot but fear that he impairs a finely-adjusted intellect and a feeble frame by too much application to them.

What will be the effect on the Government of any calamity to its head it would be very premature to discuss. On the one side it may be said that the main part of his work is done; that Mr Disraeli has "educated" his party; that the questions on which the moderate part of them differ from moderate Liberals are few and small; that there is no occasion and no room now for the adroit tactics which he used to practice while his party was in a minority; that now that they are in a majority the time is come for a more plain and straightforward policy, which others may be as well able as he would be to practise, and more willing. But, on the other hand, without Mr Disraeli this Ministry, it has been justly said, would be "Quarter Sessions all over." All the other leaders of the Ministry (Lord Cairns excepted) belong exactly to the class from whom chairmen of Quarter Sessions are taken, and many of them have been such. But this class, though a most respectable, is by no means the quickest, the keenest, or the most experienced in business to be found in English society; and it is a serious thing to commit the fate of the country to a Cabinet composed of them and them only. There is known, too, to be a part of the Cabinet not indis-posed to return to some old Tory maxims which the country would not endure for a moment. The Conservative party have, too, been out of office so much for so many years that we really cannot say of its leaders whether they have the capacity and the courage required for great affairs. We may well wish for the health of Mr Disraeli, for when he goes we shall be governed by an "unknown quantity."

SPANISH COMPROMISES WITH CREDITORS.

THE Spanish bondholders have this week been called together —for the third time, if we remember rightly, within a period of about two years—to consider a compromise of their claims offered them by the Spanish Government. These successive compromises have also been adopted each time with practical unanimity, although the advantage promised to the creditor has been diminished upon each occasion, as compared with the previous offer, and the first two contracts, immediately after their execution, were flagrantly broken by the Spanish Government—the second with circumstances of peculiar treachery. It has yet to be shown also that the third will not meet with a similar fate. The bearings of so remarkable a history of compromise certainly appear to us worth some attention. They illustrate, we think, the nature of the Governments which the English investor is frequently asked to lend to, and the kind of treatment he may expect to receive

[Jan. 2, 1875.

THE ECONOMIST.

when the game of borrowing to pay interest on old loans can no longer be continued. They also show to the more prudent the natural weakness of foreign bondholders as a class, and of even the best instruments they employ, and the facility thus offered to repudiating foreign Governments, who know quite well that they may get rid of the greater part of their obligations without suffering the penalties which the more careful and intelligent of their creditors would be disposed to inflict upon them.

The main points of the successive compromises, and what became of them, can be very briefly described. The *first* was a proposition made in October, 1872, that the creditors should consent to a reduction, for a term of five years, of the halfyearly interest payable to them. Instead of the full sum in cash, it was proposed that they should take two-thirds in cash, and the remainder in new 3 per cent. stock, at the price of 50. As the market price of the Spanish 3 per cents. was then about 30, the creditors were, in fact, asked to sacrifice about a sixth of their annual interest, and another sixth was to be paid them in a way which was likely to cause a proportionate reduction of the value of their capital. But the creditors, with at least the passive recommendation of the Council of Foreign Bondholders, who were atraid of pushing the Spanish Minister too hard, accepted the terms almost cheerfully. They submitted without protest to be taxed heavily for five years by their debtor. But in the event only one coupon, that for January, 1873, was paid under this " arrangement." The coupon for the following July was left unpaid, and ever since the Spanish Government has been in default.

The second compromise was brought before the bondholders in March of the present year, when two coupons were over-due, and it related only to the provision for these coupons. The Spanish Government, either of its own accord or having been incited thereto, offered to place in trust for the benefit of the creditors certain obligations of the Rio Tinto Mining Company, falling due by annual instalments extending over nine years, and also a number of pagarés, likewise falling due by annual instalments, which the Government had received from purchasers of the national lands. These obligations and pagarés, it was calculated, would suffice to cover a new issue of redeemable 5 per cent. stock equal in nominal amount to the two overdue coupons, so that the creditore, it was represented, who could afford to wait would be paid in full. But the subsequent coupons were acknowledged to be unprovided for, and it was clear that the 5 per cent. bonds would realise a most uncertain sum, the values of distant obligations of a mining company and of pagarés given for lands in Spain being necessarily most uncertain. Actually, when it was believed that the arrangement would be carried out, the two overdue coupons were only saleable for about 10s per \pounds or rather less, showing the market opinion to be that the creditors were offered only the equivalent of 50 per cent. of their past due claims. But the acceptance of this compro-mise was almost as eager as that of the first had been, and it had this time the express sanction of the Council of Foreign Bondholders, who had negotiated with the Spanish Government, and were to control the trust and the issue of the new 5 per cents. Unfortunately the Spanish Government not only failed, as in the first instance, to keep its promise, but did so, as we have stated, with circumstances of peculiar treachery. A new Finance Minister coming into power ordered the obligations and *pagarés*, which had actually been deposited in the Bank of England as a step in the arrangements for the trust, to be removed into his own possession at Madrid, the Council of Foreign Bondholders just failing to prevent him by an injunction in Chancery. The whole arrangement was thus upset, and immediately afterwards the Minister had the impudence to announce new and still worse terms for the creditors, without the form of consulting them being this time gone through. Thus the second compromise came to an end by the most direct breach of good faith which

any government could commit. The *third* compromise, which has just been effected, and the fate of which has still to be seen, is a modification for the worse of compromise No. 2. The machinery of a trust is still to be maintained, but by the lapse of time three instead of merely two coupons have become overdue (had the meeting been deferred a week, the overdue coupons would have become four), and at the same time the solid sccurity which the Spanish Government has to offer has diminished. The indebtedness has grown, and now the Minister has only got the

Rio Tinto obligations to pledge, the land pagarés having probably been long ago mortgaged or sold. The proposal therefore is-(1) that the obligations should be put in trust as before, the amount thus to be realised to the bondholder being estimated at one-third nominally, but about one-fourth according to estimated selling price, of his three overdue coupons ; and (2) that for the remaining two-thirds of the nominal amount of the coupons the creditors should receive at the rate of 2501 per 100l in new 3 per cent. stock, which would probably realise about 25 per cent. more of the whole amount due. In other words, the new proposal is to give the creditor about one-fourth of what is overdue to him in money or its equivalent, and another fourth in new paper, which will probably be no real equivalent, as the creation, according to a fair reckoning, will pro tanto depreciate the selling price of what the creditor now holds. Spain being insolvent, the multiplication of its paper can do its creditors in the aggregate no good : the most they can hope for is a dividend, and this will not be changed in amount by the quantity of paper afloat, though the quantity of paper will no doubt affect the rate per pound. The new compromise is thus, in fact, no better than a sacrifice by the creditors of the whole of their past due coupons for a payment of five shillings in the pound. But this compromise, too-notwithstanding the failure by the Spanish Government in regard to No. 1, and its still more flagrant failure in regard to No. 2-has been accepted with alacrity by the creditors of Spain, again with the express sanction of the Council of Foreign Bondholders.

3

Could any history ke more instructive ? From the first it is evident the Spanish Government perceived with whom it had to deal, and took advantage of that knowledge to "arrange whatever suited its convenience. Hence its first proposal to obtain the consent of the creditors to their being taxed onesixth of their interest for five years, without receiving any equivalent; its second proposal to pay one-half only of two overdue coupons, no provision for those to come due being made; and finally, its third proposal to pay about a fourth only of three overdue coupons, there being again no question of provision for the future. The descent in the scale has, of course, been in accordance with the exigencies of the Goverment. When the first proposal was made the civil war had not broken out, and at the time of the second all resources immediately available had not been so completely exhausted as they are now. But the ques-tion is not whether Spain has offered from time to time to do as much as she could, but whether the creditors are to cancel their titles in full for only part payment, leaving them nothing to show for a period of future settlement, when a quiet and stable Government will permit the resources of the country to be developed, if such a period should ever come. The Spanish Government assumes with great confidence, and as experience has shown with justice, that the creditors will surrender their "titles" for a fraction of what is nominally due, and it has not yet hit upon a fraction so small as to provoke a refusal. There could be no clearer revelation of the weakness of the mass of foreign bondholders. Their disposition always is to be passive, to take what is offered, and on the terms offered, if the dividend is an appreciable one at all, and to submit to the most ignominious treatment from their defaulting debtor. Too many of them, unfortunately, can hardly help themselves. Belonging to a class which ought not to have meddled with doubtful securities, and having been tempted by the desire for income, any offer of something in the shape of income is irresistible to them. Thus a compromise which is recommended actively or passively by any species of authority, is readily accepted by the mass of bondholders; and the few who might be justified in taking the risk of lending to a country like Spain, and who could afford to wait and deal vigorously with their debtor, are overruled. The actual risks of loans to the dangerous sort of foreign States are increased by the interference of a class of lenders whose ignorance permits the borrower in the beginning to enjoy too good a credit, and afterwards encourages him to treat his obligations lightly.

Such is the *first* lesson from the history we have narrated; but the *second* lesson—the little reliance to be placed on the special agencies created to protect the bondholders' interests, and the danger that these agencies may be converted, unless great care is taken, into a new cause of loss—is also a most important one. With the greatest respect for the Council of Foreign Bondholders, which has undoubtedly on more than one

THE ECONOMIST.

eccasion done good service to its constituents, we think we may say that in the present case its efforts to assist the bondholders have not resulted in any particular success. Their difficulties, it may be granted, were enormous. The perversity and poverty of Spain, and the weakness of many of their own constituents, were fatal obstacles in their path. But the result is so small—if it can yet be said that there is any result is so sinal—If it can yet be said that there is any result, so long as the Rio Tinto obligations are not in the custody of the new trust—that it is difficult to see how the creditors could have been worse off than they are without the council. They have not been paid for two years, and the final offer in a cumbrous way of a fourth of what is now over-due to them in exchange for a full discharge is not the bind due to them in exchange for a full discharge is not the kind of compromise of which a negotiator on their behalf can boast. And so far as a body like the Council of Foreign Bondholders does nothing really good, we fear its existence must be reckoned prejudicial. Its tendency, like all other active bodies, is to do business, to put itself in evidence, to obtain any passable result rather than none; and we fear this tendency has been utilised by the Spanish Government in its own interest. So far as we can judge, at least, the zeal of the Council in arranging the last two compromises, instead of holding off or insisting on much more, appears to have been more pronounced than it ought to be, if the interests of its clients are to be vigilantly guarded. Certainly if the Spanish Government had the least suspicion that the Council was anxious to do something, they could not but take advantage of that anxiety. The conclusion is that if the Council or any similar body is to be as serviceable in the future as it has formerly been, the bondholders in turn must supervise its action carefully, and must rather be distrustful than otherwise of the compromises recommended as probably sacrificing too much to the defaulting Government. It is impossible to say that any greater success would have been possible in the present case, but a series of such successes would soon ruin the foreign bondholder.

AN "ANGLO-SAXON ALLIANCE."

ME FORSTER is not a politician in whom a superficial obserwation would be likely to detect the influence of sentimentalism : the rough and studiously unpolished vigour of his style, the downright "practicality" of his opinions, even his tactical mastery of the opinions and passions of men which in recent years has obtained him a leading place among our statesmen, seems to exclude him altogether from the imagina-tive and emotional part of politics. But this is an error ; and Mr Forster in spite, of his shrewd Yorkshire ways, and his directness of thought and speech, has some weak places in his intellectual armour at which the grandiose, if not the poetic, finds now and again an unlicensed entrance. In some respects it is an advantage to a statesman to have his imagination easily moved by splendid conceptions, and to possess the rare gift of communicating the glow and force of those internal motions to the popular mind. But the more power of this sort any politician has got the heavier becomes his responsibility, and the greater is the need for applying rigorous tests to the magnificent vagueness of his visions. Thus, all the more because Mr Forster is now one of the leading men of the Liberal party, a possible inheritor of Mr Gladstone's suthority, it is expedient to examine, with some severity, the project of an "Anglo-Saxon Alliance" which he put forward as a possibility of the immediate future, in language (for him) of unusually high-coloured rhetoric, at his reception on the 14th ult. by the Union League Club of New York. It is probable that American politicians are much too busy with matters of local importance, with re-arranging all the machinery "inside "politics" to suit the altered balance of political forces, to extend their vision as far as the possibilities of which Mr Forster speaks ; and it is quite true that many writers and orators, both in England and America, before Mr Forster have indulged in "tall talk " about an Anglo-Saxon Alliance. But Mr Forster is, perhaps, the first responsible statesman, certainly the first within the shadow of such great future responsibilities, who has committed himself to approval of this project. The words of such a man sink down deep into they iffe t ultimately even people like the "log rollers" of the lobties at Washington, and they set in motion trains of ideas the full connection of which can hardly be encompassed by the contemporary intellect.

Mr Forster says, and most sincerely we are sure, that it was

not only, nor chiefly, because he thought the preservation of the Union and the abolition of Slavery desirable for the general good of humanity that he took the side of the Federal Government in the Secession controversy; but because he falt that the attainment of these ends was indispensable to the establishment of peace and good-will between the two great Nationalities of the Anglo-Saxon race. And he goes much further than a desire to establish friendly feelings : he advocates alliance, co-operation in political activity—the foundation, in point of fact, of a powerful League of all the English-speaking communities. It is not difficult to enumerate the points of likeness between the capacities and the needs of America and England ; it is simple enough to assume that those capacities will be most freely developed and those needs most fully satisfied by the unity of action. Mr Forster, in a strain of unwonted eloquence, drew some such picture : "This Union " League Club, I am told, was formed, in dark hours of danger, " to bind together loyal Americans in support of your glorious " union against the slave power. May it be the type and " forerunner of another union league, of a close alliance " between the United States and England, and all English-" speaking communities, of friendship between our Govern-" ments, so that we together may influence the world by " proving how great are the blessings of popular government, " when individual self-control prevails among the people ; for " depend upon it, neither you nor we will be able to promote " liberty abroad or protect the liberties of others, or even pre-" serve our own liberties, if either of us allow this individual " self-control to fail from among us." There is sound advice in this, as well as rhetorical hopefulness ; but is it not possible that the very ends which Mr Forster has in view would in all probability be defeated by the means he proposes to adopt ?

i

Why should we expect united political action to be more easily introduced and to work greater benefit in the case of two kindred nations like America and England than in the case of two communities not united by any ties of race or language ! It is begging the question to assume that the ties of common race and language make nations better inclined to enter into active political alliance or better suited for har-monious activity. We are disposed to doubt the value of such bonds of alliance, especially in the case of the Americans and the English. It is true that a large proportion of the American people are of English descent, and that the English element in the population of the United States is, by quality if not by quantity, the dominant element. But apart from the fact that the original stream of population has now been so largely diluted with other currents of blood-not only by immense Irish and German immigrations, but by the absorp-tions of Dutch, French, and Scandinavian settlements—we have to admit that the "Anglo-Saxon" character, as it has been nationally developed in the United States, is already divergent from the original type in a remarkable degree. And there is every reason to believe that as time goes on this di-vergence, so far from being at all lessened, will steadily in-crease; for the cause of it, the difference of the whole "environment" of the American—the climate, the soil, the natural aspect, and the social conditions of his country—from the environment of the Englishman is persistent, and its action is cumulative in its energy. Again, the single point in which the original identity of origin between the English and American nonulation remains any area to form the form the form population remains apparent is far from being, in our judg-A common language, as far as our ment, a point of union. present experience goes, is hardly ever a bond of friendship, but it is very often, and very naturally, a source of irritation to both the communities that speak it. Every trivial and disparaging remark passed upon one nation by another in a language common to both rubs the sores of wounded vanity. This is particularly conspicuous in the case of the Americans, who feel keenly all that is said about them in England. If by a miracle the people of the United States could be transformed into a German-speaking population, it is probable that our relations with them would be improved, not impaired.

But these general objections to such an alliance as Mr Forster proposes are supplemented by special ones of even greater weight. There is not, and there cannot be, any real identity of interests between communities separated so widely from one another as England and the younger nations which owe their origin to her. This is clearly seen in the determination with which not only the United States and the principal of our self-governing colonies adhere to protection in spite of the almost propagandist manner in which the mother country

THE ECONOMIST.

has adopted Free-trade. There is no identity either of interest or of opinion upon this very important point of principle. Indeed, the divergency from identity of opinion takes in almost every department of thought and action, and we should be sorry to think that it would be materially lessened by any projects of alliance or confederation such as those advocated by Mr Forster. Nothing more painful can be imagined than the reduction of the world, or all the most progressive parts of it, to one dead level of "Anglo-Saxon" commonplaceness. In the interests of the human race we ought to wish for diversity of opinion among the Englishspeaking races, and this must tend to keep those races apart in action, if it does not bring them into conflict. For these reasons we doubt if such a League as Mr Forster looks forward to is at all a practicable object; but we are sure that if it be it is a most perilons one to aim at. An "Anglo-Saxon "League" would establish, perhaps not openly, but certainly in fact, a cosmopolitan tyranny. No race is fit to be trusted with irresponsible and uncontrolled power over other and weaker races; least of all a race like our own, which, in spite of all its splendid qualities, is in its relation to types of humanity which differ from it, coarse, domineering, and often cruel.

THE COURSE OF PRICES OF COMMODITIES IN 1874. WE subjoin, in usual form, for December, a table showing the changes in the prices of the leading wholesale commodities which we have selected for similar treatment during the year. As in the previous month of November, there is a singularly little change to note. On the whole there is a firm tendency, except mainly in cotton, iron, and copper—the previous low price to which the chief commodities had fallen still leaving room apparently for a moderate reaction. In cotton the decline is a renewed one, and makes the price lower than it has been for a long period; but in iron and copper it is more a tendency to return to a low level of prices which had been reached early in the year, and from which an upward reaction had already taken place, and these two exceptions, therefore, are not inconsistent with the general tendency to improvement or to comparative firmness in price which the leading wholesale commodities have for some time been showing. The low level of price established has evidently been sufficient to place stocks generally in stronger hands, and to induce more ready purchases for consumption, and thus there is almost a pause in those large fluctuations which were so important in the earlier part of the year.

While the course of prices thus presents hardly any change to comment on, in addition to what we noted last month, it may be useful now to take a review of the whole year, abridging for that purpose the monthly tables which we have published from time to time. One of the tables which we subjoin contains such an abridgement, the prices at the end of each month being taken for comparison; and a second one compares the prices at the end of December, 1873, with those at the end of last year. And such a review, we think, brings out very clearly the points on which we have lately dwelt. (1) The great reduction in most articles which has occurred within the twelvemonth; and (2) the comparatively stationary state of prices at the low level which has now existed for several months in most articles, and in some cases for more than half the year. These two circumstances combined, show, we think, an alteration pro tanto for the better in the general conditions of trade, and the exact facts and their bearing may be worth some explanation.

As to the *first* point, the second table exhibits on what a different level prices are at the close of 1874 compared with a similar period of 1873. Wheat has fallen from 61s 8d to 44s 8d per qr, or 30 per cent.; cotton, from 8d to $7\frac{6}{10}$ d per lb, or 9 per cent.; wool, from 19/ 15s to 18/ 5s per pack, or 5 per cent.; saltpetre, from 23s 9d to 22s 3d, or 6 per cent.; Straits tin, from 115/ 10s per ton to 94/, or 20 per cent.; and coal, from 31s 6d to 30s per ton, or about 5 per cent.; the change in this last case, which is in London house coal, being also known to be much less than the fall in coal generally. Copper almost alone among the important raw materials shows no reduction, and on balance there is little real alteration in meat or in articles of colonial produce included in our list, a slight rise in the important article of sugar setting off a fall in coffee and pepper. Thus, with hardly an exception, the scale of prices of the important articles included

in our list is lower—in most cases considerably lower—at the end of 1874 than at the end of the previous year. The most important raw materials of manufacture are all cheaper, and wheat, still the staple article of food for the masses of Europe and America, stands at only two-thirds of its last winter's price.

5

As to the second point, the stationariness or tendency to firmness now shown for some time by most prices, the facts are equally clear. What the first table shows is that, in the case of the majority of articles, a lower price than the present one has been touched during the year at some point, and that after various fluctuations, according to the more or less speculative character of the article, comparative stability is shown at the prices now current. Thus, Scotch pig iron, which left off at 109s in December, 1873, had reached its lowest as far back as April, when the price recorded was as low as 71s 3d, and the closing price of 80s is about the minimum which has since been touched after two intermediate periods of reaction to a higher price. Straits tin, again, which opened at 1171, had fallen to 93/ in April, and after a moderate reaction upwards fell to 921 5s in August, since which there has been an advance to the present closing price of 94%. In copper also, where there is little change for the year, it is found that there has been an intermediate fall of price, the lowest point being touched last August; and the explanation of no change for the year apparently is that copper has been going through the same process as the other articles, but happened to have lost a considerable part of its high price before the end of December, 1873. In wool, the lowest price was touched in June and July, since which there has been a steady recovery; in saltpetre in June; in wheat and flour in October, though the Gazette average does not show it till November ; in sugar in July; and so of other articles. There has been a longer or shorter period in each case during which the price has tended to rally from the low point which had been touched. The only exception among the more important articles is cotton, which remained comparatively stationary all through the year from March to August-the range of price, as indicated by the quotations at the end of the month, being between $8\frac{1}{2}d$ and $8\frac{3}{16}d$ —and then since August there has been a gradual decline from the latter price to the final quotation of $7\frac{1}{16}d$. Such a change, coming immediately after the new season's American cotton crop, shows the working of new causes affecting cotton, which may not yet be at an end. Otherwise, however, with only minor exceptions, the course of prices has been different, the quotations being now almost all above the lowest point touched last year, though not much above it, and that lowest point having been passed in most cases several months ago. The causes of the general fall at cases several months ago. the beginning of the year have evidently so spent themselves as to permit of a period of moderate rest and activity at the new level established, and the special cause of the fall in wheat which came later was also soon exhausted, the bottom being reached with comparative rapidity.

Such being the exact nature of the facts, we think little comment is needed to bring out the character of the improvement in the conditions of trade which they imply. They are confirmatory of each other. We ought to expect from so great a decline in the level of many prices which has occurred within the twelvemonth that a certain stimulus to business will be given. Raw materials are all cheaper to work with, less capital is required to carry on the same quantity of transactions; cheap wheat increases greatly the consuming power of large masses of people who usually spend up to the limit of their income. And the fact that large groups of commodities have for some time been stationary in price, or even tending to rise, appears to be a sign that such a stimulus is being felt. The excess of quantities offering, which was the cause of the fall of price, is being used up. No doubt this last change may also be due in part to the fact that production has been checked, which would diminish an excess of particular commodities offering quite as much as an increase of pur-chases. As we explained many months ago, temporary reactions in every trade during the course of a fall of prices, were likely to occur from this cause, without preventing the ultimate fall of prices which was due when the capacity of production was brought fully into play. But the steadiness of prices in many trades has now lasted for so many months as to indicate more probably that the price has been taken ad-vantage of to increase stocks as well as consumption, and in this way, rather than by a check to production, the excess

THE ECONOMIST.

weighing upon the market, and causing the fall of prices, has been used up. That this last explanation is correct is also confirmed incidentally by the returns of the quantities of our exports, which indicate little diminution, but rather an increase of the amount of transactions during the year.

Reviewing the prospect for the new year, it seems safe to point out as one of the results of the present condition of things that the alterations for the better we have described are likely on the whole to continue, and that the next great change in trade, though it may possibly be long delayed, will be towards increased activity. Just because of the magnitude of last year's fall of prices, and the low level established for almost all commodities, no such fall is again so likely. A variety of causes may produce minor fluctuations, and a special change may occur in a particular article like cotton, but a general may occur in a particular article like cotton, but a general rapid change like that of last year, which is so paralysing to trade while it lasts, seems hardly to be possible. The good harvest of last autumn is also a principal reason why the change in other prices, having now been a considerable one, should be arrested at rather a higher level than was perhaps reached in former seasons of depression. With a had hervest things might have been much worse, but With a bad harvest things might have been much worse, but the coincidence of the recent good harvest with the steadiness of general prices since maintained does not seem altogether accidental. The only new adverse cause now at work is rather dear money, and if this had come with a bad harvest we do not see what was to have prevented a farther general fall in prices; but unless the average rate for money should prove to be much higher during the year than there is yet perhaps any certain reason to expect it to be, the adverse effect of this influence can hardly be expected to go the length of causing a farther general fall of prices when the influences the other way are so strong.

I __PRICES of LEADING WHOLESALE COMMODITIES at the end of each

BUSINESS NOTES.

THE REVENUE.—The returns of the Revenue for the December quarter have been issued this week, and give rise to the usual discussion; but as regards the main branches of revenue, which are alone worth considering, it is now so much safer to follow the weekly returns that there is really nothing new to state. At the beginning of the quarter, as our readers are aware, and as we pointed out at the time (see ECONOMIST of Oct. 31), there was a sudden augmentation of revenue, which looked rather satisfactory after the previous decline, but more lately it has become evident that this augmentation was not continuing, and that there was still some leeway to make up. This will be very clear if we look at the increase or decrease of Customs, Excise, and Stamps since the 24th of October, which was the date to which the last account we noticed was brought down. Between the 24th of October and the end of the year the receipts of these branches were as follows, as compared with the corresponding period of 1873 :—

| AAVVA VA | | | | | |

| 13 1 | | ~ | | | |

Customs

Excise..... Stamps

This shows that except in Customs, where the falling off is still at a less rate than the estimate, the principal branches of Revenue have been either stationary since the 24th of October last, or have only been increasing as estimated ; that the increase in the first three weeks of October was therefore wholly exceptional; and that nothing has been done in the last two months to make up the loss before the end of September. Indeed, if we reckon that the above figures for the period between October 24 and the end of the year include one day more in 1874 than in 1873, and that an increase of receipt on that account ought to be allowed for, we should be inclined to say that the return shows rather a falling off than an increase, and there is at least a material shortcoming when compared with the estimate. Looking at the account another way, there is little doubt that the Revenue must augment, as it has not yet done, between this and the end of March if the Chancellor of the Exchequer's estimates are to be saved. Comparing the amounts of Customs, Excise, and Stamps actually received to date, and the proportion to be received before the end of the financial year in order to make good the estimate, with the actual receipt of the March quarter of 1873-4, we can see at once how great an increase upon last year is now necessary.

THE ECONOMIST.

responding quarter of last year will not, as in the quarter just past, be more than about 200,000*l*; but in Excise and Stamps, it will be observed, the amount still required to make up the estimate exceeds greatly the actual yield of the March quarter in 1874. In excise the amount thus in excess is 242,000*l*, and in stamps 422,0001, while the excise is also affected by the circumstance that the loss of the horse duty, amounting to 480,000*l*, falls on the quarter now begun, so that the amount received in the March quarter of 1874 cannot be reckoned for the purposes of the present comparison at more than 8,050,0001. amount really required, therefore, in next quarter in excess of the actual yield of the corresponding quarter of the past year, in order to make good the excise estimate, is about 700,000l; making altogether for excise and stamps a total of 1,122,000l yet to make up, which has to be set against a probable surplus of say 400,000l on the customs. Is it highly probable, after the experience of the last three quarters, that such an augmentation can be safely reckoned on in the last quarter of the financial year ? Surely it is not creditable that the question of the estimates being realised should remain so doubtful as late as this is in the financial year, and that too after the contingency most favourable to the Chancellor of the Exchequer -an extremely good harvest-has occurred. The fact that in such circumstances he just manages to pull through, supposing he does manage in the end, is in truth a condemnation of the budget estimates.

THE PRODUCTION OF GOLD IN AMERICA .- We gather from the report of the United States Director of the Mint for 1873-4, which we have just received, that the "deposits of "gold of domestic production" at the mints and assay offices of the country during the year in question amounted to 29,736,387 dols, or say 5,947,000?. Taking these deposits, as we have formerly done, as the best test of the domestic production (though the official estimate, on what grounds it is not stated, is rather higher), it would appear that the falling off in the rate of production, which used to be rather over 6,000,000% has not been so marked last year as in the years 1871-2 and 1872-3, when it had been reduced to rather less than 5,000,000l annually. The fact, however, that the production in the last year on record is under 6,000,000i is still important, as showing that the balance was still leaning towards a rather short supply, and that the maximum of the average annual exports of gold from the United States could not be so much as 6,000,000l, the amount of the annual deposits of gold of domestic production at the mints. If it be true, as reported, that a large new discovery has been made on the Comstock lode, this discovery will come just in the nick of time. As a curious illustration of the extent of re-coinage which goes on, it may be mentioned that the total of deposits and purchases of gold at the United States mints during the above year was 13,772,000l, or considerably more than double the newlyproduced gold of native origin. And of this sum of 13,772,000l, nearly three millions were in foreign coin and bullion and jewellers' bars, while about four millions are called "re-deposits" of bars. The following shows in detail the amount of the domestic production deposited at each of the various mints :-

A NEW FOREIGN BORROWER.—We suppose from the definiteness and particularity of a Reuter's telegram from Hong Kong, published this week, that there is at length no doubt of the fact that China is to be added to the number of States having a public debt. It is stated that a loan has been actually contracted on account of the Chinese Government, that the amount is 627,675/, that it will bear 8 per cent. interest and be issued at the price of 95 per

cent. through the Hong Kong and Shanghai Bank, that it will be secured by the Castoms Revenue, that 300,000l is to be placed in China, at the exchange of 4s 11.40d per dollar, and that the subscription lists will close on the 16th inst. The operation is thus one which makes it resemble some of the worst issues of foreign loans which come into the market. The rate of interest particularly is very high for so small a loan by a country of such vast population and rescurces as China, and almost implies that the Chinese Government must be wastefully using its home resources, since with proper economy and without the burden of a great funded debt it ought to be able to borrow temporarily at a much less rate of interest than 8 per cent., or do without loans altogether. As regards the way in which such a loan should be treated by investors here, we do not think there can be much doubt. The moderation of the amount of the proposed loan is no doubt an element in favour of China, but whatever the amount, the points to be kept in mind by investors are that China is practically an unknown country undergoing a tedious political and social revolution in consequence of its enforced contact with Western powers, and that it is quite uncertain whether such a country can possess that kind of political stability which is essential to financial good faith. Lending to China may be a good enough speculation for those who know something about it and can afford to take the risk, but the case is one where much knowledge is required and should be used, and where the risk, judging by the rate of interest, will presumably be appreciable. It is greatly to be feared, however, that China, like Japan and other new borrowers of recent years, will be demoralised by the cordiality of its welcome to the money markets of the West, and will be tempted to exceed the proper limits of indebtedness, even if it should now be keeping within them. Yet why should China be able to borrow a sixpence without first producing its accounts of revenue and expenditure ?

TURKEY AND THE NEW FINANCIAL CONVENTION .- The intelligence regarding Turkish affairs this week confirms the suspicion which we expressed at the time of the new issue of 5 per cents. in September last, that in spite of the promises of financial amendment which the Turkish Government had given, and its engagement to let the Ottoman Bank administer its revenues, the position was substantially unchanged, and all that speculators were trusting to was the bare promise of a Government which had often made similar promises before, and had never kept them. What we now hear-apart from more serious rumours of an intention to "tax" the debtinterest and the like-is, that the Turkish Government delays or interposes difficulties in the way of carrying out the Convention with the Imperial Ottoman Bank, and has also been obtaining advances from various financial houses as before, in order to pay its coupons as they come due, instead of negotiating exclusively with the bank. The Turkish Government has thus shown itself as untrustworthy in financial matters as ever, disposed to run up a new score of floating debt in the old wasteful manner as soon as the previously existing floating debt has been funded, and unwilling to submit to any effectual restraints by which alone good finance becomes possible. Turkey may or may not have resources to meet all her engagements if her revenues are properly administeredwe believe that with the best arrangements possible she would have the utmost difficulty in paying her way for many years without frequent borrowing-but what the experience of the last few months proves is, that the defect of character, which is the origin of the bad finance, is so incurable that hardly any resources can save so incapable a Government from embarrassment and ultimate ruin. The breach of engage-ments, both in the letter and in the spirit, of which the Turkish Government has been guilty immediately after they were entered into, and that at a time when its necessities are still great, and there is no margin for any financial error, ought surely to teach the most sanguine how doubtful a speculation it is when they buy its securities in the hope that a new financial era is beginning. Even if the deviation from the right path should prove to be for only a short period, it must now be clear that with a Government so disposed as that of Turkey is, little faith can be placed in the new arrange-ments until they have actually been working without interruption for a considerable period.

DECREASE. francs. Private deposits 1.417.685 5,272,142 The large increase in the discounts and circulation is a

Jan. 2, 1875.)

The large increase in the discounts and circulation is a consequence of the heavy demands for the end of the year and the restricted business in the outside market, and also of the account being made up on the eve of the last day of the month, thus comprising all the demands for accommodation and none of the entries. The greater part of the augmentation is in Paris. The advances on bullion have also increased by three millions. A comparison of this week's return with that at the end of 1873 shows the strength gained in the situation of the Bank during the year; the cash reserve has increased by 566 millions; 328 millions have been reimbursed of the loans to the Treasury, and the circulation has been reduced by 163 millions; 328 millions have been reimbursed of the loans to the Treasury, and the circulation has been reduced by 163 millions. The deposits have indeed increased by 78 millions, but the Bank has now a margin of 556 millions within its maximum circulation. The discounts, even with the large augmentation this week, are 325 millions less than last year, but the present amount of 809 millions is still above the average before the portfolio had been swelled up to an abnormal manner by the creation of paper by the business arising out of the indemnity loans. The Bank has fixed its dividend for the second half of 1874 at 125f free of duty. This is a little more than the earnings in the period, the difference being made up by a deduction from the reserve for eventual losses on prolonged bills. The 285f paid for the year still represents over 7 per cent. on the present market price of Bank of France shares.

present market price of Bank of France shares. There has been a hardening of the discount market this

There has been a hardening of the discount market this week; the demand for bills has ceased, and as the require-ments of trade are always heavy at the close of the year no business in commercial paper has been done under 3[‡], and even at that rate the transactions have been small. Two important issues of securities will take place in January, those of the Credit Foncier and the City of Paris, and will probably cause money to be temporarily dearer, until the balance is restored by the return of the January dividends to the circulation. The accounts from the Stock Exchange of a scarcity of money at the settlement created a demand for bills at sight on London, which have been paid 25f 20c; long paper is less sought after, and is offered at 25f 23c. Paper on Amsterdam is very firm at 211[‡] short and 211[‡] long the 100 florins; Berlin has improved and obtains 363[‡]; Vienna is scarce and is paid 221[‡] long and 221[‡] short; St Petersburg is weak at 341 and 342[‡] the 100 roubles. The above, excepting London, negotiate at three months and 4 above, excepting London, negotiate at three months and 4 per cent. Italy at sight is stationary at 9§ dis. The market for Rente has been well sustained during the

past week, and but for a reaction on Tuesday on news of an arduous settlement in London, causing apprehensions of higher charges for carrying over here at the end of the month, arduous settlement in London, causing apprehensions of higher charges for carrying over here at the end of the month, a more marked improvement would have been obtained. Contangoes have, nevertheless, remained at a reasonable rate, and buyers of the Three per Cents, have been able to carry on their purchases to the end of January at 24 and 25 centimes, and of the Fives at 36 and 37 centimes, or from 4⁴/₄ to 5 per cent. The liquidation of Rente is already sufficiently advanced to remove all fear of any serious advance on those rates. The value of Rente compared with the end of November shows a steady progress, account being taken of the coupon deducted for the Threes and the addition of the report, this stock has gained 60 centimes; the Fives have been more favoured, and have advanced 1f 25c. At the present rates all the purchases at option during the month have been made firm. The purchases for investment through the receivers-general mark a return to favour of the Three per Cents. Until recently the daily orders consisted only of demands for the Fives, with oc-casional sales of the Threes. This week 50,000f of Rente of the latter stock have been taken, and although the bulk of the purchases are still of the Fives, of which 300,000f of rente have been demanded, the arbitrages have ceased. The interview yesterday between Marshal de MacMahon and representatives of the Left Centre and all the fractions of the Right, gave an excellent tone to the Bourse to-day, and there was a general rise. The news of the Alfonsist revolution at Madrid did not produce a marked effect on the Spanish Funds, the advance being only from 18¹/₄ to 18³. The second telegram, however, announcing the adhesion of the armies of the North and the Centre, did not arrive until after business hours. The receipts on the six great railway companies for

blished show a diminution of 31,000f on the last year; but the value of shares has roved with other securities. Sucz Canal ed 10f in the week. Subjoined are to-day's ount :-94

The following is a comparison of the prices of the principal securities dealt in on the Paris Bourse to-day, and on the 31st December, 1873 — The Three per Cents. have advanced from 58f 40c to 62f 10; Fives from 93f 40c to 99f 77½; Morgan loan, 514f to 525f; Spanish Threes, 17½ to 18½; Italian Fives, 61f 70c to 68f 70; Egypt 1870, 385 to 395; Ottoman Fives have fallen from 47f to 44f 90c; the bonds of 1860 from 330 to 327; those of 1869 from 292½ to 278½, and of 1873 from 273½ to 260; the Ottoman bonds of 1863 and 1865 are on the con-trary higher, having advanced from 340 and 330 respectively to 260; the Ottoman bonds of 1863 and 1865 are on the con-trary higher, having advanced from 340 and 330 respectively to 353 and 351. City of Paris bonds have also all improved; the 1855 and 1860 from 4224 to 4424; 1865 from 447 to 474; 1869 from 290 to 3114; 1871 from 2554 to 283. Honduras bonds have declined from 35 to 18; Hungarian 1868 have re-covered from 219 to 230. Bank of France shares have receded from 4,230 to 3,780. Banque de Paris have risen from 1,0771 to 1,1574; Oredit Foncier from 815 to 865; Credit Lyonnais from 6514 to 735; Credit Mobi-lier, from 3234 to 350; Société Générale, from 525 to 540]; Franco-Hollandaise Bank, from 4414 to 525; Spanish Credit Mobilier, from 355 to 6764. Comptour d'Escompte is un-changed at 5572; Paris Gas Shares have risen from 7134 to 8432; Messageries, from 535 to 5582; Suez Canal Shares, 4282 to 475. Transatlantic shares have fallen from 280 to 843 $\frac{3}{4}$; Messageries, from 535 to 558 $\frac{3}{4}$; Suez Canal Shares, 428 $\frac{3}{4}$ to 475. Transatlantic shares have fallen from 280 to 217 $\frac{3}{2}$. In railway shares Eastern have improved from 493 $\frac{3}{4}$ to 515; Southern, from 615 to 657 $\frac{1}{4}$; Northern, 1,038 $\frac{1}{4}$ to 1,035; Orleans, 835 to 877 $\frac{1}{4}$; Western, 520 to 565. Paris to Medi-terranean form an exception, and have fallen from 887 $\frac{3}{4}$ to 880. French railway bonds have all improved; Northern, from 287 $\frac{1}{4}$ to 304 $\frac{3}{4}$; Orleans, 281 $\frac{1}{4}$ to 305 $\frac{3}{4}$; Western, 276 $\frac{1}{4}$ to 294 $\frac{1}{4}$; Paris to Mediterranean, 280 $\frac{1}{4}$ to 307 $\frac{1}{4}$. Lombard bonds have fallen from 2524 to 250 $\frac{3}{4}$. have fallen from 2521 to 2503.

A syndicate of financial houses, headed by the Credit Foncier Company, has contracted for a loan of 65 millions of francs to five departments of the east of France to re-establish the network of navigation by rivers and canals mutilated by the new frontier line between France and Prussia. The works are to spread over a period of eight years, and the interest and redemption of this loan will be provided by the interest and redemption of this loan will be provided by the State. The capital to be raised will form part of a new issue of 200,000 Credit Foncier bonds of 500f nominal, bearing 20f interest, redeemable by drawings in 60 years, with 800,000f in prizes annually. The price of issue will be 452f 50c. This loan will compete with that of the City of Paris, the bonds being of the same type and rate of interest. The amount given in prizes is besides greater, the 800,000f being for a capital of 90 millions effective, while the City of Paris gives but 900,000f for 220 millions. The rate of issue and the open-ing of the subscription for the Municipal Loan **Pre** not yet announced, although the Bill was voted before the Christmas vacation. vacation.

Vacation. One good result which will be obtained from the calling in of the small notes of the Bank of France will be to remove the temptation to forgery, from the facility with which they pass from hand to hand without endorsement, and consequently without any means of tracing them back to the parties who put them in circulation. Although a great number of persons have already been discovered creating spurious notes, those who have still escaped detection are probably still more numerous. The Bank of France, when forged notes are paid in to it, quietly accepts them in order to avoid causing alarm

to trade. The amount of the losses under this head will most likely never be published, but it must be considerable. The forgeries are not confined to Paris; at Cambrai this week the police made a descent at the house of a lithographer and seized, besides a parcel of about a hundred 20-franc notes, two stones, on each of which these notes were reproduced four times. The stamps for paying the taxes on chicory and matches are also largely imitated.

The Paris Savings Bank has issued a summary of its operations in 1874; the return being made up to the last Sunday in the year. The deposits amounted to 14,433,670f, being an increase of 884,926f on 1873; the reimbursements were 11,564,040f, or a diminution of 55,436f on the preceding year. The number of new accounts was 28,916, and of those closed 22,836. The number of transfers from the Savings banks in the departments to that in Paris was 969; and from Paris to the departments 1,358, showing that the movement of the working classes from Paris to the provinces predominates, as had been remarked each year since the war. The number of depositors on the 26th December was 245,727, an increase of 4,935 during the year, and the amount of the deposits held by them 37,857,762f, which is an augmentation of 1,746,854f. This is a sign of returning prosperity, as the deposits at the end of 1873 showed a diminution on 1872. The sum due to depositors was held as follows:—Cash in hand, 31,636f; at the Bank of France, 179,396f; at the Caisse des Depôts et Consignations, 37,646,729f. During the year Rente for a capital sum of 2,732,932f was also purchased for depositors. A series of frands by one of the principal clarks at the tran-

A series of frauds by one of the principal clerks at the treasury of the City of Paris have just been discovered. The employé in question, a M. Chasteau, was charged with the care of the titles of the loan of 1871, for which there are drawings for prizes and for reimbursement. On the issue of the loan scrip certificates were given, and were only exchanged for the definitive titles when the whole of the instalments were paid up; the definitive titles alone had a right to participate in the chances of the drawings, and the numbers of these last were not identical with those of the scrip certificates. As many of the subscribers were in arrear with their payments, a great number of the definitive titles which were drawn had remained in the Municipal Treasury, one with a prize of 10,000f, nine with prizes of 1,000f, and a number of others for redemption at 400f, while the price of them on the Bourse was only about 260f or 270f. Chasteau appears to have abstracted those drawn, from the Municipal safe, replacing them by others undrawn, purchased on the market, and then had them presented by a confederate at the Treasury, and obtained the prizes or the reimbursement at the full price. So far as yet discovered his profits by this manipulation amount to about 53,000f, but these are not the only frauds with which he is charged, and it is probable that others may be discovered, for many subscribers deposited their titles for safety at the Hôtel de Ville, and as Chasteau had the keeping of them, an inventory of them will have to be taken, and these are over 250,000 in number. The public are not losers by these substitutions, excepting by their own negligence in not exchanging their scrip certificates in proper time, as their rights had become forfeited to the city ; but the business at the Hôtel de Ville must have been managed in a very loose manner for such simple frauds to have been practised so long without detection.

TALLOW.-La Plata sheep, 51f; ox, 52f 5Cc to 53f.

GERMANY AND AUSTRIA. (FROM OUR OWN CORRESPONDENT.)

VIENNA, Dec. 27, 1874.

The new German gold coins are continuing to be exported out of the country, and a diminution of the Prussian Bank's abnormal rate of discount at 6 per cent. is for some time not to be thought of. We have lately been informed that not only

the German gold manufactories and goldsmiths have melted the new coins, and that some four millions have been sent to Brussels, but that speculative men of business in Hamburg have melted them into gold bullion, and sold them to the Belgian Mint. Besides that, we must account for what the Bank of France has adroitly managed to get into its hands. No wonder then that the German Government has readily adhered to the wish of the Reichstag, and has withdrawn the Bank Bill, promising at the same time to prepare a new project, in which the proposal for an Imperial Bank is to be contained. The German Bundesrath has already accepted this new project, and has given it over to the Commission of the Reichstag. With one single exception, of which we will speak further on, the paragraphs of this new project are all acceptable, the indemnity granted to the Prussian Bank being a fair one, so that scarcely a doubt can exist as to its being approved of. Its principal provisions are the following :-

[Jan. 2, 1875.

The capital is to be furnished by private means (in shares), and is to amount to double the capital of the Prussian Bank, that is to say, to 40 millions of thalers, or 6 millions of pounds sterling. The shareholders will have 4½ per cent. of the interest guaranteed, and receive one-half of the rest of the gains, whilst the other half goes to the Exchequer of the Empire. The indemnification of the proprietors of the Prussian Bank, that is to say, of the shareholders and the Government, is to consist of the following :—

The shareholders of the Prussian Bank have the right to become shareholders of the Bank of the Empire. The Prussian government is to have its share of 2 millions of thalers issued, and besides that one-half of the reserved capital, amounting to about 3 millions of thalers, as well as one-half of the landed property. The other half of the reserved capital belonging to the shareholders is to go over to the Bank of the Empire. The Prussian government receives an indemnity of 5 millions of thalers, to be taken out of the benefits (agio) of the shares the Bank will emit. Then the Bank of the Empire must promise to pay 621,910 thalers yearly up to the year 1925, destined to the amortisation of 15 millions of "Cassenscheine" given over in 1856 to the Prussian Bank by the government for withdrawal, and for which the latter received the same amount of consols, which of course go over to the new Imperial Bank. Nothing is to be said against these several provisions, as it is of course but fair that if the new Bank undertakes to pay the old Bank's debts, it must also inherit its advantages and its credit. The indemnity to be paid to the Prussian State is not too great either, for its part in the gains has in the latter years amounted to 14 millions. The indemnity can all the more readily be granted, as we may with safety sappose that the sale of the shares will bring the sum required. Nor have we anything to say against the way in which the Bank is to be directed, that is to say, the same way as the Prussian Bank has been governed until now, the direction being placed in the hands of the Chancellor of the Empire.

We now, however, come to the point in which our opinion somewhat differs from those who formed the new project. The German Bank legislators intend abandoning the old system followed by the Bank of Prussia in the emission of notes, which has never given difficulties of any kind, and have decided to adopt one of the chief arrangements of the Bank of England, which consists in limiting the emission of notes, of which the Bank does not possess the value in gold, to a certain sum. The old Bank of Prussia is required to hold only one-third of the value of notes emitted in cash, whilst the Bank of France does not limit the emission of notes at all. The reason for this strange provision, which, without any plausible cause whatever, introduces an arrangement into our country of which we have seen the worst consequences in England, is merely a whimsical one. Years ago some of our free traders had made up their mind to imitate the English currency party in everything, and had, long before the institution of the Empire, in the Prussian Landtag, proposed limiting the circulation of bank notes. They still adhere to what they then thought right, and it is owing to them that one of the dispositions of the first Bank Bill has been introduced into the new, namely, that the notes not backed by ready cash in the Bank are, up to a certain sum, to be taxed at 1 per cent. The one improvement made in this arrangement is that the Bank of Bavaria is no longer to be excepted from the common rule, as was the case in the first Bank Bill, and that the sum to which the emission of notes not backed in gold is limited, now amounts to 380 millions of marks, instead of 300 millions, as had been at first proposed. Of these 380 millions, 32 millions fall to the Bavarian Bank, 24 millions to the Saxon Bank, 10 millions to each of the Frankfurter, Wurtemburg-Darmstadt-Baden Banks, to each of the Prussian Banks 13 millions, 21 to the rest of the banks,

THE ECONOMIST.

and 250 millions to the Bank of the Empire. No doubt the circulation of notes to this extent will suffice in ordinary times nor can we consider the taxation of 1 per cent. an unfair measure; but we are also quite certain that during a panic we should live to see the same appearances as we had in London in the years 1847, 1857, and 1866. Then the measure we have spoken of will turn out to be useless, for once money has disappeared under the influence of a panic, the emission of notes must exceed the limits prescribed by the law, and arrive at the point where the taxation reaches 5 per cent. The Banks will then have to raise their rate of discount in a manner will then have to raise their rate of discount in a manner much out of proportion to the natural conditions, and can thus bring no good to the country. The majority of the Reichstag seems inclined to approve of this measure. Very few persons indeed will believe that the money crisis has still its greatest difficulties to get over. The greater part of those who have to decide in this important question forget that within a twelvemonth all the bank notes under 100-mark must be withdrawn. Minister Delbrück confessed that at the end of 1873 there were 178 millions of thalers of these notes in circulation. Of these, 78 millions are notes of 20 to 25 thalers, which can easily be replaced by 100-mark notes. The thalers, which can easily be replaced by 100-mark notes. The rest, however, are not so easily replaced, and as they are in use amongst the less wealthy classes, we may suppose that their withdrawal will bring on a diminution in the circulation of at least 50 millions. Then the question remains, what is to become of the 300 millions of old silver currency still in circu-lation? The sume with which the Government can withdraw lation? The sums with which the Government can withdraw these consist of 50 millions of thalers in newly-coined gold, these consist of 50 millions of thalers in newly-coined gold, and 170 millions of thalers of small silver, nickel, and copper change, the greater part of which are not yet coined. In the middle of October the sum of new coins of this kind reached scarcely 14 millions of thalers. The Government made a mistake in having the gold coined first and the small change afterwards. The new gold pieces coined up to the present moment, representing a value of 362 millions of thalers, are but 65 millions in number, whilst the new cur-rency law demands the coinage of 860 millions of pieces in silver, and 2,800 millions of pieces in nickel and copper. Had silver, and 2,800 millions of pieces in nickel and copper. Had the Government begun by having the small change coined, a double advantage would have resulted from that measure—(1) a great deal of the interest would have been saved; (2) the technical powers of the mints would have been tried with the technical powers of the mints would have been tried with the less important piece of work—their arrangements, the persons employed in them, the machines, could have been changed or augmented if they proved insufficient. If the Government goes on coining at the same rate as it has done until now, then it will take ten more years before it finishes the task given it by the new currency law. New arrangements must be made to quicken the process of coining. It was of less im-portance to make a few unsuccessful trials with nickel or copper than with gold : had the former been coined at first. portance to make a few unsuccessful trials with nickel or copper than with gold; had the former been coined at first, the machines and the persons attending to them would have been in high training by the time the turn of the gold coins came round, and much time could have been saved, perhaps three-fourths of what has really been required. The conse-quence would have been that the old currency coins could have been withdrawn at the shortest notice, and all the diffi-culties in which we are at present involved—the raising of prices, the exportation of gold, the raising of the rate of dis-count—would not have come upon us.

But even when the German Government will have surmounted all these difficulties, it will still be wanting gold coins to withdraw the old silver currency with, if we rate the difference we have spoken of at 130 millions of thalers. This difference will amount to much more; we name that sum from a fear of being taxed with exaggeration. The new Bank law takes the present rate of circulation of bank notes as a standard for the future. More notes than we have at present in circulation can therefore only be obtained if we consent to pay 5 per cent. for them, a measure by which the rate of discount is again raised. To carry out the new law completely, the German Government must coin 130 millions of thalers more in gold pieces, besides all the small change which we have mentioned before. Limiting the emission of notes is therefore a measure whose very first evil consequences the government itself will feel. Had it intended to leave the old silver currency in circulation, then limiting the emission of notes was the right measure to be taken, but then we should for ever have had the double standard now in force, which the new law prohibits. The more we turn the question over in our minds, the more we find that if the Reichstag adopt the measures with which we have found fault, the difficulties the German circulation has at present to struggle with will but increase and become more and more troublesome to deal with.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1864, a deficiency of 6,745,8981; in 1872 (Jan. 3), an excess of 4,074,2951; in 1873 (Jan. 1), a deficiency of 2,490,2981; and in 1873 (Dec. 31), a deficiency of 1,785,2671. In 1874, there is a deficiency of 2,466,6281.

In 1864, a fall in the value of money was imminent, but the exceptional demands connected with the close of the year caused the market to remain tight. The produce markets were showing signs of recovery from the recent collapse in some of them.

In 1872, the current demands for money were good, but any pressure commonly incidental to the close of a year had subsided. There had been a great rise in prices of securities during the year past. M. Thiers advocated the extension of note circulation by the Bank of France.

In 1873, rates in the money market began to sink steadily, being no longer upheld by the demand usually accompanying the close of a year. Reaction and activity had been apparent in trade during the concluded year; prices had consequently risen, but notwithstanding the German absorption of gold, trade was not unsound. A check to advancing prosperity was our deficient harvest, which had to be supplemented by the surplus from France.

In 1874, all pressing demand for money had suddenly ceased with the beginning of the new year. Everything appeared favourable to a long course of easy money, the absorption of gold having greatly diminished, while large sums were due and arriving.

The account of the Bank of France for the week ending December 31 shows the following changes :---

| Assezs. | Dec. 31. | Dec. 24. | | Increase. | | Decrease. |
|---------------------|-------------|-----------------|-----|-----------|-----|-----------|
| Cash | \$3,028.000 | 53,238,000 | *** | | | 210,000 |

DISCOUNT AND MONEY MARKET .- Yesterday being the closing day of the year there was the usual active demand for until then, the current rate for short advances on Consols since the commencement of business after the Christmas holidays on Monday having been 7 per cent., while the discount rate also advanced under the pressure, the minimum for 3 months' Bank bills being quoted $5\frac{1}{2}$ to $\frac{2}{7}$, against 5 per cent. a week ago. There was also a very good demand at the Bank, where 7 per cent. was paid for short advances. To-day, however, there has been rather more ease, the expectation still being that with the present influx of gold into the Bank rates must fall in a week or two, so that there is a great competition for bills. The minimum for 3 months' Bank bills has fallen this afternoon to 51 per cent., while there are transactions at lower rates, and longer bills are also taken at very low rates. The market nevertheless is not quite settled, the closing of the Stock Exchange to-day farther interrupting the usual course of business for short loans ; a day or two must accordindly elapse before it is seen how the market will be after the usual movements at the turn of the year.

The Bank return shows very clearly the extent of the pressure for money which has been felt throughout the week, by the large the private securities having increased sum of 3,490,000/. At the same time it is also shown that the demand has been to some extent owing to precautionary arrangements, the private deposits having increased 2,465,000l, and the increase of 1,219,000l in the public deposits being the only indication of a real transfer of resources from the open market to the Bank. During the next week or two, when the dividends are paid, the figures on both sides of the account will, no doubt, show a diminution. The other changes show, perhaps, rather a smaller change than is customary at this season. The circulation has only increased customary at this season. The circulation has only increased 328,000/, and the coin withdrawn for the country would appear to have been only 79,0001, so that as the influx of gold from abroad was 548,000l, there is finally a net addition of 141,000l to the reserve. If the return had included the last day of the month and perhaps the 1st day of January, the changes would doubtless have been greater, and next return will probably show that there has been a farther efflux of coin or notes to compensate any additional influx of bullion into the Bank from abroad. During the last four weeks the net influx from abread has been 1,352,000l, and but for this augmentation, which is directly due to the 6 per cent. rate, the present return would have been quite as unsatisfactory as those which gave so much concern in October and November.

| THE STOCK MARKETS To-day being a holiday in the |
| Stock Exchange, and attention having been chiefly occupied |

THE ECONOMIST.

since the commencement of business after the Christmas helidays on Monday with the Stock Exchange fortnightly settlement, the consequence has been a marked absence of new transactions. To some extent this has been a cause of dulness, and being assisted in a few important cases by other causes of weakness has at times almost given an appearance of general flatness to the markets. This was especially the case in the heavy English railways on Monday, where high rates for carrying over were quoted by the dealars, and a fall in Great Westers, occasioned by the accident at Shapton last week, helped to diffuse dulness through the market. In the foreign markets the continued offers of Peruvian stock had also a similar effect, although the recent disquieting attacks appear to have been given over. But in spite of these exceptions, and of the small amount of business, the general course of prices has been firm, the strong tendencies of the market in anticipation of cheaper money being very manifest. The settlement also showed that in some leading departments, especially in English railways, the operations for the fall have been on so large a scale as again to produce a scarcity of stock. The rates for carrying over were at any rate very much lighter on the second day of the settlement than they have lately been, and in some cases charges for the loan of stock have been paid, and prices have been firm in consequence. This state of the account would so far show that the diminution of dividend for the current half-year, and the other causes adverse to railway prices, have been to a large extent discounted, and that in view of increased traffics and cheaper prices for coal and raw material next half-year, speculators for the fall may again experience the difficulty felt during all last summer of closing their accounts.

ENGLISH GOVERNMENT SECURITIES.—This department has been moderately firm in expectation of cheaper money, though the high rates for advances of course check any rise in the price.

COLONIAL GOVERNMENT SECURITIES.—These stocks show steadiness.

FOREIGN GOVERNMENT SECURITIES.—With about the sole exception of Peruvian, the tendency to improvement in this department has been rather strongly shown—the better class of investment securities as well as the more speculative having all advanced in anticipation of the dividends and drawings at the beginning of the year. Among the speculative, Egyptian have been most in favour, no such rumours having been circulated regarding them as have affected some of the others. Turkish have also been steady, notwithstanding the delay which has occurred in the ratification by the Government of the Convention with the Imperial Ottoman Bank, and even Spanish have rather advanced, in spite of the threatened issue of new stock under the new compromise with the creditors, the proclamation of Alphonso as king having apparently given a stimulus to some speculative purchases.

As regards Peruvian, the weakness this week may be ascribed almost exclusively to the sales of unallotted stock which have been made, and not to the circulation of adverse rumours which were so current a few weeks ago. These sales, it must be understood, have also weakened the hands of other holders and speculators, so that as distrust is still left by the recent attacks on Peruvian credit, the rallies in this stock have not been well sustained.

Various rumours have been in circulation this week as respects Turkish securities, in addition to the report of delay in ratifying the convention with the Imperial Ottoman Bank, which is confirmed. Among others is—(1) astatement that an advance of 400,000l has been obtained at Constantinople, to pay the January coupons of the debt; and (2) a statement in *Le Nord*, of Brussels (a Russian organ), to the

effect that the Turkish deficit is so large as to have induced the Government to decide in favour of "taxing" the foreign creditor. The last intelligence may, of course, be discredited by the channel through which it comes, but the fact that Turkish finance is not going so smoothly as was expected under the new arrangements is now quite patent.

The following are the changes for the week, taking the latest unofficial quotations : --

ENGLISH BAILWAYS .- The tendency here in the beginning of the week was rather dull, in consequence of the rates for carrying over speculative purchases being rather high at the beginning of the account, but except in Great Western there has ultimately been no great fall in almost any case, and in general there is rather an improvement. The arrangements on the second day of the account appear to have shown quite clear that the speculative opinion which we described last week as predominant—to the effect that the dividends on the heavy lines would show a diminution for the current half-year, and that in consequence of Midland competition and otherwise the immediate railway prospects were generally gloomyhas had the effect in practice of producing a scarcity of stock, the engagements for the fall being in excess of the floating supply. In Great Western, however, the adverse speculation appears to continue unchecked by any such cause; and as the im-pression previously was most adverse to this stock, and the accident helps to depress it, the result is a fall of 21 per cent. for the week in addition to the decline which has now been going on for some time. It remains to be seen whether the speculators for the fall are not again carrying their operations so far as to produce a reaction like what occurred last summer—the public being still, on the whole, unwilling to sell, in consequence of the difficulty of finding good investments into which to exchange, and the diffused conviction that a great improvement in the value of their property is only a question of a year or two.

The traffic receipts on eighteen railways of the United Kingdom, of which a list is subjoined (including the principal railways), amounted for the week ending December 26 to 942,217l, being an increase of 25,475l as compared with the corresponding week of last year. The aggregate receipts for the half-year to date now amount to 24,671,566l, showing an advance of 553,5451 on the corresponding period of last year. The principal increases for the week have been-Midland, 5,1161; North-Western, 4,1421. Excepting a falling off in North-Eastern of 2,1967 for the week, there is no instance of a material decline.

JOINT STOCK BANKS .- A rise has occurred in the following :- English of Rio de Janeiro, 1; London Biver Plate, 1; Ditto, New, 1; Metropolitan, A. 1; National Provincial, New, 1. On the other side, Anglo-Egyptian have fallen 1; Imperial Ottoman, 1; National of Australasia, 1.

TELEGRAPHS .- Anglo-American have advanced #; West and Brazilian, $\frac{3}{4}$; Cuba, $\frac{1}{4}$; Reuter's, $\frac{1}{4}$; Telegraph Con-struction, $\frac{3}{4}$. On the other side, Globe show a fall of $1\frac{1}{4}$.

MINES.-In British shares, Van have advanced 1. Foreign are firm but quiet. Flagstaff, ³/₄ higher; Colorado, ¹/₄; Almada, ¹/₅; New Quebrada, ¹/₄; Russia Copper, ¹/₄.

MISCELLANEOUS.—In bonds, &c., New York City Loan are 1 higher; Share Investment Trust Preference, 1. Among financial companies, Imperial Credit Certificates are ‡ higher; National Discount, ‡. The following have fallen :— Ceylon Company, ½; ditto 10 paid, 1½; ditto 5 paid, ¼; London General Omnibus, 1; Native Guano, ‡.

BULLION .- The following is taken from the circular of Messrs Pixley and Abell on the transactions in bullion during the week :-

Gold.—The Bank continues to receive the bulk of the arrivals, the demand for export, although slightly more active than last week, not being sufficiently so to absorb all that has come to hand. 782,000/ has been sent into the Bank since our circular of the 23rd inst., and further amounts will follow. About 250,000/ has been received from New York during the week, the Peninsular and Oriental steamer delivered 448,000/ from Australia and Japan to-day, and the West India steamer been \$2,000/ has 48,200/.

Silver.—About 22,000/ has been received from New York, 60,000/ from the Pacific, per Corcovado, and 32,000/ from the West Indies. The price, which was gradually receding last week, has to-day touched the lowest on record, viz., 57¹/₂d per oz, at which rate the amount per Corcovado has been sold. The Bokhara takes 8,500/ to Bombay.

Mexican Dollars .- About 100,000/ value of this coin will be on the market from West India steamer; the present price is 56d per oz, at which rate the market may be considered tolerably firm. The Bokhara takes 71,540/ to China and the Straits.

Exchange on India for Banks' drafts at 60 days' sight is 1s 10d per rupee. The fluctuations in the rates of issue of the India Council Bills in 1874 have been very considerable.

Quotations for Bullion.—Gold — Bar gold, 77s 9d per oz std; ditto, fine, 77s 9d per oz std; ditto refineable, 77s 104d per oz std; Sonth American doubloons, 73s 8d per cz; United States gold coin, 76s 34d per cz. Silver—Bar silver, fine, 4s 94d per oz std, nearest; ditto, containing 5 grains gold, 4s 914d per oz std, ditto; Mexican dollars, 4s 8d per oz.

According to the Gazette return of this evening the movement in the precious metals during the week ended Dec. 30 has been as follows : - Gold - import, 423,4711; export, 49,3951. Silver-import, 143,1951; export, 209,7311. The sum of 127,000l has been sent into the Bank to-day.

NOTICES AND REPORTS.

STOCKS.

STOCKS. Bolivian 6 per Cent. Loan.—Messrs Lumb, Wanklyn, and Co. notified that the coupons due 1st January would be received for payment from the 28th December; also that from the 1st January, the sum of 334 per cent. would be payable in respect of the principal sum secured by the bonds which were in October last drawn for payment on the 1st of January. It was requested that such bonds be presented through a banker. New South Wales—Issue of 4 per Cent, Bonds.—The Bank of New South Wales will receive tenders (until the afternoon of January 5) for 1,000,000/, in bonds of 1,000/, 500/, and 100/ each. Interest from 1st of January will be paid half-yearly in London, the principal being redeemable on 1st July, 1903. The published minimum is 90 per cent. The object of the issue is the construction of railways. South Australian Government 4 per Cent. Bonds.—The Agent-General invites tenders for 600,000/, at and above the minimum price of 90 per cent., redeemable at par on 1st July, 1899.

price of 90 per cent., redeemable at par on 1st July, 1899. The National Bank of Australasia will receive tenders until 6th inst. The money is required for railways, waterworks,

and telegraphs. Spanish 3 per Cent. External Bonds.—At a meeting of bond-holders it was resolved to accept the pagares of the Rio Tinto Company and Three per Cent. External Bonds, at the rate of 40 per cent., in liquidation of the coupons due on 30th June and 31st December, 1873, and 30th June, 1874, and the Council of Foreign Bondholders were authorised to adopt Council of Foreign Bondholders were authorised to adopt such measures connected with the carrying out of the agree-ment as they might think proper. Allowing for coupons which have been cancelled, the three coupons included in the settlement represent, it is understood, about 6,250,000/. RAILWAY COMPANIES. Elham Valley.—Creditors are requested to send in their claims by 30th of January. The 10th of February is appointed for the hearing and adjudication. Illinois Central.—A dividend of 4 per cent. in currency has been declared by the directors, payable in New York, on 1st of February, to the holders of full paid shares registered at the close of the 15th January. London and Greenwick.—The half-yearly meeting is called for 12th January, when a dividend, at the rate of 11 7s 6d per cent., free of income-tax, will be recommended for the half-year.

year.

Mexican.--The total earnings for the first six months of 1874 amounted to 231,011*l*, against 179,485*l* at the corresponding period of last year, showing an increase of 51,526*l*. The earn-ings for the subsequent three months of 1874, as compared with the same period of 1873, exhibited a decrease of 2,841*l*, which it is stated is partly due to a rainy season of extra-ordinary severity, which caused interruption to traffic. *Northern of France*.—An interim dividend is announced at the rate of 4 per cent. per annum.

BANKS.

Anglo-Austrian .- It is notified that as the dividends will, in accordance with the resolution adopted on the 18th May last, be payable henceforth once a year only, it has been resolved to issue fresh coupon sheets

to issue fresh coupon sheets. Banque Franco-Egyptienne.—The directors announced that an instalment of 12.50f of the dividend of 1874 would be paid on

instalment of 12.50f of the dividend of 1674 would be pre-2nd January. Bank of Roumania.—A dividend is announced at the rate of 5 per cent. per annum out of the profits of the year 1874. Imperial Ottoman.—The bank announces that in consequence of the revised statutes and the project of the convention sub-mitted to the meetings in August not having yet been finally ratified by the Turkish Government, the distribution of the reserve fund is unavoidably delayed for such ratification. A dividend of 10s has now been paid on the old shares on account of the year 1874, and also of 1s 9d per new share, both free of income tax.

both free of income tax. FINANCE, CREDIT, AND DISCOUNT COMPANIES. Scotish Australian Investment.—At the meeting a dividend was declared at the rate of 10 per cent., and, in addition

thereto, a bonus at the rate of 5 per cent., making a distri-bution at the rate of 15 per cent. per annum.

ASSURANCE COMPANIES.

Royal Exchange Assurance.—The usual interim quarterly dividend of 4 per cent. has been declared. Scottish Union Fire and Life.—The company have declared a

dividend at the rate of 14 per cent. per annum for the past half-year.

half-year. **MISCELLANEOUS COMPANIES.** British and Foreign Water and Gas.—At the meeting the re-port, which was agreed to, mentioned that, pending the ter-mination of the legal questions in connection with the Bu-charest Gasworks and the completion of the Saratov Water-works, it was decided not to present a profit and loss account. Direct United States Cable.—At the adjourned meeting it was stated that by the last accounts received from the Faraday the broken part of the cable had not yet been recovered. The vessel was about to leave Conception Bay, with the object of recovering the broken part of the cable, which it was hoped would be buoyed in a few days. As soon as that was done the connecting link of the 250 miles of cable would be made. The meeting was further adjourned.

The meeting was further adjourned. Eastern Extension, Australasia, and China Telegraph.—The company announces the payment of an interim dividend of 3s -The per share.

per share. Eastern Telegraph.—The company announces the payment of an interim dividend of 2s 6d per share. Governments and Guaranteed Securities Permanent Trust.—The half-yearly dividend on the certificates of the second issue, due 1st January, was paid at the offices of the Trust on that data date.

date. Italian Irrigation (Canal Cavour).—The numbers are pub-lished of 800 bonds which have been drawn, and will be paid off by Messrs C. J. Hambro and Son. Kama-Wolga Steam Navigation Debentures.—Messrs Forbes,

Kama-Wolga Steam Navigation Debentures.—Mesars Forbes, Forbes, and Co. have published the numbers of seventy-two debentures, amounting to 7,200l, which have been drawn for repayment at par on 1st of March. London and County Tranways, Limited.—Creditors are re-quired by 15th January to send in details of their claims to the official liquidator, Mr C. L. Nichols. National Safe Deposit.—It is anticipated that the building, safe deposit vaults, and fittings will be ready for business in March next. Capital expended to 31st October, 131,241l. North British Australazian.—At the meeting a dividend of 5

North British Australazian.—At the meeting a dividend of 5 per cent. per annum was declared, and a resolution was passed to the effect that the expenses of management in Australia are too high.

Bettws Llantwit Colliery.—The directors announce that the guaranteed dividend, at the rate of 10 per cent. per annum, payable at the Alliance Bank. Crenver and Wheal Abraham United.—The directors have

creater and wheat Arranam Ormed.—The arrectors have issued a circular showing the position of the undertaking, and proposing to raise 20,000l for three years at 124 per cent. per annum in debenture bonds of 50l each, giving as security a mortgage of the company's interest in the mines, &c. It is stated that the amount spent to the present time on the mines is 143,520l, of which 43,520l was received from sales of tin and

copper. New Quebrada.—At the meeting the report stated that the progress of the works of the Bolivar Railway is fairly satis-factory, and the prospects of the mines are considered to be favourable. Van.—A dividend of 10s per share is payable on the 2nd

The Commercial Times.

POST OFFICE ANNOUNCEMENT.

A new agreement has been entered into with the Royal Mail Steam Packet Company for the conveyance of mails to Brazil and the River Plate, commencing in January. The packets will leave Southsmpton twice a month, instead of ones a month as heretofore, viz., on the 9th and 24th of each month; and mails will be made up in London on the morning of those days, excepting when the 9th or 24th fails on a Sun-day, on which occasions the mails will be made up and the packets will sail on the following day. sail on the following day.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

FRIDAY NIGHT. The severe cold, as affecting trade and traffic, is at the moment the cause of more general dulness than can be ascribed to the close of an old year, and the accompanying holidays and stock-taking. Traffic of all kinds is impeded, the canals being quite blocked, while the roads, where not clogged with snow, are in an inconveniently slippery state. The railways appear also to be affected in their power of dealing with traffic, machinery and steam-power of all descrip-tions being impeded by the weather. Speculation in the corn trade is not so active as it has lately

tions being impeded by the weather. Speculation in the corn trade is not so active as it has lately been, but prices remain quite firm as the result of the small supply of foreign grain on offer, while the possibility of a severe and long-continued winter interfering with prospective arrivals is not lost sight of. For the present the course of prices depends on the weather, but no decided movement, either upwards or downwards, is probable; on the one side, if the frost continues, the consequent firmness will be a bar to free purchases, and on the other, if a thaw extends to this country, the fall will be pretty sure to bring in buyers. The stocks in store at the principal ports being very moderate, although home and foreign supplies have been fully up to the calculated demand, it appears that uillers and dealers have supplied themselves at recent low prices, and are under little necessity of coming forward as buyers for some time unless at their own prices. The snow that lies over most of Europe

is regarded with satisfaction as protecting the sown wheat, and the frost has been of service in preparing the land for spring sowing, prospects being so far good for next year. Cotton receipts at American ports showing a falling-off from the large totals of last year at this time, confidence has been given to the market at Liverpool, and in some cases there is a slight advance. The discovery that stocks on hand at the end of the year were 89,000 bales more than the estimate had little effect on prices; but had no such result been apparent, a more marked advance for the week would probably have taken place. At Manchester the market for manufactures has, as usual, sympathised with the firmer value of the raw material; but the demand is expected to be dull until some revival of general trade is more plainly apparent that at present. The cold weather has made certain branches of the home trade active. The Eastern markets have not become more favourable. The price of wool is quite firm. Cold weather and a better feeling in the cotton trade have doubtless had something to do with the strong state of the market, and manufacturers

do with the strong state of the market, and manufacturers appear to be receiving better orders. From the Continent and America this is the case as well as on home account, and spinners continue well employed.

The gloom and depression now reported of the iron trade on the whole appears to arise chiefly from the poor prospects manufacturers at present see of returning activity at anything like profitable rates. The turn of the quarter is not expected to bring with it a material reduction of quotations, and any to bring with it a material reduction of quotations, and any change that will be made is generally dependent on a pre-liminary fall in the cost of wages and materials. The tendency this week in supply and demand has, in addition to the holidays, been clouded by the diffi-culty of transit, which has kept stationary large quantities of coals and goods on the frozen canals, but no hopeful reports are anywhere made, and even the demand for pig iron has lately dropped off, the Scotch stores now showing a rapid increase. In the chief iron districts the sliding-scale method of adjusting wages will cause an undisputed fall in them to of adjusting wages will cause an undisputed fall in them to take place in the new quarter, but not in all cases are prices likely to come down smoothly. In South Wales about 100,000 ironworkers and colliers are resisting the reduction now in-sisted on by the masters, and a strike is expected. The miners in West Cumberland are also on strike, and in the latter case may continue out for some time, being upheld by their union, but not so in the former. The markets for foreign and colonial produce, when not

interfered with by the holidays, have been so by the weather to a great degree. Prices are scarcely changed. Coffee re-mains firm. Copper and tin have been in demand.

EXTRACTS FROM TRADE CIRCULARS.

(From Messrs Alexr. Collie and Co.'s Monthly Prices Cur-rent, dated Manchester, December 30.)-In our market the changes have been so unimportant as to call for remark only in contrast with the decline in cotton. Yarns and several descriptions of shirtings are well engaged at old prices; and where concessions have been made by producers to induce new orders they have rarely exceeded 1¹/₂d per piece. The business transacted has been of a general though not extensive cha-racter, but it is known that many intended contracts are held in abeyance until the prospects of business in the ensuing year can be to some extent determined. These, in view of the new safe level of prices are looked upon herefully, and with in abeyance until the prospects of business in the ensuing year can be to some extent determined. These, in view of the now safe level of prices, are looked upon hopefully, and with the prevailing anticipation of an easy money market, give good reason to except a revival in demand. Advices from the larger Eastern markets have not exhibited much improve-ment, some classes of goods having declined while others have slightly advanced. The position of holders there is greatly ruled by the extent of stocks and of shipments on the way, and as the latter are now falling off greater steadiness should become apparent, unless further derangement of the ex-changes takes place. The house trade has been unusually active, particularly in the heavier classes of goods; and as the winter, which opened very severely though seasonably, promises to continue so, our market is likely to derive greater support from this branch than is usually the case at this time of the year. (From the Cotton Circular of the Imperial Ottoman Bank, dated Alexandria, December 19.)—We have again to report that our market has been flat, with little or no business doing, notwithstanding that prices have been throughout the week in favour of buyers. Current qualities are fully 1d lower than the highest point. We quote:—Good fair common, 8½d to 8¾d; fully good fair ditto, 94; good fair, with staple, 9¼d; fully good fair, staple, 10d; fully good fair to good, staple, 10¼d; good, 10½d per lb, f.o.b. (From Messrs W. Nicol and Co.'s Weekly Overland Circular, dated Bombay, December 5.)—Our market has been unable to sustain the pressure of prolonged dulness in Liverpool, and

dated Bombay, December 5.)—Our market has been unable to sustain the pressure of prolonged dulness in Liverpool, and many sellers have appeared who willingly accepted prices averaging 4 rs to 5 rs per candy under those current at the close of the previous week. Machine-ginned Broach is the

THE ECONOMIST.

19

only description which has not suffered a decline, and this is only description which has not suffered a decline, and this is not surprising considering the large aggregate of speculative sales which has been made in it, and which cannot be covered in at present, except at a considerable loss. The up-country markets continue very much in advance of local prices, and there would seem to be no immediate prospect of improve-ment in this respect. Information of what is doing here finds its way very promptly into the districts now-a-days, and, from what we can learn, holders in the Mofussil seem disposed to hold out for some time longer, in the hope that Bombay what we can learn, holders in the Mofussil seem disposed to hold out for some time longer, in the hope that Bombay dealers may be forced to cover in at prices even in advance of those ruling now. The total sales reported locally amount to about 6,000 candies, of which nearly a half consists of old cotton. In new descriptions Oomrawutee has been most freely dealt in, and although our quotations is 183 rs, a con-siderable transaction, for February delivery, took place at 180 rs per candy. Imports, &c.—The following are the week's figures viz.: figures, viz. :

| Cupret-contract and another deal of the | 1873. | | 1874. | |
|---|---------|-----|--------|--|
| 1200 to most of show had to 200 | bales. | | bales. | |
| Total shipments since 1st January | 948,004 | 1,2 | 33,427 | |
| Receipts during week | 10,082 | | 12,153 | |
| Exports ditto | 9,208 | | 10,888 | |
| Afloat in harbour | 5,733 | | 6,832 | |
| Estimated stock | 18,749 | | 14.743 | |

dated Rotterdam, December 30.)—Our tin market has ruled very quist during the greater part of the month. Prices showed a decline of 1fl to 1½fl, when upon better reports from showed a decline of 1ft to 1fft, when upon better reports from the London market, where some speculative demand appears to have sprung up, an improved tone immediately manifested itself. The decline has since been partially recovered, and on the part of holders we have to report a decided firmness at the close. The combined returns of Banca and Billiton for 1874, compared with those of 1873, exhibit :--A decrease of the im-port for December of 347 tons; a decrease of the import for the 12 months of 1,617 tons; a decrease of the deliveries for December of 446 tons; a decrease of the deliveries for the 12 months of 131 tons; an increase of the stock second hand of 57 tons; an increase of the unsold stock of 145 tons; an increase of the total stock of 202 tons; a decline of the quo-tation of Banca of 13ft, equal to 21/10s per ton.

THE COTTON TRADE.

LIVERPOOL .- DECEMBER 30.

The cotton market has become firmer, and with a hardening tendency the quotations of some descriptions are slightly advanced. For Sea Island there continues but a small de-mand, but prices are without material change. American has American has mand, but prices are without material change. American has been less freely offered, and was ¹/₂d per lb higher yesterday, but with a less buoyant market to-day quotations are raised only ¹/₂d to ¹/₂d per lb in the medium and higher grades. For Brazilian there has been a moderate demand, yet in some few instances prices are quoted ¹/₂d per lb higher. In Egyptian the business has been very moderate, without alteration in prices. West Indian and Peruvian remain unchanged, but African is partially ¹/₂d dearer. East Indian continues in moderate request, without change in prices.

In cotton "to arrive" and for future delivery the business is considerable at rather higher rates, but closing quietly.

The sales of the week (four days), including forwarded, amount to 52,370 bales, of which 4,560 are on speculation and 3,890 declared for export, leaving 43,920 bales to the trade.

5,500 declared for export, leaving 45,520 bales to the trade. DEC. 31.—The sales to-day will probably amount to about 10,000 bales, the market without change. The actual stock of cotton, declared this morning, amounts to 684,710 bales, which proves to be 88,630 bales more than the estimate, showing an increase of 53,870 American, 3,560 Brazil, 5,080 Egyptian, 120 Smyrna, 30 West Indian, and 25,970 East Indian.

LONDON.-DECEMBER 31.

Annexed is a portion of the circular issued this week by the London Cotton Brokers' Association :--There has been a better inquiry this week, with a firmer tone, and the sales are to a fair extent, considering the in-terruption of the holidays. For arrival there is no general improvement, and prices close about the same as last week. PRESENT QUOTATIONS.

MARKETS IN THE MANUFACTURING DISTRIOTS, BEADFORD.—This being the last market-day in the year business is unusually languid. The transactions in wool are effected to cover urgent requirements only. Prices in the

B

P

0

[Jan. 2, 1875.

finer classes of lustre hogs are firmly maintained, but in other classes, if anything, a shade easier. In the yarn market, operations are generally confined to the supply of immediate requirements. In the piece market business remains very quiet. BIRMINGHAM.—Business is nominally resumed at the local ironworks, but owing to the slackness of trade and the in-terruption caused in the supply of fuel and raw material by the freezing of the canals, the holidays will practically extend over the week. At the weekly meeting of the trade on 'Change transactions were few and unimportant, pending some authori-tative announcement as to the course of prices. Other than leading makers, it is believed, will reduce prices 1l per ton for marked bars, and 10s, or thereabout, for unmarked iron, con-ditional, of course, upon the expected reduction of coal and wages. wages.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

AMERICAN GRAIN AND FLOUR MARKETS. NEW YORK—December 18. The flour market has ruled dull for the past week, but there is no further decline in prices. The local trade usually operates sparingly as the holidays approach, and shippers have in some cases had their limits reduced, and in others cancelled altogether; but receipts have been moderate, and holders have not been inclined to make concessions, except to close out odd lots, or move small parcels on the wharves. The wheat market has been dull, with some depression in prices of enring growths, but vesterday there was a firmer feeling. The spring growths, but yesterday there was a firmer feeling. The receipts at the West are now somewhat smaller than one year ago, and a considerable reduction in stocks is now going forago, and a considerable reduction in stocks is now going for-ward, thus affording holders much encouragement, notwith-standing the large quantity in store at this point. Indian corn has been firmer. Much of the business in new corn was for export by steam to Liverpool. The receipts at the West are much larger now than one year ago, and we have besides unusually good supplies from the South, but stocks being quite small, the increased receipts do not have much effect as yet in weakening prices. To-day, the market was dull and weak. In oats the speculation has quite subsided. It was mainly on Western account, receiving little support from local operators, and the trade holding off with much pertinacity. The following are the closing quotations :--Flour: Superfine

operators, and the trade holding off with much pertinacity. The following are the closing quotations :-Flour: Superfine State and Western, \$4.20 to \$4.60; extra State, &c., \$5.00 to \$5.15; Western spring wheat extras, \$4.90 to \$5.20; ditto winter wheat X. and XX. \$5.50 to \$8.00; city shipping extras, \$5.10 to \$5.60; city trade and family brands, \$6.00 to \$7.50; Southern bakers' and family brands, \$7.00 to \$8.00; Southern shipping extras, \$5.50 to \$6.75; rya flour, superfine, \$5.20 to \$5.60; corn meal, Western, &c., \$4.25 to \$4.65 per brl. Grain: Wheat, No. 1 spring, \$1.20 to \$1.24; white, \$1.26 to \$1.38. Corn, Western mixed, 89c to 95c. Rye, 93c to 96c. Oats, mixed, 66c to 68c. Peas, Canada, \$1.15 to \$1.40 per bushel. \$1.40 per bushel.

The movement in breadstuffs at this market has been as

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK. MARK LANE, THURSDAY EVENING.

MARE LANE, THURSDAY EVENING. The trade during the week has been somewhat in-terrupted by the holidays, and by the general dispo-sition to curtail operations at the close of the year. The frost has, however, given considerable firmness to prices, and notwithstanding the limited demand that has existed, the tendency has been decidedly upward. English wheat has come forward very moderately, and imports of foreign have not differed materially from those of the pre-ceding week. In some of the country markets 1s per qr advance is quoted, and at Mark lane the business done was at the extreme of late rates. Coast cargoes in some instances show advance is quoted, and at Mark lane the business done was at the extreme of late rates. Coast cargoes in some instances show an advance of 2s to 2s 6d per qr. The quantity of wheat on passage has rather fallen off, and should the frost continue must do so more perceptibly, but up to the present time the port of Odessa remains open. There are, however, still fair supplies in view from abroad, and also in the country, but it may be noted that the common qualities of wheat continue to supplies in view from abroad, and also in the country, but it may be noted that the common qualities of wheat continue to be used to some extent for feeding purposes. In flour there has not been much passing, and no quotable change in value. Both malting and grinding descriptions of barley are harden-ing in value, and neither could now be so well bought as in the preceding week. Beans and peas have been in short supply, and have realised full prices. Oats have arrived largely, but are generally held very firmly, as supplies must shortly fall off unless the frost should break. For maize en-hanced rates are paid.

b 1b 1b 1b 1b 1b 1b 9d @ 10d ... 9hd @ 10d ... 11d ... 11d @ 1hd ... 11d @ 1s ICE.—Cargoes of soft grain cannot be bought at last week's rate RICE. especially those near at hand, and the market is firmer. Some Burmah rice has sold at 8s to 8s 44d, to be shipped from Calcutta to this king-dom, say about 1,000 tons, being part of the quantity not consumed during the late Indian famine. On the spot limited sales reported, including white Bengals at 11s 44d per cwt.

According to the "Rice Brokers' Circular" for the week ending the 31st December three cargoes Rangoon have sold at 9s 6d to 10s per cwt, the price varying with the conditions.

SHELAC.—The inquiry has been restricted to fine qualities. METALS.—The chief feature of interest to notice this week has been the upward movement of Straits tin. A large amount of business is reported at higher quotations. Straits, 95/ to 95/ 10s cash; to arrive, 94/ to 95/; Australian, 94/ cash. These rates are about 1/ 10s above last Thursday's. The price of Chili copper keeps low on account of the large charters in November and first half of December, but there is now rather more inquiry. Common bars quoted at 84/. English lead steady. Scotch pig iron had run down in price to 75s 6d caah on Wednesday, and afterwards recovered to 76s. Spelter firm. 120 tons sheet zinc (London rolled) by auction yesterday about half eold at 80/ to 30/ 2s 6d per ton. Parens of Mirats at the close of the last Fire Years.

ADDITIONAL NOTICES.

GREEN FAULT.—The report of Messrs Keeling and Hunt states the market for oranges and lemons, owing to larger supplies, cold weather, and demand for the holidays being finished, is lower. Barcelona nuts in good request. Brazil and black Spanish nuts firm in price. French walnuts and cheanuts without alteration. Pine apples from St Michael's

In good to desc. First and there spins and the apples from St Michael's selling at moderate rates. ENGLISH WOOL.—A steady demand; prices firm at late rates. COLONIAL WOOL.—As usual at this season of the year, the market is quiet; very little doing. FLAX.—Market quiet. HEMP.—Market steady at unaltered prices. SILK.—Market somewhat firmer in tone; rather more business doing. SEEDS.—All quotations unaltered except campy seed, which is realising higher prices owing to excessive scarcity. TOBADDO.—There has been but little business done in American tobacco during the past week, buyers having operated only for their most immediate requirements, which is usual at this period of the year; besides which holders show a strong disinclination to do anything beyond a retail business, preferring to hold what stocks they have, as but little, if any, addition is likely to be made to stock this year. Sub-situtes continue in active demand at higher prices. Segar tobacco much wanted. much wanted.

much wanted. LEATHER.—At this festive season there is generally very little business transacted in the leather trade, and this year has been no exception to the rule. A market was held at Leadenhall on Tues-day; the attendance was, however, very sparse, and the trade inactive. The supplies of fresh goods are very small, and prices are firmly maintaized.

maintained. METALS.—A Aery quiet week has prevailed through nearly all branches of our market. Copper has been very little dealt in, and

[Jan. 2, 1875.

prices are about 10s per ton easier. Tin is an exception, a steady business having been made daily, when the holidays have not pre-vented. Spelter and lead are quict, but maintain their value. Tin-plates continue firm at the advanced rates.

22

METROPOLITAN CATTLE MARKET. MONDAY, Dec. 28.—The total imports of foreign stock into London last week consisted of 4,380 head. In the corresponding week last year we received 6,730; in 1872, 2,367; in 1871, 4,514; in 1870, 5,059; and in 1869, 1,617 head.

portant sale of a first-class Tenyard and other Pres-old Property, also Stock in Trade, near Warrington,

bold Property, also Stock in Trade, near Warrington, Lancashire. **METREDK. T. LAURENCE HAS** been favoured with instructions from the owner, Charles Broadbent, Eq., to offer that valuable property, known as the Latchford Tannery, together with the goodwill of the old-established business, also a substan-ially built residence, cottages, and building land, by PUBLIC AUCTION, on the premises, at ELEVEN for TWELVE o'clock, on January 21st, 1875. The very valuable stock of leather, dry and in process of manufac-tars, cak bark, valonis, heavy Uruguay hides, &c., will be offered after the property, absolutely without reserve. If the freehold property is not d posed of as a whole, it will be offered in 5 lots, and should the tanyard then re-main unsold it will be offered on lease, the yearly rental for such term to be fixed by public auction. The iuquors, machinery, and trade utensils to be taken at a valuation by the purchaser or lessee of the tan, ard, plans, catalogues, and any further particulars can be obtained of Messes Laurence Brothers, 7 East India Avenue, London, E.C.

Avenue, London, E.C. SOUTH OF AUSTRIA AND UPPER ITALY RAILWAY COMPANY.
