For editors who are not logged into an account:

- IP addresses are **stored forever**, and
- IP addresses are **publicly available**

Whereas the IP addresses of editors who are logged into an account are only stored for 90 days and not shared publicly.

For more information, see our [Privacy policy](#) and [Data retention guidelines](#).

What is the problem we are trying to solve?

WIKIPEDIA
The Free Encyclopedia

User talk: **139.99.197.10**
From Wikipedia, the free encyclopedia

Shared IP address

This IP address, **139.99.197.10**, is registered to **Cognizant Technology Solution India Pvt Ltd** and may be shared by multiple users. If **proxy servers** or **firewalls** are used, this IP address may represent many users at many personal computers or devices.

For this reason, a message intended for one user may be received by another, and a block intended for disruptive users may also affect innocent users. If you are editing from this address and are frustrated by irrelevant messages, you can avoid them by **creating an account** for yourself. Sometimes, in response to **vandalism**, you may be temporarily unable to create an account.

If you are autoblocked repeatedly, contact your **Internet service provider** or network administrator and request it contact Wikimedia's **XFF project** about enabling X-Forwarded-For HTTP headers on its proxy servers so that blocks will affect only the intended user. Alternatively, you can list this IP address at [Wikipedia:WikiProject on XFFs](#).

⚠ In response to vandalism from this IP address, **abuse reports** may be sent to its network administrator for investigation.

Review contributions carefully if blocking this IP address or reverting its contributions. If a block is needed, administrators should consider a **soft block** using [Template:Anonblock](#).

S Network administrators, to monitor this IP address for vandalism, can subscribe to a **web feed** of this page in either **RSS** or **Atom** format.

March 2012 [edit]

i Welcome to Wikipedia. It might not have been your intention, but your recent edit removed content from [Retail banking](#). WIKIMANIA
SINGAPORE

What is the problem we are trying to solve?

- IP addresses are personal data.
- How we collect, use, and share personal data is subject to various laws.
- Our current status quo presents various risks:
 - Surveillance risks for our users
 - Legal risks
 - Falling short of user expectations

What is the problem we are trying to solve?

While addressing those risks, we also have to consider what our users need to protect the projects. **IP addresses are invaluable tools when dealing with harassment, abuse, and vandalism.**

We don't want to make changes without giving the communities appropriate mechanisms to handle the impact.

**WIKIMANIA
SINGAPORE**

Our approach

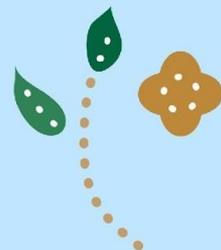

**WIKIMANIA
SINGAPORE**

Our approach

We have divided the work into these phases:

1. Build tools to **reduce our reliance** on IP addresses (directly)
2. **Mask IP addresses** and replace them with an anonymous identifier
3. Work with communities to **migrate existing software**

How does this address the problem?

For editors who are not logged into an account:

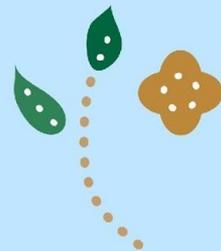

- IP addresses **will not** be stored forever, and
- IP addresses **will not** be publicly available

1. Reducing reliance on IP addresses

We built the **IP Info feature** to allow users who need access to critical data for anti-vandalism to do so without requiring access to the IP address itself.

We are adding a more reliable data source (Spur) to have better detection for proxies.

IP editors will receive a new identity:
a **temporary account**.

Temporary accounts will be tied to their browser and last as long as the cookie does (up to 12 months).

Rather than each edit attributed to an IP address, multiple IP addresses can be linked to a given temporary account.

Who can see IP addresses?

**WIKIMANIA
SINGAPORE**

Temporary account IP addresses will be accessible to the following users:

- Stewards and checkusers (by default)
- Admins who opt-in
- Patrollers who opt-in and have:
 - ≥ 300 edits,
 - ≥ 6 months old account, and
 - ≤ 1 project block

Communities are also encouraged to create more restrictive guidelines for patrollers.

For more information, see the policy at

[\[\[wmf:Access to temporary account IP addresses\]\]](#)

Who can see IP addresses?

IP addresses will **ONLY** be accessible to users who meet those requirements.

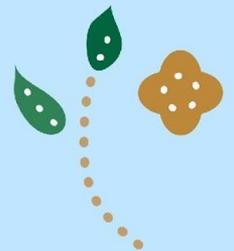

This does not include:

- Public access

Users who do not qualify can still use the IP Info feature as long as they are at least autoconfirmed.

3. Migrating tools

- Several tools also need IP address access to gather data about potential for abuse.
- These **tools will need to be updated** so that they can function after IP Masking deployment.
- We will **ask volunteers** to update tools maintained by them.
- We will **provide technical support** throughout this process, as needed.

IP Masking rollout will be **slow**. We will closely work with the communities to minimize disruption to existing workflows.

We will also focus on gathering community feedback with each rollout.

**WIKIMANIA
SINGAPORE**

Mockups

WIKIMANIA
SINGAPORE

Key design principles

Parity with legacy IP editor experience

Temporary accounts should feel ephemeral

Highlight incentives for creating an account and nudge user towards it

Clarity that anyone can edit

Guidance and education incorporated in the new experience

Unregistered editor: First edit

Kouign Amann

Kouign amann pastry

Type	Cake
Place of origin	France
Region or state	Brittany
Main ingredients	Yeast-leavened dough, butter, sugar

Media: Kouign-amann

Recipe [edit]

Individual cake

The strict original Douarnenez recipe requires a ratio of 40 percent dough, 30 percent butter, and 30 percent sugar.^[3] Traditionally, kouign-amann is baked as a large cake and served in slices, although recently, especially in North America, individual cupcake-sized pastries (kouignettes) have become more popular.^[*citation needed*]

Popularity [edit]

The kouign-amann has been a staple pastry at many Japanese bakeries after becoming popular in the late 1990s.^{[4][5]}

In 2014, episode 7 of *series 5* of the BBC's *The Great British Bake Off*^[6] featured the kouign-amann. In 2015, notable bakeries in New York,^[7] Washington D.C.,^[8] Boston,^[6] Salt Lake City,^[9] and San Francisco began to sell the pastry.^{[10][11][12]} In **Denver**, several bakeries offer varieties; some shorten the name to "queen".^[13]

Block user

[Help](#)

Use the form below to block write access from a specific IP address or username. This should be done only to prevent vandalism, and in accordance with policy. Fill in a specific reason below (for example, citing particular pages that were vandalized). You can block IP address ranges using the CIDR syntax; the largest allowed range is /16 for IPv4 and /19 for IPv6.

Username, IP address, or IP range

*1729

This is a temporary user using the following IPs: **103.125.51.171**, **103.125.53.189**, [see 43 more](#)

Block type

- Sitewide**
Blocks editing on all pages and namespaces. Also blocks default actions ([See help](#))
- Partial**
Allows you to select pages and namespaces to block. Doesn't block default actions but lets you block certain specific actions.

Things to do

WIKIMANIA
SINGAPORE

We need your help!

WIKIMANIA
SINGAPORE

Help us track down volunteer tools that will need changing.

- File tasks for impacted tools on Phabricator.
 - Use the tag [#IP Masking](#)
- You can also drop a comment on [\[\[phab:T337012\]\]](#)
- When mentioning a tool please include:
 - **A link to the tool**
 - **Brief description of what it does**
 - **The wiki(s) it is active on**

We need your help!

**WIKIMANIA
SINGAPORE**

- Help us expand technical documentation:
 - [\[\[mw:Help:Temporary accounts\]\]](#)
 - You can help us expand this to include specific guidance for gadgets, templates, lua modules etc.
- Help us migrate tools that will need migrations to adapt to the upcoming changes.

Resources

- Project page on Meta-Wiki: <https://w.wiki/3V8N>
- IP Masking work-in-progress is deployed on [German Beta Wikipedia](#) which can be used for testing purposes.
 - Note: Not all workflows have been implemented yet.
- Technical documentation on MediaWiki under [Help:Temporary Accounts](#)
- IP Masking main task on Phabricator: [\[\[phab:T324492\]\]](#)

Timeline

**WIKIMANIA
SINGAPORE**

Estimated roadmap

Milestone	Estimated completion time
First version of IP Masking in MediaWiki and deployed on test.wikipedia.org	End of 2023
WMF teams update software they own	October 2023
Pilot wiki test (on a small wiki without a lot of IP traffic)	March 2024
Volunteer-owned tools are updated	Until deployment on respective wikis

Thank you
