ELEMENTARY

GREEK GRAMMAR,

BASED ON THE

LATEST GERMAN EDITION

OF

KÜHNER, K.

BY

CHARLES O'LEARY, M. A.,
PROFESSOR OF GREEK IN MOUNT ST. MARY'S COLLEGE, MARYLAND.

NEW YORK:

D. & J. SADLIER & CO., 164 WILLIAM STREET;

128 FEDERAL St., BOSTON; AND CORNER OF NOTRE DAME AND

St. Francis Xavier Streets, Montreal, C. E.

1856.

Educt 1118.56.500

Entered according to Act of Congress, in the year 1856,
By CHAS. O'LEARY,

In the Clerk's Office of the District Court of the United States for the District of Maryland.

John F. Thow,
Printer, Stereotyper, and Electrotyper,
377 & 379 Broadway,
Cor. White Street, New York.

PREFACE.

THE Grammar here offered is an abridgment of the System of modern German Grammars. Such a book for beginners seems called for in the unanimous preference given by Scholars to this system, over the imperfect system of the grammars now in use. The study of the language is no longer confined to artificial rules; its growth and its changes are shown to be according to known principles and laws. The excellence of the system here offered consists in making the student acquainted with these principles, and thereby employing his reason in that part of his education, where memory only was exercised by the old method.

We have had, moreover, an opportunity of observing and testing its value as a method of Elementary Instruction. It has been taught for some time in the College to which we are attached, with all the advantage to the student that was anticipated. We saw no other objection to its being universally adopted, than the copious form in which it has been presented both in the German Grammars, and in their English versions. With the view of removing this objection, and of giving the junior student the benefit of a system so highly prized by the scholar, we have compiled the present Elementary Grammar. We have followed the Grammars of Kühner, known as his "Large" and "School" Grammars. These have been selected, as being more methodical and scientific in their arrangement than any others that have come under our observation. Omitting the

learned dissertations and numerous details of the original, we have endeavored to furnish to the student, in a concise and simple form, whatever is of general application.

The advantages this system of grammar possesses over the common method are principally these:

1st. The forms and changes (of words) are traced to a few general principles and thereby are subjected to a scientific classification.

2d. The multitude of details, ever embarrassing to the student, are comprised in a few comprehensive rules.

3d. What were regarded as exceptions and anomalies, are brought under the established laws of the language.

4th. Rules founded on a profound knowledge and scientific analysis of the language are substituted for arbitrary formulas.

It remains only to state, that such an arrangement has been adopted as will best unfold these elements to the learner.

In this arrangement a knowledge of the laws that govern the interchange of letters becomes an essential introduction to the study of inflections.

In every manner of inflection the changeable part of the word is carefully distinguished from the unchangeable part or stem.

The principles of contraction are given in a few rules, which if duly impressed on the mind of the student, will save him from the embarrassing exercise of reciting examples.

Verbs in μ a are reduced to a common principle of Tense-formation, and thereby, it is hoped, divested of the confusion and irregularity which made them a puzzle to the student.

The syntax will be found to run in accordance with the more copious syntax of Kühner and Jelf.

Instead of a number of unconnected rules, the principle of each case is first laid down, and the various constructions are shewn to be modifications of this principle.

C. O'L.

PART I.
ETYMOLOGY.

CHAPTER I.

§1. Letters.

FORM	•	SOUND.	NAM	E.
\boldsymbol{A}	a	a	"Αλφα	Alpha
\boldsymbol{B}	ß	Ъ	$B\check{\eta} aulpha$	$\bar{ m Beta}$
$oldsymbol{arGamma}$	γ	g	Γάμμα	Gamma
⊿	δ	f g	Δέλτα	Delta
$oldsymbol{E}_{\perp}$	E	e short	'Έ ψιλόν	$\mathbf{Eps}\overline{\mathbf{llon}}$
$oldsymbol{Z}$	5	${f z}$	$Z\check{\eta} aulpha$	Zēta
$oldsymbol{H}$	η	e long	Ήτα	Eta
$\boldsymbol{\varTheta}$	$\boldsymbol{\vartheta}$	\mathbf{th}	Θῆτα	Thēta
I	L	i	Ίῶτα	Iōta .
K	×	k	Κάππα	Kappa
1	λ	1	Λάμβδα	Lambda
M	μ	${f m}$	$M\check{v}$	$\mathbf{M}\mathbf{u}$
N	ν	${f n}$	$N ilde{m{v}}$	Nu
Ξ	Ĕ	X	Ξĩ	Xi

FORM		SOUND.	NAME	l .
0	0	o short	"Ο μιχρόν	Omīkron
П	π	p ·	Πĩ	\mathbf{Pi}
$oldsymbol{P}$	Q	r	${}^{\backprime}P ilde{\omega}$	$\mathbf{R}\mathbf{ho}$
$oldsymbol{arSigma}$	σς	8	Σίγμα	Sigma
T	τ	t	$Tlpha ilde{ u}$	Tau
Y	\boldsymbol{v}	u	³Υ ψιλόν	\mathbf{Y} psīlon
$oldsymbol{\Phi}$	φ	${f ph}$	Φi	$\bar{ ext{Phi}}$
\boldsymbol{X}	x	$\ddot{\mathbf{ch}}$	Χĭ	\mathbf{Chi}
$m{\varPsi}$	$oldsymbol{\psi}$	$\mathbf{p}\mathbf{s}$	$\Psi \tilde{\iota}$	\mathbf{Psi}
${oldsymbol \Omega}$	ω	o long	Ω μέγ $lpha$	Omĕga

The letters are pronounced like the Latin characters placed opposite to them.

Rem. Iota is pronounced like the English ie.

 γ before the palatals γ , \varkappa , χ , ξ , like ν .

 ζ is made up of ds, and is to be pronounced accordingly. Thus $\tau \rho \dot{\alpha} \pi \epsilon \zeta \alpha$, pronounced $\tau \rho \dot{\alpha} \pi \epsilon \delta \sigma \alpha$.

 σ final assumes the form of ς . When Sigma concurs with τ they are written as one character, ς , called Stigma.

 τ always retains its own sound; never taking the sound of c before i, as in English and Latin.

§2. Vowels.

1. Letters are divided into vowels and consonants. Vowels have each two sounds, a long and a short. The long sounds of ε and o are denoted by distinct characters, η and ω . The sounds of the others may be distinguished by the mark (-) for long, and (-) for short, placed over them; thus, $\bar{\alpha}$, $\check{\alpha}$.

- 2. The vowels α , ι , ν , are regarded as the radical vowel sounds. The others are subordinate to them. Thus ε is intermediate to α and ι , and o, to α and ν .
- 3. Vowels coming together are sometimes blended into one sound, which is called a diphthong.
- 4. In Greek, diphthongs are formed by the union of ι and ν with the other vowels.

$$\alpha + \iota = \alpha \iota \text{ pronounced as } \alpha i \text{ in aisle, as } \alpha i'.$$

$$\alpha + \nu = \alpha \nu \qquad \text{``au in fraud, as } \nu \alpha \nu \varsigma.$$

$$\varepsilon + \iota = \varepsilon \iota \qquad \text{``in fight, as } \delta \varepsilon \iota \varrho \alpha.$$

$$\varepsilon + \nu = \varepsilon \nu \qquad \text{``eu in feud, as } \varphi \varepsilon \iota \nu \varphi \omega.$$

$$o + \iota = o \iota \qquad \text{``oi in void, as } o \iota \delta \alpha.$$

$$o + \nu \\ \omega + \nu \\ = o \nu \qquad \text{``ev in sound, as } \delta o \iota \varrho o \varsigma,$$
or with some like ou in group.
$$v + \iota = \nu \iota \qquad \text{``like the pronoun } w e, \text{ as } \nu \iota \circ \varsigma, \text{ or } w h i, \text{ in white.}$$

5. When ι forms a diphthong with the vowels $\bar{\alpha}$, η , ω , its sound is suppressed, and instead of being written with the long vowel it is subscribed—as $\alpha\iota\sigma\chi\varrho\bar{\alpha}$ for $\alpha\iota\sigma\chi\varrho\bar{\alpha}\iota$; $\alpha\iota\sigma\chi\varrho\bar{\alpha}\iota$; $\alpha\iota\sigma\chi\varrho\bar{\alpha}\iota$.

§3. Contraction of Vowels.

1. Contraction is the blending of two sounds or two letters into one, to prevent the hiatus that would arise from the concurrence of a number of vowels. The diphthong is the simplest form of contraction, but it is limited to the combinations mentioned (§2-4). All other combinations are comprised under the four following rules:

- 2. I. Both vowels coalesce into a cognate long vowel or diphthong.
- II. A short vowel is absorbed by a long vowel or diphthong preceding or following it.
- III. The short vowels α , ι , ν , absorb the following vowel and become long.
- IV. When a short vowel precedes a diphthong, it coalesces with the first vowel of the diphthong, whilst the second is entirely absorbed, unless it is ι , which is subscribed.

EXAMPLES OF THE FOREGOING RULES.

RULE I.

$$\varepsilon + \varepsilon = \varepsilon \iota \text{ as } \varphi i \lambda \varepsilon \varepsilon \text{ contracted into } \varphi i \lambda \varepsilon \iota.$$

$$\alpha + \alpha = \bar{\alpha} \quad \mu \nu \dot{\alpha} \quad \mu \nu \bar{\alpha}.$$

$$\sigma + \alpha = \omega \quad \delta \varphi \dot{\alpha} \rho \mu \varepsilon \nu \quad \delta \varphi \bar{\omega} \mu \varepsilon \nu.$$

RULE II.

$$\epsilon + \epsilon \iota = \epsilon \iota$$
 " $\varphi \iota \lambda \dot{\epsilon} \epsilon \iota \varsigma$ contract. into $\varphi \iota \lambda \tilde{\epsilon} \iota \varsigma$.

 $\eta + \epsilon = \eta$ " $\dot{\nu} \lambda \dot{\eta} \epsilon \sigma \sigma \sigma$ " $\dot{\nu} \lambda \tilde{\eta} \sigma \sigma \sigma$.

RULE III.

$$\begin{array}{lll} \alpha + \varepsilon &= \bar{\alpha} \quad \text{``$\tau i \mu \alpha \varepsilon$ contracted into $\tau i \mu \dot{\alpha}$.} \\ \iota + \varepsilon &= \iota \quad \text{``$\pi o o \tau \iota \varepsilon \varsigma$ & $\pi o o \tau \iota \alpha \varsigma$ `` $\pi o o \tau \iota \varsigma$.} \\ \upsilon + \varepsilon &= \upsilon \quad \text{``$i \chi \vartheta \dot{\nu} \varepsilon \varsigma$} \quad \text{``$i \chi \vartheta \dot{\nu} \varsigma$.} \end{array}$$

RULE IV.

$$\alpha + o\iota = \varphi$$
 " τιμάσιμι cont'd into τιμῷμι. $\alpha + o\nu = \omega$ " πειράσν " πειρώ. $\varepsilon + \varepsilon \alpha \iota = \eta$ " ποιέ-εαι " ποιῆ.

3. The following examples comprise all the forms of contraction according to the foregoing rules.

[•] Into η in the third declension.

[†] Into ει in Accusative Plural of the third declension, as πόλεας, πολεῖς.

[‡] Into a in some adjectives, and into ov in Accusative Plural of syncopated and contracted adjectives, μειζόας, μειζόας (§25).

[§] Into η in certain adjectives.

$$\begin{array}{lll}
o + \iota &= o\iota \text{ as } \alpha i\delta \acute{o} i & \alpha i\delta o i \\
o + \alpha \iota &= \alpha \iota \text{ " } \dot{\alpha}\pi\lambda \acute{o}\alpha \iota & \dot{\alpha}\pi\lambda\alpha i \\
o + \epsilon\iota \\
o + \eta \\
o + o\iota
\end{array}
= o\iota \text{"} \left\{ \begin{array}{ll}
\mu\iota\sigma\vartheta \acute{o}\epsilon\iota \\
\mu\iota\sigma\vartheta \acute{o}\eta \end{array} \right\} \mu\iota\sigma\vartheta \acute{o} i$$

- 4. Crasis contracts vowels concurring in separate words, when these words are closely related, as the article and its noun, the conjunction and the word it connects; as τὸ ὄνομα, τοὔνομα. A comma placed over the vowel marks crasis.
- 5. Elision removes a final vowel before the initial of the following word; as $i\pi'$ $\alpha \ddot{\nu} \tau \omega$ for $i\pi'$ $\alpha \ddot{\nu} \tau \omega$. It is limited in prose to prepositions, some forms of the pronouns, and verbs of familiar use; as $g\eta \mu \iota$, $oi\delta \alpha$, $i\iota \mu \iota$, &c. A long vowel is never elided.
- 6. Synezēsis contracts only in pronunciation, and is confined to particles and adverbs; as $\mu \dot{\eta}$ o \ddot{v} , to be read $\mu o \ddot{v}$.
- 7. Besides the foregoing vowel-changes, others are made by the substitution of a strong vowel for a weaker. In this way Epsilon, being the weakest of the vowels, is very often displaced as a final letter by other vowels; as will be seen in the inflection of nouns and adjectives.

§4. Consonants

1. Are divided into Palatals, γ , \varkappa , χ , pronounced from the palate; into Linguals, δ , τ , ϑ , ν , ϱ , σ , pro-

nounced from the tongue; into Labials π , β , φ , pronounced from the lips.

- 2. Consonants produced by the same organ of speech are said to be cognate. Thus γ , κ , χ are cognate consonants.
- 3. The consonants are divided again, according to the stress required in pronouncing them, into

Breathings.—The Aspirate (') which corresponds to h; the Sibilant (ς); the Digamma, dropped from writing, but in sound resembles V or F.

Liquids.— λ , μ , ν , ϱ , so called from the facility with which they flow into other sounds.

Mutes.— π , β , φ , γ , \varkappa , χ , τ , δ , ϑ .

§5. Division of Mutes.

1. Mutes are divided according to the organs of utterance into 3 palatals, \varkappa , γ , χ ; 3 linguals, τ , δ , ϑ ; 3 labials, π , β , φ .

Again, they are divided according to the breathings into 3 smooth containing one of each of the other divisions, π , \varkappa , τ ; 3 middle, β , γ , δ ; 3 aspirate, φ , χ , ϑ . The following diagram represents the mutes in this twofold division.

	вмоотн.	MIDDLE.	ASPIRATE.	
Palatals	×	γ	x	καππα mutes
Linguals	τ	δ	Э	ταυ "
Labials	π	β	φ	πι "

- 2. Mutes of the same breathing are called coördinate.
- 3. The aspirate mutes are formed by the union of a mute of each order with the aspirate breathing. Their combination with the sibilant breathing ς gives rise to the double letters ξ , ψ , ζ , $= \gamma \varsigma$, $\pi \varsigma$, $\delta \varsigma$.

The breathings in relation to vowels* are divided into the soft (') and aspirate ('). The latter is equivalent to the letter h.

§6. Changes of Consonants.

- 1. The tendency in language to attain euphony or harmony of sound by assimilation of letters has led to many changes both in vowels and consonants, from the original and radical forms of the words. These changes can be classified under general heads. The following rules will guide the beginner in tracing them through all combinations, and will enable him to anticipate them under certain conditions in the inflection of de clinable words. The radical form of the word will be
 - * In diphthongs the second vowel bears the breathing sign.

given in each example, in order that the student may see in accordance with what rules and principles the changes occur.

MUTE CHANGES.

- 2. I. Mutes assimilate by partaking the same breathing.
- II. The smooth and middle labials and linguals before an aspirate palatal are changed into aspirates, as $\vec{\epsilon} \tau \dot{\nu} \pi \vartheta \eta$ by assimilation $\vec{\epsilon} \tau \dot{\nu} \varphi \vartheta \eta$, $\vec{\epsilon} \lambda \dot{\epsilon} \gamma \vartheta \eta$ by assimilation $\vec{\epsilon} \lambda \dot{\epsilon} \chi \vartheta \eta$.
 - III. The following is the order of concurrence: a smooth (π, \varkappa) before a smooth τ ; a middle (β, γ) before a middle δ ; an aspirate (φ, χ) before an aspirate ϑ

3. Examples.

										STEM
β mid.	ъ	efore	τ	smooth	changed	into	π	smooth,	ας τέτριβ-ται	(τριβ) τέτριπ-ται
φ asp.		"	τ	46	"	"	π	"	τέτρεφ-ται	(τρεφ) τέτρεπ-ται
γ mid.		"	τ	46	46	"	κ	"	λέ-λεγ-ται	(λεγ) λέ-λεκ-ται
χasp.		"	τ	46	"	66	κ	66	βέβρεχ-ται	(βρεχ) βέβρεκ-ται
π smoo	th	66	δ	mid.	"	"	β	mid.		(κυπ) κύβ-δα
φ asp.		"	δ	44	46	"	β	"		(γραφ) γράβ-δην
K Smoo	th	"	δ	"	66	66	γ	66		(πλεκ) πλέγ-δην
χ asp.		"	δ	44	44	66	γ	66		(βρεχ) βρέγ-δην
π smoo	th	"	ક	asp.	66	"	φ	asp.		(τυπ) ἐ-τύφ-ϑη
β mid.		"	ð	"	66			ü		(τριβ) ϵ-τρίφ-ϑη
K Smoo	th	"	ð	"	66	"	'n	"	1 1	(πλεκ) έ-πλέχ-δη
γ mid.		"	3	"	"	"	,-			$(\lambda \epsilon \gamma) = \hat{\epsilon} - \lambda \hat{\epsilon} \chi - \Im \eta$

4. The concurrence of coördinate mutes takes place not only in the inflection of verbs and nouns—but also in the formation of derivative words—and even in sep-

arate words. In the last case crasis and elision often give occasion for a change of mutes by bringing different breathings together, as $\vec{\alpha}\pi\hat{o}$ o \ddot{v} ; by elision $\vec{\alpha}\pi'$ o \ddot{v} , by assimilation $\vec{\alpha}\varphi'$ o \ddot{v} ; $\tau\hat{\alpha}$ $\tilde{\epsilon}\tau\epsilon\rho\alpha$, by crasis $\vartheta\tilde{\alpha}\tau\epsilon\rho\alpha$.

5. This principle is limited to mutes of different organs; as, if two aspirates of the same kind come together, one is changed to a smooth or to a different letter. Thus $\Sigma \acute{a}\pi \varphi \omega$ for $\Sigma \acute{a}\varphi \varphi \omega$.

6. A Lingual followed by another Lingual is changed into σ ; as $\vec{\epsilon}\pi\epsilon i\vartheta - \vartheta \eta\nu$ (stem $\pi\iota\vartheta$) changed into $\vec{\epsilon}\pi\epsilon i\sigma - \vartheta n\nu$.

7. A Lingual followed by ι is changed into σ . Thus $\pi \lambda o \acute{\nu} r o \varsigma$, adjective $\pi \lambda o \acute{\nu} \sigma \iota o \varsigma$, instead of $\pi \lambda o \acute{\nu} r \iota o \varsigma$; $M \iota \lambda \acute{\eta} r o \varsigma$, adjective $M \iota \lambda \acute{\eta} \sigma \iota o \varsigma$.

- 8. Iota produces a like change in Palatals as τάχυς, ταχίων, for which θασίων. In some instances Iota assimilates itself to the change it produces; in the example given θασσων is more common than θασίων. So βράδυς, βραδίων, for which βρασίων changed to βράσσων.
- 9. Two aspirates cannot begin two successive syllables; when the middle part of a word loses the aspirate belonging to it, it is transferred to the beginning; Ex. Ex. Ex. of from $E_{\chi}\omega$, to have.

§7. Changes required by the Concurrence of Liquids and Mutes.

1. A Pi-Mute before μ is changed into μ , as $\tau \dot{\varepsilon}$ - $\tau \nu \pi$ - $\mu \alpha \iota$ (stem $\tau \nu \pi$) $\tau \dot{\varepsilon} \tau \nu \mu$ - $\mu \alpha \iota$.

A Kappa-Mute before μ into the mid. γ ; as $\pi \acute{\epsilon}$ - $\pi \lambda \epsilon \varkappa$ - $\mu \alpha \iota$ (stem $\pi \lambda \epsilon \varkappa$), $\pi \acute{\epsilon}$ - $\pi \lambda \epsilon \gamma$ - $\mu \alpha \iota$.

A Tau-Mute before μ into σ ; as $\pi \dot{\epsilon}$ - $\pi \epsilon i \vartheta$ - $\mu \alpha i$ (stem $\pi \epsilon i \vartheta$), $\pi \dot{\epsilon}$ - $\pi \epsilon i \sigma$ - $\mu \alpha i$.

- 2. The labial β before ν is changed into μ ; as $\sigma \not\in \beta$ - $\nu \circ \varsigma$ (stem $\sigma \in \beta$) changed to $\sigma \not\in \mu \nu \circ \varsigma$.
 - 3. ν before a labial into μ ; as $\epsilon \mu \pi \epsilon i \rho \iota \alpha$ for $\epsilon \nu \pi \epsilon i \rho \iota \alpha$.
- ν before a palatal into γ ; as $\sigma v \gamma$ $\tau \lambda \dot{\epsilon} \omega$ for $\sigma v \nu$ καλέω, $\sigma v \gamma$ χρόνος for $\sigma v \nu$ χρόνος. Exfore enclitics ν is not changed; as $\ddot{\sigma} v \pi \dot{\epsilon} \rho$ τόν $\gamma \dot{\epsilon}$ (neither is it before Tau-Mute; as $\sigma v \nu \delta \dot{\epsilon} \omega$).

§8. Mutes and Liquids with the Sibilant σ .

- 1. The labials and palatals combine with Sigma to form the double letters ξ and $\psi = (\gamma + \varsigma)$ ($\pi + \varsigma$). The preposition $\varepsilon \varkappa$ before σ remains unchanged.
- 2. A Tau-Mute before σ is dropped; as $\pi\epsilon i\sigma\omega$ for $\pi\epsilon i\vartheta$ - $\sigma\omega$ (stem $\pi\iota\vartheta$), $\lambda\alpha\mu\pi\alpha\sigma\iota$ for $\lambda\mu\mu\alpha\delta\sigma\iota$ (stem $\lambda\alpha\mu\pi\alpha\delta$). The same happens before κ ; as $\psi\epsilon\dot{\nu}\delta$ - ω , $\ddot{\epsilon}$ - $\psi\epsilon\nu$ - $\kappa\alpha$ for $\ddot{\epsilon}$ - $\psi\epsilon\nu\delta$ - $\kappa\alpha$.
 - 3. ν before σ is dropped; as $\mu \acute{\epsilon} \lambda \alpha \varsigma$ for $\mu \acute{\epsilon} \lambda \alpha \nu \varsigma$.
- 4. A Tau-Mute and ν occurring together before σ are dropped. To compensate, the vowel is lengthened; as $\tau \dot{\nu} \varphi \vartheta \epsilon \iota \varsigma$ for $\tau \dot{\nu} \varphi \vartheta \epsilon \nu \tau \varsigma$, $\tau \nu \pi \tau o \dot{\nu} \sigma \alpha$ for $\tau \dot{\nu} \pi \tau o \nu \tau \sigma \alpha$, $\tilde{\epsilon} \lambda \mu \iota \sigma \iota$ for $\tilde{\epsilon} \lambda \mu \iota \nu \vartheta \sigma \iota$.
- 5. $\sigma \dot{\nu} \nu$ in composition with σ followed by a vowel has ν assimilated to σ ; with σ followed by a consonant, or ζ , ν is dropped; as $\sigma \nu \sigma \sigma \omega \zeta \omega$ from $\sigma \nu \nu$ and $\sigma \dot{\omega} \zeta \omega$; but $\sigma \dot{\nu} \nu \sigma \tau \eta \mu \alpha$ is changed to $\sigma \dot{\nu} \sigma \tau \eta \mu \alpha$; σ also undergoes assimilation with ν ; as $\dot{\epsilon} \nu \nu \nu \nu \mu \iota$ for $\dot{\epsilon} \sigma \nu \nu \mu \iota$.

6. In the Nom. of the third declension, σ is omitted after ρ and ν , and the preceding vowel is lengthened; as $\dot{\rho}\dot{\eta}\tau\omega\rho$ for $\dot{\rho}\dot{\eta}\tau\rho\rho\varsigma$, $\dot{\epsilon}\dot{\iota}\varkappa\omega\nu$ for $\dot{\epsilon}\dot{\iota}\varkappa\nu\varsigma$.

FURTHER CHANGES.-LIQUIDS.

- 7. When the same liquid occurs in two successive syllables of a compound, one is changed; as κεφαλαλγία, for which κεφαλαργία. ν is assimilated to λ in composition, as συλλέγω, ὅλλυμι, for συν-λέγω, ὅλ-νυμι.
- 8. The harsh sound produced by the concurrence of μ and ν with ϱ , is avoided by the insertion of β and δ , as $\mathring{\eta}\mu\varrho\sigma\tau\sigma\nu$ changed to $\mathring{\eta}\mu\beta\varrho\sigma\tau\sigma\nu$, $\mathring{\alpha}\nu\varrho\sigma\varsigma$ to $\mathring{\alpha}\nu\delta\varrho\sigma\varsigma$.

Besides the foregoing changes, which apply to the inflection and formation of words, the radical parts of words are often changed by the addition of a consonant or the lengthening of a vowel for the purpose of strengthening them. The most important of these changes will be classified under general heads in treating of verbs, where they are of most common occurrence. In strengthening by consonants of the same kind, only the liquids, $\sigma i \gamma \mu \alpha$, and the mute τ can be doubled in common language. Changes also arise from the removal of consonants from the end of words, as only the three consonants ν , σ , ρ can terminate a Greek word. The proclitics our and ex are exceptions, but they may be regarded as embodied in the word that follows them.

§9. Division of Syllables.—Accent.

- 1. Every vowel pronounced by itself, or with one or more consonants, constitutes a syllable.
- 2. When a word consists of more than one syllable, these are divided into the radical syllable, or root, which contains the main idea, and the syllables of formation, which give this idea the character of verb, noun, adjective, or adverb. Thus from the radical $\varphi \iota \lambda$, denoting "friendliness," is formed, by the addition of $\tilde{\omega}$, the verb $\varphi \iota \lambda \tilde{\omega}$, "to love;" of $\iota \alpha$, the noun $\varphi i \lambda \iota \alpha$, "friendship;" of $o \varsigma$, the adjective $\varphi i \lambda o \varsigma$, "dear;" of $\omega \varsigma$, the adverb $\varphi \iota \lambda \omega \varsigma$, "friendly."
- 3. Every syllable is long or short as the vowel in it is long or short. Diphthongs and contracted vowels are always long.
- 4. A vowel that is naturally short becomes long before two consonants, or the double letters ξ , ψ , ζ .
- 5. Besides pronunciation according to quantity, the Greeks used accents to mark the syllables which receive the tone.
- 6. There are three accents; the acute, marked thus ('), the grave ('), and the circumflex, formed of the acute and grave (").
- 7. The acute denotes that the syllable is to receive the rising tone; the grave, the heavy or falling tone; the circumflex, the full prolonged tone. The syllable that receives the circumflex must be naturally long.
 - 8. The acute may rest on any of the three last syl-

lables of a word; if the last syllable is long, it cannot be farther back than the penult. The circumflex may rest on the penult, or last syllable; if, however, the last syllable is long, it cannot rest on the penult, but must be changed into the acute.

9. There are certain words, which being blended in the pronunciation with other words, receive no separate accent, and hence are called enclitics, or proclitics, as they precede or follow the words into which their accentuation is absorbed. These are principally adverbial particles, prepositions, some of the pronouns, and the verbs, $\epsilon i \mu i$, to be, $\varphi \eta \mu i$, to say.

Note.—It is obvious that, as by inflection the syllables of a word vary in number and quality, the accent must also shift its position. For further on the accent, see §143 on Accent.

CHAPTER II.

ETYMOLOGY, OR GRAMMATICAL FORMS.

§10. Parts of Speech.—Declension.

1. The parts of speech are eight:

I. Substantives.

II. Adjectives.

II. Pronouns.

IV. Numerals.

V. Verbs.

VI. Adverbs.

VII. Prepositions. VIII. Conjunctions.

Rem.—Words are either essential or formal. Essential words express an independent idea. The formal denote the relations of ideas to one another. The essential words are the substantive, adjective, and verb.

- 2. The essential words, with the pronouns, are inflected, in order to denote their different relations in a sentence.
- 3. The inflection of the substantive, adjective, and pronoun, is called Declension; that of the verb, Conjugation.
- 4. The former are inflected only by number, gender, and case.
- 5. The Greeks have three numbers—two, singular and plural, corresponding to the English and Latin, and the dual, to denote the number two.
- 6. Three genders, as in Latin, determined partly by the signification of words, partly by their terminations. The termination marks of gender will be given under each declension.
- 7. There are three declensions, first, second, and third, distinguished by the inflection endings of the Nom. and Gen. cases.
- 8. Nouns and adjectives of the neuter gender have the same inflection ending for the Nom. Acc. and Voc. In the plural this ending is α .
- 9. The dual of all nouns and adjectives has the Nom. Acc. and Voc. alike, also the Gen. and Dat.

§11. THE ARTICLE. DECLENSION OF \dot{o} , $\dot{\eta}$, $\tau \dot{o}$.

1. This was originally a pronoun, and is always used as such in Homer. It is therefore omitted from a place among the parts of speech. Joined to a noun, it denotes its gender, and also serves to limit and specify its meaning.

It is inflected as follows:

	81	NGULAR.			PLURAL.	
Nom. Gen. Dat. Acc. Voc.	τοῦ τῷ	ή τῆς τῆν	τοῦ τῷ	τῶν τοὶς	αί τῶν ταὶς τὰς	τὰ τῶν τοῖς τὰ
Nom.) Acc. } Voc. } Gen. } Dat.		τά τοῖι	τώ • τοῖν			

§12. Inflection of Nouns. 1st Declension.

1. The nouns of this declension are of the Masc. or Fem. gender. They are of the ending α , η , Fem.; αs , ηs , Mas.

2. Case endings of the 1st declension.*	2.	Case	endings	\mathbf{of}	the	1st	declension.*	
---	----	------	---------	---------------	-----	-----	--------------	--

	FEMININE.			MASCULINE.		OF ALL NOUNS.		
		Sing	ular.		Sing	gular.	Plural.	Dual.
Nom.	ă	ū	or	η	as c	or ns	αι	α
Gen.	713	αç		ης	l '	ν	ων	αιν
Dat.	η	ą		η			αις	αιν
Acc.	ŭν	ą ŭv		ην	αν	ην	ας	ce
Voc.	ŭ	ā		η	ũ	ηἄ	$\alpha \iota$	α

- 3. The case endings of the dual and plural are the same for the different genders and terminations. The Gen. plural is always circumflexed.
- 4. If η is the ending of the Nom. it is retained throughout the singular. α of the Nom. is changed into η in the Gen. and Dat., unless ϱ or the vowels α , ι , ε , precede it. When ϱ , α , or ϱ , precedes, the ending is η .
- 5. The following nine nouns, however, end in α, viz: πόα, στόα, γύα, σικύα, καφύα, ἐλάα, ἀλωά, χρωα, ναυσικάα.
- * As words are divided (§9, 2) into the radical part, or root, which contains the fundamental idea, and the ending syllable or letter which gives that idea the character of a verb, a noun, an adjective, or an adverb; so again, every declinable word is divided into the stem and the inflection syllables. The stem bears with it the main idea, the inflection syllables give the relations of this idea in a sentence; if a noun, the inflection endings give the different case relations (§114); if a verb, the inflection endings (or syllables) give the relations of Tense, Mode, Person, and Number (§46). In inflection, then, the stem of every word is to be preserved unchanged, unless otherwise required by euphony; the syllables of inflection alone are subject to varia-

FIRST DECLENSION.

Paradigm. Feminine Substantives.

Sing.	a through all cases of the Singular.	η through all cases of the Singular.	α changed to η in Genitive and Dative.
Nom.	ή χώρα,place.	γνώμη,thought.	δόξα, opinion.
Gen.	τῆς χώρας	γνωμῆς	δόξης
Dat.	τῆ χώρα	γνώμη	δόξη
Acc.	τὴν χώραν	γνώμην	δόξαν
Voc.	ὧ χώρα	γνώμην	δόξα
Nom.	αί χῶραι	γνώμαι	δόξαι
Gen.	τῶν χωρῶν	γνωμῶν	δοξῶν
Dat.	ταῖς χώραις	γνώμαις	δόξαις
Acc.	τὰς χώρας	γνώμας	δόξας
Voc.	ὧ χῶραι	γνώμαι	δόξαι
Nom.) Acc. } Voc. } Gen. { Dat. }	τὼ* χώρᾶ	γνώμα	δόξα
	τοῖν χώραιν	γνώμαιν	δόξαιν

6. ἀλαλά, war-cry,—proper names, as ᾿Ανδφόμεδα, Αήδα, Γήλα, Φιλομήλα,,—nouns that contract ἄα into $\bar{\alpha}$, as $\mu\nu\dot{\alpha}\ddot{\alpha}$, retain the α , though not preceded by ρ , in all cases of the singular.

tion. When the syllables of inflection are appended directly to the root, the latter and the stem are identical. Ex. $\dot{\eta}$ $\ddot{\delta}\psi$, "the voice;" Gen. $\ddot{\delta}\pi$ -os (root and stem, $o\pi$); τo - $\pi p \dot{\alpha} \gamma \mu a$, "the thing;" Gen. $\pi p \alpha \gamma \mu a \tau$ -os (ste. $\pi p \alpha \gamma \mu a \tau$, root $\pi p \alpha \gamma$). The root is always a monosyllable.

* The feminine τà seldom occurs (see §109. 2).

§13. MASCULINE Nouns.

1. The genitive of Mas. nouns ends in $o\nu$; nouns that have α before the final σ , never change it;* those that have η retain it in all cases of the Sing., except the genitive.

Exceptions.

2. The Voc. ends in α in all nouns in $\tau \eta \varsigma$, as $\tau o \xi \acute{o} - \tau \eta \varsigma$, Voc. $\tau o \xi \acute{o} \tau \alpha$,—in nouns in $\eta \varsigma$ formed from a verb and noun, as $\gamma \epsilon o \mu \acute{e} \tau \varrho \eta \varsigma$, Voc. $\gamma \epsilon o \mu \epsilon \tau \varrho \alpha$,—in names of nations in $\eta \varsigma$, as $H \acute{e} \varrho \sigma \eta \varsigma$, Voc. $H \acute{e} \varrho \sigma \alpha$.

FIRST DECLENSION.

Paradigm of Masculine Nouns.

SING.	Ending in as.	Ending in 115.	Ending in 771s.	Compounds.		
N. G. D. A. V.	ό νεανίας τοῦ νεανίου τῷ νεανία τὸν νεανίαν ὧ νεανία	τελώνης τελώνου τελώνη τελώνην τελώνη	ίππότης ίππότου ίππότη ίππότην ίππότα	μυρο-πώλης μυρο-πώλου μυρο-πώλη μυρο-πώλην μυρο-πώλα		
N. G. D. A. V.	οί νεανίαι τῶν τοις Plural and Dual like Feminine Nouns. τοὺς					
N.) A. } V. } G. \ D. \	τὼ τοῦν					

^{*} Except in Genitive Singular and Plural.

- 3. Nouns that have a vowel preceding the ending are contracted according to the rules of contraction (§3. 1). $\varepsilon + \alpha$, when preceded by a vowel or ϱ , are contracted in α , otherwise into η ; as, $\sigma \nu \varkappa \dot{\epsilon} \alpha \sigma \nu \varkappa \dot{\eta}$, $\dot{\epsilon} \varrho \dot{\epsilon} \alpha \dot{\epsilon} \varrho \dot{\alpha}$.
- 4. For dialectic forms of this and the remaining declensions, see Section on Dialects (§97).

§14. Second Declension.

1. The Second Declension has two terminations, og masculine and feminine, ov neuter. Some diminutives of the Fem. gender terminate in ov, as $\dot{\eta} \gamma \lambda \nu x \dot{\eta} \rho \iota o v$.

Case	Endings.
------	----------

	Singular.		PLURAL.		DUAL.
	Mas. & Fem.	Neuter.	Mas. & Fem.	Neuter.	Same for all Genders.
Nom.	ος	ον	οι	- α	ω
Gen.	ου		ων		OLV
Dat.	ω		ois	•	ουν
Acc.	ον	ον	ους	α	ω
Voc.	οσ ε	ον	Oi	α	ω

Rem.—The vocative of words in o_s generally ends in ϵ , though not unfrequently in o_s : thus, Voc. $\delta \varphi i \lambda \epsilon$ and $\delta \varphi i \lambda o_s$; $\delta \vartheta \epsilon \delta s$ (God) has the Voc. in o_s .

Paradigm of	of the	Second	Declension.
-------------	--------	--------	-------------

SING.	λόγ-ος, stem λογ.	ἡ νησ-os, stem νηs.	δ Se-όs, stem Se.	τὸ σῦκ-ον, stem συκ.	Contr. noun δ πλό-ος, stem πλο.

DUAL. N.) A. > V.) G. } D. }	τὼ λόγ-ω τοῖν λόγ-οιν	νήσ-ω νήσ-οιν	- do - o i v	-oth	πλό-ω " πλῶ πλό-οιν " πλοῖν

Rem.—Nouns in which o or ε precedes the case endings, suffer contraction in the Attic dialect, according to the rules of contraction (§3. 1.). Sometimes the open form is retained, as $\nu \acute{o}$ - φ .

§15. ATTIC SECOND DECLENSION.

Some words (adjectives and substantives) have the endings $\omega_{\mathcal{S}}$ (Mas. and Fem.), $\omega_{\mathcal{V}}$ neuter, instead of the ordinary endings, $o_{\mathcal{S}}$, $o_{\mathcal{V}}$. They retain the long vowel through all the cases, and when ι occurs in the common form, they have it subscribed, i. e. in the Nom. Dat. Voc. Plural, Dat. and Gen. Dual. For $o_{\mathcal{V}}$ and o_{α} of the

common form they have ω . Some Mas. and Fem. nouns drop the ν in the accusative.

Paradigm.

SING.	MASCULINE.	MASCULINE.	NEUTER.

v .	λε-ώς	λαγ-ώ	ὰνώγε-ων
PLUB.			
N.	λε-φ	λαγ-φ	ἀνώγε-φ
G.	λ <i>ϵ-ῶν</i>	λαγ-ῶν	ἀνώγε-ων
D.	λε-φ̂ s	λαγ-φ̂ς	ἀνώγε-φε
A.	λε-ώς	λαγ-ώς	ἀνώγε-ω
v.	λε-φ	λαγ-ώ	ὰνώγε-ω
DUAL. N.)			
A. { V. }	λε-ώ	λαγ-ώ	ἀνώγε-ω
G. t D. j	λε-φν	λαγ-φν	ἀνώγε-φν

Rem.—Nouns in o_S are for the most part masculine. The feminine nouns were originally adjectives, which, being changed to substantives, borrow the gender of the noun which they qualified. Thus, $\hat{\eta}$ $\mathring{\eta}_{\pi \epsilon \iota \varrho o_S}(\gamma \mathring{\eta})$, $\mathring{\eta}$ $\sigma \mathring{\nu} \gamma \varkappa \lambda \eta \tau o_S$, "the assembly," $(\beta o \nu \lambda \mathring{\eta})$. Some, however, have an independent signification of their own, yet are feminine, as $\mathring{\eta}$ $\nu \acute{o} \sigma o_S$, "sickness."

[•] For Accentuation, see §143.

§16. THIRD DECLENSION.

Case Endings.

	Singular.			PLURAL.		
	Mas. & Fem.	Neuter.	Mas. & Fem.	Neuter.	For all Genders.	
Nom. Gen. Dat. Acc. Voc.	ς ος τ΄ ν or α Generally like the Nom.	os 1	ες ων σι (ν) ἄς ες	α ων σĭ α	ε Οιν Οιν ε ε	

- 1. The ending σ is the gender sign, and should be appended to all nouns of the Mas. and Fem. gender. The laws of euphony (§8), however, do not admit the concurrence of σ with certain letters terminating the stem:* hence the following rules are observed:
- 2. I. When the stem ends in a $\varkappa\alpha\pi\pi\alpha$ or Pi-Mute the gender sign σ blends with these mutes and forms the double letters ξ and ψ , with which so many of the nouns of this declension terminate. Thus, $\varkappa \acute{o}\varrho \alpha \xi$ (stem $\varkappa o\varrho \alpha \varkappa$)= $\varkappa o\varrho \alpha \varkappa \varsigma$; $\varphi \lambda \acute{\epsilon} \psi$ (stem $\varphi \lambda \epsilon \beta$)= $\varphi \lambda \epsilon \beta \varsigma$; $\alpha \ddot{\iota} \gamma \nu \psi$ (stem $\alpha \ddot{\iota} \gamma \nu \pi$)= $\alpha \ddot{\iota} \gamma \nu \pi \varsigma$.
- II. When the stem ends in a consonant with which σ cannot concur (§8), either σ or the incompatible consonant is dropped. To compensate for the omission,

^{*} The stem is often modified in the nominative, but can always be obtained by throwing off the case ending os of the genitive.

the vowel of the stem is generally lengthened. Thus, $\pi o \iota \mu \dot{\eta} \nu$, a shepherd, for $\pi o \iota \mu \dot{\epsilon} \nu \cdot \varsigma$ (stem $\pi o \iota \mu \dot{\epsilon} \nu$), Gen. $\pi o \iota \mu \dot{\epsilon} \nu \cdot o \varsigma$; $\Delta \dot{\epsilon} \lambda \dot{\varphi} \dot{i} \varsigma$ for $\Delta \dot{\epsilon} \lambda \dot{\varphi} \dot{i} \nu \cdot \varsigma$ (stem $\Delta \dot{\epsilon} \lambda \dot{\varphi} \dot{i} \nu$), Gen. $\Delta \dot{\epsilon} \lambda \dot{\varphi} \dot{i} \nu \cdot o \varsigma$; $\dot{\varphi} \dot{\eta} \tau o \varphi$ for $\dot{\varphi} \dot{\eta} \tau o \varphi \cdot \varsigma$ (stem $\dot{\varphi} \eta \tau o \varphi$), Gen. $\dot{\varphi} \dot{\eta} \tau o \varphi \cdot o \varsigma$.

III. When the Nom. contains the pure stem, the radical vowel remains unaltered in the oblique cases, e.g. $\vartheta \dot{\eta} \varrho$ for $\vartheta \eta \varrho \varsigma$ (stem $\vartheta \eta \varrho$), Gen. $\vartheta \dot{\eta} \varrho - o \varsigma$; $\ddot{\eta} \varrho \omega \varsigma$ (stem $\dot{\eta} \varrho \omega$), Gen. $\ddot{\eta} \varrho \omega - o \varsigma$.

On the foregoing principles we have Masc. and Fem. nouns of this declension divided into three classes:

- II. Those that reject the gender sign σ , or its incompatible consonant (§8); δ ποιμήν for ποιμέν-ς (stem ποιμεν); δ φήτως for ψήτος-ς (stem ψητος); δ δράκων for δράκοντ-ς (stem δρακοντ), gender sign rejected.

μέλας for μέλαν-ς (stem μελαν), Gen. μέλαν-ος; ὁ δελφίς for δελφίν-ς (stem δελφιν), Gen. δελφίν-ος; ἡ δίς (stem διν), Gen. δίν-ος; ὁ γίγας for γίγαντ-ς, Gen. γίγαντ-ος (stem γιγαντ), incompatible consonant rejected.

- III. Those that contain the pure stem in the Nom. e.g. $\delta \, \vartheta \dot{\eta}_{\ell}$, Gen. $\vartheta \dot{\eta}_{\ell}$ -os (stem $\vartheta \eta_{\ell}$); $\delta \, \ddot{\eta}_{\ell}\omega_{5}$, Gen. $\ddot{\eta}_{\ell}\omega_{5}$ (stem $\ddot{\eta}_{\ell}\omega_{5}$).
- 4. To these may be added neuter nouns, which, being without the gender sign σ , suffer no alteration in the Nom., unless the stem contains a consonant not

admissible at the end of a word. Such a consonant is rejected and the Nom. ends in a vowel. The pure stem reappears in the Gen.; e. g. $\sigma\omega\mu\alpha$, the body, Gen. $\sigma\omega\mu\alpha\tau$ -og (stem $\sigma\omega\mu\alpha\tau$).

- 5. Frequently the $\tau \alpha \nu$ ending of neuter nouns is changed into σ ; as, $\tau \dot{\nu}$ $\tau \dot{\epsilon} \rho \alpha \varsigma$, Gen. $\tau \dot{\epsilon} \rho \alpha \tau o \varsigma$ (stem $\tau \epsilon \rho \alpha \tau$); sometimes into ρ ; as, $\dot{\eta} \pi \dot{\alpha} \rho$, Gen. $\dot{\eta} \pi \dot{\alpha} \tau o \varsigma$ (stem $\dot{\eta} \pi \alpha \tau$).
- 6. σ is also sometimes added to a stem of vowel ending for the sake of strengthening the Nom.; e. g. $\gamma \dot{\epsilon} \nu \sigma \dot{\epsilon}$, Gen. $\gamma \dot{\epsilon} \nu \epsilon \sigma \dot{\epsilon}$ (stem $\gamma \dot{\epsilon} \nu \dot{\epsilon}$). For the change of ϵ into o, see §3. 7.

§17. OBLIQUE CASES.

1. The remaining cases of the Third Declension are formed by appending the case endings to the stem, and making the changes required by euphony.

ACCUSATIVE.

- 2. The Accus. ending of each Declension is ν ; the difficulty of pronouncing the ν in connection with the consonant ending a stem, caused it to be changed into α .
- 3. Hence, when a vowel ends the stem, the Accus. is in ν . When a consonant ends the stem, it is in α .
- Εx. πόλις (stem πολι), "a city," Accus. πόλιν; λέων (stem λεοντ,) "a lion," Accus. λέοντα.
 - 4. Excep. Nouns in $\varepsilon v \varsigma$ and $\eta \varsigma$,* with a stem
- * This accusative ending deviating from the general rule, arises from the original Digamma ending of words in aus, ϵus , ous. Thus, $\beta a \sigma \iota \lambda \epsilon \acute{\nu}s$, originally $\beta a \sigma \iota \lambda \epsilon F s$; hence, Accus. $\beta a \sigma \iota \lambda \epsilon F a$, instead of

ending in a vowel, have the Accus. in α. Εα. βασιλεύς (stem βασιλευ); Accus. βασιλέα; τριήρης (stem τριηρε), "a boat;" Accus. τριήρεα.

5. Nouns in $\iota \varsigma$ and $\iota \varsigma$, whose stem ends in a Tau-Mute, drop the Tau-Mute in the Accus. and take the

ending ν .

Ε΄χ. ἔρις (stem εριδ), Accus. ἔριν (for ἔριδα), "discord;" εὐχάρις (stem ευχαριτ) Accus. εὐχάριν (for εὐχάρινα), "grateful."

VOCATIVE.

- 6. As a general rule the vocative contains the simple stem. It has not the gender sign σ , and is not therefore subject to those changes which the concurrence of σ with the ending consonant of the stem occasions in the Nom. Ex. δ $\delta \alpha i \mu \omega r^*$ (stem $\delta \alpha \iota \mu \omega r$), Voc. $\delta \alpha i \mu \omega r$, "a deity;" δ $\delta \varphi \iota \varphi$ (stem $\omega \varphi \iota$), Voc. $\delta \varphi \iota \varphi$, "a serpent."
- 7. If the stem contains a consonant that cannot end a word (§8, 8), the Voc. instead of the simple stem takes the form of the Nom. Ex. δ $\varkappa \delta \varrho \alpha \xi$ (stem $\varkappa o \varrho \alpha x$), Voc. $\varkappa \delta \varrho \alpha \xi$, "a crow;" $\mathring{\eta} \ \mathring{o} \psi$ (stem $o \pi$), Voc. $o \psi$, "the eye."
- 8. Hence, if nouns in $\iota \varsigma$, $\alpha \nu \varsigma$, $o \nu \varsigma$, $\nu \varsigma$, are from a stem of consonant ending, they form the Voc. like

βασιλεΓν. The Digamma was changed into v (a common transition), which is dropped between the vowels, hence βασιλέα. Kuhner, L. g. g. § 2 83.

Oxytones, i. e., words that have the acute accent on the final syllable, retain the long vowel of the Nom. Εχ. ποιμήν, Voc. ποιμήν.

the Nom.; but if from a stem of vowel ending, they form the Voc. by throwing off the gender sign σ . Ex. $\hat{\epsilon}\lambda\pi i\hat{\varsigma}$ (stem $\epsilon\lambda\pi i\delta$), Gen. $\hat{\epsilon}\lambda\pi i\delta\sigma\hat{\varsigma}$, Voc. $\hat{\epsilon}\lambda\pi i\sigma$, "hope;" $\pi\acute{o}\lambda i\hat{\varsigma}$ (stem $\pi o\lambda i$), Voc. $\pi\acute{o}\lambda i$; $\pi o\tilde{v}\hat{\varsigma}$ (stem $\pi o\delta$), Gen. $\pi o\delta - o\hat{\varsigma}$, Voc. $\pi o\tilde{v}\hat{\varsigma}$, "a foot;" $\beta o\tilde{v}\hat{\varsigma}$ (stem βov), Voc. $\beta o\tilde{v}$, "an ox."

9. When the stem ends in two consonants, one of which is admissible at the end of a word, the other not, the latter, if final, is rejected, and the Voc. ends in the former. Ex. $\lambda \dot{\epsilon} \omega \nu$ (stem $\lambda \dot{\epsilon} o \nu \tau$), Voc. $\lambda \dot{\epsilon} o \nu$; $\gamma \dot{\imath} \gamma \alpha \varsigma$ (stem $\gamma \iota \gamma \alpha \nu \tau$), Voc. $\gamma \dot{\imath} \gamma \alpha \nu$.

§18. PARADIGM.

Class I. Words that in the Nom. add the gender sign σ to the stem.

SING.	ἡ λαῖλαψ, "the storm,"	δ κόραξ, "the crow,"	ή πόρτι-s, "a heif-	
	stem λαιλαπ.	stem κορακ.	er," stem πορτι.	
N.	ή λαίλαψ=λαίλαπ-ς	δ κόραξ=κορακ-ς	ή πόρτι-ς	
G.	λαίλαπ-ος	κόρακ-ος	πόρτι-ος

V.	λαίλαψ	κόραξ	πόρτι	
N. G. D. A. V.	ai λαίλαπ-ες	οί κόρακ-ες	αί πόρτι-ες	
	λαιλάπ-ων	κοράκ-ων	πορτί-ων	
	λαίλαψ-ι	κόραξ-ι	πόρτι-σι	
	λαίλαπ-ας	κόρακ-ας	πόρτι-ας	
	λαίλαπ-ες	κόρακ-ες	πόρτι-ες	
N. A. V. G. D.	τὰ λαίλαπ-ε λαιλάπ-οιν	τὼ κόρακ-ε κοράκ-οιν	τὰ πόρτι-ε πορτί-οιν	

Rem.—The stems of nouns in ψ and ξ generally end in the smooth and middle Mutes; a few end in the aspirates, as $\ddot{o}vv\xi$, Gen. $\ddot{o}vv\chi$ -os (stem $ovv\chi$).

§19. Paradigm.

Class II. Words that drop σ , or the ending consonant of the stem.

1. Nouns that drop the ending consonant.

	ή λαμπάς, "the lamp," stem λαμπαδ. §8. 2.	ή ρ̃ίs, "the nose," stem ριν.	δ γίγας, "the gi- ant," stem γι- γαντ.
N. G. D. A. V.	ή λαμπάς for λαμπαδ-ς λαμπάδ-ος λαμπάδ-ι λαμπάδ-α λαμπάς	ή ρίς for ρίν-ς ρίν-ος ρίν-ι ρίν-α ρίν	ό γίγας (-ντς) γίγαντ-ος γίγαντ-ι γίγαντ-α γίγαν
N. G. D. A. V.	αί λαμπάδ-ες λαμπάδ-ων λαμπάσ-ι λαμπάδ-ας λαμπάδ-ες	aί ῥιν-ες ῥιν-ῶν ῥισ-ί ῥιν-ας ῥιν-ες	οί γίγαντ-ες γιγάντ-ων γίγασ-ι * γίγαντ-ας γίγαντ-ες
N. A. V.	λ τὰ λαμπάδ-ε	· τὰ ῥῖν-ε	τὼ γίγαντ-ε
G. D.	} λαμπάδ-οιν	ριν-οιν	γιγάντ-οιν

* For γίγαντ-σι.

Rem.—To this division belong words in ους, Gen. ουντ-ος; εις, Gen. εντ-ος; ηις, Gen. ηιδ-ος; ας πλακοῦς, Gen. πλακοῦντ-ος; τυφθείς, Gen. τυφθέντ-ος; παρηϊς, Gen. παρηϊδ-ος. Also τὸ οὔς, "the ear" (stem ωτ), Gen. ωτ-ός; κτείς, "a comb" (stem κτεν), Gen. κτεν-ός.

11. Nouns that retain the ending consonant of the stem, reject the gender-sign σ , and lengthen the stem-vowel.

	ή φρήν, "the mind." (Stem φρεν.)	δ δράκων, "the dragon." (Stem δρακοντ.)	ό πατήρ, "father." (Stem πατερ.)
N.	ή φρήν (for φρεν-ς)		
G.	φρεν-ός	δράκοντ-ος	πατρ-ός
D.	φρεν-ί	δράκοντ-ι	π ατρ-ί $_{,}$
A.	φρεν-ά	δράκοντ-α	πατερ-ά
V.	$\phi \rho \eta \nu \text{ (see §17.6.n.)}$	δράκου	πάτερ
PLUR. N.	al Ashu as	Sadvana	
	αί φρέν-ες	δράκοντ-ες	πατέρ-ες
G.	φρεν-ῶν	δρακόντ-ων	πατέρ-ων
D.	φρε-σί	δράκουσ-ι	πατρά-σι
$ \mathbf{A}\cdot $	φρέν-ας	δράκοντ-ας	πατέρ-ας
<u>v.</u>	φρέν-ες	δράκοντ-ες	πατέρ-ες
	τὰ φρέν-ε	δράκοντ-ε	πατέρ-ε
	φρεν-οίν	δρακόντ-οιν	πατέρ-οιν

Rem. 1.—Like $\pi \alpha \imath \dot{\eta} \varrho$, are declined $\dot{\eta}$ $\mu \dot{\eta} \tau \eta \varrho$, "mother;" $\dot{\eta}$ θυγάτη ϱ , "daughter;" $\dot{\eta}$ Δημήτη ϱ , "Ceres;" $\dot{\eta}$ γαστ $\dot{\eta} \varrho$, "belly." They drop ε in gen. and dat. singular, by syncope. $\dot{\sigma}$ αν $\dot{\eta} \varrho$, "man," suffers a like syncope, but inserts $\dot{\sigma}$ to avoid the concurrence of the liquids ν , ϱ ; as $\dot{\sigma}$ αν $\dot{\eta} \varrho$, gen. $\ddot{\alpha} \nu \delta \varrho \sigma \varepsilon$ (for $\ddot{\alpha} \nu \varepsilon \varrho \sigma \varepsilon$); dat. $\ddot{\alpha} \nu \delta \varrho - \iota$ (for $\ddot{\alpha} \nu \varepsilon \varrho - \iota$).

Rem. 2.—Here belong the oblique cases $\ddot{\alpha}\rho\nu\rho_{5}$, $\ddot{\alpha}\rho\nu_{i}$, for $\ddot{\alpha}\rho\epsilon\nu_{i}$, $\ddot{\alpha}\rho\epsilon\nu_{i}$, from the obsolete $\dot{\alpha}\rho\dot{\eta}\nu$, for which the Nom. $\dot{\delta}$ $\ddot{\alpha}\mu\nu\rho_{5}$, "a lamb," is used.

Rem. 3.—Nouns of the foregoing class have their stem in ν , $\nu\tau$, ρ . For the omission of ν , $\nu\tau$, before σ_{τ} see § 8. 4, and of τ as a final letter, § 8. 8.*

§20. Class III. Nouns that contain the pure stem in the Nominative.

- I. 1. Nouns of this class omit the gender-sign in the nom., suffer no change in the stem-vowel, and are therefore inflected by appending the case-endings to the stem as it appears in the nom. Thus, ὁ παιάν, gen. παιάν-ος, dat. παιάν-ι, acc. παιάν-α, &c.
- 2. The stem-endings of nouns of this class are ν , $\nu\tau$, ϱ , with the exception of $\delta \dot{\alpha} \mu \alpha \varrho$, "wife" (stem $\delta \alpha \mu \alpha \varrho \tau$). When τ is the final letter of the stem, it is rejected in the nom., but reappears in the oblique cases. Ex. $\Xi \epsilon \nu o \varphi \dot{\omega} \nu \tau o \varsigma$.
- 3. Here belong neuter nouns in ϱ ; as, τὸ νέκτα ϱ , gen. νέκτα ϱ -ος; τὸ πέλω ϱ , gen. πέλω ϱ -ος.
 - II. Words formed from stems of vowel-endings.
- 1. When a vowel ends the stem, the nom. generally takes the gender-sign; the other cases are formed according to the general principle, (§20. 1.)
- 2. Words in $\bar{\iota}_{\mathcal{S}}$, $\bar{\upsilon}_{\mathcal{S}}$, retain the stem-vowel throughout, but those in $\check{\iota}_{\mathcal{S}}$, $\check{\upsilon}_{\mathcal{S}}$, as well as neuters in $\check{\iota}$, $\check{\upsilon}$ take Epsilon in the oblique cases,† and have the gen. of mas. and fem. nouns in $\omega_{\mathcal{S}}$ instead of $o_{\mathcal{S}}$, according to the Attic dialect, (§99.)
- * $\dot{\eta}$ $\chi\epsilon\dot{\iota}\rho$, "the hand:" a noun of this class, is peculiar in retaining the long vowel of the Nom. in the oblique cases; except the Dat dual and plural, $\chi\epsilon\rho$ - $o\hat{\iota}\nu$, $\chi\epsilon\rho$ - $o\hat{\iota}$ (stem $\chi\epsilon\rho$).
 - † Except Acc. and Voc., singular.

BING.	ή πόλις, city (stem πολί).	ή κῖς, corn- worm (st. κι).	δ $π η χυς, cubit$ (stem $πηχυ$).	δ ἰχθῦς, fish (stem ἰχθυ).
N.	ή πόλις	ή κῖς	δ πῆχυς	δ lχθΰ-ς

DUAL N.) A.} V.) G. (D.)	πόλε-ε πόλε-οιν	หใ−€ หเ-0เิบ	πήχε-ε * πηχέ-οιν	τὰ ἰχθύ-ε (θ) ἰχθύ-οιν

ENDING ns.

3. Words of this ending, belonging to 3d Dec., are properly adjectives; some from usage have acquired the signification of nouns. They are contracted in all their cases except the nom. and voc. sing. and the dat. plur. Many proper names belong to this ending, of which those in $\kappa\lambda\acute{\epsilon}-\eta\varsigma$ are contracted in all the cases; as, $\Pi\epsilon\varrho\iota\kappa\lambda\acute{\epsilon}-\eta\varsigma$, cont. $\Pi\epsilon\varrho\iota\kappa\lambda\~{\eta}\varsigma$.

ENDINGS $\alpha \nu \varsigma$, $\epsilon \nu \varsigma$, $o \nu \varsigma$, $\omega \varsigma$ (ω).

- 4. The vowel ν of these endings is substituted for the Digamma (F). Those in $\varepsilon \nu \varsigma$ form the gen. in $\omega \varsigma$, and the accus. in α ; see §17, Note.
 - * For the position of the accent on the antepenult, see §143.

	ή τριήρης, "a galley." (stom τριηρες.)	ό βασιλεύς, king. (stem βασιλευ.)	δ βοῦς, "the ox." (stem βου.)

V.	γρâ-ες	aἰδόι	ἥρω-ες
N.	,		
A.	} τὰ γρα-ε	αἰδώ	ήρω-ε
v.	(/ pare		، سرار،
G. D.	γρα-οιν	aໄδοΐν	ήρώ-οιν

^{*} For ϵ -i. Acc. η for ϵ -a. Plural, ϵ is for ϵ - ϵ s, &c., according to Cont. (§3.) † For the omission of υ between vowels, see §17, Note.

Rem.—Nouns in $\omega_{\mathcal{S}}(\omega)$, gen. o- $o_{\mathcal{S}}$, as $\alpha i\delta \hat{\omega}_{\mathcal{S}}$ and $\eta_{\mathcal{X}}\hat{\omega}$, are declined in the plural and dual according to the 2d Dec.; they form the voc. sing. in $o\tilde{\iota}$.

§21. NEUTER Nouns.

ENDINGS os, α s, α .

	τὸ γένος, "race." (Stem γενε), see §3. 7.	τὸ τέρας, "prodigy." (Stem τερατ.)	τὸ σῶμα, "the body." (Stem σωματ.)
sing.	τὸ γένος	τὸ τέρας	τὸ σῶμα
G.	γένε-ος	τέρατ-ος	σώματ-ος
D.	γένε-ι (ε-ϊ)	τέρατ-ι	σώματ-ι
A.	γένος	τέρας	σῶμα
V.	γένος	τέρας	σῶμα
N. G. D. A. V.	τὰ γένε-α γενέ-ων γένε-σι γένε-α γένε-α	τέρατ-α τεράτ-ων τέρα-σι τέρατ-α τέρατ-α	σώματ-α σωμάτ-ων σώμα-σι σώματ-α σώματ-α
N. A. V. G.	τὼ γένε-ε	τέρατ-ε	σώματ-ε
D.	} γενέ-οιν	τεράτ-οιν	σωμάτ-οιν

Neuters in ας, syncopated and contracted: κέρας, "horn." Nom. τὸ κέρας (stem κερατ); Gen. κέρατ-ος, by sync. κέρα-ος, cont. κέρως; Dat. κέρατ-ι, κέρα-ι, κέρα. Pl. Nom. κέρατα, κέρα; Gen. κεράτων, κερῶν. Dual, Nom. κέρατε, κέρα; Gen. and Dat. κεράτοιν, κερῷν. So κρέας, "flesh."

A few neuters in $\alpha\varsigma$ are from a stem in ε , and consequently have the Gen. ε -o ς , and the other cases accordingly. Thus: $\tau \grave{o}$ $\beta \varrho \acute{\varepsilon} \tau \alpha \varsigma$, "an image" (stem $\beta \varrho \varepsilon \tau \varepsilon$); Gen. $\beta \varrho \acute{\varepsilon} \tau \varepsilon$ -o ς ; Dat. $\beta \varrho \acute{\varepsilon} \tau \varepsilon$ - ι . Of like form are $o \ddot{\upsilon} \delta \alpha \varsigma$, "the ground," $\varkappa \upsilon \acute{\varepsilon} \varphi \alpha \varsigma$, "darkness." Two nouns, $\delta \acute{\varepsilon} \pi \alpha \varsigma$, "a cup," and $\sigma \acute{\varepsilon} \lambda \alpha \varsigma$, "light," have the Gen. in α -o ς , from stem in α . Thus: $\delta \acute{\varepsilon} \pi \alpha \varsigma$ (stem $\delta \varepsilon \pi \alpha$), Gen. $\delta \acute{\varepsilon} \pi \alpha$ -o ς , &c.

§22. Anomalous Nouns.

1. Under this name are comprised all those nouns that deviate from the foregoing rules and paradigms. They may be divided into three classes:

I. Those that have a Nominative form, not deduced, according to the rules above laid down, from the stem, as it appears in the Genitive. Ex. γυνή, "woman," Gen. γυναικ-ὸς (stem γυναικ.)

II. Those that have two forms, through some or all of the oblique cases, and both forms corresponding to the form of the Nominative. Ex. \ddot{o}_{QVLG} , "a bird." Nom. Pl. \ddot{o}_{QVLG} - ϵ_{G} (from stem \dot{o}_{QVLG}), and \ddot{o}_{QVELG} (from stem \dot{o}_{QVL}).

III. Those that have two forms in the oblique cases, one of which corresponds to the form of the Nom., the other does not, but is derived from a different stem. Ex. $\vartheta \varepsilon \rho \acute{\alpha} \pi \omega \nu$; Acc. $\vartheta \varepsilon \rho \acute{\alpha} \pi \omega \nu \tau \alpha$, and $\vartheta \acute{\varepsilon} \rho \alpha \pi \alpha$, as from a stem $\vartheta \acute{\varepsilon} \rho \alpha \psi$.

2. Many nouns are of different Declensions, some of different Genders, and some of different Genders and

Declensions. Ex. $\dot{\eta}$ $\varphi \vartheta \dot{\phi} \gamma \gamma \eta$ and $\dot{\phi}$ $\varphi \vartheta \dot{\phi} \gamma \gamma o \varsigma$, "the tongue."

3. They are divided into heterogeneous, or nouns of different genders; and heteroclites, or nouns of different declensions. Ex. $\delta \nu \dot{\omega} \tau \sigma \varsigma$, and $\tau \delta \nu \dot{\omega} \tau \sigma \nu$, "the back;" $\dot{\eta} \vartheta \dot{\alpha} \lambda \eta \varsigma$, Gen. $\vartheta \alpha \lambda \sigma \tilde{\nu}$ and $\vartheta \dot{\alpha} \lambda \eta \tau \sigma \varsigma$.

CHAPTER III.

§23. Adjectives and Participles.

- 1. Adjectives and participles are inflected like nouns; they have different inflection-endings to correspond to the different genders of the nouns they qualify. Εκ. κάλος Mas., κάλη Fem., κάλον Neut.
- 2. All adjectives do not take separate forms for the Mas. and Fem.; some are therefore inflected with two endings—one for the Mas. and Fem., the other for the Neuter. Ex. $\tilde{\epsilon}\nu\delta\sigma\xi\sigma\varsigma$ Mas. and Fem., $\tilde{\epsilon}\nu\delta\sigma\xi\sigma\nu$ Neut.
- 3. Some have only one inflection-ending, as they are not used in connection with nouns of the neuter gender.
- 4. From the foregoing distinction, adjectives are divided into three classes: I. Adjectives of three inflection-endings; to this class belong Participles. II. Adjectives of two. III. Adjectives of one.

The neuter of adjectives and participles, like neu-

ter nouns, has three cases, the Nom. Acc. and Voc., alike, with the ending α in the plural. These are the only cases that have a distinct Neuter form—the rest have the same form as the Masculine.

The Fem. of Adjectives, when it has a separate form, is inflected like nouns of the First Dec.; the Mas. and Neut. of words in the termination og, like nouns of the Second Dec.; in all other terminations, like nouns of the Third Dec.

Participles in os do not change this termination in the Vocative.

§24. PARADIGM.

os, Mas.; η (α when preceded by ϱ or ι), Fem.; ov, Neuter.

	καλ-ός	(καλ), bea	utiful.	μακι	ρό ς (μακρ) , 1	ong.

Rem.—The perfect forms, $\delta \sigma \tau \dot{\omega}_{S}$, $\beta \epsilon \beta \omega_{S}$, &c., from $\delta \sigma \tau \dot{\alpha} - \alpha$, $\beta \epsilon \beta \alpha - \alpha$, are inflected like $\tau \epsilon \tau \nu \sigma \omega_{S}$, except in the Fem. which is $\omega \sigma \alpha$. The vowel ω is retained in the Masc., and generally in the Neuter. Thus: $\delta \sigma \tau \dot{\omega}_{S}$, $\delta \sigma \tau \dot{\omega} \sigma \alpha$, $\delta \sigma \tau \dot{\omega}_{S}$ and $\delta \sigma \tau \dot{\sigma}_{S}$; Gen. $\delta \sigma \tau \dot{\omega} \tau - \sigma_{S}$, $\delta \sigma \tau \dot{\omega} \sigma \eta_{S}$, $\delta \sigma \tau \dot{\omega} \tau - \sigma_{S}$, &c.

1. The Adjectives $\mu \dot{\epsilon} \gamma \alpha \varsigma$, "great," and $\pi o \lambda \dot{\nu} \varsigma$, "much," are irregular in their inflection, inasmuch as

^{*} έστώς is a contraction from έστεῶς or έσταώς.

different parts of them are derived from different stems. The Nom. Acc. and Voc., Masc. and Neut., in the singular number, are according to the forms $\mu \dot{\epsilon} \gamma \alpha \varsigma$ and $\pi o \lambda \dot{\nu} \varsigma$; the other parts are according to the forms $\mu \dot{\epsilon} \gamma \dot{\alpha} \lambda o \varsigma$ and $\pi \dot{\alpha} \dot{\alpha} \lambda o \varsigma$. Here belongs also $\pi \varrho \ddot{\alpha} o \varsigma$, "mild," which in part is according to a form $\pi \varrho \alpha \ddot{\nu} \varsigma$, $\varepsilon \iota \alpha$, $\ddot{\nu}$.*

- 7. Those formed from $\pi o \nu \varsigma$, "a foot," have the neuter in $o \nu \nu$, and the cases formed regularly from the stem. Ex. $\delta i \pi o \nu \varsigma$; Neuter $\delta i \pi o \nu \nu$; Gen. $\delta i \pi o \delta o \varsigma$; Acc. $\delta i \pi o \delta a$ and $\delta i \pi o \nu \nu$; Neuter $\delta i \pi o \nu \nu$.
 - 8. Adjectives formed from odov's, "a tooth," (stem

 $o\delta o\nu\tau$), have the neuter in $o\nu$, and the oblique cases according to the stem of the noun. Ex. $\mu o\nu \acute{o}\delta o\nu\varsigma$; Neut. $o\nu$; Gen. $\mu o\nu \acute{o}\delta o\nu\tau$ - $o\varsigma$, &c.

§26. Class III. Adjectives of one Termination.

- 1. Adjectives of this class are Masc. and Fem. They have no corresponding Neuter form; partly because the quality implied belongs only to persons, and partly because they are not susceptible of a Neuter form; as, $\mu \alpha \kappa \rho o \chi \epsilon i \rho$, "long-handed." Sometimes, however, they occur in connection with neuter nouns in those cases that have a common form for the Masc. and Neuter.
- 2. Their inflection corresponds to that of nouns of a similar stem.

TERMINATIONS AND INFLECTIONS.

```
μόνιας, Gen. μονίου, &c., "solitary."
as. Gen. ov.
         άδοs.
                     δ, ή φύγας (stem φυγαδ), Gen. φυγάδ-ος, "fugitive."

         artos.
as.
                     δ, ή μάκαρ, rare feminine μάκαιρα, Gen. μάκαρος, "happy."
αρ,
         apos.
                     δ, ή έθελοντής, Gen. έθελόντου, "volunteer."
          oυ.
775,
                     δ, ή πένης (πενητ), Gen. πένητ-ος, "poor."
775,
         ntos.
                     δ, ή ἀπτήν, Gen. ἀπτῆν-os, "unfledged."
ήν,
          ήνος.
ώs,
          ῶτos.
                     δ, ή άγνως (αγνωτ), Gen. άγνωτ-ος, "unknown."
                     δ, ή ἀνάλκις (αναλκιδ), Gen. ἀνάλκιδ-ος, "weak."
LS,
          ιδος.
          υδοs.
                     δ, ή νέηλυς (νεηλυδ), Gen. νεήλυδ-ος, "newly come."
vs,
   Many have the stem ending in Pi and Kappa Mutes. Εx. δρπαξ, αἰγίλυψ.
```

§27. Comparison of Adjectives.

1. Quality can belong to an object in different degrees.

- 2. There are different forms of the adjective to denote these different degrees, termed the positive, the comparative, and superlative.
- 3. The positive form attributes quality simply, and without comparison, to an object.
- 4. The comparative attributes quality in a higher or lower degree, to one object compared with another.
- 5. The superlative attributes quality to an object in the highest or lowest degree, or in a higher or lower degree, to one object compared with several others.
- 6. Participles, when they assume the signification of adjectives, are also compared.
- 7. Adverbs express degrees in relations of time, place, and manner, and hence admit of degrees of comparison.
- 8. In Greek there are two forms of comparison. One (the more common), consists in appending to the stem of the adjective, the endings τερος, τερα, τερού, for the comparative, and τατος, τατη, τατου, for the superlative. The other, in appending ίων for the comparative, and ιστος for the superlative.
- 9. The syllables o, $(\omega_1)^* \alpha \iota$, $\epsilon \varsigma$, $\iota \varsigma$, are used to unite the endings of the first form to the stem of the adjective, and hence are termed connecting syllables.
- 10. The stem is found by rejecting from the positive the ending of the Gen. case. Hence, for the comparison of adjectives in the first form, we have the following Rule:
- * o is used when the preceding syllable is long, ω when it is short in order to avoid the concurrence of several syllables of the same quantity.

11. Annex the ending to the stem of the adjective, directly, or by means of one of the connecting syllables. Εκ. πίκρ-ος; stem, πίκρ; connecting syllable, ο; Compar. πικρ-ό-τερος; Superl. πικρ-ό-τατος. σὄφός; stem, σοφ; Compar. σοφ-ώ-τερος; Superl. σοφ-ώ-τατος.

I. Adjectives in $o_{\mathcal{S}}$ append the endings by means of the connecting syllable $o(\omega)$, (g. n.), as in the foregoing examples. Adjectives in ε -o $_{\mathcal{S}}$ and o-o $_{\mathcal{S}}$, contract the ending vowel of the stem with the connecting syllable $o(\omega)$. Ex. $\pi o \rho \varphi \psi \varphi \varepsilon$ -o $_{\mathcal{S}}$; Comp. $\pi o \rho \varphi \psi \varphi$ - ψ - $\tau \varepsilon \varphi o_{\mathcal{S}}$; Superl. $\pi o \rho \varphi \psi \varphi$ - ψ - $\tau \varepsilon \varphi o_{\mathcal{S}}$; Superl. $\pi o \rho \varphi \psi \varphi$ - ψ - $\tau \varepsilon \varphi o_{\mathcal{S}}$; Those in o-o $_{\mathcal{S}}$ take the connecting syllable $\varepsilon_{\mathcal{S}}$.

Excep. A few adjectives in $o_{\mathcal{S}}$ take the connecting syllable $\alpha \iota$. Ex. $\mu \dot{\epsilon} \sigma - o_{\mathcal{S}}$, $\mu \dot{\epsilon} \sigma - \alpha \dot{\iota} - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, $\mu \dot{\epsilon} \sigma - \alpha \dot{\iota} - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, $\mu \dot{\epsilon} \sigma - \alpha \dot{\iota} - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, $\lambda \alpha \lambda \cdot \iota \sigma - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, $\lambda \alpha \lambda \cdot \iota \sigma - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, $\lambda \alpha \lambda \cdot \iota \sigma - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, $\lambda \alpha \lambda \cdot \iota \sigma - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, Those in $\alpha \iota - o_{\mathcal{S}}$ reject $o_{\mathcal{S}}$ and annex the comparison endings directly; $\gamma \dot{\epsilon} \varrho \alpha \dot{\iota} - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, Comp. $\gamma \dot{\epsilon} \varrho \alpha \dot{\iota} - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$, Superl. $\gamma \dot{\epsilon} \varrho \alpha \dot{\iota} - \tau \dot{\epsilon} \varrho o_{\mathcal{S}}$.

II. Adjectives in η_S , Gen. ov, take the connecting syllable ι_S . Ex. $\varkappa\lambda\acute{\epsilon}\pi\tau\eta_S$, $\varkappa\lambda\epsilon\pi\tau-\acute{\iota}\sigma-\tau\epsilon\varrho\sigma_S$, $\varkappa\lambda\epsilon\pi\tau-\acute{\iota}\sigma-\tau\alpha\tau\sigma_S$; so also, $\psi\epsilon\nu\delta\acute{\eta}_S$, Gen. $\psi\epsilon\nu\delta\epsilon-\acute{\sigma}_S$, Comp. $\psi\epsilon\nu\delta-\acute{\iota}\sigma-\tau\epsilon\varrho\sigma_S$, Superl. $\psi\epsilon\nu\delta-\acute{\iota}\sigma-\tau\alpha\tau\sigma_S$.

III. Adjectives in η_S , Gen. ε - o_S , in v_S - $\varepsilon\iota\alpha$ -v, and in α_S , neuter α_V , append the comparison endings to the stem as it appears in the neuter. Ex. $\dot{\alpha}\lambda\eta\vartheta\dot{\eta}_S$, $\dot{\alpha}\lambda\eta\vartheta\dot{\varepsilon}_S$ - $\tau\varepsilon\varrhoo_S$, $\dot{\alpha}\lambda\eta\vartheta\dot{\varepsilon}_S$ - $\tau\alpha\tauo_S$; $\gamma\lambda\upsilon\varkappa\dot{\upsilon}_S$, $\gamma\lambda\upsilon\varkappa\dot{\upsilon}_S$ - $\tau\varepsilon\varrhoo_S$, $\gamma\lambda\upsilon\varkappa\dot{\upsilon}_S$ - $\tau\alpha\tauo_S$; $\mu\dot{\varepsilon}\lambda\dot{\alpha}_S$, $\mu\dot{\varepsilon$

IV. Adjectives in $\epsilon\iota\varsigma$ (stem $\epsilon\nu$), append the endings to the stem, ν being changed into σ before τ ; $\chi\alpha\varrho\iota\iota\iota\varsigma$ ($\chi\alpha\varrho\iota\iota\iota\nu$), $\chi\alpha\varrho\iota\iota\iota'\sigma$ - $\tau\iota\varrho\sigma\varsigma$, $\chi\alpha\varrho\iota\iota'\sigma$ - $\tau\alpha\tau\sigma\varsigma$.

V. Adjectives in & take the connecting syllable 45

or ες. Εα. άρπαξ, (stem αρπαγ,) άρπαγ-ίσ-τερος, άρπαγ-ίσ-τατος; ἀφήλιξ, "growing old," (stem αφηλικ), ἀφηλικ-έσ-τερος, ἀφηλικ-έσ-τατος.

VI. Adjectives in ων, neuter ον, take ες; εὐδαίμων, εὐδαιμον-έσ-τερος, εὐδαιμον-έσ-τατος.

§28. Second Form of Comparison.

Comp. ιων, Mas. and Fem.; ιον, Neuter; Superl. ιστος, ιστη, ιστον.

1. Adjectives in $v_{\mathcal{G}}$ and $\rho o_{\mathcal{G}}$ receive this form of comparison, though they partake also of Form 1. They reject $v_{\mathcal{G}}$ and $\rho o_{\mathcal{G}}$ before the ending. Ex. $\dot{\eta} \delta \dot{v}_{\mathcal{G}}$, $\dot{\eta} \delta \dot{v}_{\mathcal{G}}$, "sweet;" $a i \sigma_{\mathcal{X}} \rho \dot{o}_{\mathcal{G}}$, $a i \sigma_{\mathcal{X}} \dot{v}_{\mathcal{G}}$, "love, "base." Comparatives and Superlatives formed from nouns in $o_{\mathcal{G}}$ are also of this form. Ex. $\varkappa \dot{v} \dot{\delta} o_{\mathcal{G}}$, "glory," $\varkappa v \dot{\delta} \dot{o}_{\mathcal{G}} \dot{o}_{\mathcal{G}}$, $\varkappa v \dot{\delta} \dot{o}_{\mathcal{G}} \dot{$

§29. Anomalous Comparison.

1. The following adjectives deviate from the foregoing rules; they are the relics of obsolete forms, which are associated together on account of similarity in signification, though they differ widely in form.

άγαθός, good.

COMPARATIVE.

SUPERLATIVE.

αμείνων

Βελτίων and βέλτερος

χοείσσων λωΐων and λώων

φέρτερος

ἄριστος

βέλτιστος and βέλτατος

χράτιστος λῶστος

φέρτατος and φέριστος

xaxóc, bad.

χαχίων χείρων

ήσσων and ήττων

χάριστος χείριστος

ἥκιστα (adverb).

μικρός, small. ολίγος, few.

μιχρότερος έλάσσων μείων

μιχρότατος έλάχιστος όλίγιστος

μέγας, great.

μείζων

μέγιστος

πολύς, much.

πλείων or πλέων

πλειστος

δάδιος, easy

δάων

δᾶστος

Note. Adjectives regarded anomalous, but which conform to the second form of comparison, are often classed with the above. Thus, καλλός, καλλίων, κάλλιστος, conforms to rule; so, μήκος, "length," μάσσων, μήκιστος (see §6, 8); even κρείσσων, κράτιστος, are of this form, as derived from the noun kparos (see §6, 8).

§30. DEFECTIVE COMPARISON.

1. Adjectives denoting a series are comparatives in their signification, and have no positive. The adverbs and prepositions containing their roots, are made the basis from which their comparison is formed.

πρότερος (prior), πρῶτος (first), from πρό. ἀνώτερος (higher), ἀνώτατος (highest), " ἄνω. ὑπέρτερος (higher),
$$\begin{cases} ὑπέρτατος & " ὑπέρ. \end{cases}$$
 $ΰπάτος & " ὑπέρ. \end{cases}$ $ΰστερος (later), ὕστατος (last), " ὑπό. ἔσχατος (extreme), " έξ.$

Note. Adjectives may be compared by adding μᾶλλον, "more," for the comparative, and μάλιστα for superlative; as, δῆλος, "evident," μᾶλλον δῆλος, "more evident," μάλιστα δῆλος, "most evident."

COMPARISON OF ADVERBS.

- 2. Adverbs formed from adjectives, are compared as the adjectives. The comparative has the neuter singular termination, the superlative the neuter plural; as, ἀξιό-τερον, ἀξιό-τατα, from ἄξιος.
- 3. Comparatives and superlatives of adverbs formed from positives in ω , which are prepositions or adverbs, retain the termination ω ; as, $\varkappa \acute{\alpha} \tau \omega$, $\varkappa \alpha \tau \omega \tau \acute{\epsilon} \rho \omega$, $\varkappa \alpha \tau \omega \tau \acute{\alpha} \tau \omega$.

§31. Numerals.

1. Numbers are divided, according to their signification, into cardinal, ordinal, multiple, and proportional.

- 2. Those that denote number absolutely, as, 1, 2, 3, and answer to the question, 'how many?' are called cardinal numbers. The four first are declined; from four to two hundred are indeclinable. The hundreds are of the form of adjectives of three terminations; as, Masc. διακόσι-οι, Fem. διακόσι-αι, διακόσι-α, "two hundred."
- 3. The numbers from ten to twenty are denoted by prefixing the proper cardinal to δέκα, "ten," the conjunction καὶ being inserted between them. Thus, ὀκτω-καί-δεκα, "eighteen." In the same manner the numbers between each decade are denoted, as εἶς καὶ εἴκοσι, "twenty-one." If the decade precedes, καὶ may be omitted.
- 4. For the eighth and ninth of any decade, the Greeks wrote the following decade wanting 1 or 2. Thus (48), πεντήχοντα δυοίν δέοντα, i. e. "50 wanting 2;" (49), πεντήχοντα ένὸς δέοντα, "50 wanting 1."
- II. Those that denote a series, as first, second, third, are called ordinal numbers. They resemble adjectives in $o_{\mathcal{S}}$ of three terminations, and are declined accordingly; e. g., $\delta \varepsilon \dot{\nu} \tau \varepsilon \rho o_{\mathcal{S}}$, $-\alpha$, $-o\nu$, "second;" $\delta \varepsilon \varkappa \dot{\alpha} \tau o_{\mathcal{S}}$, $-\eta$, $-o\nu$, "tenth."
- 5. Adverbs denoting how often, are formed by affixing $\dot{\alpha}_{\varkappa i\varsigma}$ to the cardinal number; as, $\pi_{\varepsilon \nu \tau \dot{\alpha}_{\varkappa i\varsigma}}$, "five times." The three numbers, 1, 2, 3, are represented in this relation by $\ddot{\alpha}_{\pi \alpha \xi}$, "once," δi_{ς} , "twice," $\tau \varrho i_{\varsigma}$, "thrice."
- III. Multiples are formed by annexing to the cardinal the ending $\pi \lambda o \tilde{v}_{\mathcal{S}}$ (Eng. fold), $-\tilde{\eta}$, $-o\tilde{v}_{\mathcal{V}}$; $\tau \rho \iota \pi \lambda o \tilde{v}_{\mathcal{S}}$, "threefold."

- 6. The ending πλάσιος, -ία, -ιον, annexed to the cardinal, denotes, "how many times more," "how many times as great;" πενταπλάσι-ος, "five times as many."
- 7. The numeral substantives (which express an abstract idea of number) are formed in $\alpha \varsigma$, Gen. $\alpha \delta o \varsigma$; $\delta \nu \dot{\alpha} \varsigma$ ("duad"); $\tau \varrho \iota \dot{\alpha} \varsigma$ ("triad"). $\mu o \nu \dot{\alpha} \varsigma$ is the abstract noun corresponding to one.
- 8. Proportion is expressed by $\mu \acute{\epsilon} \varrho o \varsigma$ (part); as, $\tau \check{\omega} \nu \ \pi \acute{\epsilon} \nu \tau \epsilon \ \mu \acute{\epsilon} \varrho \omega \nu$, $\tau \grave{\alpha} \ \delta \acute{\nu} \omega$ (sc. $\mu \acute{\epsilon} \varrho \eta$) = two-fifths.

§32. Examples of Numbers with the Greek Signs.

	CAI	RDINAL.	ORDINAL.		
1	ú	દાંડ,	πρῶτος, -η, -ον,		
2	β'	δύο,	δεύτερος, -α, -ον,		
3	γ	τρεῖς,	τρίτος, -η, -ον,		
10	ί	δέκα,	δέκατος, -η, -ον,		
11	ıά	ἔνδε κα,	ένδέκατος, -η, -ον,		
12	ıβ	δώδεκα,	δωδέκατος, -η, -ον,		
20	\varkappa'	εἴχοσι,	εἰκοστός, -ή, -όν,		
21	χά	εϊχοσιν εἶς,	είχοστός πρῶτος,		
100	e'	ξκατόν,	έχατοστός, -ή, -όν,		
101	ρά	έχατόν εἶς,			
10 00	a	χίλιοι, -αι, -α.	χιλιοστός, -ή, -όν.		

Up to 1000, the letters have a mark placed over them; for 1000 and above, the mark is placed under them. Thus, $\alpha = 1$; $\alpha = 1000$; i = 10; i = 10,000; i = 11; i = 11,000.

1 §33. Inflection of the first four Numerals.

	εls, (stem εν,) one.		εν,) one.	δύο, two.	
N. G. D. A.	els év-ós év-l év-a	μίἄ μιᾶς μιᾳ μίαν	ev ev-qs ev-{ ev	δυό δυοῖν (δυεῖν) δυσί (δυοῖν) δύο	
N. G. D. A.	τρεῖς (th τριῶν	ree)	· τρία	τέσσαρες (τέτταρες) τεσσάρων	τέτταρα
D. A.	τρισί τρεῖς		τρία	τέτταρσι τέτταρας	τέτταρα

2. Compounds of the negative particles $o\ddot{\nu}\delta\varepsilon$, $\mu\dot{\eta}\delta\varepsilon$, with $\varepsilon\dot{\iota}\varsigma$, as $o\dot{\nu}\delta\varepsilon\dot{\iota}\varsigma$, $\mu\eta\delta\varepsilon\dot{\iota}\varsigma$, are inflected like $\varepsilon\dot{\iota}\varsigma$. They are used in the plural, $o\dot{\nu}\delta\dot{\varepsilon}\nu\varepsilon\varsigma$. $\ddot{\alpha}\mu\varphi\omega$, "both," is declined like $\delta\dot{\nu}o$.

CHAPTER IV.

§34. Pronouns.

- 1. Pronouns express the relation of an object to the speaker. If the pronoun stands for the speaker himself, it is 1st person; if for the person spoken to, it is 2d person; if for the person or thing spoken of, it is 3d person.
- 2. As there can be no more relations of person than these three, there can be only three personal pro-

nouns, and these belong to every language. In Greek they are, $\check{\epsilon}\gamma\omega$, I, $\sigma\acute{\nu}$, thou, $o\check{\check{\nu}}$, of him; the last wants the nominative, which is supplied by the adjective pronoun $\alpha\check{\nu}\tau\acute{o}\varsigma$.

- 3. Besides the personal pronouns, there are six other classes: the Reflexive, the Reciprocal, the Possessive, the Demonstrative, the Relative, and the Indefinite.
- 4. The personal, with the reflexive and reciprocal, are called Substantive pronouns; the others are called Adjective pronouns, being generally joined to substantives, though they can also stand substantively by themselves. The adverbs of manner, time and place, derived from pronouns, as $\pi \acute{o} \vartheta \epsilon \nu$, whence? $\pi o \acute{\nu}$, where? $\vec{\epsilon} \nu \tau \alpha \tilde{\nu} \vartheta \alpha$, here, are called Adverbial pronouns.

PERSON	TAT	PRO	NO	UNS.

SING.	<i>ἐγώ</i> , Ι.	σύ, thou.	ot, of him.
N.	έγώ	σύ	Wanting. ov ov e
G.	έμοῦ (μοῦ)	σοῦ (σου)	
D.	έμοί (μοί)	σοἱ (σοι)	
A.	έμέ (μέ)	σϵ (σϵ)	
PLUR. N. G. D. A.	ήμεῖς ήμῶν ήμῖν ήμᾶς	δμεῖς δμῶν δμῖν δμᾶς	σφείς, neut. σφέα (σφεα) σφών σφίσι (ν) σφάς, neut. σφέα (σφεα)
N. A.	νώ	σφώ	σφωέ
G. D.	νφ̂ν	σφώρν	σφωτν

Rem. 1.—The oblique cases of the second and third

persons singular may be enclitic, also the oblique case of the third person in the plural and dual, but never the circumflexed $\sigma\varphi\dot{\alpha}\varsigma$ and $\sigma\varphi\dot{\omega}\nu$. Sometimes $\sigma\varphi\dot{\alpha}\varsigma$ is shortened by the poets into $\sigma\varphi\dot{\alpha}\varsigma$, and in this case it suffers inclination of the accent.

2. The monosyllabic forms of $\partial \gamma \omega$ are enclitic. They retain the accent, however, when governed by prepositions.

3. For the sake of emphasis the particle $\gamma \varepsilon$ is appended to the pronouns of the 1st and 2d person, as $\check{\epsilon}\gamma\omega\gamma\varepsilon$, $\sigma\acute{\nu}\gamma\varepsilon$; in this case the accent of $\check{\epsilon}\gamma\acute{\omega}$ is drawn back.

§35. DIALECTS OF PERSONAL PRONOUNS.

For ἐγώ, there is an old Doric form ἐγών.

2. For $\sigma \dot{\nu}$, the Dorians have $\tau \dot{\nu}$; there exists also an

old epic form τύνε.

- 3. The genitive in $o\nu$, comes from $\dot{\epsilon}o$ contracted, which has been retained in the language of epic poetry; as $\dot{\epsilon}\mu\dot{\epsilon}o$, $\sigma\dot{\epsilon}o$, $\dot{\epsilon}o$, or $\dot{\epsilon}\mu\dot{\epsilon}o$, $\sigma\epsilon\dot{\iota}o$, $\epsilon\ddot{\iota}o$. In the Ionic and Doric dialects, this ϵo is contracted into $\epsilon\dot{\nu}$, as $\dot{\epsilon}\mu\epsilon\dot{\nu}$, $\mu\epsilon\dot{\nu}$, $\sigma\epsilon\dot{\nu}$, $\epsilon\dot{\nu}$. The Dorics have also instead of $\sigma\epsilon\dot{\nu}$, $\tau\epsilon\dot{\nu}$ and $\tau\epsilon\dot{\nu}\varsigma$, $\tau\dot{\epsilon}o\iota o$.
- 4. To poetry belongs the genitives $\dot{\epsilon}\mu\dot{\epsilon}\vartheta\epsilon\nu$, $\sigma\dot{\epsilon}\vartheta\epsilon\nu$, $\dot{\epsilon}\vartheta\epsilon\nu$. This termination $\vartheta\epsilon\nu$ seems added to express more fully the genitive relation (out of).
- 5. The Ionic dialect among the Epic writers lengthens the pronoun of the 3rd person by prefixing ε ; as, G. $\vec{\epsilon}\epsilon\tilde{\iota}o$, D. $\vec{\epsilon}o\tilde{\iota}$, A. $\vec{\epsilon}\dot{\epsilon}$.

- 6. In the dative the Dorians have εμίν for εμοῖ, τίν or τεΐν, and τοί (which is also Ionic), for σοί, ἴν for οἶ; τίν is also used for σέ.
- 7. The forms ἡμεῖς, ἡμῶν, ἡμᾶς, ὑμεῖς, ὑμῶν, ὑμᾶς, σφεῖς, σφῶν, σφᾶς, are contractions from ἡμεές, ἡμέων, ἡμέως, &c., found in Ionic writers.
- 8. The Dorians shorten the nominatives into $\dot{\alpha}\mu\dot{\epsilon}\varsigma$, $\dot{\nu}\mu\dot{\epsilon}\varsigma$, and in the accusative have $\dot{\alpha}\mu\epsilon$, $\dot{\nu}\mu\epsilon$, for $\dot{\eta}\mu\alpha\varsigma$, $\dot{\nu}\mu\alpha\varsigma$; hence arose the Æolic plural still preserved:

Nom. ἄμμες (we), ὕμμες (you). Dat. ἄμμιν, ὅμμιν οτ ἄμμι, ὕμμι. Acc. ἄμμε, ὅμμε.

- 9. The Acc. σφέ is used by the Attics for all numbers and genders, consequently for αὐτόν, -ήν, -ό, and αὐτούς, αὐτάς, αὐτά.
- 10. $\mu i \nu$ is also used by the Ionics as the Acc. of all genders and numbers of the 3d person, as $\nu i \nu$ is used by the Attics.

§36. Reflexive Pronouns.

- 1. These are from αὐτός compounded with the Acc. sing. of the three personal pronouns, ἐμεαυτοῦ, of myself; σεαυτοῦ (contr. σαυτοῦ), of thyself; ἑαυτοῦ), (contr. αὐτοῦ), of himself.
- 2. The first and second are declined only in the oblique cases of the sing.; the third is inflected as one word also in the plural. They are all found written separately in Homer.

INFLECTION	OF	REFLEXIVE	PRONOUNS.
THETEOTION	UĽ	DEFINAL VE	LEGNO

	MASC.	FEM.	MASO.	FEM.	MASC.	FEM.

PLUB. N. G. D. A.			 δμῶν, αὐτῶν, &cc.			

§37. Reciprocal Pronoun ἀλλήλων.

This is formed from $\ddot{a}\lambda\lambda o\varsigma$, and signifies mutual relation of objects to one another. It is evident from its meaning that it can have no singular.

	PLURAL.	, DUAL.
G. D.	άλλήλων άλλήλοις -αις -οις	άλλήλοιν -αιν -οιν " " "
A.	άλλήλοις -αις -οις άλλήλους -ας -α	ἀλλήλω −ā −ω

§38. Adjective Pronouns.

1. Possessive Pronouns are derived from the Gen. of personal pronouns, and denote something of or belonging to the person implied. They are inflected like adjectives in $o_{\mathcal{S}}$ of three terminations. Thus,

from
$$\vec{\epsilon}\mu o \tilde{\nu}$$
 is N. $\vec{\epsilon}\mu o \hat{\varsigma}$, $-\eta$, $-o \nu$, mine. G. $\vec{\epsilon}\mu o \tilde{\nu}$, $-\eta \varsigma$, $-o \tilde{\nu}$,

from
$$\sigma o \tilde{v}$$
 is N. $\sigma o \zeta$, $-\dot{\eta}$, $-\dot{o}v$, thine. G. $\sigma o \tilde{v}$, $-\dot{\eta} \zeta$, $-\dot{o}v$, from $o \tilde{v}$ is N. $\dot{\epsilon} o \zeta$, $-\dot{\alpha}$, $-\dot{\alpha}v$, his, &c. or $\ddot{o} \zeta$, $-\ddot{\eta} \zeta$, $-\ddot{\eta}v$, G. $o \tilde{v}$, $-\ddot{\eta} \zeta$, $-o \tilde{v}$, from $\dot{\eta} \mu \tilde{\omega} v$ is N. $\dot{\eta} \mu \dot{\epsilon} \tau \epsilon \rho o \zeta$, $-\alpha$, $-o v$, our. G. $\dot{\eta} \mu \epsilon \tau \dot{\epsilon} \rho o v$, $-\alpha \zeta$, $-o v$, from $\dot{v} \mu \dot{\omega} v$ is N. $\dot{v} \mu \dot{\epsilon} \tau \dot{\epsilon} \rho o \zeta$, $-\alpha$, $-o v$, your. from $\sigma \varphi \tilde{\omega} v$ is N. $\sigma \varphi \dot{\epsilon} \tau \dot{\epsilon} \rho o \zeta$, $-\alpha$, $-o v$, $v \omega \dot{\tau} \tau \dot{\epsilon} \rho o \zeta$ from $v \tilde{\omega} \dot{v} v$. $\sigma \varphi \dot{\omega} \dot{\tau} \tau \dot{\epsilon} \rho o \zeta$ from $\sigma \varphi \dot{\omega} \dot{v} \dot{v}$.

§39. Demonstrative Pronouns.

1. Demonstrative pronouns serve to point out an object definitely. The English demonstrative 'this' has two corresponding forms in Greek, δ , $\tilde{\eta}$, $\tau \delta$ (see §), and $o\tilde{v}\tau o\varsigma$, $\alpha\tilde{v}\tau \eta$, $\tau o\tilde{v}\tau o$.

Note. οὖτος is formed by the union of the article ὁ, ἡ, τὸ, with the pronoun αὖτός. The vowels o and ω, with the diphthong oι of the article, coalesce with the initial vowels of αὖτός into ου, whilst the vowels a and η, when they come in contact with the same initial vowels, are absorbed. Thus, ὁ αὖτός, ἡ αὖτή, τὸ αὖτό, become οὖτος, αὖτη, τοῦτο, and so throughout the inflection. αὖτός with the article prefixed (ὁ αὖτός) denotes "the same." It is sometimes contracted by Crasis, but can be distinguished from the foregoing both in form, as ὁ αὖτός (the same) by Crasis αὖτός, and by the Crasis sign and accent. Thus in the Nom. pl., where the forms of the Fem. and Neut. are alike, αὖταί (for αἰ αὖταί,) denotes "the same;" αὖται, "these;" ταὖτά (τὰ αὖτά), "the same;" ταῦτα, "these."

The English 'that' is expressed in Greek by $\dot{\epsilon}\kappa\epsilon\dot{\imath}$ - $\nu o \varepsilon$; to these is added $\alpha\dot{\nu}\dot{r}\dot{o}\varepsilon$, a pronoun corresponding to the Latin *ipse*.

f					
BING. N. G. D. A.	οῦτος τούτου τούτφ τοῦτον	αὖτη ταύτης ταύτη ταύτην	τοῦτο τούτου τούτφ τοῦτο	εκείνος εκείνη εκείνο	αὐτό8 -ή -ό αὐτοῦ -ῆς -οῦ αὐτῷ -ῆ -ῷ αὐτόν -ήν -ό

	τούτω τούτοιν	ταύτᾶ ταύταιν	τυύτω τούτοιν		αὐτώ -ά -ώ αὐτοῖν -αῖν -οῖν

2. Besides the foregoing, there are the demonstrative adjectives $\ddot{\alpha}\lambda\lambda\rho\varsigma$, another, inflected like $\alpha\dot{\nu}\dot{\nu}\dot{\rho}\varsigma$; $\tau\rho\iota\dot{\rho}\dot{\nu}\tau\rho\varsigma$, such; $\tau\eta\lambda\iota\dot{\nu}\rho\dot{\nu}\tau\rho\varsigma$, so great; $\tau\rho\sigma\rho\dot{\nu}\tau\rho\varsigma$, so much, inflected like $o\dot{\nu}\tau\rho\varsigma$, except that they have the neuter in $\rho\nu$ as well as in ρ ; $\ddot{\epsilon}\tau\epsilon\rho\rho\varsigma$, another, is declined like adjectives of the same termination. When preceded by the article, it means one of two (Latin, alter).

§40. RELATIVE PRONOUN.

3. With res must be classed the indefinite pronoun

§42. Correlatives.

- 1. Under this term are comprised adverbs and adjectives of pronoun origin, which have a mutual relation; such that when one implies a question, a corresponding term denotes the answer. The adjective correlatives refer to size and quality; the adverbial to place, time, and manner. The former are declined like adjectives in og of three terminations.
- 2. Correlatives are classified into Indefinite, Interrogative, Demonstrative and Relative. They proceed from a common root, and are distinguished by the accent and the initial letter.
- 3. The indefinite and interrogative have the same initial letter π , but are distinguished by the position of the accent. Thus, $\pi \acute{o}\sigma o\varsigma$; "how much?" interrogative; $\pi o\sigma \acute{o}\varsigma$, "of a certain size," indefinite; $\pi \acute{o}\vartheta \epsilon \nu$; "whence?" $\pi o\vartheta \acute{e}\nu$, "somewhere."
- 4. The initial letter of the demonstrative correlatives is τ ; of the relative the aspirated δ and $\dot{\eta}$.

EXAMPLES.

Adjective. Correlative.		INDEFINITE. Of certain size. ποσός -ή -όν	So great. τόσος -η -ον	RELATIVE. As great. 8005 -7 -00
Adv. Correl.	ποίος -α -ον;	Of certain kind. ποιός -ά -όν ποτέ, sometime.	τοίος -α -ον	Of what kind. δποΐος -α -ον ὅτε, when.

§43. Pronoun Suffixes.

- 1. The particles * $\gamma \varepsilon$, $\pi \varepsilon \varrho$, $o \tilde{\nu} \nu$, $\delta \varepsilon$, ι , and the prefix $\delta \eta$, are joined to pronouns to add force and precision to their characteristic meaning.
- 2. $\gamma \varepsilon$, as remarked (§34. R. 3), joined to the personal pronouns, gives emphasis to the person implied; as, $\varepsilon \gamma \omega \gamma \varepsilon$, "and for my part."
- 3. $\delta \varepsilon$ is joined to the demonstrative pronouns to give precision and limitation to their demonstrative meaning; as, $\delta \delta \varepsilon$, "this very person."
- 4. $\pi \epsilon \varrho$ is joined to relatives, and combines a demonstrative with their relative meaning; as, $\delta \sigma \pi \epsilon \varrho$, "which very person."
- 5. ι suffixed to demonstratives adds to them the idea of place. This ι is a dative termination, and preserves the force of the Locative Dative in this connection; as $o\dot{\nu}ro\sigma\dot{\iota}$, "this person here."
- * Prepositions, Conjunctions, and Adverbs, not derived from Substantives or Verbs, are termed Particles.
- † $\delta\delta\epsilon$ is declined like the article. Homer gives it a double termination in the Dat. plural, as, $\tau o i \sigma \delta\epsilon \sigma \iota$.

Note. For further, see Dialects of the Pronouns.

CHAPTER V.

§44. THE VERB.

- 1. A Verb is a word that expresses action. The relation of the action to the subject of the verb is fourfold, and is made the basis on which verbs are divided into Transitive, Intransitive, Middle, and Passive.
- 2. A verb is Transitive, when the action implied proceeds from the subject to some external object, as, βουλεύω σέ, "I advise you." Intransitive, when the action proceeds neither from nor to the subject, but resides in it, as, θάλλω, "I bloom." Middle, when the action is directed by the subject to itself, as, βουλεύομαι, "I advise myself." Passive, when the action is received by the subject, as, βουλεύομαι ὕπο σοῦ, "I am advised by you."
- 3. To denote these relations of the action to the subject, the verb has three forms, termed Voices; the Active voice, which embraces most transitive and intransitive verbs, the Middle and Passive, which embrace verbs of the same names.

Note. Verbs are called Deponent which have partly passive and partly middle forms, but in signification are Transitive, Intransitive, or Reflexive.

§45. Division of Verbs.

- 1. Verbs are divided according to their terminations into verbs in ω and verbs in $\mu\iota$. The former will be first treated, as they constitute the more numerous and important class.
- 2. First, every verb is to be distinguished into two parts, the radical part or *Stem*, and the Syllables of Inflection, which are added to the stem to denote the time, the mode, the number, the person of the verb. Thus, in $\vec{\epsilon}$ - $\beta o \dot{\nu} \lambda \epsilon v \sigma \alpha$, "I advised," $\beta o \nu \lambda \epsilon v$ is the stem, ϵ , $\sigma \alpha$, are syllables of inflection, (see §12, Note.)
- 3. The stem is subject to no changes throughout the inflection, except those required by the rules of Euphony.*
- 4. That letter of the stem to which the syllables of inflection are added, is called the verb characteristic, \dagger as, according to it, verbs are divided into Pure and Impure verbs. Pure verbs are those whose characteristic is a vowel; e.g., $\beta o \nu \lambda \epsilon \dot{\nu} \omega$, the characteristic is ν , to which the inflection syllable is annexed. Pure verbs whose characteristics are α , ϵ , o, are contracted according to rules for contraction, (§3.)
- 5. Impure verbs are those whose characteristic is a consonant; e. g., $\tau \varrho \iota \beta \omega$, "I rub," characteristic β .
- 6. Impure verbs are divided into Mute and Liquid verbs, according as their characteristic is a Mute or a Liquid.
- * Some changes of the stem vowel occur in some tenses, which will be noticed in their proper place.
 - † The letter of the simple stem, (see § 19, note,) and not that let-

§46. Inflection of Verbs in ω .

- 1. Verbs are inflected by tense to denote the time; by mode, to denote the manner; by number and person, to denote the number and person of the verb.
- 2. The Greek verb has seven tenses: Present, Imperfect, Perfect, Pluperfect, Future, Aorist, and Future-perfect, or Paulo-post Future.
- 3. The Perfect, Pluperfect, Future, and Aorist, have each a second form, called 2d Perfect, 2d Future, &c.
- 4. Five Modes: Indicative, Imperative, Optative, Subjunctive, and Infinitive, together with a participial form of each tense.
- 5. The Tenses are not all used in each of the Modes, as will be seen from the Paradigm.

Note. The Greek Aorist, which has no corresponding tense in Latin or English, denotes past time absolutely, without any reference to a contemporaneous action.

§47. Inflection of Verbs in ω . Tense Endings.

1. Verbs in ω have the following tense endings in the active voice.

The tense ending of the Present is ω ; of the Imperfect, $o\nu$; of the 1st Perfect, $\varkappa\alpha$, in verbs whose

ter which, added for the purpose of strengthening the stem, sometimes holds this place, is the verb characteristic. characteristic is a vowel, a liquid, or a $\tau \alpha \nu$ mute; in verbs whose characteristic is a $\pi \iota$ or a $\kappa \alpha \pi \pi \alpha$ mute, the ending is $\dot{\alpha}$. The aspirate blends with the characteristic mute.

The tense ending of the 1st Pluperfect is $\kappa \varepsilon \iota \nu$ or $\dot{\varepsilon} \iota \nu$, with the same distinction as in the Perfect; of the 2d Perfect, α ; 2d Pluperfect, $\varepsilon \iota \nu$; 1st Future, $\sigma \omega$; 2d Future, ω ; 1st Aorist, $\sigma \alpha$; 2d Aorist, $\sigma \nu$.

Note. The consonant which connect the ending of some of the tenses with the verb characteristic, is called the tense characteristic. Only three tenses, the 1st Perfect, 1st Future, and 1st Aorist, have a tense characteristic. The tense characteristic of the Perfect is κ or ('), that of the Future and Aorist is σ .

§48. AUGMENT AND REDUPLICATION.

- 1. The Augment, in general terms, is ε prefixed to the stem in those tenses that denote past time; as, Imperf. $\dot{\varepsilon}$ - $\beta o \dot{\nu} \lambda \varepsilon v$ -o v, from stem $\beta o \nu \lambda \varepsilon v$.
- 2. If the initial letter of the stem is a vowel, the Augment is blended with it, according to rules of Contraction (§3). Thus, from stem $\alpha\nu\delta\alpha\nu$, the Imperf. becomes $\ddot{\eta}\nu\delta\alpha\nu-o\nu$, for $\dot{\epsilon}-\dot{\alpha}\nu\delta\alpha\nu-o\nu$; but if the initial is a consonant, the Augment remains a distinct syllable. In the latter case the Augment is called the syllabic; in the former it is called the Temporal Augment.*
- 3. Reduplication consists in the repetition of the initial consonant of the stem before the Augment; as, $\beta \varepsilon \beta o \nu \lambda \varepsilon v \kappa \alpha$, from stem $\beta o \nu \lambda \varepsilon v$.
- * Syllabic, from adding a syllable to the stem. Temporal, from increasing its time, or quantity.

4. Reduplication belongs to the Perfect and Pluperfect tenses, and takes place only in verbs whose stem begins with a single consonant.* The Pluperf. prefixes an additional Augment to the Reduplication; as, ε-βε-βουλεύ-κειν, "I had advised."

The Perfect, whether it admits of Augment or Re

duplication, retains it through all the Modes.

5. The Augment of the other tenses, viz.: Imperf. and Aorist, is limited to the Indicative Mode. (See Rem. on Tenses.)

Inflection by Tense.

1. This consists in appending to the simple or altered † stem the Tense endings above given.

PARADIGM.

- 2. Verb in $\pi \iota$ Mute (with stem strengthened in Pres. and Imperf. by τ); $\tau \nu \pi \tau - \omega$ (stem $\tau \nu \pi$), "I strike."
 - * See Remarks on Reduplication, §75.
- † The Pres. and Imperf. generally contain what is called the strengthened stem; this is the simple stem altered by the addition of a vowel or consonant, or by the lengthening of the stem vowel. Thus, in τύπτ-ω, τυπ is the simple stem, which is strengthened in the Pres. and Imperf. by the addition of τ . The second Aorist always contains the pure stem. If the stem is altered by vowel changes, the strengthened form is preserved in the Perfect, 1st Future, and 1st Aorist.

Present. $\tau \dot{\nu} \pi r - \omega$, formed by adding tense ending to strengthened stem.

Imperfect. *i-runt-ov*, formed by prefixing the Augment, and adding tense ending.

1st Perfect. $\tau \acute{\varepsilon} - \tau \upsilon \varphi - \alpha^* = \tau \acute{\varepsilon} - \tau \upsilon \pi - \mathring{\alpha}$, formed by prefixing reduplication, and adding tense ending to the simple stem.

1st Pluperf. $\vec{\epsilon} - \tau \epsilon - \tau \nu \varphi - \epsilon \iota \nu = \vec{\epsilon} - \tau \epsilon - \tau \nu \pi - \epsilon \iota \nu$, formed by prefixing the additional augment to redupl. and adding tense ending.

2d Perfect. $\tau \vec{\epsilon} - \tau \nu \pi - \alpha$, formed as 1st Perfect without the aspirate.

2d Pluperf. ε-τε-τύπ-ειν, formed as 1st Pluperfect without the aspirate.

1st Future. $\tau \dot{\nu}\psi - \omega = \tau \dot{\nu}\pi - \sigma\omega$, formed by adding tense ending to the simple stem (see §8).

1st Aorist. $\xi - \tau \nu \psi - \alpha = (\xi - \tau \nu \pi - \sigma \alpha)$, formed by prefixing the augment and adding the tense ending to the simple stem.

2d Aorist. ε-τυπ-ον, formed by prefixing the augment and adding tense ending to simple stem.

^{*} When the verb begins with a vowel, two consonants, or a double letter, it is not susceptible of reduplication, but takes the augment.

§50. Verbs in (χαππα) and (ταν) Mutes inflected by Tense.—Tense Formation the same as

$\pi \lambda \acute{\epsilon} \varkappa - \omega$ (stem $\pi \lambda \epsilon \varkappa$), "to weave."

Present, $\pi\lambda\acute{\epsilon}\varkappa$ - ω^* Imperfect, $\acute{\epsilon}$ - $\pi\lambda\acute{\epsilon}\varkappa$ - $o\nu$ 1st Perfect, $\pi\acute{\epsilon}$ - $\pi\lambda\acute{\epsilon}\varkappa$ -a = $\pi\acute{\epsilon}$ - $\pi\lambda\acute{\epsilon}\varkappa$ -a1st Pluperf., $\acute{\epsilon}$ - $\pi\epsilon$ - $\pi\lambda\acute{\epsilon}\varkappa$ - $\epsilon\iota\nu$ = $\acute{\epsilon}$ - $\pi\epsilon$ - $\pi\lambda\acute{\epsilon}\varkappa$ - $\epsilon\iota\nu$ 2d Perfect, $\pi\acute{\epsilon}$ - $\pi\lambdao\varkappa$ -a†

2d Pluperf., $\acute{\epsilon}$ - $\pi\epsilon$ - $\pi\lambda\acute{o}\varkappa$ - $\epsilon\iota\nu$ 1st Future, $\pi\lambda\acute{\epsilon}$'s - ω = $\pi\lambda\acute{\epsilon}\varkappa$ - $\sigma\omega$ 1st Aorist, $\acute{\epsilon}$ - $\pi\lambda\acute{\epsilon}$'s - ω = $\acute{\epsilon}$ - $\pi\lambda\acute{\epsilon}\varkappa$ - $\sigma\omega$ 2d Aorist, $\acute{\epsilon}$ - $\pi\lambda\epsilon\varkappa$ - $\sigma\omega$

ελπίζ-ω (stem ελπιδ), "to hope."

Present, $\vec{\epsilon}\lambda\pi i\zeta - \omega$ Imperfect, $\ddot{\eta}\lambda\pi \iota \zeta - o\nu = \vec{\epsilon} - \acute{\epsilon}\lambda\pi \iota \zeta - o\nu$ 1st Perfect, $\ddot{\eta}\lambda\pi \iota - \kappa\alpha$ (see §8). 1st Pluperf., $\ddot{\eta}\lambda\pi \iota - \kappa\epsilon\iota\nu$ 2d Perfect, $\ddot{\eta}\lambda\pi\iota\delta - \alpha$ 2d Pluperf., $\ddot{\eta}\lambda\pi\iota\delta - \epsilon\iota\nu$ 1st Future, $\ddot{\eta}\lambda\pi\iota - \sigma\omega$ 1st Aorist, $\ddot{\eta}\lambda\pi\iota - \sigma\alpha$ 2d Aorist, $\ddot{\eta}\lambda\pi\iota\delta - o\nu$

^{*} Many verbs of this characteristic have their strengthened stem in σσ or ττ; as, τάσσ-ω (stem ταγ); Fut. τάξ-ω; 2d Aor. ἔ-ταγ-ον. Some in ζ; as, κράζ-ω, 2d Aor. ἔ-κραγ-ον (stem κραγ).

[†] For the change of the stem vowel, see §69.

§51. PURE VERB.

βουλεύ-ω (stem βουλευ), "I advise."

Present,		βουλεύ	-ω
Imperfect,	ž-	βούλευ	-ov
1st Perfect,	βε-	βούλευ	-200
1st Pluperfect,	è-βε-	βουλεύ	- 28612
2d Perfect, *			
2d Pluperfect,			
1st Future,		βουλεύ	-σω
2d Future,			
1st Aorist,	દે-	βούλευ	-6a
2d Aorist,			

1. The full inflection of a Greek verb is exhibited in the following Paradigms. A pure verb has been selected for the purpose, as it presents the inflections free from those changes which, in accordance with the rules of euphony, arise from the concurrence of the verb characteristic with the tense endings, in impure verbs.

MODE VOWEL.

- 1. The vowel which follows either the verb characteristic, or tense characteristic in each mode, is called the mode vowel. In the Opt. it is always a diphthong, formed by adding ι to the vowel of the Indic. (except in the Pluperfect, which changes $\epsilon\iota$ of the Indic. into $o\iota$). The mode vowel of the Subjunc. is the vowel of
- * The second tenses do not belong to pure verbs; the second perfect, however, is not of infrequent use, especially in early poetry.

the Indic., yet so as to be always long in the former. The Perfect and 1st Aorist change α of the Indic. into ω in the Subjunctive.

2. Tenses are divided into principal and historical. The Optative mode is properly the Subjunctive of the historical tenses, which are the Imperf., Pluperfect and Aorist; hence its appropriation by them in the following Paradigm. For further on the Modes, and for Fut. Opt., see §132, 133.

§52. Paradigm.—βουλεύ-ω, "I advise."

	Indicative.	Imperative.	Optative.
Present. Imperfect. 1st Perfect. 1st Pluperfect. 2d Perfect.	βουλεύ-ω ἐ-βούλευ-ον βε-βούλευ-κα ἐ-βε-βουλεύ-κειν	βούλευ-ε βε-βούλευ-κε	βουλεύ-οιμι βε-βουλεύ-κοιμι
2d Pluperfect. 1st Future. 2d Future. 1st Aorist. 2d Aorist.	βουλεύ-σω έ-βούλευ-σα	βούλευ-σον	βουλεύ-σοιμι βουλεύ-σαιμι

	Subjunctive.	Infinitive.	Participle.
Present. Imperfect.	βουλεύ-ω	βουλεύ-ειν	βουλεύ-ων
1st Perfect. 1st Pluperfect. 2d Perfect. 2d Pluperfect.	βε-βουλεύ-κω	βε-βουλεύ-κεναι	βε-βουλεύ-κως
1st Future. 2d Future.		βουλεύ-σειν	βουλεύ-σων
1st Aorist. 2d Aorist.	βουλεύ-σω	βούλευ-σαι	βούλευ-σας

§54. Inflection of Verbs in the Middle Voice.

1. The middle voice has the following tense-endings:

Present,	-ομαι.
Imperf.,	-όμην.
Perfect,	$-\mu\alpha\iota$.
Pluperfect,	$-\mu\eta\nu$.
1st Aorist,	-σάμην.
2d Aorist,	-όμην.
1st Future,	-σομαι.
2d Future,	-ουμαι.

2, The inflection by tense proceeds as in the active voice; that is, by adding the tense-endings to the stem, and prefixing the augment and reduplication to the proper tenses—thus:

Stem βουλευ.

Present,		βουλεύ	-ομαι.
Imperf.,	г-	βουλευ	-όμην.
Perfect,	βε-	βούλευ	-μαι.
Pluperf.,	ἐ-βε-	βουλεύ	$-\mu\eta\nu$.
1st Aorist,	<i>ह</i> -	βουλευ	-σάμην
2d Aorist,			•
1st Future,		βουλεύ	-σομαι.

§55. Inflection by Mode.

§61. CONTRACTED VERBS.

Pure contracted verbs correspond in their inflection to the paradigm of $\beta o \nu \lambda \epsilon \dot{\nu} - \omega$.

They are contracted * only in the present and imperfect tenses. In contraction they conform to the general rules of contraction (§3).

The following are the contractions which they un-

dergo:

The characteristic α is contracted with the ending vowels o, ω , and $o\nu$, into ω ; with ε into α .

The characteristic ε is contracted with the ending vowels ε and $\varepsilon\iota$ into $\varepsilon\iota$; with o into ov; with α into α .

The characteristic o is contracted with the ending vowel ω into ω ; with o, ε , and $o\nu$, into $o\nu$.

* The unusual contraction of $\delta \epsilon \iota$ and $o \eta$ into $o \iota$, is confined to the 2d and 3d persons indicative and subjunctive of verbs in o.

The contraction of the infinitive endings $a\epsilon\iota\nu$ into $a\nu$, of $o\epsilon\iota\nu$ into $o\nu\nu$ without ι subscript, arises from the old infinitive endings $a\epsilon\nu$ and $o\epsilon\nu$.

§62. Paradigm of Contracted Verbs.

Rem.—In the verbs $\zeta \acute{a}$ - ω , $\pi \epsilon \iota \nu \acute{a}$ - ω , $\delta \iota \psi \acute{a}$ - ω , and $\chi \rho \acute{a}$ - $\rho \mu a \iota$, the characteristic a is contracted with the ending vowel ϵ into η , and with $\epsilon \iota$ into η .

The characteristic ϵ in verbs of a monosyllabic stem, suffer only the contraction with ϵ and $\epsilon\iota$ into $\epsilon\iota$.

§63. Inflection of Mute Verbs in the Middle Voice.

1. The inflection of the middle voice has been already given in the case of pure verbs. It is the same for mute and liquid verbs, but is rendered somewhat complex by those changes which the characteristic

consonant of the verb, concurring with the tense ending, must undergo in accordance with the Rules of Euphony.

These changes, given §6, 7, 8, are here repeated.

CHANGES OF MUTES BEFORE μ.

2. A Π_{ι} -Mute before μ into μ , as (from stem $\tau \nu \pi$), $\tau \acute{\epsilon} - \tau \nu \mu - \mu \alpha \iota$ for $\tau \acute{\epsilon} - \tau \nu \pi - \mu \alpha \iota$.

A Καππα-Mute " μ into γ , as (from stem $\pi \lambda \varepsilon \varkappa$), $\pi \dot{\varepsilon} - \pi \lambda \varepsilon \gamma - \mu \alpha \iota$ for $\pi \dot{\varepsilon} - \pi \lambda \varepsilon \varkappa - \mu \alpha \iota$.

A Tav-Mute " μ into σ , as (from stem $\varphi \rho \alpha \delta$), $\pi \acute{\epsilon} - \varphi \rho \alpha \sigma - \mu \alpha \iota$ for $\pi \acute{\epsilon} - \varphi \rho \alpha \delta - \mu \alpha \iota$.

 II_{ι} and $K\alpha\pi\pi\alpha$ -Mutes before σ , combine with it to form ψ and ξ .

A $T\alpha\nu$ -Mute before σ is dropped, as $\pi \acute{\epsilon}$ - $\varphi \varrho \alpha$ - σ - $\alpha \iota$ for $\pi \acute{\epsilon}$ - $\varphi \varrho \alpha \delta$ - $\sigma \alpha \iota$.

- 3. Mutes of the same breathing must concur—a smooth must precede a smooth, &c.
- 4. N occurring between consonants is changed into α , in order to facilitate the pronunciation.
- 5. To illustrate the above rules, the inflection of the Perfect tense is here presented, compared with its inflection without the stem changes.

PERFECT MIDDLE $\tau \epsilon - \tau \nu \mu - \mu a \iota$, stem $\tau \nu \pi$.

	υπομάποσεο έτεμ. (τέ-τυπ-μαι) (τέ-τυπ-σαι)	ουλι. τε-τύμ-μεθον τέ-τυφ-θον τέ-τυφ-θον	` ,
5. τ€-τυπ-ται	•	τε-τυφ-σον	(τε-τυπ-σον)

1. τε-τύμ-μεθα (τε-τύπ-μεθα)
2. τέ-τυφ-θε (τέ-τυπ-θε)

3. τε-τυμ-μένοι εἰσί (τέ-τυπν-ται)

πέ-πλεγ-μαι, stem πλεκ.

SING. UNCHANGED STEM.	DUAL.	UNCHANGED STEM.
1. πέ-πλεγ-μαι (πέ-πλεκ-μαι)	πε-πλέγ-μεθον	(πε-πλέκ-μεθον)
2. πέ-πλεξ-αι (πέ-πλεκ-σαι)	πέ-πλεχ-θον	(πέ-πλεκ-θον)
3. πέ-πλεκ-ται	πέ-πλεχ-θον	(πέ-πλεκ-θον)

1. πε-πλέγ-μεθα (πε-πλέκ-μεθα)
2. πέ-πλεχ-θε (πέ-πλεκ-θε)
3. πε-πλεγ-μένοι εἰσί (πέ-πλεκν-ται)*

πέ-φρασ-μαι, stem φραδ.

2.	πέ-φρα-σαι	(πέ-φραδ-μαι) (πέ-φραδ-σαι) (πέ-φραδ-ται)	πέ-φρασ-θον	(πε-φράδ-μεθον) (πέ-φραδ-θον) (πέ-φραδ-θον)
		 πε-φράσ-μεθα πέ-φρασ-θε πε-φρασ-μένοι 	(πέ-φραδ-	·9e)

* By changing ν into a, these endings become $\tau\epsilon$ - $\tau \nu \pi$ -a- $\tau a\iota$, $\pi\epsilon$ - $\pi \lambda \epsilon \kappa$ -a- $\tau a\iota$, and $\pi\epsilon$ - $\phi \rho \alpha \delta$ -a- $\tau a\iota$. This form is frequently adopted in verbs of $\tau a\nu$ characteristic. This is the Ionic ending.

Rem.—In liquid verbs, ν before μ is changed into σ or is assimilated; as, $\varphi \alpha i \nu - \omega$ (stem $\varphi \alpha \nu$), Perf. Mid. $\pi \acute{\varepsilon} - \varphi \alpha \sigma - \mu \alpha \iota$; $\xi \eta \varrho \alpha i \nu - \omega$ (stem $\xi \eta \varrho \alpha \nu$), Perf. Mid. $\acute{\varepsilon} - \xi \acute{\eta} \varrho \alpha \mu - \mu \alpha \iota$. This happens only in verbs in $\alpha \iota \nu \omega$, $\alpha \iota \nu \omega$; those in $\varepsilon \iota \nu \omega$, $\iota \nu \omega$, reject the ν , as $\tau \varepsilon \acute{\iota} \nu - \omega$ (stem $\tau \varepsilon \nu$), Perf. Mid. $\tau \acute{\varepsilon} - \tau \alpha - \mu \alpha \iota$. In the former class, the ν appears when collision with μ does not occur; thus, $\pi \acute{\varepsilon} - \varphi \alpha \sigma - \mu \alpha \iota$; 2d person, $\pi \acute{\varepsilon} - \varphi \alpha \nu - \sigma \alpha \iota$; 3d person, $\pi \acute{\varepsilon} - \varphi \alpha \nu - \sigma \alpha \iota$; 3d person, $\pi \acute{\varepsilon} - \varphi \alpha \nu - \sigma \alpha \iota$;

§64. Inflection of Mute and Liquid Verbs in the Middle Voice.

Mute verb τύπτ-ομαι, "I strike myself" (stem τυπ).

1. The foregoing stem-changes being observed, the inflection of mute verbs conforms exactly to that of pure verbs.

2. INFLECTION BY TENSE.*

		$ au u \pi$

Rem.—The 2d Aor. Mid. corresponds in inflection to the Pres. in the Imper. and Subj. modes; to the Imperf. in the Ind. and Opt. See βουλεύ-ω.

^{*} έ-τε-τύπν-ται, έ-τε-τύπν-το.

§66. Inflection of Mute Verbs in the Passive Voice.

PARADIGM.*

TENSE.	INDICATIVE.	IMPERATIVE.	OPTATIVE.	s'E.	INFIN.	PART.
1st Fut. 2d Fut. F. Perf. 1st Aor. 2d Aor.	τυφ-θήσομαι τυπ-ήσομαι τε-τύψ-ομαι ἐ-τύφ-θην ἐ-τύπ-ην	τύφ-δητι [&c. τύπ-ηδι, ήτω,	- θησοίμην - ησοίμην - οίμην - θείην - είην	-ନ୍ତ -ଜ	-ήσεσθαι -εσθαι -ῆναι	-θησόμενυς -ησόμενος -όμενος -είς -είς

The first tenses of the above have been already given in the paradigm of βουλεύ-ω. The 2d Future is inflected like the 1st Future, and the 2d Aorist like the 1st, as there given.

§67. REMARKS ON TENSE FORMATION.

- 1. The principle of Tense-forming has been given (§49).
- 2. The due application of this principle requires a knowledge of the pure stem, as distinguished from the impure or simple stem. This is best attained by studying those additions made to the stem for the purpose of strengthening it in the Present and Imperfect.

The following are the most general: +

- 3. I. The stem is strengthened by changing its
- * For tense formation, see §57.
- † For the different modes of strengthening the stem, see §93, 94.

short vowel into a cognate long one, or into a diphthong. A stem strengthened in this manner is generally retained through all the first Tenses.* Hence, in order to obtain the pure stem, the above changes are to be reversed. Thus, in liquid verbs, from the strengthened form

 $\lambda \dot{\eta} \vartheta - \omega$, by changing η into α , is obt. $\lambda \alpha \vartheta$, pure stem. $\varphi \alpha \dot{\imath} \nu - \omega$ " αi " αi " $\varphi \alpha \nu$ " $\varphi \vartheta \dot{\imath} \dot{\varrho} - \omega$ " εi "

In Mute verbs, from

$$\lambda \epsilon i \pi - \omega$$
 by changing $\epsilon \iota$ " $\tilde{\iota}$ " $\lambda \tilde{\iota} \pi$ " $\tau \varrho \bar{\iota} \beta - \omega$ " $\bar{\iota}$ " $\tilde{\iota}$ " $\tau \varrho \tilde{\iota} \beta$ " $g \varrho \bar{\upsilon} \gamma - \omega$ " $\bar{\upsilon}$ " $\tilde{\upsilon}$ " $g \varrho \tilde{\upsilon} \gamma$ " $g \varrho \tilde{\upsilon} \gamma$ " $g \tilde{\upsilon} \gamma$ " $g \tilde{\upsilon} \gamma$ "

II. The stem is strengthened by doubling the characteristic, or by adding a different consonant to the characteristic, which is always a simple consonant. A stem strengthened in this manner is found only in the Present and the Imperfect. Hence, to obtain the pure stem, remove the additional consonant from the simple characteristic. Thus, from the strengthened form

^{*} Except liquid verbs.

[†] See §50, note, and §8.

§68. First Tenses.

1st Perfect.

- 1. The characteristics α, ε and o are lengthened * in this tense, as also in the 1st Future and 1st Aorist, as τιμά-ω, Perf. τε-τί-μη-κα; φιλέ-ω, Perf. πε-φίλη-κα; δελό-ω, Perf. δε-δέλω-κα. When a liquid precedes α, it is merely lengthened; as, ὁρά-ω, Perf. έ-ώρα-κα.
- 2. A few verbs of a monosyllabic stem change the stem vowel ε of mute verbs into o; of liquid verbs into α ; as, $\lambda \dot{\varepsilon} \gamma \omega$, stem $\lambda \varepsilon \gamma$, Perf. $\lambda \dot{\varepsilon} \lambda o \chi \alpha$; $\sigma \tau \dot{\varepsilon} \lambda \lambda \omega$, stem $\sigma \tau \varepsilon \lambda$, Perf. $\dot{\varepsilon} \sigma \tau \alpha \lambda \kappa \alpha$.

1st Future.

- 3. A $\tau \alpha \nu$ -Mute before the characteristic σ of the Future is dropped; as, $\pi \epsilon i \vartheta \omega$, "I believe," stem $\pi \iota \vartheta$, Future $\pi \epsilon i \sigma \omega$, for $\pi \epsilon i \vartheta \sigma \omega$; see §8.
- 4. If ν comes before the $\tau \alpha \nu$ -Mute, both are dropped and the stem vowel is lengthened; as, $\sigma \pi \acute{\epsilon} \nu \delta$ - ω , Future $\sigma \pi \acute{\epsilon} i$ - σ - ω ; see §8. 1.
- 5. An aspirate in the verb characteristic cannot combine with the tense ending of the Future, and is therefore transferred to the initial; as, $\tau \rho \dot{\epsilon} \varphi \cdot \omega$ (stem $\tau \rho \dot{\epsilon} \varphi$), Future $\vartheta \rho \dot{\epsilon} \psi \cdot \omega$.
- 6. A few verbs in $\alpha i\omega$ ($\alpha \omega$), $\epsilon \omega$, assume ν in the Future, which was originally in the stem as a Digamma. Thus, $\kappa \alpha i \omega$ (Attic $\kappa \bar{\alpha} \omega$, with Digamma $\kappa \alpha F \omega$), Future $\kappa \alpha \dot{\nu} \sigma \omega$, "I burn;" $\chi \dot{\epsilon} \omega$ (stem $\chi \epsilon F$), "I pour," Future $\chi \epsilon \dot{\nu} \sigma \omega$.
 - The short vowel is retained in some verbs, as τελέ-σ-ω.

7. The 1st Aorist coincides with the Future in the foregoing particulars. It has forms derived from the old and modern stem, in those verbs that assume v in the Future. Thus, $\kappa\alpha i - \omega$; 1st Aorist, $\tilde{\epsilon} - \kappa\alpha v - \sigma - \alpha$ and $\tilde{\epsilon} - \kappa \eta - \alpha$. In the Optative, the terminations $\epsilon \iota \alpha$, $\epsilon \iota \alpha \varsigma$, $\epsilon \iota \epsilon$, &c. (Æolic), are frequently used instead of $\alpha \iota \mu \iota$, $\alpha \iota \varsigma$, $\alpha \iota$, &c.

Attic Future.

- 8. The characteristic σ of the Future, when preceded by the short vowels $\check{\alpha}$, $\check{\epsilon}$, $\check{\iota}$, is omitted in certain verbs. The vowels α and ϵ , thus brought into contact with ω , are absorbed; ι is suffered to remain, but in either case the termination ω takes the circumflex accent. Thus, $\tau \epsilon \lambda \acute{\epsilon} \omega$, Future $\tau \epsilon \lambda \acute{\epsilon} \sigma \omega$; Sigma being omitted, $\tau \epsilon \lambda \acute{\epsilon} \omega$, which is contracted into $\tau \epsilon \lambda \check{\omega}$.
- 9. From its frequent use by Attic writers it is called the Attic Future. This form is limited to the Indicative, Infinitive, and Participle.

§69. Second Tenses.

1. The change of the stem vowel in these tenses is very common.

2d Perfect.

2. The ending is always appended to the simple characteristic; as, $\tau \dot{\nu} \pi \tau - \omega$ (stem $\tau \nu \pi$), 2d Perfect $\tau \dot{\varepsilon}$ - $\tau \nu \pi - \alpha$.

CHANGE OF STEM VOWEL.

- 3. The stem vowels α , ι , ν are lengthened; α , when preceded by a liquid, is merely lengthened; otherwise it is changed into η ; as, $\varphi\alpha\dot{\nu}-\omega$ (stem $\varphi\alpha\nu$), 2d Perfect $\pi\dot{\epsilon}-\varphi\eta\nu-\alpha$.
- 4. The stem vowel o remains unchanged, but ε , of a monosyllabic stem, is always changed into o;* as, $\varkappa\lambda\dot{\varepsilon}\pi\tau$ - ω (stem $\varkappa\lambda\varepsilon\pi$), 2d Perfect $\varkappa\dot{\varepsilon}$ - $\varkappa\lambda o$ - $\pi\omega$. $E\iota$ of the Present of Mute verbs is changed into $o\iota$, \dagger of liquid verbs into o; as, $\lambda\varepsilon\dot{\iota}\pi$ - ω (stem $\lambda\iota\pi$), 2d Perfect $\lambda\dot{\varepsilon}$ - $\lambda o\iota\pi$ - α , "I leave;" $\sigma\pi\varepsilon\dot{\iota}\varrho$ - ω (stem $\sigma\pi\varepsilon\varrho$), 2d Perfect $\dot{\varepsilon}$ - $\sigma\pi\varrho$ - ω .

2d Aorist.

5. The ending is appended to the simple characteristic.

CHANGE OF THE STEM VOWEL.

- 6. E of a monosyllabic stem is changed into α ; as, $\tau \rho \acute{\epsilon} \pi \omega$, "I turn" (stem $\tau \rho \epsilon \pi$), 2d Aorist $\acute{\epsilon} \tau \rho \alpha \pi o \nu$.
- 7. The 2d Future appends $\tilde{\omega}$ circumflexed to the pure stem. This ending is the result of contraction consequent on the rejection of σ from the original, which was $\dot{\epsilon}\sigma\omega$. Thus, from stem $\tau\nu\pi$, was formed 2d Future $\tau\nu\pi\dot{\epsilon}-\sigma-\omega$, which, by rejecting σ , became $\tau\nu\pi-\dot{\epsilon}-\omega$, by contraction $\tau\nu\pi-\tilde{\omega}$.
- 8. The Pluperfects retain the stem changes of their respective Perfects.
 - * Hence έ-οργ-α from έργ-ω.
 - † Hence ε-οικ-α from είκ-ω.

§70. LIQUID VERBS.

- 1. In the inflection of Liquid Verbs the following particulars are observed:
- I. The stem vowel is strengthened (except in a few verbs with ε as a stem vowel) in the Present and Imperfect:—1st. By doubling the characteristic λ ; as, $\sigma\varphi\acute{a}\lambda\lambda$ - ω (stem $\sigma\varphi\alpha\lambda$). 2d. By adding ν to the characteristic μ ; as, $\varkappa\acute{a}\mu\nu$ - ω (stem $\varkappa\alpha\mu$). 3d. By lengthening the stem vowel; as, $\varphi\alpha\acute{i}\nu$ - ω (stem $\varphi\alpha\nu$).

II. The simple stem appears in the Future, which is formed without its characteristic σ , by appending $\tilde{\omega}$ to the stem. Thus, from the foregoing stems are formed the Futures $\sigma\varphi\alpha\lambda-\tilde{\omega}$, $\varphi\alpha\nu-\tilde{\omega}$, $\varkappa\alpha\mu-\tilde{\omega}$.

This is the only Future belonging to Liquid Verbs in the Active and Middle voices, and is inflected like the contracted form of verbs in ε - ω .*

III. The First Aorist omits its characteristic σ , lengthens the stem vowel, and appends α to the simple characteristic; as, $\psi \dot{\alpha} \lambda \lambda \omega$, "I touch," 1st Aorist, $\xi \psi \eta \lambda - \alpha$.

IV. The 1st Perfect \dagger retains its characteristic \varkappa . The liquid ν , instead of being changed into γ before \varkappa ,

* This future is a contracted form of the original future in $\epsilon \sigma \omega$, by syncope, $\epsilon \omega$, by contraction, $\hat{\omega}$.

† This tense with the pluperfect, both in the active and middle voices, 1st aorist and 1st future passive, suffer a transposing of the liquid and the stem vowel (called Metathesis). Thus $\beta\dot{\alpha}\lambda\lambda-\omega$, Perf. $\beta\dot{\epsilon}-\beta\lambda\eta-\kappa a$, Pass. $\beta\dot{\epsilon}-\beta\lambda\eta-\mu a\iota$. In this case the stem vowel is lengthened.

as required by the rules of euphony, is rejected, except in a few verbs with α as a stem vowel. The stem vowel ε is changed into α ; as, $\varkappa \tau \varepsilon i \nu - \omega$ (stem $\varkappa \tau \varepsilon \nu$), Perfect $\varepsilon - \varkappa \tau \alpha - \varkappa \alpha$.

V. The 2d Perfect, both of Liquid and Mute verbs, has been treated (§69).

VI. The 2d Aorist changes the stem vowel ε into α , and appends its ending to the simple stem; as, $\varkappa \tau \varepsilon i \nu - \omega$ (stem $\varkappa \tau \varepsilon \nu$), 2d Aorist $\varepsilon - \varkappa \tau \alpha \nu - o \nu$.

§71. Inflection of Liquid Verbs by Tense.

§72. REMARKS ON THE INFLECTION ENDINGS OF THE THREE VOICES.

ACTIVE VOICE.

- 1. N properly belongs to the 3d Person Plur., but is omitted before σ (see §8. 5); and to compensate, the vowel is lengthened. Thus, $\beta ov \lambda \epsilon \dot{v} ov \sigma \iota$ for $\beta ov \lambda \epsilon \dot{v} ov \sigma \iota$.
- 2. The ending η instead of $\varepsilon\iota\nu$ occurs in the 1st Person Pluperf. This results from the Ionic ending $\varepsilon\alpha$, formed by substituting α for ν , a substitution very common in the Ionic dialect. Thus, for $\dot{\varepsilon}$ - $\beta\varepsilon$ - $\beta o\nu\lambda\varepsilon\dot{\nu}$ - $\kappa\varepsilon\iota\nu$, $-\varepsilon\iota\varsigma$, $-\varepsilon\iota$, comes the Ionic form $-\varkappa$ - $\varepsilon\alpha$, \varkappa - $\varepsilon\alpha\varsigma$, whence the Attic $\varkappa\eta$, $\varkappa\eta\varsigma$, $\varkappa\eta$.

Note. The inflection by person and mode of liquid verbs is according to the paradigm of mute verbs, except in the future, as above explained.

- 3. In the Optative, the ending $oi\eta\nu$, instead of $oi\mu\iota$, is of Attic origin. Thus, $\tau \nu \pi oi-\eta\nu \eta\varsigma$, $-\eta$. This ending is of frequent use in contracted verbs; as, $\tau \iota \mu \dot{\omega} \eta \nu$, $(\tau \iota \mu \omega oi\eta\nu)$,* $\varphi \iota \lambda oi\eta\nu$, $\delta \varepsilon \lambda oi-\eta\nu$.
- 4. For the Aorist ending of the same Mode the Æolic -εια, -ειας, -ειε, are common; as, τύψεια, -ειας, -ειε.
- 5. For $\varepsilon\sigma\alpha\nu$, 3d Person Plur. Opt., the shorter form $\varepsilon\nu$ is adopted. The same remark applies to the ending of the Passive Aorist.
- 6. The Imperative has the ending -όντων for -έτωσαν, Active; as, τυπτ-όντων for τυπτ-έτωσαν; and -σθων for -έσθωσαν, in the Middle and Passive; as, τυπτ-έσθων for τυπτ-έσθωσαν.

§73. PASSIVE AND MIDDLE.

- 1. Σ belongs, as characteristic, to the Second Person, but has been removed, except in the Perfect σαι and Pluperfect σο, by the Ionic Dialect. Thus, for the ending σαι, as τύπτ-ομαι, τύπτ-εσαι, the Ionic, by rejecting σ, adopted τύπτ-εαι, which the Attic changed into τύπτ-η, and the common language into τύπτ-ει. In like manner ασο, 1st Aorist Mid., became Ionic α-ο, Attic ω; as, ε-τύψ-ω; and εσω became Ionic εο, Attic ου; as, ε-τυπτ-όμην, 2d Person ε-τύπτ-εσο, Ionic ε-τύπτ-εο, Attic ε-τύπτ-ου.
 - 2. The regular Perf. and Pluperf. endings are v-rai,

ç.

^{*} See contractions, §3.

 ν - τo . These, with the stem-consonant, are difficult of pronunciation, and were softened into α - $\tau \alpha \iota$ and α - τo by the Ionic substitution of α for ν . Thus, $\tau \acute{\epsilon}$ - $\tau \varrho \iota \mu$ - $\mu \alpha \iota$ (stem $\tau \varrho \iota \beta$), 3d person plural $\tau \acute{\epsilon}$ - $\tau \varrho \iota \beta \nu$ - $\tau \alpha \iota$, softened into $\tau \epsilon$ - $\tau \varrho \acute{\iota} \varphi$ - α - $\tau \alpha \iota$, for which in the common Dialect the participle with the verb $\epsilon \iota \mu \iota$ is used; as, $\tau \epsilon$ - $\tau \varrho \acute{\iota} \mu \mu \epsilon \nu o \iota \epsilon \iota \acute{\sigma} \acute{\iota}$.

§74. THE AUGMENT.

A general view of the Augment has been already presented (§48). The following particulars, not embraced therein, deserve to be noticed:

I. The initial ϱ of the stem is doubled, when the augment is prefixed; as, $\dot{\varrho}\dot{\epsilon}\omega$, "I flow," Imperf. $\dot{\epsilon}\dot{\varrho}\dot{\varrho}\dot{\epsilon}\omega\nu$.

II. The initial ι and ν absorb the augment, and become long (Cont. §3); as, $i \varkappa \dot{\alpha} \nu - \omega$, Imperf. $i \varkappa \alpha \nu o \nu$. for $\varepsilon - i \varkappa \alpha \nu o \nu$.

III. Alpha initial, followed by a vowel not forming a diphthong with it, is contracted with the augment into α instead of η ; as, $\alpha \dot{\eta} \delta i \zeta$ -o $\mu \alpha \iota$, Imperf. $\alpha \dot{\eta} \delta \iota \zeta \dot{\phi}$ - $\mu \eta \nu$ for $\dot{\epsilon}$ - $\alpha \eta \delta \iota \zeta \dot{\phi} \mu \eta \nu$.

IV. When the initial is a long vowel, or one of the diphthongs $\epsilon\iota$, $o\nu$, the augment is absorbed (§3). In the diphthongs $\alpha\iota$, $o\iota$, the augment combines with the vowels α , o, into η , ω , and ι is subscribed; $\alpha\iota\varrho\dot{\epsilon}\omega$, "I take," Imperf. $\eta\varrho o\nu\nu$ (for ε - $\alpha\iota\varrho o\nu\nu$); $o\iota \varkappa\iota\dot{\zeta}$ - ω , Imperf. $\omega\varkappa\iota\dot{\zeta}o\nu$ (see §3).

V. The augment remains unabsorbed before the vowel ω of some verbs; $\vec{\omega} \cdot \vartheta \dot{\epsilon} - \omega$, Imperf. $\vec{\epsilon} - \dot{\omega} \vartheta o \nu \nu$.

VI. It sometimes happens that when the initial vowel is lengthened by the augment, an additional unabsorbed augment is prefixed; as, $\delta\rho\dot{\alpha}-\omega$, Imper. $\dot{\epsilon}-\dot{\omega}\rho\omega\nu$.

VII. The contraction of the augment with the initial ε of some verbs is in $\varepsilon\iota$, instead of the more usual η ; as, $\varepsilon\chi\omega$, $\varepsilon\dot{\chi}\omega\nu$.*

VIII. Verbs compounded with a preposition take the augment, as a general rule, between the preposition and the verb; \dagger as, $\sigma \nu \nu - \varphi \not= \varphi - \omega$, "I contribute," Imperf. $\sigma \nu \nu - \not= \varphi \not= \varphi \circ \nu$.

IX. If the final letter of the preposition is a vowel, it is elided before the augment; as, $\alpha \pi o - \beta \alpha \lambda \lambda \omega$, "I reject," Imperf. $\alpha \pi \epsilon \beta \alpha \lambda \lambda \sigma \nu$, except in $\pi \epsilon \rho \iota$ and $\pi \rho \sigma$; in the latter, however, the vowel is contracted with the augment into $\sigma \nu$. Ex. $\pi \rho \sigma - \beta \alpha \lambda \lambda \omega$, Imperf. $\pi \rho \sigma \dot{\nu} \beta \alpha \lambda \lambda \sigma \nu$ for $\pi \rho \sigma - \dot{\epsilon} - \beta \alpha \lambda \lambda \sigma \nu$.

X. Verbs compounded with $\delta\nu\varsigma$, if their initial is a consonant, or a vowel incapable of augment, receive the augment at the beginning, otherwise in the middle. Ex. $\delta\nu\varsigma$ - $\omega\pi\dot{\epsilon}\omega$, Imperf. $\dot{\epsilon}$ - $\delta\nu\sigma\dot{\omega}\pi o\nu\nu$; but $\delta\nu\varsigma$ - α - $\varrho\epsilon\sigma\tau\dot{\epsilon}$ - ω makes $\delta\nu\sigma$ - η - $\varrho\dot{\epsilon}\sigma\tau o\nu\nu$.

XI. Verbs compounded with $\epsilon \nu$ follow no fixed rule regarding the position of the augment.

Note. The augment affords the only example of the contraction of ϵo into ω ; in all other cases it is into ov.

- * There are only twelve verbs which undergo this contraction with the augment.
- † If the preposition combined with a verb does not alter its signification, the augment occurs at the beginning. Ex. καθεύδω, "to sleep," Imperf. ἐ-κάθευδον.

Verbs formed from pre-existing compounds follow the general rule. Εχ. ἐναντιούμαι, Imperf. ἡναντιούμην 'from εναντιος, "adverse.")

§75. REDUPLICATION.*

CASES WHEREIN REDUPLICATION IS NOT ADMITTED.

I. When the initial of the stem is a vowel; as, äπτω (stem aπ), Perf. ήφα.

II. When the initial is the Liquid ρ , a double letter, or two consonants; † as, δέω, Perf. ἔδόηκα; ζετέ-ω, Perf. ε-ζέτη-κα; σπείρω (stem σπερ), Perf. έσπαρ-κα.

Excep.—If the consonants consist of a Mute and a Liquid (except the combinations $\beta \lambda, 1, \gamma \lambda, \gamma \nu$), the verb admits of reduplication; as, γράπτω (stem γραπ), Perf. γέ-γραφα.

III. Four verbs, whose initials are the Liquids λ , μ , take the augment $\varepsilon \iota$ instead of the reduplication: $\lambda \alpha \mu \beta \dot{\alpha} \nu - \omega$ (stem $\lambda \alpha \beta$), Perf. $\epsilon i \lambda \eta \phi \alpha$; $\lambda \alpha \gamma \gamma \dot{\alpha} \nu \omega$ (stem λαχ); συλλέγω and μείρομαι (stem μερ).

IV. When the initial is an aspirate Mute, the reduplication is in the corresponding soft (§6. 9); as,

φιλέ-ω, Perf. πεφίλη-κα.

ATTIC REDUPLICATION.

This reduplication of verbs, whose initial is a vowel, is common among Attic writers. It consists in repeating the two first letters of the stem before

- * For the principle of Reduplication, see §48.
- † Some verbs of two consonants as initials, take a reduplication; the consonants in such examples, however, are brought together by syncope; as, πταομαι and πιπτω, for πεταομαι and πιπετω. See §94.
 - \dagger βλάπτω, βέ-βλαφα, is an exception.

the augment in verbs whose initials are α , ε , o. Thus, $\partial\mu\dot{o}-\omega$, Perf. $\ddot{\omega}\mu\dot{o}\varkappa\alpha$, by Attic reduplication $\partial\mu\dot{\omega}-\mu\dot{o}\varkappa\alpha$. This reduplication occurs in the Second Aor. of a few verbs; as, $\ddot{\eta}\gamma\alpha\gamma\sigma\nu$ from $\ddot{\alpha}\gamma\omega$. Here, it is seen, the reduplicated vowel takes the augment.

§76. Verbs in $\mu\iota$.

- 1. Verbs in $\mu\iota$ have only three tenses of this form, Present, Imperfect, and 2d Aorist; the remaining tenses are formed regularly from the stem according to the Paradigm of verbs in ω .
- 2. They are divided into two classes:—I. Those that append the tense-endings immediately to the stem. II. Those that append them by means of the connecting syllables $\nu\nu$ and $\nu\nu\nu$.

CLASS I.

- 1. Verbs of this class are from a stem of vowel characteristic. They form their tenses by appending $\mu\iota$ for the Pres. and ν for the Imperf. and 2d Aor. to the lengthened vowel of the stem, and adding the proper prefixes.
- 2. This lengthened vowel is retained only in the singular of the Indicative Active.*
- 3. The prefixes are, for the Present—a reduplication—which consists in repeating the initial consonant
- * Verbs of the characteristic a retain the long vowel in the 2d Aor. Indic., Dual and Plural, throughout the Imper., and in the Infin., Active Voice.

of the stem with *Iota* in verbs susceptible of reduplication (§48). Thus, from stem $\vartheta \varepsilon$, is formed Present $\tau i - \vartheta \eta - \mu \iota$.

- 4. The Imperfect prefixes an augment to the reduplication of the Present; as, $\vec{\epsilon} \cdot r i \cdot \vartheta \eta \nu$.
- 5. The 2d Aorist prefixes the augment to the stem. Thus from the same stem is formed 2d Aorist $\xi \vartheta \eta \nu$.
- 6. In verbs not susceptible of reduplication, Iota* alone is prefixed in the Present and Imperfect. Ex. stem $\sigma \tau \alpha$; Present, $\ddot{\iota}$ - $\sigma \tau \eta$ - $\mu \iota$; Imperf. $\ddot{\iota}$ - $\sigma \tau \eta$ - ν : stem $\dot{\varepsilon}$; Present, $\ddot{\iota}\eta \mu \iota$.

§77. Class II.

- 1. The reduplication is not prefixed to the stem of verbs of this class. The tense endings are the same as in Class I., and are appended to the stem by means of the syllable $\nu\nu\nu$, if the characteristic is a vowel; by $\nu\nu$ if it is a consonant.
- 2. The stem-vowel remains unaltered, unless it is o, which is changed into ω , and remains long throughout.
- 3. Thus, according to foregoing rules, are formed from stem $\delta \epsilon \iota \varkappa$, Pres. $\delta \epsilon \iota \varkappa \nu \upsilon \mu \iota$, Imperf. $\dot{\epsilon} \delta \epsilon \iota \varkappa \nu \upsilon \nu$; from stem $\sigma \tau \varrho o$, Present $\sigma \tau \varrho \dot{\omega} \nu \nu \upsilon \mu \iota$, Imperf. $\dot{\epsilon} \sigma \tau \varrho \dot{\omega} \nu \nu \upsilon \nu$. The 2d Aorist conforms mostly to the Paradigm of verbs in ω .

The remaining tenses are formed regularly from

* This Iota, which is termed the Improper Reduplication, receives the aspirate breathing.

the stem, which is obtained by throwing off the connecting syllables $\nu \nu \nu$ and $\nu \nu$.

§78. Paradigm of Verbs in µu.

Very few verbs in $\mu \iota$ have the three tenses in full. The following four verbs are the most complete, and are therefore selected to exhibit the Paradigm in $\mu \iota$.

INFLECTION BY TENSE.

Stem.	Present.	Imperfect.	2d Aorist.

^{*} In the dual and plural of the Opt., the vowel η before the ending is rejected by the Attic Dialect. Thus, for i-σταί-η-μεν, Attic, i-σταί-μεν.

TENSE.	NUMBER. Person.	IMPERATIVE MODE.					
Present.	1 -	ι-στη (ι-στα- 3ι), ι-στά-τω, ι-στα-τον, ι-στά-των, ι-στά-τες, ι-στά-τωσαν, & ι-στάν-των,	τί-3ει (τί-3ε- το), τι-3έ-τω, τί-3ε-τον, τι-3έ-των, τί-3ε-τε, τι-3έ-τωσαν,& τι-3έν-των,	δί-δου,* δι-δό-τω, δί-δο-τον, δι-δό-των, δί-δο-τε, δι-δό-τωσαν,& δι-δύ-των,	δείκ-νυ, δείκ-νύ-τω, δείκ-νυ-τον, δείκ-νύ-των, δείκ-νυ-τε, δείκ-νύ-τωσιιν (δείκ-νύν-των),		
2d Aorist.	S. 2. 8. D. 2. 3. P. 2. 8.	στή-3ι.† στή-τω, στή-των, στή-των, στή-τε, στή-τε, στή-τωσαν, & στάν-των,	3ές (3ε3ι), 3έ-τω, 3έ-των, 3έ-των, 3έ-τε, 3έ-τωσαν (3έν- των),	δός (δό-3ε), δό-τω, δό-τον, δό-των, δό-τε, δό-τωσαν (δόν- των),			

Rem.—The verbs $\tau i \cdot \vartheta \eta \cdot \mu \iota$ and $\delta i \cdot \delta \omega \cdot \mu \iota$ form the 1st Aorist with \varkappa instead of σ ; as, $\xi \cdot \vartheta \eta \cdot \varkappa \alpha$, $\xi \cdot \delta \omega \cdot \varkappa \alpha$. To these may be added, $\tilde{\eta} \varkappa \alpha$ from stem $\dot{\epsilon}$ (of verb $i\eta \mu \iota$); and $\tilde{\eta} \varkappa \epsilon \gamma \cdot \varkappa \alpha$, 1st Aorist of $\varphi \dot{\epsilon} \varrho \cdot \omega$; from stem $(\epsilon \gamma \varkappa)$. This form is used only in the sing. of the Indic. Active; the 2d Aorist, which is of rare use in the part occupied by the 1st Aorist, completes the Aorist tense in the remainder of the Active and in all the Middle. The passive form of 2d Aorist is not in use.

^{*} The form in $\mu\iota$ would give imperative ending $\Im\iota$. The ending given in paradigm conforms to pure contracted verbs, and is of more frequent occurrence.

[†] In compounds στα, as ἄποστα.

§80. PARADIGM.

MIDDLE VOICE.

- 1. The tenses are formed (in Class I.), by appending $\mu\alpha\iota$ for the Present, and $\mu\eta\nu$ for the Imperf. and 2d Aorist, to the unaltered vowel of the stem.
 - 2. The prefixes are the same as in the Active Voice.
- 3. Verbs of Class II. have the same endings, and annex them by means of the syllables $\nu\nu\nu$ and $\nu\nu$, with the distinction observed in the Active.

INFLECTION BY TENSE.

STEM.	PRESENT.	IMPERFECT.	2D AORIST.
ΣTA ,	ί-στα-μαι,	ί-στά-μην,	ε-στά-μην.
ΘE,	τί-θε-μαι,	$\vec{\epsilon}$ - $\tau \iota$ - $\vartheta \dot{\epsilon}$ - $\mu \eta \nu$,	ε-θέ-μην.
<i>40</i> ,	δί-δο-μαι,	ε-δι-δό-μην,	ε-δύ-μην.
∆EIK,	δείκ-νυ-μαι,	ε-δεικ-νύ-μην,	wanting.

§86. The following Second Aorists of Verbs in ω are according to the Form in $\mu\iota$.

Stem. Imper. Opt. Subj. Infin. Part. Present. $\xi = \beta \eta \nu$, (Ba), $\beta \hat{\eta} = \delta t$, $\beta al - \eta \nu$, $\beta \hat{\omega}$, $\beta \hat{\eta} = \nu a t$, $\beta a \delta t$, $\beta al \nu \omega$, "to go." [guish." $\xi = \sigma \beta \eta \nu$, $(\sigma \beta \epsilon)$, $\sigma \beta \hat{\eta} = \delta t$, $\sigma \beta \epsilon l + \eta \nu$, $\sigma \beta \hat{\omega}$, $\sigma \beta \hat{\eta} = \nu a t$, $\sigma \beta \epsilon l + \nu \nu \nu = \mu t$. "to extintive $(\gamma \nu \omega)$, $(\gamma \nu \omega)$, $(\gamma \nu \omega) = \delta t$, $(\delta \nu - \eta \nu)$, $(\delta \nu - \eta$

2. Summary of verbs that form their 2d Aorist according to form in $\mu \iota$.

Stem. 2d Aorist.

διδράσχω, (δρα), έδραν, "to run away."
πέτομαι, (πτα), έπτην, Mid. ἐπτάμην, "to fly."
σχέλλω, (σχλα), έσχλην, "to dry."
φθάνω, (φθα), έφθην, "to anticipate."
καίω, (καε), ἐκάην, "to burn."
ἡέω, (ρυε), ἐξἡὑην, "to flow."
χαίρω, (χαρε), ἐχάρην, "to rejoice."

ἀλίσχομαι, (άλο), $\{ ηλων, \\ εάλων, \}$ "to be taken."
βιόω, (βιο), εβίων, "to live."
φύω, (φυ), ἔφυν, "to produce."

§87. Perfects according to Form in μ L.

1. Example, δι-ω.

Perf., S. $\delta \acute{\epsilon} \delta \iota \alpha$, $\delta \acute{\epsilon} \delta \iota \alpha \varsigma$, $\delta \acute{\epsilon} \delta \iota \epsilon$,
D. $\delta \acute{\epsilon} \delta \iota \tau \sigma \nu$, $\delta \acute{\epsilon} \delta \iota \tau \sigma \nu$. [omitted.
P. $\delta \acute{\epsilon} \delta \iota \mu \epsilon \nu$, $\delta \acute{\epsilon} \delta \iota \tau \epsilon$, $\delta \epsilon \delta \acute{\epsilon} \alpha \sigma \iota$, Mode vowel being
Imper. $\delta \acute{\epsilon} \delta \iota \vartheta \iota - \tau \omega$. Subj. $\delta \epsilon \delta \acute{\epsilon} \omega$. Inf. $\begin{cases} \delta \epsilon \delta \acute{\epsilon} \epsilon \nu \alpha \iota, \\ \delta \acute{\epsilon} \delta \iota \mu \epsilon \nu \end{cases}$.

Summary of perfects of the above form belonging to verbs in ω .

Present. Perfect. 1st Pers. Plur. Stem. $\gamma i \gamma \nu o \mu \alpha i$, $\gamma \acute{\epsilon} \gamma \alpha - \alpha$, $\gamma \acute{\epsilon} - \gamma \alpha \mu \epsilon \nu$, (γA) , "to become." $\beta \alpha i \nu \omega$, $\beta \acute{\epsilon} \beta \alpha - \alpha$, $\beta \acute{\epsilon} - \beta \alpha \mu \epsilon \nu$, (βA) , "to go." $\vartheta \nu \dot{\eta} \sigma \kappa \omega$, $\tau \acute{\epsilon} \nu \vartheta \omega - \alpha$, $\tau \acute{\epsilon} - \vartheta \nu \alpha \mu \epsilon \nu$, $(\vartheta \alpha \nu)$, "to die." $\tau \lambda \dot{\alpha} \omega$, $\tau \acute{\epsilon} \tau \lambda \alpha - \alpha$, $\tau \acute{\epsilon} - \tau \lambda \alpha \mu \epsilon \nu$, $(\tau \lambda A)$, "to bear."

- 2. Here belong also the Imper. κέ-κραχθι from κράζω, πέ-πεισθι from πείθω, and the participles βε-βρώς and πεπτώς from βιβρώσκω and πίπτω (stems βρο and πετ).
- §88. Anomalous and Defective Verbs in $\mu\iota$ arranged according to their Characteristic Vowels, α , ϵ , ι , o.
- 1. Verbs that annex the tense-ending to the lengthened vowel of the stem.

Characteristic α (Ex. $i\sigma \tau \eta \mu \iota$).

$$φη-μί (φA)$$
, "I say."

INFLECTION BY TENSE (see §77).

- Present. $\varphi\eta$ - μi , formed by annexing the ending μi to the lengthened vowel of the stem.
- Imperf. $\tilde{\epsilon}$ - $\varphi\eta\nu$, formed by prefixing the augment, and adding the ending to the stem as in the Present.

TENSES ACCORDING TO FORM IN ω .

Future, φήσω.

1st Aorist, ἔφησα.

INFLECTION BY MODE.

- 1. Many parts of the above verb are used only in its compounds.
- 2. The Mode vowel $o\iota$ of the Opt. is more common than $\varepsilon\iota$; the former is Attic.
- 3. To this class belong $\ddot{\alpha}$ - η - μ ι (stem $\alpha \varepsilon$), "to breathe;" δi - $\delta \eta$ - $\mu \iota$ (stem $\delta \varepsilon$), "to bind;" and δi - $\zeta \eta$ - $\mu \iota$ (stem $\zeta \varepsilon$), "to search."

§92. εἶμι, "Το Go." εἰμί, "Το ΒΕ."

Eimi, "to go" (stem ι), and $\epsilon i \mu i$, "to be" (stem $\epsilon \varsigma$), though not related in their radical syllables, are here presented together, in order that the similarity and difference in their inflection may be better observed.

INFLECTION BY MODE AND TENSE.

Είμι, " to go." Είμί, " to be."

§93. STRENGTHENING OF THE STEM.

- 1. Under the paradigm of Tense Formation (§49, note), it has been observed that the Pres. and Imperf. add certain letters to the stem for the purpose of strengthening it. When the strengthening letter is a vowel, besides the two tenses named, it is also retained in all the first tenses, but never in the second.
- 2. The consonants used to strengthen a stem are, generally, τ when the characteristic is a Pi-Mute; τ (σ), when it is γ ; σ when it is δ ; ν when the characteristic is \varkappa .

EXAMPLES.

```
τ \dot{\nu} \pi - \tau - \omega (stem τ \nu \pi), "to strike."

\pi \rho \dot{\alpha} \tau - \tau - \omega (stem \pi \rho \alpha \gamma), "to do," \gamma being assimilated.

\pi \rho \dot{\alpha} \dot{\sigma} - \sigma - \omega (stem \pi \rho \alpha \dot{\sigma}), "to say."

\delta \dot{\alpha} \varkappa - \nu - \omega (stem \delta \varepsilon \varkappa), "to bite."
```

3. In the case of liquid characteristics, ν strengthens the characteristic μ , as $\varkappa \dot{\alpha} \mu - \nu - \omega$ (stem $\varkappa \alpha \mu$); λ is

doubled, as $\psi \dot{\alpha} \lambda - \lambda - \omega$ (stem $\psi \alpha \lambda$); stems with the characteristics ν and ρ , are strengthened by the addition of a vowel.

§94.

Besides the foregoing, there are other modes of strengthening the stem, which may be classified under different heads.

- 1. Stem strengthened by inserting ν before the ending of present:
- βαίνω (stem $\beta\alpha$, stem vowel being lengthened), Future, βέσομαι, "to go." (2d Aor., έβην, according to form in $\mu\iota$). δύνω (δυ), Future, δύσω, "to enter."
 - 2. By inserting ν_{ε} before the ending:
- βυνέω (βυ), Future, βύσω, "to stop up." ἐκνέομαι (ἐκ), Fut. ἔξομαι; Perf. ἔγμαι, "to come." κυνέω (κυ), Future, κύσω, "to kiss."
 - 3. By inserting $\alpha\nu$, $\alpha\iota\nu$, before the ending:
- αἰσθάνομαι (αἰσθ), Fut. αἰσθήσομαι, "to perceive." 2d Aor. ἠσθόμην.
- όσφοαίνομαι (όσφο), Fut. όσφοήσομαι, "to smell." 2d Aor. ωσφοόμην.
- 4. By inserting ν (changed to γ before γ), before the characteristic, $\alpha\nu$ before ending:

ἐρυγγάνω (ἐρυγ), 2d Aor. ἔρυγον, "to vomit." θιγγάνω (θιγ), 2d Aor. ἔθιγον, "to touch." μανθάνω (μαθ), Fut. μαθήσομαι, "to learn." 2d Aor. ἔμαθον.

λανθάνω (λαθ), 2d Aor. ἔλαθον, "to lie hid."

- 5. By inserting the syllable $i\sigma x$, σx , before the ending; the former when the stem ends in a consonant, the latter when it ends in a vowel:
- άλίσκομαι, (άλο), Fut. άλώσομαι, "to take." 2d Aor. έάλων and ἥλων. Perf. έάλωκα and ἥλωκα.
- εύρίσκω (εύρ), Fut. εύρήσω, 2d Aor. εύρον, "to find." Perf. εύρηκα.
- 6. By Reduplication, which consists in repeating the initial consonant with the Iota, before the stem:
- βιβάζω (βα), Fut. βιβάσω (Attic, βιβῶ), "to convey." γιγνώσεω (γνω), Fut. γνώσω, "to know." 2d Aor. ἔγνων.
- γίγνομαι (γεν), (for γιγένομαι), Fut. γενήσομαι.
 2d Aor. εγενόμην.

2d Perf. γέγονα and γέγαα (γα). Perf. Mid. γεγένημαι, "to beget."

πίπτω (πετ), (for πιπέτω), Fut. πεσοῦμαι, "to fall."
Perf. πέπτωκα; 2d Aor. ἔπεσον.

τιράω (τρα), Future, τρήσω, "to wound."

CHAPTER VI.

§95. DIALECTS.

The Greek language has a variety of Dialects; the most important are the Ionic, Doric, Æolic and Attic. The grammatical forms of words have been presented in the preceding pages, as they occur in the Attic and common dialects.* The other dialects will be here brought under view in examples characteristic of them, selected from the writings preserved in each.

THE COUNTRIES IN WHICH THE DIALECTS WERE RESPECTIVELY SPOKEN. THE WRITINGS BELONGING TO EACH.

The *Doric*, regarded as the oldest dialect, was spoken in the Greek colonies of the south and southwest coast of Asia Minor, in the Island of Rhodes, in a great part of the Peloponnesus, and in some parts of Greece Proper, especially in Thebes.

Writings. The odes of Pindar, a native of Thebes (B.C. 522); the Choral odes of the drama, with some

^{*} So the Attic was named when it became the language of the Grecian world after the conquests of Alexander; as a matter of necessity, Attic purity was impaired by the introduction of many provincial forms.

treatises on philosophy. This was the least polished and cultivated of the four national dialects.

The *Æolic*, closely akin to the Doric, was spoken in the Æolian colonies of the north-west coast of Asia Minor, in the islands that skirt the coast as far as Lydia, in Achaia, Thessaly, and other parts of Greece Proper.

Writings. The odes of Sappho and Alcæus (B. C. 610), both natives of Lesbos. This dialect was of more refined cast than the Doric.

The *Ionic* was spoken in its purity in the Ionian colonies of Asia Minor, and partook of the general refinement and cultivation of that portion of the Hellenic family. It is characterized by a fondness for vowel sounds, by a softness and delicacy that distinguish it from the Doric branch of the language. It is divided into the Older and Later Ionic.

Writings. Of the Older, the works of Homer (B. C. 900).

Of the Later, the prose writings of Herodotus (B. C. 484), and of Hippocrates (B. C. 460).

The Attic, akin to the Ionic, was spoken in its purity in Attica, at Athens. After the loss of Grecian independence, and the consequent breaking up of distinct nationalities, this became the universal dialect of the Greeks. In its high cultivation, and the richness of its literature, it surpasses the other dialects. It is divided into the Old, the Middle, and the New.

Writings. Of the Old, the tragedies of Æschylus (B. C. 520), Sophocles (B. C. 497), and Euripides

(B. C. 480); the History of Thucydides (B. C. 472); the Comedies of Aristophanes (B. C. 472), and the orations of the earlier orators.

Of the Middle, the works of Plato (B. C. 430), and Xenophon (B. C. 447).

Of the New, the orations of Demosthenes and the writings of his cotemporaries, the later comedies.

The *Epic*. This name is given to forms found in the Epic poems of Homer and Hesiod.*

§96. Special Dialectic Forms.

- 1. Dialects do not admit of any general rules, whereby they can be distinguished from one another. They are to be learned only from examples selected from the writings in which each is presented in its greatest purity.
- 2. The following general characteristics are worthy of notice:
- 3. The Doric has the broad open sound of $\vec{\alpha}$, where the Ionic and Attic have $\vec{\eta}$. In contraction it has $\epsilon \vec{\nu}$, where the Attic has $o\vec{\nu}$; $\vec{\alpha}$ is its primitive vowel.
- 4. The Ionic is partial to the open sound of vowels, and rarely contracts; η and oi are its favorite vowel sounds. It is fond of inserting $\dot{\epsilon}$ before $\dot{\omega}$.
- * The Epic dialect is composed of forms that remained from the old language, not appropriated by any of the newly modelled dialects. To these were added, no doubt, forms invented by the poet, according to the analogy of those furnished him by the ancient language, as well as by the more modern dialects.

5. The Attic contracts the resolved vowel sounds of the Ionic. It is partial to the long vowel $\vec{\omega}$, and for the purpose of introducing it, shortens a preceding long vowel, or changes it into $\vec{\epsilon}$.

§97. 1st Declension.

- Nom. 1. The Doric retains the original long $\vec{\alpha}$, for which the Attic and Ionic have substituted $\vec{\eta}$. Ex., $\tau i \mu \bar{\alpha}$, Gen. $\tau i \mu \alpha \varsigma$, (Dor.)
- 2. The Æolic terminates Masc. nouns in $\dot{\eta}_{\mathcal{S}}$ with short $\check{\alpha}$; Ex., $i\pi\pi\sigma\imath\check{\alpha}$ for $i\pi\pi\acute{\sigma}\imath\eta\mathcal{S}$. This form is of common occurrence in Epic poetry.
- Gen. 3. The Genitive Singular terminated originally in αo , the Plural in $\alpha \omega \nu$. Ex., $A \tau \varrho \epsilon i \delta \alpha o$, Movoa $\omega \nu$. The Doric contracted the vowels in both cases into α ; $A \tau \varrho \epsilon i \delta \alpha$, Movoa ν . The Ionic substituted ϵ for α . Ex., $A \tau \varrho \epsilon i \delta \epsilon \omega$, Movo $\epsilon \omega \nu$.
- Dat. 4. The old form of the Dative was aug, retained by the Doric, and older Attic poets. The Ionic is $\eta\sigma\iota(\eta\varsigma)$; the new Attic is aug.

Accus. 5. The Æolic Accus. Plur. was $\alpha \iota \varsigma$ instead of $\alpha \varsigma$.

§98. 2D Declension.

- Nom. 1. In proper names in $\lambda ao\varsigma$, the Doric rejects o throughout, and adopts long α . Ex., $M\epsilon\nu\dot{\epsilon}$ - $\lambda\alphao\varsigma$, Doric $M\epsilon\nu\dot{\epsilon}\lambda\bar{\alpha}\varsigma$, Gen. $M\epsilon\nu\dot{\epsilon}\lambda\bar{\alpha}$.
- Gen. 2. The old ending was oo (contracted into ov), whence the Thessalian ov0, adopted by the Epic

poets. The Ionic termination sing. and plur is the same as for the first, $\epsilon \omega$, $\epsilon \omega \nu$. The Doric plural is $\tilde{\alpha} \nu$, contracted from $\dot{\alpha} \omega \nu$.

Dat. (Dual.) Epic our instead of our.

(Plural.) οισι was the original form, still preserved in Homer, and in Ionic prose; hence regarded as Ionic. Εχ., λόγοισι, Attic, λόγοις, "words."

Accus. (Plural.) Doric, ω. Εχ., τως νόμως, "laws," for νόμους. Æolic, οις; as νόμοις.

Attic, 2d Declen. The Epic Gen. is ωo instead of ω ; in some words the ω is resolved differently. Ex. $\gamma \dot{\alpha} \lambda \omega s$, "sister-in-law;" Gen. $\gamma \alpha \lambda \dot{o} - \omega s$.

§99. 3D Declension.

Nom. The Doric has α instead of the Attic, Ionic and Epic η . Ex., $\pi o \iota \mu \dot{\alpha} \nu$ for $\pi o \iota \mu \dot{\eta} \nu$.

Gen. (Plur.) Ionic, $\acute{\varepsilon}$ - $\omega\nu$; Doric, $\acute{\alpha}$ - $\omega\nu$, contracted into $\check{\alpha}\nu$. Ex., $ai\gamma\check{\alpha}\nu$ (stem $ai\gamma$), from $ai\xi$, "a goat," instead of $ai\gamma\omega\nu$. Nouns in $\iota \varsigma$ (Att. Gen. $\varepsilon\omega\varsigma$) are regular in the Epic and Ionic. Ex., $\pi\acute{o}\lambda\iota\varsigma$, Gen. $\pi\acute{o}\lambda\iota$ - $o\varsigma$.

Dat. Epic endings σ_{ℓ} (σ_{ℓ} when stem ends in a vowel), $\epsilon \sigma_{\ell}$ and $\epsilon \sigma \sigma_{\ell}$. The original ending of the Dat. Pl. was $\epsilon \sigma_{\ell}$, strengthened in the Epic by the insertion of σ ; and never doubles the σ . In the old Language $\epsilon \sigma_{\ell}$ was added to the simple stem without the Euphonic changes. Ex., $avanter \epsilon \sigma_{\ell}$, for which $avas_{\ell}$.

§100. Adjectives.

Adjectives in $v\varsigma$, Fem. $\varepsilon\iota\alpha$, have in the Epic, Fem. $\varepsilon\alpha$. Some have $v\varsigma$ common to the Masc. and Fem. in the Epic, which have separate forms for both genders in the other Dialects.

Homer, for the sake of metrical quantity, uses in comparison-adjectives the long connecting vowel ω , where the preceding syllable is long (§27, 9.) Ex. $\xi \varepsilon \iota \nu - \acute{\omega} - \tau \varepsilon \rho o \varsigma$.

§101. Pronouns.

REFLEXIVE PRONOUNS.

Έμαυτοῦ, σεαυτοῦ and ἐαυτοῦ have their components written separate in Homer, as, ἐμὶ αὐτόν. The Ionic Dialect changes the diphthong $\alpha \nu$ into $\omega \nu$, and to this prefixes ε. Ex., ἐμεωυτοῦ, σεωυτοῦ.

ADJECTIVE PRONOUNS.

Possessive.

Thine, $\sigma \dot{\phi} \varsigma$. Dor. $\tau \dot{\epsilon} \sigma \varsigma$; also Epic.

His, $\delta \varsigma$, $\ddot{\eta}$, $\delta \nu$. Dor. and Ion. $\epsilon \delta \varsigma$, $-\dot{\eta}$, $-\dot{\delta} \nu$.

Our, ημέτερος. Doric and Epic, αμός.

Æolic, ἄμμος, ἀμμέτερος.

Your, ὑμέτερος. Dor. and Epic, ὑμός. Æol. ὕμμος. Their, σφέτερος. Æol. and Epic, σφός.

Demonstrative.

Sing.—Nom. Fem. in Dor. is $\dot{\alpha}$; Gen. Epic, $\tau o i o$, $\tau s \tilde{\nu}$; Dor. $\tau \tilde{\alpha}$; Fem. $\tau \tilde{\alpha} \varsigma$; Dat. Dor. Fem. $\tau \tilde{\alpha}$; Acc. Dor. Fem. $\tau \dot{\alpha} \nu$.

Plur.—Epic Nom. $\tau o i$, $\tau \alpha i$; also Dor. Gen. $\tau \dot{\alpha} \omega \nu$; Epic, $\tau \tilde{\alpha} \nu$; Dor. Dat. $\tau o i \sigma \iota$, $\tau \alpha i \sigma \iota$; Epic Acc. $\tau \dot{\omega} \varsigma$, $\tau \dot{\sigma} \varsigma$; Doric, $\tau \tilde{\eta} \varsigma$ ($\tau \tilde{\eta} \sigma \iota$).

οὖτος, αὕτη, τοῦτο, "this." The Ionic inserts ε before the long endings of the oblique cases. Ex., τουτέου for τούτου.

ἐκεῖνος, Ionic, κεῖνος; so in Attic poetry. Doric, τῆνος; Æol. κῆνος.

όδε. Dat. Epic, τοῖσδεσι and τοῖσδεσσι, instead of τοισίδε and τοῖςδε.

Relative.

Indefinite and Interrogative.

τις, τι, "any one;" "who?" Gen., Epic and Ionic, τέο; Epic, Ionic, and Doric, τεῦ; Dat., Epic and Ion., τέω and τω. Pl. Accus. Neut. ἄσσα; Gen. τέων, Epic and Ionic; Dat. τέοισι, Epic and Ionic; also τοῖσι.

ὅστις, "whoever," ὅτις, ὅτι, ὅττι. Epic Gen. ὅτευ; Epic and Ionic, ὅτεο, ὅττεο, ὅττευ; Epic Dat. ὅτεφ, ὅτω; Epic and Ionic Accus. ὅτινα, ὅτι, ὅττι. Epic Plur. Nom. Neut. ἄτινα; Epic Gen. ὅτεων, Epic and Ionic Dat. ὁτέοισι; Fem. ὁτέησι; Epic Acc. ὅτινας; Neut. ἄτινα and ἄσσα, Epic.

§102. AUGMENT. REDUPLICATION.

- 1. All Dialects except the Attic suffer the omission of the augment in poetry. Εx., λύσε for έλυσε.
- 2. Ionic Prose even omits at pleasure the temporal augment. Εχ., ἔργασμαι, ἄμμαι, for εἴργασμαι, ημαι.
- 3. Complying with the exigencies of the verse, the Epic doubles the Liquids, the Mutes π , τ , and the breathing σ . Ex., $\tilde{\epsilon}\lambda\lambda\alpha\beta\sigma\nu$, $\tilde{\epsilon}\sigma\sigma\epsilon\nu\alpha$. It neglects doubling ρ for similar reason. Ex., $\tilde{\epsilon}\rho\epsilon\tilde{\epsilon}\alpha\varsigma$.
- 4. The Doric contracts the augment ε , with initial α , into long α instead of η . Ex., $\ddot{\alpha}\gamma\omega$; Imperf. $\dot{\varepsilon}\alpha\gamma o\nu$, Dor. $\ddot{\alpha}\gamma o\nu$, Ionic and Attic, $\ddot{\eta}\gamma o\nu$.
- 5. The 2d Aorist, Act. and Mid., is reduplicated in some verbs by the Ionic Dialect. This reduplication is retained through all the Modes. Εκ., κεκάμω, κέκλυθι.

§103. Personal Endings and Mode Vowel.

ACTIVE VOICE.

1st Person. The original ending μι,* is preserved by the Epic in some verbs. Εχ., κτείνωμι, τύχωμι.

2d Person. The Epic, Æolic and Doric add $\vartheta \alpha$ to the common ending $\eta_{\mathcal{S}}$. Ex., $\tau i \vartheta \eta \sigma \vartheta \alpha$, $\dot{\epsilon} \vartheta \dot{\epsilon} \lambda \eta \sigma \vartheta \alpha$, for $\tau i \vartheta \eta_{\mathcal{S}}$, $\dot{\epsilon} \vartheta \dot{\epsilon} \lambda \eta_{\mathcal{S}}$; rarely to $o\iota_{\mathcal{S}}$ of the Opt., as $\delta i \delta o\iota_{\sigma} \vartheta \alpha$. The Doric ending is $\epsilon_{\mathcal{S}}$, in 2d Pers. Indic. principal Tenses; $\beta o\dot{\nu} \lambda \epsilon \nu \epsilon_{\mathcal{S}}$ for $\beta o\nu \lambda \dot{\epsilon} \dot{\nu} \epsilon \iota_{\mathcal{S}}$.

3d Person. The Doric has η for ει. Εχ., διδάσκη for διδάσκει. The Epic adds σι to the Subjunctive; ἄγη-σι.

1st Pers. Plur. The Doric is ες instead of μεν; τύπτομες.

3d Pers. Plur. The Doric is οντι; as, τύπτοντι. This was the original ending (ν being the characteristic of 3d Pers. Plur.), which was altered by the softer Dialects into ουσι. The Æolo-Doric οισι for ουσι also occurs; as, ναίοισι for ναίουσι (see §8, 4).

For $\varepsilon \iota \nu$ of Pluperf. the Epic and Ionic have $\varepsilon \alpha$, contracted by the Attic into η ; as, $\eta \delta \varepsilon \alpha$, $-\varepsilon \alpha \varsigma$, $-\varepsilon \varepsilon$ for $\eta \delta \varepsilon \iota \nu$, $-\varepsilon \iota \varsigma$, $-\varepsilon \iota$. The Dual endings of the historical tenses, 1st and 2d Persons, are alike in Homer.

Note.—Verbs that originally had the Digamma, do not contract the augment in Homer. Ex., $\mathring{a}v\delta \mathring{a}v\omega$ ($Fav\delta \mathring{a}v\omega$), Imperf., $\mathring{\epsilon}\mathring{a}v\delta \mathring{a}vov$; $\mathring{\epsilon}\mathring{t}\delta \circ \mu a\iota$, ($F\epsilon \mathring{t}\delta \circ \mu a\iota$), Aor., $\mathring{\epsilon}\cdot \epsilon \iota \sigma \acute{a}\mu \epsilon vos$.

* The conjugation in $\mu\iota$ is, for good reason, regarded as the older form of the verb.

MIDDLE VOICE.

2d Person. The characteristic letter was Sigma, which is retained only in the Perf. and Pluperf. Thus, Pres. τύπτεσαι, from which the Ionic excludes σ; τύπτεσαι, contracted by the Attic into η; in conversational language, as appears from Comedy, into ει. Hence, τύπτει οτ τύπτη. In like manner is derived the 2d Person of the historical tenses ου. Thus, Imperfect, ἐτύπτου from ἐτύπτεο Ionic, for ἐ-τύπτεσο; and ἐ-τύψω, Ionic ἐ-τύψαο for ἐ-τύψασο. Homer lengthens the Ionic εο into ειο; as, ἔφειο. In the Epic εο becomes ευ instead of ου in some verbs; as, ἔπλευ, ἄφχευ.

1st Pers. Plur. $\mu \epsilon \sigma \vartheta \sigma v$ and $\mu \epsilon \sigma \vartheta \alpha$ occur as endings in the Dual and Plural in poetry, instead of $\mu \epsilon - \vartheta \sigma v$, $\mu \epsilon \vartheta \alpha$. Ex., $\tau v \pi \tau \dot{\sigma} \mu \epsilon \sigma \vartheta \alpha$.

3d Person. The $\dot{\nu}$ characteristic before the ending is changed by the Ionic and Epic into α . Ex., $\dot{\epsilon}$ -βε-βουλεύατο for $\dot{\epsilon}$ -βε-βούλευντο. The α , o, η preceding ν are changed into ϵ ; $\dot{\epsilon}$ βούλοντο, Ionic $\dot{\epsilon}$ βουλέατο; πέπτανται, πεπτ- $\dot{\epsilon}$ -αται. By this change of ν into α the Ionic dispenses with the periphrasis of participle and $\dot{\epsilon}$ 1μι in the 3d Person Pl. Perf. and Pluperf. Ex. (φραζω); πεφράδαται (3d Pers. Perf.) for πεφράδνται, for which is substituted in Common Dialect πεφράσμενοι $\dot{\epsilon}$ 1σι.

The ending ησων, both Indic. and Optat., is shortened by the Ionic and Epic into εν. Εκ., έτυπεν for ἐτύπησων.

IMPER., OPT., SUBJUNC. AND INFIN. MODES.

I. The Imper. endings έτωσαν and έσθωσαν become, in the Doric and Ionic Dialects, όντων and σθων. Εα., τυπτέτωσαν, Dor. τυπτόντων; τυπτέσθωσαν, Dor. τυπτέσθων.

§104. CONTRACTED VERBS.

The Epic admits contraction, but much more sparingly than the Attic.

- I. Verbs in $\alpha\omega$.—The Ionic keeps the open form, but substitutes ε or o, sometimes ω , for α . Thus, $\delta \rho \dot{\alpha} \omega$, Ionic, $\delta \rho \dot{\varepsilon} \omega$. It resolves α into $\alpha\alpha$; $\delta \rho \dot{\alpha} a \sigma \vartheta \alpha \iota$ for $\delta \rho \dot{\alpha} \sigma \vartheta \alpha \iota$. It omits the vowel preceding the 1st Aor. ending; as, $\dot{\eta} \beta \tilde{\omega} \sigma \alpha$ for $\dot{\eta} \beta \dot{\omega} \eta \sigma \alpha$. In the Dual, $\alpha \varepsilon$ are contracted into η (Ionic).
- II. Verbs in $\varepsilon\omega$.—Even in the common Dialect the open form is frequently retained. The Ionic contracts εo into εv ; as, $\mathring{a}\mathring{v}\varepsilon v v$, $\gamma \acute{\varepsilon} v \varepsilon v$. Verbs in $o\omega$ are likewise contracted by it into εv ; as, $\mathring{\varepsilon}-\delta \iota \varkappa \alpha \iota o \widetilde{v} v$. In Epic, ε is resolved into $\varepsilon \iota$; as, $\mathring{\varepsilon}-\tau \varepsilon -\lambda \varepsilon \iota \varepsilon v o$.
- III. The Infin. being originally $\varepsilon\nu$, not $\varepsilon\iota\nu$, is without ι subscript in contractions; as, $\tau\iota\mu\tilde{\alpha}\nu$ from $\tau\iota\mu\acute{\alpha}\varepsilon\nu$ ($\tau\iota\mu\acute{\alpha}\varepsilon\iota\nu$). The Doric, contrary to its usual fondness for α , contracts $\alpha\varepsilon$ into η . Thus, Infin. $\tau\iota$ - $\mu\tilde{\eta}\nu$; also $\varphi o\iota\tau\tilde{\eta}\tau\eta\nu$. It contracts αo , $\alpha o\nu$, and $\alpha \omega$ into α . $E\alpha$., $\pi\varepsilon\iota\nu\tilde{\alpha}\mu\varepsilon\nu$ for $\pi\varepsilon\iota\nu\acute{\alpha}o\mu\varepsilon\nu$; $\gamma\varepsilon\lambda\tilde{\alpha}\nu$ for $\gamma\varepsilon\lambda\acute{\alpha}\omega\nu$.

§105. Conjugation in µ1.

- I. The Imperf., Epic, Ionic, and Doric, of verbs whose characteristics are ε and o, is formed according to contracted verbs. Ex., $\dot{\varepsilon}$ - $\tau i \vartheta \varepsilon \iota$, $\dot{\varepsilon}$ - $\delta i \delta o \nu$. This is almost limited to the 2d and 3d Persons. This form is met with in the Present of these Persons also.
- II. The Ionic has the Opt. $o\iota\mu\eta\nu$, instead of $\epsilon\iota\mu\eta\nu$. Ex., $\vartheta\epsilon o\iota\mu\eta\nu$. The endings of the historical Tenses are shortened by the Epic. Ex., $\epsilon \cdot \vartheta \epsilon \nu$ for $\epsilon \cdot \vartheta \epsilon \sigma \alpha \nu$.
- III. The Epic forms the Imper. of ἴστημι, ἴστα or ἴστη, instead of ἵσταθι.
- IV. The Ionic lengthening by the insertion of ε , is common in these verbs. Ex., $i\sigma\tau\dot{\varepsilon}\omega$, $\delta\dot{\upsilon}\nu\varepsilon\alpha\iota$, for $i\sigma\tau\omega$, $\delta\dot{\upsilon}\nu\alpha\iota$. For $\sigma\iota$ in the 3d Person, the Doric has $\tau\iota$ Sing., and $\nu\tau\iota$ Pl. Ex., $\tau\iota\vartheta\dot{\varepsilon}\nu\tau\iota$, $\delta\iota\delta\dot{\upsilon}\nu\tau\iota$, for $\tau\iota\vartheta\dot{\varepsilon}i\sigma\iota$, $\delta\iota\delta\dot{\upsilon}\dot{\upsilon}\sigma\iota$; $i\sigma\tau\alpha\tau\iota$ for $i\sigma\tau\alpha\sigma\iota$.

V. INFLECTION OF THE VERB $\epsilon i \mu i$ ($\epsilon \sigma$), "I AM," IN THE DIFFERENT DIALECTS.

Imperf. Epic, εια; ηιες and ιες; ηιε, ηε, ιε and ει; 1st Pers. Plur. ηομεν; 3d Pers. Plur. ηουν, and ηισων.

Ionic 1st Pers. Sing. ἤιον; 3d Plur. ἤιον, ἴοαν.

Opt. ἴοι, ἐείη, Ερίς.

Aorist Mid. είσατο. Dual, ε-εισάσθην.

VII. Many verbs in ω have the Present, Perfect, and 2d Aorist, Act. and Mid., according to the form in μι, especially in the Epic Dialect. To such belong Perfects in αα—as γέγαα from γίνομαι—(syncopated;) 2d Aorist in μην, as ἔβλητο (from ἐβλήμην), κτάμεν and κτάμεναι from κτείνω, &c.

From the principles of both conjugations above developed, the student can determine to which class each verbal form belongs.

ADVERBS.

Adverbs are either primitive words, as $o\vec{v}$, $\mu\acute{\eta}v$, $\check{\eta}$, &c., or derived from the other parts of speech. They serve to define an object, as to place, time, circumstance, manner. The greater number of Adverbs are formed from Adjectives, and are generally of the termination $\omega\varsigma$, ov, α .

Prepositions and Conjunctions are used solely in denoting relations between words in a sentence, and therefore are transferred to that part of grammar which treats of the sentence.

PART II.

CHAPTER I.

106. SYNTAX.

- 1. Syntax treats of the relations words bear to one another in a sentence.
- 2. Every sentence has a subject, or that of which something is stated, and a predicate, or that which is stated of the subject. Ex., $\delta \pi \alpha i \varepsilon \pi \alpha \iota \delta \varepsilon \nu \varepsilon \iota$, "the boy plays;" here $\delta \pi \alpha i \varepsilon$, "the boy," is the subject, and $\pi \alpha \iota \delta \varepsilon \nu \varepsilon \iota$, or what is stated of him, is the predicate.
- 3. The subject most commonly appears as a noun or pronoun, but may also be an adjective or participle with a noun understood, an infinitive mode, or a complete sentence.
- 4. The word which limits the meaning of a substantive is called an *attributive*, and this may be an adjective or participle, another noun,* the article, a pro-
- * A noun used in this relation, is said to be in apposition with the noun it defines or limits; as, "Demosthenes the orator," "Tacitus the historian."

noun, or a complete sentence. (See compound sentences, §131.).

- 5. The predicate appears generally as a verb, accompanied by what is termed "the object." The object may be a noun, pronoun, adjective, preposition with its case, a participle, infinitive, or a complete sentence (§131). Εχ., ἀγαθός ὁ ἀνὴο δικαιοσύνην φιλεῖ, "the good man loves justice." Here, ἀγαθός is the attributive of ἀνήο (subject), and δικαιοσύνην the object of φιλεῖ, which completes the predicate.
- 6. From the foregoing distinction, the construction of a sentence is divided into the attributive and objective construction.

CHAPTER II.

§107. ATTRIBUTIVE CONSTRUCTION, OR THE AGREE-MENT OF ATTRIBUTIVE WORDS WITH THEIR SUBSTANTIVES.

- 1. The attributive word agrees with its substantive in case, gender, and number.*
- 2. When the Infin. or a complete sentence stands in the place of a substantive, the attributive is in the
- * What is said of number, in regard to agreement between attributive and substantive, applies to the verb and its subject: the subject of a finite verb is always in the Nom. case.

neuter gender, if it be susceptible of gender-termina-

- 3. An adjective used substantively, cannot have another adjective as attributive.
- §108. Principles of Synesis* (κατὰ σύνεσιν).

EXCEPTIONS IN GENDER AND NUMBER.

1. The attributives, instead of taking their gender and number from the grammatical gender and number of the noun, assume those of the object implied. Εκ., ω τέκνον φίλε, "dear child;" ὁ ἄλλος στρατὸς ἀπέβαινον, "the rest of the army departed."

IN CASE.

- 2. An attributive substantive in apposition with a possessive pronoun, is in the genitive, to agree with the genitive implied in the possessive. Ex., ἔμος Δάης ἥν κυνώπιδος, "he was the brother-in-law of me—shameless." Il. γ, 180. Compare the Latin, "in tuum hominis simplicis pectus vidimus." This principle applies
- * This principle of agreement between words and clauses being regulated rather by the meaning implied, than by grammatical form, is of very general application. As an example in clausal agreement: When a present is used for a past (Præsens Historicum), in the principal clause, the Opt. mode follows in the subordinate clause, instead of the Subjunctive, as required by grammatical form. (See Subordinate Clauses.)

also to possessive adjectives. Εχ., Νεστορέη παρά νηί — βασιλήσς. Il. β, 54.

Rem.—The Greeks viewed a plurality of objects of the neuter gender as one connected whole; hence, neuters plural have the number of the verb determined by the following principles:

I. When the neuter plural expresses a class as such, without regard to the individual members comprising it, the verb is singular. Εχ., τὰ ζῶα τρέχει. The same rule applies to participles. Εχ., δοξὰν ταῦτα, "these things being agreed upon." Χεπ. Απ. 4. 1, 13.

II. If the neuter plural denotes persons, and if the idea of parts is prominent, the verb is plural. Ex., τὰ τέλη—βρασίδαν—εξέπεμψαν, "the magistrates despatched Brasidas." Th. 4, 88. ἀμφοτέροις άμαρτήματα ἐγένοντο, "errors were committed by each of the two." Th. 5, 26.

§109. AGREEMENT IN THE DUAL.*

- 1. Two objects may be expressed either in the dual or plural number, accompanied by attributives and verb, in either number indiscriminately. Εχ., χείμαξοοι ποταμοί κατ' ὄφεσφι ξέοντες, συνβάλλετον ὅβριμον ὕδωρ, "two winter torrents descending from the mountains, commingle their impetuous floods." Il. δ, 452.
- * Objects really plural, i.e., embracing more than two, rarely occur in the dual. A dual significance belongs generally to those substantives which, though plural in form themselves, are joined by a verb or attributive in the dual.

The dual forms to the tomator, with Mas and form norms. The Fem. ra seldom

If when the several nouns are viewed separate, and not embled into one mited multitude, the verbs must be understood as belonging to each in the object to which they seem especially to belong the object to which they seem especially to belong the object to which they seem especially to belong the object to which they seem especially to belong the object to which they seem especially to belong the object to which they seem especially to belong the object to which they seem especially to belong the object to which they seem especially to belong the object to which they seem especially to be only to be object to which they seem especially to be object to which they

In tragedy, with the names of women, the attributive occurs in the masculine in all numbers, as more suited to the dignity of the drama

it. Εχ., πατήρ, καὶ μήτηρ, καὶ άδελφοὶ αἰχμαλῶτοι γεγενημένοι.

PERSON.

III. When the nouns are of different persons, the verb agrees with the first in preference to the second, with the second in preference to the third.

GENDER.

- IV. Nouns denoting persons of different genders, have their attributives in the masculine.
- V. When the nouns denote persons and things, the attributives are in the gender of the persons, if they are the more prominent. Εχ., ἡ τύχη καὶ Φίλιππος ἡσαν τῶν ἔργων κύριοι, "fortune and Philip were the masters of circumstances." But if both are viewed as things, the attributives are in the neuter plural. Εχ., ἡ καλλίστη πολιτεία καὶ ὁ κάλλιστος ἀνὴρ λοιπὰ ἄν ἡμίν εἴη διέλθειν. PL. RP. 562, α.
- VI. When the nouns denote things, and are of the same gender, the attributives agree with them, or are in the neuter, and plural number; if of different genders, the attributives are always in the neuter plural. Εχ., καὶ δυνάμεις καὶ τιμαὶ ἀγαθὰ ὄντα. ΡL. ἦν ἡ ἀγορὰ καὶ τὸ πρυτανήϊον λίθῷ ἡσκημένα. Her. 3. 57.

SPECIAL RULES ON THE USE OF ATTRIBUTIVE WORDS.

§111. THE ARTICLES.

- 1. The article was originally a demonstrative pronoun, and is invariably used as such in Homer. Its office is to limit the meaning of a noun; hence, whenever a noun is to be represented in a definite manner, it is to be accompanied by the article.
- 2. Proper names, owing to their naturally restricted meaning, do not take the article.
- 3. If the proper name is repeated, the article is added to it, to denote that it is the name already mentioned. Ex., ἀναβαίνει οὖν ὁ Κῦρος. Xen. 1, 1. 2.
- 4. The names of the arts and sciences, virtues, &c., as being individual appellatives, often omit the article.
- 5. A substantive predicate* does not take the article, unless it is limited in compass to the subject. Ex., οἱ δ᾽ ἰππόβοται ἐκαλέοντο οἱ πάχεες, "the rich were named those (before mentioned) Ippobotæ." Her. 5, 77.
- 6. The article, when joined to an adjective or participle, becomes a pronoun. Ex., ὁ ποιούμενος, "he doing," "the doer."
- * The nature of a predicate being to express a quality in general, it cannot be circumscribed to any one object which may possess this quality, to the exclusion of others, and therefore rejects all restricting terms. The use of the article thus serves, in many instances, to distinguish subject from predicate.

- 7. An adverb, placed between the article and its noun, is an adjective in meaning. Ex., at ὅπιθεν νήες, "the rear ships." Th. 1.
- 8. The article prefixed to an adverb, a preposition, or preposition with its case, converts them into substantive or adjective phrases. Ex., οἱ πάνυ τῶν ἀνθρώπων, "the best men;" τὰ νῦν, "the present;" οἱ ἔν ἄστει, "the citizens."

§112. Adjectives.

- 1. Adjectives, instead of being placed in agreement with their substantives as attributes, sometimes govern them in the Gen. Ex., οἱ χρήστοι τῶν ἀνθρώπων, "worthy men." The adjective in this construction derives its gender from the noun it governs.
- 2. An adjective placed in the neuter gender—independent of the gender of its noun—governs the noun in the genitive. Εκ., μέσον της ημέρας.
- 3. When the noun can be easily conceived and supplied, from the quality or action denoted by the adjective and participle, it is commonly omitted in the context. Ex., $\delta \sigma \delta \varphi o \varsigma$, "the wise man;" $\dot{\eta} \dot{\epsilon} \pi \iota o \tilde{\nu} \sigma \alpha$ ($\dot{\eta} \mu \dot{\epsilon} \varphi \alpha$), "the following day."
- 4. Associations of space, time, and manner, are denoted in Greek by adjectives. Ex., σκοταίους διελθεῖν τὸ πεδίον, "to traverse the plain in the dark." Xen. An. 4, 1.5. ἵνα μὴ ὑπαίθριος ταλαπωροίη, "that he might not suffer in the open air."

§113. Pronouns.

- 1. Pronouns, both personal and possessive, are used in Greek only where emphasis is required.
- 2. Possessive pronouns have sometimes an objective meaning; $\sigma \dot{\partial} s \pi \dot{\partial} \theta s$, "regret for you."
- 3. The pronoun σφίσι, the possessive ὅς, and the reflexive ἐαυτοῦ, are used of the first and second persons. Εκ., ὀυδὲ γὰρ τὴν ἑαυτοῦ σὺ γὲ φύχην ὁρᾶς, "for neither do you see your own soul." Χεπ. C. 1, 4.9; εὐρήσετε σφᾶς αὐτοὺς ἡμαρτηκότας τὰ μέγιστα ἐς ϑεούς, "you will find yourselves committing grievous errors against the gods." Χεπ. Η. 1, 7. 19.
- 4. Relative. The sentence in which a relative has place, has two clauses: the antecedent clause (which contains the substantive), and the relative clause. The antecedent is often in the relative clause. Ex., οὕτος ἔστιν, ὅν εἴδες ἄνδρα. (See Adj. Sub. Sent.)
 5. Demonstrative. A demonstrative pronoun, in-
- 5. Demonstrative. A demonstrative pronoun, instead of being in the neuter gender, or in the gender of the object to which it refers, takes the gender of the noun to which it assigns that object. Ex., ἀντὴ τῶν κάκων πήγη ἔστιν, "this (evil) is the fountain of evils."

CHAPTER III.

§114. Objective Construction.

- 1. The relations existing between the members of the predicate (§106, 5), are denoted by cases, which in Greek and Latin are distinguished by *inflection-endings*. These relations were originally viewed as relations of space; from this they were transferred to time, and from time to cause and manner.
- 2. The action of every verb with which an object is joined as a supplement to complete the predicate, was viewed as preceding to, from, or resting on that object. Hence the three relations: of Gen., which denotes motion from; of Accus., which denotes motion to; and of Dat., which denotes rest in.

As these relations are not confined to the verb and substantive, but may exist also between the latter and other parts of speech, it follows that wherever they are established, the case that expresses each respectively is to be applied. Hence it is that we find these cases in connection with nouns, with adjectives, with adverbs; prepositions are used only to express these relations more precisely, as subsisting between two words, and will therefore be treated separately.

Note. An attributive combination expresses one notion only, an objective combination expresses one thought. (Becker.).

§115. THE GENTTIVE,

- 1. In Local relation, expresses the idea whence, out of, separation, removal from. Hence it is joined to verbs of departing, separating, removing, freeing from, &c. Εχ., τοῦ πεδίου ὑποχωρεῖν, "to retire from the plain." Xen. Cyr. 2, 4, 24. So of verbs of ceasing, differing, alleviating, &c.
- 2. In its relation of separation, freeing from, differing from, the Genitive is joined to nouns, adjectives, and adverbs. Ex., ἀπαθης κακῶν, "without suffering evils." Her. 3, 147; φίλους ποιεῖσθαι ἐτέρους τῶν νῦν ὄντων, "to make other friends than the present ones," Th. 1, 28; πέρην τῆς ὁδοῦ, "on the other side of the way;" λύσις κακῶν, "freedom from ills."
- 3. In Causal relation, the Genitive denotes outgoing, but as from an internal source of power, or spring of action. Hence it is joined to verbs that signify to originate from, proceed from, be produced from, spring from, &c. Ex., ἀρίστων ἀνδρών εἴκος ἄριστω βουλεύματα γίγνεσθαι, "it is consistent that the best measures should spring from the best men." Her. 3, 81. The Gen. in this relation is used as an attribute; as, τὰ τῶν ἀνθρώπων πράγματα, "the things of men," = τὰ ἀνθρώπινα πράγματα.
- 4.* The material of which any thing is made, being viewed as its cause or source, is put in the Gen.
- * This and the following (to 9), are the attributive combinations of the Gen., in which the noun in the Gen. holds the relation of an attributive to the noun governing it.

- Ex., χαλκοῦ ποιέονται τὰ ἀγάλματα, "the statues are made of brass." Her. 5, 82; attributively; as, τράπεζα ἀργυρίου, "a silver table."
- 5. The relation of origin, source, extends the Genitive to that of authorship, possession, and the like. In this relation, the Gen. stands with the verbs εἶναι, γενέσθαι, ποιεῖσθαι; with adjectives expressive of the same relation as ἴδιος, οἰκεῖος. Εκ., ἐγένετο Μεσσήνη Αυκρῶν τινὰ χρόνον, "Messenia belonged to the Locrians for some time;" ἤν ὑμῶν αὐτῶν ἐθελήσητε γενέσθαι, "if you wish to belong to yourselves" (= be your own masters), Dem. Ph. 1, 42; ἱερὸν εἶναι τοῦ Ἡλίου, "sacred to (belonging to) the sun," Xen. An. 4, 5, 35. Attributively; as, ἡ Σοκράτους ἀρετή, "Socrates' virtue."
- 6. In its relation of possession, the Gen. is joined to εἶναι to denote habit, character, value, part, duty; also the standard of price, or measure to which any thing belongs. Εχ., ἀνδρὸς ἀγαθοῦ ἔστιν εὖ ποιεῖν τοὺς φίλους, "it is the part of a good man to benefit his friends;" δοχεῖ ταῦτα δαπάνης μεγάλης εἶναι, "this seems to be a great expense;" ὁ Εὐφράτης ποταμὸς τὸ εὐρός ἐστι τεττάρων σταδίων, "four stadia in breadth," Χεπ. Απ. 1, 4, 11; δέχα μινῶν χωρίον, "a place worth ten minæ."
- 7. Not only the direct agent or source from which an action originates, but also the collateral circumstances, which may be viewed as concerned in the action, and conspiring to produce it, are placed in the Genitive. On this principle, terms of time and place are construed in the Gen., especially in poetry. Ex.,

- ἄνθη θάλλει τοὺ ἔαρος, "flowers bloom in spring;" πεδίου διέπρησσον, "they traversed the plain," Il. γ, 14; νέφος δ' οὐ φαίνετο πάσης γαίης, "no cloud appeared over the plain," Il. ρ, 372.
- 8. Hence, attributively, the Genitives τοῦ αὐτοῦ εὐτοῦς, τῆς αὐτῆς ἡμέρας. The Gen. in this sense expresses "time when," but only as the period in the course of which, or within which, the action takes place.
- 9. On this principle the Gen. absolute, as a term of time, can be explained. Ex., Kύρου βασιλεύοντος. The Accus. in this relation implies that the action is protracted during the whole of the time specified; the Gen., that it takes place at some moment within the time specified.
- 10. The Gen. stands for the whole of an object in relation to one or more of its parts. Hence its use with all words of a partitive meaning, with verbs whose action can refer only to a part of an object. Εχ., τῶν μενόντων ἔθελε εἶναι, "he wished to be one of the remaining," Th. 1, 65; στάγονες ὕδατος, "drops of rain." With adjectives, πόλλοι τῶν ἀνθρώπων; comparatives and superlatives, οἱ νεώτεροι αὐτῶν, "the younger among them;" ἄριστος τῶν 'Αχαίων, "the bravest of the Greeks." With adverbs; as, ποῦ γῆς; "where on earth?" ἐνταῦθα τῆς ἡλιχίας, "at that age;" ὀψὲ τῆς ἡμέρας, "late in the day."
- 11. Here belong such phrases as ἐπιβαίνειν τῖς γης, "to set foot on land;" τέμνειν γης, "to ravage a country."
 - 12. Of verbs whose action can refer only to a part,

may be mentioned as of most frequent use with the Gen. the verbs, to taste, to smell, to eat, to catch hold, to aim,* &c. Ex., ἀπογεύεσθαι τούτων τῶν βρωμάτων, "to taste of these meats," Xen. Cy. 1, 3, 4; ὅζειν ἴων, "to smell violets;" ἐσθίειν κρεῶν, "to eat of flesh;" μέσου δουρὸς ἐλών, "having seized his spear by the middle," Il. η, 56.

- 13. Under the relation of sharing, participating in, the Gen. accompanies words that denote experience, dexterity, skill, and the like, with their opposites. Εχ., ἔμπειρος εἰμί τῆς τέχνης, "I am acquainted with the art;" ἀπείρως εἶναι ταύτης τῆς τέχνης, "to be unacquainted with this art."
- 14. Every word that implies any mental emotion may have the Gen. of the object which calls forth that emotion. This obviously is the Gen. of motion from, under another phrase. Εχ., Σοκράτης ἐρωτικῶς διάκειται τῶν καλῶν, "Socrates is fond of the beautiful," Sym. 216; τῶν ἀγαθῶν πάντες ἐπιθυμοῦσιν, "all long for the good," PL., RP., 438; ζελῶ σε τοῦ πλόυτου, "I envy you your wealth;" "Εκτορ δ' αὖτ' Αἴαντος ἀκόντισε, "Hector aimed at Ajax." Π. χ, 855.
- 15. Many verbs are used figuratively in denoting mental action, and are, on the above principle, construed with the genitive. Εχ., ἐπειγόμενός περ "Αρηος, " eager for the fight," ΙΙ. τ, 142; μήτις νῦν ἐνάρων ἐπιβαλλόμενος, "setting himself on spoils." ΙΙ. ζ, 68.

^{*} The verbs to aim, to pursue, &c., seem more correctly to belong to verbs expressing an *affection* of the mind (14), as they always imply mental effort and direction.

16. A condition is connected with the Gen. of the object which occasions it; as, κάκως ἔχω πόδων, "I am ill in my feet." The object seems governed by the adverb; as, οὕτω τρόπου ἔχεις. Xen. Cy. 7, 5.

For the Gen. of the Infinitive with $\tau o \tilde{\nu} \mu \eta$, see

under Infinitive.

The Genitive relations above developed may be briefly stated as follows:

§116. Accusative,

- 1. In Local relation, is the case that expresses motion to, and answers to the question whether? It marks the limit to which the action proceeds; as, αστυ μολείν, "to go to the city."
- 2. The relation denoted by the Accus. can subsist between a substantive and a verb—a preposition, an adverb, another substantive; but most commonly occurs between it and the two former.
- 3. With verbs of motion, the space passed over, also the time over which the performance of an action extends, are put in the Acc. Ex., ἀλλ' εἰμί γὰο δὴ τλημονεστάτην ὁδόν, "I shall go the most toilsome way," Eu. Med. 1067; Σύβαρις ἤκμαζε τοῦτον τὸν

χρόνον μάλιστα, "Sybaris was extremely flourishing during this time." Her. 6, 127.

- 4. From this use of the Accus. have sprung many adverbial expressions of space and time; as, την ταχίστην (ὁδόν), "as quick as possible;" την πρώτην, "first," Dem. OL. 11; την ἄλλως. Id. Ph. 11. The Accusative of place is used in poetry with verbs of rest. Ex., ὁ Πύθιος τρίποδα καθίζων Φοίβος, Eu. Or. 944.
- 5. Causal relation. The Accusative marks the effect as the limit to which the cause tends. Ex., $\hat{\eta}$ $\mathring{\nu}\beta\varrho\iota\varsigma$ $\mathring{\nu}\mathring{\rho}\nu$ $\mathring{\nu}\mathring{\nu}\varrho\alpha\nu\nu\nu$ $\mathring{\rho}\nu$ $\mathring{\nu}\acute{\nu}\dot{\nu}\iota$. Hence the Accus. of effect with transitive verbs.
- 6. The simplest relation of this Accus. exists between verbs, whether transitive or intransitive, and a substantive of cognate stem or kindred meaning. Ex., δέομαι ὑμῶν δικαίαν δέησιν, "I claim from you a just request," Dem. Ph. 1; πόλεμον ἐστράτευσαν, "they conducted the war." Th. 9, 912.
- 7. From this principle Intransitive verbs take the Accus. of an object of kindred meaning—or such as accords with the meaning of the verbs to form one complete harmonious idea with them. Ex., ἀστράπτειν γοργώπον σέλας, "to light a terrific light;" μένεα πνείοντες 'Αχαιοί, "the Achivi breathing strength," Il. γ, 8; 'Αρέα πνεῖν—βλέπειν, "to breathe—look war;" 'Ολύμπια νικᾶν, "to conquer in the Olympic games." Some verbs of this class, instead of a substantive, take an adjective. Ex., ἀσθενὲς φθέγγεσθαι; ήδυ γελᾶν. (Lat. "mortale sonans," En. VI.)
 - 8. This use of the Accus. explains the origin of

many adverbial expressions; as, ταὐτὰ χαἰοειν, θαύμαστα ἐκπλήττεσθαι.

- 9. The Accus relation of verbs intransitive is extended to verbs passive, to adjectives of intransitive signification, in order to give completeness to their meaning. It is called the Accus of definite limitation. Εχ., χάμνειν τοὺς ὀφθαλμούς, "to suffer in the eyes;" χάλος ἐστι τὰ ὄμματα, "of beautiful eyes."
- 10. In causal relation the Accus., beside limitation, denotes the design or purpose for which any thing is done, and also the manner of the action. Εκ., χρῆσθαι τινὶ τί, "to use any thing for some purpose;" τῆ κρήνη τὰ πλείστου ἄξια ἐχρῶντο, "the fountain they used for the most solemn purposes." Τh. 11. πεισθῆναι τὴν ἀναχωρήσιν, "to be persuaded to a retreat." Τh. 2, 15. τοῦτον τὸν τρόπον, "in this manner."
- 11. In causal relation the Accus. is used of the object upon which the action or condition is founded. Εχ., μὴ φεῦγε τὸν χίνδυνον, "do not flee the danger;" τὰς μὲν μάχας θαξόεῖτε, "brave the battles." Χεπ. 3, 2. 20. ἐχοτῆναι χίνδυνον, "to shrink from the danger."
- 12. Hence the Accus is used with verbs that express a feeling or a sudden emotion, to denote the cause that excites that feeling. Εχ., αἰοχύνομαι τὸν θεόν.

DOUBLE ACCUSATIVE.

13. Transitive verbs take a second accusative of the object upon which the immediate effect is produced

- —or of the manner in which, or of the means whereby, it is produced. (The latter is more commonly in the Dat.) Εχ., ξαυτὸν λωβᾶται λώβην ἀνήκεστον, "he inflicts on himself an incurable maining." Her. 3. 154. τὴν ναυμαχίαν ἀπεωσάμεθα Κορινθίους, "we repelled the Corinthians in a naval fight." Τh. 1, 32. ώρχωσαν τοὺς στρατιώτας τοὺς μεγίστους ὅρχους, "they bound the soldiers in the most solemn oaths." Τh. 8, 75.
- 14. This double Accus is common with verbs signifying "to do good," or "evil,"—to inquire—to ask—to teach, &c., &c. When this construction is changed to the passive, the Accus of the immediate object becomes the Nom. of the subject—but the second Accus remains the same. Ex, $\hat{\eta}$ rejoin $\hat{\eta}\nu$ in $\hat{\eta}\nu$ in the judgment to which he was condemned."

§117. DATIVE.

- 1. The relations of the Dat., as of the other cases, are twofold—Local and Causal.
- 2. In Local relation, the Dative denotes approach, nearness to an object, or a residing in it—and is joined to all words conveying such signification, also to words implying association with, intercourse with, communion, contrast. Εχ., αἰγιαλῶ βοέμεται, "roars upon the shore." Il. β, 210. τοῖς ἀγαθοῖς ὁμιλεῖν, " to associate with the good;" κοίναι πᾶσιν ἡμῖν, " common to us all." Isoc. Pau. 42, 9. τοῖσι Δακεδαιμονίοισι ἀντίοι, "opposite to," &c. Pl. Sym. 195. ὅμοιον ὁμοίφ ἀεὶ πελάζει, "like approaches like." Th. 2, 61.

3. The Dat. denotes the time in which an action happens, the circumstances under which it happens. Ex., τη πρώτη ημέρα ἀφίκοντο ἐπὶ τὸν ποταμόν, " on the first day they came to the river." Xen. An. 4, 8. σὲ κακῆ αἴση τέκον, "under an evil destiny I gave you birth." Il. α, 418.

178

- 4. In Causal relation the Dat. denotes the object with reference to which, i. e., for or against which, any thing is, or is done, (Dat. of advantage and disadvantage,) the object on which an action is manifested in its results. Ex., 'Αρτέμιδι ἑορτὴν ἀγεῖν, "to keep a feast for = in honor of, Artemis." Her. 6, 138. ὑφίστασθαι ξυμφοραῖς, "to yield to circumstances." Xen. An. 3. 2. 11. Κύρω ἦν μεγάλη βασιλεία, "to Cyrus was, i. e., Cyrus had, a great kingdom;" ἐχθρός τινι, "hostile to any one;" περὶ φιλίας τοῖς 'Αθηναῖοις, "regarding friendship with the Athenians." Th. 55. πυρὸς βροτοῖς δοτὴρ ὁρᾶς Προμηθέα, "the giver of fire to mortals." Æsch. P. 617. This Dative is often qualified by a participle. Ex., μοὶ ἡδομένω ἤλθεν.
- 5. The Dative is used with expressions of likeness, agreement, suitableness, and their opposites. Ε΄κ., ὁμοίαν ταῖς δούλαις εἶχε τὴν ἐσθῆτα, "she had a dress like her slaves." Χεπ. Cy. 5. 1. 4. τὰ αὐτὰ πάσοχω σοί, "the same with you."
- 6. With expressions of reproach, blame, help, contention, opposition, co-operation, and the like. Ex., οὐ τοῖς ἄρχειν βουλομένοις μέμφομαι, "I blame not those who wish to rule." Th. 4. 61.
- 7. The Ablative of means, cause in Latin, is expressed by the Dative in Greek. Some verbs also, as

χράομαι, take a Dative of the direct object, instead of the Accusative. Ex., φόβφ ἀπῆλθον, "they departed through fear;" τινὶ χρᾶοθαι, "to use any thing."

- 8. The Dative of manner, means, &c., is extended to the degree, the standard and measure of any thing, the degree by which one thing surpasses another, or differs from it. Ex, $\pi o \lambda \lambda \tilde{\omega}$ $\mu \epsilon i \zeta \omega r$.
- 9. Many Dative expressions, not directly embraced in the foregoing rules, can be easily traced to the general principle of Dative of the object, with reference to which any thing is done. Such are the following: τῷ ἀπτομένῳ ἔξωθεν σῶμα οὐα ἄγαν θερμὸν ἥν, " to one touching the body externally it was not very warm;" εἴοβαντι Συρίαν ὅσα μεχρὶ θαλάσσης οἰαεῖ, "as many as dwell towards the sea—, as one enters Syria;" and the expression συνελόντι εἰπεῖν, " to say in a word," (= to say it when one has brought it together).
- 10. With verbal adjectives the agent is regularly in the Dative. Εχ., ἀσκητέον ἐστί σοι τὴν ἀφετήν, "you must practise virtue."
- 11. The Dative of the personal pronoun, first and second persons, is used to point out, in an animated manner, the interest of the speaker, or of the person addressed. Εχ., 3Ω μήτης, ως καλός μοι ὁ πάπχος, "O, mother! behold how beautiful grandfather is."

§118. Prepositions with their Cases.

Prepositions express the foregoing case relations (§114), with more precision and fulness. They denote primarily relations of place, but are also applied to time and cause.

As some prepositions are connected with different cases, it is obvious that their signification must be modified under different constructions to correspond to the different case relations of Genitive (whence?) Acc. (whither?) and Dat. (where?) Thus, παρά, "near by," with Gen. denotes, "from near by;" as, παρὰ βασιλέως, "from near by the king." With the Acc. it denotes "to the presence of;" as, ἤει παρὰ τὸν βασιλέα, "he went into the presence of the king." With Dat. it denotes rest "near by," "in the presence of;" παρὰ τῷ βασιλεῖ μένειν, "to abide in the presence of the king."

LIST OF PREPOSITIONS.

There are eighteen Prepositions in the Greek Language; of these,

Four govern the Gen. only: avri, opposite to, in-

stead of; ποό, before; ἀπό, ἐκ, from.

Two govern the Dat. only: ἐν, in; σύν, with.

Three govern the Accus. only: ἀνά, up; εἰς, ὡς, into, towards.

Four govern the Accus. and Gen.: διά, through; κατά, down; ὑπέρ, over; μετά, amidst.

Six govern the Gen., Dat., and Accus.: ἀμφί, περί, around; ἐπί, upon; ὑπό, under, by means of; πρός, to; παρά, near by, by the side of.

Besides the foregoing, some adverbial phrases are used with the meaning of prepositions; as, δίκην, δέμας, (Lat. instar), "like;" χάριν, ἕνεκα, "for the sake of;" ἔκητι, "by," "according to."

§119. Infinitive and Participle.

- 1. The Infin. is the simple notion of the verb,* without reference to any particular subject, and therefore without the limitations of number and person.
- 2. It retains the governing power of the verb, with the verbal properties of tense and voice.

§120. Infinitive without the Article.

- 1. The Infin. without the Art. is used only as the subject of the verb $\epsilon \bar{i} \mu \iota$, or as the complement of the predicate in the Accusative. \dagger
- 2. The Infin. as an Accus., follows such verbs as express *feelings*, *powers*, or *operations* of the mind, or some action, state, or endeavor, proceeding from the will or the understanding.

Such verbs are: 1. To will, strive, resolve, design, undertake, dare, require, command, persuade, exhort,

- * The Infin. is not properly a mode, for it represents the simple notion of a verb without any modification.
- † This limitation of the Infin. seems hardly admissible in some passages, as in the following: $Dem.\ OL.,\ 1.\ 13$; $\pi \circ \lambda \lambda \grave{a}$ $\kappa a \imath \chi \acute{a} \lambda \epsilon \pi a$ in the following: $Dem.\ OL.,\ 1.\ 13$; $\pi \circ \lambda \lambda \grave{a}$ $\kappa a \imath \chi \acute{a} \lambda \epsilon \pi a$ in the following: $\Delta \iota \acute{a} \iota \acute{a}$

- allow, together with their opposites: forbid, refuse, &c. 2. To believe, suppose, &c. 3. To be able, understand, cause, make, &c. 4. To learn, instruct, &c. 5. To rejoice, be glad, sorry, &c.
- 3. The Infin. in the same sense follows adjectives, denoting fitness, worthiness, agreeableness. Ex., $\eta \delta v^*$ $\pi i \nu \epsilon \iota \nu$, "pleasant to drink." Also impersonal expressions, and expressions denoting power, capability, &c. Ex., of os $\pi o \iota \epsilon \tilde{\iota} \nu$, "capable of doing."

§121. Infinitive Accompanied by a Second Object and its Attributives.

- 1. Many verbs besides an Infin. take a direct object, which is in the case required by the verb. Ex., δέομαι σοῦ ἔλθειν, "I request you to come."
- 2. Attributives joined to the object by means of the Infin. of Apposition verbs, are in the case of the object, or in the Accus. Εχ., δέομαι σοῦ προθύμου εἶναι, οr, πρόθυμον εἶναι, "I request you to be earnest."
- 3. When the Attributive gives the object new relations by becoming itself the head of a clause, it is in the Accus. instead of the case of the object. Ex., δέομαι ὑμῶν καταψηφίσασθαι—ἐνθυμουμένους ὅσος μοι ὁ ἀγών ἐστιν, "reflecting how great my contest

^{*} The use of the Act. Infin., where a passive suits our language, is explained by supposing such expressions as "for us," "for one," understood. Thus, a ξιος θαυμάσαι, "worthy to be admired" (worthy for us to admire).

- is; " ἀνδοὼν ἀγαθῶν ἔστιν ἀδικουμένους ἐξ εἰρήνης πολεμεῖν, "it is the duty of the brave when wronged, to exchange peace for war." Th. 1. 120.
- 4. When the Infin. with its subject is made the object of verbs of willing, thinking, manifesting, (verba sentiendi et declarandi), and the subject of the Infin. is different from the subject of the principal verb, it together with its attributives is in the Accus. Ex., νομίζει τὸν ἄγαθον ἄνδοα εὐδαίμονα εἶναι. If the subject of the Infin. is the same as the subject of the principal verb, it is not expressed, and the attributives are in the Nom. Ex., νομίζει εὐδαίμων εἶναι, "he thinks he is happy."* "Ωστε is joined to the Infin. in order to express a purpose, or an object to be accomplished. Ex., ἀνέπεισε Ξέρξεα ὥστε ποιέειν ταῦτα, "he persuaded Xerxes to do this." Her. 7. 6.

§127. Infinitive with the Article.

- 1. The Infin. with the article is virtually a noun, and satisfies all the case relations of nouns above explained, without losing its government as a verb. It gives the Greek language the power of expressing a whole clause, inserted between the Infin. and the arti-
- * This rule applies also in the case of the Infin. with the article, even when such Infin. with its subject, is the subject of another verb, and not in the relation of object. Εχ., τὸ ἀμαρτάνειν ἀνθρώπους ὅντας, οὐδὲν οἶμαι θαυμαστόν, "that men, constituted as they are, should err, is, I think, nothing strange." The use of the Accus. seems to arise from the dependent nature of an Infin. clause.

cle, as one substantive idea. Εχ., δορυφορούσιν ἐπὶ τοὺς κακούργους ὑπὲρ τοῦ μηδένα τῶν πολιτῶν βιαίφ θανάτω ἀποθνήσκειν, "they keep guard against the wicked, in order that no citizen should suffer a violent death."

- 2. As the Infin. corresponds to the rules of substantives, it is unnecessary to treat it in detail; the following particulars, however, deserve special notice.
- 3. The Gen. of the Infin. with τοῦ,* τοῦ μή, is used to denote a purpose or object; the result of an action being substituted for that which calls forth the action. (See Gen. of cause, source.) Εκ., Μινῶς τὸ ληστικόν καθήρει ἐκ τῆς θαλάσσης, τοῦ τὰς προσόδους μαλλον ἐέναι αὐτῷ, "Minos cleared the pirates from the sea, in order that his revenue might come in better." Τh. 1. 4.
- 4. Frequently the Infin. with the article τό, is used where a noun in its place would be in the Gen. Ex., τὸν πλεῖστον ὅμιλον τῶν ψιλῶν εἶογον τὸ μὴ τὰ ἐγγὺς τῆς πόλεως κακουργεῖν, "they restrained the multitude—from injuring the neighboring portions of the city." Th. 3. 1. Here τὸ merely gives emphasis to the Infin., which is governed as without the article, i.e., the object of εἶογον.
 - 5. The phrases in which the article stands with the
- * The Gen. of the Infin. is sometimes used in the sense of belonging to, or connection, in reference to what precedes it. Ex., $\epsilon\mu\pi\epsilon\dot{\rho}$ ovs de $\epsilon\chi$ ovtes tods diwkovtas tod $\mu\dot{\eta}$ ekpevyew, "having their pursuers experienced, which tended to their not escaping." Th. 11, iv. This may be regarded as a feature of the Gen. of quality or possession (§115). Consult Arnold's Th. bk. ii.

Infin. εἶναι absolutely, an adverb, or a preposition and its case being enclosed, may be regarded as adverbial. Εχ., τὸ νῦν εἶναι, "according to the present condition;" τὸ κατὰ τοῦτον εἴναι, "as far as pertains to him."

§128. Participle.

- 1. The participle represents the idea of the verb attributively; but instead of quality, it denotes action or state. It retains the verb-properties of tense and voice, as also the governing power of the verb. These give it relations not embraced in the rules for attributives, to which it otherwise conforms; such relations only will be here presented.
- 2. The participle is joined to a verb to express an action or state as already belonging either to the subject or object. Ex., οἰδα θνητὸς ἄν, "I know that I am mortal;" ἤκουσα Σοκράτους διαλεγομένου, "I heard Socrates debating." It is obvious that the participle agrees with the word to which it refers—whether it be the object or subject. When the subject of the principal verb is likewise its object, the object is not expressed, and the participle is attracted in case to the subject.
- 3. The participle is used as a complement of verbs denoting perception, manifesting, &c. Ex., ὁρῶ σε τρέχοντα, "I see you running;" διαβεβλημένος οὐ μανθάνεις, "do you not perceive that you are calumniated?" ἡ ψυχὴ ἀθάνατος φαίνεται οὐσα, "the soul appears to be immortal,"=evidently is immortal, (see §129.)

- 4. The condition, or circumstances attending an action, are sometimes expressed in Greek by a verb, whilst an accompanying participle expresses the main action. Ex., ὁ Κροῖσος φονέα τοῦ παιδὸς ἐλάνθανε βόσκων, "Crœsus unconsciously nourished the murderer of his son;" διατελῶ καλὰ ποιῶν, "I am continually doing good;" ἔφθησαν ἀπικόμενοι, "they came first."
- 5. This construction is adopted also with the adjectives πολλός, παντοῖος, and the verb ἔχω, signifying state or condition. Εχ., πολλὸς ἤν λισσόμενος ὁ ξεῖνος, "the stranger entreated earnestly (much);" ἔχουσι αὐτὴν (τὴν ἡγεμονίην) κτησάμενοι, "they have acquired;" τὶ ληρῶν ἔχεις; "why keep trifling?"

§129. DIFFERENCE BETWEEN THE INFINITIVE AND PARTICIPLE AS COMPLEMENTS.

1. From the foregoing rules it is seen that the Participle and the Infin. may be used as complements of the same class of verbs and phrases. There is a difference, however, in the manner both connect the action or state they denote with the noun to which they refer. The action or state, as implied in the participle, is viewed as already belonging to the object or subject, and appropriated by it at the time signified; whilst with the Infin. no such close connection exists, but the idea of the verb is viewed as detached, and rather possibly, than actually at the time specified, belonging to the subject or object. This difference can be best

seen from examples. Thus, οἰδα θεοὺς σεβόμενος, means "I am conscious of worshipping the gods;" οἰδα θεοὺς σέβεσθαι, "I know how to worship the gods" (without implying that I worship them). ἀκουω Σοκράτους διαλεγομένου, "I hear Socrates discoursing (with my own ears);" ἀκούω Σοκράτους διαλέγεσθαι, "I hear (from others) that Socrates discourses. αἰσχύνομαι κακὰ πράττων τὸν φίλον, "I am ashamed of doing evil to a friend;" αἰσχύνομαι κακὰ πράττειν τὸν φίλον, "I am ashamed (prevented by shame) to do evil," &c. ἐφαίνετο κλαίων, "he evidently wept," or, "it was evident he wept;" ἐφαίνετο κλαίειν, "he seemed to weep."

§130. THE PARTICIPLE USED TO EXPRESS ADVERBIAL AND CIRCUMSTANTIAL RELATIONS.

- 1. The participle defines a substantive, as to time, cause, condition, purpose, and manner.
- 2. This use of the participle is often supplied in English by a subordinate clause, introduced by a relative or a conjunction. Ex., οἱ φυγόντες πολέμιοι—ἐδιώχθησαν, "when the enemy fled—they were pursued;" ἐπισκέψομαι τὸν φίλον νοσοῦντα, "I will go to see my friend, who is sick;" ληϊσόμενοι ζῶσιν, "they live by plunder;" τοῦτο φράσων ἤκω, "I come to announce this."
- 3. When the participle qualifies a noun or pronoun—not otherwise governed—or not governing in the sentence, they are both in the Gen. This is called the

Gen. absolute, or independent. Ex., $\pi \acute{a}\nu \tau \omega \nu \sigma \iota \omega \pi \acute{\omega}\nu \tau \omega \nu$, $\epsilon \acute{i}\pi \epsilon \tau \sigma \iota \acute{a}\delta \epsilon$, "when all were silent, he spoke the following;" $K\acute{\nu}\varrho\sigma\nu$ $\beta\alpha\sigma\iota\lambda\epsilon\acute{\nu}\sigma\nu\tau\sigma\varsigma$, "in the reign of Cyrus."

- 4. This Gen. absolute generally refers to time, but is used also in other relations, both conditional and causal. Εχ., πᾶν τὸ Ἑλληνικὸν ἐκινήθη, διαφορῶν οὐσῶν ἑκασταχόθεν, "the whole Grecian world was agitated, because (in as much as) disunion prevailed every where." Th. 3, 82.
- 5. The Dat. of the participle and noun, is used in specifying time, and instrument, but cannot be regarded as absolute, since its close connection with the other members of the sentence brings it under the rules of the ordinary Dative.
- 6. The Accus. absolute is used where the participle has no definite subject, consequently in the impersonal phrases, εξόν, δέον, δοκοῦν, παρασχόν, προσῆκον, &c.; ἡμῖν εξὸν μὴ καλῶς ζῆν, "as it is not in our power to live with honor;" καλῶς παρασχόν, "a favorable opportunity being offered;" δοκοῦν, "whereas it seems fit."
- 7. The Accus. absolute is sometimes used with participles not in the impersonal form. In this case, a verb denoting mental operation is understood. Ex., ἐσιώπα, ὡς πάντας εἰδότας, "he was silent, (thinking) that all were informed of it."
- 8. The Nom. and Accus. absolute are used as additional attributives in description. Ex., τοὺς βοῦς θάπτουσι, τὰ κέρατα ὑπερέχοντα, "they bury the oxen, with the horns projecting."
 - 9. Some adverbial expressions in English, are ren-

dered in Greek by the participle. Ex., ἀοξάμενος, "in the beginning;" τελευτῶν, "finally."

CHAPTER IV.

COMPOUND SENTENCES.

§131. Principal and Subordinate Clauses.

- 1. In the simple sentence treated above, the attributives, as well as the complement of the predicate, consist of single words,—Noun, Pronoun, Infinitive, Adjective, Participle and Adverb. The place of each of these may be filled by a complete clause dependent on the verb or phrase on which the simple term in the same position would depend.
- 2. Subordinate clauses, as dependent sentences are termed, are therefore divided into substantive, adjective and adverbial clauses—according as they supply the place and bear the import of these parts of speech respectively.
- 3. The connection between the two clauses, principal and subordinate, as individual members of the same sentence, falls on the verb alone, which must be modified in the subordinate clause, according to the nature of the dependence existing, and to the time implied in the verb of the principal clause.
 - 4. The leading principles which regulate the syntax

of the verb in the connection here intimated will be briefly given; a short notice of the syntax of Tenses and Modes being prefixed.

§132. Tenses.

- 1. Tenses are divided into two classes: Principal, viz. Pres., Perf., Future; and Historical,* viz. Imperf., P. Perf. and Aorist.
- 2. The Pres. represents an action going on at a time present to the speaker; as, γράφω τὴν ἐπιστολήν, "I am writing the letter." It is used of past actions to present them in a more intimate view; as, ταύτην τὴν τάφρον βασιλεύς ποιεὶ ἀντὶ ἐρύματος, "this ditch the king constructs—as a defence."
- 3. The Perf. represents an action just completed at the present time, or existing to the present in its results. Ex., $\tau \dot{\eta} \nu \ \dot{\epsilon} \pi \iota \sigma \tau o \lambda \dot{\eta} \nu \ \gamma \dot{\epsilon} \gamma \rho \alpha \phi \alpha$, "I have written the letter;" $\dot{\eta} \pi \dot{o} \lambda \iota \varsigma \ \dot{\epsilon} \pi \iota \iota \sigma \tau \alpha \iota$, "the city has been, and still remains, built."
- 4. The Future represents an action as about to take place, at a time that is future in relation to the present time of the speaker. Ex, $\gamma\rho\dot{\alpha}\psi\omega$, "I will write."
- 5. The Future Perf. represents a future action, as completed in anticipation; as, τετύξομαι τῆς εἰρήνης, "I shall have obtained the peace."
- 6. The Imperf. represents an action in progress in past time, but contemporaneous with some other action or event. It takes in accompanying circumstances, and is therefore the proper tense for descriptive narratives.

^{*} So called from their use in historical narratives.

Ex., ὅτε ἐγγὺς ἤσαν οἱ βάρβαροι, οἱ Ἑλλήνες ἐμάχοντο, "when the barbarians were approaching, then the Hellēnes were fighting."

- 7. The P. Perfect represents an action completed in past time, but always with reference to some other action; as, ὅτε οἱ σύμμαχοι ἐπλησίαζον, οἱ Ἀθηναῖοι τοὺς Πέρσας ἐνενικήκεσαν, "as the Allies drew near, the Athenians had conquered the Persians."
- 8. The Aor represents an action of past time, absolutely without reference to any other action; as, ἔγραψα, "I wrote." It is used of customary and repeated actions—of facts based on experience. Εχ., ζημίας αὐτοῖς ἐπέθεσαν, "they were wont to impose penalty on them." Χεπ. Cy. 1, 2, 2. μικρὸν πταῖσμα ἄπαντα ἀνεχαίτισε καὶ διέλυσεν, "a slight disaster subverts and ruins all." Dem. OL. 1, 20, 9. Hence arises its frequent use in comparisons in poetry, since comparison must be based on observation. Εχ., ὡς ὅτε τις δρῦς ἤριπεν, "as when a tree falls." Il. π, 482.
- 9. The Subjunctive of the Principal Tenses, and the Opt. of the Historical, denote something present or future. This accounts for the absence of the augment in the Imperf. and Aor. in those Modes, since augment marks time that is past.

§133. Modes.

- 1. The Indicative is the Mode of actual facts, and positive statement.
- 2. The Optative and Subjunctive are the Modes of conditional facts and conceptions.

- 3. The Optative is the Subjunctive of the Historical Tenses. The Aorist Subjunctive implies conditional future.
- 4. The Imperative is the Mode of the unconditional expressions of the will, and is used in commanding, supplicating, &c.

GENERAL PRINCIPLE OF THE USE OF THE MODES.

- 5. A positive assertion, an actual realized fact, a statement based upon realized facts, are to be expressed in the Indic. Hence, this is the natural Mode of the principal clause; οἱ πολέμιοι ἀπέφυγον, "the enemy fled."
- 6. A conception, a fact dependent on a condition, a purpose or aim, which are all things merely conceived, and dependent on some condition as to their realization, an indirect statement, the statement of the opinions of another which the writer would not have ascribed to himself, are to be expressed in the Opt. or Subjunctive Mode. Hence, these are the proper Modes of dependent or subordinate clauses.

EXAMPLES.

Conception.—οὐκ ἔχω ὅποι τράπωμαι, "I know not where to turn."

Purpose.—λέγω ΐνα μάθης, "I speak that you may learn."

Indirect Discourse.—ἔλεγεν ὅτι ἔτοιμος εἴη ἡγεῖσθαι αὐτοῖς, "he said, that he was prepared to guide them." Xen. An. 7. 1. 33.

Statement of the opinion of another.—Τισσαφέρνης διέβαλε τὸν Κῦρον, ὡς ἐπιβουλεύοι* αὐτῷ, "Tissaphernes accused Cyrus, that he was plotting against him." Xen. An. 1.

§134. THE INDICATIVE IN SUBORDINATE CLAUSES.

- 1. The Indic is used in the subordinate or dependent clause when a realized fact, and not a conception or supposition, is therein stated. Εχ., οἱ δ' ἔλεγον ὅτι ἄρκτοι πολλοὺς ἤδη διέφθειραν, "and they affirmed that the boars already killed many." Χen. Cy. 1. 4. 7.
- 2. The Indic. of the historical Tenses is used, with $\ddot{\alpha}\nu$, in the subordinate clause of actions which would certainly follow on the fulfilment of a certain condition. Ex, $\epsilon \dot{\epsilon}$ $\tau o \tilde{\nu} \tau o \epsilon \lambda \epsilon \gamma \epsilon \varsigma$, $\dot{\eta} \mu \dot{\alpha} \rho \tau \alpha \nu \epsilon \varsigma \ \ddot{\alpha} \nu$. Such a sentence is virtually negative.
- 3. As the Future is naturally dependent on time and circumstances, it is of frequent use in subordinate clauses instead of the Aor. subjunctive. It takes ἀν (Ερίς κε), when a condition, independent of futurity, is to be made prominent. Εχ., εἰ δ' Ὀδυσσεύς ἔλθοι, αἶψά κε σὺν ῷ παιδὶ βίας ἀποτίσεται ἀνδρῶν. Οd. ρ, 540.
- 4. With the Pres. and Perf. Indicative $\partial \nu$ is never used.
 - 5. The Indic. with $\partial \nu$ is also used to denote re-
- Here the Indic. would imply that the writer believed the charge to be true.

peated action under certain conditions. Ex., αν* εἴπεν, "he would say," "was accustomed to say."

§135. OPTATIVE AND SUBJUNCTIVE IN SIMPLE CLAUSES.

1. The dependent or subordinate clause of a compound sentence is the proper and natural place of the Opt. and Subj. Modes. They are sometimes employed in simple sentences, yet always involving a dependency on some thought or feeling. The following are the most common instances of their use in this respect.

SUBJUNCTIVE IN SIMPLE CLAUSES.

I. To express doubt and deliberation. Ex., ποί τράπωμαι; "whither am I to turn?"

II. Advice, exhortation. Ex., λώμεν, "let us go."

III. Command, entreaty; negatively with μή, μηδέ. Εχ., μη τρήσης, "do not fear."

IV. In poetry (Epic) the Aorist Subjunctive is used of a future action instead of the Indic. Future. Ex., οὐ γὰο τίς με βίη — δίηται, "for no one will force me." Il. η, 197. οὐ γάο πω τοίους ίδον ἀνέρας

^{*} The use of the modal particle $\tilde{a}\nu$, can be learned only by a complete examination of conditional subordinate sentences. The following general view of its signification deserves attention: "It indicates that what is stated in its own clause is dependent on certain conditions, expressed or implied, and therefore, as to realization, dependent on the fulfilment of such conditions." A predicate therefore, accompanied by $\tilde{a}\nu$, is based upon another predicate as its condition. (See Kuhner, G. G.)

οὐδὲ ἰδωμαι, "for I have never seen, nor shall I see such men." $Il. \alpha$, 262.

V. This use of the Subjunctive with οὐδέ, μή, is common with Attic writers; as, οὐ μὴ γένηται τοῦτο. This use of the Aorist denotes what is future, as something admitted, expected, or apprehended; and terms of such import should be supplied in rendering the thought into English.

THE OPTATIVE IN SIMPLE CLAUSES.

1. The Optative, as before remarked, is the subjunctive of the historical tenses, and therefore, as a general rule, denotes what is conceived as past, whilst the Subjunctive refers to the future. The Opt.,* Aor. and Imperf., when used of Present and Future time, denote that the conceptions are viewed with much more uncertainty and indefiniteness, than would be implied in the Subjunctive. It is thus used to denote,

I. Supposition, presumption, admission, possibility, without implying its realization. Ex., $\alpha \pi o \lambda o \mu \epsilon \nu \eta \varsigma \delta \epsilon \tau \tilde{\eta} \varsigma \psi \nu \chi \tilde{\eta} \varsigma$, $\tau \acute{o} \tau \acute{o} \tilde{\eta} \delta \eta \tau \tilde{\eta} \nu \varphi \acute{v} \sigma \iota \nu \tau \tilde{\eta} \varsigma \alpha \delta \vartheta \epsilon \nu \epsilon \iota \alpha \varsigma \epsilon \tau \iota \delta \epsilon \iota \star \nu \dot{\nu} \dot{o} \iota \tau \dot{o} \sigma \tilde{\omega} \mu \alpha$, "life being extinct, the body then

* When a present conception is expressed in the Subjunctive, the probability of its being realized is assumed; or its uncertainty is suppressed in viewing the present, or the future from the present point of time; but when expressed in the Opt. (the Subj. of historical tenses), the speaker transfers himself, as it were, to the past, and views the conception from a point of time remote from that implied in it, and consequently without the same definiteness and certainty that spring from an inspection favored by a close connection in time. (Kuhner, L. G. G., 466. 1.)

(we may presume) betrays its frail nature." Pl. Phæd. 87.

II. Wish, desire; τοῦτο μὴ γένοιτο, "may this not happen;" μὴ μὰν ἀσπουδί καὶ ἀκλειῶς ἀπολοίμην, "may I not perish ignobly," &c. Il. ξ. 304.

III. Command, in the form of request. Ex., χώ-ροις εἴσω, "proceed in."

IV. Direct questions, implying supposition, wish. Ex., $\tilde{\eta}$ $\dot{\psi}\dot{\alpha}$ $\dot{\nu}\dot{\nu}$ $\mu o i \tau \iota \pi i \vartheta o \iota o$, "would you but listen to me." Il. δ , 93.

V. Deliberative questions, with the past signification of the Tense. Ex., τi , $\varphi i \lambda o \varsigma$, $\delta i \xi \alpha i \mu i$; "what, friend, was I to do?"

§136. SEQUENCE OF TENSES.

- 1. A subordinate with a principal clause, present one united thought, the two being so related that the subordinate stands as the complement or limiting member (subject, attribute, or object) of the principal. Εχ., ἡγγείλαν ὅτι οἱ Πέρσαι ἀποφύγοιεν, "they announced that the Persians fled." Here the subordinate sentence ὅτι οἱ Πέρσαι, &c., is the object. ἡγγέλθη ὅτι Μέγαρα ἀφέστηχε, "it was announced that Megara had revolted," = the revolt of Megara was announced. The subordinate holds the place of a subject.
- 2. The relation of the verb of the subordinate clause to that of the principal clauses, is regulated as follows:
 - 3. If the verb in a principal clause is in the princi-

pal tense (Pres., Perf., Fut.), the verb in the subordinate clause is in the Subjunctive. Εχ., γράφω ίνα ελθης, "I write that you may come." If in a historical tense (Imperf., Aor., Pluperf.), the verb in the subordinate clause is in the Opt. Εχ., ἔγραψα ΐνα ἔλθοις. Hence the sequence of tenses is:

PRINCIPAL CLAUSE.

SUBORDINATE.

Present, γράφω, "I write," Perfect, γέγραφα, Future, γράψω,

ίνα έλθης, subjunctive, "that you may come."

Imperf., ἔγραφον,
Aorist, ἔγραψα, "I wrote,"
Pluper., ἐγεγράφειν,

iνα ἔλθοις, optative,
"that you might come."

Note. From the above it will be seen that the optative is properly the mode of the historical tenses. It corresponds to the Imperf. and Pluperf. subjunctive in Latin.

- 4. The rule regarding the sequence of tenses, though a main principle in the construction and syntax of the language, is not regularly followed. In animated narrative the subjunctive follows an historical tense. Εχ., τοὺς ἱππέας ἐκέλευσε φυλάττειν, ἔως ἄν τις σημάνη. Xen. Cy. 4. 5. 36.
- 5. Frequently there occurs, also, an attraction of the mode in the subordinate clause. Ex., ανθρωπος έδύνατ' αν πράττειν α έβούλετο, "man was (would be), able to do what he wished." (X. C. 1, 4. 14.)
- 6. When two conditional clauses are connected, implying probability in different degrees, the more

7. When the present is used for a past tense (§132,
2.) in the principal clause, the optative is in the subordinate clause (κατὰ σύνεσιν).

§137. SPECIAL VIEW OF SUBORDINATE SENTENCES IN THEIR THREEFOLD DIVISION OF SUBSTAN-TIVE, ADJECTIVE, AND ADVERBIAL.

- 1. Substantive clauses represent the substantive idea of subject, attribute, or object, expanded into a sentence. In the use of the mode,* they conform to the general principles of modes (§133).
- 2. Substantive clauses are introduced by the conjunctions ὅτι and ὡς, when they stand as the objects of words of perception, manifesting, &c. Εκ., ἠγγέλ-θη ὅτι Μέγαρα ἀφέστηκε. Τh. 1, 114. οὖτοι ἔλεγον—ὅτι—᾿Αριαῖος δὲ πεφευγὼς εἴη. Χεπ. Απ. 2. 1. 3.
- 3. The mode in such substantive clauses can be the Opt. or Indic., according as they denote reality, or a
- * It is a common error to trace the mode employed in a subordinate clause to the preceding particle. It is the conception implied that determines the mode, whether such conception embraces a fact, or reality, when the Indic. is required, or merely something existing only in thought and imagination, which demands the subjunctive and optative. This principle is the same for simple and subordinate clauses, and viewing the latter as involving any other principle in their modal construction is an error.

conviction of reality on the part of the speaker, or mere conception or supposition.

4. Secondly, substantive clauses denoting purpose, aim, effect, are introduced by the conjunctions ίνα, ώς, ὅπως (ὅσρα poet.), ἵνα μή, ὡς μή, ὅπως μή. Εχ., γέγρασα ὑμῖν, ἵνα μὴ ἐνοχλῆσθε. Dem. Cor. 239. 39. τὸν Κῦρον ἀπεκαλέι, ὅπως τὰ ἐν Πέρσαις ἐπιχώρια ἐπιτελοίη, "he summoned Cyrus back, that he might complete," &c. Xen. Cy. 1. 4. 25.

§138. Adjective Subordinate Clauses.

- 1. Adjective subordinate clauses are such as represent the adjective or participial idea, expanded into a sentence. Εχ., τὰ πράγματα ἃ 'Αλέξανδρος ἔπραξεν = τὰ ὑπὸ 'Αλεξάνδρου πραχθέντα πράγματα, "the deeds which Alexander has accomplished," = the deeds accomplished by Alexander.
- 2. Adjective clauses are introduced by the relative pronouns őς,* ὅστις, οἶος, ὅσος, ὁστισοῦν, ἡλίπος. Εκ., οῦς ἀν ὁρῶ τὰ καλὰ ἐπιτηδεύοντας, τούτους τιμήσω, "I will honor those whom I observe living honorably."
- 3. An adjective subordinate clause becomes a substantive clause, when the relative, accompanied by the verb $\epsilon i\mu i$ and an adjective, stands as a demonstrative noun. Ex., $\tilde{\eta}\lambda \vartheta o \nu$ oi $\tilde{\alpha} \rho \iota \sigma \tau o \iota$, "the best (= those who were the best), came."

^{*} In Homer and the Doric poets, and sparingly among the Attic and Ionic prose writers, ős is used as a demonstrative. Εχ., πόλεις Έλληνίδας, ἃς μὲν ἀναιρῶν, &c. Dem. Cor. 248.

- 4. From this use of the relative is derived the expression, ἔστιν,* οῖ, ὧν, οἶς, οῦς, ἅ (some), which obtained the character and signification of one word, in the different relations of case, and is inserted even in the middle of sentences. Εχ., Κλεόπομπος τῆς παραθαλασσίου ἔστιν ἅ ἐδήωσε, "Cleopompus laid waste some of the country bordering on the sea." Τh. 2. 26. ἦν δὲ τούτων τῶν σταθμῶν οῦς πάνυ μαχροὺς ἤλαυνεν, "he made some of these stathmoi very long."
- 5. This use of ἐστὶ and the relative adverbs is also of common occurrence. Ex., ἔστιν ὅτε, "sometimes;" · ἔστιν ὅτε ἔλεξεν, "he spoke sometimes."

§139. Attraction of the Relative.

- 1. The attributive connection of the adjective clause with the principal, has led to the frequent attraction of the relative into the case of its antecedent in the principal clause, whereby the adjective character of the subordinate clause is better preserved. Εκ., χαίρω ταῖς ἐπιστολαῖς αῖς ἔγραψας (= χαίρω ταῖς ὑπὸ σοῦ γεγραμμέναις ἐπιστολαῖς), is more in the adjective agreement with the principal clause, than the common construction would be.
 - 2. By attraction, the adjective clause, when intro-

Nom. $\xi \sigma \tau \iota \nu$ of $(=\xi \nu \iota o \iota)$.

Gen. $\tilde{\epsilon}\sigma\tau\iota\nu$ $\tilde{\omega}\nu$ (= $\tilde{\epsilon}\nu\iota\omega\nu$).

Dat. έστιν ols (= evíois).

Acc. $\xi \sigma \tau \iota \nu$ ous $(= \xi \nu \iota \delta \nu s)$.

^{*} INFLECTION OF cotiv of, Abbreviated evici.

201

duced by οίος, ὅσος, ἡλίκος, &c., may be omitted in the following manner: the correlative demonstrative pronoun is omitted with εἰμί, the relative is attracted into the case of the antecedent noun, and the subjunctive of siui follows the case of the relative. χαρίζομαι άνδοι τοιούτω οίος σὺ εί, becomes by the above rule, χαρίζομαι ανδρί οίω σοί, which was inverted into χαρίζομαι οίω σοὶ ἀνδρί. πρὸς ἀνδρὰς τολμηρούς οίους καὶ Αθηναίους, "against brave men, such as the Athenians are."

INVERTED ATTRACTION.

- 1. This consists in the attraction of the antecedent into the case of the relative. It occurs most frequently in the phrases, οὐδεὶς ὅστις οὐ (εἰμί being omitted), &c. Ex., περὶ ὧν οὐδένα κίνδυνον (= οὐδεὶς κίνδυνος έστι), ὅντιν οὐχ ὑπέμειναν οἱ πρόγονοι, "there is no danger which your ancestors," &c. Dem. Cor. 2. 95.
- 2. Adjective clauses in respect to mode are governed by the general principle (§133). For difference between optative and subjunctive, see §133.

ADVERBIAL SUBORDINATE CLAUSES.

1. Adverbial clauses represent the adverbial idea dilated in expression into a sentence. They denote the adverbial relations of Time, Place, and Circumstances, and serve, as adverbial expressions, to define rather than to complete the Predicate.

2. They are divided into

ADVERBIAL CLAUSES

- I. Of Place, which are introduced by the relative adverbs of place, viz.: οὖ, ἦ, ὅπη, ὅπου, ὅϑεν, ἔνϑα, ἔνθεν, οἶ, ὅπο, ὅπη. Εκ., ἔπεσθε ὅποι ἄν τις ἡγῆται, "follow whithersoever each (officer) leads." Th. 2. 11. In Mode they conform to the general principle (§133).
- II. Of Time. To these belong all conjunctions, and expressions denoting when, while, as soon as, since, sooner than, till, until. Ex., ἐμάχοντο μέχρις οἱ Αθηναῖοι ἀνέπλευσαν, "they continued fighting until the Athenians sailed back." Xen. H. 1. 1. 3. For Mode, consult general principle (§133). The Indicative Mode is used after έως (till), when an object is regarded as unattainable.
- III. Of Cause. When the ground or cause is expressed in the form of an adverb of time, the introductory conjunctions are: $\ddot{o}\tau \varepsilon$, $\ddot{o}\pi o \tau \varepsilon$, $\dot{o}\varepsilon$, $\dot{\varepsilon}\pi \varepsilon i \dot{\sigma}$, $\ddot{\varepsilon}\pi \varepsilon i \dot{\sigma}\dot{\sigma}$; when in the form of a substantive, the conjunctions are: $\ddot{o}\tau \iota$, $\dot{o}i\dot{\sigma}\iota$, ($\dot{o}i\dot{\alpha}$ $\dot{\tau}o\ddot{v}\tau o$ $\ddot{o}\tau \iota$), $\ddot{o}\ddot{v}\nu \varepsilon \varkappa a$, ($\dot{\tau}o\dot{v}\tau o v$ $\ddot{\varepsilon}\nu \varepsilon \varkappa a$,) or $\dot{o}\dot{\sigma}o\dot{v}\nu \varepsilon \varkappa a$ ($\ddot{\sigma}\tau o v$ $\ddot{\varepsilon}\nu \varepsilon \varkappa a$). Ex, $\ddot{o}\tau \varepsilon$ $\dot{\tau}o\dot{v}\nu v$ $\tau a\dot{v}\dot{\sigma}$ o $\ddot{v}\tau \omega \varepsilon$ $\ddot{\varepsilon}\chi \varepsilon \iota$, $\pi \rho o \sigma \dot{\eta}\varkappa \varepsilon \iota$ $\pi \rho o \dot{\tau}\dot{\nu}\mu \omega \varepsilon$ $\dot{\varepsilon}\dot{\sigma}\dot{\varepsilon}\lambda \varepsilon \iota v$ $\ddot{\sigma}\varkappa o \dot{\nu}\varepsilon \iota v$, "when such is the case, it becomes," &c. Dem.~Ol.~1.
- IV. Of Condition. The Introductory conjunctions are ϵi , $\epsilon \dot{\alpha} \nu$ (cont. $\eta \nu$, $\ddot{\alpha} \nu$).
- 3. The clause with the conjunction is termed the conditional, the other the consequent clause.

- 4. Every condition is viewed either as possible, or impossible. Possibility is viewed as of certain, doubtful, or uncertain realization. Upon this difference in the condition rests the observance of the Mode, which may be briefly stated as follows:
- I. Possibility without any intimation of uncertainty; Indicative in both clauses. Εκ., εἰ τοῦτο λέγεις, ἀμαρτάνεις.
- II. Possibility with some prospect of decision; consequently involving the idea of Future time. Subjunct. (Present generally) in the conditional clause; Indic. Future in the consequent clause. Εχ., ἐἀν τοῦτο λέτγης, ἀμαρτήσει, (if you say this, you will err).

III. Possibility viewed as a conceivable case, apart from its realization. The Opt. in both clauses. Ex., $\varepsilon i \tau \iota \varepsilon \chi o \iota \varepsilon$, $\delta o \iota \eta \varepsilon \alpha \nu$.

IV. When the condition is viewed, as not a reality, which is the case when reference is to the past; the Indic. of the historical Tenses in both clauses, $\varepsilon \tilde{\nu} \tau \iota \varepsilon \tilde{\nu} \chi \varepsilon \varsigma$, $\varepsilon \delta i \delta o \nu \varsigma \tilde{\alpha} \nu$. This is virtually a denial of both the condition and the consequent, and consequently the same as an impossibility.

§141. Coördinate Sentences.

- 1. When sentences are so united as to present one connected thought, whilst each has its own independent construction, they are said to be coördinate.
- 2. Coördinate sentences are connected by the copulative or disjunctive conjunctions, or by the adversative particles, $\mu \acute{\epsilon} \nu \delta \acute{\epsilon}$.

3. The conjunction η , besides its adversative force, has also a comparative use.

η κατά and η πρός are used in the sense of the Latin 'quam pro,' when an attribute belongs to an object in a higher or lower degree, than could be expected in relation to another object. Εκ., μείζω η κατὰ δάκρυα πέπονθα (I have suffered too much for tears); η ώστε, when the attribute is greater than accords with any preconceived notion. Εκ:, η ώστε ἐπὶ Πεισίδας τὴν παρασκεύην, "greater than to be against," &c. Χεπ. Απ. 1. 2. 4.

§142. On the use of the most common Adverbial and Conjunctive Particles.

 $\ddot{a}\nu$ (poet. $\varkappa\dot{\epsilon}\nu$, $\varkappa\dot{\epsilon}$), cont. for $\dot{\epsilon}\dot{a}\nu$ (supposed root, $\dot{\epsilon}\ddot{a}\omega$), corresponds to the conditional (if). It accompanies subordinate clauses in all tenses except Pres. and Perf. Indic. Owing to the unconditional character of those tenses, where $\ddot{a}\nu$ occurs in sentences containing them, it is to be referred to a dependent clause. Ex., où $\ddot{a}\nu$ oid $\dot{\epsilon}i$ duvai $\mu\eta\nu$, "I hardly know if I am able;" $\ddot{a}\nu$ belongs to the dependent $duvai\mu\eta\nu$. It sometimes denotes that the verb of a preceding clause is to be repeated.

äρα (äρω, to suit). Primary meaning is suitably, appropriately, natural in the course of things, natural order in narrative, or chain of reasoning; it may be rendered by consequently, therefore, thereupon, as it seems, for sooth. In connection with individual terms,

it corresponds to the Eng. just, exactly; $\tau o \tilde{\nu} \tau'$ $\tilde{\alpha} \rho \alpha$, "just this." Homer uses it frequently as a connecting link between thoughts closely related, and developed out of one another. This use is often without its corresponding Eng. equivalent terms. $\tilde{\alpha} \nu$ and $\tilde{\alpha} \rho \alpha$ never begin a clause. $\tilde{\alpha} \rho \alpha$; interrogative, signifies, "is it that?"

 $\alpha \tilde{v}$, again, moreover, on the contrary, further. From $\alpha \tilde{v}$ and $\tilde{\alpha} \rho \alpha$ comes the compound $\alpha \tilde{v} \tau \alpha \rho$, "but;" it preserves in part, the meaning of $\tilde{\alpha} \rho \alpha$, intimating a close connection with what precedes. Yet generally it has an adversative meaning like $\tilde{\alpha} \lambda \lambda \tilde{\alpha}$. It introduces an objection, and stands at the beginning of its clause, except when in connection with a Voc.; $\tilde{\alpha} \tau \alpha \rho \tilde{\epsilon} \phi \eta \varsigma$, "still thou didst say so."

γάρ, "for," always explanatory, introduces a reason for something stated. Ex., καί, ἦν γὰρ ὁ Μαραθών ἐπιτηδεώτατον χωρίον—ἐς τοῦτό σφι κατηγέετο, "and to this place he led them—for Marathon was the most favorable position." Her. 6. 102. Καὶ γάρ, may be rendered—"and no wonder—and with reason—for." (γὰρ is compounded of γέ, ἄρα.)

γε (enclitic), "at least," limits and defines an object; έγωγε, "I at least."

 $\delta \acute{\eta}$, an affirmative strengthening participle, giving prominence and fulness to the word to which it is annexed, may be often correctly rendered by assuredly, truly. Its meaning, however, is not restricted to any one term in English, but is best rendered by any expression that gives corresponding prominence to the word to which $\delta \acute{\eta}$ is added; $\mu \acute{o} \nu o c \delta \acute{\eta}$, "quite alone;"

πράτιστοι δή, "the very best." δή is joined to other particles; as, $\pi ο \tilde{\nu}$, $ο \tilde{\nu} \nu$, and in this connection corresponds to certain phrases, to be found in every language. $\tau i \varsigma \delta \dot{\eta} \ o \tilde{\nu} \nu$; "who, pray?" "who, tell me?" $\delta \dot{\eta} \pi o \nu$, "assuredly yes;" $\ddot{\alpha} \lambda \lambda o \iota \delta \dot{\eta}$, "others, whoever they may be." $\delta \dot{\eta} \tau \alpha$, from $\delta \dot{\eta}$, has the limiting force of $\delta \dot{\eta}$; it corresponds to the Lat. demum, tandem. $\tau i \delta \dot{\eta} \tau \alpha$; "what, pray?" (quid demum?) $\delta \dot{\eta}$ and $\ddot{\eta} \delta \eta$, as particles of time, signify "just now," "just then," "precisely at that very time," &c. $\kappa \alpha \dot{\iota} - \tau \varepsilon$ (latter enclitic) correspond to the Lat. et—

nai—τε (latter enclitic) correspond to the Lat. et—que. τε is used in Greek, where no copula is required in English. Its distinct and proper use seems to have been at first to add something secondary, whilst καί connects things equally important. καί has also an intensive force=nay, also, especially. τε—καί, "both—and," "and moreover;" καί—τε, "yet—besides," "not only—but."

 $\mu \grave{\alpha} - \nu \acute{\eta}$, used in adjurations with the Accus. of the object sworn by. $\mu \acute{\alpha}$, negative; as, $\mu \grave{\alpha} \ \tau \grave{o} \nu \ \Delta \acute{\iota} \alpha$, "no, by Jove;" $\nu \acute{\eta}$, affirmative; $\nu \grave{\eta} \ \tau \grave{o} \nu \ \Delta \acute{\iota} \alpha$, "yes, by Jove." The primary meaning of $\nu \acute{\eta}$ (sometimes $\nu \alpha \acute{\iota}$), (Lat. $N \alpha$), is, truly, verily, indeed. It is often added to $\mu \acute{\alpha}$; as, $\nu \alpha \acute{\iota}$ ($\nu \acute{\eta}$) $\mu \grave{\alpha} \ \tau \grave{o} \nu \ \Delta \acute{\iota} \alpha$, "assuredly no," &c.

 $\mu\acute{\epsilon}\nu$ — $\delta\epsilon$ serve to contrast two clauses; $\mu\acute{\epsilon}\nu$, "on the one hand;" $\delta\acute{\epsilon}$, on the other; used to connect coördinate sentences. The clause with $\mu\acute{\epsilon}\nu$, is termed the Protasis, or antecedent clause; that with $\delta\acute{\epsilon}$, the Apodosis, or consequent clause. With divisions of time, they denote, sometimes, $\pi\varrho\widetilde{\omega}\tau o\nu$ $\mu\acute{\epsilon}\nu$ — $\check{\epsilon}\pi\epsilon\iota\tau\alpha$ $\delta\acute{\epsilon}$. So they contrast number and place. $\tau\grave{o}$ $\mu\acute{\epsilon}\nu$ — $\tau\grave{o}$ $\delta\acute{\epsilon}$ are

sometimes used absolutely=partly on the one side, "partly on the other." They sometimes simply connect clauses=both—and; frequently they are used where in our language connecting particles are not required, though they appear to give compactness to the sentence in Greek.

 $u\eta - o\ddot{v}x$. These negatives differ in meaning, as the Indic. and Subjunc. Modes; that is, oux is used in the negation of facts (denies objectively); $\mu \eta$, in the negation of conceptions (denies subjectively.) our is to be used where a sentence contains a direct declaration. Hence, as a general rule, they accompany respectively those Modes to which in principle they are allied. our also denies ground, cause, reason; frequently accompanies the Opt. $\mu\eta$ is prohibitive, accompanies the Imper., and is the regular negative of the Infin. Ex., ότι οι βάρβαροι ούχ ήττηθησαν, οι Ελληνες τὰ όρη οὐ zατέλιπον, "because the barbarians were not," &c.; μὴ γράφε, μὴ γράψης, "do not write;" πολλὰ μέν ἔστι ιδέειν τὰ μήτις ἐθέλει, "of such kind as one may not wish to see." When these negatives are joined to participles, it is intended that the participle partake of the idea characteristic of the negative. Ex., δ οὐ πιστεύων, "one who does not believe;" ὁ μὴ πιστεύων, "if one does not believe."

 $\mu\dot{\eta}\nu$ denotes assurance, asseveration, &c.; it is strengthened by $\dot{\eta}$, which has a similar meaning. Ex., $\dot{\eta}$ $\mu\dot{\eta}\nu$ $\dot{\omega}\varsigma$ $\varphi i\lambda o \iota \varsigma$ $\varkappa a \iota \sigma \iota o \iota \varsigma$ $\chi \varrho \dot{\eta} \sigma \epsilon \sigma \vartheta a \iota \alpha \dot{\nu} \iota o \iota \varsigma$, "that he would assuredly treat them as friends." Xon. Cy. 4. 2. 8.

v'u, a particle of confirmation; for sooth, truly, cer-

tainly. Ex., καὶ νύ ἀπόλοιτο, "and he would assuredly have perished." ἤτοι is of similar meaning.

ov, wherefore, consequently, marks conclusion, or

the effect of a cause.

 $o\ddot{\nu}\varkappa o\nu\nu$ (compound of $o\ddot{\nu}\varkappa - o\dot{\nu}\nu$) properly means, "not therefore." Its negative force is lost, however, unless when the accent is on $o\ddot{\nu}\varkappa$. Otherwise it means simply therefore.

 $\pi \epsilon \varrho$ (enclitic), signifies through, throughout, altogether; is attached to words that are to receive marked emphasis, and may be rendered by very. $\delta \sigma \pi \epsilon \varrho$, "the very person who;" $\delta \sigma \sigma \sigma \epsilon \varrho$, "precisely as much."

 $\pi o \tilde{v}$, of place, denotes where, somewhere, anywhere; it gives vagueness and indefiniteness to the idea it qualifies. Of causal signification, denotes probability, detracting from the definiteness of the expression to which it is joined. It may be rendered by "perhaps," "if I mistake not," "I ween."

 $\pi\tilde{\omega}_{\varsigma}$, manner; used interrogatively, denotes "how?" otherwise it denotes, "in some certain manner, or way." Often it is used by the Dramatic writers in expressing wish, desire; $\pi\tilde{\omega}_{\varsigma}$ $\tilde{\alpha}\nu$ $\tilde{\sigma}\lambda\tilde{\sigma}(\mu\eta\nu)$, "would I could perish."

rou (enclitic), has the meaning, truly, certainly; hence, it is used as a confirmative particle.

Rem.—The Greek particles have not their equivalent terms in Modern Languages. Their force or meaning is best rendered by any expression, or even emphasis, that reflects in a word or phrase, that shade of meaning given to it by the Greek particle.

§143. ACCENTUATION.

The general rules for the position of the accent have been given (§9). The following is a more detailed view of the same.

I. Words are divided according to the position of the acute accent into: Oxytones, with the acute on the final. Εχ., χαπός. Paroxytones, with the acute on the penult. Εχ., τύπτω. Proparoxytones, with the acute on the antepenult. Εχ., ἄνθρωπος.

II. According to the position of the circumflex into: Perispomena, with the circumflex on the final. Ex., $xax\tilde{\omega}_s$. Properispomena, with the circumflex on the penult. Ex., $\sigma\tilde{\omega}\mu\alpha$. For the influence of the quantity of the final syllable, see §9.

III. The inflection-endings $o\iota$, $\alpha\iota$, are short in relation to accent. Ex., $\mathring{a}v\vartheta_{\varrho\omega\pi\sigma\iota}$, $\imath\mathring{v}\pi\tau\iota\tau\alpha\iota$. These endings of the optative are long. Ex., $\tau\iota\mathring{u}\eta\sigma\alpha\iota$, $\mathring{\epsilon}\varkappa\lambda\iota\mathring{\iota}\tau\sigma\iota$. The ω peculiar to the Ionic and Attic dialects is short in relation to accent. Ex., $\pi\acute{o}\lambda\iota\omega\varsigma$.

ACCENTUATION OF THE VERB.

I. The accent recedes as far towards the beginning as possible, and this even in compounds. Εχ., τιμάω, ἐτίμαον; φέρε, πρόσφερε.

II. The syllable of the word prefixed, that had the accent before composition, retains it. Ex., $\vec{a}\pi \acute{o}\delta o \varsigma$, $\vec{\epsilon}\pi \acute{o}\delta \varepsilon \varsigma$.

Exceptions. Parts of the verb that are oxytone and perispomena.

III. Final syllable has the circumflex in 2d Aor., Infin. Act. Ex., τυπεῖν. 2d Aor., Imper. Mid. Ex., λαβοῦ. 1st and 2d Aor., Subj. Pass. Ex., τυφθῶ, τυπῶ.

IV. Final syllable takes the acute in 2d Aor. Part. Masc. and Neut. Ex., τυπών, τυπόν. 2d Aor. Imper. of five verbs: εἰπέ, ἐλθέ, εὐρέ, λαβέ, ἰδέ. All participles in ς, Gen. τος, τετυφώς, τυφθείς, except the First Aorist participle Act. Ex., βουλεύσας.

PAROXYTONES AND PROPERISPOMENA.

V. The penult takes the acute or circumflex (according to §9, 8.), in the following forms: Perf. Mid. Infin., τετύφθαι, πεφιλῆ-σθαι; 1st Aor. Act., τύψαι, τιμῆσαι; 2d Aor. Mid., τυπέσθαι; all infinitives in ναι, τετυφέναι, τυφθῆναι, τιθέναι; participles of Perf. Mid., βεβουλευμένος; dual and plural of the Aorists Pass., Subj., τυφθῶμεν, τυπῶμεν.

VI. In polysyllables which have a penult long by nature, the three corresponding forms of 1st Aor. are distinguished as follows: Infin. 1st Aor. Act., βουλεῦσαῖ, properispomena; Opt. 1st Aor. Act., βουλεύσαῖ, paroxytone; Imp. 1st Aor. Mid., βούλευσαι, proparoxytone. When the penult is not long by nature, the Infin. and Opt. forms correspond. Εχ., φυλάξαι, Infin.; φυλάξαι, Opt. In dissyllables, the correspondence is obvious.

ACCENTUATION IN CONTRACTIONS.

I. A contracted syllable is accented only when one of the syllables blended in it held the accent previous

to contraction.* Ex., $\varphi i \lambda \varepsilon - \varepsilon$, cont. $\varphi i \lambda \varepsilon \iota$; but $\varphi \iota \lambda \dot{\varepsilon} - \varepsilon \iota$ becomes $\varphi \iota \lambda \varepsilon \dot{\iota} + \dot{\varepsilon}$

II. When the contraction is in the penult, the accentuation conforms to the general rules (§9, 8).

III. A final contracted syllable has the following rules regarding the acute and circumflex:

IV. An oxytone before contraction remains oxytone when contracted. Εχ., έσταώς, έστώς.

V. A paroxytone when contracted becomes perispomenon. Εχ., φιλέ-ει, φιλεῖ.

ACCENTUATION IN CONNECTED DISCOURSE.

I. In sentences, oxytones receive the mark of the grave. Εχ., εἰ μὴ μετρυιὴ περικαλλὴς Ἡερίβοια ἦν. The acute remains before every pause. Εχ., Κῦρος ἐπέρασε τὸν ποταμόν, οἱ δὲ πολέμιοι, &c.

CRASTS.

- II. When crasis combines words, the acute of the second word is retained. Ex., τἀγαθόν for τὸ ἀγαθόν. When the second word is a dissyllable and paroxytone, with the final syllable short, the crasis syllable takes the circumflex. Ex., τοὖπος for τὸ ἔπος.
- * Adjectives in our contracted from ϵ_{05} , though proparoxytones in the open form, take the circumflex on the contracted syllable. Ex., $\chi_0 \dot{\omega} \sigma \epsilon_{05}$, contr. $\chi_0 \omega \sigma \hat{\omega} \hat{s}$.
- † The Gen. plural and dual of $\tau\rho\iota\dot{\eta}\rho\eta$ s is paroxytone, contrary to rule: $\tau\rho\iota\eta\rho\dot{\epsilon}\cdot\omega\nu$, $\tau\rho\iota\dot{\eta}\rho\omega\nu$. Adjectives in $\dot{\eta}\vartheta\eta$ s have the same irregularity.

ELISION.

III. Accent is not taken away by elision, but is transferred to the preceding syllable, except in prepositions, and in the adverbs $o\dot{v}\delta\dot{\varepsilon}$, $\mu\dot{\eta}\delta\dot{\varepsilon}$, $\dot{\alpha}\lambda\lambda\dot{\alpha}$.

IV. When an oxytone preposition follows its noun, the accent recedes towards the noun. Ex., $\mu \dot{\alpha} \chi \eta \varsigma$ $\ddot{\epsilon} \pi \iota$ for $\dot{\epsilon} \pi \iota$ $\mu \dot{\alpha} \chi \eta \varsigma$. This is called anastrophe.

PROCLITICS AND ENCLITICS.

V. These are words that are so closely united, the former with words that follow them, the latter with words preceding them, that they are regarded as part of them in tone, and consequently forego their own independent accent. To the former belong the forms of the article δ , $\dot{\eta}$, oi, ai; the prepositions $\dot{\epsilon}\nu$, $\dot{\epsilon}i\varsigma$, $\dot{\epsilon}\kappa$, $\dot{\omega}\varsigma$ (prep. and conjunct.). $\dot{\epsilon}\kappa$ and $\dot{\omega}\varsigma$, following their nouns, retain the accent.

To the latter belong the verbs $\varepsilon i \mu i$, $\varphi \eta \mu \iota$, in the Pres. Indic. except 2d pers. sing. The forms of the personal pronouns $\mu o \nu$, $\mu o \iota$, $\mu \varepsilon$, $\sigma o \nu$, $\sigma o \iota$, $\sigma \varepsilon$, $o \dot{\nu}$, $o \dot{\iota}$, $\dot{\varepsilon}$. The duals $\sigma \varphi \omega \iota \nu$, plur. $\sigma \varphi \iota \sigma \iota$. The indefinite $\tau \iota \varsigma$ in all its monosyllabic forms. The indef. adverbs $\pi \omega \varsigma$, $\pi \omega$, $\pi \eta$, $\pi o \nu$, $\pi o \vartheta \iota$, $\pi o \vartheta \varepsilon \nu$, $\pi o \iota$, $\pi o \tau \varepsilon$. The Attic particles $\tau \varepsilon$, $\tau o \iota$, $\gamma \varepsilon$, $\nu \nu \nu$, $\pi \varepsilon \varrho$.

§144. DIGAMMA:

ITS NAME, VALUE; PROOFS OF ITS EXISTENCE.

I. The Digamma (§§4, 5) belonged to the early language, and was preserved longest in the Æolian

dialect. In sound it answered to the English F or V. Its traces remain in many Latin words of Greek affinity under the character V. Ex., oivoc, vinum; oixoc, vicus; oic, ovis; βoic, boves; vaic, navis; iioω, video. It was virtually the labial breathing, possessed like the lingual breathing σ of the power of a consonant. As its use in the language declined, its place as a breathing was in some instances supplied by the aspirate ('), or by the sibilant σ. This can be seen by comparing Latin words with their Greek kindred. Ex., iσπεροc, vesperus; or those Homeric terms to which it belonged with the Latin terms of common origin. Ex., oiv, sui.

Name.—The name was originally $\beta \alpha \nu$ or Vau; called Digamma from its resemblance in form to two Γ 's joined together.

Proofs of its existence.—It is preserved still in the numerical alphabet, as the symbol of 6, marked by a character similar to stigma ς . This was its place in the regular alphabet, i. e. between ζ and η .

II. In the language of the Homeric poems, certain words occur beginning with vowels, which occasion a hiatus with the final vowel of the preceding word; as, $\vec{\alpha}\pi\hat{o}$ $\vec{\epsilon}o$, $\lambda\iota\pi\hat{\epsilon}$ $\delta\hat{\epsilon}$ $\hat{\epsilon}$. Apart from these concurrences, hiatus seldom happens, and it is therefore inferred that some sound of consonant character prevailed in Homer's time, which at a later period was dropped from the language.

III. Before these words, a vowel capable of elision is never elided. Εχ., θαρσήσας μάλα εἶπε θεοπρόπιον, ὅτι οἶσθα. Π. α, 85.

IV. Before these words an ending syllable naturally short is lengthened, and a long vowel in the same position is never shortened. Ex. $\mathcal{E}\beta\alpha\nu$ oliov $\delta\varepsilon$ $\mathcal{E}\varkappa\alpha$ orog. (II. α , 606.) $\alpha\nu$ is lengthened by position, owing to ν and the Digamma of olivor (Foliov $\delta\varepsilon$). δ ourval $\dot{\varepsilon}$ lux $\dot{\omega}$ n $\dot{\varepsilon}$ la (Felix $\dot{\omega}$ n $\dot{\varepsilon}$ la). α is preserved long by the Digamma.

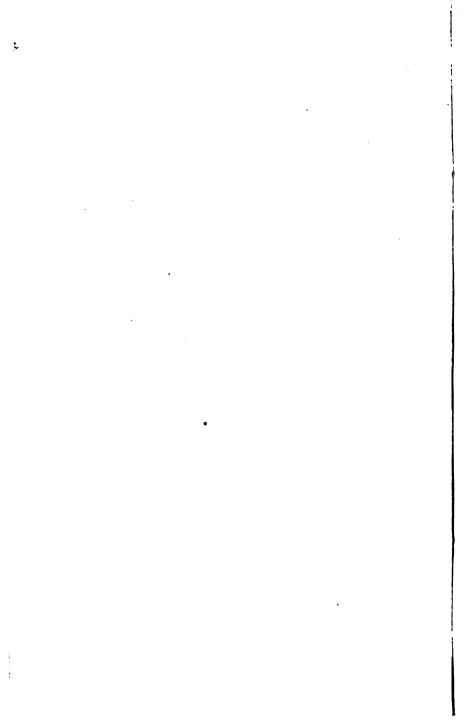

V. The preservation of Vau (Digamma) in Latin words of common origin with the Greek.

DIGAMMATED WORDS OF THE HOMERIC POEMS.

The pronoun forms οὖ, οἶ, ἑ, ἄγνυμι, ἄλις, ἀλῶναι, ἄναξ, ἀνδάνω, ἀραιός, ἄρνα, ἄστυ, ἔαρ (ver), ἔθειρα, ἔδνα, ἔθνος, εἰδω, ἑλίσσω, ἔκηλος, ἔκητι, εἰλέω (volvo), εἰπεὶν, εἴκοσι, εἴρω, ἔργον, ἔργω, ἐκας, ἔκαστος, ἡκα, ἔκυρος, ἑκών, ἔλπω, ἔλδομαι, ἔννυμι, ἔοικα, ἔρξω, ἐρύω, ἔσπερος, ἑσθης, ἔτος, ἐλικώπις, ἡθος, ἡδύς, ἐτώσιος, ἡρα, ἡχή, ἰαχή, ἶρις, ἴς, (vis) ἴφι, ἴτυς, ἴσος, οὔλαμος, οὖλος, ὧλξ, ἴλιον, ἴον.

THE END.
