Archias' "Sure" Seeds for 1915

SURE TO GROW

SURE TO PLEASE

BEST THAT MONEY CAN BUY

Archias' "Sure" Seeds are not the cheap Seeds as offered by grocerymen, hardware dealers and cheap Seed Houses that sell at prices below the cost of production of a first class article.

For thirty-one years Archias' "Sure Seed" and Plants have been planted by the most critical and successful gardeners, farmers, florists and amateurs, and need no introduction or praise from us to convince them that no better can be bought at any price.

This Firm

appreciates your orders; no matter how small or how large—we want your business and by helping us you will help yourselves by getting the best there is in our line. Ordering goods by mail has developed to a marvelous extent in recent years. Our excellent mail order service places you within a few hours of one of the oldest and best mail order houses in this country.

New Improvements

are added each season, new ideas from experience and necessity—better quality, better service derived from better knowledge of the business.

Our Location

Sedalia, the home of "Sure Seeds," is located near the center of the best and richest agricultural state in the Union. We have soils capable of producing the finest seeds of many varieties suited to our climate with good shipping facilities, low freight rates and express rates. We have railroads running in six directions from Sedalia and over thirty mails daily. We have the highest sal-

arled Farm Adviser in the United States and our Bureau of Agriculture is made up of live, up-to-date farmers that know good seeds and grow good crops.

Our Offices and Warehouse

located at 106-108 East Main Street, one block from the Missouri Pacific Railway station, are equipped with the best facilities and machinery for the rapid and accurate handling of the immense number of orders sent in by our friends and patrons.

Our Greenhouses and Nursery

We own, at Sedalia, the largest and best equipped system of up-to-date greenhouses in Central Missouri, where our customers are supplied with the very finest plants, cut flowers, floral designs, and nursery stock—fresh and in fine condition. We have also added a Conservatory to our Seed building that will pay you to visit if you are in Sedalia. We own Liberty Park Nurseries and Trial Grounds, where you are welcome.

Our Catalogues are Free

Tell your neighbors about the Archias' Plan, and have them send for our catalogue, thus you do a two-fold favor, which we assure you is appreciated, as many hundreds of new customers are added each year by the recommendation of our old friends.

We Test Our Seeds

We have probably the BEST and MOST COMPLETE system of SEED TESTING and TRIAL GROUNDS to be found anywhere. We pay particular attention to seeds suitable for planting in the CENTRAL WESTERN and SOUTHERN STATES. The Seeds offered by us will not only grow, but will give satisfaction. They are strong in vitality and are procured from properly selected, cultivated and rogued fields and are as good as grow. ARCHIAS' "SURE SEEDS" have been planted for THIRTY YEARS—ARCHIAS' "SURE SEEDS" are known to almost everybody who plants seeds—ARCHIAS' TRADE MARK is on every package and is a guarantee of QUALITY.

SEED WARRANTY

Most of the failures with seeds are entirely beyond our control and they render it impossible for us to guarantee success, and therefore we want it plainly understood that

while we exercise great care to have all seeds, plants and bulbs, sure and reliable, and also true to name, we do not give any warranty, express or implied, as to description, quality, productiveness or any other matter, of any seeds, bulbs or plants which we send out, and we will not be in any way responsible for the crop. No officer, agent or employe of this company is authorized to make any warranty whatsoever. If the purchaser does not accept the seeds, bulbs or plants on these conditions notify us at once and we will give instructions for disposition of same, and the money that has been paid for same to us will be promptly refunded. It is to our interest, however, to have everything of the highest quality obtainable, and we would not furnish seeds of doubtful quality for several times the price that we receive for them, as it would injure us more than it would the purchaser. However, we have so much confidence in our seeds that we hereby agree to refill any order for vegetable or flower seeds free of charge should they prove otherwise than as we represent them. We know of no responsible seed firm which guarantees seeds any further than this. Compare with other catalogues and you will find that we are right.

SEND MONEY by Express, Draft, Registered Letter or Postoffice Money Order. We accept clean 1c and 2c stamps same as cash.

WE SELL half pound or over at pound rates, half bushel at bushel rates.

WE GUARANTEE SHIPMENTS of Seeds, Bulbs, Plants, Implements, etc., shall reach the purchaser in good condition when sent by mail or express.

CHANGE OF ADDRESS—If you have changed, or intend to change, your address, please let us know so that we may change it on our books.

If you have rural mail delivery, be sure to add the number of your route.

WE PREPAY POSTAGE ON ALL SEEDS by the packet, ounce or pound, or fraction thereof, on receipt of price given in catalogue.

FOR HEAVY SEEDS such as Peas, Beans and Corn, add 5c per pint and 8c per quart to prepay postage. Purchaser must also pay charges on express or freight shipments.

USE OUR ORDER SHEET AND ENVELOPE when possible; write plainly; keep a copy of your order and be sure to sign your Name, Postoffice, County and State every time you write us. We will furnish extra envelopes and order sheets on application.

Cash should accompany the order.

Heartily wishing one and all a **HAPPY AND PROSPEROUS NEW YEAR**, we remain,

Most sincerely yours,

Rocky Ford Melon

The select Rocky Ford Seed which we offer is grown in the Rocky Ford, Colorado, district by a grower who raises seed only and who we know does not ship his marketable melons, saving the culls for seed, as do many of the so-called seed growers in that region. This melon is too well known to need much description. The ideal type has a small seed cavity, thick, luscious flesh, high flavor, and can be eaten almost to the rind. Flesh is green in color except a tinge of yellow at the center. Netting should be heavy. Pkt., 5c; oz., 15c; ¼ lb., 40c; 1 lb., \$1.00.

New Muskmelon, Burrell's Gem

It was hard to beat the Rocky Ford, and yet it has been done. The new variety has salmon flesh of unusual thickness, and a flavor that can hardly be surpassed. The flesh is 1½ to 2 inches thick, the rind is heavily netted, slightly ribbed and very thin. The Melons grow to an average size of 6 inches in length and 4½ inches in diameter, and weigh about 2 pounds apiece.

They are ideal shipping Melons, and notwithstanding the thin rind have stood shipment from Colorado to New York in perfection. The Burrell Gem has a dozen Melons were picked from one hill. very extensive planting. Pkt., 10c; oz., 20c; ¼ lb., 45c; 1 lb., \$1.50.

ONION SEED THAT CAN BE DEPENDDED ON

GROWN FROM THE ESTD 1870 FINEST SELECTED ONIONS

Celebrated for Purity, Quality, Size, Productiveness--Money Makers and Prize Wirners

CULTURE Onion Seed should be sown as soon as possible in the spring, even if the weather is cold, just so the soil works up well. This gives the onion a good start and ahead of weeds and before dry weather sets in. After thoroughly pulverizing the soil, sow 4 to 5 lbs. to the acre, in drills 1 foot apart and about ¼ inch deep. When 4 inches high, thin out to stand 3 to 4 inches apart in the rows, keeping them well hoed and free from weeds. Onions delight in rich, deep, sandy loam and succeed well if grown for a succession of years on the same ground. Deep plowing prevents blight.

LIVINGSTON'S STONE TOMATO

THE GREATEST CANNING TOMATO IN THE WORLD.

We venture to assert that more of the Livingston's Stone Tomato is annually being grown than any other half-dozen varieties taken together.

Introduced in 1891. This variety has attained immense popularity with canners, Southern growers and market gardeners everywhere. Its solidity and carrying qualities are remarkable. Its color is a desirable red. Its shape perfectly smooth, and thicker from stem to blossom end than most varieties, making it very handsome and salable. (See illustration.) Nobody finds any fault with this variety, but all speak in the highest terms of its beautiful color, its wonderful yielding qualities, its unequal firmness, or some other of its good points. The largest fruited of the Climbing Tomatoes, bearing enormous crops from early harvest until killed by frost; Solid-meated, fine flavored, well colored, bright red fruit, ripening well up to the stem; unexcelled for keeping, shipping, canning, preserving or prepared fresh for the table. The greatest drouth resisting large tomato known, holding its large size and fine quality during the entire summer, when other varieties are dried up. Shape round and smooth. The yield of this tomato is simply enormous, one bushel having been picked off a single plant in one picking. Well cultivated plants have attained the height of 10 feet, and 9 feet across. CLOVER SEED

Medium Red Clover—This is the most important of all clovers and the standard everywhere for hay and pasture. It is known as Common Red or June Clover in many sections. Clover grows to perfection here in Missouri, and the seed grown here is the best in the world. It is bright and plump and almost universally free from bad weed seeds of all kinds. We have had a splendid crop of clover seed this year and can offer special inducements in the way of price. 35c per lb., postpaid. Write for special prices in peck or bushel lots.

Mammoth Red Clover—This is a larger, later variety of clover, somewhat resembling the ordinary medium Red or June Clover. It is much ranker in growth, and is not suited to rich land. It is of value on thin land where other clover will not grow. It will also stand extremes of heat, wet and cold better than ordinary clover. It generally ranges in price about the same as ordinary clover or from 25c to 50c per bushel higher. Price subject to change.

Alsike Clover (Swedish Clover)—A hybrid between Red and White Clover. It has a bloom somewhat like white clover, but more pink in color. It is especially suited to low wet land where Red Clover will not thrive. It will grow on land that is almost swamp and will in time dry out the land and sweeten it up so that other clover can be grown on it. It will also grow on thin, sandy land or on stony hillsides where Red Clover would not catch. The seed is very small and goes much farther than ordinary clover. Lb., 40c; postpaid. Prices subject to change.

White Clover (Dutch Clover)—This is the low, creeping clover that is used so much on lawns and in lowland pastures. It is the hardest of all clovers, will grow anywhere and is of considerable value, especially in pastures. Lb., 50c, postpaid.

Scarlet, or Crimson Clover—An annual variety, for feeding green and for hay; sown in April or May; also the latter part of summer and fall. Sow 12 pounds to the acre. Lb., 20c; postpaid, 30c.

White Bokahara, or Sweet Clover—Tall shrub plant. Grows to 6 feet high, with branches whose extremities bear abundant small, white, extremely fragrant flowers. Splendid for bees. Sown in the spring in drills 10 inches apart. Ten pounds will sow one acre. Per lb., 40c; 5 lbs., \$1.75; 10 lbs., \$3.25.

Clover Farming—By Henry Wallace, editor of Wallace's Farmer. A concise, condensed handbook on Growing Clover for Hay, Seed and Fertility. Price, paper cover, 25c, postpaid.

Inoculation of this seed means a stronger catch and better yield.—See page 32.

GRASS SEED

Any Grass, Fodder or Forage Plant You Want and Do Not Not Find Quoted, Write for Special Prices.

and just east of us they raise thousands of acres, so we are in good shape to supply you with seed. We reclean it and grade it up carefully and give you the strictly fancy article. We guarantee it free from Red Top and free from dangerous weeds. Price subject to change, 15c per lb., postpaid.

Kentucky Bluegrass (Poa Pratensis)—It is the best pasture for the climate and soil, succeeding finely on hill lands, and producing the most nourishing food for cattle, retains its qualities to a late period in winter. Sow early in spring or during the months of October and November. Fancy clean seed, lb., 25c; postpaid; not postpaid, 10 lbs., \$1.35.

Meadow Fescue, or English Blue Grass (Festuca Pratensis)—This is excellent for hay when sown with other grasses, such as Orchard Grass and Timothy, and is also one of the best grasses for permanent pasture in a great variety of soil. Sow 30 to 40 pounds to the acre. Lb., 25c, postpaid; 10 lbs., \$1.50; 100 lbs., \$12.00, not prepaid.

Orchard Grass—A valuable grass for pasture on hay land and especially good in new timber pasture. It furnishes the first green bite in the spring and the last in the fall. It is well suited to shady places, such as orchards and groves. Sow 14 pounds per acre. Lb., 30c, postpaid.

Canadian Blue Grass—Somewhat similar to Kentucky Blue Grass, but smaller and growing closer to the ground. Valuable in thin, stony land and for mixing with other grasses for a permanent pasture. Price, subject to change, 25c a pound, postpaid.

Red Top (Agrostis Vulgaris)—Valuable for hay, also grazing; does best on moist land. Best grade, not prepaid, 1 lb., 35c; 10 lbs., \$3.25.

Tall Meadow Oat (Avena elatior)—Grows luxuriantly. Sown in the fall, it will be 3 to 4 feet tall in June. As soon as it blooms, it is ready to cut. Sow 30 pounds to the acre. Lb., 35c, postpaid; by express, lb., 25c; 20 lbs., \$4.00. Write for prices on larger quantities.

Johnson Grass (Sorghum halapense)—Perennial Grass, with long, cane-like roots. Leaves, stalks and panicles resemble those of sorghums. 25 to 30 pounds are sown to the acre. Lb., 35c; postpaid; by freight or express, lb., 25c; 20 lbs., \$4.00; 50 lbs., \$8.25; 100 lbs., \$15.50.

Rhode Island Bent Grass (Agrostis Canina)—A very fine variety for lawns. Lb., 35c.

Italian Rye Grass (Lolium Italicum)—Thrives in almost any soil, and yields early and abundant crops. Sown in the fall will produce an excellent hay crop the following season, but lasts only one year. Lb., 25c, postpaid.

Bermuda Grass (Cynodon dactylon)—One of the most valuable grasses for pasture and hay in the South, where it will stand indefinitely if plowed and harrowed in the spring once every four or five years. Bermuda grass has generally been established by planting the roots. However, it is just as easy to get a good stand if good seed is sown. Sow from March to July at the rate of 8 or 10 pounds per acre. Do not cover more than half an inch. Best grade of new crop seed, thoroughly recleaned. Lb., \$1.00, postpaid; by freight or express, lb., 90c; 100 lbs., \$75.00.

Archias' Hay and Pasture Grass Mixtures

Medicago Sativa.

An absolute necessity in the West for the Cheapest Production of Beef, Pork, Mutton, Honey and Milk.

In feeding value it ranks higher than Red Clover or Timothy Hay. Once a good stand is secured it will last from ten to fifteen years, gives three to six cuttings per year, yielding from three to four tons per acre. Sow in rich, moist loam or sandy soil, having a deep subsoil. Prepare the land thoroughly and sow seed at the rate of 15 to 20 pounds per acre, with a broadcaster or grass seeder. Cover with a brush or light harrow. Young plants are quite tender, and the land must be free from weeds until they become established. Lb., 25c; 5 lbs., \$1.00; 10 lbs., \$1.80. Inoculation of this seed is absolutely necessary for the best results of the crop.

Sudan Grass

A New Forage Crop of Immense Value to the Middle West.

The U. S. Department of Agriculture introduced this new forage plant into the United States in 1909, the seed being brought from Sudan, Egypt, and seed produced was distributed the following year to Experiment Stations of the different states. The fifth crop has been grown in the U. S. under widely varying climatic conditions. The results have been so satisfactory that it is now established as one of our permanent forage crops.

Sudan is a tall, annual grass, reaching a height of from seven to nine feet when planted in rows and allowed to mature for a seed crop; broadcasted and cut "in the bloom" for hay, about four feet.

The hay is softer than Johnson grass or sorghum, the stems are smaller and more leafy. It is, however, entirely distinct, being strictly an annual, hence not spreading like Johnson grass. It dies each year like sorghum and millet and must be seeded each spring. It stools very freely, throwing out many stems from one crown.

It is easily cured and handled as a hay crop. Stock of all kinds eat it readily and will leave any other hay for it.

For a seed crop plant 2 lbs. seed per acre in rows 36 inches apart. For hay crop broadcast or drill 12 to 20 lbs. to acre. Yields 500 to 1,000 lbs. seed or three tons cured hay per cutting per acre with three cuttings per season. Price 90c per lb., postpaid. Not postpaid, lb., 80c; 5 lbs., \$3.75; 10 lbs., \$6.50.

Grows 12 to 14 feet high, averages 40 stalks to each plant. Seed is unequalled for poultry, and will ripen in any climate. One pound of seed plants an acre. Vetches

The Wonderful Sand or Hairy Vetches, (Vicia Villosa.)

(See cut). Also called Winter Vetch. This useful plant is noted for its extreme hardiness and is valuable for forage and fertilizing purposes. It is an annual, but drops its seeds freely and will come up year after year on the same ground. The Dept't of

Agriculture estimates the value of an acre of Vetch plowed under equivalent to \$10.00 worth of commercial fertilizer. A sowing made in August or September covers the ground before winter and prevents washing during winter and early spring. It can also be sown in April and will be ready to cut by the middle of July, the second growth affording excellent hog pasture during the summer. The yield of forage varies from 10 to 15 tons per acre, equal to 3 or 4 tons when cured as dry hay. Sow in drills, using 30 lbs. per acre. Lb., 35c, postpaid. Not prepaid, 10 lbs., \$2.00; 25 lbs. or over, 16c per lb.

True Stock.
The Very Best.
Yields Immense Crops.

Sow in summer for fall and winter pasture. It is especially good for sheep, but all kinds of stock and chickens are fond of it and do well on it. It comes at the time of year when most needed. It grows best late in the summer or fall and yields an immense amount of feed. Will produce twelve tons of green food per acre. Its nutritive value is twice that of clover. One acre of Rape will furnish pasture for twenty head of sheep for two months. It is good to use as a "catch crop" sown on ground where other crops for some reason have failed, as it grows quickly. Sow 5 pounds to the acre, broadcast. Pkt., 10c; lb., 20c, prepaid. Not prepaid, lb., 20c; 5 lbs., 75c; 10 lbs., \$1.25; 25 lbs., \$3.00; 100 lbs., \$10.50.

A grand, large, medium early, yellow Corn of perfect shape, size and color. A wonderful yielder; not quite as early as the Iowa Gold Mine, but larger and more prolific, consequently more profitable.

Ears measure 9 to 11 inches in length, $7\frac{1}{4}$ to $8\frac{1}{4}$ inches in circumference, with very deep grain, set firmly on the cob; cob small for size of grain, 16 to 20 rows of kernels on cob. Medium size stalk, solid, with plenty of foliage.

An all round profitable Corn for the farmer, whether grown for market or for feeding. No Corn grower will make a mistake in planting Missouri Pride. As our stock is limited, would advise ordering early. Price of Missouri Pride, per packet, 10c; per pound, by mail, prepaid, 25c. A quick growing yellow variety, highly esteemed by those who have grown it. It usually produces two ears to the stalk. It is one of the seven varieties recognized by the Illinois Experiment Station, where it has been first in yield more times than any other variety. The Improved Leaming has been selected for a richer color—a beautiful brownish yellow—a deeper and somewhat rougher kernel. The ears average about 10 inches long and weigh three-fourths to one pound each. The stalks are of medium height with many broad leaves, making it one of the best sorts of ensilage and fodder. Numerous tests at the Experiment Station show it high in protein and oil content, making it valuable to the livestock grower and feeder. By mail, postpaid, 1 lb., 25c; 3 lbs., 60c. By freight or express, qt., 15c; pk., 75c; $\frac{1}{2}$ bu., \$1.40; 1 bu., \$2.50; 2 bu., \$4.75; 5 bu., \$11.25. Sacked free.

ARCHIAS' Golden Beauty Corn

Improved Golden Beauty.

For general planting in this section, we know of no corn that will give better satisfaction than the big, handsome, Golden Beauty. It is the largest grained and finest Corn in appearance we have ever seen. The ears are of perfect shape, as shown in cut, which was made from a photograph of an average ear. The cob is so small and the grain so large and broad that a single grain will almost cover the end of the cob when broken in half. It is of a beautiful golden yellow color and of fine quality for grinding. It matures in about 110 days and yields big crops. We recommend the Golden Beauty as the handsomest and largest grained Corn in cultivation, and is sure to please every farmer who grows it. By mail, per lb., 25c; 3 lbs., 60c. By express or freight, per peck, 75c; 1/2 bu., \$1.40; 1 bu., \$2.50; 2 bu., \$4.75; 5 bu., \$11.25; 10 bu., \$20.00. Bags free.

ARCHIAS' Speckled Beauty Corn

Introduced by us in 1892 and the past season has made a wonderful record. It is an improved strain of the old Strawberry. If you are a feeder you will do well to get a start in this great yielding, great feeding Corn. It holds a warm place in the hearts of Corn producers. Ears are from 10 to 12 inches long, deep grain, medium cob, medium rough, two good ears to the stalk. Many ears weighing over a pound and no small ears. Yields 125 bushels to the acre. Rich in oil and protein, easily masticated by cattle, roots large, stalks strong and thrifty. Try it, you can't afford to be without some of this variety if you are a feeder. It makes heavy yields and is strong in germination. You should include some of this in an early order. The best corn for bottom land, but will produce mammoth crops in any good corn land. A guaranteed success. Do not fail to plant it if you wish a big yield and finest quality. Matures in 110 days. As its name implies, it's a beauty, and will please you.

Florence Nightingale—By far the largest and best Lavender Spencer yet introduced. Originated by Alex. Dickson & Sons, the noted Rose growers of Belfast, Ireland. The flowers are truly magnificent and of immense size, borne on long, stiff stems. True, both as to color and the highest ideal of the Spencer types. Pkt., 10c; oz., 25c.

George Herbert—We have a splendid re-selected strain of this most magnificent Spencer. The gigantic bright rosy-carmine flowers of the largest size are generally borne four on a stem. Pkt., 10c; oz., 20c.

Gladys Unwin—Of the new orchid-flowering type, similar to Countess Spencer but several shades lighter in its lovely pink color. Pkt., 10c; oz., 15c; 2 ozs., 25c.

Helen Lewis—A grand orchid-flowering seedling, orange-rose wings and the standard intense rich crimson orange. Pkt., 10c; oz., 20c; 2 ozs., 35c.

The standard and wings are a deep, rich, rosy carmine scarlet, reverse of wings deep rosy carmine. Pkt., 10c; oz., 20c; 2 ozs., 35c.

Mrs. A. Ireland—The large standard is circular and nicely waved; of a very bright rose-pink with a clear creamy base. The wings, large and well expanded, are beautiful blush in color, but overlaid with rose on the exterior. Per pkt., 10c; oz., 25c.

The flowers are of extremely large size, most beautifully frilled and waved on the standard, with well waved wings. While the plants are vigorous in growth and the

gigantic flowers are borne most profusely on long, strong stems, yet, like all varieties of the true "Spencer" type, they are extremely shy seeders and the seed can never be produced cheaply unless this superb new strain should be allowed to deteriorate. Per pkt., 10c; oz., 25c; 2 ozs., 40c; ¼ lb., 75c; per lb., \$2.50, postpaid.

How to Make a Hot Bed

Select a well-drained spot and make the pile of manure 15 to 18 inches deep; or a foot of soil may be dug out and filled in with manure well tramped down. Place the frame on it. Then put 4 inches of good soil all over the surface. Throw some manure or soil up against the outer boards to hold the heat. Put on the sash and keep tight for three or four days. Keep a thermometer in the bed and when the temperature falls to 75 degrees, seed may be sown with safety. The temperature in a hot bed should not be allowed to go above 70 degrees in the day nor below 50 at night. With a hot bed the amateur can start almost any kind of vegetable or flower seed. By sowing such vegetables as Egg Plant, Pepper, Tomatoes, etc., and such flowers as Heliotrope, Scarlet Sage, Vinca, Verbena, etc., along in March it is possible to have nice, stocky plants ready to set out as soon as the weather conditions are favorable, insuring early returns from the vegetables and a long season for the flowers.

HARDY CLIMBING ROSES

At 15c Each; 3 for 36c.

Crimson Rambler

Crimson Rambler—The most popular out-of-door climber of today; a rapid producer of long heavy canes, reaching a height of ten to twenty feet in one season; rich clusters of bloom form a mass of vivid crimson beauty until late in the season. Perfectly hardy in the most trying climates, being a native of Japan.

Dorothy Perkins—Beautiful shell-pink color, which holds for a long time, fading finally to a lovely deep rose; very sweet-scented; fully equal to Crimson Rambler in foliage, hardness, habit of growth and blooming qualities.

Veltheimblau—(Violet Blue or Blue Rambler.) A sport from Crimson Rambler and as vigorous a climber; produces immense panicles of blooms, opening reddish lilac, changing to amethyst and steel-blue. A German novelty of recent introduction, the nearest approach to a blue Rose.

Flower of Fairfield—(The Ever-Blooming Crimson Rambler.) Commences to bloom in early spring and lasts till fall—more brilliant than Crimson Rambler. Blooms in large clusters; has shining green foliage, free from mildew. In all, a most remarkable Rose. Order early, as we predict a demand beyond our supply.

Tausendschon (Thousand Beauties)—This beautiful novelty surpasses all other climbing Roses of this section, both in growth, foliage and beauty of blooms. Flowers in large clusters in June and July; beautiful soft pink, changing into rosy carmine. Strong, vigorous grower, absolutely hardy, excellent climber. Florists will do well to force this grand Rose for Easter.

Lady Gay—This is a new Climbing Rose. Admired equally for the remarkable freedom with which the flowers are produced and for their brilliant color, which is a deep, clear, rich rose pink. The flowers are of good size, very double and are produced in immense clusters, after the manner of Crimson Rambler. No collection, no matter how small, should be without this variety.

Dorothy Perkins—A pink rambler that every lover of Roses should have; perfectly hardy and a profuse bloomer.

White Dorothy—A fine hardy climber of the Dorothy Perkins type. We believe it is a better Rose in many respects than that variety. It bears double pure white flowers in immense panicles. By far the best white hardy Rose yet sent out.

Ever-bearing Strawberries "Superb"

You can have strawberries just as easily in the fall as in the spring by planting the Iowa and Superb Strawberries, known as the ever-bearing varieties. These varieties will produce heavy crops in the fall, of as fine berries as any spring-ripening strawberries. Truly a luxury for home and profitable for market. Think of having all the berries you can use on your table during the months of September, October and November and later, if not killed by freezing weather.

If you grow them to sell you can get your own price for strawberries at that season of the year and there is no strawberry known that is so prolific as "Superb." They commence blooming early in the spring and the blooms should be kept removed until about the middle of August. By doing this you get a larger yield in the fall than you would if allowed to bear all summer. So prolific are they that the young plants that are formed in the summer will bear in the fall of the same year; in fact, the young plants will very often send up fruit stems before they become rooted. They are not a novelty nor an experiment, but are a success and you can have strawberries as well in the fall as in the spring—strawberries of good quality for your table every day during the late summer and fall; strawberries for Thanksgiving. Many who read this have no doubt heard of fall-bearing strawberries. Many have not. Remember we are living in an age of rapid advancement that is giving us things that a few years ago we never thought of.

You should plant some of these, the latest thing in the strawberry world. You will have to do this in order to stay up with the crowd, and you want to do that. The IOWA and SUPERB are the leaders and are considered the most successful of all the fall-bearing strawberries, heavy bearers and splendid fruit of good quality and size, plants hardy and robust.

IF YOU HAVE NOT HAD SUCCESSFUL FRUIT CROPS---TRY SPRAYING

Trees cannot thrive when infested with the different kinds of sucking, biting and chewing insects. They can not produce high grade fruit—nor much of any kind. Systematic spraying will not only increase the quantity

of your fruit crop but will wonderfully improve the quality as well. Thousands of fruit growers owe their present success to a good spray pump—after they had practically given up the hope of ever getting a good crop again.

Best material and construction of case; the best non-conducting walls, lid and bottom ever put in incubator construction. Not a particle of wood exposed; even the legs are built of heavy metal. The asbestos insulation and the redwood inner case completes the ideal. Convenient thermometer holder, simplicity of regulator—a single adjusting nut sets the regulator, the set nut outside of incubator, and when once adjusted it stays right and governs the heat to a fraction of one degree. The "Ideal" Oat Sprouter and Sanitary Hover

Important to Remember

That quickly-sprouted oats make the best of green food for chickens.

That 12 quarts of oats can be sprouted at one time under the International Sanitary Hover.

That 12 quarts of oats sprouted under the International Sanitary Hover will yield in eight days enough green food to feed 500 laying hens for three days.

That letting the sprouts grow for eight days doubles the yield of green food over the yield for the sixth day.

That instead of having to store his hovers during the fall and winter months, the user of Sanitary Hovers can work them the year around—as brooders in brooding time, as oat sprouters when other hovers are idle.

That oats must be soaked over night in luke-warm water before being placed under the hover.

That the curtain must positively be left on the hover during the first three days to hold the heat about the oats.

That the Sanitary Hover, considered merely as an oat sprouter, will pay for itself many times over.

Scores of customers, after brooding for a season with the Sanitary Hover, have written to us that they would not sell it at any price if they could not repeat on orders.

Every machine fully warranted.

Our Price for Ideal Oat Sprouter and Sanitary Hover Combined, only \$8.50.

The Up-To-Date SANITARY BROOD COOP

For successful chicken raising it is necessary to protect the young brood from rats, cats, mink, weasel and other pests. This you can do by using the Up-to-Date Brood Coop, the most successful coop on the market. It is sanitary, no bugs or insects of any kind can live in it; has ventilated top and end. Our top ventilation gives a circulation of air through the coop and keeps it from getting hot on the inside. It has three doors, one wire screen door, one slatted door to allow the little chicks to pass in and out and one storm door to close in case of rain. They work on a pivot and cannot be forced open by the old hen. They are shipped knocked down and will go as fourth class freight. Size about 18 inches high, 18 inches wide and 24 inches long. Our price, each, \$1.65; 6 for \$9.50; 12 for \$18.00.
