Pratric Rosc. Red Irish setter bitch, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to G. E. Everett, Grand Island, Neb.

Marco. Black and tan, with wbite frill, cocker spaniel dog, whelped Oct. 25, 1888, by Koko out of Pbyllis D., by J. E. Weston, Utica, N. Y., to R. G. Hoerlein, same place.

Golden Boy. White, black and tan fox-terrier dog, whelped Jan. 16, 1889, by Regent Jock out of Beatrice, by J. B. Martin, San Francisco, Cal., to Mrs. Sterrett, same place.

Golden Gem. White and tan fox-terrier bitch, whelped Aug. 25, 888, by Dick out of Norwich Belle, by J. B. Martin, San Francisco, Cal., to C. H. Kobicke, same place.

Regent Vox out of Blemton Saffron, by J. B. Martin, San Francisco, Cal., to C. H. Kobicke, same place.

KENNEL MANAGEMENT.

R. K. M., Baltimore, Md.—I have a fox-terrier bitch pup about 6 months old who suddenly started to run violently about the house, barking sharply all the time; this lasted about 3 minutes, after it was over she seemed very much frightened and cowed, but knew me and answerod to ber name. She had been confined in a small house until about 10 minutes before the paroxysm, and was fed about 4 hours previous on meat. What is the name of these attacks and a remedy, if any? Ans. You should never feed a puppy on meat. The attack is due to digestive troubles, possibly worms. Keep the bowels free with teaspoonful doses of syrup of buckthorn, once or twice daily. Feed light diet, bread and milk, soups with bread and scraps from the table. Corn meal mush is excellent. Exercise regularly.

G. H. C., Hartford, Conn.—I have a spaniel pup three months old. A month since small white particles of dandruff appeared in bis coat. Then he began scratching, became thin and had diarrhose and what passed was streaked with blood. For two weeks I gave Fowler's solution of arsenic in three drop doses twice daily, and fed cooked meat chopped fine. The bowels are now all right. To his coat I applied zinc oxide and diarchor in equal parts, also washed him in Little's sheep dip. His appetite is good and bowels regular now. Yet the hair is off on his throat is good and bowels regular now. Vet the hair is off on his throat is good and bowels regular now. Vet the hair is off on his throat, armpits and thighs. Will you kindly tell me what the trouble is, and the proper treatment? Ans. Do not feed much meat. Give Fovler's solution, 4 drops night and morning in the food, for a month. Exercise regularly and keep the bowels easy.

The revised and abridged edition of the A.O. U. Check List of North American Birds, including the addition.

The revised and abridged edition of the A.O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—Adv.

Rifle and Trap Shooting.

RANGE AND GALLERY.

MAKING MILITIA MARKSMEN.

MAKING MILITIA MARKSMEN.

FOR now these 16 years the State of New York has led the list of Commonwealths in looking after the instruction of the civilian marksmen in rifle practice. Gen. Robbins has just issued his orders for the practice of 1898, which runs during the season from May 15 to Nov. 9. Each year the entire militia force of the State is classified as shots into several groups.

The third class shall consist of all who do not appear on a range for practice.

The second class consists of all present for practice, without reference to qualification in previous years, and the practice in this class will be at 100yds, standing, on a third class or No. 3 target, and at 200yds, kneeling, or sitting, on a third class or No. 3 target.

Tho second class consists of all present for practice, without reference to qualification in previous years, and the practice in this class will be at 10yds, standing, on a third class or No. 3 target, and at 20yds, kneeling, or sitting, on a third class or No. 3 target.

The first class consists of those who score 25 and upward in the second class, and the practice in this class will be at 20yds, standing, No. 3 target, and at 50yds, lying prone, No. 2 targot. A score of 25 and upward in the first class constitutes a marksman, and entitles the maker to receive the State decoration. A score of 42 and upward in the first class constitutes a sharpshooter, and entitles the maker to receive a silver bar.

All officers and enlisted men who practice must shoot through the regular classes, except us otherwise bereinafter provided, and are prohibited from shooting for a second or higher score in a class in which they bave already qualified. The record must stand upon the first qualifying score made. The record must stand upon the first qualifying score made in the should any markman, without expense to the State, on other than a practice day, and undor proper supervision, make one of that should any sharpshooter, he will be recognized unless made at a target to which he has been regularly assigned, and where his name has been prevised practice of the practice will commence with class firths in equads, under a competent non-commissioned officer, or other duly designated instructor, at each firing point, and the vice under the supervision of an inspector of rife practice, subject by the orders of the commanding officer present. This practice will be continued to the end by all prosent without reference to the scores recorded, except that those who fail to qualify in the second class may be restricted to two shots for practice at each of the higher ranges, and any officer or enlisted man who bas won the marksmans decoration for the five years last past ueed not practice at the lower (i. e., 100yds, and 200yds, standing an

issued by the state, and crought by him on the ground, unless the same is declared imperfect by the inspector in charge. In that case the man may shoot with the nearest approved piece in the ranks.

(b) Yolley Firing, Five Rounds.—Firing in ranks at 100yds, shall then be taken up in the following order, the squad or company being formed in single rank: Fire by squad [or company], three rounds. Fire by squad [or company], three rounds at 300yds, and return; firing, on the advance, one round at 300yds, one at 200yds, and one at 100yds,, and on the retreat, one round at 150yds, and one at 250yds. As soon as the last (lifth) shot is fired, assemble on the right (or left), thus leaving the front uncovered, so that the second squad or company may deploy; during this time the marking can be done.

At the second or third day's practice those present will practice in the classes to which they respectively belong. In other respects the tour of duty will be identical with that prescribed for first general practice, including volley firing and firing as skirmishers.

In 'practice officers shall shoot first, then non-commissioned officers, then privates, on such targets as may be assigned to their companies.

The responsibility of officers on the range is great. Good officers should be proficient in the use of the rifle and able to apply armory instructions in the field. The men will be instructed as much as possible while waiting their turns to shoot, and especially in aiming and postion drill, for which a competent instructor should be detailed in each company. They should be taught how to blacken their sights and how to fix the correct elevation and windage before going to the firing points.

Wooden targets for volley firing.

ST LOUIS PISTOL SHOTS -St Louis Mo. June 8 -The last

ST. LOUIS PISTOI, SHOTS,—St. Louis, Mo., June 8.—The last of a series of three matches between the Cincinnati and St. Louis Pistol Clubs was shot last Tuesday night, and, as before, it resulted in an easy victory for the local club. Mr. O. Neuhaus of St. Louis made the highest score, and a member of the Chetnnati club ("Wick") had the honor of scoring the lowest. 10 men, 10

shots, 12½yds., standard American target, strictly off-hand, any ,22cal, pistol, any number of sighting shots allowed, but shooter

must announce soore when ready to shoot at marked target.

Supplement No. 5—Trap Tournaments.

THE TRAP. Scores for publication should be made out on the printed blanks prepared by the Forest and Stream and out on the printed blanks	bird it seemed he had lost, but the next instant a great shout went up as Mr. Willard's bird also got off over the fence. From the 24th bird out the contestants worked beautifully, and every shot was creeted with full capile.	would issue a call to the different and numerous fishing clubs of the State for a State convention similar to that of this honorable body. We would encourage the founding of clubs in every legis
Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club exerctaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only. Secretaries of clubs and nuanagers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give duo notice in our column of fixtures.	any partison foeling at all. Mr. Phillips is a mere semigoth-faced boy, and belonging to the Naperville Club, had not been heard of here before. Mr. Willard is well known at the trap, and last year won the L. C. Smith cup. Before the shoot was over the friends of either wero the friends of both. Both did excellent work Mr.	the State for a State convention similar to that of this honorable body. We would encourage the founding of clubs in every legis lative district of this State. We would appoint a committee a our State convention to confer with a committee from this body and in joint committee would discuss the measures needful and the best way of gaining the political respect so numerous following as ours jointly should command. We should defer to you in game matters, but would back you and would ask you to do so with us."
FIXTURES. June 17, 18, 19, -Tournament of the Sportsmen's Association of the Northwest, Tacoma, W. T. A. W. McNaughton, Scretary, June 17 and 18, -Tournament of the Massachusetts State Shooting Association, on June 28	Phillips extremely good with his first. The latter gentleman does not hold his gan so well down as Mr. Willard, but is a wonderfully clean killer. Mr. Willard shot a Smith and Mr. Phillips a Lefever gan, both 10-gauge. It was anybody's race until Mr. Phillips's 53d bird, a great red fellow, got away out of No. 5 trap to the right and quartered sharply, carrying off the charge. Mr.	It was moved by Col. C. E. Felton that a committee be thus appointed to confer with the Fox River Association committee Discussion was asked. Mr. Harbaugh, of Geneseo, said: "Ou little club has kept the gare laws enforced. We would indorse this joint action heartily." Mr. Chas. Kern, of Evanston, said: "This is a right more. We and the fish men baye hear to reveal."
ing Association, on Jamaica Plain Gun Club Grounds, Clarendon Hills, Mass. June 18, 19, 20, 21.—Illinois State Sportsmen's Association's tournament, Grand Crossing, Ill. Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.	Willard killed his 53d bird with the first barrel, and so won the medal amid great hurrahing and congratulations, which would all have gone as freely to his plucky young opponent had the result favored him. By agreement of the 10-tie meu, each man drew out \$25 before the tie-shooting began, conditional, of course, upon the next year's	so with us." It was moved by Col. C. E. Felton that a committee be thus appointed to confer with the Fox River Association committee Discussion was asked. Mr. Harbaugh, of Geneseo, said: "Our little club has kept the gave laws enforced. We would indorse this joint action hearily." Mr. Chas, Kern, of Evanston, said "This is a right move. Wo and the fish men have been too mucl apart. Let us pull together." Motion carried. Minutes of last meeting were read and approved. Executive committee submitted that they had no report to make, but simply pointed to their work done. The secretary's report was read an approved, and his resume of 1850 work showed a small balance or hand at date in the treasury. The resolutions of regret upon the death of Mr. Harry F. Ovyis were read, and the action of the committee in this regard made the action of the Association. A letter of regret for absence was read from Mr. H. H. Fahnstock and warduly spread in minutes.
Association, Boston, Mass. Aug. 20, 21, 22, 23.—Second annual tournameut of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus. Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournamont, Jerseyville, Ill. Oct. 8, 9, 10.—Middlesex Gnn. Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.	It was nearly dark at the close of the first shoot before the	death of Mr. Harry F. Orvis were read, and the action of the committee in this regard made the action of the Association. A letter of regret for absence was read from Mr. H. H. Fahnstock and was duly spread in minntes. Lively discussion followed the submission by Mr. R. B. Organ of a resulution to change date of the annual tournament to F. b. mary of each year instead of June. Supporting the metical wholes.
	were begun. Meantime there had been shot all but the ties of the great 20 inanimates race. Shoot No. 2., for the L. C. Smith cup, emblematic of the individual State champiouship at inanimate targets, the winner of the cup this year to receive 60 per cent., and the club of which he is a member 40 per cent. of the proceeds of the shoot at next year's tournament, the winner to execute bonds in the sum of \$500 to guarantee the production of the cup next year. Twentr Keystom targets per man; entrance \$5. First prize, the L. C. Smith cup, value \$500; second, cash and merchandise, \$50; fourth, cash aud merchandise, \$48; third, cash aud merchandise, \$75; fourth, cash aud merchandise, \$40;	duly spread in minntes. Lively discussion followed the submission by Mr. R. B. Organ of a resulution to change date of the annual tournament to F b. uary of each year instead of June. Supporting the motion wher seconded, Mr. Organ said: "I thiuk we ought to consider onr country members. They car not come here in corn-planting time, but they can come in February. Besides, we will all be hungry for a shoot in that month More than that, we can get good birds then. It is a shame to kil birds when they are nesting, as they are now. Moreover, our meeting would then fall when the Legislature is in session, and we
the fifteenth annual convention and tournament of the Illinois state Sportsmen's Association. The assemblage at Watson's Park, Irand Crossing, was jubilant at the prospect of good weather. Illinois day proved fairly prosperous, the Diamond Badgo shoot showing 19 clubs and flired prosperous.	guarantee the production of the cup next year. Twenty Keystone targets per man; entrance \$5. First prize, the L. C. Smith cup, value \$50!; second, cash and merchandise, \$89; third, cash aud merchandise, \$75; fourth, cash aud merchandise, \$40; C E Willard	meeting would then fall when the Legislature is in session, and we could have more influence then in stopping spring shooting and
Tries, as may be seen by reference below. The entry was not so arge as was wished but was quite sufficient to make this one of the most important trap contests of the country. The birds were a fair lot only, and the scores ran high, phenomenally so in some metances. All appointments were perfect, and the shoot progressed with a regular swing which was gratifying. James Watson as	$\begin{array}{c cccc} W \ W \ Foss. & Ib10101 1011110011-13 \\ J \ R \ Stice & Ib10110 11011110011-17 \\ J \ J \ Kleinman & Ib101010 10111111-16 \\ G \ H \ Bangs. & 11111011101111110-17 \\ Heury \ Kleinman & Ib101011111111110-17 \\ Alex \ T \ Loyd. & Ib10111011111111-17 \\ L \ C \ Willows & Ib101110111111111-17 \\ L \ C \ Willows & Ib101110111111111-17 \\ L \ C \ Willows & Ib101110111111111-17 \\ L \ C \ Willows & Ib1011101111111111-17 \\ L \ C \ Willows & Ib1011101111111111-17 \\ L \ C \ Willows & Ib101110111111111-17 \\ L \ C \ Willows & Ib1011101111111111-17 \\ L \ Willows & Ib1011101111111111-17 \\ L \ Willows & Ib1011101111111111-17 \\ L \ Willows & Ib101110111111111-17 \\ L \ Willows & Ib1011101111111111-17 \\ L \ Willows & Ib101110111111111-17 \\ L \ Willows & Ib10111011111111-17 \\ L \ Willows & Ib101110111111111-17 \\ L \ Willows & Ib101110111111111-17 \\ L \ Willows & Ib101110111111111-17 \\ L \ Willows & Ib1011101111111111-17 \\ L \ Willows & Ib1011101111111111-17 \\ L \ Willows & Ib1011101111111111-17 \\ L \ Willows & Ib1011111111111111111111111111111111111$	Mr. Organ offered that the Davenport February tournament always filled well. Col. Felton thought Mr. Organ's remarks just. He thought winter the proper season for trap-shooting. Mr. Reed of Evanston moved to amend by substituting Novem- ber for February. Mr. Keon thought the wild pigeons might come back, and ther
CHICAGO, III., June 4.—The day dawned fair and the weather kindly continued favorable throughout this, the first day of the fifteenth annual convention and tournament of the Illinois state Sportsmen's Association. The assemblage at Watson's Park, Irand Crossing, was jubilant at the prospect of good weather. The shooters are not yet all accounted for, ir-day being of interest only to those resident in this State. Illinois day proved fairly prosperous, the Diamond Badgo shoot showing 19 clubs and 61 entries, as may be seen by reference below. The entry was not so arge as was wished but was quite sufficient to make this one of the most important trap cortests of the country. The birds were a fair lot only, and the scores ran high, phenomenally so in some nations. All appointments were perfect, and the shoot progressed with a regular swing which was gratifying. James Watson as referree was prompt and pushing, and allowed no time to be lost at the traps. Scores were recorded by the secretary and by a lackboard scorer also, and no crowding was permitted about the books. The scorer at Watson's Park sits in a little wire cage, and a thus afforded lumunity. A set of blackboard snored aso, and no crowding was permitted about the lost is thus afforded inmunity. A set of blackboard stored in the second of the second of the grand stand, and here the main interest of the day entered. The score:	value \$50l; serond, cash and merchandise, \$88; third, cash and merchandise, \$75; fourth, cash and merchannise, \$40; C E Willard.	ber for February. Mr. Kcon thought the wild nigeons might come back, and ther June would be best. Mr. Gillespie thought that the trap-shoot should be a secondary and not the primary object of the Associa- tion. Mr. A. Price thought either February or November rather than June. Mr. Chnningham was in favor of February. There would be at least twenty more country entries in February. Mr. Colcord here rose to show that the Constitution had yet the date for Mayor June, and would have to be amended by a two-third vote. Mr. Reed's November amendment was called for. The chair could not decide. The roll was called for, and the chair ruled that delegates should vote each for himself and not by majority of delegation. Confusion resulted. It was moved to amend the Constitution, following the sense of Mr. Organ's
the gate. The live bird traps were of course at their old place in rout of the grand stand, and here the main interest of the day rentered. The score: Shoot No. 1, for the Board of Trade Diamond Badge, emblemate of the individual championship of the State, the winner of the badge this year to receive the proceeds of next year's tourna-	R J Pervis. .000000117111110001-10 W E Baxter. .1110010000111111111-13 W W Stennett. .1110110000011111111-13 G L Deiter. .11011111111111111-19 C M Powers. .110110111111111110-17 F Mosher. .1111111111111110-18	the date for Mayor Jane, and would have to be amended by a two-third vote. Club. Club	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	The original motion and the November amendment were withdrawn, and the motion to amend Constitution being then order, Mr. Reed moved to amend the same by changing February to November. The chair advised that the matter be left largely to the country members, who should be most consulted hereiu. Several outside clubs declared themselves for February. On roll call Mr. Reed's November amendment was lost, 29 to 16. The motion to amend Constitution to February was carried, 29 to 17. The Chair: There being no two-thirds vote of the Association, the Constitution is not amended. The date therefore remains as first provided, for May or June.

The president is a prought before you, I trust. Chicage much be a prought before you, I trust. Chicage much be executive committee. I did this for a reason, when upon the executive committee. I did this for a reason, when upon the trust the themselves could well explain to night. It was necessary much and of country that that work has been, we cannot overestimate, we over our thanks that work has been, we cannot overestimate, we over our thanks to the gentlemen who have so cheerfully and ably performed it. "We have struggled with a whole menagerie of ineffective game laws. We sent a committee to the Legislature, and we fortunately met there a committee from the Fox River Figl. and Gamo Association. These gentlemen aided us largely and I trust.	badge shoot of yesterday. Following are the results: Ties on 9—A. W. Reeves, W. P. Mussey, Henry Kleinman, W. G. Payson and G. L. Detter divided the 860 cash in second. Continuing the shoot-off all dropped out in a long run except Payson and Kleinman. Payson boyalty out Kleinman's integer with
Holland Hill Hill	game laws. We sent a committee to the Legislature, and we fortunately met there a committee from the Fox River Fish and Gamo Association. These gentlemen aided us largely, and I am glad to say we secured important improvements in the game laws. We have cut off two weeks of spring shooting, and have the prairie chicken season now opening Sept. I, materially better than Angust. The bill in full will soon be published in the sporting journals, and you may there see fully for yourselves. A very marked good feature is that we have secured notice mover for	hammerless Parker gun, and finally sbot out Kleinman for the 100 cigars. Kleinman killed 33 out of 34 in the tit, and Payson 34 straight, making in all 43 out of 44 birds shot at. Ties on 2-W. L. Shepherd and F. Thompson divided third, \$82. Shepherd took the boat, Thompson the het and coat. Ties on 7-J. P. Card and L. C. Willard divided fourth, cash and merchaudise, Mr. Willard choosing the most valuable prize, the subscription to FOREST AND STREAM best sporting agreement.
P Hanson Cumberland 101101012—7 Gardnor Cumborland 1112211111—10	than Angust. The bill in full will soon be published in the sport- ing journals, and you may there see fully for yourselves. A very marked good feature is that we have secured police powers for the game wardens. This State is the most backward and nig- gardly in the Union in the matter of enforcing the game laws, Nebraska appropriates \$10,000 for that purpose. We do next to nothing.	The results of the ues for third and fourth in the L. C. Smith cup race were announced: Ties on 18-L. C. Willard, W. E. Phillips, Frank Mosher, and P. E. Bradley were in 18. Willard and

Friday, Fourth Day, June 7.

Friday, Fourth Day, June 7.

It was raining in the morning and the day promised to be a wet one, but by 10 o'clock the clouds had partly broken, and noon saw quite a respectable number of shooters on the grounds. It has been a marked feature of this shoot that, while the numbers might have been greater, those that were present stayed wonderfully well, the entries even on such a day as to-day filling very favois. Phillips, the Naperville boywho ran the day of the open hadge with Charlie Willard, is employed in the cities and continue that the day as to the continue of the stay of the continue of the

day night for the great American Association shoot at Chrounneti.

BUDD—KLEINZ.—The match between C. W. Budd, of Des Moines, Ia., and J. Frank Kleiuz, of Philadelphia, for the championship and \$100 a side, was shot at the close of the State tournament, at 100 live birds, Mr. Kleinz being the challenger and Mr. Budd the holder of the cnp. The exhibition was a fine one, and it is doubtful if a closer and pretier shoot was ever seen under the circumstances. In spite of the wet and soggy we then, the birds were a screaming lot, and as by the terms of the match the guns were 12-gauges under 80s., the resultant score was phenomenal. It is doubtless true that Mr. Budd has made the best score ever made with the light gun. Mr. H. A. Penrose, of the Keystone Company, was chosen referce. John Watson, of course, furnished the birds. There was no inaputation of any unfairness, and the match was one of perfect gentlemanliness throughout. At the beginning of the match Mr. Kleinz's cheek showed discoloration from provious pounding of bis gun; at the sixteenth bird his chock was open and bleeding, and at the close of the match he was covered with blood. He was plucky throughout, however, and never flinched on a bird, so far as any one could see. Two of his birds fell dead just out of bounds. Mr. Kleinz had two miss-fires and two "no birds," the 8th and 98th. Frequent bursts of applause greeted both shooters. They did some of the best second barrel work ever seen here. Mr. Budd is a trift quicker with his second, and be comes pretty near being a double cross-boiled terror all around at tho trap. The score:

J Frank Kleinz. 21182121111220113211121—23
11231111121011111112112112—24
2121222211111211111112211212—25
Budd retained cup and championship. He shot an L. C. Smith nuder 8bs., and his load for both barrels was 34'drs. American wood (trap) powder, and 18'oz. chilled Chicago 7s. Mr. Kleinz shot a Greener 8lb, 140z., and used Schultze powder in both barrels, 34'drs, in the right and 44vs. in the left, with 7s in the right barrel

WILMINGTON, Del., June 3.—A practice shoot at c'ay-pigeons was held this afternoon by the Wawaset Gun Club at the grounds of the club. The sport was witnessed by a large crowd of spec-

NEW YORK STATE SHOOT.

NEW YORK STATE SHOOT.

THE thirty-first annual tournament of the New York State Association for the Protection of Fish and Game was given last week on the 3d, 4th, 5th, 6th and 7th, at Albany, N. Y., under the auspices of the Elm Grove Gun Club. The members of the various gun clubs throughout the State began arriving on Monday to take part in the business meeting which was held at the Delavan House on Monday evening, and a full report of which was given in our last issue. It will not be amiss, however, to repeat the fact that 24 new clubs applied for membership and were unanimously elected. This uncommonly large accession to the ranks shows plainly the reviving interest in the Association, and is an evidence of the boom in trap-shooting all over the country. At this meeting it was also decided to hold the 1850 convention at Lyons, N. Y., under the auspices of the Spencer Gun Club, and Mr. W. S. Gavitt of that club was elected president of the Association.

offir. W. S. Gavitt of that club was elected president of the Association.

There was some talk about adopting a system of classification which would be fair to all and give the amateurs a more equal chance, and a committee was appointed to confer together and suggest a plan. The meeting then adjourned till Tuesday evening at 8 o'clock to hear the report of this committee, and also one on financial matters. The adjourned meeting was not held until Wednesday evening at the Stanwix Hall. The classification committee reported that they had been mable to hold a regular meeting or to agree on any plan, and requested to he discharged. This was done and another committee appointed, consisting of Messrs. Hoadley, Whitney and Gavitt. The committee on finance a salary of \$300 a year to the recording secretary, Mr. John R. Sage, which had not been regularly paid, and they now owed him about \$1,250. Owing to the depleted condition of the treasury Mr. Sage had now kindly offered to donate this amount to the Association. On motion, this was accepted with thanks, which were also extended to the committee for their services.

On motion, adjourned.

Tuesday, June b.

The tournament proper did not commence until Tuesday morners and when at 9 cicked; the shooters commenced their inverse.

Association. On motion, this was accepted with thanks, which were also extended to the committee for their services.

On motion, adjourned.

Tuesday, June h.

The tournament proper did not commence until Tuesday morning, and when at 9 o'clock the shooters commenced their journey toward the Fair Grounds, on the Troy road, which is one of the shooting grounds of the Elm Grove Oun Club, everything looked promising for a good day's sport; but during the morning lowering clouds began gathering and finally burst in several hard showers shooters, as a rule, however, do not more than the shooters shooters, as a rule, however, do not more were taken as a rule, however, do not more the grounds of the Elm Grove of the traps for events. It is not to the control of the shooters are not the traps for events. It is some confort on the Keystone system, were soon in brisk operation under the guidance of "Tee Kay," who hustled the shooters around in a lively manner; he hustled rather too much for his own comfort on the second day, accidentally stepping into a hole and severely twisting his ankle, and during the balance of the shoot limped around with the aid of a crutch. This did not affect his unflagging spirits, however, nor his shooting form, as the scores show. He appeared on the grounds with breast covered with the badges of the various clubs which gained for nim the sobriquet of "The Badger."

While the open events were being shot at five traps, the Association purses were run off at two other sets of three traps, and still another set of three traps was used for events open to all. With all these traps and the number of shooters present, many more birds would have been thrown if the home club had had a few more men to run the traps. There were many visitors from other States, notably New Jersey, Connecticut, Massachusetts, Ohio, etc., who, not being cligible to shoot in the State events could only use the other traps, and some of them did not get shooting enough to satisfy them, and were compelled to carry home ammunition

Wednesday, June 5.

Wednesday, June 5.

About the same number of contestants were in attendance as on Tuesday, and the arrangements were in somewhat better shape. The weather was fair most of the day, but a few light showers fell in the aftermoon. Two State events and six sweeps, open to all, also two extra sweeps were shot with the following results:

open to all, also two extra sweeps were shot with the following results:

Friday, June 7.

This was the day in which most interest was centered, as the two team contests for the championship trophy and the Dean Richmond cup, the latter at 20 single live birds, were to be run off. The first event for the championship was at 20 single kingbirds, four men to a team, and was hotly contested, cach good score receiving rounds of applause, and when the trophy finally went to the Onondaga Sportsmen's Club of Syraeuse, the satisfaction was quite general after the first sting of defeat had worn off. As the time for the live bird race drew near, spectators, who had not been present in large numbers at any time, now begun to arrive until when the event commenced there were over three hundred present, thus proving that no matter what may to urred against live bird shooting, it is what the average man likes to see. The shooting was done from three plunge traps under N. Y. State Association rules, one barrel, 2lyds, rise, gan below the elbow till bird is on the wing. There were but five teams entered for this contest, and all other shooting was stopped while it progressed. The birds were only an average lot, but some strong flyors were among them, and some very long kills were made, eliciting rounds of applause. The Onondaga Sportsmen's Club of Syraeuse had held the trophy since last year and were looked upon as probable winners here, but as events proved they were not in the hunt. Considerable money changed hauds on the result, and the winners, the Queen City Gun Club of Buffalo, were very jubilant

over their victory. It was a narrow one, however, as the Elm Clty Gun Club pressed them very hard and only fell one bird be-low the winning score. City Gun Cuto presset then vor, the last shooting, race for team low the winning score.

Contest No. 6, \$347 in prizes, class shooting, race for team championship on finanimate targets for New York State, four members to a team, \$10 per team, \$2.50 per man; each club can cuter one or more teams, 20 singles per man, 50 per team, ties shot off on 12 single kingbirds per team. First, championship trephy, bronze French mantel clock, value \$80, second \$80, third \$90, fourth \$50, firth \$20, sixth \$25, seventh 22; total \$347;

Greenbush Gun Cinb, of Greenbush.

This event closed the day's work and the tournament of 1889 was over; guns were hurriedly packed up and preparations made for an early departure, to meet again at Lyons in 1890.

Frank Mason.

SOUTHERN ILLINOIS.

BELLEVILLE, Ill., June 8.—The eighth annual tournament of the Southern Illinois State Sportsmen's Association was held June 6, 7 and 8. The weather was favorable with the exception of the last day, when it rained almost continuously and interfered very much with the shoct. For three years more the tournaments of the association are to be held in this city. The officers for the year are; A. B. Fleischhein, President; W. E. Oraig, of Coultersville, and J. W. Baker, of Bunker Hill, Vice-Presidents; C. F. Krebs, Treasurer, and C. P. Richards, of Coultersville, Secretary. The scores in detail are as follows:

First Day, Thursday, June 6.

BREWER ON BRITISH SHOOTERS.

Shoot, A. T. had to Bandae intos, Sc. added: West its robe its cond. A. T. had to Bandae intos, Sc. added: West its robe its cond. A. T. had to Bandae intos, Sc. added: West its robe second, West third.

BREWER ON BRITISH SHOOTERS.

JOHN L. BREWER, the famous American trup expert, and J. who has had a recent experience on the English trap rames, talks vigorously to the able gun editor of the Philadelphia Item. He says some very sharp things about his treatment in England, and brings back some interesting notes of how matters are conditions. And this is just where the English trap shots are cante. They know that if an American visit England he must be a first-class ment that he is an American puts a handleap on bhom, and this is just where the English trap shots are cante. They know that if an American visit England he must be a first-class ment that he is an American puts a handleap to the work of the property of

benefit of the wind. Indeed, a match with the wind again;

ne benefit of the wind. Indeed, a match with the wind against as birds is seldom, if ever, allowed in England, the traps being hanged prompity, in accordance with the direction of the wind. He general rule that governs all the shooters in England is to add not over 4drs. powder and 1402, shot, and to hold the gunsts as the shooter pleases. This is susceptible of explanation. He shooter goes to the traps, has the privilege of taking sim, and an hold the gun to his shoulder or not, as he pleases. This rule followed everywhere, and the idea of holding the gun below the blow until the bird is on the wing, is laughed at by English portsmen. The gauge of gun is limited to a 12, and any weight of over 8lbs. I did not see a 10-gauge gun in use, and only a few t tbe gun stores, where I was told they were used for duck shootage. I told them that tens were used a great deal in the United tates, not only at the trap, but in the field, and that many sportsnen thought that eights, sixes and fours were the proper things or ducks, at which much surprise and amazement were manisated, and the expression was made, "We would call that puntage!" The puot gun is a big gun mounted on a swivel, and used rincipally by sailors who hunt ducks, and want to get enough ame with one or two discharges to last for a week! You ask me which guns stand at the head in England? The urdey is first in workmanship, the Greener gun first in shooting ualifities; Riley of Oxford street stands very high. W. &C. Scott. Son are not recognized in London, and it is well known that heir trade is principally among Americans, with whom, it is nderstood, their guns bave given satisfaction. The guns of ondon makers are considered far ahead of all others made in ingland; Birmingham manufacturers, with one or two exceptions, are not classed with anything but rubbish. This is probably a little too severe, as Westley Eichards, who is a Birmingham manufacturers of their guns were made for preign trade. Clabrough is another one of the unknown guns in highand; birmingham

MASSACHUSETTS STATE SHOOT.

MASSACHUSETTS STATE SHOOT.

THE Massachusetts State Shooting Association will hold its tenth annual summer tournament on the grounds of the Jamaica Plain Gun Club, Clarendon Hills, Mass., June 17 and 18. Shooting on the regular programme will begin promptly at 9 o'clock A. M. on cach day as follows:

Mooting, June 17.—Individual Subscription, 6 clay-pigeons, entrance 50 cents. 2. Individual Subscription, 6 hluerocks, entrance 50 cents. 2. The tie not shot off.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

POMPTON PLAINS, N. J.—The annual "shaking up" of the old scidenters, who quietly while away the time in solid enjoyment it the beauties with which nature has surrounded their homes so nugly located on the Plains, was celebrated by the Pequannocks, on the Plains, was celebrated by the Pequannocks, and coal gun club, on Thursday, May 39. By a little extra labor old exponse the event was announced through circulars, which tought together young and old—shooters and lookers on—by agon, on foot, cross lots and other unknown ways, until a hun-

SPRINGFIELD, N. J., June 3.—Scores made by the Union Gun Club at itssixth monthly badge and prize shoot held on its grounds here this afternoon. Twelve of the members faced the traps and found that the targets to be used were Ligowsky clay-pigeons, and thrown as far and as hard as it was possible to make the traps do. The boys caught on first rate, as the following scores will show. The shooting off of the ties was quite exciting. Conover having to break 49 out of 50 before claiming the Keyston trophy. But he got there all the same. Following are the score in control.

But he got there all the same.	Following are the scores, 18vds.:

C. N. Wingert. For the third prize Mr. J. Beacham gave a pi of solid silver of a design known to sportsmen. Mr. Augustus Phelps, who has already donated a handsome club flag, gav championship medal for competition by the members of the el the winner of the most shoots at the end of the season to cla tho ownership. Mr. John H. Sawyer, the late precident of club, who has just recovered from a severe attack of sickin presented to the club, as a special member's prize for the J shoot, a handsome solid silver tankard by Tiffany & Co., of N York, with a wish that one of the old men would win it and ki tas a memento of the Fountain Gun Club. Several other me bers present signified their intention to donate prizes at es shoot of the year, so that the members will have a strong indument to shoot for them. No one member will be premitted take a second prize. The Seddons medal, which has been cepted for during the past season, has not yet been awarded. I late secretary, Mr. G. Lange, and the present secretary, Mr. Jo Carney, have the disposal of the emblem, and their decision we be given at the next meeting.

WELLINGTON, Mass., June 8.—Several clean scores we made to-day in the sweepstake matches of the Wellington G Club, and in the silver pitcher match at 8 clay-pigeons and bluerocks Bond and Field were tied with 14 each, and in it shoot-off Bond won. In this match the following scores we made: Roxton, Choate, Chase, Melcher, Schaefer, and Baxter each, Sonow and Swift 12 each, Bradbury, Stanton, Dill a Chapin II each, Warren 10, Short and Snow 9 each, Wetherber The scores in the merchandise match were as follows: Schae and Field 15 each, Stanborn and Chapin 14 each, Bond, Chase a Snow 13 each, Stone and Warren 12 each, Bill and Bradbury each, Robinson and Coy 10 each, Melcher and Stanton 13, Swilt. The winners in the sweepstake matches were as follows: Schae and Field 15 each, Stanborn and Chapin 14 each, Bond, Chase a Snow 13 each, Stone and Warren 15 each, Bulland Bradbury each, Robinson and Coy 10 each, Melcher and St

TILE.

THE NEW HAVEN.—Pres. Chas. B. Bristol issues an order thus:
"Attention battalion! You are hereby warned to appear on the
New Haven Gun Club grounds, armed and equipped as the law
directs, to shoot in the several events on July 4; Keystones, shooting at 9 o'clock A. M.—Chas. B. Bristol, President."

THE TEAM FOR ENGLAND.—Within ten days the team which is to go from Massachusetts to measure shooting skill with the British riflemen will be on the ocean carrying trusty rifles and lots of skill and hope with them. The team is a good one, and it is understood to be practically the same which has represented the State at Creedmoor the past two years. Capt. Mildmay, secretary of the National Rifle Association of Great Britain, has notified Maj. Frost of the appointment of Quartermaster Southwicke of Devonshire as honorary secretary of the team while in England. The gentleman has a splendid reputation, and will undustedly do the team full justice. The shooting engagements are now complete, and comprise Berkshire on July 2, London Kille Brigade, July 3, South London, July 4, Sussex, July 5, and either the Honorable Artillery Company or the Lincoloshire team on July 6. The following two weeks will be devoted to individual work at Wimbledon, where the team will be in camp. Many courtesies are being showered upon the team, a notable one being the tendering of a handsome private car by the London & Northwestern Railway from Liverpool to London. Major Frost has declined many offers of escort to the depot with thanks, preferring to slip away without demonstration. He has been a quiet hard worker all along, and for some time past the team has been realling big scores in private practice.

THE EASTERN DIVISION MEET,

THE EASTERN DIVISION MEET.

The annual meet of the Eastern Division of the A. C. A. will be held at Calla Shasta, 4 miles below Springfield, Mass., on the Connecticut River, on June 15-18, the races being on June 17. Meals can be had at a farmhouse by those not prepared to cook, and some extra teuts and straw for bedding will be provided. A launch will make regular trips between Howard street, Springfield, and the camp. The prizes will be small cups instead of fage. The regatta programme is as follows: Sailing races—1. Classes A and B. Sail area limited to 75ft. 3. Novice. Unlimited. 4. Combined sail and paddle. Each one mile. The above to be one mile to windward or leeward and return.

Paddling races—1. Classes A and B. Docked, ½ mile straightaway. 2. Class I. Any canoe, ½ mile straightaway. 3. Tandem, Den canoes, single blades, imile with a turn. 4. Hand-paddling, 160yds. 5. Tandem, decked canoes, 1 mile. 6. Upset. 250yds. 7. Standing paddling, 300yds. The order of races will be announced as early as possible on race day, and will depend on wind and weather. The usual rules will govern.

R. E. TOWNSEND, OHAS. P. NICHOLS, JOHN F. SEVIN, Jr., Regatta Committee.

DELAWARE RIVER MEET.

DELAWARE RIVER MEET.

The camp of the Delaware River canoeists broke up on June 2, and though the weather had been very unfavorable during the wole week, it having rained every day of the camp, about 20 experienced canoeists remained in camp the most of the week and others came and went.

If being too unpleasant for sailing and cruising a good part of the time, a good many plans were concocted to keep the ball rolling. Upon one day the boys disguised themselves in as nivny iongenious costumes as the camp could provide, a striking one being the camp ghost, made up with a model of a skull upon the bearer's head and draped artistically with one of the dude camper's sheets. This was a most appalling sight, as a good many of the natives will testify who saw it at night, illuminated by green lights, parading the town, headed by buglers playing a most solemn air. A good many of the races were cancelled, but the most important were held. The unlimited was sailed in a little gale, as the following schedule will show. Mr. Bair, of the Mersey C. C., England, viewed the races on Decoration Day.

The events were as follow:

THE STEAM YACHT "W. B."

THE new steam yacht herewith illustrated was launched on May 28 at the yard of her designer, Dr. C. D. Miller, at Poughkeepsie, N. Y. She was built for Mr. W. B. Hayden, of Columbus, O., for use on the St. Lawrence River, and is similar, though larger, to Indienne, by the same designer, whose plans were lately published in the Forestand North Stream. The "W. B." is 87ft, over all, 79ft, 6in, l.w.l., 13ft, beam and 4ft, 6in, draft, with a triple expansion engine and Roberts's cell boiler. She is built of wood and is very handsomely fitted below. All the work was done under cover in Dr. Miller's yard.

LARCHMONT Y. C. SPRING REGATTA, JUNE 8.

LARCHMONT Y. C. SPRING REGATTA, JUNE 8.

The entry list in the postponed spring regatta of the Larchmont Y. C., on June 8, was very little to the credit of yacht mont Y. C., on June 8, was very little to the credit of yacht was concentrated in the club as a hody, and had pretty well disappeared among the individual owners. A regatta with good prizes, in the finest of June weather, was allowed to go begging with a total of but twelve starters. This lack of racing spirit was most conspicuous in the 40ft, class, where such boats as Chispa, Tomahawk and Maraquita were sailing over the course without entering, evidently sizing up the only two of their class in the race, Nymph and Banshee. With craft designed and built specially for racing, and after at least sufficient trial to put them in fair form, it would naturally be supposed that they would take the first good chance of a trial, rather than merely knocking about the course where their fellows were racing, and leaving to their smaller sisters to represent the keel class. The result of the race was hardly encouraging to the club or to the members who gave their time to its management, and in view of the limited entries and the fluky and teddous ending, the race can hardly he called a success; but the yachtsmen on the Judges' tug were treated to two very pretty and exciting duels during the greater part of the day, and to some very fine bits of sailing at times.

Users, looking in fine form this year under the blue and red large of the trick, we was called a surfunction in the class. Of the highest of forties only two of all alone in heat class. Of the highest called to the only two of the large of the class to yet work of all alone in heat class. Of the high feet of forties only two of all alone in heat class. Of the high feet of forties only two of the large of the class the only entries were Eurybia and Volusia; while

in the 30th. class there were Saracen, Kathleen and Amazon. The latter, a centerboard boat, is an old resident about the western comers, bothurd, and needs no description, the of the two new comers, bothurd, and needs no description, the of the two new comers, bothurd, and needs no description, the of the two new comers, bothurd, and the state of the class in Eastern waters, while her rival, Kathleen, lately described in the FOREST AND STREAM, is an ew hoat, this being her maiden race. But little interest was attached to the said class the Coyote, lately browstif from Bosion, had no competitor. Nymph was sailed by Mr. E. A. Willard, Banshee by Mr. A. Bryan Alley, Saracen by her owner, Mr. W. Fowle, and Kathleen by Mr. Willtocker. The course for the cabin boats mark off Captain's Island, and home over the same course, 28 knots; the open hoats sailing around the red spar huoy on Scotch Caps Reef, leaving it on starboard, thence to and around red spar huoy on Scotch Caps Reef, leaving it on starboard, thence to and around red spar huoy on Scotch Caps Reef, leaving it on starboard, thence to and around red spar huoy on Scotch Caps Reef, passing it on port, thence finish, 10 knots.

The weather was cool and hazy in the morning, with a light S. W. air, and the start was not made tintil 1186. Clara went over thence finish, 10 knots.

The weather was cool and hazy in the morning with a light S. W. air, and the start was not made tintil 1186. Clara went over the line with a good full and then tacked, waiting for Nymph, and out on her weather such a service of the part came Saracen, leading Kathleen by a hundred the start was timed:

Clara. 11 46 27 Volush.

Clara. 11 46 27 Punch 11.53 00

Amazon 11 47 27 Volusha. 115 50

The four settled own, named well on the wind, for Humboard the start was timed:

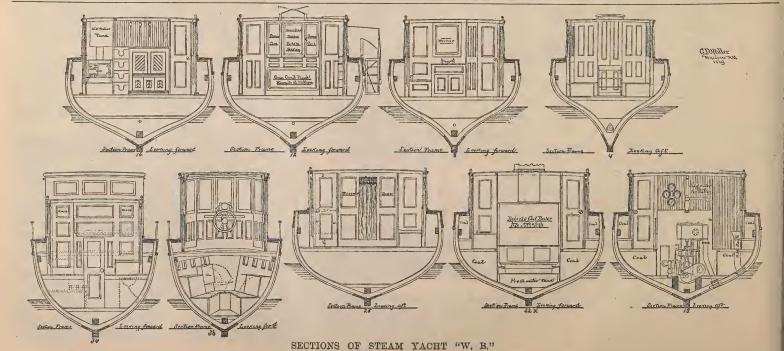

Clara. 11 46 27 Punch 11.54 00

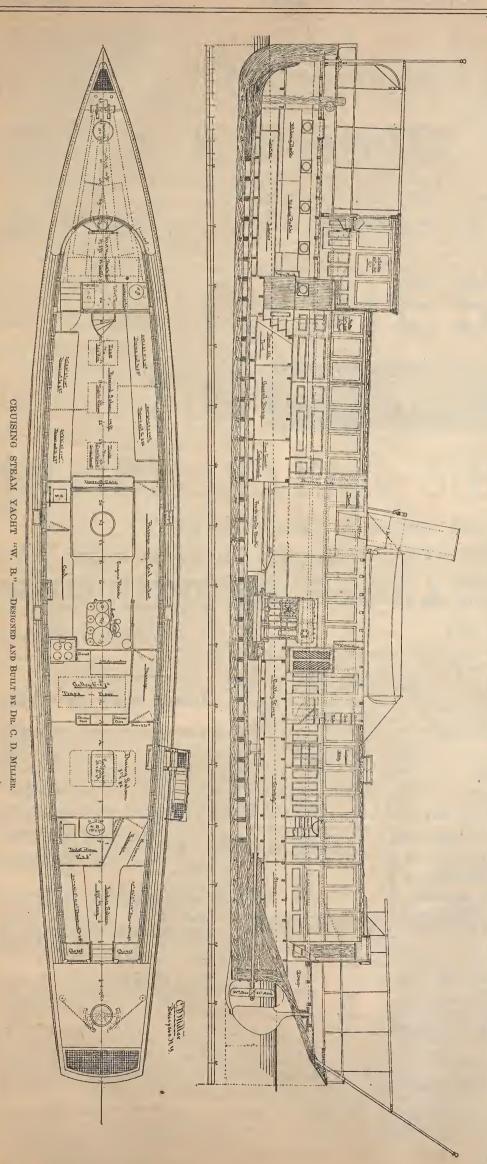

Clara. 11 50 30

Amazon 11 47 27 Volusha. 115 40

Clara. 11 40 37 North and the start was the start was timed:

Clara. 11 40 37 North and the start was a start was a start was a start was a s

speed at the first turn. The honors of the sailing, so long as the wind held, certainly belonged to Banshee and Kathleen, but the luck landed the prizes in the lockers of Nymph and Saracen. The times were:

THE TEN-MONTHS'-NOTICE CLAUSE.

THE TEN-MONTHS'-NOTICE CLAUSE.

In commenting on the objections to the last deed of gift the Boston Heraid says: "Ge". Paine knows better than any one else the great difficulties and disadvantages under which American yachtsmen were put. Challenged at the last moment by an owner with boat already built, the American was expected to design and build a boat and get her in trim in six months, and such an advantage taken was called sportsmanlike. Ten months notice is fair, both parties have ample time in which to prepare, and then the contest is placed where it should be best boat win." A we have repeatedly shows the stoud be best boat win." A we have repeatedly shows the stoud be best boat win." A we have repeatedly shows the stoud be the stoud be the stoud prepared and them the contest is placed where it should be best boat win." A we have repeatedly shows the stoud best of the stoud prepared of the stoud prepared to the should be stoud prepared to the should be stoud prepared to the stoud prepared to the should be stoud prepared to the stoud prepared to the should be shoul

ATLANTIC Y. C. ANNUAL REGATTA, JUNE 11.

ATLANTIC Y. C. ANNUAL REGATTA, JUNE 11.

The Atlantic Y. C. was particularly unfortunate this year in the weather for its annual regatta, the day opening with little wind, a heavy rain squall coming up at the hour for the start, 10:30 A. M. About noon the sky cleared and a light wind from the west came over the bay, so a start was made at 12:41, the tide being then on the last of the elb. The fleet went over on starboard tack, Thania leading, with Grayling and Sea Fox after her. Shamrock, Gracie and Katrina were together under Sea Fox's lee, the former working clear of the pack, while Gracie and Katrina were hampered by want of room. The starting line was a particularly bad one, being located in the midst of a flect of yachts at anchor. The times were:

Titania. 12 2:34 Banshee. 12 51 45 Grayling. 12 53 19 Ilderan. 12 51 45 Gracie. 12 44 38 Bijou 12 53 45 Gracie. 12 44 38 Bijou 12 53 44 Katrina. 12 44 65 Marjorie. 12 56 48 Katrina. 12 44 25 Marjorie. 12 56 48 Katrina. 12 44 25 Marjorie. 12 56 49 Anaconda. 12 47 28 Ma Belle. 12 54 40 Anaconda. 12 47 28 Ma Belle. 12 55 46 Gavaller 12 46 58 Froile. 12 55 46 Gavaller 12 46 58 Froile. 12 56 48 Froine. 12 56 48 Froin

of both, the state up, the sky being black and threatening in all directions.

Katrina, Sea Fox, Gracie and others had given up, but those that were left dropped all canvas, only Shamnock and Titania running under foresails. The storm, though very violent and destructive in this city, did not reach Sandy Hook, there being merely a very heavy rain for half an hour, with no wind. About 6 P. M. the sky cleured, the leaders setting all sail for the Scotland, then but a couple of miles away. There was no prospect of the race finishing within the limit, 10 hours, especially as the ceb tride was now setting out. On being halded by the judges Mr. Maxwell declared his intention to continue the race in spite of the calm and a heavy mist now rising, and Titania also held her coarse. The tug returned, passing the other yachts becalmed near Buoy 8. The stakeboat remained at the finish all night to time any boats that might finish, but none succeeded in finishing within 10 hours.

YAMPA.-Mr. Chapin's schooner has reached the Azores, her time from New York being 3 days, 21 hours,

CORINTHIAN Y. C. OF NEW YORK.

CORINTHIAN Y. C. OF NEW YORK.

THE second annual regatta of the Corinthian Y. C. of New York will be sailed on June 19, being open to yachts of any recognized yacht elub; to be steered by amateurs. The crews are limited to one man for each 5ft, of length on deck, and one professional is allowed for each 19ft. of length on deck, and one professionals. The yachts will be classed by corrected length; thus a 40-footer may have a crew of 8 to 12, of whom but 4 can be professionals. The yachts will be classed by corrected length; sail area, measured as by the Seawanhaka rule, plus l.w.l. length, divided by 2. The classes will be 59ft, and less than 60, sailing rating as above; 40ft, and less than 50., 30ft, and less than 40, 25ft, and less than 30, and less than 20. The man aline between the club steamer and buoy 15 to buoy 10 on Southwest Spit, keeping to on port; thence to and around buoy 8½, keeping it on port; thence to and around buoy 8½, keeping it on port; thence to and around buoy 8½, keeping to eastward of buoys 9, 11 and 13 on West Bauk, and outside of buoy 5 on point of Sandy Hook, going and return over same course to buoy 15, keeping to eastward of buoys 9, 11 and 13 on West Bauk, and outside of buoy 15, keeping to eastward of buoys 9, 11 and 13 on West Bank, and outside of hony 10 (heeping to on starting line to hnoy 10, keeping to on stort of Sandy Hook, going and return incorrect bound 15, keeping to on startboard, and return over same course to buoy 16, keeping to on startboard; thence to and around buoy 1, off Point Comfort, keeping it on starboard; thence to and around buoy 1, off Point Comfort, keeping it on starboard; thence to and around buoy 1, keeping to eastward of buoys 9, 11 and 13, going and returning.

Course No. 4, 15 nautical miles. From starting line to have a startboard in the property of the provided there eastward of buoys 9, 11 and 18, going and returning.

of buoy.

Course No. 4, 15 nautical miles. From starting line to and around buoy 16 on East Bank, keeping it on starboard; thence to and around buoy 10, keeping it on starboard; thence to finish line, bhoy 15, keeping to eastward of buoys 9, 11 and 13, going and returning.

bhoy 15, keeping to cast.

turning.

The first class will sail course No. 1, the second No. 2, the third
No. 3, the fourth and fifth No. 4. The regatta committee
includes Messrs. E. B. Clarke, W. H. Plummer, W. Gardner and
J. W. Wilson.

ATLANTIC Y. C., LADIES' DAY, JUNE 3.—The annual "ladies' day" race of the Atlantic Y. C., was sailed on June 3. after being once postponed. The weather was all that could be desired, clear, warm, and with a fresh brezze. The course was 8 miles in the Upper Bay, off the Atlantic Basin. The times were: CLASS—SCHOONERS.

WHAT WE HAVE ALWAYS CLAIMED.—In speaking of the le of the Volunteer the Boston *Herald* says: "The boat is of no sale of the Volunteer the Boston Herald says: "The boat is of no earthly use to a man as a pleasure boat, because she is too large to handle as a sloop, and too expensive to run, and would have to be turned into a schooner." This bears out the point that the FOREST AND STREAM made in first commenting on the new deed of gitt, that the WOIL class was a most undesirable and unnecessary one, and that it outly not be permanently kept up. Mayflower was afloat for the first time in public on Saturday under ber new schooner rig. and Volunteer must follow, sooner or later. The Herald also hints that a scheme is on foot to buy her in order to prevent her from contending for the Cup; but there is probably no truth in the rumor.

No truth in the rumor.

VALKYRIE'S MEASUREMENTS.—The official measurements of Valkyrie are given in the Wield as follows: L.W.L. 66.6fft; stil area 6588.isq, ft.; rating 76.46. This, we believe, is with a sprit instead of a clubropsail, so that with the latter, which she would carry under New York Y. C. rules, she would measure about as we estimated two weeks since, 6.684ft. The photos of Valkyrie have just reached New York, and are heing used as the basis for some very absurd calculations, the Times giving her a sail area of 8,208ft. The above figures show, as we have contended from the first, that she must be smaller than the American boats of her length.

SEA BIRDS AND OIL ON WATER.—The English Army and Navy Journal prints a letter from a naval officer, who suggests that the ancients, who knew the value of oiling tronbled waters, learned this habit from observing the sea birds. All the fish-east ing birds, cape-pigeons, petrels and the like, eject oil from the month when captured. In the South Atlantic and South Pacific the writer had witnessed sea birds floating in spaces of comparatively quiet water when the sea around was rough. The musual smoothness lof the water 'was evidently due to considerable quantities of oil deposited by the birds.

quantities of oil deposited by the birds.

HUDSON RIVER Y. C.—The 17th annual regatta of the Hudson River Y. C. was sailed on June 3, in a very light N.E. wind, the courses being off Seventy-fourth street, River. The winners in each class were: Argo, H. F. Allen; Aggle, J. Kaufer; Cameron, J. McCarthy; Gesine, W. Luther; Oliver, W. Arndt; Lone Star, J. Reis, and thipple, C.E. Mott. The judges were Frank Oliver, Com. A. J. Prime, and Henry Andrins. The regatta committee included E. R. Wilson, H. F. Allen, J. Kelly, J. R. Tucker and John Reisenweber.

John Reisenweber.

CEDAR POINT Y. C.—The first of a series of five monthly races was sailed on June 4 over a 15-mile conrse, in a strong breeze and some sea. The winners were: Class E, Carrie, Chas. Hill; Class F, Teal, Frank Burrett; Class H, Roana, John H. Jennings; Class K, Rival, F. Hitchcock; Class L. Kit, Herbert Woodward.

STEAM YACHTS, BOATS AND CANDES.—We have received from the St. Lawrence River Skiff, Canoe and Steam Launch Co. a very complete eatalogue of small craft, including the St. Lawrence skiff, of which they make a specialty, together with cance and steam launches. The illustrations of the various boats are very good, showing both lines and details of fittings.

ANOTHER CILP FOR THE FORTIES.—Com. Henry S. Hovey.

A NOTHER CUP FOR THE FORTIES — Com. Henry S. Hovey, of the Eastern Y. C., has offered a handsome cup for the 40ft. class in the regata of the club on July 15, off Marblehead, and 8 entries have already been made.

ARRIVAL OF THE LADY EVELYN.—The keel schooner Lady Evelyn, lately purchased in England by Sir Roderick Camerou, arrived off Staten Island on June 8, after a somewhat stormy passage, in which some damage was done to her bulwarks and skylights. She left Cowes on May 1, taking a southerly route and meeting heavy 8. W. winds.

and meeting heavy S. W. winds.

LAKE CHAMPLAIN Y. C. OFFICERS, 1889.—Com., Colonel W. Seward Webb, of New York: Vice-Com., W. A. Crombie; Meas, A. C. Tuttle, Burlington; Pres., John Gregory Smith, St. Albans; Vice-Pres., Ellas Lyman H. LeGrand Cannon; Treas., Horatio Hickok; Sec., Joseph Antel, Burlington.

ROYAL CANADIAN Y. C.—A lively race was sailed on June 1 for the following yachts, over 25ft. lw.l.: Aggle, Marlatt & Armstrong; Verve, N. B. Dick; Escape, F. Turner; Rivet, Hume Blake; Whistlewing, E. C. Rutherford. The wind was strong southwest: Verve won, with Aggle second and Rivet third.

KATRINA AND SHAMROCK.—A series of three matches was sailed last week between Katrina and Shamrock, under the management of the New York Y. C., Katrina winning every race.

CORINTHIAN MOSQUITO FLEET.—Two successful races were sailed at Larchmout on June 8 and 10, but reports were received too late for publication this week.

ELF, Mr. Wilkinson's 30ft. cutter, left Boston on June 6 for New York, where she will enter the races this week. Her owner, with three friends sails with her.

VOLUNTEER.—Gen. Paine has lately advertised Volunteer for sale in a Boston paper.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

M. D. R., Elmira, N. Y.—The A. K. R. number of the Yorkshire terrier Lady Dido is 6923.

T.T. L.—Maine is a good State, and you will do well to communicate with F. C. Barker, Raugeley, Me.

E. L. B., Fitchburg, Mass.—Would a Marlin 32-40 rifle be large enough for deer? Ans. Yes, where the hunting is done in a timbered country.

A. G., Ottawa, Can.—Dr. M. H. Cryer's Max won first in the open class for pug dogs at New York in 1884, and John Parker's Punch won first in 1885.

E. M. B., Lowell.—Please give date when entry of cocker spaniel was sent, also name of dog. We cannot trace anything from the meager information given.

M. E. A., New York.—Will you kindly settle au argument about the plumage of the quail. A says the white-necked bird is the male one. B says the brown-necked one is the male bird. Which is right? Ans. A.

Is right? Ans. A.

L. S. G., Richmond, Va.—I have a very fine gun, and would like to ascertain the trigger pull; how shall I do it? Ans. Set the trigger, then ascertain with a spring scale, the weight indicated by the pull to fire the gun. You can readily accustom yourself to a light or heavy pull.

a light or heavy pull.

G., Negaunee, Mich.—While fishing last week in a small brook for trout 1 caught 30 trout that weighed 20lbs, the largest was 16½ in long and weighed 30bs, and was 11in, around the thickest part. Is this large for brook trout, or how large do they grow? Ans. See reports of larger fish in our angling columns from week to week.

to week.

C. W. S., New York.—Will you kindly tell me the best locality on the Delaware River for black bass fishing? Ans. The tributaries of the upper Delaware abound with black bass. Callicoon (N. Y. & L. Brie R. R.) is a good place. Egypt Mills, Pike county. Pa., is noted at present. Go to Mr. Van Gordon's; board about \$1 per day; minnows and helgramites can be had for bait; boats can probably be obtained at the house.

probably be obtained at the house.

F. P., Saugerties, N. Y.—It was stated in your paper several weeks ago that the upper waters of the Delaware and the Susquehanna were teeming with black bass. Will you be kind enough to furuish more specific information, especially in regard to the Delaware, saying exactly at what point it would be best to strike the river with a view to fishing with a fly, and whether the fishing would be from a boat or by wading? Ans. Go to Port Jervis (N. Y., L. E., & Western R. R.). Between that place and the East Branch of the Delaware you will find many good points for black bass, among them, Pond's Eddy, Lackawaxen, Cochecton and Callicoon. Boat fishing is preferable.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM,

BEECHAM'S PILLS cure sick headache.-Adv.

STOVE.

With or Without Oven.

Light, substantial, compact, takes least available room of any stove made. Oven bakes well as a regular cook stove. Telescopic pipe that never falls down carried inside the stove. Takes largest wood, keeps fire longest of any stove made. Made in five sizes. Manufactured and for sale by

D. W. CREE, Griggsville, III.

THEIR

MACHINERY AND MANAGEMENT.

The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.

By C. P. KUNHARDT.

This volume is intended to be sufficiently comprehensive, and elementary at the same ame, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—From Author's Preface.

Preface. Cloth, 240 pages. Price, postpaid, \$3.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York, SAMPSON, LOW & CO., London, England.

The Smith & Wesson Revolvers are constructed entirely of best wrought steel, carefully inspected for workmanship and stock, and GUARANTEED. Do not be deceived by IMITATIONS largely manufactured of malleable cast iron, and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and

THOS. H. CHUBB, The Fishing Rod Manufacturer, Post Mills, Vt. (Mention this paper).

No Chemicals.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkall, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by per-fect mechanical processes, no chemical being used in its preparation. By one of the most ingenious of these mechanical processes the greatest de-gree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

ranguage understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of ooks of which the need is felt in every department of natural history.—Troy Press.

The book should find its way to a choice place every sportsman's library.—Chicago Inter-

Occan.

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * It is more value to me to have a description of a bird in plain Euglish which I do not understand.—W., in Journal of Commerce.

ANSWERS TO CORRESTONDENTS.

F it be remembered that only within a short period has any considerable attention been paid to the conserving of a food fish supply in the inland waters of this country, we need look no further for an explanation of the improvident and foolish methods of damming rivers and streams without making any provision whatever for the ascent of fish to their spawning grounds. So eager have the American people been to exploit the material resources of the land, its forests, mines and agricultural capabilities, that they have gone ahead without thought of what a tremendous waste they were guilty of in respect to the wealth of the waters. In this way it has come about that one of the most important questions of the day in connection with our inland fisheries is the provision and maintenance of suitable fishways in the thousands of dams, which now constitute insurmountable barriers to the ascent of fish.

The laws on our statute books governing this subject are by no means satisfactory. Take New York. Here before a necessary fishway can be constructed it must be made a subject of special legislative enactment. the Hudson has been stocked with salmon, the next thing in order is found to be the task of getting a bill through the Legislature providing fishways, that the fish may make their way to the spawning grounds. This is equivalent to jeopardizing the whole project by the whims, stubbornness and petty peanut trading of the professional politicians who make up the legislative body. There should be no necessity of going to the Legislature for individual fishways where the State is not an owner. The law should be a general one compelling dam proprietors to provide the ways whenever called upon to do so by the Fish Commissioners.

The Illinois law is more sensible than that of New York. It requires all owners of dams to erect suitable fishways, and provides that in case the owners fail to build the fishways after due notice from the Fish Commissioners, the Commissioners may build and recover from the owners double the cost of so doing. The chief drawback to this system, as found in practice, is that the Commissioners have no funds to pay for the work as it progresses, and cannot therefore carry out the intent of the law without special legislation, or unless the funds are guaranteed to them by outside sources.

Fox River Fish and Game Association, a body organized at Chicago, for the special purpose of supporting the Commissioners in the task of providing fishways in the Fox River. This river was obstructed by twelve dams impassable by fish; and when the owners refused to build fishways the Commissioners were powerless for want of funds. The Association therefore, as the most wise and practicable step, pledged the necessary financial aid; notice was served on the owners; and at last accounts the evil in this particular case was in a fair way to be righted.

So far, throughout the country at large, the fishway problem is not settled; it is one to which the several Legislatures may profitably give their attention. The expenses of erecting these ascents should be borne by dam owners; individuals should no longer be permitted to practice this imposition on the community. As the enormous value of our waters and the possibility of largely augmenting that value become better understood, fishways will multiply and rivers and creeks will more nearly contribute their full share to the wealth of the country.

MAINE DEER DOGGERS.

THE report which comes to us from an intelligent correspondent, of lawlessness in the Nicatous Lake region of Maine, is not at all surprising. That district has long been known as one where the law against dogging deer was systematically derided and set at naught. Deer always have been driven into the lake there and killed in the water, and in all probability they will be killed in that way for years to come. The root of the evil is this, that there are in Boston, New York and other cities men who find satisfaction in going "down to Maine" and defying the game law in this particular respect. They want deer, and they want them in the water, where they can have a dead sure thing of it. In the Nicatous Lake district live men who are always ready to take these city fellows' money, if their mongrel hounds can earn it for them by dogging the game into the lake. They are always ready for a job of this sort, and just so long as there are city tourists in Maine willing to pay the natives for deer dogging, the practice will go on.

An end might be put to it perhaps if the suggestion of our correspondent were acted upon and a warden or a force of wardens were assigned to the region. To arrest and convict the offenders would be no child's play, for there are among them men who have vowed to shoot down the wardens as wardens have been shot before. The enforcement of the non-hounding law in the Nicatous Lake region is one of the grave problems for the Maine Commissioners to solve; in it they have to cope not alone with the defiant spirit of the natives, but as well with the rascality of Robin Hoods from the cities, who seem to find in their hunting added zest if it be in violation of a wise law.

SNAP SHOTS.

WE understand that Captain Boutelle, the new Superintendent of the National Park, is about to start out on a long trip with pack animals to visit remote sections of the Park. It is expected that he will start from the Mammoth Hot Springs, go through the mountains to the western boundary line and follow that as nearly as possible south to the Falls River Basin. He will visit the summer range of the buffalo in the Park. This indicates that Captain Boutelle understands that the first thing necessary to an intelligent care of the Park is a knowledge of the region. We have good reasons for stating that Captain Boutelle will take all possible measures not only for the protection of game in the Park, but also, when it is practicable, will lend his influence to as sist in enforcing the Territorial game laws. The public is to be congratulated on the wisdom and intelligence which seems to be directing affairs in the National Park,

The posting of trout streams goes on apace, and the questions involved in the custom are coming year by year to have more importance. In the last report of the Wisconsin Commissioners of Fisheries they say that the renting of streams in some parts of the State has become so common as to make virtually a monopoly of the fish supply, and the Board will henceforth decline to furnish fry for stocking such waters. In New York many are the bitter disputes over certain streams which have been taken up by clubs to the exclusion of the pub-Lest year we reported a movement set on foot by the lie. The same holds true of Connecticut, whence a corre-

spondent, who has done very much in years past to secure proper game laws and to promote their observance, writes us: "To my mind, one fact is certain; that is, that all fishing for the general public in this State, except in navigable waters, is a thing of the past, all good streams and ponds having been taken up by clubs or individuals. I exceedingly regret this state of affairs; it is not right, but cannot be helped, as far as I can see. And what makes it worse is, that it was just at a time when the general public was beginning to appreciate the game laws and to

Human nature is much the same the wide world over. The slave of business here in America, who cannot resist the impulse to take to the woods, when the fish are biting, has his counterpart in far off Siberia. In Kennan's paper in the June Century describing the Kara penal settlement is a paragraph relating how in early summer, when the convicts of the free command hear the notes of the cuckoo, they run away for a free life in the forests. The Russian name of the cuckoo is Kuku-shna; it is called by the convicts General Kukushna; its first call in those northern wastes is a sign that summer has come; and those who in response to that note run away are said "to go to General Kukushna for orders." It is stated that no less than 30,000 of these free convicts obey General Kukushna's orders, and live the life of a brodyag, or tramp, in the trackless Siberian wilds. Their period of freedom is short; they are constantly pursued and hunted down by the soldiers, and in the end are compelled to return to their convict life; lut in spite of all this, it is related, they cannot resist the cuckoo's early summer summons.

In our issue of May 2 we spoke of the work of the Sociedad de Caza, of Havana, Cuba, in introducing exotic species of game birds into that island. The importation of Spanish partridges which we then reported has been followed by another one of chachalacas from Mexico. These promise to constitute a valuable accession to Cuba's game resources; they are strong, hardy birds, easily domesticated, and will no doubt thrive in their new habitat. The Sociedad has much to contend against, notably the lawless spirit which prevails in Cuba; but a step in advance has already been gained, for the club has secured an order from the Governor of the Province to the officers of the law for the strict enforcement of the close season, and although this will be resisted by all the instincts of the race, the energetic club will no doubt succeed in a comparative degree.

The floods in Pennsylvania have played havoc with many famous trout streams of the Susquehanna water-Drift and débris have effectually blotted out some of the streams; some have been diverted from their old courses; the channels of others have been scooped out into ditches; and the banks of others are unsightly with driftwood and that dismal desolation which always is left in the path of a flood. Bridges have been swept away, favorite pools filled up, and the ancient, familiar loved scenes destroyed beyond recognition and enjoyment, and beyond reward to the angler as well.

Our trap columns give evidence of the popularity of this form of sport. The increased attendance at tournaments, the frequency of club shoots and the multitudes of new clubs constantly springing up all testify to the growth of trap-shooting of artificial targets. It such popularity could ever have been attained for live bird shooting at the trap, even were the supply of live pigeons sufficient.

"For shooting, fishing and the enforcement of the game laws." That is the customary formula of a new club's purpose. As a matter of fact the shooting and fishing programme is carried out, but there soon ceases to be any fun in the rest of it; and all the game and fish protected could be stuck into a small headed man's hat. But the formula has the dignity of age, and promoters of new clubs will keep on using it.

In Australia recently a sale of thoroughbred horses and greyhounds resulted in larger returns for the dogs than the horses. We have not got so far as that yet in country, but enthusiastic greyhound fanciers are looking forward to a time when America will be as ad-vanced as Australia in these matters,

THE FUR FISHERIES OF THE NORTH-WEST SEAS.

[By a Staff Correspondent.] III.-WATER SEALING.

taken are shot within thirty yards of the boat, and a few strokes of the oars bring the boat alongside. The hunter stands ready with his gaff, and the animal is quickly lifted in. It is said that very few are lost by sinking, probably not three per cent., and twenty-five seals to a boat are considered a good day's work. Ten a day for a month are a good average. Sometimes a boat may get fifty or sixty in a day, but this is very unusual. In the season of 1886-87 Captain William O'Leary had two boats, one of which got fifty-seven and another forty-eight the same day. That day's catch for the six boats was 242 seals. The same season Captain Alexander McLean got 247 in one day to his six boats. Such good luck as this does not come often, however.

As soon as a boat gets twenty five or thirty seals the men begin to remove the pelts, one man attending to the boat while the others skin. The operation is not a long one. The hide is ripped along the median line of the belly from chin to tail, a cut is made around each fore-flipper and around both hind ones, and the hide is rapidly peeled off. A very quick workman will skin a seal in three minutes, an ordmary workman in from six to seven. The average time occupied is perhaps between four and five minutes. If the seals are plenty they are skinned in this way, but if less than thirty are taken they are usually brought on board unskinned, and if there is time after reaching the vessel the men skin them that night; if not, the work is done next morning after breakfast. The hides are then salted in bulk, stowed in the hold and left there until the vessel reaches port.

The white crews are hired in various ways: Sometimes for wages, sometimes for "lays," or shares in the catch, and sometimes by the piece, that is a boat's crew is paid a certain price for each seal that it brings in. These systems are only different names for the same thing, since either method amounts to about \$30 per month for the ordinary hands. A lay might be as follows:

Vessel, lucluding interest, time, ou

THE FUR FISHERIES OF THE NORTHWEST SEAS.

WITHING the fact few years a control of the Northwest years from the season of the

back to the beach again, and in a very humble frame of mind. The lesson they then received was not forgotten. The next year after this occurrence an American crew was wrecked near this same place, and a number of the crew got ashore alive. They were well received by the Indians, who cared for them and took them to the settlements. In return for this they were given some medals and a lot of clothing by the United States Government.

A souvenir left at this village by the Sutlej was a shell, which for some reason had failed to explode. Some time after the departure of the vessel it was found by the Indians, who, in complete ignorance of what it was, laboriously transported it to the village and placed it in the largest house, where for several years it served as a seat. But one day while a chief was giving a great "potlatch," or feast, some of the Indians who were drunk began to try to open the shell to see what was inside of it. They never found out, for when it exploded it killed all the investigators and some others, blew the roof off the house, and the chief who was giving the "potlatch" was blown either entirely away or at all events into such small fragments that no portion of him was ever found. This added somewhat to the respect which these Indians already felt for the "Boston men's" warships.

Of late years several Roman Catholic priests have gone among these people, and under their tuition and guidance they are rapidly becoming civilized.

The Sportsman Tourist.

IN BLUE GRASS LAND.

II.—KENTUCKY FOX HUNTING—THE IROQUOIS CLUB-NOTES AND INCIDENTS.

IN BLUE GRASS LAND,

IL-KENTUCKY FOX HUNTING—THE IROQUOIS CLUB—
NOTES AND INCIDENTS.

IN an earlier paper, perhaps, I have rambled over enough space to convey the idea that the Blue Grass region, provided it were the possession of foxes, would be a great country for fox hunting. As a matter of fact I presume there is no place in the United States where that sport is more zenlously followed, or where it can be seen in better form. There are plenty of red foxes within a dozen miles of Lexington, and the country is certainly hard enough to provoke all the energy of the most daring rider, even in that section, which is more than any other of our land, a country of fine horses and fine horsemen. There is plenty of leisure, plenty of foxes and fences and plenty of skill and grit in riding. Every town of consequence in the Blue Grass country has its pack, and some of these are famous. They tell me that Kit Clay's pack, of Bourbon county, is the finest pack of foxhounds in the United States. Jack Chimi's pack, kept not far out from Lexington, is another of renown. The class of foxhounds used in this section is very high. If it were not good the Blue Grass men would not tolerate it, for in the matter of four-footed running creatures they are connoisseurs of the most ably critical sort.

There is no more typical hunt in the entire Blue Grass country than that of the Iroquois Hunting and Riding Club, of Lexington, composed of twenty-five gentlemen and twenty-five ladies. Their winter hunts are the talk of the day. They are a set of hard riders, and there is not one of them, gentleman or lady, who does not follow the music until something breaks. It is cross-country riding of the hardest sort. The turf is twally good, but the innumerable fences fairly keep the horses in the air. There is little difficulty with the stone walls and stake-and-rider fences, but the stiff post and rail fences sometimes balk the best of them. Once in the hunt there is no getting out of it. The average Blue Grass thoroughbred goes fairly wild whe

s bunch of fallen horses and riders. Out of this apparently ugly accident everybody came unhurt, beyond a few bruises.

There is one peculiarity about Blue Grass fox hunting, which may be very well known to the general public, and which may not; I know it was a surprise to me. This is, that all the fox hunting is done at night! There is no meet of a clear and crispy morn, and no return at bluff and stinging evening. At night the fox plays around in one locality, and does not lay a straight line out of the country as he is apt to do in the daytime. The scent lies better at night, the time is cooler in warm weather, and not too cold in that mild climate. Above all, the multifold hum of the day has subsided, so that the wild music of the hounds comes across the fields with double volume and melody. To this music the horses will go. and little is left but to ride straight, never to flinch or waver at a riump, and keep the horse's courage backed by that of his rider. The Black Forest stories of the night-huntsman and his demon pack would have good foundation if on some starlit time of midnight one heard the swelling cry of the running pack come near and die away, and saw fitting by shadowy figures which faded off across the fields or vanished in the wood, with few sounds save the pant of the straining steeds and the thunder of their boofsupon the sturdy turf. For some unknowing stranger, belated on some lonely lane of that quiet country, what a rare midnight experience that would be! How he could gitter of eye, and body at the horse's neck as he rose to a fence, and well back to save his knees when he took the ground—each spirit riding like a human being, but all so wild, following the music of the spirit pack that lessened and sank in the distance of the rolling fields! Tam O' Shanter himself had not so good an opportunity! Yet

such is the real custom of the country, and so devoted do the people become to it that I was t-id of one farmer and his daughter who have more than once arisen from bed, saddled up their horses and joined a midnight hunt which heir pack had started on their own account, as country fexhounds sometimes will. I saw this young lady on the street, and she looked equal to such an exploit. Some of the most skillful and daring of the riders of that whole country are ladies. In passing I should say that I had heard much of the heauty of the ladies of the Blue Grass country, but not enough. I do not think one could speak too respectfully of them. They follow much one type, are usually tall and of slender form, though rounded and graceful to a deeper. Their complexions are beautiful and the pelong in any talk of Kentucky fox hunting, and they belong in any talk of Kentucky fox hunting, and they belong in any talk of Kentucky fox hunting, and they belong in any talk of Kentucky fox hunting, are keit the liveliest disgust in a Kentucky in Blue Grasslom, that is certain; but there is small danger where the twelve the two discussions and the sum of the discussion, that is certain; but there is small danger of such a contingency, for to kill a fox with a gun is something not to be dreamed of in that country. Equally Homerie is a Blue Grass man's laughter at a drag hunt, which latter is my own pet abonimation. There is not in the history of Kentucky the necord or remembrance of my had a court house. Mr. Redd was candidate for county as a court house. Mr. Redd was candidate for county as a court house. Mr. Redd feit that something had to be done to appeal to the patriotic ardor of his constituents. He waited till midnight of the day before election, and then sein of the flow which ran straight down the street of Winchester Lown. I presume the story of Deacon Dick Redd's front doorstep. Presently, just the training and Red for through all the streets of Lexington, taking cepecial care and the subject of the country of the country

rabbits a thing quite difficult enough for greyhounds and horsemen.

It has been said that there are 50 members of the Iroquois Club. I recall the following among the names: Mr. and Mrs. Roger Williams, Mr. and Mrs. Thomas McDowell, Mr. and Mrs. Sydam Scott, Mr. and Mrs. Thomas McDowell, Mr. and Mrs. Spencer Berryman, Mr. and Mrs. J. Will Payne, Mr. and Mrs. Thomas Moore, and Mrs. J. William Bright: Misses Hettie McDowell, Ida Barker, Linda Payne, Jennie Jeffrey, Mary Payne, Anna McClellan, Lucy Shelby and Misses Gibson and Gratz; G. W. Williams, W. K. Massie, Ed. L. Graves, John Patterson, John Payne, Will McDowell, Winslow Dudley, Henry McDowell, Will Talbert, Albert France, Robt, Swigert, Lee Stedman. Wm. Ford, Percy Walker, Hart Gibson, Will Shelby, Geo. B. Kinkead, Chas. Berryman. The club has a board of six governors, three ladies and three gentlemen. Its present executive officers are R. D. Williams, president, and Miss McDowell, vice-president. The latter is a granddaughter of Henry Clay, and lives at the old place, Ashland. She is famed as a beautiful and skilled horsewoman.

I think this little club is entitled to notice as a genuine sporting organization of a superior sort, and the little to the sporting organization of a superior sort, and the little to the sum of the last day he went staggering through the bush, regardless whether there were Indians about or not. Near night he came in sight of a man carrying agun. The man raised his gun, but Gomez said, "For God's sake don't shoot, I'm hungry," staggered forward and fell in a faint. He knew no more until he found himself in Fort Thompson, where all care and kindness were shown to bring him back from death's door. As he had an excellent constitution he soon recovered and was in active service again.

His experience during the last war would fill a book. He was on the west Florida coast, dodging the blockaders, running cotton out and provisions in, always with small care the cub was on the west Florida coast, dodging the blockaders, running cotton ou

that has been said may give some idea of the heartiness with which they enter into the enjoyment of life and the greatest of life's privileges—the following of rightful pastimes in the open air and in scenes blessed by the beauty of unburt Nature. I left the Blue Grass country more fully than ever impressed with the belief that people of the North do not know how to live. They are learning, and the sporting instinct is growing; but for a long time yet they may seek their scheme for a happy life down among the blue hills of old Kentucky.

In a trip of the kind, one cannot help falling upon an amount of information which can hardly be called sporting news, but which might be of interest to sporting readers. For instance, I saw at a restaurant counter at Lexington race track a card hung up bearing the inscription "Genuine Kentucky Burgoo." Now, I didn't know what genuine Kentucky burgoo was and I was afraid to ask for any, because I didn't know whether you drank it with a straw or ate it with a fork. Later on I learned that the Kentucky burgoo is nothing so ghastly and weird as its name would indicate, but is a regular institution of the great thoroughbred sales of the large breeding farms. It is of the same purpose as the barbeoue, but differs from the latter in that it is a boil and not a roast. It is a boiled aggregation of meats, fowls, squirrels and vegetables of all sorts. It is made in a kettle that will hold about 400 gallons, and is served in cups. The real burgoo is not found except at the thoroughbred sales on the large farms, and I fear my friend of the restaurant did not tempt the knowing ones who live in that country.

A mint julep is where a man pours whisky in a glass of ice, and pokes green mint into the glass with three straws. I saw the fellows do that.

When you ride up to the gate of one of the big stock farms, there is a little nigger buy standing to open the gate for you. You pitch him a quarter. When you drive out there is another nigger boy waiting to shut the gate. You pitch him another quarter. They both say "Thank ye, boss," and look happy. They say all our best negro waiters come from Kentucky. I am inclined to think all our Pullman car porters do also. There is one negro to every white man in the Blue Grass country, and two negroes to every horse. One negro cannot take care of a horse. The colored people are far more deferential in that country than they are in the North.

There is no real hospitality in the North. We are too busy, too selfish, and too ignorant of how that is done. In the Blue Grass country hospitality is princely, because it is simple, sincere, spontaneous and unstuded. You are simply temporary owner of the establishment and circumjacent earth; and things are run to suit your notions. These old Southern customs are admirable, and I pray they may never change. They are almost all that is left to us of a pure American life. They are not conventionalities, but have root in the gentle and generous part of human nature, all too much obscured to-day. It is this breath of a kindlier life which makes the lingering charm of a visit to this country, and which makes you feel the force of the Blue Grass farewell, laughing as it is—"Good-bye, We will see you again whether you come soon or not. You will have to pass through here, you know, on your way to heaven."

E. HOUGH.

THE VETERAN OF PANTHER LEON.

There died in Chester, a few miles from Fernandina, several days since, the oldest person probably in the United States. He claimed to remember perfectly incidents of the revolution, and was brought from Africa seven years before that period, and as at that time nearly twenty. The nearest estimate of his age is 130 years.—Jacksonville (Fla.) Times-Union.

THE above clipping "reminds me." On Panther Leon Island, seven miles from Cape Romano, lives an old Frenchman, John Gomez. I met him first some three years ago, when he told me he was over one hundred years old. On my canoe cruise round the cape last year I called there and had a long conversation with the old man. He told me he was born on the island of Mauritius, and that his parents soon removed to Bordeaux, where he lived until 1814 or 1815, when he came to the United States. He followed the sea around Florida and the West Indies until the first Seminole war, when he joined the forces under Col. Taylor, and served through the war.

the West Indies until the first Scientific war, when he joined the forces under Col. Taylor, and served through the war.

He told me of one experience he had on the Caloosahatchee. Col. Taylor arrived at the mouth of the Caloosahatchee with troops and provisions. Col. Smith was in charge of Fort Demon up the river. Col. Taylor sent Gomez with a letter to Col. Smith for boats to carry stores up river. Gomez missed his way and wandered through the woods five weeks, subsisting on roots and berries. Once during that time he saw what he took to be a mule lying by the side of a large log. Gomez thought, "Here is my chance; I'll creep up and catch him, and he'll carry me somewhere where I can get something to eat." He says, "Istarted to crawl up as close as possible to make a rush and catch him. When I got within a rod or so—Boof! Up jumped a big black bear, and as he tore away through the woods my heart fell again."

On the last day he went staggering through the bush, regardless whether there were Indians about or not. Near night he came in sight of a man carrying a gun. The man raised his gun, but Gomez said, "For God's sake don't shoot, I'm hungry," staggered forward and fell in a faint. He knew no more until he found himself in Fort Thompson, where all care and kindness were shown to bring him back from death's door. As he had an excellent constitution he soon recovered and was in active service again.

His experience during the last war would fill a book.

living by fishing. He has a wife much younger than himself, perhaps fifty years old, but the old man is the smartest of the two. On the morning I left the island the old man was going off fishing. He remarked to us that he would like a boy to go with him. His wife said, "Why don't you take Clement? Clement was a man living on an adjoining island, and was apparently some thirty or forty years of age. "Oh!" said John, "he's too slow"

slow."

The old man has a little garden on the island; he raises The old man has a little garden on the island; he raises a few vegetables, but his main dependence is the water and what it brings him. Fish, turtle and turtle eggs, with a little coffee, sugar and meal, make up the sum of their subsistence.

It looked like a lonely, sad life, but I don't know as in all my wanderings I ever saw a happier couple than old John Gomez and his wife on Panther Leon. Tarron.

TARPON SPRINGS, Fla.

MAINE FISH AND GAME.

MAINE FISH AND CAME.

THE Kineo Ciub got back to Boston the other day from Moosehead well pleased with the trip. This clutb is made up of Boston merchants and professional men, and the trip is made annually to Kineo. A steamer is hired, and the club and it invited guests, with guides and boats, goes to some part of the lake each for fishing. The party is much pleased with the fishing this season. Trout of 3lbs, and over were caught with the fly. The members of the club are chiefly fly-fishermen, some of them never fishing in any other way, though others will deign to take a trout with bait, if a trout is to be had no other way. The party is "well browned up" this time, though the story is that it could hardly have been the sun, for it rained about every day that the club was at the lake.

The people of Maine themselves are giving more and more attention each year to sporting matters. The early fishing at the lakes is pretty thoroughly followed up by her prominent business and professional men, and later in the season other methods of sport are adopted. Grouse hunting is very popular. The streams are thoroughly fished. A party, made up of Hon. H. M. Bearce, Freeland Howe, F. H. Noyes, F. W. Sanborn, editor of the Oxford County Advertiser, S. D. Andrews, E-4,, and H. D. Smith, cashier of the Norway National Bank, all prominent citizens of Paris and Norway, or formerly citizens, have been making a fishing trip through Sunner and vicinity, and camping in tents on the ponds and streams. They also went with two-horse wagons, gypsylike.

One has only to take up the Maine papers to become

streams. They also went with two-horse wagons, gypsy-like.

One has only to take up the Maine papers to become convinced that there are still some game and fish left in the State. Bears are getting to be numerous and rather free, so far as the farmers' sheep are concerned. The barn of Albert Parsons, of Pittsfield, was entered the other night by a very large bruin, and three sheep and one lamb were killed and partly eaten. The beast entered through a manure window, some four feet from the ground. Hunters have since tried to capture the fellow, but without success; though several bears have been trapped in that section this summer. In Washington county bears are reported to be very numerous, and the farmers are losing sheep and lambs from their depredations. Here is a field for the hunters. Why is it that no more attention is given to bear hunting in Maine? The hunters of the State scarcely know of any other way to capture black bruin than by the heavy steel trap, and even in that way not many are taken. The farmers would welcome sportsmen from the cities who desire to hunt the bear, and would render them all the aid in their power.

welcome sportsmen from the cities who desire to hunt the bear, and would render them all the aid in their power.

Deer are certainly more plenty than ever before in the Pine Tree State. It is easy to talk by the book, and one can write on deer all the better for having seen them. I was favored with a sight, on May 29 of this year, that well repaid me for many an excursion into the woods, We had been fishing the stream that joins the two ponds, (I would say exactly what ponds, did I not fear that those two deer would fall unlawfully to some poacher's shotgun before Oct. 1.) I had come down to the first pond before the others of the party. We had seen fresh tracks, and I happened to look a little way over the water to the east shore, not more than 100yds., and there was a deer, though it was about midday. I kept perfectly quiet, in order to watch the motions of the handsome animal. It would feed along the rushes and wade into the water for a minute, and then bound back into the thicket. This lasted for several minutes, when behold there were two of them! They would turn and butt each other, like lambs at play, and then would bound into the water and jump into the air. Such grace I have never seen in any animal. The bounds would sometimes be straight up into the air several feet. They would whirl and whisk their "cotton," all in play, in a manner that would make any sportsman long for his rifle. But for me the sight was too grand for shooting, even if I had been armed with any other weapon than a ten-ounce fishing-rod. My only desire was that the beautiful creatures should remain till the others of the party came up, but they did not. They evidently satisfied their desire for the fresh grass of the shore of the pond, and disappeared into the forest. From all parts of the State come the stories of deer, and prospects for shooting in the fall are excellent, if the poaching is kept down through the close season. In Washington county the farmers are again complaining of the depredation of deer in their grain fields, i

for the deer that the State tries to protect during the breeding and helpless seasons.

The Aroostook Republican tells a rather bad story, if it is true, on this subject. That paper says that the game laws are not enforced in that county, and hints that the game wardens are not doing their duty. "Trout are being netted and killed by dynamite in the Madawaska lakes by the thousands, and in the region of Woodland and Perham yards of deer were broken up, nearly every animal being slaughtered. This is a matter for the people of Aroostook county to attend to. If the game and fish are slaughtered wantonly by poachers there will be no inducement for tourists to travel that region in the spring and fall."

I do not echo this because I know it is true, neither

would I blame those who have the enforcement of the game laws in their power. But I hear something of the same story from other parts of the State. In the case of the two deer that I saw, I am assured by guides and others that they both will be killed before the beginning of August; that juck shooting in close time is regularly practiced on the pond in question. If any one in authority, and desiring to look after that pond, will write the FOREST AND STREAM, the letter will be forwarded to me and I will give the needed information.

SPECIAL.

Editor Forest and Stream:

I have just returned from a fishing trip to the Maine woods, having visited the Moosehead and Nicatous region. In Moosehead Lake and at its west outlet the fish ng was all a sportsman should desire. Fly-fishing was not as good as I have seen it there, but large trout could always be gotten trolling with flies. The fishing in Nicatous Lake and Passadumkeag stream, its outlet, was decidedly poor, there being too much water from the recently heavy rains.

What I especially wish to call attention to is the law-less spirit of the inhabitants of both Moosehead and Nicatous. While fishing at the dam at the west outlet of Moosehead (Wilson's) I saw a river driver deliberately jigger a large trout which was lying in water a foot deep on the ap-on of the dam. Upon being asked if he knew he was breaking the law he said, "Yes, but there is no law in the woods." This fellow was a Canadian Frenchman, and a hard-looking specimen. I told several people around the dam about it, but they seemed to think it was all right.

around the dam about it, but they seemed to think it was all right.

In the Nicatous region a large part of the inhabitants gain a living by assisting self-termed sportsmen in clubbing deer to death in canoes. From the time one gets out of the train at Olamon station on the Maine Central Railway till the lake is reached, a unanimous and loudly expressed contempt for the law against hounding deer is expressed. They openly declare that they will hound deer, and defy the authorities to stop them. Preparations for next fall's shooting were already in progress, and men boasting of the ability of their dogs to drive deer to water or pull them down. The only way the game commissioners can stop this Nicatous poaching is to send several game wardens to establish a camp on the lake the first of S ptember and keep them there till the lake freezes, or the poachers are all arrested. An efficient fish warden should be kept at the west outlet dam, Moosehead Lake, from June 1 to Dec. 1, and one not connected with the lumbering or hotel interests. Winterhunting and fishing should be prohibited in future, for incalculable harm is done both interests by permitting such latitude.

Matural History.

LONG ISLAND BIRDS.

Editor Forest and Stream:

Will you be good enough to ask your readers to inform me whether they know of any specimens of the following species of birds that have been taken on Long Island, New York, within the last twenty years; if so, are they now extant and where? The numbers and names are from the American Ornithologist's Union Check List.

WM. DUTCHER, 51 Liberty street, New York city.

THE LOST RIVER SUCKER.

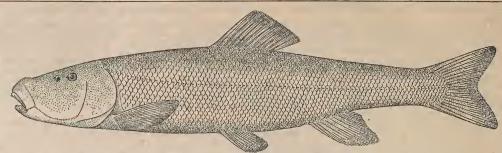

THIS is the local term, applied to a good-sized fish, first described by Prof. E. D. Cope in the American Naturalist Vol. XIII., 1879, p. 784, under the name of Chasmistes luxatus. He tersely describes it as follows: "Elong ste in form, head long, flat above and with a large footanel. Mouth term nal, the spines of the premaxilary bones projecting, so as to form a hump on the top of the snout. Lower lip very thin, dermal fold extending entirely around the chin. Scales 12-80-9. Radii: D. 11; A. 9.

the snout. Lower lip very thin, dermal fold extending entirely around the chin. Scales 12-80-9. Radii: D. 11; A, 9.

"Color, clouded above with black puncturt ons, below paler, with red shades in some specimens, fins uncolored. It attains a length of nearly 3ft. It ascends the streams in thousands in the spring, and is taken and dried in great numbers by the Klamath and Modoc Indians. The former call it Tswam. Its habitat is given as Klamath Lake, Or."

This is all there is on record regarding this species, and as it has never been fully described nor figured, I make this the principal excuse for this article at this late date, believing that a short description of the mode employed in catching the fish will be of interest to some of the readers of FOREST AND STREAM.

While stationed at Fort Klamath, Oregon, during parts of the years of 1882 83, I learned from the settlers and Indians living in the vicinity of the post that early in March each year countless thousands of a large species of sucker ascended L st River out of Tulé Lake, for the purpse of spawning about the headwaters of this stream, and that it was a sight well worth seeing. From the descriptions given me I believed that this fish was then still unknown to science, and I therefore at the time caused drawings to be made of fresh specimens, both colored and uncolored, which are inclosed herewith. These were made by Sergt. C. Gloster, Troop K, 1st Cav.,

LOST RIVER SUCKER, MALE. ONE-FIFTH NATURAL LENGTH. (From Alcohol Specimen.)

and are good likenesses. A pair, male and female, were skinned by me on account of their large size, and forwarded to the National Museum at Washington, D. C., where they are still the only representatives of this species. The only other specimen in the hands of a naturalist, so far as known to me, is the type in the possession of Prof. E. D. Cope, at Philadelphia. The following detailed description was kindly made for me from the skins above referred to, by Dr. T. H. Bean, the ichthyologist of the U. S. Fish Commission:

Chasmistes luxatus Cope.—The two skins in the U. S. National Museum are about thirty inches long and represent two sexes. The dorsal has cleven developed rays and the anal fine; there are twelve rows of scales between the lateral line and the beginning of the danal fin, and from eighty to eighty-two scales in the lateral line. The eye is one-fifth as long as the snout and is contained between ten and eleven times in the length of the head. The head is about one-fourth of the total length to the end of the scales. The distance between the eyes is nearly four times the length of the eye. The length of the dorsal base is about one-half the length of the head and is somewhat greater than the longest ray of this fin. The anal base is about a length to the end of the scales. The distance round to the anterior nostril. In the male the longest ray of this fin. The anal base is about the posterior that ip of the snout to the anterior nostril. In the male the longest ray of the anal equals the length of the posterior that ip of the snout to the anterior nostril. In the male the longest ray of the sand equals the length of the posterior that ip of the snout to the anterior nostril. In the male the longest ray of the family surface and the posterior that the head and one-seventh of the total length to the end of the scales. The male is rorfusely covered with minute spiny tubercles most abundant on the snout, top of head, the fins and the posterior half of the body. The table of measurements given below wi

	Female.	Male.
	Inches.	Inches.
Total length	30.00	29.75
Length to end of scales	26.50	26.75
Head, length of	7.00	6.40
greatest depth	3.20	3.80
width of mouth	1.70	1.30

Ventral, length of longest ray	2.80	3.10
Caudal, length of middle rays	2 00	1.80
external rays	4.00	4.00
external rays	4,00	≤,00

The maps examined by me show no Tulé Lake on them; but according to these Lost River flows into Rhett Lake,

small fry. As I was making a general collection of the fishes found in that region for the U. S. National Museum, I am certain that such a conspicuous fish as the latter would not have been overlooked by me.

In order to obtain some of these fish I made a special trip to the fishery on Lost River, some forty miles south of the post, and secured several specimens, which I packed in ice, and after having drawings made of a pair, male and female, I skinned and forwarded them with a general collection for the National Museum.

I arrived at the fishery on Lost River early on the morning of March 6, 1883. The surrounding country is flat and uninteresting and for the greater portion covered with sage brush. Looking westward, Tulé Lake could be seen probably about ten miles distant, and beyond it the outskirts of the Modoc stronghold, the lava beds, appeared in plain view. A few scrubby willows fringe the banks of the stream, which at the fishery is probably 30tt. wide. There the river flows over a rocky ledge, forming shallow riffles with perhaps 2 or 3ft. of water on them. The riffles are about 100yds. in length and the banks on each side some 3ft. high. Above and below these the stream widens out and the water in most places seems to be sluggish and deep. At the time of my visit it was quite muddy from the melting of the snow in the mountains, and the run of these fish was not at its height yet. However, it appeared to me that they were caught quite abundantly even then, and both sides of the streams were lined with whites and half-breeds as well as Indians, the last camped in the immediate vicinity with their families and a full complement of papooses and dogs. The squaws were busy splitting the fish up along the back, removing the heads and backbones and spreading the split fish upon the numerous sage bushes in the immediate vicinity to dry. The stench from the mass of decaying offal, which was scattered about everywhere, was anything but pleasant, but one can get u-ed to most anything in time, and after having be

LOST RIVER SUCKER. ABOUT ONE-THIRD NATURAL SIZE. (FROM LIFE.)

which is evidently the same body of water universally known in that region under the former name. This lake is located about forty miles from Fort Klamath in a south-southeasterly direction, and is not quite so large as either of the Klamath lakes. As near as I have been able to ascertain, the so called Lost River sucker is indigenous to Tulé Lake, and is not found in either the Upper or Lower Klamath lakes, as stated by Prof. Cope in his original description. In a conversation I have had with him recently on this subject, he told me that he obtained his specimen from an Indian, and understood that it was caught in Klamath Lake. During the eighteen months I was stationed at Fort Klamath, I never heard of nor saw a fish of this kind caught in the Klamath Lakes or their tributaries, but am aware that a smaller and less important species of the same genus, the Chasmistes brevirostris Cope, is found in these waters, and may be seen in considerable numbers along the shores of the upper lake from the wagon road running along Modoc Point almost any day in the spring of the year. This species is much smaller, and one of the large Lost River suckers would be noticed at once among such comparatively

attached. This rod was bent in the shape of a hook with the point well sharpened. The operator would reach out into the stream with his pole, as far as practicable, the curve of his rod dragging on the bottom, the point upper ward, and when coming in contact with a fish, a sharp jerk would be given, which usually impaled the poor brute in some part of the body, and after considerable struggling on its part to break away, it would be landed and at once removed from the hook by one of the squaws in waiting. As the majority of the fish will average from 6½lbs. to 7lbs. it took quite a skillful hand and no little labor to raise them up the steep bank without allowing the slender and pliable pole to turn and let the fish drop off before being properly landed. It all seemed simple enough looking on, so I concluded to try my hand also, but found it everything else but casy work to land my fish after hooking one. They make things especially lively when hooked near the tail, and my vain efforts to get control of one so hooked by me afforded considerable amusement to the entire Indian population then at the fishery. I never worked so hard to get a fish, and after all my endeavors it managed to wriggle off, just at the

time I thought I had it all right, much to my mortification, and the gratification of the large audience present. Of course it was the largest one hooked that morning; at any rate I thought so. An expert will readily catch in this manner a hundred such fish a day and even more, and I am sure that he will not be disturbed by umpleasant dreams inghtfall after such a day's work, judging from my limited experience.

A handsome young Modoc, while engaged in this work expecially stiracted my attention, a word as that of several of the young squaws present. He proved himself exceedingly skilled in the handling of his pole, his graceful and sinuous figure anticipating even of his victim and preventing his escape. He probably landed two fish to most of his competitors' one. There seemed to be a good deal of rivalry among the younger members to see who could catch the most fish, and while a bungler was most ummercifully chaffed, every one notivithstanding seemed to be in the best of humor, and I presume that your humble servant came in for his full amount of their jokes. Possibly, for my peace of mind, it was about as well that I did not understand all that was said about as well that I did not understand all that was said about myself.

These fish vary from 5 to Sibs. in weight and an occasional one will reach 10bs. It certainly cannot be called handsome, but its flesh is firm and white, much free from bones than ever I supposed a sucker to be, and well flavored, free from the muddy taste that even sticks to many of the larger trout found so abundantly in that region. I certainly preferred those I had cooked on my return to the post to any of the average trout in the Klamath basin, excepting the small ones possibly, and I was not alone in that opinion. The females were full of meanly ripe eggs which were almost ready to be deposited. They are about the size of a No. 4 shot and pale straw yellow in color. The Indians made no use of these as food. I am told that this fish, when slightly salted and then dried, tastes very

Chas. E. Bendire.

To Pennsylvania Ornithologists.—West Chester, Pa., June 6.—Having been informed that you are interested in the study of ornithology, I take the liberty of addressing you and stating that by a recent act of our State Legislature I have been directed to prepare a second and revised edition of the "Birds of Pennsylvania," for gratuitous distribution. I am exceedingly anxious to correspond with competent field naturalists in every county of our Commonwealth. If it is not imposing too much on your time and good nature I will be pleased to correspond with you relative to the bird-life occurring in your section of the State. Inclosed please find a printed list of birds recorded as occurring in Pennsylvania. I will be greatly obliged if you will kindly mark the list as indicated and return it to me at your earliest convenience. Should you decide to furnish me with information relative to the feathered tribes, which is worthy of special mention, full credit will be given in the forthcoming edition of the "Birds of Pennsylvania." If you know of any naturalists in this State_with whom I can correspond in relation to birds and mammals, please give me their names and post office address.—B. H. Warren, State Ornithologist. [A provisional list of the birds of Pennsylvania accompanies this open letter.]

FEMALE NARWHAL WITH TUSKS.—The male narwhal has only one developed tusk, and that is on the left side. The female has two tusks, but they are usually not functional. About the month of July, 1887, Captain James Pairweather harpooned a female narwhal with two tusks in Prince Regent's Inlet. Specimens of narwhal with two tusks are rare in museums. About eleven examples are recorded, but the sex of only one of these is certain. A female captured in 1684 is preserved in the Hambnrg Museum. Robert Brown says that double-tusked narwhals are not rare; Scoresby denies this. In the specimen recently obtained by the National Museum the spirals turn in the same direction and the symmetry of the two sides is wonderful. It is questionable whether a male narwhal with a right tusk is known.

PENNSYLVANIA SONG BIRDS are protected by a law patterned after the New York law. To take birds for scientific purposes a certificate must be obtained from the county prothonotary,

RANGE OF THE TURKEY BUZZARD.—Belmar, N. J., May 27.—On Saturday last while driving along the beach at this place I came across a pair of turkey buzzards. As they did not take wing until I was within 50ft. of them I was enabled to get a good view and to recognize them as being the same species I had so often seen on the Homosassa River, Florida. I have also seen them at the southerly end of Barnegat Bay, but never in this neighborhood before. What is their northern limit?—BIG REEL. [The turkey buzzard occurs as far north as southern New England on the Atlantic coast and on the western plains to latitude 53°. We have seen them in Connecticut.]

Game Bag and Gun.

DUCKING FROM A CATAMARAN.

A GUST of wind swept in through the car door as the brakeman swung it open. His indistinct exclammation of "Amityville!" recalled my dozing senses. "Come, Ed, wake up; here we are!" "All right, old man; I'm not asleep; only thinking. Let me help you with that bag."

with that bag."

The train moved off into the darkness, leaving us the sole occupants of the little station room. We were speculating as to whether Frank had received the telegram and considering the advisability of setting out for his shanty without him, for he usually met us at the

his shanty without him, for he usually met us at the station.

"Hello, boys! Darned if I ain't glad ter see yer, Shake!" was his greeting as he stalked into the clean house, making havoc with the neat floor wherever his cowhides, covered with mud, landed.

"It's good you youngsters had sense enough to fetch long them ileskins of yourn. Better crawl right into them now, an' doan't waste no time. Thars supper waitin' fur yer down ter the ranch."

Keeping within the narrow circle of Frank's lamp we plodded through mud and water, congratulating ourselves that our backs were to the flerce storm of wind and rain. The eye could trace nothing beyond the circumference of that little spot of light emanating from Frank's lamp, the only cheering ray or sign of life in this vast gulf of palpable darkness. How the wind did moan through the low pines that lined the road, driving the rain in vicious sheets among the branches and upon us with all the fury of a March nor'wester. It was a relief, after tramping over a mile, when we saw in turning a bend the ruddy glow from the windows of our guide's house.

All those who love the gun for the scenes and incidents it brings them among know the

guide's house.

All those who love the gun for the scenes and incidents it brings them among, know the enjoyment of being one of three or four sportsmen when grouped together around the after-supper table. Who cannot recall such evenings? Who cannot, if he is a sportsman, recollect some of the reminiscences that accompany the curling haze of tobacco smoke?

"Wall, boys, yer'll have a clear day ter-morrow, I'm thinking," said Frank in his paternal tone. "This yer storm has been a whooping things up fur the last two days, an' it'll blow itself out ter-night. I've got everything all ready ter jump right inter, so as we'll not waste no time in the mornin'. The broadbills have been rather plenty lately."

in the morning.

lately."

"By the way, Frank, where is that catamaran that you used over on the beach last summer?" I inquired.

"She's over there yet hauled up "longside my fishing short."

used over on the beach last summer?" I inquired.

"She's over there yet hauled up 'longside my fishing shanty."

When the ducks are migrating they fly along the shore, some days in numbers. Ever since my eyes had fallen on that little double boat, the idea occurred to me that it might be used as an excellent means of preventing the onward course of a few south-southerlies. This scheme had become firmly fixed in my mind, and I determined to give it a trial this trip.

Like all old settlers, Frank's head was stored with stories of hunting trips and happenings that are inseparably connected with the pursuit of sport upon land or water. It required little more than an interrogative word now and then to extract these retrospections from him. We all know these genial characters. Frank possessed all those virtues that make a man universally liked. Good-natured, honest, a child of nature, living but today, taking the world with the same even philosophy, whether the days bring misfortune or good luck. It was a very tender point with him to have his friends call him Frank. This arose rather from an indication of sincere fellowship than to make him feel young, for he had scarcely reached the half century line and was as tough as any of his fellow baymen.

It was late before we turned in, and when we last looked at the heavens the clouds were commencing to break. It seemed to me that I had been underneath the blankets something less than five minutes when I was roused by some fiend, with a lamp, shaking me.

"Come, Frank, let's have another wink," I muttered drowsily.

"All right, but yer'll have ter sleep without ther blandrowsily.

roused by some fiend, with a lamp, shaking me.

"Come, Frank, let's have another wink," I muttered drowsily.

"All right, but yer'll have ter sleep without ther blankets," and the cold-blooded villain swept the covering over the foot of the bed.

A couple of cups of hot coffee restored the good nature in both of us. The night still hung over the earth when we sallied out, loaded down with stools, shells and guns. A small arm of the bay reached up back of the house, where Frank moored his catboat. Stowing everything hastily away, we tied down two reefs and went skimming down the little creek before the night breeze. How strange and unearthly it all appeared. The little boat swept onward over the long waves that still remained out on the bay. Everything was dark and unreal, the only sounds that disturbed the silence were the dismal sing of the wind and and the surging of the water parted by the bows. The gloom threw over my mind a feeling of vague hallucination; for a few minutes it seemed like some unusual dream. A dash of the cold briny in the back of the neck dispelled this illusion. The skipper headed the Sanderling into one of the small coves on Oak Island, threw her into the wind and let go halliards.

We were all ready, with some fifty deceits bobbing in front of our blind, by the time the daylight commenced to creep over the waters. For some time before it was light enough to distinguish anything we could hear in the air above the ducks swinging along on whistling pinions.

The sun was just peeping above the banks of clouds when the first flock came in. Only three forgot to depart. By 10 o'clock we had scored but 13 birds, and things were getting dnll.

A storm of any duration from out the north and northwest, smooths the ocean close to shore. The wind beats down the surf so that there is scarcely a break. It was so to-day. The blow of the last three days had the effect of making the sea as placid as a millpond. The sun toward the middle of the day came out very warm and the dying out of the wind made it more like an April than March day.

Now or never! I could see flock after flock of "old mammies" skirting low over the water just out of range of the shore. Taking about twelve decoys I tied them together with twine (two and two) about two feet long and slung them over the supports of the catamaran. She was but fourteen feet long. Just light enough for Ed. and myself to lift easily. Before launching I fastened a short stick in each corner and wound a strip of light green muslin some eighteen inches high around them, to serve as a blind.

Running out about 300yds, I joined the strings of the stools together so that they formed a long line, each bird 2ft. from its neighbor, connecting the whole crew to my floating battery by a long cord.

Things were not fairly ready. I was just attempting to discover the softest position to assume while lying flat on a level board upon my back, when in dashed a flock of seven or eight. Drawing on one of the old birds, I let go some No. 4, and catching two as they cross tangled them up with an ounce of No. 2. One was only wing-tipped and dove instantly on touching the water. Two more flocks swing in, leaving five of their number, and I was lying low watching another approaching string, when a shadow passing just in front caused me to look up. There, almost directly above, was a large gull. Straightening to a sitting position and throwing the gun to my face, I pulled the trigger. As he turned over I recognized a bird I had long been anxious to procur

at those wily pirates of the ocean, the great black-backed gull.

The wind was beginning to work around to the west and rising. The long ocean swells were gradually increasing in length and size, so I rowed in, with a number of south-southerlies, and among the lot some beautiful male birds with their long tail feathers and ruddy breasts. Ed and Frank had not been idle on the bay side. Gathering stools, etc., together we went scudding across the broad breadth of water between the beach and mainland, with a good mess of birds stowed away forward. They were not canvasbacks, true, but there was some consolation in knowing that the reason they were not of that species was because there were none of them around, i. e., in the particular vicinity of our blind. Shooting ducks on the broad ocean from a catamaran is a unique experience, at least to one individual, and one not likely to be forgotten, even if the game is nothing more than the despised "south-southerly." Try it some quiet March day, and if the recollection of it in summer does not make you several degrees cooler, the writer is as wide of the mark as he once was of a certain woodcock who refused to be persuaded by two charges of No. 12.

Rex B.

THE ARKANSAS DEER LAW.

THE ARKANSAS DEER LAW.

PALD KNOB, Ark.—Editor Forest and Stream: In the category of States that have lately distinguished themselves by the supreme idiocy of their attempts at game-protective legislation, the great State of Arkansas is certainly deserving of the red ribbon. The old law as it stood prior to the last session of the Legislature, was sadly deficient in some respects; only preventing the killing of deer for seven months in the year; the open season beginning ten weeks too soon, Sept. 1, and holding on until Feb. 1. Still it effected a great deal of good, doing away with hounding while the does and fawns were comparatively powerless to escape, and preventing the butchery heretofore common during the buffalo gnat season, when any boy with an army musket could score a half dozen deer by a day's sitting near a smoking stump. As a consequence there was a marked and visible increase in the game supply to such an extent that our market gunners could make fair wages supplying the Memphis market, where it often happens that venison and wild turkey are quoted lower than beef and tame poultry.

However, our toothpickian Solons were determined not to let well enough alone. That there was room for improvement in the old law was quite apparent, but whether their effort in this line was crowned with success I leave the reader to decide.

First, instead of cutting the open season down to three months—from Nov. 15 to Feb. 15, or Nov. 1 to Feb. 1; either of which changes would have been better—they added on another month, August; so that now the ambitious sportsman who may be lacking a firearm, stands a very fair chance of running down and capturing an infantile "monarch of the forest," thus winning his laurel wreath in a manner strictly legal, though quite unique. How this change adds to the welfare of the game I am as yet unable to learn.

There has been for years a law that assessed a license on all "non-residents following hunting or trapping in Arkansas." Numerous attempts have been made to have this statute ap

Now this resource in the time of need is shut off by legislative decree. "Six years shall the Memphians hunger for the flesh-pots of Arkansas," spoke the law makers, and Gov. Eagle saw that it was good and signed

the bill with his official hieroglyphic; and the angular, hungry-looking mossyback in the wayback districts straightway broke his old rifle in disgust and gave his better half the barrel for a fire poker. (Mem.: I'm going to buy myself another gun soon.)

It is hard to understand why such a law should be necessary in a country where game is more abundant than in any other portion of the Union. When, in an "off year" for most crops, nearly a hundred deer can bo killed in a circle hardly four miles in diameter—and most of these by four still-hunters poorly armed and little versed in hunting; when such a score as this is made within five miles of an old established railroad and in one of the most populous counties in the State, why should such strenuous efforts be made to prevent the farmers from getting value received for the sweet potatoes and peas destroyed by the deer during the months when they may not be molested? Possibly the framers of the bill knew what they were about.

As it stands, an impenetrable fence is built between the average Arkansas gunner and the Arkansas deer; for most of our local nimrods must combine pleasure and profit in their sports, and the majority of those able to enjoy a week in the woods without detriment to their business interests, are confronted by another new-fangled, progressive idea which makes it a misdemcanor for the resident of one county to "camp-hunt" in another. So to condense the matter in a nutshell, one must adopt the words of a late correspondence in the Little Rock Gazette, which asserts that the only party who can hereafter devastate our forests is the wealthy amateur "able to hire some particular friend, in the best range, to invite him to spend a few days as his honored guest."

Give us less legislation and more protection—and to the Arkansas sportsmen as well as the swamp deer.

S. D. Barnes.

CAMPS ON THE LITTLE SOUTH

IN a letter to Forest and Stream some time ago I promised some camp notes from our hunting trip to the Barnes Camp country on the Little South, or South Fork of the Cache La Poudrie River, a beautiful stream that heads high up on the Snowy Range and comes dashing down the mountains through beautiful forks and grand cañons to the fine agricultural valley of the Poudrie and empties into the South Platte River below the city of Greeley. The Little South is a fine stream for trout in the summer, but go down to deeper water for winter quarters.

Old Grey has come with me and here we are on Nov cers.

Old Grey has come with me and here we are on Nov. 22 in camp all snug and nice after a two and a half days' hard pull up the mountains. Three times did we have to unload and carry our oats and bedding up the steep places in the road in order to make our load light enough so our horses could get up with the wagon and grub. Our camp is in a beautiful basin near the top of Barnes Mountain; we have pitched our tent in a grove of young aspens with plety of dry wood at our tent door. Some 30yds, distant an ice cold spring sends its waters dancing down the mountain side, and all around the camp is abundant grass for our tired horses, the snow having melted off the south slopes and in the basins.

It being late when we got our camp all in shape we made but a short trip from camp. I saw a fine flock of about a dozen of willow grouse, but did not shoot any of them for there was plenty of deer signs about, and I never allow myself to shoot at small game when hunting for deer. On my return, when near camp and just as the shades of evening were creeping through the pines, I jumped a fine blacktail doe, but the timber being so thick I missed.

Old Grey came in empty-handed. Supper over I clean and cill we Morning the shades of the sand beautiful to the southers.

I missed.

Old Grey came in empty-handed. Supper over I clean and oil my Marlin .40-60 and hang in its place ready for its deadly work to-morrow, and as I write my camp notes old Grey has the camp stove red hot and is cleaning his doublebarrel muzzleloader, an old arm with the hammers on the side, shooting about a .32 ball and very accurate. Old Grey is a Virginian, seventy-one years old.

hammers on the side, shooting about a .32 ball and very accurate. Old Grey is a Virginian, seventy-one years old.

Nov. 23.—Up before day this morning, and at daylight I find that my horses have "hit the road" for home. While hunting for their tracks near camp I start two deer not more than 300yds. from our camp; most too far off for a good shot. Taking my horses' tracks I follow them to the road below camp, and after a hard tramp of about ten miles find them at the gate of a cattle ranch we had to pass through on our way in on my return. When within 500yds. of camp two deer skip across the road just ahead of me, but do not stop for my Marlin. Arriving at camp at 1 o'clock I find old Grey at work cleaning grouse to fry for supper. The inner man being satisfied I shoulder my Marlin for a short hunt over north of camp to get the lay of the country. In less than a half mfle of camp I jump three deer out of a gulch of dead pines and get a running shot, but no venison for camp yet. I take their tracks and follow slowly, and as I pass over a rocky ridge and down around the mountain side, sparsely covered with dead timber, I see a deer standing and looking at me up on the side of the mountain. Knowing it will stand there but a moment I make a quick shot. Up the mountain a little quartering to me. I throw my gun on to it and fire three shots in rapid succession, the third shot breaking its neck. Pacing down to where it lay I found it was just 185 paces. Then I go to look for the one I shot at first. Where it stood I find plenty of blood; following the trail about 50yds, up the hill I find it dead, shot through. Dressing and hanging up the game I hurry to camp for a pack horse and have them both hanging in an aspen tree by the tent before dark. They were both buck fawns: Old Grey got more grouse, so there is no prospect of a meat famine in camp soon. The evening passes off pleasantly, listening to old Grey's stories of wild turkey shooting away down in old Virginia.

Nov. 24.—Had a big tramp to-day and saw no deer. Saw

in old Virginia.

Nov. 24.—Had a big tramp to-day and saw no deer.

Saw a beautiful white snowshoe rabbit and a white weasel, but did not shoot them. Old Grey got three

Weaser, the grouse.

Nov. 25, Sunday.—Thought I would take a ride to-day up toward the timber line on the west side of Little South, where I camped six years ago. Found about six inches of snow, but saw no game sign except a fresh lion track, and I had not lost any lions. Returned to camp about 2 P. M. Old Grey was in camp cleaning grouse and a

snowshoe rabbit. About 3 P. M. I take my gun and go over the green ridge south of camp. While going down the south side I see a nice sleek fawn in some dead timber, which I kill with the first shot; and then see another bound away down the gulch. My dead deer proves to be another buck fawn. I see the other deer walking slowly about among the dead timber a little below, apparently waiting for the other. I fire and wound it; left a strong trail of blood: but there being no snow over here, and it now most dark, I dress my dead deer and return to camp, intending to return early in the morning and follow my wounded deer. A lady passed our camp this evening on horseback, carrying a Ballard rifle, the wife of Mr. Barnes, who has a cattle ranch about three miles from our camp over on the Little South; she had killed two deer this fall: she had been helping Mr. Barnes take out a bunch of cattle and was on her return home, where she expected to remain by herself until his return, some three days later. She was a typical Western woman; a lady with plenty of grit.

Nov. 26.—This has been a red-letter day for us. Early this morning we went over the mountain and took the trail of the wounded deer. It was with great difficulty that we were able to follow it over the bare ground and rocks; but in a short distance we jumped it up out of a lot of down timber away up on the mountain side. I fired three shots at long range, but failed to get a ball into the right spot to stop it. The trail soon led me over into a thick belt of dead timber with three inches of snow; here I could follow very easily, and soon discovered that I had broken the deer's right hindleg well up in the thigh. After following over a mile, and being very cautious, I crept on to it and shot it through the heart. At almost the same instant I heard two shots fired at a short distance to my right, which proved to be by Old Grey; he had shot a fine two-point buck, a dead match to the one I had just killed. He had seen the buck coming before I shot, and snapped a cap

shoulder.

Hanging up our deer we again parted company. I had not gone more than 300yds, when I jumped a band of five or six just around a point on a mountain side. I fired a wing shot and wounded one, which I followed until most dark, but had to give it up. I don't think it was wounded very bad. Old Grey saw several more deer, but did not get a shot. He is as happy to-night as a schoolboy with a pair of new skates, and says he is good for a big day's hunt to-morrow. Have now hunted four and a half days, and we have five fine young deer, all bucks.

but did not get a shot. He is as happy to-night as a schoolboy with a pair of new skates, and says he is good for a big day's hunt to-morrow. Have now hunted four and a half days, and we have five fine young deer, all bucks.

It looks stormy to-night: have doubled the blankets on our horses; got in a big pile of wood, and tied the tent down tight; old Grey has it hot; and I jot down my notes while he sits on the spring seat in front of the stove and tells about that possum he and the darky "caught up a 'simmon tree down in ole Virginia."

Nor. 27.—Looking out of the tent at the first peep of day we discover that it has snowed about an inch, just enough for a good tracking snow. We are again off for the hills and pine woods; a fine mist is still falling and a thick fog hides the high mountain tops above us. Old Grey strikes a fresh track near camp and follows it, but fails to get his deer, and comes into camp at 3 P. M. with a nice fat rabbit. I went over the mountain and found the fresh trail of three deer. After some distance they were joined by two more, and passed through the timber where we killed the two bucks yesterday, passing within a rod of each deer. I followed very cautiously now as the tracks were getting quite fresh. Going up the side of a high mountain thickly covered with green pine and spruce, I see something away up ahead of me that looks like deer hair; can just see it between two trees not more than a foot apart, but cannot tell which end the head is on. As the smoke clears away my deer is gone and all is quiet. I stand still a little while and then move cautiously up. Pretty soon I hear a loud thumping and breaking of brush, and directly I see four deer cross the head of a gulch some hundred yards up above me. Going on up I find my deer lying on its back down in a small gulch, about two rods from where it was standing when I shot. This was rather an odd shot; the deer, a very fat yearing doe, must have been standing with her head doubled back bitting her right hindleg, for my bullet passed t

being for the most part down hill, I went nine miles in one and a half hours, when I arrived at a ranchman's house and found my horses tied up to the fence. I made the acquaintance of Mr. Hake. His wife, seeing the horses going past, had run out and caught them. I declined a kind invitation to remain over night in the cabin, and arrived at camp at 7 P. M., cold and hungry. But old Grey had things hot for me. Supper over, dishes washed and stored away in the mess box, old Grey takes his accustomed place on the spring seat in front of the camp stove, and the day's hunt is all gone over again, winding up with some of his "old Virginia" yarns.

Nov. 28.—Forty years old to-day. The fog is still thick, and the pines are beautiful with their white coating of frost, which seems to me a fitting tribute for my fortieth birthday, for ere long the frosts of many winters will whiten the top of my old head. As it was rather a poor day for hunting, we concluded to pack our game into coamp. Having but rone saddle, we strapped a blanket on to the lother horse. By going over Barnes's Mountain on to the Little South, we have a good trail around to where our deer hangs. About three miles from camp some fresh tracks cross the road. I give my horse to Old Grey and go on ahead; at the top of a ridge a fresh track crosses the trail; judging from the size of the track, I take it to be a fawn. Keeping a sharp lookout to my right as I move slowly up the trail, I discover a deer some 70yds, distant standing behind a small green pine. I can only see its hindquarters. Holding where I think it shoulders rought to be, I fire, and such a jump and rush and running in a circle as that fawn made; but I knew I had it is of held my fire, and it soon went down. The ball had hit it in the neck and came out through the right shoulder. I went over, and as Old Grey came over the ridge I motioned him up to me. We soon had it hanging up on a pine, and went on and got the three deer we had killed I motioned him up to me. We soon had it hanging up on a pine

venison ribs beats fat coon or 'possum down in or virginia any day.

Nov. 30.—Clear and frosty, but the sun came up bright and warm, so we thought we would make one more effort for a big buck. We hunted all day and got nothing except a snowshoe rabbit, which I shot high up on the mountain among the green pines. Saw three beautiful snow-white mountain quail, but did not succeed in getting one of them. To-day is the close of the open season for deer in Colorado, and to-night we end our hunt.

ON THE SAULT STE. MARIE.

ON THE SAULT STE. MARIE.

A Sthis has been one of the most peculiar seasons ever known in the region, I cannot refrain from giving some account of a three weeks' trip on the Sault Ste. Marie River and Munoshkong Bay. I call 1889 a peculior season from its forwardness, opening one month earlier than usual, and the scarcity of migratory birds which heretofore have settled and nested in the bay in countless numbers every spring. Munoshkong Bay, about half way between Lake Superior and Lake Huron, is a widening of the Sault River, about 7 miles deep; around this are several smaller bays, which in the autumn are full of tall rushes, covering thousands of acres, with many open places where the lilies grow—a perfect paradise of a wildfowl shooting ground. This is surrounded by soft swampy grassland, extending back to the timber, making a perfect home for the muskrats, which until this spring could be found by the hundreds, but were almost totally annihilated during the past winter by the ice freezing to the bottom; this caused them to perish in great numbers and their carcasses can now be seen by the score. These facts, coupled with the total failure of geese to alight and only a few small scattering flocks of ducks, go to make up a very peculiar state of affairs in this ancient and famous hunting ground of the Indians, who used to congregate here in early spring for a blaughter of ducks, geese and muskrats.

My Indian friend, Mr. Ed Shawwauna, with whom I made a most enjoyable five days' trip last September, has often given me such glowing accounts of the great quantities of duck and geese which congregate here in spring flight, that it has always increased my desire to visit the place, more out of curiosity than a desire to destroy game. Mr. S. having gone with dog and cauoe over the ice early in April, to be on hand at the earliest breaking up of the ice, my desire increased each day to join him. The 20th of April found me amid the drifting ice, under sail, in a small boat with camping outfit, making down the river

vited to join them, which I gladly did, as they were out for a trip to Munoshkong also; and it proved a most agreeable meeting, for I found young Perry one of the best woodsmen and agreeable companions I ever met. He is a perfect genius in every sense of the word, for with axe and pocketknife he can make anything a woodsmen and generated.

best woodsmen and agreeable companions I ever met. He is a perfect genius in every sense of the word, for with axe and pocketkinife he can make anything a woodsman needs.

The first night in camp we were awakened by the arrival of two canoe loads of whooping Indians, who camped near us. Next morning we moved further up the river into the thick timber where it was warmer, and we found better camp wood. Avoing P. set a gill-net and caupit some pickerel; and here was where my companion showed his hand at cooking boiled fish and potaces. Did I ever eat fish with such a relish? Our white tent and soft bed of sweet green balsam boughs gave as picturesqe a scene as one could wish. The third day we started down the river, encountered about a mile of ice and camped on an island near the mouth of the Munoshong, a lovely spot on high ground among the balsam, birch and poplars. Here we had smoked fish, fried fish and fish boiled. Young P. served up woodchuck, muskrat and porcupine, all of which I tried and pronounced excellent, except the muskrat, for which I confess some prejudice: it may be palatable when properly prepared, but I fancied I could taste in one dish of this kind a little musk, which settled the thing with me.

After a few days we went around into the bay and camped in the hardwood. Up to this time we had seen but few ducks, and no geese would alight, though many flocks passed over every day, and cold northwest winds and snow made life anything but agreeable. One night P.'s dog barked at something near camp. I got up, unied him and tried to sic him, but he would not seek; we concluded it was a bear, as it walked off slowly, cracking the brush as it went. Next day while building a deadfall bear trap I had the misfortune to cut my foot badly with an axe, which put a damper on our prospects, almost every day and night deer came close to our camp, and on Sunday, April 27, an inch of snow lay on the ground and deer tracks could be seen in every direction. P. went out about two miles in the bay to a reef to get a

RIFLES FOR SMALL GAME.

RIFLES FOR SMALL GAME.

Editor Forest and Stream:

I have owned during the past ten years no less than a half dozen rifles of as many different makes, but mostly of .2cal. I have at present a No. 3 F. Ballard gallery rifle, which has been re-chambered to take the Winchester cartridge, containing 15 grains powder and 45 grains lead. Although I cannot complain of inaccuracy, I find one fault which every one who uses a .2cal. rifle on game seems to find, it too often causes a lingering death, giving the game a chance to escape. I agree with your correspondents that there should be a rifle placed on the market, midway between a .32cal. and .22cal., but I do not think the .25cal. would fill the bill, being but .03 of an inch larger in caliber than the .22. I would consider an ideal small-bore rifle a Colt repeater, .27cal., 25 grains powder, 85 grains lead, 26in, barrel, 9lbs. This would undoubtedly do good work up to 250yds., and would be in caliber about midway between the .22 and .32.

Nevada, Ia.

NEVADA, Ia.

Nevada, Ia.

Editor Forest and Stream:

I would like to ask some of the writers who advocate the .25cal., if that will be much improvement on the .22. Would it not be better to make a rifle a little nearer half way between .22 and .32, say .27 or .28cal.?

Has any one tried the .30cal. in a rifle? If so will they give their experience? It does not seem as though a .25cal. would have much advantage over a .22 in point of ease in keeping clean. However, if any one turns out a good .35cal. rifle with good ammunition to suit, I will try and have one. I hope too they will make a good article in rim-fire cartridges, as they are cheaper, and so far as we can learn give about as good results in that size shell as the center-fires.

Cheapness in ammunition should go a great way toward making a small rifle popular. Witness the rifles using .22 short, and we predict for a .25 or .27cal. rifle with rim-fire ammunition suited for it an immense sale.

Buckeye State.

Editor Forest and Stream:

I must say that I am very glad to know through the Forest and Stream that there are good men taking an interest in having a .25 rifle made. I think it would be the gun for all-around work. I have often wished for a larger bored gun than the .22, and a .32 is too dangerous for yard practice. I am sure the .25 would meet the demands of most sportsmen. It could be much more easily kept clean, although I do not find much trouble in keeping my .22 in fine condition. It would not cripple so much game to go off and die, and it would do its work at longer range.

Seneca Mo.

NEWFOUNDLAND DEER LAW.

HARBOUR GRACE, Newfoundland, May 30.—Editor
Forest and Stream: I inclose a copy of the "Deer
Preservation Act," passed in the present session of the
Legislature. The act has not yet been officially promulgated, but I think you may rely on this copy as correct.
It will receive the sanction of the Governor to-morrow
at the close of the Legislature. This abridgment of the
law gives all the provisions of interest to foreign sportsmen:

men:

I.—Hereafter no person shall kill, or pursue with intent to kill, any enribou, except from the 1st day of October until the 15th day of Fobruary, both inclusive, in any year, nor shall any person expose for sale or have in his possession any green caribou skin or any part of the careass of a caribou, except during the period aforesaid and the first ten days in March in any year.

II.—No one person shall, during any one year or season, kill or take more than five stag and three doe caribou.

III.—No person shall kill or take caribou without having first procured therefor to himself a license, issued for the year or season as hereinafter provided.

IV.—Every such person not usually resident in this colony or its dependencies, shall pay for such license an annual fee of \$50, and every person domiciled in this country shall pay a fee of \$10 for such license.

ery person doucicled in this country shall pay a fee of \$10 for ch liconse. V.—The license required by this act may be issued by a stipendiymagistrate, collector or sub-collector of customs, a justice of e peace and such other officers or persons as may be empowered the Governor in council for that purpose, the person requiring e licence first paying therefor a fee of \$1 and making oath or irmation that he will not take or kill for the season for which e license is issued in manner provided by this act a greater mber than five stag and three doe carbou, and that he will use best endeavors to have the carcasses or flesh of any carbou he ay kill, and which may not be consumed for food and which is itable for food carried out of the woods, or interior of the country into some town or settlement within ten days after the carries ushall have been killed. And that he will duly clear at the istoms' House any carbou heads, anthers, skins or other parts the caribou which he may lawfully export or carry out of this lony.

suitable for tood carried out of the woods, or interior of the contry into some town or settlement within ten days after the earthou shall have been killed. And that he will duly clear at the Customs' House any caribou heads, antlers, skins or other parts of the caribou which he may lawfully export or carry out of this colony.

VL—Any person knowingly or wilfully making a false declaration on oath or false affirmation under the preceding section of this act shall in addition to any other penalty to which he may be subject under this act, be liable to be indicted, tried, covieted a subject under this act, be liable to be indicted, tried, covieted a subject under this act, must produce the same when required so to do, by any magistrate, justice of the peace, constable, collector, or sub-collector of customs.

VIII.—No person shall export or carry with him out of this colony any venison, or the heads, anthers, skins or other parts of caribou, without first clearing the same at some customs' house, or with a duly authorized officer of customs or an officer empowered, for the purpose of this act, and the person so claiming the purpose of this act, and the person so claiming the purpose of the control of the control of the thin the same shall have been obtained and that the same is not exported as an article of commerce, and shall also make oath or affirmation of the numbers (if any) of the caribou he himself or any party he shall have been with, have killed or taken in the course of the then or of the immediately preceding season, and he shall pay a fee to the officer of \$1 for each clearance.

IX.—No person shall export in any form the flesh of caribou as an article of commerce of caribou.

Xi.—No person shall export in any form the flesh of caribou as an article of commerce of caribou.

Xi.—Any person who shall here of caribou with dogs, shall be liable to a fine of \$25 in addition to any penalties to which he may be then shall person who shall prosecute the offense, and any person finding any such snare or trap s

Am off to-morrow for a couple of days' good trouting. The spring is here, the delicate-footed May, with her fingers full of leaves and flowers, and with it comes the thirst to be away, wasting in wood paths the voluptions between tuous hours.

tuous hours.

Stamford Rod and Gun Club.—Stamford, Conn., June 15.—The Stamford Rod and Gun Club is the title of a new organization formed quite recently, chiefly by New York gentlemen having summer residences in Stamford and Noroton. The headquarters of the club is at Stevens Point. The club will devote itself to the promotion of the sports of shooting and fishing, and to this end will exert all its influence for the enforcement of all laws relating to game and fish. The club consists of the following named gentlemen: W. J. Parks, President; George Geis. Secretary; William Eckhert, Steward; George Costigan, Jacob Senjer, S. A. Wolf, H. C. Mount, Henry Kleisch, E. Hodgeman, William A. Ross, R. Vander Henden, Joseph Jordan, James W. Campbell, A. J. Pixley, Thomas J. Murray, J. G. Dotterwich, George A. Peters, George Rebsamen, Samuel Howard, Alfred Hopcroft, W. G. Williams, D. Budd Scofield.

CHICAGO, Ill., June 10.—Mr. J. E. Miller has resigned charge of the gun department of the Western Arms and Cartridge Co., and on July 1 will open at Cincinnati, O., his old home, a general agency office of the Oriental Powder Mills, of Boston. Mr. Miller's friends here regret that he must leave Chicago, but wish him all the luck in the world.—E. HOUGH.

THE WOODCOCK SEASON IN NEW JERSEY embraces the month of July and then the months of October, November and the first fifteen days of December.

Sea and River Hishing.

FISHING NEAR NEW YORK.

VIII.—SOUTH SHORE OF LONG ISLAND—Concluded.

VIII.—SOUTH SHORE OF LONG ISLAND—Concluded.

CANARSIE BAY has been the most popular fishing resort near New York for years. In fact, it is almost too popular, for, although the majority of fishermen who go there are gentlemen and behave themselves as gentlemen, there are unfortunately many anglers met there who carry more liquid bait than any other kind, and who conduct themselves like loafers. If you are a respectable, law-abiding and peace-loving fisherman—as of course you are—go to Canarsie on any day but a Sunday or a holiday, and you can have a good quiet day's fishing.

CANARSIE SHORE.

CANARSIE SHORE.

day's fishing.

CANARSIE SHORE.

Canarsie station, on the bay shore, is the objective point for the fishing on the north shore of Canarsie Bay. Take the Rockaway Beach and Canarsie R. R. from the Howard House, East New York, from which point the round trip fare to Canarsie is 20 cents. To reach East New York take any of the Brooklyn ferries and connection can be made on the other side for East New York by horse cars. The quickest route of all is via Brooklyn Bridge and Kings County Elevated R. R. Trains to Canarsie run from a half hour to an hour apart.

The fish now being caught within reasonable distance of Canarsie station are flukes, blackfish, sea bass, bluefish and weakfish. Some of the favorite spots for dropping a line are Barren Island, quite a long sail from Canarsie. Ruffle Bar, Pumpkin Patch and Fishkill. Weakfish will be very plenty after this week. There is a line of steamers (fare 10 cents) that makes connection with all trains at Canarsie for Seaside station, Rockaway Beach, the southern boundary of the bay.

On the left side of the station as you alight from the cars are the following resorts:

D. B. Morrell has twelve rowboats for hire at 50 cents a day, except on Sundays and holidays, when the price is \$1. He keeps bait of all kinds constantly on hand, and can provide tackle if desired. One of Morrell's patrons, Charles Freeman, of Canarsie, caught one 5lb. and one 4lb, blackfish three Sundays ago.

John O'Brica has fifteen round-bottom and twenty flatbottom boats, for which he charges 50 cents a day week days and \$1 Sundays and holidays; boatman \$2 a day extra. O'Brien keeps always supplied with bait and tackle.

extra. O'Brien keeps always supplied with bait and tackle.

Eden & Madson have six round-bottom boats, for which they charge the same rates as the others. They also have a 32ft. centerboard cabin sloop for hire at \$8 week days and \$10 Sundays and holidays. The sloop takes fishermen to Fire Island, Sandy Hook, the Banks, or anywhere her skipper thinks is a likely spot for hauling in big fish. Eden & Madson keep bait and tackle always on hand.

The resorts mentioned below are all on the right side of the station (south side):

James Sellers has twenty-nine rowboats which he rents at the prevailing rate. He also has three 18ft. catboats, which he rents at \$2 week days, \$3 Sundays and holidays; boatman \$2 a day extra. Bait and tackle are always supplied if desired. Sellers says that shrimp are the best bait just now, and that fluke are the most plentiful fish at this season. Weakfish are probably biting well by this time.

at this season. Wearnest this time.

William H. Lisk has thirty-one rowboats for hire at William H. Lisk has thirty-one rowboats from 17 to the Condens and holi-William H. Lisk has thirty-one rowboats for hire at the prevailing rate. He also has five catboats from 17 to 20ft. long for hire at \$3 week days, \$4 Sundays and holidays; sailing master \$2 extra. Lisk reports that plenty of bluefish and flukes are being caught, the last of the ebb and first of the flood tide being the best time for fishing. Eels are as plenty hereabouts now as flies in a country barroom in August. The prospects for crabbing this season Lisk declares to be great.

Garrett S. Braisted has twelve round-bottom rowboats at the prevailing rate. He also has five catboats to hire at \$2 week days and \$3 Sundays and holidays: sailing master, \$2.50 a day extra. Braisted reports good catches of blackfish, flounders, fluke and weakfish by his patrons. He always keeps bait and tackle on hand. The celebrated catboat Ours, champion cat of Canarsie Bay, is owned by Braisted.

He always keeps bait and tackle on hand. The celebrated catboat Ours, champion cat of Canarsie Bay, is owned by Braisted.

John Kavanagh has sixty rowboats for hire at the prevailing rates. He also has one 20ft. catboat, five 16ft. cats and two of 18ft. length, for which he charges from \$1 to \$4 week days, with an advance of half a dollar on holidays and Sundays. Beside these he has two spritsail round-bottomed boats at \$1 a day week days. Kavanagh is the owner of the 40ft. centerboard cabin sloop the Katie Kavanagh, and the 35ft. centerboard cabin sloop the Katie Kavanagh, and the 35ft. centerboard cabin sloop the Fleetwood, for which he charges \$8 a day week days and \$10 Sundays, which prices include a sailing master. Kavanagh has bait and tackle always on hand, and can lodge fishermen at 50 cents a night. Kavanagh reports a big haul of sea bass and fluke in the bay at Fishkill recently by John Reither, of Brooklyn.

ROCKAWAY BEACH SHORE.

The south shore of Canarsie Bay is formed by the spit of sand well known as Rockaway Beach. The best fishing grounds in Canarsie Bay are reached from the stations on the New York & Rockaway Beach Railroad, which crosses Canarsie Bay on a long trestle, and runs along the beach to its western end. Trains may be taken from Long Island City, from Bushwick avenue (round trip 50 cents). The summer time table will be in effect soon, but at present trains leave Long Island City at 5, 6:35, 9:10, 11:10 A.M., 1:30, 3, 5, 6:45 P.M.; Sundays, 7:10, 9:10, 10:30, 11:50 A.M.; 1:15, 3:15, 3:20, 4:30, 5:45, 7 and 8:10 P.M. From Bushwick avenue trains leave at the same time as from Long Island City, except that in some instances they are five minutes earlier, and the last train at night is at 6:30 instead of 6:45. On Sundays the time tables are identical. From Flatbush avenue trains leave at 6:15, 9:20, 10:57, 11:40 A.M., 1, 1:40, 2:40, 3:50, 4:40 and 6:20 P.M. Sundays at 7, 9:20, 10:15, 11:40 A.M., 1, 1:50, 2, 3, 3:50, 4:27, 5:50 and 8:10 P.M. All these trains stop at the fishing stations,

time table is as complex as the weakfish tackle illustrated

time table is as complex as the weakfish tackle illustrated in a New York evening newspaper.

The steamers crossing the bay from Canarsie to Rockaway Beach make their landing there at Seaside station. This is the last station if the angler comes by rail at which there is a fishing resort. It is the nearest place from which to reach the fishing grounds off Barren Island, and is convenient to several other favorite places. Martin Schultz, of this place, has for hire twenty-one flat-bottom rowboats at % cents a day; three round-bottomed boats at 50 cents an hour or \$3 a day; one small catboat at \$3 a day, and one 21ft. catboat at \$1 an hour or \$7 a day, including sailirg master. Schultz makes all his own boats and guarantees them dry. He reports good catches of weakfish, blackfish, sea bass, bluefish and fluke. One of his customers, Mr. Charles Newman, of Brooklyn, in one day's fishing recently caught thirty fluke, which averaged two pounds in weight. Schultz always has bait and tackle on hand.

At Holland station, the next stop above Seaside toward Brooklyn, is Charley Frey's place. He has thirty-seven rowboats at 50 cents weekdays and 75 cents Sundays and holidays; one 23ft. catboat at \$6 a day, and one 19ft. cat at \$5 a day. He also has one 37ft. cabin centerboard sloop at \$10 a day, which includes sailing master. Frey and Charles Miller caught fifty weakfi h at Moxie's Creek at the head of the bay as early as June 8. On the same day Messrs. A. Phillips and J. F. Burke caught twenty-eight large blackfish at the Block House wreck opposite Barren Island. Frey keeps both bait and tackle. At Holland station is the headquarters of the Redfield Fishing Club. of which Mr. Andrew Sutton of New York is the president.

Hammel's station (Willow Grove) is the next stopping place. E. G. Babcock has twenty-two rowboats at from 50 cents to \$1 a day; three catboats from 16ft. to 22ft. at \$3 a day without sailing master or \$5 with one, and one 20ft. sloop at the same rates. Babcock is a boat and wacht builder and does good work

20ft. sloop at the same rates. Babcock is a boat and yacht builder and does good work. Bait and tackle can always be supplied.

M. A. Magerus, at Hammel's station, has fifty rowboats at 50 to 75 cents week days, 25 cents extra Sundays and holidays; one 21ft. catboat at \$8 a day, and one 26ft. open sloop at \$10 a day, sailing masters included in the last two craft. One day recently Henry Snyder, of Williamsburgh, one of Mr. Magerus's patrons, caught a 71b. blackfish at Block House wreck, and the party he was with took twenty blackfish of an average weight of 41bs. Magerus keeps bait and tackle.

J. Carle, at Hammel's station, has fifteen rowboats at 50 cents week days, 75 cents Sundays and holidays; one 18ft. flat-bottom catboat at \$1.50 a day; one 16ft. catboat at \$3 a day, sailing master \$1.50 extra. He also has a 28ft. steam launch, accommodating from ten to twelve persons, at \$8 week days, \$10 a day Sundays and holidays.

At Hammel's station is the luckiest fishing club on the bay, the Lonesome Six. They are also the jolliest and happiest crowd that exists in all Long Island. Three of them, Louis Diessle, George Groesch and George Roehm, were down the day the FOREST AND STREAM man visited Hammel's, and they had been making a big record. They enticed 17 fluke out of the wet, one more than they coaxed the Sunday before, and their average weight was 61bs. The night before they bobbed to get 301bs. of eels but took 401bs. by mistake. They want to see the Columbia Club, of Staten Island, try to beat their fishing record this season.

At Beachanel, the station between the beach proper

Glbs. The night before they bobbed to get 300/s. of eels but took 401bs, by mistake. They want to see the Columbia Club, of Staten Island, try to beat their fishing record this season.

At Beachanel, the station between the beach proper and Broad Channel, is T. A. Smith's place. He has thirty rowboats for hire at 50 cents week days, 75 cents Sundays and holioays.

At Broad Channel, one of the most famous fishing spots on the bay (get off at Broad Channel station) is Fuller's Hotel, Charles Fuller, proprietor. He has seventy-five rowboats at 50 cents week days, 75 cents Sundays and holidays, two flat-bottomed 16ft. catboats at \$2 a day, one 19ft. c. tboat at \$4 week days, \$5 Sundays, one 20ft. cat, same price, and one 24ft. open centerboard sloop at \$6 week days, \$8 Sundays. Last three craft are provided with sailing masters. Fuller always has bait and tackle. He will furnish lodgings and the finest fish dinners around the diggings at reasonable prices. Weakfish are being caught in plenty by Fuller's customers. The season opened here very early, Dr. Houghton, of Brooklyn, having caught 38 weakfish averaging 14lbs. on June 7, and 2lb. snappers are also plenty. The last of the flood is the best tide.

Babcock & Rusweiler are also at Broad Channel. They have seventy six rowboats at 50 cents week days, 75 cents Sundays and holidays; four catboats from 13 to 17ft. long at \$4 a day with boatman, \$2 a day without, \$1 extra on Sundays; and one 27ft. cabin centerboard sloop at \$5 a day for service inside the bay, \$7 outside. Bait and tackle can be procured here, and lodgings at 50 cents a night. Meals can be had ât acarte.

At Dorman's Atlantic Fishing Station, Broad Channel, there are fifty rowboats at the same price as Fuller's; three flat-bottom catboats at \$2 a day; one 25ft. catboat at \$7 week days, \$8 Sundays; and the handsomest yacht I saw on the whole bay, the Gracie Young, 40ft. over all, with cabin, which is hired at \$10 a day with a crew of frow. Dorman keeps bait and tackle. His patrons have caught sover mean

NEAR-BY FISHING.

M. R. A. M. SPANGLER, president of the Anglers' Aspublished a very useful little pamphlet for the benefit of anglers, telling them where, when and how to go for fresh and salt water fishing within a radius of 100 miles of Philadelphia. The information is intended primarily of the habits and gualities are also as the property of the

of 9 or 12 thread Cuttyhunk line are recommended for this species.

The history of the introduction of the black bass east of the Alleghanies and its rapid increase in that region are briefly sketched. The bass is defended from its detractors, and its merits, from the angler's standpoint, are recounted. The localities for black bass fishing in the Delaware and Susquehanna rivers are so numerous that it is scarcely necessary to name them. Little Washingington, on the Susquehanna, and a half a dozen other places below it on the same road, are especially noted, and Lake Hopatcong, in northern New Jersey, is a celevated bass ground. Mr. Spangler prefers an 8 or 9ft., 10 to 120z. split-bamboo rod. Among the wooden rods he recommends bethabara. lancewood, greenheart and dagana. He advises the use of a rubber multiplier reel with

* "Near By" Fresh and Salt Water Fishing, or Angling within a Raoius of One Hundred Miles of Philadelphia. Where to go. When to go. Bow to go. By A. M. Spangler, President of the Anglers' Association of Eastern Pennsylvania. With numerous illustrations. Philadelphia, 1889. Pp. 96.

a check, capable of holding 50 or 60yds, of waterprost enameled line, size G. For baits minnows, stone cutflell, lampreys, crawfish and helgramites are in general use. Brook trout streams in northern Pennsylvania are practically limited to Monroe, Pike, Luzerne and Sullivan counties, the first two preferred. Bedford, Blair, Centre, Huntingdon and Milih also contain some trout, and a small number of brook trout are found in Cumberland county, where also rainbow trout have recently been introduced with some success. Henryville, Monroe county, furnishes good fishing. Canadensis, reached from Cresco, is another of the places mentioned. Forks Station is a good fishing center. Streams entering the Delaware in Pike and Wayne counties, Pennsylvania, are recommended by Mr. Spangler, as also New York tributaries of the upper Delaware. The Mongaup is especially mentioned. The Shohola and its upper tributaries an most of the upper Delaware. The Mongaup is especially mentioned. The Shohola and its upper tributaries and the creeks falling into the upper Lackawaxen are celebrated waters. Masthope and Calicoon creeks afford fine fishing. From Hancock many renowned streams of Sullivan county, New York, are reached. The author names the following choice flies for northcastern Penn sylvania: "'Bpting, queen-of-the-waters, black-gnat, whit, and royal-coachman, Cahill, Beaverkill, red-hackle, Imbrie grizzly-king and Montreal."

The pike, which is Esox lucius of the books, is to the found at May's Landing, Milville, Atsion, Spring Mil and in Lake Hopatcong; also in some branches of Forke River, New Jersey. The spoon and live bait are the most successful means of catching pike, and cloudy days, early in the morning and late in the afternoon, are best for fishing. The chain pickerel, Mr. Spangler remarks, is mosteadily taken by skittering and trolling, the former meaning "jerking or drawing the bait along the top of thwater, and called "bobbing" in Florida.

Mr. Spangler passes on to the catfish, the shad, the road and the carp. The l

ing season, which is in January and February, this fish at its best, and is really delicious. The summer flounde at Somers Point is the fish whose feeding habits we hav described above; it is common in all parts of Great Eg Harbor Bay.

The blackfish, or tautog, is a very free biter, frequenting submerged timbers, rock-strewn tideways, and the borders of meadows where the water is deep and the tide moderate. It comes in April and continues to take the hook in suitable waters until the middle of October. A tiss month is very small and the jaws strong, the hook should be small and stout. Mr. Spangler recomment the Chestertown, and would suspend the hook about on foot from the bottom. Crabs, sandfleas and fiddler crabare good baits; hermit crabs and soft crabs are still mortaking. The scales can be removed readily after diping in strong vinegar; but it is better to skin the fish At Somers Point the tautog is called smooth blackfish. The weakfish, or squeteague, has been caught by M. Spangler at Cape May early in May, gravid females on taking the hook. They arrive at Atlantic City and Banegat Bay two or three weeks later. They remain on the coast until September, when they begin their migratios southward. After the middle of September the fishin from Somers Point is almost entirely in the ocean neather inlets. One method of angling for weakfish is bureans of a float and small sinker, keeping the hook on two or three feet from the surface. For fishing in frot two and a half to five fathoms we are advised to use sinker heavy enough to keep the line taut and though the surface of the chances are largely in favor of capturin hake or kingfish while angling for weakfish." Weakfis seek their food in the channels during flood tide an retire to the deep water during the ebb. The latter ha of the flood and beginning of the ebb afford the best fishing, and night is the best time. Soft and shedder crafare excellent baits, but shrimp, clam, mussel, shiners, an a piece of the throat or eye of the weakfish are all use with good r

trolling. For fishing with rod and reel the author advises the use of 20004s, of 18-thread Cuttyhunk line, holding a large stout hook fastened to a piece of piano wire, the wire necessary on account of the sharp, lancet-like teeth in the powerful jaws. A piece of menhaden is one of the best batts, or an artificial minnow is sometimes used. Anchor the boat in some place frequented by the fish and fasten a float several feet above the batt; then wait for developments, which may be prompt and will surely be startling. The important rule in recling in a bluefish is to keep a tant line until the game is landed. At Ocean City, N. J., the species is sometimes called mackerel but the usual designation is snap mackerel or snapping mackerel, and this will illustrate its method of taking the batt.

The lingfash is generally associated with the weakfish and arrives and leaves about the same time as this species and arrives and seves about the same time as this species and a received by the same time as this species and a friend took 168 on a single tide. The kingfash is a specially at Anglesca, where he and a friend took 168 on a single tide. The kingfash is a specially at a species. It is to be found on the bottom, and a small batt and correspondingly small, but strong, hook are needed. Mr. Spangler recommends the use of a single gut smood looped 3 or in. above the sinker. The tackle must be light. Clams and nussels are used for bait, and small pieces cut from any of the silvery fishes, particularly the spot, or even the darker colored sea bass, will be accepted. Shedder orab is the best bait. The kingfash is one of the species which sometimes disappears from our northern waters for a cern of years and then reappears in large numbers. Twe kinds of kingfash are taken at Somers Point.

The Spanish mackerel shows some resemblance to the luefish in its style of taking the hook, but has not testing the substance of the high and the received shows the sea of the substance of the accession and sometimes in small by displayed the

BLOOMING GROVE PARK.—The fishing in Lake Giles has been surprisingly good. A large number of bass have been taken running from 1 to 2lbs., and several over 2lbs. A few days since one weighing 3½lbs. was taken on minnow, and same afternoon one weighing 2½lbs. was taken on a fly. The trout in the lake are giving great sport. Since the season opened upward of 150 have been taken averaging 1lb., quite a number of them weighing 1½ to 1½lbs. As this is the second year since the stocking of the lake with trout began, the results are proving that Lake Giles will become one of the best trout lakes in the country. The annual fly-casting tournament of the club members, on Decoration Day, did not result in scores that are deserving of record.—XXXXX.

Madison County, New York.—Our county, especially the senthern half, contains many small lakes and four or five large reservoirs which are used as feeders for the Erie Canal. Most of these have been stocked with black bass. Most of the time since the season opened it has rained, therefore not many bass have been taken. One catch of three weighing 104lbs, is reported. From one of these lakes two of our experts with Soz. rods captured 70lbs, in one day. Seven of these bass weighed 28lbs, and two tipped the scales at 9lbs.—Wing.

PARADISE CLUB.—Lac des Grandes Iles, Canada, June 10.—Editor Forest and Stream: The Paradise Club of anglers of New York have completed their club house here and can boast of the finest house of its kind in the Dominion. Several members are here at present enjoying the fly-fishing, which is splendid. Catches of 50 trout weighing about 2lbs. each are an everyday incident. I took a 4 pounder with a brown hackle at noon yesterday from the boat landing. Alexander Edgley, formerly keeper of the Windsor Hotel at Lake Edward, has been appointed guardian of the new club. The building and its contents were brought from New York, and the fleet of cedar boats were made by R. J. Douglas & Co., of Waukegan, Ill. A new and commodious lotel has been erected at Lake Edward, and new and roomy boats are on hire. The trout fishing there is simply unsurpassed. Many anglers prefer to camp upon the beautiful shores of the lake. To this end everything needed can be rented at the station, and ice in plenty can be had to send fish home. I leave to-day for a tussle with the Mistassini River.—KIT CLARKE.

Large Tautog.—The largest tautog ever taken in American waters, it is said, was caught by Elijah Elbridge at Tinker's Island, Marblehead, Memorial Day, weighing 14lbs. Elbridge caught twenty, the average weight being 3lbs. The largest salmon ever caught in that vicinity was taken off Sherman's Point at Camden, Me., Memorial Day. It weighed 35lbs. and measured 3ft. 6in. in length. Another weighing 25lbs. was captured in the same not at the same time.—Gloucester Daily Times.

BLUEFISH ARE SWARMING in the Great South Bay, and big catches are reported from Sayville, Bayshore, Islip and Babylon. These points are reached by the Long Island Railroad from this city; and at any of them boats may be chartered. The boatmen charge \$5 a day for the boat and their services, no matter how many may be in the party; the bait costs extra, a dollar, more or less. This is the time for bluefish.

TROUT CASTS. — Cleveland, O. — Editor Forest and Stream: I send to you by express a plaster cast of some brook trout raised by the late Seth Green, who did so much to advance fishculture in this country. He sent the fish to me in the early spring of 1870. As it was impossible to remove the winter coating of slime from them, I could not make a rerfect cast; however, they give good satisfaction.—Dr. E. Sterling.

TARPON SPRINGS, Fla., June 7—Fishing is good. Groupers are out in force. Quail will be quite plenty, if one may judge from present indications. I counted five broods the other day in less than an hour's walk. Weather cool and delightful.—TARPON.

PICKEREL IN MEACHAM LAKE. - We are told that several pickerel have been caught this year in Meacham Lake, in the North Woods. This will be unwelcome news to those who know what a fine trout water the lake is.

Hishculture.

THE FOOD CARP.

THE FOOD CARP.

Editor Forest and Stream:

The food carp is not a German fish, and there are no German carp in this country, except a few specimens in the hands of the U.S. Fish Commission. The fish is of Chinese origin, and has been cultivated in that country for thousands of years, as was positively ascertained by Hon. John Russell Young while U.S. Minister to that Empire.

The food carp has been annazingly improved by the intelligent and systematic methods of cultivation by a comparatively few Americans, and that, too, witbout intelligent cooperation on the part of Fish Commissions, except in a very few instances.

There are not three varieties of the food carp, as is so often stated. There is really but one variety, while there are an infinite number of types, distinguishable only by the quantity of scales found upon individual specimens, varying from an entire covering to a partial covering of all grades up to no scales whatever, the finer bred being of these partisale types baving the least number of scales. By breeding from selected specimens of any of these types specimens of all the other types are almost certain to be found, showing conclusively that there is but one variety of the food carp.

Your angling correspondent in the issue of May 23 gives seven points favorable to the carp, the first and fourth being identical: but he has failed to give the most favorable points. Here repeat, and without the least fear of successful contradiction, that our best-bred carp, as a table fish, is the peer of any fresh-water fish excepting only the Salmoniaa. No elaborate cookery is required. Take a properly cultivated earp of 51bs. or upward, and prepare it in the simple manner in which Americans prepare the Thanksgiving turkey—sew it in thin muslin and bake brown—and there are few epicures who will not acknowledge its excellence. It is in season during the late fall and winter months only, and this fact has caused most of the abuse of the carp. Epicures have eaten it out of season.

Another point, and in many re

Forest and Stream, Box 2.832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nantt," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

DOG SHOWS.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capf. R. C. W. MacCuniz, Secretary.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Sceretary.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville; N. Y.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club.
P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field
Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club,
at Lexington, N. C. G. H. Odell, Secretary, Mill's Building, Now
York, N.Y.
Dec. 16.—Second Annual Field Trials of the Southern Field
Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta,
Ga.
Jan. 20, 1800.—Second.

Ga. Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal. COURSING.

Oct. 24.—Fall meet of the National Coursing Club at Hutchinson, Kan., M. E. Allison, Manager.

DOG LICENSE LAWS.

[Continued from page 425.]

WE continue below the publication of our reports on the laws relating to dogs in towns, and the methods adopted to reduce the number of vagrant curs. The information has been secured by correspondence with the mayers or presiding officers of the several places named, and the reports were all made in 1888:

New Jersey.

mayors or presiding officers of the several places named, and the reports were all made in 1888:

New Jersey.

Bridgeton.—Tax on dogs, \$1.50. First Ward of this city has just filed a list of dogs: they amount in this ward to 187. We have four wards. 12,000 inhabitants. If all the rest have as many we bave plenty of dogs. We have an ordinance that all dogs shall be muzzled or chained up from June 1 to Aug. 31. This ordinance is not enforced. Dogs go as they please. If one gets cross we order it muzzled. This is done by general consent, thinking a dog is more likely to go mad muzzled than unmuzzled; therefore we have no dog pound or killing of dogs in any way. But the city council talk of passing an ordinance to have dogs registered; if not, to be sent to pound and killed.—J. De Edos, Marca.

Jersey City.—There is no license fee or tax inposed on dogs in this city, and there is no dog pound. The Mayor is empowered by law to issue a proclamation at any time authorizing the killing of all dogs found running at large in the streets and without muzzles, and the killing is usually done by policemen. The contractor for the removal of dead animals from the streets takes the bodies away.—D. Mo-Agion, See'v.

Asbury Park.—We bave no license fee or tax on dogs. Two years ago we employed a dog catcher and caught a few. What dogs were not claimed in a reasonable time were killed and burned. Nothing has been done in the matter the present year. I rather guess some bave been stolen here the past summer, as my son lost a very valuable setter dog.—C. T. Balley, Chief of Police.

Neuronk.—The owners of dogs are taxed \$1 for male and \$2 for female, which when collected is applied to the contingent fund of the city. It is estimated that there are about 15,000 dogs in the city, but the assessors only find on an average about 2,300. During the dog days (the same as in other cities) they are all supposed to be muzzled or they are liable to be impounded and destroyed unless redeemed by their owners. We have no dogs pound. Any dogs kile

Pennsylvania.

Pennsylvania.

Bradford.—The licensed fee or tax imposed on dogs in this city is, on dogs \$1, on bitches \$5. There is no pound. Universed dogs are shot. Revenue from license fee \$100 a year.—R. A. Dempsey. Mayor.

Johnstown.—The registry fee for one dog is 50 cents, for each additional dog kept at same residence \$1. Our method of disposing of stray dogs is a brutal one—shooting the dog; and this is usually done by an inexpert marksman. If the dog has an owner, the owner is fined if he does not pay fees. The dogs killed are not utilized. In the neighborhood of 500 dogs are registered. Only a few have been killed; I have not the record before me to give exact numbers.—CHAL. L. Dick, Burgess.

Here is a little story of one of Johnstown's five hundred, as told by a correspondent of the Philadelphia Inquirer: "Johnstown, June 6.—A large crowd of people attracted my attention about 6 o'clock this evening on Main street. On going closer I noticed that a number of men and women were surrounding a dog, on which each and every one of the crowd was anxious to lavish attentions and endearing terms more appropriately bestowed upon a favorite child than upon an animal. The dog, a beautiful water spaniel,

whose fur was clipped so as to give him the appearance of a miniature iton, atond as quiet and dignitized among the miniature iton, atond as quiet and dignitized among the analysis of the control of th

Scranton.—All dogs must he muzzled between May 20 and Sept. 20. Our manner of disposing of unmuzzled dogs at large has been to send out one of our officers (who is an expert marksman)armed with a double-barreled shotgun and accompanied by two other officers with a horse and wagon in the early morning only. The squad take a section of the city for a trip, the officer with the gun goes ahead of the others and shoots all numuzzled dogs he finds at large, the others follow on, pick up the bodies and throw them into the wagon, and they are finally taken to a boneyard and sold for ten cents each, which about pays expenses. We have killed this year in this way about 400 dogs, all or nearly all of which were worthless curs or mongrels, the officers being instructed to spare blooded or valuable dogs, which are generally taken care of by their owners, but which might be at large by accident. We have found this plan to work well so far, and have carried it out for two seasons without accidents nor many complaints, but lots of commendations from many citizens, asit has been the means of causing people to either muzzle or keep under control their ugly curs or suffer their loss. This way of killing dogs is somewhat dangerous and should only he done by a good shot and with great care and jndgment, but as our city has at present no proper pound the difficulty of earching the dogs and of disposing of them afterward is such that we deem this to be the best way of disposing of them. The tax on male dogs is \$1 for first, \$2 for second, \$3 for third and \$4 for fourth. For females, \$3 for first and \$5 for second. For harboring unregistered dog, \$5 for male, \$10 for female, half in each case for informer and half for city. Dogs killed and buried after twenty-four hours impounding, with notice given to owner if known. Penalty for obstructing dog catchers \$10, to be divided as above. Nodogs impounded for five years here.—JAMES R. KENNEY, Mayor.

**Chester.—Our register fee is \$1, which is good during the life of the dog. The owner is l

Delaware.

Wilmington.—The tax imposed on the owners of dogs is \$1 per annum and upon the owners of bitches, \$2. The method of disposing of them is by shooting. They are kept in the pound before being destroyed for 24 hours and the fee to the dog eatcher, paid by owners in redeeming within that time, is 50 cents if the dog is registered, and if not registered a fee of \$2.—Austin Harrington, Mayor.

District of Columbia.

District of Columbia.

The law requires that dogs be registered, and that the owners be furnished with a metallic tag to be attached to the dog's collar in evidence of payment. The collar is indispensable and must have the owner's name legibly engraved on it. Dogs running at large without the tax are seized and impounded and put to death at the expiration of 48 hours if not redeemed or sold. A dog wearing the tag tax is personal property and is so regarded in all the courts in the District. The owner is responsible for all injury caused by his dog, and may not let him go at large unmuzzled hetween May 15 and Oct. 15.

Ohio.

Ohio.

Ohio.

Columbus.—We have at present uo ordinance licensing dogs. Had one some years ago, but owners of dogs kicked so much that it was repealed. Only ordinance in force is in regard to vicious dogs which have to be tied up or muzzled.—P. H. Bruck, Mayor.

Cleveland.—The city imposes a license fee of \$1 for each male dog and \$2 for each female, and every dog must be provided with a tag. This permits the dog to run at large, and is only a regulation in that respect. The police are directed to kill any dog running at large not wearing a tag. The tags are renewed each year, We have no pound.—CHAs. P. SALEM, City Clerk.

Norwalk.—Our city imposes no tax or license on dogs. We dispose of none unless they are sick, cross and vicious, or mad.—P. C. Breckenrider, Mayor.

Cincinnati.—City license \$2 on dogs. Any person can kill an unlicensed dog, but it is seldom done. The city pays a fertilizing company for removing dead animals, and the company sells the skins and uses the carcass for fertilizers.

—E. W. Pettir, Mayor's Secretary.

Piqua.—We have no tax or regulations (as to dogs) of any kind, but they are allowed full liberty.—G. A. Brooks, Mayor.

Dayton.—We have an ordinance, passed in 1842, providing

kill an unlicensed dog, but it is seldom done. The city pays a fertilizing company for removing dead animals, and the company sells the skins and uses the carcass for fertilizers.—E. W. Pettit, Mayor's Secretary.

Piqua.—We have no tax or regulations (as to dogs) of any kind, but they are allowed full liberty.—G. A. Brooks, Mayor.

Dayton.—We have an ordinance, passed in 1842, providing for the assessing and collecting a tax (50 cents per head) upon dogs, to prevent bitches from ruuning at large, and to provide against the prevalence of hydrophobia. Now this ordinance is a dead letter law and has been for years. It was found impracticable. In fact we do not need the workings of such an ordinance. In this State (Ohio) we have a statute making a person guilty to permit a dog to run at large unaccompanied with some person. We cause the arrest of quite a number of persons each year upon such a charge, and find it has the desired effect. Dogs are kept conflued and we have comparatively little complaint.—IRA CRAWFORD, Mayor, by CHARLES W. DALE, Clerk.

Sidney.—There is a State tax on all dogs in Ohio. We have no city tax and we have no pound. They run at large. Under our State law any person has a right to kill any dog away from its home or master. Dogs are plenty. I see 15 now from my office window playing in the street. The niggers sometimes kill them and utilize the skin. There are handreds of them in our town, and it would be a blessing if they could be extirpated.—M. C. HALE, Mayor.

The county imposes a tax of \$i\$ a head.—MAYOR.

Mt. Vernom.—We have no license or tax on dogs, no pound or destruction of dog, unless hydrophobia exists, when mayor by proclamation orders all dogs killed by marshal unless muzzled.—W. B. Brown, Mayor.

Chillicothe.—We have no city license or tax on dogs, we have no pound system. We have a city ordinance which requires owners of dogs to keep their dogs securely muzzled, so that they cannot bite, during the months of July, August and September; if this ordinance is not complied with, d

Mansfield.—We have no city tax or license. We shoot unclaimed and stray dogs. We have no pound. Some unprincipled party has been poisoning dogs by the dozen during last month, perhaps 100 or more. We cannot detect them; if so, we will deal with them severely.—R. B. McCroux, Mayor.

Obertin.—We have a tax of \$1 per year on each dog. The marshal or health officer are authorized to destroy and bury unlicensed dogs.—ARDEN DALE, Mayor.

Whooster.—Our city imposes no license fee on dogs, as no ordinance of that kind has ever been passed. Our State imposes a tax of \$1 upon each animal of the dog kind, provided the owner places no value upon the dog. When owner places a value, the tax rate is the same as on other property. In our city dogs are prohibited from running at large unless muzzled, and when found at large without, are summarily disposed of by the marshal by killing them; they are not impounded. During the past eighteen months of my term there have been disposed of in the manner stated 207 animals of the dog kind.—J. R. Woomworter, Mayor.

Delcuure.—The city bas no ordinance on dogs except one to prevent dogs running at large. Dogs cuiside of premises or not with the owner or if not muzzled can be shot down.—J. K. Newcook Mayor.

Sand 884,—I have a charge of \$1 for dogs of the male kind and \$8 for each dog of the female kind. All dogs must wear a collar with metallic plate with owner's name engraved on it. Dogs must also be provided with a muzzle, to be worn whenever the Mayor shall issue a proclamation requiring it. Stray dogs or dogs roaming without owners may be captured by the marshall or his subs, and if the same cannot be captured they may be killed. A dog with collar and tag and muzzle in the season is not allowed alone on the street, but it is the duty of the officer seeing such dog to notify the owner; but the dog is to be captured or killed if loose at night in spite of license, collar, tag and muzzle, to be worn whenever the Mayor shall issue a proclamation requiring it. Stray dogs or dogs roaming w

RATIONAL BREEDING.

RATIONAL BREEDING.

L'VERETT MILLAIS, a well known breeder of Basset hounds, acknowledges very candidly that in the first decade of his career as a breeder he made a great many mistakes, but these mistakes resulting in a greater or less measure of failure, only stimulated him to an investigation of its causes, of the origin and perpetuation of family and strain types and of the general principles of successful breeding. As a member of the Basset Club in which he took a very lively interest his attention was very naturally occupied by the evident tendency to deterioration of the English Basset hounds. These dogs were, as is well known, of the famous Couteulus strain, founded upon Fino de Paris, a dog of great excellence and well marked characteristics, which he had very successfully perpetuated in his family, until at length too close inbreeding produced its usual results of general deterioration. Millais was not alone in attributing this deterioration to its true cause, but when he proposed to remedy this evil by crossing with Basset hounds of another strain—the Lane—he was met with the very general objection that such a cross, while it might improve the physical stamina of the Contenix strain, would destroy all its leading characteristics. The Basset hounds of the club's strain were simply lemon and white, and such a cross it was feared would involve the sacrifice of this special excellency of the breed; but Millais, who had by that time got a pretty clear insight into the measures necessary to hring in fresh blood without sacrificing type, succeeded in carrying his point, after making it clear that his object was not to replace the Contenix sires by Lane sires, but to breed dogs with a greater infusion of Contenix and a lesser of Lane strains for sires for the club's kennel.

The experiment verified his anticipations. The families of the first cross were about one-half of them true to type in the matter of color, selecting these and breeding with them back to the Contenix sirain, the Lane characteristics have

OLDHAM & WILLEY'S FIELD SPANIEL "GLENCAIRN."

to select sires from another strain of greyhounds to correct the evil, for every strain has its infusion of alien blood.

Dog breeders do not all breed with the same object. Some breed for no type beyond the variety. Some breed for strain and variety types, others for family, strain and variety types. Others again breed to an aberrant individual for the establishment of a family on his type; but whichever of these objects is kept in view, there is always room for the display of the keenest judgment in the selection and pairing of breeding stock. A dog may be true to family, strain and variety types, in all the essentials of these types, and yet lave very bad points, and it is only by judicious selection and mating that good points in the offspring can be secured. Successful breeding is admittedly a curiously complex question, but Everett Millais, in his "Theory and Practice of Rational Breeding," has not shrunk from the task of turnishing formulae for achieving it with some approach to mathematical exactitude, and his little work is perhaps the best work on the subject extant.

GLENCAIRN.

CLENCAIRN.

The picture of the field spaniel Glencairn published this week is from a sketch by Henry B. Tallman, and is an excellent likeness. Glencairn was imported last February by Messrs. Oldham & Willey, the well-known spaniel fanciers. He was whelped April 17, 1834, and is by Easten's Bracken (Solus—Beverley Bess) and out of Easten's Belle, a full sister to Easten's Bracken. He won in England no less than 41 first prizes, many of them at the largest shows. He made his first appearance in this country at New York, where he won first. This he repeated at Troy, Albany, Utica, Rochester and Boston. At Worcester and Philadelphia he won first in the challenge class. In addition to these wins he received a number of valuable special prizes. His breeding is of the best, and as a sire he will undoubtedly prove to be a valuable acquisition to the spaniel breeders of the country.

INDIANA KENNEL CLUB DERBY.

The entries for the third annual Derby of the Indiana Kennel Club closed June 1 with fifty-seven nominations, forty setters and seventeen pointers, fifty-four of which are hereinafter described, one was rejected and two are held for further information. All were whelped in 1888.

P. T. Madison, Sec'y.

ALICE (P. Lorillard, Jr., Tuxedo, N. Y.), lemon and white bitch, Aug. 7 (Cassio—Allie James).

AMORET (P. Lorillard, Jr., Tuxedo, N. Y.), black and white bitch, Aug. 7 (Cassio—Allie James).

BEN HARRISON (J. H. Ricksicker. Sterling, Kan.), black and white dog, April 1 (Marksman—Don's Nellie).

BESSIE GLADSTONE (W. A. Kinsley, Indianapolis, Ind.), black and white bitch, April 19 (Rush Gladstone—Queen of Tennessee).

white bitch, Aug. 7 (Cassio—Allie James).

BEN HARRISON (J. H. Ricksicker, Sterling, Kan.), black and white dog, April 1 (Marksman—Don's Nellie).

TAFFY (L. Gardner, Mt. Vernon, N. Y.), liver and white dog, Jan. 3 (Hairspring—Diables).

TAFFY (L. Gardner, Mt. Vernon, N. Y.), liver and white dog, Jan. 3 (Hairspring—Diables).

TAFFY (L. Gardner, Mt. Vernon, N. Y.), liver and white dog, Jan. 3 (Hairspring—Diables).

TAFFY (L. Gardner, Mt. Vernon, N. Y.), liver and white dog, Jan. 3 (Hairspring—Diables).

MARSHALL, Texas, June 13.—Editor Forest and Stream: The fourth annual meeting of the Texas Field Trial Club will be run on partridges (quail) near Marshall, beginning on Feb. 11, 1890, open to amateurs only.

Marshall, beginning on Feb. 11, 1890, open to amateurs only:

DERBY—Open to all pointers or setters whelped on or since Jan. 1, 1888. Retrieving required. Entrance fee. \$5. \$50 to first, \$25 to second, \$10 to third. Entries close Feb.10, 1890, at 9 0'clock P. M.

ALL-AGED STAKE—Open to all pointers and setters, regardless of previous winnings. Entrance fee \$5. \$100 to first, \$25 to second, \$10 to third. Entries close Feb. 10, 1890, at 9 0'clock P. M.

Prizes will be paid in cash or silverware at the option of the prize winner.

President, Edmund Key, Marshall: First Vice-President, W. J. Wolz, Marshall; Second Vice-President, R. R. Scott, Scottsville.

For particulars, running rules, etc., apply to W.L.Thomas, Sec'y-Treas., Marshall, Texas.

DOG TALK.

MR. E. H. MOORE has met with a great loss by the death of his well known mastiff dogs champion Minting and liford Caution, and the bitch Countess. All the particulars we have are that Minting died from heart disease, and liford Caution and Countess from peritoritis. The loss is a severe one not only to Mr. Moore, but to the breeders of the country as well. A description of the dogs and a list of their many winnings is unnecessary, as readers of Forest AND STREAM are familiar with their record. The many friends of Mr. Moore, we are sure, will sympathize with him in his great loss and join us in the wish that he may succeed in securing specimens of the breed worthy to fill their vacant stalls.

A kennel club has been formed at Kansas City, Mo., with Hon. J. E. Guinotte, President; Messrs. J. A. Graham and S. F. Field, Vice-Presidents, and Mr. F. B. Rice, Secretary and Treasurer. The club will probably hold a dog show as soon as the necessary arrangements can be made.

Mr. Wm. Graham sailed for home yesterday on the Celtic He reported having had a most enjoyable time during his brief visit, and stated that he had learned at least one new wrinkle about dog dealing that he would not soon iorget,

We understand that he received a number of importance ommissions from prominent fanciers for the purchase dogs to be sent out in season for the shows next spring.

Mr. E. M. Oldham, of Mamaroneck, N. Y., has made an addition to his kennels and will take a few dogs to board. This will be welcome news to residents of the city, who wish to leave their dogs in good hands while they are absent on their summer vacation.

Mr. D. Baillie, of Lexington, Ky., sails for England to-day instead of last Thursday, as noted last week. Mr. Baillie takes with him the Chestnut Hill Kennels' collie Dublin Scot for competition at the Kennel Club's show, Olympic, London, next month.

Mr. E. D. Morgan, of this city, has recently purchased in England the bull-terrier dog Spotless Prince, a well known winner, said by some to be one of the best in the country. He was whelped January, 1888, and is by Cato and out of Young Venus.

We hear complaints that some of the special prizes that were offered at two or three of the spring dog shows have not been paid. The A. K. C. should see to this.

The fall meet of the National Coursing Club will take place at Hutchinson, Kan., Oct. 24. The address of the manager is Mr. M. E. Allison, Hutchinson, Kan.

Schipperkes are looking up, Mr. W. J. Comstock, of Providence, R. I., has recently imported a pair, and we understand that others will soon arrive.

There will be a dog show at Kingston, Ont., the first week in September, in connection with the exhibition of the Cen-tral Fair Association of Canada.

Mr. J. H. Naylor, of Chicago, will shortly visit England, and if he finds a terrier or two that suit he will bring them over on his return.

Mr. H. S. Pitkin, of Hartford, Conn., has quite a kennel of St. Bernards, and is doing his best to breed some win-

Where is the new list of judges that the Spaniel Club was to vote for? Is it not about time that they were aunounced?

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

W. A. G., Boston.—I have a pointer dog 2 years old next August. de is a bandsome dog, but has always been inclined to be quite hin. Eats pretty well, but for a year or more he appears every lay to he sick at his stomach and vomits. This does not seem to be a natural state of things, and what would you advise me to do or it? This dog Joe has been sire to two litters, and the pupples II seem to be stronger and more robust than the sire. It looks at he had some trouble in digesting his food; hat is there any emdy for such a trouble? Ans. Give 5 drops of Fowler's solution of arsenic in food night and morning as stomach tonic. Also ive a 3-grain quinine pill three times dally. You can conceal the bowles free. Exercise regularly.

F. A. E., Clinton, N. Y.—My pointer bitch, 14 monthsold, rather at, fed with scraps from table, very little meat, apparently in ealthy condition and feels well, has an eruption on outside of oth hindlegs. Looks very red, and the hair has come out largely. t does not seem to annoy her any as yet. Is it probably a species f mange; and if so, what would you suggest? Ans. A form of name. Keep the bowels open. Give two or three compound athartic pills every day for four or nive days. Reduce her weight. Exercise. Use the following ointment:

If Ung. diachylon.

Ung. zinc oxid.

Mix. Sig. Externally applied twice daily after washing.

G. F. M., Maynard, Mass.—An Irish setter, I year old, has been troubled with the under cyclid turning up in his cyc every time he closed it; the lid would turn up so as the hair would touch the eyeball; he has been troubled with it since he was 3 months old. Ans. Turn the lid out and examine for ingrowing hairs or a growth. Let a few drops of solution of zinc sulphate (2grs. to the ounce) fall into the eye. It may be congenital and incurable.

FILMIRA DOG SHOW.—Editor Forest and Stream; I have been engaged as superintendent for the dog show to be held under the auspices of the Inter-State Fair, at Elmira, N. Y., Sept. II to 20, 1889. The Pet Stock Association will apply for membership in the A. K. C. We will give over \$1,000 in premiums, and I think will have no puppy classes. Lots of specials have been promised.—J. OTIS FELLOWS.

BOSTON DOG SHOW.—Boston, June 16.—Editor Forest and Stream: The New England Kennel Club claim dates of April 1, 2, 3 and 4, 1890, for their sixth annual bench show of dogs at Boston, Mass.—J. W. NEWMAN, Sec'y.

Bifle and Trap Shooting.

THE TEAM FOR ENGLAND.

THE TEAM FOR ENGLAND.

On Tuesday last the rifle team of the Massachusetts volunteer militia left for England to test their prowess with the crack shots of the English volunteers.

The team met at noon, and hy special invitation of the proprietress of the Hotel Bellevue, on Beacon street, sat down to a substantial lunch shortly before I o'clock. At 2 P. M. the members took a handsome drag with six horses, and through the courtesy of Sergt. Kenney of the artillery staff, were driven to the State House, where at 2:15 P. M. Addt.-Gen. Dalton made the formal inspection of officers and men, and Maj.-Gen. Frost received the official paper, giving the team leave of absence, permission to discuss the property across the sea and the royal permit of the English authorities to enter Great Britain armed and equipped as military body. The members were then presented to Gov. As who officially bade them "Godspeed." Many of the ladies who are strumental in the presentation of the stand of colors given to the strumental in the presentation of the stand of colors given to the strumental in the presentation of the stand of colors given to the strumental in the presentation of the stand of colors given to the strumental in the presentation of the stand of colors given to the strumental in the presentation of the stand of rolors and the strumental in the presentation of the stand of colors given to the strumental in the presentation of the stand of rolors and the second of the case of the team.

The next stop of the team of the standard of the city, said "good-by." Then Treasurer Asa B. Potter was complimented with a call at the Maverick Bank shout 3 P. M., and after marching through Fanueil Hall market the team were driven to the Boston Alhele Association's building, where the club held an informal reception complimentary to Maj. Frost, who is a member, and the especial of was the last to say good-by. The team arrived at the Boston & Potton of the complex with a special saloon carriage will be in waither on mor, on the Shore the S

shot on July 2, 3, 4, 5 and 6, and the men will be under canvas ally 8 to 20.

The Massachusetts men are fortunate in the selection of Quarramaster G. F. Gratwicke of the 4th Devonshire as thoir English Deventy, and honorary secretary as well, and one of the glish Twenty, and honorary secretary as well, and one of the set known and posted rifle shots in Encland.

The final acknowledgment of subscriptions will be made by reasurer Potter on Monday morning, and shows a fund of some 900. The personnel of the team is as follows: Major J. P. 2005, Second Brigade. Captain: Major C. W. Hinman, First rigade; Major O. H. Marrion, First Infantry (Surgoon); Major H. Benyon, Fifth Infantry (Adjutant); First Lieut, S. B. ewton, First Cavalry (Quartermaster); First Lieut, S. B. umstead, Second Infantry; First Lieut, R. B. Edes, Fifth fantry; First Lieut, W. G. Hussey, Eighth Infantry; Sergt., alor W. M. Merrill and Sergt, W. C. Johnston, Jr., Second rigade; Sergt, M. W. Bull, Second Infantry; Sergt, George ovle, Fifth Infantry; Corporal W. D. Hnddleson, First Infantry, Firster, E. Bull, L. T. Farnsworth and W. M. Farrow, Second Infantry.

Privates F. K. Bull, L. T. Tarnsworm and W. B. Parrow, second Infantry.

The team is considered fully equal, if not superior, to any team yet representing Massachusetts. If these men should wear all the championship medals which they have won they would be nearly invisible, for they own among them te enormous number of 246, all of them genuine tokens of championship.

Major Frost, who commands the team, is 33 years old, and has had 15 years experience in the Massachusetts millia, largely in the cavalry arm. He is an expert with the rifle and has numer-

ous medals and trophics to show. Mr. Frost won all the cavalry matches during his term of service in that branch, and his record at mid-wange with the carbine has never been equalled in the United City. Himman, of Boston, has been a member of two international chams, and at present holds the record with the United States Springfield rifle at 2004ds, and the record with the United States Springfield rifle at 2004ds, and the record with sporting rifle at 800, 900 and 1,600 yet. He has won the President's change of the Pirst Regiment a hright, wide-band work. At Creedmoor last year he accomplished the feat of winning the Governor's match, 300 yet, with a clean score. Dr. Marion is surgeou of the First Regiment a hright, wide-band work. At Creedmoor last year he accomplished the feat of winning the Governor's match, 300 yet, with a clean score. Dr. Marion is surgeou of the First Regiment a hright, wide-mon of the team, is a good markenam. Adjust the Bryon, of the First Intartry, is appointed because of his executive shilly and his good nature. Lieutenant Newton is probably without a sumaster of the First Battalion of Cavalry.

Lieut. Bumslead is a Springfield wan. He was a member of the famous array team years ago, and came within one of being of the State is the international team. He has been a member of the State is the international team. He has been a member of the State is the international team. He has been a member of the State is the international team. He was a member of the State is the international team. He was a member of the State is the state of the price of the State is the state of the sta

CANADIAN WIMBLEDON TEAM.

CANADIAN WIMBLEDON TEAM.

THE members of A Company, Royal Grenadiers of Toronto, gave the four members of the Wimbleden team selected from their company a grand send-off on the evening of June 14. Sergt. Mowat presided, and the guests of the evening of June 14. Simpson. Sergt. Mowat presided, and the guests of the evening of June 14. Simpson diors; Staff-Sergt. Kitchell, Royal Grenadiers; Gapt. Kenny, Staff-Sergt. Kersufl. Royal Grenadiers; Capt. Kenny, Staff-Sergt. McVittie, Royal Grenadiers, and Sergt. Major Cox, Royal Grenadiers. Sergeants Ashall, McVittie, Mitchell and Kerswell have been chosen to sustain the honor of Canadian shooting in the coming contest, and the following record of the representatives will show the reason of the confidence felt in them by their comrades:

Sergt. McVittie's record is the first given, and shows a most remarkable manksman's experience. The prizes and mcdals he won are as follows: At Wimbledon—Eight times in the final aggregate, Dominion of Canada trophics and gold cross, Olympic, that times in Elcho shield, Scotch eight, Henry, Arthur, Ladies, Club, Gard Powerke. Edinhurgh—President's, Lord Provost.

Club, Gard of Albert, Bass, Secretary of State for War, Wills, First Club, Gard of Albert, Bass, Secretary of State for War, Wills, First Club, Gard of Albert, Bass, Secretary of State for War, Wills, First Club, Gard of Albert, Bass, Bannockburn cup, Association for prize of Albert, Bass, Bannockburn cup, Association for prize of the promision, and prizes which space will not per mit to mention.

Staff-Sergt, Thos, Mitchell hashad a most distinguished career, He bas for a long time past held the position of champion shot and gold medalist of the Dominion, and his companions have all confidence in his retaining his after private of the position of champions shout and prizes which space will not per the value of the van with fly and the position of Staff-Sergt. Pink, 483 fastralion, Ottawa, who has been obliged to withdraw owing to continued ill health. He is well on in years a

Sergt. Mimford, 63d Halifax Rifles, was notified, and reported at Quebec on Wednesday, with the rest of the Nova Scotia contingent.

The competing teams will be as follows, giving the competitors' ammes in the order of their selection: Commandant, Lieut.-Col. Bacon, Ottawa; Adjurant, Major Hood, Montreal; Staff-Sergt. Mitchell, Grenadiers, Toronto; Staff-Sergt. McVittie, Grenadiers, Toronto; Private Armstrong, Guards, Ottawa; Sergt. Rolston, 20th Battalion, Capt. Rogers, 2d, Ottawa; Staff-Sergt. Curzon. Grenadiers, Toronto: Lieut. Jamieson, 43d, Ottawa; Major Sherwood, 43d, Ottawa; Lieut. Wilson, 33d, Huron Battalion; Staff-Sergt. Corbyn, 63d, Halifax; Staff-Sergt. Ogg, Guelph Artillery; Lieut. Comboy, 30th Battalion; Major Weston, 66th, Halifax; Egan, 63d, Halifax; Lieut. Dimock, '8th Battalion, Truro, N. S.; Lient. Blackmore, 63d, Halifax; Corp. Crowe, Guelph Artillery; Staff-Sergeant Ashell, Queen's Own; Private Horsey, 45th, Bowmanville, Ont.: Sergt. Mumford, 63d, Halifax. At Wimbledon most of the battalion matches are for teams of six men. There is one, however, the Mappins, for battalion teams of four. Had

Pink not resigned, the 43d would have been the first battalion to be able to enter such a team. His withdrawal transfers the opportunity to the 53d, as they now have four men. The match consists of an obstacle race, with four obstacles, a quarter mile course, and the firing of seven shots at four and seven and five hundred yards. The whole performance is to be accomplished within five minutes.

	with an action which would rule one off from any race track in the world. Are not shooters as much gentlemen as horsemen are, and should they demean themselves for one moment by association with such tricky characters? These would be harsh words if they were not true. It is due to the prompt and decided stand of the management that these things are hushed up now and will never again be heard of. It would not be safe to try it any further. At the close of this shoot the classifications will be published generally, and any one seeking by trickery to evade his due class would also be published and subsequently barred. Open attempts to be classed low, such as were common all the morning, are not thus serious. They are only funcy.	Cider
E E	attempts to be classed low, such as were common all the morning, are not thus serious. They are only funny.	Robinson, 011101101111 9 3 Bemis 011111100010 7
w 's	are not thus serious. They are only funny. Very soon, however, everything was running smoothly, and the boys were in the middle of as pretty a little tournament as ever was. The talk of the beginning died away or served only to point an occasional joke, and thus to keep things stirred up. The traps—	T K
٥,	standard, Keystone, bluerock, Ligowsky and Bandle clay-birds— all worked beautifully. Mr. Penrose, in charge of the Keystone trans. Was soon raising his voice in his long, convulsive and de-	WHOTE INTIDITUTE CO DAY COM
	an occasional joic, and thus to keep things soffred up. The traps-standard, Keystone, bluerock, Ligowsky and Bandle clav-birds—all worked beautifully. Mr. Penrose, in charge of the Keystone traps, was soon raising his voice in his long, convulsive and depairing wail of "L-1-lost!" and everybody gradually began to feel as if there was a mighty good shooting match on hand. Throughout the day the officers of the day have been to the last degree courteous and painstaking, and there has been an adherence to method and system greater than has been an arear of a market of the state of the	Mustin
s- n	shoot in the Western circuit. The result is highly pleasing. A	Eyard10110111101—9 3 Shorty111011111111—11 W.C

Bandle	Nothing of special interest came up until the calling of what the boys facetionsly termed the "base-hall match." This was a match arranged between a number of the shooters on exactly the same plan as a hilliard tournament, one shooter being pitted against another in individual contest, and the winner of the greatest number of the several individual matches to be winner of the shoot. The entrance for this shoot was \$2, and there were 15 entries. As some of the races between the experts footed out 20 to 30	Saturday, Fifth Day, June 15. Heavy rain fell during the morning, but it cleared shortly after noon. The only remaining tournament shoot was the Class A Ligowsky match. Great interest centered in the team match set for this afternoon by the contestants, in which Budd and Parma-
There was a light warm rain this morning, but the afternoon cleared well and showed as pretty weather as one could ask Some of the Indianapolis and Chicago boys had gone home, but he should fill with pearly the some numbers as before. By all	heavy wind storm struck the grounds, and a momenf later every- thing lay in ruin and confusion. Out of eight tents only one was left standing—the headquarters tent of the Association, which t was only kept up by the strenuous efforts of its occupants. The	really the best feature of the meet. The score: Ligowsky Donation match, Class A, on 15 singles and 5 pair
odds this was the best day yet of the meet. The feeling was better than before, and things had settled down to a more regular and satisfactory basis. Several shooters who had been loud it their denunciation of the classification system had neekly accepted the frivitable, and were shooting regularly where the property of the state of the stat	crowded sheds, or into the headquarters tent. From under the	Ligowsky clay-birds: Stree
No event of any special interest transpired, and the shooting, al though tiresomely and painfully slow, was nevertheless regula and generally pleasant. There should be at least domble the nam ber of birds trapped daily. At the announcement of the Ligow sky free bird shoot for to-morrow, \$75 cash to he divided unde the classification system, there was general applause, and an in teresting event is expected. Good feeling prevails generally to night. The score— Match No. 2 (match No. 1 of programme not shot), Classes B an	- I managing to keep the growd in a roar.	The tournament was now practically at an end. Major Taylor announced that the three best averages for each class had been made up, but there being no surplus over the guarantee, no prizes could be offered for the same. The figures show plainly enough
March No. 2 (match No. 1 of programme not shot), Classes B am C. on 9 single Peorias, \$2 entrance: Robinson	The match that had been in progress was declared off, and the moueys were refunded. It having cleared nicely by this time the traps were set in for the Ligowsky free shoot, in which great interest was taken. The terms of this match, so generously offered by this well known company, were \$35 each to A, B and C alsaes, to be shot for as one money, no entrance fee and birds free, the birds to be 15 singles and 5 pairs. After some little fill-bustering among the great unclassified, and a little judicions and prompt action on the part of the management, the respective classes fell amically to shooting with results as shown below. It	had, and how much poorer it would have been had classification not been attempted. The two top scores in Band C class certainly
Frank	3 is really quite wonderful the progress that has been made during three days in this classification business, and it is fair to suy that the American Association has solved the question as it has never been solved hefore and shown that classification is practical and will be popular when it has been more often seen in actual work. 5. It is no longer the bugbear that it was here at the beginning of the week. The Association may therefore set aside the question of the unexpectedly light attendance, itself a fault of the shooters and art of the association and deem the a recent week.	tioned. Two-men team match, 50 live birds per man, \$100 a side, Budd and Farmale vs. McMurchy and Bandle. The score: C W Budd

McMurchy has been troubled with the rheumatism, but shot in apparently good form. Parmalee cannot shoot live birds as he can targets. Budd is always the same, quiet, steady and gentlemanly. There is no more connendable a shooter at the public trap than Chartie Budd. Al Bandlo, colossal in figure and good natured, shot a hard race, as he is sure to do. Each man had his followers, and wagers were on side and individual issues. Rolla O. Heikes filled acceptably the position of referee, the match being shot mader American Association rules. There was no demur to his decision except in one ease. Parmalee grassed a left quartering hird. The referee announced "dead bird." The trapper started to gather the bird, which look wing and went out of bounds. There was no challonge, but the decision of the referee was changed to "lost bird." Under the strict rules of the Association this decision can only he warranted by supposing the case to be covered by that rule which says: "A bird once out of bounds shall be scored a lost bird." This is by ordinary trap usage thought to be intended to cover the case of a bird flying out of bounds and then returning and falling within bounds. It remains a question whether tho opposite party did not forfeit its rights by neglecting to challenge bird does not have to be gathered to be scored. The result of the match, however, was not affected by this decision; in the latter Major Taylor and Mr. Tucker, of the Board, both concurred informally with Mr. Heikes, The greater part of the erowl now went home. The tents and material began to disappear under the packer's orders. Frank Mosher, L. C. Boyd and A. M. Robinson shot a side match or two at 16 live birds, Mosher winning twice. Night approached and the end of the tournament was at band.

In reviewing this, the first meet of the American Shooting Association, little remains to add to what has been already said. The meet has gathered moral strength every day, and to-day the American Shooting Association has cause to fee made confident than at a

MASSACHUSETTS ASSOCIATION.

MASSACHUSETTS ASSOCIATION.

THE tenth annual meeting of the Masschnsetts Shooting Association was held outhe 17th and 18th inst. atClarendon Hills, Mass., on the Old Colony Road. Providence Division, six miles from Boston, under the management of the Jamaica Plain Gun Club. This is the yourgest and one of the most progressive clubs in the Association, and the tournament was given to them as an incentive to still greater effort. It has for its officers: Pros., A. W. Rounds; Treas, C. H. Olmstead; Sec., J. R. Hanmer, Capt., H. A. Baker, and with their efficient aid, the members manage to have a lively club shoot every Taursday. The shooting grounds are located on the crest of a hill, entailing quite a climb when no day morning, when a number of would-be shooters gathered on the platform and waitod and growled for the rig which never, yes, finally did come, but was so small that several trips were necessary. Some of tho waiters became disgusted, more perhaps on account of the arbitrary system of bandicapping in vogue in the Association than because of the delay, and returned to Boston. The expert shots are handicapped in distance, they shooting at 21yds, to the amatours' 18yds, and this they consider unfair. A more countable system would be by classing all contestants as 70,80 and 90 men, as in other State associations. However, those that remaned cot there after a while, some of us walking through the west grass in the dripping woods.

The shooting commenced at 9 o'clock, but soon after the rain sean to fall, and it came down in perfect torrents, interfering sally with the comfort of all concerned. It seems to be only an appropriate of the caps, and the regular programme consisting of ten regular events, besides a number of extra sweeps, was completed. The shooting was done from four sets of three traps each; they were in constant operation for star bearing and one not often to be procured on an occasion of this kind not return to the benefit of outsiders as well as members of the Association, and programme consi

The two Wellington	n teams finis	shed with an equi	al seore of 40

The two Wellington teams inisided with an equal secre of 40 and divided first. Lexington and Brockton with 39 each divided second, and Jamaica Plain won third. In this event, an unfortunate decision of the judge on Herrick's last bird in the first five, put the Lexington club out of the tie for first. The bird flew very low and was well broken when almost down to the screen. The tindge however failed to see it and refused to change his decision.

The annual meeting of the Association was held on Monday evening at Yonng's Hotel, for the election of officers and the transaction of other business. About twenty-five members were present, representing; the following clinks: Lexington, Wellington, Mass, Rifle Association, Jamaica Plain and Brockton. The minutes of the previous meeting were road and approved, and the treasurer reported a balance on hand of \$127.39, which report was accepted and placed on file. The Fall River Gun Club was reinstated on application. The officers of the Association siree 1836 have been: Pres. H. W. Eager, Marlboro; 1st Vice-Pres., Alber Houghton; 2d Vice-Pres., J. Buffum; Scc., Chas. Hartwell, of Worcester; Treas, Albert Keating, and Board of Directors, W. H. Allen and J. S. Sawyer. Under the head of new business Mr. J. S. Sawyer broached the subject of classification, saying that under the present system of handicapping by distance the experts claimed to be practically out-classed, and he suggested that some change be made, closing by requesting the opinion and suggestions of the experts, those most interested.

A long informal discussion ensued, the genral tenor of which was adverse to the welfare of the experts. However, in Mr. Tucker, of the Lexington Club, they found a champion, and he advised the Association to adopt some rule which would keep the experts in; if the present rule was so unjust to them he hoped that modifications would be made so that they would not be driven away trom tournaments. The talk finally resulted in a motion by Capt. Sawyer that the American Shooting Association, whether living in the Stare or not, should be allowed to shoot in the State events. Carried.

Moved to pay the secretary \$10 as a slight recompense for his services. Carried.

Moved to pay the secretary \$10 as a slight recompense for his services. Carried.

Moved to pay

Chas. Hartwell, of Gardner, Treasurer, Albert Keating, of Quincy, Directors, H. F. Amsden, of Boston and A. M. Tueker, Charlestown. On motion adjourned.

Tuesday, June 18.

The second day of the tournamont opened bright and clear, although a strong east wind gave rise to the fear that more rain might fall. This fear was not realized, however, and the day passed very pleasantly. The wind did not interfere seriously with the flight of the birds, except on Nos. I and 2 sets of traps, and it blew right across these, bastening somewhat the flight of the quartering birds. The arrangements for transportation of shooters from the station to the gronnds were very much improved, a large bus meeting every train and for 25 cents giving each passenger a comfortable and pleasant ride. Only a small number were present in the morning, but accessions to the ranks were frequent as each train arrived, and the later events were woll filled. Some old-timers were present, among them D. A. Brown, J. N. Frye and Percy Aldrich, of the old Tremont shooting men. The latter is an old live-bird shot, and has taken part in many events all through the country. The members of the Jamalea Plain Club are workers, and no tedious waits occurred in running off the events. The programme called for ten regular sweeps, in addition to which many extra sweeps were shot, but of the latter we give only a few. Much interest centered in the individual badge contests, and Mr. F. J. C. Swift, of Falmouth, covered himself with glory by winning all three, also the medal offered for best average in amateur events.

At 1 o'clock a second edition of Monday's elegant luncheon, but fanything more elaborate, was served, and its abundance and quality helped to put every one in good humor, and in this condition no kieking was heard, though truth to tell, no necessity for it existed. Two trophies, in the shape of watch charms, were donated by the Association for the best average on the two days, shooting at 50 clay-pigeons and 50 bluerocks each day, 200 birds in all, o

8 birds in the 90 class received six times the amount of money the man who broke the same number in the 80 class, and double the amount of the man who had to break 12 straight in a tie in the 70 class. In this case every man in the 90 class won a prize without shorting a tie. In match No. 2 the number of entries bad dropped to \$6 (the 70 class losing 10), the same 9 in the 90 class, every man also won without shooting a tie, while only 10 men won in the 70 class after shooting splendidly in ties. In match No. 3, there were 11 in the 90 class, and every man won without shooting at tie, while in the 70 class every man won again without shooting at it, while in the 70 class every man won again without shooting at it, while in the 70 class every man won again without shooting at it, while in the 70 class every man won again without shooting at it, while in the 70 class every man who won had to be an expert at the shooting. The 5th match for a man who could shoot any the 90 class was the place to win, and I am surprised that some of the 70 class was the place to win, and I am surprised that some of the 70 class don't reject to be placed in the 90 class. I cannot see any justice in this maner of division of prizes, and though hardly a 70 class shooter myself, would much prefer taking my chances against 10 men in the 90 class than four times that number in the 70 class. If this plan continues, I can foresee a dropping off in the entries of the next tournament.

is,

, 1	COLUMBIA, Pa.—Wrightsville, Pa.—On Friday afternoon, the 14th inst., several of the members of the Columbia Gun Club faced the traps to try their skill and endurance in a shoot at 100 standards from three traps. Some of the shooting was very good, but with exception of Mr. Krueger it was again proven that amateurs accustomed to shoot races cannot "hold on!" in a long one. Mr. Krueger's score is a good one and he did not try his hardest to make a big score. At all times he shoots the same quick, automatic style, and pulverizes his birds with remarkable regularity. The following are the scores: A C Krneger

BOSTON, June 12.—To-day's meeting at the range was exceedingly interesting, owing to the fact that the thirteenth and final ompetition for the Climax diamond badge was held, and the ourth contest in the 1898 gold coin and merchandise match took lace. The weather conditions were fine, the attendance fair and he shooting good. At the close of to-day's competition for the lamond badge Messrs. Stauton, Wheeler and Choate were tied, ach having won it four times during the series of 13 shoots. In he shoot-off at 10 clays and 10 standards Mr. Choate won, breaking 19 out of a possible 20 birds. The summary of to-day's sport is a follows: Climax diamond badge match, 20 clay-pigeons from 5 raps, and 20 standard targets from 3 traps:

Clays.

Standards.

SEAWANHAKA CORINTHIAN Y. C. JUNE 15-17.

A LTHOUGH tho small number of entries and the many changes wanhaka Corinthian Y. C. of its usual interest, there was at the same and the many changes of the weather conspired to rob the annual race of the Seawanhaka Corinthian Y. C. of its usual interest, there was at the same that the control of the control of the small boats, the honors of the day going to the new keels Minerva of the forties and Kathleen of the thirties, each outsailing her class by miles. In the larger classes there was so much fluking that the results were of little importance, but in the smaller the race was exciting during the greater part of the day. Grayling did not turn up this year, though usually in this race, but her place was taken by Mayflower, her first race under schooner ig. As Mr. Burgess was at the wheel, there was every promise of an exciting race between her and Sca Fox, steered by Mr. Tams, but the many flukes made the final result very unsatisfactory. In the 70ft. class both Katrima and Titania were out, preferring no doubt to wait until Tuesday for the trial that has been accorded to the control of the same and the final result very unsatisfactory. In the Schooner class the flukes made the conding vory time. Gracie was not really in it with the others all day, doing no better than on Thursday. The elift, class, Hidlegarde and Mischief, the latter with a new owner but her old single jib, and the 58ft, class, Clara with nothing but Roamer against her. attracted little attection.

The groat foature of the day was the racing of the forties, five coming to the line. Nymph and Banshee were handled by their regular Corinthian crews, Gorlla and Marquita were handle capped hy lack of practice, their crews being hastily got together. Liris was out of it after her dissister of Thursday, and her crew apparently booked for berits on the club steamer, but at the last momen and her were the first time in the classes under 58ft., while the allowance of crew has been changed from one man to every

SFECIAL RACE, JUNE 17.

courses and conditions for the special race on Monday for the and 30ft. classes were the same as on Saturday, except that ional crews and clubtopsails were allowed, the helmsman in amateur. The prizes were \$150 for five starters in the 40ft. and \$75 for each of the other classes, to be increased to \$100 if red. The starters were Minerya, steered by Mr. J. Beavor-Maraquita, steered by Mr. Fred Swift; Tomahawk, steered by D. Morizar; Gorilla, steered by Mr. —, and Nymph, steered by A. Willard, in the 40ft. class. Banshee was unable to get a pumast in time. Volusia and Beatrice started in the 35ft. class, er steered by her owner, Mr. C. A. Post; and in the 30ft. class cathleen, steered by Mr. Mrithcok, with a Corinthian crew; n. steered by Mr. Kowle, also with a Corinthian crew from ; Elf and the new Tomboy, steered by Mr. Archibald Rogers, ut of Bedouin's crew under Captain Pittuck. The wind was sesh from the west in the morning, with every promise of a se, the day being clear and pleasant. In spite of the fine entry

REGATTA COURSES, NEW YORK BAY.

New York Y. C. starts at Buoy 15, Seawanhaka C. Y. C. starts at Buoy 18,

Corinthian Y. C. starts at Bnoy 15. Atlantic Y. C. starts at Bay Ridge, above Bnoy 18.

Finish for all at Buoy 15. The outer mark of the new outside course of the New York Y. C. is S.W. by W. of Sandy Hook Lightship, near the shore at the lowest point shown on the chart.

down with the yachts, and the spectators missed the sight of her off the wind.

The fight thus far had been a most exciting and interesting one. Such a picked fleet is rarely brought together as that in the 40 and 30ft, classes, new craft, the work of several rival designers, and with nothing lacking to make each the winner if possible. The job lot assortment of craft of all sizes and degrees of excellence that ornament the average club regata was replaced by as fine a fleet of evenly matched boats as is not often seen. With the racers was the cruiser Chispa towing a boat, but near enough to see what was going on. The times at buoy 10 were:

of M., but after making up to within 18 miles of the line data and view as the line of steel as the line of the line of steel as the line of the li

NOW FOR A SPARMAKER'S TRUST.

NOW FOR A SPARMAKER'S TRUST.

THE chances are that the present season will prove to all the necessity of a change in the rules which will encourage, or at least permit a reduction of the outrageous sail plans now carried on all racing craft; but in the meantime there is a bounteous harvest ahead for the sparmakers; and now, if ever, is the time for the successful organization of a sparmakers' trust. The winds thus far have not been specially heavy, but the list of casualties is son ething unusual in the ordinary run of the spring racing. Titania has carried away the end of her bowsprit, dorilla and Banshee have both lost a topmast, while Liris has already spoiled a topmast, lower mast and topsailyard, and Kntrina a boom. Kathleen's bowsprit we do not include, as it went in a collision. This is but the beginning, and while we do not wish to prophesy evil we look for more masts to go before the question of supremacy is decided in the 70,49 and 30t. classes, to say nothing of smaller spars. The fact is, that the whole fleet is and must be, grossly over-rigged, the only hope for better things which we have tlus far been able to discover being in the performance of little Minerva on Saturday in which perfection of torm, a reasonable amount of power for the length, and a moderate sail plan won from the larger and more heavily rigged hoats in both light and strong winds. If Minerva can repeat her performance throughout the season, or even make a good record in her class, she will do much to prove the practicability of a desirable type of racing yacti under the present rules. If she fails, the other hope is that the two most powerful boats in the class, Liris and Gorilla, may yacti under the present rules. If she fails, the other hope is that the two most powerful boats in the class, Liris and Gorilla, may yeach under the present rules if she has all the power and sail that is practicable on 40ft. In such a case it is likely that a cliange of the rule will be welcomed by all, and we shall see the present limits to leng

GIVE THE LITTLE FELLOWS A CHANCE.

GIVE THE LITTLE FELLOWS A CHANCE.

SOME flagrant instances of the disregard of the moral as well as the legal rights of the owners of the smaller craft nave occurred during the late races, the worst being the conduct of the big Dauntless. Il2ft. l.w.l., in running in among the 40ft. class while the latter had no steerage way, there heing very little wind, and that all killed by Dauntless's kites. The fact that she, too, was in the race is no excuse for spoiling the sport and impering the safety of the small boats. In the Atlantic Y.C. race on Tuesday the large schooner Fearless failed to give way when on the port tack and took the bowsprit out of Kathleen, a 30ft, boat, also in the race and then leading her class. The man on the bowsprit end, Mr. Brown, had a very narrow escape from scrious injury. The names of these boats suggest the query whether they would be equally dauntless and fearless were the positions reversed, and they smaller instead of much larger than the other boats. On Wednesday of last week the schooner Social, while becalmed, was run into by the steamer Long Branch, with an excursion barge in tow, in Flushing Bay. We do not know who is to blame in this case, but as the yacht is reported as in stays and hecalmed, it was the steamer's duty to keep clear.

THE MERLE.—Oswego, June 11.—Editor Forest and Stream: To correct wrong impression conveyed by a sensational article going the rounds of the daily press yesterday regarding Merle having been driven ashore during the storm of Sunday last, I would say that while at anchor off Pleasant Point, a resort some ten miles below here, and after the heaviest of the storm was over, by the parting of what has proved to be a very poor chain cable the Merle was forced into shoal water and grounded before sufficient cannas could be made to insure way enough to stay her. She was released without injury and at regular moorings off our club house by 10 P. M. Sunday. I trust if any mention is made of the matter in the FOREST AND STREAM you will state the facts as above. The Merle will no doubt be delivered to her new owners within a few days.—ALLEN AMES, Owner of Merle.

THE WRECK OF THE MALTA.—Editor Forest and Street The cabin yacht Malta, reported in your issue of June & as cisted, was an old yawl 22th long raised on purchased by so hoys for §28. She did not capsize, but dragged her anchor a went ashore and broke up. Be gentle with the miserable "cent hoarders" and let them die a natural death. They have senough to answer for without being belied.—R. G. W. [Our inf mation was taken from a local paper, in which it was stated by the yacht capsized. Our correspondent being on the ground probably better posted.]

VOLUNTEER.—The New York Sun of Sunday last under the heading "The Volunteer Crippled, she is Warped and Bulged, and will not Race for the Cup," published a sensational story to the effect that Volunteer is in such a condition that it would not be possible to race, and that Gen. Paine will not sell her or allow her to be used in the defense of the Cup. The whole story is evidently a malicious fabrication, as Volunteer is in better condition for racing to-day than two years since. Capt. Haff has worked constantly to perfect her bottom, and it is now in good condition for painting, which it was not when she raced Thistle.

ATLANTIC Y. C.—The annual regatta of the Atlantic Y. C. will he resailed on June 21.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoelsts and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of hoars and fittings, and all items relating to the sport.

TORONTO C. C. NOTES.

TORONTO C. C. NOTES.

Editor Forest and Stream:

In casting about me for the wherewithal to put into the annual spring notes, methought some of your readers might appreciate a peep at some sketches which Mr. J. D. Kelly, our club artist, hung on the bulletin board a few weeks ago, to the amusement of many and the confusion of one or two. The artist has taken for his first general sketch a short peep into the locker room just at the time when the spring swapping of canoes, etc., is going on Novice No. I proudly pleks up his new purchase as he hands ove the necessary funds, while the chap who sold her can scarcely repress the diabolical grin which gradually illuminates his connence as he counts the stamps and pictures to himself the novice out for his first cruise, counting stars through the chinks in the sides of his new purchase which has been warranted sound in wind, limb and feature. The open canoe paddler, as he slobs on the fresh spring coloring is no doubt calculating the cost of a lazyback, carpet and rep cushions, for has he not all winter beey yarning to his numerons lady friends about the pleasures of canoeing in an open craft with a lady friends, going over to Hanlan's Island in the evening to listen to the regimental bands playing the sweetest of airs, and then the quite walk home in the twilight with his best girl, but anon a cloud passes over his brow as he suddenly remembers that the price of McConkey's lee cram is now up to twenty cents a dish and he'll have to pass that blessed place every time with his lady friend whose capacity has never been gauged short of two dishess. We leave him figuring whether he hadn't better take a street car every night, when they'll be whisked up town before his friend has time to make alluring remarks about the heat, etc.

No. 3 is a different sort of a chap, who never thinks of the other sex (unless he wants a button sewed on or a new flag made), but as he yanks up the sail for the forty-seventh time he reaches the conclusion that she ought to put his new Orion up

sex (unies in """ as he yanks up the sail for the forty-seventii time ite i calculate as he yanks up the sail for the forty-seventii time ite i calculate. Sketch No. 2 pictures the canoeist as he is "abroad," i. e. when he has his shoes on together with the rest of his clothing. The sketch of the chap seated in the stern is a very good picure of on genial vice-commodore, D. B. Jacques, who gathers his charming lady friends around him ench Saturday, and by example and precept tries to make the younger members look after their lady friends. (The point of the sketch is seen when it is remembered that Hyla's craft barely holds himself, and he is never found in young ladies' company if he could get out of it by running half a mile or so.)

No. 3, the racer, sometimes called the skinflint, the skipper on which it strikes me would look better with a little more breakfast under his belt. The thing flapping around at the end of the string is not a baby rattle or a pair of eyeglasses, but a large combination tool knife which the skipper is addicted to carrying a lo Baden-Powell. I do not know whether the artist intendency reflection to be cast on those feet when he placed them out side the canoe or not, but there'll be a row if any one intimate that they won't go inside a 30in. craft. Some A. C. A. member will now he able to see why Mac is sometimes a vigorous kicker hut what is a fellow to do when he is endowed with 14 or 15in. feet? Use 'em by kicking occasionally, or hang em up to ge rusty? The lines of the canoe are taken directly from to reignal.

be used in the defense of the Cup. The whole story is for racing to-day thin two years since. Capt. Half has been so not, but there'll be a row if any one intimates that they won't so inside a Jun. crats cap. C. A. members do constantly to perfect her bottom, and it is now in good in the control of the co

This very appropriate name has been given him on account of his ability in headling that well-known conceists' dish, ham and eggs. (Ae probably won't now regret the enormous quantity I of the probably won't now regret the enormous quantity I now reach to when the probably won't now regret the enormous quantity I in year to when he never the probably well can almost as as the sweet flavor of it is now not the new to be regoten.) The lost was all ways a handy fellow to be very not of regoten.) The lost was all ways a handy fellow to have a very men and boy his braist state record of being the only man who can stand in his cance and manker with his topmast.

Canceing! Yes, canoeing is boming in Toronto. The membership of the club is now up in the mieties and still coming in, while one of the rowing clubs has forty odd cances in its racks, and the yeach club is full of 'em.

One of the latest craft to arrive is the 30ft, open cance to hold for paddlers; she looks well, all keeping stroke, and shoots along at a greaf rafe. Vice-Commodore Jacques is captain of her crew, which number from 1 to 16 the writer, on account of the size of his feet, is last on the list, so as he can kick the small boy who tries to hang on, I guess.

The Boreas has changed hands, did you say? She is still in the club, though, while Mr. Nelson knocks around the Muskoka lakes with a craft large enough to hold wife and family.

Among the new craft which are expected to be speedy is a new Hyla from the Ontario Canoe Co., and one of the same nodel for W. Smith. The secretary now sails last year's Hyla, Mr. Wilton Morse now spins around in the '88 Mac under the name of Gweu, while her former owner is getting a new article from Wm. English, of Peterboro. W. A. Leys has disposed of the Dawn to Colin Fraser, Northern Division purser, who is re-rigging her. Levs has dropped salling for a season, and comes out as a single-blade paddler in a new open cance built by Gec. Warria, the shell builder, 16x30x12, and weighs 25tbs. The first salling race of the

Fraser, Northern Division purser, who is re-rigging her. Levs has dropped saling for a season, and comes out as a single-blade paddler in a new open canoe built by Ger. Warria, the shell builder, 16×30×12, and weighs 251bs. The first saliling race of the season comes off June 15. A committee will handicap all who can losts a rag.

TORONTO, June 7.

CORINTHIAN MOSQUITO FLEET, JUNE 8-10.

CORINTHIAN MOSQUITO FLEET, JUNE 8-10.

The first regatta of the Corinthian Mosquito Fleet was sailed off thressince Cove, Larchmont, on June 8, which an extremely light air, though at no time did the wind drop out. There were fifteen entries received by letter, but light wind and various reasons prevented several from being present. The course for cut-sons prevented several from being present. The course

a steady sailing breeze from S.S.W. over a triangular course formed by striped spar day No. 2, of Lurchmat, spar budy No. 2, on Hen and Chickens, and black sear off Clustable Point, twice round, making total distance 5 miles.

Mr. Osgood, of the steam yacht Norwal, very graciously tendered his nighthal anuch to Mr. Augustus Monroe and Mr. Russel Henderson, who kindly officated as regatta committee for the Mosquito Flect.

Although the fleet numbers 20 hoats only 7 started in this race. The interest of the day was in the yawl class, Lestris, Waif and Gnat, as the other four did not class and only raced for fastest time over the course, which was easily won by cat Belle, outsailing everything. The Lestris was sailed by Com. Thornton Smith, her sails being handled by her owner, Dr. Ledyard. The Waif was sailed by her owner, I. D. Huntington, Jr., and the Gnat by her owner, I. D. Huntington, Jr., and the Gnat by her owner, to starboard on the second leg to establish an overlap just at the turn of the black budy. This gave the Lestris a lead, which back on the wind, with both men lying flat on deck, she increased, so making one shore hitch to cross to two tacks of the Waif, and finally winning.

IANTHE C. C. SPRING REGATTA, JUNE 8.

Inthic C. C., canor Venemoska; L. B. Pilmar, Iantha C. C., canoe Nipsic; W. P. Dolge, B. Fredericks and J. T. Conaer, Iantha C. C., and F. Milesi, Ratherforl C. C. Paras seemal to be some affiliation between the curo. Wind and the wind itself, perhaps they were sweethearts, but Hogan seemal to woo them both very successfully, for he came in first, with Donglass not far behind. Phillips soon came along and took the junior prize, a handsome banner. Hogan and Douglass took first and second prize flags for the report rule respectively. The unset sailing race was won by Palmer with Hogan a close second. The evening was spent merrily with supper, songs, etc.

ANSWERS TO CORRESPONDENTS.

V. A. N.-The law was that of Wisconsin.

F. C. C.—The fishing in Lake George is chiefly for lake trout and black bass.

H. P., Hokendauqua, Pa.—Bird-lime is made by boiling down linseed oil. It can be used for the capture of English sparrows.

C. G., Rye, New York,—Will you advise me where I can procure some mailard eggs? Ans. Write to Mr. Fred Mather, Cold Spring Harbor, N. Y.

Here is an item from the Hartford Times, which shows how the dog law works: "It is a serious matter to befriend a dog in New Haven, especially if the friendless brute takes a notion to follow its benefactor. Michael H. Reilly, a jeweler who recently moved to town and lives on Lafayette street, several days ago threw a piece of meat to a wandering dog. Since then he has several times tried to drive the dog away. On Monday he was charged in the City Court with keeping an unregistered dog. He told this story and put on a witness to corroborate. Judge Pickett said he was within the law and fined Reilly \$1. The latter appealed."

The little five year-old son of H. C. Shaw of Gray's River was missed from his home a few days ago and could not be found. Just as his parents were becoming alarmed he came toddling in with a string of forty-eight fine trout which he had caught in Crooked Creek.—Vancouver (Washington Territory) Independent.

THE NEW CATALOGUE of sporting goods and articles for in and outdoor pastanes, iss ted by Messrs. Peck & Snyder, is in many respects a remarkable volume. It contains descriptions of all sorts of implements and toys, and everything from a bicycle to a base ball bat, from a fishred to a toy fire engine, is figured in it. Parents and guardians are recommended not to let the youngstern get hold of this book unless they are prepared to be teased to death. Price 25 cents.

No Chemicals.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by per-fect mechanical processes, no chemical being is manufactured from the inst stage to the last by per-fect mechanical processes, no chemical being used in its preparation. By one of the most ingenious of these mechanical processes the greatest de-gree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolute's pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a clossary of all the loval names in popular use, illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—Troy Press.

The book should find its way to a choice place in every sportsman's library.—Chicago Inter-Ocean.

Ocean.

I would much rather know what this book tells me, the various names by which the p-ople call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * ** It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—W., in Journal of Commerce.

ANSWERS TO CORRESPONDENTS.

THE CONTRADICTORY CROW.

THERE have been protracted newspaper discussions of the good and bad qualities of the crow; and every once in a while the bird is up for discussion in county farmers' societies and State legislatures. The Maine Legislature gave a long hearing to the crow's friends and enemies last winter, and finally passed a bounty law, which is reported to be now effecting a decided decrease in the ranks. The question of the crow's comparative usefulness and destructiveness is one that requires a more careful and comprehensive examination than is within the compass of any individual or local society; and the topic has with reason been taken up by the Division of conomic Ornithology and Mammalogy of the National Department of Agriculture. In the annual report for 1888, which is now before us, Mr. Walter B. Barrows gives the results of the investigation so far as it has gone. The data acquired are as yet insufficient for determining beyond dispute whether the crows should be considered destructive vermin and destroyed, or whether they should be protected.

Friends of the crow claim for it that it destroys insects and field mice and eats carrion. These points are conceded in its favor. The charges against it are that it destroys young grain, particularly Indian corn, on first coming up, the ripe and ripening corn and other grain, various other vegetable products, the eggs and young of poultry, and the eggs and young of wild birds.

To determine what consideration should be given to these various contentions the Department has undertaken the task of a systematic examination of a large number of stomachs; and from various parts of the country the material has been sent in for this purpose; but the examinati A has not yet progressed so far as to afford ultimate

One of the most interesting discoveries brought out by this dissection of crows' stomachs is that of the birds' agency in distributing noxious seeds. The berries of the poison sumach and the poison ivy are greedily consumed sportsmen's convention scheme, which means that dele- 2, 8, 5, 6, 7, 8, 10, 13 and 15;

by them. Stomachs of crows taken in every month from September to March, and coming from different localities from Massachusetts to Florida, were found to contain sumach and ivy seeds, in proportions which lead to the conclusion that the consumption must be enormous. The berries of both species cling to the stem throughout the winter, and it is thought that their dissemination by the crows must be carried on even when the ground is covered with snow.

It is a well known fact that certain seeds germinate more rapidly for having passed through the digestive organs of birds and other animals. To determine whether this was true of the poison ivy and sumach seeds eaten by the crows, experiments were made with seeds taken from the great roost in the Arlington national cemetery. These were found to have preserved their vitality and to germinate more quickly than seeds taken from the vine. This furnishes a new count in the indictment against the crow, that he is spreading broadcast the seeds of these vegetable pests.

The conclusions drawn by the Division from the study of the crow question so far as it has been carried are these:

- I. Crows seriously damage the corn crop and injure other grain crops usually to a less extent.
- II. They damage other farm crops to some extent, frequently doing much mischief.
- III. They are very destructive to the eggs and young of domesticated fowl.
- IV. They do incalculable damage to the eggs and young of native birds.
- V. They do much harm by the distribution of seeeds of poison ivy, poison sumach, and perhaps other noxious plants.
- VI. They do much harm by the destruction of beneficial
- VII. They do much good by the destruction of injurious insects.
- VIII. They are largely beneficial through their destruction of mice and other rodents.
- IX. They are valuable or casionally as scavengers.
- To this it is added that "the careful examination of large numbers of stomachs, and the critical study of the insect food of the crow, may change materially the present aspect of the question; but so far as the facts at present known enable a judgment to be formed the harm which crows do appears to far outweigh the good.'

PHASES OF GAME LEGISLATION.

W E report in another column the county ordinance adopted by the Oneida county, N. Y., supervisors forbidding the exportation of game killed in that county. A bill to this effect was passed by the last Legislature. but Governor Hill vetoed it. The New York law gives county supervisors power to increase the protection of game within their jurisdiction, and the Utica Fish and Game Protective Association have thus secured by local enactment what they failed to obtain at Albany. The intent of the new regulation is to shut off the marketing of game birds taken in Oneida county. Other counties have like laws with a like purpose, and in several instances the results have shown that the end is attained.

As an example of the evil we adverted to last week. the damming of rivers and streams without provision for the ascent of fish to their spawning beds, take the Hudson River. In the dams at Mechanicsville and Northumberland there should be fishways for the salmon. A bill to provide for their erection, in the last Legislature, failed to reach Governor Hill, and all because of party

The notion is continually cropping up that the solution of game protection in this country is to be found in national legislation. State laws have in many respects proved defective and worthless; and the feeling appears to be to appeal to the general Government for a national law supposed to be more potent, because it is national, We question whether any help is to come from Washington, even if Congress could constitutionally legis-late on the subject. If we cannot enforce State laws, we could not enforce national laws. Advocates of game bills in Congress are on the wrong track,

gates from different States are to come together, hold a meeting and pass resolutions. The resolutions have been adopted and promulgated more than once already, and that has been the end of it. And it will be the end of other national conventions and other sets of resolutions.

As a matter of fact if game is protected it must be protected by the earnest purposes and the active efforts of home men and measures. The State game and fish protector system, with wardens or protectors in each district, county or town, is the machinery which has been proved and is proving itself effective. We should look to perand is proving itself effective. fecting this system, and to building up local public sentiment for its support, rather than to boom national conventions which can never do any more than to resolve, or than to besiege Congress for national legislation.

SNAP SHOTS.

T is not a creditable picture; it is in truth a disgusting I one, which our Macon, Ga., correspondent draws of the fishing practiced in that vicinity; and the more speedily the residents there take measures to abate their heathenish ways the better for the fish and for their own man-hood. Georgia is the most progressive State of the South; her material resources are developing with great strides; her people are prosperous; but no people can afford to squander such a natural source of wealth as is contained in Georgia waters; it is folly, and folly on a tremendous scale. With respect to caring for her food fish supply Georgia is sadly behind the times. When the State comes to repair these wasted resources it will be found necessary to expend large sums of money in restocking waters which ought have been kept well stocked at nominal cost if the natural supply had been drawn on with discretion. This is the hard common sense aspect of the fish question; there is no angler's sentiment about it; but it appears to be a phase of common sense which can be learned only after foolish wastefulness has made its acquirement an expensive educational process.

These Georgia fishing methods remind us of a story "Al Fresco" told us last spring of a fisherman in the North Carolina mountains who set out for a record. He was an angler from town, that is to say he had all the outer appurtenances that go to make an angler—rod, reel, fly-book, creel, and dress the latest style of angling suits. He made his way to a remote stream, famed for its trout, followed it up until he came to a dam, paid the miller a generous price to draw the water out of the dam, and then literally scooped up the big fish, and on his return went among decent people bragging of his prodigious feat.

The Forest and Stream Publishing Company will publish in a short time a new work entitled "Log Cabins, How to Build and Furnish Them." This book is by a well-known architect, Mr. W. S. Wicks, of Buffalo, and will prove a very useful aid to the camper and outer. Its directions are so plain and simple that any one who can use an axe can follow them, and it is profusely illustrated with plans and elevations of camps and cottages, and with designs for furniture and interior fittings. this book before him the man or boy who finds himself in the timber can erect for himself a shelter either as simple as a bough house or as elaborate as an Adirondack cottage.
This work cannot fail to add very materially to the comfort of those who spend their vacations in the woods, beyond the so-called comforts of civilization.

Surely anglers of the better class are careless of their duty, when the press publish without a protest records of fish caught by the hundred whose average weight is only an ounce or two. There are plenty of men who are willing to catch and count fingerlings, but if the officers of the law did their part toward enforcing the statutes of New York State they ought to be afraid to boast of such catches. Each decent angler ought to do his part toward impressing those with whom, he comes in contact with the criminality of taking these baby trout.

Captain Moses Harris, until within a short time in charge of the Yellowstone Park, has reached Fort Custer with his command.

We are desirous of obtaining a copy of the volume Another favorite panacea with some is the national index for the following volumes of Forest and Stream:

THE FUR FISHERIES OF THE NORTH-WEST SEAS.

[By a Staff Correspondent.]

IV .- HISTORY OF WATER SEALING IN BRITISH COLUMBIA.

IV.—HISTORY OF WATER SEALING IN BRITISH COLUMBIA.

FROM time immemorial the Indians of the British Columbia coast have hunted the fur seal, but the number killed by them in any one season was comparatively small. Their method was to go out from the coast in large canoes and kill the seals by spearing them, and this method readily procured for them enough fur to supply their wants. About ten years ago the demand for skins induced a few whites to go off in small vessels and seal along the coast, but they never made large catches. A year or two later, however, the trade began to grow.

No account was made of this industry in any of the Canadian Fishery Reports up to the year 1876, but in that year Mr. A. C. Anderson, then Inspector of Fisheries for British Columbia, stated in his report that the Barclay Sound and Clayoquot Indians killed about 2,600 seal. In 1877 his statistical returns, taken from the Custom House reports of exports, gave the catch as 5,700 skins, valued at \$25,650. In 1878 his figures show an increase to 9,592 valued at \$43,168.50, and in 1879 the fur seal catch had increased to 12,500 skins, valued at \$100,000.

His report of 1880 goes more into detail, and we learn that there were engaged in the pursuit of the fur seal 7 vessels, registering 260 tons, employing 27 sailors, 186 hunters and 93 canoes. For that year the catch was 18,600 skins, valued at \$163,200.

In 1881 the mmber of vessels had increased to 10, registering 483 tons. They employed 46 sailors, 292 hunters and 146 canoes, but, owing to the very boisterous season, the catch was not nearly so good in proportion as the preceding year, and amounted to only 13,541 skins, valued at \$162,492.

In 1882 the fleet numbered 13 sail, aggregating 775 tons. The number of sailors was 52, of hunters 400, using 200

V.—WATER SEALING A DANGER TO OUR SEAL FISHERIES.

On their larger breeding grounds the fur seals are found in such enormous numbers that a thoughtless person might imagine that they could never all be killed off. Such United States ports, which numbered about as many

statements have been made about other animals which seemed even more numerous and had even a wider distribution than the species in question. A case in point in that of the buffale, which once ranged from a find in that of the buffale, which once ranged from a find in that of the buffale, which once ranged from a find that of the buffale, which once ranged from a find of the Arctic circle in such numbers as to blacken the prairie, and which is now practically extinct. Among the seems as if these species which are particularly and seems as if those species which are particularly and seems as if those species which are particularly and seems as if a seem of the seems of the seems as if a seem of the seems are seed and a seem of the seems as if a seem of the seems of the seems as if a seem of the seems of the seems as if a seem of the seems of the seems as if a seem of the seems of the seems

vessels, took an equal number, so that in all 70,000 seals may have been killed, of which at least 50,000 would have been females. Of these females perhaps one quarter or 13,500 were killed on their journey northward toward their breeding ground, at which time they are pregnant, so that this represents the death of 25,000 seals. Each one of the females taken in the Bering Sea during the months of June, July and August is the mother of a pup, and the killing of this mother is followed by the death by starvation of the pup. The strong, rapidly-growing young must nurse at frequent intervals or die.

It does not therefore seem unreasonable or unfair to assume that the taking of over 50,000 cow seals in this manner really represents a loss of 100,000 seals, of which 75,000 would be females. This is a very serious drain upon our breeding stock, and can scarcely fail to affect it, no matter how carefully the seals may be protected while on the breeding ground.

Up to the present time the seal fisheries have furnished to the United States almost the only revenue that it has derived from Alaska, and although the rapid development of that Territory gives promise that it will at no distant day be a valuable possession from its other resources, still it must be the policy of the Government to protect the seal fishery by every means in their power, and if this is to be done some check must be pnt on water sealing.

[TO BE CONTINUED.]

The Sportsman Tourist.

TO ALLAGUASH LAKE AND BEYOND.

TO ALLAGUASH LAKE AND BEYOND.

NEARLY one-half the great State of Maine is to-day an unbroken forest. Of that vast tract of wilderness, of which the boundary line between Maine and Canada may be called the center, some 16,000 square miles are in the State, and are sufficient to make a square 127 miles on either side, and one-tenth greater than the States of Massachusetts, Connecticut and Rhode Island combined.

Two successive summer cruises in the Moose River country, west of Moosehead Lake, had created a desire to see more of this great forest, and to gain a personal knowledge of the remoter regions of the Penobscot and St. John valleys. Such a journey as would enable a sportsman to penetrate to the heart of so wild and extensive a region required careful preparation. In fact, all the spare hours for many weeks had been devoted to getting together a suitable outfit and seeking information about the middle of September last, and arrangements were made for four weeks' absence from home. The party consisted of a sportsman of long varied experience and no little skill, a veteran of the war; the writer, less experienced and far less skillful, but willing to learn, and two guides.

The pleasure seekers of our party left Boston by the 7 P. M. train on the Boston & Maine R. R. It is an easy way to go hunting and fishing—resting at ease in a luxurious sleeper while nearing your camp at a speed of forty miles an hour. The afternoon of the next day, as the steamer bearing us from Greenville to the Northeast Carry touched at Kineo, well-remembered voices greeted us, for there were our guides, Will Redman and Fred Henderson of Moose River, who had come by appointment. These men knew nothing of the country to be traversed, yet we preferred their known skill and faithfulness without knowledge of the region to the chances of taking guides who were strangers. At 5 P. M. we landed at the Northeast Carry, passing the night at the Winnegarnock House on the Moosehead Lake shore. This is a fairly confortable house, which might be i

at the Northeast Carry, passing the night at the Winnegarnock House on the Moosehead Lake shore. This is a fairly comfortable house, which might be improved in some particulars.

The Northeast Carry from Moosehead Lake to the Penobscot River is about one and a half miles in length, there being a good road all the way. At the Penobscot termination there is also a tavern said not to be as well kept as the Winnegarnock. At either end of this carry teams are ready at all times to take canoes and baggage across at a charge of one dollar for each canoe and its load. At one time the competition to secure this business brought on a very angry controversy in which shotguns and rifles were used as arguments. Now the matter has been aimcably adjusted and each teamster totes whatever comes to his end of the carry, and takes no business from the other end. It would seem as if the man on the banks of the Penobscot had the best of the argument, as sportsmen usually go in heavily loaded and come out with empty canoes.

At an early hour our effects were moved across the carry, and canoes were afloat on the Penobscot. The name signifies Rocky River, and in a dry season is appropriate, but so frequent and copious had been the rains in the summer and fall, it flowed a full strong river, bearing our canoes well above its rocky bed.

Our outfit consisted of two canvas canoes made by our guide Redman and both nearly new, two tents, three pair of heavy wool blankets, one large rubber camp blanket, cooking utensils, two .44 rifles, one shotgun, ammunition, three fly-rods, three waterproof canvas packs, stout shoes, rubber sporting boots, overcoats, waterproof coats and a complete change of woolen clothing for each sportsman, such few personal effects as guides carry for their own use, and innumerable small articles likely to be needed in camp and in travel. In the commisary department were the supplies on which four men lived twenty-two days, leaving rations sufficient for two days more. In nearly all notes of extensive journeys in the

201bs, bacon.

There were about 320lbs, of provisions in all. These, with the exception of the pork and potatoes, had been selected with care and shipped by freight to Greenville, foot of Moosehead Lake, in advance)

From Northeast Carry to Chesnncook it is called 18 miles. There are no clearings along the river, yet it is a muchtraveled water route, cances with sportsmen and bateaux with lumbermen and supplies being frequently met. One may travel an equal distance on many of the roads through the rural districts of Massachusetts and Conceticut and meet not half so many people. Eighty cances and sportsmen were reported as in the country to which the Penobscot is the highway at one time last September.

which the Penolscot is the highway at one time last September.

At Chesuncook is a woods hotel kept by Mr. and Mrs. Hilton. It is a model of its kind, and to find such excelent accommodations in so remote a place was a pleasant surprise. The house is two story, painted white, with a veranda running half-way around. The view from the front is very fine. looking across Chesuncook, but even at that distance its sides of bare of the seal evel. As the bird flies it is 23 miles from Chesuncook, but even at that distance its sides of bare cot seem majestic in their proportions, and the scars of great land slides that have fluorities and the scars of great land slides that have fluorities and the scars of great land slides that have fluorities and the scars of great land slides that have large the very comfortable night at Chesuncook, with seavily laden canoes we left to follow Umbazookin's Bream to Mind Pond Carry, and thence to Chamberlain Lake. Unbazookin's Stream is winding, and in places so shallow that we were obliged to wade and drag the canoes. At such places the channel is easily followed by the marks of paint on the rocks where canoes have scraped. At Mud Pond Carry a man named Smith has erected a log house, where he lives during the late summer and early fall. He keeps two ancient and sorry looking horses, and enjoys a monopoly of the business of "toting" across the carry. The distance is about 13 miles and the road, at first rough and mnddy, grows worse as Mud Pond is approached. In places the mnd and water were so deep as to cover the body of the sled on which our outfit was dragged across, and it wet the bottoms of our provision boxes. No serious damage was done, and only two hours were lost in the transfer, whereas had we been obliged to flounder through the mnd, "sacking" all our effects on our backs, two days would hardly have sufficed for the laborious task.

Mr. Smith had been at the carry since Aug, 10—about six weeks—eduring which time ten parties of sportsmen had crossed going north. While passing

beautiful clear water lake covers twelve square miles, being nearly square, with many coves. Here, on a beautiful green poplar-covered point we selected our camp site. Along the point for forty rods was a line sand beach, adding greatly to the attractions of the site. A camp had at some time been established here and paths buried out to the water on both sides of the point. Our first work was to clear away the undergrowth, widen the paths, build a table and generally put the camp in order. This place was our headquarters for two weeks. From the beach Allagnash Lake stretched away an easy road for the canoes convenient at hand. From here we made excursions to the surrounding region, and innted partridges in the woods and loons and ducks on the lake. Just above our camp the stream poured its strong volume into the lake, and the trout gathered to feed in the incoming waters. The size of these trout was remarkable, the quality excellent. Of the first ten speckled trout taken here, the smallest weighed 14bs., the largest was 20in. long, weighing 34bs. The usual size was 18th. long, weighing 34bs. The usual size was 18th. long, weighing 34bs. The usual size was 18th. long, weight 24bs. My companion, shortly after our arrival, was playing one of these 2-pound trout and had it nearly tame enough for the net, when another fish caught one of the flies and started a fresh excitement. These fish were finally both brought to net, the second being a lake trout of about 14bs. This gave us the idea of baiting a place so as always to have plenty of lakers. Just where the lake deepened and the current from the stream was not yet wholly lost, we marked a spot by a stake, and here daily fed our gathering school with all the refine food from the camp. Thereafter we had no difficulty in getting all the lake trout we had no difficulty in getting all the lake trout we had no difficulty in getting all the lake trout we had no difficulty in getting all the lake trout we had no difficulty in getting all the lake trout we had no difficult

Allaguash Stream enters, thence up the stream to its extreme headwaters. At the month of Ellis Stream, Chamberlain Lake, two Bangor gentlemen were camped with Indian guides. These were the last sportsmen we met till Chesuncook Lake was reached coming out three weeks later. Slowly we worked up Allaguash Stream, having often to unload and lift over obstructions or make short carries of a few yards around rocks and falls until late in the afternoon we came to falls about 20ft, in height at the foot of a small pond. Below the falls is a magnificent pool, wide and deep, rimmed by rocks, stellered by forests, resounding always to the roar of the falls. Here, while we cast our fless on the fruitful waters are the falls. Here, while we cast our fless on the fruitful waters are the falls. Here, while we cast our these on the fruitful waters are the falls. Here, while we cast our was the falls and the control of the falls. Here, while we cast our was the cances at raper value and the falls. Here, while we cast our was the falls and the control of the falls. Here, while we cast our about the control of the falls and the control of the falls

Yet the settlers say each fall his two sons go down the Penobscot and north with two canoes loaded with provisions, and in a few weeks return with a great quantity of furs, carrying to their father a year's supply of provisions and bringing out his year's catch of furs. The woodsmen believe that it is somewhere on a tributary of the St. John River that the Indian lives his isolated life. The loneliness of its solitude is broken only by the coming of his faithful boys once a year. Long winters the old man passes alone, many miles from human habitation, fearing the sight of man more than any beast of the forest, the memory of his crime always with him, and naught to look forward to but death. What secrets of the wilderness may he not have discovered in these years of exile in its remotest parts?

When the camp-fire was burning low, the pipes gone out, cach rolled his blanket about him and slept. While we sleep a little deer comes along the sandy beach; daintily he steps, until coming to the path that leads to our tent he smells the fire, then he quickly springs back and away to safer grounds. Then a fox picks his way down the shore looking for his late supper. He, too, smiffs the tainted air and is away. After them a mink both bold and sly approaches the camp. He cares not for the smell of fire, but proceeds to examine the state of the camp's larder. First he finds a plump partridge ready dressed for the broiler, a fine spotted trout of 2lbs. weight also, and a lake trout to match, with six small those to the water and floats them away to some secure retreat of his own. We knew all this, for each had registered his name and action on the smooth sands of the beach. For the morrow's breakfast a smoked fish took the place of fried trout and broiled partridge, and the cook thereafter stored his game on the top of the smoke house.

Hatural History.

RAISING CANARY BIRDS.

RAISING CANARY BIRDS.

CANARIES can be bred to greater advantage in a room of moderate size than in ordinary breeding cages, which are too small, not allowing space for flight and exercise, without which strong and healthy birds cannot be raised. Room breeding also offers pleasant, profitable and attractive employment for both young and old, and birds thus raised are more sprightly and tuneful than those raised in small cages.

In selecting the breeding room choose one near the top floor of the dwelling facing the south, if possible, though any light, quiet and airy room will suit the purpose. The walls and ceiling should be kept well whitewashed and great care taken to keep out rats and vermin of all kinds. The frames of the windows on the outward sides should be covered with wire netting, the mesh of which must be small that the birds cannot get their heads between the wires, as in such event, in the struggle to get free they would be likely to injure, perhaps strangle themselves. To admit proper ventilation and air in fine and warm weather, cords and pulleys should be attached to the window sashes, so as to raise or lower them at will. A table or shelf should be placed within easy reach of the

door of the breeding room on which to place the food, etc., to avoid as much as possible disturbing the birds when setting on the nests. Use nest boxes made of tin with small holes in the bottoms (these may be found at the bird stores). Sew together several layers of linen cloth to fit the bottom of the nest box, and fasten in place so the birds may not become entangled; do not use cotton as this is more likely to harbor vermin. Frames should be made in which the nest boxes should be hung; for size and form see accompanying illnstration. The frames should be made of smooth planed boards, one-quarter inch thick, open back and front, top and bottom boarded, the top or roof to incline forward with a pitch so steep as not to allow the birds to rest on it, and thus prevent the females being disturbed when nesting. A perch should be placed across each frame a short distance in front of the nest boxes (see illustration), two of which, one on each side, should be firmly hung inside the frames. The frames should be hung by hooks one on each side and fastened to the wall (so as not to shake or sway, as this might cause the female to leave her eggs unhatched), about five feet from the floor, so as to be easily reached. Deer's hair, which should be well scalded to cleanse it

from vermin, placed in the breeding room will be used by the birds to form a soft inside lining for their nests.

Select your birds for breeding from those which are strong and healthy, be sure the males are good singers, with soft, sweet and loug notes; the young birds will be more likely to be good songsters, as the young male birds when in the nest obtain their first and most lasting impression of melody, the parent male bird being then full of vivacity and brilliancy of song. As you select your birds in pairs for mating, do not turn them loose at once in the breeding room, but place two cages side by side on the wall, one fitted up as a breeding cage, the other a plain cage. Put the female in the breeding cage and the male bird in the other cage and let them remain separated; in seven to ten days they will show a desire to get together by endeavors to get through the bars or wires of the cage; then put the male bird with the female. The eggs will be generally hatched in twelve to fifteen days; after the young birds are fully fledged turn the young and the old birds loose in the breeding room, and the old mated birds will almost always year after year thereafter seek each other as mates. As pair after pair are selected to breed from, mate them in the manner described, the object of thus mating them before letting them fly in the breeding room is to prevent the males from fighting each other for the mastery.

Place a supply always of coarse sand or fine gravel on the table in flat or shallow dishes, as all seed-eating birds require it to enable them to digest seed food. Swinging perches suspended from the ceiling (by fine wire) hanging down to within about five feet above the floor, will add to the health and sprightliness of the birds. A further attractive feature is a leafless tree, the bark of which is smooth, placed at each window. This is to be firmly planted in a box or tub containing earth. Tubers of the Madeira vine if planted thickly in the earth, will in a short time send up vigorous shoots, which s

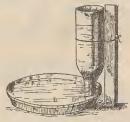

trained or led to the branches of the tree by means of cords.

Keep the earth in the tub constantly moist (not wet), bore a draining hole in the bottom of the tub to carry off moisture. Such a bird-tree will remain in constant verdure all the year round. The birds will greatly enjoy such a tree, when the sun shines on it; after they have been bathing they will fly on its branches to bask in its rays to dry and arrange their plumage and practice their songs. The beautiful and graceful foliage and sweet smelling odor of the flowers of the vine will greatly enliven the room. The general food should be rape seed with a small quantity of hemp and canary seed occasionally added. When the old birds are feeding the young in the nest, soaked stale wheat bread free from soda or grease mixed with grated hard-boiled eggs, ground hemp seed, and a small quantity of maw meal, and now and again soaked stale wheat bread alone or soaked biscuit or crackers alone. But great care should be taken that no sour bread is fed to the birds. A moderate amount of green vegetable food should be fed all the year round.

A drinking fountain should be provided in which the

round.

A drinking fountain should be provided, in which the water should always be kept fresh and clean. Such a fountain can be found at the fancy poultry dealers, or a good substitute may be made by a bottle filled with water being turned upside down in a flower-pot saucer—a flat

disk or such a saucer makes a good bath-tub for the birds, this being very necessary for the health of the birds. Several pieces of cuttlefish bone should be hung up in the room convenient for the birds to reach for shell material, and to assist digestion of seed-eating birds. These complete the most requisite features of the breeding room, in which more young to the pairs of old birds may be raised than in cages, as breeding can be coutinued all the year round successfully.

UNCLE JOE.

GAME IN THE CITY.

NEW YORK, June 24.—Editor Forest and Stream:
Having occasion to make some offsets on a little rill skirting the outer cliffs of Hamilton Grange in the Twelfth Ward of New York city, much to my astonishment we there, among the underbrush, at the rear of a sauce or truck garden on St. Nicholas avenue, ran into five woodcock, the two parent birds with three young flight birds. They seemed to be citizens as they did not, to all appearance, seem greatly disturbed by onr sudden break in on their city seclusion, as their flight was but a short distance away.

On the same day, Saturday, June 15, we returned by way of the open cross field, on the Morris and Watts homestead. We had but entered the field on the Seventh avenue side, when a salute well known to our ears was heard. It was "Bob White" in his clear, never-to-be-mistaken clarion note of the cock bird that greeted us. By call we lured him clear over the fields to Mr. Morris's stables, and to his overseer's lodge midway of the estate.

CANONICUS.

SPIDER BITES.—Your article on spider bites reminds me of a conversation held many years ago with Dr. J. L. S. Thompson, now dead, of Lancaster, Mass. He had been bitten by a black spider while pruning fruit trees. At the same time, in the town of Boylston, seven miles distant, there was a similar case, of which the Doctor daily received reports while treating his own wound. He recovered, but the other man died. In reply to my questions he said: "I poulticed and kept poulticing. Most people don't know how to do this; they make a poultice about as big as a quarter of a dollar and let it stay. I made a bag full and shoved my hand right into it, and changed it often. I thought that as long as I could keep the swelling below the elbow I shouldn't despair. I did eep it so and recovered."—KELPIE.

Game Bag and Gun.

WAS IT A FRUITLESS HUNT?

Having been born with the hunting instinct largely developed, and with an intense love of wild life, it has always seemed strange for me that there could be any persons who did not love the streams and the woods of the country of t

when he was high enough for me to shoot over the other man's head I let drive at him. Then the third man let drive at him, then the first one again, then I the second time, when he went out of sight. The first shot had gone through him, and my last shot bad hit him, but he sailed off and we did not get him. We sent another man whom we met to look for him, and we went on after deer. We found a yesterday's track and followed it about four miles, until it went across the State line into Maryland, when we gave it up. Turning toward home we hunted the whole mountain, but did not find any more signs. When we got to the house we learned that the law in Maryland, just across the line, forbade the shooting of deer for five years, and as the deer were coustantly hunted on this side they had all taken refuge over there.

Well, we had such a supper as does not often fall to the lot of hunters, and the amount of it we consumed would have astonished the natives if they had not fed hunters before. So we gathered around the fire and listened to hunting stories and ate apples until bedtime. As hunting seemed useless under the circumstances, and as the next day was Thanksgiving we concluded to try the turkeys on the way down toward the station and then go home. As my back had gone lame the day before and I felt it in my bones that there would not be any use in hunting I concluded to go with the baggage and let the others take the tramp. When the time came to start, the team was hitched to an old sled. If it had been torture to ride up in the wagon you can imagine what a delightful time we had in a sled when it was on bare ground half the time and on the stones nearly all the other half. To help matters, when about half way we found that the snow had all melted, and we had to go so slow that we feared we would miss the train. One would stand up and try to coax the slow farm horses to get us there, while the others held on and laughed and halloced. It was a merry ride, and we "got there all the same." To close the expedition we ha

A LUCKLESS EXPEDITION.

well satisfied with our fruitless hunt.

CLEVELAND, Ohio.

A LUCKLESS EXPEDITION.

NOT a great while ago my friend Crickett, of "Saints' Rest"—a decided misnomer, I am sorry to say—expressed himself as certain, from what he regarded as reliable imformation, that ducks could be killed by the score at a place called Cedar Island, near the mouth of the Santee. He was extremely desirous that Teccel, Mud and myself should go with him to that modern paradise, and assured us we could get all the shooting we desired. Our former visit to that section not having proved very satisfactory, we were quite anxious to go to the Eldorado of his fancy, and have several goldeu days of excellent sport, supplying ourselves with all the game we wanted and then distributing to such of our friends as relished the flavor of the mallard and the teal. It is true, it was rather late in the season, but he thought we could get some ducks and as many of those fat shad which come into Wingaw Bay on their way to the spawning grounds as our appetites would demand. On Monday, the 25th of February, we met at Wadesboro, with nearly a thousand loaded shells, ready to try our guns on the swift-flying game. Our trunks contained our clothing and blankets, a small quantity of well-roasted Java, some granulated sugar and a nice lot of potted meats and some cured boiled hun.

At 2:35 P. M. we took the train for Lane's on the N. E. Railroad, arriving there at 7:30. At Florence we were met by our friend, A. L. G., of Philadelphia, who had been invited by me to be a participant in the joys of our visit. On Tuesday morning it was raining, with the wind from the southeast—a sign not very agreeable to any living thing except waterfowl. Owing to the stormy condition of the weather our captain deemed it unadvisable to go out to sea and then enter the bar off Santee, and proposed to take an inland passage which would navigate. He thought we would reach Cedar Island on Wednesday late in the day. But alas! after traveling for miles the recession of the tide caused

twice and ought to have killed both times, but only saw that I had robbed one of them of a few feathers. Mud did not shoot.

The following morning, the tide being favorable, we hoisted sail, and sped down the canal at a good pace, until it joined another of those crooked curves. And then it was slow, slower, slowest. At about 12 A. M. on Friday, we entered the north branch of the Santee and turned the prow to Cedar Island. After going over a mile, we grounded on the sands, where the yacht was forced to remain until the incoming waters would float her. Our eager sportsmen got out the small boats and were rowed to the island. Crickett did his own rowing, and on our passage through the creeks he worked harder than a boat hand, and but for him I am not sure that we would not, even now, be in that hateful lagoon. On the shore we were met by Mr. Willetts, who had charge of the property. He kindly showed us the ponds which the ducks frequented at an earlier period of the season. At them we waited for several hours. Mud killed two coots, and a small duck, with a spoonbill. Crickett and Teccel shot several times at long range and

I did not shoot at all. And this was our experience at Cedar Island, and our reward for all the labors of our voyage from home! Ehew!

On Saturday morning we concluded to meet the perils of the sea by going over the bar and trying our little craft on the rugged waters of the Atlantic. A few hours upon the "briny deep," and our course was directed to the Pee Dee bar, over which we passed in safety. That night we spent at anchor on Wingaw Bay, and Sunday morning at 10 we were at Georgetown.

The following day at 7:20 we were off for Lane's, and at night took supper at home. Our only trophies were a pair of shad each, which we bought just before leaving. The only consolation we had was that we wasted but little ammunition.

Now, if any of your correspondents can report a more luckless hunt I should like to hear from him.

At the proper time there are many ducks in the marshes near Georgetown, and a sportsman who can stand a rough life, and is willing to work and undergo physical labor, can get as much game as he can eat and a good quantity for the gratification of others. For my part, I prefer to go into the fields with my dog, where I can always get a dozen birds and sleep at night on a bed.

SMALL-CALIBER RIFLES.

SMALL-CALIBER RIFLES.

Editor Forest and Stream:

In your edition of May 9 I notice a letter from "Lyman Sight," regarding the loading of the .32-40 shell. I had the same trouble with the factory shell with the large bullet, and after experimenting with the round ball hit on the following. I bought from the Winchester Arms Co. some of the small bullets they use in their extra short .32cal. rim-fire cartridges, and by using a cotton cloth patch I forced the ball into its socket in the shell, where it is firmly set. I used the full charge of powder, which I think gives a very straight trajectory. Let "Lyman Sight" try my plan and let me know his experience, and at the same time I should like to hear from any one else interested in the .32-40 shell.

RICHMOND, Va.,

RICHMOND, Va.

ONEIDA COUNTY LAW.

THE Supervisors of Oneida county, N. Y., have adopted a law

"SECTION I. That the lawful season for killing partridges and woodcock within the county of Oneida, shall be only from sunrise of the first day of September till sunset of the thirtieth day of Notember in each year hereafter. Whoever shall kill or hunt any partridges (otherwise known as ruffed grouse) or any woodcock at any other time than during the above specified lawful season aforesaid, shall forfeit a penalty of \$25, and \$25 additional for each burd killed of either of said species.

"Whoever shall sell or expose for sale or purchase or have in possession, in Oneida county, any of said birds at any other time than during the lawful season aforesaid, shall forfeit \$25 for each bird; except they may be possessed, sold or purchased during the lifteen days next following the close of the lawful season for killing aforesaid; provided the seller or possessor proves such birds to have been lawfully killed during the lawful season aforesaid.

said.

"SEC. 2. It shall not be lawful for any person to sell, carry or transport beyond the border limits of Oneida county, any partridge or any woodcock that had been taken, captured or killed within the limits of Oneida county. Whoever violates this provision shall forfeit \$25 for each bird of either of said species."

Copies of this law for posting may be had free of charge by applying to John D. Collins, Secretary Utica Fish and Game Protective Association, Utica.

GAME LAWS AT ALBANY.

[Special Correspondence Forest and Stream.]

[Special Correspondence Forest and Stream.]

A LBANY, N.Y., June 21.—The Governor has disposed of several of the fish and game bills left with him by the Legislalature. Those which he signed are as follows: Chap, 512 for the protection of fish in Lake Ontario adjoining Cayuga county; Chap, 407, amending Sec. 640 of the Penal Code in regard to the stealing of fish; Chap, 534, for the building of a fishway in the Delaware River, at Lackawaxen, the State of Pensylvania to spend an equal amount; Chap, 539, amending the game laws in regard to hunting at night; Clap, 530, regulating fishing in Glen Lake; Chap, 536, for the protection of fish in Owasso Lake, Cayuga Lake, Seneca River, etc. The Governor retriesed to sign the following: For the construction of a protection of shad and game River at Chemango Forks; for the construction of shad and game fishing in Lake Governor; amending the game laws relating to fishing in Lake Governor; amending the game laws relating to fishing in Lake Governor; amending the cannot construction of fishways in the Oswego and Seneca rivers; providing for the construction of a fishway in Cattaraugus Creek; for the construction of a fishway in Cattaraugus Creek; for the incorporation of icthyological societies, and for the construction of a fishway in Cattaraugus Creek; for the incorporation of icthyological societies, and for the construction of a fishway in Cattaraugus Creek; for the incorporation of icthyological societies, and for the construction of a fishway in Cattaraugus Creek; for the incorporation of the Construction of a fishway in Cattaraugus Creek; for the incorporation of a fishway in Cattaraugus Creek; for the incorporation of a fishway in Cattaraugus Creek; for the incorporation of a fishway in Cattaraugus Creek; for the incorporation of a fishway in Cattaraugus Creek; for the incorporation of a fish way in Cattaraugus Creek; for the incorporation of a fish way in Cattaraugus Creek; for the incorporation of a fish way in Cattaraugus Creek; for the incorporation of a fish wa

FISHING NEAR NEW YORK.

IX.-UNCLASSIFIED RESORTS.

THERE are a few fishing resorts near New York which may be deserving of mention, but which are not capable of classification under any particular head. For instance, there is sometimes excellent fishing for striped bass up the Hudson River. In Croton Bay, near Sing Sing, and along the shore below Sing. Sing are some favorite places in both spring and fall, the latter being by all odds the best time, however. There is also good fishing for white perch, which are small, but a good pan fish. For the latter I have found angle worms to be a most taking bait, although they will bite on sandworms, shrimp and sometimes shedder crabs. Sing Sing is reached by the Hudson River Railroad from Grand Central Depot, fare (one way) 60 cents. Boats can be hired at two or three different places at \$1 a day; guide, extra, \$2 a day. No bait can be had where the boats are hired. At Tarrytown (same route, fare one way 50 cents) striped bass may be caught in the Hudson River, but they are not so plenty as at Sing Sing. Or, rather, they are probably as plenty, but there are few earnest striped bass anglers at Tarrytown, and hence the good places have not been discovered and the habits of the fish are not well known. The Pocantico River empties into the Hudson just above Tarrytown, and its waters contain pickerel, perch, black bass, sunfish and catfish. There is fair sport for black bass in this river, using small frogs, crawfish and minnows as bait. Don't fish too near the bottom or catfish will take all your bait, and pickerel will probably bite oftener than bass, anyway. But with those baits you will not be bothered with the numerous little sunfish and perch, which will, however, consume all the worms you can provide them with before a bass gets a chance for a nibble. I have never seen flies used on this river, but I should think the bass would take them. The perch will take trout hackles readily. Tie

three on the leader, with a buckshot on the tail fly, let the cast sink below the surface and draw slowly toward the boat or shore until you get a strike. The mouth of the Pocantico is a mile row from Tarrytown station of the Pocantico is a mile row from Tarrytown at the control of the Pocantico is a mile row from Tarrytown of the test to do for the Pocantico is a mile row from Tarrytown of the station of the pocantic of the policy of the policy

exploration of lakes Hopatcong and Greenwood, with a view of giving Forest and Stream readers such information as will enable them to get good fishing at these beautiful lakes without the expense attending the hiring of local guides, and at as low a rate of cost in every way as possible. Very likely, too, articles will be published dealing in detail with the resorts at Barnegat, Great South Bay and other famous places for sportsmen further from New York than the resorts mentioned in this series.

PENNSYLVANIA TROUT STREAMS.

Fown New York than the resorts mentioned in this series. SENECA.

PENNSYLVANIA TROUT STREAMS.

Editor Forest and Stream:

In your issue of April 18, "E. E. C.," of Mt. Pleasant, Pa., asks for information concerning fly-fishing for trout in the small streams of the Laurel Hill and Allegheny Mountains. It matters little what bait is used in Westmoreland county, as the streams are pretty well depopulated, and to catch a 10-inch trout in any of them is bordering on the miraculous. Occasionally, however, a fly-fisherman will happen along, and casting his flies over the head of the worn-angler will land some very fine trout. Let "E. E. C." get a congenial friend, a buckboard, a 7x9 wedge tent, a selection of trout and basflies, a good rod and 50ft, of line, a pair of blankets, two weeks' provisions, and hie himself eastward a few miles. Let him rig up his rod at Jones's Mill Run, attach a redisia, a black-grant or a white-miller to a 3ft. mist-colored leader, and carefully cast it into one of the numerous nice pools, and if he will keep out of sight of the fish I will guarantee him a handsome trout.

In these streams will be encountered places where for a hundred yards the alders or laurels grow so thickly that to cast a fly is impossible, but with 50ft. of line they may be thoroughly fished. Slip quietly in at the upper end of the growth, let out all the line, and the fly will float down until suddenly a big fellow jumps out from his lair and he is yours.

On troose small streams I use but one fly, instead of the conventional three, on account of the numerous bushes, and after fishing all over that section of Pennsylvania I found the three flies above mentioned the most killing; in the morning the red-ibis, toward noon the black-gnat, and the white-miller in the evening. The streams throughout Pennsylvania, particularly west of the Alleghenies, are fished to death, and the trout are very wary. Occasionally the angler's ingenuity will be called into requisition, as the fish will refuse all bait offered them. At one t

Editor Forest and Stream:

Cumberland Valley, Pa., extending from the Susquehanna to the Potomac, has many streams abounding in trout. The most noted is Big Spring, near Newville, a tributary of the Conodoguinet. It is a large open stream, where the angler can cast his fly with success, and a great many fish of fair size are taken every season. In this county of Franklin there are a large number of streams containing speckled trout. Birch Run, a branch of the Conococheague, in the South Mountain, has probably more trout than any other creek in the county, but they are small in size. I have frequently taken in from five to six hours' time from four to five dozen trout, and a few years ago took seven dozen in one day. A party of three from this place took ninety in one day. This stream is wild and rugged and there is much underbrush, making it difficult to cast a fly; better success is to be had using worms for bait. Aughwick in the west and Trout Run in the north, both in the North Mountain, have many trout. Falling Spring, rising three miles east of Chambersburg, contains trout of large size. This stream was stocked some five years ago with California or rainbow trout, received from the U. S. Fish Commission, and now we catch many of this variety. One taken a couple of weeks ago measured 18in, in length and weighed 2lbs, 90z. It was taken at the spring's confluence with the Conococheague.

Chambersburg, Pa., June 13.

CHAMBERSBURG, Pa., June 13.

RUTLAND, Vt., June 20.—The first annual banquet of the Rutland Fish and Game Club, held at the Berwick House, last evening, was a most happy gathering of the local anglers and guests from abroad. The Rutland Club has done excellent work in stocking streams and enforcing the laws; and now they have proved that they know how to enjoy themselves around the mahogany as well,—F,

THE PIKE-PERCH.

THE PIKE-PERCH.

The number of pike-perch annually hatched by artificial methods is enormous. Not many years ago the treatment of adhesive eggs was one of the great difficulties of fishculture. We have not at hand a description of the apparatus used by Muller and Brown in 1857, when they conveyed 20,000,000 eggs of the pike-perch from Lake Ontario to Lake Saltonstall, Connecticut, and we do not know whether any of the eggs were hatched; but it was formerly the practice to allow the eggs to adhere to glass plates, which they did by means of a sticky envelope covering the shell. It was in this way that Livingston Stone hatched some of the eggs of the Cold Spring trout ponds, in Charlestown, New Hampshire, many years ago. It is astonishing to note the radical changes which take place in the handling of eggs. A few years ago it was believed to be necessary to let adhesive eggs stick naturally to glass surfaces, or to threads which were suspended in jars or boxes. We have recently learned from Mr. C. V. Osborn, President of the Ohio Fish Commission, that his men, at the expense of a great deal of time and trouble, wash off the sticky substance from the pike-perch eggs, and then place them in jars to be hatched in the way followed in hatching the eggs of shad, whitefish and other common species. The Ohio Commissioners distributed 60,000,000 fry of the pike-perch in all parts of the State last year. Canada put out 25,000,000 fry from the hatchery at Sandwich, Ontario, and the total number of young planted to date by the Dominion is 172,135,900. Pennsylvania distributed 12,000,000 in its eastern waters recently, as stated in Forrest Ann Strream of May 23. The U. S. Fish Commission has distributed about 60,000,000 up to the present time, having just begun the work. As this is one of the finest food and game fishes of the United States, we dwell with considerable grafification upon the enormous results of its artificial propagation.

Anglers are, of course, aware that we have two well marked species of pike-perch, or wal

America.

The spawning season occurs in April and May, and, in Pennsylvania, continues until June. Favorite places are sandbars over which the water is shallow. The period of incubation depends upon the temperature, varying from about a fortnight to one month. The eggs vary from about 17 to 25 in 1in., and the uumber in a single female has been estimated at from 200,000 to 300,000. In a state of nature the eggs are subject to very serious dangers, and a very small percentage of them are hatched out; storms drive them up on to the lake shores, and many species of fishes devour them on the spawning beds.

The rate of growth must be rapid, for we captured many of the young last summer for the Fish Commission aquaria at the Cincinnati Exposition, and the smallest of them in July were not less than 4in, long and some were the grown approach them in July were not less than 4in, long and some were the summer of the scales also as the same were the same approach to the same the same transfer of the same transf

many of the young fast stimmer. Or and the smallest of them in July were not less than 4in. long and some were fin.

The colors change remarkably with age. The young are banded very much like the kingfish of the coast, not closely resembling the parent in pattern of coloration. The eye of the living fish is like a glowing emerald. The flesh of the pike-perch is firm and white, flaky and well flavored. Commercially, the species ranks very high in the Great Lake region, being next to the whitefish in importance.

This fish feeds on the bottom, its food consisting of other fishes, and it is not very particular what species it devours. Some people charge it with destroying its own young; minuows, however, are readily accepted as bait. It prefers clear and rapid waters, and lurks under submerged logs and rocks, from which it can readily dart upon its living prey.

In the Susquehanna it is angled for and readily taken by using live bait—minnows representing numerous genera of the family Cyprinide, but particularly such as are more or less transparent, with silvery sides. The fall-fish or dace, the corporal, roach, and species of the genera Luxilus and Hybognathus are freely used. The artificial fly can be employed to great advantage also, particularly in cold weather in the vicinity of dams. On some parts of the Susquehanna, between Columbia and Harrisburg, the pike-perch is frequently caught by trolling with the spoon, the tackle being the same as that used in trolling for bass. The favorite fishing grounds of the lower Susquehanna are reached by the Columbia and Port Deposit Railroad. Fite's Eddy is one of the best places; Washington, three miles below Columbia, is another good location. The species is well distributed throughout the river and its larger tributaries, the Juniata and North Branch being especially noted.

In fishing for the pike-perch it is to be remembered that the species is a bottom fish, and the angler must

Branch being especially noted.

In fishing for the pike-perch it is to be remembered that the species is a bottom fish, and the angler must keep his bait near the bottom. The tackle generally used for black bass is suitable for the pike-perch, and it is desirable sometimes to use a float. In the Ohio River Dr. Henshall has been informed that fishing with hook and line is excellent from Marietta to Pittsburg. In this region the fish is called salmon. Mr. Goode says there is no better fishing anywhere for this species than may be found in Lake Pepin and other waters near Lake City, Minnesota. Winter fishing through the ice with liverminnow bait is very successful on Lake Pepin. As in the case with the shad and other anadromous fishes, the

important fishery for the pike-perch occurs during the spawning season only, and like the shad the fish is in its best condition at that time.

The pike-perch has a near relative in American waters known as the sauger, Stizostedion canadense, which runs into several varieties, but none of them grow very large and all of them are inferior to the S. vitreum. In Europe there are several species of pike-perch, the one most nearly resembling our large species being the zander of the large rivers of the continent. This species, also, prefers clear, deep, flowing water, and is generally found in the depths. It spawns at the same season as our own pike-perch in shallow spots abounding with aquatic plants except in Swedish lakes, where it spawns in deep water. The zander is said to reach a length of 3 to 4ft. and a weight of 25 to 30lbs. In the German markets, however, specimens of over four pounds in weight are rare. The species can be caught with the bait from June until September, its favorite food is the gudgeon (Gobio fluviatilis) but, like its American relative, it will also take insect larvæ, crayfish, worms and other invertebrates.

THE LAKE ELLERSLIE FISHING CLUB

"I CAUGHT fourteen bream on silver-doctor and professor in the middle of last winter," said Al. Spotswood, "I had to fish through the ice, and the fish took the fly right at the bottom."

"Alex. Jeffrey has often caught birds on a fly," said George Williams, gravely.

"Wasn't it you that caught a blacksnake on a fly once, Al?" asked W. K. Massie of Mr. Spotswood.

"Yes," replied the latter, "I was fishing out at the reservoir, and had out a pretty long line. The snake took the fly in good shape, and played well, but I finally landed him."

him,"
"I caught a goose on a fly once," mused Mr. Massie,
"but I don't remember that I ever caught anything else,
except fish."
except fish."

reservoir, and mad one a percy well, but I finally landed him."

"I caught a goose on a fly once," mused Mr. Massie, "but I don't remember that I ever caught anything else, except fish."

I preserved a respectful silence, for I could think of nothing but Kit North's story in the "Nootes Ambrosianae," of how he once cast a fly so far and so lightly that it took life and wings and flew off across the mountains. I was afraid the other fish story tellers would recognize this story, because it was evident that there was assembled in the little office a number of old hands, so that nothing but a gill-edged yarn would go.

The rich Kentucky sun shone warmly through the window, and silence and drowsiness fell upon the party, as each waited for the other to set a pattern.

"You people must sort of—that is, occasionally—you know—"I ventured at length, diffidently.

"Oh, yes, we fish with the fly a little," said somebody, "we have a club. There are about 200 of us. We fish out at the reservoir. It's only about four miles. Come on and go out."

It being at length established that these gentlemen usually caught something else besides birds, geese and snakes, the remaining preliminaries for a fishing trip were rapidly concluded. This was the first introduction of the Lake Ellerslie Fishing Club, of Lexington, Ky., and it marked one more of the constant surprises which Kentucky had in store; for in this organization I found the strongest fly-fishing club I ever happened to meet, was treated to some genuine sport at the fly, and say once more a proof of the growing hold that sports of the wood and stream are gaining upon the very best social element all over the land.

Lake Ellerslie Club is but a few years old, but a glance at the list of its members will show any Lexington man, at least, that its social and financial status is guite above any question; while it requires but a very slight investigation of its piscatorial resources to remove any remaining doubt about its worthiness to receive the seal of absolute approval as a

and I give my word there it ime.

This extreme plentifulness of the fish supply is due to two causes. In the first place, the lake is a natural home for fish, being fed by cold "spring branches" and by springs of its own. It is from 12 to 20ft. deep in places, and has acreage enough and natural food enough to sustain a vast amount of fish life. In the second place, the

waters have been stocked repeatedly, abundantly, and, above all, intelligently. The stocking was begun by the late Gen. Wm. C. Preston, who owned the surrounding land, and who, as I understand it, originally leased the fishing privileges to the club. Since taking possession, the club has annually stocked the waters. They were heavily planted two years ago, some of the young fish being obtained from the Fish Commissiouers, but the great bulk of them being native fishes obtained from Kentucky streams. This is the most sensible method of stocking any waters; that is to say, with fishes native to that locality. They are the ones sure to thrive. In this case, the plant consisted largely of bream, croppies (called "new lights" in that country), sunfish, goggle-eyes, perch and bass. Some carp had also been planted before the club took possession, and it is said that two or three dozen mascallonge were once planted, of which one was recently taken, 28in. in length. The planting of carp cannot be of any possible benefit to a fishing club, and may be a detriment, if the carp do feed upon the spawn of other fishes, as it is very probable they do. It would be well for the club not to put in any more carp, and, better yet, never todream of putting another mascallonge into their lake. The latter fish grows with such rapidity, and is so unspeakably voracious, that it is certain to spoil infinitely more good sport than it can ever afford. No bream or perch ever grows so large that a full-grown mascallonge cannot swallow him at a gulp, and it takes a good many such gulps to satisfy one of these long-faced pirates. If the Lake Ellerslie men do not make away with the mascallonge they have put into their waters, it is only a question of time until the lake has but a single fish, and that will be a mascallonge that will crawl out at night and steal sheep. Eighty acres is not water enough for mascallonge and little fishes to occupy together, except in so close a personal relation as would hardly please the latter. Much better, thoug

ally desirable, are the catfish, which formed a small per cent. of the total plant put in. These have been heard from, but not in numbers sufficient to show them troublesome.

The efficiency of the measures of the club in stocking their preserve may be seen from the estimate that 400,000 fish are annually taken out by the members of the club, the majority being killed with the fly. I do not think this current estimate can be very largely in excess. I am satisfied that I saw 1,000 fish taken by anglers within the range of vision on one everning I fished at this lake, and there were numbers of fishers further down the lake. It is nothing for an angler to take a creelful in an evening's fishing, and that would commonly mean forty to fifty fish, as the catch runs small. The excellence and ease of such fishing attracts a large turnout on almost every pleasant evening of the fishing season; and as the season begins in April and continues until late in the fall it may be imagined what is the total number of fish taken.

The commonest fish in the Reservoir is the croppy, or "new light." This fish was unknown in Kentucky until the building of the "Toledo Canal," which comnected northern Ohio waters with the channel of the Ohio River. From the latter stream the fish worked up the Kentucky tributaries, and first became noticeably numerous at about the time of the first appearance of the religious followers of Alexander Campbell, who were called Campbellites, or sometimes, after their own professions and semi-contemptuously, "New Lights." The sectarians and the fish caught the name at the same time, and for the latter it has clung tenaciously even till now, and is indeed almost the only name understood for that fish in the country which I visited. I am told that this fish attains a weight of four pounds or more in the south. I never saw one anything like so large as that. The size most common at Lake Ellerslie was a trifle larger than ore's hand; the average weight would therefore run between a quarter and a half of a poun

string broke, and I lost fifty or sixty new lights and bream."

Small minnows are readily taken by the croppies here during the day, and they often rise to the fly during the day, although the fly is then more apt to attract the sunfish and black perch. In the evening we found them rising to the fly as readily as trout, and on the light tackle used at these waters the sport was exceedingly fine. Although the new light cannot be said to be a very long fighter, it certainly rises gamely and strikes in earnest. Sometimes two or three are taken at a cast. We found professor about the best fly for steady work on the new lights, or at least the one most in use. Brown-hackle, Seth-Green and coachman were favorites next in order, and flies allied to those models were taken almost equally well. I presume I was the first to try Parmachene-belle on Lake Ellerslie. This, it will be remembered, is well hackled out with scarlet, the hackles also blending in with the white wings. My specimens came near being scarlet and white hackles, with coachman as stretcher, brown-hackle first dropper and Parmachene-belle as top dropper. I killed five new lights out of six on the belle, the other one taking the hackle. It was about half an hour before sundown. A few moments later the bream began to monopolize things, and these seemed to take to the old reliable coachman, perhaps because it was growing darker. I left a few of the Parmachene-belle with my friends, and Mr. Massie wrote, under date of May 23:

"The daisy red and white fly left us by yourself while here on the following day attracted a 2-pound bass, which was enjoyed, broiled, the next morning for breakfast.

** ** Al Spotswood caught a 134-pound catifish this morning. If George writes and tells you it was 18, you can strike the proper average."

Mr. Massie does not state whether or not Mr. Spotswood took his catifish on the fly, but I am satisfied that a

Mr. Massie does not state whether or not Mr. Spotswood took his catfish on the fly, but I am satisfied that a man who would catch a blacksnake on a fly would not hesitate to catch a catfish in the same manner. As to the bass, they were not rising much to the fly at the time of my visit, but soon began to rise more readily.

Mr. George Williams wrote under the same date as that

Mr. George Williams wrote under the same date as that of Mr. Massie's letter:

"The fly sent down by you, marked "?" is the best killer I eversaw. They have begun to bite in earnest now, and the sport is great. Massie yesterday took one bass of 2 lbs., and one of 1 lb, besides 6 l of the large-sized bream. Spotswood took one 3 lbs. bass and one 2 lbs. and also this morning took a 1 lb. catfish on his fly-rod."

There would seem to be a conspiracy about that catfish. The similarity of accounts rendered is too startling. But more about the bass! Under date of May 20 Mr. Massie writes again and says:

"We went out to the lake again Monday, and I landed a bass 18 lin. long, weighing 8 lbs. He had a new light 9 in. long in his mouth when caught. He took the brown fly with green body, which we thought would be a good one, when you were here. This is my best black bass this season."

I am glad to make these little excerpts from the letters, as it ey serve to show something more of the quality of the fishing and of the sort of tackle best suited for it. I think the fly referred to last above is the same as the one marked "?". I did not know the name of it, but my recollection is that it was not very dissimilar to the Cock-a-Bonddhu pattern. Doubtless most Western fly fishers for bass have found a soft brown wing and peacetic body usually good. From what I know of the tackle used by the gentlemen referred to, it is evident that the bass mentioned were taken on very light fly-rods, on single leaders, and hooks not larger than No. 8. This is pretty fine fishing. On account of the bream, which do not have so large a mouth as the croppies, a No. 10 hook is really preferred to the No. 8 by the Lake Ellerslie anglers.

It is the bream, after all, which makes the fishing of Lake Ellerslie flah and ounce for ounce is gamier than the bass, and out of sight a better riser to the fly. The Lake Ellerslie bream rarely reach half a pound, speaking of the catch of this year, but a fish of that weight will strike a fly so flercely and

ont the largest fish. His creel always seemed to support his theory.

The favorite flies for the bream seemed to be No 10, professor, Seth-Green, grizzly-king, brown-hackle, blackgnat and coachman; and doubtless some of the later flies the boys have got on, of which the prevailing pattern is peacock body and brown wings, and green and silver body to brown wings have been found equally good. White-miller is readily taken at dusk, but should not be much better than coachman, or, indeed, than professor, grizzly-king or any of the models with white or mallard wings.

Besides the fishes already mentioned there are said to

Besides the fishes already mentioned there are said

grizzly-king or any of the models with white or mallard wings.

Besides the fishes already mentioned there are said to be suckers and redhorse of large size in this wonderfully populous sheet of water. While we were fishing at the rocky bend of the lake near the gate a fish nearly 3ft. long broke water. It was thought to be either a redhorse or a carp. There are also a few pike in the lake, which fact is much to be regretted.

It may easily be seen that Lake Ellerslie Club is by no means playing at fishing, but actually enjoying sport such as is met but rarely under the most favorable natural conditions. Lexington is certainly a town blessed of the gods, and in nothing more than in this quiet and lovely sheet of water, lying fairly at the edge of town, and assuring so large a number of its people a breath of good fresh air and a touch of genuine nature. Often as the drive is made out, between the oak-sown fields of green, and over a road which edges some of the grand old Kentncky places whose homes seem, in their dignified simplicity, to be almost a part of the wide earth and of the spreading trees, the prospect grows in charm, and finds no anti-climax in the easy-lying lake, and in the gentle dropping down of the soft southern twilight; and when night has quite tucked in the landscape with her dusky curtains, and pinned all neatly with her diamond stars; or when the great luminous southern moon has swam calmly up and smiled beneficently on the earth, what pure delight to ride slowly home, under the great elms and oaks, which by this time are whispering to each other as trees only do at night. Why, bliss—I don't know where it lives if it isn't in Lexington.

The courtesy and hospitality of the Lake Ellerslie Club are something not to be discussed, but to be accepted silently and as a matter of course. The club is in Kentucky. The gentlemen who own the preserve make a great pretense of rigidly reserving its privileges; but, bless you, if a fairly plausible tramp, the raggedest and most pitiable fellow on earth,

man and a sportsman, and Kentucky is full of true Ken-

man and a sportsman, and Kentucky is full of true Kentuckians.

The following is the list of Lake Ellerslie Club, for which this paper is indebted to the courtesy of Mr. W. S. Cramer, the obliging and efficient superintendent of the club: Pres., Dr. J. W. Whitney; Vice-Pres., Major H. B. McClellan; Treas., Mr. C. H. Voorhies; Sec., Mr. Theo. Lewis; Directors, Dr. J. W. Whitney; Col. John R. Allen, Mr. Theo. Lewis, Mr. C. H. Voorhies, Mr. J. R. Norton, Mr. W. S. McChesney, Jr., Gen., Jas. F. Robinson, Major J. H. McClellan, Mr. D. D. Bell. Members, Messrs. John Anderson, John R. Anderson, R. F. Anderson, J. E. Anderson, D. D. Bell, W. O. Bullock, C. J. Bronston, W. H. Boswell, O. Lee Bradley, W. D. Bryant, J. L. Barkley, J. M. Bell, J. H. Bryan, T. E. Baird, Wm. Bruce, John S. Clark, B. F. Carpenter, T. J. Cassell, T. H. Cassell, J. WORSE THAN THE HEATHEN.

WORSE THAN THE HEATHEN.

ACON, Ga.—Editor Forest and Stream: Your correspondent asks why bass do not take the fly here. It must be because he has not made the proper advances. They take the fly for others from April to November, October being the best month.

We have only the large mouthed bass, and my experience with them is that more can be caught anywhere on live bait and trolls than with the fly. Besides the bass the bream, white perch and red-breasted percli will take the fly, but only in the spring and fall. The smallmouthed bass is abundant in north Georgia, and his habits are the same as elsewhere. Brook trout will also take the fly in north Georgia if 125 to a rod in one day is any indication.

The great mistake that our local anglers make in their efforts at fly-fishing are the following: First, there is an abiding belief that if the water is too clear fish will not bite. The truth is that our waters are seldom clear enough to afford good fly-fishing. Second, that if the wind is blowing at all it is a misfortune; the reverse being the fact. Third, the selection of flies and tackle is usually poor, and very few can handle what they have. The use of rod and reel is a new departure here, and five years ago this tackle could not be had in the city. Fishing is not good enough to draw visiting anglers. Consequently our local men are only just emerging from the rut that they have been in for generations.

The above is simply an introduction to what is of more importance to our anglers than whether bass will take the fly or not. If things go on as they are at present, in a few years there will be not a fish here to rise to Gabriel's horn, much less to a fly.

If there is a law of any description in this State to protect fish I plead ignorance of it. Niuety-five per cent. of the fish are taken from their beds. I do not now refer to the market-fishers, but to all of our anglers. No fishing party thinks of starting out except in the bedding season, and usually then after having located a bed. What cannot be take

or shot, if the water is low enough, and if not dynamite is freely used.

Fyke-nets are put in all streams that are small enough; gill-nets in all ponds; trot-lines, gourds and tin cans are available at all times. I know of 1,700 brook trout being taken from one stream in a day last October by one party of seiners. A friend just returned from a fishing trip informs me that they located the red-breasted perch bed in such shallow water that the fish would not bite, but that bushels of them were killed with shotguns. Our fishing streams and ponds are all small. The fish cannot "stand the racket". Were it not for an occasional inaccessible swamp they would would have been exterminated by this time.

What I say of fish is true in regard to game. I have seen quail on a hotel table in May of this year. Most of the deer are killed in May and June. A friend of mine, who probably kills more deer than any man in the State, told me in conversation not long since that in dressing does he had often seen the fawn sufficiently developed to stand up after the doe was opened—propagation of deer by Cæsarian section. Most turkeys are killed in April and May. The same holds true of squirrels. This is not half. I could give page after page of the same description.

In rather a rambling life I have never seen even

half. I could give page after 19.5
tion.

In rather a rambling life I have never seen even among savages the utter disregard for natural laws and animal life that exists in middle Georgia. The consequence is that in a thinly settled country that should abound in game hunting is comparatively poor.

I hope that your circulation is large enough in this State to help us out a little. There have been several spasmodic efforts at protection, but thus far with no result. We have a few men who are ready and anxious to change the existing condition of affairs, so give us what help you can.

BREAM.

THE AMPHION FISHING CLUB, at Goose Creek, mentioned in last week's paper on "Fishing Near New York," is made up of Brooklyn business men, not of New Yorkers.

ELMIRA, N. Y., June 23.—The Anglers' Club will make an excursion about July 20 to Bala, Simcoe county, On-tario, which reports say is an excellent point for black bass and muscalonge fishing.—Ftx.

CHICAGO AND THE WEST.

CHICAGO, June 18.—Everybody who goes out brings back fish. Messrs. Burton and Gillespie caught seventy odd black bass, wall-eyed pike and silver bass at Lake Winnebago last Saturday. They report the fishing all that could be asked, and the accommodations good at \$2.50 per day.

Fox Lake is affording good sport. The inexhaustible breeding grounds of Grass Lake keep the whole chain supplied. There have been numbers of 3 and 4-pound bass taken at Fox Lake and the lakes adjoining this spring.

bas taken at Fox Lake and the spring.

Mr. Fred'C. Donald is trying to get a friend or so to go with him down to Cedar Lake on the C. & A. road. He is the general passenger agent of that road, and the boys won't believe his fish stories.

I have as yet heard nothing from the Gammon party who went up after mascallonge, but they should be back

soon.

Mr. John Soderberg, of Blomgren Bros., is at Silver Lake for a week or so, and is having all the sport in the world. The Wisconsin lakes have a great many happy

Mr. John Soderberg, of Blomgren Bros., is at Silver Lake for a week or so, and is having all the sport in the world. The Wisconsin lakes have a great many happy visitors right now.

In a late Cincinnati trip I went across the river into Kentucky, and in the course of a five-mile drive saw several artificial ponds said to be abundantly stocked with game fish. This is very common in Kentucky. There is hardly a pond of any size, in some parts of the State, which has not been well planted, and some of these ponds, being of natural beauty of surroundings, offer very pleasant and successful sport. The fish most planted in the farm ponds are carp and "new-lights" (croppies). It doesn't take a very large pond for the fish in that country of springs and living water.

June 19.—Mr. Robert S. Day, a prominent attorney of Pittsburgh, Pa., is in the city to-day and is outfitting heavily for the Lake Superior country, where he will fish for some time. The Lake Superior waters are attracting a great many anglers now. An English party numbering several gentlemen and led by Mr. M. C. Inglis, have been stopping at the Palmer House here for several days purchasing outfit for a trip to Superior. They start to-day on the steamer Taylor, which they have chartered for the cruise. A part of their outfit was 1,500 heavy rifle cartridges. It is not plain what they wish of these at this season of the year, unless they deliberately and Englishly intend to break the game la ws.

Mr. J. M. Clark, of the Wilkinson Company, last Monday brought in six black bass whose aggregate weight was 23½lbs. The fish were caught in one day's fishing at Loon Lake, a few miles above Lake Villa, on the Wisconsin Central. The entire catch was eleven bass, all taken by bait-casting, of course; but following the growing custom of a few of our crack anglers, Mr. Clark returned to the water all the bass weighing less than 3lbs. When I think of such fishing as we are having out here right along, and thinking nothing of it, and then reflect on the poor people who l

Sorry for them.

I think Mr. Hearth is wrong when he claims his 10lbs.

30z. bass is the largest bass ever authentically recorded.
He offers a fine Meek reel for anybody who will bring in a larger one, and some day he will just about lose his reel. Mr. Hearth insists that his bass is a small-nouth.

E. HOUGH.

KEEPING LIVE BAIT.

KEEPING LIVE BAIT.

Editor Forest and Stream:

We in New England have but a short season in which to use the artificial fly in taking the noble black bass. The time is near at hand when we must use the minnow in casting or for live bait in still-fishing. I have particular reference to northern New England.

In past years I have been much troubled to keep the delicate minnow alive during the day. To learn the trade, I obtained two small thermometers. With one I took the temperature of the water from which the minnows were taken. I took into the bucket some of the same water with the minnows, and put in new mown grass to prevent the swash and injury of the fish. Then placing the bucket having the minnows and grass in my carriage, and also a few small pieces of ice rolled in a thick cloth, I started on a drive of three miles to Long Pond for black bass. If the second thermometer told me the atmosphere was cooler than the water where I had taken the minnows I had no further care of them till the end of the drive. There I took out the grass, put into the bucket fresh water, and with all the requisites in the boat started on my excursion for black bass. If the atmosphere grew warmer I put into the bucket a small piece of the ice to keep the temperature of the water the same as it was in the morning. Occasionally I took from the bucket some of the water and poured in some fresh from the pond which was of the right temperature, and aerated the water.

The first thing in this whole business is temperature, the second is aeration, perhaps the third is to prevent swash and injury to the little fry.

When one has become accustomed to the thing, thermometers are not needed, the hand is sufficient. But a change of 5° or 10° of temperature is source death to the bait. I do not use a bucket with an inner wire one. I much prefer, when I wish for a bait to take him out with a miniature dip net about as large as the hand, aud not to harm all the minnows in the tank by pulling them out of water. By practicing the method I have des

ture must be kept uniform as in the method Finaves of in an open can.

Last August I explored in Kennebec county, Maine, for crawfish, and am certain they may be found in localities not before reported. They are another good batt for black bass. The greed of anglers is fast extinguishing the beautiful trout of Maine, but in the water sheds of the Kennebec and Androscoggin Rivers the brave black bass and the toothsome white perch will fully fill their place.

LATE SPAWNING TROUT.

IN your paper of May 16 are some of my reminiscenses of trout fishing, in which occur several typographical errors, by one of which I am made to say that I have "griddled" trout. This may be true, but the word intended was guddled. It is, I think, of north country origin, and signifies the taking of trout by the hand. Perhaps the present generation doesn't know the process; if so, never mind.

tended was guddled. It is, I think, of north country origin, and signifies the taking of trout by the hand. Perhaps the present generation doesn't know the process; if so, never mind.

I set out to write about late spawning trout, and desire that you will continue to call the attention of your influential readers to the fact that these fishes spawn, in some cases, much later than we have been led to suppose. For instance, I yesterday (June 18) fished for a short time in a brook, where I took three trout. Of these, two contained spawn. It has happened this season that I have spent more time in trouting than for many—perhaps twenty—years previously. My catches have not been studying the orooks and the trout. Of these I could doubtless have taken more elsewhere.

I began my fishing about the middle of May, and I believe that fully one-half my trout taken since that time have contained spawn, more or less developed. Further, there is a farmer of my acquaintance, who has never shown any interest in the preservation or propagation of fish. He said to me (with no previous conversation on my part to lead up to the subject), that he thought our trout season opened too early, for the reason that a member of his family had taken about eighty during May, of which more than one-half contained spawn.

In this State the season closes Sept. 1. Is the law based upon a thorough study of the habits of Michigan trout, or on observations made elsewhere? Perhaps our trout season should be moved ahead a couple of months, and from the limited acquaintanc I have made with the habits of these fish, I judge that it is a subject which demands the attention of our Fish Commission.

While upon this subject, I wish somebody who knows would tell me why it is that June is the month when the brook trout are the most easily taken along the shores of Torch Lake. Is it because they visit the brooks to deposit their spawn? One person lately caught 294 at one outing, and I think in one day. About eighty of these were taken in one place, when they st

lished to the number of trout one person may take in a day.

Your readers need not get excited and think of doing the same thing, for the case was exceptional, and the man the best fisherman I know; but I believe the fact is as stated and offer no further comments, except to say that the trout were all of moderate size.

One of the worst features of trout fishing in this region is that so little attention is paid to the six-inch law. Pity it is that people will persist in carrying home poor little trout of three or four inches in length, with no excuse except that they are trout!

Let the honorable anglers of Michigan bestir themselves in these matters. There is still trout fishing in this State for us; if we do our duty, not otherwise, there may be some left for our grandchildren.

Central Lake, Mich., June 19.

The Cowpasture River.—This river of Virginia is a small stream, and not of much importance to any one but sportsmen, but though small it is nevertheless very pretty and picturesque, and is for its size as good a place for black bass, pike, etc., as any in Virginia. The principal part of this river for fishing flows through Bath county, and passing through that county joins the Jackson, a stream of about the same magnitude, at Clifton Forge, forming with this river the James. It is of the same order as the latter river, consisting of deep pools and lakes, which are alternated by shallows and rapids, so that one can have ample opportunities both for bait and fly-fishing, and boats can always be obtained if necessary. There are plenty of black bass, sunperch and pike, and any one going out for a day ought, if he is anything of a fisherman, and will take a little trouble, to get a very well-filled basket. There is plenty of accommodation along the river, a great many farmers having farms in the valley who are always hospitable to strangers. There are also some very convenient spots for camping on its banks, and any one going there and taking a little trouble will be sure to get good sport worth it.—C. H. H. RUMBOLD.

THE EUTOPIA AND TROUT LAKE FISH AND GAME ASSOCIATION, is the name under which a company of anglers have organized in this city and have acquired about 1,200 acres of land near St. George, Charlotte county, N. B. The property includes the two lakes from which the name of the association is taken, a brook connecting the lakes, and good surrounding camping ground. The officers of the association are: John W. Handren of the New York Yacht Club, President; Dr. Benjamin F. Vosburgh, Vice-President; Julian H. Barclay, Treasurer; Thos. McGrath, Secretary; James E. Lynott of New Brunswick, Assistant Treasurer and Secretary, and the following Directors: John W. Handren, Benjamin F. Vosburgh, Julian H. Barclay, Peter Reid, James E. Lynott, Albert Darling, William S. Macfarlane, H. P. De Graaf and Fred. Bredel.

MOOSE POND TROUT.—Mr. Dayton Ball, of Albany, on June 11 and 12 took in Moose Pond, in the Adirondacks, a string of trout which weighed respectively, 4lbs. 18oz., 3lbs., 2lbs. 9oz., 2lbs. 7oz., 2lbs. 7oz., 2lbs. 4oz., 2lbs. 1oz., two 2lbs., 1lb. 9oz., 1lb. 8oz., 1lb. 7oz., and several employ ones.

FOREST AND STREAM, Box 2.832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by Forest and Stream.

The revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—Adv,

DELAWARE RIVER BLACK BASS.

DELAWARE RIVER BLACK BASS.

Editor Forest and Stream:

The recurring ontery against black bass by certain fishermen along the upper Delaware recalls the protest made against the stocking of that river with these excellent fish, some 18 or 20 years ago. New Jersey had just appointed her first Fish Commissioner, Dr. J. H. Slack, and he took the ground that the bass would extirpate the shad. He was fortified in his expressions by most of the New Jersey papers which took part in the discussion. Hon Edward J. Reeder, of Easton, Pa., one of the Fish Commissioners of that State, and in most respects the most efficient one the State has even had, championed the cause of the bass, and for the time there was a lively newspaper scrimmage between him and Dr. Slack. Both were able writers, and the Doctor had the advantage of being a practical fishculturies, but he came of the state has even had, championed the cause of the bass, and for the time there was a lively newspaper scrimmage between him and Dr. Slack. Both were able writers, and the Doctor had the advantage of being a practical fishculturies, but he came of the state has the county and became interested in the black bass. In those days trout culture was the only variety of fishculture carried on in this country, and most of those then engaged in the business supposed it possible to stock most waters in the country with that pecress fish. It is not surprising then that most of the practical fishculturists looked with disfavor upon the introduction of an inferior variety of fish. I was myself one of the few trout culturists who became early convinced of the fully of stocking any except the purest of waters with trout, and consequently saw the propriety of thoroughly testing other varieties, which gave promise of waters of waters with trout, and consequently saw the propriety of thoroughly testing other varieties, which gave promise of success. In due time I took charge of the stocking of a large portion of the waters of southern New Jersey with black bass. I went to

A LESSON IN TROUT CULTURE.

A LESSON IN TROUT CULTURE.

WE glean the following interesting notes from a report of operations at the Wytheville Station, Virginia, from Jan. 1, 1885, to June 30, 1887, by Marshall McDonald. The distribution of trout fry having proved a failure, Commissioner McDonald has made a change in the methods of handling the young trout, and instead of planting the fry they are kept at the station in ponds until 5 or 6 inches long, when they are able to take care of themselves. The Commissioner states that the natural trout stream of the station was stocked for several years in succession with fry of both the Eastern brook trout and the California or rainbow trout without any appreciable results following, while the 400 fingerlings, from 4 to 5 inches in length, planted in August, 1886, in the same stream, were found to have attained a length of 7 to 8 inches during the ensuing fall and winter, and he concludes as follows:

"The important lesson to be drawn from these experiments is that in stocking streams infested by small predaceous fish we can only assure success by stocking with trout of sufficient size to dominate the water. Under the circumstances indicated experience shows that several hundred yearling trout are sufficient to stock a stream presenting suitable habitat. On the other hand, we can rarely expect success in stocking such waters with any number of fry, however great. It may be assumed as a rule that a pair of yearling trout are fully the equivalent of several thousand fry in stocking streams presenting the conditions to be found in the trout regions of Pennsylvania, Maryland, Virginia and States further to the south."

CONNECTICUT COMMISSION.—Hartford, June 1.— New Fish Commissioners have just been appointed by Governor Bulkeley and confirmed by the Senate. Judge Pike, of Middletown, resigned in January, and the present Commissioners are: Wm. M. Hudson, Hartford; James A. Bill, Lyme; Robert B. Chalkir, Saybrook. A new law has been enacted which divorces the Shell Fish Commissioners from the Fish Commissioners, and the Governor has appointed the following gentlement to act as Shell Fish Commissioners from the dates named: Wm. M. Hudson, for four years from July 1, 1889; George C. Waldo, of Bridgeport, for two years from July 1, 1889; Bryant A. Treat, of Wallingford, for the term commencing August 26, 1890, to July 1, 1891. The Hon, James A. Bill remains in office until Aug. 26, 1890.—H.

A WYOMING HATCHERY.—J. C. Barr and L. E. Martin have lately constructed a fish hatchery on the Colorado Colony Ditch Company's ranch, near Big Horn, and will stock it this season with mountain trout. The pond, or artificial lake, is supplied with water by a large spring. The depth in some places will be as great as 12ft. They intend putting in rowboats in the near future.—Sheridan (Wyo.) Enterprise.

THE HISTORY OF PATSY.

Editor Forest and Stream:

E. O. Damon recently sent the following letter to the Shooting Times, London, and the editor, a well-known thief, who has been barred from the English Kennel Club, and is seldom recognized by honest people, printed the stuff:

Dear Strit may be of interest to some of your readers to hear a werd or two from over the sea about dogs and dogsy men in your midst, and how we confiding Yankees go over to you for our stock, and put out our moncy for our favorites. How we sometimes get "left," to use a slang, is, for me, a sufferer, to tell; many of us have not the moral courage to come out in public and admit the fact, as was the case with the owner of a great red dog sent out several years ago by a prominent member of the Irish Setter Club. I am just in receipt of word of the arrival out of another Irish setter, which came with great recommend, but proves very disappointing. Not at all as written of, and a verifable third-atter. Well, being a lover of, and having always shot over an Irish setter, I last year deeded to import a dog of this breed, and knowing the uncertainty of getting a high-class dog, I went to Mr. C. H. Mason, of New York, and asked him if he could procure for me a dog that would be of quality to attract in the study or to sum up, I required a high-class Irish setter and asked for his price, or rather the probable cost of such an animal. He told me that such an animal could be had. Mason said he would go to Bagiand for the dog, through his buyer. This was in June. In September I or "lead a letter from him, in which he described two Irish dogs, which is a last the line. In September I me dog, through his buyer. This was in June. In September I me, an under-sized dog, and his is his only failine. Wants a little more size for a dog, but for general formation, coat, color, and continued the such as follows:

"My buyer knows of but two dogs that would be likely to suit me, an under-sized dog, and his is his only failine. Wants a little more size for a dog, but for general format

and movement, you can't have any better. His price will be \$200. I am quite sure he is a 'hot un,' and if you want him remit at oute.'"
To any man the impression of this dog would be that he was an undersized dog, but made up very true in outline, a fair head and all the points so requisite in a high-class Irish dog.

After cautioning Mr. Mason as to his being sure of the dog's quality. I order, of course, basing my order upon his opinion of the dog and his confidence in his buyer.

Nov. 20 the dog comes, and with a record and flourish jumps into print in the Dec, 13 issue of Forest and Stream over the name of C. H. Mason, a writing up that attracts the faney and scares to death several of our prize winners. At the New York show Patsy is the center of attraction to a trembling few, but they soon take heart, and one after another says: "Is this the ogd described in the article by Mason?" and as our favorite fancier said: "The most misleading description of a dog I ever read." a dog, as the —— reporter said in his report, "with very little to commend him."

An examination of the dog shows him to be very short on legs, short and thick-set neck, ears short and set high, head that would be poor for a bitch, no stop or occtput at all, nose very sinpy and straight stifles, a type of dog the exact contrary of such dogs as Tim, Elcho, Jr., or Kenmore—a type of dog that several of our examination, said: "You could not give his services to me." Such is the dog sent over at a cost of \$550, and which took months of time to find, a dog from the poultry show at Strabane, and offered to our breeders as a dog of such "typical head and fine formation," a dog that the Rev. R. O'Callaghan advised me not to breed to, and which at the New York show takes a very highly commended!

Now, how are we hoot type improve our dogs to go to work to

to, and which at the New York show takes a very nignty commended!

Now, how are we who try to improve our dogs to go to work to bring out a dog of worth? I draw this conclusion—either a red in Ireland amounts to nothing or there are no good reds there, or those who advertise in our papers as buyers are swindlers. I have not written this to get drawn into a discussion, but simply to show how imposed upon I have been, and to save some others from a like fate. The above is no distortion of facts, as all our best fanciers can testify to who have seen this Strabane wonder, and which Mason advised me to let stand in this country upon his Strabane record, though he did think I might show him at New Bedford, as he judged there.

If Patey was the right dog in Ireland, then our Yankee knack has helped give us a class of reds far superior to this type of a dog; but no more Irish dogs for me through the agency of Mason, Blank & Co. Se I say another one sold; who will have the next?

E. O. DAMON.

Blank & Co. So I say another one sold; who will have the next?

It seems strange that a man with such rigid notions of honest dealings as E. O. Damon should have sent his communications to such a notorious bad character as "Wildfowler." Damon is an old reader of FOREST AND STREAM; he has read it for years, and it is not at all likely that he just happened to miss the numbers that contained the articles ans correspondence headed "Wildfowler's' Thievery." I leave your readers to judge for themselves why the letter was sent to a rogue. My own idea is that Damon felt that as he had a very poor case he had better rely on thieves to magnify and distort the facts until they should succeed in making a mountain of a mole hill. No sooner had the leading man in "Wildfowler's' Thievery" printed the letter than that sickening creature Huscroft, who has recently been evolved from office boy to "special commissioner," dispatched it to his congenial associate in Chicago; and with a loud blast of trumpets the "History of Patsy" was given to the American fancy. Mean, sneakish insingations and half lies were tacked on to Damon's already untrustworthy letter. One would have thought that "Salisbury's Pedigree" would have been sufficient to teach these perverters of truth

lesson; but their pigheadedness known no bounds, and hey persist in running their bear and inst at stoke wall, to the persist in truning their bear and inst at stoke wall, the persist in pe

Patay as follows: "He grows upon me the more I see him, and if I could put him up say two inches higher I would not want another, change. I think he is remarkably strong a street dog: I shall be perfectly satisfied. I shall put him on itrids today and give him a trial, reporting to you. I will add in the street of the perfectly satisfied. I shall put him on brids today and give him a trial, reporting to you. I will add in the perfectly satisfied. I shall put him on brids today and give him a trial, reporting to you. I will add you have not our mifed grouse yesterday—our wildest and not wany to grow the perfectly and the perfectly and the remarkably steady and on his points, also to gan or wing. A few days in my handling and he will adapt himself to our rough the field and his qualities as a stand dog. He will soon learn cur covers and prove all the grouten and the himself to our rough the field and his qualities as a stand dog. He will soon learn cur covers and prove all the grouten and the perfectly and the standard of the perfectly and the standard growth of the perfectly and the standard growth of the perfectly and the perfectly and the standard growth of the perfectly and the standard growth of the perfectly and the perfectly and

limb, hight bone, with straight stiffles ruins him in my eyes. I am not at all fault-finding with your efforts. Your efforts would fill the hill of a novice selection. I that the sight of the little fellow?

As soon as Damon had reported this letter he said the straight of the little fellow?

As soon as Damon had reported this letter he said the straight of the little fellow?

As soon as Damon had reported this letter he said the straight of the straight of

contradictory that really I cannot follow yon. In one of your letters you gave me to understand that Mr. Hammond had told you that Patsy was wortheless. When I asked Mr. Hammond what he thought of the dogs he at once replied that he was the best in the class, barring his size. You, as well as I, know that Mr. Hammond would never say one thing to you and another to me; he is not a man of that man of that work and the state of the post of the property of the p

make up your mind what you want. But even if you did
this a man could not please you, became as soon as you saw
the dog or somebody told you he was a 'duffer' you would
want another of entirely different type."

March 19 Damon sent Mr. Perry that Patsy was a "duffer,"
"not as represented" and "not as ordered." Neither do I
find in it that he told Mr. Perry that Patsy was a "duffer,"
"not as represented" and "not as ordered." Neither do I
find that Damon told Mr. Perry that Damon was unmanly
in trying to palm off a "duffer," which it was his duty to
have done seeing he believed Patsy a "duffer." Damon said:
"I have had him on grouse this spring, and he is all that is
claimed; fast, a keen worker and very staunch and readily
handled. On quail and chickens he will prove a grand one.
I shall show Patsy at Boston with my Winnie II, second at
New York. After the Boston show you can have him if you
choose. He is very much more of a dog than you imagine,
and at my price is the cheapest dog I ver saw. I feel confident could you see him you would take him. Kate IX,
whelped Sunday night eight puppies by him, four dogs and
four bitches, a nice lot and very even. Mason says he considers Patsy a better dog than Desmond II, second at New
York and first at Troy. In condition and soundness Patsy
has not an out. He is an all day dog and of great value: for
his field quality alone he is worth my price."

Does this last letter prove that in Damon's opinion Damon
bought a "duffer," or does it prove that he bought a good,
honest dog? There is a deliberate falsehood in the letter
that must not be overlooked. It is where Damon says:
"Mason says he considers Patsy a better dog than Desmond,"
If readers will refer to my reply (given above) to Damon'
letters of March 4 and 5 they will notice that I wrote, "without seeing the dogs together it strikes me that Patsy is the
better." Very different from saying "Patsy is a better dog
than Desmond." But then Damon is a "gentleman;" he is
above trickery of any kind; he does not believe in

dog than Kenmore and Sunset, the first and third prize

dog than Kemmore and Sunset, the first and third prize winners at Boston.

April 15 Damon wrote Mr. Perry again: "I must say that my O'Callaghan bitch Winnie II. is now in heat and I am naxious to try the experiment of an inbreed with Patsy. Serving and the will be the serving the third will settle the serving the provided of the serving th

was not picked up on the streets of Lifford, as Damon has insinnated, I print Dr. Boyd's reply to Mr. Graham, and at the same time I ask Dr. Boyd's pardon for making it public property:

Lifford, County Donegal, March 26, 1889. —Dear Sir. Inclosed you have letters returned as requested. You are the party I had the transaction with, so will certainly do as you desire, but I cannot see what objection there is to saying I got far more than £50 for him. This answer would, I, think, make him (Damou) more satisfied, knowing there had been a big price paid for him at this side, and it would stop his writing to me, as I would state, without Mr. Mason's or your permission, I would not tell the exact price. But you are the best judge. Will I even say that I had written you after receiving his letter and that you wished price, kept secret? Please let me know this, but indeed my idea would be to let him know you had paid me the big price. Yours truly, J. C. Boyn."

Looking over Damon's letters to the press and to private indiduals I find: 1. That when Damon wished to make himself heard he wrote to a paper edited by a thief. 2. That Damon complained of getting "left," and then tried the experiment on Mr. Perry. 3. That an examination of Patsy showed Damon that the dog was the exact contrary of such dogs as Tim, Eleho, Jr., and Kenmore, but that a later examination showed him to be a better dog than Kenmore. 4. That Damon wanted a "good, reliable stud dog, one and a half or two years old, of the best of breeding and strain," and a dog whose first points must be "speed, nose, style and field work combined." 5. That Damon bought what after seeing him he pronounced a splendid field dog, a superbly bred dog, a dog that sired the best puppies he had ever seen and a dog that in looks surpassed Kenmore and was defeated at New York only, he claims, because the judge owned two stud dogs and did not wish to hurt his business by bringing into prominence a dog advertised at a low fee. 6. That Damon considered Mr. Graham had previously s

him." 20. That Damon did not receive Patsy. 21. That Damon sold and shipped to Mr. Perry a dog that Damon never received. 22. That Damon is not responsible for his

never received. 22. That Damon is not responsible for his actions.

If E, O. Damon has been egged on in his foolishness by the Chicago trickster, and I am told that he has, it will be well for him in the future to remember that once upon a time a man named Balaam owned a long-eared quadruped that was stopped.

CHAS. H. MASON.

Thauks to Mr. Mahew for having tried to show Damon the folly of his ways, and to Mr. Perry for having sent me copies of Damon's letters.

C. H. M.

PATSY.

copies of Damon's letters.

C. H. M.

PATSY.

THE Irish setter dog Patsy is the subject of a long commnucation in our columns this week. We give a portrait of the dog sent to us by Mr. Damon who wrote of it: "It is taken from a photo and is an exact likeness, no exaggeration whatever, and the fancy see him just as he is if his superb color could be shown. In a letter dated Dec. 3, Mr. Damon writes: "Patsy will make his mark in the stud and as new blood he will be in demand, being splendidly bred and never beaten. I have coming out a grand bitch selected with special reference to breeding to this dog. * * * Patsy is the most level-headed and obedient dog and has more sense than any other Irish dog I ever saw. Mr. Mason can give you a better idea in his writing up than I can. But he is no duffer I can assure you. In coat and color he has no superior in the country." Following is the description of the dog by Mr. Mason which was published in our issue of Dec. 13, 1888:

"A few days ago I had the pleasure of giving Patsy, Mr. E. O. Damon's recently imported Irish setter, a careful examination. As this young dog is almost certain to make a mark, especially in the stud. I will give your readers a brief description of him. Skull well formed; muzzle somewhat too light; eurs set a trifle high; eyes a shade too light in color, but well set and with file expression; a head full of quality and character, but rather effeminate; neck better than average and would be improved by less bulk and by a little more length; shoulders beautifully laid on; chest very nearly perfect; back firm as a rock and truly formed; loin symmetrical and strong; hindquarters showing much strength; tail of correct length, beautifully fringed and always well carried; stands on a superb set of legs and feet; coat and color perfect; feather of best quality and sufficiently abundant. A graceful, stvlish and esay-moving dog whose most prominent defect is a lack of size. His late owner considers him one of the most promising field dogs he has ever owned—f

DOG TALK.

THE Fanciers' Gazette proves that dogs reason as follows:

A "A young man who lived in a cottage in Yorkshire had a splendid mastiff dog, called Ponto, who was allowed to roam about just as he pleased all over the house. His favorite place, however, was in the study under his master's writing table. When Mr. D—s was away from home, as was often the case. Ponto, much to his disgust, was chained up in the yard. From this treatment he did all he could to keep away. On one occasion his master went for a few days' visit to a neighbor, leaving the usual orders about the dog. In vain, however, did the servants search high and low for Ponto; nowhere was he to be found, and they gave up the search in despair. In the evening, when the two maid servants were sitting quietly at work in the kitchen, they sinddenly heard the small handbell in the study ring violently. They started up in alarm, and each wanted the other to go and see what was the matter; but neither of them dared, and they sat still and frightened. Presently the bell pealed again, and, curiosity proving greater than their fears, they went to the partor door. There they paused again, but hearing the bell once more, they turned the handle, and peeped in. What was their surprise to find Ponto sitting on his haunches, with the bell in his month! He had evidently seen his master use the bell to summon attendance, and finding himself shut in, he thought he would try if a little bell-ringing on his own account would not get him out of his prison."

At a recent meeting of the committee of the English Kennel Club, Mr. J. Sidney Turner gave notice that he would propose the following new rule at the special general meeting to be held at Olympia, July 10: That any person who shall knowingly exhibit a dog which has suffered from distemper at any time within the previous two months of the show at which it is exhibited, shall be debarred from again exhibiting for such period as the Kennel Club committee shall decide.

We have received notice from Mr. Chas. Deckleman, Brooklyn, N. Y., stating that the Brooklyn Kennel Club will hold a dog show in that city, Sept. 7 to 11. We shall probably be able to give further particulars next week.

We have received a list of the nominations for the second annual Derby of the Southern Field Trial Club, 51 in all, 42 setters and 9 pointers. The list will be published next week.

Mr. H. H. Briggs, kennel editor of the Breeder and Sportsman, has been appointed to judge all classes at the dog show held at Los Augeles, Cal., this week.

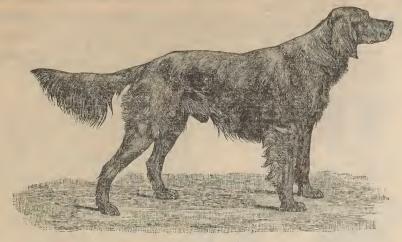

We are informed that the National Coursing Association contemplate holding meetings uext fall at some of the important Southern cities.

Mr. E. H. Morris has been arrested upon the charge of evading the duties on a dog recently imported by him. We are informed by the best of authority that the prosecution is malicious, and that Mr. Morris has the requisite consular certificate for every dog imported by him.

The St. Bernard Club of Switzerland will hold an international show at Berne, July 12 to 14.

The California Kennel Club propose holding a dog show at San Francisco, next October.

THE POINTER CLUB.—New York, June 24.—Editor Forest and Stream: There will be a meeting of the executive committee of the Pointer Club of America, at 44 Broadway, New York city, in the rooms of the A. K. C., at 12 M. Monday, July 1.—Geo. W. LARUE, See'y and Treas.

PATSY.

BREAKING A BEAGLE.

THE other day I took a beagle puppy to a gentleman of color, who had the reputation of having the best rabbit dogs in the country, for the purpose of having him broken. "That's a mighty purty hound," said he, "but I'm afeard he won't stand the racket of my system of breaking." "Why not?" asked I.
"'Cause," he replied, "he's fat and slick and delicate lookin', I'm afeard he'd die before he'd be broke. My plan is awful simple, but it never fails. I don't feed my hounds, and they have got to ketch rabbits or starve to death. Now do you want to leave him?"
I concluded I did not eare to subject my Rowett to so Spartan a method of breaking, so I put him in the wagon and drove home.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

JAMES, Norwich Conn.—I. How can I reduce corpulency in a bull-terrier? He is allowed but little exercise outside his own yard, be being anxious to fight every dog he meets; also has a funuy tough. 2. Would it be nossible for you to advise the kind of dog to get for a loving companion and a faithful friend? I do not need a hunting dog nor a feroctous watchdog. I'd like a dog who will become attached to me, and one i can train to mind only his owner. Ans. I. Limit the food. Give no starches or fats and but little meat. Exercise regularly and keep the bowels freely open with syrup of buckthorn in teaspoonful doses, compound earhartic pills or oil. All the symptoms are due to obesity. 2. A well-bred collie or greyhound will probably suit you.

B. G.—My pointer dog's eves are each morning filled with a yellow pus. They have troubled him at intervals since last fall, but are now worse than ever. I had a dortor look at them and he said the lids were granulated, but his medicine did no good. Can you prescribe? Ans. If the lids are granulated use bluestone, with which you may lightly touch the lids, It is more likely to be a digestive difficulty. Give 5 grains of quinine twice daily in pills. Keep bowels open and put 5 drops of Fowler's solution of arsenic in the food night and morning.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. Kennel Record and Account Book. Price \$3. Training vs. Breaking. By S. T. Hammond. Price \$1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

Bifle and Tray Shooting

RANGE AND GALLERY.

THE INDIANAPOLIS TOURNAMENT.

INDIANAPOLIS, June 19.—The biennial meet of the Western Shooting League had an anspheious opening in this city today. In the unorning the visiting clubs, which huchded societies from Gineinnati, Chicago, St. Louis, South St. Louis, Belleville, Peru, Ill., Munroe, Wis., Cleveland, Joliet, Eigin, Highland, Peoria, Milwankee and Omaha, were escorted to the Schuetzen Park by the local bands, and there were interesting addresses and great enthusiasm when President Kneff, of the Chicago Association, produced the League flag, which will remain here for two years.

sociation, produced the League Rag, which was remained two years.
Individual shooting was the order of the day and the list of prizes called for a silver goble to all making 35 buliseyes, range catter, of hand (4n. center), and a medal to every 15 shots center, II. F. Peppenbrink, James Braun and L. F. Zehring, Johet; Ed. Burgan, Davenport; S. Merrier, Milwaukee, and G. Rupperuter, St. Louis, were awarded goblets. Altogether 11,147 shots were fired and there were 815 centers. Rifles from 32 to 40cal. were used.

used.

Aune 20.—The present one is proving the most successful meet ever held by the Western Shooting Bund. To-day 31,100 shots were fired, and there were 35 winners of medals, one being awarded for ever 15 centers, and 32 goblets were also claimed, one being awarded for every 32 centers. Emil Berg, of Davenport, made 200 out of a possible 279 on the King's target in 10 shots, and Louis Knaebel, of Highland, 71 out of a possible 75 on the Union target.

awarded for ever 15 centers, and 32 goblets were also chaimed, one being awarded for every 32 centers. Emil Berg, of Davenport, made 200 out of a possible 270 on the King's target in 10 shoep, and Louis Knaebel, of Highland, 71 out of a possible 75 on the Union target.

The winners of goblets included John Spilter, Joliet; R. Bonner, Peoria; A. L. Roberts, Joliet; R. Unzieber, Peru, Ill.; Dr., Julius Merekle, Chicago; John Breelow, Davenport; Jacob Karlein, Jr., Monroe, Wis.; P. A. Scheitt, Joliet; Ed. Rugger, Monroe; Ed. Thlieppaa, Chicago; Val. Linek, Peru, Ill.; G. W. Spongler, Monroe; G. M. Cook, Davenport; Hy Hochn, Monroe; Win., Hazenzohi, Cincinnati; Otto Lauer, Peru, Ill.; Francis Folker, Dubuque; M. N. Peotke, Chicago; Jos. Kutsch, Dubuque; F. Toggenberger, Chicago; Granz Londi, St. Louis; C. Schotte, Chicago; Emil Berg, Davenport; C. W. Ranzow, Davenport; H. H. Neiman, Gincinnati; Wm., Tell, South St. Louis; C. Schotte, Chicago; Emil Berg, Davenport; C. W. Ranzow, Davenport; H. H. Neiman, Gincinnati; Wm., Tell, South St. Louis; Dr. E. A. Hodges, Indianapolis; P. Klauer, Dubuque; Capt. M. Gindele, Ciucinnati; G. W. Knarzer, Indianapolis; H. Thorwart, Chicago; Otto Raef, Chicago; D. Schneidewind, Belleville.

June 21.—The principal event of to-day in connection with the Western Shooting Association Festival was the team shooting in which 18 clubs entered. Joliet won first prize; score; 1,173. Monroe (Wis.) second, 1,156, and Chicago; third, 1,313. Cincinnati stood seventh in the match with a score of 1,108, being beaten by Milwaukee Peru (Ill.), and Davenport, as well as the prize winners. Omaha came last with 873. Nieman, of Chicago, won the team medal, scoring 197, and Gindele was second with 4 points less, and Hazenthal third.

First prizes during the day for individual shooting were made by C. Linke, of Peru, Ill., 318, and D. Schneidwis, same place, 219.

June 22.—The Western Shooting League closed its meeting to day with the awarding of prizes and a festival. The next meeting will be held in St. L

	CREEDMOOR.—The Creedmoor rifle range has finally come

CREEDMOOR.—The Creedmoor rifle range has finally come under the entire control of the New York State authorities, Governor Hill having signed the bill which brings about that result, and hereafter the officers of the National Rifle Association will have nothing to do with the range except to go there to shoot. The Association will still have the use of the range, the same as heretofore, and the members will not be encumbered with the bother of running it. On the other hand, they will no longer have the place under their control, but must be subject to the orders of the State authorities.

TORONTO, June 21.—A number of gentlemen met in the Walker House to-night to take preliminary steps toward the formation of a Small-bore Rifle Association. A committee consisting of Dr. Powell (chairman) and Messrs. J. I. Hall, E. P. McNeil, W. R. Hughes, Fred Maughan and Thomas Anderson were appointed to draft a constitution and rules, which will be submitted to a meeting to be held soon. A large number signified their intention of becoming members.

PENNSYLVANIA MARKSMEN.—The company rifle contests for the Singerly gold, silver and bronze medals for teams of 4 men each who never were entered in a rifle contest, took place at the Hartrantf Rifle Range, at Frankford, the 21st inst. Shooting sommenced promptly at 9:30 A. M., and all teams not on the range were debarred from competition. Major H. A. Shenton, of Sixth Regt., N. G. P., was detailed to look after the matches. Fhe City Troop team held their average through the contest and range out a good winner with the combined scores at 200yds. 80 coints, and 500yds. 81 points. The scores made by the teams were us follows—conditions of match: Four men to constitute each seam, who were never in a contest, and had qualified as marks—earn, who were never in a contest, and had the contest and had the contest and had the contest and had the contest and had the

SAN FRANCISCO, June 16.—The annual prize shoot of the Germanic Schuetzen Club attracted a very large number of marksmen to Harbor View to-day. There were so many skilled rifle-wielders around that locomotion in the shooting room was well-nigh impossible. There were two distinct shoots—for honorary members and all comers. The former was the most important, as the best shots in the club took part. The competition was very close and did not finish until nearly 6 o'clock. A 25-ring target was used, the first prize going to the member scoring highest out of a possible 75 points; Geo. Heim 62. A. Rahwyler 81, J. Ustehig 60, A. Utschig 59, J. Dombien 53, J. Young 57, F. THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gravis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Scoretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

Aug, 13, 14, 15—Second Tournament of the American Shooting Association, Boston, Mass.

Aug, 20, 21, 22, 25—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

WORCESTER, Mass., June 21.—At this week's meet of the Worcester Sportsmen's Club, at Coal Mine Brook Range, the classification series of shoots was resumed. In the classification each man had a possible 30, and in the prize a possible 10 birds. The first score in Cluss A: W. R. Dean 22, G. J. Rugg 28, E. Smith 27, Geo. Sampson 26, A. R. Bowdish 23, M. D. Gilman 25, H. D. Jourdon 25, E. S. Knowles 22. Class B: E. F. Swan 17, C. R. Clafflin 17, Dr. Bowers 20, A. L. Gilman 20, C. R. Holman 16, F. Vernou 12, C. Forehand 11, A. B. Franklin 20, F. Forehand 16, C. Henry 15.

LOWELL ROD AND GUN CLUB.

H EREWITH are the scores of a two days' tournament given by the above club on their grounds at Tewksbury, June 20 and 21. A provision in the programme that experts should stand at 21yds., and amateurs at 18yds., undoubtedly accounts for the slim attendance.

Friday, June 21.

For the second day of the tournament only seven shooters appeared up to 2 o'clock, and at that time none of the programme events had been shot. A few sweeps were indulged in, of which we give scores.
Extra, 3 pairs clays, 25 cents, three moneys: Downs 5, Crown 3, Hartford 3, Bates 5, Frank 4, Perham 5, Knowles 3. On shoot-off: Perham first, Frank second, Knowles third.
Extra, 6 clays, same conditions: Frank 2, Crown 5, Perham 5, Bates 5, Knowles 6, Hartford 6, Downs 4. First div., Bates second in shoot-off, Downs third.
Extra, same conditions: Lovejoy 2, Knowles 4, Perham 5, Bates 5, Downs 6, Frank 5, Hartford 6; Crown 4. Downs first, second div., third shot off and won by Knowles.

Dinner match, teams of 4, at 7 clays each: Bates 5, Downs 6, Perham 5, Hartford 6; total 22. Knowles 7, Lovejoy 3, Frank 6, Crown 6, total 22. On shoot-off, Bates's team 34, Knowles's team 32.

Extra, 6 clays, 25 cents, three moneys; Frank 3, Bates 4, Knowles 6, Downs 3, Perham 3, Hartford 3, Crewn 2. Knowles and Perham first, Bates second, Frank third on shoot-off. Extra, same conditions: Knowles 4, Bates 5, Lovejoy 4, Downs 4, Hartford 6, Perham 5, Crown 4, Frank 5, Hartford first, second div., third won by Knowles on shoot-off. Extra, Keystone system, at 6 clays, 25 cents, three moneys; Knowles 6, Frank 4, Crown 2, Hartford 6, Bates 6, Cott 5, Gregg 4, Perham 5, Downs 5. Knowles and Hartford div. first after shoot-off, Perham won second and Frank third on shoot-off.

ESSEX GUN CLUB.

ESSEX GUN CLUB.

THE annual reunion of the Essex Gun Club took place as previously promised on Thursday last, on the grounds of the Jersey City Heights Gun Club at Marion, and was a very successful, aye, felicitous affair. On the very many occasions of this character ou these well-known grounds it has rarely been equalled and uever excelled in all the various elements of the make up successfully carried out for a royal good time. In the first place it is a grand club, comprising some of the finest fellows as well as crack shots of the State. The weather was in every respect superb, the birds the best lot decidedly we ever saw together in the month of June, the shooting excellent, the duner, furnished by Morrow & Day of Jersey City, can be mentioned only in the lighest terms, and was served by his corps of darky waiters in true Delmonico style. The feeling throughout the entire day was one of great enjoyment. We arrived on the seene quite late, and found that three sweepstakes at bluerocks had taken place, and there was a sweep at 10 live birds each man in progress, with that genial writer and good all-around sportsman rollicking Jake Pentz referce and scorer. It did us good once more to get our legs under the table and pen ii in hand alougside of this old timer. It was years ago when we reported matches side by side in the days before Bogardus and Carver; Jake, I think, even antelating or being cotemporary with King and Jack Taylor and Billy Seeds in their closely-contested matches.

Jake promised me to extend the usual courtesies and send me the previous secres, which he didn't. He sent the clay sancer contests, but the main sweep on live birds you will have to go without. Perhaps he thought I got it elsewhere. Did he? Following are the scores at the earthen disks. Then came the dinner, after which the main contest, the feature of the occasion, the club match between members, 16 men on a side, for the birds, the dinners and a good time. Mr. Hayes, the gentlemanly leweler more than once crowned king of rifle sh

AMERICAN SHOOTING ASSOCIATION.

AMERICAN SHOOTING ASSOCIATION.

PEGARDING the Association's first tournament, recently held A at Cincinnati, we hear the expression from many that it was a failure, and the conclusion is drawn that the Association will not prove to be what its projectors and the shooting fraternity in general hoped it would. The reason for this opinion seems to be solely because the attendance at the initial shoot did not come up to the expectations of those who thus prognosticate. This we believe to be an incorrect method of reasoning. I thurst not be forgotten that the plan of classification as adopted by the Association was practically a new and untried scheme, that is, untried so far as its rigid enforcement goes; for while a somewhat similar system has been in force at several large tournaments, the methods of securing shooters' records, and thereby classifying them, were not such as to inspire confidence among the weaker shots. The following explains the Association system:

Classification.—Sec. 1. Any shooter to become eligible to the tournaments given under the rules and management of the American Shooting Association must qualify by sending to the headquarters of the Association a certificate from the president or secretary of a regularly organized gun club. of which he is a member, giving, to the best of his knowledge and belief, what he considers the shooter's average on manimate targets. These certificates will be used in making up a proper cassification of the contestants. Blank forms will be sent to any one on application. If the scores made by any shooter give sufficient grounds for changing his classification, the Association reserves, the right to make the change.

Sec. 2. The classification of shooters will be as follows:

Class 8. To consist of all those whose average is made over.

Class 8. To consist of all those whose average is made over.

Class 8. To consist of all those whose average is made over.

Class 8. To consist of all those whose average is from 70 to 85 inclusive.

**Clas

crests are protected and a fair chance is afforded them to win ong contestants of the same relative skill. Nothing that the octation has so far done warrants the belief that it is a fullure, the croakers should give it an opportunity to thoroughly test efficacy before voicing that opinion. As we understood it the occations were that some money would have to be demated by Association at Cincinnati, but the result showed a much uller loss than was calculated on. By a reference to the scores shown that over 100 shooters were in attendance during the r days, and this, while not phenomenal, is certainly a fair rage for a first attempt. The next meeting at Boston will no bit draw many who held off to see how things would work, the the Association a chance!

SPRINGFIELD, N. J., June 22.—Two matches were shot on the Union Gun Club grounds here this afternoon, besides a number of sweepstakes and a team race to see who would set up the ice eream for the contestants. The day was all that could be desired, being quite cool with a moderate northwest breeze blowing directly across the traps. The first match was between M. F. Lindsley, of Hoboken, and C. H. Johnson, Jr., of Union, for 810 a side, American Association rules. Shooting commenced promptly at a quarter past three, and there was scarcely a second between shots. By four o'clock the match was finished, Johnson winning with a score of 94 breaks to Lindsley 76. All breaks were clean and not a scratch was scored. As soon as this match was finished Conover and Sickley promptly stepped to the score and kept up music, Conover winning by the score of 41 to Sickley's 37. The cream shoot was started immediately on the side traps, while sweepstakes were shot in front, and from then until dark there was nearly one incessant report of guns. Lindsley used a 12-gauge Lockver hammerless, U. S. Climax shells loaded with 36rs. American wood powder, special trap, and 14/0z. No. 7/5 chilled shot. Johnson used a 12-gauge Lockver hammerless, U. S. Climax shells loaded with 36rs. American wood powder, special trap, and 14/0z. No. 7/5 chilled shot. Johnson used a 18-gauge Lockver hammerless, U. S. Climax shells loaded with 36rs. dead shot. Johnson used shot. Johnson used 10-gauge Parkers. U. S. Climax shells loaded with 36rs. dead shot. F.F. F.G. and 14/0z. No. 7 chilled shot. Following are the scores; Match at 100 bluerocks, 3 screened traps, 16xds. rise. American Association rules, 810 prizes; Wm. Sigler referee, Dr. Conover scorer: Johnson while the property of the score of the property of the source of the property source.

WILMINGTON, Del., June 29.—Today was a great day for the sportsmen at Birmingham Park, near Wilmington, Del. The wawses Gun Club gave an excursion to the park, and the day was spent in clay-piceon shooting. The sport was lively, and the large number of shooters that took part made it very interesting. The Wawaset Club had as their guests A. L. Lumb, William H. Wolstencroft and James Wolstencroft, of the North End Gun Club, of Philadelphia. These sportsmen took part in the shooting, and as can be seen from the scores, did some good work. The sweepstake shooting was at clay-pigeons, open to all comers. In the first match each man shot at 5 birds:
C Buckmaster 1100—3 G Miller 1111—5 C Buckmaster 1101—3 G Miller 1010—3 H Ewing 1000—5 E Melchoir 1010—3 H Ewing 1000—3 W McKendrick 1111—5 E Miller 1000—4 W Buckmaster 0010—2 J Caldwell 00000—0 L Fox 0010—3 G Gill 1010—3 L Fox 1001—3 G Groen 11010—4 A Williamson 01000—1 J Jackson 1111—4 A Williamson 01000—1 J Jackson 1111—4 B Buckmaster 00011—2 G Groen 01010—2 First money divided between G. Huber, G. Miller and J. Jackson, second between Hartlove, E. Miller and Gill, C. Buckmaster won third by breaking 3 straight.

The second match was fairly well shot, McKendrick winning first: | 1011—4 | Green | 01011—3 | 000 | Jackson | 0011—3 | 000 | Jackson | 0011—3 | 0110—4 | O Buckmaster | 11011—4 | O Buckmaster | 11011—4 | 1101—4 | F Ewing | 1100—3 | 0101—3 | R Miller | 1101—4 | 01111—4 | W Baker | 11011—4 | 10011—4 | J Ewing | 1101—4 | 1101—4 | J Ewing | 1101—4 | 1101—5 | 0101—3 | 1001—3 | H Buckmaster | 0100—3 | 1001—3 | H Buckmaster | 0100—3 | 1001—4 | 1101—5 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 | 1101—6 The second match rest:

MISSOURI-ILLINOIS.—Chicago, Ill., June 19.—There are now on foot negotiations which are likely to result in the most important live-bird match shot anywhere in America in recent years. A number of Missouri gentlemen have sent in to Mr. R. B. Organ a challenge for a match on the following terms: Ton Missouri shooters to shoot against ten Illiuois shooters, at 100 live birds per man and \$1,000 a side, the match to be shot at Kansas City, St. Louis or Chicago, a city purse and the gate money to be added 10 the stakes, winning team to take \$1,300 and a certain amonnt, to be detormined, of all remainder to be divided into 40, 30, 20 and 10 per cent, for the four men making the highest scores. Signed to the challenge are such names of Missouri shooters as J. E. Riley, J. N. R. Elliot, P. D. Watson, J. H. McGee, J. W. and W. M. Anderson, Paul Francke, Caldwell and Cottrell. Our boys recognize that they would have hard work with these men, but they are doing their best to scratch up a team of ten, and will doubtless have nerve enough to tackle the job. Mr. Organ is collecting lists of votes among Chicago shooters to try to determine the Chicago team. Prominent among his lists are John, George, Henry and Abe Kleinman, J. R. Stice, Powers, Billy Payson, Billy Mussey, Charley Willard, Thos. Laffin, R. B. Organ, M. J. Eiel and W. E. Phillips; it is probable that this match will be shot before November or December, as it is resolved that none but good strong birds shall be used. Modified Hurlingham rules are suggested by Missouri, and modified Illinois rules by Illinois. It will probably be shot in Kansas City. That city will add \$2,000 to the purse and turn in at least \$1,000 more at the gate. There will be two or three car loads go down from here. The match will probably be about in Kansas City. That city will add \$2,000 to the purse and turn in at least \$1,000 more at the gate. There will wrill probably be shot in Kansas City. That city will add \$2,000 to the purse and turn in at least \$1,000 more at the gate. There will

faction of all concerned.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

NO CUP RACE THIS YEAR.

NO CUP RACE THIS YEAR.

A MEETING of the Royal Yacht Squadron was held on Tuesday. A at which it was decided that the club would not in any way quently that negociations for a mutual agreement are off. Lord Dunraven will probably bring the boat out, starting next month and arriving early in August, to race with the 70ft. class. Valkyrie has sailed in several races lately, but in such light and fluky weather that it is extremely difficult to form any opinion from them. One of the best of the English writers, Mr. Harry Horn, in a long letter to the New York World, indulges in the interesting but fulle amusement of "drawing a line" through Valkyrie, Thistle, Irex and Yarana, with the idea of gauging the former's performance with American boats. His opinion is that Valkyrie is a better boat in light weather and smooth water than Thistle, though like her, deficient in lateral resistance. Mr. Horn looks to the meeting of Valkyrie and Stranger at Liverpool this week to give a correct gauge between her and American boats, and says, "Probably Valkyrie will be found fully equal to giving Stranger upward of half an hour on a 40 mile course in a moderate breeze, and more than that in light winds." We can say, after seeing a good deal of sailing in this country between Stranger and her class, that if Valkyrie cannot give Stranger as Least an hour and a quatter over a 40 mile course in a moderate breeze, and even more in stronger winds, she had best stay at home, as Stranger would never have been in it with Titania or Katrina in the matches of last week. The Netled of June 15 deals out some bard facts in the following words:

"We believe a communication has been received by the Royal Yacht Squadron from the New York Y. C., announcing its Intention to adhere to the proviso that, in case of a race for the America Cup, the winning club, must adopt the 'counterfeit deed,'

s is no more than might have been expected, looking to the that the men who are responsible for the condemned 'new d' are practically these who govern the New York Y. C. at the sent time, and, as a sequence, have the management of the llenges for the America Cup. What amuses us in connection a this matter is the fact that when the much-paraded 'survivationor' earm forward in 1810, in the full possession of his alties, and interpreted the original deed that 'match' meant tagainst boot, he was laughed to scorn by the then managing mittee of the New York Y. C., and told they could only intert in a way which the other five donors might not have acted as their real meaning. And now we have a committee of club getting this complacent, but really shrewd 'surviving or' to alter the most precise and specific terms of the original in a manner which sets us wondering if the sense of fair-samong American sportsmen is not confined to a very small her.

s among American sportsmen is not confined to a very small this perhaps necessary to repeat that Englishmen regard this called now deed as infinical to sport, because it so handicaps challenging yacht that her chance of winning is a remote one; ondly, the chances are that in the impending races the Valrie will be defeated, and that the Cup will be confirmed in the session of the New York Y. C. forever. There might be no ection to this, except for the fact that there will always be n rash enough to challenge for the Cup, and by so doing give holders of it an opportunity of scenning an easy victory, and consequent boast of superiority. We contend that this is a an, unsportsmanlike and contemptible position for the holders the Cup to occupy. We should, indood, exceedingly regret, if Valkyrie were fortunate enough to win the Cup, that it osmo angland to be held under such terms as are stipulated for in the week of the content of gift."

HINDSIGHT VS. FORESIGHT.

THE warnings against too much power, too large sails and too great beam which we have preached to deaf ears for a very long time, are apt to be generally heeded before many more races are sailed this year. A look at Tomahawk and Maraquita, to say nothing of the moderately sparred Nymph at times, in the hate races, is euough to convince any one that our boats are grossly overdone in the matter of sail, without waiting for the additional evidence of Liris and Gerilla when they are in shape. We welcome the first convert to our views, the designer of the now Helen, Alice and Chrystal, and only wish for his sake that he had learned the lesson carlier, and in season to profit by it. In the Boston Herald of June 23 Mr. MeVey says:

"Commig to the forties, the lesson already learned is that all the American forties of this year are oversparred and have too much sailspread. They are simply overpowered, else why should fairly beamed boats, with deep draught for their length, and heavily weighted lead keels, careen and put rails under in a whole sail breeze? The boats with large beam, like the Maraquita, cannot carry their sail, and the Helen, with weights lower than on any other 40, is not able to stand up and carry her present canvas as she should, and her designer trankly admits it.

"As against our hard-bilged, wide-beamed hoats and lange sail plans is the Scotch eutits." Mare, a with practically no bilge, and very little have mot her, is stiffer, a dister than any of the forties, and here weight the large way that the Minerva was a stiffer boat than any of our forties, but tho fact is that she has a smaller sail plan — one just suited to her. Wero the spar and sail plan of the Maraquita, the len or Tomahawk put on the Minerva she would heel to an extreme angle, and would not be able to lug the big sail spreads of our boats. In comparing these forties 'science' gets a black eye, and the designer have simply been reaching in the dark.

"If science actually controlled, the mistake of overspurri

nuction, but it is not likely that either could be driven by Min-reva's sail plan.

After her victories over the crack Boston boats it is drawing it rather mildly to say that Kathleen "seems to be able to get along fairly well." The impression here is that she has about wiped up the 30t. class, even allowing a margin for the lack of local knowl-edge on the part of Saracen and Elf. Tom Boy, a later Burgess boat, certainly suffered nothing in this respect with Mr. Burgess and Capt. Pettick aboard, but she was very badly beaten.

A BAD WEEK FOR RULE O' THUMB.

A BAD WEEK FOR RULE O' THUMB.

A side result of the late races which has not attracted much attention in the midst of more important events is the defeat of Angeonda by Clara. After Clara and Cluderella made the 3t. class famous in 1884-7, Anaconda, modeled by Mr. Philip Blaworth in connection with Mr. John Prague, was built for the atter, to beat both the narrow entire and the wide compromise, the was of the old type made famous by Fanta, Crocodile, Gleam, clephant and Kangaroo, with beam, light draft, sloop rig and neide bellast. Her two meetings with Cinderella at Larchmont restill fresh in the memory, she being outsailed in light weather and giving up the race in a stiff blow, her opponent going over he course with Mr. C. S. Lee at the wheel, the last race he ever ailed. Anaconda and Clara have never neet until this season, in May 30. Clara beat Anaconda very neally then, but as no rizes were given and it was not a record race it did not attract nuch attention. Anaconda failed to show at the line in the Contribian race, but she was on hand on Friday in the Atlantic Y. C. and Clara was ready to meether. In a fair race of 16 knots to the cotland from Bay Ridge, Clara, narrow and deep, with 31 long ons of lead on keel, beat Anaconda, wide and shoal, with all halest inside, by 3min. sec. This was surely bad enough, but at the ame time the little Fire 40, Minerva, 13tt. shorter than Anaconda, eath her by 4min. clapsed time in the same distance. The two yere not timed at the Sandy Hook mark, but at the finish Clara, eather her by 4min. dapsed time in the same distance, the wide boat, the waterline lengths being the same, so Clara wins by over 7min. corrected time. An amusing instance of the circuit of the wide boat, the waterline lengths being the same, so Clara wins by over 7min. corrected time. An amusing instance of the circuit of the wine by the new Garduer clipper. The day after the first Seavanhaka race Kangaroo was halded on a passing boat, "Getting eath for to-morrow?" The answer came back quickly, "No, e

some over yestermay."

Some other mann.—The London Daily Telegraph of June 7 intains the following interesting item of news: "Among the useringers by the Germanic, which arrived at Queenst own from the York yesterday, was Mr. George Shepherd Page, commore of the New York Y. C. Mr. Page hopes to complete arrangents with Lord Dunraven connected with the race for the merica Cup." There are Iraditions of individual members of a New York Y. C. who have promoted themselves to the rank commodore in European botel registers before now, but the cover is probably a binnder on the part of the Telegraph. Mr. 2017, 2018, 2018. Commissioner from New Jersey to the Paris Exhibition. Comdotor Gerry still reigns supreme, and disclaims any knowledge Mr. Page and bis mission.

CAPSIZE ON LAKE MINNETONKA.—On June 21 a center-

CAPSIZE ON LAKE MINNETONKA.—On June 21 a center-board sloop capsized on Lake Minnetonka, near Minneapolis, and nearly drowned a party of four ladies, as well as their escorts all hands being in the water for an hour.

TITANIA-KATRINA, JUNE 21, 22,

about laif way in to the Hook and then setting an intermediate one. She and Grayling held very close crompany up to buny 5. At the buny Titania took in hor jibtopsail, but Katrina carried hor ballooner in to the finish. From the Lightship in the pair were about even. Titania finished ahead by 7m., the full times being.

Start. Finish. Elapsed. Corrected Titania. 11 15 00 521 45 404 45 401 45 Katrina. 11 15 00 521 45 404 45 401 45 Katrina. 11 15 00 521 45 404 45 401 45 Titania beats Katrina 6m. 59. after allowing her 18s. Off the wind the two had salled very evenly, but in the real test to windward, with the same wind and water, Titania had shown changed hardson the result, and Rabrina's conserver generally considered hopeless for the third and final race.

The last race was salled on Saturday, the weather being fair and warm, with a clear sky, a perfect day for a trip over the old New York Y. C. course, the sea being perfectly smooth. This time howover tho wind thad shifted, boug N.W., of moderated on deck all day, though they could easily have been carried. When the gun irred at i A. M. both yachts were in the Narrows, Titania standing across on starboard tack, with Katrina a little to the north on port tack. Katrina tacked to windward of Titania, but the latter puid off and came for the line, Itility up as she should be a shifted, both the control of the north on port tack. Katrina tacked to windward of Titania, but the latter puid off and came for the line, Itility up as she windward of the spinaler became for the line, Itility up as she windward of the spinaler became for the line, Itility up as she windward of the spinaler became for the line, Itility up as she windward of the spinaler became for the line, Itility up as she windward of the spinaler became for the line, Itility up as she windward, and the spinaler became for the line, Itility up as she windward, and the spinaler became for the line, Itility up as she windward, and the spinaler became for the line, Itility up as she windward, and the spinale

but Katrina ventured on three reofs and a No. 3 jib, which gave so little after sail that the helm was across the boat. Under this rig she lost steadly from the start, and was a long way astern when her boom wont in the attempt to shake out a recf, but fit would have been in every way more satisfactory to have seen bor fight it out over the course under the same canvas as Titania. The two are not likely to meet again until the New York Y. C. cruise in August.

THE second annual regatta of the Corinthian Y. C. of New York was sailed on June 19 over the courses and under the conditions published in the Forest and Streem of June 13, the principal changes from established practice being a one-gun start and the classification by corrected instead of waterline length, the measurement and allowance being by Seawanhaka rule. The entries were smaller than they should have been, most of the forties falling to start, while Clara had a sail over, her only rival, Anaconda, not turning up, though she had cut-red, and a special agreement to sail under ribbicaders had been made between her and Clara. The starters and their helmsmen were:

COMING RACES.

THE racing thus far this season has surpassed anything in the entire history of American yaciting, and further it promises to keep on without interruption until very late in the full. The programme of the Seawanhaka C. Y. C., given elsewhere, contains several races for 40-footers, probably one on July 3 from Oyster Bay across the Sound, finishing at Larchment. The Larchmont Y. C. holds its annual regata on July 4, with a special race for the forties on July 6, Mr. Bayard Thayer, owner of Pappoose, offering a \$250 cup for the two races, in addition to the regular prizes, the cup to be held by the boat winning it twice, and a match between Pappoose and Banshee is also proposed. The Gould cup of the Larchmont Y. C. is to be raced for in the 40tt. A cup has also been offered for the forties by the American Y. C., to be raced for off their club bouse at Milton Point on July 8. Both forties and thirties will be provided for in the city regatta of July-4 at Boston. On July 13 the Hovey cup, for forties, will be raced for off Marblehead, and on the 15th the annual regata of the Eastern Y. C. will be sailed there. The Weld cup, too, is in the hands of the Corinthian Y. C. of Marblehead, while the cup offered by Mr. Carroll, will be raced for on the S. C. Y. C. cruise, Altogether there is promised an amount of racing such as has never been seen here, and in the largest and best matched class ever built; and it will be very strange if the close observer is not able to come to a more definite conclusion as to the merits of the various types fban has ever been possible in the past.

SOUTHERN Y. C. BREWSTER CHALLENGE CUP.—The race for the Brewster challenge cup of the Southern Y. C. sailed on June 13, brought out but three starters, one of them, the Edith, losing her topmast early in the race. There was a strong wind at times, varied by calms, which lessed the interest in the race. The times were:

SEAWANHAKA C. Y. C. CRUISE.

FLAGSHIP SEA FOX. S. C. Y. C., NEW YORK HARBOR, June 17, 1889.

General Orders No. 1.

SEW YORK HARBOR, July 1.

THE vessels of the fleet will rendezvous in Oyster Bay harbor for the squadron cruise on Monday, July 1.

Captains will report on board the flagship at 9 colock P. M.

The squadron while there will be the guests of the Oyster Bay

The squadron while there will be the guests of the Oyster Bay Y. C. offers a cnp of the value of \$200, to be raced for by yachts in the 40tt class over a \$2-nile course in Long island Sound, open to yachts of this class belonging to any club. To be raced for on Monday, July 1, starting at 110-clock A. M. Entries should be made to Mr. Francis T. Underhill, chairman of the recartat committee, Oyster Bay, L. 1.

On Tuesday, July 2, at 12 o'clock, a breakfast and lawn party in honor of the club will be given by Fleet Surgeon and Mrs. J. West Roosevelt, at their country seat, Waldeck.

The same evening the captains of the squadron and their guests are invited to a ball given by Captain and Mrs. Francis T. Underhill, at their country seat, ontare, while at Oyster Bay, mail matter, telegrams, etc., addressed care of Con. John A. Weeks, Jr., Oyster Bay, L. 1., will be delivered to the vessels of the squadron.

Trains leave Long Island City for Oyster Bay direct, via Locust Valley.

on the invitation of the Larchmont Y. C., which extends the hospitalities of the club house and anchorage during the stay of the squadron.

On the morning of the 5th the squadron will proceed to the eastward, making such ports of call as the captains may decide, and the vessels of the squadron which intend to continue the cruise around the cape will take their departure from Vineyard Haven for Marolehead in accordance with the invitation of the Eastern Y. C., already accepted, to visit their harbor and to take part in their regatate on Monday, July 15. The Eastern Y. C., besides their regular prizes, offers a special prize for yachts in the 50ft. class provided they are represented in the squadron of the S. C. Y. C. Commodore Henry S. Hovey, of the Eastern Y. C., offers a special prize, of the value of \$200, to be raced for by the 40ft, class, on Saturday, July 13.

Mrs. A. Cass Canfield has presented the club with cups of the value of \$500 to be sailed for at Marblehead. The conditions coverning these cups will be published in a subsequent order.

Captain Royal Phelps Carroll, or the Gorilla, offers a prize to be raced for. by the 40ft, class, at Bar Harbor. Value of prize, \$200 if five start, \$150 if three start.

A member of the club offers first and second prizes in money to the sailing masters of the yachts declared to be in the best order by judges to be appointed by the commodore, the details governing in the captains.

The captains and swimming races for members of the exests of the squadron, and swimming races for members of the exests of the squadron and swimming races for members of the creation of captains is called to the routine and signal code, changes in each of which have been made since last season.

Captain and sailing races by the boats belonging to the vessels of the squadron and swimming races for members of the crews of the squadron and swimming races for members of the crews of the squadron and swimming races for members of the crews.

The captains is called to the routine and signal cod

The postponed race of the Atlantic Y. C. was sailed on June 21.

The postponed race of the Atlantic Y. C. was sailed on June 21.

The postponed race of the Atlantic Y. C. was sailed on June 21.

The postponed race of the Atlantic Y. C. was sailed on June 21.

The postponed race of the Atlantic Y. C. was sailed on Analysis of the Banshes being called away by usiness. In order to make a race in the 40ft, class the judges steamed over to Staten Island and invited an entry from Minerva, she going in with a hastily made up crew and under charge of her mate, Capt. Barr being ashore. Wona has been fitted with a long topmast, so that she can sail under Atlantic Y. C. rules, with working topsail, and ste started. Kathleen did not enter, some changes and repairs being needed before she starts on a cruise. The courses were the same as in the previous race, from the club house to the finish off Buoy 15, the classes above VI. going around Sandy Hook, class VI. and VII. around the Scotland, and the smaller boats around a markboat off Buoy 8.

The start was made at 11:25, the wind being southeast and the tide nearly up, the yachts being timed:

Cavalier 11:27:12 Nymph. 11:34:14

Athlon 11:28:38 Beatrice 11:34:24

Athlon 11:28:39 Beatrice 11:34:59

Hidegarde 11:39:49 Hidegarde 11:39:49

Hidegarde 11:39:49 Hidegarde 11:39:49

Hidegarde was handicapped 29 seconds and Mouette 4.52, Clara led Anaconda over the line, the latter trying to blanket her but failing. In the Narrows Clara tacked across Anaconda's bow, and the latter was left for the rest of the day. The beat down to the Scotland was devoid of any special interest owing to the number of walkovers and the graal lad of Clara and M

DETROIT V.C.—This club was unlucky in the choice of weather for the first pennant race, as there was no wind on May 30, nor again on June 17, to which date the race was postponed. The second attempt proving a failure another trial was set for Monday of this week.

COLUMBIA Y. C. REGATTA, JUNE 18.—The twenty-second anusal regatta of the Columbia Y. C. was sailed on the Hudson River, in a strong northeast blow, resulting in several minor casualties in addition to the loss of a man from one of the yachts. The course for classes A to F was from the club house, off Eighty-sixth street, New York, around a markboat off the house of the new Corinthian Y. C., at Yonkers; class G sailing around a markboat off Fort Lee. Eighteen yachts were entered and at 11:22 the start was made, the first half of the race being a hard beat up river. When rounding the mark at Yonkers one of the crew of the Henry Gray, in class D, cabin cats, was washed overboard and drowned before help could reach him, though several yachts came to his rescue and a boat was lowered from the guests' steamer, Cygnus. The lost man was Mr. Henry Renout, of Brooklyn, a druggist, a fair swimmer but not a yachtsman. It is stated that he came to the club house to sail with Mr. F. Everett, on the Gertrude, but as she was not on hand he went with Geo. C. Everett, in the Henry Gray. At the turn he was lying to windward, but as the boat heeled after jibing he slid off to leeward, and being weighted down with a heavy waterproof coat and wet clothing was unable to support himself long. The tiller of the Gray twisted off at the jibe, so that she could not put about and pick him up. Lines were thrown from the Gray and another boat, but missed him. The Gray continued home but didnoteroes the finish line, her antagonist, Brunhilde, having a walkover. The full times were:

DORCHESTER Y. C. ANNUAL REGATTA. JUNE 17.—
Though the entries in the annual open regatta of the Dorcheste
Y. C. were this year hardly up to the mark in point of numbers
the race promised to be interesting owing to the presence of a
class of large schooners, including Troubadour, Alert, Chone an
the new Merlin, and also from the debut of the new Burgess c.b
forty Verena, and the two Mc Vey forties Alice and Helen, agains
the famous old Ellsworth flyer Fanita. Calms and fog, however
intertered to keep some of the yachts away, and to make the racless exciting than it should have been. The courses were, to
special class, from starting line, leaving Graves whistling buoy or
starboard, Harding's Ledge bell buoy (boat) on starboard, Grave
Whistler on port, to and across starting line, expering buoy, one-half mile northeast of Winthrop Bar bno,
on port, Graves Whistling buoy on port, to and across starting
line, twenty miles; for fourth and fifth classes, from starting
point, leaving Barrel buoy, one-half mile northeast of Winthrop Bar bno,
are been started at 1:30 in a light N.W. wind. After a long chas
Verena, Mr. J. A. Beebe's new 40-footer caught and passed Fanita
Sft. longer on l.w.l. The two MeVey boats made a poor showing
being unable to stand up under their enormous rigs, Alice givin
np, while Helcn, steered by her owner, held on and finished th
race. Troubadour led Alert for a time, but the latter beat he
aduly when the windward work began. Magic dropped out an
threatening to bring trouble to some of the 30ft, class when sh
comes alongside of them later on. The times were:

QUAKER CITY Y. C. ANNUAL REGATTA, JUNE 22.—The
14th annual regatta of the Quaker City Y. C. was sailed on June
22 over a 31-knot course on the Delaware River, with calms during
the early part and strong breezes later, some of the boats losing
their topmasts. The main interest was centered in the initial race
of the new Burgess boat Nanon, the old Venitzia finally beating
her. The start was made at 10 A. M. with a light S.W. wind and
an ebb tide, but a squall came in shortly after the facet was well
under way, followed by a flat calm for a time, after which the
wind freshened considerably. Nanon led on the way down, truning the lower mark, off Chester, with a lead of over 3m. Going
home free the Venitzia caught and passed her, leading by 1½m.
at the line. The times were:

LAUNCHES.—The new Morgan schooner Constellation was successfully launched at Piepgrase's yard, City Island, on June 20, being christened by Mrs. Morgan...The steam yacht Nashawena, built by Lawley for Mr. F. P. Boggs, from Mr. Burgess's designs, was launched at South Boston on June 22, and Lotawana, Mr. Poster's new Burgess 40, was launched at the same place on June 24 ...Mr. David M. Little's steam launch. Ellida was launched at Salem ou June 20 ...Osawa, Mr. Hidreth's, 167, cutter for the Pleon Y. C., was launched at Williams's yard on June 22, and Borden launched a new boat, 15x6ft, 3in, for Mr. J. P. Bullard on the same day... The McVey boats, Alice, 40, and Chrystal, 30, have been tried, the former, like her sister Helen, proving over-sparred, so her rig will be reduced; Chrystal has had some lead shifted from the after to the fore end of the keel.... Lawley is at work on a 2fft, cutter, and a 30ft, compromise of the Nymph type.

BEVERLY Y. C.—The 14ist, regatta, first championship, was sailed at Marblehead, June 22. The number of entries was small owing to the calm and dense fog which prevailed during the morning, but the boats that started had a very exciting race. An bour or so before the start the fog cleared off and a brisk westerly wind set in, which by 2 P. M. was blowing in hard puffs and increasing every minnte. Owing to the absence of Saracen and Elf, only Beetle started in first class, carrying working topsail. In the second class the flagsbip Swordish led off swinging a club topsail followed by Wraith under lower sails only. These classes bad a reach to S.E. Pig Breaker, a run to Half Way Rock and a beat home, 10 nantical miles. They had all the wind they wanted, Wraith withdrawing, and the other two coming home with honsed topmast, Swordish being single-reefed, and beating the larger boat 10s. actual time. Third and fourth classes had a run to Bowditch's Ledge, a dead beat to Curtis Point and a reach home 7½ miles. The new cat Kiowa recently built by Dunn of Monument Reach, sailed ber first race north of the Cape, her performance being watched with much interest. The well-known Wraith led off in third class, with Klowa 5s. astern, Holden just behind the latter and Pixy a Jength or two in the rear. Dolphim and Psych, as insual were fighting it out in fourth class, the latter having a new and larger sail. Kiowa and Hoiden both passed Wraith, the former steadily spinning out a lead especially in the puffs, Psyche passing Dolphin and getting a small lead. The minute they hauled on the wind they met altitle chop sea, and Kiowa at once began, to run away from the others, badly outwinding them at the same time. As they got into smoother water under the shore, the others did better with her, though she continued to leave them steadily, carrying her sail well while all the rest had more wind to an they wanted. Wraith canght and passed Holden, Dolphin did the same to Psyche, who was overpowered, looking as it she would capsize, Kiowa

Three, Geo. Flick first, Myrtle second; Class Four, Oakey first,
J. J. Cooney second. Regatta Committee: Julius Hoffman, exCom. Harry D. Basler, Jos. Stephens, F. Maxwell. Judges: M.
Kraft. Sam Duckett, Thos. Troutt. The R. S. Patterson and
Geo. Flick, third class yachts, are matched to sail on July 1 for
\$400. There will be great interest taken in the race, as the Flick,
a Kensington yacht, bas Pecn overhauled and has new rigging.

While this is the third season for the Patterson, she has sailed
some close races with the Flick, but never been beaten.

AMERICAN Y. C. OF NEWBURYPORT.—The American Y.C.

sailed its first championship regatts of the season on June 17 in a
light north wind. Course No. 1 was sailed from the club house
at McKay's wharf to a stakeboat 2½ miles off the bar and return.

ARAB AND GUIDE.—Ouly two yachts started in the Saturday race of the Atlantic Y. C. on June 22, which was sailed in a moderate N.W. wind over an 8 mile course from Bay Ridge around Buoy 15. Arab, Mr. Edward Fish, had lower sails and housed topmast, but Guide, Mr. Benj. Aborn, Jr., carried a single reef. Guide is a new boat, and has just been out at Wintringham's yard to have ber inside iron replaced by the same weight of lead (2 tons) added to that already on her keel. Arab carries all her lead on the keel. The course was a reach out and back, Arab winning easily. The times were:

THE ATLANTIC DIVISION MEET.

THE ATLANTIC DIVISION MEET.

A FTER a thorough search for a suitable camp site the committee the ave settled on Chresequake Greek as the only practicable location within convenient distance of Philadelphia and New York, and the Division meet will be held there, beginning on July 13 and continuing for one week. The camp is two miles from Perth Amboy across Karitan Bay, and one mile from South Amboy, the Long Branch R. R., used in common by the Pennsylvania R. R. and the New Jersey Central, passing just in the rear of the camp. Morgan's station is one quarter mile from the camp. Arrangements will be made will grocers and marketmen from Amboy to call at the camp every day. The camp ground will be on a hillside in a cedar grove, beneath which is a very fine beach of yellow sand. The conress will be laid ont in full view of the bluff. Perth Amboy may be reached by steamer from New York, or by rail from any point. A circular giving full particulars of the camp and races will be sent out this week.

NEW YORK C. C.

NEW YORK C. C.

THE annual spring regatta of the New York C. C. was beld off
the club house at Tompkinsville, Staten Island on June 22,
the races being sailed in a strong northwest wind. The first race,
unlimited salving, had the following entries: Atom, C. B. Vaux;
Vagabond, C. J. Stevens; Random, H. O. Bailey; Vitesso, James
Guiler, Mayflower, J. R. Plummer; Sea Urchin, B. H. Nadal;
Naney, Dr. B. F. Curtis, and Outing, A. M. Johnson, of the N. Y.
C. C.; Nipsic, C. V. Schuyler, of the Arlington C. C.; and Nadiy,
W. S. Elliott, of the Crescents of Brooklyn.
The course was a triangle of 3 miles on the Bay, two rounds to
esailed. Atom, Random and Vagabond were the leading boats,
several others capsizing or giving up. After satling one round
the contestants concluded that they had had enough, and delined a second, as there was a strong wind and heavy sea for
same raches.

ined a second, as there was a strong wind and heavy sea for ined a second, as there was a strong wind and heavy sea for ined a second, as there was a strong wind and heavy sea for ine racing. The next race, for limited sail and ballast, was sailed over a lorter course nearer shore. The entries were: Eclipse, R. W. lake, Brooklyn C. C.; Vagabond, C. J. Stevens; Atom, C. B. aux; Gun, H. D. Ward; Vitesse, James Guller, Nancy, Dr. B. F. artis; Alpha, E. Masten, of Yonkers; Mayflower, J. R. Plummer; a Urchin, B. F. Nadal; Outing. Mr. Johnson. Atom made an ror at a turn and lost some time. Eclipse led and finally won, the Vagabond second. The finish was timed: chpse. 44 40 0 Vagabond 44 45 to the sea of the sea

ared on.

C. J. Stevens and H. O. Bailey were the only contestants for the tub prize for the best rigged sails, but the judges were unable to seide between them.

rd.
The Commodore's prize for sail rigging, consisting of two handme silver match boxes properly inscribed, made to order by the
orham Company, were awarded to Chas. J. Stovens and H. G.
alley. Their work was so evenly excellent that the committee
ould not decide which was the superior workmanship.

THE A. C. A. YEAR BOOK.

THE A. C. A. YEAR BOOK.

WE have received from the publishers, the Nautical Publishing Co., of New York, a copy of the new A. C. A. Year Book for 1889, a neatly printed pamphlet of nearly a hundred pages, uniform in size with that of last year.

The A. C. A. Year Book, prior to 1888, was a small pamphlet containing the officers' and members' names, the constitution and by-laws, and a report of the regatta committee only. It was issued at a cost of \$150, and issued free to everymember Secretary Mix last year issued a very handsome book, illustrated, containing much more matter than any former book, including a large colored map of Lake George. This book cost the A. C. A. Ics that nose issued previously. The book cost nearly \$500, and the advertising account helped greatly to give the Association a fine book for Ittle money. Secretary Mix was assisted in the work by Mr. Vaux, who superintended the printing and make up. At the executive committee meeting last November two bids were received on the book for 1889, both offering to supply the work free to members. The contract was awarded to Mr. Dobbin, of the Peterboro Review. In February Mr. Dobbin requested the other bidder, the Nautical Publishing Co., to take the book off his hands. He found he could not make the advertising pay the cest of the work. The Substantial Pub. Co. agreed to do tbis, though three months less time was given them to work up the business. The book has just been issued by them. The secretary, Mr. Hatton, and the Division Pursers have furnished the official matter, and Mr. Vaux, for the Nautical Publishing Company, has edited the book, arranged the matter and attended to the entire make-up. Though the contract only called for a book containing substantially the same matter as that of 1889, the publishers have given much more. The general and Division tensury reports appear for the first time. The regatta committee report is much uller than ever before. The membership list is arranged in Divisions, also for the first time. The membership lis

CORINTHIAN MOSQUITO FLEET.—The invitation for a special canor race under the auspices of the Corinthian Mosquito Fleet having been accepted, notice is hereby given that the race cetween six especially noted canoeists will take place on June 20, off Larebmont. The start will be made at as nearly 10 o'clock as ossible, and the ceurse will be a triangular one and so marked that the race can be watehed by spectators from the shore at Larebmont.—Theodore Ledyard, See'y.

EASTERN DIVISION MEET.

THE meet of the Eastern Division was held last weck at Calla Shasta Grove, near Springfield, the wet weather and lack of wind interfering much with its success. The officers elected for 1890 were: Vice-Com., Dr. J. A. Gage, of Lowell, Mass.; Rear-Com., A. S. Putham, of Worcester, Purser, Ralph Brazer, of Lowell; Executive Committee, E. C. Knappe, of Springfield. The paddling races resulted as follows:

First event—Classes A and B, decked, ½ mile straightaway:
First, W. R. Heald, of Worcester, 4min.; second, A. S. Putham, of Worcester, 4min. 2sec.

Second event—Class 1, any canoe, ½ mile straightaway: First, A. S. Putham, 4min.; second, Emil C. Knappe, of Springfield, 4min, 8sec.

A. S. Putnam, 4min.; second, Emil C. Ixnappe, or spring land, 4min. Ssec. 4min. Ssec. 4min. Ssec. 5min. Ssec. 5min

inve seconds ahead of the whim and winning the race.

PEQUOT CANOE ASSOCIATION.—New Haven, June 24.—The Pequot Canoe Association has hired, for their annual meet in August, Roger's Island, one of the famous group of Thimble Islands, Stony Creek. Roger's Island contains 12 acres of ground, well adapted to the pitching of tents, and on the south side stands a large house and a storage building which can be used for sleeping accommodations, etc. The island has a good well of water, and good landing piace on the north side toward Flying Point. This island will be the headquarters of this association from July 1 to Oct. 1, and during that period is open to all canoe-ists cruising along the sound. The association will gladly well-come such canoelists as may find their way to the Thimbles, and can promise them a good place to pitch their tents, a beautiful the island every morning and night to take passengers or bring out supplies. Roger's Island this between Governor's Island and Pine Orchard, mann shore, and will be easily found by any cruiser. The annual meet is from July 31 to Aug: 10.—F. P. Lewis.

BROOKLYN C. C.—The regatta of the Brooklyn C. C. post-

The annual meet is from July 3l to Ang. 10.—F, P. Lewis,

BROOKLYN C. C.—The regatta of the Brooklyn C. C. postponed from June 15 will be held on Sept. 7. Programme: 1. Unlimited satling for seators and juniors, 2. Club race (sailing),
three canoes from same elib to constitute a team. 3. Combined,
three miles, start paddling, finish sailing, 4. Unclassified small
boats, sneakboxes, cruisers, dinckers, skifts, etc. The Brooklyn
tandem paddling race on June 15 was called during a heavy rain
squall with three teams at the starting line of a mile and half
course. Messrs, Quick and Simpson, Yonkers C. C., took the lead
at the start and held it to the finish, closely pressed by Messrs,
Reevs and Masten of the same club. The pace was too hot for
Messrs, Collins Bros of the N. J. R. & A. C., who were left nearly
100yds, astern. The sailing races were postponed because there
was not wind enough to stem the tide.

A. C. A. PRIZE FLAGS.—It is desired that all A. C. A. mem-

V. B. M., Raleigh, N. C.—We cannot direct you to a correspon-ont on the rific question. There have been numerous articles in ir pages on the subject. As a matter of fact, you will find any see of the several makes accurate shooters, if held right.

D. T. G. Binghamton, N. Y.—Yes, you will find muscalong fishing at Rouse's Point, in Lake Champlain; and they may be trolled for with stout tackle, specially provided for this fish at the tackle stores. The colored plates may be had of Messrs. Abboy & Imbrie, No. 18 Vesey street, New York, at a cost o \$1 each.

J. C. H., Rahway, N. J.—The bird called partridge in the North east, and pheasant in the South and some parts of the West, is the ruffled grouse (Bonasa umbelles). There is no pheasant indigenous to the U. S. The American partridges (Odonto phorthus), repre-sented in Enstern United States by our Bob White, is a large group, mainly Southern and Southwestern.

group, mainly Southern and Southwestern.

J. R. T., Norwich, Conn.—Last July I visited a small lake in a neighboring State that is well stocked with black bass, but had rather poor luck, as they would seldom take bait of any kind. Next month i propose to try them again with flies. Some fifteen years ago the outlet of the lake was raised and a large swamp was overflowed and now the water is discolored with the swamp water so the bottom cannot be seen where the water is more than six or eight feet deep. What flies shall I use? Ans. Use gray, brown and black hackles; also scarlet ibis. Live minnows or No. 4 spoon for trolling. Fresh-water shiners and small sunfish have also been used with good success. Keep boat about 40ft. from shore and cast in under overhanging bushes.

All who read with delight Mr. Robinson's capital book "Uncle Lisha's Shop," will be glad to renew acquaintance with many of the Green Mountain folks who used to assemble there of an evening and exchange gossip and tobacco. Sam Lovel, the born hunter and fisherman, plays a leading part in this continuation, Uncle Lisha having pulled up stakes and gone out West, where it seems he finds himself less contented than he and his friends had hoped. In his campings on Lake Champiain and elsewhere, Sam has for a companion the French-Canadian Antoine, whose capacity for shooting with the long bow was so frequently displayed in "Uncle Lisha's Shop." The two friends, however, get along very well together, and Mr. Robinson finds plenty of opportunity for charming bits of description of nature and natural phenomena, while his sportsmanlike enthusiasm puts life and interest, as well as versimilitude into all his accounts of hunting and fishing. It must be confessed that the dialect is often tough, that of Antoine being particularly hard to follow, and it is not always an offset to this difficulty to reflect that the reproduction is singularly faithful. Indeed, as regards much even of the old Vermont dialects, many readers may not only rejoice that its more prononneed kinds are extinct, but may wickedly wish that they had perished from the earth before Mr. Robinson got an opportunity to learn or to perpetuate them. Of course such ideas are not scientific or worthy of serious lovers of their own language, but they are at best human in their weakness, and they are to some extent supported by the consideration that what is written for ampsement ought to be principally amusing. We mention these objections only because they are sure to be made by some unreasonable people. The fact remains that Mr. Robinson has written a series of very interesting; clever and even valuable sketches which take the reader back to the great period before the beginning of the reinforded era, and into a village life which can no longer be studied, because

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkall, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by peris manufactured from the first stage to the last by per-fect mechanical processes, no chemical being used in its preparation. By one of the most ingenious of these mechanical processes the greatest de-gree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

ractically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a clossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—Troy Press.

The book should find its way to a choice place in every sportsman's library.—Chicago Inter-Oceam.

Geem.

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * It is more value to me to have a description of a bird in plain English which I do not understand.—W., in Journal of Commerce. ANSWERS TO CORRESPONDENTS.

LAKE GEORGE ISLAND CAMPS.

THE curious condition of affairs on certain of the Lake George islands was related in these columns some months ago. Years ago the Board of Land Commissioners appointed individuals as "custodians" of these islands, which were owned by the State of New York; and the "custodians," taking it for granted that they had what amounted to a lease in perpetuity, erected costly dwellings, laid out the grounds in elegant style, and established themselves as sole occupants of the public After the Forest Commissioners came existence the validity of the exclusive rights enjoyed by these island "custodians" was questioned, and the At-torney-General rendered an opinion, in which he set forth that the Board of Land Commissioners had had no authority to make the appointments, and the "custo-dians," therefore, had no special right to exclusive occupancy of the islands. The Forest Commissioners subsequently sought from the Legislature authority to lease the islands, thus to extricate the islanders from their predicament; but in this they failed.

It is now reported that the Commission has taken summary measures to open the islands to the public. They
ring signs bearing the legend "STATE LANDS,"
to be posted on the Lake George islands owned to be posted on the Lake George islands owned by the ate; and these signboards are to be taken as so many nuclees to the public that the islands are free to camping parties. It is intended and expected that the public will respond and plant itself down in a host of a thousand or more for summer sojourns on the inviting camp sites. When it comes to pitching his tent in the shade

of the elegant villa of one of the "custodians," a person of delicacy may be deterred by a twinge of squeamishness, but no doubt there are scores and hundreds of people who hold to the opinion that the Lake George island "custodians" have had altogether too much of a good thing in the past and are deserving of no special consideration now that their term of high-toned exclusive squatting on public possessions has summarily come to an end. It is harsh, certainly, that these people who have made their homes on the islands should be intruded upon in this unpleasant fashion; but the State as surely owes it to its citizens that the public domain shall be preserved for public use. The "custodians" can afford to purchase dwelling sites elsewhere; the desirable camping ground owned by the State is all too restricted now, and the public interest imperatively demands that not a foot of it be surrendered, neither in Lake George nor in the Adirondacks. =

HE HAS GAME GALORE.

THERE came into this office the other day a reader of the Forest and Stream with a letter, which he had received from a friend in North Carolina. He brought it in because it contained a natural history note which it was thought might be of interest. And so it was; but there was that in the letter which was decidedly more interesting and significant than the note of natureso significant that it deserves a place here. The letter

—, NORTH CAROLINA, June 22, 1889.—Friend Doc: I will drop you a few lines as I have been thinking about you so often. First of all I will tell you about the crops. We are all done harvesting; the wheat is the best I ever saw, I think, in this country. I think I will have 250 bushels when threshed. We will start our thresher next week. Corn doesn't look so well; can't be a full crop made. There is plenty of fruit, some peaches ripe now.

Reading between the lines, we have here abundant evidence that one shooting man has found the solution of that vexing question so many are asking themselves, Where can I find a week or two of good shooting?

This New York physician has hit on the true and felicitous way of providing a game preserve for himself and has done it by no extraordinary measures, nor by any devices which are out of the reach of thousands of others. He has made friends of those among whom he gone on shooting excursions; and this friendship is proving the happiest possible sort of game protective machinery. The friendship was won by the little courtesies which go to make up the amenities of life the world over. When the New York sportsman went shooting among the North Carolina farmers he made for himself a place in their hearts. While with them he showed an interest in the concerns of their daily life; on his return to the city he sent them newspapers, perhaps a package of tea by mail, or did some shopping favor in New York stores; and in one way and another, by acts slight and trivial in themselves but potent because of the spirit they manifested, he retained the regard and interest of his

On their part, too much cannot be done for him to protect the birds. On several adjoining farms he has virtually the exclusive shooting privileges. The nesting and hatching of the birds are now noted with eager interest by those who in former years paid no heed, unless it were to speculate on the forthcoming supply for their partridge nets. One of these farmers even went so far

as to invite the doctor up to his farm to take some shots at a big bunch of quail he had been baiting for weeks preparatory to scooping them by wholesale into his net.

Thus at the simple cost of making himself agreeable, not a heavy addition to his other expenses while there, this New York physician has provided himself with a shooting preserve which promises to afford him the highest sport for many seasons to come. This shows, in the parlance of the day, the wisdom of "making onesel solid" with the farmers.

It need not be added that this friendship gives increased. zest and pleasure to the city man's country excursions. It is one thing, when you reach your journey's end, to find a host all smiling and glad to see you for what profit he can make out of you while you stay, and quite another thing to feel that the hearty grasp of the hand has in it something of real pleasure at seeing once more the face of a friend. In looking over the shooting trips of the years that are past, do we not dwell with peculiar pleasure on those which have in them this element of friendly greeting and good will on the part of host, or boatman or guide?

THE PENOBSCOT SALMON FISHERMEN.

L AST winter when the subject of making a weekly close time for Penobscot River salmon netters was discussed in the Maine Legislature, a Belfast newspaper described it as a conflict of interests between hard-working fishermen and eigar-smoking, whisky-drinking ang-If the Belfast journalist reflected public sentiment ou fishing affairs in his State, it would be foolish for the sensible friends of fish protection to exert themselves in behalf of the salmon. But perhaps the editor displayed only his own personal bigotry and ignorance, and his misunderstanding of the merits of the question and of the character of salmon anglers.

The communication from a Bangor correspondent, telling of the salmon fishing there this season, is suggestive; and it brings up again the question of a weekly close seaand it brings up again the question of a weekly close season for the nets. The salmon fishing of the Penobscot is a restored industry. There was nothing of it, nobody made a rap at it, there were no salmon to net, until the State, through its Fish Commissioners, stocked the river a few years ago. The salmon run of to-day is entirely the product of the Commissioners' work. That work was done at public expense; it was not in any sense the result of private enterprise. The rewards, however, are being reaped by a class so limited in number as to partake of an exclusive and individual character.

The net fishermen of the Penobscot have made this season, one weir man over \$2,000 profit, others over \$1,200 each, and others less sums. These men have thus had created for them by expenditure out of the public treasury a paying industry. The State furnished the capital to supply the "raw material" for setting them up in business. As beneficiaries of the State these men ought surely to be ready to do their part to make the benefit permanent. If reason demands that for fortyeight hours in the week the gravid fish be allowed free passage up stream to their spawning grounds, the very least the fishermen can do is to give over for those fortyeight hours their netting. The netters, of all people in the whole State, ought to be first and most eager in providing for such a necessary close period.

More than this. As the net fishermen are the ones who draw from the salmon industry their thousands of dollars yearly, from them should come the funds required for artificial salmon culture to keep good the The netters ought, out of the proceeds of their industry, to contribute whatever is needed for the continued restocking of the Penobscot. They ought to have enough gratitude to do this voluntarily, cheerfully, gen-

But they never will. Instead, they will net day and night, week in and week out. And whenever intelligent, public-spirited, economic measures are broached for compelling them to adopt more provident ways, these men, who are stuffing their pockets with the proceeds of Maine's salmon culture at State expense, will raise a howl about the unreasonable demands of rod fishermen and privileged classes. And what else could be expected from them, when Maine journalists, who set themselves up as finger-posts to point out the way the public should follow, display their own want of intelli-gence by bespattering salmon anglers as whisky-drinking

HUCKLEBERRY RUN.

IN the good old days Huckleberry Run was one of the most attractive bits of ground that it ever fell to my lot to discover. Nearly a half century has passed since I first saw it. I had been having a glorious run with the hounds and had kept pretty well up with them, but rey nard had found it too hot for him and had taken a course that had led straight away, and I was completely thrown Gaining the top of a hill, I listened to the glorious music of the eager dogs until they were nearly out of hearing, when I discovered that they were bearing to the right, and I started down the slope to head them off. Coming to a large patch of alders at the bead of quite a valley, I saw within their depths the welcome sparkle of water. My long tramp through the snow had made me thirsty, and I was soon at full length beside one of the loveliest springs that I ever beheld. The basin was about the size and depth of a large washtub, with a mossy rim, from which the snow had melted. The bottom was of pure white sand, through which the sparkling waters bubbled in mimic fountains, filling the basin and overflowing, forming a goodly stream that meandered in eccentric curves and abrupt turns through the valley below. Already half in love with the spot, I turned back above the spring and took a long look at the beautiful valley, beautiful even in its mantle of snow and with its wealth of trees and shrubbery stripped of their glory by the chill blasts of winter; beautiful in its harmony of outline, with its wooded slopes and gracefully curved knolls, around which the little brook, with its fringe of spreading alders and drooping willows, wound in loving embrace, ever trilling a gladsome song that even its icy fetters could not hush.

So fascinated was I with the loveliness and quiet beauty of the peaceful valley that the heretofore all-absorbing interest in the excitement of the chase was completely driven from my thoughts. Wandering down the glade in a half dreamy state, picturing to myself the glories that would come in spring time to crown with regal splendors this very queen of happy valleys, I was suddenly brought back to earth by the tumultuous roar of quick beating pinions as a covey of grouse rose at my feet and sought refuge in a coppice of white-armed birches that covered a gentle slope on the opposite side of the run. This was in the callow days when the possession of a gun was but a dream. Yet the sound of the whirring wings was as sweetest music to my ear, striking a chord that through all the years has never ceased to vibrate with a tuneful harmony that the cares and strife of a busy world have never stilled.

When next I saw the charming spot the grass was green on the beautiful slopes, the early flowers were blooming everywhere, and the melody of countless song sters filled the air with a harmony that lute and lyre and sounding brass can never hope to rival. Sauntering through the wooded aisles or stretched at length in the bright sunshine, ever greedily drinking in the beauties of the lovely valley, the partial enchantment that stole upon me on that bright winter day when first I gazed upon the scene was now complete and I was the willing captive and ardent worshipper of the woodland spirit that ruled so fair a realm. My boyish love strengthened with the years, and very many of the happiest hours of my life were passed in the beautiful spot I had learned to love so well. Often would I with pliant rod steal along the banks of the sparkling brook and entice from its many inviting pools the gamy trout, and when the crisp October days were come what glorious sport it was to roam with dog and gun through this very home of the shy woodcock and lordly grouse! What days of delight were those! What treasures were then laid up in memory's storehouse to cheer and brighten lonely hours. when health and worldly things all went wrong.

Much I owe to the memory of the dearly-loved spot. Alas! the beauties of the once lovely valley are now but a memory. The dainty woodland sprite that once presided over the fairy realm has sorrowfully taken her departure and the spirit of "improvement" now reigns supreme; cold and darksome granite walls imprison the once free-flowing spring, and its bright waters are forced to crawl through the confines of a narrow tube. willows and spreading alders that graced the banks of the sparkling brook have given place to a rank growth of grass, while the brook itself is but a straight and narrow ditch of mud and slime. Unsightly, half-decayed stumps are all that remain of the magnificent forest, waving corn disfigures the gentle slope where stood the white-armed birches, and sordid potatoes flaunt their ugly leaves over the grave of the sweet-scented flowers. whistle of the woodcock and the love call of the grouse will be heard in their once happy home nevermore. The wondrous picture of nature's fair handwork has been disfigured beyond recognition; the beauties of the fondly remembered spot have been rutblessly blotted out, and my heart is filled with sorrow as for the loss of a dearly loved one.

Alas! that my eyes should have beheld the ruin wrought to embitter the fondly cherished memory of the beautiful valley with the knowledge of its utter desolation.

THE FUR FISHERIES OF THE NORTH-WEST SEAS.

[By a Staff Correspondent.] VI.-SEA OTTER HUNTING.

NOTHER Rur-braing m munifound in these waters is and the sea other, whose pelt is even more beautiful and more valuable than that of the fur seal. Except in its marine life the inbits of this animal in no respect resemble more valuable than that of the fur seal. Except in its marine life the inbits of this animal in no respect resemble with the property of the property. The thome of the sea otter is in the North Pacific Ocean. The American coast it is found as far south as Lower California, while on the Asiatic side its range extends count to beyond Japan. Its center of abundance, however, is along the coasts of British Columbia and Alaska, the predict of the control of the state of the sea ofter's fur has led to its constant pursuit, and though formerly it was abundant, it is now extremely rare. Good skins bring from one to five hundred dollars seach, and it is not strange that the sea otter is being rapidly externiated.

The control of the last contary the sea otter's fur has led to its constant pursuit, and though formerly it was a control of the Land of St. Paul two Russian sailors killed there no less than 5,000 of these animals. Barranov, in 18/0, took to the Ohlotsis from Alaska 13,000 skins, which we may assume to have been the catchi for the year of the Russian-American the control of the property of the control of the sea otter by wholesale had albert of the control of the sea otter by wholesale had albert of the control of the sea otter was renowed more vigorously than over.

The Indiana were accustomed to take these animals had become so scarce, it was no longer worth while to hunt them, and the result was an increase in numbers, where the pursuit of the sea otter was renowed more vigorously than over.

The Indiana were accustomed to take these animals had become so scarce, it was no longer was the indiant, surface and the state of the sea of the sea of the late of the sea of the sea of the late of the sea of the sea of the late of the sea of the sea of the late of the sea of the late of the sea of

a roof, forming a sufficiently comfortable house, 40ft. above the water's surface. These shooting scaffolds, or as they are called locally, "derricks," give the otter shooter great advantage. In distance he gains from 400 to 500ft, while the elevation above the water greatly extends both his range of view and that of his rifle. In fair weather the shooter goes to his "derrick" before daylight in the morning and returns at night to the shore, but sometimes, when the tide is high and a heavy surf is rolling, it may be impossible for him to get to it for a week at a time, or he may be unable to reach the beach for the same period. The skill attained by these men in rifle shooting is something almost beyond belief. It will be readily understood that the head of the sea otter—the only part that is seen above the water—is a very small mark, certainly not more than three or four inches in diameter, and yet it is said these shooters not infrequently kill at a distance of a thousand yards. Most of their shots are made at 200yds, and over. They use heavy Sharp's rifles fitted with teloscopic sights, and shoot always from a rest. When the sea otter is killed it sinks at once, and it may be several days or a week before it rises to the surface and is brought by wind and current into shore. The hunters employ Indians to patrol the beach and secure the dead animals, and in occasional instances where the otter does not sink dogs are employed to bring it to land. Owing to its exclusively marine habits and its great wariness, we may assume that it will be many years before the last sea otter shall have been killed, but it must always be a very rare animal.

VII.—CAN THE FUR SEAL BE EFFICIENTLY PROTECTED?

That the fur seal fisheries of the Northwest seas ought to be protected is a proposition so plain as hardly to be

That the fur seal fisheries of the Northwest seas ought to be protected is a proposition so plain as hardly to be disputed by any citized of the United States. It is not a question of sentiment, but one of business. An annual revenue of over \$300,000 would be lost to this Government if the seal should be exterminated or greatly reduced in numbers, and such an income will hardly be relinquished without an effort to retain it. If these valuable possessions are to be preserved in their present condition, the taking of seals except upon the land must be put an end to. Numerous as those animals are on the Pribyloff Islands, they will certainly disappear unless protected. The estimates by Capt. Bryant, aiready referred to, show that of the young seals born each summer only from 10 to 15 per cent. survive to become adults; and if to the destruction caused by their natural enemies we add the slaughter of the females which takes place in water easing, it can readily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that before long the number of the gradily be understood that the late of the gradily developed to gradily developed the gradily developed the gradily developed the grad

west longitude; thence from the intersection of that meridian in a southwesterly direction, so as to pass midway between the Island of Otton and the Copper Island of the Komandorski couplet or group, in the North Pacific Ocean, to the meridian of 1939 west longitude, so as to include in the Territory conveyed the whole of the Alentian Islands cast of that meridian."

The United States Treasury Department in a letter written by Mr. H. F. French. Acting Secretary, took the ground in 1881 that all water within the boundary as thus defined belonged to the United States. After referring to the definition of the boundary given above, Mr. French says: "All the waters within that boundary to the western end of the Aleutian Archipelago and chain of Islands are considered as comprised within the waters of Alaska Territory;" and further, "all the penalties prescribed by law against the killing of fur-bearing animals would therefore attach against any violation of law within the limits before described." In March, 1886, Hon. Daniel Manning, Secretary of the Treasury, again called the attention of the Collector of Customs at San Francisco to this subject, and confirmed the construction placed by the Department on the extent of the United States jurisdiction in these waters.

A result of Mr. Manning's letter was the seizure of several Canadian sealing schooners, Their captains were arrested and in several cases taken to Sitka, tried, convicted, fined and imprisoned, while their cargoes were confiscated.

On the trial of the master and mate of the schooner Thornton in August, 1886, held at Sitka, Alaska, before the United States Court, Judge Dawson presiding, is reported to have repeated the language used by Mr. French: "All waters within the boundary set forth in this treaty to the western end of the Aleutian Archipelago and chain of islands are to be considered as comprised within the waters of Alaska, and all penalties prescribed by law foor the killing of fur-bearing animals must, therefore, attach against any violation o

TO ALLAGUASH LAKE AND BEYOND.

[Concluded from Page 466.]

TO ALLAGUASH LAKE AND BEYOND.

[Concluded from Page 1995.]

NEAR the southern extremity of Allaguash Lake, from the summit of a steep hill some 500ft, above the lake, we looked over the country to the east, south and west for a great distance. Below lay the forest, tinted with autumn colors, the red, yellow and brown of the hardwood trees blending with the light green of the poplar and darker shades of henlock. So thickly are the treetops crowding to the light in these wild woods no breaks appear, and as with a great carpet of rich pattern are the hills and valleys spread. Eighteen lakes may be plainly seen, and in all the vast expanse only one house, that at Chamberlain Lake. To the east looms majestic Kataldin, his crest white with snow, south far avay is Kineo marking the center of Mosehead Lake; west are the mountains whose waters are gathered by the little streams that form the West Branch of the Penobscot. All these may the eye compass in the clear autumn air. Men follow the water courses and trails, and camp beside the larger lakes and grounds, yet much of the surface of this wilderness through swamp and on mountain is never trodden save by the wild animals that roam at will. Who can doubt that somewhere in these wilds are ponds to which the moose and deer come to slake their thirst, where no rifle's sharp report has ever echoed along the shore, where trout in generous plenty live in waters never rippled by the sportsman's fly?

The maps show two small ponds due north from Allaguash Lake, the nearest apparently one-half mile distant, the other just beyond and pouring its waters into the first. We devoted a day to visiting these ponds. After going a short distance into the woods, keeping a north course by compas, we found a spotted line, which we followed thil it crossed the stream floving from the nearest pond. Here we left the line and followed the stream to the pond, a distance from Allaguash Lake of two or three miles. The appearance of the shores indicated that it had been a favorite resort for mose

the excellent Lyman sights to shoot so as to hit the head or neck only.

From the first pond north of Allaguash Lake the second lies neare reast than north, and the two are not connected, and while the waters of one flow south to the lake, the other finds its outlet in Allaguash Stream two miles above the lake.

The almost continuous rain caused us to stop longer at Allsguash Lake than we would otherwise, our intention being to camp yet further to the northwest. The open game season was close at hand, and our vacation was more than half passed, when on the worning of the first pleasant day for over a week we left our comfortable camp and sought the head of Allaguash Stream. A party had camped two miles above the lake, and the stream was cleared to that point, but beyond driftwood frequently obstructed the passage of the canoes, and the axes our guides carried were brought into use. As at noon we ate our bunch of raw bacon and hardtack, with water from the stream as our drink, we felt like true explorers, for we had left behind us the last signs of civilization, and the empty in can and the discarded whisly bottle of the camper were seen no more. For half a day we worked steadily up stream to a distance of about five miles above the lake, where leaving the canoes we started through the woods by compass to Mud Ponds, the head of the main stream. The maps show the distance we had to tramp as two miles, yet only after four hours of continuous walking did we reach the ponds. The lower Mud Pond, and the only one shown on any maps I have seen, is a sheet of shallow water covering about a thousand acres. Grass and liby pads show or early the entire surface. Along one side is a large pene bog, then nearly flowed out by the high water. Som rods from the pond a trapper had at some time did not have gone the loggers that the country and have never remarked. Nor are they likely to do so unless it he to get the codar from the swamps, or the white wood from the dryer lands, for the pend showed the work of pin loggers thirty-f

this trip cost me. It fairly made my hair stand on end to hear that moose come. Yes, sir; it was worth \$150 of any man's money."

In the pond by which we were camped the moose had left their tracks everywhere and the lily roots they had torn up covered the water mingled with the leaves of the lilies yet growing. The caribou had worn away all the small growth in the woods around the pond. In the warm days of July and August this must be a gathering place for the game from all the surrounding hills.

We had no canoes with us here and so we constructed a raft the frame of which was the gate from the old dam. The morning after our arrival at Mud Pond, having constructed our raft we poled away to the northerned. In all this long trip until now we had seen no large gane—tracks everywhere, the creatures that made them nowhere; but there on the north shore stood a great caribou buck. How foolish it now seemed to have left our canoes behind. With a canoe the chances of getting this goodly buck with his wide-spreading antlers would have been good, but he would not let the clumsy, slow-going raft with four men so plainly in sight approach near enough to give us any chance to kill him. His size we shall never know, his track was the size of the crown of a man's hat. By the time we had informed ourselves by what path the caribou had come and gone and caught a few trout, three animals came into the water away at the end of the pond from which we had that morning come, we never were near enough to tell what they were, but two deer came to the water soon after, and these were probably of the same herd. Our investigations that day showed us another pond connected with the one we were on, by a stream some 40 or 50 rods long. As our maps did not indicate any such body of water, we were particularly anxious to explore it. To enable us to do this, our gnides went the following day to the camp at Allaguash Lake for more provisions. Thus my companion and myself were left for one day to our own resources for amusement.

The day was pleasant, and our plan was to watch for game at the northern end of the pond where we had seen the caribou. My companion was to look for animals coming to the water, while I went into the woods and watched some caribou paths. As I left my friend he asked when I would be read, to go back to camp, to which I replied at 4 of cleek. It was the 72.8. Having state and my rifle in hand. The little well surplices to the only creatures stirring, and these heartily resented the unwonted intrusion, coming close to me and scolding in noisy chatter. As the day wore on even these hid away, and the occasional quack of a duck on the pond was the only sound to break the stillness of a calm day in these remote forests. As hour succeeded hour I became more and more tired of this kind of hunting, began to consider if this was really the way to have a good time after all, and if the caribou land not deserted hour I became more and more tired of this kind of hunting, began to consider if this was really the way to have a good time after all, and if the caribou land not deserted the way the state of the carried of the control of the contro

found in some little stream or hid away in some bog like those we discovered.

From Allaguash Lake we carried three miles to Round Pond on Corcomgomoc waters. Allaguash Lake is much more easily reached by this route than by the one we took going in: in fact, Allaguash Stream from Chamberlain Lake will not float a canoe in a dry or even in an average season. average season.

average season.

At Round Pond is a camping place where several parties had stopped during the last summer. The camp register—a board nailed to a tree—indicated the presence of ladies and children, while the children's play-house with its dried mosses and wild flowers was a pleasant reminder of happy childhood. Some of these campers may be pleased to know that in the frosty October evening and morning of our camping here we fed liberally their school of tame chubs gathered about the wharf. With a delight like that of children did we two gray-headed men feed these eager little fishes, for the heart grows young in these old woods. It was our last night in camp;

a comfortable camp and a glorious fire we had that night. The nights were getting cold, ice formed in the dishes, every morning we awoke chilled and shivering, of twenty-two days in the woods only five had been free from rain or snow, clothing and blankets were nearly always damp, the ground very wet and streams at nearly freshet height. From Round Pond we ran to Chesuncook, only taking the canoes ouce or twice from the water. Stopping one night at Chesuncook, we paddled from there to the Northeast Carry the following day, through a country white with snow.

Then we returned to our homes to pick up again the many threads of which each busy man weaves the fabric of his lifted Finer and stronger will this fabric be for the days passed the mountain, lake and stream—more patient the worker that the come.

PROVIDED THE SOUTH BOARDMAN.

TROUTING ON THE SOUTH BOARDMAN.

I'd rather win the river's prize Than scenes of gay resort; To me this trout of varied dyes Is richer than a court.

Is richer than a court.

THERE is a charm in trouting that leads the ardent devotee of the rod into close and intimate communion with nature. As he wades the winding brook and gracefully circles his feathery lure upon the crystal waters, new beauties unfold themselves on every side. At his very feet the crimson-tipped flowers peep out of the waving grasses, overhead a bluebird or oriole delights with its sweet notes; beyond an aroused squirrel retreats into leafy haunt with frightened alacrity; here and there the swallow and the trout spring for the bright May fly; in the bright glades "the gaudy insects sparkle like animated gems in the sunbeams"; the twittering water birds are on the flowers and leaves of the lily; the dense and shady woods with their mossy fountains and green retreats woo him to ease and dreamy indolence. How musical to his ears, when again aroused to enthusiasm, as he threads his way, is the "familiar tinkling of the cow bells" and the hammered notes of the mottled woodpecker from the hollow tree! How sweetly is he lulled as he hears

The waters leap and gush O'er channeled rock and broken bush.

Here is a trout to his creel, there a sylvan pocm to his eye; and thus alternating, he concludes his sport in the calm and balmy evening amid sweet carols from bush and brake, fully realizing those pastoral scenes

"Of fair, sunny glades, where the buttercup springs;
Of cool, gushing fountains; of rose-tinted wings;
Of birds, bees and blossoms, all beautiful things,
Whose brightness rejoices the earth."

The "gentle art" amid such surroundings has been prouounced by Sir Henry Wotton to be "a rest to the mind, a cheerer of the spirits, a diverter of sadness, a calmer of unquiet thoughts, a moderator of passions, a procurer of

The "gentle art" amid such surroundings has been prouounced by Sir Henry Wotton to be "a rest to the mind, a cheerer of the spirits, a diverter of sadness, a caluer of unquiet thoughts, a moderator of passions, a procurer of contentedness."

While indulging in such pleasing ueditations of "the contemplative man's recreation," a genuine disciple of the Guild set forth in glowing terms the enticing sport to be had with the dappled beauties on the South Boardman, a stream which empties into Lake Michigan at Grand Traverse. I was a luxurious idler at the time the golden visions of the trout beautiful were so deftly painted, and the contagion was so great then that the next train morth from Grand Rapids found me aboard, fully prepared to sport in the swift waters of the famous river. At Walton, which place I reached about 5 P. M., I changed cars for Mayfield, my destination, which I reached in about half an hour. The landlord of the tavern was there to give me cordial welcome, and doubtless figured out then how many ducats I would be worth to him. Of course the fame of the great trout stream of Michigan lost nothing of its prestige with him, for he surfeited me with trout stories of such startling magnitude that I began to think that I had at last reached the anglers' paradise. I noticed, however, that he frequently interlarded his recitals with the significant little word "if," which prefaced the conditions of weather and water. This was the loophole for all escapes in case of failure to practically substantiate his questionable mathematics. He was, however, an excellent trouter and equally as good hunter, and apparently very agreeable and accommodating.

I made all arrangements before retiring that night for the trip to the South Boardman early the next morning. I was to take team, boat and guide, and by going about due east some five miles or more, would strike the stream so as to have seven miles of fishing, more than was necessary, particularly when one had to wade the greater part of it. The trout romances of

violate a law sacred to every genuine sportsman, and hoped he would acquiesce in it. He laughed and replied that he only wanted a little wild meat for immediate use, and presumed no one would object to it, as long as he did not slay for the market. The farmers in that neighborhood, he further stated, always took the liberty of killing meat. As he was not inclined to beed my admonition, he got in the wagon and we started off at a lively gait, and were soon going through the deep, sunless forest which prevailed nearly the entire distance, only a slight clearing here and there being seen. It was a good hard road all the way, and as it was in the month of June, nature was in its most regal dress; the birds in full plumage and voice, and the flowers and fernsand mosses along in hour high, was rapidly painting the tree tops in rein and varied colors of crimson and gold as we accended the top of a high, was rapidly painting the tree tops in rein and varied colors of crimson and gold as we accended the top of a high hill. The long bright rays at this altitude seemed to give us a cheerful morning salutation. They flashed with radiant vigor upon the tall, scarlet maples, now they pierced between chumps of pinc, making their black edges flush and glow, then boldy strike the spreading branches of some stately elms, and again in brilliant ripples of warm waves dash into the bushes and braken sparrows and pretty robins bathed in its glowing beams. On high the lyric lark sang his native hymn as if to add to the charm of the sylvan scene with which we were environed, and which was sull further beautified by the fleecy clouds that lazily drifted above in the dome of blue. These were our pleasing accompaniments as we sought the crystal stream for our tranquil pleasures. The landord would ask every now and then to have environed, and which was guited to the house of the could pursue his lawless course to his heart's content. My associate had little to say to this, though I noticed he was only too cager to always please and always

the other, and I told him to select his side. He took the right-hand side, and I, of course, the left, and we then waded in and commenced the sport. He caught the first trout, the second and the third, and yet I held on to my flies, which I had changed two or three times and without getting a single rise. Bait-fishing stock was soon above premium with me, and when I saw his fourth trout go into his creel, I waded ashore and prepared my line for bait-fishing. I was compensated with an 8-inch trout. I cut off a fin of this trout and used it in place of the worm, and soon ascertained that it doubly discounted the worm, as it was far more attractive, and yet had sufficient meat upon it to make it a choice morsel for the greedy trout. I had tried it on other occasions and found that it always worked to a charm. When I came up to Fred I discovered that he also was skittering a fin, and had beeu since the capture of his first trout. He said if I would cover the barb of the hook with a piece of worm, that it would still further improve the killing qualities of the fin. I tried the plan, and found that it worked admirably. Fred showed me a beautifully spotted trout of over a pound weight he had taken, and yet I had not even a half-pounder as a solace. I, however, had high hopes of coming out all right on the homestretch, and was not at all disheartened at the good start he had over me. He was evidently a splendid trouter, much better thau myselt, I thought, and fished with an untiring energy that I was unable to equal. He had no 'wading trousers," and the water was so cold that it turned his lips to a purple lue. He, however, endeavored to keep up a good circulation by occasional visits of the fisak to his lips, which I began to think would soon exhaust its contents, as his drafts were quite copious indeed. It was evident to me that he had the best side of the stream, for all the deep water and choice places were apparently there. I saw that I was to be largely outnumbered in trophies unless I changed my tactics; so I c

"He darts away; my reel runs off,
Around, around it goes.
I give him line, he carries off,
My pulse excited glows.
What sport can equal joys like this!
My rod now bends in two;
Will such a hook
Withstand the brook?
Will this my line prove true? Will this my line prove true?

"Now 'tis out, 'tis full at strain,
I fear 'twill scarcely stand;
The topmost joint is bent in twain,
It slackes my nervous hand.
It slackers now, he's tired out,
I wind my well-tried reel,
And gently strain

My line again. My line again. Till trouty's strength I feel."

incher it, and then as he was prepared for fishing, to go thead with his trouting, and we would overtake him with the boat, and take it on another mile, and thus alerading do as always to have new grounds.

My companion, who was familiarly called Fred by the andford, advised me to use built, declaring that it was entirely too late in the season to expect trout to rise to any ty, no matter how perfect or seductive its appearance, was satisfied he was correct, but still my rule was the season to expect trout to rise to any ty, no matter how perfect or seductive its appearance, was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received was a contemptible built-fisher, despite the success of the received for the received was a contemptible built-fisher, despite the success of the received for the

as above, that is allowing Fred to go well ahead and then fishing in his wake.

The trout evidently were not much on the feed that morning, for it took careful work to capture what we did. I lagged not in the pleasant pursuit, and fish as earnestly as ever. On I went, passing lonely stretches of wood and river scenery with the reward of an occasional rrout, until finally circling around a slarp bend I saw immediately in front of me such a dark and lovely pool, so enchantingly embowered in slade from overhanging trees, lapping bushes and waving grasses, in which the violets and primroses "blushed and bloomed," that I felt assured it was where the trout grow golden. It seemed a burning shame to offer the lovely princelings of the brook in such a charming retreat anything but an artistic fly of pre-emiment perfection, and I must confess that I felt a tinge of regret when I sent my meaty fin as the decoy to tempt him from his aqueous realm of beauty. I was heartless, and for the time being lost to all the poetry of angling, and like a sturdy baiter; sent the fin into the shady pool; it no sooner struck the water than it was greedily scized, and then a struggling trout was repenting his hasty action. He was soon encircled by the net and then gently placed in the creel. He was little less than a half-pounder, but a royal beauty. Again my univering bait was moving in the water, and another trout of about the same size was captured. This I repeated until I had caught two more, and then the sport was over at this ideal pool. I wondered if Fred had had any luck here, for he was a capital angler, though I thought he fished over the choice places entirely too fast. I have always found that slow and careful trouting in good waters yields the amplest returns.

Again I am on the tramp, and after about an hour's fishing the guide overtook us, and we concluded as it was near noon to take lunch. Selecting a shady grove for our banquet grounds, the guide started a fire nod made some coffee, and then we feasted right royally from

AN EPISODE OF THE WAR.

AN EPISODE OF THE WAR.

MEMORY oftentimes presents most striking exhibitions of latent retentive power. Incidents that transpired years ago, and had no special significance to leave behind them lasting impressions, flash from its secret chambers, and as vividly as if it were but yesterday that they took place, they pass like a panorama before our mental vision. During the great civil war, when powerful armies and mighty naval vessels covered the land and the sea, scarcely a day closed that was not fraught with military achievements or disasters to either one or the other contending forces. Now and then a thrilling incident produced a profound impression of exultation or depression in the public mind, but time and the multitudinous and multifarious affairs of life crowded it, as was supposed, out of memory. But years later a casual remark, or a transaction that may have some indirect connection with it, releases from the invisible cells of the mind the long-forgotten event, and it is pictured before us as clearly and vivilly as when we read the graphic account of it so long ago.

A check from the U. S. Treasury was recently sent to a business friend. It was to settle for salvage to the captors of a vessel that made a voyage noted for a thrilling digression from the even tenor of the ways of an unwarlike merchantman.

Twenty-six years ago the harbor of New York betokened warlike times. Men-of-war were almost daily arriving from the Southern coast for repairs or supplies, while others, full-manned, were sailing out of the harbor to take a part in the conflict that was raging a few hundred miles away. On the stretch between the Narrows and Sandy Hook the taut and ship-shape schoner Flora, with her wings spread to a clear and strong northwesterly wind, dashed on to the ocean. As she cleared the land and entered on the bosom of the Atlantic, the wind freshened and sent her on at a swinging pace. Around her bows the yeasty sea boiled and spintered, and as the misty spay flew over her forecastle it glistened and glitte

Trades is a blessed relief to poor Jack, and none can appreciate it more than he. The Flora was rolling lazily from port to starboard, and as the breeze was not strong enough to keep her sails full they flapped spitefully. The man at the wheel was powerfully affected by the calm and somnolency of the scene, as the "bobbing" of his head suspiciously indicated. "Sail-ho!" came in loud and startling tones from a sailor on the topgallant forecastle. Away off on the verge of the horizon the dark hull of a vessel appears, and as she draws nearer to the Flora a long, filmy streak, stretching far astern, reveals that she is a steamer. At the first cry of "Sail-ho!" all hands came on deck, for it was at a time when danger lurked on the occan. Confederate cruisers were scouring the seas, and many a peaceful merchantman had been captured. The dark hull came on; a thick cloud of smoke pourcd out of the funnel, and it was evident she was being driven hard to come up with the Flora. They were helpless to escape. The wind was almost a dead calm, and the anxious faces of those on board as they peered over the rail evidenced their deep interest in the actions of the strange steamer. Their fears were heightened and their nerves strung up to the greatest tension by a puff of smoke from her port bow, which was followed by a report and the dropping of a shot into the sea a short distance astern of the Flora. Now the ensign is run np to the schooner's main truck, and she is hove to. Shortly after the steamer is seen to be heavily armed, and her flag, which had been raised some time before, is recognized as the Confederate colors.

An unexpected object sometimes overpowers the mind, but men who have been accustomed to face sudden danger recover rapidly from the momentary stupefaction; and thus it was with the crew of the Flora, and they philosophically awaited their inevitable fate. She steamed close to the doomed vessel, and trained her guns on her. Five or six armed boats put off and boarded the Flora. As she was unarmed it would h

vain to offer resistance, and soon all were prisoners of war.

A prize crew was put aboard the captured schooner, and all of her crew except the mate and colored cook were transported to the steamer. Then, we apprehend, the officer in charge of the prize received orders to proceed to some port, and there to deliver her to the naval authorities. They soon parted, and it is quite natural to suppose that the prize crew looked forward with exultation to making a triumphal entry into port. The thought of how they would be feted and lionized by the citizens and fair ones made the hearts of all beat faster. But, alas, there is nothing certain in this world but a few feet of ground to receive onr earthly clay, and to the prize crew on the Flora a cruel fate denied them even this; for, one dark night, the mate and colored cook successfully planned and carried out the destruction of their enemies, and the eternal and silent graveyard of the deep received their bodies. Instead of honors and glory their requiem was sung by the feathery inhabitants of the air over the lonely ocean.

The mind recoils from such an act of butchery, but war commends any deed that will circumvent and defeat an enemy.

EDWARD MANNING.

MONTCLAIR, N. J.

Hatural History.

CRAWFISH AND SNAKES.

I RECENTLY observed a very cunning and ingenious trick of the crawfish (or crayfish) for catching flies, the recital of which may prove of interest to your naturalist readers. The crawfish, as he is called in these parts, is a kind of fresh-water lobster, which is very abundant in this region, and is still more so further south. He reaches a maximum length of some 6 or Sin., and seems to prefer muddy, stagnant ponds. He is much esteemed as food by some, especially the Creoles of Louisiana, and is, indeed, of more delicate flavor than the salt-water shrimp.

as food by some, especially the Creoles of Louisiana, and is, indeed, of more delicate flavor than the salt-water shrimp.

The trick to which I alluded was this: Sitting on the bank of a muddy pond, or "borrow pit," over the surface of which many small flies were swarming about, I observed that the crawfish came to the surface near the water's edge, and turning over on the side, the tail probably touching bottom, with claws and legs "sprudling" about in the water, they assumed the exact semblance of dead creatures floating on the water. In a few seconds flies would alight on the apparently dead crawfish, and as soon as one got into the proper position there was a sudden and instantaneous flip, when fish and flies would disappear together under the water. In a few seconds more he would again appear on the surface and go through the same maneuver with same result. There were, perhaps, two or three dozen of them in sight at the same time, and all industriously engaged in the fly-catching game.

Speaking of their prevalence, I have seen them in countless multitudes in the swamps of Louisiana after the subsidence of an overflow of the Mississippi River, crawling through the still muddy woods, seeking relief from the dearth of water, and piling up in shady places to die in such numbers as to produce a very offensive stench to the passengers on a slowly moving railway train. I have seen old crawfish crawling through the swamps with great masses of young ones clinging to certain feathery appendages under the tail of the parent.

Speaking of, but I nearly always wind up on snakes, I have now two live rattlers in a box, which were recently caught for me in a canebrake by a negro. His method of capture was to place a forked stick over the snake's neck, then grasping the neck with his hand he permitted the reptile to coil around his arm, when, unwinding it with the other hand, he dropped it tail foremost into a box. The larger of these is a little over 3ft. long, the other a little less.

Having given much attention to the

other a little less.

Having given much attention to the subject of snakes, as being of practical importance to a constant wanderer in swamps and brake, I have concluded that the rattle-snake is the only dangerous species we have, and they are not numerous. The cottonmouth moccasin, which is very abundant in the Mississippi bottoms, bears a most villainous reputation, which he does not deserve. He has plenty of venom, but never attains great length, and his fangs are comparatively short. But above all, he is in-

disposed to bite. I have teased and worried a good many specimens to induce them to show fight, but while they exhibit anger by puffing up the body and in other ways, I have never succeeded in making one strike at a stick, and he is always ready to escape at the first opening that presents itself.

A short time since, in stepping over a log, I discovered that my foot was coming down on a coiled cottonmouth. By an extra effort I cleared the snake but stepped pretty near him. He made no motion, and when I touched his head with a stick he darted off and escaped. I never kill them, because they appear to be harmless togman. Nearly all of my associates "kill every snake they see," and when questioned for a reason have no beter one than "I have no use for a snake," It is difficult to persuade them of the needless cruelty and positive have no findiscriminate snake killing.

I once had a pretty garter snake crawl up in pressuade theely giving suggestion of the appropriateness of his name. He went as high as my knee, when, grasping my leg a little above with my two hands, a kick or two brought him out, and we parted good friends.

CLARKSDALE, Miss.

ECONOMIC ORNITHOLOGY.

CLARRSDALE, Miss.

ECONOMIC ORNITHOLOGY.

THE annual report of the Department of Agriculture for 1888 includes the report of Dr. C. Hart Merriam, the ornithologist and mammalogist of the Department. This covers sixty pages and is full of matter of great interest to all persons who pay any attention to natural history, and especially to all farmers. It contains, too, much matter which the sportsman may read with pleasure and profit.

Congress has defined the scope of the work of this Division as "the promotion of economic ornithology and mammalogy, an investigation of the food habits, distribution and migrations of North American birds and mammals, in relation to agriculture, horticulture and forestry." The Division is a bureau of investigation, and the facts which it collects are published in the form of special reports and bulletins. One of these, on Bird Migration in the Mississippi Valley, was issued last November, and impressed all who examined it with the magnitude and the importance of the work being carried on under Dr. Merriam's charge.

The more important divisions of the report now before us are a statement of the work done in 1888, some remarks on the Geographical Distribution of Species, special reports on Introduced Pheasants, The Mink, The Sparrow Hawk, The Short-Eared Owl, The Food of Crows, and The Rosebreasted Grosbeak as an Enemy of the Potato Bug. Of these the investigation into the food habits of the crow is much the longest, though it would be hard to say which of all these interesting papers is the most important. As might be imagined, they are all written from the farmers' standpoint, and the question of food and whether the animal is useful or injurious to the agriculturist are the ones to be determined.

The facts brought out by Dr. Merriam's visit to Oregon about the Asiatic pheasants introduced on the Pacific coast are of great interest to sportsmen.

The work being carried on by this division and delay work that is of the greatest importance to the tillers of the soil all over the co

NORTH AMERICAN BIRDS.*

NORTH AMERICAN BIRDS.*

In this publication we have what has long been called for, a popular and interesting natural history of North American birds. written simply, but in a very pleasing style, and illustrated by colored lithographs after the best artists, and in the highest style of art.

Prof. Nehrling is no compiler; his acquaintance with the birds described has been made in the field, where he has devoted himself to loving observation of their varying characters and habits, and being possessed of a happy literary style, charming in its easy simplicity, his descriptions cannot fail to be popular with young people, whom it is the author's object to inspire with a tender regard for the feathered minstrels of the grove. The work does not profess to be strictly scientific, and is not to be reviewed from a scientific standpoint. It is intended rather for the intelligent friend of nature, but at the same time, so far as we can judge from the single part which is before us, the author descrives great praise for the excellence of his biographies so far as they go.

The plates are good examples of the lithographer's skill, and will be useful to the class for which the book is intended.

The nomenclature employed in the book is old, but this is easily understood when we are told that when the A

tended.

The nomenclature employed in the book is old, but this is easily understood when we are told that when the A. O. U. Code and Check List appeared a large number of the plates had been already printed, and a great part of the manuscript of the work had been handed in. The work will not include descriptions of all North American birds, but will run to number 393 of the Smithsonian List of 1884.

of 1884.

It is high time that a popular attractive work on North American ornithology should be published, and very much is added to the attractiveness of this work by its illustrations.

The book is being published in twelve parts, each part with three colored plates, and forty-eight pages of descriptive text, the size is imperial octavo, the reading matter is printed from large new type on finest book paper, red-line edition, and a single glance at the first part is sufficient to satisfy one that no expense has been spared to get up the work in the highest style of art. The price of each part is \$1, and the work will not be complete until the fall of 1890.

So far as can be judged from the part which has already appeared there is no other popular work on the subject of nearly cqual merit, nor, indeed, comparable with it, and we confidently predict for it a fair measure of its deserved popularity.

*North American Birds, by H. Nehrling, with thirty-six colored plates after water-color paintings by Prof. Robert Ridgway, Smithsonian Institution, Washington, D. C.; Prof. A. Gooring, Leipzig, and Gustav Muetzel, Berlin. Milwaukee, Wis.: Geo. Brumden.

The revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—Adv,

WILD PETS.

II.-ANOTHER TAME MOUNTAIN SHEEP.

HOT SULPHUR SPRINGS, Col.—I was much interested in "G. B. G.'s" history of Seep in your issue of June 6; also in the incidental mention of other domesticated mountain sheep. Thinking additional notes on the subject might possess some interest I offer the following:

mesticated mountain sheep. Thinking additional notes on the subject might possess some interest I offer the following:

Some years ago I heard of a pet sheep near Fort Collins, this State. Being on somewhat familiar terms with the veteran showman, P. T. Barnum, I wrote him to inquire if he would like to secure it. Being answered in the affirmative, I sent and got it, and after a short time forwarded it by express to Mr. Barnum. It traveled with his "Greatest Show on Earth" for two or three seasons, and was finally burned with his museum and menagerie on Broadway. During its life Mr. B. wrote me two or three times about it, and again after its death. He seemed to think it one of the most interesting animals in his collection. It was a female, and during the short time I had it in possession I learned to think it the most interesting pet I had ever owned.

Last year one was raised by a family living four miles up Grand River from this place. In the fall it was sold to an Eastern gentleman who came out for a hunt. The price was \$40. The purchaser went further West hunting, and about the time of his return to claim his purchase and take it home the animal died, from what cause I never learned.

Mountain sheep were not uncommon pets in the early years of Colorado's settlement. I know that I have frequently seen them, but cannot now recall other particular instances.

One or more sheep were killed near here last winter in

One or more sheep were killed near here last winter in violation of the State law for their protection. Neighbors charge the offense to a young man who has left the country, but there is grave suspicion that some people yet here have got "some of the hog," if they did not actually do the killing.

W. N. BYERS.

NEW BIRDS AND MAMMALS.

NEW BIRDS AND MAMMALS.

NUMBERS of the Bulletin of the American Museum of Natural History issued during the month of June contain some interesting papers on new South American birds by Mr. J. A. Allen, and on new mammals by Mr. Frank M. Chapman.

Mr. Allen's examination of South American birds in the collection of the Museum has resulted in the discovery of a number of new species and in the reference to their proper zoological position of a number of species which have been erroneously placed by other ornithologists. Among the new species described by Mr. Allen are: Thryothurus macrurus, T. longipes, Platyrhynchus bifasciatus, P. insularis, Euscarthus ochropterus and Sublegatus virescens. There are interesting notes on a dozen other species of birds.

Another paper of great interest to ornithologists from Mr. Allen's pen treats of the South American bird Cyclorhis and its near allies, and is illustrated by figures of the heads of three species, C. viridis, C. ochrocephala and C. guiunensis.

Mr. Chapman's investigations in Florida have resulted.

the heads of three species, C. viridis, C. ochrocephala and C. quiunensis.

Mr. Chapman's investigations in Florida have resulted in the collection of some very interesting material. In the paper before us he describes two apparently new species of the genus Hesperomys, under the names H. floridamus and H. nivciventris, and a new subspecies of Sigmodon hispidus under the name S. h. lateralis. Mr. Chapman made some interesting observations on the habits of the rare Neofiber alleui, the round-tailed muskrat, of which so little is known. This species was found abundant in eastern Florida, opposite Micco. Mr. Chapman's account of the habits of this species, so far as he observed them, is very interesting. He is led to believe that the food of Neofiber is largely vegetable, and that, while it is very much at home in the water, it is much less aquatic in habit than the muskrat.

Bullfrogs as Fish Eaters.—Constantine, Mich., June 20.—Editor Forest and Stream: In a late issue a correspondent states that bullfrogs do not have a taste for fish, but take almost anything else. I once had an experience which makes me think that bullfrogs lave a decided taste for fish. A companion and I were fishing for blue-gill sunfish at a lake near here, and whenever we caught a fish we threw it about 15ft, behind us into a shallow spring water surrounded by tall grass and sufficiently inclosed to prevent the fish from escaping. After fishing in this way for some time, and after having caught several dozen fish we heard an unusual commotion among the fish we had caught and a great splashing in the pool, and upon investigating, we found a monstrous bullfrog—his size certainly entitled him to that name—sitting in the pool swallowing a blue-gill as broad as my hand, not including the thumb; and before we could make him vacate he snapped up and swallowed another sunfish fully as large and swallowed that too, all but a little of the tail, which protruded from his mouth. After we had thumped him with a board, but failing to make him disgorge any of his thievings, he escaped with enormous leaps and disappeared in the lake. I do not know whether he swallowed more, but I saw him swallow those two, and he did it with decided relish, it we could judge from his countenance, which was a very open one during the process; at least he enjoyed it more than we did.—S. J. H.

LIFE IN THE SEA SANDS.—Philadelphia.—A stranger to the beach would think there would be little or no animal life in the apparently barren sand, especially along the surf; but one with investigating habits will soon learn that in the surf and sand there is almost a mass of such life. Prominent are the surf bugs and sand crabs; further out the common crab and sand eel. What they live on is not so apparent. It is such that drum and some other fish come to feed on along the beach. On the flood tide the sand bugs come out of the sand in the wave on shore, and may be scooped up with shrimp nets in large numbers, and when the wave recedes they may be seen in schools settling in the loose sands, making a ripple, as though they were pieces of broken shell. Surf bugs and sand crabs are good bait for sheepshead, especially when fishing for small fish, which so quickly devour the soft bait. How far north and south surf bugs are found I cannot answer. I have not seen them north of New Jersey nor south of Cape Charles.—P,

RANGE OF THE TURKEY BUZZAKD.—Owego, N. Y.—
Editor Forest and Stream: In your last issue "Big Reel"
wishes to know the range of the turkey buzzard. In
August, 1887, a gentleman told me that his son had killed
what the neighborhood called a turkey buzzard, and if I
would come to the house I might have it. On arriving
at the house I found it true. The bird had been around
the vicinity for several days, and the neighbors thinking
it some kind of an eagle tried to kill it. Finally, one day
it sailed over the house and alighted in the woods, and
the boy taking the gun went in pursuit and succeeded in
getting a shot. The bird was undoubtedly a turkey buzzand, and measured 6ft. from tip to tip. Owego is about
in latitude 42° N.—I. A LORING.

The Hoop Snake is still found in the columns of country papers. The Highland, N. Y. Democrat, of June 22, reported that "as Mr. Jim Head was walking along the road near the home of John Hedden, he was attacked by a hoop snake, which encircled his leg around his boot, which luckily proved a shield against his deadly weapon, and by the aid of assistance he was finally released." Our offer of a reward for a specimen of genuine hoop snake still holds good.

Game Bag and Gun.

NEW YORK WILDFOWL LAW.

NEW YORK WILDFOWL LAW.

THE wildfowl law, Sec'ion 4, Chap, 534 of the Laws of 1879, was amended by the last Legislature to read: \$4. No person shall kill or expose for sale or have in his or her possession after the same has been killed, any wild duck, goose or brant, in any of the waters of this State, between the first day of May and the first day of spetember, except that in the waters of Long Island none of said birds shall be killed between the first day of May and the first day of October. * * And any person found between sunset and sunrise on the water with a gun and lantern, in the act of attempting to pursue, fire at or kill any such birds, shall be deemed guilty of a violation of this section.

JAMES RIVER TALES .- III.

AFTER SUMMER DUCKS

AFTER SUMMER DUCKS.

A SMALL yellow flame struggling to force its light tlurough a badly neglected chimney, threw a sort of twilight uncertainty upon the usual bric-a-brac of a country newspaper office, the dim light seeming to add several inches to the height of a gigantic stalk of corn in one corner of the room and elongating the premium spear of wheat hanging from the ceiling, both duly commented upon in the local columns of a previous edition of the Claremont Herald. The hour was 4 o'clock of a September morning. Jim and the Old Man were making ready for summer ducks, and Dan stood near the door watching the preparations, all anxiety to be off, yet half fearing he would be left. Jim takes a Parker in each hand, the Old Man shoulders the oars, and with Dan prancing around us, barking his delight, we are off down the road to Chipoax Creek.

The air is damp with a heavy fog that has settled low upon the earth, the long grass hanging over the narrow road being as wet as from a rain. The birds are not yet awake. Even that early riser, the thrush, has not opened his eyes. We tread single file the winding path that leads from the road down the wooded river bank to the boat.

awake. Even that early riser, the thrush, has not opened his eyes. We tread single file the winding path that leads from the road down the wooded river bank to the boat.

Dan takes his position in the bow. It is my turn at the oars, and off she slides into the water. The fog seems to have grown denser. It is impossible to distinguish objects over a dozen boat lengths away. Five, ten, fifteen minutes are ticked off by the dip of the oars, and still the fog hangs about ins like a Hading veil, denying even a glimpse of the shore, for which we were steering.

"Say, Old Man, how's this," cries Jim, pointing to a stake we have almost collided with. If feel the inclination to say something, the first lyter of which is damn, for I recognize our starting point. We have made a circuit. Jim produces a small compass attached to a watch chain, we take our bearings carefully and try again. This time the trees come out of the fog to meet us, for we have made the opposite shore. The boat glides on just out of reach of the overhanging bushes. A great blue crane flops out of a tree above us, and with a harsh cry that startles Dan disappears in the fog.

Easy now. Here is the first narrow stream leading up through the marsh. We change positions, Jim moving up to the bow with his gun, while I settle in the stern to paddle. The first bend, and no ducks. The stream is now scarcely wider than the boat. Water bushes are bent aside to enable us to pass, taking care not to disturb an ugly-looking wasp nest with its wicked owners asleep on the outside. I give the boat a shove around the next turn. Up rise several ducks. Bang! bang! goes Jim's Parker. A clean miss with the first barrel, but the second drops its victim all in a heap, as limp as a wet dishrag. Another comes out of the wild rice at my very elbow. The paddle slips into the water as I reach for my gun, and down comes Mr. Duck with a splash. Dan is overboard attending to business, and quickly retrieves the fellow. Nice fat fellows they are. Here comes a straggler returning thro

this time. We are not fairly into the stream before a plump-looking duck comes out of the rushes, but drops back as the smoke curls away from my gun. Quiet now, for a loud word would frighten the ducks that are prebably feeding under that clump of water bushes ahead, whereas they will not often take wing at the report of a gun unless very near them. We approach with great caution, for this is one of our favorite spots, though the ducks have a trick of going out on the wrong side of the bushes—undoubtedly the right side for them. The bushes being so high that the ducks are out of range before they show above them.

We try a new dodge this time on the feathered innocents. Jim steps out upon the marsh while I proceed with the boat. If they only come this way, well and good. But no, the fates are against us. Out they go as the boat jars the bushes, but further up than usual, and only one, most likely a youngster, falls a victim by separating from the flock.

We have time for one more stream ere the tide lowers. I give Jim the bow, and tell him to shoot straight and take his time about it, for this is the boss stream of the creek. He stands up in the narrow bow ready for action, the hammers of his Parker lying back like the ears of a horse about to bite. Dod blast it! Dan is in that seat again; but this is not the place or time to rebuke him, for the stream is deep and the boat unsteady. I paddle noiselessly around the bend. The expectation becomes almost painful. With fluttering of wings up rise two beanties. Jim swings his gun and leans to one side. Dan thinks it a good time to get off that seat, and does it so expeditiously that with the report of the gun both Jim and the ducks disappear, he having lost his balance by the recoil of the gun and Dan's untimely move. He clutches frantically at the air, but it availed him not. There is a resounding splash, and Jim's feet are hanging on the edge of the boat, while his body is in the water. He holds the gun at arm's length labove the water, the muzzle wobbling suggesti

I laughed with him. It makes me same to that I think of Jim hanging by his heels, head down, in that little creek.

This mishap spoiled our shooting, but we succeeded in stopping a couple of ducks as they passed out. Putting up a small sail we sped down the Chipoax and Lorne, fairly well satisfied with our beg of seven ducks.

To me Chipoax Creek was a joy forever, and really possessed no mean beauties when viewed at high water. It swept in graceful curves through the green marsh, its course as crooked a as blacksnake's track, now lunning under a steep bank from which the trees reached down their branches as if to drink, and further on its waters playing about the trumks of luge cypress trees standing well out from the shore. But when the tide went out how marked the change! I have seen the very walls of its muddy channel laid bare, while on either side great slimy flats would come out of the water, their glistening surface broken here and there with decaying snags and dotted with little patches of tangled grass. But it is not my desire, oh, Chipoax! to revile you because your waters leave you uncovered, for many is the time that you have floated my boat and offered up your treasures with unstinted hand. Long may your tides flow in and out and your channel remain unchoked by détris of the Sea.

THE OZARK MOUNTAINS.

THE OZARK MOUNTAINS.

THE items in recent numbers of Forest and Stream about the Ozarks have interested me very much. I was in Taney and Christian counties, Missouri, for two weeks during last November, stopping at Forsyth for three or four days and at Ozark for nearly two weeks. Although business engagements prevented any personal experiences with a gun in that country I made diligent inquiry of people well posted.

The truth is I never saw a country where game of certain sorts was so abundant. The flocks of quail were so numerous and so tame that they ran along in the roadway and cocked their eyes up at me as I sat on a horse as chickens might do in a barnyard. The natives thought them rather too small to bother with—very good eating of course and worth killing if a man could bunch 'em and shoot twelve or fifteen at a shot; but as for wasting a whole charge of powder and shot on one quail was sheer extravagance.

In a ride from Chadwick to Forsyth five deer were started on the oak ridges—three in one bunch and two in another. The native who was with me said that my luck in this case was exceptional. He rode over the route very often without seeing even one. However, deer are sufficiently numerous to warrant the assertion that no sportsman need spend a week on White River without getting a handsome head to mount. Deer may be either stalked or driven to water by the native object. Turkeys, the natives said, were so thick as to be a nuisance. They scratched up their corn in springtime and picked it down when the care became sufficiently matured. Messrs, Al. Spaulding and Charley Blood, two traveling salesmen driving over a route 650 miles long out of Springfield, Mo., told me they frequently saw flocks of from 20 to 50 turkeys along their route and that they never drove over it without seeing turkeys.

Bears abound in the caves along White River and its branches. The natives butcher them for their pelts by going into the caves during over a route 650 miles long out of Springfield, Mo., told me they frequently sa

preciate the sport which these animals afford can be found in their glory.

It was singular, but I did not see a partridge (grouse), nor did I see a man who had seen any. I cannot believe that they do not exist there. It is a land that produces nuts and berries in the utmost profusion.

Of course, wildfowl shooting is good in the season. When the geese and ducks come south in the fall the waters of White River are covered with them.

If I could go there for sport I would go in October or not later than November. I would carry a Winchester for large game, a shotgun for feathers and a .22cal, rifle for fun. If a man could not supply a hearty appetite with enough game with the aid of the little rifle he ought to go lungry; and he would not need to take an unfair advantage of the game either.

To reach the Ozarks from New York take the Pennsylvania road to Springfield, Mo. It will cost a little over \$40 including palace car and meals to ride there. A spur of the Frisco road runs down into Taney county. The fare is a dollar, I think. Thereafter one can either hire a guide with dogs, team and camping outfit for, say, \$3, or he can take up quarters at some tavern. A pleasant trip would include a stop at Ozark, Christian county, at Mrs. Wrightsman's hotel; another at Forsyth, Taney county, at the Hilsabeck House; another at Vivian's, in Bakersfield, Ozark county. Mrs. Wrightsman and Mrs. Vivian are model cooks—serve food that a Northern man can relish. Vivian is a sportsman of the native sort, and a right good fellow.

I have forgotten to mention the fish. I saw some big channel cattish, one weighed over 40lbs. I was told of others weighing over 75. I was told there were no trout there. This seems to have been an error from what you have printed. The water was clear and beautiful in the streams, but it did not taste just right to me. I believed those who said there were no trout—the taste of the water made me do so. Possibly the fault was in myself. I can heartily recommend the readers of the Forest AND STREAM to try a

PATTERN AND PENETRATION TESTS.

PATTERN AND PENETRATION TESTS.

Editor Forest and Stream:

Your journal is entitled to the thanks of shotgun men who like trap practice for the exhaustive gun trial you have begun. But the task will prove a lengthy one, Much time, good judgment, technical knowledge and powder and shot will be required if the experiments are carried to any satisfactory conclusion. But the points which recommend this trial to trap-shooters lies in the hope that that trial may demonstrate what should be the method of handicapping guns, so as to put the handlers on an equality with each other, so far as guns of different weight and caliber are in question. Handicapping by caliber will, I believe, be found to be wrong. Other things being equal, weight, which largely if not wholly governs charges, will be found to be the factor to be taken into account in the greatest degree, as applying to guns alone, leaving the handler out of question. I believe that the tests for killing power will show strongly in favor of heavy guns, without reference to bore. That is, the actual killing power of two guns of equal weight but of different caliber will be found to differ but little when each gun is loaded to bring out its best capacities. If your trial is carried out with the fullness and accuracy of detail that characterized the rifle trial conducted by FOREST AND STREAM, and the problems presented well worked out, it will be a great contribution to the science of gunnery as applied to shotguns. I confidently predict that at its conclusion this trial will lead to radical changes in the present general method of equalizing guns at the traps, and that method adopted by the National Association in particular.

NOR'EAST.

Auburn, Me.

AUBURN, Me.

Editor Forest and Stream:

Editor Forest and Stream:

I have been a subscriber and constant reader of the Forest and Stream for the last four years, and I consider it good authority on all matters pertaining to guns and gunning. I read your articles on trajectories and learned a great deal that was useful to me, and I expect to learn a great deal more from your test of shotguns. The questions as to charges and weights of guns as laid down by J. J. M. are questions that have troubled me for a long time, and it affords me pleasure to know that so able authority as the FOREST AND STREAM has underdertaken the solution of them, for I know that it will benefit hundreds of gunners who now carry guns, some too heavy and some too light, some too large in bore and some too small for the purpose,

N. POTTSVILLE, Pa.

POTTSVILLE, Pa.

Editor Forest and Stream:

In your tests it might be well to see whether a recoil pad lessens penetration; also, how much more 10z. of chilled shot will penetrate than 1½0z., same load of powder—say 3½ drams dead shot; how much more a gun will penetrate when the stock is placed against a post. This point may show shooters the importance of holding a gun very hard against the shoulder. H. PHILADELPHIA.

Editor Forest and Stream:

My suggestions for the shotgun trials are as follows: First—Will a gun barrel shoot as hard when well greased as it will when dirty with soft powder? Second—Will a rubber recoil pad weaken penetration? Third—Is there any difference of account between a 26 and a 30in. barrel?

NEWARK, N. J.

W.

Editor Forest and Stream:

In describing the guns tested at Claremont the make of barrel and kind of choke is not given. Barrels are of two kinds, English and Belgian, and the advocates of the former claim for them greater penetration because of their being made of a harder metal and consequently possessing greater elasticity. In this trial of penetration the make of barrel, i. c. whether English or Belgian, should be declared. It was required to be declared in the trial conducted by the London Field in 1879.

In respect to declaring the kind of choke I have this to say. While the contest was between cylinders and chokes it was sufficient merely to state that the particuar barrel was choked, but now with cylinders practi-

cally out of the race and the contest left to the different chokes, the kind of choke should be given; and the declared pattern should also be taken as it was in 1879. In the latter trial, recoil, depending as it does ou the boring of the gun as well as on the amount of charge and nature of explosive, was a prominent factor in the test. I don't see it mentioned here.

In an article entitled "Pattern and Penetration Tests," published Feb. 21, 1889, you stated that the gun's pedigree would be taken with description of barrels, whether choked and how and of what material.

Certainly in a gun's pedigree so important a matter as the parentage of its barrels should not be omitted; and your correspondent J. J. M., whose interesting letter you published with that article, will be disappointed unless the kind of choke is declared, for he hoped to see the relative merits of the recess and muzzle choke determined. ROCHESTER, N. Y.

ROCHESTER, N. Y.

THE ARKANSAS GAME LAW

THE ARKANSAS GAME LAW.

ITTLE ROCK, Ark., June 24.—Editor Forest and Stream: I see in your last issue a letter from Mr. S. D. Barnes, of Bald Knob, about the Arkansas game law, which deserves some attention. I agree with him that changing the open season for deer from September to the demands of the farming element, whose interests seems to be so dear to his soul. I am well versed in the history of game legislation in this State, having had the matter largely in charge. I know that we had to accept this change or a repeal of the whole law because the farmers deluged the Legislature with petitions, alleging that August was the only time they had to hunt deer, having their crops laid by and nothing else to do. So we had to take the change and make the best of a bad bargain.

that August was the only time they had to hunt deer, having their crops laid by and nothing else to do. So we had to take the change and make the best of a bad bargain.

But Mr. Barnes's wrath seems to be chiefly poured out on the non-export law. I drew the law and think I knew what I was doing when I saw it through. I was after just such gentlemen as Mr. Barnes speaks of, who combine pleasure and profit and supplied the Memphis market with our game until venison and wild turkeys were quoted "lower than beef and poultry." And the law will accomplish that result, as it puts too heavy a penalty on the railroads for carrying the game to make it profitable to haul it out. Mr. Barnes's friends may have to go to work for a living instead of camping out and killing everything they can see for six or seven months of the year and selling it for less than the value of the hides. I do not know Mr. Barnes, but judge from his letter he is in sympathy with the market-hunters. I have seen a good deal of the market-hunter and he does not appeal to my sympathy at all. I have seen in the heat of summer the market-hunter's camp surrounded with spoiled game. I have seen a barrel of prairie chicken eggs. I have seen fish hauled out with seines and left to rot for want of ice. And I have seen the prairie chicken completely annihilated in this State by the market-hunter. If the law makes some of these gentlemen go to work it will accomplish that much good.

The law does not prevent Mr. Barnes or any one else from killing a deer in the open season for his own use or to sell in Little Rock or Bald Knob. It does prevent the hundreds of professional hunters who camp in our woods all the year round and violate our game laws from carrying their game to market, and as the profit of the business is gone I hope it will stop.

Mr Barnes also pours out his wrath in a mighty flood on a law that would prevent his going camp-hunting anywhere but in his own county.

I do not suppose the idea of reading the acts of the Legislature ever entered Mr. B

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 27.—I know of three woodcock nests within ten miles of Chicago; but alas! so do certain other parties, and doubtless within the next two weeks the young birds will all have been illegally and legally slain. Hardly a woodcock in this vicinity ever sees the light of the legal opening day of the season. The upland plover (Bartram's tatler) breeds abundantly near this city, and there are now a great many of the birds about on the prairies, although it would be a shame to think of shooting them now. "Italian Joe," the best plover shooter in Chicago, says he could kill fifty in any day, but he adds, "me no care-a for dem. No fetch-a much mun when-a sell." Italian Joe is one of my new friends. His specialty is plover, and he will not hunt snipe, ducks, chickens, or anything else except woodcock. I am going out after plover with him this fall and will see how he shoots them. He killed 9,000 one spring four years ago, and all within fifteen miles of Chicago. So goes the game.

RIFLES OF SMALL CALIBER.

RIFLES OF SMALL CALIBER.

Editor Forest and Stream:
Considerable has been said about the efficiency of the .22cal. rife as a hunting implement as compared with other calibers. I think the general conclusion of all that has been written is that if the bullet is only put in the right place it will often do wonderful execution, and to further substantiate this I relate this true incident: Three years ago last winter two young boys by the name of Heaton went hunting in a marsh near Kalamazoo, in this State, taking with them a Flobert and a Ballard rifle, both using the ordinary .22cal. R. F. cartridge. While in the marsh the boys came across the track of a bear, and as they were lads of considerable grit they followed after bruin all the rest of the day, as long as they could see his track, and when they could follow it no longer they stayed all night at a farmhouse and started again on the trail as soon as it became light enough to see the next morning. They followed him the next day, getting sight of him several times. They got pretty close to him once in crossing a lake on the ice, but not near enough to commence hostilities, and he kept at a safe

distance until he became tired and hungry, since he could not carry his dinner with him as the boys did, for one of them, when opportunity would offer, would go to some house, and getting a lunch would share with the other. In this way they followed the bear until he began climbing trees to get away from his pursuers, but he would slide and tumble to the ground on their approach and get away. At last he found a tree that apparently suited him so well that he thought he would not leave it, but he changed his mind after one discharge from the boys' guns, and coming to the ground charged on them, when the tiny ball from the Ballard rifle passed down the side of the bear's neck, and going on went through his heart, killing him almost instantly.

I don't want any one to think that Michiganders as a rule hunt the bear with a .22cal. rifle, neither would I advise any one to do so, but the fact remains that it has been done, and successfully, too, and that a .22cal. rifle of a good make is an effective and valuable weapon if properly haudled. Now, I would like to know whether any one else in all these United States ever knew of any other bear or equally large animal being killed with only a small .22cal. rifle?

Sea and River Hishing.

PENNSYLVANIA FISH LAW.

PENNSYLVANIA FISH LAW.

I OLLOWING are extracts from the laws enacted by the last Legislatine relating to game fishes:
SECTION 1. Be it enacted, etc. That hereafter no person or persons shall cast, draw, fasten, or otherwise make use of any seific, drift not, fyke not, or not or nets of any other description, or use any other appliance for the catching of fish, except rod, hook and line in the Delaware River. Provided, That this section shall not extend to shad fishing.

SEC, 5. It shall not be lawful to catch or kill, by any means whatever, any rock base or any wall-eyed pike, otherwise called Susquehanna salmon (specles recently introduced into the river Delaware), within two years of the passage of this act.

SEC, 6. No person shall, by any means or device whatsoever, catch or kill in the Delaware River any black bass, rock bass or wall-eyed pike, commonly known as Susquehanna salmon, between the first day of January and the thirtieth day of May in any year, nor shall catch or kill any of said species of fish at any other time during the year save wide rod, hook and line.

An act similar to the above, applying to the Delaware River above Trenton Falls was enacted, to become operative whenever New Jersey shall enact a law of like tenor.

SEC, 1. Be it enacted, etc., That hereafter no person or persons

New Jersey shall enact a law of like tenor.

Sec. 1. Be it enacted, etc., That hereafter no person or persons shall east, draw, fasten or otherwise make use of any seine, drift-net, fyke-net, or net or nets of any other description, or use any other appliance for the catching of fish except rod, book and line in any rivers, streams or waters of this Commonwealth. Provided, That this section shall not extend to shad, herring and sturgeon fishing. Provided, That the provisions of this act shall not apply in the open season to the catching of suckers, eels and catfish, in streams other than trout streams, partly or wholly included in the survey of farm lands owned by any citizen of this commonwealth, but nothing contained therein shall permit fishing by seines at any time.

Sec. 4. No person shall catch or kill, in any of the rivers, waters or streams of this Commonwealth, any black bass or wall-eyed pike under 6im, in length, or any rock bass under 5in, in length, under a penalty of \$10 for every fish so caught. But should any fish be taken of less size than the above, or should any wall-eyed pike or rock bass of any size be taken from waters in which they have been introduced within two years from the passage of this act, it shall be the duty of any one taking or capturing the same to return the fish immediately to the water from whence taken; and no person shall by any means or device whatsoever catch or kill, in any of the waters of this State, any pike or pickerel between the first day of December and the first day of June in any year.

Sec. 5. No person shall by any means or device whatsoever catch or kill, in any of the waters of this State, any pike or pickerel between the first day of December and the first day of June in any year.

erel between the first day of December and the first day of June in any year.

Sec. 5. No person shall by any means or device whatsoever catch or kill any black bass, rock bass or wall-eyed pike, commonly known as Susquehanna, salmon, between Jan. 1 and May 13 in any year, nor shall catch or kill any of said species of fish at any other time during the year, save with a rod, hook and liac. Provided, That neither this nor any of the preceding sections of this act shall apply to fishing in the waters of Lake Eric. Sec. 6. Nothing in this act shall be so construed as to prevent the catching of balt fish, other than ginne fish, by means of hand or cast nets for angling or scientific purposes, of the catching of game fish by order of any member of the State Fish Commission of this State for the purpose of stocking in other waters.

NEW CONNECTICUT LAWS.

NEW CONNECTICUT LAWS.

THE following laws were enacted by the last Connectient General Assembly and will go into operation Aug. 1:
Prohibiting fishing in Lake Kenosia, Danbury, from Nov. 15 to April 15, until 1894.
Prohibiting taking or selling any striped bass under 15 b; penalty \$10 for each fish.
Prohibiting fishing in Woodstoek Lake, or in Little Pond, or in Little River, from the lake to the Putnam Water Company's dam, from Nov. 1 to April 1; maximum penalty \$7. Repeals part of section 2,416 relating to these waters.
Repealing part of section 2,444 relating to fishing in the Ashland Cotton Company's reservoir and the Griswold Paper Company's reservoir, Griswold.
Only bona fide residents shall fish in Holly Pond, Stamford.
Prohibiting other than hook and line for catching fish in Deolittle, Benedict and Tobey ponds in Norfolk, and Lake Wangum in Canaan.
Providing for surrender of oyster grounds to the State by not

little, Benedict and Tobey ponds in Norfolk, and Lake Wangum in Canaan.
Providing for surrender of oyster grounds to the State by not only a grantee, but his "heirs or assigns."
Prohibiting fishing in Mudge, Beardsley or Indian ponds, in Sharon, from Feb. 1 to June 15; maximum penalty \$30, or 20 days in tail. Lake Washinee, Salisbury, from July 1, 1895, to July 1, 1895; maximum penalty \$7 fine or 30 days in jail; Long Pond or Round Lake, Salisbury, Nov. 1 to May 1, same penalty.
For the protection of seed oysters in Mianus litter and Greenwich cove.
Regulating leasing of natural oyster and clam grounds in Branford.

Regulating leasing of manare.

Prohibiting fishing except by owners, in the West Thompson reservoir; penalty not less than \$7 nor over \$50, or \$0 days in jail Reorganizing the Board of Shell Fish Commissioners and reducing expense of the commission.

Prohibiting the taking of black bass from May 1 to June 10, whether in ponds or running water.

THE ARKANSAS FISH LAW.

THE ARKANSAS FISH LAW.

SECTION 1. That no person shall be allowed to place, erect or of cause to be placed or erected, or maintained in any of the waters of this State or in front of the mouth of any stream, slough or bayon, any soine, net, gill net, trammel net, set not, bag weir, bush drag, any fish trap or dam, or any other device or obstruction, or by any such means to take or catch any fish in any of the waters of this State.

Provided that the prohibitions of this section shall net apply to waters wholly en the premises belonging to the person or persone using such devices, and provided further, that it may be lawful to use a very small seine not to exceed 15tt, in length for catching very small fish, usually called minnows, which may be thus caught to be used for bait or for stocking other waters with fish, but for no other purpose.

Provided further, that it shall not be unlawful for any person or persons to use a seine not exceeding 50ft. in length in any unavigable stream or lake in this State to catch fish for family use or for picnics and for sale, nor shall it be unlawful for any person or persons to use a seine not exceeding such the unnavigable streams of this State, provided such traps do not obstruct the free passage of tish in ascending and descending such streams.

Any person who shall violate any of the provisions of this act shall on conviction be deemed guilty of a misdemeanor and shall be fined in any sum not less than \$5 nor more than \$200.

Approved March 26, 1839.

TROUT STREAMS OF SILVER BOW.

TROUT STREAMS OF SILVER BOW.

DIVIDE, Silver Bow County, Montana.—The country I am about to describe is little known and only to a few. It abounds in trout, sage hens, grouse, ducks, geese, a few swan, bears, moose, elk, deer and antelope, with also a few buffalo. It is very easily reached, and sport can commence the first day out and continue going in and out. The trip also can include a trip to the great National Park.

The best way to reach this hitherto unknown lunting and fishing locality is from Beaver Cañon, a small station on the Utah and Northern Railway, where a team can be secured, or the sportsman can take stage. The best plan is for three or four to go together and take their own camp outfit, making it as small and simple as possible.

The first day I went as far as Camas Meadows, distant from Beaver Cañon about eighteen miles. Camas Meadows is a valley about ten miles long, four or five miles wide; through it run four spring streams, about 10ft, unding from 4oz. to a pound.

My first camp was on Indian Spring Creek, in a cabin built by Gen. Sheridan during one of his scouts after Indians. There I stayed eight or nine days, varying my sport with hunting and fishing alternately. The first day's fishing I captured 250 trout, using the fly. One great feature about the fishing here, and in all the streams throughout this part of the country, is that the brush interferes but very little, and that there is no swamp or marshy ground; the streams nearly all rising in one or two large springs.

marshy ground; the streams nearly all rising in one or two large springs.

Commencing at the springs to fish, the stream is a little wider than lower down; the trout are hard to capture, and it is only by keeping well out of sight that the fisher can hope to allure them from the bright, clear stream. Fishing on, going down, the stream winds through the most beautiful meadowland, running into large holes with rifles in between. Here the fishing is superb. I have taken 30, 40, and as high as 60 trout from one riflie. The other three streams are similar to the one described, all uniting together to form one stream called Camas. The fishing on the main stream is not quite so good as on the small streams, and I think the creek I camped on a little the best.

My next camp was on Sheridan Creek, about ten miles.

all uniting together to form one stream called Camas. The fishing on the main stream is not quite so good as on the small streams, and I think the creek I camped on a little the best.

My next camp was on Sheridan Creek, about ten miles, from Indian Springs. Here the fishing is better than at Indian Springs, she trout being larger as is the creek. Sheridan is about twenty miles long and heads in the mountains; the first six or seven miles of its course being small; about a mile before it comes out into the valley it is joined by the waters of a very large spring. This part of its course is very rapid, rushing over boulders into holes and strong riffles. The first day I fished from the spring down about a mile, taking about 60lbs. of trout, having among them several that would weigh nearly albs. The next day I fished two miles down stream. Here the fishing is still better, the holes and riffles being arger and the trout larger and more plentiful. By going a short distance up the mountain here, elk, deer and bear are found plentiful: here is also good duck shooting.

Ten miles from Sheridan Creek comes Icehouse, formed by a large spring; the water in the creek is so cold that it is only used by the trout during spawning season. Three miles further is Shotgun Creek, formed by Sheridan, Willow and Icehouse creeks and one immense spring. Here is the home of Mr. Geo. Rae and Jas. Dalley, two hunters and fishermen. They have good accommodation and make the sportsman at home. Mr. Rae has put in a small dam across Shotgun, and here the trout are in such numbers that it is impossible to see the bottom. On Shotgun the fishing is very good; one can also get ducks, geese, and antelope, etc., the trout here run from ½ to 3lbs. Shotgun Creek is three miles long and about 300ft, wide; it emplies into Snake River Hotel; the hotel is kept by Messrs. Kountz & Caldwell, who are well acquainted with the best hunting and fishing grounds in the country. Here we are now on one of the finest trout streams in America, the river here is

sport.

Returning to Snake River Hotel, I took a trip to Highland Park. Here duck and geese are plentiful, affording the very best of sport. The fishing is very good. In fact, from the start and back, nowhere have I seen such a country for game and fish, and I have fished in Colorado, New York, Utah, Wyoming, Idaho and Montana, and in various parts of Europe.

The climate is very good in summer, not hot, with few or hardly any mosquitoes, nights cold. Trout keep good. I did not have any spoil, shipping twice a week from Beaver Cañon to my friends. Mr. Bassett runs a stage from Beaver Cañon, B. C., to the National Park, through

the country I have described. The roads are very good, and accommodation can be got in Camas Meadows at Mr. Sawl. Hancock's, whose wife is a most excellent cook. It is here that you can get trout cooked to perfection, and the best of milk, butter and home made bread. The next place is Mr. Geo. Rae's; next Snake River Hotel. But the best is to have your own outfit, which should include, if possible, a canvas boat for Snake River fishing; then the sportsman can move camp, go and come as he pleases. Provisions can be bought in Beuver Cañon, but if the hunter or fisher wants anything extra he must bring it with him, and above all, plenty of good, fine fishing tackle. For all the trout are so plenty here, they are very dainty and will not jump at anything. T. T.

A RAINY DAY CONVENIENCE.

A RAINY DAY CONVENIENCE.

It was our last day on the Greenbrier, the day broke gloomy and threatening and we staid around the camp until nearly 10 o'ciock to give the weather a chance to do one thing or the other, until finally it appeared that it had decided to do neither, so Cooke and I put out for the Burnt Camp, determined not to lose the day's fishing, rain or no rain. The trout bit beautifully, and we were entering upon a fine morning's sport, when patter, patter, down came the rain on the leaves of the overlanging trees and through the interstices of their branches into the water. Not wishing to get wet, we sought a partial shelter under the overhanging trunks and thick canopy of leaves of a couple of large trees.

"I'll tell you what, Charlie," said I, as I began to shiver as the rain continued steadily and the moisture slowly but surely found its way through my heavy flannel shirt, chilling my very vitals, "next year I am going to bring out a short cape made of heavy drilling, well oiled, to come down about to my waist and cover my arms; a rubber coat's too bulky and heavy and I don't care for my legs anyway; it will be light and not bulky and can be strapped or tied to the creel, and think what a convenience it would be to-day."

"It would that, it's a capital idea," said he, as he abandoned his tree in disgust and strode into the river again, making an experimental cast as he went, the experiment proving an immediate success. "You see, they bite right along, rain or no rain, and here we've not only lost an hour's fine fishing, but are wet and chilled and in no condition to fish any longer. The cape needn't be long," he continued, as he recled in his line, while I gladly followed his example, "all a man needs is protection for his chest and vital organs, his legs are wet anyhow from wading. But," he continued, as we made our way back to camp through the drencled and dripping undergrowth, while the rain pattered continuously on the leaves above us, "the cape would be better if made of the oiled or rubb

the drillings in the shape of canoe aprons, tents, etc., I am confident it is the best material for the purpose."

"Well, I think I'll take the rubber cloth," he continued, as we reached the camp, and with it warnith, comfort and dry clothing.

The next summer found us in the mountains again, and this time our outfits were augmented by a cape of oiled drilling apiece. Charles had made and tried his cape of rubber cloth, and had promptly thrown it aside on seeing mine and had promptly thrown it aside on seeing mine and had provided himself with one of drilling, like it. We had had a week's fishing in the Greenbrier, the water was unusually low, and the fishing consequently not as good as usual; the trout were small and shy and it persistently refused to rain, so we packed up one fine morning and started for fresh fishing waters.

We ascended to the very summit of the Alleghany Mountains, the backbone of the eastern half of the continent. A faint trail left the road and turned off into the trees and wound down a steep, dark defile; we climbed down out of the wagons and boldly followed it, the wagons bringing up the rear; down, down, a thousand feet or so below the lofty summit, the steep tree-clothed walls of the gorge towering above us and shrouding the place in a perpetual twilight. We pitched the camp on the banks of Deer Creek, whose brawling tide we had followed down almost from the summit of the mountains, on a small piece of comparatively level ground which we were fortunate enough to find; rigged up our tackle, strapped our water-proof capes to our creels—for the long-wished-for rain was close at hand, now that we did not want it—and went fishing. That was a weird, wild evening's sport we had. The creek was a study for an artist, and worth the visit just to see as it went brawling and tumbling down the mountain. It was a continuous cataract; there were no pools, except the short, deep holes of a few feet in extent between and among the rocks and ledges. It looked like going down stairs to look ahead, and

without moving from my tracks; and that's the way no fishing was.

Presently the rain came down; so did the creek. Something broke loose somewhere above, and a big wall of water came roaring down the gulch and piling down that devil's stairway, and there was no more fishing, nor

of water came roaring down the guich and piling down that devil's stairway, and there was no more fishing, nor wading either.

But about the capes? It's remarkable how it takes the enthusiasm out of a man when he gets the seat of his trousers wet; and as the storm roared and howled, and the rain fell in torients and whirled around us in great blinding sheets and the water streamed down in rivulets over our shoulders and ran off the edges of our capes, this very soon occurred, and in a few minutes our lower limbs were thoroughly drenched; but as we were perfectly dry and protected around the shoulders and body, we didn't much mind our wet legs. In an hour more we were all assembled in our tent again, and while Otey got us up a steaming hot supper under our fly adjoining, we doffed our wet fishing togs, including our capes, and it was found that, although we wore no coats, our flannel shirts under the capes were not even damp, and we unanimously voted the capes a brilliant success.

But the capes? Take 2yds. of heavy drilling, 28 or 30in. wide, cut into two pieces, each 1yd. long, sew together at the selvage, making one piece, 50 to 60in. wide; cut in

circular form, making the cape long enough to come well down below the waist, and over the arms to the ends of the coat or shirt sleeves; leave out a little over one-third of the circle for the open front, cut to fit the neck closely, put in buttohholes and buttons down the front; oil heavily with boiled linseed oil with a little turpentine and Japan dryer in it. The neck may have three or four gores in it to insure a snugger fit, but they are not necessary. Make up the goods with the twilled side out. Total cost about 25 cents. Total worth inestimable.

STAUNTON, Va.

F. R. Weed.

CONNECTICUT TROUT STREAMS.

MIDDLETOWN, Conn., June 14.—Editor Forest and Stream: Trout fishing in this section of the State has been uncommonly good. Not only large catches have been made, but the fish are of good size and in excellent condition. This, I am credibly informed, has been the experience of sportsmen in other parts of the State; and it is universally believed to be the result of the work of the State Fish Commissioners, continued uninterruptedly for about ten years past.

the state Fish Commissioners, continued uninterruptedly for about ten years past.

Last week one of our best fishermen went a short distance from the city for about a half a day, and returned with such a beautiful string of trout as the following, each fish being carefully weighed:

Editor Forest and Stream:

We have near our village a beautiful sheet of water, Crystal Lake. Local sportsmen stocked it a number of years ago with black bass and landlocked salmon. Only two or three specimens of the latter have ever been taken. The last one, two years ago, weighed 4½lbs. Yesterday Fred Close and Frank Talcott had the luck to capture one that promptly tipped the scales at 7½lbs. It took 35 minutes to conquer it. All the old fishermen are wild, and some of them will no doubt postpone Maine trips and camp on Crystal Lake. Bass of 3 to 6lbs, are very plenty there, and for the benefit of bass haters I will say I never yet dissected one that showed any symptoms of having dined off either pickerel or perch.

The past season has been a very flattering one for trout. I never knew so many fine strings being taken of large trout.

Although very many of our streams are posted, yet there are plenty left just as good for all of us. C. W. C. STAFFORD SPRINGS, Conn., June 28.

SOUTHERN MASSACHUSETTS LEAGUE.

Editor Forest and Stream:

The Southern Massachusetts Fish and Game League was organized in New Bedford in the autumn of last year. The objects of the association were fully set forth in a circular letter, a copy of which was sent to you.

For several years we have seen that many of the valuable food fishes of our sea coast were becoming fewer in number and of diminished size. We have attributed this to the increasing number and effectiveness of the apparatus used for catching them, and chiefly fixed or stationary engines for their wholesale capture.

Several times many of us have united our efforts to obtain protective legislation, but hitherto without much success.

During the session of the Legislature now just brought to a close, the League made another attempt and again without avail.

We were met as heretofore by a combination of several interests, backed up by any amount of money, and sustained by a committee chosen specially to look out for and protect those interests. These interests, as some of your readers may not know, are the trappers themselves, the several twine and seine manufacturers, the cod and mackerel fishermen, the railroad corporations as carriers of freight, the Board of Trade of the City of Gloucester, the marketmen of the cities, and a powerful organization having for its object the defeat of any restrictive legislation.

mackerel fishermen, the railroad corporations as carriers of freight, the Board of Trado of the City of Gloucester, the marketmen of the cities, and a powerful organization having for its object the defeat of any restrictive legislation.

We are, however, neither disheartened nor discouraged. We are unore and more conviuced each year that as to certain kiuds of fish, their exhaustion is not only possible, but probable from these destructive methods of fishing. Moreover, we are satisfied that we are instructing the people, and there is a growing public sentiment in our favor, which if we keep up, will eventually give us the advantage.

I shall have time now to speak of only one species of fish, the tautog or blackfish of New York.

The upper part of Buzzard's Bay seems to be the uursery of these fish. The returus from about seventy-five pounds and weirs all around the bay, and also in Vineyard Sound for 1888, gave a catch of about 63,000 of these fish, while on the neck of land on the east side of the Acushnet River, in a length of only about three miles, tweuty-four traps or pounds took 50,000 of them.

While we believe that this stationary apparatus and indeed all the wholesale enginery for catching fish is destructive, the tautog in our waters have suffered to a greater exteut thau any of the other kinds.

As the setting of pounds is by law permitted only to such as have licenses granted to them by the Selectmen of towns, and as we believe no such licenses will be granted next year in Fairhaven, none of those twenty-four traps will be set, aud consequently we shall have the chance hitherto refused to us to see whether our waters will not be repeopled.

We shall watch the effect with much interest, for upon it will depend all our theories as to the connection between fixed apparatus for catching fish and their increase or decrease in numbers and size.

Aside from the possible exhaustion of the fisheries, the traps and weirs do an almost incalculable injury by hindering the proper and natural distribution of th

INCIDENTS IN MY HUNTING LIFE.

IV .- REELING IN A TROUT.

INCIDENTS IN MY HUNTING LIFE.

IV.—REELING IN A TROUT.

In the spring of 1857 a party from Bethel started for the Rangeley Lakes on a fishing tramp. They were Rev. Zenas Thompson, the veteran bear killer, and Josiah Brown—both of whom have since gone to the happy hunting grounds beyond—and the third Joseph Twitchell. Arriving at Upton at the foot of Umbagog Lake early in the afternoon, they added to their company the writer, as guide, commissary, cook, boatman and companion. All things being ready we started up the lake in a rowboat. We had hard pulling, for the wind was ahead and blew hard, and we had to hug the western shore and followed near the land to the extreme end of North Bay, and so on up the East Arm. When we arrived at the carry landing it was about dark. But we were all so anxious to get to Mollychunkemunk Lake that night, to get the morning fishing, that we decided to cross the five miles as best we could that night. We got on very well until the last mile was reached, then it was pitch dark, and with only a spotted or blazed line through thick woods over rough ground to travel. However, we managed—one of us holding on to a spotted tree, while aucher went ahead and found another spot, and so on—to grope our way slowly aloug, and about midnight arrived at Middle Dam, where we found a small board camp just large enough for our party. We soon had a generous fire burning and cooked our tea and lay down for the rest of the night on our sweet balsam bed. We were awakened during the night by some animal jumping out to our camp, but we were so tired out by our last night tramp that we didn't scare worth a cent, and early in the morning we started for the dam, some quarter of a mile away, to try trout fishing.

Previous to starting, Zenas had instructed Joseph in

the art of landing trout with the nice slender rods and reels which Joseph had never used nor even seen before. Zenas told him he must gradually reel the fish in after striking him, and at the same time call for the guide to help land him.

Joseph went down upon the apron at the foot of the dam and the rest of us tried our luck above the dam. Joseph had not been there long before we heard a great outery above the roaring of the waters a-calling for help. Climbing quickly upon the dam, we discovered the cause of the alarm, for there was Joseph crying out at the top of voice, "Come quick! I've got him all reeled up."

And, sure enough, there he was with a five or six-pound trout reeled up within three feet of the end of the rod, jumping and threshing, first down to the bottom of the white water as it rushed through the dam, then up and out into the air above; and Joseph puffing and blowing and holding on and singing out, "Come quick, or I shall lose him." This was nore than we could bear; we fairly roared with laughter before we could go to his assistance.

This was Joseph's first large trout; and he thought he

This was Joseph's first large trout; and he thought he was following out the minute directions of Mr. Thompson as he recled him up solid. But Joseph saved his fish by the assistance of the guide, and he doubtless remembers this and many other comical instances of his first trip to the lakes, when the only road in was an Indian trail and blazed trees.

At that time it was not much labor to get all we wanted; and after cooking in various ways and eating all we could of the delicious red-meated beauties, we brought away all we could take care of; and treated our friends not only with a nice mess of trout, but also with the amusing story of "reeling him up."

BETHEL, Me.

BOSTON ANGLERS BACK FROM MAINE.

BOSTON ANGLERS BACK FROM MAINE.

THE trouting parties are about all in, and now the situation is left to the tourist and the vacationist. With the fishing tackle people, trout baskets and lunch baskets, with cheap rods and lines, sell better than the really practical tackle of earlier in the season; all of which shows that the real season, when the sportsmen themselves are abroad, is about over. Still the tackle people note an excellent trade in salmon tackle, indicating that the salmon rivers are to be visited as usual, though the success of last seasou, except at Bangor, was not inspiriting. But, curious enough, this year Bangor is a failure. The salmon have not put in an appearance, not even in the nets and traps further down the river. The fishdealers complain that there is a dearth of Penobscot salmon. One of the wise ones (?) ventures the theory that the scarcity of salmon is largely due to the great numbers taken by the United States Commission at Orland for breeding purposes. "The taking of these salmon should be stopped," he says. He reminds one of the boy who objected to the throwing away of so much wheat in spring time for seed, only that every salmon taken for breeding purposes is carefully put back into the river again.

One of the latest of the sporting parties with rod and

should be stopped," he says. He reminds one of the boy who objected to the throwing away of so much wheat in spring time for seed, only that every salmon taken for breeding purposes is carefully put back into the river again.

One of the latest of the sporting parties with rod and reel from among Boston merchants was that of H. B. Moore, of J. E. Soper & Co., which party has just returned from a five-days' fishing excursion to Moosehead. Hary has usually been to Richardson Lake, but this year he was persuaded to try Moosehead. His party was made up of Calvin Austin, geueral freight agent of the Boston & Bangor Steauship Company; H. M. Stephenson, architect of 'Pemberton Square; G. C. Moore, woolen manufacturer, North Chelmsford, Mass., and last, but not least, G. R. Moore, his father. The party found the fishing excellent, the largest trout taken being 34 bs., a good one for Moosehead. But Harry shows some marks of other bites thau trout. The black flies took up the situation about the last day of the excursion and the boys were literally driven out of the woods. The best of fly preventives was of a good deal of service, but nothing could more than make life endurable.

The full list of the names of the Kineo Club members, who took part in the annual excursion to Moosehead Lake this year and not previously mentioned in the Forest And Strream was: J. B. Thomas, Jr., president of the Standard Sngar Refinery; C. E. Lauriat, of Estes & Lauriat; J. F. Nickerson, of J. F. Nickerson & Co.; J. P. Woodbury, H. R. Beal, of Miner, Beal & Hackett, and J. W. Sauborn, of Crockett Bros. & Sauborn. Frank Wise, of Fisher & Wise, was a guest of the club during the trip. Mr. Nickerson caught the largest trout, a fine one, weighing 44lbs. Mr. Thomas says that the fishing was all that could be asked for by reasonable men, and the Kineo Club is made up of reasonable men that are satisfied with a reasonable members of the club to fish with the fly only. Some of the members trolled, it is true, but generally they dropped the minnow an

George Fowler, formerly proprietor of Bartlett's, in the Adirondacks, now owned by the Saranac Club, died June 26th, after a lingering illness.

THE PENOBSCOT SALMON.

THE PENOBSCOT SALMON.

DANGOR, Me., June 22.—Editor Forest and Stream: This is an off year. But forty-nine salmon have been landed to date (the last one was taken June 15), against 140 last year. There are some salmon jumping daily, but they refuse all flies offered. They are dark-colored fish, which tends to show they have been in fresh water a long time: no bright fish from the sea are seen, although the bay fishermen twenty and thirty miles below us are still taking them in large numbers. Our Commissioners attribute the cause of the fish refusing to come into fresh water to the impurity of the water when low in the river, caused by waste from the pulp mills and tamerics on the river above us. When the water is high it must be purer, caused by waste from the pulp mills and tamerics on the river above us. When the water is high it must be purer, when the water is the pulp mills and the gamiest fish) by the washing of the bank at Great Works at end of dam, which caused the water to be so muddy for a month that a fly could not be seen by a fish in a foot of water.

What we need most, in my opinion, which is indorsed by all resident and visiting sportsmen, is a weekly close time on the weirs and nets on the river and bay. There are several hundreds of them now in operation from April 1 to July 15, continuously fishing; and one man alone tells me he has taken nearly 300 salmon this season. If we could have his catch alone at the Bangor pool each season it would be satisfactory, and make grand sport, and would bring thousands of dollars into the State. I am pleased to know that the citizens are becoming enlightened on this subject, and are talking freely of helping the matter through. I also believe it would be for the benefit of the weir and are fishermen to have it a law and enforce it, and I will guarantee that their average catch will be greater by allowing more fish to go to their natural spawning bedis each year, as it is a certainty that that is the object of the fish when entering our river; and I will be g

PACIFIC SALMON IN PENNSYLVANIA.

PACIFIC SALMON IN PENNSYLVANIA.

SUNBURY, Pa., June 23.—Editor Forest and Stream:

I had intended writing you earlier, and giving a more full description than I gave Prof. T. H. Bean of a genuine McCloud River salmon (Salmo quineat) found dead after the recent flood on the shore of the Susquehanna River at this point. He, or she, was a magnificent specimen, 3Sin. in length and 10\(\frac{1}{2}\)iu. broad from dorsal to belly, and estimated to weigh from 20 to 25lbs.; undoubtedly the result of the millions of fry planted in this river during the "seventies," when, as no results had been observable, the efforts, of which we hoped great things in the possibility of being able to adopt the Pacific species in our more southern rivers of the Atlantic coast, was abandoned. The fish was in fine condition physically, but considerably decomposed when discovered, so that no accurate weight could be obtained. It was an object of great interest to fishermen and others, and was viewed by great numbers of people after my identification.

Mr. Blackford may possibly remember that about 1880 I spent an hour or so at his Fultou Market on my way home to Pennsylvania, and among other things of interest inquired about the California salmon which he was introducing refrigerated. He said he had none then, but was expecting a consignment in connection with a firm in Philadelphia, and that more than likely it might be at the Dock Street Market on my arrival there. This proved to be the fact, as they were in the act of breaking the package just as I stepped foot in the market. I then took note of the features of the quinnat, distinguishing it from the salar, the larger head and jaws, coarser scales, larger dorsal and adipose fins, forked tail and greater depth for length, etc. This magnificent fellow had all these characteristics.

I have been quite familiar with the Atlantic Salmo salar from a boy, when it was customary twice or thrice a week in the "thirties" to sit down to dinner at the old Merchant's Exchange in State street, Boston,

THE TAUTOG RECORD.— Newport, R. I., June 23.—
Editor Forest and Stream: I notice in your issue of June
20 mention of a tautog weighing 14lbs, thought to be the
largest taken in American waters. Sept. 14, 1882 I took
one on Smith's Ledge, in the Seconet River, weighing
154lbs.; I refer for proof of same to David Brown, of
South Portsmouth, R. I. May 17, 1885. at Long Rock,
East River, R. I., I took a tautog of 144lbs., reference,
Wm. Gifford, South Portsmouth; Oct. 21, 1885, at Clay
Ledge, East River, one of 144lbs., reference, Chas. M.
Hughes, South Portsmouth; Sept. 10, 1887, one of 14lbs,
20z., at Mack Rogers Ledge, off Seaconet Point, reference,
I. J. Barker, South Portsmouth. My friends claim for me
that I can show a record of large tautog that cannot be
beaten in this State, nor, in fact, on the coast. I have
followed tautog fishing since I was five years old, thirtyfive years in connection with sea bass fishing, and have
caught many large fish, but these given are the largest.
—Wm. M. Hughes.

PENNSYLVANIA STREAMS AND FLOODS

PENNSYLVANIA STREAMS AND FLOODS

ANSVILLE, N. Y., June 22.—Editor Forest and Stream: In your issue of the 20th inst. I noticed a short "snap shot" regarding the late floods in Pennsylvania, and the havoc wrought in the trout-bearing tributaries of the Susquehanna. It is too true, as I learned by bitter experience.

It was my fortune to be just nicely started on my annual fishing trip along the Loyal Sock Creek and tributaries in Sullivan county, Pa., when the floods struck us and effectually housed us for nearly a week. We had just returned to the cottoge after a very indifferent day's sport on Bear Creek, when the rain began to fall, and although we had a very pleasant time sitting by the back log smoking our pipes, reading, telling stories and mending the fire, we got no fishing, and were forced to see our vacation slip away unprofitably.

At last came the faint rumors of the terrible things going on down in the valleys, so we resolved to start for home the moment we were fairly sure of getting through. This gave us one more day, and the rain having ceased we decided to try the trout once more in spite of high water.

We found the stream very high, with riparian evidence

we decided to try the work water.

We found the stream very high, with riparian evidence of a tremendous flow of water. Old landmarks and holes, cherished and loved through many years of happy contact, were totally obliterated. The whole character of the run was changed, and we almost felt as if we were working new water. One fine pool in which my companion had fished for the last twenty-five years was totally annihilated, and his expressions of regret were as keen as if he had lost an old tried friend. But though other things had changed, the trout were still there, and at 3 o'clock we had seventy-five.

other things had changed, the trout were still there, and at 3 o'clock we had seventy-five.

The next morning we started for home, very regretfully, we had been beaten out of our sport, but the lesson of the flood from an angler's standpoint was, that while the streams were badly torn up the trout still remained, and one of the least of the evils of the great flood of 1889 was the injury done to the game fish of the Susquelanna and its branches.

H. W. Delong.

was the injury done to the game fish of the Susquehanna and its branches.

Editor Forest and Stream:
Believing that you would be interested in learning how the flood affected the trout streams in the Juniata Valley, I send you a description of one of the best as I found it on fishing it on the 24th of June, Big Run is, or has been, one of the finest trout streams in the county. In addition to its having a good natural supply I have stocked it with trout fry supplied by the State hatchery. This stream had fine pools along its entire length, but on fishing it in company with my son Charles, I was hardly able to recognize the stream. In many places the channel has been entirely changed, and in others there are two or three channels. Up in the mountain the bed of the stream in many places is cut down to the rock, the pools washed away and the harbors destroyed. We caught no trout except near the mouth of the stream, where it flows through meadows and low lands. These were fair-sized trout—another illustration of the "survival of the fittest." I fear nearly all of the small trout have been destroyed. We caught twenty-two in all, the largest about 12in., the smallest Sin.; my son, who is an ardent trout fisher, eatching nearly all of them.

I confess that after seeing the destruction of this once beautiful stream I had little heart to fish. I have been told by parties who visited the other streams in our county that they are similarly washed, particularly on the east side of the Juniata River. The flood in the Juniata does not seem to have affected the black bass; some very fine strings have been caught since the river has fallen.

SANCHO PANZA.

MIFFILINTOWN, Pa., June 29.

MIFFLINTOWN, Pa., June 29.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, III., June 25.—Even at the risk of the imputation of being thought tedious, I must once more repeat the old assertion that Chicago is a city blessed of the gods, and the only true dwelling place for any sportsman of this country. This proposition, more especially as applied to the angling interests, I had intended deliberately to set about proving by means of a series of trips into our northern fishing country. Lack of time has thus far prevented that, and gradually the proposition is proving itself, through just such hasty confirmations as a chance trip or so and a few odd bits of news may offer. Perhaps the note or two sent in earlier in regard to mascallonge fishing may have sufficed to show the certainty of success and the amount of it which meets the angler for that great fish in certain waters north of here. The season has been a prolific one, and the great streams and lakes, fished for the past five years so dangerously close and hard, seem not depleted, but still abounding, and indicative of the rare plenty which they may always offer under any intelligent treatment. The mascallonge season is now practically over, and will not begin again until the first sharp frosts of autumn has cut down the lake growth.

Bass fishing was never better in the waters adjacent to Chicago than it is this spring. I simply dare not tell all I know, or hunt up all I might find about the excellence of the black bass angling north of here this season, for it would hardly be believed. The angling referred to is black bass fishing of the very highest grade, not for ‡lb. or 1tb. bass, but for the veterans of 3 and 4lbs. weight. The bass angle of Chicago, I am proud to say, is ranked not by count but weight. The fisherman here who returns laden with a long string of small bass is simply laughed at or treated with silent contempt. It is the glory and the subject of rivalry with our anglers to bring in a few bass, the largest and best specimens possible, and to return all below the standard to the wat

spectacle. Within, the club house is finished and furnished elegantly. The floors are of hard wood, bordered in red wood, and all else is on the same scale. It is the most luxurious sportsmen's home near Chicago.

Ed. Howard, of Fox Lake, has added another hotel to his bluff possessions, and is now about the busiest man on the lake. The summer cottages are now pretty much all full. Mr. John Wilkinson and the other Crabapple Islanders are mostly at home on the island nowadays. Lippincott's holds its quorum, and so do all the other resorts. The two Mason cottages near Lippincott's burned down two weeks ago, the occupants barely getting out alive in the night.

Fishing at Fox Lake for the past week has been only fair, the catch running much to pickerel and small bass. Above Fox Lake, on the same system of lakes, the records are simply marvelous, and as I said, I should hardly dare repeat them.

HELL GATE CAMP.

repeat them.

HELL GATE CAMP.

HELL GATE, Wentworth's Location, N. H., June 22.

Week, and meanwhile visited the Diamond Ponds to try our luck with fly and bait. The weather was most unfavorable, and very little success rewarded our efforts. Monday, the 10th, we left Colebrook for Wentworth's Location and Bennett's. The heavy rains had made the roads almost impassable, and when we arrived at Wentworth's we found the Diamond so swollen that we were obliged to make a detour and be ferried across the Magalloway, opposite Bennett's.

John being a model Boniface we concluded to remain with him until the water in the Diamond subsided sufficiently to permit our fishing on the Rips. On the 12th a party of seven gentlemen from Laconia, N. H., joined us, and on the 13th we had some very good fishing, though the water was still high. A member of our party succeeded in bringing to net a 3½-pounder, which proved to be the largest fish of the day. That night we had a severe shower, and this spoiled fishing there for a week at least. On the 17th, the river having flattened out somewhat, we made an early start for Hell Gate camp. The day proved all that could be desired, and we arrived at Amasa's about 5 P. M. Since then the weather has been beautiful, the river has fallen to almost its normal level, and we have had some grand sport with the fly. If one can judge at all by appearances the river never was so full of trout as it is this season, which may be accounted for in a manner from the fact of the partial destruction of the old dam at Bennett's by the lumbermen last winter.

Let me give you an illustration of how numerous the trout are here. There are ten people here in camp now, and yesterday three of us went up the river two miles and fished only in the best places on our return. On arriving at camp we had 93 fish which weighed 28lbs. I should say that not more than one in five which we hooked were put into our baskets. An hour's float down the river any evening just at sunset will fill a ten-pound basket with fish from

THE HARVEST FISH.

THIS pretty and excellent food fish is now at its best, and I think it the equal of any pan fish on the market. Its small size is against it, so far as demand goes, but it has few troublesome bones and flesh so attractive that when once one makes its acquaintance there is no doubt about an increased demand on the dealer, who, here in Washington, calls them "butter fish," havin mind the Stromateus triacanthus, which is somewhat similar in appearance.

who, here in Washington, Chis them Jutter isn, havin mind the Stromateus triacanthus, which is somewhat similar in appearance.

The harvest fish (Stromateus alepidotus) in general appearance resembles the short or ovate pompano, being slightly shorter and deeper. Its cousin of the Pacific coast, S. simillimus, is known as California pompano, and is highly prized as food. In general color the harvest fish is silvery, turning to a more or less golden yellow on lower portion of body. Its name is derived from the fact that it usually makes its appearance about harvest time. Out of the half dozen individuals examined by the writer on June 21 but two were females full of spawn, which would have been deposited early in July. They were slightly larger than the males, measuring 7in. in length by 4in. in depth. The recorded range of this species is from New York to South America. It is often abundant in the Chesapeake, at its mouth, and is taken in trap nets, pounds, etc. In New York it is said to command a good price, while here in Washington it retails at a low price, have seen a dozen sold for twenty-five cents.

Washington, D. C., June 24.

WASHINGTON, D. C., June 24.

BLANCHE LAKE BASS.

BLANCHE LAKE BASS.

BATTLE CREEK, Minn., June 20.—Editor Forest and Stream: In looking over your paper I find under head "Chicago and the West," an account of an angler taking sixty-five black bass out of Twin Lakes in one day, the catch weighing 125lbs. Now let me give you an account of a catch that was made in what is known as Blanche Lake, about four miles north of this village. A party consisting of H. S. Townes, of Petersburg, Va., W. M. Anderson, of Duluth, Minn., and O. Albertson, a merchant of this place, went out one evening the first of the week and caught thirty black bass, twenty-seven walleyed pike and between forty and fifty rock bass and pickerel. The last two named varieties were thrown back into the lake, as it is not the custom here to save any fish but the black bass and pike at this season of the year. Fifteen of the black bass weighed 59lbs., the thirty black bass weighed 83lbs. the twenty-seven pike weighed 63lbs. The catch was made in about three hours. Blanche Lake and one near to it known as Lost Lake are full of bass, and during the month of September a catch like the one above referred to will be no uncommon occurrence.

B. Strain.

The Grand Isle Seiners.—Sorrell and Mitchell, the men caught illegally fishing on Grand Isle and sent to the House of Correction for over two years, were brought before Judge Powers at Middlebury last Friday on a writ of habeas corpus, and discharged. Nobody pretended that they were not guilty, or that their sentence was other than that imperatively required by the law under which they were convicted, but they got off on a legal technicality. W. C. Hodgkins, the justice before whom they were tried, was either ignorant of what a legal commitment was or else purposely made the mittimus imperfect, it reading that they were committed "for the crime of illegal fishing," when it should have read that they were committed for the crime of illegal fishing with a seine. On this technicality they were discharged, and it reminds people of something that happened in Washington County Court when Judge Asahel Peck was on the bench. Henry Welcome stole a team from Bruce & Ladd, of Waterbury. He was arrested and indicted by the Grand Jury of Washington County Court, M. E. Smilie being then State's Attorney, and upon trial his counsel raised the point that the indictment was not good because it set up that Welcome stole a horse from Bruce & Ladd. Upon this technicality Welcome was discharged by Judge Peck, and in six weeks from the time of such discharge he murdered old man Russell, of Hinesburg, a classmate and close personal friend of the judge, who said up to the time of his iffe. It is to be hoped that before any more criminals are arraigned before Justice W. C. Hodgkins, of Grand Isle, he will make himself sufficiently conversant with the law to perform his duties in a legal manner.—Montpelier (Vt.) Argus and Patriot.

BLURFISHING AT FIRE ISLAND.—The great South Bay is now full of bluefish, which run about 2½lbs. each, and great catches are being made of these excellent fish. Mr. Sammis's hotel on Fire Island is most conveniently located for this fishing, and no more comfortable place can be found, in our opinion, for spending the Fourth of July or a summer Sunday. Good fishing, good fare and cool breezes; what could be more attractive on these het days?

Towanda, Pa., June 30.—Two different parties, consisting of two persons each, one fishing on Bowman's Creek (Wyoming county), the other in the Loyal Sock and smaller streams in the vicinity of Laporte (Sullivan county), this State, brought in respectively 20 and 16lbs, of brook trout.—Susquehanna.

TROUT IN CATSKILL CREEK.—Cairo, N. Y., June 22.—
It is estimated that not less than one hundred and fifty pounds of trout have been taken from the "Deep Hole" in the Catskill Creek, near this village, and there are many more trout left.

Log Cabins.

Log Cabins: How to Build and Furnish Them. By William S. Wickes. Illustrated. Price \$1.50. Published this day by the Forest and Stream Publishing Company.

AMERICA'S FASTEST RAILWAY TRAIN, AND THE CREAT RECORD IT HAS MADE.—The "two-hour train" which leaves the Reading Railroad station at Ninth and Green for New York at 7:30 A. M., is the fastest scheduled railway train in the United States. In addition to this distinction, it has made a record for precision and regularity of movement which high authorities declare to be without precedent in the history of railroads. From January 110 June 1 this train made 130 trips—that is, a trip every day except Sunday—and in the five months it reached its destination behind time on only nine occasions, and in these instances the maximum variation from the time-table was but a few minutes. On the remaining 121 trips it arrived on schedule time to the second, averaging 44 per cent, of absolute prouptness. This unparalleled showing demonstrates that the Reading Railroad not only possesses a magnificent and completely-equipped line between Philadelphia and New York, but also that it is munaged with rare ability and with close regard to the requirements of the traveling public.—Philadelphia Times.—Adv.

SAWDUST IN TROUT STREAMS

Editor Forest and Stream.

A week ago I suggested an itinerary for a short fishing trip through a small portion of western Pennsylvania, ending at Clear Shade in Cambria county. I might have advised the sportsman to cross a bill to Piney Run, two or three miles from Shade, where for ten years I caught some magnificent trout; but several years ago a sawmill was built on that stream, and the trout gradually diminished both in size and numbers until fishermen ceased visiting the stream entirely. We, of course, attributed the death of the trout to the sawdust, and I have yet to see a good trout stream with a sawmill in it. Follow up the streams and the argument, as does "Piscator," and we find that after Piney Run empties its waters into Clear Shade the trout in the latter stream are comparatively scarce, while above this point they are in abundance. Following the stream and its accessories on down until it empties into the Stonycreek, we

find that the sawdust from away up in the mountains does not affect the bass in this latter stream, from the fact that there is a large volume of water, the creek covers twenty times as much ground as does little Pincy Run, the sawdust lodges here and there and finally becomes lost, or appears in such infinitesimal quantities that its effect is lost. So it is at Johnstown, Pa., the junction of the Stonycreek and the Comemangh. Twenty years ago we caught bass, perch, pike and various other fishes below that town, but since the location of wire mills, discharging their thousands of gallons of eltriol into the stream, there is not a fish taken within twenty miles of it worth mentioning. So it is everywhere. If there is sufficient water in a stream to counteract the effect of sawdust the fish in that stream will not suffer; but take a small mountain brook plentifully stocked with trout, turn loose upon it a double-geared sawmill, and in a year the bottom of all the pools will be covered 2ft. deep with sawdust, the "riffles" will be running thick with the stuff, and my word for it there will be no trout there. PACIFIC, EACRAMENTO, Cal., May 5 SAGRAMENTO, Cal., May 5

VERMONT STREAM STOCKING.—A Hoxbury correspondent of the Montpelier Argus and Patritot writes: No one who has never seen it demonstrated can tell how fast tront will breed and grow in a mountain stream. Chafles house owns and tries to protect the brook through his meadow. There are already thousands of trout in his brook about sin, in length, where there were few last summer. Mr. Longee will take great pleasure in his experiment, and it is to be hoped people will respect his rights and the law, in former days there was not a trout in this brook above the falls at J. Webbs, and one of the early settlers carried a few above the falls, intending at some finitire day to enjoy the sport of catching them. In three years the brook was full of the speckled fellows, and a hunter from Watren, who accidentally found it out, caught 75 pounds in one day, from its source to where Webb's steam mill is. This so angered the old pioneer that he never cast a hook in the stream.

DOG LICENSE LAWS.

[Continued from page 450.]

WE continue below the publication of our reports on the laws relating to dogs in towns, and the methods adopted to reduce the number of vagrant curs. The information has been secured by correspondence with the mayors or presiding officers of the several places named, and the reports were all made in 1889;

lowa.

Council Bluffs.—The city has an ordinance imposing atax of \$1.25 for male and \$2.50 for female dogs, if license is not paid they are to be destroyed, but not poisoned. This ordinance is not generally enforced for the reason that there is a State law, making a double taxation as it were. The State law is "that the assessor shall list each dog over three months old, and owner, the board of supervisors shall levy a tax of 50 cents for male and \$1 for female dogs, which tax shall constitute a special fund to compensate any one for loss occasioned by dogs killing or injuring sheep or any other domestic animal, provided the damage cannot be collected from the owner of the dog." The following is a copy of the provisions of the city ordinance: "The owners of dogs are required to register the names, breed, sex and age and dog, and the owner's place of residence, and shall to the clerk the sum of \$1.25 for each male and \$2.50 for emale dog. If this tax is not paid they are to be impounded and offered for sale for not less than the tax imposed; if not sold they are to be destroyed (not poisoned) by the city marshall, who receives a fee of \$1 for doing so.—M. F. ROHEER, Mayor.

Des Maines.—The tax on each dog is \$1, on each bitch \$3.

shall, who receives a fee of \$1 for doing so.—M. F. Rohrer, Mayor.

Des Moines.—The tax on each dog or bitch is put a metal ack with the number of the receipt given by the collector. dog found running at large without a check is taken do not be subjected and if not claimed within forty.

At hours killed. Also the mayor can upon reasonable apprehension of danger issue a proclamation prohibiting dogs from running at large not securely muzzled, they shall be slain by any person and the owner or keeper shall be subject to a fine of uot less than \$25\$. The collector shall keep "ecord showing the fame of each person from whom he il have collected a dog tax, the number of receipt and check. Dogs found for the current year \$80.—I. A. HAMMER, City Clerk.

Le Mars.—Our city imposes a tax of \$1 on male dogs and \$3 on females. The State also taxes 50 cents per head. The rehall usually shoots dogs on which no license is paid. We have no pound or other provision for unlicensed dogs.—M. A. Moore, Mayor.

Marshalltown.—We have no license on dogs in our city. We have a State tax on dogs, 50 cents on males and \$1 on females; but there is no provision made for destroying them in case it is not paid.—Nelson Ames, Mayor.

Pêru.—Ünr city taxes dogs \$1 per head and bitches \$3 per head. Dogs are loosely and carelessly assessed, not one in five being returned for taxation. Those that are returned are paid for at the rates above; those that are not enjoy the freedom of the city the same as those that are paid for, and suffer no penalties either of life or impounding. The intenion of the law is to tax all dogs at the above rates. No dogs are killed nor impounded for non-payment of taxes.—John A. Graham, Mayor,

Richmond.—We have no dog tax in our city.—James W. Moore, Mayor,

Michigan.

Michigan.

Moore, Mayor.

Michigan.

Coldwater.—As a city we do not impose any license on dogs, but have an ordinance providing for muzzling during certain seasons of the year, a violation of which renders the unfortunate cur liable to be shot by the marshal. They are seldom shot, however. Dogs are liable to be taxed under State laws, but if enumerated and assessed, the tax is not usually collected in cities, as it all goes to sheep fund, if any have been killed, which seldom happens, as no sheep are owned in cities. The consequence is, that the tax of \$1 on male and \$3 on female dogs is usually not paid; anything remaining goes to school fund.—B. H. CALKINS, Mayor.

Flint.—No tax is imposed on dogs, nor are there any city ordinances restraining their freedom.

Saginany.—We do not tax dogs; had a dog tax some six years ago, but abolished it again. We shoot stray dogs and vicious ones also.—Wh. Binder, Controller.

Kalamazoo.—Our city imposes no license on dogs. There is nothing done in the matter of disposing of stray or unlicensed dogs, and they are never impounded, and in fact the dogs have it very much their own way.—CHAUNCEY STENG, City Clerk.

Ettal Saginaw.—There is no ordinance in regard to the licensing of dogs in the city, but there is no penalty if tax is not paid and the law is not enforced.—FEED. A. ASHLEY, City Clerk.

Marshall.—Our license for dogs is \$1. In case of failure to pay same, they are impounded and killed with strychnine. During the present year we have impounded and destroyed six dogs only.—F. R. AMLAR, Recorder.

Grand Rapids.—The tax on dogs in this city is for males \$1, and for females \$2. Dogs are required to wear the liceisc tag, and any dog found loose without it is impounded. and may be redeemed by the owner on production of evidence that the dog is duly licensed and payment of \$1 pound fee and 20 cts. a day for keep. The dog is slain if not redeemed. Violations of the ordinance are punishable with fine which may extend to \$000 or with imprisonment which may extend to a year. The funds rai

Mayor.

Indiana.

New Albany.—The city does not collect any tax or license on dogs, but the county does. The tax on male dogs is \$1, and on female \$2. We have no dog pound. The dogs run at large without muzzles. During the summer months a great many dogs are poisoned by citizens, but there is no protection for dogs whatever. The tax collected is for the purpose of paying for sheep that are killed by dogs. We have a few very valuable dogs in this city, but their owners have no recourse if any of these dogs are killed. During the summer months they have to keep them muzzled or confined to keep them from being poisoned or killed.—John J. Richards, Mayor.

Fort Wayne.—The tax in this city is, dogs \$2, bitches \$5. We have no pound or register for dogs.—W. N. ROCKHILL, City Clerk.

South Bend.—We require a license of \$1 for male and \$2 for female dogs. We have no dog pound. We require all dogs running at large to be muzzled between Aug. 1 and Sept. 1, and all dogs found without being properly muzzled on the streets between those dates are killed by the police.—Wm. H. Longley, Mayor.

Evansville.—We issued 2,000 dog licenses including females. The dogs are taxed \$1, females \$2. We have no dog pound; those few that escape taxes are let roam unless very worthless, when our policemen shoot them. I don't suppose there is more than one dog shot in twelve months in this city.—J. H. Dannettell, Mayor.

Valparaiso.—Our city imposes a tax of \$1 on dogs and \$2 on bitches. Dogs running at large unlawfully are destroyed by marshal and police. Number of dogs assessed in 1888 was 118, bitches 13.—T. G. Litte, Mayor.

Illinois.

was 118, bitches 13.—T. G. LYTTE, Mayor.

Illinois.

Freeport.—Mayor A. Bergman, of Freeport, reports that the license fee in that city is \$1; that unlicensed and stray dogs are impounded and killed if not redeemed in three days. Bloomington.—We have a dog tax which is assessed for by the regular assessor of the township of \$1 for each dog. In addition to this we have an ordinance requiring dogs to be muzzled from June 1 to Oct. 1; it also provides that dogs that are not muzzled shall be shot. We have not killed any dogs. This same subject we are giving attention to. It is dangerous to shoot the dogs in the street. We believe the system of impounding to be the best, and satisfying, as it gives people time to get their dogs and muzzle them before they are destroyed.—J. R. MASON, Mayor.

Rock Island.—The municipal tax on dogs is \$1 per head. Every owner is required yearly on June 1 to take out stamped metallic check and place it on the dog, and by the number of the check the dog and owner are registered within one month are required to be shot on sight by the police. The tax collected for the last fiscal year was \$317, dogs killed 157. In case of existence of hydrophobia, or supposed danger from this source, by proclamation from the Mayor, all dogs, registered or not, may be ordered to be muzzled or chained to prevent running at large during the time limited by proclamation are to be shot on sight by the police. No provision exists for impounding dogs.—VIRGIL*M. BLANDING, Mayor.

Aurora.—This city for the year ending June 30, 1889 licensed 450 dogs at \$2 each and caused 100 to be destroyed. The license rate this year has been reduced to \$1 and the number of license issued to date is 460. All dogs running at large must be muzzled from June 1 to Oct. 1. We impound all dogs for four days after they are caught before destroying them if no one redeems within that time.—Geo. Meredith, them if no one redeems within that time.—Geo. The license and and casts of one of the process are arrested and fined \$5 and costs for no

Ottawa.—The Mayor reports that the license tax in that city is 75 cents per year, that unlicensed dogs are destroyed, and that 150 were destroyed the past year.

Lincoln.—Our city does not impose a tax on dogs. Stray dogs are destroyed on the streets. Under our city laws, the Mayor can have all dogs either muzzled or destroyed when he thinks it is necessary.—C. M. KNAPP, Mayor.

Rockford.—We have no pound. For about sixty days, during dog days, Mayor gives authority for police to shoot all dogs running at large not muzzled and unrestrained.—H. C. Scovill., Mayor.

Springfield.—The license fee on male dogs is \$1, on fewales \$3. Stray dogs or dogs running at large are impounded in the dog pound. After three days' detention if not redeemed by the owner they are destroyed. The redemption fee is the same as the license fee.—Chas. E. Hoy, Mayor.

Minnesota.

Minnesota.

St. Cloud.—We tax dogs \$1 for males and \$8 for females. The method of collecting is simply a notification to the parties owning the dogs. Our ordinance provides for a fine to any one who will keep an unlicensed dog; also that such unlicensed dog shall be destroyed. We have no pound to dipose of them. If they are not licensed they are destroyed by the police; that is, they are supposed to be. I must admit, however, that several dogs slip through without the owners paying the license.—W. WESTERMAN.

Minneavoitis.—The license on dogs in this city is males \$1.20 and females \$2.20. They are impounded if found unlicensed, and at the end of three days if not called for by owner are killed.—CHAS. C. AMES, Mayor's See'y.

Dulutis.—The tax on each male dog is \$1 and on each female dog \$5. We have no pound. Owners are required to see that their dogs are licensed and in default are liable to a fine. The police are instructed to kill all unlicensed dogs and receive a fee of \$1 for each dog killed.—J. B. SUT-PHIN, Mayor.

St. Punt.—The license is \$2 for males, \$4 for females. Stray, unlicensed dogs are eaptured, taken to the pound, held for twenty-four hours; at the end of which time, if not redeemed, they are destroyed by being put into a cage and drowned. The scason for taking the census and capturing stray dogs is not yet over. Up to date there have been about 2,800 male dog licenses issued, and about 200 female dog licenses issued; about 700 dogs have been captured and destroyed.—Thos. A. PRENDERGAST, City Clerk.

Red Wing.—Our dogs are at present made personal property. Owners are taxed as for other personal property, but we find that it does not work well, as many having dogs do not list them, necessarily we have a great many dogs running at large. The subject is now in the hands of Committee of Council and City Attorney to draft a license. Have no fixed method of disposing of stray or lost dogs.—W. E. HAWKINS, Mayor.

Fairbault.—Fairbault collects a license of \$3 for females, \$1 for males. We have an ordin

Dakota.

Huron.—Our dog license is male \$1, female \$2. We keep them in pound twenty-four hours, and if not claimed and license paid they are destroyed. We keep no record of those destroyed.—H. J. Rice, Mayor.

MASTIFF PEDICREES IN THE A. K. C. S. BOOK,

Editor Forest and Stream:
As long as the A. K. R. was in the way I refrained from commenting on the above for obvious reasons. It is now time they were shown up. The strong plea for "an official stud book, sir," was that it would be so much more accurate than a private one, it would be "watched aud gnarded," it would be of exact accuracy, etc., etc. How has this turned out? Let us see. I do not go back of Vol. V., which is the latest.

stud book, sir," was that it would be so much more accurate than a private one, it would be "watched and gnarded," it would be of exact accuracy, etc., etc. How has this turned out? Let us see. I do not go back of Vol. V., which is the lafest.

8790, Busker, and 8829, Thor. One of these was a thoroughbred boarhound, shown at New York in 1888, I think it was Thor, but am not certain. Anyhow, there is no excuse for this, for I myself pointed the matter out to the secretary of the A. K. C. and if the liberty of changing an owner's views as to paternity may be arrogated to itself by "the official" (see further on), surely, they can correct an evident error in a show entry. S787, "Beau, by imported Colonel ex imported Joan" This may be all right, but as a pedigree is worthless, as nobody knows who "imported Colonel" or "imported Joan" are. 8802, Gilliard. Rajah is said to be by Druid ex Queen! What a "guardian" that didn't know that the great mastiff sire Rajah was by Griffin ex Phillist 8811, Lord Brougham, is that pedigree that was made so notorious as a fraud. In 8814 we have Bosco II, should be Bosco III, (a triffing error). 817 is very doubtful. Norah is said to be by Green's Monarch ex Phyon. Now Phyon is the way the E. K. C.S. Book gives Capt. Cautley's Phryne, dam of Mr. Exley's Venus, who was dam of that crack Bosco and also of Hero II. Norah was owned by Mr. James McNamee, and was entered at the New York show of 1883 or 1884 without pedigree; while it may be correct, I am strongly of the belief that the pedigree of Hero II.'s dam has been given to the bitch he was mated with. 852 and 8833 are the old frauds, with Ben Lomond. "Masson's Salsbury." etc., same as 8311. 8861, Venus III., says that there was a Princess Royal who was by The Emperor ex Countess, by Sultan. This Countess is dam of The Emperor. Did The Emperor ever serve his dam? Chaucer, by Orlando ex Ilford Cambria, is probably all right, as there was such a litter.

After this time the committee of the Clique Club number one undertook charge of m

nell's repeated admissions to the most reputable men. Yet on the bare record in the English Kennel Club Stud Book. "the official, sir!" with the flunkiness so well depicted in a late number of the Leudon Stock-Keeper, arrogates to itself the right to upset the convictions of the owners of dogs who send entries to its "watched and guarded" columns! Has an owner any rights against flunkyism? If I remember aright, Elm Place Jumbo was entered in "the official" (Vol. IV.) and (by accident, I presume) Crown Prince was stated to be by The Emperor, and in a tabulated pedigree (I think of the same dog; this was changed to Young Prince!

11,579, Brenda Secunda, is said to be by Turk out of Brenda, Brenda, by Nichols's Quaker out of his Venus! Great snakes! Venus, a bitch that was whelped about twenty years since being the dam of one now living! The Brenda, dam of Brenda Secunda and Idalia, is 12,159 E.K.C.S.B., while Nichols's Brenda was 2,359. 11,771, llford Comedy, is correctly given as out of Idalia (litter sister to Brenda Secunda), who is by Turk out of Brenda, by Nero out of Princess. 11,731, Lord Raglan, is correctly given as by Crown Prince out of The Lady Rowena, while in 11,797, Wambda, Lord Raglan is said to be by Crown Prince ont of Idalia! Now remember that "the committee of the American Mastiff Club, sir!" are credited with having examined the pedigrees after number 9,667 as well as the profound master of mastiff pedigrees, who kindly vouchsafed Dr. Thompson the news that Hero III. was "no mastiff." Are we to understand that "the committee" were such gross blunderers as to pass 11,731 allright and not to note that 11,797 contradicted it? Or are we to believe that the elegant heading as to "examined by," etc., is simply another piece of the delicate casuistry so characteristic of No. 44 Broadway?

Now do not forget that it was constantly heralded abroad that the "official stud book, sir!" was going to be above all errors of dog owners; it was going to insure absolute correctness. When it was picked up for th

SOUTHERN FIELD TRIAL CLUB DERBY.

MARIETTA, Ga., June 22.—Editor Forest and Stream: The second annual Derby of the Southern Field Trial Club closed June 1 with fifty-one nominations—forty-two setters and nine pointers. I herewith inclose you a list of them. All were whelped in 1888. T. M. BRUMBY, Sec'y. ARIETTA, Ga., June 22.—Editor Furest and Stream:

"PRINCE GHARLIE."*

In Memoriam.

TPON the restless, busy town The gracious twilight settles down, And harsher sounds of garish day Fade, like an echo, far away.

Within my quiet room I sit (Freshly my friendly pipe alit), And suffer thoughts to freely roam Like birdlings from their leafy home.

From past to future, sad to gay, Like sunset bright, like smoke wreath gray; From dusty street to shady lane, From breezy hill to sunny plain

They flit, but chiefly do they trend To where some spreading branches bend Above a form whose sepulture They seem to bless and make secure.

A little mound it is, but wet With tears of deep, sincere regret: A little mound beneath which lies A friend whose virtue never dies.

Fidelity, and love, and trust
There rest, while mingles with the dust
His graceful form, so dear to me—
Forever now a memory l

My friend—a dog—lies there, and small The tribute though I give, 'tis all That any friend may claim, I ween, Whose love hath been oasis green

In life, whose thorny ways stretch on Through scenes by hard experience won, And cheered by few with faith like thine, Now lying low, like withered vine.

Prince Charlie, though the cynic sneer, The friends who loved thee love thee here, And in their faithful hearts thy name Shall ever tenderest tribute claim.

Soft western winds sing in the leave Over the friend my true heart griev A gentle requiem, for his life Was gentle and with goodness rife.

JUNE 21.

*Died, on June 20, Prince Charlie, a beautiful Yorkshire Skye terrier, belonging to Mrs. E. V. Pierce, Billerica, Mass., of old age

DOG TALK.

DOG TALK.

WE clip the following from the Philadelphia Press:
A peenliar dog suit was heard before Magistrate Clarke, June 19. On the affidavit of Charles Raffertya writ was issued for the arrest of Joseph Farrow, of 3112 Spring Garden street, on a charge of "trover and conversion," the property being a shepherd dog which had heen lost on June 13, and which Farrow had in a stable at the above address. Half an hour later Farrow and the dog were hrought hefore Magistrate Clarke. Rafferry testified that he had lost the dog on the afternoon of the 19th while in a shop at Forty-first and Haverford streets, and had traced the dog to the drove-yard, where he had been using him for shee driving for the past eighteen months.

Sunday, the 16th, he heard that a young man had such a dog, and on going to him learned that he had taken the dog to Dr. Hextamer M. Perry, of Thirty-fifth and Hamilton streets, who claimed it and gave him 50 cents for his trouble. At Dr. Perry's Rafferty was told that the dog had been sent away, but that if he called the following afternoon at 3 o'clock he would have him for Rafferty to see. Rafferty kept the appointment, but there was no dog on hand, and he was then told to go to 3112 Spring Garden street and ask for Joe Farrow, who would show him the dog. Then Farrow demanded \$15 before the dog would be given up.

Harry Laird, who had taken the dog to Dr. Perry, swore that he did so as it looked something like dogs he owned, and when he asked Dr. Perry if he had lost a dog he said he had. When the dog was shown he claimed it was Ben Nevis, hut a person with him said it was not that dog, whereupon Perry said it was Sen Nevis, Jr., and gave him 50 cents for his trouhle.

Mr. James Watson, of Germantown, the last witness, said that the dog was his property, but had been used by Rafferty for the past eighteen months for sheep-driving. That on being informed by Rafferty of the whereabouts of the dog he called on Farrow, when the Fire had been used by Rafferty for the whereabouts of the dog he called

refused, though Farrow came down to so defore Mr. Wasson left.

Magistrate Clarke then called upon Farrow to tell his story, and he asserted that he bought the dog theevening of the 13th from Dr. Perry for \$10.

"You told my brother this morning you gave \$4 for the dog," interrupted Rafferty. "I know I did, and I did give \$4 and more that. I gave Dr. Perry \$10 for the dog," "You swear that?" said Magistrate Clarke, "Yes, sir." "Well, we'll attend to that presently. What do you propose doing with the dog?" "Pll give it up. I don't want to take a dog that doesn't belong to me." "Mr. Watson, take your dog," said the magistrate. He suggested that Mr. Watson could have a warrant for the arrest of Dr. Perry on the evidence given, but Mr. Watson didn't "care about going so far."

We are informed that Mr. John Borland, of Boston, Mass. as imported from England a good Skye terrier dog. The Canadian Kennel Club will hold their inaugural field

trials at Chatham, Ont., beginning Nov. 11. There will he a Derby and an All-Aged Stake. The address of the secre-tary is C. A. Stone, London, Ont.

The Farmers' Lancaster County Fair Association will hold a dog show in connection with their annual fair to be held at Lancaster, Pa., Sept. 9 to 13.

There were 90 entries at the dog show held at Los Angeles, Cal., last week. A list of the awards will be published next week.

Mr. P. Lorillard, Jr., has purchased of Mr. J. Shelley Hudson the well-known English setter dog Sportsman.

Mr. P. Lorillard, Jr., has purchased of Mr. J. Shelley Hudson the well-known English setter dog Sportsman.

NEW YORK DOG TAX LAW.—Attorney-General's Office, Albany, N. Y., June 17, 1889.—To the Secretary of State: Dear Sir—The communication of George Barber. Esq., assessor, East Poestenkill, directed to the Secretary of State and referred by you to the Attorney-General, has been duly received. The information which he seeks has reference to the construction to be placed upon Chapter 466, Laws of 1889, entitled "An act to amend Title 17 of Chapter 20 of Part 10 fthe Revised Statutes, entitled 'of dogs." This act was passed June 13, 1899. It amends Sections 1 and 13 of the above title of the Revised Statutes setting 1 and 13 of the above title of the Revised Statutes and Eric are added to the county of New York, as excepted from the provisions of the Revised Statutes. (b) It increases the tax upon a dog other than a bitch from 50 cents to \$1. (c) It exempts all dogs under four months old from any tax. (d) It provides for the registry of every other dog, annually, on or hefore the first day of May, by the owner or harborer thereof, in a hook kept for that purpose, in the office of the clerk of the city, village or town in which such dog shall be owned or harbored, and the owner shall cause such dog to wear around his neck a collar which shall he distinctly marked with its owner's name and registered number; and said clerk shall, on or before the first day of June, furnish to the assessors of the town, etc., wherein such dog is owned or harbored, a list of parties or families owning or harboring such dogs so registered. (e) Penalties are then provided for the fall mre to register, number or license such dogs. (f) Provision is then made that any dog not registered or collared, as provided for in the act. may be lawfully killed by any constable, etc. (g) Provision is then made by way of amendment of the Revised Statutes for the payment for sheep killed, from the fund to be raised hy said tax. (h) The act is not to ap

AMERICAN PET DOG CLUB.—New York, June 27.—A special meeting of the American Pet Dog Club was held at 129 East Sixteenth street, New York, on Wednesday, June 26, at 4 o'clock P. M., with the president in the chair. Members present were Mrs. Chas. Wheatleigh, Mrs. Draper, Mrs. Fairchild, Mrs. Barnum, Mrs. Baldwin, Mrs. Cunningham, Mrs. Randolph, Miss Bannister and Mr. Wm. J. Fryer, Jr. The minutes of the preceding meeting were read and approved as read. Treasurer's report read, accepted and ordered on file. The committee on securing a hall reported that if not rented before Sept. 1 it could be secured by the club. Committee on by-laws reported several bids, and it was left to the president to decide. It was voted that application be made hy this club for membership in the American Kennel Club; and that the club hold a show of pet dogs in October, exact dates and days to he duly announced in the papers. The annual election of frustees resulted in the reelection of Mrs. Wheatleigh, Mrs. Randolph, Miss Bannister and Mr. Fryer, and the election of Mrs. Fairchild to the existing vacancy.—MARION E. BANNISTER, Secretary.

DEATHS.

Daisy. Gordon setter bitch, whelped April 10, 1880, owned by A. B. King, Jr., Troy, N. Y.; poisoned.

KENNEL MANAGEMENT.

No Notice Taken of Anouymous Correspondents.

C. H. Eric, Pa.—I have an Irish setter pup, Il months old, who tout of condition: nose dry and hot, scaling off and filling up; he office a good deal; eve matterly hair dry and bristling, stands prough. I think he has had distemper. Veterinary doctor pre-cribed for distemper when he had no appetite, and he seemed to at better. What shall I give him? He will not go into water. ns. Distemper, Give 5grs, quinine night and morning. Give aspoon of whisky in water three times daily for a week. Keep im quarantined. Change bedding frequently and sprinkle carolic solution in kennel.

olic solution in kennel.

A. C. C., Hartford, Conn.—I have a pointer dog tronbled with yeak eyes. His eyes run badly—something of a watery nature. What is the proper remedy? Ans. Sponge the eyes each day vith borax and water. The tronble may be due to lack of exerise, improper feeding or digestive disturbance. These should be coked after. If digestion is poor, give Fowler's solution, 5 drope, tight and morning, mixed with the food. Keep the bowels easy. Two or three compound cathartic pills at a dose will do this.

ATTENTION is called to the advertisement in another column of D. Finch, Ancram, N. Y., who offers some fine foxhound pups for

Rifle and Tray Shooting

RANGE AND GALLERY.

OUR TEAM ABROAD.

COUR TEAM ABROAD.

LONDON, June 29.—Several members of the English Volunteers met the American riflemen on their arrival here to-night. The men were weary after their long journey. Major Frost said, however, that they were in good health, and after two days' rest they would be ready to meet the team of Berkshire Volunteers on Tuesday. The interest of London centers in the match with the Honorable Artillery Company on July 6, when picked men have been arranged to meet them.

Loydon, July 1.—The Massachusetts rifle team was entertained by the Honorable Artillery Company yesterday. After a drive through Hyde Park and Kew Gardens they dined at the Star and Garter Hotel, Richmond. On returning they drove to Wimbledon Camp, where tents are already pitched and teams are practicing.

The team practiced in the norning at Murhead, near London, and in the afternoon shot its first match with a team from the Honorable Artillery Company for a prize offered by the company, and won easily by 5 points in the total. The sbooting was at 200, 500 and 600yds, on the ranges at Nunhead, and the scores made were not on the whole very brilliant.

Each man had 7 shots at each range, besides 2 sighting shots. Wimbledon targets were used. At the 200yds, range the team shot in a standing position. At the other two in a prone position. The Massachusetts team used Springfield rifles, as used in military competitions, with the regulation government ammunition, the rifles fitted with wind gauge and a perture sight, as allowed in competitions in the United States.

The Artillery boys had Martini-Henry rifles with open sights, and ammunition as issued for the volunteer service. Telescopes, spotting and coaching were allowed.

The day was a very fair one for shooting, excepting for the fact that a trickish, changeable wind was blowing. While the 200yds, rauge was being shot it blew from the left, the rear, and at times shorted from all points between the rear and the left, and was often gusty.

The American team pronounced the range a poor one an

The Massachusetts team will shoot a match with the Royal Berkshires at Churn to-morrow, and with the London Rifle Brigade at Rainham the next day.

LONDON, July 2.—The following memorial to the National Rifle ssociation, and the Council's reply thereto, have been pub-

London, July 2-The robotics reply thereto, have been published:

"The committee of the South London Rifle Club having arranged to shoot a match with the American Team about to visit this country, and baving elected them honorary members of the club during their stay here, respectfully request that they may be permitted to use their regulation Springfeld rifles in the several M. B. L. competitions at Wimbledon, in which, as matters stand, they will be unable to fire a shot, because the 'Buffington' screw aperture rear sight, which in 1884 enperceded the selfding wind gauge buckhorn sight adopted in 1879, is barred by the N. R. A. rules.

"William Tuke, Hon. Secretary."

"William Tuke, Hon. Secretary."

From the Secretary, National Rifle Association, 12 Pall Mall East. London, S.W., to the Chairman of Committee of Sonth London Rifle Club, Nunhead, S.E.

JUNE II, 1889.—Sir.—I am directed by the Council of the National Rifle Association to acknowledge the receipt of the Memorial from the South London Rifle Club, requesting that the members of the American Team, who have been elected Honorary Members of the Club, may be permitted to use their Regulation Springfield Rifle in the several M.B.L. Competitions at Winbledon. In which, as matters stand, they will be unable to fire, because the "Buffington" screw aperture rearsight, which in 1889, superseded the Shding wind-gauge "buckhorn" sight adopted in 1889, is barred by the N. R. A. ruge. "buckhorn" sight adopted in The Council desires me to state that they account to have the pleasure of acceding to it, and the follow-increase of the South London Rifle Club be refused, as it is a divisable that the general regulations of the National Rifle Association respecting the sights of military breechloaders be departed from." I have the honor to be, sir, your obedieut servant,

BOSTON, Mass., June 29.—The regular shoot of the Massachusetts Rifle Association was held to-day with a good attendance and some fine scores, especially those of Mr. Hill from Lawrence. The weather conditions were favorable, except the heat. Mr. Richardson won the gold champion medal and Mr. Francis won the gold medal in the 20-shot rest match. Following are the best scores made to-day:

isence.
FOREIGN RIFLE NOTES.—The Swiss commission appointed or report upon the adoption of a new rifle had secommended the muncdiator ne-equipment of the whole of the Federal troops with eapons after the pattern submitted by Col. Schmidt, of the Swiss

immediate re-equipment of the word of the Swiss Aruv.

A Frenchman, M. Bieunait, is said to bave found the means of replacing the metal shell of cartridges by one of a vegetable composition, which will be entirely consumed in firing. This cartridge scarcely weighs one-half of a metal cartridge, the price is considerably less, and its use will do away with all the drawbacks attached to the extraction of the shell after each shot. As the metal shell, however, secures the closing of the gun, M. Biennait has invented a new contrivance, which may be easily affixed to every gun at a small expense, and which would give to his vegetable shell the same advantage as possessed by those in use. The employment of these new cartridges would enable soldiers to carry twice the number now allowed, and thereby the difficult problem of the supply of ammunition in battle would be greatly simplified.

NEWARK, N. J.—The thirty-seventb annual festival of the

Simplified.

NEWARK, N. J.—The thirty-seventb annual festival of the Newark Shooting Society will be held at the Newark Shooting Park, Thursday, Friday and Saturday, July 4, 5 and 6, Schuctzen rules to govern. Hours of shooting: Thursday, 1 to 7 P. M.; Friday, 9 A. M. to 12:30 P. M., 1 to 7 P. M.; Saturday, 9 A. M. to 12:30 P. M., 1 to 6 P. M. Bullseye target will close at 4 P M. on the last day. Officers for 1889: Pres., Henry W. Egner, Vice-Pres., William Hayes; Treas, Julius Stapft; Sec., C. H. Townsend. Shooting committee; August Bigerow, 1st shooting master; John Coppersmith, 2d shooting master; William Hayes, Albert Seitz, C. H. Townsend.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are par-ticularly requested to write on one side of the paper only,

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

FIXTURES.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. I.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. 3. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

NEW JERSEY STATE TOURNAMENT.

Philadelphia.

NEW JERSEY STATE TOURNAMENT.

THE New Jersey State Association for the Protection of Fish and Game (so-called) met at their rooms, Continental Hotel, Newark, on Tuesday last, Dr. Pindell, president, in the chair Wm. Haye's secretary. Nincleen clubs were represented, berides a large gathering of sportsmen from different parts of the State, and much interest was shown. The conduct of the State shoot for 1839 was unanimously awarded to the Jersey City Heights Gnn Club if they would accept the responsibility. At a meeting of the last-mentioned club at their rooms, Newark avenue, J. C. H., on Thursday last, it was resolved to accept the same, and the following committee on organization and running matters were appointed with full power to act: Chairman, Frederick Quimby, Milton Lindsley, Albert Heritage, with Wm. Hughes, George B. Eaton, J. J. Maher and Dr. F. Cummins sub-committee. Any clubs wishing to join the State Association can do so by applying to Wm. Hayes, Secretary, Broad street, Newark. There will be a four-day tournament, two days at clay (not graven) images and two days at live birds. Sweepstakes at times at both will be open to visiting sportsmen outside of the association prizes and badges. One of the marked features of the occasion will be a 5 live bird shoot for old stagers only. No one less than 55 years will compete. The shooting to be old style and what we have always advocated, gun below clobow until the bird is on the wing. Only bona fide members of regular organized clubs of the association allowed to compete. Five prizes of \$15 cacb have been so far maranteed. This age limit we fear will bar out Uncle Billy fingbes, as he has recently renewed his age and is not now over 40. Also the field editor Jake P., he only calls now for about 55 or so, but we have a small matter of old to settle with Jake and we shall insist upon him being allowed in, and we propose to test his sight on the rubes and delicacy on the trigger. We know he used to shoot most as well as he writes, which is say

TOURNAMENT OF THE NORTHWEST.

TOURNAMENT OF THE NORTHWEST.

TAGOMA, Washington Territory, June 20.—Editor Forest an Stream: The great tournament of the Sportsmen's Association of the Northwest, held at Tacoma under the direction of the Tacoma Rifle. Rod and Gun Club, is over, and has been a greasticcess. The weather was pleasant and attendance large. Ever thing passed off pleasantly, and each member took it upon him self to make it pleasant for sisting sportsmen, of which there were a large number as follows: J. H. Foster, G. K. Streight an A. W. Du Bray ("Gaucho") of Walla Walla; G. W. Hugci, W. E. Close, Geo. Reed, J. L. Field and H. O. Peters, Kalama; J. Dotoy and A. Cooper, Whateom; J. West, S. T. Stine, J. R. McLaughlin, J. McNaught, J. C. Natrass, Jos. Hardy, H. W. Robertson, G. Kellogg and A. W. Hardy, Seattle, E. W. Moore, J. L. Fristol Grip"), Frank Carter, C. H. Smith, Butte City, Montana W. H. Stimer, St. Faut, get and fine and seating the shorting one of the scores were large, and if any Eastern sportsman in looking them over should think that if he had been there he would have had a "pudding" let me assure him of his mistake. There were as good shots here as will be found anywhere, as the scores at live pigeons (at 4 cents each) will show. The background for one unused to it was the worst possible, being of the heavy dark green of the immense fir forests. A trestle to convey water was also a prominent feature; and one man expressed the opinion of nearly all when he remarked, after missing a bluerock, "That trestle has cest me \$40." Five unscreened traps were used, with unknown angles There was no wind, and for live birds the conditions were east.

No 1, 10 single bluerceks, entrance \$2.50, 40, 30, 20 and 10 percent:

West. 5 Brown 6 Moore first, ties div. At the annual meeting of the Association the following persons were elected to serve the ensuing year. The next tournament will be held in Portland: President, A. W. DuBray, Walla Walla, Vice-President, E. E. Ellis, Tacoma; Secretary-Treasurer, H. F. Hudson, Portland. Montana was admitted to the Association. A committee of one from each club was appointed to revise bylaws and constitution.

NORTH END VS. BALTIMORE.

NORTH END VS. BALTIMORE.

I RANKFORD, Philadelphia, June 28.—To-day was field day for the members of the North End Gun Club, being the return match with the Baltimore Gun Club, a hitherto unbeaten organization. A short time ago they had the pleasure of hanging the North Enders up for 8 birds. To-day they were taken into camp, regaled with the best the market afforded and beaten to the tune of 16 birds, neither club shooting up to its average. The visiting team was met at Broad street station by a committee containing Capt. W. H. Pack, James Wolstencroft and A. L. Lumb. On reaching Frankford the visitors were scated in Mr. Gray's large, new coach and driven to the Messrs. Wolstencrofts' Mill. Here the visitors were invited to partake of dinner, which was laid in the large new stock room of the mill; covers were laid for seventy-five persons, and the way that lobster and chicken salad and more substantial comestibles, not forgetting the great American institutions, pie and ice cream, disappeared was a caution to doctors. The lady friends of the North End club came in for the highest kind of encomiums from all, and more especially from the visitors. After the good things had been disposed of the march was taken for the grounds, a short distance away, and shooting began at once. The match was for 25 single birds each, Keystone targets, National Association rules, teams of five and six men each:

THE GLOVERSVILLE (N. Y.) GUN CLUB will hold a tournament to-day.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

BOSTON, June 26.—There was a fair attendance of trap shots at the range to-day. The weather conditions were good and several clean scores were made. Among the visiting sportsmen present were Mr. Hall, of Chicago, who made his maiden attempt at trap-shooting, and, as will be seen by the scores helow, did remarkably well for a new beginner; and Mr. Bowker, of the Natick Sportsman's Club, who, with a light 12-gauge gun, did some excellent work. The principal event was the fifth competition in the gold coin and merchandise match. The following is a summary of to-day's events:

Gold Coin and Merchandise Match.

Fifteen clay pigeons and 15 Keystone targets, five traps; Keystone squad system.

Clays. Koystones.

The winner	o in the sweepstuke matches	were as follows:

weepstake shooting.

TORONTO, June 25.—The third championship match of the Offland Rifle Association was shot over the different ranges to-day.
The day was all that could be desired for fine shooting. Newton
Brook, Scarboro' and Orillia made the three highest scores that
have ever heen made by any teams in the association. The marksnanship exhibited was indeed wonderful, and proves what perection can be attained by practice. The score of each team is
uppended, and the total matches won and lost out of the three
hot. It is but fair to mention that Alliston shot with only nine
nen, while all the rest had ten:

Points.—Total won.—Total loct

	Points.	Total won.	Total lost.
Orillia	791	28	2

BOSTON GUN CLUB, June 29.—At the Boston Gun Club shooting tournament for the experts at Wellington to-day, the principal event was the 100 clay-pigeon championship, to the winner of which was given an elegant gold watch charm. This was taken by J. Knowles of the Lowell Kod and Gun Club, who also took the special prize of \$\frac{5}{5}\$ given by the club for the best score over 90. Taking into consideration that of the 23 shooters contesting nearly all were the cline of the different clubs in Massachusetts. The Brockton, Wellington, Lowell, Matck, Worcester, Willimantic, Ex-ter, Mussachusetts Rifle and Boston gun clubs were all represented. The winner was beartily congratulated by all the sportsmen present. The names of the leaders are given below in the respective sweeps: Initial sweep No. 1, set traps—Docke, Bartlett and Stanton. Initial sweep No. 2, set traps—Dockey, Eager, Smith, Spring, Bowker and Bartlett. Tenclays. Perry; 10 clays, Knowles in Clays, Knowles, Eager, Choute and Cooper; 10 clays, Knowles and Perry; 10 clays, Stanton, Smith, Eager and Choate; 10 clays, Knowles and Perry; 10 clays, Knowles, 10 clays, Hen, Stanton, Choate, Bartlett, Chase, Knowles, 10 clays, Perry and Nichols; 7 Peorias, Swift; 10 clays, Knowles, 7 Peorias, Stanton and Knowles; Eager Dickey match, 25 clays; Peorias, Stanton and Knowles; Eager Dickey match, 25 clays, 10 clays, Perry and Nichols; 7 Peorias, Swift; 10 clays, Knowles, 7 Peorias, Swift, 10 clays, Choate, 10 clays, Choate, Totals of scores in the 100 bird match: Knowles first, 12; Perry second, 91; Eager third, 87; Dickey, 17; 7 clays, Swift; 10 clays, Choate, 10 Peorias, Swift, 10 clays, Choate, Totals of scores in the 100 bird match: Knowles first, 12; Perry second, 91; Eager third, 87; Dickey, Choate and Bowker 86, Nichols 85, Stantou and Smith 83, Battleft 89, Allen and Piper 17, Swift 73, Roxton 12, Spring 71, Wood 67. Chase, Cooper, North and Gerrish withdrew. NEWARK, June 27.—The deciding match in the sercis between the South Side Go. Chase, Cooper, North and G

and W. Wolsteneroft; second went to Dukes on 9; third was divided by Sickley, Parliment and Beam on 8 each, Collins taking fourth alone on 7.

WELLINGTON, Mass., June 29—There was a good attendance at the grounds of the Wellington Gun Clinb to day and several clean scores were made in the sweepstake matches. In the silver pitcher match, at 8 clay-pigeons and 7 bluerocks, Dill won with 14. The other scores in this match were: Schaefor and Hutchingson 12, Bond. Field, Baxter, Warren and Tilton II, Stone II, Chase and Leang 9, Herrick, Cowes and Bradbury 8. In the merchandise badge match, Bradstrect won with a clean score of 16 clay-pigeons. Theer, Bradbury, Hutchingson and arren, Lang and Chase 18, Schaefor and Hutchingson; The critical properties of the company of the clay-pigeons. The critical properties were as Total 1, Stone Dill. Cowes and Brad liq. Bradstreet; of the company of the company

VICTORIA, B. C., June 12, 1889.—The U. S. Cartridge Co.: Gentle-Men-I have used your shells exclusively for the past two years, and the last eighteen months in salt water shooting, which tries a shell more than anything else, searcely a day passing but what my shells were more or less wet. When I came out here I brought a box with me, and on one occasion when boat shooting it came on rough and we shipped considerable water, wetting runs and ammunition; after that mine were the only shells that could be fired. I gave all my unloaded ones to my friends and wrote for more, hut my letter miscarried and I waited two months without them. During that time I used the few I had over and over, stiffening the mouth with muchlage. Some of them I fired seven and eight times, and they could have been fired again. Since that I have purchased some 2,000 for myself und friends, and have just another 1,600. I see you advertise an illustrated catalogue. Please send me a couple. They will do you good. I use only stells I buy of J. Muckleston & Co. Yours truly, (Signed) John G. Counish.—Adv.

G. D. S., London.—For the eggs address H. B. Bailey, No. 51
South street, New York.

P., Philadelphia.—We hear of rockfish or striped bass being caught by hook and line in the surf along the New Jersey coast weighing from 2 to 50bs., but are not informed how such fishing is done. You would confer a favor on many friends of the sport by giving the required information, such as the scasou of the year, time of tide, whether high or low surf, the direction of the wind and formation of the beach where such fish would be likely to be found; the kind of bait used and whether bottom fishing or trolling is best. Is rock fishing like drum fishing in the surf, done in little gullies or little channels between the outer cage of the teach and niner bir, clam bait and sinker for bottom fishing with ordivary drum tackle? Casting into the gullies just outside the other contains the surf and moderate surf is the lest time to fish. Ans. Strong facile of the best make is required for the capture of this fish. A stiff rod, not exceeding 9ft. in length, a real holding about 200yds, of 18-thread Cuttyhunk line, No. 6 or 7 Sproat or 5 or 60°Shanghnessy look, and a 2 or 302, sinker is needed as long casts are necessary. Fish from rocky ledges in deep water, high tide and a good-sized surf is best. Hip boots and a gaff are required. The best buits are shedder crabs, menhaden, squid, and lobsters. Trolling with spons is a successful way to capture this fish alsc. The season is from the beginning of June until October; best in August, September and into October.

ENGLISH, PAST AND PRESENT. By Richard Chenevix Trench, D.D., Archhishop of Dublin. The Humboldt Pub. Co., 28 Lafayette place, New York. This is another standard work added to the humboldt Library Series—a work that has had a salo second only to "The Study of Words," by the same author. Twenty editions of the latter and thirteen of the former are the best evidences of the popularity of the works. A most interesting study, therefore, is the history of the English language past and present. This is Nos. 108 and 109 of the Humboldt Library.

A VERY GENEROUS CONCESSION.

Albino.

A VERY GENEROUS CONCESSION.

O'NE of the "generous concessions" that have been so generally of outside courses and the inferred abandonment of the muchabused inside course, Much has been said about the spirit and liberality which the New York Y. C. has displayed in this matter, but unfortunately the exact truth has come out from no less a person thau Mr. Geo. L. Schuyler, the "surviving donor," who certainly should know what he is talking of. In a late interview where there was only about 18th. of water, whereas the Yolunteer draws 22tt, with her board down. This obstacle to boats of all sizes, and particularly of the large class being so rapidly developed of late years, might be unch incroased in the case of future holders of the Cup if the provision of the old deed requiring the club course to be used was in force. I therefore suggested that the deed that the clange yeas made, not out of one of the Cup in the change yeas made, not out of one of the Cup," not holders and challengers, but only the New York Y. C., whose tonure of the Cup is practically made perpetual by the provisions and exactions of the Cup, is practically made perpetual by the provision and exactions of the days, which was briefly the new York Y. C., whose tonure of the Cup is practically made perpetual by the provisions and exactions of the last deed of gift. The true history of the adoption of outside courses is briefly this; For fifteen years, from the first Cup race in 1870, the iuside course of the New York Y. C., whose tonure of the Cup is practically made perpetual by the provisions and exactions of the last deed of gift. The true history of the adoption of outside courses is briefly this; For fifteen years, from the first Cup race in 1870, the iuside course of the New York Y. C., whose tonure of the Cup is practically made perpetual by the provisions and exactions of the last deed of gift. The true history of the adoption of outside courses, when he had a provision of the superior knowledge of the home pilots eompared with fo

TIME ALLOWANCE IN THE CUP RACES.

TIME ALLOWANCE IN THE CUP RACES.

A VERY good instance of the mixture of truth and falsehood A that is brought forward to obscure the roal issue in the discussion of the new deed of gift is shown in the reference which the daily papers have of late heen making to the marter of time allowance. The two bare facts that America sailed without time allowance when she won the Cup, and Valkyrie will receive time allowance when she won the Cup, and Valkyrie will receive time allowance in racing against Volunteer for it, are brought into prominence to show that America was treated unfairly, while Valkyrie will be received in a very different manner. It is true that America sailed her great raco without time allowance, hut the roason was not because time allowance was denied her by the Royal Vacht Squad on, but because she being larger than nearly all her competitors, her owners refused to start unless the race was without time allowance. Of the it competitors the only ones she had to fear were the small cutters of less than half her tomage, like Freak, Aurora, Volaulte and Arrow: the yachts of her owners that the self of the road of the schooner Wyvern, inferted as the big bark Brilliant and the schooner Wyvern, inferted and would have received which for that end of the story; now for the other. The New York Y. C. proposes to used a yacht 70ft, long, and in one class, by one 8fft. One and one with the half her of the for that end of the story; now for the other. The New York Y. C. proposes to used a yacht 70ft, long, and in one class, by one 8fft. One and in a totally different class, giving an allowance which it has itself condemned as insufficient where the disparity of size is ogreat, and with the full knowledge that what it will dignify with the name of match is but a farce that can only have one ending. Within the past tenda, s American yachtsmon have seen some very jast sailing hy home boats of Valkyrie's class; so great, and with the full knowledge that what it will dignify with the name of match is but a farce t

hand.

CEDAR POINT Y. C.—This prosperous little club, whose station is at Saugatuck, Conn., has now a membership of 40 and a fleet of 22 yachts. A good deal of racing is done in open boats, and the club has a number of fast craft from 20 to 24ft,

WAIT TILL THE WAR IS OVER.

WAIT TILL THE WAR IS OVER.

THE Royal Yacht Squadron may congratulate itself on a brief respite before the impending storm broaks; for a week at least all such trivial matters as yacht racing must bo laid aside before the great contest in which Boston as usual plays a prominent part. Yacht racing, in company with practical politics, science, art, the drama, the Johnstown disaster, the Samoa difficulty and other trivial matters, must wait a few days until it is know that John has knocked ont Jakey, that Jakey has annihilated John, or what is more probable, that both are claiming a disputed victory and that neither has been hurt. When this is over the daily papers will attend to the case of the Royal Yacht Squadron, inclinding Messrs. Dunraven, Watson, Grant and Yorke, and that anouymous old chestnut, the "prominent yachtsman who does not wish his name to be mentioned," will inform the world as to his views of the defense of the Cup. From all indications there will be the usual lack of logic or argument, and tho stock phrases of "generous concessions," "winning from the floet," "won without time allowance," "surviving donors," "duties of trustees," "emblem of the yachting supremacy of the world" and all the rest will be displayed in startling headlines and emphatic italies. An appeal to patriotism will be made which will satisfy the conscience of the average yachtsman for the time being, and the Cup will rest undistantbod for a while; but the day will surely come when American yachtsmon will realize the mislake that their representatives are now making for them, and when the Amorica's Cup is again to be offered to the world on fair and sportsmanlike terms, as some at least of the five donors evidently intended that it shoud.

DETROIT Y. C.

DETROIT Y. C.

DETROIT, Mich., June 29.—1 inclose herewith a report of the Dotroit Y. C. regatta held on June 24. Also report of the match race sailed on June 25, between the fourth class yeachts, Madaline, Day Dream and Aldina R. The rule of measurement there for time allowance is length on waterline, greatest boam, depth from inside of planking to deck at spar, which we call then there for time allowance is length on waterline, greatest boam, depth from inside of planking to deck at spar, which we call the greatest boam, depth from inside of planking to deck at spar, which we call the greatest boam, depth from inside of planking to deck at spar, which we call the greatest and the manual of the greatest and the greatest and the manual of the greatest and greatest and greatest and the greatest and greates

all the yachts are handicapped, and several protests have been entered, which will be considered by the regatta committee.

The Free Press thus reports the three-cornered race between the Madaline, Day Dream and Aldina R.;

Isauel goes the first gun. Ten minutes later another. The beats have five minutes to cross the line in. Look at them. The Aldina R. is the first, but the Day Dream is only a few seconds after her, closely followed by the Madaline. Now You'll see a race. Away they go on the starboard tack. Who's alocal? The Aldina R. But the Dream is right after her hey hold their relative positions. Now they're coming about in their course and heading for the stake boat. Who'll reach it first? The Aldina R.? If they are trying that? The Aldina R.? If they are trying they what are they doing on the Aldina R.? They are trying they but up their See the Day Dream now. Where's the man who hot on the Aldina? See the Day Dream now. Where's the man who hot on the Aldina? He cannot be found. They are bearing down upon the stake boat. Day Dream reaches it first. Wasn't tast a pretty turn she made? Could anything have been prettier? The gets around and heads they have this? Who says the Aldina is not in the race? Look at her. See that turn! Wasn't it a dany? She shimmed around they shinaker. But they stake boat as if she had been on wheels. She heads for home. Out goes the spinaker. The Madaline turns next, not far behind. Now you'll see a race. The Aldina R. sails better before the wind than the Day Dream. She'll catch her before she goes a

mile. See her crawl up. Isn't it a pretty sight? It's hard to tell who is ahead. It looks as if the Aldina was gaining. Yes, she is! The Day Dream is running well, though, and the Madaline is gaining on the leaders. On they go. The finish will be reached inside the limit. The Aldina R. is in the lead. The Day Dream is a close second. Look at her come! The wind is freshering somewhat. It's too late, though, the Aldina R. crosses the line first, Day Dream right on her heels. The Madaline gained considerable on the home stretch, and finished a good third. Shrieks from the boat whistles greeted each boat as they crossed the line. Who's the winner? Can't tell yet. The Day Dream is allowed time, but yits how much is not known. Wait until the judges decide. The Day Dream wins by about nine seconds, allowing her half a loser. A more exciting and closer race was uever seen on these waters. The time is as follows:

Start.

Aldina R. 12 34 47 3 31 26 4 49 24 4 14 37 Day Dream. 12 35 42 3 29 08 4 50 40 4 14 58 Madallino. 12 36 44 3 33 57 4 53 14 4 16 30 The judges were: Chas, B. Stevens for the Day Dream, C. M. Rousseau for the Aldina R., and Herman Deltz for the Madaline. Capt. Joe Nicholson was referee, and W. M. Bellman, of Toledo, time-keeper.

time-keeper.

THE ROYAL YACHT SQUADRON AND THE NEW YORK Y. C.

A S yet nothing is known as to the recent action of the Royal A Yacht Squadron except the bure fact that it has declined to accept the terms laid down by the New York Y. C., that the Cup in the future must be raced for under the third and last deed of gift, as told in the following cablegram received by Secretary J. V. S. Oddie:

Committee regret cannot confirm challenge. Letter follows, GRANT, There has not yet been time since the meeting on June 25 for a letter from the R. Y. S., but one is likely to arrive this week, when all the details will be known. The fact that the decision of the R. Y. C. was immediately known in London and cabled to the American papers before any official notice was sent to the New York Y. C., and also that no immediate reply had been made to the letters of the latter, has given rise to a good deal of ill-feeling on the part of ex-Com. Smith and others of the New York Y. C., and it is charged that the R. Y. S. has treated them with great discourtesy.

American pales stotal no immediate reply had been made to the letters of the latter, has given rise to a good deal of ill-feeling on the part of ex-Com. Smith and others of the New York Y. C., and it is charged that the R. Y. S. has treated them with great discourtesy.

If there was nothing particularly important at stake these questions of etiquette, when the R. Y. S. should have replied to the letters, whether they should have kept their decision secret from the public until it was announced to the New York Y. C., what were the exact relations between Messrs. Grant and Yorke, and others of like unture, might be worked up into issues, but they are very insignificant beside the important matters of principle involved, and may well be left to the professors of etiquette and deportment to quarrel over. The vital points of the whole matter are in brief as follows: The new deed of gift, made nearly two years each of a an any timp of and the general of a member for the Cup. It was the duty of such a legal to be a long and the professors of etiquette and the professor of the cup. It was the duty of and the general for a member for the Cup. It was the duty of and the legal to be a long the member for the Cup. It was the duty of and the general for a member for the cup. It was the duty of and the general for a member for the cup. It was the duty of and the general for a member for the cup. It was the duty of and the general for a member for the cup. It was the duty of an anti-cup that it was a secondary of the cup that it was a man and several British of the forward copies of such documents as the deed and this resolution to all clubs likely to be interested. Squadron was not one of these, and it would appear that it general for the forward copies of such documents as the deed and this resolution to all clubs likely to be interested. But we cannot say whether this was done in the present cases. Last March the Royal Yacht Squadron was called upon by one of its members to challenge in his behalf for the America's Cup und

docated by Volunteer, the tack that she was a little faster or slower is hardly of much importance, and had the terms been agreeable there is no doubt but that she would have raced for the Cup.

As bearing on this same question, we take the liberty of quoting from a private letter lately received. The writer is a yachtsman who has raced a good deal on both sides of the Atlantic in tast craft, and is fully conversant with the customs and usages of both nations, especially as concerns the Cup races. He says: "Lord Dunravcu has a very good reputation as a sportsman, and I have no doubt that he went into the thing under a bona fide mistake as to the stipulation about the new deed of gift. You would be surprised at the ignorance which prevails in England on the subject; the truth is that very few people care much about it, and those who do, assume that the matter is as simple as an ordinary challenge cup race. They cannot understand why it should be treated as a national question by Americans, or why all this fuss should be made about conditions which seem to them out of place in a matter of sport, however necessary they might be if it were a question between two sharp men of business. It does seem a little childish to look upon the possible capture of the Cup as a grave national disaster, especially when we consider that American yachtsmen could get it back at any time by sending over a big schooner. It all comes down to this: Do the New York Y. C. want to have races for the Cup or do they not? If they do, they must impose conditions which give the challenger at least a chance, otherwise they will have no races; that is why I lament the issue of Lord Dunraven's challenge. His present policy is perfectly simple; he wants to race for the Cup will refuse to take the Cup under the new deed of gift. This sail very well if Valkyrie wins, but as the chances are about ten to oue against her, I do not see that anything will be gianed." The decision of the It. Y. S. probably settles the fate of eup racing for some years, as

equally misintorned as to the fairness of the present conditions for its next challenge.

ATLANTIC Y. C. CRUISE.—The rendezvous of the fleet of the Atlantic Y. C. for its annual cruise will be at Whitestone, L. I. Saturday, July 18. The fleet will sail to New London on Monday, July 18. The fleet will sail to New London on Monday, July 18. The fleet will sail to New London on Monday, and the priday to New Bedford, where further orders will be given. The run from New Ledon, where further orders will be given. The run from New Ledon to Shelter Island will be a special race, for which prizes will be given by Com. Jefferson Hogan, A prize will be given to the port during the entire cruise.

NEW YORK Y. C. CRUISE.—The rendezvous for the N. Y. Y. C. cruse will be, as usual, at New London, on Wednesday, Ang. on board the flagship Electra on the same evening. Com. Gerry mittee, as fleet captain. The usual race will take place during the cruise, the Goelet curps probably being raced for on Friday, Aug. 9. The extent of the cruise is not yet determined, but it is possible that the fleet may go to Marblebead.

AROUND CAPE COD.

AROUND CAPE COD.

On June 20 both Saracen and Elf sailed from Bay Ridge to of this kind in a 30-tooter is shown in the account of Suracen's trip to New York in a recent issue of the Forest And Strikan, and also in the following extracts from the logs of Shona and Pappoose, lately arrived at New York from Boston. Shona's logreads as follows: "Left Boston Saturday noon. June 8, wind southwest, drizzly rain; anchored at Hull at 130 P. M. of under way again at 11:20 P. M. clearing weather, wind Southwest. Minot's Light abeam at 1 P. M. Smiday. Laid three hours becalmed. At 4 A. M. wind came in south and backed to the southeast; hazy. 7 A. M., wind came in south and backed to the southeast hazy. 7 A. M., wind came in south and backed to the southeast hazy. T. A. M., wind came in south and backed to the southwest; hazy of the southwest blowing hard; weather thick and hazy. Monday, June 10, wind southwest blowing hard; weather thick and hazy. Southwest, Got under way at 3 A. M., anchored under Monomory Point at 7 P. M., weather thick. Wednosday, 12th, hazy, wind west southwest, got under way at 7 A. M., becalmed at 9 A. M. At 11 A. M. wind all around compass; fair tide; anchored in the Viueyard at 6 P. M. Thursday, 13th, wind southwest; undor way at 1130 A. M. Got as far as Cuttyhunk Island, but found the sea too heavy and put back into Quick's Holl; anchored at 4:20 P. M., 1130-4, 14th, wind southwest, lazy. Under way at 6 A. M.; anchored at Newport at 2 P. M. Saturday, 15th, wind northwest, under way at 5 A. M. in company with the Scotch cutter Maggie and N. L. Stebbins's Boston sloop Galatea. Beat out to Point Judith Light. Put in a reef and stood on an hour; sea getting too heavy, turned back at 2 P. M.; anchored at Newport at 4 P. M. Maggie and Galatea at 5 A. M. Went out to Brenton's Reef Lightship, laid off and on two honrs. Wind hauled to the southward of Phylose and Galatea at 5 A. M. Went out to Brenton's Reef Lightship, laid off and on two honrs. Wind hauled to the southward of Phylose and Galatea at 5 A. M

VALKYRE, CUTTER .- DESIGNED BY G. L. WATSON FOR THE EARL OF DUNRAVEN.

the westward. Everything that came over the shoals stopped there. Friday morning at 5:40 we started for New London, wind strong west northwest. Got to Quick's Holl, double reefed mainsail, set No. 2 jib and housed topmast. Had lots of wind and a hard beat. Wind getting to westward, went into Newport. arriving at 4:30 P. M. At 6:30 Saturday morning came out of Newport in a strong west northwest breeze, with reef in mainsail and topmast housed. Beat all the way to New London, where we arrived at 5:10 P. M. We have beat all the way here, and been under water all the time, but the Papoose is a little davling and stands up just as well under her new rig as she did before. I would like to have had some of the new 40's along with us."

Kathleen's turn will come next, as she is entered for the races at Marblehead on July 13.

SEAWANHAKA CORINTHIAN AT OYSTER BAY.

SEAWANHAKA CORINTHIAN AT OYSTER BAY.

THE Seawanhaka Corinthian race for 40-footers at Oyster Bay last Monday, resulted in a victory for the Liris over her five competitors, Maraquita, Minerva, Banshee, Pappoose and Gorilla. The wind was blowing fresh from S.E. at the start, but hauled around to S. when the yachts finished the second leg of the course at Mattinecock Buoy. It was blowing nearly 20 knots an hour at the finish. The course was from Red Ground Buoy, inside Oyster Bay, northward to a buoy off Captain's Island, the course at Mattinecock Buoy, and home to the Ground Buoy, passers of the Mattinecock Buoy, and thome to the Ground Buoy, passers of the Mattinecock Buoy, and the western shape of Lloyd's Aleck.

The Pappoose was first away, followed closely by the Maraquita, the rest crossing the line in this order, Liris, Gorilla, Banshee and Minerva. Spinakers were set for the run over the first leg on all except the Gorilla, whose spinaker was not broken out until after she had been passed by the Minerva off Lloyd's Neck.

The Pappoose held her lead until within a mile of the buoy at Captain's Island, with the Maraquita astern and to the westward, the Minerva and the Maraquita astern and to the westward. The Minerva and the Maraquita astern and to the westward, the Minerva and the Maraquita astern and to the westward. The Minerva and the Maraquita astern and to the westward the Last place, and were to the east leg and the vachts found a northeast hreeze. Taking in spinakers, they jibed all and made for the buoy on the starboard tack. Then the Liris picked up wonderfully and so did the Maraquita, The former was the first to reach the mark, jibing around it a few seconds ahead of the Pappoose, with the Maraquita actions the starboard tack. The mashee, as she felt the shift of the wind, held closer than was necessary, and soon found herself ahead and in the course of the Minerva. She turned the mark fourth, with the Minerva fitch and the Gorilla last.

Soon made a near little, Sefore turning the first mark C

her second place in the corrected results. Banshee finite fourth, Pappoose fifth and Gorilla last. As the Pappoose probably have to allow Gorilla it will put the Smith beat fifth place. On the whole, the race was a victory for William Gardner three prominent designers, and this is somewhat remark from the fact that he is a new comer and the Liris is only second boat. His Kathleen, launched this spring, which beaten the Burgess thirties, is here, ready for her races or cruise of the Seawanhaka Corinthian Y. C. The time take the race to-day was as follows:

action of the K. Y. S.; "As has been stated in these columns, the chances are that there will be no race for the American Cup this year on account of the terms of the new deed of gift. It is a fair couclusion that Watson hoped to catch the Americans napping, and that they would be just childish enough to build a 70-footer to meet him; and all this in six months, which is too short a time in which to build a yacht and expect her to perform at her hest. It was a sad but of news for Watson that no new boat would be built to meet him, and that the Volunteer would be selected to meet the Valkyrie. He then knew well that the Valkyrie was 'out of it' with Volunteer, and the chestnut 'unfair deed of gift' was 'rung' up. Now the statement comes that the Valkyrie will not come over and sail for the Cup, but will come out and sail against our 70-footers. This would appear to indicate a generous sprit at first blush, but, on calmer consideration, it shows the work of a cunning, crafty yachtsman. It would be the proper thing for Watson to come over here and sail against 70-footers, some of which were designed and built some three years ago, while the Valkyrie is this year's product, and in her Watson has taken advantage and outbuilt our present 70-footers, though it is by no means certain that the English craft could outsail either the Cup, has adopted the sharp practice, and the American yachtsmen now look upon all his moves with suspicion. It is a cleventhing to give up sailing for the America's Cup and race for another cup against 70-footers, each of whose designers, if given a chance, could build new boats which would outsail the present achieved a gainst 70-footers, each of whose designers, if given a chance, could build new boats which would outsail the present other cup against 70-footers, each of whose designers, if given a chance, could build new boats which would outsail the present of the regression of the season are: July 18, 25ft. class; fat, class; fept. 21, critices in ones." It pans us to see such harsh and

SOUTH BOSTON AND SAGAMORE CANOE MEET

Pettick's Island, Boston Harbor, June 16-17.

Not since the time when the red or copper-colored savage paddled his own cance over the waters of Massachuesetts Bay has there been a cance meet in Boston harbor until the meet held at Pettick's Island on June 15, 16 and 17. The meet was held under the auspices of the South Boston C. C., of Boston, and the Sagamore C. C., of Lynn.

It was a meet long to be remembered by those who participated in it, as at last Boston cancelsts have bravely struck out for what they have been longing for in past years.

The meet was in every way a success, and it was a surprise to many of the leading cancelsts to see that there was such a large number of cancelsts about Boston and who would attend a meet. Saturday, with a good reefing S.W. wind, the cancelsts commenced to gather upon the island. After establishing headquarters in an old house just above the beach, the tents commenced to loom up.

The threatening sky of the afternoon having been reinforced by a legion of heavy clonds, culminated in a sharp shower toward sundown, wetting the campers down a trifle. By nightfall about 100 cances were snugly cradled on the mossy bank beside the tents. Next morning at an early hour more cances hove in sight, together with friends who came by steamer. The island resembled in appearance a military camp, with its numerous tented dwellings, the cances forming succeeded the hot, calm morning. About fifty of the boys cruised to Downer's Landing, Weymouth, Back River and around Pettick's Island, returning before sundown, when all participated in athletic sports and enterfaining the visitors.

In the evening the canocists had a large bonfire on the island, and all the spare lumber, trees, etc., were confiscated by the volunteer wood gatherers. Gathering around the bonfire Chairman A. M. Hird addressed the canocists and called upon the representatives of the clubs present at the meet. The response showed how strong the desire of local canocists to hold a meet in Boston Harbor has been, and all protested that if the Eastern Division of the American Cance Association would not select Boston Harbor for a meet in '90 that they would all co-operate and hold a meet next year that would last for either one or two weeks.

showed how strong the desire of local canoelsts in hold a meather showed how strong the desire of local canoelsts in hold a meather polivision of the American Cance Association would not select Boston Harbor for a meet in "90 that they would all co-operate and hold a meet next year that would last for cither one or two weeks.

Afterward the boys sang songs and spun the usual yarns by the faceside, the oversion being brightened up by music, including a faceside, the oversion being brightened up by music, including a faceside, the oversion being brightened up by music, including a faceside, the oversion being brightened up by music, including a faceside, the oversion being brightened up by music, including a faceside, the oversion being brightened up to make the property of the faceside, the cloude is brughtened and the hours flew by and at midnight the fire commenced to smoulder, the canoeists' next thoughts were of their heds, but before leaving the hops all arose and sang "Aud Lang Syne."

Monday morning the sun rose over the camp with a promise of good weather and pienty of which, but when the reveille sounded in cliskins, guthered about the beach near the finish line to within the obstawors made ready for the races of the day. At 10 o'clock the bugle sounded the "ussembly" and the campers, clothed in cliskins, guthered about the beach near the finish line to within the promise of the first event. Class i, paddling, for any canoe. The course was half a mile straightaway, and as the spectators looked up the course through the downpour all that could be seen was a line of paddle blades flying aloft here and there. It was a close race throughout, there being 12 entries. C. F. Dodge, of the Puritan C. C., list in the Haleyon, and H. D. Murphy second in the Juan-C. C., list in the Haleyon, and H. D. Murphy second in the Juan-C. C., list in the first prize was a handsome silk banner, and the second a dozen photographs of the handsome man who won them. The race throughout was pretty close, all being well hunched thi

RED DRAGON C. C.—The first race for the Red Dragon C. C. trophy cup was held on June 28. Owing to the inclemency of the weather only three boats entered. The course was around Petty's Island about 5 miles, strong N. E. wind. Nacoochee was first over the course and led to the foot of the island where Cigarette took the lead, which she kept easily to the finish. The times were as follows. Start 4:06:00:

GEORGE MURRAY BARNEY.

GEORGE MURRAY BARNEY.

WHEN the members of the A. C. A. come together next more for their yearly re-union there will be one familiar missing from the group around the camp-fire; one canos among the leaders in the races, for death has been busy since year, and has called away one who was loved and admired I who knew him. George Murray Barney, the son of E. H. Bard Springfield, Mass., was hardly less known than has famoug canoeists far and near as a skillful and enthusiastics while those who were privileged to know him more intimecognized the same sterling qualities in the son which have for the father the friendship and respect of a wide circle of or ists. In the canoe club, on a cruise, or in camp he was althe genial, courteous gentleman, with a kind and pleasant for all he met; always bright and cheerful in spite of the that hung over him. The consumptive tendencies inherited his mother made him always delicate, and with hittle hope of life, and this, in connection with his love of the open air, calm to spend a great part of his time in hunting, fishing canoeing, in the search for health which has at last proved itess. His death took place on May 29, at Pasadena, Cal., whe had spent the winter, his father being with him at the time; on June 13, he was buried on the grounds of his father's established. In canoeing the father and son, take worked gether for the past five years, sailing the same boats and a each other in improving them; while in camp their relations rather those of brothers than of father and son; the heart thusiasm of the elder making the disparity in years hardly parent. Mr. Barney was horn in New York in 1803, but spon greater part of his life in Springfield. He was onlite a sk mechanic and invented several appliances in connection his father's business. His success as an amature photograph known to most canoei-sts, and he was one of the organizers an active member of the Springfield Camera Club.

No Chemicals.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkall, potach, soda or exist amonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water,

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by per-fect mechanical processes, no elemical being used in its preparation. By one of the most ingenious of these mechanical processes the greatest de-gree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a clossary of all the local names in popular use, Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of ooks of which the need is felt in every department of natural history.—*Troy Press*.

The book should find its way to a choice place n every sportsman's library.—*Chicago Intereccan*.

Occam.

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrev name which science gave him for the sake of cataloguing him. * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—W., in Journal of Commerce.

SOLD BY Forest and Stream Publishing Co. PRIOR. \$2.50.

THE CONEMAUGH FLOOD.

THE corener's jury on which fell the duty of investigating the terrible floods in the Conemaugh Valley has given its verdict. It is reported to have found that the owners of the South Fork Fishing and Hunting Club were guilty of negligence in not making their dam secure On the other hand it is stated, and, we think, has not been denied, that the members of the South Fork associa-tion employed the very best expert engineering talent that was to be had to make monthly examinations of the dam on their property, and carried out their recommend-

During the first few weeks after the appalling catastrophe by which so many lives were lost, the public mind was so excited by the calamity, and so many wild reports concerning it were flying about, that it was impossible to form a calm judgment as to the causes of the occurrence, or to take an unprejudiced view of the responsbillities in the matter. Now that the excitement has died away, a good deal of definite and authoritative information is being made public, which throws light on the conditions which prevailed just previous to the disaster, and which enables us to say why the calamity took place.

The State weather service of Pennsylvania has recently published a topographical map, showing the amount of water which fell in all parts of the State during the two days which preceded the disaster. This map shows that the earlier statements as to the rainfall were not greatly exaggerated, and warrants the belief that even without the bursting of the South Fork Dam the floods of that memorable storm would have been very disastrous.

In the northwestern corner of the State and along its eastern border, the rainfall was less than one inch. A large area in the western portion of the State and a narrow strip west of the Delaware River region, the two aggregating perhaps 30 per cent. of the whole area of the State, received from one to four inches in these two days, while in the great central belt, comprising not far from there is, therefore, apparently no redress.

40 per cent. of the State, the rainfall was from four to eight inches. In the Conemaugh Valley and near Williamsport the deluge even exceeded eight inches.

It was never expected nor intended that the South Fork Dam would sustain such a pressure as was brought upon it by this unprecedented rain storm. The responsibility for its fall under such circumstances ought not to be placed on the owners of the dam. They appear to have taken all reasonable precautions to keep their dam safe, Neither can we call this disaster an act of God. The responsibility for this disaster should be placed just where it belongs, and that is on the people who have stripped the Allegheny Mountains of their timber. Steadily and without pause this work of devastation has gone on. Floods from melting snows and from spring rains, causing the streams to overflow their banks, and to work damage to the extent of millions of dollars, have not served to warn the public of the dangers to which certain communities were exposed through this greed for gain. the flood which swept away Johnstown and destroyed in an hour thousands of lives and millions of property. Will this lesson teach the State of Pennsylvania and other States that some regard must be paid to nature's laws? It is to be feared that it will not.

The lumbermen will still be permitted to strip the mountains of their timber, and to prepare their rocky slopes to throw off the water which falls upon them just as a shingled roof sheds rain. A single calamity, no matter how overwhelming, will not teach the needed lesson, but when widespread disaster and suffering come, as come they must if the work of destruction is not checked, then here in America we will follow the example set us in the Old World, and care for our forests.

TO PLUNDER CAMPERS.

THERE is a class of land-sharks, growing in numbers A and of greedy appetite, who appear to be possessed of the notion that they have a lien on the universe and a mortgage on all outdoors. They stake off so much of their claim as they can get some sort of title to, or as much territory as they can cover with their hirelings, and then proceed to lay tribute on intruders. Their particular prey is the camper, who pitches his tent on one of their lake shores or drops a worm into one of their brooks or follows the trail of game through some of their woods.

The time was when a man might go into the North Woods and camp out without peril of being made to stand and deliver, or of being hustled off by "Reserve" guardians. That time has not gone by for a stil. very large extent of territory, but all too much of the choicest area of the Adirondacks is coming into the possession of those whose sole aim is to exploit the natural wealth and do what they can in the way of plucking sportsmen,

To the Adirondack Reserve concern-already noticed in our columns as charging campers so much a night for the privilege of camping on the Au Sauble Lakes district and which now proposes to charge \$1.50 per day per rod for trout fishing—there must now be added, in the list of those who prey on sportsmen, the Northern Adirondack Railroad Company. This road in conjunction with lumber companies controls a large extent of country in the Northern Adirondacks, that district described in a communication printed on another page to-day. The railroad and the lumber concerns have published a notice in local papers setting aside all their territory with the waters therein as a private park for the propagation and protection of game and fish; and their plan is, as reported to us, to police this district and impose a camping license fee on all visitors who enter the territory by way of rival

An Adirondack lumber company posing as having interest in game and fish protection is a spectacle for gods As a cold fact, the lumbermen mean to get all the money they can out of their lands. To do this they are now disposing of the hemlock to tanneries, whose men by the hundred are cutting the trees and peeling the bark; and all the hardwood, big and little, is being worked up or is going into charcoal. They are, in short, as expeditiously as modern methods can hasten the work skinning the lumber and reducing the territory to that briar-patch and brush condition which after fire has done its work will mean blackened desolation.

The hoplessness of the situation is that all these enterprises appear to be within the sanction of the law, and

SNAP SHOTS.

THOSE of our readers who have visited, or may intend to visit the Canadian Dominion, will be glad to learn something about a new book connected with that region. It is entitled "Historical and Sporting Notes on Quebec," and is from the pen of J. M. Le Moine. It contains a large amount of historical facts, within a small space, not easily accessible to the average tourist, and also an account of the sporting facilities of that portion of the Dominion lying between the city of Quebec and the headwaters of the famous Saguenay. It was in 1862 that Mr. Le Moine commenced his career as an author, and from that time to the present he has published not less than twenty-seven volumes connected with the history and scenery, the traditions and people of his native province, twelve of them in French. Taken together they form a fitting monument to the man who is to-day the leading and most successful author north of the St. Lawrence. One of the rovelties connected with the volume here mentioned is that it is divided into two parts, and while the first is inscribed to Her Royal Highness, the Princess Louise, the second part is dedicated to the Yankee author, and long our correspondent, Charles Lanman.

At the last meeting of the Commission in charge of the National Zoölogical Park Mr. W. T. Hornaday was ap-pointed superintendent of the new park. Ever since the project to establish a national zoölogical garden was first set on foot Mr. Hornaday has been extremely active in pushing it forward. He has been in charge of the collection of animals for some time on exhibition in the Smithsonian grounds, and has been signally successful in in-creasing their number and in making the limited funds at his command go as far as possible. Possessed of great energy and a large experience with animals, acquired in many quarters of the globe, Mr. Hornaday promises to make a very efficient superintendent. It is understood make a very efficient superintendent. It is understood that the negotiations for the land along Rock Creek, where the park is to be located, are well advanced and that there is every prospect that before long the Government will be in a position to begin the work of preparing the park for its future inmates.

A butcher named Miller, employed by the man who has the contract for furnishing beef in the National Park, recently killed a bear which was prowling about the slaughter house at Norris Geyser Basin, and was promptly ordered out of the Park by Captain Boutelle, the Super-intendent. Miller claimed that he shot the bear in selfdefence, but Captain Boutelle declined to go into the merits of the case, saying that whether Miller was justi-fied in killing the bear or not, he would have to go, as he had violated the rules of the Park. If the Superintendent listens to excuses for infractions of the regulations from one offender he will have to do the same for all others. We do not understand that the Superintendent's orders require him to hold court and try offenders. duty is to enforce the regulations established by the Secretary of the Interior.

It appears to us that the Selectmen of Boxford, Mass., are making wholly needless pother about a dog case, which is said to perplex them. A statute provides remuneration to owners for damages inflicted by dogs on domestic animals. A mad dog in Boxford, it is said, bit another dog, which was valuable, and which died of the bite. The owner put in a bill for remuneration. The Selectmen hesitate to pay for the damages because they do not know whether a dog is to be classed with other domestic animals. As Massachusetts dog owners are required to pay a stiff tax on these animals there ought to be no question about their legal standing. Let the Boxford Selectmen pay up.

It was announced last week that a syndicate had purchased 390,000 acres of land in the Adirondacks, 306,000 acres of which were of virgin forest; and that this entire country was to be lumbered. The extent of this deal has drawn attention anew to the depletion of the Adirondack forest area, and the suggestion has been put forth that the Legislature should step in and prevent this syndicate from carrying out its plan. The only way in which that could be done would be for the State to buy the land; and it is not at all probable that it will do this.

We are desirous of obtaining a copy of the volume index for the following volumes of FOREST AND STREAM: 2, 8, 5, 6, 7, 8, 10, 13 and 15.

The Sportsman Tourist.

THE STRAITS OF GEORGIA.

above the surface of the water. Up the valley to the left of Mt. Victoria is a good game country, and to the left of this valley is Mt. Alfred, 8,456ft. high. The old Indian trail up this valley leads to Desolation Strait, two days travel. You return through Prince of Wales Reach, then north of Nelson's Island into Malaspina Strait, then up the strait skirting the shores of the mainland for twenty-five miles to Point Sarah, then to the right southeast you are in Malaspina Inlet. Go up this inlet five miles, then to the left a couple of miles up Lancelot Inlet, and you are at Theodosia Arm, which comes in from E.N.E. There are very high falls up the stream that comes into the head of this arm.

Returning to Point Sarah, then on northeast two miles up Desolation Sound, with Redonda Islands and lofty mountains to the left, and we arrive at Forbes Bay, which is south of Mt. Denman, 6,600ft. high. Back from the bay and along the southern base of Mt. Denman is the home of the famed "silver tip" and other large game. Four miles from Forbes Bay brings us to Atwood Bay, and another mile to Brettell Point. Here we enter the waters of Toba Inlet, which extends back northeast some eighteen miles into the mainland. Eight miles up the inlet on the left is Salmon Bay, with Mt. Barner, 6,090ft. high, to the northeast. The eastern slope of this mountain is a good sleep ground, and the river flowing into the head of the inlet is full of trout and salmon.

In returning keep to the right past Brettell Point, through Pryce Channel, past Deer Cliannel, which comes

a contented cat well pleased with the menu. That trout soon disappeared and then I passed over another four-pounder."

"Another four-pounder, Fred?" and then I began to think of Falstaff and his men in buckram.

"Yes, another four-pounder," he answered, and then he glowered upon me with something of disdain in his expression.

think of Falstaff and his men in buckram.

"Yes, another four-pounder," he answered, and then he glowered upon me with something of disdain in his expression.

"Well," he continued, "I fed that bear trout after trout, until feeling somewhat reassured I thought I would take a glance at the recipient of my bounty, so I slowly turned my head as he was feasting, and much to my amazement discovered that he was perfectly blind. I carefully arose now, and placing a dozen or two of trout at his feet. I gently walked off and stepping into the stream pursued my course to camp. I never told this strange adventure to my associate campers, for I was satisfied they would set me down as an ingenious liar."

"Why do you relate it now?"

This interrogation appeared to worry him, but after he had played battledore and shuttlecock with it for a while, he smiled upon me and said with great confidence, "because he wanted some gentleman aside from himself to have knowledge of such an exciting event that it might possibly form an interesting chapter in natural history."

With as much politeness as I possibly could, I hinted that he was simply on a blind lay, and bagged only blind game, and asked afterward if he ever caught a blind trout. At this the guide laughed, and Fred looked somewhat disconcerted, thinking doubtless and truthfully hat we believed he was romancing. He, however, drew the long bow no more on that trip that we knew of, for his talk after this blind affair was more plausible.

The lunch being dispatched we sent the guide ahead with the boat, and wading into the stream commenced the work of enticing the trout. He free get the advance of me some distance and then had both sides of the stream as before.

As I wound my joy-inspiring way along the river, I was ever alert for the radiant trout, and enticed many a one to my quivering bait and to my creel. I knew my companion would hang his banner on high if he badly defeated me, and therefore I worked with might and main, passing no tempting spot unfished that I thought con

any."
"I'm surprised that these high-art anglers would buy

"They do, though, but they alway tell me not to give

"This significant that they always tell me not to give 'em away."
"Do you?"
"I can't, for I don't live in town. My home is down by the bridge."
"Do you ever sell any to bait-fishermen."
"Very seldom, they always have 'em."
Here the little girl quickly spoke up and said: "Last season he sold a lot to one."
"How was that?"
"Why, you see," said the lad, "there were two men trouting here. The first one that passed was fishing so hard that he paid no attention at all to us, only saying 'Good morning, children,' and then hurried on. After a while his partner came along, and as he passed close to me I asked him if he didn't want to buy some trout. At this he smiled and came ashore and inquired how many I had. I told him twenty-five. He laughed right out and said: 'Get 'ein quick!' I pulled my bix ashore, and as I put them in his basket he smiled and laughed all over saying: 'I'll snow him under now!' I didn't know what that meant then, but papa explained that he wanted to beat his partner. He never asked the price of 'em, but putting his hands in his pockets he drew out some money and gave me three dollars, and then tossed one to sis, saying, 'That's for you, little bright eyes,'and then he was gone like a flash, fishing as he went. Oh! he was such a handsome man. He had a gold chain around his neck and something on his little finger that sparkled like the sun. Papa said it was a diamond, and learned down at the tavern that he was a big banker from the East. Sis and I will never forget him."

"Did you ascertain whether he snowed his partner under?"

"Oh, yes; papa learned all about it, and said he beat him badly, and plagued him a great deal about it."

under?"

"Oh, yes; papa learned all about it, and said he beat him badly, and plagued him a great deal about it."

I was perfectly delighted with the conversation I had with the children, but as I was not in for the purchase of trout I told the little girl if she would give me a kiss I would give her a dollar. The little boy's eyes were all a sparkle at this, and turning quickly to his little sister he said:

"Sis, kiss the nice gentleman."

The little elfin then cheerfully got upon the outer and

"Sis, kiss the nice gentleman."

The little elfin then cheerfully got upon the outer end of the log near the water, and as she removed her straw hat her bright curls gracefully flowed over her nut brown shoulders, and the sun which struck this part of the oaken trunk bathed her head in crimson and gold, thus giving her the appearance of a "little fairy queen that gamboll'd on heaths and danced on ev'ry green." As I presented my bronzed and furrowed face with heavy beard and thick moustache, she bent forward and her sweet little innocent lips gave me a hearty kiss that I prized more highly than if it had been from the rosy mouth of maiden royal.

"Here's your dollar, sis, and one for you, bub," suiting

action to word, and then I bade them a hasty good-bye, and wading out into the cold water proceeded with my fishing lest I also should be "snowed under." I turned and looked back at them before I passed the bend just ahead of me that would shut them out from my view, and there I beheld them both standing on the log intently watching me, with the little girl gracefully wafting kisses, to which I sincerely responded, and then the little romance of the stream was ended, but not forgotten, for it will always live in delightful memory as one of my rarest pleasures of trouting on the Boardman.

"Ah!, what the world would be to us If the children were no more. We should dread the desert behind us, More than the dark before."

him down fine, and that his corner on sightless bears had gone glimmering.

Our drive home was entirely through a wooded country that did not show a single field gleaming with Ceres' yellow sheaves. It was in its primitive aspect, with the exception of a few spots that had attracted the lumberman's axe. The soil was thin and sandy, and I doubt if a farmer could scratch a living from it by the most industrious toil. The deer at times freely ambled there; the common black bears frequented it; the partridge and woodcock haunted its thickets in great numbers; the song birds warbled from bush and brake the livelong day, while streams and rills ran through it in the sunlight like ribbons of silver.

After supper the guide came to me and said that I could have the trout that he had caught. I presume he had had a talk with the landlord, and that he very graciously condescended to let me have the fruits of my employé. It was in order to arise and embrace him as a "mossback" upon whom at last had dawned a vision of common sense and even-handed justice. The world does move, even in the wilds of Michigan, and there is yet hope that the reform may spread to other benighted regions. I gave instructions to have a few of the trout saved for my breakfast, and the remainder I had shipped to one of my friends in Grand Rapids. The next morning I concluded to start for the Lake Superior regions, and on calling for my bill was surprised to find that the landlord had charged me for the entire trip to the Boardman. I kicked savagely at this and demanded an explanation, wanting to know why my companion had not been charged with half of the bill, as he was not invited by me, and further, was an apparent stranger. He stated that he only sent him along to keep me company. Very kind and considerate of him, but I emphatically gave him to understand that the bill must be corrected. He then threw off a few dollars, being much less than half the expense of the trouting trip, and rather than fret myself into a feverish rage over it. I settled t "Me counting on the Development of Extending of the County of the County

every day with trout. In these streams are found both the native Colorado and the eastern trout.

The best fishing, however, is found in the Eagle River and Frying Pau districts. These streams and their tributaries cannot be surpassed. Eagle River is reached by the Rio Grande R. R. From Leadville, after six or eight miles of high-up grade, we reach Tennessee Pass, and at once began the descent from the very headwaters of Eagle River. The road extends down the entire length of this magnificent stream, crossing and recrossing it to its continuence with the Grand River. Every few miles is a station, from many of which we could cast a fly into the stream from the depot platform, and trout are plentiful everywhere. From Red Cliff down the road has been open but a few seasons, and the stream has not yet been whipped to death.

One of the large tributaries, Gore Creek, enters Eagle one mile below the station of Minturn, and is most excellent fishing from source to mouth. On this creek we spent several days at two different times, and filled our creels each day to our perfect satisfaction, not with fingerlings but with large, gamy, fighting trout from 80z to 350z, each, and we left several after hard, long tusseling that we estimated at not less than 7lbs. There is a wagon road extending up this creek about ten miles. From four miles up is a pack trail leading over to Piney Lake and Creek, a distance of six miles, and here the trout are said to be too plentiful for sport. We did not go over, but met a party of three who had been there for three days, and they had on their packs 1,300 trout and two deer. Elk, deer and small game are plenty in the upper Gore and Piney district, and occasionally a bear is found.

A few miles further down Eagle River is another tributary, Brush Creek. For this stream get off at Eagle

quired to gain the direct distance of little more than one

quired to gain the direct distance of little more than one mile. The road now follows very closely the course of the beautiful Frying-Pan Creek, first on one side then the other, to its mouth at Aspen Junction, where it flows into the Roaring Fork. This is distant from Leadville about sixty-five miles, or four and one-half hours time. The stations from Lake Ivanhoe down are Sellers, Norrie, Lime Creek, Ruedi, Sloan and several other sidings; and from any of these points the fisherman can within a few steps reach this grand trout stream. At Norrie we are near the mouth of North Fork, and have here the advantage of the two streams, both of which are most excellent fishing. At Lime Creek is a small mining camp, and the creek of the same name enters the Frying-Pan at this place, and no better fishing could be desired than this tributary affords. It takes its rise from the Mountain of the Holy Cross and flows southwest, while Brush Creek heads but little distance from Lime Creek and flows north into Eagle River. Game is also plenty in this Frying-Pan district; we saw from the car window both deer and mountain sheep on our way over.

We spent several days at different points along this stream and its tributaries in the same manner as we had fished on the Eagle River and with about the same results, catching enough each day to perfectly satisfy ourselves. This, too, is a new section of country, opened but two seasons since the construction of the Midland Railroad. Prior to that it was only accessible in many parts by pack trails.

We made these various trips out from Leadville in from two to six days each, according to the locality we selected, and on our return to the city we usually spent from one to three days with our families and put in the time with short excursions to some of the many points of interest in the vicinity. One peculiarity of Leadville is the large number of spring wagons with canopy tops large and strong, which will accommodate from six to nine persons. These are very comfortable and well equipped

divide with our friends outside of the requirements of our own table.

We handled our fish in a different manner from most other fishermen we met. On our return from each outing, whether at noon or night, we dressed and cleaned the fish, leaving the heads on, and stringing them on a forked willow or birch stick, putting the largest on first, which prevents the crushing weight of the large upon the small ones. We then fasten the ends of the string (sticks) with a good strong loop and hang them up to thoroughly drain; and thus let them hang over night in the coolest place to be found on the north side of the cabin or tree. In the morning there will not be moisture enough about them to wet a paper. We then slip each string into a paper sack (with which we always provided ourselves in starting out), and tie the bag close above the fish and below the loop, thus they are protected from flies and dust; and left in a cool cellar or cave during the day and left out of doors during the night, they will keep in perfect condition for many days. In this way we always took them home in much better shape than when packed with grass in boxes, kegs or baskets.

I have fished in the New England brooks (that being my native home) and in the waters of many other States, and I have no hesitation in saying that Colorado surpasses any locality in which I ever cast a line. I have also fished in other parts of this State than that described in this sketch, but nowhere have I found as many points of interest so easily reached as from Leadville.

but nowhere have I found as many points of interest so easily reached as from Leadville. O. F. S.

THE ST. REGIS DISTRICT.

THE ST. RECIS DISTRICT.

MOIRA, Franklin County, N. Y., near the Adirondacks, June 17.—Editor Forest and Stream: Some ten years ago I wrote an article for the Forest AND description of that portion of the Adirondacks situated within the county of Franklin and known as the St. Regis District. Since that time, or within the last six years, as most of your readers know, great changes have taken place within the borders of this district. Especially is this the case in its northern and eastern parts. Where it was, at that time, an unbroken wilderness, are now several villages of considerable size. A number of large mills for manufacturing lumber have been erected on the streams, and a railroad is running through its whole length from north to south, which will soon be extended to Tupper's Lake, at the most southern limits of the county. Large numbers of Italian laborers are now at work grading the road bed above Brandon Station for that purpose. My object is to inform the reader what effect all this has had on the game or hunting and fishing in this district, and what prospect there is for sport at either still within its borders. In regard to the hunting, I can say that in most parts of the district, except in the immediate vicinity of the villages, it seems to remain about as good as it was before the lumbering operations commenced in the district.

Deer hunting has been as good and as many deer were

Deer hunting has been as good and as many deer were killed in the district last season as in any season, I think, for the last ten years, and according to trustworthy re-

ports the prospect is as good as ever for good hunting the coming season. A gentleman of this place who sold a large tract of the land in the district to the lumber companies went through on the line of the railroad to Tupper's Lake two weeks ago, and he saw twenty-three deer on the route and did not leave the line of the road. Bear also seem to be still plenty. They were seen quite frequently in different parts of the district this spring, and only a short time ago two were caught in traps in the township of Duane near Deer River in the eastern part of the district. Without doubt the number of deer in the Adirondacks has considerably fallen off in the past ten years, and the cause of their still being so plentiful here is that, as is well known by all experienced hunters, the deer, as well as bears and some other animals, are fond of frequenting the clearings or openings, where the heavy timber has been cleared away and the underbrush and bushes left standing, as it is in localities where lumbering operations have been carried on. These clearings, of which there are now large numbers within the district, are soon overgrown with shrubs and bushes, on which deer are fond of feeding, and, without doubt, many are drawn here on that account from other parts of the wilderness.

But the chance for sport at angling for trout. I am

drawn here on that account from other parts of the wilderness.

But the chance for sport at angling for trout, I am sorry to have to state, has, since I wrote the article mentioned above and since the lumbering operations commenced here six years ago, greatly diminished in many of the waters of this district, in those portions of it where the lumbering operations are being carried on, in the vicinity of the villages and mills along the streams, and near the lakes and ponds. Still, there are many waters in the western part of the district that are in territory not owned by the lumbering companies, of which I shall write further on, where the trout are as plentiful and as good sport can be had as ever. Several causes have led to the decrease of the trout and nearly ruined the sport at angling in the waters situated or running through the good sport can be had as ever. Several causes have led to the decrease of the trout and nearly ruined the sport at angling in the waters situated or running through the parts where the lumbering operations are carried on. First was the clearing of the streams of all obstructions for running logs, and cutting all bushes overhanging their banks, thereby destroying the shade and lurking places of the trout; second, the building of the mills near the heads of streams and allowing all the sawdust and other refuse from them to pass off in the water down the stream, killing or driving the trout below to other waters; and third, the indiscriminate fishing for trout at all times and in all seasons and by all methods, from the common hook and line to snares and gill-nets. The lumber companies have large numbers of laborers at their mills and villages, many of whom are in the habit of spending the Sundays in fishing, and they have never been in any way particular what method they practiced if they could only get the trout. Taking all these things together, is it a wonder that trout of any size have been nearly exterminated in these waters? The streams to which I refer here are the east and middle branches of the St. Regis and their tributaries, together with the ponds in their vicinity. Meacham Lake, out of which the east branch has its source, is not included in these waters; but owing to the judicious management of Mr. Fuller in yearly restocking it and preventing fishing in it out of season, the trout have increased rather than diminished in numbers in the lake.

In the western portion of the district there are till quite a number of ponds and streams in which the trout.

Fuller in yearly restocking it and preventing fishing in it out of season, the trout have increased rather than diminished in numbers in the lake.

In the western portion of the district there are still quite a number of ponds and streams in which the trout are as plentiful as ever, and where excellent sport can be had by the angler. These waters comprise the upper portion of the west branch of the St. Regis and Parishville rivers and their tributaries, and also several ponds of considerable size, among which are McDonald, Wolf, Train, Whitney, Long and Kavanaugh. It is to this portion of the district in which these waters are located to which I would now recommend the readers of FOREST AND STREAM who are in search of sport with rod and gun. This portion of the district is distant from any of the villages and from the line of the railroad, consequently it has been but comparatively little frequented as yet, and the streams are free from sawmills; and but very little lumbering in this section of the country has been done. The only hotel near where sportsmen can find accommodations is at the Blue Mountain House, at Blue Mountain, near the northeast corner of the part of the district to which I refer. The house is about six miles west from the village of Santa Clara, the nearest point on the railroad. There is a post office at the village and telegraph connections. A good wagon road leads to it from the Mountain House, The location is very healthy, and has on that account been much resorted to of late years by invalids or those troubled with pulmonary complaints. The charges here are very moderate compared to what they are in some of the other hotels in the Adirondack region. Mr. Henry Phelps, the proprietor, had erected last season at Wolf Pond a nice hunting camp for the accommodation of his sporting guests, the country around the pond being a noted hunting ground for deer. There is also excellent trout fishing in the outlet, which is joined near the pond by the outlet of Long Pond, two miles further to the east are kept at these ponds and guides furnished to parties visiting them or other hunting and fishing localities in that region. Mr. Phelps is owner of a large tract of land around Blue Mountain and in this part of the district, so parties camping there need have no fear of being driven off or molested. I mention this, as I understand that the several lumber companies, with the railroad company, are about to form all the territory owned or controlled by them into a private park, and that it will all soon be posted and that no one will be allowed to camp on it without a permit from them. I have not recommended the Blue Mountain House on account of any interest I may have in it or its proprietor, but because it is the only establishment of the kind in that part of the district where sportsmen can find good accommodations. When I go to the woods I go independently; I have a full camping outflt of my own, and for the last five years, whenever I have been there, I have camped on the borders of some of the waters of the district, and generally through the entire season.

The portion of the district that I have attempted to describe is, I believe, the best hunting and fishing ground that there now is within its borders or in the northwestern portion of the Adirondacks.

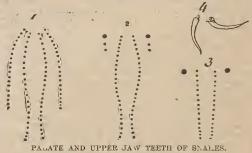

A. C.

Hatural History.

SNAKES' WEAPONS.

THE mention of crotalus fangs by Mr. John C. Cahoon in FOREST AND STREAM of March 8, reminds me that an apology has been due from me ever since my hurried reply to "Coahoma" in FOREST AND STREAM of July 21, 1887. "Coahoma" was in doubt about a "black snake" which he had found on the banks of the Mississippi, and whether it was a veryon one or not and he did not the 1887. "Coahoma" was in doubt about a "black snake" which he had found on the banks of the Mississippi, and whether it was a venom one or not, and he did me the honor of consulting my opinion as to what it might be. That issue of Forest and Stream reached me just as I was on the point of dispatching the obituary notice of a thirteen-year-old python (Python sebte), and I hastily added in a P. S. a few words to "Coahoma." The subject then passed from my thoughts until it came back in print, when to my dismay I saw that I had made a very misleading statement in writing "If the snake had no teeth on the palate it was a venomous one!" Whereas I should have said upper jaw instead of palate. For in point of fact all snakes, whether venomous or not, have palate teeth, finely pointed and slanting backward in two rows toward the throat. The palate teeth are important aids to the snake in feeding, and without them the prey could not be firmly retained. I regret so careless an error on my part, and regret also my delay in acknowledging it. The readers of Forest and Stream, who must have observed the mistake, have been too polite to call attention to it, and "Coahoma" again invites my opinion regarding the "immature" fangs which he has observed in a mocasin snake. But first let me entirely efface the effect of my late discrepancy and offer a little diagram of the three forms of dentition which prevail in the palate and upper jaws of snakes:

Fig. 1 represents the colubrine, or entirely harmless snakes, which have four rows of upper teeth, two on the palate and one in each jaw. Fig. 2 represents the venomous colubrines, such as the coral elaps of America and the Corotalida, which have fangs only in the upper jaw, and

The larger dots represent the fangs. [From Fayrer's "Thanatophidia."]

The larger dots represent the fangs.

[From Fayrer's "Thomatophidia."]

sufficiently terrible to do the work required of them. The palate teeth of these serpents are fewer, as will be seen. So that what I ought, and intended, to have said was that the absence of a row of simple teeth in the upper jaw of a snake would be a pretty sure proof of its being venomous.

Potent as are the viperine and crotalus fangs toxically, they are feeble mechanically, and easily come out, as from the force of the stroke. The other day, at the London Zoōlogical Gardens, a very young viper (a puff adder from Africa) struck at one of the others of the same brood, and a fang was left sticking in the side of the head. It was with no fratricidal intention that the little viper attacked its brother (or sister), but in sheer stupidity, during feeding time. The young puff adder, hearing the keeper open the trap door whence came the food supplies, struck at the nearest living creature, which happened to be one of its own relations. Even in young vipers—and as "pit vipers" the rattlesnakes are included—the reserve fangs in various stages are found. Those ophiologists who have devoted careful attention to the development of the poison tooth are of opinion that the shedding and replacement of the functional fang is a regular process, and not that a secondary one is awaiting an accident, so to speak, to become functional. But when, by accident, the functional fang is lost, a longer period may elapse before it is replaced than if it were expelled by a mature secondary. Dr. Weir Mitchell has shown this. "A crop of young teeth, or of fangs, work their way into the intervals of the old ones and gradually expel these latter," writes another distinguished ophiologist. Occasionally the most advanced reserve fang is sufficiently forward even to inflict a wound, which accounts for the fact that sometimes the marks of two punctures are seen close together on one or both sides where the person has been bitten, proving that a secondary as well as the funct

easily to "Coahoma's" other inquiry regarding "the bristle-like sting" which he observed in another "black snake." The spine terminating the tail has given rise to the negro stories about the "stinging tail," which have prevailed ever since a snake so appendaged was first observed by a white inhabitant of America. We scarcely expected in these days of ophiological enlightenment to see those old myths cropping up again, because they have been repeatedly ventilated and refuted till they have become newspaper sensations and nothing more. Every known snake has been so thoroughly examined and dissected and described by the numerous herpetologists of America that any poison apparatus in the tail would have been discovered and made known long ago. With all deference therefore to "Coahoma's" friends of "undoubted veracity," one may be permitted to suggest that scientific eyes and trained observations are essential to a true comprehension of apparent facts in natural history. The argument "seeing is believing" will not hold good in all cases. To see is one thing, to comprehend what is seen is another thing. It is quite possible that an accidental wound may be inflicted by one of the snakes whose tail terminates in the sharp spine from the snake angrily flourishing its tail about. But an intentional wound must not be credited. The tail of a snake, like the tail of most animals, is expressive of its emotions. You will see the tail of snakes, and indeed of most reptiles, thrown about sometimes angrily, sometimes exploringly and sometimes to find a grasp for safety, especially when the head or the rest of the body is under constraint of any kind. Even those snakes that are not true constrictors use their tail as a means of support, a fulcrum, a balance, a mainstay. This is seen very much in those small and feeble little "blind worms" (Anguis fragilis) of Europe, several in Australia, and the Typhtops lumbricalis of the West Indies, which have the credit of two heads as well as a fearful tail. They are burnweight snakes, the

A FEW FACTS ABOUT LOONS.

and hang to her while she dives and swims away, remain-

and hang to her while she dives and swims away, remaining a long time under water.

The loons have the faculty of sighting the direction a boat is going, then diving and going under water in an opposite direction, so when they come up you are not prepared for them, and they take breath and mark your locality and thus evade pursuit. They are half-amphibious, and can travel under water faster than on the surface. I once drove one up a brook and followed in my boat thinking I was sure of him, but near the headwater he turned, dove and passed under my boat so swiftly that I could only see a white streak of bubbles. I once caught one in a trap set near her nest, and concluded to drown her to ascertain the fact of her duration of life under water. I held her under thirty minutes by my watch before she stopped kicking.

I once saw what appeared like two men rowing a boat toward me as I stood on a sand beach at the end of a lake in the wilderness early one morning, and being alone and fifty miles, as I thought, from any human being, I watched the supposed boat with intense interest. They seemed to be rapidly approaching, but my eyes were diverted an instant from them by something else, and when I looked again the boat was not to be seen, but in place of it were two loons swimming along commonplace enough.

I accounted for the strange appearance as a mirage, the same way that ships were seen approaching Rhode Island in the time of the Revolution, but for a long time I could not relieve my mind from a strange presentment of some unknown danger.

The loons subsist entirely on fish, and are not very particular in their choice of kinds.

J. G. R.

FLORIDA CROCODILES AND BIRDS.

FLORIDA CROCODILES AND BIRDS.

CHICAGO, Ill., June 27.—Dr. J. W. Velie, secretary of the Academy of Sciences of this city, to-day showed me some of the specimens collected by himself in his last winter's Florida trip. Of these he values most highly his crocodiles, of which he got twenty good specimens, bringing back fifteen skins, four skeletons and one live specimen. One mounted specimen, a very large crocodile, measures 14ft., and the work upon it is very good. Of course, every one will know that the crocodile is quite different from the alligator, and this difference was very readily marked by the slightest comparison of the specimens Dr. Velie has side by side. The crocodile is lighter and greener in color, has an altogether differently shaped head and snout, and a far more vicious display of teeth, and is altogether uglier, if possible, than the alligator. It is also more vicious, and drives the alligator out of its territory. The specimens were secured either with the Florida "grains" or with a harpoon invented by Dr. Velie, which has a pivoted barb. The big fellows made a long and hard fight.

Dr. Velie was on this trip at the extreme southern point of Florida, although he did not go off to the Keys. He says that the plumage birds which were formerly so plentiful in all that country are now practically exterminated, and he had the greatest difficulty in getting even a few miserable specimens. The reddish egret is now almost impossible to obtain there, and where he once knew thousands of pelicans he now saw not one. Mr. Batty and his sixty hired gunners for the feather market, and the others of the same ilk, have done their work well.

Froos' Food.—Westerly, R. I., July 1.—While out for

eren a few miserable specimens. The reddish egret is tunk.

A FEW FACTS ABOUT LOONS.
THE loon, or great northern diver, is the first bird to migrate in the spring to the feeding grounds in the languley Lakes, often alighting in a small open space of the strength of the control in a small space of open water, there they must stay until the ice thaws sufficient to give them now room. Once in a small space of open water, there they must stay until the ice thaws sufficient to give them now from one in a small space of open water, there they must stay until the ice thaws sufficient to give them now from one in a small space of open water, there they must stay until the ice thaws sufficient to give them to control of the c

doing all your work in the open. I would not give a snap for those pretty targets sent out with new guns when the trials have been carried out in a garret range or in a long shed where queer conditions prevail.

I am glad that you have not allowed your judgment of a gun to be founded on a single shot and that the charges used are not given merely as stated by the gun mau, but that the labor of analysis has been undertaken to complete the record. Permit me to suggest that you make at some time a more distinct trial of charges by taking a good standard gun and then going through the various charges of powder—black, wood and Schultze—and of the various brands, also with various weights and sizes of shot. No doubt to some of the gunmakers your tests will have a flavor of antiquity. They have been tried in private for the benefit of the makers, and they have too frequently good reason for keeping them private; but yours is the first public trial taken on a scheme broad enough to make your results standard for all time.

Nick.

Editor Forest and Stream:

The Forest and Stream is a welcome visitor and grows better every week. The pattern and penetration tests will be appreciated by all lovers of the gun, and will be of great value in selecting a gun, as regards weight, bore, length of barrel, etc. However, I think that all the patterns should be made with the same make of shot, and, if possible; wads and powder of same kind. Unless this is done it will be hard to decide which is the best in penetration, as while the charges of shot can be easily counted, yet different makes of soft shot vary quite a little as to hardness, and would, therefore, vary in penetration. S. WATERTOWN, N. Y.

HOLDING ON AND AHEAD.

HOLDING ON AND AHEAD.

Editor Forest and Stream:

"Ancient," in his interesting article on "Cross Shots," has, I believe, made a mistake regarding the velocity of shot. A duck flying 60 miles an honr is at the rate of 88ft. per second, and a cross shot fired at 40yds. distant, to hit that duck by aiming only 2yds.—6ft.—ahead, would need a velocity of 1,620ft. per second, 100ft. greater velocity per second than the .45-70 U. S. Gov. rifle cartridge has on a dry day.

With 4drs, ducking powder and 1½oz. No. 6 shot, fired from a No. 10 chokebore gun the shot—so a chronograph says—will hardly attain a velocity of 900ft. a second, which would take it ½ of a second to go 40yds., which would require the aim to kill that duck to be nearly 12ft. ahead.

Of course most of your readers who are wing shots

ahead.

Of course most of your readers who are wing shots know that a moist barrel gives a greater velocity to the projectile than a dry one, consequently the shot have a greater velocity in a damp atmosphere than in a dry STANSTEAD

one. STANSTEAD.

["Ancient" does not assert that shot from an ordinary weapon has an initial velocity of 1,620ft, per second. He only assumed a rate of speed for illustration of the condition of cross shooting and in opposition to those who contend for centrifugal as well as projectile force as a factor in determining the line of the charge. "Stanstead" is approximately correct as to the rate of initial velocity.]

BEAR AND DEER IN NORTH CAROLINA.

BEAR AND DEER IN NORTH CAROLINA.

Delivides, N. C., July 4.—The boys have "opened the ball" by putting the brakes on one big old he bear. For several weeks the bears have been preying upon the farmers' pigs, and have been having it all their own way, owing to the fact that the boys were very busily engaged with farm work, and the swamps were very wet; but about a week since bruin became a little too high-toned, and thought he'd change his diet of pork for one of juicy beefsteak, so he killed a fine yearling, which, in the struggle, raised such a hullabaloo that the boys concluded to investigate. They hastily got together a crowd of dogs and went for the old "ragfoot." He was too independent to run very much, and they soon came upon him. But now came the trouble. The reeds and bushes were fully 10ft. high and as thick as wheat in a field, while the rain, which was falling at the time, made everything dripping wet, and as most of the crowd were armed with percussion guns (muzzleloaders), they found, upon attempting to shoot the bear, that their guns were as useless as so many sticks. Four of them attempted to shoot at once, but only one fired. This only wounded the old chap, and he moved off again with dogs and boys in pursuit. One daring fellow, John W., rushed up to the bear after following him nearly a mile and shoved his gun against the head of the ugly brute, pulled both triggers, and both barrels snapped. John was alone at the time, with the exception of the dogs, but he succeeded in turning the course of the game and drove him back, when he passed near a young man who carried a breechloader, which, when leveled, put a couple of loads of "buck and ball" through Mr. Bruin's corporosity, and forever quieted his longing for beef and pork. He weighed about 300lbs.

The asininity of our legislative Solons in removing the protecting law from our deer was fully demonstrated a few weeks since, when some dogs chased a fine doe into the river within gunshot of the town of Hertford, and a party of men went out with bo

novement.

I am afraid that the present wet season will have a bad effect on the bird shooting next fall, as they are now nesting, but lots of old birds went over from last fall, and if no young ones are raised we will still have some shooting.

A. F. R.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronunced by "Namit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

O'DONNELL'S NOTE.

D'DONNELL'S NOTE.

BEING passionately fond of squirrel hunting, I made arrangements to camp out up in the wilds of Licking Creek for a two-weeks' hunt. The party consisted of Sheriff Shivery, Wm. Brown, Gus Wright. Henry Diem and myself. We had a large tent, 11x14ft., and plenty of provisions and ammunition, and for two weeks gave ourselves up to solid enjoyment, during which time we shot all the squirrels and ruffed grouse we could use in camp; and each one brought a mess home. My son Charles requested us to leave our tent, cooking untensils, etc., when we came home, as he and a few of his friends wanted to spend a week hunting after our return. We left everything in camp for them on our return, but when their party was ready to start all had backed out excepting Charley and Levi Goshen, who determined to go alone. After hunting three days, Goshen, who was tax collector, suddenly remembered that he had appointed Thursday to collect his tax, so he took his gun and hunted home, leaving Charley alone in camp. When Goshen told me on his return that Charley was in camp alone, I hired Ed. Gushart to go up and stay with him until I sent a team for the tent.

There was a teamster who hauled ties from up Licking Creek to the railroad, and Gushart made arrangements to go along with him as far as he went. About nine miles up Licking Creek lived John O'Donnell, who had a note due in the bank at Mifflin, and the cashier sent word by the teamster to O'Donnell that unless his note was paid that day it would go to protest. The teamster and Gushart started about 2 o'clock in the morning, and consequently arrived at O'Donnell's before daylight. When the teamster called O'Donnell, he was informed that he had started a short time before to go up the creek about two miles to salt some cattle—there were several hundred young cattle turned out to pasture, and it was O'Donnell's business to attend to them. When the teamster had driven about a mile he stopped his team and hallooed, whoo! The teamster being somewhat deaf, supposed it w

A Tube Bullet.—Mr. A. Weed, of Tarrytown, N. Y. has been flying in the face of tradition in the matter of rifle bullets, and has prepared a bolt bullet in which he leaves an opening down its entire length. He has made them of several calibers, .38, .40 and .45, and in each case the work has been of the best sort. The front of the bullet is cut square off, and the forward end slightly countersunk; an opening of about one-third the diameter is then carried down the center of the bolt, leaving a heavy tube of about the same weight as the ordinary bullet. When fired it is found to fly with a very low trajectory, and when hitting any hard substances, as a plank, the hole cut is clean and neat in outline, but when fired into a log, and the log is split for examination, the superior destructive powers of the new bullet are at once shown. It mushrooms, but even more than or as much as the hollow point bullet, and on game of a large sort it is claimed that the stopping power of the new bullet is unexcelled. Mr. Weed expresses a willingness to supply a few of these bullets, without cost, to the readers of the Forest and Stream who may care to test them on game.

THE WOODCOCK'S WHISTLE.—Cookstown, Ont.—I was not aware, until seeing a printed note the other day, that it is a mooted question as to how the sharp whistle is made by the woodcock when he rises. I thought that it was understood by all woodcock shooters that this noise is made by the wings of the bird. If any one who doubts this will examine the russet woodcock he kills he will find three strong, narrow feathers on the outside of each wing. It is the rapid motion of these feathers through the air that produces the whistling noise when the woodcock rises. In proof of this let any sportsman interested in this question go out during the month of August, when these birds are moulting. Among some of the birds that he will flush a few will rise making no whistling noise at all; let him shoot these birds, and he will find on examing their wings that they have lost the three narrow feathers on the outside of each wing, which feathers have as yet not grown again.—H. B. N.

DEER IN THE ADIRONDACKS.—New York, July 3.—
The Adirondack Preserve Association's headquarters are in Essex county. We are pleased to be able to inform you that from advices we get from our members who are now at the club house there are very good prospects for the coming deer season. It is an undoubted fact that this game has of late very much increased, and a letter from one of our members, received to-day, states that within the last two weeks seventeen have been seen in the day time, and in one case our member paddled up to within 20ft. of a fine buck on Mink Lake one afternoon. I mention this as evidence of our efforts in the carrying out of the provisions of the game laws of the State, and we feel very hopeful that with the continued assistance of the residents the old cry of "No deer in the Adirondacks," will not be heard. Our lakes show no diminution of trout, the largest taken this season was of 3albs, in weight.—J. G. Case, Secretary.

YELLOWSTONE NATIONAL PARK, July 1.—There are at this date a few over 150 tourists in the Park. Since June 1 the Transportation Company have carried nearly seven hundred people. Camping parties are coming in slowly. Traveling with teams, they spend much more time in the Park than the average tourist. Mr. Ed. Wilson, the Government scout, on a recent trip saw two bands of buffalo that together made seventy-five. With one of these bands he counted twelve young calves. No particular effort was made to count a larger number, as the

buffalo were partly in the timber. Mr. Wilson was careful not to disturb them. They are on their summer range and where they are protected from hunters.—H.

THE LONG ISLAND SHORE BIRD SEASON opened yester-

Sea and Biver Hishing.

NEW YORK FISH LAWS.

NEW YORK FISH LAWS.

The last Legislature enacted laws, of which abstracts are given:

CHAP, 497.—Sec. 1. Section 640 of the Penal Code is hereby amended by inserting immediately after the eleventh subdivision thereof a new subdivision as follows: 12. Takes or attempts to take, without the consent of the owner of any lake or pond, any fish from the waters thereof, provided such lake or pond is so situated that fish cannot pass therein from the waters of any other lake, pond or stream, either public or owned by other persons; or, without the consent of the owner of any such lake or pond, places therein any pisctyorous fish or any porson or other of the consent of the leath of fish, or lest the waters of any other lake or to the leath of fish, or lest the waters of the stream of the law of the latter of the or one, with intent to take the therefrom or to harm fish therein.

CHAP, 512.—Sec. 1. It shall be unlawful for any person to kill, or catch any fish, except minnows, in that part of Lake Ontario commonly called Fair Haven Bay, or that part of Lake Ontario commonly called Fair Haven Bay, or that part of Lake Ontario commonly called Fair Haven Bay, or that part of Lake Ontario commonly called the pond, immediately east of Fair Haven Bay, which is hereby declared public waters, or in that part of Lake Ontario lying between the parallels of longitude formed by the east and west boundary lines of Cayuga county, and within two miles of the shore, or in Sodus Creek, within two miles of its smouth, in any way or manner, or by any device whatever except that of hook and line, and it shall be unlawful for any person to have in his or their possession, any fish excepting minnows, which have been taken from any of such waters, contrary to the provision of the contract of the contract of the contract of hook and line, and it shall be unlawful for any person to have in his or her possession at any time lake, formerly known as Long Pond in the town of Queensbury, Warren county, or take from the waters thereof, or from the w

CHICAGO FISHING WATERS.

CHICAGO FISHING WATERS.

CHICAGO, Ill., July 4.—On last Saturday, while a great portion of Chicago's citizens were out fishing, Chicago added 130 square miles to her territory, and increased her population to 1,100,000. When the boys got off the trains, on their return from fishing, they stepped into the second city of the Union in population, and the first in enterprise. Chicago sportsmen may now shoot ducks or go fishing for bass within the city limits, for by the annexation of certain suburbs Calumet Lake, Wolf Lake and other notable waters fall within the line. The old canvashack grounds, and the marshes which even yet hold some of the shooting, are to-day a part of the city of Chicago. Was ever a city so kind to her sportsmen!

yet hold some of the shooting, are to-day a part of the city of Chicago. Was ever a city so kind to her sportsment.

I mention the above fact in these columns not from any vainglorious Chicago spirit, but simply to call attention again to the often-nentioned fact of the singular situation of this city in regard to sporting facilities. The city fairly shakes hands with the forest and the stream. This is a fact which grows on one through investigation, and yet one which has never had a thorough investigation in any sporting paper. It has been my purpose this season to make a series of trips to the angling waters about Chicago, to see what extent these really reached, and report what I knew to be authentic facts in regard to them. It has been impossible to perform more than a mere fraction of this intention, but what little has been done is enough to show how futile was the original intention. Given a radius of 100 miles about [the city, and it would take a man a year to mention the better places for bass angling alone, and to visit more than the fewest of them would be out of the question. I therefore give up all claim to thoroughness of research and shall confine myself to visiting and mentioning a few of the more noteworthy locations near at hand.

To investigate the weekly exodus I went up the Wisconsin Central one recent Saturday, without having any definite point in view, and caring more to see the crowd than anything else. This road is the best patronized of any in the matter of short-distance angling traffic. It runs through a district truly unique, which lies all along the road, anywhere from 35 to 65 miles out of the city. The iron string has certainly threaded a vast number of rare pearls. A great many of our passengers—nearly all of whom carried angling insignia—got off at Lake Villa. The Fox Lake Hotel men will try to persuade any one, especially a newspaper man, that there is no use fooling around Lake Villa. Yet Deep Lake, lying near by, has lately yielded some grand bass, and Cedar Lake, a biscuit-

there are rather tough, I am told, although I have not stopped there.

there are rather bough, I am told, although I have not stopped there. In passed the altes above named, and also Camp Lake.

I passed this lakes above named, and also Camp Lake.

I passed this deathed delegation disembarked, and we rain on up to Silver Lake, where I found good lodging and a good number of anglers. Among the latter were the two imsperables. W. W. McFarland and C. D. Garamon. "Well, do you fellows go just everywhere?" I asked them; and then they asked me if I wanted some frogs, where the them is the season of the passed that you have a season of the passed that you have a to the spoot, the deady frog getting away with the rest of the spoot, the deady frog getting away with the rest of the spoot, the deady frog getting away with the rest of the spoot, the deady frog getting favor with the rest of the spoot, the deady frog getting favor with the rest of the spoot, the deady frog getting favor with the rest of the spoot, the deady frog getting favor with the rest of the spoot of th

or mascallonge fishing yet, and I have not spoken of the trout fishing, although Wisconsin and Michigan now have hundreds of our trout anglers hid up in their woods. I have been too busy and too hurried to get past the edge of the angling field here. But if "Seneca" or Mr. Spangler should so patiently investigate this field as they have those lying adjacent to New York and Philadelphia, I know they would surprise themselves and all readers of this paper, and would follow my often-made assertion that all Eastern people ought to come out here to live.

E. HOUGH.

THE BAY OF QUINTE.

THE BAY OF QUINTE.

BELLEVILLE, Ont., July 4.—Although the season for bass and maskinonge fishing opened on June 15, but few of either of these varieties of game fish have as yet been caught, owing to the fact that the bay fairly swarms with shad or gaspereaux, which furnish abundant food of a dainty character for their larger brethren of the finny tribes. But three maskinonge have so far been reported as having been taken at Mosquito Bay, the weights of which were 12lbs., 16lbs. and nearly 20lbs. A month hence, however, when the shad have disappeared, there will no doubt be grand fishing.

The close season for pickerel (doré) was much better observed than usual. The Forest and Stream Club, a new organization, took the matter in hand, and after some six or seven convictions had been obtained, fishermen and poachers were fain to respect the law.

The Dominion Government have partly complied with the representations of the clubs by prohibiting fishing with nets during the months of June, July and August; but violations of this law have been reported, and although the Government overseer is anxious to do his duty, his hands are tied by the parsimony of his department, which refuses to allow a sufficient amount for expenses. The Government ought to enforce their own regulations, but they seem to think that private parties will incur the expense, trouble and odium of doing so. It is to be hoped that a change will be made in this regard, and in the further respect of ordering the release of the nets and other gear of those fishermen who wilfully set the law at defiance, as has been done in several cases.

The Dominion Group of the seless of the nets and other gear of those fishermen who wilfully set the law at defiance, as has been done in several cases.

The Prize Yarn.—The New York Evening World recently offered a prize for the best fish story, and Mr. J. L. Gunckel, of Tolodo, O., who writes the "Sunset Club" papers in Forest And Stream, won the prize with this yarn: "I was in a boat off Edgewater on Ten Mile Creek, a tributary to Lake Erie, fishing for perch. Near the wild rice on the opposite side of the stream, I noticed every now and then the splash of a large fish, and thinking there might be a hungry pike feeding, I changed my tackle, hooked a 5in. perch securely behind the dorsal fin and made a cast. A heavy strike, the reel spinned and a second strike followed. The movement of the fish ceased and a trembling sensation in the line and rod was experienced, which moved to the center of the stream, and a regular shaking ensued, resembling a terrier worrying a rat. I gave a jerk; no effect; the sensation continued the more savagely; it felt very heavy. Gradually I hauled in, and when within a few feet of my boat I saw the trouble. A 9lbs, pike had a savage hold of the head of the perch, a 7lbs. dogfish a firm hold of the tail, and the hook remained in its original position between the heads of the two fish who were struggling for the perch, and this continued after I landed them and neither would let go of the bait. The two large fish were caught without the hook touching either."

Maine Trout.—Camp Bemis, July 6.—Mr. Pavish of Montville, Conn., who made some remarkable catches at our lakes with the fly last September, has been whipping the pool below the Upper Dam pretty constantly for the past few days. On July 3 he took one trout of 7lbs. 10oz.; on the 4th one of 6½lbs., and one of 3½lbs.; and on the 5th, in the same place, a salmon of 3½lbs. These were taken with flies by fair casting. About June 25 Mr. John W. Hill, of Waterbury, Conn., took with flies in the same pool, in one day, twenty-eight trout, one of which weighed something over 7lbs. Many of the others weighed between 2lbs. and 3lbs., and, I think, one 3½lbs. About the same time Mr. French, the present proprietor of the Upper Dam House, took one of 6½lbs.; also three 5½lbs., 5lbs. and 4lbs. Many smaller ones have been taken lately. Now can any one tell us of a place anywhere on your present stamping ground where, at this season of the year, the trout do not hide any more successfully.—F. C. Barker.

Notes from a Railway Train.—At Cotopaxi, Colorado, men were fishing for trout, the season having just opened. At Green River, Utah, on the day following, we had for our breakfast "mountain trout," which were Coregonus williamsoni and not a species of Salmo. Near Castle Gate, in this Territory, several men were fishing in the vicinity of the coal mines. We were told that trout are plentiful along the route of the Denver and Rio Grande. At Ogden, June 15, we saw a big creel of trout eaught in mountain streams near by. Fish are reported to be very plentiful in this neighborhood, and they are believed to be well protected. The sentiment in favor of protection is strong, and dynamiters are regarded as no better than murderers.—B.

Bass in the Susquehanna.—Millersburg, Pa., July 1.

—Bass fishing in the Susquehanna since the flood is better than for two years past. Mr. Woodside, an old experienced fisherman, caught thirty-seven from 3 o'clock till evening, and Mr. Bowman, the champion fisherman, took fifty-three in the morning before 10 o'clock. When he came to shore he had to hunt a friend to help him carry them home, they tied them to a pole and carried it on their shoulders. The largest bass this season was caught by Mr. Kline, an amateur fisherman, who was fishing last week for the first time this season; it balanced the scales at 3lbs, 12oz. All the bass I opened the past week or two had crawfish in them. The baits they are taking the best now are helgramites.—H. S. G.

Berthoup, Colorado, June 26.—I went up Big Thompsen trout fishing a few days ago. Fishing not very good yet; river too high. Largest we caught was 18in. long. Heard of one caught that weighed 3lbs., but did not see it.—A. A. K.

TARPUM?—The Gloucester Times of July 5 reported: "A rare and beautiful fish was on exhibition at Quincy Market, Tuesday, said to be the second of the kind ever seen in Boston. Its scales are composed of a large circular substance, which has the appearance of bone, and a little larger than a silver dollar, being coated with a substance that wonderfully resembles silver. The fish weighs just 84lbs., and measures 64ft. in length, with a well-rounded body, not differing very much from that of a halibut." The above was probably a tarpum. This fish is often found in the markets of Baltimore, Washington and New York, where they are used by the dealers as attractions, and to good effect.

SPANISH MACKEREL.—Very large catches of Spanish mackerel (Scomberomorus maculatus) are now being made in the Chesapeake. These fish are mostly taken on the eastern shore of Maryland, in pound and gill-nets. This species is somewhat of a game fish and at times takes the spoon. It is one of the most beautiful as well as one of the most valued of our food fishes. It visits our coast during the summer, going as far north as Cape Cod. The market price for this fish a few years ago ranged from twenty-five cents to as high as one dollar per pound; it is now selling in Baltimore for four cents wholesale.

Salt-Water Fishing.—Newport, R. I., July 5.—I wish to make a correction in my short notice or record of tautog fishing. I have followed tautog fishing in connection with striped bass fishing since I was five years old and for the past twenty-five years. I took the first striped bass of the season this year in this locality with rod and reel, June 23, weight 4 and 6½lbs., also one of 7½lbs. July 2.—WM. M. HUGHES. [Mr. Hughes tells us that he is prepared to act as guide to fishermen seeking salt-water sport; and he sends us good references.]

STRIPED BASS IN CALIFORNIA.—Mr. Yale, editor of the Scientific and Mining Press, San Francisco, informs us that a gentleman caught a 45lbs, striped bass, June 16, in San Francisco Bay. The exact locality is unknown, but it was either at the west point of Hospital Cove, or in the rapid water beyond Lime Point, Small fish of this species are occasionally sold in the markets, and we are told that they sometimes bring \$2 per pound, while shad are abundant and command only 8 cents.

Hishculture.

SAN FRANCISCO FISH MARKETS.

SAN FRANCISCO FISH MARKETS.

In the month of June the display of fresh fish is not up to our expectations; the number of species is comparatively small and the supply is rather limited. We are informed, however, that there is no scarcity of fish in the waters near by. Mussels, clams, oysters, crabs, shrimp and prawns are common enough. The family of flounders, as usual, is well represented by species and individuals; but halibut are not found exposed on the stalls. The tomcod continues to be ubiquitous and insipid as of old. Whiting (Merluctus) are among the cheap fishes. Cultus cod (Ophiodom) and the rock trouts (Hexagrammus) are met with everywhere. Rock cod (Schastichthys) are very abundant and always attractive. The bullhead (Scorpartichthys) is cheap and inferior. Bonito have made their appearance in small quantities, the individuals being much larger as a rule than the average in New York markets; the price is low, as the demand is not great. Spanish mackerel are scarce and high-priced. A species of mackerel motified like our common Eastern one, but with a much larger eye, is coming in small numbers and brings from 30 to 50 cents per pound. The pompano of this market would be called butterfish or harvest fish on our coast. The viviparous perches are well-represented, but not greately prized. The Sacramento perch (Archophites) is one of the few fresh water fishes found in stock. The sea bass is a weakfish reaching gigantic proportions, 75lbs. being given as its occasional weight; a smaller member of the same family is the corvinetta, or kingfish. Barracuda are appearing in all the markets. Smelt are everywhere common: this is not a species of Osmerus like our Eastern smelt, but a larger relative of the silversides or friar. Shad from the Sacramento and other rivers are to be seen daily. Some are in the spawning condition, but many of them are spent. May and June are the usual months for spawning. The smallest shad noticed in Clay street market was about 12in. long. The species has increased wonderfully and

CARP AS SPAWN EATERS.—Editor Forest and Stream: Some time ago a correspondent wrote you advising the extermination of German carp in the Passaic River, on account of its alleged destruction of the spawn of other fish. I am fully satisfied that the charge is well founded. I have been raising carp for the past six years, and have watched their habits very closely, and have seen them invariably (for the last three years) eat their own spawn as soon as deposited, and doubt not the spawn of all other fish accessible to them would share the same fate. I have three carp ponds, averaging in size from ½ acre to 2 acres, and not one single carp has been hatched in them for several years, on account of the total destruction of the eggs by the parent fish. It is true my ponds are overstocked and the fish are always hungry, but I believe destruction of spawn will be the result in any waters in which they become numerous. Still I am a friend of the carp, and for rapidity of growth and ease with which it can be cultivated, in all waters not too cold, I don't think its equal can be found. Perhaps its spawn-eating propensities are instinctive when the water becomes so overstocked that no more fish can thrive in it. I was hoping "J. G. R." would tell us how to trap otters, but so far have seen nothing on the subject.—P. (Louisa County, Va.).

KANSAS CITY FISH SUPPLY.—A hasty glance at the market in Kansas City, Mo., June 12, showed the summer supply of fishes to be derived mainly from the East and from Minnesota. Lobsters and frogs were in stock. Flatfish and haddock were the Eastern species. The other kinds were white perch (or fresh-water drum), crappies, red-eyes, sunfish, buffalo and sturgeon, besides the Minnesota contingent of pike, whitefish and lake trout.

Montpeller, Vt., June 29, 1889,—Yawman and Erbe, Rochester, N. V.: Gents—I desire to express my entire satisfaction with the automatic reel, one of which was ordered by Mr. John E. Hubbard for me some weeks since. I have used it for two weeks in the lakes of the St. Bernard Club, where with a party of seven the lakes of the St. Bernard Club, where with a party of seven to large the property of the pound to four pounds each, and found it far ahead of what I had anticipated. I am sure that all who saw its working were highly pleased with the result. I have in no wise been solicited for this testimonial. I give it because I appreciate the merits of the reel. Yours very truly, Harlan W. Kemp.—Adv.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal. Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.
COURSING.
Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutch
inson, Kan. M. E. Allison, Manager.
Oct. 24.—Annual Meet of the American Coursing Club, at Great
Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

THE POINTER CLUB.

THE POINTER CLUB.

Editor Forest and Stream:
At the regular meeting of the Pointer Club of America, held July 1 in the rooms of the American Kennel Club, 44
Broadway, New York, the following well-known gentlemen were elected members: Dr. John A. Hartmann, Latrobe, Pa.; Col. C. H. Odell, Gen. T. N. Logan, Mr. Thomas H. Terry, New York; A. C. Waddell, Kansas City, Mo.; W. B. Meares, Jr., Hillsboro, N. C.; H. B. Owen, Richmond, Va.; Worthington Hoyt, Cleveland, Ohio.

After deliberate consideration and much discussion, the Stonehenge standard for pointers was declared to be good enough for adoption by the club, and it was so ordered. (President Wise offered to supply a \$7.50 copy to any one who applies in time.) Motion made by Mr. Anthony, seconded by Mr. Heath and carried as above.

Dr. Rowe has been requested to furnish written terms under which competition shall be invited for the cup (value \$100) donated to the Club by the doctor last February.

The terms will appear in print in an early issue of the sporting papers.

under which competition snan be the same place. Show do noted to the Club by the doctor last February.

The terms will appear in print in an early issue of the sporting papers.

President Wise appointed Messrs. F. R. Hitchcock, J. L. Anthony and G. Muss Arnolt a sub-committee to prepare plans for the distribution of such prizes as may be offered by and through the Pointer Club for the coming season. A Produce Stake was discussed, intended for puppies whelped after a fixed date, value \$100 to \$200 cash, also several other prizes for bench and field merit. The prospects are very flattering for a liberal prize list under the auspices of the club.

The members will be invited to vote upon the selection of six gentlemen to be recommended by the club to bench show committees as proper persons to judge pointers at shows. It is intended to have an avowed "pointer man" judge pointers, if the members so elect. Blanks will be prepared and forwarded by the secretary.

Many other matters of importance to the pointer were discussed and after a very successful meeting it was adjourned until Aug. 20 at the same place, when reports of different committees will be received.

The report of the treasurer was read and accepted, showing the club to be in a prosperous condition financially with annual dues for 1889 now payable, for wich a notice will be sent.

Membership is increasing rapidly and a cordial invitation is extended to all lovers of the pointer to become enrolled before the busy season opens.

GEO. W. LARUE, Sec. and Treas.

THE MAIDEN MYSTERY SOLVED.—New York, July 8.—Editor Forest and Stream: A week ago to-day I visited your rooms and, with the kind assistance of Mr. Hammond, found in your files of English sporting papers criticisms of Meersbrook Maiden that answered so well for the bitch that has been known in this country as Meersbrook Girl, that I felt partially satisfied that the two were identical. The following day I received letters from England that convinced me that such was the case. The two black and tan terrier bitches Meersbrook Maiden and Meersbrook Girl have been shown, bred and have whelped under wrong names, and as your paper has kindly published notices of these events, I wish this to be published as a correction. The names and pedigrees wherever they have appeared should be changed about. In future the bitches will appear under their proper names and pedigrees, with the prefix Rochelle instead of Meersbrook, and the puppies will be brought up with respect for their true ancestry. The bitches were evidently accidentally changed in names while in transit to this comtry, and their breeders, Messrs. Hill & Ashton, merely expressed an opinion to this effect, leaving it entirely for me to determine. Had they done what they could have done to satisfy me of this fact, much of the recent unpleasantness could have been avoided.—H. T. Foote, M.D., V.S. (Rochelle Kennels, New Rochelle, N. Y.).

PETE THE DOG.

PETE THE DOG.

NE pleasant afternoon in the fall I was hunting in the woods with a friend who had hunted buffalo on the plains, and had been hunted by the Indians, but his scalp was still where nature had placed it before the hair oil period of his existence.

To hear that man tell the story of his hunting days was to me what Othello's recital of his hairbreadth escapes was to me what Othello's recital of his hairbreadth escapes was to Desdemona. I wished that heaven had made me such a man. His maryelous words roused the sleeping Nimrod in my soul, and with an imagination so excited that I could easily have magnified a woodchuck to a buffalo, I had accepted his invitation to break for the woods where we could both show our contempt for civilization.

Our happy hunting ground was easily reached. In due time we found ourselves treading the tangled mazes of young timber, where, though not many rods apart, we could not see each other. Bang went my companion's gun. I ran toward him and exclaimed, "What's up?" "Nothing." "What did you shoot at?" "To encourage the dog."

Pete was our dog's name. He was a borrowed dog. Our acquaintance with him was purely accidental, but it soon developed into intimacy, and ripened into a friendship far more sincere than many acquaintances that are begun under the conventional forms of polite society.

It was blue Monday that we had chosen for our outing—that day of all others in the week when a minister feels the least like work and the most like getting away from every thing that reminds him of it.

My pastor, a young man who can fire a shot that will tell upon any of the evils of the times, and who can also hit a partridge on the wing about every other time he tries, had said to me; "Come; let's take our guns, get aboard the cars and go where no book agent can find us."

We stopped at an insignificant station, with woods on every side of it—a place that a traveling man on the train said was rather small at the center, but then it had a tremendous circumference.

There was a rude cab

leaned over too far and capsized her. At least, that's the only way we can account for it, for John was careful, and knew all the ins and outs of a boat as well as you do of a shotgum.

"John was a good swimmer and tried his best to save the other boy, but he could not swim as John could and was scared out of his wits. He got his arms around John, and in the struggle both went down. Pete gave the alarm, for he was on the shore, and I got there just in time to see both loys sink out of sight, but too late to help them, and besides I can't swim at all.

"I thought Pete would die. He fairly haunted the lake shore, and it was days before he would notice any of us. But he likes squirrel hunting. He was always treeing them for John, poor boy, and if ye coax him a little, mebbe he'll go along with ye. Once git him started and ye're all right."

Both of us took to Pete at once. The pastor, after a moment, induced him to jump over the fence, and very soon he struck the trail of the squirrel we had been after a few minutes before.

Pete seemed to think we were good fellows, and hnrried from one piece of woods to another, often getting far ahead of us, but always barking furiously when be started a squirrel, and always placing himself at the foot of the tree in which the squirrel was and then waiting for us to come up snd shoot him if we could. Pete was a dog who had opinions. I make his relative pronoun "who" because I am more than half inclined to think he has a soul. He certainly seemed to have a more clearly defined sense of duty than some bipeds who expect a dog to come and serve them whenever they choose to whistle.

Pete's eyes were far more effective than ours, and he could see a squirrel when we could not. At first we were disposed to think the dog was mistaken and that, misled by the seem to integround, he had tracked the squirrel to a tree that he had left some time before, but we always found it next to impossible to get him away from a tree in which we could see nothing, when his view of the case did not coin

with us he would turn back, run toward the tree we were leaving, and bark as if to say, "There's your squirrel, now shoot him."

At last we tried an experiment. Unable to discover the squirrel that Pete said he knew was there, one of us fired into the tree and then called Pete to come away. He came, but quite reluctantly. I half believe Pete said to himself, "Well, perhaps you've done the best you can, and if you really can't fetch him, why try another tree."

Pete certainly had a delicate sense of the eternal fitness of things. Once when we had treed a squirrel, the pastor fired and wounded him. He sprang from the tree and by a series of vigorous bounds traveled over the tops of several tall oaks, landing on one at a considerable distance from his starting point.

It was now my turn. I fired and for a moment the victim hung by one claw, every nerve in his body quivering, and then fell to the ground. I never saw a nobler fox squirrel in all my life. Pete caught him as he fell, gave him one vigorous shake, and still holding the fellow between his jaws walked deliberately away from the spot, a distance of several rods and carefully laid down his prize at the foot of the very tree where he had discovered him. What in the world did that dog mean? Any other dog would have dropped his game anywhere on the dry leaves, but Pete placed him where he ought to have fallen and seemed immensely pleased when we patted him and called him an intelligent dog.

About noon we found ourselves at the little cabin where Pete's master lives. We spread our lunch upon a side table and were favored with a cup of tea that had steeped upon the kitchen stove. A tramp through the woods is a wonderful appetizer. And yet after two hungry men were fully satisfied, there was a generous pile of fragments left. "These will make a glorious dinner for Pete," said the parson as we stood by the pump at the back door, ready for another start. "He don't get such a meal as that every day; but where is he?" "Hark," said I, "there he is," and sure

enough, half a mile away Pete was barking enthuiastically, and we knew that he was calling for us to come. We took a generous meal to him, for no doubt he was hungry. The parson offered him the leg of a turkey. He actually turned away from it in huge disdain. Was it because he did not consider the second table good enough? Did he scorn to eat our leavings? No; Pete had no false pride, but he kept his bright eyes fixed wistfully upon the tree. Nothing would induce him to eat. "What shall we do?" said the parson, "he won't be satisfied till we do something."

Carefully following the direction of Pet's eyes I thought I could distinguish a small grayish hump on one of the high branches. I fired at it. Down came a gray squirrel. Pete was delighted. We again offered him the turkey leg, and this time he crunched it, meat, bone, marrow and all between his ravenous jaws. His white teeth were not like the mills of the gods, for now they ground with fearful rapidity. Very pleasantly the hours sped. The slant light of the setting sun on the leaves and underbrush admonished us that we must leave this enchanted ground and go back to the haunts of busy men—one of us to study up original sin and convert original sinners, the other to show the honorable court that his client is in the right and that the man on the other side has neither law in his head nor a regard for justice in his heart.

Pete followed us to the little station. We stood upon the platform till a curve in the road hid him from our eyes. As long as we could see him he was on the track gazing after the train, as if some one that he loved was leaving him.

I pity a man who cannot return the love of a dog. I am sure my paster would enjoy a pastoral call on Pete far better than he does his regular calls on some of the Peters and other good saints in his parisb.

I hate to think that when Pete dies his career will be utterly and forever ended. So much intelligence, fidelity and gentle affection seem worthy to live a little longer than the ordinary life of a white do

FLINT, Michigan.

LOS ANGELES DOG SHOW.

LOS ANGELES DOG SHOW.

I OS ANGELES, June 29.—Editor Forest and Stream:
I The first dog show of the Southern California Kennel
Club was held in this city June 24 to 29, in connection with
the exhibition of the Los Angeles County Poultry Association. The show was a very good one indeed, much better
than I anticipated, as before the time of closing entries I
did not know, nor did any one else, where the dogs were to
come from to make it, and thought if we could get 40 or possibly 50, it would be as much as we could expect, but you
will see we had 90, and quite a number of them were really
good ones and will compare favorably with those of the best
at shows of this size. Next year, if all goes well, we will
give a rattler I think, as the interest is now awakened and
all are talking dog. It has been the best attended show I
have ever seen, the hall being completely crowded from the
time of opening till the close, so it has been a paying one.
Mr. H. H. Briggs, kennel editor of the Breeder and Sportsman, judged all classes and gave very general satisfaction,
indeed I have heard no complaint whatever regarding his
decisions. The only kick I have heard is from a party who
showed a mastiff which was catalogued at \$100, that was
claimed at that price, but the owner refused to part with
him, and proceedings at law may result. Below is a complete list of the winners.

AWARDS.

MASTIFFS.—Dous: 1st. W. Piutit's Amado: 24, Kirkhoven Mus-

Piete fist of the winners.

MASTIFFS.—Dogs: 1st, W. Pintii's Amado; 2d, Kirkhoven Mustiff Kenuels' Impedial Arno. Bitches: 1st, Kirkhoven Mastiff Kennels' Lella M. Pumpies: Absent.

ST. BERNARDS.—ROUGH-COATED—Dogs: No entry. Bitches: 1st, W. Bowring's Sheila.—SMOOTH-COATED—No entry. NEWFOUNDLANDS.—lst, withheld; 2d, A. A. Montano's Prince Myra.

GREAT DANES.—Ist, Baron Rogniat's Montebello. Puppies: 1st, W. Beach's Strahgoff.—HARLEQUIN—Dogs: 1st, Dr. W. LeMoyne Wills's Tiger. Bitches: 1st, Dr. W. LeMoyne Wills's Glio. GREYHOUNDS.—Dogs: 1st, withheld; 2d, A. D. Machado's Nadan. Bitches: Absent.—Puppies—Dogs: 1st, G. W. Gordon's Leo; 2d, A. S. Henderson's Muldoon. Very high com., Mrs. A. S. Henderson's Pete.

derson's Pete.

FOXHOUNDS.—Dogs: 1st, C. S. Campbell-Johnston's Jack.

Bitches: 1st, A. N. Campbell-Johnston's Dina; 2d, C. Haskell's

Venus. Puppies: 1st, M. Hamerwass's Sport.

POINTERS.—LARGE—No entries.—Swall.—Dogs: 1st, K. E.

Benchley's Kan Koo. Bitches: 1st, A. B. Truman's Patti Crox
teth T.; 2d, F. Handley's Nell. Puppies: No entry.

ENGLISH SETTERS.—Dogs: 1st, J. F. Holbrook's Tom Paine;
2d, T. Bright's Koyal Sport; 3d, E. Unger's Tripler. Reserve. E.

C. White's Jack. Very high com., E. B. Tuft's Dike II. High

com., C. E. Fowt's Signet. Bitches: 1st and 3d, H. T. Payne's

Princess Claude and Los Angeles; 3d, A. C. Ruschhaupt's Daisy.—

Puppies—Dogs: 1st, S. A. Wattson's Peerless. Bitches: No entry.

IRISH SETTERS.—Dogs: 1st, A. B. Truman's Mike T. 23 E. B. Princess Claude and Los Angeles; 20, A. C. Rusenhaupt's Daisy.—
Puppies—Dogs: 1st, S. A. Wattson's Peerless. Bitches: No entry.
IRISH SETTERS.—Dogs: 1st, A. B. Truman's Mike T.; 23, E. B.
Tutt's Duke Alexis. Bitches: 1st, A. B. Truman's Lady Elcho T.
Puppies: No entries.
GORDON SETTERS.—Dogs: 1st, B. A. Breakey, Jr.'s, Duke; 2d,
A. E. Dixon's Colonel; 3d, M. Katz's Dude. Bitches: 1st and 2d, J.
B. Proctor's Lady Lupton and Burton Lass; 3d, J. Machell's Nun.
Very high com., M. Katz's Queen. Puppies: No entries.
FIELD SPANIELS.—Dogs: 1st, withheld; 2d, T. C. Mark's Zip,
Bitches: 1st, withheld; 2d, B. A. Heinman's Queen. Puppies: 1st
and 2d, withheld; 3d, J. Singer's Venice.
COCKER SPANIELS.—Dogs: 1st, H. P. Rennie's Giffree, Bitches:
1st, Mrs, H. P. Rennie's Woodstock Belle; 2d, H. S. Sheppard's
Lady. Puppies: No entries.
RETRIEVERS.—Dogs: No entries.
Bitches: Absent.—Puppies
Dogs: 1st, withheld; 2d, J. J. Schallert's Pasha.
COLLIES.—Dogs: No entries.
Bitches: 1st, withheld; 2d, J. J.
Hanford's Bounce. High com., O. H. Gardner's Sport. Puppies:
No entries.
DALMATIANS.—Dogs: 1st, withheld; 2d, C. D. Sherman's

DALMATIANS.—Dogs: 1st, withheld; 2d, C. D. Sherman's Prince II. Bitchce: 1st, withheld; 2d, J. C. Preston's Flora.

No entries.

DALMATIANS.—Dogs: 1st, withheld; 2d, C. D. Sherman's Prince II. Bitchee: 1st, withheld; 2d, J. C. Preston's Flora.

BULLDOGS.—No entries.

BULL-TERRIERS.—CHALLENGE—1st, C. Barnes's Little Nell.—OPEN—No entries.

Pupples: 1st, T. Savage's Nancy; 2d, H. Chevallier's Billy.

FOX-TERRIFRS.—Dogs: 1st, Miss Susie Glassell Patton's Don Carlos; 2d, C. S. Campbell-Johnston's Rennis; 3d, Clara Bowring's Lory. Bitchee: 1st, J. B. Martin's Golden Patch; 2d, Dr. C. P. Murry's Fan. Pupples: 1st and very high com., Ballyhooly Kennels' Rags and Tatters; 2d, Dr. C. P. Murry's Toby; 3d, J. G. Holborew's Don. Reserve, E. Bowring's Aphrodite. High com., C. W. Page's Trot.

BLACK AND TAN TERRIERS.—1st, F. Donaldson's Dick; 2d, Mrs. T. Bright's Ben Harrison.

SCOTCH TERRIERS.—1st, O. S. Campbell-Johnston's Tatters. MEXICAN TERRIERS.—1st, Mrs. A. A. Sausengh's Rob Roy. PUGS.—Dogs: 1st, Miss Julia M. Taylor's Pat. Bitchee: 1st, Mrs. W. H. Lucas's unnamed; 2d, Rev. D. F. Mackenzie's Queen. MISCELLANEOUS.—1st, H. Marteen's Bismarck: 2d, Mrs. E. Williams's Sir William.

SPECIAL PRIZES.

Kennel mastiffs, Kirkhoven Mastiff Kennel; greyhounds, A. S. Henderson; English setters (2), A. B. Truman; Irish setters, the same; best display, the same; best kennel (2), the same; best mastiff, Lelia M.; St. Hervard, Shella; Great Dane, Montebello; Newfoundland, Prince Myra; greyhound (2), Leo; owned by a lady, Pete; foxbound, Jack; pointer, Patti Croxteth T.; dog, Kan Koo; English setter (2), Lady Elcho T.; bitch, the same; Gordon setter, Lady Lupton; bitch (2), the same; English etter (2), Under The Path (1), the same; spanied (2), Woodstock Belle; cocker, the same; retriever, Pasha; collie (2), Bounce; Dalmatian, Flora; bull-terrier, Little Nell; fox-terrier (2), Don Carlos; rough-haired terrier, Tattere; toy terrier (2), Woodstock Belle; sporting dog puppy, K

IMPORTING DOGS.

IMPORTING DOGS.

Editor Forest and Stream:

It occurs to me that there is a great deal of confusion on the above matter, and that parties importing dogs may be frequently, although innocently, violating the law. Of course the case of Mr. Morris is the suggestion here, but I do not mean to say that I refer to it in any way whatever, as I know nothing of the facts.

As I understand the case, the consular certificate sets forth that the animal is of a superior breed, calculated to improve the stock in the U.S. is imported for breeding purposes and not for sale. In the last paragraph lies the danger to the importer; he really does import the dog for risk years after, does be violate the law by selling? In point of fact, I think a great number of dogs are imported respecially for sale, and passed through on consular certificates of the above character, and it seems to me that these are clear violations of the law, and that as the consular certificate is sworn to on the other side by the agent of the importer, and the latter presumably knows all the statements contained in the certificate (in point of fact generally knows whem fully), he is clearly bound by the conditions, and comes within the pale of the criminal law if he violates conditions made for him, and in which he concurs. Disregard of custom law is sequent, and is so commonly looked on as not considered the sequence of the law, by what verges charged on as not considered the sequence of the concurs. The properties of late occurrence might bring the parties into trouble with the Custom House authorities.

Parties living outside the port of entry commonly have their animals consigned to some one in New York, invoiced to them, etc., etc., the name of the owner and real importer never appearing, as for instance, all dogs coming to me are consigned to a friend who keeps a Custom House papers at some distant point, forwarding them to the port of entry, delays, charges for keep, extra Custom House pepers at some distant point, forwarding them to the port of entry,

DOG TALK.

IN advocating compulsory reports from judges at dog shows the June issue of the American Kennel Gazette says. * * * "But what the Association requires for official record it demands to be furnished as a duty under penalties prescribed for non-compliance, and if the American Kennel Club decides to compel official reports from judges at shows to be included in these duties and deliberately through its delegates so enacts, we venture not only to predict that the enactment will be most strictly complied with, but that the judges themselves will support it." Our advice to the delegates is to go slow in the matter and not trade off a good judge for a poor report.

The ninth annual show of the St. Bernard Club, of England, was held at Windsor the last week in June. There were 202 entries, including all the best specimens of the breed in the country. The London Filed says: "It was gratifying to find some few young dogs not shown before which are likely to take a high position for themselves in the future. This was most particularly noticable among the bitches, which, taken all through, form better groups than the dogs, the open all-aged class of the former being probably the best of the kind we have yet seen. There was also a marked improvement in the quality of the smooth-haired or short-coated variety; and, although the grand prize did not go to one of them, the immense Watch made quite a good fight for the trophy with the great Sir Bedivere, who secured the challenge cup for the third time, although this grand dog is not yet two years old."

Fanciers' Gazette publishes an interview with Mr. Sidney W. Smith, of Leeds, Eng., the well known St. Bernard fancier, who has recently returned from a trip to this country. Mr. Smith was greatly taken with Plinlimmon, Jr., owned by Mr. E. B. Sears, of Melrose, Mass, and would have taken him to England with him, but Mr. Sears refused to part with him. In answer to the query, "What do you think of canine prospects there," Mr. Smith replied: "From beginning to end I find a wish to purchase the best blood and the praiseworthy ambition to breed and come over here and beat us on our own grounds, and which they will succeed in doing unless we are very carefal. * * " It seems to me the Americans have a good eye for a dog, and if only they knew where and how to lay their hands on the best blood they would soon be a trouble to us."

Spratts Patent have made a new departure that will prove of great convenience to many dog owners in this vicinity. The firm have established extensive kennels at Northvale, N. J., where they will board and care for dogs. Mr. Michael Murphy will have charge of the dogs, and as the kennels are in a healthy locality and convenient to New York, we have no doubt that they will be well patronized.

We learn that the Clumber spaniel bitch Bromine, winner of first at Barn Elms and Warwick, will soon leave England for Ottawa, Canada.

We have received from the Memphis and Avent Kennel an excellent picture of their well-knowm setter Roderigo,

which is a copy of the painting by Mr. J. M. Tracy. The grand performances of Roderigo in the field have made him an especial favorite of ours, and we are greatly pleased to have so good a likeness of him to adorn the walls of our

The Pointer Club, as will be seen in the report of the meeting last week, very wisely decided that the standard for the breed as given by "Stonehenge" is "good enough for adoption by the club."

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Max. By Mrs. Dr. C. F. House, Painesville, O., for brindle and white St. Bernard dog. whelped Feb. I, 1889, by Cato, Jr. (A.K.R. 6748) out of Vida (A.K.R. 6898).

Ponto. By W. Alvord, Painesville, O., for orange St. Bernard dog. whelped Feb. I, 1889, by Cato, Jr. (A.K.R. 6748) out of Vida (A.K.R. 6898).

Bob Gates, Jr. Ned Gates and Dan Gates. By D. A. Goodwin, Jr., Newburyport, Mass., for two black, white and tan and one orange and white English setter dogs, whelped July 5, 1889, by Bob Gates (Count Rapier—Belle of Hatchie) out of Flo Maelin (Gath's Mark—Cosy).

Lilly Gates, Myra Gates and Breeze Gates. By D. A. Goodwin, Jr., Newburyport, Mass., for black. white and tan English setter bitches, whelped July 5, 1889, by Bob Gates (Count Rapier—Belle of Hatchie) out of Flo Maelin (Gath's Mark—Cosy).

Pearl Gates and Belle Gates. By D. A. Goodwin, Jr., Newbnryport, Mass., for one orange and white and one chestaut, white and an English setter bitches, whelped July 5, 1889, by Bob Gates (Count Rapier—Belle of Hatchie) out of Flo Maolin (Gath's Mark—Cosy).

Kitty Glendynne. By Michael Flynn, Jr., Bristol, R. L., for red Irish setter bitch, whelped May 17, 1889, by bo hampion Tim (Biz—Hazel) out of Onota Belle (champion Chief—Bizreena).

BRED.

Notes must be sent on the Prepared Blanks.

Gipsey-Racket III. Clark & Ruttor's (Lawrence, Mass.) beagle bitch Gipsey (Cameron-Nell) to A. C. Krueger's Racket III. (Cameron's Racket-Maggie). May 28.

Norals-Racket III. Clark & Ruttor's (Lawrence, Mass.) beagle hitch Norah (Lee-Juliet) to their Racket II. (Cameron's Racket Krueger's Myrtle). April 13.

Blossom-Bannerman. H. S. Gilbert's (Millersburg, Pa.) beagle bitch Blossom (A.K.R. 5711) to A. C. Krueger's Bannerman (A.K. R. 1709). June 11.

Cusson'a-Balkis. H. W. Huntington's (Brooklyn, N. Y.) grey-hound bitch clampion Cassandra (Debret-Dead Secret) to his chumpion Balkis (Civto-Primrose). June 29.

Vistrida-Baldur. Wacouta Kennels' (Ounda, Neb.) mastiff bitch Vistala (Montgomery-Nell) to W. Wade's Baldur (A.K.R. 6617), June 21.

Vistala (Montgonery—Neil) to W. Wade's Baldur (A.K.R. 6617, June 21.

Meteo's Dell—King Don. King Don Pointer Kennels' (Attica, Ind.) pointer bitch Meteor's Dell (Leon—Lillie Faust) to their King Don (Vandevort's Don—Vandevort's Luck), June 19.

Patti M. II.—King Don. King Don Pointer Kennels' (Attica, Ind.) pointer bitch Patti M. II. (Xick of Naso—Patti M.) to their King Don (Vandevort's Don—Vandevort's Lnck), June 19.

Patti M. II.—King Don. King Don Pointer Kennels' (Attica, Ind.) pointer bitch Patti M. II. (Xick of Naso—Patti M.) to their King Don (Vandevort's Don—Vandevort's Lnck), June 30.

Croateth Rival Queen—King Don. (Ring Don Pointer Kennels' (Attica, Ind.) pointer bitch Croxitch Rival Queen (Croxitch—Countess Rival) to their King Don (Vandevort's Don—Vandevort's Lnck), July 1.

Lady Vegas—Fritz. C. W. Littlejohn's (Leesburg, Va.) pointer bitch Lady Vegas (Bang Bang—Telie Doe) to his champion Fritz (Beaufort—Spoil), June 19.

East Lady Vegas (Bang Bang—Telie Doe) to his champion Fritz (Beaufort—Spoil), June 19.

Beat feed Fred Lake Virrie (champion Bradford Ruby—Puss B.) June 19.

FOR MAN AND BEAST.—While commenting on the innumerable comorts and pleasures bestowed upon humanity by the inventions of the past ten years, we observed by a statement in one of our exchanges that this advanced state of affairs has not alone dealt with the human race, but had reached rational and speedy methods of cure for the sudden and dangerous diseases to which horses and cattle are subject. Paimer Bros., citylivery, LaCrosse, wis., in a press letter, write: "We have used Humphreys' Vererinary Specifics for twelve years, and find to cause for regret, and we cheerfully recommend them to all our friends."—Adv.

OUR TEAM ABROAD.

OUR TEAM VICTORIES PRICEDE THE WERK AT WISHIEDON.

ON BOARD CITY OF CHICAGO,—There is a national intersity to the company of the came that has the temority to cross the Atlantic and try conclusions with the knells marksmen, to the present lean; that each shall do their utmost in every way to the present team; that each shall do their utmost in every way to honorably win. The previous team pulled well together, but a great mistake was made in the selection of the captain for that any to honorably win. The previous team pulled well together, but a great mistake was made in the selection of the captain for that any to the present team, its wins or lossos, its victories or defeats, as strictly from a rifemant's point of view. Certain of the captain of the present team, its wins or lossos, its victories or defeats, as strictly from a rifemant's point of view. Certain of the captain of the bad been a practical rifeman, could have known and foreseen the mistakes that were made at the avoided the extreme long rances, and will context with a strictly military musket at military distances, viz. 280, 500 and 6007ds. Avoided the extreme long rances, and will context with a strictly military musket at military distances, viz. 280, 500 and 6007ds. Which was a strict of the two systems? Take the ammunition, for instance, that of the U. Si so of 4.6-ea.; containing Types, of power was sot deep in the shell, and the muzzle of the shell crimped to seemely had been any to the strictly of the stri

petitors to be volunteers in good standing in their respective corps, rifles bona fide Government muskets, with service ammunition.

The above matches will be competed with twelve men on each team, and seven shots at each distance, with two sighting shots at 200yds.

Some question has been raised by the Berks as to the position at 200yds, but Maj. Froet will insist on the standing off-hand position, and not allow the prone, as is desired by the Berkshires.

A word as to rifles. It is well known that the expert shots at the control of the standing off-hand position, and not allow the prone, as is desired by the Berkshires.

A word as to rifles. It is well known that the expert shots at the control of the standing off-hand position, and not allow the prone, as it is well known that the expert shots at the first of the standing of the st

match with the First Royal Berkshires at Churn and defeated it even more easily than the Honorable Artillery Company was

match with the First Royal Berkshires at Churn and detection reven more easily than the Honorable Artillery Company was done for on Monday.

The Americans led in totals of 37 points at 200yds, 28 at 500yds, and 29 at 600yds. Their lend, accordingly, in the grand total at the three ranges was 92. The match was witnessed by about 500 people, among whom were Lord Wantage, Viscount Bury, and of ite a number of ladies. The rife range at Churn-Lord Wantage's—is an open one on the downs, and was pronounced by the Americans as first-class. The weather was pleasant, with a gentle and steady breeze blowing from the right.

As in Monday's match, the Americans shot with Springfield rifles, and their opponents with the Martini-Henry gun. The Americans increased their lead at each of the three distances, and at the 500 and 500 ranges did some quite brilliant shooting. The first table shows a total for each contestant out of a possible 35, at the 200 and 500 ranges respectively; the second table shows the totals at 600yds, and the aggregate for the three ranges.

The Berkshire regiment made a total at the three ranges of 972. After the match both teams were tondered a luncb by Lord Wantage, who congratulated the Americans upon their victory. He said that they bad a better rifle, and declared he was greatly impressed by their skill and steadiness in firing. He alluded to their having gained two substantial victories within a few honrs of their landing on English soil, and expressed his hope that they would continue to be victorious.

LONDON, July 3.—The Massachusetts rifle team scored its third successive victory to-day by defeating the London Rifle Brigade at Rainham. The shooting was at ranges of 200, 500 and 660yds., as in the previous matches, and the Americans worsted their opponents at each of them, leading with 32 points at 200yds., 38 and 77 in the grand total. The weather and all the conditions were very favorable for the marksmen. At the 500vds. range the Americans did some brilliant shooting, Doyle and Bumstead making clean scores. The following is the score:

LONDON, July 5.—The Massachusetts rife team won its fifth successive victory to-day, defeating the South London Club at Nunhead by 49 points in the total. The weather was delightful, but, as seems to he the rule at Nunhead Range, a fricky wind was blowing. The conditions, however, were in pleasant contrast to those which prevalled on the downs at Brighton, and the American team showed its strength hy running up at 200yds, the best score it has made from the shoulder since coming to England. F. Bull registered a clean score at 500yds. The following is the record:

Against this the Sonth London Club put in a total of 1,025, thus leaving the American boys victors by 43.

The conditions were upon the whole favorable. There was a blue sky and the wind was not too strong or erratic. The meeting was, as usual, a business one, and there were few spectators, but the number included Lieut, Charles E, Hawley of the United States Navy, who made a long journey to be present on reading of the team's where about in the newspapers.

The home team used Martinis, which some of them cuddled in a manner highly diverting to the visitors. The feature of the afternoon was Major Himman's shoot, which included the highest possible score ou the longest range.

South London's range totals were 332, 368, 325; grand total 1,025. The highest individual English score was 95, made by young Licut. Craig, and the lowest 77.

To-night the Americans are enjoying themselves at the Alhambar. To-norrow, Saturday, they will be the guests of Major MacKenzie, a veteran of the Honorable Artillery Company at his charming seat in Essex, and the day will be spent in practicing with the Martini rifle, which the Americans will have to use at Wimbledon, except in special team matches which are being arranged.

charming seat in Essex, and the day will be spent in practicing with the Martini rific, which the Americans will have to use at Wimbledon, except in special team matches which are being arranged.

LONDON, July 6.—The American volunteer riflemen in their matches this week have broken the world's records with military rifles. Every team they have met has been picked from the matter English. Scotch and Irish twenties, to sey nothing of the Queen's prize winners. For a team shooting entirely without practice, at a strange range every day, their record is remarkable and has set the English volunteers to thinking.

The American riflemen went to Chingford this morning to practice with the Martini-Henry rifles Joaned by the National Kife Association. They shot over the Honeylane range, Epping forest, and the result was sufficient to warrant hopes of good shotonal State coors are now dring. They will remain at Wimbledon next week, after which they of thicago, July 31. Capitain Fratien sail the Honeyland matches at Wimbledon next week, after which they of thicago, July 31. Capitain Fratien sail the American theory of the properties of the sail the said over the week's success, which bears out his predictions made before sailing.

In ive matches Himman and Bull tied for first place, the totals being: Himman 453, Bull 453, Bumstend 451, Doyle 444, Farrow 449, Merrill 433, Hinddleston 433, Pvt. Bull 432, Hussey 431, Edes 423, Farnsworth 432, Johnston 404

LONDON, July 8.—The Massachusetts riflemen have not as yet some to a decision as to the matches in which they will engage at Wimbledon. The decision of the Council, excluding Spring-ield rifles from the general contests, was expected. The American team are actively drilling with the Martini-Henry rifle, and showed to-day good form both in the pool practice and in the Alexandra cup match, which was limited to Martini-Henry rifle, and showed to-day good form both in the pool practice and in the Alexandra cup match, which was limited to Martini-Henry rifles, to his of the pro

	Unser Fritz,

THE NEWARK SHOOT.—Newark, N. J. July 6.—The annual festival of the Newark Shooting Society, which ran from Timrsday noon to this evening, was one of the most successful, so far as shooting socs, ever held by the society. The weather, up to 230 P. M. on the first day, was anything but favorable, but there was a good number of out-of-town riflemen on hand at the opening, and there were many more on Friday and to-day. The visitors declared themselves well pleased with the arrangements and with the manner in which they were treated by the local marks men. Among the visitors were A. H. Merriman, Meriden, Conn.; H. Eggleston, Syracnes; George Schalk, thou even and Geos and L. Eugleston, Syracnes; George Schalk, thou even and Geos and Potisville, Pa.; J. P. Delahunty, Pittston, Pa.; G. Eugleston, New York; Tom J. Dolan, New York; Geo. Krauss, Brooklynt, L. Flach and M. Dorrler, Zettler Rife Club; H. Holges, L. Vogel, G. Schlicht, Charles E. Gensch and Geo. Kleinhub, Brooklyn, N. Y.; H. W. Popc, Hartford, Conn.; C. I. Foster, Meriden, Conn.; J. T. B. Collins, New York; H. W. Hawes, expert fly-caster and rifleman, of Central Valley, N. Y.; Wm. Wurfflem, inventor of the Wurfflein rifle, of Philadelphia; Ed. J. Travis, a crack shot, of Philadelphia; Jos. M. Green, of Philadelphia; Bernard Walther, J. A. Beyken, C. G. Zettler, of the Zettler Club; F. W. Hofele, Dave Miller and Capt. R. W. Dewey, of the Miller litile Club of local society turned on the fair shills. Conn. The members of the local society turned on the fair shills. Conn. The members of the local society turned on the fair shills. Conn. The members of the local society turned on the fair shills. Conn. The members of the local society turned on the fair shills were made by F. C. Watts, and the last by William Hayes. On Friday the conditions were not so favorable, but nevertheless some good shooting was done. Dave Miller got the first bullseye and the last by George Joiner in the morning. In the afternoon were very heavy a 72, T and 6 on law first bullseye and t

second premium. A. C. Gates scores 12, 68, 66; J. A. Boyken 70, 68, 67.

TORONTO, July 5.—A committee meeting of the Off-Hand Rifle Association was held to-day to make arrangements for the forthcoming tournament. President J. W. Crosoly, King City, took the chair, and the other members present were Simuson Renne, Scarbore, J. Hay, Tottonham, and S. F. Wilton, Orilla, Rules governing the tournament were adopted and arrangements completed for the meeting, which will take place at Orilla, or Oct. 10 and 11. Orilla offers \$10 in prizes for each team competing in the tournament. The team matches will be shot on the first day, commencing at 1:30 F. M. The championship and \$10, \$5 and \$3 respectively for first, second and third teams, will be the prizes. On the second day the individual matches will be their prizes. On the second day the individual matches will be held, boginning at 9 A. M. The prizes will be \$10 for first and 50 cents for each of the next 19. Mr. Geo. E. Wilton, of Orilla, told of the preparations made by the Orilla Club. Three good targets had been provided and seven clubs were expected to compete.

TORONTO, Ont., July 6.—The Tenth Royal Grenadiers of Toronto have challenged the Massachnsetts rifle team to shoot a match with eight or ten men on a side, either in Canada, Massachusetts or by telegraph.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 south Delaware avenue, Philadelphia.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, July 5.—The Fourth was a great sportsman's day in Chicago and nearly all the shooting clubs had meets at their grounds and club houses. Mak-saw-bas and Grand Calunets had pleasant little gatherings. Mineola Club, of Fox Lake, led off with \$250 worth of fireworks across the lake. Mr. F. J. Magin and family, Mrs. Bott. Lindblom and family, Mrs. R. M. Fair and family, Mr. H. P. Wadhams and a number of others were present. The formal opening of the beautiful new Mineola club house will occur next Saturday eveuing, July 18, and will be a brilliant affair. Preparations are now making on a large scale for it, and a carload of refreshments will go up over the Wisconsin Ceutral next week.

About the jolliest Fourth of July crowd, however, was the little one that gathered on the South Pier, out in the lake in front of the city, and indulged in a little trap-shooting, considerable fresh air and a lot of fun. The hosts of the party were Mr. Fred. C. Donald, General Passenger Agent of the C. & A. road, President of Gun Club of Chicago and President of the Illinois State Sportsmen's Association, Mr. Chas. S. Burton, City Passenger Agent of the Kankakee line; Mr. F. H. Lord of the Manitoba road, Mr. Chas. E. Willard of the Standard Cartridge Co., Mr. John Gillespie of the Jenney & Graham Gun Co., and Mr. Henry Smith of the West Side. The entertainment was gotteu up on the spur of the moment by these gentlemen, but the refreshments were as copious and choice as a month's study could bave made them, and the guests of the party will rise to maintain that same. There were present also Mr. J. F. Ballantyne, managing editor of the Dally Nows; Mr. A. H. Harryman, editor of the Santary News; Mr. H. W. McCinniff, Mr. W. Isbell, Mr. C. H. Kroell, Mr. A. Angelica and the representative of Forest Assenting and the unfortunate who couldn't get that windy right quarteer always found some one waiting for him with the serding control of the considering. It took It out of Is, In out of Is, and the lake, to win

Fourth, and that seemed the opinion of all. I don't suppose John Gillespie ever did have quite as good a timo or ever shot much better.

Lake Georgo Club also celebrated with a pleasant affair of the gun, and it was reported that English Lake house had a few visitors. Tolleston Club had quite a little affair of a live bird shoot, with a general showing of good scores, Mr. F. A. Howe had 15 out of 25, Mr. W. R. Linn 48 out of 60, Mr. D. H. Berkon 50 out of 70, Mr. O. H. Rocke 92 out of 98, Mr. J. J. Gillespio 46 out of 60, Mr. Cl. F. Eelton 4 out of 61, Mr. Carl Moeller I7 out of 20, Mr. W. C. Hough 49 out of 55. Mr. Roche seemed unable to miss a bird. He sat in a chair at 4094s, part of the time, using a 12-gauge gun, and got nearly everything be shot at. There was revolver and rifle practice also, and direworks in the ovening. Mrs. F. A. Howe caught a 7bs. pickerel. The water on the marsh is high. July 7-Mr. Chas. E. Willard, who built up the Blatchford cartridge to what success it had, left the Blatchford Co. a few weeks ago. Mr. Willard will be superintendent of the Othcago and St. Louis factories of the Standard Cartridge Co., a new organization of which more will be heard later on. Charlie Willard's friends are delighted to see him now where he belongs, at the head of the work for a progressive and enterprising firm which is awake to the wishes of sportsmen and to the value of their trade. The quarters of the new company will be on the northoast coraer of Randolph and Wabash, and are now being elegantly fitted. Mr. E. S. Riee, general agent of the Dupont powder, will be in the same office. There will be a large-sized hum around there next year.

BOSTON TOURNAMENT.

E. Hough.

BOSTON TOURNAMENT.

THE second tournament of the American Shooting Association will be given at Boston, Mass., Aug. 13, 14 and 15, at Beacon Park; \$1,700 cash in guaranteed purses, conducted under the management of Maj. with any one applying to New York office, Room 184 Stewart ididing.

Matches marked free for all are open to classes A, B and C, Matches marked class B are open to class C, with A barred. In matches marked class B, classes A, and B are barred. Shooting begins promptly at 9 o'clock each day.

Money divided when 20 or more entries, 40, 30, 20 and 10 per cent. Money divided when 180 or more entries, 40, 30, 20 and 20 per cent. All surplus entrance money in guaranteed matches Nos. 5, 6 ad 7, each day after paying for targets used, will be divided qually between classes A, B and C, and these amounts will be vided among those making first, second and third best averages their respective classes. Any shooter in classes B and C can make an average in a higher ass, in addition to his own, if he so elects, and his average will considered in such class. Shooters must compete in all gnaranteed matches, in such asses as they may shoot in, to establish an average in said class. Entrance money includes price of birds in all matches, and tey will be deducted from the purse before a division of it. Targets of the following companies will be used: Cleveland arget Co., Peoria Targets of co., Ligowsky Clay Pigeon Co., Keyone Targets of the following companies will be used: Cleveland arget Co., Standard Target Co., Cruttenden & Card King ird Co. Bandle Clay Bird Co.

Owing to the large number of shooters that have signified their tention to be present 30 traps, in sets, each set in a straight line, ill be kept in use.

An excellent dinner will be served each day (at a nominal price) om 1 to 2 o'clock, and all shooting will cease during the hour, unch can be had at any time.

Parties desiring hotel accommodation engaged, and any local formation, can address the general manager at the New York itee.

Beacon Park can be reached by Boston and Albany Railroad, tee by boyes ears from Rowdoin Souare.

lso by horse cars from Bowdoin Square.

SPECIAL NOTICE—NOM DE PLUMES.

Any shooter may use a nom de plume, but it must appear on his lassification card, and he must adhere to the same nom de plume all shooting thereafter when he uses one. In case of any viotion of the above becoming known to the Association, a withrawal of the card will be ordered. The shooter has a right to hange his nom de plume by notifying the Association and send-g his card for alteration.

TORONTO, July 6.—There was a large gathering at the Stanlegh is card for alteration.

TORONTO, July 6.—There was a large gathering at the Stanley Gun Club's shoot on McDowall & Co.'s grounds. The first event was a shoot for the president's handsome gold watch, which has now been shot for seven times, during which T. Sawdon, Jr., has won it twice out of three times. Mr. C. Charles wins the trophy for the first time. In addition to this there was a club shoot for five handsome prizes, donated by the club, value \$35\$. This shoot having proved very satisfactory, a similar list of prizes will be offered for next Saturday.

Watch shoot at 25 birds.

contest on the Sherman Gun Club grounds was well attended.	third, ties on 3 div. fourtb.
Many prominent lovers of the dog and gun drove out during the afternoon. In the match between the Sherman Gun Club and the Galion Club of Galion the former won by breaking 46 birds more than the latter. This is the most severe defeat any club ever suffered from the Sherman team. They defeated the Galion Club af Galion last summer, but not so badly. The conditions of the	Third shoot, nandrap, insurance medal, value \$100, presented to the club July 4, 1878, by the insurance agents and companies of St. Louis, to be shot for annually and owned by the member winning it three times in succession. Conditions: Nine livo birds, ground traps, use of both barrels, handicap distance; 3 pairs pigeons, 21yds. rise. First tie at 5 single birds, second tie same,

Batteson.

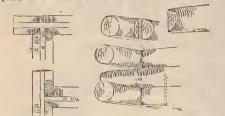

OTTAWA, July 6.—The members of the St. Hubert Gun Club are highly pleased with their success in Toronto, but complain of the Toronto Team No. 1 putting in Wayper, of Guelph, and Wyness, of Buffalo, alleging that neither is a homa fide member of the Toronto club. The St. Huberts, by winning the Stanley cup and \$88 in cash, proved themselves probably the best amakeur club in Canada to-day. To-day their shooting was a sweep at 15 birds each: P. N. Thompson 14. Dr. A. Martin 14, Ed White 12, R. G. Dalton 12, P. Trudeau 11, S. White 8. Sweep at 10 each: Dr. Martin 9, P. Thompson 8. Ed White 7, Deslauriers 7, R. Dalton 6, W. Lett 6, S. White 6. Sweep at 5 doubles: Ed White 8, P. Thompson 8, Dr. Martin 6, R. Dalton 5, J. Deslauriers 5.

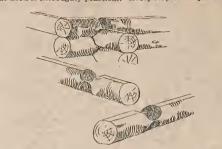

Every week we are obliged to defer to the next week trap scores which come in too late for pub-lication in the current issue. It is particularly re-quested that scores be sent us as early as possible.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price \$2.50. For sale by FOREST AND STREAM.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—Adv.

LOG CABINS.

construction is explained. The author is an architect, who has himself built log cabins, and very handsome ones, too, as shown in the plates. These designs are numerous and varied. They are a pleasing revelation of the artistic possibilities of log cabin architecture. Nothing is more appropriate for camps—the permanont private lodges or club houses—than the log cabin; and it

REGATTA WEEK ON THE SOUND.

REGATTA WEEK ON THE SOUND.

Though it is only a few years since the Larchmont Y. C. came in with its annual regata on July 4 to supplement the June races in New York Bay, the courses between New Rochelle and Stamford are almost as well-known, and promise in time to hocome as famous for hard fought battlos as the older ones about Sandy Hook and the Narrows. Of course the big craft that have salled so many races in the past about the Lower Bay will never come to the Sound, but from present indications it would seem almost as though they had done with racing in the Bay as well. The only classes above 53t. that can be said to have any life this year, or in fact last year either, are the 90ft, schooners and the 70ft, single stickers; besides them the racing is left to the small fry. If the present interest in the small classes, notably the 40 and 30ft, should prove permanent, this may not be such a great evil, but at this time it is very hard to say what the future is apt to bring forth. Plenty of races and good prizes fail to bring good entries in the larger classes, many classes not filling at all, while in the smaller, in spite of the existing activity and excitement, it is an open question whether the fight will be kept up for more than one or two seasons, and if not what is to follow it. There is no ground for fear that yacht racing in America will die out or even decline, on the contrary it must grow as the interest in yachting extends, but beyond this its future is hard to divine. The refinements of late introduced into racing have served to bring in some new men by the additional excitement offered, but to discourage more by the increased lahor and cost of racing a yacht in winning form. Where the happy mean botween over-developement on the one hand and lack of interest and excitement on the other is to be reached, is a problem which all yacht cluss could study to advantage. Just now a great boom is on in the 40ft. class, promising plenty of sport for this year at least, and though the offered hoom in the 70

Sern. As soon as he was clear of Liris's sail her skipper was able to see how close he was to the buoy, and to avoid it he tacked, narrowly shaving Banshee's bowsprit end, and stood up the harbor, losing a couple of minutes before he was able to come on his course for the line again.

A protest followed immediately after the race, but was not allowed, the evidence being insufficient to show that Minerva had established an overlap, or done any more than luft under Liris's stern. Banshee and Gorilla followed Liris across, Minerva being last. Pappoose was timed at 12:03:49, Maraquita at 12:04:49, and the rest at 12:05:50. Maraquita was evidently looking to retrieve her losses down the bay, as she had Capt. Hadi, Sr., of Thanh, on board with his son, and for a time she did very well, streaking along a little astern of Pappoose, and with the rest in a strangling pack some distance astern. The lightening breeze did not suit Liris with a jibheader, and after a short time she set ber huge club, the result being she came up on the leaders and dropped the laggards. Her worst rival, Minerva, was kept bnsy by Banshee and Gorilla astern, leaving Liris a clear field for a time. After some four miles were gone and she had nearly caught the loaders, the wind went around to the east, bringing spinakers in and booms over to port. Liris ran to windward of Maraquita, leaving Liris of the turn. Liris was to leeward, heading squarely for the mark and going through Pappoose's lee, when the latter bore away until her boom was in Liris's starboard rigging, being shoved clear by the forward hands. After this little episode and some persuasive language Pappoose bore op and left the way clear. No time was taken, but Liris turned first, then Pappoose and Maraquita in close succession, while Banshee, Minerva and Gorilla were still well astern, rounding in the day small jibtoosali, but Pappoose held on to a balloon jibngsal see had set some time before, though it was only hurting sell as the strong breeze and a close reach. She had a short t

Only Azalea turned up to represent the two-stickers, and she could not find a rival. There are, we be

Nymph had gained about 2½m. on Liris in coming across. Once around the mark all settled down to work through the squall, which was now at its beight, the rain soon pouring in perfect torrents. Liris was the weather boat, boiling along with plank-sbeer to, while to loeward were Banshee. Maraquita and Gorilla, the latter in trouble with her gafftopssif, the sail streaming out to leeward. Nymph was coming up astern, but there was no time to leeward. Nymph was coming up astern, but there was no time to leeward. Nymph was coming up astern, but there was no time the rain. After a couple of miles had been covered, Liris still aboad, her bowsprit doubled up into an S curve, a bow to leeward in the outer end. For a minute or more, before the word was passed and the boat run off the wind, the stile went through some wonderful gyrations, bending like a piece of steel, the cbeese and lime joint opening and closing, but still it stood, though badly sprung. The stick was a beautiful piece of clear spruce, hollowed and botled in addition to the cement, but by the time the jib was lowered it was past all use in any wind. The yacht was hove to for three or four minutes until the jib was stowed and the full damage ascertained, and then, though to all appearances out of it, with some it miles yet to go, through a hervy squall han our for some it miles yet to go, through a hervy squall han our for some it miles yet to go, through a hervy squall han our for some it miles yet to go, through a hervy squall han our for some it miles had been and were wished to windward before the collapse, and even now the others were made out in a string to lecoward and but little abend. As the mark was neared the rain lessened as well as the wind, and boats at some distance were visible. Kathleen had lost hornomiaal opponents, Vorant and Amazon, and had passed Eurybia, in the next class, during the squall. Giggle was the only one of the small craft to come to grief, as previously noted, her crew being picked up safely. The times at Captain's Island

moving very slowly, but with a draft to her sails from a shore breeze, while Anaconda, further out, was waiting for the wind to come.

Inch by inch Liris drew to windward of the others and nearer to the finish, though sometimes entirely becalmed. Banshee bad rounded, ahead of Gorilla, and stood on after Liris, but was bopelessly astern. For nearly three hours the game went on, Nymph once getting a little puft that threatened to send her over the line, the last mile being made in phenomenally slow time, but at last Liris was well across the tide and to windward of the line, and bore down in triumph the winner of a bard race. She had done well from the start until tho accident, and also under easy canvas on the way home, and while she never could have outsiled Nymph from the Captain's Island mark home in her crippled condition, the final victory was won not by any shift of wind while gave ber an advantage over ber rival, but by hard and careful work in piloting and trimming sails on the last legs. Besides the regular class price she wins the first leg for the Thayer cup, Nymph taking the Gould cup, as neither Liris nor Marnquita belong to the club. Maraquita finally beat Nymph in, while little katheen finished after Bunshee and ahead of Gorilla, beating Eurybia in the Sitt. class by a large margin on even time.

OYSTER BAY Y. C., ANNUAL REGATTA, JULY 4.

The fifth annual regauta of the Oyster Bay Y. C. was sailed on July 4, ix a strong S.W. breeze, the course being twice around a triangle, 17 miles in all, with 7 starters:

The special race of the Larchmont Y. C. for a prize cup valued at \$150 was sailed on Saturday in light and fluky weather. In addition to the regular prize the Thayer cup, valued at \$250, was also up for the second time. Liris had won one leg for the cup on Thursday, and her chances wore considered very good to cup on Thursday, and her chances wore considered very good to cake it finally in the second race, but the was unable to get a new bowsprit in time at Piepgrass's yard. The old one was fished, and she came into Larchmont on Saturday morning under full canvas, but the stick was still very weak, so a batten was lashed on. The race was delayed for some time waiting for her, but finally she was ready. Besides ber were Nymph, steered by Mr. Burgess; Gorilla, steered by Mr. A. Cary Smith, and Pappoose, steered by Capt. Nat Watson, her skipper. By an agreement of owners made in the morning there were no restrictions on sails or crew, and all awang clubtopealis and wore at liberty to have professional skippers at the wheel. The course laid out was ten miles to wind-

ward and return, the wind being east and of moderate strength, so the tug was sent to lay off the course, the regatta committee going on the steam yacht Inanda. As soon as Liris came on the wind for the line ber bowsprift outhed up a cain, so she ran to be read to be the property of the course, the regatta committee going on the steam yacht Inanda. As soon as Liris came on the wind for the line ber bowsprift outhed up a cain, so she ran to be even to be the course of a course of the course of the

NEW ROCHELLE Y. C., FOURTH ANNUAL REGATTA.

The fourth annual regatta of the New Rochelle Y. C. was sailed on July 6, the courses being:

Course No. 1.—For all above the 30ft. class: From the starting line to and around the horizontally striped buoy at the west end of Execution Reef, leaving the same on the port band; thence to and around buoy off Matinicock Point, leaving the same on the port hand; thence to and around stakeboat flying the club flag anchored south of Captain's Island, leaving the same on the port hand; thence to the horizontally striped buoy at the east end of Execution Beef, leaving it on the starboard hand; thence to and around the horizontally striped buoy at the west end of Execution Reef, leaving all buoys on the said reef on the starboard hand; thence to and across the finishing line in an opposite direction from the start. Distance, 22 nautical miles.

Course No. 2.—For the 80ft, and all smaller classes: From the starting point to and around the horizontally striped buoy at the west end of Execution Reef, leaving the same on the port hand; thence to and around the easterly lome stakeboat, leaving the same on the port hand; thence to and around the horizontally striped buoy at the west end of Execution Reef, leaving it on the starboard hand; thence to and around the horizontally striped buoy at the west end of Execution Reef, leaving all buoys in the safe at the west end of Execution Reef, leaving all buoys in the safe at the west end of Execution Reef, leaving all buoys in the safe at the west end of Execution Reef, leaving the new form the starboard hand; thence to and around the horizontally striped buoy at the east end of Execution Reef, leaving all buoys in the safe at the west end of Execution Reef, leaving all buoys in the safe at the west end of Execution Reef, leaving all buoys in the safe and the west end of Execution Reef, leaving all buoys in the safe and the west end of Execution Reef, leaving all buoys at the safe and the west end of Execution Reef, leaving all buoys at the

AMERICAN Y. C. REGATTA—JULY 8.

The efforts of the American Y. C. to further yacht racing on Long Island Sound met with very little encouragement from yacht owners, as only 4 yachts above 35ts. came to the line on Monday morning. The courses and conditions for the race were Course No. 1.—For all cabin yachts: From Milton Point to and around a stake-boat anchored in Hempstead Harbor (course 8.4 W.) (from stake-boat Sands Point Lighthouse bears W. by S., and Execution Lighthouse bears W. by N., 4 N.), passing same on the port hand; thence to and around the stake-boat anchored to Apatin's Island Lighthouse (course N.E. \$4 N.), passing also on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor (course S. Passing same on the starboard hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N.), passing also on (course N. ½ E.). Distance about 2n nautical miles.

Course No. 2.—For all open yachts: From Milton Point to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor course S. \$4 N., passing the same on the port hand; thence to and around

black buoy off Matinicock Point (course N.E. by E. & E.), passing same on the port hand; thence to and across the finishing line at Milton Point (course N.W. by W. & W.). Distance about 10 mautical miles.

Race to be sailed under Larchmont V. C. rules. The wind was light from W.N.W., with an ebb tide through the morning. As Magic and Clara each had no competitor a match was made between the c.b. schooner, 80ft. 81n. lw.l., and the keel cutter, 80ft. 61n. l.w.l.; and the keel cutter, 80ft. 61n. l.w.l.; the former to receive an allowance for rig of 15 per cent., making hor nominally 65ft. 81n., by Larchmont rule, Clara being 35ft. 111n. Thus Magic would allow Clara 5m. 31s. Only two forties were present, Nymph and Liris. The latter came into Larchmont late at night with her new bowsprit, a wet and heavy spar. The week had been a hard one for her crew, with night passages and shipping new spars, and those left on board were well tired by Monday morning. Both she and Nymph bad difficulty in finding men to take the place of the absentecs, and sailed short-handed with scratch crews. When the yachts were ready Nymph refused to sail the course laid out by the club, a reaching course, demanding a six-mile course to windward and return, two rounds. Liris declined to accede to any change of the regular course, and Mr. Alley, on behalf of the regular course, and Mr. Alley, on behalf of the regular course, and Mr. Alley, on behalf of the regular course, and Mr. Alley, on behalf of the regular course, and Mr. Alley, on behalf of the regular course, and Mr. Alley, on behalf of the regular course, and Mr. Alley, on behalf of the regular changed her mind. Neithers lee nor Liris were allowed clubtopsails, but Clara carriod hers. The startors were:

Amazon and Nymph were the	leaders, Liris, Magic and Clara
being close together. Spinakers,	braced well forward, continued
to draw for a few minutes, but	all were soon obliged to lower
them. When less than a third of	the three-mile leg to Hemstead
had been covered the breeze died	out entirely, Magic and Clara
drifted up on Liris, lufling her	out a little and breaking ber

them. When less than a failed of the three-mile leg to Hemstead had been covered the breeze died out entirely, Magic and Clara drifted up on Liris, lufling her out a little and breaking ber wind. For another mile the drift continued, and then Nymph and Amazon caught the breeze again, spinakers being reset. The others were becalmed for some little time, and when they finally caught the wind Nymph had turned the mark and when they finally caught the wind Nymph and turned the mark with Magic after both. The times were:

Nymph. 207 50 Clara 218 50 Amazon 218 45 Eurybia 220 20 That Nymph's gain of 8m, on this leg was but a fluke is shown by the times; the three miles were sailed in a little under the hour, and Clara, carrying a clubtopsail, was beaten 7m. 28s, by Nymph, with jibtopsail set, and the wind forward of the beam, now sailed very fast, running into a much strongor breeze as she neared Captain's Island. Liris bad her sails in better shape than in any previous race, but the topmast rigging stretched so badly that before half of the six mile leg was covered she was soliged to lower her No. 1 flibtopsail. Magic and Clara soon passed ber, the schooner reaching ahead of the sloop for a time, but finally Clara shifted her ballooner for a working foresail, and luffed from under Magic's lee and out across her bows. When mear the mark Magic ran by her enough to turn a little ahead, the times being:

Nymph. 306 30 Liris. 315 30 Magic. 32 35 50 Magic. 32 10 30 Magic. 32 10 30 Magic. 32 30 30 Magic. 35 100 Liris 40 Magic and 50 Clara 40 S 31 120 Amazon. 35 50 Magic. 35 50 Miles and Liris start leeps were 85m. 40s. and 16 Liris showing that Nymph had gained but 5s. Liris set her Jibtopsail at the mark. The wind was now a trifle abaft the beam, decreasing steadily as Hempstead was again neared. Magic gained now on Clara, the times of Nymph and Liris over this leg were 85m. 40s. and 58m. 45s., showing that Nymph had gained but 5s. Liris set her Jibtopsail at the mark. Finish. Elapsed times over the return conres were quic

BEVERLY YACHT CLUB.

BEVERLY YACHT CLUB.

142D REGATTA, 1ST OPEN SWEEPSTAKES, MONUMENT BEACH, JUNE 29.
THIS was the first open race sailed under the club measurement of waterline and sail area; the result was a very hard day's work for the judges.

1n first class Surptise was noticeable by her absence, but Climax and Quissett made a very good race.

Second class this year promises to have the largest and most exciting races; Mist will have to look to her laurels, and all but one of her formidable competitors were on hand.

Thyra and Gymnote are two new boats built by Dunn; they are not yet thoroughly in shape; but sailed a good race, though not troubling Mist nuch.

Hamana is a new one from the builder of Mist, and is built on Mist's model with an overhang added. She did poorly, and is presumably not in form as yet.

Mollie, which under old rule was at foot of first class, is now at head of second class. She is very fast, and pushed Mist hard, beating her on actual time, but losing on allowance. It is to be regretted that Crawl did not enter.

In third class last year's champion, Daisy, met Hanley's Eina, who had already shown great speed in her matches with Kiowa.

In fourth class Hanley's new Kitten sailed her first race. She did poorly, and evidently to be shaken into trim.

Courses: First and second classes leaving Pine's Buoy on starboard, Bird Island Buoy and Seraggy Neck Buoy on port, and return, 11 miles; third class leaving Pine's Buoy, on bort, and return, 7½ miles; fourth class leaving judges' yacht and Pine's Buoy on prat, and return, 6½ miles. Wind, W. S. W., light. Summary:

148d regatta, first buzzard's bay championship, monument beach, july 4.

148D REGATTA, FIRST BUZZARD'S BAY CHAMPIONSHIP, MONUMENT BEACH, JULY 4.

The race was sailed in a very heavy sea and a strong southwesterly gale of wind, which greatly reduced the number of starters, all hands being closely reefed. Mattie had a walkover in first class, Kiften won easily in fourth. Second and third promised very well, in second the champion Mist met Tantrum, always a good boat in a blow, and Dunn's new Gymnote, who ought to be a heavy weather hoat, in third champion Daisy met Hanley's new Eina and Bonnie Bairn, the latter a deep Burgess sloop with a heavy lead keel.

Gymnote's boom broke short off as she crossed the line, and Tantrum carried away peak halliards within 50yds. of the start, leaving Mist a walk. Daisy fared no better, her boom went within 100yds, of the start, the owner of Eina did not realize Bonnie Bairn was in his class, but being a good sport objected to a walkover, consequently he lay by Daisy for fifteen or 20 minutes, then asked judges to resail race at some later date, but on finding that the sloop was in his class and had from 15 to 20 minutes start Eina at once went after her, gaining rapidly. Bonnie Bairn ledults ahead, a very good performance.

Courses for first and second classes—Leaving Pines Bnoy Scraggy Neek Buoy and Bird Island Buoy on starboard and return. Il miles. Third class—To and around Pines Buoy and repocat, 5% miles. Fourth class—To and around Black Buoy 11, off Jacob's Neck and return, 2% miles. Wind, a strong gale from S.W.:

144TH REGATTA, 1ST CUP RACE, MARBLEHEAD, JULY 2

144TH REGATTA, IST CUP RACE, MARBLEHEAD, JULY 2. It had been blowing hard S. W. by S. all through the afternoon and night of July 3. The 4th opened with a strong breeze from the same direction, and at 10 A. M., when the boats got under way for a trial spin, it was blowing pretty strong. Several of the boats ran outside to test the wind, and as a result Saracen, Swordish, Witch and Otter housed topmasts, Hoiden, Swordish, Dolphin and Nonpareil put in single reefs, but the wind kept steadily decreasing, and just before the start Swordish shook out her reef.

ecreasing, and just before the start Swordfish shook out her efef.

First, and second classes ran down the harbor, had a beat to.

E. Pig Breaker, whence spinakers were carried to Half-way tock; from the rock they laid their course to mouth of harhor nd crossed the line in a couple of tacks.

Saracen and Elf were off promptly in first class, Saracen a cond or two in the lead. She spun out a good lead in the beat o windward and held her own afterward.

In second class Marguerite got to line ahead of time, and had ifficulty in kceping on right side of it. When gun was fired she ras dangerously close to stakeboat and on wrong tack; in jibing he fouled it, but no protest was made. Swordfish was first off, oltowed closely by Marguerite, Otter and Witch. Swordfish ained steadily and won hands down. Otter withdrew, while the ther two made a pretty good fight, resulting in favor of Marguerite.

gained steadily and won hands down. Otter withdrew, while the other two made a pretty good fight, resulting in favor of Marguerite.

In the third class Kiowa met Mosca for the first time, and as the wind was much lighter on the tbird class course and there was a good deal of running and reaching, it was expected that the Mosca, with her big sall spread, would win.

Kiowa and Wraith led off together almost on the flash of the gun, Mosca and Kathleen just behind them. It was almost before the wind to Buoy 3, and some of the sloops boomed out their jibs. To the surprise of all, the Buzzard's Bay catboat Kiowa at once began to draw away from the others, getting a lead of 40s. at first buoy, Holden and Mosca coming next. Here they hauled sheets a little for Curtis Point, which Kiowa, still gaining, rounded first, then Holden, Mosca, Wraith and Kathleen got their booms into the best became the deal. Wraith and Kathleen got their booms into the water, which seemed to stop them. Mosca gradually passed Holden, rounding Bowditch's just ahead of her, Kiowa steadily gaining, have rounded a little more than ten minutes shead of Mosca.

Here wind was very light, and kept on getting lighter for real.

Mosea.

Here wind was very light, and kept on getting lighter for rest of the race. Klowa took a short tack to the southward, then headed for the Salem shores; Mosea and Hoiden going round at the same time. Holden tried for Mosea's weather, but failing broke tacks and seemed to lose a little by it; about this time she shock out her reef. Kathleen was close on Wraith at Bowditch, but the latter did well to windward and Kathleen dropped out of race; her bottom was foul, she will do hetter next time. Klowa gained steadily, while Wraith did well with the others.

In fourth class Dolphin led all round, coming home under full sail. Nonparell would have done better to follow snit. Hoiden has not been measured, she may be larger than figured here.

Course; first and second classes from judges' yacht, leaving

black buoys Nos. 5 and 3, Tom Moor's Rock, Tinkers Island and Roaring Bull on starboard; Can Bnoy off S. E. Pig Breaker, Half-way Rock and black buoys Nos. 3 and 5 on port, and return; lo miles. Third and fourth classes leaving black buoy on Selman's Berth on port, black bnoys Nos. 3, 5 and 7 on port, stakeboat off Curtis's Point on starboard, Bowditch's Ledge Beacon on starboard, Red Bnoy No. 8 on port, to judges' yacht; 7½ miles. Wind, S. W. by S., fair at start, rapidly dying out; very light for last half of race. Summary:

145TH RACE, 2D CHAMPIONSHIP, MARBLEHEAD, JULY 6.

The race was sailed, except in Marblehead Harbor, where there was a light breeze, in the faintest kind of an air from S.S.E., being little better than a drift, 'particularly in the windward work. As noue of the printed courses gave any windward work the judges improvised a course, sending all classes to Red Buoy 6 (a run with wind on starboard quarter), then a short beam reach to Cutthroat Ledge, a beat to Half Way Rock and a run home, a scant 8 miles.

In first class Beetle took seven hou rs drifting down from Boston, arriving just at the start, but not having her crew aboard did not start. Elf sailed a good race with Saracen.

In second class Swordfish won as usual.

In third class Wraith and Kiowa found it altogether too light; it was Mosca's day, and she worked out a good lead In the long swell and faint air. Nerina sailed very well, beating Mosca on allowance. It was so light to windward that some of the crews laid out to leeward to keep boom on right side.

In fourth class Dolphin did not like it any better than Klowa. Elf was officially measured 36.02.

SING SING Y. C. OPEN REGATTA, JULY 4.

THE Sing Sing Y. C. sailed a regatta on July 4, open to all yachts, from off Sing Sing around a stakeboat off Dobb's Ferry, for all but Class 9, which sailed a short triangular course, two rounds, off Sing Sing. There was a strong S.W. wind during the early part of the race, followed by a severe N.W. squall and then a calm. The full times were:

NEW YORK Y. C. CRUISE.

NEW YORK Y. C. CRUISE.

THE following general order has been issued:
FIAGSHIP ELECTRA, N. Y. Y. C.,
HARBOR OF NEW YORK, July 1, 1889.}

General Orders No. 2.
1. The vessels of the squadron will rendezvous at New London, off Pequot House, on Wednesday, Aug. 7.
2. Captains will report aboard the flagship on the same evening at 9 o'clock.
3. Special attention is called to the race for the cups presented by Capt. Goelet, which will take place at Newport, Friday, Aug. 9, unless otherwise decided at the meeting of captains.
4 The squadron cruise trophies of 1889, given by the club, will be raced for by yachts of the New York Y. C. The rules and regulations governing competition for the same will be issued to captains by the regatta committee.
5. During the cruise the Owl and the Game Cock colors will be raced for by the four-cared gigs and double-scull cutters and dinghies belonging to the yachts of the squadron, and the holders will be subject to challenge at any time, on one day's notice.
6. There will also be a race for the steam and naphtha launches belonging to the squadron, the time, conditions and prizes for which will be hereafter announced by the Commodore.
7. The routine and rules contained in the Club Manual will be observed during the cruise. Particular attention is called to the fact that they have recently been changed in many important particulars.
8. There will he special cups given for competition by third class sloops (70ft.) and seventh class sloops (40ft.), dates of which will be announced by the Commodore.
9. Yachts when in squadron are earnestly requested to take their ship's time in striking bells from that of the flagship, and in no case to anticipate it.

By order of the Commodore.

STEPHEN PEABODY, Fleet Captain.

INTERNATIONAL YACHT RACES.

INTERNATIONAL YACHT RACES.

THE following letters were received last week by the New York Y. C. It is certain that Valkyrie will cross the Atlantic to race the 170t class for the Paine cup and in private matches. She has not been successful in the late races on the Clyde.

She has not been successful in the late races on the Clyde.

DEAR CAPTAIN GRANT: There is no doubt that the New York Y. C. are quite correct in their contention that you are in error when stating that Mr. Oddie's letter of April 12 containing continuous and the contention that you are in error when stating that Mr. Oddie's letter of April 12 containing continuous and the contention of the mistake, and can only express my extreme regret at the misunderstanding. The accompanying letter from Mr. Watson will explain the misunderstanding. When talking the matter over with you I fully believed that the correspondence between Mr. York, secretary of the Royal Clyde Y. C., and Mr. Bird, the then secretary of the New York Y. C., showed that a challenge would be accepted on exactly the same terms as the Volunteer and Thistic contests, but on subsequent examination I find that the correspondence in question may be at two readings. Mr. York, in his letter of Nov. 27, 1888, addressed to the secretary of the New York Y. C., mentions the existence of the proviso, but in a postscript says: "In the event of the paragraph being perfectly true and that a challenge will be accepted under the same conditions as in the Genesta, Galatea and Thistle contests, please cable 'True'." To this letter the secretary of the New York Y. C. cabled the reply "True."

Now, the conditions that governed the Genesta, Galatea and Thistle contests, please cable 'True'." To this letter the secretary of the New York Y. C. cabled the reply "True."

Now, the conditions that governed the deed was not then in existence, while the reply "True" may be taken to refer either to the body of Mr. York's letter, which recognizes the proviso, or the postscript, which makes no difference to the same

one reading we have taken the other. Yours truly, Dunrayen.

20 St. James Square, S. W., June 24.

Dear Sir: I beg to acknowledge the receipt of your letter of May 24, with inclosure.

I am exceedingly sorry that a difficulty has arisen with regard to the challeuge of the Royal Yacht Squadron made in my name for the America Cup; and my regret is the greater since I find I was mistaken as to the terms on which the challenge would be accepted.

I did not know that the "new deed of gift" was in any way involved, and can only express my sincere regret at being under a misapprehension in that respect.

What I intended to do, and what I thought I had done, was to challenge to sail the Valkrie for the Cup against any vessel the New York Y. C. might select, according to the conditions that governed the last three 'international contests, and to the spirit of that challenge I wish to adhere.

As far as sailing for the America's Cup is concerned I am in the hands of the Royal Yacht Squadron. If they instruct me to sail, well and good.

But, on the other hand I attach no importance to the nature of the prize, all I care for is the interest helonging to a fair competition between the two vessels, and if the New York Y. C. find themselves unable to offer the America Cup as a prize I shall be ready on my part to sail against whatever yacht would have been selected to defend it, either for a prize of equal value or nothing at all.

Since there is scarcely time for further correspondence on the

selected to define it, close for a place of a fall.

Since there is scarcely time for further correspondence on the subject it would be very convenient that I should be represented by some one on your side of the ocean. I have therefore written a letter to Gen. Paine, of which I inclose a copy, and if he will kindly consent to act for me I will abide by whatever arrangements he makes.

I am sending a copy of this letter to Gen. Paine. Yours truly, Dunraven.

ments he makes.

I am sending a copy of this letter to Gen. Paine.

Yours truly,

DUNRAVEN.

20 ST. JAMES SQUARE, S. W., June 24.

DEAR SIR: Although I have not the pleasure of your personal acquaintance I feel sure you will excuse the liberty I take in writing to you concerning the America's Cup. Your men is so well knym over here in connection with international yacht rates in which I find myself placed.

The Royal Yacht Squadron challenged for me under a misapprehension, for which I am responsible, as to the terms under which a challenge would be accepted, and it is possible that my challenge may fall to the ground, owing to a difference of opinion between the Royal Yacht Squadron and the New York Yacht Club about the new deed of gift.

I have no wish to express here any opinion as to the relative merits or demerits of the different deeds under which to have York Yacht Club has held the Cup, or to discuss their legal aspect, or the various interpretations that may be put upon the "mew deed."

Whether I race for the America Cup or some other prize, or nothing at all, it is equally immaterial to me; all I care abont is the sport, the interest of the race, to see what my ship can do, and to have the relative merits of the two vessels fairly demonstrated.

I see no reason, therefore, why the match should not take place, as I am ready and anxious to sail against whatever yacht the New York Yacht Club would have selected to defend the Cup, all the conditions of sailing remaining unaltered, with the exception that we should easil for some prize other than the Cup. Time is too short to permit of my settling this matter by correspondence; I should be very grateful if you would kindly consent to act for me.

As you are probably aware, the conditions of sailing, courses, etc., are pretty well agreed to. The only point outstanding to which I attach any importance being the time of starting.

As expressed in my letter of May 3 to Mr. Smith, many and obvious objections appear to exist in leaving the time of starting in a

hands, it you will be so good as to act for me and arrange for the match.

I cannot, however, afford to race for a large sum, but should be glad if the sum, if any, that we sail for be such as to enable the victor to buy something commemorative of the event.

I helieve the value of the America Cup was 100 guineas. I suggest the same sum.

If in any way you find it inconvenient to accede to my request I trust you will not hesitate to say so.

I inclose a copy of my letter sent this mail to Mr. Smith. Yours faithfully.

[Signed] Durrayen.

ROYAL YACHT SQUADRON, COWES CASTLE, June 27, 1889.

To James D. Smith, Esg.

DEAR SIR: With reference to your letter of the 27th ult., addressed to Mr. Richard Grant, Secretary to the Royal Yacht Squadron, relative to the challenge for the America Cup in behalf of the Earl of Dunraven, and having given it the fullest consideration, we have first to admit that the challenge was sent under a misapprehension as to the terms alluded to in your letter of Dec. 14 last, addressed to the Secretary of the Koyal Clyde Y. C. as the inclosed copies of letters from the Earl of Dunraven and Mr. G. L. Watson will show. We therefore much regret that we are unable to confirm the challenge with the condition attached that "if the cup is won by the club challenging it shall be held under and subject to the full terms of the new deed," the acceptance of which we consider would preclude the renoval of that friendly competition which it is so desirable to encourage and maintain, and for which the cup appears to have been originally conveyed to the New York Y. C.

We could not undertake the responsibility of entering into such a covenant, which would make the terms of the new deed gift binding in any future challenge.

We would further point out that the effect of accepting the conditions of the New York Y. C. would he to compet the Royal Yacht Squadron to insist noon receiving, should it be successful in winning the Cup, more favorable terms from a challenger than those under which it is challenged.

Charles Baring, John Multholland, Allen Young C. B.

CHARLES BARING, JOHN MULHOLLAND, ALLEN YOUNG, C. B.

To the Earl of Dunravan, K. P.: DEAR LORD DUNRAVEE—I told you about a month ago by word of month, but now repeat it by letter, that I had made a serious

overlook when advising you as to the terms of challenging for the America Cup.

Most unfortunately, when we spoke to Mr. Graut on the matwee had not a copy of Mr. York's letter to the New York Y. C., where the conditions attached to the winning of the cup are quoted. I had seen Mr. York's letter before it was dispatched, and certainly should have remembered such a very important condition; but, as a matter of fact, I clean forget about its existence and unwittingly misted you and Mr. Grant. Will you, therefore, read this letter to Mr. Graut or the Royal Yacht Squadron, who are interested in the matter, as it would materially add to my regret were any one but myself blamed for my blunder. I am, etc.,

G. L. WATSON.

ROYAL YACHT SQUADRON, CASTLE COWES, June 27, 1889.

To James D. Smith, Esq.:

To James D. Smith, Esq.:

Sin: I have laid your letter of the 27th ult., relative to the challenge of the Royal Yacht Squadron, on behalf of the Earl of Dunraven, for the America's Cup, before the special committee appointed at the annual general meeting of the squadron, to decide any question that might arise thereon. I beg now to forward you the decision that has been arrived at by them. I have the honor, etc.,

RICHARD GRANT, Secretary R. Y. S.

On the receipt of these letters Chairman Smith wrote as follows to General Paine:

New York, July 8, 1889.

DEAR GENERAL PAINE: I received a letter from Lord Dunraven this morning enclosing a copy of the letter he had sent to you, also advising me had sent you a copy of this teter to me. I asked you by telegraph if you were willing to give the press of New York a copy of bis letter to you for publication.

I notice that Lord Dunraven proposes to "leave himself in your hands to act for him"—in other words make you his representative. Are you willing to act? Yours, faithfully,

To this note General Paine replied by telegraph as follows:

JAMES D. SMITH. I have no objection to your publishing it as part of correspondence with you. Shall wish to know what action you propose.

Charles J. Paine.

STEAMERS AND THE RULES OF THE ROAD.

Editor Forest and Stream:

A subject of interest to canoeists and yachtsmen in this locality, and for that matter on every body of inland water, is the danger to small craft from the steamers carrying passengers to and fro. Such steamers are not governed by the existing inspection laws, and seem to care but very little for the rules of navigation.

Irondequoit Bay is such a body of water as I refer to; it is about 5 miles long by \(\frac{1}{2} \) to I mile wide and connected by an outlet with Lake Ontario, over which are two bridges without draws. It is claimed that this bay is not navigable water in the sense of the U. S. or State laws governing steam craft, although there are some half a dozen steamers running thereon, which carry several thousand people during holidays and Sundays, and many hunddreds during week days.

Why are these steamers not obliged to carry life preservers, boats or ratfs and lights, and stand proper inspection as well as on other waters? The lives of passengers are just as much in danger from explosion or collision as elsewhere! Why should they not be obliged to obey the rules of the road regarding saling craft as elsewhere?

To show the spirit of some of the captains on these steamers, regarding the matter i will mention what might have been an accident of some moment, which happened yesterday. Several members of the Rochester C. C. were sailing on the bay, and were about to land at the Newport House docks, and as one of them was running into the dock as steamer was also approaching from almost abeam, and it seems steamer dock and landing at the next; between these two docks was the low landing stage for small craft. When it was certain that the steamer was going to the upper dock, it was too late for the canoeist to go about as the steamer was also approaching from almost abeam, and it seems steamer dock, and landing stage for small craft. When it was certain that the steamer was going to the upper dock, it was too late for the eanoeist to go abo

SEAWANHAKA CORINTHIAN Y. C. CRUISE.

SEAWANHAKA CORINTHIAN Y. C. CRUISE.

THE fleet of the Seawanhaka C. Y. C. was at the appointed rendezvous in Oyster Bay by Sunday, the following yachts being at anchor; Sea Fox, schr., Com. A. Cass Canfield; Medusa, entter, Vice-Com. Robert Center; Iroquois, schr., Rear-Com. R. N. Ellis; Stranger, schr., Mr. Geo. Scott; Ruth, schr. Mr. H. C. Marquand; Crusader, schr., Mr. Chas. A. Cheever; Mayflower, schr., Mr. F. T. Underhill; Clara, cutter, Dr. J. C. Barron; Gracie, sloop, Mr. J. P. Earle; Thiste, sloop, Mr. Malcolm Graham; Iola, sloop, Mr. J. P. Earle; Thiste, sloop, Mr. Malcolm Graham; Iola, sloop, Mr. F. H. Wecks; Maraquita, cutter, Mr. A. Belmont, Jr.; Minerva, cutter, Mr. C. H. Tweed; Liris, cutter, Messrs. Wetmore and Hoyt; Gorilla, sloop, Mr. R. P. Carroll; Banshee, sloop, Mr. P. S. Pearsall; Kathleen, cutter, Mr. Wm. Whitlock; Vandal, sloop, Mr. Henry Stanton. On Monday morning the auxiliary maphtha yawl Etcetera, Mr. L. Q. Jones, joined the fleet. In spite of rain and bad weather generally a unmber of ladies were on board the yachts to witness the race of the forties. Iu the evening a meeting was held on board the lroquis, at which it was decided to sail from Larchmont on Friday niorning for Newport, the programme for the rest of the cruise to be determined on there. On Tuesday, morning the fleet saluted the flag of the Oyster Bay Y. C., afterward dressing ship. At noon all hands were welcomed by Dr. J. West Roosevelt, the fleet surgeon, and his wife, at his handsome residence, Waldeck, where a breakfast and garden party were given in honor of the club, and in the evening, m spite of the long continued rain, all were present at the ball given by Mr. F. T. Underhill. On Wedesday several swimming matches for prizes, given by Mr. Underhill, took place between the crews of the different yachts. On 1 hursday morning the fleet sailed to Larchmont, where the members joined in the festivities of the day as guests of the Larchmont ty. C.

On Friday the cruise was resumed, and on July 9 the fleet was at Vineya

· CHESAPEAKE BAY Y. C. ANNUAL REGATTA.—The annual regatta of the Chesapeake Bay Y. C. was sailed on July 4, and was a very hotly-contested race. The regattas of the club are open to all craft owned in the State that come within the classification. The match of the 4th was open to all boats measuring over 28ft. "oyster measurement" (which is from inside of stempost) to 35ft. in first class and all hoats 28ft. and under in second class. The time allowance is 6s, per foot per mile for difference in length, four boats required to start in each class to make a race. Only two boats entering in second class, theso two were allowed to start in the first class, taking the minimum length of that class. The course was in Miles River, starting at Deep Water Point, thence to buoy off Long Point, thence passing "Hill" buoy on starboard hand to buoy on east end of Herring Island, thence to finish, line drawn from Deep Water Point to "Hill" buoy, distance I miles. Wind vory fresh S. W. All the boats in the race were Chosapeake cauces, very able and fast craft, especially fast in reaching and runnit g, at which points of salling we think they cannot be boaten in strong winds by any single-hulled vessel. The time allowance taken at start, the boats starting in the following order and time:

Island Bride

The Edward and Saidie started at 28ft. The first leg of the course was a reach close hauled. Edward broke her foremast after going a couple of miles and was out of the race. The order of rounding Long Point Buoy could not be taken, as, owing to a misunderstanding, the club steamer with regatta committee did not get ander way in time. After turning the Long Point Buoy the boats had the wind on port quarter and came very fast to Hill Bnoy. The Gertie by this time having picked up all boats ahead of her and passing the Hill Buoy at 11.5s, closely followed by Saidie, Lucy Lee, Moses, Island Bride, White Wings and Little Jim. From this point to Herring Island it was dead before the wind. The Gertie turned first, Vickors second and Island Bride third, Saidle fourth, others not timed. They had a beat back to the finish, Gertie holding her lead of a few lengths, closely pressed by the Vickers, with the Island Bride gaining on both, but slowly. The Vickers tacked for the line when off Deep Water Point, and the Gertie, watching her closely, also went on port tack, but they had miscalculated the strong ebb tide running, and poth failed to weather the point, involving another short hitch to starboard and them to port before they would weather the line. In the mean time, the Island Bride had held her starboard tack, and the excitement on the club steamer, anchored just across the line, was intense among the members and the numerous ladies on board. Just as the Bride came about for the line tho lacing in the head of her foresail gave way, but she kept on sailling the last tack practically under mainsail and jib. The Gertie and Vickers tacked between the Island Bride libs, behind the Vickers, with Saidie and noe other of the boats well up. Gertie wins first prize, Vickers second prize and Island Bride third. A match has been made between the Island Bride in the Gertie to sail another match over the same course. The usual large crowd attended the regatta, and the event was a great success, only marred by the how

CORINTHIAN MOSQUITO FLEET.

CORINTHIAN MOSQUITO FLEET.

SPECIAL CANOE RACE.

A SPECIAL cancerace of the Corinthian Mosquito Fleet was sailed on June 29 off Larchmont, over a 3-mile triangular, twice around. Among those responding to the invitation were Paul Butler, of Lowoll, Mass, C. B. Vaux and C. J. Stevens, of New York, and Geo. Forrest, of Hartford. The Mosquito Fleet presented a very handsome oxidized silver bowl to the winner, who proved to be Paul Butler in the Fly. The Larchmont Y. C. very kindly extended the privilege of their well appointed house and grounds to the Mosquito. Fleet on this occasion, which was appreciated by the contestants, who could ship their cances direct and be assured of care on their reception, and also have large floats on which they could rig and prepare for the contest. The race was started at 3:53, the Sound being flat and glassy up to that time, when a light air came in from S. E., changing an hour later to S.S. W., when it remained strong enough to compel Mr. Butler to get out on his plazza.

By close timing at the start Vaux went over first, followed very closely by Eutler, both on starboard tack, Stevens coming for line on port tack, going about on line in their wake. Forrest went in stays on line, losing 3m. at the start. After a short hitch all four stood to westward under the shore to avoid the strong ebb tide; it was high tide at 12 o'clock.

At first mark to windward Butler turned Im. ahead of Vaux, 13/m, ahead of Forrest, who changed his place from fourth up to second and back again several times, fighting for second place at finish and would have gotten it but stood on too far, allowing Vaux to shoot under his stern and across the line second to Butler's first.

The race was one of much interest to the many yachtsmen at Larchmont, who filled three naphtha launches, and followed around the course. Mr. L. Q. Jones tendered his naphtha launch Etcetra to Com. Thornton Smith and Sec'y Theodore Ledyard, who acted as regatta committee.

Following is a summary of the race:

Atom, C. B. Vaux, N. Y. C. C. Fly, Paul Butler, Vesper C. C. Vagabond, C. J. Stevens, N. Dimple, Geo. Forrest, Hartfo	Y. C. C. 3.53	Finish. 6 48 30 6 44 30 6 50 55 6 49 30	Elapsed. 2 55 30 2 51 30 2 57 55 2 56 30

RACE FOR THE CHALLENGE CUP. JUNE 15.

ROYAL C. C.

RACE FOR THE CHALLENGE CUP, JUNE 15.

YEAR by year sees an increasing number of cances at Hendon Lake, and plenty of young blood coming forward to compete for the much coveted trophy. Feeling that a race of this importance should not be carried off by a flike, or accident, the R. C. C. this year arranged that the cup should be sailed for on two days, instead of one, as hitherto, and, in the event of different cances winning, that a final tie should be sailed off on a third occasion. The first race came off at Hendon last Saturday, but the weather was very paltry, the competitors taking six and a half hours to cover the ten miles—almost the slowest race on rec. d. The winner turned up in an unexpected quarter, as Mr. G. E. Webste in the Stella (late Nautilus), succeeded in beating Charm and Natural Stella (late Nautilus), succeeded in beating Race for first, second and third class cances, five rounds, lcaving all, huoys on the port hand:
Nautilus. ... W. Badon-Powell. Vanessa. ... B. de Q. Quincey. Charm ... W. Badon-Powell. Vanessa. ... B. de Q. Quincey. Charm ... W. Helding. Diamond H. Church. Severn. ... T. H. Holding. Diamond H. Church. Kitten. ... E. A. Leach. Atalanta. ... R. do Q. Quincey.

They were started in a very faint air from the wostward at 3 P. M., Wanda, Atalanta and Nautilus leading, with Stella and Charm in close attendance. Nina, Severn, Diamond, Vanessa and Kitten were all in a cluster, and it was not unit after rounding the buoy in the bight that thoy began to spread out at all. In the turn to windward to the western buoy, Nautilus stepped away from the others, although it was tedious work in the light wind. With spinaker set she ran up the lake, followed by Stella, Charm. Severn and Ulidia, in the order named. In the second round the wind seemed inclined to freshen; but after a faint effort it died away again. Nautilus held the lead for the two first rounds, and Severn passed Charm, who was going very badly and not at all up to previous form. Stella was only one minute behind

the next race will be on the 22d, and the final if necessary, on the 29th.—Field, June 22.

PEQUOT CANOE ASSOCIATION.—Editor Forest and Stream:
The clubhouse on Rogers Island was formally opened on July 4, and despite a very wet afternoon the day was a great success. The committee in charge of the house went to the island on Com. Borden's yacht on Tuesday and remained until the following Monday, as the visitors kept ooming from July 4 to the 8th, and there was a great deal of interest taken in the club and its summer home. On the opening day the club house was decorated with signals and bunting, and during the evening hung with Chinese lanterns around the entire veranda. The fireworks in

the evening were very good, and the only drawback to the day was the rain, which keptall under cover during the afternoon. The view from the island is magnificent, and the island itself a large one, with plenty of good locations for tents, besides the honse, which is very large. Cruisers will be welcomed, the flag of any clab being a passport to the hospitality of the camp.—PROUOT.

Answers to Correspondents.

PW No Notice Taken of Anonymous Correspondents.

E. L. R., Smithville Flats, N. Y.—There is located four miles from here a body of water, belonging to the State, that contains somewhere near 100 acres. The pond was stocked fourteen years ago with 15,000 or 20,000 salmon trout. It has always contained pickerel, perch, sunfish, bullheads, eels, pond shiners and pond suckers or minnledabs. The pond is fed by springs, and the dralnage from a small section of country. The water is quite clear; there are no swamps draining into it. Depth varies from 2 to 40ft. In the shallows are stumps, logs, pond illies, numerous grasses. In the deep water (which predominates) the bottom seems to be free from logs, and is of a hard mud or gravelly character. 1. What kind of fish would you advise us to stock this pond with? How would catfish do for one kind, and black bass for another? 2. Can catfish be obtained at the State hatchery? 3. What do you suppose has become of the 15,000 or 20,000 trout put in fourteen years ago? There has not been one caught that I know of. 4. Would wild rice be apt to grow in the shallow water as an attraction for wildfowl? 5. Are the game laws of Rockland and Westchester counties in regard to exportation of game successful in stopping market hunting? 6. Where can I get a full copy of their game laws? 7. Of the Oneida county law mentioned in last week's paper is the extract, as published, complete? Ans. 1. Stock with large-mouthed black bass, which would probably do

best. 2. Yes, at Caledonia Hatchery. 3. Have escaped through brooks or perished. 4. The wild rice will probably do well. 5. The non-export game laws have done good when they have been enforced. 6. Write to the county supervisors. 7. The law was given in full, save for the enacting clause.

ANGLER, Sing Sing, N. Y.—Is there any law against catchir small striped bass with hook and line; if so, what is the limit as i size? Ans. The law prohibits killing black bass or fresh-wat striped bass or salt-water striped bars weighing less than on half pound, or less than 8in. in length from end of snout to en of caudal fin.

N. C. L., Salem, Mass.—How much is the muzzle of the gur contracted to constitute a full-choke, and how much a modified choke? Ans. From thirty-thousandths to forty-thousandths of an inch for the full choke, and five-thousandths for the modified.

INFORMATION WANTED.

Can any of your readers give me information about the region of the lower lakes of the Penobscot. Milinoket, Pumedumecok, etc.? Is it a good place to go for a month's fishing and hunting in the early fall? Can provisions be obtained there, and is it accessible from below?—W. G.

No Chemicals.

To increase the solubility of the powdered cocoa, various expedients are employed, most of thein being based upon the action of some alkall, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by per-fect mechanical processes, no chemical being used in its preparation. By one of the most ingenious of these mechanical processes the greatest de-gree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use, illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—Troy Press.

The book should find its way to a choice place in every sportsman's library.—Chicago Inter-Oceans.

Ocean.

I would much rather know what this book tells me, the various names by which the prople call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—W., in Journal of Commerce. BITS OF TALK. III -CONCERNING QUAIL.

THE man with the feather in his cap had tried to kick them out from the corn-stacks where they had taken shelter at the first dischurge of the gun; the man with the red setter had poked at them in a stone wall; and the man from Hackensack had captured them by hand when they had run into a hollow stump. other time," he continued, "we lost them entirely; there was not a sign nor a scent nor a sound. It was at sunset; and I was just tired enough to set my gun up against the fence and perch on the top rail myself, while the rest went on further for a last try at them. I was looking the sunset and thinking to myself what a glorious thing this going shooting was, whether or no, birds or no birds, when all of a sudden I heard a quail's call, low and sweet and timid, with a sort of 'Where are you? and 'Whist, there!' turn to it. I could no make out just where it came from; but a second later, from the rail fence on which I was sitting, in fact, almost from directly under me, out stepped Bob. After him, from under the next rail, came another and another, and then more until there were seven. I kept mum and as motionless as a brooding Buddha; and without appearing to see me

sa's a brothing butten, and whole appearing to see the they went leisurely off in single file. It was a pretty sight, too, I tell you."

"What a chance for a raking ground shot," suggested the man with a feather in his cap. "Why didn't you pot

"Couldn't get to my gun," explained the man from Hackensack with a smile; but the others knew him well enough to know that that was not the reason, for if he had had forty guns those birds would have been safe

"That was odd, you being 'onto' those quait, and their not knowing it," said the man fast to the dog chain. "It is not often that we can get the advantage of the birds in that way; but it often enough happens, I fancy, that they are close by us without our ever finding it out, even with the nose of 'the best dog in the world.' Why, down on my place on Long Island I one day came upon a de-

serted quail's nest, with the broken shells, under an evergreen not more than three feet from the edge of the lane; and we had been coming and going there all the time, the carriage went by there three or four times every day yet none of us had ever seen that quail nor mistrusted that the nest was there under our noses. As a nest-hider the quail may be voted a success; madam can keep a secret, despite the noisy proclivities of her lord and master. By the way, we have one fellow down there, who always gives his full name, Rob ert White, three syl'ables, clear and distinct every time; he has been there for three or four years; we can distinguish him unmistakably from the rest, and know just where to find him. I've seen him, and he appears to think some pumpkins of himself, probably insists on being addressed as Robert in public, though I don't doubt his wife calls him Bo."

"Why don't you put him on toast some November? He might taste better than the common brood."

"'No shooting allowed' is the sign you'll find nailed up on my place. Besides, if I devoured him I would have to fall back on the pipers of plain Bob White; and I prefer melody to a mouthful."

"A quail by any other name, even colin," said the man with the feather in his hat band. "I notice your love of melody does not protect the quail to any great extent,

when you go up into Connecticut."

"Excuse me, gentlemen," said a stranger, dressed for a long journey, "but that's where I shoot, and last season I had a queer thing happen to me. I was shooting once at the very tail of the season on the Sound, where birds are not too plenty, and in the light snow we had seen quail tracks and had found where they had flown. We hunted for them high and low, but could not move them, and at last, just before night, we started for home. We had to pass over a sand ridge, from which the dry snow had been blown. As we did so the old dog, who was still working busily ahead of us, came to a point. We walked up, thinking that now we had them, and that we would at least get four barrels into them before dark. But when we got to the dog he was pointing a woodchuck's hole. stepped about in front of him, but there was no grass We stepped about in front of him, but there was no grass on the ground, nothing but the bare sand, and of course no birds in sight. The dog was pointing straight down the hole. 'Darned ole fool,' said Sam, 'I'll larn ye to pint woodchucks. Here, hold my gun.' I took the gun and he drew out his whip and hit the dog a cut, and so he did some Bararagar, the hirds rose all about him. as he did so-Br-r-r-r-the birds rose all about him. was holding both guns and was so paralyzed that I forgot to shoot, and the birds disappeared in the woods and we never saw them again."

"Those little incidents do linger in one's memory," put in the man with the setter. "A fellow has some odd experiences when he is out."

"I think the neatest thing in quail shooting I ever came across," said the man from Hackensack, "was something I saw last Saturday, when I was out 'hunting without a gun.' Barnes, from New Brunswick, was visiting me. He is a sportsman, and has hunted game on three continents, but he had never seen any American quail shooting, and he wanted to take a hand at it. I had no dog, but I suggested that we walk out and we might at least flush a bird or two. So we went out and down to our little brook, you know where it is, built us a fire, and settled down to smoke a pipe and talk of game. Barnes was just telling about one of his adventures in Ceylon, when through the bushes I caught sight of a man coming our way; and then I saw that he had a gun and was following a dog. After him came another man. They were heading directly for us, and soon the dog came to a point. I signaled to the man to hold his dog on point, and Barnes and I circled around, and came up pretty near. The birds flushed, the gunner shot both barrels, bringing down two birds within 10ft. of each other; and his companion got a third one and missed with his second. The birds dropped within 30yds. of Barnes and me. The whole thing was just as pretty a bit of quail shooting as I ever saw, and you may imagine how delighted the New Brunswicker was with it all. Why, if we had had things all our own way and planned out ahead, I couldn't have arranged for him a better exhibition of quail shooting as it is shot."

By this time the ferryboat had reached her slip; the

man with the setter found himself and the dog and the chain tangled up with several hundred pairs of legs; and the others lost sight of him in the jam, as they separated WAYS OF THE WOODCOCK.

THE notes on the habits of the woodcock printed in another column will undoubtedly bring a smile to the lips of many a reader, yet they are deserving of a thoughtful consideration, which shall winnow the facts from the fancies.

We really know very little about the private life of the woodcock, or indeed about that of any of our best known game birds. A few of the most obvious facts with regard to each species have been seized and written of fully that we are all of us prone to think that these few facts comprise all that there is to the bird's life. The same thing-but in a greater degree-is true of the habits of our game animals. Take for example the question of the woodcock's boring. How many have seen the bird do this? Of those who have seen the operation, how many have been able to decide for them-elves whether he knows the position of the worm by the sense of touch or that of hearing? The familiar twitter or whistle is another point about this bird concerning which there are diverse opinions. A corre-pondent a week or two since expressed the confident opinion that it was made by the bird's wings; we believe that it is not made by the wings, and could give reasors which to us appear conclusive.

"Paul Pastnor's" theory that the woodcock perforates the ground and then imitates the pattering of rain to induce the worms to visit the surface, appears fanciful in the extreme, but the error may be in his conclusions and not in his observations. At the same time we should like to have a little more testimony as to the distance at which an earthworm is visible, even on a bright moonlight night and through a pair of strong opera glasse

We wish that more of our sportsmen would devote a portion of their time to the study of the birds and mammals that they pursue with so much ardor, and that the results of their observations might be set down and publicly recorded. Almost every man who shoots or fishes much, has seen a great many interesting things which would be of value to others, and these observations ought to be given to those whose tastes lead them in the same direction. It is a remarkable fact that we still lack full and complete life histories of birds so familiar as the woodcock, the ruffed grouse and the quail, and of mammals so well known as the Virginia deer, the red fox and the common gray hare. Who will take hold of one of these species and supply the needed book?

SNAP SHOTS.

A RTICLES of incorporation were recently filed in Minnesota incorporating the National Park Transportation Co. with a capital of \$60,000. The names of the incorporators are Charles Gibson, St. Louis; Thomas F. Oakes, St. Paul; George W. Wakefield, Bozeman, and Ella C. Waters of Billings, Montana. This company has bought out the stage lines and property heretofore belonging to George W. Wakefield, and will in future operate them under the name of the "National Park Transportation Company."

Charles Harvey Bollman, late museum assistant in the University of Indiana, a young naturalist of great promise, died at Waycross, Georgia, July 13, at the age of 21. Mr. Bollman was at the time acting as assistant to the U. S. Fish Commission, having in charge the work of exploration of the rivers of Georgia. Last year he was employed in the exploration of the lakes of Michigan, and he had previously done a good deal of similar work in Indiana, Arkansas and Florida. Although so young, Mr. Bollman was the author of numerous scienyoung, Mr. hollian was the trific papers on insects and fishes, published chiefly in the Proce dings of the United States National Museum. He was the highest authority in America on Myriapods. he was one of the few men in America who had a thorough scientific knowledge of fishes.

In the Michigan Legislature a bill to prohibit the deposit of sawdust in streams was defeated, as was also a bill, strongly supported, making the game and fish warden the inspector of all dams and giving him authority to order the erection of fishways.

Mr. George Shepard Page has taken to England a large number of American birds, bobolinks, cardinals, Balti-more orioles and nonpareils, which have been liberated on English estates.

The Sportsman Tourist.

ON THE BORDER.

The Sportsman Woutst.

ON THE BORDER.

The JUANA. Mexico.—In my letter from the Rancho de Las Palmos I incidentally mentioned this old Mexican town as being the terminus of the railroad from Sin Diego, eighteen miles distant. While it is within the Province of Mexico, it is not in Mexico proper, but in Lower California; and the town is equally divided between Americans and Mexicans, the boundary line separating the two countries running crosswise through the center of the town—Americans on one side, Mexicans on the other. On the American side are several stores, heer saloons, residences, and a rather pretentious-looking, half-finished three story lotel—one of the numerous monments commemorsting San Diego's boom of two years ago. On the Mexican side the sight is truly Mexican, Here is the Custom House, a long, low one-story adobuilding, whitewashed within and without. To the tourist who goes to see what he can see, gets his handkerchief or one of his cards stamped with the Mexican seal as a souvenir of the place, quasifs a glass of the fiery mescal or purchases a bunch of lifty cigars, breaking the package before returning to the American side, I say to him with a clear conscience, the Custom House, with its numerous bowing, smilma, polite officials, presents a peculiarly unique sight. But to the guilty wretch who drives along with a number of dutfable articles concealed within his wagon, his eves penetrating every nook and contro of the rillage, fearfully dreading the sudden appearance of an aread and mounted officer, who will pounce upon him "like a wolf on the fold"—to such an one the neek little Custom House looms up title an ancient bastile, while the green and white Brg. waving peacefully over two nations, with its writhing snake firstly cluttled within the talons of a monster eagle, assumes an a pect tuly awful. If he should happen to be born under a lucky star he drives quietly on, and with boundhing heart and bated breath reaches the other side with his booty. And all for a few cents. On the month of th

street." And we walked. If I ever catch that villain on American ground I'll wallop him—I'll—I'll do some of the most artistic street mopping with him that was ever known.

Until very recently Tia Juana has been the "sporting" headquarters for San Diego and all Lower California. Twenty feet across the line, on the Mexican side, was located a bull ring of considerable proportions, and here, every Sunday throughout the year, congregated thousands of people to witness bull fights, and an occ: si mal prize slugging match. Gambling of all kinds, indoors and outdoors, was rampant, and thousands of dollars changed hands daily. Finally Gov. Torrcs ordered the bull ring demolished and all gambling suppressed. This was done, and to-day Tia. Juana is the quiet, sleepy old town of a hundred years ago.

While sitting under a pepper tree to day perusing the Forest And Stream and enjoying a quiet smoke, I noticed a ripple of excitement further up the street. Watching a little more closely I saw half a dozen "sporty" looking chaps separate from the crowd, and two of them carried baskets. Thinks I to myself "chickens;" and while they were quietly conversing I as quietly sauntered up and inquired, "Where is it to be?" "Where is what to be?" "The main." "What main?" "Oh, come. Don't give us anything like that. Where is it?" They said they were looking for a man, and just then he came up. They stowed away the birds for sife keeping, and after inbibing a cigar or two we all started for a place on the Mexican side to witness a quiet little fight. We found a dozen Mexicans and as many birds, and watched two or three son Diego chaps said he could "get a bird right here in Tia Juana that will do up any one you've got for \$50." The match was made instanter, and returning to a place of concealment the San Diego bird was produced. He was armed with spurs, and the Mexican bird wore slashers—at least that is what those fellows called them. Two or three shots from the San Diego bird knocked his Mexican highness cold, and the stakes were duiy

arranged, this time for \$25, and the San Diego bird waltzed in, wafted a bifter with his off feot on the head of his antagoni-t, and all was over. The Mexicans looked at each other in amazement, and as the San Diegans raked in the stakes they boiled over with rage. They jabbered and jabbered, and swore that the Americans would never leave the place alive unless they returned the money. Better council prevailed, and after talking the matter over among themselves one of the party advanced to the Americans and remarked that they need not give up the money to them, but they must go to the Custom House and leave it, they could not take it out of the country. Another wrangle ensued, and finally the Mexicans called out the Alcalde (justice of the peace) to settle matters. This official listened to both sides, and when they had finished and every one was waiting breathlessly for his decision, he jumped up and swore by the long horn spoon, or something, that he had a rooster which could lick anything either in Mexico or San Diego, and that he would just let him at the San Diegan, and not only keep in Mexico the money won by the Americans, but he would add \$50 more to the pot! The bird was produced, the money put up, and in exactly twenty-one minutes the Alcalde's bird lay dead in the pit. Then the fun began. The Mexicans swore, the Alcalde gesticulated, and all declared that not an American should return across the line. I told him I was an orphan and strictly decent, and that I didn't want to come to the fight, but was persuaded into it by these bad men, and that if they would let me go I would never do it again. While this was transpiring the San Diegans made a dash for liberty, and succeeded in crossing the line, and were safe in America. I am slightly di-figured, but not in the ring.

AN ADIRONDACK TRAIL.

AN ADIRONDACK TRAIL.

the ring.

AN ADIRONDACK TRAIL.

AN ADIRONDACK TRAIL.

AN ADIRONDACK TRAIL.

THERE were four of us—three lawyers and a layman the latter writing this sketch that it might be truthful. It was a congenial quartette, too, for each did as he pleased, and each pleased to do as the others did. So the first requisite of a pleasant trip was assured, for nothing is more destructive of the enjoyment of such trips than a member of the party who can be satisfied with nothing but the accomplishment of his own desires when they conflict with the desires of the other members.

The trip from Syracuse to Malone, the principal northern gateway to the Adirondacks, was somewhat tedious and wholly uneventful. But there was rare pleasure in the fourteen-mile drive to the State Dam, southeast from Malone, and real luxury in the hostelry of R. G. Low, who knows exactly what to do to make a tired man seeking rest and recreation happy and contented. There is no place in the Adirondacks where a man of gentlemanly mistincts will be better satisfied with the treatment he receives. State Dam has long been known for its fruitfulness of anglers, and at proper scasons yields up abundance of sport. Its contiguous waters are scarcely less popular, and the wonderful breeding grounds maintain the supply of trout from year to year. Four miles from this resort is the hone of the Ragged Lake Club of Syracuse, which is being converted into a place of rest and pleasure for lusiness men who like a ten days' retreat to the great forest. The sonthern view from State Dam embraces a magnificent panorama, scattered along which are the peaks of some fifteen well-known mountains. A solid mass of mixed timber makes up the foreground, with silvery lakes and streams in contrast with the dense green of the heavy foliage. It was among constant delights that we spent four days, when three of us started upon a trip through the heart of the great wilderness, one of the very genial lawyers being called home, much to our regret, for none could have appreciated the trip

disasters from fire are probable. Paul's sons are the active managers of the resort—capable, efficient, courteous gentlemen.

Beautiful St. Regis! Your glories have often been sung, but only feebly. It is the eye rather than the ear that appreciates your loveliness.

Our start from Smith's through to Booneville was made soon after 3 o'clock, with a guide and bout for each of us. The distance to be traveled was about one hundred miles, and we had three days in which to make the trip. I shall endeavor to describe the route so clearly that any person wishing to cover it will recognize this as a condensed and ragged, but truthful pen-sketch. The distance, then, across the lower St. Regis is one and one-half miles, into Spitfire and across it, one and one-half miles, and into the upper St. Regis, two miles in length. There are many expensive and beautiful cottages or "camps" to be seen on the points of the beautiful shores, and the scenery is constantly most charming. At the head of this lake (these waters run northward) is Bunker's carry, one and one-half miles to Big Clear Lake; but the "carry" is made with a horse and wagon over a good road, at \$1.25 per boat.

Taking a brief rest at a well-kept hotel at the end of the carry, and taking a glance at the grand scenery round about, and you hasten three miles across the crystal waters of the Big Clear to another carry four niles in length. If you have telegraphed ahead from Paul Smith's you will be met at this and the carry previously mentioned by wagons to transport boats and a four-seated wagon to carry persons from Big Clear to the Upper Saranac, where the four-mile carry ends,

directly at Saranae Inn, owned by a club of gentlemen, with Dr. Ward, of Albany, at its head. This was formetly known as the Prospect Home, but its name was recently changed. It is the inn where Mr. Cleveland has spent parts of several seasons, and the same telegraph instruments in the office which gave daily records of his doings still do duty for visitors. The Upper Saranae is a central figure of the Adirondacks, the "Queen of the Saranaes." Its elevation above tide-water is about 1,700tf. and commands a picture que view. In the foreground are fulls approaching mountains, while far in the distance are Whiteface, Marcy (said to be the oldest rock formation known to geologists), Melntyre, Seward, and others of prominence, with smaller ones between the foreground and background, forming successive steps like the seats of an amphitheater. This scenery ranks with the finest in the wilderness. There are many lakes in the vicinity where anglers enjoy rare sport, good fishing being procurable at almost any season of the year.

The production of the same and the property of the production of the same procession of the year of the production of the same procession of the year of the production of the same procession of the year of the production of the same procession of the year of the production of the same production of the year of the production of the production of the year of y

station, and New York morning papers are received on the day of their publication.

We left the lovely Raquette early Friday morning en route to Old Forge, at the western end of the famed Fulton Chain of eight lakes. The start was through a tortuous, winding, sluggish stream some four miles: thence to Eighth Lake over a carry of about a mile: thence through this pretty lake and another mile carry to the Seventh Lake, and on to the ever glorious Fourth Lake, grand in its scenery and majestic in formation. One leaves this lake with regret as he hurries onward toward Old Forge, through waters not specially attractive, but among the oldest known of any. The Forge derives its name from an attempt made three-quarters of a century ago to establish iron works at this point, but which proved disastrous to the undertakers. Two and one-half miles further down the river is Arnold's, where a hunter and trapper lived many years ago, who resented what he thought to be an insult by murdering the man and drowning himself. From Old Forge to Booneville it is best to go down the river ten or a dozen miles by boat, and then go eight miles over a tram railway to Moose River, and there neet your carriage to take you twelve miles to the Black River Railroad.

I am aware that I have endeavored to condense matter

your carriage to take you twelve miles to the Black River Railroad.

I am aware that I have endeavored to condense matter enough for a book into this short but too long article. It was my purpose only to roughly describe the route of this trip of over one hundred miles for the benefit of tourists and sportsmen, and nowhere else, I believe, can they find a "trail" like this.

In conclusion, I must express the regret I feel, that the same avarice which drove patronage from Niagara Falls is finding its way into this region. There is a disposition

in many places to kill the golden goose. This spirit will much more quickly drive summer visitors from the Adiroudacks than four times the present amount of devastation from fire, railroads and timber cutters. Murray opened the great gateway; will those who are profiting therefrom close it by their own blindness?

This grand combination of lakes and rivers, mountains and valleys, chasms and peaks, comprising altogether nearly or quite 4,000,000 acress—more than seventy miles across in any direction—would not long remain in its present condition if it were in almost any European country. It would come under the ownership and control of the State, and be preserved for the people of the State. But our own country, first in much that cannot be too strongly commended, is sadly slow in doing those things which would give it a reputation for something besides business, push and enterprise. The general Government should do as other general governments would do if they had opportunities for acquiring so many national parks as might now be secured for this country, in different parts of it. More money issquandered every year by Congress than would be required to purchase and maintain for many years all of the gifts of nature which have been so bountifully bestowed upon us. Are we to forever reject these gifts?

D. H. B. SYRACUSE, July 4.

A WEEK OFF.

which have been so bountifully bestowed upon us. Are we to forever reject these gifts?

A WEEK OFF.

I was mid-summer, with the hot August sun beating down with relembless fervor on the city pavements, when Mark and I were granted our week off. We had clerked faithfully for Benjamin & Co., carpet dealers, these five years; and they had always rewarded us with a week's outing in August, just when business is dull. Hitherto we had improved our furloughs by running down Kalamazoo way to see the old folks, but this summer had been so unusually torrid and dry, and in consequence we felt so physically enervated, that the thought of the scorching harvest felds and white dusty highways of our boyhood homes made us perspire instead of mentally recuperate, so we resolved to go up North and default clerks to make and decision or reparture, when Mark proposed that we carry our windown the parture, when Mark proposed that we carry our windown the parture, when Mark proposed that we carry our windown the parture, when Mark proposed that we carry our windown the parture, when Mark proposed that we carry our windown to the land boardinghouse bed and stared at him in amazement. "Look a-here, old fellow," I ejaculated, "don't you know it's out of season to hunt deer, and that's all the big game we would be likely to run agnins." "But there's bear up there," mildly suggested Mark. We looked into each other's eyes as only two friends can when one of them has made such a startling proposition that the other's credulty is staggered. Before Monday morning Mark had won me over to the idea of taking the rifles, but we were so afraid that some of our wagsish acquaintances unight see us accourted on the street that we sent the guns to the station by a boy to be expressed to our destination. Then we walked boldly to the Union depot and boarded the "Gadillac Limited," on the Grand Rapids and Indiana' Railroad. It was 7 o'clock in the morning, and the air was already closes and sultry.

The train stood away straight as an arrow for higher l

mill, three miles into the forest. The train-road was used for drawing lumber to the railroad, and in many places it was of costly construction, running on high trestles over swamps and morasses. A log-surfaced lake, a Titanic mill guarded by two black smokestacks, and the scattered houses of employees, constituted Sawyer's mill and its environments.

We bought all of the bread one housewife could muster and denuded the cupboard of another of all its berry pies, and then with the dark pine forest to the eastward for an objective point we tramped on, wearily shifting our equipage from one galled shoulder to the other. We were getting tired and foot-sore; there was no use in denying it. The fresh spicy breeze rustling through the quaking asp and blackherry copse on the shady side of the logging trail we were following, dried up the moisture on our feverish faces, but sharpened our hunger to the verge of poignancy. We had brought no tent with us, as it would have added to our luggage, and we had been told that "canvas was unnecessary, as plenty of deserted lumbermen's shacks would be found in the woods." How some men can contort their veracity when giving advice to a party about to camp out, especially if that party consists of two innocent city carpet house clerks! We did not spend much time in looking about in that great lone-some pine forest for fabled woodsmen's shanties, but seeing a glimmer of water through an opening we beat our way toward it, falling over slippery logs and being mercilessly tripped with thorny briers. Mark swore that some of those particular mosquitoes that were perforating the scruff of his neck were by breed a pure cross with bumble bees, and I had no reason to question his opinion. It was all fun anyway, and sport and recreation was what we had entombed ourselves in the savage wilderness for. So we emerged on the shores of little Silver Lake, making its splyam shores peal with our silvery laughter. Silver Lake was rightly named; it was as round as a silver dollar, and the purple evening

converted the state of the stat

whose matron for a reasonable consideration kindly furnished us with eatables, and we spiced the menu with the trophies from our hooks. But yet we had seen no bear!

But as fate would have it we were not destined to see the metropolis of western Michigan again without scenting bear; the most remarkable day of all proved to be the last one of our stay. We got up that morning with the sun and stretched our limbs like a couple of spring chickens. We had planned to make a trip to Todd Lake, four miles distant, and there troll for pickerel. We paused at the door of our cuisine benefactor's log residence, and she gave us a large, warm sugar cake to carry for our moon lunch. Then getting minute directions as to the location of the lake, we consulted our compass and plunged anew into the darksome forest. What a wild jaunt that was! We had not gone a mile before Mark lost our magnetic guide from a hole in his pocket, and we lost much precious time in a vain search for it. Then we trusted to luck for the outcome and marched forward lost our magnetic guide from a hole in his pocket, and we lost much as De Stoff must have done in his interninable seanching a ragely grand about our surroundings. It was treading softly over the yielding carpet of nature's great eathedral, with rustic boughs for rafters and the interstices canopied with trembling leaves for freezoe. There were tall, graceful silver birches with milk-white trunks, hiding under the wings of dark robed somber hemlocks, whose cone-studded plumage was in turn overlapped by the dirge-moaning crests of mastodon white pines. Near 11 o'clock we emerged on an oozy alder bottom, and here noticed the tooth marks of the extinct beaver on many a gnawed stump. What a labyrinth of sylvan lanes that alder copse was laid out in! We straggled through them, holding our guns high above the cruel saw-grass that slashed at our unprotected wrists, many a time having to bend low and grope our way through green tunnels, where the willow branches had interlocked overhead. Suddenly we stepped into a bright, clear sunlight, and instead of being enraptured by a view of the broad expanse of Todd Lake, there lay before us a billowy sea of blue-joint gra

our outing, we shouldered our traps and wended our way toward Evart.

I can only give you a passing glimpse of the narrow escape we ran by fire before we reached the railroad. We had noticed great volumes of white smoke looming up in the southeast the day before, but had considered it a long way off. Now we found our path was leading us directly into it. We made a wide detour to the westward, scrambling through the lumber slashings that had been denuded of their choicest timber the winter before. But the flames scurried after us and played like the forked tongues of demons along the lurid horizon. Boom! crash! boom! sounded the forest giants as they thundered to the earth and shook loose dense clouds of glittering sparks. We dropped everything but our gims and run like mad. It was not like giving a man a fair chance for his life in an open space. We were tripped by wiry ground hemlock and dashed stunned and bleeding to the ground; we ran blindly against upturned gnarled roots and were hurled back into the teeth of the fiery tempest by the recoil. We broke through to the ampits in great piles of dry brush and madly struggled to get out with the horror of despair, while the seething flames hovered over us and almost licked our scorched bodies. O, the joy of relief and rescue, when we staggered into a damp swamp and buried our blistered faces in the oozy moss. The fire rolled on and left us as brands matched from the burning, and eventually we safely reached Grand Rapids to recount the tale in a careless,

off-hand way to our envious fellow clerks. But we never mentioned the bear incident only in mutual whispers in the sacred cloister of our own room. Then Mark said that on our next bear hunt we would bait a trap with tresh-baked sweet cake, and when bruin had gotten safely into it we would finish him with our indomitable Winchesters.

George E. Newell.

"AN EPISODE OF THE WAR."

"AN EPISODE OF THE WAR."

POST MILLS, Vt., July 10.—Editor Forest and Stream: Will Mr. Edward Manning, of Montclair, N. J., please give the name of the Confederate cruiser, who captured the Flora, and whose prize crew "the mate and colored cook" made food for the sharks? Confederate cruisers were few, and their custom of manning prizes from their own too seanty crew, to run the gauntlet of Federal guidonts that cruised and blockeded every port in the Confederacy, was not a rule laid down in our logbook. Ransom or bonding, scuttle or the torch (but tew of the former, however), were the common and general ways of disposing of prizes. Of course we don't question the truthfulness of the "Episode of the War," still it reads a little like a story to the marines.—Ex-Confederate Navy.

iet of Federal gunboats that cruised and blockaded every port in the Confederacy, was not a rule laid down in our logbook. Ransom or bonding, scuttle or the torch (but few of the former, however), were the common and general ways of disposing of prizes. Of ceurse we don't question the truthfulness of the "Episode of the War," still it reads a little like a story to the marines.—Ex-Confederate Navy.

Mr. Manning brought us the "Episode" as a substantially true relation, the name of the schooner being changed; and in response or "Ex-Confederate Navy's" request he has sent us the text of the petition in the case, presented to the Court of Commissioners of Alabama Claims. It was on the showing of the facts as in this petition that the firm alluded to by the writer of the "Episode" was awarded the sum which it had paid as salvage to Tillman and Skedding for recapturing the schooner and bringing her back to New York. We quote from the petition certain paragraphs which appear to ns to demonstrate that Mr. Manning's account may be accepted as a bit of history:

"Fourth—That on the fourth day of July, 1861, as your petitioner is informed and verily believes, the said schooner S. J. Waring with the aforesaid boxes of merchandise and other goods on board for the ports of Ruena Ayres and Montevideo, in South America, and thereafter and on or about the seventh day of July, 1861, as your petitioner is informed and verily believes, the said schooner, while prosecuting her said voyage with the aforesaid boxes of merchandise and other goods laden on board of her, was attacked, seized, and captured on the high seas by the Confederate cruiser Jeff Davis.

"Fifth—That as your petitioner is informed and verily believes those in command of the said schooner are prize crew, which prize crew changed the course of the said schooner are prize crew, which prize crew changed the course of the said schooner with the declared intention of making the port of Charleston, in the State of South Carolina, or some other poots laden on board of he

Hatural History.

OUTDOOR NOTES FROM LOUISIANA

YEARS ago I spent a summer vacation in Missouri, chasing the "hoopsnake," but, like the ague in Indiana, he was always in the next county. I am now after the "hornsnake," and expect to obtain the same result. This, to me, latest contribution to ophiology, is devoutly believed in by the natives here, and their accounts of him agree marvelously well. He is from 3 to 5ft. long, slender, of a dull bluish-black color, striped longitudinally with yellow, and the last two or three inches of his tail is a slender, sharp bone, carrying a deadly poison. He stings instead of bitting, and his sting is instant death—not even immediate amputation, if the bite is in an amputable part, being quick enough to stop the lightning-like action of the poison. One old Acadian, the Nestor of the neighborhood, told me how some twenty years ago his cousin was found lying dead in the rice field, and a large hornsnake coiled up beside him. One of the party, bolder than the rest, killed the snake, cut off his horn, and gave it to 'Sieur' Polyte, who showed it to me. Unfortunately, it was so exactly like the horn in a stingaree's, or stingray's tail, that even the old man's honest belief could not convince me that it was anything else. I have offered a reward ot \$5 for a full-blown specimen of the "critter," but so far without result. I suspect he's but an avatar of the hoopsnake.

I fear I have lost my credit as a man of science among my Acadian neighbors forever. I spent the day, not long since, at the house of one of them, and, during the forenoon, one of the tribe of small boys killed a joint snake in front of the veranda on which we were sitting. This led, of course, to the remark from one of the company that the pieces would re-unite before sundown, and the snake be whole again. I ought to have held my tongue; but no; I must needs demur to the statement, and the controversy was finally settled by both parties agreeing to the crucial test of letting the remains lie undisturbed and allowing facts to decide. The subject was forgotten by all of us, until we broke up to go home after supper, when some one remembered it, and we all went to see which disputant was right. Alas for me! every joint but one had disappeared, and there, but a few feet from where they had been, lay coiled—a jointed snake! On my attempting feebly to hold my own by evidence of the one joint that was left, arguing that this was consequently another snake, and not the "original Jacobs" at all, I was met with the triumphant statement that this snake was just that one joint shorter, and that, in the hurry and agitation of his reconstruction movement, he had overlooked this one member, and thus failed to incorporate it into the new body politic. "Logic is logic," and I retired defeated from the field.

I saw something lately that I am almost afraid to record in Forest and Stream, for fear that some "bird sharp" will say I was blind, or blind drunk, or "don't know a hawk from a hern-shaw," or that "the books" make no mention of such a fact. However, here goes, and if they prod me too sharply, perhaps Forest and Stream will allow me to kick back. Imprimis, then, the

white egret is a common bird here—ditto the blue. I have often seen the white and the blue in the same flock, but some, three weeks ago I saw a flock in which were not only whites and blues but white and blues and blue-and-whites; in fact they were as variegated and particolored as a tlock of barn-pigeons. Of course, I had left my gun at home ("what things a fellow do see when he ain't got a gun"), and when I next went that way, armed, the flock had left the pond. They were so tame that I drove within twenty yards of them, and when they flew they simply circled around me, within easy gunshot, and lit again in the same place as I passed, so I had ample opportunity for observing them closely. May be this thing of parti-coloration is not so rare in wild birds as I thought, but I have never seen nor heard of such a thing before.

Can any of your readers tell me something about the specific and generic affinities of a bird called down here the "water turkey?" In structure and habits he is the most contradictory bird I ever came across. Web-footed and short-legged like a duck, I have never seen him in the water, but when at rest always perched in trees. With a long neck and spear-shaped head and bill, like a crane or heron, and so, one would suppose, feeding as they do on frogs and small fish, the stomach of the only two specimens I was able to secure contained nothing but the shell cases of insects and green vegetable matter. Lake Charles, Louisiana.

[H. P. U. is sound in his observations on the pied heron. It is Ardea carulea, the little blue heron. The adult is usually slaty blue with maroon-colored neck, while the young is pure white, and between these two colors there are all grades. The water turkey, known also as snake bird, is allied to the gannets, cormorants, pelicans, etc., the tolipalmate swimming birds. Its name is Anhinga anhinga.]

THE SPARROW PEST.

OME time ago you had quite an interesting discussion on the English sparrow. If I remember right there were few pros, but many cons brought out. It not too late let me in with a most decided con, for I know whereof

Some time ago you had quite an interesting discussion on the English sparrow. If I remember right there were few pros, but many cons brought out. If not too late let me in with a most decided con, for I know whereof I speak.

The blizzard of a year ago almost obliterated Bob White from all the northern counties of New Jersey; yet this same terrible cyclone spotted our parks, streets and byways with the dead bodies of thousands of these English sparrow pests. This was in March. In April a few robins appeared around our homes, then came bluebirds and wrens and other feathered reminders of other days. The enemy seemed to have departed and they prepared to tarry with us as of old. Years ago in front of our house, in order to keep this English pest from building in our porch and soiling the walls, we had hung up a number of empty powder kegs and cans, which houses these creatures immediately availed themselves of; and we have had our shade trees loaded down with a chattering fighting, thiewing set of feathered secondrels without one trait of commendation, for they won't touch the worms now—the very object for which they were brought across the water—but they insist upon the best of seeds, grain and even cake—confound 'em. Eat worms! not much, except in the foliowing way: In our back yard we have a couple of pear trees that used to bear well year after year. Our next door neighbor has some peach trees that produced fruit large and delicious in flavor. Do we get them now? Not much. Where we used to get bushels now we can find but a few. Why? I can see from my back window day after day scores of these sparrows pecking at the buds. Naturalists may say they are after the worms or larvæ in the buds, but they take buds and all, and I don't believe the yarn that there is an incipient elements of the pirates were non est and what were lett were so demoralized that our little darlings would also is ce cream to them, larvas or no larvæ.

In our back yard we have a grape arbor, on one end of which I had hung a tin powder rank e

DR. M. G. ELLZEY, of Woodstock, Md., a frequent contributor to the FOREST AND STREAM, has assumed the editorship of an agricultural science department in the Natural Economist of Washington; and good work may be expected from him there.

More About Otters.—Indian Rock, Me.—While traveling their beats of our other frequently have what trappers call slides. Sometimes they have a place to leave the water to go on to some knoll (to scratch and dig the scratch and bear the inevitable amiction as best I could.

Presently I heard some animal—it may have been a dog—passing rapidly through the covert up a little distance. As I listened there was a familiar sound of whistlance.

moss), and when they get ready to start for the water they slide on their beliles. Any person will readily see that in going from the water an otter would place his hindfeet close to the edge of the bank. There is where I set the trap. Anywhere from three to eight inches under water and I never had an otter pass the trap without putting his foot in it, and if the trap is smart I always find the otter. They never twist their foot off, as m st other animals do, but fight the trap and everything within their reach until they become exhausted, when they lie down and die, probably within twenty-four hours after being caught. If your correspondent is not satisfied with this explanation I can give him two other modes. I wish all correspondents to criticise all I may have to say in your valuable paper, as I do not intend to write one word I cannot substantiate. I am neither sensitive nor nervous and do not object to difference of opinion, so as to get at the facts.—C. J. RICHARDSON.

RUFFED GROUSE EGGS.—Coralville, Ia., June 20.—
Noticing the clipping from the Worcester Spy, relative to the finding of a nest of the ruffed grouse containing fifteen eggs, I add a little evidence in regard to the numbers sometimes found in a single nest. In early June, 1855, a young man living here found a nest containing 23 eggs. He flushed the eld bird from the nest. This spring a man, in burning some brush piles, discovered a nest containing 18 eggs. In 1884 I found a nest near here and will append my notes in regard to it. It will show the period of incubation to be different from that given by some writers: May 2, 1824—I found this day a nest of the ruffed grouse containing 12 eggs; one must have been laid to-day, it looked so fresh and clean. May 4—The above nest contains 14 eggs to-day. May 28, 7 P. M.—The old bird was away from the nest, but the eggs are all right and sound. May 31—Thirteen eggs hatched, and old bird and young all gone; I got the shells and one addled egg. The first nest of a quail that I ever found was in New London county, Conn., and contained about 15 eggs. The old birds were just four weeks in incubation. By looking up notes, I could give other instances of large clutches of ruffed grouse.—JOHN WILLIAMS. [Our correspondent's notes are worth putting on record, and we shall hope for the rest of them.]

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—
Purchased—One West Australian kangaroo (Macronus ocyatromus),
5, two Gillespie's hair seals (Zalophus gillespii), 5 and 9, one grisson
(Galictis villata), one skunk (Mephitis mephitica), four prairie foxes
(Vulpes macrurus), two bald eagles (Haidactus leucocephalus), two
green jays (Xamihura luzuosa), one ring-necked parakeet (Palacormis torquatus), two yellow-throaded parakeets (Brotologerys lovi), one
Barbary partridge (Caecabis petroso), one blue-headed pigeen
(Stannanas ejanneephala), three alligators (Alligator missishpriensis), two allikator snapping turtles (Macrocheljs lacertina), two
black hog-nosed snakes (Heterodon piatrithius niarer'), one hognosed snakes (Heterodon piatrithius atmodes), three hognosed snakes (Heterodon piatrithius atmodes), three hognosed snakes (Heterodon piatrithius atmodes), three hognosed snakes (Heterodon piatrithius getulus). Presented—Two opossums (Didelphys virginiana), one gray squirrel
(Schurus earolinensis), two woodchucus (Arttomys monax), one
blackbird (Quiscalus purpureus), one crow (Corous americanus),
one Canary bird (Scopa saio), two reed birds (Dolichonya oryzivorus), one king rail (Rallus elegans), one pintail duck (Dayla acuta),
one Canary bird (Scienus canarius), one sott-shelled turtle (Asydonectes ferox), six alligators (Alligator mississippiensis), two water
snakes (Tropidonous spedom), two Ausasiz tortoses (Xerobates
agassizi), one grass snake (Oyelophis æstions), one horned lizard
(Phymosoma coroutal), one crowned horned lazard (Phymosoma coronata), and one punctated geeko (Spherodatylus punctatisshaus).
Born—One buffalo (Bison americanus), one Virginia deer (Ciracus
virginianus), one elk (Cervus canadensis), three peafowi (Pavo
cristata), and one zebra inch (Estreldu subjidva).

Game Bag and Gun.

A STUDY OF WOODCOCK.

A STUDY OF WOODCOCK.

To me there is no bird so interesting as that sby, mysterious, semi-nocturnal haunter of shades and swamps, the woodcock. I have studied it for years, and yet it seems to me as if I knew very little more about it than when I began. It is a bird which almost baffles the efforts of the student of natural history, because it seems to live always under the consciousness of being watched. It is the coyest, most retiring game bird of our Northern coverts. To know it intimately, one must be as assiduous in one's attentions as the most devoted-lover.

I do not hesitate to say that I have some theories about the woodcock which I have not yet succeeded in verifying. Some of them are altogether contrary to the commonly received statements of well-known writers on natural history. I may be laughed at for advancing one or two of these theories in the present paper, but I console myself with the thought that many mirth-provoking theories, in the course of modern investigation, have become science.

Among other things I believe the woodcock has the receiver of trees.

become science.

Among other things I believe the woodcock has the power of song. To be sure I have not verified this theory yet, but I think I am on the way to do it. I have heard the song, but I haven't quite fastened the responsibility for it upon the woodcock. However, that will come in

time. Not long since I spent a moonlight night on a certain water, a famous breeding ground for woodcock, making a nocturnal study of these birds. The record of it may not be uninteresting. I chose a night when the moon was full, so as to have all the light possible. In my pocket I carried an ordinary opera glass and a small metal whistle. The use of these appliances will be described presently.

tle. The use of these appliances will be described presently.

I left the road just before it reaches the bridge over the river, and crossing a wide meadow came to the breeding covert I have spoken of. It lay not far from the river, and was abundantly watered by a little stream which ran through it with many a zigzag and devious digression. The covert was composed of alders, birches, hemlocks and a few cedars. When I reached the ground it was late in the afternoon. The air was oppressively warm, and not a sound broke the absolute stillness of the place. I sat down on a little knoll, lit my pipe, and tried to drive away the persistent cloud of mosquitoes which hovered around me. But in vain. They swarmed into the cloud of tobacco smoke as if enamored of its fragrance. I had forgotten my "Jumboline," and all that remained for me to do was to grin and bear the inevitable affliction as best I could.

ing wings, and suddenly, as lightly as a feather, a woodcock alighted on the knoll where I sat, not six feet from me. I remained absolutely motionless, permitting the insatiable mosquitoes to drive their suction pipes into all the exposed portions of my body. The woodcock stood for a moment perfectly still, as if listening. Then it began to strut around like a barnyard cock, its pert little head nodding and its great bright eyes glistening like beads. It evidently had no notion of my presence, though between the mosquitees and a strong immulse the little head nousing and to generally like beads. It evidently had no notion of my presence, though, between the mosquitoes and a strong impulse to laugh at what looked like a little old wood witch hobbling about with a very long black cane, I could hardly keep still. Suddenly a stick cracked, and as quickly and lightly as she came, the wood witch with her long black

about with a very long black cane, I could hardly keep still. Suddenly a stick cracked, and as quickly and lightly as she came, the wood witch with her long black cane was gone.

I slapped myself frantically, and sent at least a dozen half-gorged mosquitoes out of the world. Then, jumping up I took a walk through the covert. Near the edge a woodcock flushed, flew a few feet only and then came down and fluttered along the ground as if wounded. I knew her young were near and stopped where I was. Seeing that her counterfeit agony had no effect upon me the mother bird returned, picked up one of her concealed fledglings with her feet and flew away with it. She barely rose above the alders with her burden; but in a minute or two she returned and carried off another of the young birds in the same way. This time I tried to follow her, as she seemed to fly very slowly, but she succeeded in giving me the slip.

I now proceeded to test another of my theories, with the aid of the metal whistle aforementioned—the theory, namely, that the woodcock, in common with many other wild creatures, has considerable of a bump of curiosity. Placing myself in the vicinity of a spot where I had flushed a bird I kept perfectly still for about fifteen minutes and then began to blow a succession of soft notes at regular intervals on the whistle. In less than four minutes Master Cock, stepping very daintily and stopping to listen at almost every step, emerged from his hiding place and came toward me. Having previously taken the opera glass from its case, I watched to the best of advantage every motion of my little friend, whose actions were exceedingly amusing. Every now and then he would stop, rest his long bill on the ground and close his eyes as if going to sleep. Then he would start up, strut in a circle, trail one wing and cock his head, as if trying to locate the sound. I am of the opinion that he was actuated, not only by curiosity, but by some vague association of the note of the whistle with the note of the female. At last an inadve

woodcock from the banks of the little brook I have mentioned, and in every instance fresh borings in the soil proved to me that the birds had been feeding when disturbed.

Just at dusk, however, there was a veritable uprising among the woodcock. Standing on the edge of the swale I saw cock after cock leave the cover and fly out into the open meadow. In fact they darted around me on all sides, with flight almost as erratic as bats. Whether these excursions were merely for exercise and amusement, or whether the birds visited and returned from other feeding grounds, or whether (actually) they were in pursuit of insects in the air, I am sure I cannot say. At all events this peculiar activity did not last above half an hour. My theory is that these flights of the woodcock, just at dusk, are mere playful abullitions of bird spirits—explosions of nerve-energy, if you choose. All birds are vivacious and joyful by nature. They are the optimists of the animal creation. What more natural, then, than that the woodcock (which, I am almost confident, has a song, and which most certainly has a bright eye and coquettish little ways) should break over its hermit habits once a day and enjoy a mad, merry whirl in the air?

I remember that once when I was camping on the east shore of Ma'lett's Bay, in Lake Champlain, as we were lying outstretched, four of us, in the glow of the campfire, after supper, right in the middle of us there dropped down an andacious woodcock. The bird stood within 3ft. of the blaze and 2ft. of the dog's nose, a mischievous, alert, playful adventurer, which could have had no reason under the sun—or. more correctly speaking, under the moon—for floating down into our midst, except to give us a surprise and enjoy our amazement. It was a maneuver "just for fun." I could see it in the bird's eye. There the woodcock of to the or fifteen seconds, and the dog was so completely taken aback that he simply stared, like the rest of us. Suddenly, as if at the wave of a magician's handkerchief, the bird was gone. Up jum

diately pounced upon and devoured by one of the woodcock. Presently another worm made its appearance, and so on until the two woodcock had devoured as many as a dozen of them. Then the "vein" seemed exhausted, and the birds took their leave.

I have subsequently studied the philosophy of this method of digging bait, and have come to the conclusion that certain birds are a great deal wiser than certain bipeds without feathers. If you will take a sharpened stick and drive it into the ground a number of times, in a spot which is prolific with worms, and then tap on the ground with the stick for a few minutes, you will find that the worms will come to the surface, and that they will come up through the holes which you have made. I account for it by the supposition that the tapping of the stick somehow affects the worms the same as the patter of rain, and it is a well-known fact that worms come to the surface of the ground when it rains. The antics of the woodcocks after they had made their borings, then, were simply mimetic, and intended to delude the worms into the belief that it was raining in the upper world. The worms, being deceived, came up and were devoured. All this may seem ridiculous, but if it is not true, will some naturalist please state how a woodcock can grasp and devour a worm when its bill is confined in a solid, tight-fitting tunnel of soil, and also how it is enabled to know the exact spot where it may sink its bill and strike a worm? And further, of all those who have seen a woodcock feeding, how many ever saw it withdraw a worm from the ground with its bill?

After the pair of birds I have mentioned flew away, I found another open place by the brook, where the light of the moon poured in, and after watching for perhaps an hour, saw a solitary cock alight and go through exactly the same process of feeding which has been already described. When the woodcock left, I went to the spot and examined the borings. They were very close together, and, of course, it was impossible that the bird should have

is a "likely place."

Although I remained in the cover until the moon went down, I saw only the three birds feeding which I have mentioned. There were some low and mysterious sounds in the swale during the night, which may or may not have been the conversation of the little community I have been describing.

in the swale during the hight, that have been the conversation of the little community I have been describing.

About midnight a small black animal passed through the covert, and I crept forward to see what it was. Judge of my surprise and consternation when, instead of fleeing, the animal turned upon me in the most threatening manner. I lingered only long enough to perceive that it was a skunk, and then quitted the vicinity in the shortest time possible. Skunks are oftentimes amazingly bold, especially in the summer. They seem to realize that they are held in universal respect. Evidently the same motive had brought this particular skunk to the woodcock covert which had brought me—namely, a scientific interest in the habits of the birds, reinforced in the skunk's case by the pleasing possibility of a woodcock chick for breakfast. No wonder the four-legged scientist was indignant at the meddling impertinence of his two-legged brother!

I left the covert immediately after the moon set and made my way homeward, sleepy, but satisfied that I knew more of the woodcock than I had ever known before. But I shall probably live a good many years yet before I discover all I want to know about this hermit bird.

PAUL PASTNOR.

A MUZZLELOADER.

A MOZZZESCOPOLINE

A dear old friend and ardent sportsman having, in his will, bequeathed all his firearms to me, I send you the following description of one of them, a double muzzle-loading rifle by Purdey, thinking that some of your readers may perhaps be interested by an account of the kind of weapon preferred by many of the best deer-stalkers on this side of the Atlantic, in the days before express rifles were invented or efficient breechloaders known.

readers may perhaps be interested by an account of the kind of weapon preferred by many of the best deerstalkers on this side of the Atlantic, in the days before express rifles were invented or efficient breechloaders known.

The Purdey rifle has barrels of Damascus twist, 29in. long, and weighing 5lbs. 1½oz. They are of 30-bore (about .54-gauge), rifled with two grooves, each of which is ½in. broad. The rate of twist is one turn in five feet. The fore sight is of dark steel in the form of a strong elongated bead, and is dovetailed in the central rib lengthwise, so that it cannot be moved sidewise by a blow. There is a fixed hind sight for 100yds., and there are also folding leaf sights for 150, 200 and 250yds. Each of these has a very broad V with a semi-circle notch in the center and a perpendicular line of platina underneath. When aiming, the bead of the foresight has very much the same appearance in this notch as it would have if viewed through the hole of the peep sight. The weight of the rifle with ramrod is 8lbs. 4oz.

Each barrel has a round piece of platina let into the breech just behind the nipple, with a very minute slit in it to act as a vent and allow the air to escape when ramming down the bullet. The locks are exquisitely made and have safety bolts in front, to fix the hammers at half cook if desired. On the left side of the comb of the stock is a projection for the cheek to rest against when aiming, and near the butt is a steel patch-box like those often seen on American muzzleloaders. The rammod is very stout and on one of its pipes, and also at the back of the stock, are a couple of strong iron loops, to which a leather sling can be attached.

Being by Purdy, the rifle is, of course, perfect in finish, balance and in handiness, for bringing quickly and accurately to the shoulder. And it ought to be so, considering that, until within the last few years, Purdey made only one quality, charging £36 for a single and £78 for a double muzzleloaders. They have two wings fitting the grooves and weigh

I have not yet had time to find out the proper quantity of Curtis & Harvey's No 5, but tried 70 grams with the following results, using a chair for resting my elbows but without any rest for the rifle. The target was in shade and a strong freezing wind was blowing across the range from 8 o'clock. I fired 4 shots at 50yds, 14 in. wide by 14 deep, aiming at the intersection of the cross lines, 5 at 160yds, in 104 wide and 2½ deep. In all these the bullets of the right and left hands crossed each other considerably, showing that more powder was required. I ought to have mentioned that I placed thick lubricating cloth wads next the powder, because they allow of easy loading for any number of shots, and so are useful at target practice, but they diminish the recoil and thus necessitate more powder than when the bullets are used with patches only. Without the wads they begin to be difficult to ram home after six or eight shots from the barrel, owing to the fouling at the breech. This is one disadvantage of much greater accuracy than the easy-loading expanding bullets used in the old Enfi. Id and Springfield muzzleloaders.

Last week I tried the Purdey again, with 82grs. of powder and the scat of a chair for resting my elbows. Weather calm, light gloomy, slight snow falling occasionally. I fired six shots at 100yds., the right in 2½ in. deep and ½ in, wide, left in 3½ in. deep, ½ in, wide and ½ in. deep. Average height above lower edge of horizontal line 5½ in. and ½ in. over. Five at 150yds, in 12 in, wide and 12 ½ in. deep. The npyrrmost shot being evidently wild, owing to my bad holding or some defect in the bullet, I only measured the height of the other four above the lower edge of the line. This averaged 2½ in, and ½ in. feep. The npyrrmost shot being evidently wild, owing to my bad holding or some defect in the bullet, I only measured the height of the other four above the lower edge of the line. This ave

the barrel when loading is only 4m, from the base upward.

After rifles of this kind had been in use a short time, Purdey reduced the gauge to about 50, with bullets of 20 to the pound and (3\psi_0).88 grains of powder, the grooves having one turn in 6ft. A further reduction to .41 was made about the year 1865. I have two of the bullets used in that bore, the weight being 200 grains.

The charge of powder was at first 62 grains, but was increased until, as stated by the late Mr. Walsh, clitor of the London Field, in his book on rifles, it reached 4 drams. Mr. Purdey used to show visitors to his shop some of the bullets of these small-bores taken from the carcasses of deer. Although cast solid, they had been flattened to the shape of a mushroom by the velocity given by the heavy powder charges. They were all of the criginal sugarloaf-shape with wings fitting the two grooves, and Mr. Purdey adhered to this system of rifling until breechloaders came into use. About three years ago he told me that he had found none superior in accuracy up to 200 yards.

me that he had found none superior in accuracy up to 200 yards.

My old friend, to whom the above described rifle belonged, always insisted that although a breechloader might be useful for some kinds of shooting, nothing was better than a double muzzleloader for fair stalking on foot, or what is called "still-hunting" in America; and it is a fact that during four seasons' stalking with muzzleloading rifles, during which I bagged eighty-two head of large game, I am aware of having lost only one wounded animal with a doublebarrel, and that would have been lost even with a breechloader. With a singlebarrel many wounded escaped, but with the deuble I invariably, except on that one occasion, killed with the first or second shot or else missed with both.

I only determined upon adopting breechloaders after the native who carried my spare gun ran away with it on one occasion when we suddenly met a tiger, and on another when we came across a herd of wild elephants in the Sewaliks, a range of hills near the foot of the Himalaya Mountains.

I wish a good American geologist would thoroughly explore those hills. Some grand discoveries would probably be made. Many interesting fossils have been found, among which are those of the sivatherium and an extinct species of hippopotamus. These were in the museum of the Government Botanic Gardens at Saharunpore when I was there.

J. J. M.

DAYTON, Ohio, July 15.—The woodcock season opened to-day, and a number of hunters were in the marshes before daylight. Young birds are abundant and fat, and fair bags are being made. Drouth through the hatching season has resulted in plenty of birds. Ashton Webb on Saturday bagged 41 doves. Phil Wenz killed 29 the evening before. The birds have been left undisturbed until now and are very plenty.

VERMONT GROUSE.—Waterbury. Vt., July 12.—Game prospects for the coming season look better than for several years. Grouse—our only game bird—have not been plenty for many years, but they are showing up better this season, and young birds are more numerous than for many years,—F, E. A.

MAINE'S BIG GAME.

MAINE'S BIG GAME.

The proprist of big game in the Maine woods and the woods of the other New England States and Canada are something surprising this year. The Maine papers have many items of deer, and even moose, coming out the interior speak of seeing more deer than ever before. Dr. E. B. Kellog, of Tremont street, Boston, with his wife and friend, has recently returned from a fishing trip to Erol Dam, and thence to the Diamond Pords and through the Dixville Noth to the vicinity of the Canadidan Pacific Ratinard in Canada. They followed the rail-road down on a landcar—the line is still in process of construction—till they came to Moose River, where it is a small stream. Here they did considerable fishing, and splendid huck they had, with a plenty of fair-sized trout. They stopped at a camy on the line of the road. Here there is a small greyhound kept. The Doctor says it is but a pup, and that its owners have no notion of training it to run deer. But the deer are very plenty on the little lake. Fifteen have been seen this season. At one time two does with their fawns came out in sight on the little lake. Fifteen have been seen this season. At one time two does with their fawns came out in sight on the little lake. Fifteen have been seen this season. At one time two does with their fawns came out in sight on the property of the Tawns and tossed it in the air more than 10ft. It came down without injury and the puppy refused to hurt it, but was disposed to play with it. The owners of the dog took the fawn into custody and it is now at the camp, the admiration and wear to be a season of the came. The party found fishing good, but the mosquitoes were simply unbearable.

The story is currently told that Edgar Harlow and Charles Morris caught a live carbon in the waters of Moosehead take, a week ago last Simady, and the story is currently in the company of the calves and the puppy of the state, and they have been seen the season of the authorities, it seems. Recently with the control of the calves and the property of

there are foxhounds (?) enough being bred within 100 miles of Boston to run every deer into the lakes and ponds of Maine, where they can be shot by the sports who have the money to pay a guide for his services, but not the skill and endurance to kill a deer by fair hunting in the open season.

SPECIAL.

SMALL CALIBER RIFLES.

SMALL CALIBER RIFLES.

Editor Forest and Stream:

Some time ago I bought a Winchester singleshot, c.f., .22-15-45, and have had bushels of fun with it, With a Lyman ivory front sight it is good for anything, from a kangaroo mouse at 20yds, to an alligator at 100. (Killed an 8ft. 'gator last week with it at 92 paces, and I am frightfully long-legged. At the first shot he never moved, so thinking I had missed him I put in a second; still he didn't move, and I went to investigate. Found the two bullet holes within half an inch of each other, just above and between the eyes. The first one must have killed him as instantly as a flash of lightning.) I have owned almost as many rifles of different makes and caliber as I have hairs left on my head and wouldn't give my present battery for all I have ever had or seen. They are Sharp's Old Reliable .44-110-370 for bear, elk, moose, etc.; Marlin .32-40-165 for deer, turkey, et al. and the Winchester for miscellaneous vermin. Am not sure but what for elephants and hippopotami I might want something different, but for all game the American continent holds I consider myself well "heeled." If they were the only three guns of the kind in existence I don't think I'd take \$1,000 for them.

If the Winchester folks would only put a little finer sights on their rifles, even if they charged a little more, I think it would be an improvement. The factory sights are too coarse. By a fine sight I don't mean a half-inch circle at 500yds., which, or its equivalent, some of your rifle shots talk about, but say a duck's head at 100yds, or a squirrel's at 125. If I could make either of these shots twice out of five times I should "think no small beer of myself." As to hitting a duck's head at 200yds, as some of your correspondents tell about, that's a notch beyond me—and—well, I'd like to vatch them do it. I have met but few, very few, men in my life time who are blessed with a better pair of eyes than I am—Providence be thanked for the same—as proved on shipboard, on the plains and at the la

Editor Forest and Stream:

I have used in my time quite a good many different rifles and have now a .22 chambered for the 15-45 and it shoots splendidly; but I would like a little heavier charge. I think the .25 would just fit, but I want a center-fire shell, for my experience is that I get much better shooting than with a rim-fire, and I believe that a good .25 center-fire with a good charge of powder in proportion to the ball would fill the wants of a large class of sportsmen.

B.

Hollow Bullets.—Bergerville, Quebec.—I have for some time past been using hollow bullets of my own manufacture. I think the reasons why the Winchester express bullet does not always expand are these: The cavity is of too small diameter, and the inserted copper tube does away with most of the effect of the hollow by rendering the bullet too stiff. If the hollow were increased in diameter and diminished in length and a slight hollow made in the base of the ball, it would, I think, prove satisfactory. The bullets which I have been using are the .44-40-200 Winchester. I cast my own bullets and use 45grs. powder with them. I made a slight hollow in the base of the ball, and after inserting it in the shell drilled a hole in the point as far as where it joins the shell. I then reamed out the hole till the sides of it corresponded to the shape of the ball. I now had only to close the hole. I did this with a long gun cap from which I extracted the priming. I fired one ball into a hard snow bank, and it made a hole about 2in. in diameter. I could not find it, so do not know how much it expanded. Fired into soft earth or pine, they resemble a mushroom in shape, expanding from \$\frac{1}{4}\text{in}\$. In diameter. I was satisfied that they would do good work on game, but could find no better mark than a muskrat. There were a few bits of flesh and strips of skin left after the ball strick him. I hope to try them on large game before long. As regards accuracy, I find them perfect. I shot a bluejay at 75yds., and put a ball in the middle of a bush 1\frac{1}{2}\text{ft}.

An Expensive Bunny.—Towanda, Pa., July 1.—Hun-

An Expensive Bunny.—Towanda, Pa., July 1.—Hundreds of young rabbits are reported seen along the country roads, one of which brought \$7 last week in this market. A drummer, out on a business trip looking over his country customers, just purchased a new target rifle and was anxious to try it on live game. A half-grown cottontail was potted. Throwing the kitten under his buggy seat he drove into town and put up at the hotel. Enthusiastic over his new gun, he related to a friend what he had done and where it was. Within five feet of him stood a game warden. His name was ascertained, he was arrested, fine and costs amounting to \$7, willingly paid and he said he had learned a valuable lesson.—D.

THE MICHIGAN DEER SEASONS, as prescribed by the new law, are: Open season in Lower Peninsula the month of November: in Upper Peninsula, from Sept. 25

A GEORGIA POSSUM FARM.

IT was in the early afternoon when we arrived, and to the uninitiated the farm appeared to be an immense fruit orchard, bearing an oblong, whitish sort of fruit hanging from the dead limbs of the trees by a long black stem. But appearances were deceptive. It was not fruit, but between 700 and 800 possums taking their afternoon siesta. Our party was somewhat unacquainted with the habits of the Georgia possum, and, consequently, plied question after question to our highly amused

hosts. I now consider myself an expert on the possum, and here is what I learned and saw:

hosts. I now consider myself an expert on the possum, and here is what I learned and saw:

The possum, when desiring to take a nap, simply climbs the most convenient tree, walks out on a limb, wraps his tail one and a half times around and swings his body out into space. His legs and feet are drawn close into his body and his head drawn up between his shoulders until it forms an almost perfect ball and appears to be a great pear covered with white fur.

The sun was slowly setting below the distant pine mountains, and we were still gazing at the queer objects in amused wonder, when a half-dozen little possmus emerged from the pocket of their mother, ran up her tail and commenced playing on the limb above. In a few minutes this marsupial stretched her head and then her fore feet out. She swung herself once or twice, grabbed her tail with her forepaws, and climbed up it to the limb, which she caught with her claws, untwisted her tail and pulled up. Hardly had she balanced herself when the half-dozen young ones climbed into her pocket and were hid from view. She then climbed down the tree. While this was going on more than 700 others bad awakened and were coming down from the trees. Reaching the ground each one made for the creek, drank, and then ran up the hill to a pen in which they were to be fed.

They were of all sizes. Some would barely weigh a half a pound, while others would tip the scales at 30bs. The possum, when hungry, utters a sound which is a cross between a mew and a moan. Over 700 possums were together so thick that the ground could not be seen between them, and the small ones had been forced upon the backs of the larger. All were uttering this peculiar sound, reminding one of an army of solders moaning over the death of their general, when through the gate a negro pushed a wheelbarrow, heaped full of all kinds of trash and slops—consisting of fruit peahings, vegetables, meats, bones and bread. As he hove in sight the scene among the possums reminded one of feeding time in a menagerie. The little ug

Sea and Biver Hishing.

MICHIGAN FISH LAWS

SYNOPSIS of the important provisions of the new general fish law relating to the inland waters of the State:

The catching of trout, salmon and grayling is lawful only from May I to Sept. 1, and then only if the catching is by book and line. (If of a size less than 6in. in length, they must be returned to the water) May I to Sept. I, and then only if the catching is by nook mutatine. (If of a size less than 6th. in length, they must be returned to the water.)

Bass may be caught at any time, but only by hook and line. The use of any explosive substance in catching any kind of fish is unlawful.

The spearing of any kind of fish (except mullet, grass pike, red sides and suckers) is unlawful from March I to July I.

The use of any species of net (except dip nets, in catching mullet, etc., as above) is unlawful at all times.

It is unlawful to catch or ship brook trout or grayling for the purpose of sale, at any time, and it is unlawful to buy or sell the same during the close season.

A violation of any provision of this law is punishable by a fine of not less than \$5 nor more than \$100 and costs, or imprisonment thirty days if the fine is not paid.

An act of the Legislature of 1889, regulating fishing with nets in the Great Lakes, and the bays and harbors connected therewith, regulates the size of meshes as follows:

The meshes of the funnel or lead of pound nets shall not be less than \$10 in extension.

The meshes of ithe pocket of pound nets, not less than \$4 in. in extension.

The meshes of selnes shall not be less than \$4 in. in extension.

(Gil nets not less than \$2 in. in extension may be used for taking perch, herring and pickerel.)

The meshes of selnes shall not be less than \$3 in. in extension. The drifting or towing of all drag nets with boats is unlawful. Seines must be fastened to shore or dock.

A fine of not less than \$10 or more than \$100 and costs, or imprisonment thirty days, is the penalty prescribed for a violation of this law.

CAMPS OF THE KINGFISHERS.—1.

CAMPS OF THE KINGFISHERS.-I.

ECHO LAKE, ONTARIO, CANADA.

CAMPS OF THE KINGFISHERS.—I.

ECHO LAKE, ONTARIO, CANADA.

WE had spent our vacation of 1885 in the old camp at the mouth of Sweeny's Creek on Central Lake, Mich., a spot around which cluster many pleasant themories of happy days of floating and fishing and dreaming and idling along the rush-lined shores of the Intermediate Chain; and when "old Knots" and the "old pelican of the Sangamon" (Uncle Dan Sloan) suggested that we hunt up a new lake on whose shore to kindle our campfire for the summer fish of 1886, it seemed like turning our backs on an old friend who had stood by us through dismal days of blustery storm and pelting rain, and pleasant weeks of genial sun, when woods and waters wore their fairest mood.

The smiling waters of Central, Sisson's, St. Clair, Six-Mile, and the others, each with some special claim to be remembered by us, seemed to invite to one more season of gentle wooing with rod and line, and an abiding love for the old camps of this Traverse region that has grown with the years, made strong remonstrance against a change of base. But as old Ben—onr oracle—says, "A change o' camp, an' a triflin' with strange waters is only a shiftin' o' the affections which don't count agin ye in the general roundup," it was finally decided that other waters than the Intermediate should receive the homage of the Kingfishers for the next annual camp, and we at once set about the task of selecting a locality where bass might be found in fair numbers, with mayhap a maskinones* now and then just to fill the measure of our happiness, and a stream or two within easy reach where trout enough might be had to keep the old smell from dying entirely out of the well worn frying pans.

Through some hunter friends old Dan had learned of a chain of small lakes on the Upper Peninsula of Michigan near Waucedah, a station on a branch of the Chicago & Northwestern R. R., about forty miles west of Escanaba, that promised to fill all the requirements, but a letter of inquiry to Mr. E. P. Dillon, of Waucedah, about supplies, bo

*I believe that Mas'-kin-on'-je, is the proper name of this no-blest of all the game fish of the North. This name is certainly far more musical than muskylunge, mascallonge, muscallunge or any other of the half dozen different ways of spelling it, and is to be preferred if for no other reason.

canoes." Fancy old Dan in "a couple of hoats, such as they are," or old Knots in a giddy-minded birch bark canoe. Dan's infirmities require a good steady boat to nake him measurably comfortable, while the adipose of old Knots and the unreliability of his legs as "ase legs," call for a craft with a breadth of beam that will give security against any frolicsome capers in a mild blow, or in case he wanted to "swap legs." "Birch bark canoes might do," he said, "for Indians and wildfowl with web feet that didn't mind a ducking now and then, but he wanted a boat that would stand still long enough to give him time to sit down in it." Clearly the craft indigenous to that region would not suit Knots, and we concluded to look clsewhere for a camping place.

Green and Duck Lakes, fifteen miles southwest of Traverse City, had been highly spoken of to us the year before as fine bass waters, but the obstacle of hauling boats from Traverse and back presented itself, and this, too, was abandoned. Platte Lake came next for consideration, a body of water five miles long by three wide, lying over near the coast line of Lake Michigan and some thirty miles west of Traverse City. It has a clear outlet into Lake Michigan three miles in length, and is said to be the very best lake for bass in that whole region; but to get to it would require an overland ride with all our "calamities," besides the trouble of hauling in boats from Frankford, twelve or thirteen miles to the south.

We had heard so much good of this lake that with all the discomforts of reaching it we had about made up our minds to go there, when Knots received a letter from a brother angler living in Detroit, Mich., a Mr. F., that upset all our plans and started us on a new trail. As brother Friz was to be one of our party he was entitled to a voice in the selection of the waters around the Les Cheneaux Islands, above Mackinaw Island or the St. Mary's River, at the foot of the West Auebish rapids.

Then, when the time was getting short before the day set for the start, h

River.

The year before, the general passenger agent of the Grand Rapids & Indiana Railroad, Mr. C. L. Lockwood, had referred a brother angler of Frankfort, Ky., to the writer for information about some of the lakes of Upper Michigan, and the correspondence ended in an invitation for him (since known to the readers of FOREST AND STREAM as "Snakeroot") and his chum, Charley F., to join us for a short season in the "bresh," which they did. The acquaintance thus begun has never been regretted, for they are a couple of as square, big-hearted sportsmen as ever pulled a trigger (both excellent shots) or dug worms of an afternoon for an early start to the "crick" on a morning. "Judge Snider," of Cincinnati, another old angler friend with a heart as big as a bar'l, had also been one of the party the previous year, and the Upper Michigan fever had fastened on these three with such a firm grip that nothing short of the certainty of being flayed alive by mosquitoes, black flies and no-see-'ems would have kept them from the North Woods, and when the roll was called they were ready with, figuratively speaking, twenty-five days' rations in their gripsacks, and otherwise equipped for the expedition to Echo Lake.

Knots and the "Jedge" were to start a couple of days

speaking, twenty-nve days rations in their gripsacks, and otherwise equipped for the expedition to Echo Like.

Knots and the "Jedge" were to start a couple of days ahead and look out for boats at the Soo; Brother Friz would follow up and join us about the time we had the eamp in running order and the browse stripped for his bed, and Old Dan, with a couple of other good fellows from Decatur, would join the writer and the "hunters from Ole Kentuck" at Richmond, Ind., from whence we would follow "the fishing line"—the Grand Rapids & Indiana Railroad—to where it lost itself in the waters of the straits of Mackinaw City.

Rare old Ben Renshaw, with his quaint jest, his inimitable, mirth-provoking speech, his genial ways and inseparable brier roof—the life of the camp and the faithful comrade whose place none could fill—was not to be one of us; he wrote that he could not leave the farm at that time in the scason, and that "instid o' ketchin' trout an inuskylunge in Michigan or Canada, he'd hev to be satisfied with a little plain fishin' fur cats and mud-turkles in the Sangamon, fur the Joneses never wus used to the very best o' everything nohow." But disappointments and minor calamities must be borne with a certain amount of resignation, and the old "mud-turkle" was left behind with genuine regrets and a promise that he would jine the gang the next year.

Old Sam S. (the good people of Frankfort, Ky., call him "Snakeroot") and chum Charley turned up smiling and happy on the evening of July 14, and next morning we were off, with one end of the baggage car half filled with our camp calamities, among which was the same old stove that brother "Seneca" scored me about in For-

EST AND STREAM, and for which I have long since forgiven

EST AND STREAM, and for which I have long since for given him.

At Richmond we looked in vain for old Dan and his friends, and at Fort Wayne another backset awaited us, and we went on our way wondering what manner of misfortune had overtaken the old Pelican, for we had come to believe that nothing less than the "old man with the scythe" would deter him from being on time when "Hickory" wanted him to go afishin. It was a sore disappointment, but there was nothing to do but go on to camp, trusting he would follow the trail on the next train. At Grand Rapids the train waited an hour and forty minutes (for a connection) to give us a chance to pass the time industriously swapping fish lies with "old Bill Hess," who was at the depot to meet us charged to the muzzle with good humor that beamed from his honest old phiz, and a batch of fresh yarns save l up for our especial delectation. Among all the brothers of the rod, with whom we have smoked the pipe of good fellowship in the flicker of the camp-fire in the past score of years, none is more worthy, none more welcome to share our blanket and our last flapjack than old Bill; may he live a thousand years.

As we were going to a strange country where the from

more worthy, none more welcome to share our blanket and our last flapjack than old Bill; may he live a thousand years.

As we were going to a strange country where the frog crop might not have "hit," as they say in the wilds of Tennessee, the menagerie box had been sent up ten days ahead to Bellaire with instructions to Tommy Derenzy—our little tow-headed friend on Central Lake—to "hive" 350 of the speckled beauties and have the box at Mancelona on the morning of the 16th as we went through.

With the prospect of five big, bright silver dollars in view, Tom laid himself out (Tom's a hustler when it comes to "hivin" a frog") to fill the order, and as we pulled up at the station in the gray of the morning we were hailed with, "Hello, Mister H., here's yer frogs—350 of 'em by Tommy's count; but he couldn't come over himself. an' I thought I bring 'em over for ye; an' I reckon you'll find 'em all alive an' akickin', though some of 'em hies been ketched more'n a week," all this in one breath while a handshake was in progress by Pap Derenzy, who had come as Tommy's representative, and "Mr. Hickory." It may be noted that Pap Derenzy has a wondrous and tenacious grip when it comes to hanging on to a dollar of our daddies, and if Tom got the whole of the \$5 he was in great luck, and the old man laboring under a temporary aberration of mind at the time of the transfer. If this should ever meet the eye of Pap it may remind him of something.

We arrived at Mackinaw City just in good time to miss the steamer Messenger for the Sault, which was in the nature of another decided backset, as we would have to stay there till the next morning. Here was a "category;" however, we concluded to take the ferry steamer, Algomah, which would leave in a few minutes for Mackinaw Island and St. Ignace, and spend the day and night on the island, and take a steamer of another line for the Sault in the morning; but as we were on the point of carrying out this plan Mr. W. M. Carpenter, the genial and obliging agent of the G. R. & I. R. R., shed

arrival of a "sure enough circus," but, as old Ben was not along to "talk up the show," they were left in wondering ignorance as to the part the frogs were to take in the performance.

To our surprise there were the Jedge and Knots on the dock, their faces smiling and rubicund (owing doubtless to the "coloring matter" concealed in the hot sun rays), the lazy loons having concluded to stop over and "rest" and see the sights of the island instead of going on above to secure boats and learn something about the lake; but as it turned out their presence at the Sault a day or two ahead would have done little good in getting us to the camp sooner than we did.

We left the island, headed for Detour Point, with a faint breeze setting softly from the west, a thick blue haze hanging in the air that gave the shore to the north the appearance of a low bank of clouds peeping over the edge of the horizon, so dim and indistinct that it required the aid of a glass to dispel the illusion. The haze and smoke grew thicker as we advanced till at last we could not see the waters or the lake outside a radius of a hundred yards or so, and Capt, Barker slowed down the speed till the steamer had barely steerage way, blowing the whistle at short intervals for a response from the fog horn at Point St. Vital to determine his whereabouts. The Captain was evidently off his bearings. The smoke came from forest fires that had been raging for days along the railroad between St. Ignace and Marquette, and was a source of great annoyance to vessels navigating the upper end of Lake Huron and the St. Mary's River when the wind was from the west. The people at the lighthouse seemed however to be in no hurry to answer the signal, but finally after a half hour of vigorous blowing a hoarse half from the fog horn came floating over the water through the smoke from a point away off on the larboard beam, and a fortunate veer of the wind a little while after drove the smoke northward till we could see the shore plainly, with Detour Point two of three miles

ipulator of the caudal had that critter been an old time army mule with his business end in good workin' order." Off to the east, a matter of three miles across the passage, we could see through the lingering smoke the green shores of Drummond Island lying on the American side of the national boundary line, which Capt. Barker told us was indented with numerous small bays, some of which afforded fine bass fishing, adding as a postscript that "they didn't bite much till 'long in September."

Under way again, we were soon at the foot of St. Joseph Island (lying on the Canada side of the line), a body of land twenty-five miles long by fifteen at the widest point, the chief products of which, the jolly mate kindly informed us, were "peasoupers an' black bears, with the bears slightly in the majority."

Off the lower end of St. Joseph on the American side of the boundary we passed Limestone Island, a high rock-girt, forest-clad strip of land two or three miles long and one of the loveliest of the many lovely islands that dot the length of this glorious river, and shortly after were admiring the beauties of Mud Lake on the Michigan side (a widening of the river), which old Sam gravely made out to be "a mighty handsome piece o' water with a mighty ugly name."

Kingfisher.

IN PRAISE OF BATTLE LAKE.

IN PRAISE OF BATTLE LAKE.

BATTLE LAKE, Minn., July 8.—Editor Forest and stream: Please allow me space to correct an error in last week's letter, and also to give our Eastern neighbors a pen picture of our place. You dated my letter of last week from Battle Creek, Minn., when there is no such place in the State. It is Battle Lake, the place being named after the beautiful lake on the shores of which it is situated. Years ago the Sioux and Chippewa Indians met here and engaged in a three days' fight, and the place has since been known as Battle Lake. It is located 218 miles west of north from St. Paul, within forty miles of the Dakota line, on a branch line of the Northern Pacific Railroad, known as the Fergus Falls and Black Hills branch. We are thirty-three miles from Wadena, where we leave the main line, and twenty miles from Fergus Falls, a place of 6,000 inhabitants, and the county seat of Otter Tail county. The waters of Battle Lake are purity itself and teem with all varieties of fresh-water fish, the black bass and wall-eyed pike predominating. Three good hotels cater to the public who happen in this the most fascinating spot in the Park Region. We have with us every season from two to three hundred guests, who remain during the months of June, July, August and September, and partake of the joys that this climate and bewitching scenery can give. Chickens, ducks, geese and brant are plenty in their season, and plenty of good boats and liveries can be had at very reasonable rates. The prices charged here are what we brag on. Our hotel accommodations are very highly spoken of by our Chicago, St. Louis, Kansas City and Fort Scott guests, and it costs the visitor but \$1 per day to enjoy them. Good boats, with bait and necessary equipments, can be had at \$3 per week, and good teams for hunting are furnished at \$3 per day.

A writer has said of Battle Lake: "If you are seeking health or pleasure go straight to Otter Tail county, in the center of the famous Park Region of Minnesota. Find a resident of Battle Lak

weighed 1451bs., twelve pike and over a hundred pickerel and rock bass. The lake files are now very thick, which accounts for the small catch."

Bronson Strain.

Trout and Leeches.—Montreal, July 6.—Editor Forest and Stream: Just back of the Manor House at St. Melnage is a lake fed by springs of cold water; it is about a half mile long, 200yds. wide, in places over 100ft, deep. Three years ago I caught large gray trout there; this year the lake appears to be completely inhabited by large black leeches, and no gray trout nor fish of any kind are left. Have the leeches killed them all? In trolling deep with minnows, upon bringing them up to the surface, I found a leech was fastened to each one. Now what is the best way to get rid of these leeches? I cannot poison the water because the farmers round use it for drinking and watering their cattle. My idea is to get a fish that will feed upon them. Will the red trout do it?—Piscator. [We know of no successful exterminator of this pest. It is reported to have done great injury to Tahoe trout in California. From Francis Francis we quote the following: "I know also a small lake in Wales, where the fish never take a fly until after dark, when fish from 2 to 3lbs. weight may be taken. This lake abounds in leeches, and the trout are very fine in it." This is very singular, as Mr. Daubeny writes in London Field of March 22, 1884, viz.: "The most deadly enemy to young fish I believe to be leeches (Piscicola geometra), and in some streams it seems to me a puzzle how any of the fry, when just emerged from the egg, can escape them. * * I think that they will not touch trout ova, the shell being too tough for them, but fry a few days old on being placed in a saucer with some of these tiny leeches, by way of an experiment, were at once seized upon and devoured." As is well known, in France they drive old horses and cattle into waters containing leeches for the purpose of gathering the leeches for leeching, but whether the crop is ever exhausted in certain waters we are not inform

BASS CASTING CHICAGO STYLE.

GHICAGO, July 6.—Pursuing my investigation of Chicago's fishing waters, I last week went to Loon Lake, about fifty-five miles up the Wisconsin Contrast and the contrast of th

right down to brass tacks in the argument, the bait-caster must hide behind his recl, and that is all there is to it. I caught ten bass whose total weight was 36lbs., and out of the lot there was only one bass to which I gave the least fighting chance. As quick as a fish was hooked the cry was, "Pull him in: don't let him run or he'll get into the weeds!" I dou't know what others call it, but I call that yanking 'em. The tackle is strong enough to stand it; and although at the end of the day I found my gallant little rod warped and crooked by the heavy work it had had, I never for a moment had a doubt of its staying together when I put it against a rushing bass, keeping the point well down to divide the strain between rod and line. I must confess, however, that I enjoyed the fun, and gloried much in the grand fish we took. It is my privilege to be inconsistent, and yet my rivilege to laugh at the inconsistency of the others who, cowering behind their casting reels, deplore the depletion of our waters by pot fishermen and those unspeakable men who will take pickerel and croppies home with them in their baskets. I know very well that the man who cannot cast cannot catch many large bass in these lakes, and I beg permission to turn up my nose at him for fooling with little fish. I beg permission also to brand him as a destrover of our noble game fish the black bass. Meanwhile I shall join the army of righteous bait-casters, who every week lug in thirty or forty pounds of bass. Whenever I want to go fishing on business principles, and for the purpose of getting bass, I shall take just the sort of outfit used on this trip. It is practical, no question of that. All that worries me is that it is too practical. This will not worry so very many, perhaps, and for those I would continue a description of the Chicago style. I found Mr. Clark the most skillful caster I ever saw. He cast over my head with perfect ease, and with an accuracy which seemed to me perfectly marvelous. Mr. Clark thinks so much of his own casting that

rapidly in the guides, and at the end of two days' fishing it is best to lay the line aside and get another. No. F is heavier and wears longer, but is not so artistic in its work.

Aly friend Mr. Clark last year declared that a No. 6-O Limerick hook was the only one fit to use in these lakes for bass. When we talked about using that hook I always told him that I would die first. This year Mr. Clark says that a Sproat hook is the only one fit to use in these lakes for bass; and I wish I might think it was I who corrected him. No. 5-O Sproat will do. Some prefer 6 O. I used 4-O and believed that large enough. On this trip there was a marked percentage in the matter of lost strikes in favor of the Sproat model over the Limerick and side-bend models. The latter sometimes fail to hold the fish. The straight-draught of the Sproat makes it very deadly. In buying the Sproat hooks or any other kind for bass fishing, the angler should get the double snelled make of the very highest quality and price. Then they will not pull off the snells.

It is necessary that the apparent connection between the hook and the line be broken, and for this purpose a short bit of doubled leader of the very best quality, heavy, is used, the total length of gut including the snell being about 15in. This is the distance the frog will hang below the tip of the rod in the act of the east, and it is not too far. There should not be any swivel used on the gut for frog-casting, and the young angler should remember this, in spite of any "authority" he may have read. The swivel is desirable for minnow casting, not for frog. You do not want a particle of metal showing about your cast if you can help it.

The immature caster will wonder why the expert will outfish him with the same tackle, and take larger fish. This lies very largely indeed in the matter of choosing, hooking and handling the frog. The biggest bass do not bit the biggest frog. You want the smallest frog, about two onnees in weight, of the sort known here ast meadow frogs." Our anglers h

The largest bass do not bite right at the surface. The frog should be allowed to settle down before it begins its journe, into the boat. A small sinker inthreofore necessary. This should be a split buckshot, and should be fasted on the line just above the top of the leader. It is allowed to the fast of the book, as it would tend to frighten the fast. It should not be a long sinker, as it will keep your frog swimming beautifully at just the right them make more splash. Arranged just as above, it will keep your frog swimming beautifully at just the right tepth.

I have in the foregoing described a perfect outfit for bass fishing in the Chicago style. It is simple, compact, neat and not so very expensive. It soost is from \$25 to \$30, the reel being the main item. That it is serviceable and perfectly practical, I know very well, and I only wish it were less deadly. In regard to the use of it, I wish I had more space to expentiate. The constant catches of large bass by our leading frog casters (the minnow is not used on these lakes) is evidence of the skill they have. Bait-casting is by all means the only way to catch these big bass here, and the followers of this style of angling now number hundreds where formerly they did tens. These Chicago casters, with customary originality, have cut loose entirely from all rules and precedents, and have invented a style of their own. The casting is done almost entirely from the boat, owing to the nature of the country, although a few expert casters wade and take good strings. An expert caster disdains to stand up in the boat, but keeps low down, to allow no shadow to fall on the water, He cannot, therefore, follow the rules and diagrams set forth by Dr. Henshall in his "Book of the Black Bass." He laughs at Henshall with Western and wrist, making the snap of the stiff and sturdy little lancewood rod do the work, and bringing the tip of the rod up and over in what is plantically in the source of the standard of the standard program of the stiff and sturdy little lancewood rod d

with me; albeit breathing high scoin for all pot-fishermen.

Much as I regret it, on account of that croppie incident, I should be obliged to head any partial list of our better bait-casters with the name of the amiable crank whom I have chosen in this article as a type. Mr. J. M. Clark has been the apostle of bait-casting here, and is the one who did most toward forming the little army that goes north out of this city every week. Mr. Clark, however, got his first lessons from Mr. Elmer Wilkinson, the artist, who is a beautiful caster, but not above, or below, using a fly for bass, which he is now doing at Camp Lake with success. Among our better men who go into Fox Lake are Messrs. Chas. F. Hills, Geo. E. Cole, Robert Miller, Geo. R. Davis, Coroner Hertz, Dr. Fuller, Mr. Dwen and Mr. Smith, of Shea, Smith & Co. These men all get fish, even in the hard Fox Lake fishing in the lily-pad pockets. Among those who favor Antioch Station are Dr. Carson, Mr. Lee, Mr. Chas. Hyde, Mr. Fred. Ray, Mr. W. H. Brown, Mr. Lawrence Earl and Mr. W. Cutler. Mr. Miller and Mr. Hyde took their boats over from Fox Lake on the day that our party struck Loon Lake, and left the latter water just as we started in. They had thirty-three black bass. There were four in their party, but the two mentioned did most of the fishing. I should say they had enough. In the Silver Lake and Camp Lake districts prominent figures are Mr. Chappelle, of Giles Bros, Messrs. Frank Noble, Edward Van Bergen, Capt. Ramage, Thos. McKee, Thos. Waters, Jos. Hislop, Edwd. Hewfurt, H. Dunkinson, Mr. Sturgis, of Proctor & Gamble, and Mr. Jenkins. of Shea, Smith & Co.

"TROUTING ON THE SOUTH BOARDMAN."—Petoskey, Mich. Lake 10.

"TROUTING ON THE SOUTH BOARDMAN."—Petoskey, Mich., July 10.—Editor Forest and Stream: I inadvertantly made a mistake in the heading of my letter, the first part of which was published in your issue of July 4. It should have read "Trouting on the Boardman," instead of South Boardman.—Alex. Starbuck. Mr. Starbuck writes that he is on the way to the north shore of Lake Superior on a trouting expedition, and may at the same time go to the famed Nepigon for big trout.

The revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—Adv.

ALLIGATOR GARS AND BLACK BASS.

ALLIGATOR GARS AND BLACK BASS.

A NEGRO man, heretofore found credible, told me yesterday about an alligator gar attacking a boy some two weeks ago. The little fellow, about ten years old, was bathing in the Calcasieu River. The colored man, at work in a field near by, heard him call for help, and, running to the rescue, found him in the clutch of a monster gar, and it was not till he had been hammered three or four times lustily with a club that the fish let go his hold. The boy was so badly mangled about the abdomen, the wells of which were cut in a dozen different places, that peritonitis set in, and he died on the third day.

men, the wells of which were cut in a dozen durerent places, that peritonitis set in, and he died on the third day.

Can any one tell me how large the alligator gar grows? I saw one caught on a trot line on the Lower Calcasieu, about a month ago, so large that two men could not lift him into the boat, after his skull was smashed with a hatchet. They started to tow him to shore, but, unfortunately, the line broke, and he sunk. One of the men estimated his length at 12ft. and his weight at 150bs., the other thought he was at least 15ft. and would weigh 200lbs. Probably both over-estimated, but he certainly was a monster.

"Macon Angler" complains that the black bass in his vicinity will not rise to the fly, and attributes it to the abundance of insect life in the waters which they inhabit. I hardly think that can be the reason, from the fact that in a small pond on my plantation, where a number of bass have been left by the recession of the waters of the bayou, and which abounds with insect life (I caught eighteen different species of insects there one evening, "and it wasn't a very good day for bugs, either,"), they take the fly freely. The more gaudy-colored the better, the red-ibis and a green and yellow nondescript of my own making being the favorites. It is the first time, by the way, that I have ever found the red-ibis amounting to anything as a bass fly.

To what extent has the black bass been found in salt water? I caught one, M. salmoides (big-mouth), in the Calcasieu River, so near the Gulf that the water was too brackish to use, and, in fact, where the tide was running fast enough to make rowing against it quite laborious.

H. P. U.

LAKE CHARLES, Louisiana.

SPEAKER BOYD'S WINNINISH.

A TALL man, over 6ft. in height, who hails you cordially, but with an expression of disappointment because he cannot swap some fish stories with the Lone Fisherman of Beaver, left Quebec one night in the month of last September. Twenty-four hours later he was a tired but welcome guest at the Fifth Avenne Hotel. This man of symmetrical figure holds a high position in the Keystone State. It is the Speaker of the Pennsylvania House of Representatives, Henry K. Boyd, who grasps you by the hand as he says; "Well if I can't find one fisherman, I'm in luck to stumble over another." He introduces me to a natty man, a slightly undersized and agrecable gentleman with a diamond scarf pin, and the man inside the well fitting clothes answered to the name of "Bald Eagle, of Herkimer," for it is the Hon. Jimmy Husted.

one fisherman, I'm in luck to stumble over another." He introduces me to a natty man, a slightly undersized and agrecable gentleman with a diamond scarf pin, and the man inside the well fitting clothes answered to the name of "Bald Eagle, of Herkimer," for it is the Hon. Jimmy Husted.

It was midnight, but everybedy keeps "early" hours in New York, at least while the dog star rages, and I heartily enjoyed Speaker Boyd's "over-true tale" about his two weeks' sojourn with his Indian guides at Chicontinic, away at the ead of navigation on the Sagnenay River, below Quebee, among trout and winninish.

Brown as a berry, with a suspicion of Canadian wilderness appetite still on him, Mr. Boyer describes his journey in the Canadian wilds in pursuit of the gamiest fish that swims and the liveliest fighter of the northern lakes. He says: "Many fishermen dote on grayling fishing, this fish having many of the characteristics of speckled trout, and the pursuit under difficulty of the grayling adds ardor to the sportsman's joys, because they are hard to find and still more difficult to catch. These are smaller in size and do not fight with a hundredth part of the pluck and tenacity of the winninish, which are by a peculiarity of piscatorial nomenclature called 'landlocked salmon.' The distance, the expense and physical exertion required to catch this wonderful fish, and the few isolated localities in this or any other land where the winninish can be captured, makes the sport rare and adds vastly to its charm. I had a friend who fired my imagination by telling me of a beautiful spot in Canada, at the foot of the Great Discharge, where the whole Saguenay River pours out though a narrow gorge into a circular lake dotted with islands; this tremendous current meeting in its reckless course the little rocky islands becomes churned up into all conceivable sorts of eddies and swirls. It is in the white cream and froth of this boiling mass that the best and biggest fish love to resort. He told me one could see the fish rolling like po

while two stalwart Indiaus rush the light canoe up seemingly impossibe rapids which leap and dance with fairy foam, through the most beautiful and picturesque country in Canada.

On the 30th of August I began my fishing for the jumping fish on Murray's wa-na nish. In three hours I had seven good-sized fish, in spite of the rain in the morning, one of 3½lbs., one of 2½lbs. and five of 1lb. each, 11lbs. in all. Tuesday, Aug. 31, I had my best day, and caught twenty fish in spite of the storm and rain, one 3½lbs., one 3lbs., two 2lbs. each, two 1½lbs. each, three 1½lbs. each, eleven 1lb. each, 28lbs. in all.

"Never again do I expect to bave such joyful and bila-

twenty fish in spite of the storm and rain, one 34bs., one 34bs., two 24bs. each, two 14bs. each, three 14bs. each, eleven 11b. each, 28bs. in alf.

"Never again do I expect to have such joyful and hilarious experience, save I come again among the Laurentian Mountains and among those jumping fish. Five times (I had two flies on) I made double catches: four times I landed both fish, but the fifth I lost the end fish, a 3-pounder, while the other jumped over the head of the Indian, who sat in the bow, and I caught the 'winny' on the jump in the landing-net. Oh, the joy of it! I don't wonder now that President Arthur used to spend the summer months in this fisherman's paradise. My biggest catch was a 34-pounder on my lead fly, and a 1-pounder on the tail fly, and I landed both. My Laurentian Club friends advised my taking strong tackle. I took my very light bethabara trout rod, with lancewood tip, which I have used fifty times among the trout streams in the Pocono Mountains of Pennsylvania, and with a light but strong silk line, it admirably answered my purpose. We got caught in a storm five miles out on my first day's fishing on Lake St. John, where there are said to be 30b. winninsh, and nothing but the level-headed Indian, Sebago, my best guide, saved us. Our light skiff would not have lived twenty minutes longer, as we sprung a leak a mile from shore.

"Saturday ended my glorious sport, for all things have an end, and Walter Scott says 'a bag pudding has two ends.' I bade my guides farewell on the wooded shores of Lake St. John, a regretful one to us all, and as our locomotive pulled out of the forest primeval, the glowing words of that famous fisherman, Adirondack Murray, kept repeating themselves: 'Less than one hundred miles from Lake Edward, due north, lies the famed Lake St. John, the 'native soil' of the grandest and most illustrious game fish, without any exception whatever, that plows through fresh waters.'"

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, July 8.—Mr. E. C. J. Cleaver is just back from a trip around Ashland. He and Mr. Mat. Benner had great success with the trout in the Brunswillow, near Philip Kohl's cabin, three and a half miles west of Minersville. Their trout did not run heavy. They did not face the rough country which had to be crossed for the 2lb. trout country. They went over into Turtle River country after mascallonge, but found that country wild and with no boats but 30ft. dugouts, which they could not use. They found mascallonge at Butternut Lake. All these points in Wiscousin.

Mr. Fred C. Donald, G. P. A. of the C. & A. railway, and Mr. Chas. S. Burton, city passenger agent of the Kankakee line, had good luck a short time ago on Wausaukee River, Wisconsin. They caught sixty-one trout in one day before 3 P. M. A nine miles buckboard ride is a feature of that trip. Mr. C. E. Rollins had a great catch on those waters a week earlier. Mr. Burton is now hesitating between a trip this week to the Pentwater, on the west shore of the lower Michigan peninsula, and one to Eau Claire, Wisconsin. He gets good reports and strong invitations from both places.

The Oconto and the Pike in Wisconsin have both been doing well this spring. Ellis Junction, on the C. & N. W., is a good point to go in on the former stream.

Mr. F. P. Taylor says he can get grayling any time he wants to in Michigan, but he won't go with me after them. He says he caught plenty—five years ago!

Messrs. A. Hirth, Chas. Heath, Nath. Moore, Mr. and Mrs. L. F. Loeb and Mr. M. Lippman went over the foot of the lake to St. Joseph, Mich., Saturday, after bass.

Mr. W. C. Wise starts this week for a fly-fishing trip in Washington Territory.

Mr. W. Kemedy, of Pittsburgh, Fa., lately passed

the lake to St. Joseph, Mich., Saturday, after bass.

Mr. W. C. Wise starts this week for a fly-fishing trip in Washington Territory.

Mr. W. Kennedy, of Pittsburgh. Fa., lately passed through here after a most successful trip after Lake Superior big brook tront.

Mr. Frank Greenwood Pratt, of St. Louis, outfitted heavily here Saturday for a Lake Superior trout trip.

Col. Jas. Kilbourne, of Columbus, who lately led into Gogebic paradise country Messrs. H. A. Lamman, F. F. Hoffman, F. W. Prentiss and R. E. Sheldon, proved himself so doughty an angler and so worthy a chief, the above gentlemen, when they reached this city on their return, presented him with a beautiful fly-book and 12 dozen flies, the book bearing the uames of the donors.

We are having lovely fishing weather at this date. Our anglers are all going out, and are all having success, whether at bass or trout. The season seems unusually favorable. There has never been so much fishing tackle sold in any year in Chicago as during this season, and buyers ask for the better grades. Sporting interests are growing here.

sont in any year in Chicago as daming this season, and buyers ask for the better grades. Sporting interests are growing here.

CHICAGO, July 9.—Fishing for bass and pickerel has been unusually good of late below the dam on the Kankakee at Momence, Ill. Two men caught thirty bass there in one day of last week. The run seems to be in which was due in early June.

This same peculiarity seems noticeable at the lakes also, and is doubtless due to the late and cool spring. The earlier bass taken seemed to be mostly two or three years old and averaged small. The big ones are now biting ravenously, and it is questionable if any season ever offered better fishing here in any late years.

Mr. W. A. Toles, of the Globe Light and Heat Co., just back from Twin Lakes, Wis., where he spent two weeks, reports the fishing better there than he ever knew it. He and his friend Mr. Hobler took 751bs. of large and smallmouthed bass and pickerel in two hours' fishing. The fish were rising much better the last week than the week before.

A somewhat noted sportsman came to his end this

before.

A somewhat noted sportsman came to his end this week in Mr. Hiram A. Pearsons, who was drowned while bathing from a yacht off the lake front here. Mr. Pearsons was late of San Francisco, where he had quarters at the Pacific Club. He was thirty-one, a bachelor, a mine owner, very wealthy, and noted in the Rockies as an enthusiastic and liberal sportsman. He is said to have had the exclusive privilege of fishing the headwaters of

the Columbia River, for which he paid \$15,000 yearly. He for years kept up a hunting box near Bonanza City, Idaho, which was located on the top of the Continental Divide, according to report.

Mr. C. E. Fargo, of C. H. Fargo & Co., is just back from a lucky trip at Gaylord club house in Wisconsin. Mr. M. M. Gaylord is up with the club now, and will probably remain during the greater part of the summer, his health being poor.

I have spoken earlier of Messrs. W. H. and E. F. Comstock as expert fly-fishermen for bass. These gentlemen are just back from Brown's Lake, Wis., where they have had their usual success. They tried the rather novel experiment of fly-fishing for bass by moonlight, and one evening took 15 black bass, besides a number of rock bass and the like. M. E. F. Comstock took 10 bass on the fly in that lake after 10 A. M. of July 6, and in the evening of the same day took 7 more after supper. In Twin Lakes, in last June, these two gentlemen on two consecutive days, caught 18 bass, some of which weighed 3lbs. On the 10th of June, 1888, the two killed 108 bass in one day on Brown's Lake, all on the fly. Mr. W. H. Comstock took a 3½lb. large-mouthed bass on the fly in Loon Lake this spring, and says the large-mouth rises closer to the surface than the small-mouth, and requires more delicate casting, rarely taking a trailing fly or one badly cast; whereas the small-mouth will take the fly lower in the water while trailing. Both of these gentlemen say that the small-mouth is out of sight gamer than the large-mouth, and both insist that in proper weather they can take more bass with the fly than can be taken with baits of ar as the number is concerned. As they laugh at the idea of returning all bass weighing less than 3lbs., I presume they do not catch fish on the average so heavy as those taken by our bait-casters. There is no misstatement in regard to the latter fact. A few of our best bait-casters here will not keep a bass weighing less than 3lbs., It think this is the least they can do to relieve thems

New Brunswick Trout Netters.—Kingston, N. B., July 6.—One can scarcely think it possible in this enlightened age, with books and journals such as the Forest and Stream to read, that young men having the least grain of spirit in their composition could so far forget themselves as to drive a long distance to one of our best streams to fish trout with a net. Sunday, June 23, several parties started from Moncton. Just as the last few people were going to church they drove through the streets on their way to the fishing grounds, with fishing rods sticking out of the carriage. That is about all the use they put their rods to. To one of our fishery overseers, Mr. Lazare Guimnauel, great credit is due for the effective manner in which he traced, captured and fined the law-breakers. Upon his arrival at the brook he seized a lot of trout bearing marks of a net. They refused to pay the fine, and stated that they did not net the trout but bought them from a fellow that they met on the brook. Mr. Guimnauel thought the statement rather transparent, as some of the same party were known to have netted trout on the same stream last year, and told them that unless they paid the fine he would call assistance and take every one of them to jail. They at once saw that Mr. G. meant business, and paid the fine, which amounted to \$30. I have no doubt they felt good, and enjoyed their drive home. Too much cannot be said in favor of Mr. Guimnauel in this the initial move made by any fishery overseer in this county to protect the trout fishing. We would have good trout fishing if others favor of Mr. Guimnauel in this the initial move made by any fishery overseer in this county to protect the trout fishing. We would have good trout fishing if others would follow in his steps and snub these netters, which are a disgrace to themselves and the community in which they live. I would advise Mr. G. to keep a watch on those living much nearer to the brook than Moncton, and if reports are true, he could reap a rich harvest by visiting a certain freezer situated less than a hundred miles from Tweedies Brook.—Sportsman.

The Color of Trout.—A recent writer in one of the New York newspapers under the above title tries to explain the variations in the external and internal colorations of the brook trout. The nature of the bottom and of the body of water determine the hues of the fish. The color of the flesh is regulated by the food. These statements may contain more or less truth and they may satisfy some readers; but we must not lose sight of the fact that the external colors can be changed suddenly at the will of the fish, as explained in the abstract of Mr. Goode's paper published in Forest AND Stream May 16, 1889. It has long been a favorite theory that the pink color of the salmon is derived from crustaceans which it is said to feed upon at sea; but we do not know, in the first place, that such food really nourishes the salmon, and, in the next place, several other well-known fishes—mackerel, menhaden, alewives—devour immense quantities of red crustaceans, but their flesh never changes to pink. Evidently some writers have simply jumped at conclusions and there is room for more elaborate study of the color problem. of the color problem.

Vermont Trout.—Waterbury, Vt., July 12.—There remain but two weeks more for trout fishing in this State, as the new law makes the close season begin Aug. 1, one month earlier than formerly. I believe it would have been even better had the date been July 15 or even July 1. I have dressed several trout containing well developed eggs as early as July 4. The law seems to have been very generally regarded in this section, and I believe next season will show the value of the measures taken to protect what trout we have. "Catch all you can" still remains the motto, but trout are so scarce it usually requires hard work and many trials to get even a moderate string, and except in a few instances the "trout hog" would have no chance here. I recently returned from a very enjoyable two days' trip to one of the best streams in this county. Heavy rains and high water made the fishing poor, and my friend and myself had only seventeen good trout to share at the end of two days' steady work.—F. E. A.

THE NEW JERSEY TROUT SEASON CLOSED JULY 15.—The trout, however, had closed the season before I was ready, as I got only nine in two days' fishing with all kinds of conceivable flies.—C. A. S. (Paterson).

A TUSSLE WITH A MUSCALONGE.—The largest muscalonge ever taken at Swanton was caught at 5 A. M. Wednesday by Carl Roberts, Claulde Sowles and Louis Suter while trolling about the dam. It took Roberts spoon near the cove above the iron railway bridge, and it took all three to rescue him. Just as he was landed on shore he broke the gang of hooks and would have escaped, but Louis Suter couldn't think of losing such a prize, and quick as an athlete he leaped upon the back of the 24-pound fish, and after a terrible tussle in which he was badly bitten and a new suit of clothes ruined, he succeeded in overpowering the fish, which is 4ft. long and as handsome as any trout.—St. Albans (Vt.) Messenger.

Canandaigua Lake.—Canandaigua, N. Y., July 12.—The lake is well stocked with salmon trout, black bass, pike, pickerel and perch. Since its organization in January, 1888, the Canandaigua Anglers' Association has put into the lake about 250,000 salmon trout fry. The fishing is better than it has been for many years, owing largely to the fact that those persons who have heret fore drawn seines have been debarred from doing so on account of the formation of the association.—C. B. L.

Hishenlture.

FISH MORTALITY IN SOUTH CAROLINA.—From a monthly report of the Department of Agriculture of South Carolina we glean the following letter of Fish Warden R. J. Donaldson, relative to the destruction of fish in the summer of 1887: "A remarkable destruction of fish in the summer of 1887: "A remarkable destruction of fish occurred in a lake in the central portion of this county in the early summer of this year. It is only a small lake, having little inlet or outlet of water, but abounding in such fish as bream, perch, mud-eat, eels, and similar coarse-grained fish. The growth of varions kinds of trees around its margin is very dense. A tornado or small cyclone, accompanied with heavy hall, passed over this section, and the lake was in its path; branches and limbs and the leaves of the various trees were east into the lake in vast numbers, but no fish were observed dead immediately after the storm; but a week or ten days after dead fish became common, and, finally, it would seem that every fish in the lake died and came ashore, the entire body of water becoming offensive. I think the trne theory of the killing of the fish is to be found in the presence of the tannin which exuded from the branches and leaves of the trees which were east into the lake in such vast quantities by the storm, or, perhaps, the simple process of decomposition of such matter in a lake which had only a very limited inflow of water during the hot weather was of itself sufficient to cause their death. I am satisfied, from a careful collation of all the data reported at the time of the occurrence, that the storm was not the immediate cause of death. I frequently find large numbers of dead fish in a rice field if the water remains unchanged for six weeks in the heat of summer. During last winter hundreds of tons of sea fish were cast dead upon the shores of this county."

The Ronnel.

FIXTURES.

FIXTURES.
DOG SHOWS.

Sept. 7 to 11.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn N. Y. Charles Dickleman, Secretary.
Sept. 5 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Hierr, Secretary.
Sept. 10 to 13.—Sixth Annual Stone, Manager.
Sept. 10 to 13.—Sixth Annual Stone, Manager.
Sept. 10 to 13.—Sixth Annual Dog Show of the Toledo Kennel Club, at London, On Show of the Contral Canada Exhibition Association at 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.
Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Expesition at Toronto, Canada. Capt. Greville Harrison, Secretary.
Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y.

mira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and
Pet Stock Association, at Denver, Col.
Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster
Kennel Club. New York. James Mortimer, Superintendent.
March 11 to 14, 1890.—Second Annual Dog Show of the Rochester
kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

COURSING.
Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutch inson, Kan. M. E. Allison, Manager,
Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

ETHAN ALLIN.

ETHAN ALLIN.

The striday, July 12. Mr. Allin was born in Providence, R. I., Feb. 14, 1814. In April, 1815, his father removed to Pomfret, Conn., to the old homestead where Mr. Allin passed the remainder of his days. As a boy he was very fond of shooting, and whenever he could secure a few hours of leisure they were spent in his favorite pursuit. He early became very fond of ruffed grouse shooting, and as these birds were very abundant in his locality, he was soon familiar with their habits, and very expert in their capture, often with the aid of his old flint-lock musket bringing to bag in a few hours as many as he could well carry. In the fall of 1831 he became the proud owner of his first bird dog, a pointer, and great was his satisfaction in the possession of this new aid to his pleasure. Although not at this time an expert wing-shot, he devoted his time to the practice, and soon became very proficient. For a number of years he would shoot over pointers only, considering them the huuting dog par excellence. Early in his shooting career his fame as a shot and the excellence of his dogs brought sportsmen from quite a distance to witness their performance and share the

sport, and it was at the solicitation of these sportsmen that he began training dogs for others. The amount received was \$25. The quality of the dogs sent him was often very poor, and he was far from satisfied with the results obtained.

was \$25. The quality of the dogs sent him was often very poor, and he was far from satisfied with the results obtained.

After sticking to the pointer for three or four years, he received a setter to train that proved to be so good that his love for the pointer waned, and the setter became ever after his favorite. About this time Mr. Alliu determined to breed his own dogs, his ambition being to breed a strain that would be reliable, and he began by mating first-class fielders without regard to strain, using, indiscriminately, English, Irish and Gordon, the only requisite being that they must be able to go and stay and do work that was satisfactory to him. In a few years he succeeded in establishing a strain that soon became noted far and near for the excellence of their work on ruffed grouse; and many prominent sportsmen from the large cities came to visit Mr. Allin and his wonderful dogs. In this way many plensant acquaintances were made that grew with the years to warmest friendship, and each season the pleasant farm honse was filled with genial spirits who came to enjoy the hearty old-fashioned hospitality and cheerful companiouship of their friend.

Mr. Allin was a capital host, an excellent companion and a devoted friend. His knowledge of the locality and of the habits of the game birds of his section of country and his skill in their capture, together with his unflagging spirit of cheerfulness, made him a delightful companion when afield. Many of his oldtime friends have gone before, but many yet remain, and we join with them in mourning the loss of a dear friend. Mr. Allin was stricken with paralysis June 3, 1856, and, although he partially recovered the use of his limbs, and was able to walk about and oversee the work on his little farm, he was unable to pursue his favorite sport. On Friday last, July 12, the last summons came, and he peacefully passed away. The cause of his death was heart failure.

The writer first knew Mr. Allin in 1842. Three years later we met while out shooting, and for the first time I saw a dog on point and for the first time saw a bird shot on the wing. After this we were frequent companions, and a friendship grew up that has continued unbroken since. Many days of rare sport have we enjoyed together afield, and to him I am greatly indebted for instructions in woodcraft that have often been of inestimable value. The dogs bred by Mr. Allin were generally capital dogs for ruffed grouse as well as for woodcock and quail. Many of them I have shot over and retain vivid recollections of their performances. About thirteen years ago Mr. Allin bred a blue, tan and white dog that was an excellent fielder, and he was reserved for the stud. Many of the descendants of this dog inherited the color, which is very similar to that of a maltese cat, or nearly a mouse color. These dogs were exceptionally good, and Mr. Allin was very proud of them.

DISEASES OF THE RESPIRATORY ORGANS.

a maltese cat, or nearly a monse color. These dogs were exceptionally good, and Mr. Allin was very proud of them.

DISEASES OF THE RESPIRATORY ORGANS.

A CUTE disease of the organs of the chest and its liming membrane is common in dogs of all varieties, for reasons which are obvious. The longs are large and active, and are largely supplied with blood. At the same time it may be noticed that the walls of the chest are thin, and any influence which may modify the circulation in those structures will readily affect the organs contained in the early. Dogs are exposed to conditions which are likely to induce disease in the central breathing organ. Even when left to themselves, the animals take their exercise in a very structure will readily affect the organs contained in the early. Dogs are exposed to conditions which are likely to induce disease in the central breathing organ. Even when left to themselves, the animals take their exercise in a very state of the tentral breathing organ. Even when left to themselves, the animals are compelled to plunge into cold water and dry themselves as best they may and often an active run of some miles, multiplied by the animal in its constant rushing to and fro, is succeeded by a long period of rest on a cold doorstep, or perhaps on the wet grass, while the master is paying a visit to a friend.

Considering the common conditions of a dog's life, which include frequent exposure to changes of temperature, wet action, it is remark able that a per organ is not more frequent. According to Halaue and youath, to whom later writers on canine diseases are largely indebted, pneumonia, or acute inflammation of the lungs, is very fatal malady in the dog, and sometimes in an epizootic form. It is evident, from the account which Blaine gives, that the disease to which he alludes is inflammation of the lungs are all implicated in the disease of the variety of the large of the mass of the substance of the lungs, because he speaks of dogs being suffocted by the effused fluid in the class. Set of

as the fluid is poured out as fast as it can be removed. The use of the modern aspirator is one improvement on the old plan of drawing off the fluid by the aid of a trochar, and in the human subject effusion into the pleural sac is by no means a hopeless complication.

Modern canine surgeons will look upon the curative measures advocated by Blaine and Youatt with alarm. Heroic treatment of acute disease is no longer tolerated by the faculty; bleeding went out of fashion years ago, and counterirritants are deemed to be deadly in acute inflammation. Steele remarks, in regard to the treatment of pneumonia and its complications in the dog: "Emetics, bleeding, drastics, and other debilitants must be carefully avoided, and in place thereof stimulants, with febrifuges, should be given; and in cases where the bronchial tubes are affected, expectorants may be combined with the other agents."

Stimulants, as a class, may be represented by alcohol in the form of good brandy, which may be given in beef tea or a little milk. The dose will vary from a teaspoonful to a tablespoonful every three or four hours, as the condition of the animal may seem to require.

As a febrifuge and expectorant, Dover's powder may be given, or, instead, a mixture of syrup of squills and ipecacuanha wine. Counter-irritants to the chest may be best substituted by hot fomentations, followed by friction with a stimulating limiment, such as soap limiment or a mixture of ammonia and oil.

Recovery from acute inflammation of the principal respifatory organs is generally slow, and in many cases extreme debility is present, necessitating the use of concentrated food, with the addition of tone medicines, among which the preparation known as dyalized iron is the most reliable; but in these cases good nursing is more important than drugs.—London Field.

DOG TALK.

THE city of Chicago has a new dog ordinance which provides for a tax of \$2 for each dog. The mayor whenever he deems it necessay may order all dogs muzzled that run at large. Provision is made that no dog can be molested by the dog catcher while on the premises of his owner or when led by any one. The penalty for allowing a fierce or dangerous dog to be at large and anuoy auy one is \$10 for the first offense and \$25 for the second, with possibly the penalty of death in addition. It is also provided that if a dog in any manner disturbs the quiet of any person or neighborhood, or has bitten any one not trespassing upon the owner's property, the magistrate shall order the dog removed or killed within twenty-four hours under penalty not exceeding \$25, and the further sum of \$25 for every day thereafter until the dog is removed or killed.

At a special general meeting of the English Kenuel Club July 10, Mr. J. S. Turner's proposed amendment to the rules relative to cropping was discussed, and it was voted that dogs whelped after July 31 shall not be eligible for admission to any dog show held under K. C. rules if their ears have been cut. There was considerable talk of an appeal from the decision among the owners of some of the breeds that cropping is supposed to improve, but it is to be hoped, for the sake of humanity, that the edict will remain in force.

The field trial of the Irish Red Setter Club will be held Sept. 17 near Omagh, Ireland, on grouse. Six stakes will be run, the Irish setter puppy stakes, Irish setter all-aged stakes, Irish setter brace stakes, derby stakes for all breeds, grand all-aged stakes for all breeds and grand brace stakes for all breeds. The judges will be Dr. Salter and Captain J. K. Millner.

There will be a dog show at Toronto, Canada, Sept. 10 to 19 in connection with the Industrial Fair. A liberal premium list is promised and valuable special prizes will be offered. Messrs. John Davidsou and C. H. Mason have been invited to judge. The address of the secretary is Captain Greville Harrison, Toronto, Canada.

Messrs. Oldham and Willey have had the misfortune to lose by death their black field spaniel bitch champion Miss Newton Obo. She died July 15 in parturition. A post mortem showed a fine litter of 10, but all are dead. The date appears to be an unlucky one, as on July 15 last year they lost three, among them Newton Abbot Beau.

Mr. E. B. Goldsmith received last week from the kennel of Mr. George Cartwell, Kendal, Eng., two English setter dogs that were forwarded to their purchaser, Mr. William H. Weiss, Bethlehen, Pa. A pair of pngs accompanied them, also imported by Mr. Weiss.

Mr. K. E. Hopf has had the misfortune to lose by death the smooth-coated St. Bernard bitch champion Daphne. She was 7 years old, and was well known to dog show visitors. The loss is doubly severe as she was in whelp to champion Hector.

There is quite an excitement in England regarding the spread of rabies. An article from the Loudon Field advocating the muzzling of all dogs for the purpose of stamping out the dread disease will be found in another column.

A fox chase will be one of the features of the dog show of the Farmers' Laucaster County Agricultural Fair, to be held Sept. 9 to 14. The chase will take place on Tuesday, the 10th, at 1 P. M., with prizes of \$12, \$8, \$6 and \$4.

The Indiana Kennel Club propose having a stake exclusively for Irish setters at their field trials next November, if a sufficient number of entries are received. The address of the Secretary is P. T. Madison, Indianapolis, Ind.

There were 1,472 entries at the dog show of the English Kennel Club, held at Olympia last week.

We learn that Mr. Charles Heath has purchased the well known pointer bitch champion Revel III.

STAMPING OUT RABIES.

THERE are some indications, of a negative character, it is true, that the idea of restrictions on the freedom of the dog, as a means of getting rid of rabies, is not so distasteful to owners of these animals as it was.

Several writers in the daily papers, among them Dr. Drysdale and Mr Kerslake, the houorary secretary of the Society for the Prevention of Hydrophobia and Reform of the Dog Laws, besides several anonymous writers, have advocated the use of the muzzle over the whole kingdom for a certain period, and the various suggestions have not been met by any strong expressions of dissent.

Dr. Drysdale proposes to adopt measures to prevent rabies in dogs and also to provide for the protection of persons who have been bitten by rabid animals. In his letter to the Morning Post of June 13, he observes:

"It appears that that terrible affection rabies is again on the increase in London. It is reported that there have already this year been no less than twenty-two cases of the disease among the dogs killed by the police. In 1887, when a similar state of things occurred, the disease was got rid of in London by the simple application of the muzzle law for a few months. But a far more thorough method of stamping out rabies would be to imitate the authorities of Germany and

Notes must be sent on the Prepared Blanks.

owners."

The London County Council have petitioned the Privy Council to pass an order to make muzzling compulsory over the whole kingdom, and it was stated in the House of Commons by the Home Secretary, in answer to a question, that the proposition is under the consideration of the Privy Council

Commons by the Home Secretary, in answer to a question, that the proposition is under the consideration of the Privy Council.

Any difficulty which may arise in reference to the enforcement of an order for general muzzling of dogs must come from the action of the owners of dogs themselves. Neither the authorities nor the people who do not own or care about dogs themselves can possibly object to such a precaution. It may be presumed that the objections against the use of the muzzle are based on the idea that the instrument is inconvenient or injurious to the animal; and the way to get rid of the opposition is to provide an effective and convenient muzzle, which may be easily slipped on, and will not cause the wearer any inconvenience.

That the ingenuity of the mechanics of this inventive age is equal to the solution of the problem can hardly be doubted, and it is probable that the issue of a general muzzling order would give the necessary stimulus to the inventive faculty which must be lying dormant somewhere.

Of the several preventive measures which have been advocated the muzzle is the most convenient and most easily applied. The plan suggested by a French count of filing the teeth, especially the canine teeth or tusks would, if rightly done, prove efficacious by preventing the dog so treated from inflicting a wound on the person whom he attacked. The inventor of this method tried experiments which satisfied him that his system would answer. He allowed mad dogs, after their teeth had been filed, to bite his gloved hand, and finding that the glove remained uniquired, he next submitted his bare hand to the jaws of the rabid animal, and escaped without a puncture of the skin.

skin. Obvious objections to the mode above described of rendering ages incapable of biting present themselves. Some skill is necessary for the performance of the operation of filing the teeth. Pain is inflicted on the dog, and it is highly improbable that an owner of a dog would permit the process to be applied. Seizure and destruction of vagrant dogs is a very necessary part of any system of prevention; but it is clearly only a part, and does not do away with the necessity for further precaution. And in the same category may be placed the use of any means to check the production and discourage the keeping of useless dogs, which are the active agents in propagating the disease.—London Field.

A CANINE TARGETEER.—One of the most remarkable dogs in point of inventive intelligence that has ever gamboled upon this mundane sphere, says the New York Times, is Bob, a small animal of shadowy pedigree and light yellow color, who is owned by the senior member of a prosperous firm of plumbers in West Harlem. Bob's full name is Robert L. Smear, so called from a way he has of smearing himself and the walls of the shop with the contents of the red lead pots and other color-holding utensils that belong to the place, but he is called by the shorter name for various and obvious reasons. Bob is a bright dog in many ways, but his chief claim to notoriety is the following performance: He reaches the shop every morning at an early hour with the senior partner, with whom he lodges, and begins operations by dipping his long, thin tail into a tin of potblack and with it drawing a fresh target ou a small bit of board that always stands at the end of the store and is sacred to his use. He then proceeds to the putty keg, bites off a big mouthful of the oily compound, and repairs to the front steps. There he sits facing the wind with extended jaws, and lets the cool morning air pour down his throat until his bronchial tubes get in a state of wild irritation. Then he sits down on the floor at the end of the room facing the target, and proceeds to cough small putty balls with remarkable accuracy at the bullseye. He guides his aim by squinting along his extended right foreleg, and has been known to make a score of 75 out of a possible 90. Bob often has an admiring audience during his daily target practice, and his owner would not part with him for a five-carat diamond.

TORONTO DOG SHOW.—Toronto, July 12.—We hold an

SALES.

Notes must be sent on the Prepared Blanks.

Racket II. Black, white and tan beagle dog, whelped Oct. 8, 886, by Cameron's Racket ont of imported Krueger's Myrtle, by ewis Bros., Cannonsburg, Pa., to Clark & Rutter, Lawrence,

Racket II. Black, white and tan beagle dog, whelped Oct. 8, 1886, by Cameron's Racket ont of imported Krueger's Myrtle, by Lewis Bros., Cannonsburg, Pa., to Clark & Rutter, Lawrence, Mass.

Manbelle II. Black, white and tan beagle bitch, age not given, by Lee out of Maybelle, by Clark & Rutter, Lawrence, Mass., to A. C. Krueger, Wrightsville, Pa., to Clark & Rutter, Lawrence, Mass., to A. C. Krueger, Wrightsville, Pa., to Clark & Rutter, Lawrence, Mass., by Comeroe out of Nell, by A. C. Krueger, Wrightsville, Pa., to Clark & Rutter, Lawrence, Mass.

Jessic. Black, white and tan beagle bitch, whelped Aug. 24, 1887, by Cameron's Racket out of Rue, by A. C. Kruger, Wrightsville, Pa., to Clark & Rutter, Lawrence, Mass., a dog to R. F. Crooke, Dorchester, Mass.; a dog to U. S. G. Clark, Stoneham, Mass.; a bitch to Geo, H. Rutter, Lawrence, Mass., a dog to R. F. Crooke, Dorchester, Mass.; a dog to U. S. G. Clark, Stoneham, Mass.; a bitch to Geo, H. Rutter, Franklin, Me., and a hitch to A. C. Krueger, Wrightsville, Pa., Vistalo. Fawn mastiff bitch, whelped April 12, 1886, by Montgomery out of Nell, by Wacouta Kennels, Omaha, Neb., to C. H. Bahcock, Cordova, Neb.

Alpine Ben Aboha. Orange and white St. Bernard dog, whelped Ray 7, 1888, by clark of Commence, North Lawrence, Ont., to McBeth Kennels, North Lawrence, O., a lemon and white dog to P. L. Manley, Canton, O.; a lemon and white bitch and black and white dog to P. C. Young, Massillon, O.

Count Kildare. Red Irish setter dog, whelped May 17, 1889, by champion Tim out of Onota Belle, by N. McIntosh, Providence, R. I., to C. C. Greene, same place.

Dredmond. Red Irish setter dog, whelped May 17, 1889, by champion Tim out of Onota Belle, by N. McIntosh, Providence, R. I., to F. H. Whitford, Phœnix, R. I.

Kitly Glendyne. Red Irish setter hitch, whelped May 16, 1889, by champion Tim out of Onota Belle, by N. McIntosh, Providence, R. I., to M. Flynn, Jr., Bristol, R. I.

Right. Red Irish setter dog, whelped May 17, 1889, by champion Tim out of Onota Belle, by N. McIntosh, Providence, R. I., to F. DeGordy, same place.

Tim—Onota Belle whelps. Red Irish setters, whelped May 17, 1889, by N. McIntosh, Providence, R. I., a dog to H. B. Tallman, same place, and a hitch to Gi-ndyne Kennels, Bristol, R. I.

Hughdo Albert. Black and tan terrier dog, whelped May 30, 1889, by Buffalo General out of Gipsey Queen, by A. W. Smith, Buffalo, N. Y., to Wm. B. Taylor, same place.

OUR TEAM ABROAD.

[From Our Special Correspondent.]

[From Our Special Correspondent.]

L ONDON, July 5.—It was the intention of the writer to give to your readers the details of each match contested by the Massachusetts team, but everything has been so crowded that it has heen impossible to do so.

The team arrived in London Saturday, at 5:30 P. M., went immediately to dinner with the representatives of the Honorable Artillery Company, who were waiting at the depot for the arrival of the team; at 8:30 the team went to the theatre hy invitation of Miss Hantliorn to witness "True Heart." Did not get to bed until 1 o'clock, then up at 7:30 and away by train to Nunhead range for practice; in the P. M. first match with the Honorable Artillery Company. Think of it, not 48 hours in England and shooting a match with one of the best teams in England. That same evening the team dined and wined with the same company until 10:30 at their armory. Up next morning to go to Churn, 55 miles in the country, to the Berkshire range at Churn, getting back at 10 c'clock, to bed at 11. Up again early to go to Raynham, I7 miles from London. Dine in the evening at the Holborn Restaurant with the London Rife Brigade, in bed at 12, up again yestorday at 8; a ride to Brighton, 60 miles, to compete with the Sussox team. Think what an amount of nerve the team has to carry, and at this writing we are about starting for another match and only 5 minutes before we start. Such a series of victories is proving a great surprise to the entire force of volunteers. I send you complete scores of our first quartette of victories.

July 5, at Nunhead Range:

(Cauad ans) won money prizes. In the Stewart contest, 7 shots at 200yds., standing, Massachusetts riftemen scored as follows: Huddlesou 34, Hinman 33, Bumstcad 31, Hussey 30, Edes and Merrill 29 each. Americans using open sights are entitled to compete in the military brecchloading contests. In the Perinet and Bertram contests, 7 shots at 500yds., Hinman made 34 and 32 respectively. In the All-Comers' Aggregate he	EJI EJa E Da D E W S
made 34 and 32 respectively. In the All-Comers' Aggregate he made 119. LONDON, July 13.—The American ridemen have done splendid work at Wimbledon this week, considering that their own rides were barred and that they were compelled to shoot strange guns	нм
were barred and that they were compelled to shoot strange guns among strangers. Hinman has won a good place in the Alexandria match, and in the Albert competition Hinman, Huddleston and M. W. Bull are	SH'
among strangers. Himman has won a good place in the Alexandria match, and in the Albert competition Himman, Huddleston and M. W. Bull are among the leading prize winners. Himman and Hnddleston are the highest competitors. In 'the "Graphic" match Huddleston and Doyle are at the top. The Stuart prize competition finds Huddleston the top man, with 34 out of 35, and with very little chance of his score being beaten, as it hegins with four and ends with six bullscycs. Bunstead and Farrow each have 31 in the Heath prize, while Himman made 33; this is good for a first-class prize. The same officer in the Perinct et fils match has scored 34 out of 35, which will propably win the match.	H Si
British marksmen highly compliment the shooting of the Mass-	E J H Si H Si E Da
achusetts rife team. Springfield, Mass., July 3.—Before the Massachusetts rifle team left for England to do cuch excellent work for their country, it was agreed that five marksmen of the 2d Regiment living in Springfield should shoot in competition with the Springfield men on the team. To-day was chosen as the time, because it was supposed in advance to be the sharpest test of the regular team abroad. The home men shot at the 200yds, range at Lake Lookout, using the Government range at Watershop Pond for 500 and 600yds. Owing to Bumstead's phenomenal record, the stay-athomes were beaten by just one point in the total, as the scores show:	G Da W F A H H Sin W F

The American volunteer riflemen in their matches in England last week broke the world's records with military rifles. Every team they have met has been picked from the finest English, Scotch and Irish twenties, to say nothing of the Queen's price without vector and the same shorting entirely without vector.	of Calil E M

team they have met has been picked from the finest English, Scotch and Irish twenties, to say nothing of the queen's prize winners. For a team shooting entirely without practice, at a strange range every day, their record is remarkable, and has set the English volunteers to thinking. Saturday the Americans went into camp at Wimbledon, where they will compete this week with the English volunteers, shooting with the Britishers' own rifles, after which thoy will go to Pars for a week, and then sail for home on the City of Chicago July 31.—Philadelphia Public Ledger. The above is rot of the worst description, as the American riflemen have neither broken the world's records nor met a really good team, far less the pick of the members of the English, Scotch and Irish twenties. How the Americans could have met Scotch or Irish riflemen when they have not been out of England, is a conndrum. If ever they do meet a representative team their "world's records" will not save them from defeat. Their record is far from being remarkable, and when they run np against the Canadian team they will have to do much hetter shooting than they have yet shown.—Toronto Mail.

The Grenadiers have sent a challence to the Massachusetts team, which will no donth be attended to when the team returns, and another defeat given our Dominion shots.

BOSTON, July 13.—The Massachusetts Rifle Associatiou held its veekly shoot to-day, a very large number of riflemen heing resent. The day was fine, but hot, with a rather bad wind from to 9 o'clock. Mr. Lee won the champion gold medal, and Mr. lunroe won the gold medal in the 20-shot rest match. Next Vednesday the range will be open at 12:30 P. M. for rifle and distol shooting. Following are to-day's scores:

ILMINGTON, Del., July 8.—There was a great deal of excelshooting at Healdmoor Range to-day. The third and last to flow the stress between two local riflemen and two members are Kent County Rifle Club was concluded, and resulted in a ory of 7 points for the latter, which, with the second match by them by 3 points, made them winners of the contest. The match was won by the local team by 20 points, and although subled the load of the opposing team in both matches completed, still the terms required the counting of each match sepaly. The contest was close and shows the teams very evenly ched. Following are the scores in detail, standard American tet, off-hand:

HELENA, Mont., July 5.—The Helena Rod and Gun Club gave a half-day townrament July 5, at the elegant new grounds on the motor railroad near the famous Hot Springs. A large crowd was present and all enjoyed thomselves. A terrible mountain dust-storm was in progress and made the shooting very difficult and tended to make one's very existence miserable for the time. The club entertained as their guest Mr. W. H. Skinner, of St. Paul, who could not eatch on to the mountain background and was beaten every time, but had a splendid time nevertheless. The Helena Club is composed of about 60 prominent citizens, among whom is A. J. Fisk, of the Herad, who showed the writor many courtesies, and also beat him every time at the trap. He is one of the best shots in Montana, and it is no disgrace to be beaten by one as clever as he is. Five screened traps and bluerocks were by Mr. H. Bryan, of the Helena gun store: Baker gun, value \$30, trunk gun case, value \$10, cash \$5, cash \$2.

First event, 20 single bluerocks, \$2:

CANADIAN TRAP MEETING.—The Dominion Gun Alliance is rapidly extending its influence among the sportsmen, and clubs tree being added to its list-every day. Some such organization was much needed in the Dominion, and the want is now supplied. Shooting rules will be uniform; handicaps for professionals or nug-hunters will be setticd upon, and all can now enter on a fair basis. Last and not least, the Alliance by united effort in-ends to prosecute all offenders against the game laws, and this ulone should secure it support from all true sportsmen. Mr. J. A. Keyes, of St. Catharines, is secretary, and will give clubs who lavenot yet joined all necessary information. Judge Chadwick, Suelph, is the president, and Alderman C. C. Small, Toronto, reasurer. The Peninsular Gun Club, of St. Catharines, have lecided to hold a shooting tournament under the auspices of the Dominion Gun Alliance about the end of this month, and a very attractive lot of prizes will be offered.

WALNUT HILL, July 10.—The grounds of the Massachusetts Rifle Association presented a lively scene to-day after the trace shooters had assembled for their fortnightly meeting. The event of the afternoon was the sixth competition in the Gold Coin match, in which Messrs. Curtis and Stanton led, after an exciting contest. This match has proved very popular, as the ingenious method adopted of grading competitors, not only by the excellence of their score, but also by the regularity of their attendance on their score, but also by the regularity of their attendance on their score, but also by the regularity of their attendance on the higher prizes on the list, while those who put in but an occasional appearance will have an excellent list of trophies to compete for. The scores in the match will be found in the following summary, as well as the winners in the minor sweepstakes. Gold Coin match, if elay birds and list standard targets, Keystone squad system, sixth competitions.

ST. LOUIS, Mo., July 13.—Last Saturday was a delightful day, and the St. Louis Gun Club took advantage of it to hold a medal and sweepstakes shoot, which was well attended by its members. Five traps and American Association rulos were adopted for all events:

Three moneys, all ties divided.

BROOKLYN, July 10.—The shooting tournament of the Coney island Rod and Gun Ciub, beid this afternoon at Woodlawn Park, Bravesend, L. I., was more than usually successful. Twenty members of the club went to the traps, and, although the birds were is a rule good flyers, with a duffer only here and there, the swere made were above the average. Fred Quimby, J. E. Lake, I. Ward and F. Leilinger tied for first prize, the handsome meda offered by the club's president. At the shoot-off Mr. Lake we on a straight. A. Eppig, G. L. Ayres, C. Plate and F. Lanzer fied on 6x stilled, and preferred to divide second mory. J. Corhees, J. Kowenhoven, J. Schliemann, C. Detlefsen and H. Myer killed 5 cach out of T. At the shoot-off Schliemann and Detlefsen dropped but; the other three shooters after twing spain on 5 decided to divide. Fourth money went to 1. McKene. Dr. Northride won the consolation prize. In a sweepstakes at 5 birts, miss and ont, M. McKekane won first and F. Quimby second. Mr. J. Simpson, referee.

possible 38. Chick 32. Unger 31, Partington 30. Maxwell, Townsend and Rose also competed.

BOSTON GUN CLUB,—Wellington, July 13.—This was "expert day" of the Boston Gun Club at Wollington traps. The attendance, though not large, was enthusiastic, the fine trap practice adding much to the day"s enjoymont, while first-class scores were made. The next shoot on these grounds will be for the amateurs, the sixth of the handicap series, July 17. The principal event was the 50-bird match at standard targets, this being the second of a series of five 50-bird matches at five different targets, for a series of prizes of five 50-bird matches at two different targets, for a series of prizes of five 50-bird matches at two different targets, for a series of prizes of five 50-bird matches at two different targets, for a series of prizes of five 50-bird matches at two different targets, for a series of prizes of five 50-bird matches at five different targets, for a series of prizes of five 50-bird matches at five different targets, Stanton and the five 10-bird sweeps, the following being a summary of these and other events: Ten standard targets, Stanton and Gerrish; 10 clays, 6 traps, 8 traps, 8 traps, 8 traps, 8 traps, 10 traps

were shot.

VOUNGSTOWN, O.—The Flint Hill Gun Club recoully elected the following officers: R. Harry, President; A. K. Gaither, Vice-President; W. Smith, Secretary and Treasurer; L. B. Arkwright, Captain; W. Smith, H. Kipper, C. Barger, C. Weaver and F. E. Hubler, Trustees. The club now has the finest grounds and most commodious club nouse of any club in the valley. The following is the score made Thursday last, 28 standards, 18yds, rise, American rules; A. K. Gaither 10, W. Smith 17, F. Hubler 11, F. Gaither 22, C. Barger 19, Second shoot, 10 birds, Keystone rules: A. K. Gaither 6, F. Huber 8, W. Smith 6, F. Gaither 8, Third shoot, 15 birds, American rules: A. K. Gaither 9, F. Hubler 12, F. Gaither 6, W. Smith 9.

ST. CATHARINES, Ont.—The Peninsular Gun and Game Club will give a tournament July 31 and Aug. 1, under auspices of the Dominion Gun Alliance. Address for information, James A. Keyes, St. Catherines.

THE MONTREAL C. C. MEET.

THE MONTREAL C. C. MEET.

The first annual meet of the young Montreal C. C. took place at Como, on the Ottawa, on June 29 and 30 and July I, and although the programme was not carried out in its entirety, this the first attempt to hold a meet in the waters about Montreal was a great and triumphant success. The camp site was at the bottom of the deep bay formed by a long point which just far out to the eastward, inmediately to the north of which beautiful Como nestles amid her noble elms, and faced a lake-wide reach of the Ottawa, and was everything that a camp site should be Behind was a beautiful open wood, a sandy beach shelved up to a few rods of green turf, partially shaded by two magnificent butternut trees. In front was the broad river and the blue hills of Ota.

The first canoe that reached the camp was that old veteran the Lucile, and the commodore, Mr. J. White, the "Cock Robin" of last year's meet, had his camp in order, the flag flying and his famous frying-pnn at work before the next arrivals, the Pointe Claire district men, came straggling in.

The wind, light all day, had been conspicuous by its absence during the latter part, and the "White Crows" fleet, which was composed of the Mah, Inex. Cigarette and the sloop Fawn, had been all day in sailing nineteon miles. Before the crescent moon showed itself, however, tents were up, canoes were berthed, a meal cooked and consumed, and the twelve men who had reached camp that first night, built them a monstrous fire, brewed them an unpretentious jorum of hot lomonade, and proceeded to wake up the choes in the Oka bills.

"Lucile" sang "Cock Robin" with all the old gnisto, "Rosalie" produced his guitar and accompanied "Marguerite" while he convulsed themsembly with the "Woes of Mary Ann Taylor" the "Agonies of the Annateur Yachtsman" and many another rollicking song, for Marguerite can sing all night without repeating himself. When "Ino" (he's gone in for a big boat this year, but he's a canociet still) produced his "piano" and attempted to spring "Home S

"Home Sweet Home" with variations on the multifude it was decided that the time for "Auld Lang Syne" had come, and then to bed.

It had boen a long day, and every man in camp slept like a Trojan, with one exception. "Cigaretre" had elected to sleep under its cance, and about 4 o'clock in the morning be turned out and began to chop wood. "Mab" joined him, and the persistence with which these two evil doors built a bonfire brought out the whole camp before half-past o'clock. This made a long morning of it. A substantial meal was cooked, the camp got into Sunday trim, and when about 11 o'clock the St. Lawrence fleet, in tow of the Ires, came round the point, that camp looked as if it had been there for a month.

With the yachts came half a dozen cances and a couple of dozen of the Lake St. Louis and Below Rapid men, and during the long afternoon others straggled in, until hy nightfall between thirty and forty M. C. C. men and about six A. C. A. men were in camp. The Valois and St. Ann's men did not turn up at all, however, the lack of wind, the strong current and picnics originated by tho ladies of their respective clubs proved too strong repellant forces. It was a quiet day, that long Sunday, in spite of the bustle of tho new camp. A good many bass and dory were caught in the afternoon. A dozon craft cruised down to Oka and explored the quaint oid Indian village, and the Pointe Claire moss indulged in a grand fish dinner. The evening was spent in rambling along the beautiful Como woods and about the campfre, but the earny was collectively and individually tired, and it went to hed at an early hour.

The young Dominion never had a fairer natal day than was the first of July, and when the morning gun went and the red flag with its heraldic bearings went up, three lusty cheers rang over the calm water and through the all too still air. There was not a breath of wind for an hour. Whon it did come it came straight up the "Lae Two Mounting," and there was not enough wind to sail, was a good and a sour earned and a sain

The last race was a tancen, and the first through. Nash and Grissette, of the Lake St. Lonis, won; it vine and Slaw second.

Slaw second weight enough in it aligned to the meet of took partin the crushes. Every man who went to the meet of took partin the crushes as far se leard from, good time, and he cither has or will had a far se leard from, a good time, and he cither has or will have a far se leard from, a good time, and he cither has or will have a far se leard from the way the sum of the second was "a cention don't yet room!". This is, we first time the Montreal canceists have ever the a meet, but it won't be the last, not much. At least "them's the sentiments" or The Cook.

P. S.—The way those boys ate planked bass and dor't was something frightful.

LAKE HOPATCONG C. C.

count of the rain was delayed until 4 P. M., by which time the light wind which had been blowing had almost completely died out.

The first race was the yacht race, which was declared off by the judges, as none of the racers rounded the third buoy, which had sunk for some reason unknown. The cance sailing race was won by L. B. Palmer, of the Ianthe Club, in cance Ianthe, with D. D. Gessler, of the Lake Hopatcong Club, second, in cance Sylph, and T. A. Gessler third in the cance Naiad. The rest did not finish on account of the wind having died out so completely that they could not make their buoys. The race was for the Breslin challenge cup, valued at \$30, which must be won three times in succession before becoming the property of the winner. The paddling race was won by Mr. Stewart, of the lanthe, in the Scoot, with Theo. A. Gessler second, about a boat length behind, in the Naiad; prize, silver cup.

The hurry-scurry was won by Commodore Gessler in Sylph, with T. A. Gessler second in Naiad, and J. Van Fleet third in cance Arrow; prize, a nickle drop rudder.

Unset paddling race was hotly contested for between T. A. Gessler and L. B. Palmer, Gessler finally winning by about a length and thus capturing a silver rue.

Lewis F. Pilcher won the swimming race by a length and received a silver medal.

Two rowing and an all-comers' race were also gone through with, for which the prizes were handsome silver cnos.

Among those present and interested in the furthering of the canceing interest at the lake were Miss Lotta, Miss Rosina Vokes, the Misses Dunlap, the Misses Prole, Mr. E. G. Blackford, Fish Commissioner of the State of New York, Mr. Gorge Bryant, Mr. H. Prothingham, Hon. Water Knight and Col. John R. Fellows.

Mr. H. P. Frothingham, Hon. Walter Knight and Col. John M. Fellows.
The judges were Mr. Geo. M. Brockway, of the Gilsey House and Hotel Breslin; Mr. R. L. Edwards, president of the Bank of the State of New York; Mr. Robt. Dunlap, the Broadway hatter; Mr. Geo. Damerel, Mr. D. W. C. Ward and Hon. O. F. G. Megie. Judges' boat, steamer Raccoon.
L. F. PILCHER, Purser.

Charm and Stella on Saturday, June 29.

The second race for the sailing and paddling challenge flag for second class canoes took part on Friday, June 21, when only Illawarra (A. B. Ingram) and Spindrift (Col. Howland Roberts) started.

At the start there was a fresh breeze from the N.E. Spindrift went off with the lead on the paddle to the buoy in the bight, but Illawarra passed her and ronnded first. She increased her lead in the run to the lower buoy, and during the beat back the wind fell off considerably. Shortly after completing the first round Spindrift gave up, both canoes being becalmed; Spindrift in the bight and Illawarra at the lower end of the lake. A few minutes afterward a strong breeze came up, and Illawarra had to red down on the beat back. There boing no other competitor the course shortened to two rounds, and Illawarra was therefore the winner of the second class challong flag. It is to be hoped there will in future be a better entry in this class.—Field, June 29.

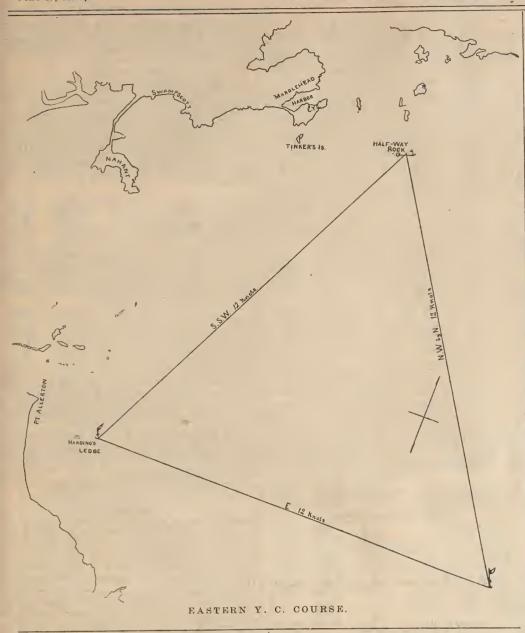

ST. LAWRENCE RIVER SKIFF RACE,

ST. LAWRENCE RIVER SKIFF RACE.

NEW YORK, July 13.—The first race under the management of the newly-organized St. Lawrence River Skiff Sailing Association was sailed to-day upon the Hudson River. The start was from the foot of 132d street, and the conrse over which the little fellows contested led them three miles to windward and return. The wind, a good wholesail breezo from the southwest, with the saistance of a strong ebb tide, managed to kick up a lively little sea, making the thrash to windward wet and exciting. The racers were all yawl-rigged, and carried in addition to their regular sails a goodly spinaker.

The entries were Germania, Sophic, Noname, Puck and Elsie, Exactly at 5 o'clock the whistle on Com. Sooysmith's steam yacht Errante sounded prepare, and five minutes later the signal for the start was blown. Close hauled on the port fack, the rivals stood away on a long leg for the Jersey slove, the Sophie in the lead, away on a long leg for the Jersey slove, the Sophie in the lead, closely followed by the Noname and Germania.

In the thrush to windward Sophie worked ahead, outfor ting and outpointing her sisters. At 506 she rounded the stake boat and neathy breaking out her spinaker, sped away for home. Close together, Noname and Germania came rushing along, and starting sheet hurried away in chase of the fleet-footed leader, But in spite of the freshening breeze and the big spinaker of the Noname, Capt. Stevenson's flyer was not to be caught, and crossed the line an easy winner at 5430. Noname followed at

NEW JERSEY ATHLETIC CLUB, July 6.—On July 6 the anoe fleet of the New Jersey Athletic Club of Bergen Point held is first regatta under the direction of Messrs. W. H. Mitchell, G. 8. Frost and A. B. Herrick. The first race, unlimited sailing, miles, was won by Atom, C. B. Vaux, N. Y. C. C., Nenemosha, B. B. Douglas, Ianthe C. C., second, out of a fleet of seven. The unior sailing was won by Sphil, N. H. Day, N. J. A. C., with dide, W. Scott, Essex J. C., second. The sailing upset was won by Sphil, N. H. Day, N. J. A. C., with dide, W. Scott, Essex J. C., second. The sailing upset was won by Mr. Douglas. The senior paddling was won by Sphil, W. E. tewart, with Squaw, L. B. Palmer, second, both of the Ianthe J. C. The junior paddling, 1 mile, was won by White Lake, N. H. Day, with Sybil, O. F. Coe, two lengths astern. The tandem race was won by Spray, Collins brothers, from Toddie, Scofield and leardsley, all of the Bayonne C. C. The hurry-scurry was won by G. F. Douglas. The N. J. A. C. has extended an invitation to he Atlantic Division to rendezvous at its house preparatory to he division meet. Sybil is an amateur built canoe, constructed by her owner, Mr. O. F. Coe, a similar design to Vagabond.

LANTHE C. C.—The Ianthe C. C. held the first of its paddling second races en the evening of July 5. The junior paddling was won by Juguil and E. Burling in the order named. The enior paddling was won by Duguil and E. Burling in the order named. The lenior paddling was won by Duguil and Sunling; Conner and Farmer, second; C. V. Schulyer, of Arlington C. C., third. Prizes have been offered by the regatta ommittee as follows: For seniors, sailing, paddling and the inglest combined; for juniors, a separate series for the same races.

highest combined; for jumors, a separate series for the same races.

ROGERS.—Sergt.-Major H. S. Rogers, son of Col. H. C. Rogers, graduated from the Royal Military College at Kingston this month. He carried off the Stanley gold medal for obtaining the highest aggregate of marks in the whole course, and the Lord Stanley prize to a qualified graduate intending to pursue the military profession, either in the Imperial forces or in the Dominion militar, for highest profesiency at the final examinations in military profession, either in the Imperial forces or in the Dominion military surveying, topography and reconnois and tactics, military surveying, topography and reconnoissance. He also won the class prize for highest proficiency and five class prizes in the entire course. Sergt.-Major Rogers has been recommended for a commission in the Royal Engineers.

A. C. A. MEMBERSHIP.—Central Division: Wm. L. Martin, Albany, N. Y.: Harry S. Moody, Rochester, N. Y. H. B. Minor, N. Y.; Anton von Buest, Geo. W. Baxter, Jas. Duguid, New Jersey. Northern Division: C. E. Britton, Frank P. Jones, D. F. Jones, Gunanoque, Ont.

THE ARLINGTON C. C. will hold its annual regatta Monday, Sept. 2.—C. V. Schuyler, Sec'y-Treas.

RACING AT MARBLEHEAD.

I always has been the custom in the Eastern Y. C. to sail the annual regatta about the last of June, a date that practically prevents the attendance of the New York fleet, as it follows too closely on the mid-June regattas, and also very near to the July races on the Sound. This year a decided departure has been made in placing the race after all the New York regattas, and just at the time the fleet of the Seawanhaka Cortahian N.C. was at Marblehead. Even under the most favorable conditions it is difficult to get many Nevrous voyage, and it is impossible to day and the they must hurry home at once for the racing at Larchmont. By waiting until the latter are over, and taking advantage of the Seawanhaka Y. C. cruise, it should be possible in the future to carry the leading hoats through all the races from the New York in the middle of June to the Eastern a month later. This year several of the smaller boats made the trip to New York for the races there, while several here made the return trip to Marblehead. Of the forties, however, Pappoose and Gorilla have come East to try their luck, while with them is the little Kathleen, of 30ft. Neither Nymph, Banshee, Liris, Maraquita nor Tomahawk have ventured round, so that the racing is robbed of part of its interest, but at the same time some new boats have taken up the game, notably the Verena, just completed, and Chiquita, one of the best of last year's craft. Clara comes round with little show for a competitor, while the 70ft. class is entirely middle to the class is cutlerly made to the Seawanhaka Y. C. came in on Thursday and Friday in rather straggling order, the little fellows having lagged behind for the races, and of ceurse being unable to catch the schooners. The passage round the Cape proved unusually trying. The second of the Cape and the first of the schooners, The passage round the Cape proved unusually trying, mostly calm winds and some sea, with strong head winds at times. The fleet includes Sea Fox, chr., A. Cass Canfield; Medus,

				Allows
	Owner.	Helmsman.	Length.	m. s.

Pappoose, k,.l	Bayard Thayer.	Nath, Watson	42,60	5 52

The morning was calm and hazy, but a light air came in from the south at 9 A. M., and before 11 o'clock there was enough wind to start the fleet. The start was from the gun at 11 with 5m. preparatory, and Capt. Sloane came for the line on starboard tack in good time. All the rest of the fleet were an port tack and bunched closely together, and Chiquita halled Gorilla to tack, which she did, though having the right of way, getting a very poor position in return. Verena had the best start and immediately walked away, Gorilla being to leeward of her, with Chiquita in third place. The new boat from the start did the best sailing, leaving the others steadily. All carried club and jihtopsails, Gorilla, Minerva and Pappoose being content with babys, the carrying the intermediate Minerva did not move with her customary activity, seeming to have little life. Capt. John Barr of Clara was steering her for the first time, while she started with a small clubtopsail set, looking for strong winds. After a time this was shifted for a large club, with better results. Alice had a very bad start, the boat not moving in the light wind with her reduced sail plan. After a few minutes she tried the starboard tack for luck without finding it. Verena was garning steadily, Chiquita having taken second place with Minerva, Gorilla, Pappoose strung out, Alice being far astern. Helen was the first to break tacks, Minerva and Pappoose following when about half the leg was covered, standing well to the eastward, out to sea, while Verena and the rest held inshore toward Nahant, The off-shore boats managed to pick up a nice little breeze, Alinerva took in her jihtopsail and shifted to her largest club, and when the two divisions met at about 121.5 she crossed well ahead of Verena's bows. The time at the Graves Buoy was:

Minerva. 1045 Gorilla. 2045
Pappoose 1496 Gorilla. 2045
Pappoose 1967 Chiquita had were and from the east by a couple of points, so that the spinaker ower quickly set on Minerva, and she hauled away for Halfway Rock before the

Verena Helen ... 234 10

The last leg was short and quickly run off with balloon jibtopsails to starboard, Minerva leading over the line by over 8m., with
Pappoose and Verena very close together in second place. The
official times were:

Finish. Elapsed. Corrected.

CORINTHIAN Y. C., 1ST CHAMPIONSHIP, JULY 13.

the regatfa committee of the Eastern Y. C., Messrs, Charles H. Joy, T. Dennie Boardman, J. S. Fay, Jr., R. D. Sears, Wm. S. Eaton, Jr.

CORINTHIAN Y. C., IST CHAMPIONSHIP, JULY 13.

The meeting of Kathleen, the new Gardner 30, with the crack boats of her class in Eastern waters, two of which she lately defeated in New York, was looked forward to with a degree of interest that a manual raft are making most of the sport. Eathleen has thus far met with but one defeated in a number of races with her own class and that above her about. New York, but it was evident she would have no walkover in the East, as both Saracen and Elf had laurels to retrieve, while there were several new houts of seeming promise of \$50 offered for the 30ft. class the regular prizes and conditions were as follows:

The first prize in each class will be a leg for the championship ragrata, of the lively Corribtian Y. C. Besides the special prize of \$50 offered for the short of the prize of the sport. Class the regular prizes and conditions were as follows:

The first prize in each class will be a leg for the championship races. First, and the state of the short of the state of the short of

EASTERN Y. C. ANNUAL REGATTA, JULY 15.

As has happened before at Marblehead, Sunday was an ideal regatta day, warm, bright and sunny, with a good breeze all day; but Monday proved e actly the reverse, with a northeaster, a pour of rain and a heavy sea. The fleet ren out to Haltway Kock about 10 Oclock, and a start was made, Clara, A'ga, Fanita and all larger craft being sent to the S.E. mark of the triangular course first, then to S.W. mark and home 3 knots; while the smaller craft ran out, S.W. mark and home 3 knots; while the smaller craft ran out, S.W. mark and home 3 knots; while the smaller craft ran out of S.W. mark and home 3 knots; while the smaller craft ran out of S.W. mark and home 3 knots; while the smaller craft ran out of the large boats sailed over fitteen it lessout to sea and returned. The forties and thrifes all turned Harding's Bell Buoy, thus making a race.

Verena lectoe on the wind the little Scotch cutter left the fleet, winning by min. In Tom Sloan's hand Gorilla did better than she has come one before, beating all the Burgess bater than she lare one before, beating all the Burgess bater than she lare done before, beating all the Burgess had Salrly. Whatever fluking was done on Saturday, all admit that Mincro her beating the beat both Saracen and Kathleen, our she was inside the islands in smooth water and out of the pleavy sea dished to islands in smooth water and out of the salven beat Kathleen, as the time show. The larger boats will sail again on Tuesday, and Mr. Thayer has offered a special cup for an extra race of the forties. The times were:

BEVERLY YACHT CLUB.

146TH REGATTA, SECOND OPEN SWEEPSTAKE, MONUMENT BEACH, JULY 13.

BEFORE describing the race I wish to correct an error and mis-print in last week's FOREST AND STREAM. In 143d B. Y. C. race read: Polly, Richard Codman, in place of Nymph, Geo. G. Amory. This was my error, but to 144th race the printer made me say Kiowa led round Bowditch by "ten" minutes while I wrote

me say known led round Bowditch by "ten" minutes while I wrote "two."
There was a strong S.S.E. breeze on 13th; all but Mattie, Mist, Tantrum, Petrel, Daisy and one or two others being reefed.
As 9 out of the 18 extries had to be measured before race, the judges had a lively time, but race was started on the second. Mr. Stockton lad cut down the spars of both his boats to save measurement; he succeeded admirably, reducing Matthe 3in, and Daisy 15in, but in latter case did not seem to have left enough mass to hold up his sail; it bagged badly, and how she got to windward as she did was a wonder.

In first class A. P. E. and Mattie were sailing a good race, when Mattie drew out the patent bolt holding peak halliard block and withdrew.

Second class sailed a way select.

In first class A. P. E. and Mattie were sailing a good rare, when Mattie drew out the patent bolt holding peak halliard block and withdrew.

Second class sailed a very close race, Mollie ticing Mist on actual time and Wildcat and Mollic pressing her close on corrected time. Gymnote and Thyra showed marked improvement. Tantram carried away forestay and withdrew.

In third case Eina met the new Ebenezer, the crack of the Sippican Y. C., of whom great things were predicted. Petrel assimished every one by carrying full sail. Eina, single reefed, started two minutes after Daisy, who led off. She sailed well, gradually taking first place and shaking out reef at windward mark. Time of first round: Eina 2:28:40, Daisy 2:29:50, Ebenezer 2:30:45, Petrel 2:32:506. Algonquin 2:34:42. Petrel was picking up Ebenezer on the run. As they started again to windward in a remarkable manner. Daisy also did very well, holding Eina for a time. Petrel still kept, picking up Ebenezer, but coming home, while well within her time allowance for third place, she broke her tiller and withdrew.

In fourth class Kitten was entered but hit a sandbar before start, breaking her centerboard. Edith had not studied up the course; twice she lost time hunting for a buoy and twice she gained a good deal by cutting a buoy; she beat Mab 9m., but of course was ruled out. The little Mab is a new boat, and time allowance tables only run to 15ft., consequently her corrected time was not figured.

Course was ruled out. The little Mab is a new boat, and time allowance tables only run to 15ft., consequently her corrected time was not figured.

Course was ruled out. The little Mab is a new boat, and time allowance tables only run to 15ft., onsequently her corrected time was not figured. Band Buoy on starboard and return, 18 miles. Fird class, leaving Pines Buoy, Abiels Ledge Buoy, judge's yachts and Pines Buoy on starboard and return, 11 and 7 and judge's yachts and Pines Buoy on starboard and preturn, 19 and 7 on starboard and return, 5 miles. Wind strong S.S.

DAUNTLESS Y. C.—The Dauntless Y. C. of Jersey City held their annual meeting on July 4 and elected these officers Com., John Flaherry; Yieo-Com., Wm. Royal; Treas., W. H. Boynton; Sec., W. H. Winkle; Financial Sec., E. L. Jones; Meas., John Clark; Sergeant-at-Arms, Thos. Wissell; Regatta Committee Chairman, John W. Bolen; Trustees, John W. Bolen, W. H. Boynton, Edward Cordner; Chairman Ways and Means Committee, C. E. Reynolds; House Committee, W. H. Boonton, John W. Bolen and John Clark. The annual cruise and dinner took place on July 14, the rendezvous being at Muller's Pavilion at Clifton, Staten Island.

BOSTON CITY REGATTA, JULY 4

THE annual city regatta at Boston brought out a good fleet of starters this year, including a number of new craft. In the special 40ft, class the new Burgess centerboard Verena met the McVey keels, Helen and Alice, the first race the latter have sailed. The McVey 30, Crystal, the new Wood boat Duchess, and the Auk and Victor sailed their first race. The courses and conditions

rc: orty-footers—For all yachts 35ft, and less than 46ft. Prize 0, provided three or more start, trist class—For centerboard and keel yachts, 30ft, and less than First prize \$50, and for centerboard yachts a second prize

551. First prize \$50, and for centerboard yachts a second prize of \$-0.
Second class—For centerboard and keel yachts, 25ft, and less han 30ft. First prize \$40, second prize \$20, and third prize \$10.
Fourth class—For centerboard, all-rigged yachts, 15ft, and less han 30ft. First prize \$25, second prize \$15, and for centerboards third prize of \$10.
Fittle class—For centerboard catboats, 15ft, and less than 18ft. Prizes \$25, \$15 and \$10.
Special class—For jib and mainsail centerboard yachts less than 10ft. Prizes \$25, \$15 and \$10.
Special class—For jib and mainsail centerboard yachts less than 10ft. Prizes \$12, \$8 and \$5.
The distance for the forty-footers was 20 miles, and the course was from judges' boat to Broad Sound, leaving Long Island on the starboard, Ram Head buoy on the starboard, whistling buoy in the Graves on the starboard, bell boat on Harding's Ledge on the starboard, Point Allerton buoy, Hunt's Ledge buoy, 5, off jeorge's Island, on the port, bell boat on Harding's Ledge on the starboard, passing between the judges' boat and the flag-boat.
The distance for the first and second classes was 15 miles, and

George's Island, on the port, bell boat off Nix's Mate, Long Island and Spectacle Island on the port, buoy 7 off Fort Independence on the starboard, passing between the judges' boat and the flagboat.

The distance for the first and second classes was 15 miles, and the conres from judges' boat down West Way, leaving Thompson's and Rainsford Islands on the starboard, Long and George's Islands and Point Allerton buoy No. 3 on port, and back through the Narrows, leaving Fort Warren, Gallop's Island and Nix's Mate buoys on the port, buoy No. 7, Castle Island on the port, to flagboat anchored off Marine Park pier, leaving it on the port, passing between the judges' steamer and the flagboat.

The course for the the third, tourth, fifth and sixth classes was 10 miles. From judges' boat to Cow Pasture Buoy No. 6 (off the pumping station), leaving it on the port, to flagboat, southeast, leaving it on port, to buoy No. 7 off Fort Independence, leaving it on the starboard, to Sculpin Loc'ge Buoy, leaving it on the port, to Buoy No. 6. Lower Middle, leaving it on the port, to Buoy No. 7, Castle Island, leaving it on the port, passing between the judges' steamer and flagtoat.

The mosquito class course was three miles. From judges' boat to Buoy No. 7, off Fort Independence, leaving it or red buoy No. 2, about southeast, leaving it on the port, Fort or ed buoy No. 2, about southeast, leaving it on the port, Fort Independence to the port, to black buoy No. 9, leaving to on the port, for lagboat off Marine Park, leaving it on the port, passing between the judges' boat and the flagboat.

The start was made at noon in a strong S. W. wind. Of the forties Alice led at the start, but soon lost her advantage through luffing out of the way of another boat, being left to leeward of the Neptune. Verena and Helen sailed well together for the first alozen miles, the former leading, When near the Devil's Back a luffing match came off, resulting in a protest from Helen, she claiming that Verena aried to luft her aground, her dark being 10tt

Shadow protested Nimbus and Judith protested Echo, both demanding remeasurement.

The regatta committee included Wm. Power Wilson, chairman; John C. Short, Samuel Kelley, Wm. G. Reed, Horace G. Allen, Louis M. Clark, David F. Barry, Wm. H. Oakes, John J. Hoar, Sidney Cushing, John A. Campbell. The judges were M. J. Kiley, chairman; Wm. B. McClellan, F. H. Blaney, E. B. Coleman, P. M. Bond.

ROYAL CANADIAN Y. C., JULY 1.

ROYAL CANADIAN Y. C., JULY 1.

THE Royal Canadian Y. C. celebrated Dominion Day by a regata off Toronto, open to yachts from Hamilton and other ports, the course being 12 miles triangular, one round for the smaller craft and two for the larger. The Royal Y. C. is one of the very few clubs which still clings to that obsolete monstrosity, the scaled handicap, and through the unfairness or ignorance of the handicapping committee it was worked to the great disadvantage of the visiting boats. White Wings, the fastest centerboard sloop, received a handicap that for once made her very weary in ieed, being scratched with the schooner Oriole, 78tt. l.w.l., and allowing the Watson cutter Alleen, 55tt.l.wl., 6m. 49s., her own length being but 43tt., while she had to give 19m. 6s. the other length being but 43tt., while she had to give 19m. 6s. to the Watson cutter Verve No. 2, of her own length. Under the club rules the Oriole allows her 8m. and Alleen allows IIn. The full times were:

CLASS I.

Criole, G. Gooderham	12 0 50	3 29 40
Verve, A. R. Boswell	12 2 40	3 55 40
White Wings, Æ. Jarvis	12 0 19	3 49 50
Aileen, John Leys	12 3 53	42 30
Condor, C. A. B. Brown	12 6 30	4 39 12
Rivet, Hume Blake	12 2 35	4 39 33
Aggie, Marlett & Arinstrong	12 3 00	4 51 08
Verve, A. V. Dick	12 1 20	
Handleap—Oriole and White Wings allow Aileen 6m. 40s. Chicago Verve 19m. 6s., Aggie 20m. 6s., Toronto Verve 25m 20s., Concepted with 25 m. 20s., Rivet 29m. Oriole thus takes first prize, having heaten White Wings 20m. 10s. and Colicago Verve 25m. 20s., Concepted time, while Chicago Verve beat White Wings 13m. 10s. corrected time, while Chicago Verve beat White Wings 13m. 10s. corrected time, although she crossed the finishing line 5m. 50s. after the Hamilton cutter.

LIRIS.

the race, with her owner, Mr. A. E. Gooder ham, aboard.

LIRIS.

THERE are a good many races to be sailed and some hard a fighting to be done before the question of supremacy in the offic class is decided for the season. Verena and Chispa are yet to be heard from, the new Awa will be in the races very soon and should rove the sound of the sound of the sound of the sail and the season of the sound of the s

mall oak rail. The hatches and skylights are of mahogany, and he bitts are of steel plate \$\frac{3}{2}\text{m}\$. A powerful but compact rank capstan is placed just inward of the mast, on the starboard side is a circular forelatch, and to port a 10m. opening for ventilator over the galley. There is one skylight over the main abin, then the companion, and abaft that a second skylight over he after cabin. Abaft the latter is a circular sail hatch, also used for a steering well.

Des ending the main companion on the port side is a seat 3ft. one, back of which is a long closet for coats and wraps, with a et of drawers beside it. On the starboard side is the w. c. and oilet room, opening into the after cabin. The main cabin is a arge and handsomely fitted room, \$\pi t\$ arge and handsomely fitted room, \$\pi t\$ are costs. On each side is a cellaret locker and closet above. The fer cabin has a fixed berth with a seat in front on each side. All he joiner work below is in mahogany, but as light as possible. The after stateroom is upholstered in light colors, with rich curains to the berths and a handsome carpet. The main cabin has ushions of a dark blue, above which are curtains of yellow silk. Ilding on brass rods and hiding the sides of the ship above the of a backs, there being no ceiling. The swinging table gives room or eight persons. Opening from the cabin on the port side is a collared to the starboard side is a door to the alley and forecastle.

A large icebox occupies the space opposite the toilet room, thie just forward of the latter is the calley and forwards.

or eight persons. Opening from the cabin on the port side is a second toilet room, while on the starboard side is a door to the alley and forecastle.

A large icebox of cupies the space opposite the toilet room, while on the starboard side is a door to the alley and forecastle.

A large icebox of the latter is the galley, with a four-burner while last fowards of the latter is the galley, with a four-burner while last fowards of the latter is the galley, with a four-burner while last fowards of the latter is the galley, with a four-burner while last fowards from the latter is the galley, with a four-burner capt of the forecastle contains four hammeck beds, swung up by ay, besides table and lockers. The sail plan of Liris is the argest of the forecastle contains four hammeck beds, swung up by ay, besides table and lockers. The sail plan of Liris is the argest of the class, the base line by New York rule being \$6.5ft., giving an area of 3.603-ag.ft., or 300 nexcess of Tomahawk and Maraquita and 900 more than Micerva. The main shrouds are led to steel plate channels, the hainplates being long and carried well down the side. The pars were all hollow, but only the gaff and spinaker boom now emain, the rest having been replaced by solid sticks. The new nast is a fine stick of Oregon pine, the rest being spruce. The lew boom, not thoroughly dried, and the bowsprit, just out of he water, a stick, by the way, of Canada black spruce from the reat Joggins raft, have not helped the boat as her hollow spars id while they stood, but this disadvantage will disappear with ime. The boat has showed a remarkable degree of stiffness, specially when compared with Maraquita and Tomahawk, each arrying less sail and the former with 6in, more beam. The new old sticks will detract a little from this quality, but she still ass an amount of stability in excess of all other boats in the leet. She steers with a tiller. The bowsprit is fitted to house bout 5tt., the shrouds fleeting aft to a hole in each channel, while a short section is shac

QUAKER CITY Y. C. REGATTA.—The corrected time of the Quaker City Y. C., June 21, has just been completed. Mr. Ellis's new sloop Nanon, built by Burgess, of Boston, is the wiuner of the Middleton enp for first class sloops on corrected time by 2m., the old Venitzia, which won the Ellis cup for fastest time over the course, irrespective of class or time allowance, by beating the Nanon 2m, 34s, actual time, being second. The correct time of the Nanon is the fastest in any class over the course. The official schedule of correct time for the first and second boats in each class is as follows:

DELAWARE TUCKUPS.—An exciting match was sailed on July 1 between the tuckups George Flick and Robert's. Patterson, the course being down the river around Chester buoy, 32 miles, a run down against the tide and a beat up. The start was made at 10 A. M. in a light E. wind, the Patterson leading and gaming until she turned the mark at 12.38 with a lead of 2m. 39s. Of Billingsport a squall came up, and while reefing she was capsized, being out of the race. The crews were: G. Flick—J. Cemrod, D. Schellinger, George Taylor, Thomas Sherman, J. Reilly, Geo. Bergen and W. Flick, captain. R. S. Patterson—Frank Kleiniz, Hugh Boyle, G. Harkghesheimer, J. Dusenberger, George Florence, J. Hagen and George Campbell, captain. The following was the official time:

JERSEY CITY Y. C.—The annual regatta of the Jersey City Y. C. will be sailed on Aug. 10 over the club's course on New York Bay. The event is open to the craft belonging to the following clubs, members of the New York Yacht Racing Association: Columbia, Harlem, Hudson River, Newark, Newark Bay, New Jersey, Sing Sung, Pavonia, Staten Island, Tappan Zee, Williamsburgh, Yonkers Corinthian and Cedar Point yacht clubs. No entrance fee.

entrance fee.

BUFFALO Y. C.—The usual city regatta did not take place this year on account of the action of Common Council. This body appropriated the sum of \$250 for the regatta, the entries to be confined exclusively to home yachts. The Buffalo Y. C. had already sent out invitations to neighboring clubs to compete, but was obliged to recall them, explaining the unpleasant circumstances. The club declined to bave anything to do with the matter, and uo regatta was held.

PUZZLE-Steamer, has been sold by J. L. Mott to Arthur Chaffin.

Answers to Correspondents.

Par No Notice Taken of Anonymous Correspondents.

IGNORAMUS, Philadelphia, Pa.—Nonpareille is laid up at Staten Island.

E. R. C., Lewiston, Me.—On a still day good scores have been made at 100yds.

H. W. B., Jr.—Parrsburg, Nova Scotia, is a desirable point. We caunot supply the addresses.

E. O. T.—Holberton's "Art of Angling" will be the best of those named for your purpose. The price is 50 cents and we can supply it.

L. M. F., Chicago. - We cannot give more definite information than that contained in Mr. Hough's papers of last week and to-

dozen; 60 sheets in a pad; sent by express.

MOHAWK CAMPING CLUB, New York.—We think that for the season and game desired you will do well to follow the line marked out in the two papers, "To the Allaguash Lake and Beyond," in our issues of June 27 and July 4.

CAMPER.—You will find a forester, who is there by direction of the Forest Commission, on One Hundred Island, in Lake George, to give information about camping sites on the islands. All islands which bear the sign "State Lands" are free to the public, whether they have houses on them or not. The address of the Forest Commission is Albany, N. Y.

Forest Commission is Albany, N. Y.

J. P. T., Aylmer, Canada,—In a trap-shooting match at 15 targets, 4 prizes, National rules, no class shooting, A scores 13, B and C12, D EF and G 11, H., I and J 10. However the prizes distributed? Ans. A takes first, B and C shoot off for second, the winner taking this and the loser third (or they may divide to the winner D EF and G divide fourth or shoot off for it.

Lopi, O.—In a match one of the shooters did not shoot at his 20th bluerock, as the trap loader put in trap a bird filled with shavings from box, and when bird left trap the shooter thought it was a broken bird. The mistake was caused by the shavings falling out. The referee decided no bird, and the shooter was given a new bird. In your opinion was the referee right or wrong? Ans. Right.

a new bird. In your opinion was the referee right of wrong? Ans. Right.

Greenhead, Nevada, Ia.—In a live bird shoot, the shooter fired his first barrel and brought his bird to ground, and tried to use his second barrel, but the first shot had disabled the gun and he could not fire the second barrel; the bird still remained on the ground and was challenged. The shooter did not at once go after the bird, believing he had a right to the second barrel. He finally, as he did not get it in the three minutes allowed from the time he was challenged. Was this decision of the referee correct? The shoot was under American Association rules. Ans. We understand that the three-minute limit applies to a wounded bird; in this case, as it appears that the bird was actually killed with the first barrel, and as failure to fire the second barrel was due to an accident, this causing the delay in gathering the bird, it should in equity have been scored to the shooter's credit.

BEECHAM'S PILLS act like magic on a weak stomach.
