DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 770540

HYOGO LIAISON OFFICE

REMARKS

NAME OF PLANT: MITSUBISHI DENKI K.K., HIMEJI PLANT,

The above plant is now in full operation under a reconversion permit, part of the facilities being engaged in production under a P.D. The views as expressed by the plant management are on the whole considered reasonable.

Takayoshi Tonda

LOCAL LIAISON OFFICER

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. [illegible]

[illegible] MANUFACTURING CO. LTD.
[illegible]

[illegible] January 1947

Subject: Explanatory Statement regarding materials in designated factory.

In accordance with your instructions to report the submit this application on this captioned.

We have been given a reconversion permit (No. 333) by the 6th Army dated 24 December 1945, and another permit for the additional items of production (No. 31 CK 73) by Hyogo Military government dated 4 September 1946. We are now doing our utmost for the production of the undermentioned items.

A. Padlocks

By the procurement demand from the 8th Army, we started the manufacturing of padlocks in October 1946 and since November 1946 we have been supplying 600 padlocks per month to the Army.

B. Magnetos

A great majority of the magnetos for auto-tricycles, agricultural engines, fishingboat engines, etc, are being produced in our factory which is, without any exageration, the leading one in this line of business and only one maker in the Kwansai district(Western half of Japan). Especially in the production of the magnetos for small auto-tricycles, we are supllying over 80 percent of the whole domestic demand.

C. Insulators

Insulating materials that are essential for electric machines and tools are wostly being manufactured in our factory. All of our sister factories in Kobe, Nagoya, Itami and Fukuyama get their whole supply of insulators from no other factory than ours.

D. Electric Wires

Electric wires produced in our factory go to all of our sister factories as is the case with our insulator.

We are engaging in the special production of small-round wire with less than 2.3 mm in diameter which is not produced such an around as needed in other electric wire manufacturing factories in Japan.

E. Compressor motors for electric cars

Compressor motors for the electric cars which are in urgent need of production to relieve the present transportation difficulties, are being manufactured in our factory to be fixed to the governmental carriages by the demand of the Transportation Ministry.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 176040

F. Scales

Automatic scales, longed for to obtain by civilians as well as merchants are also produced in our factory and have been met with public favor.

The production plan of the abovementioned items from January, 1947 to June 1947 is as per attached sheet, and in order that we can fulfil this project, the materials in the enclosed report are absolutely necessary. And if you would kindly allow us to speak frankly, we are afraid that our production will go only for two or three months, even if all of them should be permitted to used by our factory. For this reason we are now worrying very much about to get more materials necessary to fulfil the project.

Our factory is now under full operation and so, if the equipments used in production should be confiscated, our factory could not but stop the production of these essential commodities for peaceful civilian life.

We should like to take this means of asking for your kind consideration to the fact that every product in our factory is essential to peaceful civilian life and that the materials as per attached sheet are indispensible to produce these commodities essential reconstruction of the democratic and cultural Japan.

Hoping again this rough and humble statement will meet your special attention, we beg to remain,

Yours respectfully

Ken Okubo.

Ken Okubo
General Manager

Sheet no. 1
