The great influence over the mind of an association with the beautiful during youth, is manifested in the lives of all great men; and it would be almost possible to decide on a man's general character from the place where he lived, and the scenery that surrounded him: and yet, however much the distant scenery may have moulded the more matured mind, its effect is not to be compared with that of the immediate surroundings of the cradle and homestead upon the more pliant mind of youth. Can we expect the highest developements from one, who, struggling through a youth in a hovel, is turned on to the world at some advanced period of life to fight for himself? Or to particularize a little more, and to select one of our New England farm houses as an example; what beneficial influence will that homestead exert upon the finer feelings, where the sole motto is, "Money makes the mare go," or "A penny saved is a penny gained;" where not only thrift is taught, but also is seen the daily practice of storing in some stocking end, old desk, or bank vault, those dollars, a few of which could have tightened the cracks in the barn, rehung the door, reset the decaying fence posts, repaired the paling or destroyed the hedge of nettles, burdock and wild lettuce that disputes the entrance. Is not that father to blame, who, by neglecting all out door ornament, has lost all vestiges of beauty and comfort to the homestead, so that the growing boy is ashamed to own that it is his home? Does the son or daughter neglect one bit of house or farm work in order to beautify the front yard, train the vine over the window, or eradicate the weeds from the pathway?

On the contrary, do we not all know that the time devoted to such things, *when once the beginning has been made*, is "between whiles," and never missed? And have we not all seen the speaking eye, and swelling heart of the child at the gate, when passing strangers have stopped to notice the farm-house, as embowered amidst flowers, shrubs and trees, its pretty vine-clad porch has met the view?

Less often would the lads leave the half-finished supper of a summer eve for the country store, should there be a little weeding or tying to do in his sister's garden; how proudly he would cull his Sunday nosegay for the little girl around the corner, and half chokingly whisper the invitation to come and see *our garden*. It is not often that are seen in country villages attempts at real gardens; it is commonly some stray corner that cannot be used for anything else, or some bit of border grudgingly spared, that is devoted to flowers—but wherever it does exist it sets the example to all, and gives a certain degree of character and elevation to the house to which it belongs. In our American homes too much attention has been paid to the "almighty dollar;" and though some few pinks and a stray rose or two, border the front walk, most get no further, and meet the argument of beauty, &c., by the unanswerable rejoinder, "it won't pay! won't pay!" Indeed, if measured, even in *money value*, it will pay. Somehow, a conexion with the cultivation of flowers gives a delicacy and refinement to the most boorish, and the more earnest the love for them, the more sure are other refinements and cultivation to follow. It is really surprising to see how soon after *even our rough* Irishmen are introduced into gardens and green-houses, they begin to soften and humanize, and thus stand ahead of all their brothers. Certainly no one will be found to deny that in America, education is of the highest value; we all know how difficult it is to induce boys and girls to study; they are too fond of play; but teach them to love flowers, and not only to love flowers, and not only to love them for their beauty and fragrance, but for their relation to all other animated life; show them how mysteriously they are formed there in the earth; and coming up into daylight, grow and wax by a hidden power, not one whit less marvellous than that which developes men and animals; show them that it is not only for their particular worth they are to be prized, but because—

"There's never a leaf or a blade too mean
To be some happy creature's palace;"

show them that each flower has not its *single insect* depending upon it for *its* support, and that just as in its weakness and diminutiveness it contributes to the welfare of the animal kingdom, so in *its* strength and might does the oak, and also all other trees.

In this way you may arouse their curiosity; you may lead them along till they find themselves enwrapped in the love and study of natural history, and from that how short a step to all other knowledge; for it is not the *ground covered* so much as the *habit gained*, of application. Were no farther benefit obtained than polish of manners, few would doubt of the money'ed value of the acquisition; for, either the market gardener, the plowman, the shop-keeper, or professional man, the one gains most wealth, who, other things being equal, has most refinement of manners.

In farming communities, however, too much work devolves upon the males, to permit them to devote a great deal of time to gardening, or the arranging and caring for flowers; the most that can be expected of them is the doing of the rough work in spring and fall, and they must leave to the females the remainder. No work can be more consonant with the best idea of woman than the culture of flowers, and to them all but the heavy part can be left. So predominant a thing, however, is fashion, that but too often, many who desire to have gardens of their own are deterred because they think it will *look* strangely to be seen working in them. *Care nothing about looks!* Be assured you get more health, strength, and *looks* into the bargain, by devoting a portion of each day to flowers, than by bending over fancy work, or devouring the latest novel. Whatever is true in the country, where like seems to breed like, and where because the men work in the field, the women feel that they may not be partakers of any out of door employment, it is less so in cities and large towns, where very many take the entire charge of their flower gardens during the year, except the spring digging, and who, bringing to their aid their usual taste and skill, seem even to surpass themselves in all rivals of equal advantages. In close connexion in the world of letters with this kind of occupation, is botany, that seems of all the sciences to be the only one specially adapted to woman. For in it there is none of the labor of the geologist or the dirt of the chemist. But it is an investigation of the rarest beauties of nature, accompanied with an entire freedom from all that makes learning disagreeable,—offering the attractions of sun and fresh air, flowers and fruit, and at the same time giving a width and comprehensiveness of mind unsurpassed by any other study. We pass most naturally and easy from the garden darlings, to to the wild flowers: from the idea of them as plants, to their connexion with the animal world; taking some one great plant as a type, they may name and arrange hundreds of others that before they could know nothing of, beyond the fact of their existence and general appearance.

In the garden, too, tho tired husbandman may stroll, the day's work over, and at the same time he rests his weary limbs, refreshes his entire physical man, and instructs his mind.

Here, too, is the favorite play-ground of childhood, and better here, by far, than amongst the laboring men or by the road-side with the idle loafers of the village. And when the mother needs change and pleasure, after she has laid aside broom and duster, where better may she turn her steps than into paths fringed with roses and lilacs; now stopping to train a broken or struggling flower; or revel in the warm sunshine and summer breeze.

Thus far the garden has been treated, as though there is but one kind. Such is not the case, and it is best to divide it under different heads. First, "Flower and Kitchen Garden," then Flower Garden, into the artificial and natural, in either of which you can have flower borders, beds, in parterres, shrubbery, vines or trellisses, &c., and in close connexion may be hot-houses, conservatories, or mere houses and lawn, or yet simpler still, farm-house and front fence.

—*N. E. Farmer.* R. M. Copeland.

Injury to Wheat Crops.—We have had reported to us a statement of serious injury to the Wheat crops along "Cache Creek," from a species of "worm" that eats off the stalks at the roots and in such a manner as to destroy the crop. We shall be greatly obliged if our readers will furnish us with any facts that bear upon the subject, and if the insect is found we should like to see this enemy of our "breadstuffs."

Summer Pruning of the Grape Vine.

The cultivation of the grape is as common as that of any plant that grows.

There is scarcely any one having a garden who does not consider this vine as one of the indispensables.

If he cannot raise one kind of grape he can another, and there is no one but can raise to advantage the hardy and prolific native grape, the Isabella, for instance.

All native grapes are very luxuriant growers, throwing out shoots in one season, of from twenty to thirty feet in length, and producing a great mass of foliage.

The almost universal practice is cut off all the shoots beyond the outer bunches of grapes, and to thin out a great portion of the foliage in other parts of the vine.

In fact to such a length do some operators carry this practice, that to see the vines soon after this "summer pruning" has taken place, one would almost suppose the poor vine was in the last stage of consumption, or to remind one very forcibly of a singed cat.

This operation is performed in the month of August, when the grapes are about the size of a pea.

The idea entertained and acted upon by these farmers is, that the growing fruit is robbed of its fair proportion of food, by letting too much young wood and foliage remain on the vine, and further, that it is absolutely necessary for the full development and maturity of the fruit, that the rays of the sun should in nowise be obstructed, but that each bunch should be fully exposed to its influence.

Now, for one, the writer thinks that if it is so necessary for the fruit to be exposed, nature would not cover it up so completely as she does with foliage. He does not believe in this assisting nature, as it is called.

It is a practice that, as men advance in knowledge and inquire into the rationality of things, will be exploded. It is already becoming every year more and more unpopular.

Dr. Findley, in a work published in 1843 on the subject, starts the following proposition:

1st. If all the leaves which a tree will naturally form are exposed to favorable influences, and receive the light of a brilliant sun, all the fruit which such a plant may produce will ripen perfectly in a summer that is long enough.

2d. If all the leaves of a tree are exposed to such influences, all the fruit will advance as far towards ripening as the length of the summer will admit of; it may be sour and colorless, but that condition will be perfect of its kind.

3d. But if all the fruit which a healthy tree will show as is allowed to set, and a large part of the leaves are abstracted, such fruit, be it as it may, never ripens.

4th. Therefore if a necessity exists for taking off a part of the leaves of a tree, a part of its fruit should also be destroyed.

5th. But although a tree may be able to ripen all the fruit which it shows, yet such fruit will neither be so large nor so sweet under equal circumstances, as if a part of it is removed; because a tree only forms a certain amount of secretions, and if those secretions are divided among twenty fruits instead of ten, each fruit will in the former case have but half the amount of nutrition that it would have received in the latter case.

6th. The period of ripening in fruit is accelerated by an abundant foliage, and retarded by a scarcity of foliage.

Dr. Lindley further states, that he considers these propositions as the expression of general truths, applicable in all cases, but especially to the vine.

If they are founded, as he believes, in well ascertained laws, then the rigorous summer pruning of the vine is totally wrong. He recommends, on the contrary, that not only should the entire crop of leaves be unpruned, but that the lateral shoots, always hitherto removed, should be permitted to remain; because all those laterals, if allowed to grow, would by the end of the season have contributed somewhat to the matter stored in the stem for the nutrition of the fruit; because the preparation of such matter would have been much more rapid; and because the ripening of the fruit, depending on the presence of such matter, would have been in proportion to the rapidity of its formation.

It is a mistake, continues he, to imagine that the sun must shine on the bunches of grapes in order to ripen them. Nature intended no such thing, when heavy clusters were caused to grow on slender stalks, and to hang below the foliage of branches, attached to trees by their strong and numerous tendrils. On the contrary, it is evident that vines naturally bear their fruit in such a way as to secure it from the sun; and man is most unwise when he harshly interferes with this intention. What is wanted is the full exposure of the LEAVES to the sun; *they* will prepare the nutriment of the grape—*they* will feed it and nurse it, and eventually rear it up into succulence and luscousness.

The same writer goes on to say:—"When, however, the branches have grown for many weeks and in autumn be[gin] to thicken in their power of [illegible], every [illegible] is their right to stop the shoots by pinching at the end. [illegible] that season newly formed [illegible] have [illegible] more than [illegible] [illegible] [illegible] at the expense of [illegible] in other parts. Advance [illegible] the vine [illegible] therefore [illegible] for the [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MARCH 23, 1854

Dignity of Agriculture.

There is no nation where Agriculture has so long contended against the difficulties with which caste and fashion have overshadowed it as ours. It is true that within a few years, through the energy and devotion to this great science which some of our best men have given, Agriculture has been presented in a more alluring form, and its value and great usefulness is beginning to be appreciated. In ancient times, the loftiest minds were those that were acted on by the harmonizing and beautifying influences awak'd to life by the primary calling of man.

Hear what history says:

About 753 years before the nativity of Christ, Romulus founded the city of Rome, whose inhabitants were destined to be the conquerors and the improvers of Europe. The Roman eagle triumphed in Egypt. Persia, Greece, Carthage, and Macedon; and the soldiers who bore it on to victory, in those and other countries, being all possessors of a larger or smaller extent, naturally introduced, upon their return, any superior vegetable, or improved mode of culture, which they observed in those highly civilized seats of their victories.

Thus the arts of Rome arrived at a high degree of superiority that was the result of the accumulated improvements of other nations; and, finally, when Rome became in turn the conquered, the victors became acquainted with this accumulated information, and diffused it over the rest of Europe.

Of the Agriculture of the early Romans we know but little; but of its state during the period of its greatest prosperity and improvement, we fortunately have very full information. Cato in the second, and Varro in the first century before the Christian era, Virgil at the period of that event, Columella and Pliny subsequently, and Palladius in the second or fourth century, each wrote upon agriculture, which, except Columella's, have come down to us entire.

When Romulus first partitioned the lands of the infant State among his followers, he assigned to no one more than he could cultivate. This was a space of only two acres. After the kings were expelled, seven acres were alloted to each citizen. Cincinnatus, Curius Dentatus, Fabricius, Regulus, and others, distinguished as the most deserving Romans, had no larger estates than this. Cincinnatus, according to some authorities, possessed only four acres. On these limited spaces they dwelt, and cultivated them with their own hands. It was from the plow that Cincinnatus was summoned to be dictator: and the Samnian ambassadors found Curius Dentatus cooking his own repast of vegetables in an earthen vessel.

Some of the noblest families in Rome derived their patronymic names from ancestors designated after some vegetable, in the cultivation of which they excelled, as in the examples of the Fabii, Pisones, Lentuli, Ciceriones, and the like. In those days, "when they praised a good man, they called him an agriculturist and a good husbandman: he was thought to be very greatly honored who was thus praised." As the limits of the empire extended, and its empire increased, the estates of the Roman proprietors became greatly enlarged; and attained to a value of £80,000. Such extensive proprietors let portions of their estates to other citizens, who, if they paid for them a certain rent, like our modern tenants, were called *Coloni;* and *Politores*, or *Partiarii*, if they shared the produce in stated proportions with the proprietor. Leases were occasionally granted, which appear to have been of longer duration than five years.

They cultivated wheat, spelt, barley, oats, flax, beans, pease, lupines, kidney-beans, lentils, tares, sesame, turnips, vines, olives, willows, and the like. Of the relative importance or proportion in which the crops were profitable to the Romans, we have this judgment of Cato:—"If you can buy 100 acres of land in a very good situation, the vineyard is the first object if it yields much wine; in the second place, a well watered garden; in the third, a willow plantation; in the fourth, an olive ground; in the fifth, a meadow; in the sixth, corn ground; in seventh, an underwood, a plantation yielding stout poles for training the vine; and in the ninth, a wood where mast grows."

With such revelations from history, shall we remain inactive? The great "breaking up plow" has been at work, and public opinion has felt its influence; crooked places have been made straight and rough places have been made smooth, and Agriculture will soon receive that attention which its greatness demands. The star of hope beams brightly upon it, and we look confidently to a glorious result upon our country and the world, from a true appreciation of this science.

Celery.

This delicious and most acceptable table luxury, we are glad to notice, is receiving a portion of the attention it deserves; and we notice some of our market gardeners are giving it peculiar attention, study and care.

Until very recently we have never seen anything worthy the name of celery. True, it was celery; but not table celery. It was neither properly grown, nor any attention given to the blanching of it—it was simply a green stringent plant, wholly unfit to eat. It had been supposed by many that we could not grow celery to perfection around San Francisco, or in California, as the season was so hot and dry. This error arose from not knowing the nature of the plant, or its wants. There is no class of garden product that will pay so well as celery, when properly grown and blanched; it commands a very handsome price, and if the cultivators would but take more pains, cultivate less ground, and cultivate it better, they would be better paid for their labor.

We have noticed with great pleasure the efforts of E. A. Upton, Esq., (near Sans Souci,) to excel in the cultivation of this luxury, and we believe he brings the very finest specimens that are found at our market. Mr. Upton is giving much attention and study to this one article, and we may look for some wonderful specimens from his gardens.

The objections raised to the climate, season and soil, are wholly unfounded. We have peculiar advantages both in soil and climate, and no place in the world can excel as in this article. Celery flourishes best in a deep and rich soil, rather moist. The earth should be mellow, rather light; one great desideration is to have the soil trenched and spaded, two feet deep, and made rich by prior application of manures. It must be deep soil and free from all chayey substances, and as clear from trees as possible. The following article is worthy attentive perusal:

"To procure early Celery, the seed should be sown on a gentle hot-bed, from the first to the middle of December. Collect a load or two of warm horse-manure. Put it in a form eighteen inches thick, to be covered with a frame and glass sash. When the violent heat has subsided, cover it with six inches of light soil, whereon sow your seed. Press it down, and rake it lightly giving a gentle watering. Put on the glasses; shade from severe sun; give a little air from 11 to 2 o'clock; and as soon as the plants are up, air freely. Thin them out to half an inch apart. When they are three inches high, plant them out into a well-prepared bed of rich, light soil, which will be from the first to the middle of January—cover at night with mats or boards, to protect from cold or frost. By the first of March, they will be sufficiently strong to plant out in trenches for blanching. However, if extreme earliness is not an object, sow the seed about the first of February, on a rich, dry, warm border; when up, thin them out. About the middle of March, transplant them, three or four inches apart, into another piece of ground, to stock and harden, till they are finally planted into the rows for permanent culture.

The regular way is to select a level and rich piece of ground; dig the trenches a foot wide, ten inches deep, and three feet from each other; if convenient, from north to south, though any other aspect will do. Let the earth be regular thrown out on each side of the trench, and sloped off. Five or six inches of well decomposed manure should then be worked full half-spade deep into the bottom of each trench. The plants which were transplanted into the beds or frame should be carefully lifted, and prepared for planting, which is done by cutting off the extremity of the roots; shortening their tops or leaves, but not so low as to injure the young centre leaves; and divesting the neck of the plant from suckers. This done they may be planted into the trenches, at the distance of four or five inches apart; after which, give the whole a good soaking of water, and shade from the sun for a few days. Their after-culture, is to stir the soil frequently, with a small hoe, and giving a copious supply of water in continued dry weather. About the middle of June, or first of July, tie the leaves together, or hold them tight with one hand, and with the other the earth is carefully drawn up round the stems, but not so high as to allow the earth to get into the centre of the plant, which causes it to rot or rust. The soil for this purpose has to be broken, and well pulverized with the spade. If the weather be dry and hot, Celery should not be earthed up so early: in such case, a row for early use may be blanched, by placing a board to prevent the air from getting under. By this means it can be very well blanched, and ready for the table by the middle of September. I am aware that writers on the subject say, "earth it up every few days as it continues to grow;" but by such a practice in warm weather, it will not grow long, but rot off and decay. About the first of June, earthing up may proceed without injury; but let it be done firmly and evenly, and in a sloping direction, from the base to nearly the top of the leaves. In that state, it may remain sound for a long time. If continued frost be apprehended, dry litter should be spread over the plants, and a quantity lifted and laid in a bed of sand or earth in the vegetable cellar, in which it will keep fresh for several weeks.

When planting, it is a very convenient method to mix both Red and White together; you can thus obtain both sorts in use, from the opening of one trench. Large fields of Celery can be pretty successfully cultivated by the plough, for supplying the market. It is a crop that generally makes a good return to the grower."

St. Patrick's Day was duly observed in our city last Friday.

Rice.

There can be no doubt but that in a few years Rice will be cultivated to a considerable extent in this country. There are extensive tracts of land very well adapted to its culture, and we earnestly hope our legislature will not adjourn without giving their attention to many important subjects connected with this science which are imperatively called for.

There is much that could be done to great advantage to the State, if the needed stimulus were but promised. The vast "Tule lands" could be reclaimed and become thriving Rice plantations, thus increasing their value to the State, and adding to its wealth an additional home product. The Sacramento that has so often submerged her banks, causing ruin to the cultivator, would soon become one extended Rice field, and nothing can be more sure than that such is to be the future of these rich and fertile banks; they will prove to California what the banks of the Nile are to Egypt—the source of her products—and the swelling torrents that flood her banks and have received so many "Anathemas" from those who regarded not the element in their season, will be led to watch the coming rise of the waters as a blessing that is to give them a harvest.

We therefore most earnestly hope attention will be given to this subject immediately. We copy from a standard work a brief article upon the cultivation of this staple product.

Rice—(*Oriza Satira.*)—This is a genus of plants, consisting of several species, which, however, may be divided into two varieties, viz., mountain rice, which grows in dry, elevated soils, and marsh rice, sown in low swampy districts. The former kind was raised by Mr. Bordley, on dry, sandy land, near Annapolis, in Maryland. It is perhaps possible that this plant my be gradually introduced into the northern States, and made to grow in dry and elevated ground. This is much to be desired, as rice is the cheapest nutriment known, containing, it is said, ninety-six parts in a hundred of nutritive matter.

"The Farmer's Assistant," gives the following directions for the culture of this plant: "Early in the spring, the ground is to be fitted with the plough for the reception of the seed, which is to be drilled in, in rows, at the distance of about twenty-seven inches apart. When the young plants have acquired a suitable height, the weeds are to be eradicated from the crop with the plough, or with a small harrow to be guided by handles behind, run twice between the rows, and the work is then completed by the hoe, and perhaps some hand weeding.

"In due season after this, the water is to be occasionally let on the ground, for the purpose of killing the weeds and grass; and then to be let off again, in order that the crop may have such farther ploughing and hoeing as may be found necessary. If water is not used, the growing crop is to be kept clear of weeds, like other hoed crops, till the ground becomes sufficiently shaded to prevent farther trouble from them.

"The grain will be found sufficiently ripened while the stalks are still green; and on this account they are valuable as a substitute for hay. If the crop be flooded, the water is to be let off in due season, so that the ground can be laid sufficiently dry before harvesting. With regard to this operation, we will merely observe, that he who understands the manner of harvesting wheat, rye, barley, or oats, need be at no loss as to the best method of gathering this crop; remembering, however, that the straw should be sufficiently dried before threshing or stowing the crop away."

Agricultural Education.

The following eloquent and truthful remarks were made by Mr. William during the discussions of the convention for the revision of the constitution of Michigan. They will be found at page 249 of Mr. Shearman's System of Public Instruction:

"Now the design of an agricultural education is to take those who are certain to be skilled in manual labor, and teach them the general laws by which everything grows and thrives; to illustrate to them, by practice, the newest discoveries in agriculture; to open their minds to the reception of every useful truth, come from whence it may; and more than all, relieve the young from the thraldom of any traditionary errors that may have clung to their fathers from generation to generation. Teach rich men's sons to work! To work with the hoe and the plough! Every boy in the country understands that. But the object of such a school is to teach a man how to promote and protect all his interests. I hardly know how to illustrate the subject. But suppose the farmers of this State had, by a thorough education of the young wheat-growers, increased the value of wheat one cent per bushel. If we raise 7,000,000 bushels, it would make $70,000. If it could be increased in quantity ten per cent, it would make a difference in the production of the State for a single year of $500,000. Bring sharpened intellects to every daily pursuit of the farmer, and produce, by the use of study, experiment, and science, a corresponding increase of the productions of the State, and the cost of one hundred schools would soon be saved.

There are many branches of study that a farmer's boy *ought* to know, and which he does not learn in ordinary schools, which are rather calculated to fit a man for the counting room or college. I recollect a short time since that I saw a man—a respectable and intelligent man—upon the point of losing quite a large sum in a court, because he could not measure timber, piled in the shape of a section of a cone, for a coal pit. A man may find every day, in practical life, that he could save himself from expense and loss of time, if he had a knowledge of such matters. He ought to be familiar with the laws by which mechanical powers are applied. He ought to understand the readiest methods by which measurements of all kinds are made. I may put a case to the gentleman from Livingston. Suppose he and his neighbor had a large bin of wheat to measure, before they could settle or divide. An untaught man might measure it all over, and handle all. His boy, if taught rightly, could, in less than five minutes, calculate from the cubic contents, the number of bushels, and save the whole time and expense. These are the kinds of knowledge which he would have every farmer learn while young. But the great advantage of these schools was in the instruction that might be obtained in agricultural chemistry—a knowledge of the elements necessary to each crop; and that knowledge of physiology that would enable a man to propagate with success the best breed of animals, or bring to the most perfect development, vegetable life."

Mr. Williams is no theoretical visionary. He is a plain, straightforward, business man, and has made his own way in the world by industry and perseverance. That his neighbors respect his good sense and prudence is evident from the position he held. Such testimony, therefore, is invaluable. It is the result of careful thought brought to bear on the future welfare of our State; sustained by a wide experience among the working men of this country. As such we ask our readers not only to reflect on it, but to act on it.

Artificial Flower Making, is not an insignificant trade. An examination in Paris, in 1847, shows that the total manufacture of Cambric Flowers, in that year, amounted to more than two millions of dollars. Of these, England took $60,000 worth; the inferior and cheaper sorts being made at home. The cambric, muslin, gauze, velvet, silk, and other materials were procured St. Etienne, St. Quentin, and Lyons; the dyes and colors were prepared expressly for the purpose by manufacturing chemists; the buds, leaves, petals, stamens, pistils, and other component parts were made in small workshops by persons who each attend to only one part of the flower; while the whole were fitted together in other workshops. Even these larger workshops are frequently limited to one single kind of flower, each; so completely is the division of labor carried out. There were about fifty small manufacturers of petals, stamens, &c., employing about five hundred persons; while there were nearly six hundred dealers or venders, who employed nearly six thousand persons in building up the various parts into whole groups of flowers. Of this immense number of persons, five thousand were women, whose average earnings were forty cents a day. Several of the manufacturers effect sales to the amount of $50,000 a year each. So much activity and so much business does the single fashion of ladies wearing artificial flowers cause; and were the fashion to change—as fashions will change—how many women would be reduced to destitution!—*Household Words.*

Clay and Sand as Ameliorators.

It is important here to correct an error frequently met with in works that treat of the improvement of the soil. Almost all of them recommend clay as an ameliorator, of sandy soils, and sand for clay soils. Here again practice is in contradiction to theory, and has proved that clay and sand can not serve as ameliorators one to the other, as they will not combine; or at least they do so with great difficulty.

Let us examine the effect that each of these bodies is destined to produce upon the different soils. Sand ought to act upon soils in which clay predominates; for these soils, being generally too compact, and consequently too hard, require the application of substances tending to lighten them; and sand, as we know, possesses this property in a high degree, when it enters in a sensible proportion into the composition of a soil. But to produce this effect, it must be combined with the other elements of the soil; for where it is merely mixed with the soil, it does not loosen.

In fact, the experiments that have been made with sand prove that it has a constant tendency to descend through the arable surface, and that it reaches the sub-soil without having acted. It does not enter into the molecules of clay to form but a single body with them; it does not then prevent these molecules from remaining agglomerated among themselves; and consequently it loosens very little, if any, stiff clay soils.

But suppose even that the mixture of sand and clay was advantageous, this means of amelioration would be impracticable, on account of the immense quantity of sand required, and that it would be necessary often to renew, from its tendency to sink to the sub-soil.

It is only where a clay soil is based on a sandy sub-soil, that it would be advisable to seek to mix the last with the first, by means of deep plowing; and this should be done gradually, by setting the plow deeper each time the field is worked. The increase in depth should be gradual, in order to give the mineral parts of the soil and sub-soil time to adhere and combine, as it were, among themselves.

Another means of ameliorating clay soils is to submit the superficial crust of the arable layer to the action of fire. Particles of the clay are hardened by the heat, and produce the same effect as

gravel and sand. But this method of loosening the land is liable to the same objection as that by means of sand; the calcined particles being harder than the rest of the clay, are finally separated from it and pass into the sub-soil. It has, however, the advantage of sand in being cheaper.

Plowing at the proper season, the application of lime, and a sufficient quantity of manure, are the best means of ameliorating stiff soils. As the action of frost usually renders these soils more friable, they should be broken up in the autumn.

The same reasons that prevent the improvement of stiff lands by means of sand, hold good against the improvement of sandy lands by the use of clay. There are, however, but few cases in which the improvement of purely gravel or sandy lands will pay at all.

Millet.

The stalks and leaves of this plant resemble those of Indian corn, though much smaller. It grows to the height of three or four feet. A sandy soil suits it best. It bears drought admirably well. It is said to produce as large a quantity of grain as Indian corn, when cultivated in drills three feet apart and six inches in the rows; but owing to the difficulty in saving the crop, on account of birds, of its ripening unequally, and its shelling out, it is generally thought best to sow it broad-cast, and cut it when in milk for fodder.

Mr. Reeder, of Pennsylvania, sowed one peck to the acre in May, and put in four acres; cut it the middle of August, and dried it in the sun two or three days. He had seventy-five bushels of seed to the acre, and six tons of fodder on four acres. His cattle relished it very well.

It is stated in "The Plough Boy," that millet sowed in June, on the ground, will give from two to four tons ou fodder, and from twenty to thirty bushels of seed, equal to corn for fattening hogs. It is cultivated in Pennsylvania and Maryland as a fodder crop, and cut in the milk. It is preferred in winter by neat cattle to clover.

"The American Farmer" gives the following very flattering account of this grain. Millet sown from the 1st of May to the 20th of June has invariably furnished more fodder than could have been obtained from grass under similar circumstances. On the 5th of May, five bushels were sown on four acres; on the 5th of July it was harvested, and estimated at four tons per acre. It requires in all cases fine tilth, and as much strength of soil as is necessary to produce heavy oats.

A crop of fodder can be produced if sowed as late as the last of July.

Mr. N. Devenport, of Milton, Massachusetts, gives the following account of growing a crop of millet:

"From the 10th to the 23d of June, I sowed about twelve acres of millet, at about sixteen quarts per acre. About one-third was on land planted the year before, and I think produced nearly three tons per acre; the other two-thirds was on green sward, ploughed and harrowed but a few days before being sown; and on very light land, without any manure on either. I had not much over one ton per acre on the green sward, the land being so light that it did not bear more than two or three hundred of hay per acre. I mowed my millet from the 1st to the 12th of September; and I found the tops of heads perfectly ripe and fit for seed."

John Hare Powell, Esq, of Pennsylvania, has given us the following observations on the culture of this crop:

"I have made many experiments on various soils, and at different seasons, to ascertain the product as well as the properties of millet. Upon light land, in good condition, it succeeds best. It requires in all cases fine tilth, and as much strength of soil as is necessary to produce heavy oats. I have not seen, either in Europe or America, any green crop which so largely rewards accurate tillage and plentiful supplies of manure, as the species of millet usually grown in this and the adjacent counties. I have sown it from the 1st of May to the 20th of June, and have invariably obtained more fodder than could have been had from any grass, under similar circumstances. In the autumn, eighty bushels of caustic lime per acre were strewed upon an old sward, which was immediately ploughed, closely harrowed, sown with rye, and rolled. The rye was depastured in the winter and succeeding spring. Early in April the land was ploughed again; the lime and decomposed vegetable matter was thus returned to the surface. About three weeks after, it was harrowed, to destroy weeds; early in May it was again harrowed for the same purpose; within a fortnight it was stirred with Beatson's scarifier to the depth of nine inches, harrowed, sown with millet, and rolled. The crop was fairly estimated at three tons per acre. After the millet was cut, the field was stirred, and repeatedly harrowed, to destroy the after growth of noxious plants. I intend to again sow rye, not only to obtain pasturage, but to protect the soil from the exhalations of the sun. In the succeeding spring, a slight dressing of fresh manure was ploughed under; the scarifier, roller, and harrow, were used at intervals as before. On the 5th of May, five bushels of millet seeds were sown on four acres; on the 5th of July the crop was harvested, and estimated at four tons per acre. I have found this [illegible] forty tons from six acres, of which four only had been manured; the remainder would not have borne a good wheat crop. One of the lots was weighed, an account of this was regularly kept: the [illegible] as much as could be pressed in a [illegible] I have frequently used a large quantity of [illegible] to the [illegible] of [illegible] and [illegible] consumed millet in its green state, they performed their work with more spirit and vigor than they had done before, or have shown since, except when fed with grain. My cattle, of all ages, prefer it to both red and the best white clover, meadow, or timothy hay.

"I am not disposed to cultivate it as farinaceous crop, since I have found great difficulty in securing it sufficiently early to prevent a large part of the grain from being left on the ground. The seeds on the upper parts of the stalks generally ripen and fall before those below have been filled. I therefore invariably cut it when the upper parts of most of the heads contain seeds that are hard. In this stage in affords fodder more nutritious, and more easily made, than any sort of hay. The expense of tilling the land, is not so great as at first view would appear. A yoke of good oxen can scarify three acres and a half, without difficulty, in one day. I would recommend millet, not merely for its value as a food, but for the means it affords of making clean the land, without summer fallows, or drill crops. The ingenious arguments which have been adduced, to prove that deep stirring between growing crops is advantageous to them and the soil, are founded upon English experience, properly directed by close attention to the effects of a moist climate. Some of our writers have profoundly asserted, that as 'dew drops' are found on the under leaves of plants after deep stirring has been given in a time of great drought, the practice is sound. I should suggest that, moisture had better be at such times conveyed to the roots, than be exhaled by the sun, or placed on the leaves until his rays shall have exhausted it all. The valuable parts of most manures readily assume the gaseous form; every deep stirring, to a certain extent, in hot weather, therefore, impoverishes the soil. Deep ploughing, at proper season, is, I conceive, the basis of all good farming Such crops as shall enable the husdandman to extirpate weeds and obtain large supplies of fodder, without much exhaustion, should be the great objects for his aim. I would propose that a foul sward receive its proper quantity of quick lime, which should be spread and ploughed under, in its caustic state, in the early part of September; that the field be harrowed sufficiently; sown with rye at the rate of two bushels per acre, as early as possible; that it be depastured late in the autumn and early in the spring; that in May it be again ploughed, three inches deeper than before; that it be harrowed, and left until the small weeds begin to appear. Early in June millet should be sown; in August the crop can be removed, after the labors of the general harvest. The field should be slightly stirred with the scarifier, occasionally harrowed, and left throughout September, for the destruction of weeds, as before. In October it may be manured, and sown with wheat, or left for a crop of Indian corn."

For the California Farmer.

The County of Monterey.

This beautiful county is destined to become one of the richest agricultural and pastoral districts in our State.

The principal physical feature of the country is the great plain of the Salinas, which takes its name from the natural lakes of salt water at its commencement. The valley opens to the ocean in the middle of Monterey Bay, where it is in parts fifteen and twenty miles across. It is crossed in its middle by the Salinas river, which heads in the elevated lands of the Mission of San Miguel, and runs in a N. N. W. course for one hundred and twenty-five miles to its mouth, about fifteen miles N. E. from the city of Monterey. For sixty miles of this distance it runs through a plain varying from two to ten and twenty miles in breadth and enjoys one of the most salubrious climates on the face of the earth. The ocean coast of this county is bounded mostly by the Santa Lucia range of mountains, very steep on the shore, and so named by Vizcaino, in 1602.

The settlement of this county was commenced by the Spanish Government under Gaspar Portales and Padre Junipere Serra, in June, 1770, at the town of Monterey. In 1602 the expedition under Sebastian Vizcaino buried many of their seamen, who had died of the scurvy, near the site of the present Custom House. The features of the country around the town can be distinctly identified from the description of these "ancient mariners."

On the secularization of the Missions in 1833, lands began to be granted very freely in the Salinas plains and San Juan, to native and naturalized Californians and Mexicans. The most of them are held by titles from Governors Figuerva, Castro and Alvarado, and are among the best in the country.

Prior to the year 1824, before the commencement of the hide and tallow trade, I am told by some of the old settlers that in the Missions of San Carlos de Monterey, San Juan Bautista, Soledad and San Antonia, there were as many as 125,000 head of horn stock; some 150,000 sheep; and 25,000 horses. At one season, [illegible] fires and droughts, the priests at the Mission of Soledad were obliged to kill several thousand head of their stock of horses to preserve the pasture and water for the cattle and sheep. In Carmelo grew apples, quinces, and pears—[illegible] with strawberries and raspberries and a fine [illegible] with but a slight acclivity. In San Juan Bautista they have an old [illegible] which grows apples, pears and quinces, and I believe a vineyard was also planted there in the Mission time which produced excellent grapes. Almost any fruit of the temperate zone will grow in the [illegible] region of San Juan Bautista, which is [illegible] by two and three thousand feet [illegible] tains excellent farming land and healthy, dry climate. This valley is now settling up fast.

In the mission of Soledad grew apples, pears, olives, quinces, and grapes. The vineyard is still in bearing, being situated some five miles from the Mission, in "*bolso*," from the head of which flows a warm spring used to irrigate the vines. The grape produced is excellent flavor, but small.

The Mission of San Antonia de Padua, situated in an elevated valley of the Sierra Santa Lucia, some 1,200 feet above the sea, was founded by Padre Junipero in 1771. The most of the old buildings are still standing, but in very bad condition and gradually going to decay. The valley is very extensive, about twelve miles long by four broad, covered with every variety of California oak, and the sides of the surrounding hill with the beautiful pine of California, producing an edible nut similar in flavor to the peccan. The orchard yields pears, figs, peaches, quinces, and apples in the greatest abundance and the finest quality. The vine grows with great luxuriance, and the grape though small, very luscious. The garden grounds of the Mission are watered by a canal cut by one of the old priests and brought a great many miles' distance.

One of the sheep and horse farms of this Mission is the beautiful valley of San Lorenzo, situated in a hollow of the coast range, about fifteen miles east of San Antonio, and only half a day's ride from the great Tulare plains, opposite the Tache lake. This lovely and magnificent valley, entirely uninhabited by man, is tenanted by herds of antelope, deer, bear and every species of California game covered with hair and feathers. A fine stream runs through it, with numerous springs of water and abundance of the nut pine, oaks of different classes, sycamores, cottonwood, willow, &c. The valley is an average of two and a half miles in breadth by twelve miles in length, contains abundance of the finest soil, and is completely secluded from the world. It possesses the best and most level pass from the Coast Range into the San Joaquin Valley, as before mentioned, and nearly on a line with the proposed southern route of the Pacific and Atlantic Railroad. In this valley can be completely realized the dream of the vision of Rasselas as written in the solemn and stately prose of old Sam Johnson, a father in the English literary calendar. The profound stillness of this delightful region filled our minds with the most pleasant emotions, and it was with the greatest difficulty we could be brought to leave its beautiful groves and grassy slopes. The Coast Range of California, or second elevation of mountains from the sea, contains great numbers of valleys such as this, particularly the one some fifteen miles further to the south, called "Estralla," belonging formerly to the old Mission of San Miguel. They contain immense quantities of the finest soil and adapted to every kind of grain and fruit of temperate climes, and will doubtless in a few years swarm with a vigorous and industrious population, and as Byron saith of Portugal, in a different sense may we apply his magnificent verses to these valleys of our California:

"Then slowly climb the many winding way,
And frequent turn to linger as you go,
From loftier rocks new loveliness survey.

"Oh Christ! it is a goodly sight to see
What Heaven hath done for this delicious land!
What fruits of fragrance, blush on every tree!
What goodly prospects o'er the hills expand."

The valley of San Lorenzo must not be confounded with the rancho of San Lorenzo belonging to the Soberanes family of Soledad Mission. It is separated from this last rancho, by only a low range of hills, through which there runs an excellent wagon road. It is without doubt the best route for the southern railroad, as the most of the way from Walker's or the Tejon pass for 270 miles, is over entirely level land, until you arrive at the port of Monterey.

During the time of the old Missions, the best of wheat and grain was grown at Soledad and San Juan. Great preparations are making this year for sowing wheat by our farmers. Mr. J. B. Hill, one of our enterprising agriculturalists, has fenced in over 400 acres of plowed land, and is making preparations to enclose as many more. There are said to be large tracts of public land vacant, and the rancheros, as soon as their titles are confirmed and surveyed, will sell as low as the government. The amount of good wheat and grain lands in this county cannot be estimated under 250,000 acres. The great difficulty with settlers is the expensiveness of timber for fencing and inclosures. In a few years the furnishing of red wood rails and posts, must become an immense business for the southern county farmers, giving active employment to the lumbermen of Humboldt and the northern coasts.

The city of Monterey is probably the healthiest and most beautifully situated of any point on the entire Pacific coast of North America. It possesses a most magnificent harbor and anchorage, and will doubtless in a very few years become the mart of an active commerce, and from its agricultural lands, promises to become the seat of extensive flouring mills—a [illegible] city.

The city is situated on [illegible] gradually falling down to the sea—the [illegible] with pine and cypress, and the [illegible] and with [illegible]. The [illegible] of April exceeds the most beautiful parts of Old England, green and [illegible] and [illegible] of the most magnificent parts. And [illegible] [illegible] [illegible]

Farmer's Clubs.

We highly approve the plan of the annexed position, and we most readily second the proposition by most cheerfully offering to the "farmers of California" to extend the same offer to all clubs formed throughout our State. We now propose to send to all organizations of County Societies, Clubs and Circles, where the chief object is the advancement of agricultural science, a copy of the "California Farmer," free, when they make us acquainted with their organization, and we receive the reports of their meetings.

Farmers' Clubs.—Some weeks since we published an article setting forth the advantages of forming clubs for the familiar discussion of subjects connected with Agriculture and Horticulture, and also the outline of a constitution and bye-laws for such a club. We are pleased to learn that very many clubs are forming in different sections of the country, and that they promise to be productive of the best results. This is necessarily the case. Individual observation, research and experimenting, may do much in enabling the farmer to improve his system of cultivation, or to form one when he has none; but the secret of rapid progress lies in combined exertion; in the comparison of observations and experience. There are probably some in every town who are so thoroughly sellish aud egotistic, that they will refuse to communicate the "two mites" of their knowledge to their fellow laborers, and hold themselves aloof from any organized effort, but we query whether the co-operation of such narrow-minded men could be of any practical service in promoting the purposes of such a society. To every farmer we say, make a resolute effort to form a club immediately, so that the benefit of it may be reaped in the crops in the next season. Young farmers are the ones that should be foremost in these clubs, for they have the most to gain by them, and will be moro likely to sustain them than those who have grown gray in following the ancient landmarks.

Suiting our action to our text, we call attention to the following proposal. We will send the Country Gentleman for one year, commencing with the present volume, to every Farmers' Club, consisting of at least ten members, that shall send us their list of officers, and give us assurance that they have held, or will hold weekly, or semi-monthly meetings, for three months in the year, and monthly meetings for the remainder of the year. We shall be glad to open a correspondence with any club already formed, and to afford all the assistance in our power to those that are desirous of establishing one. The above proposal will be open for acceptance for three months. What town shall be first to avail itself of the offer?

The London Farmer's Magazine gives the following extract from the journal of a gentleman who visited Mr. Coke, at his estate at Holkham, in 1830:

"The postilions were first desired to stop near some beasts of the North Devon breed, grazing in the park; and Mr. C. mentioned several facts illustrative of the superiority of the Devons; amongst others that he called on a Mr. Handcock, (a fashionable butcher in London) who supplied some of the first families, and asked him if he had ever killed any Devon beasts. He replied "no, that they were not good enough for his trade; he would only use the best Scots." Mr. C. persuaded him to try the Devons, and he so much approved of them that he bought all Mr. C. sent to market for a considerable time—more than one hundred beasts. He also mentioned a trial between the fattening of two Devons, against one short-horned ox of the old Yorkshire breed, the two costing the same as the one, and when killed the two weighed 140 stone of 14 lbs.. (1960 lbs.) while the short horned ox weighed 110 stone, (1540 lbs.) and it had eaten more food than the two Devons. Mr. C, considered the Devons as by far the best for plowing. His object was to produce the most food for man, of the best quality, and at the last expense. He said '*size had nothing to do with profit; it was not what an animal made, as much as what it cost making.*'"

This last remark contains a great deal of truth, and should be remembered by all breeders and fatteners of stock of all kinds. In California we have scarcely taken those points sufficiently into consideration, and there is a great call for careful experiments.

Heavy Sheep.—A London correspondent of the National Intelligencer says he had heard much of the great weight to which sheep are sometimes fed in England, and his belief was really staggered by some of the reports; but he saw in one butcher's shop, four sheep, which had been raised and fed in Gloucestershire, that weighed when slaughtered and dressed for sale as mutton was 250, 245, 216, and 197 pounds respectively. A shoulder, cut fairly from the largest, weighed 42 1-2 lbs. Two Lincolnshire sheep in the same shop weighed 216 and 201 pounds respectively.

County of Monterey.—The interesting and valuable sketch of this county, from the able pen of our correspondent at Monterey, will amply repay the reader; and we trust to hear from the same source often.

Carrot Butter.—A correspondent of the Dollar Newspaper gives a mode of coloring butter yellow, consisting substantially of the application of a liquid at churning, made by grating of yellow carrots, and after soaking in half their bulk of milk or water over night, straining through a cloth. This, we are assured, will make it as yellow as October butter, and with an agreeable flavor. Customers, that buy butter of the manufacturer, who furnishes the communication, much prefer this to any other. Some of our readers may think this method worthy of trial; others will prefer a modification, which we have often tried with great success. This modification differs in one particular only, yet has several advantages. The point of difference is in the time of applying the carrots;—that is, instead of doing it at the commencement of the churning, by introducing them into the churn, we apply them about two or three days sooner by introducing them into the cow. This modification has several advantages, namely, saving the labor of grating the carrots; furnishing animal instead of vegetable butter; and nourishing the cow into the bargain.

Later from the East.

The steamship Uncle Sam, Capt. Mills, arrived at this port at 8 o'clock on Monday morning, bringing late and important news from all parts of the world. The following is her memoranda.

The Independent Line Steamer Uncle Sam, W. A. Mills, commander, left San Francisco Feb. 16, at 5 o'clock, P. M. On the 23d, at 9 A. M., passed steamship Cortes, bound to San Francisco. Feb. 26th, encountered a severe gale from the N. W., which caused considerable delay. March 1st, at 1 o'clock A. M., arrived in Panama, having made the passage in 12 days and 7 hours—3 1-2 days in advance of the mail steamer California. Left Panama on the evening of March 6, at 8 o'clock P. M., with 873 passengers and 140 packages of Adams & Co.'s Express, from the Company's splendid steam yacht North Star.

There was but little local news at Panama when the steamer left. The weather was remarkably fine, and the Isthmus crossing in splendid condition—some of the passengers having crossed with their baggage in six hours with ease.

The Batemen children are at Panama, and will leave by the next steamer for San Francisco.

The news at Acapulco was quite stirring; the whole country is in a state of revolution. Gen. Alvarez has come out with a Pronunciamento declaring Santa Anna to be a robber, and accusing him of having sold his country. Gen. Alvarez is encamped in the mountains, about nineteen leagues from Acapulco, with a force of three or four thousand men. Santa Anna is collecting an army to march against him. He is also fitting out a fleet at Mazatlan to blockade the Harbor of Acapulco. On the day the Uncle Sam left Acapulco there was a report current that a battle had been fought and Alvarez's troops had been victorious.

Mr. Anthony Haines, of Ohio, died March 13. This is the only person that has died on board the Uncle Sam since she has been in the California trade, now over a year.

March 17th, lat. 28 44, lon. 115 44, at about 2 o'clock, P. M., the Uncle Sam experienced two severe blows, one on the bow, and the other on the starboard quarter. A moment after, discovered an enormous whale in the wake, with a severe cut in his side, and bleeding profusely; in the attempt to cross her bow, the monster took it a little too cool, and consequently got run over. At 3 o'clock P. M. passed steamship Cortes, bound to San Juan.

The Uncle Sam brings 873 passengers, of whom 105 are ladies.

We make up from our files the following summary of news;

The Nebraska question is not yet settled. Almost every Senator has made a speech either for or against the bill. Among the recent speeches in its favor, we notice one by Col. Weller. Public meetings have been held in many of the northern cities; the speeches and resolutions were savagely denunciatory of the principles of the Nebraska bill.

The Gadsden treaty and the message of the President accompanying it are printed in the eastern papers. As usual, the publication was unauthorized, and some discussion arose in the Senate upon the question of the violation of the injunction of secrecy.

The following are the principal provisions of the treaty:

1st. The new boundary commences two marine leagues north of the mouth of the Colorado, giving us no access to the Gulf of California, and goes between latitude thirty-one and thirty-two to the one hundred and eleventh degree of longitude west of Greenwich.

2d. It abrogates the eleventh article of the treaty of Guadalupe Hidalgo, and cancels the claims of Mexican citizenship under that article to date of ratification.

3d. The United States pay fifteen millions of dollars in mothly instalments of three millions each—the first payable on ratifying the treaty.

4th. Reserve five millions for claims of American citizens in Mexico, including the Garay grant.

5th. Both governments agree to put down fillibusterism, and pursue the fillibusters with army and navy into the other's territory.

6th. Agree to refund goods and chattels stolen by Indians from citizens of the other's country.

Great preparations are going on for a general European war. France and England will participate in it. The Cunard steamers have been detailed to convey troops to the seat of war.

Half of the British revenue force has been ordered into the navy, and everything indicates a speedy commmencement of the broil.

Louis Napoleon has ordered 3,000,000 cannon balls to be made at once.

The Russian Ambassadors have left France and England, and the English and French Ministers have been directed to leave Russia.

50,000 Turks have crossed the Danube, all well equipped. All communication between the two great Russian armies has been cut off, and their position is considered very critical.

Ten thousand British troops are to go to Constantinople immediately. Eighty thousand soldiers are to depart from France immediately, for the seat of war. 20,000 of these men are the flower of the French army.

A number of French ships of war have been ordered to sail at once for the seat of war.

Harrison, Ohio, Tuesday, Feb. 14.—To-day, about 4 o'clock P. M., the town of Harrison, (twenty miles northwest of Cincinnati.) was visited by a fearful and destructive tornado, tearing down dwellings, stables, &c. The course of the current of air was nearly from southwest to northeast, and the width of its track was about one hundred yards. A thunder shower came on from about northwest, with indications of a heavy rain, which were realised. Probably ten or fifteen minutes after the commencement of the rain, the tornado came down the White Water Hills, northwest of town, and about west of Goodley's Mill, leaving in its trace a prostrated and broken forest. It crossed the canal just north of Goodley's Mill, and struck the town in the direction of the Presbyterian Church. It left in its track such destruction and desolation as we have never before seen. Houses, stables, fences, trees and out buildings were prostrated, and in many cases blown into the adjoining lots. We were on the ground a few minutes after the destruction, and gathered in a hasty manner the items of destruction and loss. There are of course many omissions in the individual losses. A young man by the name o 'William Pruden had his leg broken, and Ironas Homan was dangerously wounded, and several others are more or less injured; but no lives lost. It is a miracle, too, for several houses and shops were entirely blown down.

In one shop five men were at work, and the building was entirely demolished; yet they escaped, by crawling from under the building.

There were about fifty dwellings, stables and shops either totally destroyed or badly injured. The storm, however, passed over that part of the town where most were small buildings. The entire loss will not exceed $25,000.

We have not heard from the track of the storm from either way, southwest or northeast, but we fear much destruction is in the track.

In the storm here to-day, one man was blown out of the street and landed in a lot. Bags of wheat were blown out of a wagon. Sticks of timber were whirled through the air like feathers. There is now a large scantling or joist sticking into the gable end of a frame building twenty feet from the ground. It had been taken up by the wind and carried along endways with such force as to drive it through the frame, and stick there. There are various hard yarns I could tell, but they can only be believed by being seen.—*Cincinnati Commercial.*

Important Mexican News.—Our Acapulco correspondent keeps us advised of the movements in that place. We have no Mexican papers, the communication between the capital and Acapulco being cut off. Our correspondent has transmitted copies of several of Gen. Alvarez's proclamations. The General denounces Santa Anna as a traitor, and applies to him all the bad names he can think of.

Acapulco, March 10, 1854.

All communication with the city of Mexico via Acapulco intercepted; the port daily expected to be blockaded, from vessels of war from Mazatlan and San Blas. No engagement as yet between Santa Anna and Alvarez troops. Both armies are daily being strongly reinforced.

Santa Anna is to be crowned Emperor on St. John's Day, June 24th, and has indefinitely postponed his imperial visit to his hacienda at En Cerro. Two non-commissioned officers, deserters from the British army, are officers of the Government. General Alvarez is confident of success; his position by nature is impregnable. He also declared the port of Acapulco free, and in one hour by a forced loan raised $5,000. He has also decreed that American money shall pass current at par. The Castle here is in a proper state of defence for a seige; and a water battery of nine guns commands the entrance to the harbor.

War.—The dark, angry, threatening clouds that have hung over the European horizon, for months past, are now illumined by the lightnings flashing from their midst, denoting that the strife of elements has begun, and ere a month has passed we shall hear the thunders of a war more fierce and terrible than has heretofore been thought of. It will be a war that terminates only with victory or destruction. It will not be of one nation or for one nation; but for all.

We believe this the age, and the present the time, when the great battle of human liberty is to commence. A long and sanguinary war is but just begun, and the question is not Turkey and Russia, or Russia and other allied powers; but it is Liberty or Despotism, right or might.

Such is our faith, that we believe that it will result in the overthrow of despotism and monarchical power, and the establishment of the great principles of human liberty and equality, such as are now enjoyed by our own favored nation.

We trust the United States will value the position she now enjoys as the great neutral power of the world, and show by her example that she reveres liberty by maintaining her obligations of neutrality to every nation and improving her own opportunity of advancing it.

AGENTS FOR CALIFORNIA FARMER.

Messrs Adams & Co. at all their offices throughout the United States or Europe.

Messrs. Wells, Fargo & Co., at their offices throughout the Country.

Messrs. Langton & Co. *for Downieville, Foster's Bar, Goodyear's Bar, Minesota.*

Messrs. Leland & McCoombe—*Crescent City, Port Orford, Uniontown, Eureka, and Bucksport.*

San Francisco—Messrs. Murray & Co., booksellers, Montgomery street; Sullivan's newspaper stand, near the Post Office; Kimball's, Noisy Carriers Hall, Long wharf; J. H. Still, bookseller, Montgomery street.

Oakland—Mr. Isaac Willard.

Benicia, Martinez, &c.—Messrs. Stiles & Dodds.

Union City and Mission San Jose—Messrs. Howard & Chamberlain.

San Luis Obispo—Dr. Thomas L. Harvey, P. M.

Sacramento—Mr. Oscar D. Avaline; Messrs. Curle Brother.

Union, Humboldt Bay—A. H. Murdoch, P. M.

Mount Farm, O. T.—Gen. M. M. McCarver.

Marysville—Geo. S. Becker.

Stockton—Rosenbaum & Jonckimsen.

New York City, N. Y.—J. M. Thorburn & Co.

Bidwell's, Butte Co—P. Freer.

Weaverville, Trinity Co—H. B. Davidson & Co.

Yreka—Crane, Rogers & Co.

N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

Col. J. T. Hanley, Postmaster at San Francisco, left on the Golden Gate, on Thursday, for Washington. He goes to obtain further appropriations from Congress for the support of the Post Office Department.

Special Notice---To Subscribers.

We have issued, with this number, twelve numbers of the Farmer, and we trust in an acceptable manner to our Patrons, and desire to make each succeeding issue an improvement upon the last; and to do this—to feel encouraged to do this—we look to those who have kindly forwarded their names to us as subscribers, that they will use their influence to extend the circulation of our journal and make it more widely known and its influence more useful and prominent.

We hope too that many of our friends will make it a point to establish clubs, and send us the result.

We would hope, also, that subscribers should remit us the amount of their subscriptions cheerfully, as they are able to judge what the paper will be.

Many of the Farmers know the wants of the people for a paper like the one we have commenced; and to make it really what it should be, its friends should not only subscribe and pay, but see that it is widely circulated, and furnish it also, from time to time, with all the important facts that are of interest—this is what the Farmer needs continually, and will the friends see that we have it?

We particularly desire to be informed if our subscribers fail to receive their numbers regularly. We can furnish a few more subscribers from No. 1—A FEW ONLY.

Special Premiums for Subscriptions.

In addition to the standing inducement for the getting of subscribers for the "Farmer," we will make a present of HARPER'S ILLUSTRATED FAMILY BIBLE to the person who procures THE MOST SUNSCAIBERS in the first six months of our publication. This we regard as one of the most beautiful books ever issued. Who will have the prize?

A Premium---Farmers' Clubs.

With the hope of inducing such of our friends, and those who have a little leisure, to ride among their neighbors and introduce an Agricultural Paper, we take pleasure in offering the CALIFORNIA FARMER: and, to make it an inducement, we say to such friends—if you will get us FIVE subscribers, and remit the amount, we will send you SIX PAPERS, or for TEN subscribers, TWELVE PAPERS. We trust there are many friends who will cheerfully take a little pains to aid us, and thus extend the circulation of the Farmer, and make a useful vehicle for the Agriculture of California.

Subscribers will please be particular to name the Post Office to which papers are to be sent; or, if forwarded by express, which line they prefer.

To Our Patrons.

To Advertisers.—We would call the attention of those who desire to have their advertisements produce quick returns, to the pages of the California Farmer.

The Farmer will reach sources of trade entirely new and unattainable by any other means, and thus secure a large and immediate profit to those who desire to make known their business. By a glance at our advertising columns, it will be perceived that we present the best known and most extensive houses, and as we have space for but one or two of each branch, these will be the most prominent houses, and thus give more influence to them.

Agents Wanted.

We want good active agents to visit every county in the State for the Farmer. Young men can find a steady and profitable employment. Apply at this office.

☞ We desire Agents to report as early as possible, that we may be prepared in our issues for a sufficient number to supply the demand. Be sure and report promptly.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO.

ARRIVALS.

March 15—Schr Falmouth, Biley, 6 hours from Bolinas Bay, with lumber.

Schr Bay State, Waterman, 16 days from Magdalen Bay, via San Diego 5 days, with fish and turtles.

March 16—Clipper ship Waterwitch, Plummer, 220 days from Boston, via Rio Janeiro 76 days, with mdse.

Bark Isabella Hyde, Somerby, 45 days from Valparaiso; mdse.

Brig Tarquina, Robertson, 10 days from Puget Sound; piles.

Brig J B Brown, Mayhew, 8 days from Puget Sound; lumber.

WARREN & SON

MARRIED.

In this city 20th, by Rev. Mr. William, Nicholas Reynolds, Esq., and Miss Jane Morrison, both of San Francisco.

In this city, March 19th, by Bishop Allmeny, Francis J. Trary and Miss Catharine Clark, both of this city.

In Butte county, March 15th, by Rev. E. B. Wollsworth, Mr. George Campbell and Anne S. Caldwell, late of Racine, Wisconsin.

In New York city, Feb. 4th, by the Rev. Franklin Dyson, at the residence of the bride's father, Osborne S. Dodson, of Dawneville, Cal., and Miss Lucy M., youngest daughter of the Rev. E. Wadsworth, of Huntington, Luzerne county, Pa.

In Charleston, S. C., on Tuesday, Jan. 31st, by the Rev. J. Maxwell Pringle, John M. Breck, of Portland, Oregon, and Annie, daughter of the late Rev. William Ashmead of Philia.

In Nevada, on the 16th last., by Rev. Mr. Warren, Mr. Ezra D. Doyt and Mrs. J. A. Burnett, both of Nevada.

At the residence of Thomas J Holmes, Portland, Oregon, March 13, by Rev. Mr. Lymon, Mr. Henry Brown, and Miss Sarah Rowntree, of this city.

DIED.

In this city, March 19th, William Roney, aged 38 years, late of Philadelphia.

In this city, March 20, Hiram P. Rogers, of the firm of Howe & Co., aged 35 years, formerly of Boston, Mass.

In this city, March 17, David H. Fuller, aged 31 years, of West Gardner, Me.

At sea, Aug. 34, by falling from the maintopsail yard of the Br. brig Wm. Stoveld, Capt. James Mearns, a native of Aberdeen, Scotland.

At Carson's Creek, March 12th, Mr. William K. Newman, a native of Franklin county, Tennessee.

In this city, March 19th, Emma, second daughter of Samuel W., and Julia Green, aged about 5 years.

On board steamer California, March 20, of acute dysentery, Mary Ann Clynch, of the State of New York, aged 27.

March 21st, of laryngitis, Edwin L. Willson, aged 4 months, son of Caroline and Joseph L. Wilson.

REMOVAL.

DR. J. C. YOUNG has removed his office from 226½ Dupont street, to the corner of Montgomery and California streets, opposite Page, Bacon & Co.'s Banking House, where he will be happy to consult with his former patrons, and treat scientifically and with discretion all those who may require the services of a physician. The success of Dr. Young since his advent in this State, has been without a parallel, and he hopes by continued and untiring application to his profession, to remove from the public mind that lack of confidence which has so unhappily existed in regard to the Medical Profession in the State of California.

P. S.—All letters enclosing $10 will receive immediate attention. Direct Box 735, P. O.

N. B.—All papers in the State will please insert as Special Notice, the above, for one month, and send bill to Dr. J. C Young, M. D. 12 1m

C. A. McNULTY,
IMPORTER AND DEALER IN

[

UPWARD AND ONWARD.

BY SARAH J. WHITTLESEY.

Upward and onward, and who shall e'er pinion
Our bold Eagle's bright wing from the sun?
Proudly unfurling o'er freedom's dominion,
The star-and-stripe banner of thirty and one!

Foes have assailed her, and sneers of disaster
Thundered of impotence, rupture and shame;
Despots and traitors but speed her the faster,
Upward and onward to glory and fame!

Upward and onward, while thrones and dominions,
Empires and kingdoms have gone to decay;
Freely she floats as when first her broad pinions
Rose at the dawning of Liberty's day.

Veiled in the future, whatever betide her,
Starry ensign of the free and the brave;
Millions of true hearts will rally beside her
Shielding, defending, and perish or save!

Land of the stars and stripes, gallantly waving,
Whose only Monarch reigns righteous above!
On her white shores that two oceans are laving,
Bondage is only the links of his love.

Ægis of Justice, intrepid and daring,
Fount of nepenthe for wanderers' woes,
Faithful redresser, in equity hearing
Stars for defenders, and stripes for her foes!

Warm is her bosom, and freely she giveth
Respite and refuge from tyranny's rod,
Boldly proclaiming each mortal that liveth,
Born to do homage alone to his God!

Upward and onward, tho' foes may defame her,
Over the blue of the billowy sea;
Millions of hearts thrill with pride as they name her,
Home of the valliant and land of the free.

Upward and onward, America! ever
Be thy bold Eagle's swift flight to the sun;
Wither the arm ever lifted to sever
Our golden link of the Thirty and one!

Free as the breezes of heaven that fan her,
Long as eternity, mortals await,
May the bright folds of the star-spangled banner,
Float at the stern of the old ship of State!

I WILL BE GOOD TO-DAY.

"I will be good, dear mother,"
I heard a sweet child say;
"I will be good: now watch me—
I will be good all day."

She lifted up her bright young eyes,
With a soft and pleasing smile;
Then a mother's kiss was on her lips
So pure and free from guile.

And when night came, that little one,
In kneeling down to pray,
Said, in a soft and whispering tone,
"Have I been good to-day?"

Oh, many, many bitter tears
'Twould save us, did we say,
Like that dear child, with earnest heart,
"I will be good to-day."

MOSS ROSE.

The Angel of the Flowers one day,
Beneath a Rose-tree sleeping lay,
That spirit to whose charge is given
To bathe young buds in dews from heaven.
Awaking from his light repose,
The Angel whispered to the Rose,
"O fondest object of my care,
Still fairest found where all are fair,
For the sweet shade thou hast given to me,
Ask what thou wilt, tis granted thee."
Then said the Rose, with deepening glow,
"On me another grace bestow."
The spirit paused in silent thought—
What grace was there that flower had not?
'Twas but a moment—o'er the Rose
A veil of moss the Angel throws;
And, robed in nature's simplest weed,
Could there a flower that Rose exceed?

THREE THOUSAND DOLLARS.—Clark, of the Knickerbocker, gives the following colloquy between Powers, the sculptor, and a successful Yankee speculator who had "come over to see Europe." Scene, Power's studio at Florence, and the artist at work upon the "Greek Slave." Enter stranger, spitting, and wiping his lips with his hand:

"Be yeou Mr. Peowers, the seulpture?"

"I am a seulptor, and my name is Powers."

"Y-e-as; well, I spected so; they telled me yeou was—y-e-a-s. Look here—driven a pretty stiff business, eh?"

"Sir?"

"I say, plenty to du, eh? What d's one o' them fetch?"

"Sir?"

"I askt ye what's the *price* o' them seeh as yeou're peekin' at neow."

"I am to have three thousand dollars for this when it is completed."

"What!—heow much?"

"Three thousand dollars."

"*Three theousand dollars!* Ha'n't statewary riz lately? I was cal'latin to purchase some, but it is tew high. How's paintin's? Guess I must git some paintin's. Three theousand dollars! Well, it is a trade, skulpin' is, that's sartain. What do they make yeou pay for your tools and stuff? Spect my oldest boy, Cephas, could skulp; fact I know he could. He is always whittlin' reound, and cuttin away at things. I wish you'd 'gree to take him as a 'prentice, and let him go at it full chisel. D'ye know where I'd be liable to put him eout? He'd ent stun a'ter a while with the best of ye, he would—and he'd make money, tew, at them prices. Three thousand dollars!"

The "seulpture" having informed his visiter that he was not desirous of taking an apprentice, the "anxious inquirer" departed.

LOVE YOUR FATHER.—You who are yet favored and blest with the society of a father, *love him.* You little know the sorrow rankles in that heart that meets not the approving smile of a father. You may possess the gold of California, the wealth of the Indies, yet that vacant place is not filled. I have often wondered why it is that I hear those with whom I associate speak so often of their mother, and seldom of their father. My father and mother were beloved alike by me, and how many hours have I spent by that new-made grave, wishing him back to earth. But I do not mourn—he is freed from the trials of earth, and I ofttimes wish that I could be sleeping by his side. I happened to be in company one evening, about two years after my father's death, with some ladies, and heard one of them make this remark, "that she should not feel sorry to hear that her father was dead at any time." Alas! thought I, why was not your father taken, and mine spared, when I loved him so well? But I should not murmur; it is doubtless all right, and that my friend may live to see the time when tears will avail her nothing—she may yet be an orphan like myself. Perhaps that father is not always so pleasant as you could wish, my friend, but let him know that you love him—that you sympathize with him in his trials, and I care not who he is, he can but love you. Ah! yes, as you value your happiness in this world and that which is to come, do all that is in your power to make the last days of your parents happy. How often have I turned aside to hide the tears that would unbidden start as I have heard reproaches heaped upon a father; and how have I wished that I could be in that daughter's place long enough to speak one kind word to cheer him in this dreary world. I love to think of the time when He that has been "a father to the fatherless," shall say, "It is enough, come up higher." Then I expect my beloved parent will greet me in that blessed country where

"Parting words are never spoken,
Bonds of love are never broken."

ERREY.

THE SACREDNESS OF TEARS.—There is a sacredness in tears. They are not the mark of weakness nor of power. They are the messengers of overwhelming grief, of deep contrition, of unspeakable love. If there were any arguments to prove that man is not mortal, I would look for them in the strong, convulsive emotions in the human breast, when the soul had been deeply agitated, the fountains of feeling are rising, and the tears are gushing forth in crystal streams. Oh, speak hot harshly to the stricken one, weeping in silence; break not the solemnity by rude laughter, or intrusive steps. Despise not woman's tears—they are what made her an angel. Scoff not if the stern heart of manhood is sometimes melted to tears of sympathy—they are what elevate him above the brute. I love to see tears of affection. They are painful tokens, but still most holy. There is pleasure in tears—an awful pleasure. If there were none on earth to shed tears for me, I should be loath to live; and if no one to weep over my grave, I could never die in peace.

VALUABLE knowledge can be attained only by personal effort. Every one must traverse the hills and valleys for himself, and it is only by unremitting application and perseverance that the attempt will be crowned with success. But to the devoted, persevering seekers, success is certain. The state of mind is such as to insure the best use being made of any accessible helps, and of the exercise of ingenuity and application in surmounting difficulties even in absence of all foreign aid. Whatever may be his deficiencies and disadvantage, the person—especially the younger person—who is so sensible of the value of knowledge as to apply his heart to understanding—to seek for it as for silver, and search for it as for hidden treasures—assuredly shall not seek for it in vain. Knowledge is the prize of application.

AT a court of sessions out west, a man was brought up by a farmer, accused of stealing some ducks.

"How do you know they were your ducks?" asked the defendant's counsel.

"Oh, I should know them anywhere," replied the farmer; and he went on to describe their different peculiarities.

"Why," said the prisoner's counsel, "these ducks can't be such a rare breed: I have some very like them in my own yard."

"That's not unlikely, sir," replied the farmer; "they are not the *only* ducks I have had stolen lately!"

"Call the *next* witness!"

A GOOD story is told of Professor Humphrey, of Amherst College. One morning, before recitation, some of the students fastened a live goose to the professor's chair. When he entered the room and discovered the new occupant of his seat, he turned upon his heel, and coolly observed, "gentlemen, I perceive you have a competent instructor, and therefore I will leave you to your studies."

CALIFORNIA.—The following is from Wither, an English poet of the sixteenth century:

I've heard those say that travel to the West,
Whence this beloved metal is increased,
That in the places where such metals be,
Is neither grass, nor herb, nor plant, nor tree,
And like enough—for this at home I find,
Those who too earnest employ the mind
About that trash; have hearts, I dare uphold,
As barren as the place where men dig gold.

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the Fire Proof Store, No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Haxall and Gallego.

Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any adulteration.

Ground feed of all kinds always on hand.

Every exertion will be used to merit a continuance of the vator heretofore so liberally extended to us. 1-3t

Catalogue of Fruit and Fruit Trees.

WE call the attention of Nurserymen and Orchardists to a new catalogue just issued by us, prepared with great labor and cost, giving the lists of the best fruits cultivated in Europe or America, with their synonyms. This catalogue embraces also lists of best Vegetables, Ornamental Trees, Flowering Plants, Seeds, &c.—being a perfect illustration of the best varieties of everything belonging to AGRICULTURE, HORTICULTURE, and FLORICULTURE, with brief directions for the cultivators in each department, and as *adapted to California.*

This work will be found a very great help to all engaged in cultivation.

Price $1 per copy. WARREN & SON,
Nurserymen, Seedsmen, and Florists,
5 Musical Hall Buildings.

FLOWERS! BRIGHT FLOWERS!

A GIFT FOR HOME.
"THROW PHYSIC TO THE DOGS."

WE convert the pill box into a Floral vase, and instead of the "nauseate drug," we offer the perfume of Flowers.

Our beautiful collection of *California Flower Seeds* we now offer.

These are put up in handsome morocco cases, or homœopathic cases of glass bottles, with printed lists and directions, and with pressed flowers of the different varieties of each. These are of the most beautiful style that can be prepared, and are most appropriate gifts for home at this season.

We invite attention to them at our rooms, at Musical Hall Buildings. WARREN & SON,
5 Seedsmen and Florists.

3,000 lbs. New Garden Seeds.

RECEIVED by Brother Jonathan and John L. Stephens—20 cases Fresh Garden Seeds, of the very best varieties, which we shall offer at wholesale or retail, at low prices.

Purchasers who buy of us may always depend upon the Seed being true and fresh. We never offer seed from auction houses and refuse lots. WARREN & SON,
8-tf Musical Hall.

Eugenie and Leonce.

TRANSLATED FROM THE FRENCH.

[CONCLUDED.]

Eugenie, on her part, desired no larger allowance than she already had; with judgment and economy a very moderate sum proved sufficient to supply her wants, and she was rich enough to be both generous and beneficent. Her thoughts were yet occupied with the old peasant, as she was preparing to go to rest at night, and she said to Louise that they would go in company the next day and give some assistance.

The next day the Count d'Amilly came, as he often did, to breakfast with Eugenie.

"Here," said he, "is an invitation to a ball in Paris, to come off in ten or fifteen days; it is to be a magnificent fete, and I hope, my dear daughter, that you will go. You need a dress for the occasion, and see I have brought you one."

In saying this, the Count put into her hand a purse containing sixty louis. When alone, Eugenie called Louise, and showed her the gift she had received.

"With fifty louis I can buy a dress sufficiently elegant, and the remaining ten I can give to poor old Jerome. Go, Louise, and enquire among the villagers whether all that they say of the old man is true, and if the account we have had is not exaggerated; I will carry to him, myself, the sum I intend to give him."

In the afternoon Louise returned and told her mistress that she had not only enquired among the villagers, but had visited the cabin of the old peasant himself—that he had a poor, bed-ridden sister, who was tenderly nursed by Jerome's eldest grandchild, a girl twelve years old; that the sick woman occupied a comfortable room, with a tolerable bed, while the old man slept in a kind of little barn, upon a bed of straw, and that, although wretchedly poor, Jerome was considered the most honest man in the village the best brother, and the kindest grandparent.

"That is enough," said Eugenie, "let us go at once and carry to him the ten louis." Merely saying to her husband, who was seated with some visitors at a game of whist, that she was going to walk in a grove of willows which bordered a harvest field, she set off on her errand of charity. She reached the spot where Jerome ordinarily labored—she looked on every side, but Jerome was not to be seen. At length one of the reapers directed her steps towards a hedge of wild roses, behind which, he said, the old peasant sought a short repose on the borders of a little stream. Eugenie and Louise reached the spot, and soon perceived the object of their search, asleep, and surrounded by his grandchildren. They approached softly, in fear of disturbing him, and paused for a moment in order to contemplate the touching picture. One pretty little girl was fastening her apron to the hedge, above her grandfather's head, to shelter him from the heat of the sun; one of her brothers assisted her in this labor of love, while the two others, armed with small branches, and on their knees on either side of the old man, drove off the flies and gnats which would have disturbed his repose. The little girl, seeing Eugenie, laid her finger to her lips to enjoin silence, and Eugenie, smiling, stole softly to her side and whispered,

"I wish to speak with your grandfather—I will remain here till he awakens; you can go with your brothers to play in the field, and when I call you, you can return."

The little girl seemed rather unwilling to desert her post, and finally, she and her brother agreed to go, only on condition that Eugenie promised to keep the flies off their grandfather in their absence. Granting to this request a smiling assent, Eugenie took the branch in her hand, and seated herself beside Louise, under the shade of the hedge of roses, and the little family ran off to play. Eugenie then taking the purse from her pocket laid it on her lap, to take it to the [illegible] to awaken the old man by the tinkle of [illegible] the money she passed and [illegible] with her reward.

"How gratified [illegible] old man! what a surprise [illegible] seventy years [illegible] Eugenie [illegible] age, [illegible] [illegible] [illegible] [illegible]

Eugenie's tears fell fast as she uttered these words.

"Think, madam," said Louise, "what a blessing your bounty will be to him."

"This small sum," said Eugenie, "will give him only temporary relief. Oh, that I could assure him of happiness in his old age. Ten louis will only be a solace to present misery, but fifty louis would give him permanent ease. Fifty louis is the price of my ball dress, and what pleasure will it yield me; it will scarcely excite a remark; and I shall see around me a hundred more magnificent. If I were to have a dress adorned with gold or pearls, do you think Louise it would make me more beautiful in the eyes of Leonce? To-day he praised my appearance; I wore only my white dress, and some violets which I gathered in the forest. Louise, with ten louis I could purchase a dress, simple, to be sure, but on that account, perhaps, a more elegant one. Muslin and flowers are more suitable at my age than velvet and jewels—do you not think so?"

"I must confess, madam," said Louise, "that I should be charmed to see you in a magnificent dress."

"Ah," said Eugenie, "think of this poor old man, and you will not long entertain such a vain idea. Think of the happiness I should feel in alleviating his misery; with what joy he would join his family around their evening meal, and with what delight he would receive and return their caresses; and for my part I could write tomorrow an account of all to my dearest mother. Oh! my mother, how happy my letter would make you."

"But, madam," said Louise, "you may perhaps be the only lady at the ball dressed so plainly, and this might displease the Count, and perhaps your husband. However, they are both so good—so generous."

"Let us go then, Louise, I will consult Leonce. I ought to do nothing without his advice; but let us go quickly, for the sight of this old man offers me a temptation which I find it hard to resist."

Eugenie was about to rise, when a slight movement among the leaves behind her caused her to turn her head, and at the same moment Leonce leaped over the hedge and clasped her in his arms. Immediately after she had left the house he had followed her in her walk, and knowing that she sought Jerome to minister to his wants, he had concealed himself behind the hedge; and though she spoke so low, he had heard through the slight screen every word that she had uttered.

"My dear Eugenie, what have I heard? while you were occupied with schemes to promote the happiness of this good old peasant you have added, if possible, to mine; since this conversation convinces me how entirely you are worthy of my admiration and love."

Leonce was still speaking when Jerome awoke. Eugenie disengaged herself from her husband's arms, and approached the old man. He regarded her with astonishment, and would have risen respectfully, but she prevented him, and prayed that he would remain seated.

"Pardon me, madam," said he, "but I must return to my labor."

"No," said Eugenie, "you may rest now."

"But my day's work, Madam?"

"I will make you compensation for that. Here is my purse; I pray you accept it; you cannot have as much pleasure in taking, as I have in giving it."

With these words Eugenie bent over the old man, and gently placed the purse, containing fifty louis, in his trembling hands. Leonce, smiling, a few yards off, regarded his wife with delight; never had she appeared more charming in his eyes; never had she produced on his heart a more deep and tender impression. Meanwhile, the old man looked in a kind of bewilderment at the purse which lay in his lap. Never, in his life had he seen so large a sum at once; he rubbed his eyes; he thought he must be still asleep and dreaming. Eugenie enjoyed his excessive surprise. At length Jerome clasped and raised his hands.

"Oh, my God," he exclaimed, "what have I done to merit so great a gift?" then, turning to Eugenie, with his eyes filled with tears, he continued:

"Oh, madam! may the Almighty, to reward you, give you children to resemble you."

He could say no more—he choked his utterance. At this moment Leonce [illegible] appeared, running towards the group. Eugenie [illegible] the old man to [illegible] and to conceal this adventure till she [illegible] it; then taking [illegible] and her brothers she promised to [illegible] Jerome [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MARCH 30, 1854.

The Season.

The present spring may be called a backward one. Heavy rains, cold winds, and a deep coating of snow upon the mountains, have kept the temperature at a low figure, and greatly retarded much of the labor of the season. It has been found injurious to work the soil while too moist, as it leaves a greater tendency to bake during the dry season; and the late heavy rains in many of our vallies have prevented the planting of much that would otherwise have been accomplished.

There is, however, much to encourage. Barley, wheat and oats are looking very well. The quantity of barley planted this year is not so large as usual, while the quantity of wheat is very much greater. We congratulate our citizens with the fact that unless some disaster should befall the crop of wheat the present year, California will raise *enough for home use.*

Let this fact be well understood, let our friends abroad understand it—that we ought to be, can be, and will be independent of all others for our own breadstuff.

The quantity of oats planted this season is smaller than usual; principally for green fodder. Buckwheat has been planted to some extent, and is now being planted somewhat on a large scale, this being a good season to plant, considering the backwardness of the spring. Corn has been planted in much larger quantities than before—principally by those contiguous to mills, where it can be ground into meal. There has been considerable attention given to cotton and tobacco. Some considerable plantations of each have been made, the results of which we shall be anxious to learn, although we have no doubt of success in their growth.

We have noted also the attempt to grow the sugar cane, this year being the first trial, and feel a great hope that even this will be successful. Enquiries are daily made for the tea plant (*Thea Viridis*), and in another year we shall see it introduced among us.

A few years will make a great change in the products of California, and the returns of each spring, as we note the seasons, we shall be called upon to speak of tea, coffee, sugar, rice, cotton and tobacco; and among the fruits we shall note the orange, lemon, fig, grape, peach, apricot, pear, plum, cherry, quince, strawberry, raspberry, gooseberry, currant, and many of the fine, delicious tropical fruits, that we have never yet supposed could be cultivated in California.

But we digress, we were speaking of the present agriculture of California. From a hasty trip up river, we had opportunity to note the various crops, and felt pleased to see the cheering prospects, notwithstanding there is so much to discourage. Along the banks of the Sacramento farmers and gardeners are busy cultivating early crops, now well advanced, and putting in continuous crops: for we wish friends in the "old States" to know that our market gardeners have already finished their first crops—such as early turnips, radish, lettuce, endive, parsley, beet, carrot, onion, &c., and finer vegetables are not grown the world over.

Notwithstanding the discouragement that has been the lot of the farmer and gardener during the past year, by the very low prices of all the products of the soil, yet a very general increase of cultivation is going on throughout the State. The amount of cultivation in orchards and vineyards is largely increased. The number of vines planted is very large, many persons planting from ten to twenty thousand each. Very large orchards of apple and peach have been planted, and the pear plum and cherry have been planted to a considerable extent. Smaller fruits, such as currant and raspberry, have been planted considerably, and strawberries have been widely and extensively diffused. From facts that have come under our notice, we feel confident that the fruits that will be exhibited in our markets the present season will far surpass the most sanguine expectations, both as to quantity and quality.

We shall endeavor to keep our readers prepared for coming luxuries, from time to time.

New Masonic Lodge.—A new Lodge of Masons, says the Marysville Herald, has been organized at Rough and Ready, D. The following is a list of officers elected: Andrew C. Kean, W. M., Joseph Herrit, S. W., J. M. Morso, J. W., Roberts, Secretary, W. H. Buchanan, Treasurer, A. F. Gallaway, S. D., S. L. Smith, J. D., L. McComber Tyler, William Brown, Chaplain.

The California Farmer.
DO FARMERs NEED A PAPER?

In the older States, where the systems of cultivation are nearly uniform, and where the same general system will answer for each section of country and where there is a constant intercourse and exchange of thought and sentiment and practical results, among the cultivators of the soil—the want of an Agricultural Paper it would seem, would not be so severely felt as in a State like California, where those engaged in farming are seldom together and where all their efforts are new—where the climate and soil are new and untried, and where many of those who are engaged in the work, are those who are new beginners—and where many of their most earnest efforts and costly plans are entirely unsuccessful.

It is a fact however in the older States—where there is the most knowledge of the science and where the information upon every branch of Agriculture is quickly diffused through all the various political, literary and religious papers—that the agricultural papers are eagerly sought for and well sustained, and farmers are not only readers but able contributors to their columns—the farmers, many of them, supporting several agricultural journals by their patronage and esteeming it their first duty and interest for themselves to be advised of every new feature that is developed and to know at the earliest moment every circumstance that will advance the interests in which they are engaged.

This is as it should be, and if the old States, with all the knowledge they possess, sustain so ably their journals of agriculture, shall the cultivators of California neglect the means of information that is now within their reach?

The California Farmer was established with the hope that the Cultivators would be pleased to make it a medium of communication with each other in the various sections of the country, and that they would be pleased to receive it, and to sustain it, and to use their influence to have it as widely circulated as possible, and to furnish from time to time those interesting facts, those practical details, that would result in a general blessing to all.

We feel gratified to know the increased interest in the subject, and we hope every one who reads this article will ask himself if *he* cannot call upon some friend and induce *him* to subscribe and to give *his* influence to make the Farmer more widely known.

We are very grateful for the interest that many of our friends have taken in this work: we earnestly entreat a kind continuance of this interest, and will bend all our energies to make the Farmer, as a "Journal of Agriculture," what it should be.

We would ask of the Cultivators of the State to communicate with us freely and make any and all inquiries upon all subjects—and give us *facts!*

Agriculture in our State.

We had omitted to mention the adoption of the resolution which was introduced in the Assembly, by Mr. Letcher, of Santa Clara, asking a liberal appropriation by Congress of lands for the endowment of an Agricultural College in California. This has been done, and we are happy to know that this same gentleman, with his customary devotion to the great interest of the State, has a bill, which he will soon introduce, for the incorporation of a State Agricultural Society, with suitable provision for sustaining the Society, and encouraging its members to great exertions to develope the resources of the State.

A day or two at the Capital gave us confidence that, despite politics and wire pulling, there are some good and true men, who do desire the good of the State, and are willing to labor for it.

We were pleased to see the resolution introduced by Mr. Griffiith, asking that Dr. Winslow of this city, be invited to deliver an address on Agriculture before the Legislature, but we were surprised that the subject was laid upon the table. We trust this resolution will not be permitted to remain, for we would ask, is not the subject of Agriculture of importance enough to enlist the attention of our Legislators and to induce them to give it a hearing? We know there are many very able men in both branches, having this interest at heart, and we look to them for a due share of the attention of our government to this most important source of our prosperity as a State.

The gentleman who introduced the resolution, and those who feel the importance of this question, are not easily defeated in any good action, and we trust the resolution may still pass. We can assure the Hon. Legislators they would not regret the time spent, and we trust when the address is delivered there may be a due interest felt in the matter, for the gentleman named to deliver it bears the reputation of a finished scholar, and he will doubtless present the subject in so truthful a manner, and in such a winning way, that its importance cannot longer be overlooked.

Flora.

The Flora of California should demand some thoughts from us, and certainly more than a mere passing word. In passing up the river, as we leave Benicia, the hills begin to put on their gay robes, and many of those beautiful slopes now greet the eye with the variegated hue of a rich and gorgeous carpet of many colors.

The *Escholtzia Californica*, or California Poppy, stands out prominent upon the hillsides, distinctly seen in passing, by the beautiful orange color that marks the hills. The *Ranunculus*, or Butter-cup, is seen in the bright yellow. The *Nemophila* wears her robe of blue. The *Delphinium*, or Larkspur, is dressed in the royal purple. The *Dodecatheon* lifts her delicate stem, bearing these chaste umbels of flowers—white and peach bloom. The early Violet hides her modest flowers, and gathers her pet treasures beneath the foliage of the leaves, that she may better enjoy them.

As the season is rapidly advancing in the Floral part, we look for new beauties and pleasures to be developed with the coming week. No one should refrain from a visit to these gorgeous hillsides, to gather the treasures, and inhale the fragrance that hangs about these gems of God's fair earth.

Artesian Wells.

We desire to awaken in the minds of the readers of the Farmer to the value of Artesian Wells, as the most certain and reliable means of irrigation, upon an extensive scale, and for certain and continuous supply of water at the least cost—we mean least absolute cost. We are aware that the first outlay will be larger, but once done it is done forever; once *well done* is done forever, and such will be the case if the artesian well is made. We have seen them sunk upon the slope of a hill, elevated some fifty feet above the level of the valley below, and the water could be thrown in a jet of sixty to seventy feet. The water will rise above the surface always, and a constant overflow, a constant stream may be carried over grounds of vast extent.

Such are the advantages that could be enumerated, that the most sceptical would be convinced of their value, and be willing to go to a larger outlay to secure the benefits accruing from so valuable an improvement.

The Rasette House.

This celebrated hotel, for the time that it has been building, the care that has been bestowed upon it, and the immensity of its structure and cost, together with the delays it has experienced, these all have tended to make the "Rasetto" celebrated.

We were very courteously shown over the immense building by the proprietor, during the last week—Mr. Rasette explaining his plans for the interior arrangement and the objects he had in view, pointing out with much interest all the most important improvements—the results of which would add to the convenience, comfort, health and safety of those in the hotel. We understand that the whole architectural designing, exterior and interior, has been the work of the proprietor himself. The vast number of rooms—about two hundred—are admirably arranged in suits of two or more, and while they appear of good size and height, and finely ventilated, there is a wise economy of space.

The basement consists of the offices, bar, and reading rooms, all fitted up in the most approved style of modern finish and workmanship. The first story contains elegant suites of rooms for families, fitted up in the most elegant style, and we learn that nearly every room upon the first floor has been engaged by some of our prominent citizens and families. The second floor in part is for the spacious dining halls. These are of the most spacious and elegant order, and give a finishing touch to the building. When all is finished, no hotel in the State can compare with it, either in extent, convenience, comfort or luxury.

In the second story are also rooms in pairs or single, and rooms for one or two persons, all fitted up in the best and most convenient style, and the same may be said of the third and fourth suites of rooms.

Nothing can be more complete than the plans of ventilation and lighting the whole suites of rooms and these extensive galleries. The galleries will afford fine promenades, and the balconies an admirable prospect, commanding as they will a view of the whole city.

When we examine this immense building, and look back and see under what circumstances it was undertaken, immediately after the heavy loss of the proprietors by the fire—when we know the many difficulties that occurred, resulting in delay and loss, and the distrust thrown upon the building, its safety, &c.,—when we remember, too, the fortitude that has been required to go on, under all these hindrances, and under the present embarrassments of trade, and prospect of a reward for all the expenditure, vast as it is, must necessarily be—when we see all this, we cannot but admire the indomitable energy and the manly perseverance that manifests itself in all this great enterprise.

The undertaking was a herculean one, and where one man would succeed, forty would be crushed. Would we could go more into detail, now; by and by, we will do so.

Mr. Rassette deserves success and he will receive it. He has erected a noble structure—one that will be a monument of fame, and a source of wealth. His perseverance entitles him to the one, and his industry deserves the other.

Sulphur Springs.—It is a matter of very great importance to learn of the recent discoveries of valuable springs of medicinal qualities in the vicinity of our city. The day is coming when business men will realize that it is beneficial to break away from the harrassing cares of trade, and spend with their families some portion of the pleasant season at some chosen resort; and nothing will more readily bring about so desirable a result as the recent discovery of these springs, and let them but be established, let them once become a fashionable resort, and our word for it, let business be as it may there will be no putting off "going to the Springs." Those to which we allude, as recently found, are at Oakland; the waters are said to resemble those at Blue Lick. Some say the water is more strongly impregnated, at all events, if these discoveries are as represented, they are invaluable.

Robb's Emporium.—What a zest it gives to one's appetite to be surrounded with everything pleasing to the senses—spacious rooms, couches and chairs that are refreshing; tables, cutlery, dishes, napkins, all, that by their taste, elegance and cleanliness, give a stimulus to the appetite that is soon to be appeased. Speaking of appetite, reader, should you have any desire to gratify yours, we assure you, that be it ever so particular, even epicurean, you can be safe to have it satisfied by a visit to "Robbs." Amongst the solids, from the choice "porter house steak" to the "venison pate," the dish of game, or whatever your wishes may crave. You have only to send your message and "Raphael," that prince of cooks, will answer to your call; and if you are more delicate, and need pastry, your only difficulty will be in the variety to choose from to be found there. If more delicate, an "ice cream and bon bons" will please your delicate taste; and such a desert as is offered you *free of cost*, in the delicious music, from accomplished performers upon one of Stoddard's fine toned pianos, fresh from Woodworth's warehouse. Go to Robb's, eat and be refreshed, as we have done, and listen to the music as we have, and you will say we have not said too much in praise of this most fashionable resort; but you will say "the half was not told you."

Extraordinary Invention.—Messrs. Editors—While we are hearing of new inventions and the progress of reform, I take the liberty to state to the readers of your valuable journal what I have invented and am about to bring before the world at the earliest possible period. For the last four years I have had my mind engaged on a marine locomotive, and I have succeeded in bringing it to nearly a perfect plan. It is unlike anything now used in navigating the ocean—one of its most important features is the remarkable fact that it has no headwater resistance; thus the speed can be increased in the same ratio as we increase the number of revolutions. I make these statements candidly, and my object is to open the way to give my invention a public demonstration, and if any one has any invention of the same kind, embracing the same principle, let him make it known now, and not wait until the thing is before the public, and then come forward and claim it as his own. If any one has invented a locomotive that will cross the Atlantic in four days without any head-water resistance, let him speak now; if not, let him forever hold his peace, for I have such an invention, and am ready to prove my statement to any one who will address me post-paid. Henry A. Frost.

Worcester, Mass., Jan. 18, 1854.

Since the above was in type, Mr. Frost has furnished us with diagrams of his astounding invention, from which we shall execute engravings to present to our readers in a few weeks.—*Scientific American.*

Arrival of the Brother Jonathan.

The anxiously expected Nicaragua Line's steam ship Brother Jonathan arrived at this port on Sunday evening, at 6 o'clock. Her detention was caused by bursting her air pump, cracking her boiler, and otherwise damaging the machinery. The Jonathan brings a very large number of passengers, including many ladies. She brings no further news from Europe or the Atlantic States.

We take from the Sun the following account of a most melancholy accident which occurred at Virgin Bay on the 2d instant.

On the 1st of March, about 200 of the passengers by the steamer of the 16th February, arrived at Virgin Bay, and were safely embarked aboard the steamer Central America, although the wind was blowing freshly, and there was a very heavy surf on at the time. On the 2d of March, the steamer Ometepe anchored in Virgin Bay, and at 10 A. M., the launch, in command of F. Lang, commenced taking off passengers to the Ometepe. Five trips were made in safety, although the heavy wind and surf still continued. On the sixth trip, the launch, which was very heavily loaded with passengers and baggage, when half way to the Ometepe, about 200 yards from shore, was struck by a heavy sea, that sent the spray in thick volumes over the passengers, who, becoming alarmed rushed to leeward, and listed the boat, so that she became perfectly unmanageable. In this condition, the sea made a clean breach over her, sending large quantities of water into her every wave.

Many of the passengers then became so alarmed, that they lost their presence of mind and jumped overboard, thinking that the launch must go down, from the quantity of water she had taken in.

All of those who leaped in the water were drowned, owing to the weight of gold some had on their persons, and others from being cramped by their clothing. On the other hand, all who remained in the launch were saved, as well as the luggage on board. The passengers on the shore and the natives rushed into the water, and were very instrumental in saving the lives of those who stuck to the launch.

From the time of this melancholy accident to the morning of the 3d, nineteen bodies had been recovered. They were carried to the office of the Nicaragua Transit Company, where treasure, jewels, and everything of value were taken from their persons, coffins provided, and the unfortunates buried with all the rights of Christian sepulture, the Rev. Dr. Greer reading the funeral service.

The launch had been in use for two years; was of twenty tons burthen, and considered fully suitable to the business, having always carried her passengers in safety during that time. On the 6th and 7th March, the outward bound Californians were landed in safety, during a surf and blow equally heavy. We understand that no blame has been attached to the officers in command of the launch; but that the casualty was purely owing to a panic among the passengers, who, by rushing to leeward, made the boat entirely unmanageable.

The following is the list of the names of the drowned: Jacob Lewis, N. Y.; Charles Lyon; old man from Michigan; Wm. W. Studley, Wm. Len, James Path, Wm. H. Gardner, Eugene name unknown, Francis Harris, C. Pine, D. W. Loud, Fred. Clering, David Churchill, Edward Thomas, Isaac Edge, English woman and husband, David Lewis, Cal., M. Mon. native.

From Southern California.

By the arrival of the steamer Goliah, on Friday last, we are put in possession of the Los Angeles Star of the 17th, from which we take the following items of interest:

Mr. John Raines, just arrived in this city, from Sonora, represents the people as being in a most wretched condition, from fear of the Apaches, who continue their depredations and outrages more than ever, and are every day becoming bolder as the terrors of the people increase; entering the towns and killing men, women and children, or carrying them off as prisoners, without fear of pursuit or rescue. The ranchos are nearly all deserted. Cattle and horses are running wild, and likely to be driven off by any one who takes the trouble.

An order has been issued by the government prohibiting emigration to California, and about 500 troops, including 100 at Altar, are stationed along the frontier to enforce the decree.

The tobacco monopoly, which Gov. Gandara asked of Santa Anna, for the purpose of raising funds to pay for military operations, has been granted to him, and he has levied an additional tax of 25 per cent. on tobacco for the same object.

Mr. Raines travelled far into the country, and conversed freely with many of the chief men. He says there is a strong desire among them to become citizens of the United States. Americans are well received and treated with consideration. They are perfectly aware of Walker's intentions toward Sonora; they look upon him and his band robbers, and intend to receive him as such. They have no fears; but will attack and kill the whole band if they make their appearance.

Mr. [illegible] left the city of Mexico [illegible] and returned with the land of Juarez to Walker's rancho. [illegible] Walker's [illegible] 100 guns. [illegible] Mexican [illegible] Walker [illegible] Walker [illegible] Walker

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MARCH 30, 1854.

John A. Sutter.

"Hope deferred maketh the heart sick."

Sutter Fort—Hock Farm—Capt. Sutter. What thrilling memories are awakened at the mention of these potent names. What a charm has been thrown around each, what an interest is felt, and how much worship bestowed upon each.

The early comer to these shores, as he landed at Sacramento, and took up his march in search of the precious ore, must first pay a visit to the renowned "Sutter's Fort," and as he entered the broad gateway and gazed upon the walls and the interior of this familiar place, he felt a holy veneration for the spot and for him whose name it bore, and as he again went forth upon the prairie felt he had performed an act in visiting this spot that would lay upon his memory forever.

Those who passed up the Sacramento, as they neared that beautiful spot "Hock Farm" have ever been intuitively led to look with the deepest reverence upon it, and to uncover and pay a token of high regard and to recall the name of the founder with affectionate interest.

In all our associations, at all our public gatherings, in every demonstration that affected public interests—those associations, those gatherings, would seem unreal and uninteresting without the presence of him whose name touched a chord in every heart, lent an interest to every theme and gave a charm to every occasion.

These were bright days! happy days!—days when the Veteran Pioneer owned large tracts of land—days when his table groaned with the bounties he had spread, free, for his friends—days when his business was thriving—when his acres were broad, his flocks numerous, and his gold plenty.

How changed the scene! Sutter's Fort is now a ruin, its crumbled and decayed walls are not even a shelter for the owl and bat; those that once saluted it and made pilgrimages to it, pass it without a thought or recognition, and the spot that was once a home for the stranger, a sure refuge for the needy of every nation, is now a ruin—the blood red flag of the auctioneer has desecrated it—its sacredness has been defiled—its glory has been waning, and is now gone!

Hock Farm, the "homestead" of him who has given a homestead to thousands—Hock Farm, where on every return of spring the flowers lifted their fragrant petals to welcome a thousand guests—Hock Farm, where daily the star-spangled banner has been raised and where the thundering cannon has roared and the gates have been opened wide to welcome the stranger or the citizen to one of the most hospitable mansions on the Pacific coast, and to give them a reception as kind and generous as it was truthful and welcome, oh how changed! That star-spangled banner, floats no more—it may be raised upon the staff, but its stars have been dimmed, its colors have paled, the breeze touches it not, it hangs listlessly, for its life blood is receding; the cannon thunder no more—there is a silence that speaks—for that walking pestilence has touched them—A Shylock has been there. That sacred homestead, "Hock Farm," has been polluted by the "mortgage deed." "Tell it not in Gath—publish it not in the streets of Askalon!"

Oh God what a change! He whose dwelling was a home for all who needed a home—he whose table was ever spread for the hungry, and whose purse was ever open to clothe the naked and relieve the distressed—John A. Sutter, the man who has enriched thousands, to feel the gripe of poverty, to be compelled to mortgage his goods and chattels that he may feed his own family, and shield his own gray hairs. Forbid it, Heaven—if done already, let it be quickly undone, and let the acts of a grateful people be as much greater as the foul wrong has been dark.

Let this foul wrong be done away and let the citizens take this matter in hand; let a subscription be at once prepared, and a thousand hearts must respond to it. The Honor of California demands that they should be done.

What, the homestead of the first, best, truest friend California ever had, in the power of the sheriff, his peace of mind and the happiness of his family destroyed? No, no, no, it must not, cannot be. Californians, see to it; duty demands it of you. Let the Homestead of the noble Pioneer be placed beyond the power of any one to trespass upon it, and let it be guarded by the love and affection of those who not only profess to be his friends by words, but by deeds that prove it.

Massachusetts Horticultural Society.

We have received from the able corresponding secretary of the Massachusetts Horticultural Society a volume of their committee's reports upon gardens and greenhouses, together with their awards of premiums for 1853, and the schedule offered for 1854.

The following amounts were awarded: for Gardens and Greenhouses, $155; by Committee on Flowers, $367; by Committee on Fruits, $727; by Committee on Vegetables, $2 [illegible]—total, $1755. In addition, several valuable gold and silver and bronze medals were awarded.

The prospective premiums for 1854 are most truly liberal, amounting to the sum of $2525. This society stands pre-eminently at the head of all societies of this kind in the United States, in point of its pecuniary ability, having an ample and increasing fund to promote the science of horticulture. It is not invidious to say this, for it is one of the earliest societies, and it numbers among its members those whose scientific and practical knowledge have done more to advance horticulture, than any other society in the country.

The Hon. Marshall P. Wilder, now president of the National Society, whose name is known throughout the wide world, and whose devotion to horticulture, has prompted him to introduce a vast amount of pomological and floral treasure into the United States from all parts of the world—the names of Walker, Hovey, Cabot, Allen, Winship, Tudor, Breck, Cushing, Downer, Williams, and many other men, whose science, zeal and practical efforts have won for the society and for themselves high praise, are found among its most active members. It is such efforts and from such men, that build up a society and make its influence felt.

We do not wish to be understood as underrating other distinguished horticultural societies in the United States, many, very many, that are now exerting a noble influence, and are directed and controlled by the best men of our country; but our sympathies and our memory lead us back to the "Old Bay State," where our taste for this noble science received its first impressions.

The document received contains much valuable information upon the new fruits recently introduced. We rejoice to note the upward and onward progress of this society, and we shall be glad to reciprocate favors at all times, and hope the day is not far distant when the societies of the Atlantic and Pacific may not only exchange favors by mail, but that we may have the pleasure of reciprocal personal courtesies at our annual exhibitions.

New Music.—We have received from Messrs. Atwell & Co. a collection of new and choice music from their extensive assortment, received by last steamers. We have reason to thank our kind friends Atwell & Co. for their remembrance, for we only needed their music to make a heaven below, if what Mrs. Childs says is true. Mrs. Childs says, "There are three things of which we shall have an abundance in Heaven—Music, Flowers, and little children.

Flowers we ever have around us, and as to children, the school near us furnishes a goodly quantity—though rather noisy—and it only wanted the music to make the Heaven, and we are indebted to Messrs. Atwell & Co. for the Heaven we have enjoyed—in anticipation. We commend our readers to this establishment for the best collection of music and all that appertains to it that can be found in the city.

History of Sacramento.—We have received from the publishers copies of No. 1 of the "Illustrated Sketches of California," with history of Sacramento Valley. The greater portion of the present number is taken up with a history of the various missions. These sketches of the missions are valuable, as matters of history, and of great interest to Californians. A sketch of Capt. Sutter's early history, with his portrait and miscellaneous items.

The publication is issued in a very neat style, and undoubtedly will be well received and appreciated. We trust the publishers will be amply rewarded for their exertion.

Shells a Fertilizer.—The attention of our readers are directed to the article of shells, advertised in another column of our paper. Many portions of our heavy clay soil would be very much benefitted by a heavy dressing of these shells. These, with a dressing of good stable manure, would break up and warm the soil, and produce that mellowness so desirable for good cultivation, and so easily attainable here, if attention is but given, as it should be, to the subject.

Timber Trees.

We would urge upon the permanent settlers, the Farmers of California, attention to the subject of "Timber Trees." This must of necessity become an important feature in the Commerce of California.

The very rapid growth of some varieties should awaken a due attention to their cultivation, and if large plantations of the leading varieties were made, it would be found a profitable investment. We invite attention to the article we publish today on the subject of the Acacia—known by many and called the Honey Locust.

ACACIA TREE.

The Acacia tree is well known in America, from which it was introduced by the name of the Locust tree. It grows very rapidly in the early stages of its progress; so that in a few years, from seeds, plants of eight and ten feet high may be obtained. It is by no means uncommon to see shoots of this tree eight or ten feet high in one season. The branches are furnished with very strong, crooked thorns; the leaves are winged with eight or ten pairs of leaflets, egg-oblong, bright green, entire and without foot-stalks. The flowers come out from the branches in pretty long bunches, hanging down like those of the laburnum, or the still more lovely *Wistaria sinensis*. Each flower grows on a slender foot-stalk, smelling very sweet. It is of a white color, but there is a rose-red variety. It blows in June; and when the tree is full of bloom makes a handsome appearance, and perfumes the whole around. The flowers are followed by seed-pods, oblong, flat, having a longitudinal rib next the seedling suture, on the outside of that being drawn out into a membranous margin; one-celled, and two-valved. The seeds are sometimes as many as sixteen, kidney-shaped, ending in a hooked beak, like a lens, and are of a rusty color.

In North America, where this tree grows to a very large size indeed, the wood is much valued for its duration. Most of the houses built at Boston, in New England, on the first settling of the English, were constructed of this wood; and since then it has been much used in America for various purposes.

The seeds of the Acacia tree were first brought to Europe by M. Jean Robin, nurseryman to the King of France, and author of a "History of Plants." M. Robin brought the first seeds from Canada; in consequence of which, succeeding botanists have, in honor to his name, termed the genus *Robinia* to which the Acacia tree belongs. Soon after its introduction into France, the English gardeners received seeds from Virginia from which they raised many trees.

The wood, when green, is of a soft texture, but becomes very hard when dry. It is as durable as the best white oak of North America, and esteemed preferable for axletrees of carriages, trenails for ships, and many other important purposes. The turner finds the wood of the Acacia hard and well suited to his purpose, and is delighted with its smooth texture and beautifully delicate straw color.

The tree, when aged, abounds with certain excrescences, and when polished they are beautifully veined, and much esteemed by the cabinet-maker. It makes excellent fuel, and its shade is said to be less injurious than that of any other tree; while the leaves afford wholesome food for cattle. A gentleman in New England sowed several acres of it for this purpose alone.

It has been employed with signal success in Virginia for ship building, and is found to be very superior to American oak, ash, elm, or any other wood they use for that purpose. In New York it has been found, after repeated trials, that posts for rail-fencing, made of the Acacia tree, stand wet and dry near the ground better than any other in common use, and will last as long as those of swamp cedar.

The Acacia tree seems happily adapted to ornamental planting. Whether as a single tree upon the grass, feathering to the ground line, or as a standard in the shrubbery, towering above a monotonous mass of sombre evergreens, the Acacia has great charms for us, and may justly be called a graceful tree: and although its light, loose and pleasing foliage admits the light and seems to harmonize so delightfully with a polished lawn, or the highly cultivated shrubbery (and there is hardly a shrubbery to be found without them), yet we should like much to see the Acacia tree planted in the woods everywhere, where forest timber is an object of attention.

In France the Acacia tree appears to have been more generally diffused throughout the country than in England; for it does not only ornament their gardens, and shade their public walks, but the sprightly foliage of this beautiful tree shines through their woods and forests in every direction; so much so that it might be taken for an indigenous inhabitant of the soil.

In one of the Memoirs by the Agricultural Society at Paris, the properties of this tree are very highly extolled. Its shade, it is said, encourages the growth of grass. Its roots are so tenacious of the soil, and shoot up such groves of suckers, that when planted on the banks of rivers it contributes exceedingly to fix them as barriers to check the incursions of the stream. Acacia stakes, too, are more durable than any other kind of wood.

The choicest pieces only of the best oak timber are applied to the purpose of trenail making in ship building; and, as the Sussex oaks are generally reckoned the best, most ship builders, even in the north, have them from thence, and the demand for them is so great, that trenail making is there become a very considerable manufacture. If it be proved that the Acacia tree is equal to our best oak for this important purpose in our naval architecture, then do we strongly recommend (and we write practically) to every landed proprietor to plant the Acacia as a forest tree, more especially as it will grow upon sandy or gravelly shallow soils, where the oak does not thrive.

In forty years the Acacia tree will grow sixty feet high, and will girth six feet, three feet from the ground; and, although brittle in a young state, the characteristics of the timber of a grown tree are toughness and elasticity.

As a durable timber, it has been proved that nothing can exceed the Acacia wood, when of proper age. But there is one important use to which these trees may be applied, which has hitherto escaped the notice of the planter, namely, hedges. From its rapidity of growth it forms a fence capable of resistance in one-fourth of the time of any other plant hitherto used for that purpose. Had we to fence in a whole estate, we should, in preference to all others, plant Acacias. They bear clipping, and may be raised to twenty or thirty feet high, if required, and are so strong that no animal can force through them. The only instance of an Acacia hedge we know of, on the continent of Europe, is to be seen round part of the boulevard of the city of Louvain. Plants for this purpose should be taken from the nursery lines four feet high. At every point where the stems cross one another, a natural union or grafting takes place, and, as the stems increase in size, the spaces between will gradually decrease; so that in the course of a few years the fence becomes a complete wooden wall, not occupying a space more than twelve or fifteen inches, forming a barrier that no animal can force. Fences of this description may either be made on the level ground, or concealed from the distant view.—*Farmer's Encyclopædia.*

Potash and Soda in Plants.

Professor D'Aubeny has read to the Chemical Society, a paper "On the Variation in the relative proportion of Potash and Soda present in certain samples of barley, grown in plots of ground artificially impregnated with one or other of these Alkalies." The author detailed some experiments undertaken by him at the Oxford Botanic Garden, with the view of determining whether the usual quantity of potash and soda existing in barley, might be made to vary, by causing the plant to grow in soil of more than the ordinary quantity of one or the other of these alkalies. He found that when the barley had grown in a soil which had been dressed with a strong solution either of carbonate of soda or of chloride of sodium, the ashes of the plant contained about eight per cent. more soda than was present when the plant had grown in a soil unimpregnated, or impregnated with carbonate of potash. The difference may admit of explanation by supposing one alkali capable of replacing the other, within the organism of the plant; but the author thinks it more probable that it arose from the sap circulating through the plant at the time it was cut, containing in the one case more soda than it did in the other. The saline contents of the fluid of the sap would of course be confounded with those which have been actually assimilated by the plant, and hence, from the variation in its composition, must tend to modify the amount of the alkalies obtained from the ashes of the plant in each instance, according to the nature of the material with which the soil had been impregnated.

Questions of Importance for Farmers.

It is important that Farmers should establish local meetings in their counties and towns—and bring before these meetings questions of a practical nature and such as are of immediate interest.

We annex the following as proposed by the executive committee of the Massachusetts Board of Agriculture for their meetings, and think it very important that these subjects should be before the people in the same form. We shall be glad to hear of the result of such discussion from our practical men in California:

1. Is the *increased culture* of Indian Corn, worthy the attention of the farmers of this Commonwealth?

2. Can anything be done to make the *home* of the farmer *more attractive;*—and *to retain the sons* of the farmer in *this employment?*

3. *Plows and Plowing,*—taking into view the form of the plow,—the time and manner of using it, and all incidents connected therewith.

4. *Manures* — preparation and application thereof; including improved fertilizers.

5. *Vegetable products,*—such as carrots, beets, turnips, &c., their value as feed for stock, compared with hay and corn.

6. *Dairy products.*—what class of animals is best fitted for the making of butter and cheese, and what is the best mode of feeding for these purposes?

7. *Culture and preservation* of fruits.

8. *Neat-Cattle.*—what is the best method of improving the stock of animals to be kept on our farms?

9. *Sheep,*—can they be advantageously kept on our farms; if so, the kind best for this purpose?

10. *Grain crops,*—wheat, rye, barley, and oats—their value as compared with Indian corn, and as preparatives for grass.

11. *Forest Trees,*—Can they be advantageously cultivated—if so, what varieties, and in what manner?

12. In what manner can the State most effectually advance the interests of the farmer?

Rearing Calves.

HERDSMEN and others who have had some experience in raising young cattle, have expressed various opinions in relation to the most proper course or mode of treatment to be pursued, some contending with a good deal of stringency for the natural way as they term it—i. e., permitting them to enjoy the company of their dams till four, five, six or ten months of age, while others assert with equal pertinacity, that the better way is to separate them from the cows when a few days old, and raise them, "by hand." The farmer of course will reflect upon the relative advantages of the two methods, and consider the claims of each to preference before he adopts either. But after all, whether the one or the other is most expensive, may depend wholly, or in a great measure, upon the circumstances of time and place. In very many localities, the butter and cheese a judicious and economical dairyman would be able to realize from the milk, or from the milk itself, without manufacturing it, would be worth more in ready cash, than the carcass of the calf, while in others, it would scarcely defray in the market the cost of manufacturing, while the calf would be valuable. A friend who has had much experience in dairying and rearing calves, has directed attention to the following able article on the subject in the Genesee Farmer. We present it from that sheet as conveying a most lucid and readily understandable synopsis of our own views of what in a large majority of cases, would unquestionably be found the most judicious and economical course, for the farmer engaged in stock raising for the market, to pursue:

"The cost in both cases ought to be taken into consideration. In the first instance, the butter and cheese, that might be made from the milk would amount to more in four months, than the value of the calf at that age. In the latter the proceeds of the milk are nearly attained independent of the raising of the calf. This can be established by unquestioned and unquestionable authority. Then there is a very great balance in favor of the latter.

That the calf that runs with the cow four months, will somewhat exceed in growth and proportion the one reared by hand, is readily granted. But after that period, it is taken from the cow, and has to graze to get its own living. There is a change that takes place; it shortly becomes stunted; its growth is checked, and this too at the very period when it ought to be in the most thriving condition. The one reared by hand becomes more and more accustomed to food, continues gradually to improve without receiving any check in its growth, and when winter arrives, is in far better condition than the others.

There are different procedures in preparing the mess for the calf. Each one has a favorite plan. One mixes with a small portion of milk, a portion of boiled potatoes and fine bran. Another boils the milk, and lets it stand till it cools to the temperature of milk from a cow. The plan most generally adopted (and perhaps the best,) is, to let the milk stand twelve hours, at first, when it is skimmed, heated to the temperature of the cow and a handful of shorts and flour added to each calf's mess. Four or five quarts of milk is at first a proper quantity. This is to be gradually increased as judgment can best decide. After four or five weeks, whey, and a small quantity of shorts added, can be taken with equal success. Calves raised in this manner are more gentle and docile than when they are run with the cows, and can be better managed through the winter, and most generally afterwards. Another very important consideration is, they soon forget their mother, and the trouble of keeping them separate through the fall and winter is dispensed with."

Grafting.

IN horticulture, the operation of affixing one portion of a plant to another in such a manner as that a vital union may take place between them. Grafting has been practiced from the most remote antiquity; but its origin and invention are differently related by naturalists. Grafting may be performed both with herbaceous and ligneous plants; but, in practice, it is chiefly confined to the latter, and more especially to the propagation of esteemed varieties of fruit trees. A grafted plant consists of two parts; the stock or stem, which is a rooted plant fixed to the ground, and the scion, sometimes, but erroneously, termed the graft, which is a detached portion of another plant to be affixed to it. The operation of grafting can only be performed within certain physiological limits; but what these are, science has not yet absolutely determined. In general, all the species of one genus may be grafted on another reciprocally; but this is not universally the case, because the apple cannot be grafted on the pear, at least not for any useful purpose. In general, it may be presumed that all the species of a natural order, or at least of a tribe, may be grafted on one another; but this does not hold good universally. The reverse of this doctrine, however, viz., that the species belonging to different natural orders cannot be grafted one on another, holds almost universally true; and, therefore, a safe practical conclusion is, that in choosing a stock, the nearer in affinity the species to which that stock belongs is to the scion the more certain will be the success.

Grafting, one of the most important operations in horticulture, affording the most expeditious [illegible] and perpetuating all our best varieties [illegible], and many kinds [illegible]. Varieties of trees are [illegible] plants could [illegible] or propagated by [illegible] the suckers; and though this may be done by cuttings and layers, yet by far the most eligible mode is by grafting, as it produces stronger plants in a shorter time than any other methods. Grafting is performed in a great many different ways; but the most eligible for ordinary purposes is what is commonly called splice-grafting, whip-grafting, or tongue-grafting. In executing this mode, both the scion and the stock are pared down in a slanting direction; afterwards applied together, and made fast with strands of brass matting, in the same manner as two pieces of rod are spliced together to form a whip-handle. To insure success, it is essentially necessary that the alburnum, or inner bark of the scion, should coincide accurately with the inner bark of the stock; because the vital union is affected by the sap of the stock rising up through the soft wood of the scion. After the scion is tied to the stock, the graft is said to be made; and it only remains to cover the part tied with a mass of tempered clay, or any convenient composition that will exclude the air. Some of the other modes practised are termed cleft, or slit-grafting, crown-grafting, cheek-grafting, side-grafting, and grafting by approach, or in-arching.

The season for performing the operation is, for all deciduous trees and shrubs, the spring, immediately before the movement of the sap. The spring is also the most favorable period for evergreens; but the sap of this class of plants being more in motion during the winter than that of deciduous plants, grafting, if thought necessary, might be performed at that season.—*Ibid.*

Impermanent Manures the Most Permanent.

THIS, at first view, seems to be contradictory. But let us look at it. Let us see whether the most impermanent manures, under a sharp, wide-awake system of farming, are not the most permanent in their effects.

A permanent manure is one, in which the plant-feeding ingredients are so far insoluble, as in coarsely crushed bones, for instance, that the plants take but little of them the first year, little the second, and so on for twenty, thirty, and sometimes more years. The farmer would hardly wish his manures to be permanent in this respect, because they do not give him back their money value sufficiently quick. He desires a speedier return for the value of his manures at the time of their application.

An impermanent, or quickly acting manure, on the other hand, is one in which the plant-feeding ingredients are so far soluble, that the plants take nearly or quite the whole of them the first year. The strength of the manure goes to the first crop. And yet I contend that the effects of this manure, under good management, are most permanent; because it quickly produces an increase of crops. This increase of crops, if expended on the farm, leads to an increase of stock, that to an increase of manure, that to a still greater increase of crops, and so on permanently, as long as the good management is continued. In this way will a farm soonest become rich; and not only so, but it will become capable of keeping itself rich, without the addition of manures from abroad; and thus it appears that the most impermanent, quickly acting manures, may really be the most permanent in their effects.

It is well for the farmer to apply such home fertilizers as he may have at command, though some of them may give him but a slow return. As they cost him but little, he can afford to wait for the result. But if he purchases manures, it should be with the expectation of getting the entire cost and something more back in the first crop. N.

Flowers in the Shade.

THIS is an interesting and important matter to our citizens who have their grounds to arrange and who may not be aware that the native shrubbery—the evergreen, oaks, and other trees—can be left upon their grounds and made useful and ornamental, a shield to the soil and a protection to the plant; and at the same time, the native shrubs will be much improved by this method of cultivation. The following article is appropriate to the subject, and we copy it therefore:

There are several flowering plants that do better in the shade than when fully exposed, among which are those brilliant evergreen shrubs, the Kalmias and Rhododendrons. The Mezereon succeeds best in the shade, as well as the Funkia japonica, the gentians, chrysanthemums, pansies, the periwinkle, gadiolus floribundus and natalensis, the Tiger flower, the auriculas, cowslips, and the forget-me-not. Most of the Phloxes, and Ranunculus do well in the shade, and many bulbous plants, as hyacinth, tulips, &c. All our wild flowers from the woods will of course succeed; such for instance as the Hepatica, Claytonia, Erythinum, Trillium, Lilium [illegible], Cypripedium, Orchis fimbrista, and Cymbidium. Some evergreens are much better grown in the shade; among them the box, which is always a fairer green when sheltered from the sun. The English Ivy and the yew are the same case. This last might, [illegible] grandly enlarged by those who have had occasion to grow plants in the shade our experience [illegible] in this matter.

The British Museum [illegible] by botanical papers, just secured a very [illegible] in the newly discovered [illegible] and Kew [illegible] at St. Helena as Governor of [illegible] Island. This purchase will [illegible] valuable

Some Account of Captain Mercator Cooper's Visit to Japan.

BY C. F. WINSLOW, M. D.

IT was about the first of April, 1845, as Captain Cooper was proceeding towards the whaling regions of the northern ocean, that he passed, in the neighborhood of St. Peters, a small island lying a few degrees to the S. E. of Niphon. It is comparatively barren, and was supposed to be uninhabited; but being near it, Capt C. thought he would explore the shore for turtle, to afford his ship's company some refreshment. While tracing the shore along, he discovered a pinnace of curious construction, which resembled somewhat those he had seen in the China seas. Turning his walks inland, he entered a valley, where he unexpectedly saw, at some distance from him, several persons in uncouth dresses, who appeared alarmed at his intrusion, and immediately fled to a more secluded part of the valley. He continued his walk and soon came to a hut, where were collected eleven men, whom he afterwards found to be Japanese. As he approached them, they came forward and prostrated themselves to the earth before him, and remained on their faces for some time. They were much alarmed, and expected to be destroyed; but Capt. C., with great kindness, reconciled them to his presence, and learned by signs that they had been shipwrecked at St. Peters many months before. He took them to the shore, pointed to his vessel, and informed them that he would take them to Jeddo if they would entrust themselves to his care. They consented with great joy; and abandoning everything they had on the island, embarked with him immediately for his ship.

Capt. C. determined to proceed at once with them to Jeddo, the capital of the Japanese Empire, notwithstanding its well known regulations prohibiting American and other foreign vessels to enter its waters. The captain had two great laudable objects in view. The first was to restore the shipwrecked strangers to their homes; the other was to make a strong and favorable impression on the government, in respect to the civilization of the United States, and its friendly disposition to the emperor and people of Japan. How he succeeded in the latter object, the sequel will show; and I shall make but few remarks, either on the boldness of Capt. C.'s resolution, or its ultimate consequences touching the intercourse of the Japanese with other nations. The step decided on, however, has led to some serious and interesting information relative to this country, whose institutions and the habits of whose people are but little known to the civilized world.

Capt. C. left St. Peters, and after sailing a day or two in the direction of Niphon, he descried a huge and shapeless object on the ocean, which proved to be a Japanese ship or "junk," as these vessels are called—wrecked and in a sinking condition. She was from a port on the extreme north of Niphon, and had a cargo of pickled salmon, bound for Jeddo. She had been shattered and dismantled some weeks previous, and was drifting about the ocean at the mercy of the winds, and as a gale arose the following day, the captain thinks she must have sunk. From the ship he took eleven men or more—all Japanese—and made sail again for the shores of Niphon. Among the articles taken from the ship by its officers, were some books and a chart of the principal islands composing the empire of Japan. This chart I shall speak of in detail hereafter, and it is perhaps, one of the most interesting specimens of geographical art and literature, that has ever wandered from the shores of eastern Asia.

The Manhattan was at anchor in the harbor of Jeddo four days, during which time the captain was supplied by command of the Emperor with fuel, water, rice, rye in the grain, vegetables of all kind, and some crockery composed of the lacquered ware of the country. He was recruited with everything of which he stood in need, and all remuneration was refused. But he was told explicitly never come again to Japan, for if he did, he would greatly displease the Emperor. During these four days, he had many conversations with the governor of Jeddo, and other persons of rank, through their interpreter. In one of these, he was informed by the governor, that the only reason why he was allowed to remain in the waters of Japan, was because the Emperor felt assured that he could not be a bad-hearted foreigner, by his having come so far out of his way to bring poor persons to their native country, who had been entirely strangers to him. He was told that the Emperor thought well of his "heart" and had consequently commanded all his officers to treat him with marked attention, and to supply all his wants.

The day before he left, the Emperor sent him his autograph, as the most notable token of his own respect and consideration. It is often said that he greasers men are most careful in their orography, and in this case, the [illegible] would support the truth of the remark, for the autograph, by the size and boldness of its characters, appeared more as if a half-grown chicken had stepped in an inky water, and many walked two or three times deliberately over a sheet of white paper, than any other print to which I can [illegible] a resemblance.

[illegible] plate, like the plates of astronomical and [illegible] scientific works. This little book attracted Capt. Cooper's attention, and excited his curiosity to such a degree that, after noticing similiar figures emboidered in gold on the tunics of the high officers, he ventured to inquire into their explanation. He then learned that it was a kind of illustration of the heraldry of the empire—a record of the armorial ensigns of the different ranks of officers and the nobility existing in the country. Capt. C. allowed me to examine this book and it appeared to me to be a great curiosity, both as a specimen of typographical art, and as giving us information of the numerous grades of Japanese aristocracy, and the insignia by which they may be distinguished.

This map, with several other articles in Capt. C.'s possession, was accidentally left in his ship by the Japanese. They desired to give him many things which they perceived were interesting to him; but they assured him they would be in danger of losing their heads, should the Emperor learn that they had furnished strangers with any means of information relative to their country or its institutions. They showed great and real alarm on this subject, and concealed or destroyed many things as they approached Jeddo, that had been about the ship. Captain C. took no advantage of their dependent situation, but allowed them to follow their own inclinations in all respects.

Having laid at anchor four days and replenished his stores of wood, water, &c., he signified his readiness to depart, but the winds were adverse and it was impossible for him to get to sea. There seemed to be disposition manifested by the government to force him away but there was none for him to remain a moment beyond the time when his wants had been satisfied. A head wind and tide presented no impediments to going away from Japan in the mind of the Governor of Jeddo. At his command, the anchor was weighed, and a line of boats was attached to the bows of the ship, so long that they could not be numbered. They were arranged four abreast, proceeded in the greatest order, and were supposed to amount to nearly a thousand. It was an immense train, and presented a spectacle to the eyes of the seamen approaching the marvellous. The boats, instead of being propelled by rowing or paddles, were all sculled by a single oar, employed, however, by several men. In this manner the Manhattan was towed twenty miles out to sea, and the officer in charge of the fleet would have taken her a greater distance, had not further aid been declined. The Japanese then took a courteous leave of our hero, and while his long train of barges wheeled with a slow and graceful motion towards the shore, the latter spread his sails for the less hospitable regions of Kamschatka and the N. W. coast, highly gratified with the result of his adventures among this recluse, but highly civilized people.—*Chronicle.*

The Oregon Pea.

MR. A. B. ROZELL, of Nashville, Tenn., has recently given the results of his experiments to test the utility of the celebrated Oregon Pea. He says:

"The pea grows on a bush from five to six feet high, with five or six large branches near the ground; and they, with the main stalk, put out other branches, until two stalks would make a bunch as large round as a tobacco hogshead, or near it. It grows more like cotton than anything else I know of, only it is much larger and the branches not so horizontal. After leaving the ground a little, all these branches, with the branches they put out at every joint, bear from four to ten pods in a bunch, with about fifteen peas in a pod; so they are hung with peas from top to bottom. The leaves are very large and beautiful; and, taking it altogether, it is the most beautiful and rich plant I ever saw.

"The stalks and leaves make, perhaps, the finest hay in the world—stock preferring it to any other. The hay and pea together is a better and far cheaper feed than can be raised from anything else in the United States, for horses, mules, cattle, sheep and hogs. I believe I can raise more and better feed for my stock from one acre of land than I can from five of anything I know of. It will grow on land so poor that it would produce little or nothing else; and to a really poor land is better for it, and will produce more than rich land. This may appear strange to some, but it is nevertheless true. Rich land will produce more stalk but not so many peas; in the [illegible] it is like cotton. As an improver of the soil, I consider it far superior to clover, or anything known in T[illegible] when [illegible] and then plowed in. Now, taking it altogether, I consider it one of the greatest [illegible] the farmers of the M[illegible] that has been introduced for the last [illegible] years, and I am of opinion it will prove a great blessing to the farmers of T[illegible] and the surrounding States [illegible] the many hundred [illegible] not only [illegible] but among my real friends [illegible] being [illegible] [illegible] Mr. [illegible] [illegible] on the 25 [illegible]. He [illegible] [illegible] [illegible]

[From the Cincinnati Horticultural Review.]

Vegetables---Standards of Excellence.

Dr. Warren—Dear Sir: We may now fairly say, without hesitation, that Horticulture is advancing towards the same degree of perfection which has been reached by many other branches of our industrial occupations, and in her train she is drawing along her twin sister, Agriculture. Good culture is now being universally seen and appreciated. The various markets are well supplied with vegetable luxuries, that were once unknown and rarely seen, and the more common esculents are brought into market in prodigious quantities. Throughout the country Horticultural and Agricultural Societies are springing up, as thickly as mushroons in September. Rarely do we open the pages of a fresh periodical, but we are informed of tables well filled with the finest vegetables, fruits and flowers, at this or that exhibition. Success attend them all, and may they proceed in the good work, until the ultimatum of perfection shall become the only recognized quality, not alone in the wealthy private establishment, but also in every public market. For a large portion of the year, our great cities are supplied with as fine vegetables and fruit, as any part of the world; and our exhibition tables are beginning, in many things, to present perfection itself. Now amidst this general progress, it may be well to direct a little attention to the standard of quality, by which these things should be tested. It appears to me, that this subject has not hitherto received that attention, in the periodicals, to which it is entitled; even the committees of societies seem to neglect it, and leave the decision without any standard to the judges. It may be asked, Who are so likely to know as those who are chosen by the managers? All men are not possessed of the same powers of observation, neither can all judge of perfection with the same precision; beside, we must recollect that many of those appointed as judges, are from different countries, and have each been imbued with different notions of excellence, according as the standards recognized in each man's former home. It is high time that we began to appreciate and establish an American standard, and act up to it. All societies ought to have such a guide, which should be strictly adhered to, and to which the members and exhibitors should have free access, that each may know what he is doing, and how to bring his productions towards excellence.

With regard to vegetables, it may be said by some, that any man who knows how to grow a good cabbage, knows also what a good cabbage is. A proper consideration of the matter, will show the fallacy of such an idea, for closely applied observation and continued examination will show, that as much skill is required in deciding the merits of first rate esculents, as there is in those of the choicest florists' flowers, and the same danger of going astray, without some definite rules. Perhaps the following remarks may have some small influence in drawing attention to the subject.

All plants that are grown simply as food, either for man or beast, should contain the greatest amount of nutritive matter, with good flavor; size alone does not often produce this most desirable result, neither does it in all cases yield the greatest profit, even to the farmer, nor furnish the table with the most nourishing or palateable substances. It is true that bulk or weight sometimes fetches most in the market, although more commonly quality pays best even there; but at present, I wish to direct attention to criteria of excellence, by which those productions that find their way to the various exhibition tables should be judged, and also be a guide to the housewife in making her purchases. Here quality ought to be the main consideration; flavor and texture will rank first, and generally, succulency combined with solidity, without stringiness, would be my guide. There are some exceptions, in which an over-succulent vegetable would be objectionable, as the potato, for instance, where the best qualities are found in the dry mealiness. An over-watery esculent should be discarded, unless in the case of those grown as Salads, or which are eaten in a raw state, and here the water may so abound as to destroy flavor, though this is certainly not often the case. *Form* is generally the next point for consideration; while in a few, color ought to be equally regarded, as in Beets and Peas. Size is only a property of minor consideration. In making this last observation, I would not discourage those methods of growing vegetables which are calculated to make them attain large size ultimately, (for good culture will do this, and will also produce the best flavor), but would speak of them as they ought to appear at the exhibition, or in the most suitable state for the table.

Those vegetables, whose roots, as they are generally termed, are used as food, may be divided into the tuberous, as in the Potato; spindle-shaped, as in the carrot; napiform, as in the Turnep; and bulbous, as in the Onion.

The *tuberous rooted* include the common Potato, Jerusalem Artichoke, Sweet Potato, etc., and ought to be even on the surface, free from indentations—if globular or oval shaped, so much the better. This class should likewise be solid, and should contain much starch, which is the nutritive matter; when cooked the sample should be dry and mealy. In the case of potatoes, it is desirable that a boiled portion should accompany the specimen exhibited, that might determine, not only the quality, but also prove if it retained its color.

The *spindle-shaped* contain the Carrot, Parsnep, Long Radish and Beet; Salsify, Scoonzonera, Rampion, etc., and should taper from the top gradually downward; they should be clean, having no forks, fibres, nor any unevenness. Color is of particular consideration in some of this class; in beets, a dark, bright crimson; and in carrots, a rich orange, is to be preferred. All spindle-shaped roots, have not the same relative proportions of length to breadth, but there is a comparative unity; and the same general outline, with these exceptions, may be the guide.

The *napiform*, which includes the Turnep, Kohl Rabi, Swedish Turnep, Turnep Beet, Radish, etc., should be globular, smooth, clear in color, free from fibres, with the crown well up, and the collar of leaves very small. Although some of the best turneps, at present before the public, are flatted, it would be a great improvement, if the same qualities were found with a globular shape. There are several varieties, as the Snowball, Yellow Aberdeen, etc., that possess both properties, and which only require to be more generally known, to be fully appreciated. Whether globular or flattened, the crown should not be sunken, nor the substance stringy or pungent.

The *Bulbous* includes the Onion, Leek, Shallot, Garlic, etc., and the same general outline that is suitable to the napiform, will apply to these.

Those vegetables, the seeds of which are used in an unripe state, such as Corn, Peas, Lima Beans, etc., the pods or heads ought to be evenly and regularly formed, well filled, the seeds equal in size, young and fleshy; a bluish green, is a point of excellence in the pea family, and a rich, sweet flavor, the best property both in peas and corn. Bunch Beans, Scarlet Runners, and all those in which the pod is eaten, should not have the seeds much swollen; the pod ought to be brittle, crisp, well formed and even, the more succulent and rapidly grown the better.

The superiority in Cauliflower and Broccoli, is close heads, a little elevated or rounded from the outside, toward the centre; a circular outline on the base, and excepting in the purple or sulphur-colored varieties of broccoli, to be white and free from spots. In Cabbages and Lettuces, the heart ought to be close, solid, crisp, tender, not burst, nor old; of a white color inside, with the leaves neatly incurved, and pressed closely over each other.

In Celery, the whole plant, (roots included,) should be shown; these ought to be cleanly washed; the blanched portion to be quite white, if it be a white variety, or whitish pink, if of a red sort; this color extending upward, nearly to the top, the stalks to be solid and crisp, not spongy or hollow. A good head of Celery should weigh from five to eight pounds, and one half should be bleached. In this instance, and in all others where vegetables are used in a blanched state, the bleaching ought to be perfect, but not carried so far as to render the plant watery or insipid. How seldom we see or hear of Mushroons being produced artificially. This is much to be regretted, for they can be easily and cheaply grown, and are a very desirable accompaniment to other dishes. The best state of this edible, is before the cap opens out flat, and while in the "button" form when they are more tender, and the flavor is not so coarse, as if old and black. If too large, they are not so handsome,—a good specimen may be from two to three inches in diameter, with a nicely rounded and close top, the substance fleshy and brittle.

Cucumbers of the best kinds have not hitherto been sufficiently valued, many persons thinking the short and prickly ones the best; nothing can be more erroneous, for some of the long sorts are as much superior to those so commonly seen in the market, as the mellow apple is to the acrid crab. A first rate cucumber should be young, quite straight, and even in thickness from end to end; with very short, thick neck, the diameter proportioned to the length, not shorter than eighteen inches, and covered with a fine powder or bloom, a bright, green color. It is immaterial whether it be spined or not, but the spines ought to be evenly scattered over the surface. A point or two might be sacrificed in favor of a young fruit, on account of superior crispness and flavor while in that state.

Much as the Tomato is valued, we have but few varieties approaching to any real merit, and these might be improved. The Burlington is perhaps one of the handsomest; in form and color it is very well, but the skin is thick, and it is often hollow; by care and attention in seed saving, a race of far superior quality might be obtained, of which I have already had some proof. The main excellence of a tomato, is in an even and rounded surface, in form like a pippin apple, well filled inside with a pleasant subacid pulp,—a hollow tomato should always be discarded,—the skin must be thin, and the color clear; a bright red is preferred, and is certainly most to be regarded.

It is desirable in Squashes and Pumpkins, that the flesh be solid and particularly well flavored; all points ought to be sacrificed to these two requisites. Were this more attended to by the awarders of prizes at exhibtions, instead of encouraging size so much, we should soon have a far better quality than is mostly to be procured at present.

The Globe Artichoke, is a vegetable to which we may call attention. This is a plant of the easiest culture, but excepting in the more Southern States, it requires earthing over in winter, as a protection against frost. It is a very desirable vegetable, and ought to be more generally cultivated. In a good Artichoke, the outline of the head should form a globe, inclining somewhat toward egg-shape, with the scales thick and fleshy, and it is best for cooking when something advanced in size, but still young, and the fleshy part tender.

There are some other kinds of esculents, that merit cultivation; but those enumerated above, are sufficient to serve as a guide, in determining first class vegetables. In making these observations, my object is to draw attention, to a too much neglected standard of excellence in this respect, for fine as many vegetables are, that are brought to our markets, and grown in private establishments, there is much room for improvement, and if I have contibuted a mite, toward the onward progress of the art, my end will have been obtained.

W. Chonlton, Gardener to J. C. Green, Esq.
New Brighton, Staten Island, N. Y.

The Ground-Nut.

We are told in the daily papers that the trade in ground-nuts has become of very great importance in Western Africa, the barbarous tribes there having taken to cultivating their land, instead of occupying themselves in slave-hunting It is said that 900,000 bushels of this commodity have been received in the present year; that the trade has increased of late at the rate of 20 per cent. per annum, and that the amount is still rising. What, is the Ground-nut, thus suddenly risen into such importance as to attract the serious notice of merchants?

The plant which produces it is a little annual, with oblong leaves growing in fours, and rather large yellow Pea-flowers rising a little way above the ground. Botanists call it Arachis hypogæa. The plant is one of a class which bury their pods in the earth, when they ripen, instead of raising them into the free air. In order to effect this, the flower-stalk, after the flower has passed away, gradually curves downward, and at length forces its end perpendicularly into the soil, along with the very young pod that is seated there. Having buried itself sufficiently deep, the pod then begins to swell, and when ripe, becomes an oblong, rugged, pale brown fruit, containing about two seeds, as large as the kernel of a Hazel nut Such pods are common in collections of unusual fruits; the French call them *Pistache de terre*, in allusion to their resemblance to Pistachia nuts.

At the present day, the Arachis is found in a state of cultivation all over the hottest part of the tropics. It is, nevertheless, almost certain that, like Maize, Tobacco, and Pineapple, it was unknown till the discovery of America, and that every region in the old world where it is now grown, owed it to Brazil. So that we have in this plant a further example of the rapidity with which vegetables will take possession of soils, when the climate is suitable.

Sometimes the Arachis is eaten; but we agree with M. Poiteau, who has lately published an account of the plant, in regarding it as a very indifferent variety of the nut kind, whether raw or roasted. Its great value is caused by the abundance of oil which it contains. Olive oil, largely employed in dressing woolen cloths, has become too dear for manufacturing purposes. Olive trees have of late years been unproductive, and are disappearing from some of the Italian States; they are now, moreover, reported to be attacked by some kind of mildew, so that a good substitute has become a matter of first necessity. Such a substance has been found in Ground-nut oil, or oil of Arachis. According to Dumas, it was a house at Marseilles that first thought of importing this substance. Eight or ten years ago, four or five kilos were imported by way of experiment; and so great was the success which attended it, that in 1852 the imports into France amounted to the enormous quantity of seventy million kilos, (about 70,000 tons), a figure beyond even that of sugar.

We know little of the cultivation of this plant, except that it requires a temperature much above that of any country north of Lyons. According to Girardin and Dubreuil, it requires a good, alluvial soil, or even sandy land plentifully watered, and has been heavily manured. In the month of May it is dibbled in lines, so as to leave the plants a foot apart in all directions. As soon as the flowers appear, the plants are earthed up, and this is continued as long as growth continues. When the temperature falls to 58 degrees, the Arachis ceases to grow; its leaves turn yellow, and it may then be dug. Each acre should yield about half a ton of seed. These produce from thirty-four to sixty per cent of good oil, fit for burning or for cloth-dressing, but not eatable. The cake is very rich in nitrogen, and makes excellent manure; but it is poor in phosphates.

We notice the plant thus at length, in the belief that it may prove a profitable crop in all our tropical colonies where there is moisture enough to suit. In Spain and Algiers it is found to rank among the more advantageous objects of field cultivation.—*Gard. Chron.*

The Calaveras *Chronicle* declares the recent hanging affair at Jackson, in that county, by which a man was hung on the charge of stealing a horse, to be a disgraceful outrage, and that Judge Eno has issued warrants for the arrest of all the parties concerned in this outrage.

MARRIED.

At Fort Reading, March 15th, by Homer A. Curtiss, Esq., Mr. Livingston Barton, of Shasta, and Miss Lorn Geer, of Fort Reading.

In Shasta, March 16th, by Judge G. W. Murty, Mr. J. W. Johnson and Miss Mary Gleen, of Whisky Creek.

In Middleton, Shasta county, March 16th, Mr. William Thornton and Mlle. Julien.

In this city, 22d inst., by Rev. Mr. Brierly, Mr. Chas. Tucker, jr., of San Francisco, and Miss Mary R. Tucker, of Milton, Mass.

On Thursday, 5th January, at Gourock, Scotland, Charles F. Low, Esq., of San Francisco, and Jessie, youngest daughter of the late John Stewart, Esq., Hyde Park, Glasgow.

In Marysville, March 26th, by C. B. Fowler, Esq., Mr. Ching Topow and Miss Ah Say, both of Shanghae, in Chinese Empire.

At Benicia, on Sunday, March 26th, by the Rev. Mr. Woodbridge, Geo. W. Gift, Esq., and Miss Fannie Kimball, all of that city.

At Oakland, by the Rev. S. Bell, Horatio Nelson Sargeant, and Mrs. Mary E. Wright.

DIED.

At Liverpool, Dec. 29th, Margaret Graham, eldest daughter of Robert Rogers, of this city.

On board ship California, in this harbor, on the 23d inst., Joseph W. Allyne, late of Boston, aged 25 years, son of Samuel H. Allyne, Esq., of Sandwich, Mass.

In this city, on the 27th day of March, Robert Greenbow, late Associate Law Agent of the United States for the California Land Commission, aged 54 years.

In Shasta, March 21st, Mr. J. J. Western, formerly of Kentucky.

At Hampshire Mill, Yuba county, March 10th, Cornelius Higgins, of Cass county, Michigan, aged 24 years.

In this city, March 23d, Mr. Benjamin F. Ford, from Pamnaquid, Me., a pilot of this port.

Massachusetts and Maine papers please copy.

MARKET REPORTS.

San Francisco, March 30, 1854.

The constant liability to change in our market, the up and down of prices, renders it the most uncertain one in the world. The commodity that bears a high price the present week, is liable to find an overstocked market the following, and thus it will ever be, until the communications with the Atlantic are more speedy.

The present prices named of articles in our market are not reliable, as many sales are made on private terms to meet exigencies. We can however note a better feeling, and consequently better prospects ahead.

Agricultural products are very low, so low as not to pay the cost of transportation from any great distance. The quantity of Potatos in market is rapidly decreasing, although the prices are below the actual cost of transportation.

Grains are low and receding, as the time approaches for the new crop, which promises to be abundant.

Union, Humboldt Bay—A. H. Murdoch, P. M.

Mount Farm, O. T.—Gen. M. M. McCarver.

Marysville—Geo. S. Becker.

Stockton—Rosenbaum & Joneckimsen.

New York City, N. Y.—J. M. Thorburn & Co.

Bidwell's, Butte Co—P. Freer.

Weaverville, Trinity Co—H. B. Davidson & Co.

Yreka—Crane, Rogers & Co.

N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

A Premium---Farmers' Clubs.

WITH the hope of inducing such of our friends, and those who have a little leisure, to ride among their neighbors and introduce an AGRICULTURAL PAPER, we take pleasure in offering the CALIFORNIA FARMER: and, to make it an inducement, we say to such friends—if you will get us FIVE subscribers, and remit the amount, we will send you SIX PAPERS, or for TEN subscribers, TWELVE PAPERS. We trust there are many friends who will cheerfully take a little pains to aid us, and thus extend the circulation of the FARMER, and make a useful vehicle for the Agriculture of California.

Subscribers will please be particular to name the Post Office to which papers are to be sent; or, if forwarded by express, which line they prefer.

Special Notice---To Subscribers.

In order to make it perfectly convenient to remit to us from the East, the amount of subscription to our paper, we will receive bills on any of the State banks that are usually current in New York—these can be remitted by mail to us at our publishing office, and the receipt will be acknowledged and the paper regularly mailed.

We can assure the friends of Agriculture, abroad as well as at home, that every token of their approbation, every evidence of their generous support, shall be met with a corresponding evidence on our part that we will merit their kindness.

Agents Wanted.

We want good active agents to visit every county in the State for the FARMER. Young men can find a steady and profitable employment. Apply at this office.

☞ We desire Agents to report as early as possible, that we may be prepared in our issues for a sufficient number to supply the demand. Be sure and report promptly.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO

ARRIVALS.

MARCH 22—Bark Charles Devens, Haley, 7 days from Oregon, with lumber.

Bark Archibald Gracie, Mitchell, 7 days from Oregon; lumber.

Bark Nanaimo, Johnson, 7 days from Oregon; lumber.

SONG.

BY CHARLES SWAIN.

So mournfully she gazed on him
As if her heart would break;
Her silence more upbraided him
Than all her tongue might speak.

So mournfully she gazed on him,
Yet answer made she none;
But tears that might not be repressed,
Fell slowly, one by one.

"I hoped," she said,—but what she hoped
In blushes died away:
"I thought," she said,—but what she thought
Her tears might only say!

She could do nought but gaze on him,
For answer she had none—
But tears that could not be repressed,
Fell slowly, one by one.

Alas that life should be so short—
So short, and yet so sad:
Alas! that we so late are taught
To prize the world we had!

The silent sorrow of that hour
Will haunt his daily track;
And oft he'll wish when lost the power,
He'd called that weeper back.

TO FARMERS.

Neat be your farms: 'tis long confessed
The neatest Farmer is the best.
Each bog and marsh industrious drain,
Nor let vile balks deform the plain,
Nor bushes on your headlands grow,
For briars a sloven's culture show.
Neat be your barns, your houses neat,
Your doors be clean, your court-yards sweet;
No moss the sheltered roof enshroud,
Nor wooden pales the windows cloud;
No filthy kennels foully flow,
Nor weeds with rankling poisou grow;
But shades expand and fruit trees bloom,
And flowering shrubs exhale perfume;
With pales your garden circle round;
Defend, enrich, and clean the ground;
Prize high the pleasing, useful rood,
And till with vegetable good.

THERE is a lesson, says the Knickerbocker, and a good one, in the following lines. We could wish that our readers might hear them sung in the admirable voice and manner of the friend from whom we derive them:

"Let us speak of a man as we find him,
And censure alone what we see:
And should a man blame, let's remind him
That from faults we are none of us free.
If the veil from the heart could be torn,
And the mind could be read on the brow,
There are many we'd pass by with scorn,
Whom we're loading with high honors now.

"Let us speak of a man as we find him,
And heed not what others may say;
If he's frail, then a kind word would bind him,
Where coldness would turn him away;
For the heart must be barren, indeed,
Where no bud of repentance can bloom:
Then pause, ere you censure with speed:
Do a frown or a smile hangs his doom."

HE WHO HAS MOST OF HEART.—"He who has most of heart knows most of sorrow." Yes, yes, they are a fair target for the envious, the malicious, the selfish and the crafty. God pity them, when the wide world is before them; when every rough breath of unkindness sends a chill like death to the trusting heart; the coarse sneer, and brutal jest, fall with a crucifying sharpness on the sensitive ear; private griefs and sorrows, borne with all their crushing weight unshared, too sacred to be trusted to ears that may prove treacherous, are rudely probed, and laid bare to careless eyes, by hands and tongues that should say, "Lean on me, I will shelter you."

Yes, yes,—most of heart, most of sorrow! Treachery repaid for trust,—once, twice, thrice,—the heart still throwing out its tendrils to clasp again but a crumbling ruin. Leaves—buds—flowers—stem, all trampled under the ruthless foot. The same blue, mocking sky overhead; the same heavy thunder-cloud ever looming up in the distance. The little bark, feebly piloted, dashing on amid the billows, amid rocks, and shoals, and quicksands; no strong arm to help; no friendly voice to say, "God speed you!" no hope on earth; no haven of rest; no olive branch for the weary dove. The waters never assuaged; the bow of peace never in the heavens. The feeble, fluttering wing beats earthward, though preferring to soar. O, surely, "he who has most of heart knows most of sorrow!"

ONE of the best double puns we have ever heard, says the Yankee Blade, was perpetrated by a clergyman. He had just united in marriage a couple whose christian names were respectively Benjamin, and Ann. "How did they appear during the ceremony?" inquired a friend. "They appeared both *Annie-mated* and *Bennie-fitted*," was the ready reply.

ONE of the most beautiful passages we ever read is the following one of Burns', which occurs in the dedication of his first edition of poems. "The poetic genius of my country found me, as the prophetic bard Elijah did Elisha, at the plow, and threw her inspiring mantle over me. She bade me sing the loves, the joys, the rural scenes, and rural pleasures of my native soil in my native tongue; I tuned my wild, artless notes as she inspired."

NEXT MORNING HEADACHES.—The shooting pains and penalties for infringing the laws of Nature.

UNWISE MEN.—The following are a few of the characters coming under this head:

The jealous man—who poisons his own banquet and then eats it.

The miser—who starves himself to death, that his heirs may feast.

The mean man—who bites off his own nose, to spite his neighbor.

The angry man—who sets his own house on fire, that he may burn up another's.

The slanderer—who tells tales, and gives his enemy a chance to prove him a liar.

The self-conceited man—who attaches more consequence to dignity than to common sense.

The proud man—who falls in the estimation of sensible observers in proportion as he rises in his own.

The envious man—who cannot enjoy life and prosperity, because others do.

The dishonest man—who cheats his own soul more vitally than he does his fellow men.

The robber—who for the consideration of dollars and cents, gives the world liberty to hang him.

The drunken man—who not only makes himself wretched, but disgusts his friends.

THE CHRISTIAN WIFE.—Chateaubriand discourses beautifully on this theme:

"Man in uniting himself to her, regains a part of his substance; his soul, as well as his body, is incomplete without his wife; he has strength, she has beauty; he labors in the fields; he does not understand the details of domestic life, but his companion prepares the repast, and her smiles sweeten existence. He has his crosses, and the partner of his couch is there to soften them; his day may be sad and troubled, but in the chaste arms of his wife he finds comfort and repose. Without woman, man would be rude, gross, and solitary. Woman spreads around him the flowers of existence, as the creepers of the forest decorate the majestic oak with their odoriferous garlands. Finally, the pair live united, and in death are not separable; in dust they lay side by side, and their souls are re-united beyond the limits of the tomb."

THE NIGHT SIDE OF LOVE.—Midnight veiled the heavens with infinite blackness as Hans Von Rosenbaum stepped from the orgied halls of the Kinkel Lager Hans Zum Saus and Brus. The foam of the beer still dashed his wild beard, and the murmur of the evening breeze mingled in his soul with the memories of cries for "anoder pretzel!" and "pring in de Lager!" and the trilling of harps and pianos—for it had been concert night.

"Kat-a-ri-na!" he cried from the bottom of his heart and voice—"Kat-a-ri-na!—Komm heraus!"

The breeze sighed in the leaves—the waves rippled—all was still.

Once more in agony arose that cry—"Kat-a-ri-na!"

Deep from the recesses of the second story window murmured an answer—

"*Nix komm heraus!*"

"Vot—you *vont* kom out!" roared Hans, in all the grief of rejected love. "Den you goes mit ter teufel and be dondered? Gotrhimmelkreuzschockselwerenoth!"

A brick flew from his hand, skimmed through the misty air—there was a jinkle of broken glass—a cry in female Dutch—and—all was silent.

* * * Still wanders in the dark midnights, the spectral forms of Hans Von Rosenbaum around that dwelling, still rings from the window the ghostly cry of *nix come hersaus*, still speeds its course on the night wind a phantom brick-bat; and still the benighted traveller hears a low dismal wail in Dutch. All things in heaven and on earth are re-echoed and reflected in their ghosts or in their shadows.

"Is them fellers alive now?" asked an urchin of his teacher.

"What fellows do you mean, my dear?"

"Why, Paul, and Luke, and Deuteronomy, and them."

A DINNER SCENE.—*Father*—There, Sammy, there's a nice bone for you to pick for your supper.

Sammy (a precocious youth)—Old man, "is thy servant a dog, that he should do this thing?"

Father (enraged)—Old woman, Sammy is done; put the cur to bed!

THE velocity of the wind is from an imperceptible movement to 100 miles an hour. When moving at the rate of one mile per hour, it may be said to be hardly perceptible; at two or three miles just perceptible; at ten to fifteen, pleasant and brisk; twenty to twenty-five, very brisk and bracing; at thirty to thirty-five, high; at thirty-five to forty-five, very high; at fifty, a storm; at sixty, a great storm; at eighty, a hurricane; at one hundred, a hurricane, uprooting trees, overturning houses, &c.

THE London correspondent of the New York Commercial, under date of November 1, says that the German armies now in the field are much larger than those which decided the fate of Europe at the battle of Waterloo.

THE CONVERSATION OF FLOWERS.—Do flowers converse? Yes, certainly; or else what is the meaning of "Flowers of Speech?" Besides, we have a standing proof of the conversation of a flower in its (s)talk!

GOODS IN GREAT DEMAND.—The pedlar for whose wares there is most demand must be he who carries the pack o' nonsense.

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the Fire Proof Store, No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Hoxall and Gallego.

Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from now Wheat, without any adulteration.

Ground feed of all kinds always on hand.

Every exertion will be used to merit a continuance of the favor heretofore so liberally extended to us. 1-3t

Catalogue of Fruit and Fruit Trees.

WE call the attention of Nurserymen and Orchardists to a new catalogue just issued by us, prepared with great labor and cost, giving the lists of the best fruits cultivated in Europe or America, with their synonyms. This catalogue embraces also lists of best Vegetables, Ornamental Trees, Flowering Plants, Seeds, &c.—being a perfect illustration of the best varieties of everything belonging to AGRICULTURE, HORTICULTURE, and FLORICULTURE, with brief directions for the cultivators to each department, and as *adapted to California*.

This work will be found a very great help to all engaged in cultivation.

Price $1 per copy. WARREN & SON,

The Betrayer.

SCENE I.

It was a summer evening in July, a bright sun was shining on the golden crops of corn, ready for the reaper, and gay groups of village maidens rejoicing in all the light-heartedness of youth, for past sports or anticipated pleasures.

One attached couple had wandered by the side of a river; the maiden looking up to her companion's face with all the confidence of affection, while the tall and even stately form of her companion responded to her look with a kind pressure of the hand, or an affectionate glance of the dark eye.

"You will not forget me," said Marion Gray, for so was the maiden named, "when you are mixing with the great world. I hope, nay I am sure you will remember her whose every thought will be devoted to you."

"Doubt it not, dear Marion," was the reply. "Walter Edwards will not forget the fair one who has plighted her affection to him truly and faithfully."

"Yet, Walter, there is one thing on which I think with pain. I, who should have no secret from you, good and kind as you are, have that on my mind which I scarcely dare to tell."

"What is that?"

"You have been to me all that I could desire—you have left no wish unfulfilled—yet now, while your vows are ringing in my ears, and your hand is clasped in mine, the thought creeps over me that—that--dear Walter, will you forgive the past concealment—that our belief is not the same—that we trust to different faiths for our salvation."

She paused. He waited for her to proceed with an air of anxious expectation; but the fair one still hesitated.

"And is it this which has so often made you rest? Nay, then, I wonder not; for there is a fearful penalty hangs over the creed of the heretic; and fear you not that it may fall upon you?"

"I have sometimes been apprehensive that my Bible might be discovered, and that"—

"A Bible—a Bible! and were you really possessed of a Bible? and in the vulgar tongue? But where—where do you conceal it? You know that"—

"An awful penalty awaits those so offending. I do. Death is denounced against those who court the book of life."

And this was then the mournful truth. The spirit of bigotry and vengeance had let loose the furies of the mind. Stern priests believed that they presented a grateful offering to the God of mercy, by destroying their fellow men for differing from them in spiritual matters, and that, too, while one of the gentle sex sat upon the throne. The emissaries of the exasperated ministers of religion spread themselves everywhere throughout the country in disguise among the people. Fires were blazing in Smithfield—daughters were torn from their parents—husbands from her whom he had protected for fifty years, and given to the flames for the very deed which Marion had confessed.

Aware of this, the young man manifested a trembling eagerness to know where this all-important volume could be safely concealed. On this point he questioned Marion very closely, and it was not till she had minutely described the secure hiding-place in which it was deposited, that he [illegible] at his ease.

"I know," said he, "that there is real danger, but greater, more terrible danger still would exist for me were my soul left in darkness; and rather than this, if it must be so, I am ready, if need be, to seal the truth with my blood; and feeble as I am, the fearful struggle with death would be trifling compared to the thought that you were left to ruin, with none to comfort."

"Speak not thus!"

"Night after night," continued Marion, "ere I retire to rest, or I ponder over the word of God and the sacred volume placed beneath my pillow, I [illegible] for the knowledge of the promise."

"Dearest Marion," said Walter Edwards, [illegible] "these years are over I must [illegible]"

"You [illegible]"

"Fear [illegible]"

That period, from the circumstances above described, during the reign of queen Mary, was a fearful one for England—the blood of her best and most pious sons was poured forth like water. Emissaries, to discover the followers of the new creed, were secretly dispatched to every county in England.

Walter Edwards had come, an unknown man, to the village of Sevenoaks, and had been attracted towards Marion by the mildness of her demeanor, and perhaps by the report which had been spread about from some unknown source that she had been converted to the religion of Luther.

That she was such is proved by the conversation recorded, and that he had succeeded in gaining the guileless affections of poor Marion is beyond all doubt.

He left for the great city. The mandate of authority soon compelled Marion to follow him.

SCENE II.

In an antique and stately room, of which but few specimens remain, sat one whose name had spread terror over England—Cardinal Pole. Near him stood a table, covered with papers, at which his secretary sat writing. Pictures of the saints, and of their martyrdoms, hung around, excepting on one side, hung with crimson drapery.

The door opened, and Marion Gray, attended by a guard, entered, and with a firm but subdued demeanor, stood face to face with the dreadful man who was the arbiter of her fate. For a space he sternly regarded her, as if surprised to see one so young.

"Know you the crime," he at length said, calmly, "for which you have this day been summoned hither?"

"I have been told," replied Marion, "that it is for following the true faith, and that I hold to be no crime."

"Ha, maiden! that which our church forbids, and holy men disavow, call you that no crime? Hast thou not broken our sovereign's commands, and held in thy possession a copy of that volume which is forbidden to such as thee?"

"It is true?"

"And canst thou, a child, pretend to understand it?"

"It is written there, 'a child shall not err therein,'" said the captive, simply, quoting the divine word. "But who has accused me?"

"Maiden, thou shalt behold thine accuser."

As he spoke, he made a sign to his secretary to ring a small bell which rested on the table.

At this summons the crimson drapery moved, and the tall form of Walter Edwards appeared in the opening.

"And art thou, too," exclaimed Marion, with a deep sigh, "in the hands of this terrible man? Now, God protect us, for our hopes on earth are few."

"What mean you?" exclaimed the Cardinal.

"What mean I!" replied Marion, wrought almost to frenzy by the sight. "Could not cruelty be content with the destruction of one over whom scarce eighteen summers have passed? Will not my blood suffice, or must ye slay one who has only sinned by loving me? Spare him and I will bless you."

"Woman, thou art beside thyself. Speak, Walter Edwards, and say how thou didst track this guilty one to her home, and get from her the secret of her false faith. Say, man," he continued, not heeding the agonizing remorse which passed over Walter's face—"say that thou hast denounced her to the church, and given her to our chastisement. Speak, art thou dumb?"

Gasping for breath, the accuser muttered—"Pardon me, my lord—a sudden faintness—it is as thou hast said."

"You do not mean it, Walter—you cannot mean it; the presence of this slayer of God's saints hath turned thy brain. Yet no," she suddenly exclaimed; "by the eye which meets not mine—by thy bended form, and by the quivering of thy lip, thou hast spoken truly."

"It is even so," in a low voice murmured the accuser.

"Horror, horror!" exclaimed Marion, now fully comprehending the mighty calamity which had befallen her. "And from your hands, Walter!—you, on whom I leaned in all my troubles; you, who seemed to me so kind, so gentle; you! God of my fathers, sustain me in this bitter hour of trial."

"What have you to answer?" demanded the Cardinal.

"I never read the [illegible]," said Marion, utterly disregarding the [illegible] "[illegible] never [illegible] I [illegible] it, [illegible] I [illegible] my [illegible] I will [illegible] Walter Edwards [illegible] against a [illegible]

"Time presses," said the Cardinal, "thine answer, girl?"

"My answer, Lord Cardinal is this," and the speaker seemed inspired with an unearthly energy as she proceeded, "that of all those whom thy cruelty has cut off—of the hundreds thou hast destroyed, and of the hearts thou hast blasted, none disregard thy punishments or laugh to scorn thy threats more than the betrayed village maiden before thee."

With a stern glance he pointed to the door by which she had entered, and the prisoner was led to the only lodging she was to possess on this side the grave.

SCENE III.

In a cell, to which the light of day could hardly reach, lay Marion Gray. The fiat had gone forth, and on the morrow she was to add another to the list of those who died for faith. It was midnight when a noise as of the grating of a door upon its hinges, aroused her; and, springing from her hard couch, she saw the form, once so dear, of him who had betrayed her. He entered with a slow and melancholy step; and there, in that damp cold cell, by the flickering light of a dull lamp, met, for the last time, the betrayer and his victim!

"Marion," said a low melancholy voice.

"What would you, Walter, with one who has done with the world?"

"I have come to implore your pardon," was the answer, in a voice almost choked by tears.

"Ask it of God, Walter—I am at peace with all the world."

"Within this week, Marion," said Walter, "I have suffered the anguish of years. Look on this furrowed cheek—on this wasted brow—and on these hollow eyes."

"You have cause for bitterness. I am doomed by you. Is my face as fresh as when you first sought me? Is it nothing to die in the springtime of youth? Is it nothing to feel that a terrible death awaits me?" said Marion, touchingly.

"Oh, Marion, would you but consent to live! Recant in time. You may yet be saved. For your repentant lover's sake renounce your heresy."

"Peace, Walter."

"If you could but say the word, and worship your God in a different form, happiness would await us. In a distant land you might teach me that which you have learned, and on a foreign shore might our bones rest peacefully and calmly in the same grave, with but one hope, one faith, and one God."

"Walter, Walter—you trouble me, yet you plead in vain. Weak and frail as I am, I am content to die in the faith I have avowed, for the Deity I worship will give me comfort in the hour of affliction. And now, farewell—I would gather strength in sleep for my last trial."

He renewed his importunity, but in vain, and at length despairingly passed from her presence and Marion Gray fell on her knees and prayed long and earnestly for divine assistance; and strengthened by that power on whom she leant in all her troubles, fell a victim to the fierce intolerance of the times.

Of Walter Edwards little is known, save that, from that time, his name is no more found among those "who went about like roaring lions seeking whom they may devour."

A Scrap from the Life of a Ruined Man.

"We're very happy then, when all our [illegible]
Flow from ourselves, not from the [illegible]'s voice."

Who I am, it matters not. I have the vanity to think that a fragment of my own personal history may be useful to others. Why should not a man's life be written before he dies, if it can be of any service? At all events, in this case, he has satisfaction of reading his own biography, and, if not himself the author, probably at learning a great deal about himself that he never heard of before. He "paints a moral or adorns a tale," while rampant in the flesh: and not only affords food to reviewers, but enjoys the pleasure of knowing what others think of him. He establishes his immortality himself. It is not left to lukewarm friends, or careless executors, to write his history on a grave-stone. But there or here or here nor there.

By nature I am a City-man—a New York City man. Born, bred and [illegible] I [illegible] the sound of Trinity Bells. Boys [illegible] when I was a boy. We were not [illegible] are now. We [illegible] what we [illegible] [illegible] and [illegible] I was a [illegible] I [illegible] I [illegible] I

proved sufficient for all my wants. Some weeks I spent in reflection. What was I to do? Go again into business? Begin at the bottom of the ladder, when I had fallen from the top of it? To what end? To make money—to grow rich? There was the rub. The savings of two generations, besides my own labor, had been swept away in a month. What had my grandfather and father gained by their incessant life-long toil? Had they done any good; was any one better, wiser, happier for their having lived? Were *they* happy? Had they fulfilled the end for which they were created? Were all the noble powers, the inestimable talents with which they were born, intended for no other use than selling exchange, cashing drafts, and counting specie? Was such a life preparatory to the life beyond the grave? Are there offices in heaven? And what surety, if I even succeeded again in becoming independent, that I should retain my fortune? In the late ruin, we knocked each other over like nine pins. I know now that not one business man in an hundred, in our large cities, dies solvent. And what prospect of misery, if such reverses occurred again late in life. A city devastated by the plague, could not have been the scene of more affliction or sadder family desolation. I was too old to study a profession. There was nothing open to me but to turn farmer. Every sentiment within me quailed at the thought. My City blood was too strong. My horror of the country was ingrained. But I reasoned the matter with myself. Here, said I, are some sixteen millions of souls in these United States, two millions of whom probably live in the large cities and villages. Where and what are the rest? I have always been proud of my country. It is a noble country—the noblest country for ability, virtue, industry and intelligence on the earth's face. Who makes it so? The citizens of Philadelphia, New York, and Boston, with a few *et ceteras?* As I looked round me, and analyzed our City society, I could not in conscience say so. The whole City-world was lying a shattered wreck around me, and yet the United States lived on. Our losses were but a tumor in the body politic, disordering the health, but neither dangerous or incurable. The vitals were sound. Who then forms the country? It *must* be the Farmer. If so, there must be an uncountable wealth of industry, intelligence, virtue, and power among them. Their exterior may seem rough to our City eyes, but wonder if we City people don't appear effemiuate and frivolous to them? Which of the two has most of the MAN about him? Which is best adapted to form the noble woman, the devoted wife, the prudent, sensible mother—our City women, or the Country women? Is not the sound mind found in the sound and healthful body? I determined to view the matter with my own eyes. I made a long tour among the farmers in various States. At first, I certainly was repulsed in the North, (the Southerners are a most polished race) by what seemed to me a coarseness and want of refinement, both in manners and ideas. But I found so much that was good, so much that was true, so much that was pure, exalted, and self-denying under this rough exterior—so much quiet happiness and freedom from care—so much manliness in the men, and independent heart-born sense, and tenderness of feeling in the women, that I became a convert to country life. It made a new being of me. Emigration was then crowding to Michigan. I visited it in the Spring, and was charmed with the exquisite beauty of the scenery:—

> "It was a fresh and glorious world,
> A banner bright that was unfurled
> Before me suddenly;
> I looked upon those hills and plains,
> And seemed as if let loose from chains,
> To live at liberty."

I purchased a partially cleared farm; returned to Connecticut, and married one of her charming daughters; and here I am, with a family of boys and girls around me—rough enough, perhaps, in City eyes—but as happy and independent as it is given to man in this world to be; but I thank God daily that *I was ruined* before it was too late to change my habits and learn wisdom.

Do you want a MORAL? It shall be the words in which I answered my son, John, when he begged me to let him go to ———, and enter a store. "John," said I, "I have tried both lives. I know them. You do not. Man made the City; God made the Country. If God, in his providence, undoubtedly calls you to a City life, go, but go with my hearty commiseration. If not, and if you wish to walk with God here and hereafter—if you wish to be an independent man, and really your own master—to enjoy life—to do good—and freely exert the talents you are blessed with, then stay in the country. The gewgaws of the City, which have fascinated you, are all moonshine. Take my word for it. What you took for gold is only gold leaf, such as they put on gingerbread when I was a child, and thin enough it is at that. If you choose, you can be a far greater man in the County than you could be in a City, and infinitely freer from care; for the mind works free when it breathes the pure air of heaven, among the aged forests and flower-carpeted plains. In the country the fear of what your neighbors will say does not make a slave of your soul, for you don't depend on their favor for your living. America has buried three eminently great men—Washington, Clay and Webster. They were all farmers by choice; as farmers they were all in advance of their age; they loved the country. They never left it but unwillingly. John is a sensible boy. His mother always says that he takes after his father. He staid at home—but the world may hear of him some day yet. —*Farmer's Companion.*

THE funeral of Dr. Gardner took place at Washington, March 5.

Speech of Hon. E. Nichols

Upon the Resolution inviting Dr. Winslow to deliver an Agricultural Address before the Legislature of California.

Mr. Speaker—My reasons for advocating the motion of my honored colleague are these: I desire light; you can afford it by courtesy, therefore dispense it; I seek information—do not withhold it. I wish to be enlightened, and hope you, my esteemed brethren, will graciously permit me the privilege thereof. You will bear in mind that a few days since, my esteemed colleague and myself were earnestly appealed to by three other Hon. gentlemen to withdraw our objections to the suspension of the rules in order that a certain bill might pass, to which we were opposed on strong feeling and principle. Yet, sir, we yielded, and I now expect the same courtesy from them; and as the bill in question interests ALL of you, anticipate a general response to my own request. Indulge me, Mr. Speaker, while I briefly state my reasons for requesting this reconsideration, in order that I may be allowed to listen to Dr. Winslow's lecture. Ever since the meeting of this honorable body, I have remained silent, rooted to my seat for very shame, that I did not understand the varied subjects discussed. The bills on agricultural interests, mineral lands, and others of a similar nature, were lying unheeded and disregarded on my desk; I lacked information thereof, statistics, and facts. Perhaps, had the resources from whence I could draw information existed near me, I would have tested their teeming depths. They were indeed beyond my reach—*not* my understanding; and I had neglected giving them the attention they deserved. Now, sir, during all this time, I have listened quietly and earnestly to many gentlemen who have pleased me by their discourses, and to many who have not. And here, where I had no idea of opposition, where I had expected to derive abundant information,—for the Doctor is an able and scientific man, according to the universal testimony of every one;—where I had intended to come prepared with pencil and paper, in order to record statistics and useful data for future digestion in this body,—lo, here, I say, I was unexpectedly thwarted in my fondest hopes. And by whom?—why, the Hon. member from El Dorado, Mr. Conness, and my colleague from San Francisco, Mr. Swasey. Now, sir, they were the most streuuous in their opposition, and I do say, that there are certain members upon this floor, who make it a point—their only one—to oppose everything they do not understand themselves, thereby wishing to keep all others equally in the dark. Everything disconnected with their own schemes they denounce, and consume more time and money in their vain declamation than would suffice to stop forever the mouths of those who are constantly bleating for retrenchment and reform, They raise their hands to Heaven and cry out. "Lo, here is a trap door"—"There is surely something behind the curtain"—"The eyes of all the world are upon us!" and the like unmeaning phrases, replete with sound, but without sense. It is not true; the eyes of their constituents are shut, and they do not care a rush what we do or what we say, if no grand principle be violated. Do not deem, oh ye immaculate Solons, that you occupy for a single moment, otherwise, their serious attention. No, sir—all these are but convenient pegs on which loud declaimers hang their shining, superficial, metaphorical hats; and some Hon. gentlemen's frontispieces are nodding beneath them all the blessed time! I was prepared, therefore, to encounter the Hon. member from El Dorado in opposition, but I was surprised and mortified to meet my Hon. colleague from San Francisco there too. I must conclude that they are both as ignorant as myself on this vital, all-important subject of agriculture, upon the development of which depends the surest and most abundant wealth in any State. And therefore they refuse to afford me the means to emerge from this benighted thraldom.

It will be recollected that my colleague prescuted a few days since some joint resolutions on the subject of Railroad Lands, and also a series of laws for the protection of settlers or squatters. These latter were passed, and by so large a majority that it called forth the universal remark out of this House of—"how radically democratic this body is, and how thoroughly popular in all its policy!" Yet, sir, they both contained, indeed, the elements of extreme popular inclination, and gained for my colleague the proud and well-earned title of "champion of the people's rights." Judge, then, of my astonishment, when I listened to him violently opposing so essentially popular a branch of internal domestic economy (as the development of our agricultural resources really is) being discussed and revealed by an able scientific lecturer before this body. Sir, his sole argument, or rather his shadow of an attempt at one, was this: "Let the public press be the medium through which the Doctor is to enlighten the people. Here is not the spot to bother us with the information, nor is now the time." Indeed! Oh, what a solid, practical and forcible reason, for a Legislator who represents an agricultural county! I wonder, now, how he should have liked to have had applied this same reasoning to his squatters' protection bill? I voted and worked for its passage. It is true, he did not ask or influence me, but others did, honorably and fairly. Yet, sir, by Heaven, I now declare that could I, by recalling my vote from the journal, change the result of the vote upon its passage, I would not only do so, but I would hurl them out of that window, and let them rest there forever. What! Withhold information upon such a noble and requisite subject, and above all, from the representatives of that State which ere long will derive its sole stability and wealth from its rapid development; and, to cap the climax, that such withholding should spring from a member representing an agricultural county! Why, sir, it is contrary to the very spirit of our age—of our California age, wherein thoughtfulness, and not thought, is the predominant feature and moving power, or prevailing force. For, although the terms seem synonymous, yet they are in true, practical working, widely different. I cannot better explain than by illustration. For instance—The language of thought is: In with steamers, through with railroads, on with telegraphs, and over with clippers; while the language of thoughtfulness is: Up with school houses, and down with vice; rise, Christianity, and crush superstition and ignorance; advance improvement, liberty, and information, and redeem the masses of mankind!

And it is precisely this kind of advancement and improvement which I desire, both for my own mind and yours, my Hon. friends. Now, Mr. Speaker, it may be urged as inconsistency on my part, because I opposed the invitation to T. F. Meagher, while voting for Mme. Bishop.

(Here Mr. Conness rose and inquired of Mr. Nichols "if he would give his reasons for Mme. B. and against Meagher.")

Mr. N.—I will, sir. In the bright days of my early youth I listened to Mme. Bishop with pleasure and delight. In a foreign land I learned to admire and applaud her whom more than one nation has crowned with laurels and success. Unacquainted with any instrument myself, yet passionately fond and devoted to music, as I trust I ever may prove, my support of the invitation to the fair and bewitching artist will be readily conceived. And I will also add that there are so many upon this floor who can perform upon one instrument only, (the German flute,) and do so continually, that their opposition will be understood and appreciated. Gallantry, however, independent of every other consideration, would have induced my hearty approval. Is my Hon. friend satisfied? Again. I will explain my opposition to Mr. Meagher, which many warm and sensible friends reproached me with, as well as Mr. Conness.

Mr. Meagher has overlooked the solemn duty of his mission, and, in a series of wild sketches, which partake of the marvellous and astounding rather than the practical and substantial, but yet pourtrayed with a master hand, has only evinced how much fanciful exuberance a great mind can weave--into graceful metaphysical webs, 't is true, but yet which break at every breeze. Read his lectures, recently delivered, and cull from them if you can three solid, working sentiments, which rouse millions to action, and set the masses thinking for themselves. Analyze them all, and find for your pains but the magic vagaries of a cultivated mind, and not the glowing impulses of solid reason or homely sense. In earlier days, when associated with Gavan Duffy and other noble spirits, he wielded the convincing weapons of intelligence which the bone and sinew understand and can appreciate; but now he scorns their use and their power, and prefers to dwell in the clouds while battling with spirits not of earth! Yet, he can always delight and bewilder, though he may not touch the heart, or rouse to work! "Whatever thy hand findeth to do, that no with all thy might," is the motto of Ireland's truest friends and well wishers. He does not, through inclination, embody it either in thought or action. The climax is too far postponed in his rhetorical displays; while similes, metaphors and various figures of speech, crowd thick and fast, so extensive in their combinations that they really serve but to confuse the mind, and distract both sense and feeling. Even as a man addressing for the first time a large assemblage among whom may be found indeed the upturned faces of warm and intimate friends; yet confusion so distorts the vision and power of utterance as to render him incapable of distinguishing a single object, or individualizing at all. In fine, he *is too far from the people.* He shuns the crowd. He flies after delusive phantoms of the imagination, and away from the noble cause he serves. While good, honest, staunch John Mitchell hugs them all with an honest grasp which they both understand and feel, and that same noble cause he *never* forgets; for it prompts every move upon the battle-field of human energy, glows in every thought, and lives in every action! Before I leave this branch of my subject, I cannot resist the temptation to present a picture, in order to contrast their respective styles. I am fearful it will lead even me to the clouds. But I have at least a noble precedent.

Behold a landscape which contains, in a narrow space, every varied scene in nature—the sublime, the beautiful, the charming, and the touching; in awakening grandeur, or in slumbering repose. Fancy it, I say. The shroud of winter envelopes all; Nature, here, is wrapped in death-robes, at the departure, for a time, of the dear reviving seasons. Ice chills every object—gleams everywhere—in glittering confusion, it is true, yet it flares upon you, and blinds the sight. So Meagher blinds the sense, and you stand amazed—not moved. Look again! Spring and summer have dissolved with melting fingers this clinging shroud from the magic scene, and lo! the change gladdens sense, thought and feeling! Birds are singing on every bough; blossoms and foliage, turf, valley, and meadow, hill-top, and mountain side are re-animated and instinct with gushing life. The laughing streams, as they dance along, are murmuring sweet songs to the pretty flowers that raise their drooping heads and glistening eyes, while clustering ever by their side in happy glee. All is true, natural, moving, and touching—felt by all, of every class, of every hue, and in every clime! The great heart of Nature lies beating before you; and at every throb, each vein in her system is swelling with intense delight! Yes, a dozen columns of brave, honest, John Mitchell's writing and speaking are worth a life-time of Meagher's recent lectures! I could never refuse this hall to staunch John Mitchell. I did not vote for Meagher.

But I have wandered from my subject.

I do hope that you will sustain me in the reconsideration of this measure, and pass the resolution. If it be defeated, I shall feel wounded, and think that you have treated ME with unkindness and discourtesy. I would never refuse any one of you my support to a question involving no party principle, or interest, or factious tie of any kind. The agricultural interest and resources will continue to yield untold wealth of every character to our giant State—the "Young America" State of the Union—in gold, in labor, and in industry—in peace and plenty—long after our mines shall have become exhausted, and their very existence melted into the twilight of fable!

Then, Mr. Speaker, do let us invite my friend Dr. Winslow to instruct, inform, and enlighten our minds on this ennobling subject. In conclusion, I appeal to the snow-robed counties of the extreme North; to you, my friends from Klamath and Trinity—to you from Siskiyou, by whose side I have stood in conflict, and recently shared in your brilliant triumph—to you from El Dorado, San Joaquin, Placer, and Nevada, all of whom I dearly love and shall ever cherish—to you from the central regions, whose names I do not know, yet long to learn, since I honor and esteem you all—to you, from the sunnier and more genial climes, Santa Clara, San Diego, San Jose, San Bernardino, and Monterey—to your southern glow of generous impulse. Oh! do not let me appeal in vain! In line, thou, too, last, though not least, stern, proud, strong-hearted, unsubdued Alameda—thaw, I beseech you, the snows of age which are fast chilling your unrelenting hearts; listen to this manly appeal from a youth who longs for wholesome instruction and facts—and in memory of your own become again redolent with spring's warm sunshine, by granting my warm appeal! By the hallowed recollection of days gone by when, in the honored legislative halls of your own proud State—the "Old Dominion"—you granted there the same generous courtesy I now seek, to many who have long since gone to the dark house, and the last sleep,—I charge you, aid me now, and rekindle anew the kindly spirit of your noble hearts!

Mr. Speaker, I have done, and need not say that I rely with far more than a mere trusting hope upon gallant, proud and honored Yuba.

(The reconsideration and the resolution were passed by a large majority.)

MARRIAGE OF A MILLIONAIRE.—We find the following in the Boston Saturday Evening Gazette of February 18:

> "'The bard has sung, God never formed a soul
> Without its own peculiar mate, to meet
> Its wandering half, when RIPE to crown the whole
> Bright plan of bliss, most heavenly, most complete!'

"These poetic lines—not more poetical than true—from the pen of Maria del Occidente, have been verified by an affair in real life, which reached the culminating point to-day. For many years the final fate of a Boston millionaire has been the topic of discussion among various circles, where members of the opposite sex have been congregated, and more than one tender heart, ranging from twenty to forty, has felt an interest in the final result, and exhibited great personal concern for his welfare. To-day witnessed the consummation of marriage between Joshua Sears, Esq., merchant, of Boston, and Miss Snow, of Brewster, Mass., who may have seen some thirty-five summers. The newly married couple left for New Bedford this P. M. The marriage ceremony took place in Chelsea."

CALIFORNIA OR CLEAR LAKE.—Lake Bigler, described by the Placerville Herald, is certainly one of the curiosities of California. It lies at a great elevation, between two distinct ridges of the Sierra Nevada. It is at least fifty miles long, within an average width of from ten to twenty miles, and is of great depth. It never freezes, though surrounded a great part of the year by snow. It abounds with fish of several varieties, among which the speckled trout, many of large size, and the salmon—real salmon—predominate. So clear are its waters, that a stone or other objects can be distinguished at the bottom, thirty or forty feet. About midway between two extremes of the lake, on the eastern side, is a singular over-arched chasm in the wall of rocks, that leads to unknown caverns and dark recesses, said by the Indians to be the abode of spirits.

THE Illustrated London News of Jan. 21, says that no less than 1,230,000 letters passed through the London District Post on Saturday previous. This is the largest number ever known, even upon Valentine's Day.

AN English paper says: On a cannon-shot fired the other day from the right bank of the Danube, which fell close to the quarters of Prince Scharmanoff, were the words, "Good morning to you, Prince Gortschmkoff!"

ACCIDENT TO THE REPUBLIC.—A few moments previous to the departure of the steamer Republic the cylinder head broke, and it being impossible to repair it in time for her passengers to connect with the steamer on the other side, her passengers were transferred to the Oregon.

THE BIG LUMP.—The lump of gold recently found at Columbia, weighing 27 lbs., has been purchased by Page, Bacon & Co.

Okra.

This plant is cultivated extensively in the West Indies, from whence it has been introduced into the United States. The pods are gathered green, and used in soups. They form an important ingredient in the celebrated Gumbo soup of New Orleans and other southern places. The pods are filled with seeds and a mucilage of a bland and highly nutritious quality. Hence the okra is frequently recommended to persons afflicted with dysentery and other bowel complaints, either eaten boiled, or made into soup. When buttered and spiced, they afford a rich dish, and with vinegar, they make a good pickle. The plant comes to maturity in the Middle States, and the pods are abundant in the Philadelphia market. Those who become once accustomed to this wholesome vegetable, contract a great fondness for its peculiar flavor.

In Louisiana and other southern States, a dinner is scarcely considered complete without okra cooked in some way or other, and the poor consider it one of their greatest blessings. Mr. Legare, editor of the Southern Agriculturist, has furnished the following recipe for making okra soup, after the celebrated method pursued in Charleston. The pods, he says, are of proper size when two or three inches long, but may be used as long as they remain tender. If fit for use, they will snap asunder at the ends, but if too old and woody, they must be rejected. One peck of the tender pods are to be cut crosswise into very thin slices, not exceeding one-eighth of an inch in thickness. To this quantity add about one-third of a peck of tomatoes, previously peeled and cut into pieces. The proportion of tomatoes may be varied to suit the taste. A coarse piece of beef (a shin is generally made use of) is placed in a pot or digester with about two and a half gallons of water, and a very small quantity of salt. This is permitted to boil a few moments, when the scum is taken off and the okra and tomatoes thrown in. With these ingredients in the proportions mentioned, the soup made is remarkably fine. Still, some think it improved by additions of green corn, Lima beans, &c.

The most essential thing to be attended to is the boiling, and the excellence of the soup depends almost entirely on this being done faithfully. For if it be not boiled enough, however well the ingredients may have been selected and proportioned, the soup will be very inferior, and give but little idea of the delightful flavor it possesses when well done. A properly constructed digester is decidedly the best vessel for boiling this or any other soup in; but where such a utensil is not at hand, an earthenware pot should be preferred; but on no account make use of an iron one, as it would turn the whole soup perfectly black, instead of the proper color, namely, green, colored with the rich yellow of tomatoes. The time usually required for boiling okra soup is about five hours, during which it should be occasionally stirred, and the ingredients mashed. When taken off, the original quantity will be reduced to about one-half, and the meat "done to rags;" the whole forming a homogeneous mass, of the consistence of thick porridge.—*Farmer's Encyclopædia.*

Lawns and Grasses.

Lawns connected with country houses will vary in extent from half an acre to several acres, as the case may be, although, in this country of "land saving," there will be very little danger of getting the lawn too large, even if it should include twenty, thirty, or forty acres in extent. Where the houses and farm buildings can stand near the central point of the lawn, it will be better if it has a high and commanding aspect; however, that must depend on circumstances, as the highest point on the lawn will be the best for the buildings to stand upon, whether that be upon one side or central. It will be well, where the builder is designing a new place for a residence, to select a point near or in the midst of a belt or grove of forest trees. This he will find to be a great advantage over building on an open place where he has got to wait a short life time for small trees to grow up to make shade. In such cases, however, of barren points, some trees of a large growth should be immediately transplanted about the buildings.

As to the general management of lawns, it must vary according to the size, situation, circumstances of the owner, &c. Of course the general design of a lawn is to remain in permanent grass and growing trees. And in the first place, whatever the size of the lawn, whether it be one acre or twenty, we would have but one outside fence or enclosure. All cross sections of fences have a bad look and spoil the prospect. Wire or iron fences are the most substantial, look the best, and are the cheapest for a life time, that can be built.

The laying out and preparing a lawn for seeding down to grass, requires a great deal of labor and judgment to have it well done. The land should be plowed deep, subsoiled, and well pulverized; the surface should be made smooth with a fine tooth harrow and rakes. By this, we do not mean to pull down natural hills or conical knolls, to fill up a natural valley or ravine. We should much prefer to have the land remain in its natural state as to form of surface or position. The kinds of grass seed to be sown should be a mixture of Red Top, Kentucky Blue Grass, and White Clover, sown with a liberal hand, and then to be [illegible] with a fine tooth harrow or [illegible] to [illegible] by the crow.

"While [illegible] only an acre or [illegible] two [illegible] can be done [illegible] "[illegible] any other." [illegible] hands of a competent man good work can be done. But mowing a swath with the ordinary scythe is one thing, and cutting or shearing with a lawn scythe is another business altogether. The grass should be cut once or twice a month through the growing season, and it should be cut even and alike; for it is only in this way that a close, tight sward can be obtained, and that after two or three seasons of experiment or growth. They understand this business better in England than we do, because they have done more at it; still we can by a little practice learn enough to answer all useful purposes.

Where the lawns are several acres in extent, the practice of cutting with a scythe would be slow, laborious and expensive. In this case, we think that the grass might be fed down by sheep. This could be done by enclosing the sheep with a cheap wire hurdle fence, to be moved over the lawn as the grass is fed down, and so after the ground is all gone over the first plat will be ready for the sheep again. Then the sheep would scatter their droppings, or manure, over the surface, and it being of such a fine quality it would be the best top dressing the lawn could have.—*Horticulturist.*

The War Question.

The actual *status* of the war question is still a subject of popular conjecture. By the steamer Nashville, from Havre, Feb. 15, and Cowes the next day, we have the following—the latest intelligence:

Although Lord Aberdeen had stated in the House of Lords that war was not inevitable, yet the Admiralty and Horse Guards Authorities in London were acting as though war was actually declared.

The most extended preparations are in progress at all the English ports.

At Portsmouth, Plymouth, Woolwich, Chatham, and at all the naval stations, the preparations were on a stupendous scale. The Baltic fleet, consisting of 36 ships of various classes, chiefly of line-of-battle ships and powerful screw frigates, would be ready by the 6th of March, and was to assemble in the Downs on that day, and to be joined by 10 French sloops of war, of 120 to 80 guns each, and the combined fleet, under Sir Charles Napier, would then be held at disposal for operations in the Baltic against St. Petersburg. The pioneer of this great force, the British steamer Hecla, left Portsmouth on the 11th, to make surveys in the Baltic and North Sea before the advance of the fleet.

At Southampton great preparations are being made in getting ready the steamships Orico, Ripon, Manila, Himalaya, and others, and in order to be ready to embark 3,500 on the 18th from the Southampton docks. Other large steamships, in Liverpool and London, had been engaged by the Government on the 11th; the Niagara and Cambria, belonging to the Cunard Company, had been taken up, and the place of the former ship in conveying the mails to New York was to be occupied by the propeller Alps, to leave Liverpool on the 18th. The other ships of the Cunard Company would also, it was stated, be taken up by the Government as they arrived, leaving it to the Messrs. Cunard to carry on the mail service as they best could, by means of smaller steamers. Many of Green & Dunbar's fine East India sailing ships have also been hired by the Admiralty to convey horses, stores and troops to the East.

While these gigantic preparations on the part of the English Cabinet, and while others of a similarly formidable character are simultaneously going on in France, rumors of peace were again in the ascendant, and many people indulge the belief that there would be, after all, no fighting. The Paris correspondent of the London Times states for certain that fresh negotiations for the settlement of the Eastern question were on the tapis, and hopes were generally entertained that they might be successful. The new proposition adopted by the four Powers make a concession to the Emperor of Russia, viz.: The liberty of treating to a certain extent alone with Turkey—the latter power, however, to have the right to consult with its allies. It is proposed that the evacuation of the Principalities should take place simultaneously with that of the Black Sea, and that the fleets will re-enter the Bosphorus when the Russians recross the Pruth.

Louis Napoleon, on the 30th ult., sent an autograph letter to the Czar, (after it had been submitted to the British Cabinet,) proposing that a treaty of peace between Russia and Turkey, on the basis of the Vienna note modified by the Porte, that negociations should take place direct between a Russian and a Turkish plenipotentiary, and that if an arrangement should be effected, a convention shall take place between the Cabinet of St. Petersburg, the Ottoman Porte, and the Four Powers, under the guarantee of Europe.

No great hopes were entertained of the success of these efforts for peace, and the great bulk of the people were, in fact, averse to any further "shilly shallying" and desirous of giving the Czar such a chastisement as shall effectually prevent him from being able to break the peace of world for a long time to come.

A camp for 40,000 men is being marked out at a place on the Sea of Marmora, six miles from Constantinople.

In Asia Gen. Guyon had commenced active operations against the Russians.

At Bucharest the Turks were making almost daily attempts to cross the Danube, but without success.

Eastern Items.

Awful Catastrophe!—The New York Times of March 3, says: A telegraphic dispatch from Hartford, Connecticut, brings back forcibly and painfully to our remembrance the terrible explosion which, long ago, occurred in Hague street in this city. Our account is to the effect that, at about midday yesterday, a steam boiler exploded in the car factory of Messrs. Fales & Grey, while there were in it more than three hundred human beings, and that many of them were buried beneath the ruins of the building which fell in huge masses, crushing to death sixteen of the number, and severely injuring more. The explosion is described as terrific. The timbers of the building, the heavy machinery, and everything about the premises, was shattered in pieces, and the walls, for an hundred feet in length, were razed to their foundations. The consequences are appalling; and yet, with so many human beings within the tumbling walls, and beneath the falling roof and broken machinery, we may be thankful that so many escaped uninjured. Of the cause of the explosion we are not informed; that, it will be the province of the corner's jury to determine, if they can. But, as those are dead who had the care of the motive power, it is not probable that the real cause will be known.

Tragedy on Board the Sierra Nevada.—A melancholy affair occurred on board the Sierra Nevada on her passage up, as follows: On Wednesday evening, March 22d, at half-past seven o'clock, ten of the deck hands got in a quarrel, when Wm. Pratt, the second officer, went from his room to quiet them, and while doing so a steerage passenger by the name of John Gardner interfered. Mr. Pratt requested him to go away, when Gardner seized him by the throat, and in the scuffle stabbed Pratt twice in the breast, and also severely cut the third officer in the arm. Gardner attempted to escape, but was caught and confined. Mr. Pratt died in about thirty minutes. He leaves a wife on Long Island. He was an excellent officer and most exemplary man, and was loved and respected by all with whom he associated.

The Garoner Claim.—Dr. George A. Gardner was, on the 3d of March, sentenced to ten years imprisonment at hard labor, in the Penitentiary of the District of Columbia, upon a verdict of his Jury, finding him guilty of forgery in the matter of that magnificent Mexican claim, upon which he recovered from the Treasury of the United States the sum of four hundred and twenty-seven thousand and some hundred and odd dollars. But the fatal and terrible *finale* of his case followed close upon the Judge's sentence; for the criminal, a few hours after, was found dead in his cell, doubtless the result of poison retained about his person to meet the contingency. Thus ends the career of a young man scarcely twenty-eight years of age, intelligent, educated, and capable, under good counsels, of high and honorable achievements.

The Nebraska-Kansas Bill has finally passed the Senate, after an amount of agitation and excitement that seems rather to be the re-echo of the feeling created out of doors that of the warm antagonism of the legislative elements raised in favor of and against it. The fierce opposition raised against the bill in the Northern States, has evidently frightened the Administration, for we find the Washington Union of yesterday backing out of its former position, and declaring that it does not regard the support of the Nebraska bill as a test of Democracy, or its opposition as antagonistic to the Administration. It is evident that the expedient resorted to by General Pierce and his Cabinet to restore themselves to the confidence of the National Democracy, will end in failure, if it be productive of no worse consequences. It is not at all improbable, however, that the excitement and angry feelings to which it has given rise, and which threaten us with an active campaign and renewal of the anti-slavery agitation on the part of the Abolitionists, will sweep away the present Administration and give rise to new political combinations. There has been a good deal of trimming amongst the old stagers in the Senate upon this question; and from the course taken by General Cass, Mr. Clayton, and Mr. Everett, it is plain that they regard it as [illegible] ground for Presidental aspirants. Of the Northern Senators there was a majority of two against the third reading of the bill. The Southern vote was unanimous. Mr. Gwin voted for the bill. Mr. Weller was absent.

Another disastrous conflagration has taken place in New York. About two o'clock Sunday morning, March 5, a fire broke out in the basement of No. 5 Spruce street. With the rapidity of electricity the flames communicated to the adjoining buildings and before the [illegible] of the largest stations in the [illegible] were added to the [illegible] The fire [illegible] were Nos. 8, 10, 12, 14 and 16 Spruce street. [illegible]

On the night of the 27th of February, a terrible disaster occurred at the Orleans theatre New Orleans, by which two young men were instantly killed, and a large number of persons more or less injured. The persons killed were named Florian Malus and Fergus Toledano. The theatre had recently undergone alterations, and the accident is attributed to the inferiority of the English iron, which had been used by the contractors for the pillars to the different tiers. At the time of the accident, it being a benefit night, the house was very full—1500 persons having passed the doors. There are three tiers to the building—first being occupied by ladies, the second by gentlemen, and the third by colored persons. During the performance the upper tier gave way and came on to the second tier, the extra weight carrying it away also, and it in turn coming on to the first. Fortunately, the first tier projected some two or three feet further out than the others, and the ladies on the front seats barely escaped being crushed by the falling mass. Some sixty or eighty negroes were precipitated a distance of sixty feet upon the people in the parquette, and strange to say none received serious injury. The gas was immediately shut off to prevent conflagration, and the scene is described as being frightful in the extreme.

Senator Douglass has been burnt in effigy in Boston.

The sentence against T. W. Dorr, has been annulled and expunged by the Rhode Island Legislature.

The Cabinet has determined that Peru shall render full satisfaction for the Chincha Island outrages; and if she does not, the navy will enforce satisfaction.

A. O. Nicholson, editor of the Union, was elected Government printer on the 1st of March, by 122 votes out of 203.

It is said that the Senate will institute rigid enquiries in regard to the publication of the Gadsden treaty and other secret papers, and that a number of editors from New York and elsewhere are summoned to Washington.

The Third Regiment of Artillery, which was wrecked on the San Francisco, is still destined for the California service. They embarked about the 1st of April.

The Maine House of Representatives have passed, by an almost unanimous vote, resolutions against the Nebraska bill. An effigy was suspended in Augusta, with the following inscription upon it: "Stephen A. Douglass, author of the infamous Nebraska bill—the Benedict Arnold of 1854."

James Saunders, Marshal of the Hibernian Society, has been sentenced to four months imprisonment in the Penitentiary, for having participated in the riot in the Ninth Ward, N. Y., on the Fourth of July.

Gen. Robt. Armstrong, of the Union newspaper, is dead. He was a native of East Tennessee, and about 65 years of age.

A proposition has been started in St. Louis to erect a Crystal Palace in that city.

A delegation of the Common Council of Washington City are visiting New York, for the purpose of investigating the working of the city rail road system.

From Oregon.—By the steamers America and Peytona we have late papers from Oregon.

The Spectator says the light from the volcanic fires of Mt. St. Helens was distinctly visible at Oregon City on Sunday evening, the 18th ult.

The same paper says: We have been informed that Fred. W. Lander, late Chief Civil Engineer of Gov. Stevens' Pacific Railroad Expedition, is soon to make a survey of a railroad route from the Columbia river near the mouth of the Umatilla, to the South Pass of the Rocky Mountains, to connect with the great Central Road to California.

For some days the weather has been unusually fine. Old Italy in all her splendor could not have surpassed it.

The early shrubbery is now in full bloom, and the out-bursting buds of the largest trees give evidence of the near approach of spring. The hills on either side of the Willamette show by their new green dress that vegetation is rapidly springing up anew.

Now that the ground has become warmed, a shower of rain would infuse new life into the whole vegetable class.

Winter wheat generally looks remarkably well, but more particularly the early sown. It promises an abundant yield to the farmer.

There has been but little spring wheat sown.

Oats put in the ground last fall have nearly all been winter-killed. Farmers are now busy sowing oats, &c., for a summer crop, the ground is in excellent order, and the time well improved.

From Australia.—By way of Callao we have the Sydney Morning Herald of December 2. [illegible] but [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 6, 1854.

Gardening.

This subject is beginning to enlist a portion of that attention its importance demands. Until very recently the simple dwelling house upon the lot, was all that gave an indication of rural life, and the dwellings were simple and unadorned. More recently there has sprung up around our city a totally different class of buildings. The plain residence has given place to the beautiful Gothic cottage or Italian villa, of the most correct style. The same spirit characterises the ground around them. Arbors, walks, trees, flowering shrubs, trailing vines, &c. All the necessary adornment to give it the name of garden. The very buildings seemed to have been placed in the position and built in that style best adapted to the design of the ground around it, so that when finished there should be a beautiful harmony pervading the whole.

To those who remember the uncouth appearance of the bills around this city in 1849-'50; if they can compare them with their present appearance, they will see the additional value that has been given to property by the improved taste for "Gardening." They will see too the increased beauty of the entire environs of San Francisco.

No one will doubt, for a moment, but that the largely increased value given to real estate has been caused by the more general desire and improved taste for landscape gardening. However beautiful the residence may be within or without of itself, there is still an unfinished look, a dreariness, without the adornments that cultivated ground possesses. They speak a value that can only be comprehended by one word—*Home.*

Here, where nature has been so lavish, where flowers the most beautiful, have been so profusely scattered in our pathway, yet in times past they seemed almost valueless. For man, lone man, had no one upon whom he could bestow the beautiful gift, Even though the flowers were as beautiful as those of the Garden of Eden,

> "The garden was a wild,
> And man, the hermit, sigh'd
> Till woman smiled."

It has been said, the flowers of our prairies were *without fragrance;* but when woman's gentle tread touched the soil, those flowers sprang forth to our view with newer beauty and sweeter fragrance, and we gathered them and made them an offering of our welcome. the most appropriate that affection could tender, for they were truthful, pure, and fresh from the hand of their maker, God.

"There is not in the arts and sciences one link of their circle so suitable for the occupation of man in a state of innocence, as that which embraces the cultivation of plants; and it is an instance of the beneficent providence of the Deity, that he assigned a garden as the dwelling of our first created parents. It is no consequence of the fall of Adam that plants require cultivation: he was placed in Paradise to till and to keep it. Then the weed had not sprung up to render the tillage toilsome; fruit trees which God had "planted" were the chief objects of care, and it was an employment without much labor, combining the preservation of health with amusement, pure without insipidity, constant without sameness. From that period gardens have never ceased to engage the attention of man; and even now that their labors are manifold, they still afford the "purest of the human pleasures."

To be an efficient cultivator of plants, a knowledge of botany is requisite. Whilst that science remained the chaos of unarranged facts, and ill-classified individuals, which it was until the master-hand of Linnæus reduced its confusion and discord to harmony in 1737, it required for its acquisition the devotion of a life. Such acquisition the new system of classificatiou rendered comparatively easy in a few months. That gardeners availed themselves of the advantage needs no further instance than Phillip Miller, in whom the perfect botanist and horticulturist were combined, and who was a correspondent of the chief men of science then living.

For the working with full effect of the spirit of the immortal Swede, our own Ray had prepared the arena. Indefatigable, enthusiastic in his pursuits, of clear and comprehensive mind, he gave an impetus to botany and its correlative arts, more effectual to their advancement than they had received during the ages of years preceding. For fifty years he most successfully labored to clear the path of this science and to increase her stores. Nor does he enjoy his fame only among his countrymen; it is afforded to him by all Europe. Haller says, he was the improver and elevator of botany into a science, and dates from his life a new era in its history. In little more than twenty years, Ray recorded an increase in the English Flora of 550 species. His *Catalogus Plantarum Angliæ*, in 1670, contains 1050 species: his Synopsis, in 1696, describes more than 1600 species. A phalanx of botanists were then contemporaries which previous ages never equalled, nor succeeding ones surpassed. Ray, Tournefoot, Plumier, Plukenet, Commelin, Rivinus, Bohart, Petivir, Sherard, Boccone, Linnæus, may be said to have lived in the same age.

I will not pass unnoticed, as being of this period, Abraham Cowley, the well known poet, physician, and author of *The Four Books of Plants.* Although he deserves little praise as a botanist or as a gardener, he merits notice as assisting in their advancement, by winning to them and encouraging the attention of the literary. Of the influence which botanists possess over the forwarding the interests of horticulture, I shall quote but one more instance. Sir Arthur Rawdon was so gratified with the magnificent collection of West Indian plants possessed by Sir Hans Sloane, that he dispatched a skilful gardener, James Harlow, to Jamaica, who brought thence a vessel nearly freighted with vegetating and dried plants, the first of which Sir Arthur Rawdon cultivated in his own garden at Maira, in Ireland, or distributed amongst his friends, and some of the continental gardens. His taste for exotic plants was probably much encouraged by his intimacy with Dr. William Sherard, who, being one the most munificent patrons and cultivators of exotic botany during that "golden age" of the science, appeared, as Hasselquist observed, "the regent of the botanic garden" at his house at Sedekia, near Smyrna, where he was a British consul: for here he cultivated a very rich garden, and collected the most extensive herbarium that was ever formed by the exertion of an individual. It contained 12,000 species. His younger brother, Dr. James Sherard, also cultivated at Eltham, in Kent, one of the richest gardens England ever possessed.

But it was not only in the collecting and arranging of plants that botany was adding fresh stores and zest to gardening. Previous to this period little was known of the structure of plants, and the uses of their several parts. Grew, Malpighi, Linnæus, Hales, Bonnet, Du Hamel, Hedwig, Spallanzani, &c., cleared away, in a great measure, the ignorance which enveloped vegetable physiology. Previous to their days the male bearing plants of dicœious plants, as spinach, and the male flowers of cucumbers, &c., were recommended to be removed as useless; they taught the importance of checking the return of the sap; the mode of raising varieties: in short, all the phenomena of vegetable life, which throw so much light upon the practice of the gardener, were first noted and explained by the labors of these philosophers. Another class of philosphers that contributed a gigantic aid to the advance of horticulture, were those chemists who especially devoted themselves to the vegetable world. Such men were Ingenhouz, Van Helmont, Priestley, Sennebier, Schraeder, Saussure, &c. To them are we indebted for the most luminous researches into food of plants, the influence of air, of heat, of light, and of soils. Previous to their researches the immense importance of the leaves of plants was unknown. Cultivators were unaware that by removing one of them they were proportionately removing the means of breathing and of nourishment from the parent plant; and mankind in general were ignorant that it is by the gas which plants throw off that the animal creation is alone enabled to breathe.

The scientific institutions of previous years, which had merely existed, were now in a state of vigorous exertion. The Botanic Garden at Chelsea was especially distinguished under its curator Philip Miller. This garden, as previously stated, was founded in 1673, though the inscription over the gateway is dated 1686, until which year it was not effectually arranged. It was strengthened and rendered permanent by Sir Hans Sloane, in 1721. He, having purchased the manor, gave the site, which is a freehold of four acres, to the company, on condition that they should pay £5 per annum for it, and that the demonstrator of the company, in their name, should deliver annually 50 new species of plants to the Royal Society, until the number amounted to 2,000. This presentation of plants commenced in 1722, and continued until 1773, at which time they had presented 2550 species.

If old botanical institutions improved, so also new ones were formed. The Kew Gardens were commenced in 1760, by the Princess Dowager of Wales, mother to George III. The exotic department was established chiefly through the influence of the Marquis of Bute, a great patron of gardening. It was placed under the care of Mr. W. Aitou, and it has since become one of the most celebrated botanical institutious in the world.

The Cambridge Botanical Garden was also founded in 1763, by Dr. Walker, vice-master of Trinity College. He gave the site, composing nearly five acres, in trust to the chancellor, masters, and scholars of the university, for the purpose of establishing the garden. Thomas Martyn, the titular professor of botany, was appointed reader on plants, and Charles, son of the celebrated Phillip Miller (who had aided Dr. Walker in selecting the ground) was made first curator.

Previous to this period, the number of exotics cultivated in England probably did not exceed 1000 species; during this century above 5000 new ones were introduced. Some tolerably correct idea may be formed of the improvement arising to horticulture, from this spirit of research after plants, by a knowledge that in the first edition of Miller's Dictiouary, in 1724, but twelve evergreens are mentioned. The Christmas flower and aconite were rare, and only to be purchased at Mr. Fairchild's nursery at Hoxton. Only seven species of geranium were then known. In the preface to the eighth edition of the Dictionary, in 1768, the number of plants cultivated in England are stated to be more than double those that were known in 1731. The publication of the seventh edition of that work, in 1759, was of the greatest benefit to horticulture. In it was adopted the classical system of Linnæus. It gave a final blow to the invidious line of distinction which had existed between the gardener and the botanist, and completed the erection of the art of the former into a science, which it had been long customary to esteem as little more than a superior pursuit for a rustic. From being merely practised by servants, it became more extensively the study and the delight of many of the most scientific and noble individuals of England. Miller improved the cultivation of the vine and the fig, and was otherwise distinguished for his improvement of the practice, as he had been of the science of gardening. Having thus decisively gained the attention of men of science, the rapid progress of horticulture from this era is no longer astonishing. The botanist applied his researches to the increase of the inhabitants of the garden, and the better explanation of their habits. The venerable physiologist adapted his discoveries to practical purposes, by pointing out the organs and functions which are of primary importance; and the chemist, by his analysis, discovered their constituents, and was consequently enabled to point out improvements which practice could only have stumbled on by chance, and perhaps during a lapse of ages."

Fruit Growing.

The splendid specimens of fruits exhibited at the late "Agricultural Fair" at Musical Hall buildings was an evidence that California must ere long be distinguished as a Fruit growing State.

It is too early in the history of Fruit culture to lay before our readers the description of all the fruits raised in Europe and the older States as fit to be cultivated here. There can be no question but that a large proportion of all the various fruits must succeed—even better here than in the other States; but it is also very certain that in this State there are some kinds of fruits that are peculiarly adapted to this kind of soil and climate. and if fruit growers would but give the subject a proper study, they would not only greatly advance their own interest, but become benefactors to others.

Several fruits that are not successfully grown in many places East, we feel confident must succeed here. We instance the St. Michael Pear. This variety is known in Boston as the St. Michael—in New York it is the *Virgalieu*, and in Philadelphia, the "Butter Pear" There can be but little doubt it will succeed here.

Our object in the present article is to direct attention to the subject of fruit culture, and urge upon those interested a careful and critical examination of everything relative to the season, climate and soil, as it affects them, and to make the results known.

We propose to give the history of some of the best fruits known among the Pomologists of the other States and Europe, and to speak of those that in our humble opinion are peculiarly adapted to California. If our patrons and friends have information of any kind upon the matter, we shall be glad to hear from them, and will make the results known.

The Porter Apple.

The Porter Apple is so well known in New England, as the very finest of our early fall apples, that it is almost unnecessary that we should say anything in its praise. Indeed, at the season of its maturity there is scarcely any other variety —unless some of the recently introduced ones should prove so, that will approach it in excellence. The vigor of the tree—its compact form —the size of the fruit—its rich golden skin—and the rich and vinous excellence of its abundant juice, form a combination of qualities which few apples possess. To this may be added, early bearing and a handsome habit, which make it a fine variety for cultivation for dwarf or pyramidal trees.

The Porter originated in Sherburne, Mass., on the grounds of the Rev. Samuel Porter, about fifty years ago, and remained unnoticed for some years. A neighbor, passing through his orchard one day, had his attention accidentally attracted to the tree from some very beautiful specimens which fell off. He soon after called upon the owner, and apprized him of the valuable fruit he had upon his grounds, and requested that he might be permitted to cut a few scions. Mr. Porter, though somewhat advanced in life, and not seeming to be aware of its excellence, or of the importance of disseminating superior fruit, replied that he might have the whole tree if he wished. This, however, was not desired, but, content to possess the scions, his neighbor grafted them into trees in his own garden, and, from that period, the Porter grew rapidly in favor, and no orchard could be considered complete without it. As an early fall apple it has no superior, and few that equal it.

The cultivation of the Porter has been confined principally to the vicinity of its origin. Within a few years, however, since its qualities have become more widely known, as it has been much sought after; yet the supply for the market does not keep pace with the demand, and fine specimens always command a very high price. It is admirably adapted for garden cultivation; trees in our collection six years old and only eight feet high, being in full bearing.

Tree.—Moderately vigorous, partially spreading and upright, the branches making a long curve upwards; old wood clothed with numerous short spurs.

Wood.—Bright reddish chestnut, dotted with whitish specks, rather slender and very short jointed; buds medium size, short, with prominent shoulders; old wood dull pale brown.

Leaves.—Large, oblong, tapering to the point, partially folded, and very regularly, deeply, and sharply serrated; petioles medium length, and moderately stout.

Flowers.—Medium size; petals tinged with pink.

Fruit.—Large, about two and a half inches broad, and three inches deep: Form, oblong, largest about one-third from the stem, slightly flattened at the base, narrowing to the crown, which is oblique and somewhat ribbed: Skin, very fair, smooth, clear bright yellow, faintly striped and marbled with dull blush on the sunny side near the base, and marked with a few crimson dots: stem rather short, about three quarters of an inch long, slender, curved, and inserted in an open, broad, and not very deep cavity: Eye, rather large, open, and sunk in a moderately deep, ribbed hollow; segments of the calyx long, regularly formed, and reflexed at the ends: Flesh, yellowish, fine, crisp, and tender: Juice, abundant, rich, subacid, very sprightly, and high-flavored: Core, medium size, slightly open: Seeds, rather large, acutely pointed.

Ripe in September and October, and keeps well.

The Blackberry.

No country in the world could surpass California in the growth of this very delicious fruit, and as we have such fine *native varieties*, we are rather surprised that amateurs have not cultivated them.

We shall endeavor to introduce a variety into California the coming season, the report of which we annex, as from the Club of the American Institute of New York:

"A splendid specimen of the blackberry was presented to the society by Wm. Lawton, Esq., of New Rochelle. Its history may be given in the following extracts from the official report of the proceedings of the Farmers' Club of the American Institute, at a regular meeting held at their rooms, No. 351 Broadway, in the city of New York, August 2d, 1853. Many of the berries were from three to four inches in circumference, and a large basket of them were partaken of by the members of the Club. Mr. Lawton named the fruit the 'New Rochelle Blackberry,' but the Club changed its name to the 'Lawton Blackberry,' and tendered to him the thanks of the Association, the following paper having been previously read by Mr. Lawton."

"This blackberry—to which I have before called the attention of the club—has been cultivated, in small quantities, for several years, in New Rochelle, Westchester county, where I now reside. I have not been able to ascertain who first discovered the plant, and brought it into garden culture, but am informed it was found on the roadside, and from thence introduced into the neighboring gardens. As it came to me without any name to distinguish it from the 'Wild Bramble,' I beg leave to introduce it to the notice of the club as the 'New Rochelle Blackberry,' and, at the same time, present as a specimen a few quarts of the fruit, gathered this morning, precisely as they came from the bushes, without being selected. I have examined many works with a view to ascertain if there has ever been any improvement on the well known wild varieties, but without success. The '*Double Flowering*,' '*Dwarf*,' or '*Dewberry*,' '*American Upright*,' and the '*White Fruited*,' are all that are named. The Dewberry is the first to ripen, and the best flavored fruit. The White Fruited seems to be cultivated as novelty more than for the fruit. The Upright variety fruits late in the season, is of vigorous growth, and under favorable circumstances produces large mulberry shaped berries, but the seeds are not thickly imbedded in the pulp, and are so abundant as to impair materially the quality of the fruit. The blackberry seems to adhere to its original character with singular tenacity; or, from the many millions of plants which spring up from seeds annually distributed in almost every variety of climate and soil, we should constantly find new varieties. Improving the wild plants by careful cultivation is one thing; to produce a new variety is another. The fruit now before you I believe to be of the last named character. It is not like the Dewberry, or long and mulberry shaped like the 'Upright Blackberry,' and the seeds are so completely imbedded in a rich pulp as hardly to be noticed. I think in shape and size they compare very well with the Hovey Seedling Strawberry.

"The 'New Rochelle Blackberry' sends up annually large and vigorous upright shoots with lateral branches, all of which, under common cultivation, will be crowded with fine fruit, a portion of which ripens daily in most seasons for six weeks, commencing about the middle of July. They are perfectly hardy, always thrifty and productive. and I have not found them liable to blight or injury by insects."

Dahlias are like the most beautiful women, without intellectuality, they strike you with astonishment by their extensive splendor; but are miserably destitute of those properties which distinguish and render agreeable less imposing flowers. Had nature given the fragrance of the rose or stock to the dahlia, it would have been the most magnificent gem of the garden; but, wanting perfume, it is like a fine woman without mind.

The Merced Valley.

The Mariposa Chronicle of the 23d ult., contains an interesting description of the valley watered by the Merced river. The writer says.

There is no portion of our country more interesting than the Merced Valley. Its great agricultural advantages, the many inducements it offers to the farmer, bid fair to make it one of the most populous and flourishing portions of California. It extends from the foot hills about Phillips' Ferry to the mouth of the Merced River, a distance of about forty-five miles, and its average breadth is about two and a half miles, the Merced river flowing through it, which supplies the soil with constant moisture, and renders this bottom adapted to the cultivation of all the products of the temperate zone.

The experiment of raising cotton has been successfully tried, and the enormous yield of small grain well repays the exertions of the farmer. The soil is alluvial, and the annual overflowing of the Merced river will always preserve its fertility, and judging from the late rapid improvements made there, this bottom will soon be justly styled the garden spot of the great Valley of the San Joaquin. To the stock raiser, a farm here is of the highest importanee, as the high lands surrounding are covered, for nine months in the year, with the finest grass, and the range, which is unadapted to any farming purpose save the raising of stock, is extensive. The increase of population has been very rapid, and where but two years ago, an isolated tent might have been seen, as the traveller struggled through the rank and overgrown vegetation, now can he seen on either hand the smiling abodes of the enterprising and industrious settler.

The cultivation of wheat is now demanding the attention of all, as the soil is peculiarly fitted for it, and the wheat raised being of the finest quality. Several small flouring mills have been erected upon the river, and the flour manufactured compares favorably with that of the best imported brands, and this result has stimulated the exertion to build a mill this fall capable of turning out from seventy-five to one hundred barrels of flour daily. This enterprise will enable us to be more independent, and not to be subject to the grovelling cupidity of the San Francisco flour monopolists. Such are the prospects of the Merced Valley, and populated by a class of orderly, industrious citizens, it will be one of the most flourishing agricultural districts of our State. Its situation deserves a passing notice. Being in close proximity to the mining region, its products will always find a market, and the miner can be furnished with better provisions, and for an easier rate than can be afforded by foreign importers.

This settlement is yet in its infancy, and much is to be expected. Its facilities for intercourse are great, as the Merced river, in a high stage of water, is navigable for steamers of considerable size, it having been satisfactorily proven by the passage of several steamers up its waters, which ascended some thirty miles from its mouth, and with a slight expenditure its navigation could be rendered easy and certain. The San Joaquin is almost always passable up to the mouth of the Merced for small crafts, and the transportation down to the San Joaquin is easy.

The scenery surrounding is beautiful, and highly picturesque; the stately Sierra Nevadas, with their crowns of snow which they lay aside but for one month in the year, to the east, and the Coast Range, with their verdant and gradual slopes, to the west, present a grand and imposing appearance, and the rich and flowering valley spread at your feet, is surely a picture of unsurpassing loveliness, and well may the Merced farmer think that but few of California's smiling abodes can favorably compare with his own happy home.

The settlers here are particularly fortunate in their pre-emption locations, as no *manufactured* Spanish grant has yet been presented to the Board of Land Commissioners, claiming the fertile lands of this valley, and robbing the hardy pioneer of the rights and privileges given to him by our government, and not like their distant neighbors of the Four Creeks and King's river, whose improvements and their all are comprised in some half a dozen Spanish grants, justly entitled to the same notice that their unprincipled holders are.

The quantity of farming land of the Merced Valley is 112 1-2 square miles, equal to 450 pre emptiou claims, of 160 acres each, and making a liberal calculation, the immense products of this valley can be easily ascertained, and will be found adequate to form a staple reliance.

The plains of the Merced and San Joaquin rivers, are valuable auxiliaries to the farmer. These extensive plains afford a fine pasturage to stock, and over which roam large herds of elk, antelope, and in the winter season deer. Large herds of mustangs or wild horses are met with frequently, in riding over these prairies; and it seems that Nature has displayed more than her usual handiwork in the formation of the Valley of the Merced.

Binny's Doings.—Mr. Drake, of Milford, says, we have nine hens over one year old, 29 pullets from June to September chickens. Since the first of December to the first of March we have gathered 75 dozen eggs. Part of these have been sold for 12 1-2 to 18 cents per dozen, the rest consumed in the family. The few we have run about a common, have picked up their food, such as it is, and not cost us anything except grain.

[illegible] cooks they [illegible] with the [illegible] as well as when it was present in the house.

Planting Fruit Trees.

The following remarks, by a French writer, contain important hints, and cannot fail to interest our readers, especially those whose land is not wet or retentive of water. They apply especially to apple orchards.

The holes should he broader than deep, and as wide at bottom as they are at top. They should not be less than six feet in diameter. The depth should vary from about 2 feet to 2 feet 8 inches, according to the nature of the soil, for it would be hazardous to make a deep hole in thin land having a bad subsoil, because the hole being of course filled with good soil, the roots would soon penetrate amongst it to the bottom of the hole; they would then be inclosed as if within the impenetrable sides of a vase: and in consequence of this the tree would stop growing and a progressive decline would follow, because when roots are deeply situated, it is very difficult for them to reascend to their proper level. In low grounds, subject to inundation, it is advantageous to make the holes deep, and to fill them almost entirely with lumps of lime-rock and small stones; thorns or brush are laid on them, then turf, with the grassy side downwards, so that the lowest roots of the tree are nearly on a level with the surface of the ground. The foot of the tree is surrounded with a hillock, or mound of earth, of the same diameter as the hole, and of sufficient thickness; this is formed with the earth thrown out of the hole. In order to prevent the sides of the mound from slipping, it is well to cover it with sod. Where the soil is light, we may fill in the holes a considerable time before planting. The case is different with regard to clayey soils, because in fall-planting there is generally rain, the soil recently replaced in the hole absorbs and retains the water, thus forming a sort of puddle in which it would be improper to plant; whereas, by remaining in conical heaps by the side of the hole, it is never saturated with wet, it dries quickly, and becomes as much divided as its nature will permit. We, therefore, ought not to fill the holes in this kind of soil until the very day on which we plant. In order to form a drainage in the holes made in clayey soils, it is proper to put in the bottom brambles, or any kind of light brush, and sometimes old plaster and mortar, more or less pulverized, covering it with sod. These not only facilitate the escape of water, but they also ameliorate the soil. The brushwood in the course of time is reduced to mould, which is only one-eighth part of its original thickness, and as the earth which is above also settles a sixth or more of its original thickness, allowance must be made for those circumstances in planting, otherwise the tree will eventually sink too low; and it is always better to plant too high than too low, because the roots strike down much more readily than they will come up to the proper level again. If the sinking of the earth and brushwood cannot be well estimated, a circular mound of 16 or 20 inches in diameter should be left undisturbed in the middle of the hole. This mound is cut down to the depth at which it is intended to plant the tree, and the brushwood and earth are then filled in, and neither the mound nor tree will participate in the sinking that ultimately takes place.

Tulare Valley.—A correspondent of the San Joaquin Republican, gives the following description of this Valley. He says:

I must say that there is no country perhaps under the sun that remains so little known abroad as do the many lovely portions of Tulare county. I was as far south as the Four Creeks and Tule river. This country possesses advantages over almost every other portion of California in point of agricultural resources; it has the greatest abundance of good timber and a vast body of rich arable land, vieing in point of fertility with the productive valleys of the ancient Nile. There are at this time some four hundred citizens permanently located in the vicinity of the Four Creeks. They seem a happy, intelligent, law-abiding, hospitable people. They have their county organized, and have their quota of civil officers, but have no use for them. They live in peace and harmony, and seldom, if ever, disagree. They enjoy good health; hence I would recommend as a desirable place for either lawyers or doctors, should they happen to take it into their heads to emigrate to this Eden of California, that they should supply themselves with good plows and the necessary accompaniments, and they will doubtless find abundant practice and a very rich reward.

Gutta Percha Pens.—The Philadelphia Sun says: "We some time since spoke of the luxury which the use of these pens imparted, they being the only agreeable substitute for the goose quill we have yet met. We are now happy to state that Messrs. Lippincott, Grambo & Co., of our city, have been appointed agents for the sale of Schlessinger's "Patent, Platina-pointed, Gutta Percha Pens," and we most cordially recommend them to general use. The body is metallic, coated with the uncorrosive gum, and tipped with platina; these ingredients giving them strength, flexibility, and an even point. They will not snap like a steel pen, if bent; they do not wear away easily, and you may dip them into your ink-stand as often as you please, without [illegible] by the fluid. They possess all the advantages of the best gold pens, and are [illegible] Quadrille. We have used one ever a fortnight, and it writes as well as when it was [illegible] in the holder."

The Surroundings of Farm Houses.

We publish the following from the "Farmer's Companion," a valuable and interesting periodical published at Detroit, Michigan. We like the tone of it, and hope to find that we have many "Aurelias" here in California who will lend their influence to make the "Cottage Home" what it should be. We shall look for their help in our efforts to diffuse the right taste throughout the State—and surely the "lords of creation" will not hesitate to act under such fair and gentle leaders:

"Mr. Editor: May I be permitted, through the columns of your excellent paper, with J., to express my love for that noble, useful and pleasant occupation, "farming." There is a charm in all that pertains to this delightful employment, for which I have always cherished an unbounded love; particularly so, since I became the wife of one of Michigan's farmers, which was five years ago; and I am, as yet, taking lessons at housekeeping. I like it very much. Nothing gives me more pleasure than to take a ramble through the verdant meadows, and visit the fields of waving grain, which look grand and beautiful.

I like to see a farm house surrounded with shade trees of various kinds—some of our native trees are very pretty for that purpose. There should also be a choice collection of flowers and shrubbery, and they should be arranged with as much order and good taste as we would exhibit in arranging our furniture. I love to look upon a well cultivated garden and fruit orchard; all of these add much to the beauty and utility of one's farm, for without these adornments it would look like a barren desert. The different seasons of the year, of which each has a peculiar charm, the summer, in particular, is delightful; the little songsters return to cheer us with their sweet warblings; sweet flowers bloom to brighten our pathway; verdant landscapes and forests are to be seen on all sides. These are nature's noble works, from which we may derive, if we are studious, very many useful lessons. From the lofty oak down to the most fragile floweret, are to be learned lessons of wisdom. But, as brevity is preferable, I will conclude by saying to you and others, who are engaged in "labors of love," go on in your noble enterprise. I trust you are gaining a wreath of immortal fame, which, as you advance in your labors of philanthropy, will bloom and grow brighter and brighter, and while the noontide of life is passing, and the evening of age is approaching, may you have the retrospective pleasure of knowing that your "work is well done. That success may crown all your efforts is my sincere wish. Aurelia.

Death of the Laird of Dumbiedikes.—We are assured by the able Biographer (Sir Walter Scott) of this worthy character, that as he lay on his death bed, and his breath growing short, he addressed his son and heir, Jock, in these memorable words: "Jock, when ye hae naething else to do, ye may be aye sticking in a tree; it will be growing, Jock, when ye're sleeping. My father tauld me sae, forty years sin', but I ne'er fand time to mind him; Jock, ne'er drink brandy in the morning, lies the stamack saer." Many years after, Sir Walter was assured that a Scottish Earl was so struck by this novel and weighty truth, as to be led to planting a large tract of country. And now-a-days, in consequence of this advice and example, that district where Dr. Johnson complained that they stole his walking stick, because it was the largest piece of *timber* the natives had ever seen, is as thickly wooded as many parts of the interior of our beautiful Peninsula. "*Be aye sticking in a tree.*" No advice can be better; especially if it is a good fruit tree. The cost and trouble are very slight. You do yourself good. You do your neighbors and country good. "*Be aye sticking in a tree;*" in every corner where a tree can grow, till you live in a perfect forest of fruit. "*Can't afford it, aye?*" Then save it out of that same brandy, or whiskey, against which the Laird warns Jock; and if this don't do, give up the tobacco too. Far better is a good peach, or a fine apple, than all the slings, cock-tails and bitters in creation. "*But where can I get good trees?*" Where? Read the advertisements in our paper. Few cities enjoy a larger assortment of able, respectable, and honest nurserymen than Detroit. The are men at the head of the profession. They are not only *nurserymen*, but gentlemen of intelligence and character likewise. "*Be aye sticking in a tree.*" The Chinese plant a tree on the birth of every child, so that when old enough, it is sure of having fruit; and you may just as well mark every spring and fall the same way. Thus, by counting the trees you can tell how old you are.—*Farmer's Companion.*

Poultry.—At this season, we frequently hear our neighbors and others complaining that their fowls do not supply them with [illegible] quantity of eggs as they are want to do in other parts of the year; but we have a theory in this matter, for we came to the conclusion long ago that we ought not to expect them to provide us with eggs unless we gave them something to eat. Now if fowls [illegible] at their roosting time, they will [illegible] that hour, and will [illegible] supplied with fresh [illegible] time, consequently they will produce a larger amount of eggs than they would if left to shift for themselves. Every one who keeps fowls should bear this in mind, and not expect the good [illegible] while [illegible] —*Boston Newspaper.*

Academy of Sciences.

We most certainly feel gratified to note the influences for good that this society is exerting throughout the State and we commend it to the attention of our citizens as worthy of being sustained. Every society and every individual that aims to develope the resources of a country, aids in its advance and prosperity, and such efforts should be seconded by every good citizen.

We notice the efforts making to have a grand May-Day Festival. We earnestly hope it may be a successful one. San Francisco should hail May Day as one of her "gala days," surely, and a society numbering so many scientific men as the Academy of Sciences, can most assuredly, by a union of effort and means, prepare a most splendid affair, and this we trust will be the result.

A California Garden.

Mr. William Wolfskill, of Los Angeles, has fifty acres of land, which affords the following quantity and variety of products: thirty-five acres of grape vines, with about 1000 plants to the acre, produce each about 1100 bbls or 34,650 gallons of wine. Three acres of peach trees, with 100 trees to the acre, average 40 lbs. to the tree, 12,000 lbs. Seventy pear trees average 1000 lbs. to the tree, 70,000 lbs. Forty apple trees, 240 lbs. each, 76,000 lbs. Twenty orange trees, bearing about 2000 each. Twenty-five fig-trees, about 300 lbs. to the tree. Ten apricots about 100 lbs each. Ten citron bushes with about twenty each. Sixty English walnut trees just beginning to bear. An olive tree, and a few quinces.

The value of these products on the ground is as follows:

750 bbls. of wine distilled make 4,725 galls of brandy, $1 80 per gall	$8,505
11,025 galls wine at $1 per gall	11,025
12,000 lbs. of peaches at 5 cents per lb	600
70,000 lbs of pears at 4 cents per lb	2,800
1000 lbs. of apricots at 4 cents per lb	400
9,600 lbs. of apples 10 cents. per lb	960
40,000 oranges at 5 cents each	2,000
200 citrons at 50 cents each	100
Figs, walnuts and quinces, no sale	00,000
	$26,380

Mr. Wolfskill's *Ranch* is about 700 miles by land from his garden or vineyard, on Punta Creek in the valley of the Sacramento. There about 3000 head of cattle, and a hundred or two of horses range. And to amuse himself while herding his stock, he has planted a fine vineyard which will begin to bear soon, and set out near 1000 trees of various kinds of fruits. Among them he has some fine olive trees. He is now delivering a thousand head of cattle to the butchers at $40 a head.

Mr. John Wolfskill, has on the Punta some orange trees that have lived through the cold weather of this winter, and he is not without hope of getting them to bear.

What will our poor white-fishing, rye-raising, lag-behind-the-age friends down East say to that kind of farming?—*Pacific.*

How to make Coffee—(Translated from the French).—The roasted coffee must not be ground too fine, else it will pass through the strainer and the liquid be thick and muddy. Coffee will rust iron, and in this case changes both in color and flavor. Filtering coffee-pots made entirely of earthen ware or China, or furnished with a strainer of pewter, are preferable to those of tin; the coffee is always better in the first. Experienced connoisseurs will not drink coffee prepared in a tin pot, when they have once tasted it from a porcelain one. When the coffee is roasted, it ought not to be *black*, but of a fine deep *red* color. Too much roasted, it loses its perfume, and becomes bitter; if not enough, it is sour and acrid. It is very difficult to roast coffee just right; and the mistress of the house should superintend the operation, if she does not do it herself, which is better. When the roasting is complete, put the coffee into an earthenware jar, and cover it close, till cool. When cold, remove it to a tin canister, with a tight cover; and only grind it as you want it for use. To make it, put into the strainer a good tablespoonful of ground coffee for each person; or if it is not required very strong, at the rate of three spoonfuls for six persons. Then press it down a little with a wooden instrument for the purpose (like a pounder), leaving a hollow in the top to pour the hot water on. Put in, at first, only a little water; let it soak into the coffee; then add as much water as is required, cover up, and keep warm. When the water is all run through, take out the strainer and serve. The next day you may take the grounds, have them well beat, water for breakfast and dessert [illegible]; pouring this [illegible] fresh, as above, but not using so much.

This is the [illegible] French coffee as [illegible] drunk in this country. It [illegible] by the [illegible] as they [illegible] to the taste.

Grape [illegible]

[illegible] Apple [illegible]

A [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 6, 1854.

Speech of Hon. E. Nichols.

The speech of the honorable E. Nichols, which we publisb entire to-day, reminds us of one of tbe happy poems of John Pierpont, where he glowingly pictures the necessity of holding up before the people the subject he had before his mind. If strong earnest appeal would not do—then keen satire; if that failed, a vein of wit, or ridicule, or repartee—the point must be carried, the victory won. We do not hold this to be a parallel case precisely, but we will ever rejoice in tbe presentation of the subject of Agriculture before the people, and now particularly by the resolutions which have been adopted hy our honorable Legislators, to hear what can be said upon tbis subject.

The speech of the gentleman contains many happy hits, and much earnestness in behalf of the cause of Agriculture, for which we return due acknowledgement. The beautiful figure of "stern winter," and "genial spring," as representing the characters of Meagher and Mitchell, we look upon as a gem; and the gentleman will pardon us if we take his figure and apply it to the mass of people in California, upon the subject we have so much at heart. To them the subject of Agriculture is of little moment. With them it has no beauties or worth, they look upon it with indifference, and their actions reflect upon it the same chilling effect that the breeze from the ice clad mountains throws upon the tender plants, bursting through the earth in early spring time in the vallies at their base.

But again there are some generous spirits that step forth in aid of this noble science, whose words cheer, and whose smiles fall upon it, like to the genial rays of the sun, that burst from the cold clouds that surround it, but whose light and heat rest upon the early plant with such vivifying power that it lifts their glowing foliage upward, and sends up their early buds, opens their fragraut flowerets, and the sun gazes upon them, still shining, with the dew drops that hang upon them, emblematical of the tear of gratitude that they offer for the new life that has been given to them.

As, in the cause of this science, the indifference of the masses retards its growth, the encouragement of the few gives it life and vigor that will ever increase its permanency and usefulness.

We commend the speech of the gentleman, and trust all who have kindly seconded his efforts to present this subject bcfore our Legislators will be amply rewarded by the value it will confer upon the whole State.

Moral Culture.

We especially commend the communication we have received from a lady contrihutor. The earnestness and truth with which the subject presented is the best evidence of the sincerity of the writer.

We can most cheerfully attest to the MATERNAL INFLUENCE, and we feel that the "great feature" will be in the moral character of our citizens which the desire and will of the present generation of mothers make it.

The influences of the present day are anything but favorable to a high tone of morals. The "love of gold," the worship paid to it by wealthy men and men of high political influence, irrespective of MORAL CHARCTER, reveals to us the dangers that surround the youtb of the present day, and unless the maternal influence is sufficiently potent to counteract evil influences, we can expect but little for the future.

We commend the communication and hope the appeal will not be in vain.

Will Christian Mothers, who feel a high desire for the welfare of their children, for the immortal souls of heings committed to their charge, joiu with me in this appeal to *all*, rich and poor, high and low, to exert their talent and time in forming a high standard of moral excellence in the minds of every immortal being committed to their charge? To the mother does the care of early infancy belong, and no unimportant mission is it to train the human mind, to impart principles of honor, integrity and virtue therein.

When I reilect on the state of society as it now exists, the time given to dry, light reading, cards and other follies of the day, instead of sound moral and religious reading which would tend to elevate and expand the soul, purify the heart and enlarge the understanding, I feel compelled to call the attention of such from following that which satisfies not, to something more substantial, more real, and more in accordance with their high responsibilities.

The vanities and follies of life bring no substantial joys; while a life devoted to religion, virtue, charity and other christiau graces, brings peace of mind, contentment, and a self-satisfactiou above all price. Let mothers commence with early infancy to inhue the minds of children with a sense of their entire dependence upon God, to make *His* laws the rule of their life and to feel that a departure from them, must bring sorrow, remorse, and unhappiness.

What satisfaction must it bring to a mother, who has devoted her time, her talents, her influence, in forming her child's character, in expanding its benevolence and other moral organs, subduing selfishiness, covetousness, pride and every tendeney to immorality—far, far happier must that mother be than one who has delegated to a hireling tbis high trust.

Who can watch the early dawn of an expanding mind like the mother? Who can feel that lively interest in the welfare of that child like the mother? None, none. Therefore, I appeal to all Christian mothers to sow the early seeds of religion, virtue, and morality, in the breast of their offspriug.

Trout Fishing.

Wnat! Trout fishing in California? Glorious news. It is of more value than the "big nuggets" just found at "Yankee Hill." The very announcement would almost move the earth upon the grave of "Izaak Walton." But we will only ask our readers to read the most capital article we have copied from the "Alameda Express," a new paper, well got up, full of readable matter, and worthy the generous support of the citizens of that county. The article to which we call attention is one of the best things we have read of late, and appropriately done:

"We feel it incumbent on us to impart the interesting inforuation to all true disciples of quaint old Izaak Walton, that there are au abundance of trout in the mountain rivulets at the back of this town (Oakland).

"Now is the time and this is the spot to test your skill, ye lovers of the good old sport with rod and line. Here is an opportunity to display your adroitness, in whipping a stream or casting a fly. See that transparent pool in which the gurgling water from above descends with a mimic roar, as though ambitious to emulate the thundering cataract,—approach it carefully; see ye not that therein is basking the speckled prey ye seek, whose pearly eye is hasking in the sun's bright beam, as eagerly he watches some rash fly, which, all unconscious of danger, hovers around, skimming with his gauze-like wing the crystal liquid,—gently! gently! not too eager, for your wily trout resembleth a coy maiden whom to woo and win much circumspection must be used; have a care lest the sun cast thy shadow over his lurking place!—hush! make not the slightest rustling, for the least sound will peril all chance of his contributing to fill thy basket; now then softly, and with most skilful cunning, cast. Ha! scarcely has the glittering bait touched the surface ere with a sudden dart, rapid as the lightning's flash, its seized, and thy scaly prize is landed gasping and flutteriug on the greensward at thy feet!

"Who but a devotee of this pastime can rehearse the pleasurable excitemet attendant on trout-fishing? The heaving hreath, the sparkling eye, the thrilling anxiety lest the long desired prey should start before the allnring bait can touch the surface, and the ecstatic pleasure felt on landing your fish after such wary patience has been exercised to approach the purling brook wherein he lay coucealed; all these delights can only be appreciated by the keen admirer and skilful pupils of the joyous art.

"We fear we are getting too enthusiastic—let us sober down and briefly inform the angler that within a very short distance of our picturesque little Oakland, are chances to have rare sport with rod and line."

Stock Raising.

This extensive braneh of Agriculture, or portion of it, is one of its most important features.

We are desirous of presenting from week to week the condition of the Stock Market of California—a market, or rather Stock Report, embracing value at Sacramento and this city of all kinds of stock. We are promised aid in this matter from some of the best stock raisers in the country, and we wish our farmers would give a little attention to this matter—it is of some importance to them, and they can all give us some information, especially their own views relative to the character and value of the different breeds of animals, and their various qualities, as adapted to California. Will our farmers give us a little assistance by facts.

The Feast of the Spring Offering.—The annual festival of the Chinese, in offering meats, preserves, &c., at the graves of their departed friends, was celebrated on Tuesday. After the ceremonies at the cemetery, the Chinamen returned to the city and feasted themselves. In China the feast of the spring offering is said to be kept up with great pomp, and is one of the grandest gala-days in the kingdom. The ceremonies are described by witnesses as being highly interesting.

Congressional.—We have received valuable reports and documents from Hon. M. S. Latham, senator Gwinn, and Gen. McDougal, for which we are truly obliged.

"The Swan of Erin."—We are most happy to welcome again to the bright shores of the Pacific, one who has made so many happy by the sweets of melody.

Catherine Hayes, will find as many warm and affectionate greetings, as true and lasting friends in California, as in any part of the world.

We are glad to find our friends Herr Mengis and Mr. Bushnell, returning to us again, and that with all the flattering receptions that they have met with, they still remember their friends on the Pacific, and return again, we trust for a long season.

A ready greeting awaits them, by which they will feel assured, that though they have been long absent, they have not been forgotten.

Home Favors.—Messrs. Adams & Co., and Messrs. Wells, Fargo & Co. continually place us under obligations for up river papers and prompt delivery of new and valuable data for "California Farmer." The Fruits are growing, gentlemen—you shall come in for your share.

A new steam fire engine, with many improvements, and weighing four thousand pounds less than the one in operation, is in process of construction at Cincinnati. It will throw as much water as the one now in use by the city, and the time of raising steam will be only three minutes.

The Election in Sacramento.—The municipal election in Sacramento on Monday, under the new city charter, resulted in the election of Johnson (whig), for Mayor, over Hall (dem.) by a majority of 105. The whigs elected all the Aldermen, with the exception of the two in the Third Ward, and the balance of the ticket.

Among the passengers who arrived in the Sierra Nevada, was Col. D. S. Turner, President of the Mercantile Library Association. His return will be hailed with pleasure by a large circle of personal friends, and by the Association he presides over.

Arrival of Distinguished Musical and Theatrical Artists.—Among the arrivals on Sunday we notice quite a number of theatrical celebrities. Miss Catherine Hayes, accompanied by her mother, and Mr. Bushnell, her agent; Herr Mengis, the celebrated vocalist; Kate and Ellen Bateman, the infant prodigies; the well known and fascinating Kate Denin and her sister; Miss Laura Keene, who has given so many heartaches to Atlantic bachelors, and Mrs. J. W. Thoman, are among the most prominent of those whom we notice. We may truly say that we have an array of talent to represent the California without a parallel in any of the older States of the Union.—*Advertiser.*

Chinese Innustry.—Within the past week or two a number of Celestials have established themselves on Dupont street in departments of useful labor. One genius has started a cabinet maker's and carver's shop, and he exhibits a great deal of ingenuity in his labors. Another has opened quite an extensive bakery, and the bread and cakes which are piled up, previous to being placed in the oven, look certainly very nice, and neat and clean, despite the greasy appearance of the men who make them. The Chinese in this city, have not been very celebrated for their industrious habits, and it is certainly very gratifying to see this almost useless class engaged in any kind of useful labor.—*Alta.*

Interior Items.

Lively Mining Excitement—Iowa Hill.—A despatch from Grass Valley, March 30, says: Mr. S. M. Pratt came in to-night from the scene of the gold excitement at Iowa Hill, and brings information we deem reliable. He things fully 1,000 men are collected there. One company of ten men have twenty feet in depth of pay dirt, and with the use of the hydraulic hose are taking out from 75 to 125 ounces per day. One-tenth interest in this company sold two days ago for $12,000 cash. Many tunnels are being driven into the hills. Ground is laid off in town lots for a mile in extent, and from 75 to 80 houses are being erected for hotels, gambling saloons, &c. Lots of twenty feet front are selling at $150 to $175 each. A bridge is to be thrown over a deep ravine to open a road to Sacramento, saving twenty-five miles of the present route.

The Crowning Lump.—Wells, Fargo & Co.'s express messenger, from Yankee Hill, near Columbia, reports the good fortune that has befallen a poor Italian in the finding a lump of pure gold weighing TWENTY-SEVEN POUNNS. This is the largest lump ever yet found in California—and to show how changeable, how fickle dame Fortune conducts herself, we have only to record that only the day before this discovery, the fortunate finder was driven hy the fear of starvation to beg his food. One day a beggar, the next a fortune; how emblematical of California life.

Rattlesnake Company.—The digging at this bar are undoubtedly very rich. Three men with one sluice and about six weeks labor, saved the neat little sum of six thousand dollars.

Nugget.—A lump of pure gold, 101 oz. 7 dwt., was found at Spanish Bar dry diggings, near Coloma, on Friday. $1760, at one haul, is not bad.

Rich Diggings.—The Miners' Advocate says: We are informed by a gentleman just up from Buckye Flat, that a party working there for some time, and not making anything, sold their claim on Monday week for $30. The purchaser immediately commenced working deeper through the clay, and came to another strata which was literall covered with gold, and the lucky purchaser on Tuesday took out of the claim SIX POUNDS! Considerable excitement prevails among the old claim holders, in consequence of the discovery.

Another Large Lump.—The Miners' Advocate learns that a piece of gold weighing one hundred and six ounces, was taken out a few days since at Rhodes' old diggings, near the Western House on the Sacramento road.

Another Lump.—The Grass Valley Telegraph says the Buena Vista Company have found another large lump of quartz gold, weighing 17 1-4 oz.; the estimated value in gold is $140.

Grass Valley.—The weather during the last ten days has been clear and beautiful—the probability is that the rain is pretty much over for the season.

A Premium---Farmers' Clubs.

With the hope of inducing such of our friends, and those who have a little leisure, to ride among their neighbors and introduce an AGRICULTURAL PAPER, we take pleasure in offering the CALIFORNIA FARMER: and, to make it an inducement, we say to such friends—if you will get us FIVE subscribers, and remit the amount, we will send you SIX PAPERS, or for TEN subscribers, TWELVE PAPERS. We trust there are many friends who will cheerfully take a little pains to aid us, and thus extend the circulation of the FARMER, and make a useful vehicle for the Agriculture of California.

Subscribers will please be particular to name the Post Office to which papers are to be sent; or, if forwarded by express, which line they prefer.

To Advertisers.—We would call the attention of those who desire to have their advertisements produce quick returns, to the pages of the CALIFORNIA FARMER.

The FARMER will reach sources of trade entirely new and unattainable by any other means, and thus secure a large and immediate profit to those who desire to make known their business. By a glance at our advertising columns, it will be perceived that we present the best known and most extensive houses, and as we have space for but one or two of each branch, these will be the most prominent houses, and thus give more influence to them.

Special Premiums for Subscriptions.

In addition to the standing inducement for the getting of subscribers for the "FARMER," we will make a present of HARPER'S ILLUSTRATED FAMILY BIBLE to the person who procures THE MOST SUBSCRIBERS in the first six months of our publication. This we regard as one of the most beautiful books ever issued. Who will have the prize?

Agents Wanted.

We want good active agents to visit every county in the State to the FARMER. Young men can find a steady and profitable employment. Apply at this office.

☞ We desire Agents to report as early as possible, that we may be prepared in our issues for a sufficient number to supply the demand. Be sure and report promptly.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO.

ARRIVALS.

March 29—Steam propeller Ariel, Wilcox, 159 days from Philadelphia, via Valparaiso 48 days, with mdse.
Bark E Wright, Jr., Burgess, 247 days from New York, via Valparaiso 70 days, with materials for a steamboat.

April 4—Ship Independence, Haskell, Manila; brig Boston, Hedger, whaling voyage; schs Joe Hewett, Lemon, and J P Haven, Jacobsen, Sacramento.

MARKET REPORTS.

San Francisco, April 5, 1854

THE whole phase of the markets look much more cheering, —business is getting more lively in every branch of trade— many articles are steadily advancing. Miners are all doing well; gold is coming in rapidly, steamers are carrying much larger freights, the sun shines bright, the skies are clear, the earth with her green robe dotted with flowers gives a hopeful aspect; Produce is in better demand, Farmers are cheered by the prospect of an abundant crop the coming season, and what is better, the assurance that it will pay them for their labor a full reward. The grain crops never gave better promise, and of this crop California will raise enough for her own use and be independent of the world for her own bread Breadstuffs the coming year—thus enriching our own people by retainining the wealth within our State.

$100,000 WORTH OF FURNITURE

NOW OPEN FOR INSPECTION AT

HOWES & CO.'S

No. 180 Montgomery Street,

(Opposite the Metropolitan Theatre.)

Comprising everything suitable to furnish the *PARLOR, OFFICE, DINING ROOM, CHAMBER* or *KITCHEN*—at wholesale and retail.

All persons who wish to furnish

Hotels, Offices, or Dwelling Houses,

Are respectfully invited to examine our stock before making purchases, as we feel certain that we can offer greater inducements to purchasers than any concern in the City. Our goods are purchased by a

Partner in the Eastern States.

For CASH, consequently we are enabled to sell all kinds and qualities of Furniture at the **Lowest Market Prices.**

We shall enlarge our store in the course of fifteen or twenty days, and until that time we are prepared to offer *GREAT BARGAINS TO OUR CUSTOMERS*—rather than be at the trouble of removing our goods to some other place, we prefer to sell

☞ *VERY CHEAP FOR CASH.* ☜

☞ Goods delivered to any part of the city, free of charge. Orders promptly filled, and goods packed properly for country dealers.

Come and be convinced. HOWES & CO.

Remember the number,

180 Montgomery Street,

Opposite the Metropolitan Theatre. 14 tf

BATES' SUPERIOR

UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.

Soil, Propagation, Manag ment, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top soil at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.

If the land is poor, so that grass and weeds will not vegetate, then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable. SULLIVAN BATES,

14 Bellingham, Norfolk Co., Mass.

SIDE HILL PLOWS,

REMOVAL.

DR. J. C. YOUNG has removed his office from 226½ Dupont street, to the corner of Montgomery and California streets, opposite Page, Bacon & Co.'s Banking House, where he will be happy to consult with his former patrons, and treat scientifically and with discretion all those who may require the services of a physician. The success of Dr. Young since his advent in this State, has been without a parallel, and he hopes by continued and untiring application to his profession, to remove from the public mind that lack of confidence which has so unhappily existed in regard to the Medical Profession in the State of California.

P. S.—All letters enclosing $10 will receive immediate attention. Direct Box 735, P. O.

N. B.—All papers in the State will please insert as Special Notice, the above, for one month, and send bill to Dr. J. C Young, M. D. 12 1m

[ORIGINAL.]

THE LOST ONE.

Oh! never breathe a lost one's name,
When those who loved that one is nigh:
It pours a lava through the frame
That chokes the breast and fills the eye;
It strains a chord that yields too much,
Of piercing anguish in its breath;
And hands of mercy should not touch
A string made eloquent by death.

Oh! never breathe a lost one's name
To those who call'd that one their own;
It only stirs the smouldering flame
That burns upon a charnel stone.
The heart will ache, and well nigh break,
To miss that one forever fled;
And lips of mercy should not wake
A love that cherishes the dead.

THE TWIN TREE.

BY SARAH ANDERTON.

Came a youth and maid one morning,
When the sun was shining free,
Bearing each a branch of myrtle,
Slivered from one blooming tree.

Laughing, in the earth they placed them—
Laughing, took their homeward way:
Heedless words their lips were leaving,
While in his her small hand lay.

Came the youth and maid one morning,
When the sun was shining free,
Kindly years had blessed the branches,
And they smiled a fair Twin Tree.

Said the youth, "Oh, gentle maiden!
Pale thy cheek, and mine the same!
And the magic of thy being
Dwell within me like a flames.

"Root-entangled, branch-entwisted,
See our childish labor grown—
And the deathless souls within us,
Have not *they* such union known?"

Sprang up words of dear confession—
Words which to her mute lips clung:
In her bosom, like a dew-drop,
All her melting spirit hung.

Met they in a close embracing,
Resting from the weary Past;
Praying, "Bless the sweet fruition
Given to our souls at last!

"Guard, oh God! the twin-life freighted
With deep blisses, perils sore,
Fate may tear its web, but never
Can unweave the fibres more!"

Smiles.

"There's matchless beauty in a sunny smile,
Bright from the depths of a loving heart—
It strews in life's path, sweet flowers the while,
And bids dark Despair and Gloom depart.
O then, let thy lips be wreathed with a smile—
At home—mid strangers—wherever thou art!"

Smiles—blessed smiles! What an invaluable gift from Heaven to the countenance is the bright halo of sweet loving smiles! The fairest features are still fairer when radiant smiles, like golden sunshine play gently round the rosy lip. When wandering among strangers with none to greet us with Affection's tender voice, or cheer our lonely hours with the sweet communings of Friendship—then we miss sadly the warm sunshine that encirles our *distant home* in an atmosphere of Love—the sunny smiles that beam on the ruby lip, and sparkle in the depths of the lustrous eye—how precious in their absence—how lightly valued when present! Ye gentle daughters of our noble tillers of the soil! do you ever think of the worth, the beauty, of heart-warming smiles to the affectionate father, brother, or perchance lover, when returning from the labor-field of industry, wearied with toil, you meet them with beaming glances of sympathy and affection?

The joyous country with its blooming flowers, its laughing rivulets, its song-loving birds, and the blue, smiling sky above, are yours; with the thousands of pure, holy influences that cluster amid Nature's temples, teaching silent lessons of the beauty of Life, and bidding you to ever wear a smile of cheerfulness in return for the varied and delightful scenes so lavishly spread around you. Wherever you go scatter the rosebuds of kindness in your path, and cheer the sorrow-stricken one by the delicate ministrations of a sympathetic heart. Banish the frowning brow, and pouting lip from your features, and with the magic wand of *gentleness* for your talisman of power, cheerfully perform your Life-mission, gladdening the hearts of *all* and lighting the home of one, with the light of your smile, and you will be rewarded by the unchanging affection of *true* friends, and the approving smile of your Heavenly Father.—*Byra Bell.*

A RULING PASSION.—A gambler, on his death bed, having seriously taken leave of his physician, who told him that he could not live beyond eight o'clock next morning, exerted the small strength he had left to call the doctor back, which having accomplished with difficulty, for he could hardly exceed a whisper. "Doctor," said he, "I'll bet you five guineas I live till nine."

SLANDER.—Look on slanderers as direct enemies to civil society; as persons without honor, honesty, or humility. Whoever entertains you with the faults of others, designs to serve you in a similar manner.

HONESTY.—A knavish attorney asked a very worthy gentleman what was honesty. "What is that to you?" said the gentleman, "moddle with things that concern you."

TIME is the craddle of hope, and the grave of existence. It deprives beauty of its charms, while it transfers them to her picture.

GETTING DRUNK WITH A PURPOSE.—A movement is now on foot to put a stop to all drinking of every kind of beer or spirit "except for medicinal purposes." Whether it will be an improvement to saturate society with water instead of moistening it with malt, is a question which we leave to those who delight in dry discussion; but we must warn the friends of total abstinence that the exceptiou "for medicinal purposes," is sufficient to throw the whole question overboard. We never yet knew an old woman who couldn't find a medicinal purpose for every extra glass of grog she happened to have a fancy for. If an Act of Parliament should ever be passed to prohibit spirit drinking, except for medicinal purposes, it will be absolutely necessary to add a schedule of imaginary maladies which shall be declared to be not within the exceptions allowed by the statute. In this schedule we would comprise that anile ailing familiarly known as the "wind," which has caused the consumption of more brandy and water by elderly females in a month, than has been imbibed by the most inveterate topers during an equal period. We must also guard the Legislature against the allowance of spasms as a ground of exception to any measure for the prohibition of dram drinking, for there is no doubt that any woman of a certain age can command spasms at any moment when she is desirous of calling up "spirits from the vasty deep" of the cellaret.—*Punch.*

BE careful not to speak of yourselves, if you can help it. The less you say of yourselves, the more the world will give you credit for; and the more you say of yourselves, the less they will believe you.

INSCRIPTION FOR SURGEON'S HALL.—Surgeons are the angels of this world—they are constantly redressing injuries.—*Punch.*

Catalogue of Fruit and Fruit Trees.

WE call the attention of Nurserymen and Orchardists to a new catalogue just issued by us, prepared with great labor and cost, giving the lists of the best fruits cultivated in Europe or America, with their synonyms. This catalogue embraces also lists of best Vegetables, Ornamental Trees, Flowering Plants, Seeds, &c.—being a perfect illustration of the best varieties of everything belonging to AGRICULTURE, HORTICULTURE, and FLORICULTURE, with brief directions for the cultivators in each department, and as *adapted to California.*

This work will be found a very great help to all engaged in cultivation.

Price $1 per copy. WARREN & SON,
Nurserymen, Seedsmen, and Florists,
5 Musical Hall Buildings.

PROSPECTUS.

THE SACRAMENTO DEMOCRAT will be published every morning, (Sundays excepted) on and after Saturday, 11th inst., by the undersigned, in the city of Sacramento.

Arrangements have been entered into, by which we will be able to furnish the latest and most interesting News from all parts of the State, with as much promptness and facility as any other paper in the State; and we assure all who may favor us with their patronage, that no labor or expense will be spared to make our paper interesting, not only as a political paper, but as a family paper, and highly valuable to the Commercial community.

The DEMOCRAT, in its politics, will be Democratic, and will observe the old Land Marks of Jeffersonian Democracy. Its policy will be to support and maintain the present Administration of the Federal Government; and, while nothing sectional shall enter into the columns of our paper, we shall stand by the usages of the Party, and combat every innovation upon the principles which so long have governed and held together the NATIONAL UNION DEMOCRACY.

The DEMOCRAT will be furnished to Subscribers at the usual rates.

10 VINCENT E GEIGER

A CARD.

FREE EXHIBITION HALL.—We desire to announce, and we do so most respectfully, that hereafter, during our Exhibition, our Hall, containing all the magnificent specimens of the Agricultural Exhibition, together with the choice Paintings and Embroideries, and many rare and beautiful specimens and curiosities from the "Islands of the Sea," will be open to the visits of all who wish to examine them, FREE OF CHARGE.

We would also announce to Artists that our Hall is offered to them FREE, to exhibit their work for exhibition or sale, and we further announce to all persons who have Paintings, Statuary Works of Art, Curiosities, or extra specimens of anything of domestic manufacture, that here is a place the most appropriate for its exhibition or sale, and where the most extended notice can be given to it. All who have works of art, or any of the curiosities of the country, or wonderful specimen of the Agriculture of California or the Pacific coast, will find this Hall the most appropriate place for the exhibition of the same.

We desire also to state that all the Agricultural papers and periodicals of the United States and the principal publications of Europe upon the subjects of Agriculture, Horticulture, and Floriculture and other scientific subjects, and to our patrons, and to the cause of Science, they are ever open, and we tender our best aid to developing to the utmost of our power the good resulting from them. WARREN & SON.

The Passion Flower.

A TALE OF LOVE.

'Twas early "olden time," as the landscape proved. There was a rugged and recently battlemented house; from its keep a crusader's banner waved, and pike and crossbowmen paced the walls. The castle stood upon a hill, surrounded by a trench, across which was a drawbridge. At the foot of the hill was a scattered village—a village by courtesy alone, for the cottages, or rather huts, were desultory and widely parted from each other. The spot of ground taken up by the village had evidently been the clearing of a small portion of an extensive forest, the latter itself having originally been a portion of the first Norman's great hunting-grounds.

For a time nothing human is seen upon this landscape. At length there is a clanging of chains, the portcullis is raised, the drawbridge is dropped, and a young knight rides forth. He is but slightly armed, insufficiently for the joust, enough for self-protection in an age when all carried arms for self-defence, if not of offence. Unattended and alone he rode down the hill, and through the village; passing out at the opposite side, he forces himself through some thick underwood until he reaches a rough road, hewn through the trees for the passage of men-at-arms and knightly escorts. He rides for a good half hour till he reaches the foot of a hugely-spreading old oak; dismounting, he fastens his horse to the tree, and wends his way through a path edged on either side with brushwood until he comes upon an open and verdant glade of some acres in extent. Choosing a particular spot, he unfolds a scarf and waves it above his head.

There stands a tall turret, like the remains of an old castle, in the distance. He has not long waved his scarf in the direction of the turret, ere the action is answered by the waving of a crimson flag from the top of the tower, and shortly afterwards the figure of a female attired in pure white, and having a pink scarf around her waist, is seen galloping along the path upon a palfrey. The knight hastens to meet her, and they are speedily locked in each other's arms.

"Sweetest Maude, an I had not known thee, I should have taken thee for an angel," said the knight, first speaking.

"I know not what thou couldst have taken me for, dear Florian, but it is not the first time you have flattered me with the title," replied the lady, and then many love passages passed between the two, till they seemed to forget the passing time, and that it was growing dusk. The sound of a neighboring convent-bell was heard through the distance.

"Harken, dear Florian, it is the vesper-bell; we must part," said the girl.

"So soon?" replied the knight, reproachfully.

"Nay, Florian, we have passed somewhat longer in each other's company than of late; but have you spoken to the proud lord, your kinsman?"

"Speak not of him, speak not of him, if you love me, Maude; he has commanded me to wed the Lady Florence, and I swear——"

"Nay, Sir Florian, swear not, for she is beautiful, rich, and of noble descent. I am neither, since the last has been attainted."

"Maude, I pledge my knightly honor I love but you alone. Fly with me to a happier land. But first your secret—the secret of your birth; let me proclaim aloud to the world that the heir of a princely house has dared to wed the object of his love. You cannot, oh! you cannot be of base descent. Fly with me to the monastery; Father Ignatius will unite us, and then, in a foreign land, we may dare the vengeance of my haughty kinsman; nay, I may even carve a new line;" and he clasped her in his arms.

The girl yielded to his embrace and consented. The knight was in raptures, and in a moment would have led her to her palfrey; but arresting the movement, she said, "But stay, Florian; we are united for ever, I trust, by vows: I am the betrothed of a brave but unknown knight, and the lover de B——"

"No longer de——" echoed the knight with astonishment. "Then was I but your knight-errant!"

"Even so," replied the lady, "and you have been a true knight. But no, no," she added, passionately, "I live for you alone."

"Maude, I dare not offer you my hand; my race is clear from dishonor, my own fame is like my polished armor. Sir Roger was attainted for treason by the king, his spurs were struck from his heels in open court—I dare not, even for your love, bear all this," replied the knight, proudly.

"You are speaking to his daughter, Sir Florian," was the calm reply of the girl, her eyes suffused with tears.

The tears aroused the love of the knight. He fell at her feet, sought her pardon, again swore his love, and besought her to fly with him. Again she relented.

"We will start at once for Flanders," said Florian.

"Is Father Ignatius in readiness?" asked the maiden, and the color mounted high in the knight's cheeks, as he replied, "What need we, dearest Maude, whose love is so pure and holy, of the interference of a priest? We can live and love—ay, I could exchange my very knighthood for your love."

For some minutes the girl made no reply. Her face was suffused with blushes; the blue veins in her forehead were gorged; at length she broke out into a wild hysterical laugh: "Ah, ah, ah! What, Sir Florian, my father's daughter a light-o'-love? It were indeed worthy his punishment, but neither his merits, birth, nor my honor—all, all, Sir Florian, too high even for an emperor's leman."

Still she moved not from the spot. Florian caught her in his arms—she resisted—he became more importunate. A strong grasp was on his arm. He turned to resent it; it was an aged priest. The knight seemed to know and respect him, for he let go his hold of Maude.

"What means this strange trysting?" said the monk. "Sir Florian, this is not seemly; thou hadst better join thy princely kinsman; hearken to his horn; he is returning this way;" and at the moment a gay troop of knights and gentlemen in hunting gear passed; the elder of the troop, who seemed the leader, addressed Florian:

"What ho! Florian; toying, thou sly rogue, with a pretty demoiselle? This would not sound well in the ears of thy affianced, the fair Lady Madeline: nevertheless, home with us, cousin, and we will not tell of thy disportings."

Maude had listened to the old lord's words; they sunk deeply in her heart, and she was carried, fainting, homewards by the monk.

"A base knight and a craven," said the latter; "forget him, girl; thou art as well born; he has dared that, an I were his age and cloth, would have cost him a dagger's thrust! But, God's me! I have already suffered too much by human passions and distempers."

"Father, he loves me, and yet would disgrace me."

"Forget him, child."

"In the grave, father. I have none to love but him; my heart, my soul, is formed of his love; destroy that, and all is gone—I die—but then I should love on in some form; I cannot exist without love—and love is Florian—Florian is love."

Months passed on; the tree of love had taken root in the maiden's heart, strong and wide-spreading as an oak; remove it, and you removed and tore into fragments the soil in which it was embedded;—poison the root, and the flower perishes—sinks sapless into nothing. So with Maude, fair flower of the wilderness; the root of her existence was her love; it had been sapped, but she loved on; the more she loved, the less she lived—would she live, she must kill love—would she love, she must kill life. She lived till summer time, and then she flickered with life fragile but brilliant; and in the hot summer days she would sit by the neighboring stream, day-dreaming of Florian. One day she sat by the water's edge, and called upon the name of Florian, implored of him to return her pure love; she gazed into the water, she saw his image there; the trees, the clouds, nay, in the very distance, she could see her Florian, but he would not speak to her; and as life drew nearer to its close, her love grew firmer; she swore upon her heart she would see, watch, and protect his future; praying, dreaming, watching, nay, peering into hope, she swooned. She recovered to discover herself in the arms of a beautiful being of a female form—too pure, too good in aspect for an inhabitant of this earth. She then with her last gasp implored for a future existence in the form of something that would keep her ever near the being she loved, and a soft voice whispered, "it shall be even so, and to-morrow you yet."

The Squatter's Adventures.

"Well, stranger, we have floods here in Louisiana, such as, I guess, you have never seen the like of in England. England is not large enough to have such floods. One of them would cover your whole country, I have heard said. I will not say that it is true, as I am not acquainted with your geography. I know, however, there are mighty big freshets here, as I have sailed a skiff more than a hundred miles across one of them, where there was nothing to be seen but cypress tops peeping out of the water. The floods, as you know, come every year, but the large ones only occasionally. Well, about ten years ago I located in the Red River bottom, about fifty miles or thereabouts below Nachitoches, where I built a shanty. I had left my wife and two young children in Mississippi State, intending to return for them early in the spring; so, you see, I was all alone by myself, except my mare, a Collins' axe, and, of course, my rifle.

I had finished the shanty all but the chinking and the building of the chimney, when what should come on one night but one of those severe floods. It was at night when it began to make its appearance. I lay asleep on the floor of the shanty, and the first intimation I had of it was feeling water soaking through my old blanket. I had been dreaming, and thought it was raining; and then again I thought I was sinking in the Mississippi; but I soon discovered the reality; I jumped to my feet like a startled buck, and groped my way to the door. What a sight I beheld! I had cleared a piece of ground around my shanty—about a couple of acres—leaving the stumps a good three feet high; but there was not one to be seen. My clearing, stumps and all, was submerged; and I could see it shining among the trees all around the shanty. Of course, my first thought was about my rifle; and I turned into the shanty and laid my hands upon that quick enough. I next started in search of my old mare. She was not hard to find, for if ever a creature made a noise, she did. She stood tied to a tree close by, and the way she squealed was a caution to cats. I found her in three or four feet of water, pitching and floundering all round the tree. She had nothing on but the rope she was hitched by. Both saddle and bridle had been floated off; so I made the rope into a sort of halter, and mounted her bare-backed.

Just then I began to think where I should go. The whole country appeared to be submerged, and my nearest neighbor lived across the country ten miles off. I knew that his shanty stood on high ground, but how to get there? It was night—I might lose the trail, and ride chuck into the river. When I thought of this, I concluded to stay by my own shanty till morning. I could hitch the mare inside to keep her from floating off; and for myself, I could climb on the roof. While I stood thinking of this, I noticed that the water deepened, and a thought entered my head that it would soon be deep enough to drown my old mare. For myself, I did not feel afraid. I could climb a tree, and stay there till the flood fell; but I should then lose the mare, and that creature was too valuable to think of such a sacrifice, so I made up my mind to chance crossing the prairie. There was no time to lose—never a minute; so I gave the mare a kick or two in the ribs, and started.

I found the path out to the edge of the prairie easy enough. I had blazed it when I first came to the place; and as the night was not a very dark one, I could see the blazes as I passed among the trees. My mare knew the track among the trees as well as myself, and splashed through it at a sharp rate, for she knew, too, there was no time to lose. In five minutes I came out on the edge of the prairie, and just as I expected, the land was all covered, and looked like a broad pond. I could see it shining clear across to the other side of the opening. As luck would have it, I could just get a glimpse of the trees on the far side of the prairie. There was a big clump of cypress trees, that I could see plain enough. I knew them to be close to my neighbor's shanty, so I drove my creature the spar, and struck right for it. As I left the timber, the mare was up to her hips. Of course I expected a good deal of heavy riding, but I had no idea that the water would be much higher—that proved to be a mistake. I had got more than a mile, if not more than two miles, I believe, that the water was rapidly rising, for I noticed the mare getting deeper and deeper. I was not long in [illegible]

[illegible]

right about that. The minute after, it seemed to deepen suddenly, as if there were a hollow in the prairie. I heard the mare give a loud 'gouf,' and then sink until I was up to the arm-pits. She rose again the next minute, but I could tell from the smooth riding, that she was off the bottom. She was swimming, and no mistake.

My first thought was to head her back to the shanty, and I reined her round for that purpose; but turn her as I might, she could no longer touch bottom. Stranger, I found myself in a quandary about then. I began to think that both mine and the mare's time had come in earnest, for I had no idea that the creature could ever swim to t'other side, especially with me on her back, and particularly as my ribs were heavier then than they now are. I was not much under two hundred at that time, and that is no light weight. Well, I was about reckoning up. I got to thinking about Mary and the children, and the old shanty in the Mississippi, and a heap of things that I had left unsettled, and that now came into my mind to trouble me. The mare kept plunging ahead, but I observed that she was sinking deeper and deeper and fast losing her strength, and of course could not hold out much longer. I thought at this time that if I got off her back and took hold of her tail she could manage a little better. So I slipped back over her hips, and clung to the long hair. It did some good, for she swam higher, but she got mighty slow through the flood, and I had but little hopes of reaching land.

I was towed in this way about a quarter of a mile, when I spied something floating a little ahead. It had got considerably darker, but still there was light enough to show me that the thing was a log. The mare might then have a better chance for herself, and, maybe, if eased of dragging me, who was keeping her back, she might make footing somewhere. So I held on till she got a little closer, and then, letting go of her tail, I clasped the log, and got on it. The mare swam on, apparently not missing me. She disappeared through the darkness, but I did not as much as say good-bye to her, for I felt afraid that my voice would bring her back again, and she might strike the log with her hoofs, and 'whamimel' it about. So I lay quiet, and let her go her way.

I was not long on the log before I discovered it was drifting, for there was a current that set tolerably sharp across the prairie. I had got astride of one end of the log, but, as it dipped considerably, I was still over the hams in water. I thought it might be more comfortable nearer the middle, and was about to pull the thing more under me, when all at once I saw there was something clumped up on the other end of the log. Of course it was not very clear at the time, for it had been growing cloudier ever since my leaving the shanty; but it was clear enough to show me that the thing was an animal; of what sort it was impossible to tell. The thing might be a bear, and it might not; but I had my suspicions that it was either a bear or a panther. The question was not to be left long undecided as to the thing's gender. The log kept making circles as it drifted, and when the animal came round into a different light, I caught a glimpse of its eyes. I knew those eyes to be no bear's eyes; they were panther eyes, and no mistake. I reckon, stranger, I felt very queer about then. I did not try to go any nearer the middle of the log, but, instead of that wriggled back right plump to the end of it, and sat there for a good spell, without moving hand or foot. I felt a rael fool to make a motion, for it might tempt the animal to attack me. I had no weapon but my knife, having dropped my rifle when I slid from my mare's back, and it had gone to the bottom long since. I felt as though I must stand a tussle with the panther, no how, and I mused to let him attack first, as it would give me

[illegible]

We drifted on for a good hour—more or less. We [illegible]

pass within twenty yards of the mound. I determined, then, as soon as we should get alongside, to put out for it, and leave the panther to continue his voyage alone.

On first seeing the island, I observed something that I took for bushes. But there were no bushes on the mound, that I knew of. However, when we got closer, I discovered that the bushes were beasts. They were deer—for I discovered a pair of buck's horns between me and the sky. But there was something still larger than a deer. It might a horse, or an opelouse, or an ox, but I thought it was a horse. I was right about that, for a horse it was, or rather, I should say, a mare, and that mare was no other than my old creature. After parting company, she had turned with the current, and, as good luck would have it, had swam in a bee-line for the island, and there she stood, looking as slick as if she had been greased. The log had by this time got nigh enough, as I calculated, and, with as little rumpus as possible, I slipped over the end of the log, and let go my hold of it. I was not right spread in the water before I heard a plump, and, looking round a bit, I saw that the panther had left the log, and taken to the water too. At first I thought he was after me; I drew my knife with one hand, and swam with the other. But the panther did not mean to be quarrelsome that time. He made but poor swimming himself, and appeared glad enough to get on dry ground, without molesting me; so we paddled on, side by side. I did not want to make a race of it; so I let him pass me, rather than that he should fall behind, and get among my legs. Of course he landed first, and I could hear, by the stamping of hoofs, that his sudden appearance had kicked up a jolly stampede among the creatures on the island. I could see both deer and mare dancing all over the ground as if Old Nick himself had got among them. None of them, however, thought of taking to the water. They had all had enough of that I guess. I kept rather still, so as not to land near the panther; and then, touching bottom, I climbed quietly up on the mound. I had hardly drawn my dripping carcase out of the water, when I heard a loud squeal, which I recognized to be the whin of my old mare, and just at that moment the creature came running up, and rubbed her nose against my shoulder. I took the halter in my hand and jumped upon her back, for I was still in fear of the panther; and the mare's back appeared to me the safest place about; and that was not very safe, either, I imagine.

I now looked round to see what kind of company I had got into. The day was just breaking, and I could distinguish a little better every moment. The top of the mound was not over half an acre in size, and it was as clear of timber as any other part of the prairie; so that I could see every inch of it, and everything on it as big as a tumble-bug. I suppose, stranger, that you will hardly believe me when I tell you the concatenation of vermin that was then and there congregated together. I could hardly believe my own eyes when I beheld such a gathering, and I began to think I had got aboard of Noah's Ark. There was—listen, stranger—first, my old mare and myself, and I wished both of us any where else at the time—then there was the panther, your old acquaintance—then there were four deer, a buck and three does. Then came a catamount; and, after him, a black bear, almost as large as a buffalo. Then there was a racoon, an opossum, and a couple of gray wolves, and a swamp rabbit, and—darn the thing!—a stinking skunk! Perhaps the latter wasn't the most dangerous vermin on the ground, but it certainly was the most disagreeable of the whole lot, for it smelt only as an accursed pole cat can smell.

I have said, stranger, that I was mightily taken by surprise on first seeing this 'clamjamfrey' of creatures; but I can tell you I was still more dumbfoundered when I first saw their behavior to one another, knowing their natures as I did. There was the panther lying close up to the deer—its natural prey; and there were the wolves, too; and there stood the catamount, within three feet of the opossum and the swamp-rabbit: and there were the bear and the cunning old 'coon; and there they all were, no more minding one another than if they had spent all their days together in the same pen. It was the oddest sight I ever beheld; and it reminded me of a bit of Scripture my mother had often read from a book called the Bible, or some such name—about a lion that was so tame he used to 'squat' down beside a lamb, and not lay a claw on the innocent creature. Well, stranger, as I am saying, the whole party behaved in this very same way. They all appeared down in the mouth, and badly scared; but for all that I had my fears that the panther or the bear—I wasn't afraid of any of the others—might get over their fright after the flood fell; and therefore I kept as quiet as any of them during the whole time I was in their company, and staying close by the mare. But neither bear nor panther showed any savage propensity the next day, nor the night that followed it.

Stranger, it would tire you to tell you all the movements that took place among these creatures during that long day and night. Never a one of them laid tooth or claw upon the other. I was hungry enough myself, and should have liked to have taken a steak from the buttocks of one of the deer, but I dare not do it, for fear my breaking the peace might lead to a regular 'shindy.' When day broke next morning after, I saw that the flood was falling; and as soon as it was shallow enough, I led my mare quietly into the water, and climbing upon her back, took a silent leave of my companions. The water still took my mare up to the flanks, so that none of the vermin could follow without swimming, and none of them seemed inclined to try that. I struck directly for my neighbor's shanty, which I could see about three miles off; and in an hour or so I was at his door. There I did not stay long, but borrowing an extra gun he happened to have, and taking him along with his rifle, I started my mare back to the island.

We found the game not exactly as I had left it. The fall of the flood had given the panther, the cat and the wolves, courage. The swamp rabbit and the opossum were completely gone—all but bits of their wool—and one of the does was better than half devoured. My neighbor took one side and I the other, and riding close up, we surrounded the island. I plugged the panther at the first shot, and he did the same for the bear. We next laid out the wolves, and then the 'coon, and then we took our time about the deer—these latter and the bear being the only valuable things on the island. The skunk we killed last, as we did not want the thing to stink us off the place before we skinned the deer. After killing the skunk we mounted and left, of course, loaded with our bear-meat and venison. I got my rifle, after all. When the flood went down, I found it near the middle of the prairie, half buried in the mud of the slough.

I saw I had built my shanty in the wrong place; but I soon looked out for a better location and put up another. I had all ready in the spring, and then I went back to Mississippi and brought out Mary and the two young ones."

Thus ended the squatter's story.

[For the California Farmer.]

Home.

"Do they miss me at home, do the miss me
At morning, at noon, or at night,
And lingers one gloomy shade round them,
That only my presence might light?
Are joys less invitingly welcome,
And pleasures less hale than before,
Because one is missed from the circle—
Because I am with them no more?"

No period of time since the world began has ever occurred by which the thoughts of Home, the affections that cluster round it, and the memories that are linked to it, have been called into such powerful action as during the accession and settlement of California.

The greatest antagonist of Home and of human happiness, had commenced his course and contentment, peace of mind, and love of "Home" yielded to the allnring bait held out by the "Love of Gold"—the Love of gold proved the stronger,—Home was given up—men became wanderers, enduring a series of hardships and privations that could not again be endured, all for this "Love of Gold."

The excitement attending preparations to leave the old familiar and cherished scenes, stifled for a while the "voice of the Heart," and it was not until that excitement died away that thousands of bleeding hearts were made to feel that they had given up the substance for the shadow; but amid all the scenes of the wildest romance and brightest hope of gain, there could ever be found the "still small voice" whispering "Home! Home!! Home!!!

If amid the hurry and bustle of business, or among the exciting occupations of gold hunting, the memory seemed to flag and loved ones were for a time forgotten, it only required the arrival of the "ocean steamer" to give a quickening to the heart where

Richest treasures, "Love of Home," though deeply buried, lie. These, once impressed upon the heart, they never, never die.

The arrival of the mail is the talismanic power that opens the heart—that heart surrenders at once to the influences at work to revive these sentiments which are still strongly treasured there—there is an electric influence at work upon the spirits of all who have those attachments of Home—and it is refreshing to witness the triumph of these attachments to Home and kindred upon the arrival of our mails. These messengers that bind heart to heart are borne hither across two oceans, and like the uniting of the wires of the telegraph, hearts from distant lands are brought into close communion, affections are strengthened, and another hope is awakened that the Love of Home may yet finally triumph over the "Love of Gold."

The most interesting exhibition of this undying affection can be witnessed in all its phases by all who will take the time to visit the post office upon these occasions. The countenance is often the barometer that speaks the power of that affection, and the anxiety to "persevere" that they may learn their fate, the tone of voice as the name is called, the watchful eye as letter after letter is turned—if fortunate, the quick turning of that message to see if any fatal seal of black shall carry sorrow to their hearts; if no message is received, the despairing look, the starting tear, these are but a few of the indices, but they tell in a voice not to be misunderstood, that though widely separated, the name and associations of Home are yet the main stay of all thought and action, even amid this land of gold.

Were it not for these assurances, we should fear for our institutions, we should fear that ties would be sundered, and society revert back to a state worse than socialism or barbarism. But these evidences we have noted induce us to believe the *Good* and *True* will triumph, and here in California we shall see ere long the permanency of those institutions that alone can save us from ruin. We mean the institution of marriage, that is now so lightly regarded by the mass, and which recently have been in so many cases trampled under foot as of little moment. We fear the community see not the danger. A voice must be raised against this fearful trespass or the work of ruin will surely come—a blight has already rested upon the cherished altars of many once happy homes—hearts once united are rent asunder, and this community see not the danger that is creeping in upon us by so lightly esteeming those institutions from whence spring the highest and holiest aspirations of our nature and give tone and strength to all the moral sentiments.

If scenes such as have been recently witnessed in our courts are permitted to increase and the most sacred of all institutions to be thus lightly esteemed, that word of which there is no equal in its power over the human heart will lose its potency, for the home will not be a permanent place of *peace* and *happiness*, its charm will be destroyed and those who seek there for refuge and repose when the world is dark and lowering, will no longer feel like uttering the touching words—

"Do they miss me at home, do they miss me?"

for its sacredness will have been lost in the new phase given to it by the fashion of the present day, that seems disposed to annul the marriage covenant and place no more value upon it than upon any ordinary contract, a fashion that will carry sorrow to many an once happy home and many a confiding heart, by tearing away the sacredness of those barriers that alone give it protection. We are however rejoiced to know that we have found a judge in Hon. A. C. Monson, who most nobly arrests this tide of desolation that seemed to threaten our institutions, and we now trust we shall witness a better era, for to our courts we must turn and on them rely for safety and protection in such emergencies. *

Address of J. A. Wight.

The following excellent address of J. A. Wight, of Chicago, editor of the Prairie Farmer, before the North-western Pomological Convention, on the tendency of horticultural pursuits in fostering *home feelings*, and preventing the bad effects, if not the bad morality, of a wandering life, will meet with a general approval from our readers:—

Strangers from the Old World notice with surprise that in this country every dwelling is for sale. Money will break up the strongest attachments, and scatter from their birth-place the best established family. No sooner do the females and children of the household come to be familiar with the walks, and trees, and bye-ways of the homestead, and to love them as familiar things, than the whole is transferred to a stranger, and an exodus is instituted for a new order of things. Where this is common, is it possible that the home feeling should not be awakened, or die outright? Love is a strong plant, and will overgrow everything else, but its roots do not love new soils. The tendrils it throws out fasten by growth; and, if ruptured, will not mend themselves—nor be mended by tying. It is the *old* orchard and the *old* garden, and the old garret, may be, that we think of as dear to our childhood. The *new* may be more in fashion, set after a better order, and filled with a better furniture; but we do not desire it, for the old is better,

The home feeling depends upon a good many things for its full development and persistency. One of these, is permanency of place; another is a virtuous and moderately intelligent family. Of the first of these I have already spoken. The second tends to secure the first; for no man desires to get away from the things to which his affections are fastened. And what should a man best love on earth, after his God and those whom God has given him, if not his home and his garden, and the types of loveliness that grow there—things which his own hands have planted and tended, and over which his own eyes have watched against Autumn blight and Winter frost, and insect foes. What walks should he love better than those his own feet have been accustomed to tread by morning, and evening, and moonlight; whose every bend and unevenness he knows in the darkness as well as in the daylight—paths to which his own feet not only, but those of his early and best friend are familiar; along which little feet have pattered—some of them now may be treading the walks of the upper Paradise—what paths should he love better than these? If he has these, and that which they suppose as belonging to them, the love of Mammon and the spirit of unrest will not so easily unsettle him. * * *

"Does any doubt that the culture of fruits and flowers tends to virtue and intelligence? It was once objected to me by a fine lady, that she had known some very "coarse people" that were skilful florists. Very possible. But were they not virtuous people? Were they not as intelligent and refined, and more so than others in like condition and with like advantages? This could not be denied. No one supposes that Floral art or Pomonal skill alone will make a philosopher or a perfect character, any more than good painting alone will constitute a well planned and well built house. But, generally speaking, who are your virtuous and who are your vicious people? Are the former those that wander about having no home—or if they have, never staying there—spending their time in the street or at the street corners, where the rumble and bowling balls and the rattle of tumblers keep open the dozing eye of midnight? Are the latter the people whose dwellings, large or small, look out from amid green trees, and smile with embowering honeysuckles—where the garden laughs all the summer with blending fruits and flowers? Watch the man with a brass star on his coat, and see where he takes his nightly station, whether by the beautiful garden, as if to drag from his precincts the uproarious disturbers of the peace; or whether by the place where men, destitute or despisers of home, do congregate. Do you see the florist or pomologist marching between the brass stars to the watch-house? Ah, my friends, such wear their floral treasures on their noses, and their fruits are not yet fully gathered; and the harvest of them we shall not stop to see."

The following remarks on "the use of flowers," are decidedly to the point:—

"Now and then, to be sure, some man with ginger-dyed integuments, whose notions of æsthetics have been gathered among porcine multitudes, crunching through our corn fields, suggests, "What is the use of flowers?" Use! It is no fault of theirs or their Maker, but, my good friend, I do not discover their use to you. That little girl of four summers, bounding through the garden, singing songs of her own making to tunes equally original, has learned it. Ask her, my corn and potato friend. Her little soul rushes to them as naturally as water to a channel. She knows their use as well as a bee knows that of honey. 'Oh the beautiful flowers,' she cries, with her heart in her eyes.

"Use? That cannot be useless which affords us an innocent pleasure. I know there have been and are those who suppose we ought never to be happy; and that all delight in this world, like that of poor Mark Tapley, ought to consist in being miserable. But I do not so read the world. If we are never to be happy, what are instruments of happiness made for? Flowers catch the eye of the infant as soon as it can catch anything but its mother's smile. Childhood gathers clover blossoms and dandelions all the summer day. Youth and beauty twine them in wreaths, and wear them among ringlets, and make of them winged messengers of love. Ripened life pauses before them and smoothes down the brow of care, and thinks of angels and the bloom of celestial fields. Age bends again over them with busy memories of times when life budded and blossomed, and remembers a rejuvenescence yet to come, of which these are the emblems. Death, the coffin, and the grave welcome them, and with them throw back a parting smile on the living, as if already catching a glance of the coming immortality.

"Flowers are all use. Spring would not be Spring without them. The birds would never know how to sing, and the bees would put on mourning. All fruit is the product of inflorescence, and the seeds of all things lie wrapped beneath this banner of beauty. Flowers—as much as we do—make this a world of life, and without them the air would be that of a graveyard."

Validity of School Land Warrants.—The following is an important communication from Col. Gift, Register of the Land Office, to the editor of the San Joaquin Republican:

Register's Office, Benicia, April 2, 1854.

Sir: I see an article published in the Stockton Journal of April 1st, in which it is stated that I have received instructions from the Commissioner of the General Land Office, authorizing me to issue patents on the locations of State school warrants. I must say that such is not the case. Some time since Gen. Hastings wrote to the Commissioner, requesting him to return him his State warrants after they had been confirmed by the Secretary of the Interior, as his vouchers against the State, so that he could have the same patented to him from the State of California. But, in reply, the Commissioner informed him that those warrants would have to be retained by the Government, and therefore authorized me to issue certificates of location upon the locations of said warrants, after the lands had been surveyed and subject to location by said warrants. I have received no instructions upon the subject which have not been published, and the law remains as it ever has been, giving the pre-emptor the preference on all unsurveyed Government lands.

In reply to his inquiries in relation to the fee charged by me, I will say that I charge it for the certificate which I give, and not for the registering as he states.

Yours, respectfully,
Wm. W. Gift, Register.

Sugar in Louisiana.—A recently published table of the produce of sugar in Louisiana, for 1853, puts the whole amount at 321,934 hogsheads, or 321,934,000 pounds. The sugar crop of Cuba for the same year is only estimated to reach 600,000,000 pounds. In 1840, the total sugar crop of Cuba was 321,636 hhds., and that of Louisiana was only 119,947 hhds. The value of the property employed in the growing and manufacture of sugar in 1853, was estimated at $126,929,000, and that of the slaves employed on the plantations and manufactories at $125,970,000, against $60,000 as the amount invested in plantations and manufactories, and $93,220,000 in slaves in 1845. The consumption of sugar in the United States in 1840, was estimated at 350,000,000 pounds. For 1853 the estimated consumption is put down at 745,000,000.

Budding.—A new application of budding has been made by Knight; it is that of transferring "a part of the abundant blossom-buds from one tree to the barren branches of others." He tried this first on roses, and afterwards on pears and peaches, with much success.

Great Clothing Emporium.—In passing up Montgomery street the present week our attention was drawn to the clothing establishment of the Messrs. Mansfield, near Merchant street. We do not believe that New York can furnish a finer or more complete stock of goods; it is one of the largest, most select and fashionable of any in the country, and if our citizens wish the best, most fashionable and finest fit, we can only say, go to Mansfield's Montgomery street.

We acknowledge the reception of valuable documents from Senators Weller and Gwin, and our representatives Mr. McDougal and Latham, and we are proud to notice their faithfulness to the best interests of California.

Transformation of Plants and the Importance of Its Results.

We present the important facts recorded in the article which we copy from the Magazine of Horticulture, one of the oldest and ablest Horticultural journals in the country; and we make these extracts at this time on account of the strange freaks of nature in the grains exhibited in California. We have seen many very singular specimens—some like those of wheat and chess, distinct double-headed, which reproduce the same; and an amalgamation of wheat and chess in the same head. And, as cultivators in California will have an opportunity to collect as many facts, and produce as many and as curious specimens as any part of the world, we call the attention of all interested in the growth of grains to this important article.

Every few years the subject comes up in our agricultural papers of the transmutation of wheat into chess. Intelligent cultivators and men of veracity have affirmed that such changes have taken place, and have offered to furnish specimens of the transmutation; but the question has been considered by most agricultural authors as so absurd, and indeed apparently impossible—appearing to set at naught all our established notions of botanical distinctions—that those advancing such statements have scarcely had the privilege of telling their own story.

We admit that we have had no faith in these alleged transmutations; nevertheless, if all that is told is true, our belief is somewhat shaken, and the transmutation a theory not by any means, as has been supposed, impossible; yet we must have good evidence before believing it probable: such evidence has been adduced by two learned French botanists.

In the Gardeners' Chronicle we find some remarks on the subject of the origin of wheat, worthy the attention of every cultivator; not particularly for the detail of the experiments by which the grain is traced from its original form to its present perfect state, but for the results deduced by Dr. Lindley from these experiments, and which are of great importance to all amateur and practical cultivators who have any desire to improve our flowers, fruits and vegetables.

No one could recognize in our rich Baldwin Apple the sour and useless crab, or in the delicious Seckel pear the austere wilding, which grows in our hedges. These changes are scarcely greater than that of the *Ægilops* transformed into Wheat through twelve succeeding generations. Our vegetables have undergone nearly the same alterations; not many persons would suppose that the rich champion of England pea is the offspring of the small kind known as the field pea, or corn the result of cultivation upon the wild grain of South America. This all of us have seen accomplished, and though the experiments of M. Fabre are not as familiar, they appear sufficiently authenticated to be taken as facts; and such being the case, how can we longer doubt that transmutations heretofore brought to notice are not strictly true?—

In 1844, the question of the transmutation of corn was raised in this journal, at p. 555 of the volume for that year, and at p. 779 it was further alluded to. Thereupon ensued many communications on both sides of the question, and from time to time the subject has been occasionally revived; but it nevertheless remains just where it did then, so far as anything like proof is concerned. Belief has opposed itself to unbelief, credulity to incredulity, and assertion to counterassertion; but of evidence derived from well-conducted experiments, we have had nothing. For ourselves, without by any means encouraging the belief of the changing of oats into rye, or in any similar transmutations, we have also asserted, from the first, that no naturalist, acquainted with certain facts brought to light of late years, could venture absolutely to deny the possibility of such changes. Writing in 1844, we said that "in Orchidaceous plants, forms just as different as wheat, barley, rye and oats have been proved by the most rigorous evidence to be accidental variations of one common form, brought about in some mysterious manner, before our eyes, and rendered permanent by equally mysterious agency." "Then," says reason, "if these inconceivable changes have been proved to occur among Orchidaceous plants, why should they not also occur among corn-plants? For it is not likely that such vagaries will be confined to one little group in the vegetable kingdom. It is far more rational to believe them to be a part of the general system of the creation."—(1844, p. 555.) And again, in reply to a correspondent, it was added, "as we have repeatedly said we think no man should undertake to affirm what is possible or impossible in nature." (1845, p. 401.)

Some have thought these views objectionable, believing that we already possess that amount of knowledge of natural phenomena which justifies our deciding dogmatically upon such general questions as the change of one plant into another. It has been even held that scepticism in such matters tends to unsettle men's minds, and to induce thought in all by which science loses. We do not concur in that opinion. We see no harm in receiving even Lord Monboddo's theory of human tails; the more knowledge advances, the [illegible] theory and the hypothesis [illegible] of the former, [illegible] have been clearly exposed.

[illegible] which we have just [illegible] completely justifies the views we have held, for although it does not prove that oats change into rye, as many believe, and offers no support to some other speculations of the same kind, nevertheless demonstrates, beyond all further question, that Wheat is itself a kind of transmutation of a kind of grass. M. Esprit Fabre, of Agde, known to botanists as an acute observer and patient experimentalist, has made the discovery, and it has been introduced to public notice by Professor Dunal, of Montpellier, in a pamphlet, from which the following statement is condensed.

The ancients imagined that the native country of Wheat was the valley of Enna, in Sicily, where it is said the fables of Ceres and Triptolemus originated. In fact there exists in Sicily, in great abundance, a natural grass, called by botanists *Ægilops ovata*, the grain of which is much like that of starved Wheat, but having floral organs of a very different character, and whose ears naturally fall to pieces, on ripening, by a separation of the joints. This kind of grain is said to have borne the name of *Ble du Diable;* the plant producing it was even called by Cisalpinus *Triticum Sylvestre.* Nevertheless naturalists appear almost unanimously to have treated the notion of Wheat coming from *Ægilops ovata* as an absurdity, except three French observers, whose experiments produced no result.

About the year 1824, the late M. Requien, a zealous French botanist, residing at Avignon, observed in the neighborhood of that city, a, to him, new kind of *Ægilops*, which he called *triticoides* because of its resemblance to Wheat; and Signor Bertoloni, who introduced it into his Italian Flora, states that it has also been found in Sicily, by Professors Gussone and Tenore. There is also in the south of France another *Ægilops*, termed *triaristata*, supposed to be a distinct species. Thus, according to botanists, there are three different kinds of this genus in the south of Europe, and these have been each the subject of M. Esprit Fabre's experiments.

The first point established by this observer is that both *Ægilops ovata* and *triaristata* produce what Requien called *triticoides*. It seems therefore that the three supposed species are all forms of the same species. In fact, the very same ear that yields either *ovata* or *triaristata*, also yields *triticoides*. Nevertheless, M. Fabre calls them perfectly distinct from each other, and is of opinion that when *Æ. ovata* runs to *triticoides*, it gives rise to the small grained smooth Wheats which the French call *Seissette* and *Touzelle;* and, on the other hand, when *Æ. triaristata* runs into *triticoides*, it gives birth to the coarser Wheats, having downy ears, known in Languedoc under the name of *Fourmen* and *Petanielle*, and including Egyptian Wheat. Be that as it may, and M. Fabre offers the statement merely as an hypothesis, it is certain that *Ægilops triticoides*, when once produced, if raised from seed year after year, goes on changing till at last it becomes but mere Wheat. This is clearly shown by the subjoined concise statement of what the French naturalist testifies as occurring to the *Æ. triticoides*, derived from the *Æ. ovata.*

First year of cultivation; 1839. A few grains ripened here and there among the spikelets, which still preserved the brittle character of Ægilops. The return proved to be about five-fold of close-packed concave corn, very velvety at the upper end. The beards of the glumes, which are most abundant and remarkable in Ægilops, had begun to alter and disappear. The plants looked exactly like Touzelle Wheat.

Second year; 1840. The spikelets of this sowing had become more numerous, and each contained two grains; the ears less brittle; the grain less concave and velvety, and much more floury than in the previous year; the beards of the glumes further diminished.

Third sowing; 1841. The changes already described became more evident; as many as three grains appeared in some of the spikelets; the plants became more and more like Wheat.

Fourth sowing; crop of 1842. Much injured by rust; the beards had so much disappeared that the ears had quite the appearance of beardless Touzelle Wheat.

Fifth sowing; 1843. The plants were a yard high, and exactly like Wheat; none of the glumes had more than one beard, and, perhaps, the rudiments of another. The spikelets contained each from two to three grains. The ears had become less brittle. The corn was so large that it protruded beyond the chaff; the crop produced 180-fold in one case, and 450-fold in another.

Sixth sowing; 1844. Changes still going on, but gradually. The ears continued brittle—one of the great peculiarities of Ægilops.

Seventh sowing; 1845. The plants proved very much like Wheat. Beards further diminished. Each spikelet contained from four to five flowers, of which three proved fertile, as in good Wheat. These were really Wheat.

Up to this time the experiments had been conducted in an enclosure, where no other grass was permitted to grow, and far from any other grain crop. The corn had been planted in a town, ripening in the years above indicated. But M. Fabre now transferred his experiments to the open field, sowing his Ægilops Wheat broadcast. In this manner he cropped a field near the road from Marseilles, completely surrounded by vines and far from any Wheat field. For four successive years he persevered in this trial, obtaining every year Wheat like that of the neighboring farms and sixfold or eightfold increase to the acre.

In 1[illegible] the [illegible] ears nearly [illegible] and [illegible] of from [illegible] two or three spikelets each containing [illegible] florets, [illegible] and [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 13, 1854.

May-day.

"Wake nod call me early,
Call me early, Mother dear,
For I'm to be Queeo of May, Mother,
I'm to be Queen of May."

How beautifully appropriate is the spring-time of the year for these gatherings, these merry meetings of the gentler sex, that they may go forth upon the hills and plains and welcome the advent of the fragant harbingers of lovely spring.

Where is the heart, however hard, that would not soften down at the sight of a happy group of innocent children decorated with the gay wreaths of bright and sparkling flowerets. Callous must be the feelings of those who would not be interested at the sight of the "white lamb" that is brought forth to be decorated by the hands of these little ones, and as they have finished their pleasant work to see them watch the steps that are in preparation to crown the maiden that shall be called "fairest of the fair," as their "May Queen" and presiding genius of their festive scenes.

And shall not such scenes be ours again? "Merry England" sends forth her teeming thousands to May-day Festivals—and shall we not follow so good an example?

We have extracted a pleasing sketch upon the subject from "Forest Gleanings," and if we can give an impetus to so pleasing a subject and induce our friends to take up the *theme*, we shall rejoice. We can have a May-day Festival in San Francisco, that would eclipse anything of the kind in any country. The time is near at hand; will not every reader add a wish and a word to bring to pass so happy a scene?

MEMORIES OF MAY.

BY THE AUTHOR OF "FOREST GLEANINGS."

"Q. Flowers, wherefore do ye bloom?
A. We strew the pathway to the tomb."—MONTGOMERY.

From earliest childhood to extreme old age flowers form one of our most innocent, as well as most delightful, sources of enjoyment, pure and unsullied by aught of the grossness that mingles with more animal pleasures. The first dawning of our intellectual nature may be dated from the moments when the babe stretches forth its tiny hand to grasp the flowers in its nurse's bosom. The unborn sense of the beautiful in form and color, springs to life in the soul of the child; it awakens at once to the enjoyment of a new and pleasurable sensation.

I love to see an innocent child playing with flowers—fresh, fair flowers—meet emblems at once of its beauty and its frailty—for "he cometh up and is cut down as a flower of the field." How charming are the verses of our old English poet, addressed to Daffodils—

"Fair daffodils we weep to see
Thee haste away so sooo."

—and those "To Blossoms." They are so beautiful in their sweet simplicity, that I will quote them, assured that those who know them will re-read with pleasure such lines; and those who have never read, will read them again and again, as I have done ever since I was a child.

TO BLOSSOMS.

"Fair pledges of a fruitful tree,
Why do ye fall so fast?
Your date is not so past
But ye may stay yet here awhile,
To blush and sweetly smile,
And go at last.

"What were ye born to be?
An hour or half's delight,
And so to bid good night?
'Tis a pity Nature brought ye forth
Merely to show your worth—
Then lose ye quite.

"But ye have lovely leaves, where we
May read how soon things have
Their end; none e'er so brave
But after they have shown their pride,
Like us, awhile, they glide
Into the grave."—ROBT. HERRICK.

The freshness and spirit of old Izaak Walton seems to breathe through these lines—and then his rural poetry recalls the time when maids went Maying, and fairies danced the lea.

In this work-day, money-making world, we have cast aside, as old fashioned garments are thrown by, all taste for the simple habits and rural pleasures that marked our ancestors. The dead go to the grave undecked with the flowers which the hand of duteous affection used formerly to lay upon the pulseless heart and clay cold brow. The wreath that used to be suspended in the church—that pure and emblematical hatchment which even yet is hung up by the peasant children of France and Italy—is no longer displayed to tell that one bud or one blossom has dropped from the family tree to wither in the dust. The green turf that covers the remains of the loved one is no more strewn with flowers. Is our love less warm, or has fashion forbidden the exercise of the kindly feelings of our hearts, that we no longer

"Bring flowers for the brow of the early dead."

The artist decks our brides and brides-maidens with rosea and orange blossoms, but the fragrance of nature is wanting—the dewey freshness of buds and flowers from the garden and field.

Where now are our May Queens? How lovely is the remembrance of May-day in the meadows, on the banks of the river Daveny in Suffolk, where I passed my happy childhood. What weeks of joyful anticipation that day gave birth to. My father's family came from the north of England, where still among the fells and lakes many of the rural sports and primitive customs of the people prevail, and he encouraged in us a love for May day sports.

I was one of the youngest and a pet, and so my sisters always conferred on me the May-crown and sceptre; and truly, for the time being, no queen could be more happy. My crown, a flowery chaplet—my spectre, a flower-encircled wand of fresh-cut hazel from the copswood—and my throne, a green mole hill in the meadow by the clear flowing river, while all the sisterhood danced round and sung the old pastoral song of "Kate of Aberdeen." The crown was worn till night and then cast aside to wither in the dust.

I have often heard my mother tell me how she was frightened on the night of May eve by one of my sisters walking in her sleep. The children were in the habit, on May morning, of rising up by sunrise to go Maying, and to gather laps full and baskets full of cowslips, primroses, blue bells, and other spring flowers, to make garlands with. My mother was in bed but not asleep, when the door of her bedroom slowly opened and a little figure in a long white night-dress came in; passing the night light and the table, it came to the side of the bed and held up the full folds of the night gown in its little hands, saying, as it did so, "Fowers Lila, Fowers Lila—more Fowers." Her dark eyes were rayless and wide open; but she was sleeping, though her spirit was abroad gathering flowers for the coming festival of May-day.

Not more than half a mile from the old house where I passed my childhood, there was a deep, sandy road called the St. Margaret's road; from this there branched off a little narrow lane that we called the little lane; on one side it was shut in by steep sand banks, and on the other by a high grassy slope, the boundary of some upland meadow; on this grew a wild, irregular growth of shrubbery and tall oak trees. Among this jungle, the woodbine and wild briar rose entwined themselves, mixed with brambles and briars, forming luxuriant bowers all carpeted beneath with wood strawberries and wild flowers of every hue. A little tinkling rill that a child might step across, run down on either side of this sylvan lane; from this slender streamlet we drank the most limpid water from nature's own chalice—the hollow of our hands—or sipped it like the fairies we had read so much about, from the acorn cups that strewed the grass. The banks of the rill were lined with violets—deep purple, fragrant violets—pale primroses, and the little sunbright's celandine, with that graceful meadow saxifrage, (known in olden times by the homely name of ladies' smocks,) all silver white, as Shakspeare calls them. What stores of ripe strawberries we gathered in that little lane, and threaded, like crimson beads, upon a stalk of dried grass—a little peace offering for our mother when we returned with soiled frocks, or our leave of absence out-stayed.

This little lane was our childish paradise—our garden of Eden—and in it we laid out and planted a garden for ourselves. Like Canadian squatters, we took to ourselves right of soil and made a free settlement *sans ceremonie*.

Our garden was laid out right daintily with a grotto of green moss decorated with striped snail shells, the walks were sanded, and the parterres planted with double daises and violets, polyanthuses and sweet Williams, daffodils, snowdrops, and cloth of gold crocusses. Our trowel was an old rusty iron ladle and a broken bladed carving knife, and we daily watered our garden with an old battered tin tea-pot and a leaky japanned mug; and yet, in defiance of these rude implements, our flowers grew and the garden blossomed in the wilderness; and there, sheltered from sun and rain, among the honeysuckles, we sat reclined on the green turf bank, listening to the poems and tales that my eldest sisters used to relate. Even then history was the theme that most delighted those two most remarkable sisters,* and many was the tale of thrilling interest that was recited to the juvenile auditors, who little thought that those talents were at a more distant date to claim the approbation of an applauding public.

Many years after this I revisited the little lane. A few crocuses and daffodils, choked with long grass and weeds, were the only flowers that remained to "mark where a garden had been." I stooped and drank of the little rill, and picked a nosegay of violets as a memento of the haunts of my childhood.

Tell me, ye who sigh for the crowded ball-room and gay theatre, what are the pleasures of the world compared to the memory of days spent in early youth among the Flowers of May.

*Elizabeth and Agnes Strickland, authoresses of the Queens of England and Scotland.

EVENING JOURNAL.—It is a pleasure to notice from time to time the interest our neighbors of the Journal take in the cause of Agriculture. We have noticed some very ably written articles, and their tone is a true indication of their sincerity. For the many kind words of encouragement from our friends, we shall ever be thankful, and lay them away daguerreotyped in memory as a pleasant picture. The notice of the Agricultural College in the Journal of the 6th, is of the right character, and expresses a just view of what should be done by our National Legislature, and sustained also by our State Legislature.

Drought---Irrigation---Mulching.

We make the following extracts from a Report on the Climate of New England, by Hon. J. C. Gray, and the remedies proposed are so appropriate for California, and of so practical a nature, that although we have repeatedly urged these points, we feel glad to reiterate them on account of the high source from whence they emanate.

But there is one striking feature in our climate—the long spells of drought—the effects of which no exertions should be spared to alleviate. One of the most obvious remedies is irrigation. But the majority of our farmers have not the means at hand necessary for doing this upon a regular system, to say nothing of the cost of the labor necessary to apply those means.

Another expedient, one little practised hitherto, but apparently fast coming into general use, is the breaking up of the soil to a great depth, more especially by subsoil ploughing. In countries where labor is cheaper, the same object is effected by the spade—not only dividing the under soil, but bringing it to the surface. But the expense of this course—about fifty dollars per acre in Massachusetts—is considered by many as an insuperable objection. Besides, if the under soil is brought to the surface, a heavy expense must be incurred, in addition, in the manure necessary to enrich it. The same objection is made to the enormous trench ploughs used in England, which completely reverse the soil to the depth of a foot and a half, and thus place the cold and barren subsoil uppermost. The only subsoil ploughs used by us are those which merely split and break up the hard pan beneath, and thus produce a bed of light earth of about sixteen to eighteen inches in depth. This can be effected in the stiffest soil by a subsoil plough, with four stout horses or an equivalent force of oxen, following a common plough, and the cost cannot exceed twelve or fourteen dollars per acre. When once done, it may be considered as permanent. Every one knows that the hardest ground, once fairly broken up, is loosened for many years, and nothing but the constant travel which takes place in the most frequented streets or roads can restore it to its former compactness for a long period. By this opening of the undersoil, the roots of plants are enabled to shoot downward, and this they invariably do if the surface is parched by drought. Besides, a heap of loose earth conducts the heat of the sun off much more gradually than a compact mass of hard soil, to say nothing of the superior force it probably exerts in extracting from the atmosphere its hidden moisture. If a refuge is thus kept open to our plants from the fierce rays of the sun, we shall find that none, neither trees, shrubs, grain or grass, will fail to shoot down their roots as far as possible.

The next expedient for alleviating the effects of our long spells of drought, is mulching. This expedient can be practised to much less extent than that just mentioned, and must be a resort, rather of the gardener than the farmer. With crops of English grain, it is manifestly impossible and for field culture, generally impracticable from its expense. But so far as a farmer is a raiser of trees, it may be of the greatest service. Young trees especially are not only benefited, but often actually saved, by a cover of leaves or litter of moderate thickness placed round the foot to the distance of six or eight feet. The roots of the tree are thus effectually shielded, and enabled and invited to spread themselves in the soil near the surface, that being of course the richest. If the bed of leaves found lying round the trunks of trees, in forests, be cleared away, many of the roots will be found actually lying on top of the ground.

A third expedient, and perhaps the most effectual and useful for obviating the effects of drought is the frequent stirring of the surface soil. This can never be done without essential benefit. It would be going quite too far to say that it completely supplies the lack of rain, but it is certain, that by some means or other it produces effects which no one would suppose before-hand, and no one who has ever attempted to test the point by experiment, will question it. Whoever stirs up a yard of dry soil, finds that it soon changes color and gathers moisture in some source and in some mode. Wherever this measure can be resorted to, which is of course only in places where the hoe and plough cannot be used, it is found far more effectual than any other remedy that can be applied with the same amount of labor. The latest and most popular French writer on Horticulture points out the mulching and stirring of the soil as the two leading remedies against the droughts which visit all parts of the globe frequently, and our own country in a pre-eminent degree.

TO FARMERS.—Three months—one-fourth of the year—has passed, and many of our subscribers are yet unmindful that they have not given us that encouragement we expected, in our endeavors to interest them. They have not as yet given us the results of their experiments, nor even the number of acres they cultivate, or the crops. When the farmers will spare a little of their time to give us a brief history of their efforts, with such data as they can at short notice, then we can add much to the interest and value of our humble sheet. And, by the bye, some of our patrons have not formed the "Farmers' Clubs" which they promised. Shall it be done?

THE steamer Golden Gate, with the New York mails of March 20, may be expected to-morrow.

THE following most interesting communication from a lady, published in the "Patent Office Report," is worthy the attention of our friends in California; for here we need to have these beautiful gifts of Providence around our homes, and who so well calculated to add grace to the design in the plans of cultivation, and give the finished touch of art, as woman. We trust the advice of the amiable writer at Washington, D. C., will give an impetus to our friends here.

WASHINGTON, D. C.

Sir: If I succeed in inducing even one of my fair countrywomen to turn her attention to the cultivation of flowers, I shall not think I have written in vain. I ought, perhaps, in addressing one so grave and scientific as yourself, to write on the nature, cultivation, and qualities of plants; but nothing is farther from my thoughts. *

* * * * *

With me the love of flowers is a passion, and when I look around and see their refining influence even upon the uneducated, I can but worship the hand that has placed within the reach of the humblest individual so delightful a pastime as the cultivation of flowers. Look at the most ordinary and common-place dwellings covered with climbing plants, and the enclosure embellished with flowers, and it immediately becomes a beautiful object to gaze upon, and involuntarily we suppose the occupants to be refined and educated people. Does a writer wish to excite your interest for a cottage scene, he entwines the lattice with eglantine, and wreathes the door with jassamine and roses; and if he goes still further, he places a fair girl in close contact with the flowers. This is not romance; it is sentiment. Those who have had the good fortune to have a mother that had a fondness for flowers, how, even when she is in the grave, the sight of a flower, or the fragrance borne on the wind from some favorite shrub, will recall the lost one, and stir up pleasing recollections. I would thus have thoughts of me, when in the grave, to steal over the senses of my child. I believe in the moral influence this world exercises over a man struggling and battling with this rough world. There is a strong affinity between the cultivation of perennial and immortal plants, which must lead a thinking mind to a deeper interest. The same sun, the same air and water, are all essential to the physical growth of both, and the pruning and training are necessary for the grace and beauty of each. The heat of the sun excites the activity of the plants; it increases the disposition of some of their constituent parts for new attractions to obtain such substances as may be requisite and proper for new growth; it likewise causes them to reject such matter as would be hurtful to them. Plants have an independent heat of their own; but all physiologists have found it as difficult to account for the spontaneous production of heat in the vegetable as in the animal kingdom. Oxygen gas, one of the constituent parts of atmospheric air, is as necessary to the respiration of man as to the plant; the latter consumes nitrogen, but returns the oxygen for the use of man. How beautiful the designs of Providence, thus to make the different parts of creation contribute to the support of each! Many plants live and bloom independent of the soil—water, sun, and air having been found sufficient for their growth—as the hyacinth and other bulbous plants. We, as a nation, should adopt a national flower, and not be behind England, Ireland, Scotland, or France, in sentiment. And surely from our world of flowers one could be found suitable.

Respectfully,
MARY B. THROCKMORTON.

A NEW METAL BROUGHT INTO USE.—At a meeting of the *Academie des Sciences*, on the 6th of February last, M. Dumas communicated some experiments of M. St. Clair Deville. This distinguished chemist, by a modification of M. Wochler's method, succeeded in obtaining alluminum in small bars and threads. The metal is as white as silver, does not tarnish, and is ductile in the highest degree. The point of fusion is about the same as that of silver; its density 2·56. The metal is a good conductor, and can be melted and cast in the air without a sensible oxydization. Sulphurated hydrogen, cold and hot water, nitric acid, heat, and sulphuric acid, do not act upon it—its true dissolvent is hydrocloric acid.

When M. Dumas had finished, MM. Cheval, Payen, Regnault, Le Verrier, and other distinguished members gathered round the speaker to admire the plates of alumiuum which were exposed in water, sulphuric acid and nitric acid. M. Thenare moved, and it was carried unanimously, that the necessary funds be appropriated for the necessary experiments on a large scale. Should these experiments be successful, and this new metal—which has all the good qualities of silver, is as malleable as gold, and yet is lighter than glass—be brought into general use, it is easy to predict that silver would have had its day for the purposes of domestic life. Cooking utensils, plates and dishes, spoons, forks, and drinking cups, will all be of aluminum. In fact, it can be furnished cheaply, and it is hard to say what would not be made of aluminum. Should Deville's new experiments prove successful, he will have rendered mankind a signal service by his discovery.

CROP OF WHEAT.—The San Joaquin Republican says: The farmers estimate that 40,000 acres have been sown with wheat this year in San Joaquin county. And it is further stated that the crop will amount to one million six hundred thousand bushels.

The Kitchen Garden.

Vegetables, and their cultivation, are now attracting much attention; information is eagerly sought, as we have abundant evidence in the number of inquiries we are almost daily receiving. The hints we now propose to offer are intended for amateurs, and have reference particularly to open ground culture. Whoever wishes to make his kitchen garden a profitable and pleasant investment of care and labor, must remember—

First, That it be free from stagnant moisture, either in surface or subsoil,—a cold, sour bottom is a deadly foe to a rapid, luxuriant growth, which is indispensable. A drain or two of stone or pipe tile, that a good laborer will make in a couple of days, may remedy defects of this kind in many a garden now suffering. A garden with a perfectly dry bottom, is two or three weeks earlier than one from which water cannot find easy drainage; it is much more healthy, more agreeable to work in, and more productive.

Second, That the ground be deeply spaded or trenched, or if of large extent, *subsoil plowed*. In any case it ought to be thoroughly loosened and pulverized to the depth of eighteen inches at least, that the roots of plants may have ample sources of food and nourishment at all times, and especially in *dry times*. This should have been done in the autumn; but if overlooked then, it should be done now, for it is indispensable. In spading and trenching, the subsoil should not be thrown on the *top*, for that would make a bad bed for the seeds, but it should be well loosened. In connection with this operation, *abundance* of well decomposed manure should be added, and it should be placed in the bottom of the trench as the work proceeds. Some of the coarser crops, such as potatoes, will do as well on *partially* decomposed manures, and these for early spring crops are desirable on account of the bottom heat to be derived from their fermentation.

Third, The garden must be laid out in plots, and each one should be designated by letters or numbers, and have a certain crop or succession of crops assigned to it, as the farmer arranges beforehand the mode of cropping the various divisions of his farm. Be the garden ever so small, a well defined system will add greatly to the facility and success of its management. Good gardeners and men whose gardening habits have become orderly and systematic from long practice and experience, may consider these hints superfluous, but we know they are needed, and if followed might work great reformation in many that are called *good* gardens. We all know how common it is for garden work to be deferred until an advancing season, or an active neighbor suggests the necessity of immediate action. Then the plot that is most available is put hastily in order and sown or planted with the then most pressing article. A week or two more and another plot is taken up in the same way, and so it goes on at random as the season advances.

Fourth, A timely provision of an ample and well selected stock of seeds should be made. The amateur that is not familiar with the best varieties of vegetables, should consult some reliable treatise on the subject, or go to an honest, well informed seedsman, and select such an assortment as may be sufficient for an uninterrupted succession during the entire season. No one should be satisfied with a poor assortment of suspicious seeds, merely because they are at hand. Conveyances now offer such facilities that a package can be transmitted one thousand miles in as short a period as it could thirty a few years ago. Therefore send a thousand miles, if need be, to secure good reliable seeds of the very best articles. You may depend upon it this will be economy at the end. The practice of running to the nearest seed vender to-day, for an ounce of this, and next week for an ounce or a paper of that, can result only in loss of time, and labor, and land.

About selecting varieties we must say a word or two more. This point in kitchen gardening does not seem to be appreciated. A thousand people will inquire the best varieties of apples, and pears, and peaches, before one will ask the best kind of radish, of lettuce, or pea; and yet the question has an equally important bearing on success in one case as in the other. The varieties of garden vegetables are participating to some extent in the general improvement of all branches of horticulture. A very small number of those who have gardens look into these matters. They are not aware of the introduction of new and improved varieties; they imagine that the seedsman is able to meet their wants; but the seedsman provides such seeds as he can sell, and he seldom lays in a stock of new or rare things until the taste of his customers demands it. We are not to be understood as recommending people that aim at sure and abundant crops, to dabble in novelties merely because they are such, but simply that they should secure the very best that can be had, availing themseves of every improvement that has been made, as people do in other pursuits.

Another matter that requires special consideration in the selection of seeds, is their adaptation to certain seasons of the year, and to other circumstances. For the early spring crops we want such as accomplish their growth in the shortest possible period of time. One variety of pea may be fit for use a fortnight before another served at the same time on the same level. So it is with radishes, lettuce, cauliflower, and indeed all the leading crops. Many people say a few years ago, and in fact we have heard it said within a week, that the late varieties that they saw, only varieties of it would be the best for general use, and very few persons would have a single early variety of the same species. This is to arrange the different sowings, in regard to quantity and time, in such a way that there will be continually a full supply in a proper condition for the table. This is a point in regard to which we know from experience, neither gardners nor amateurs give sufficient attention. For instance, in the case of radishes. These are very seldom seen in a fit state for the table; they are allowed to attain their full size, when they are so tough and pungent as to be wholly uneatable. They are only good when very young and tender; and if those that go to the markets, knew what a radish ought to be, they would not choose the largest, which strange to say they generally do. The great error is in sowing too much seed at once. The amateur who merely looks to a family supply, should sow a very small quantity at a time, and repeat it every week, or oftener as long as radishes are needed. Then they should be used the moment they are fit. When a large bed is sown at once, three-fourths of them have to be thrown away; in fact only two or three dishes are secured in a proper state. This point, we repeat, deserves the utmost attention. We frequently hear people say, "we have so many vegetables that we are at a loss how to dispose of them," when the truth is they have scarcely anything but what should be thrown to the hogs. Finally, in the kitchen garden everything must grow with rapidity and luxuriance. The seed must be good to vegetate quickly and produce plants with a sound and vigorous constitution. Old and poor seeds, with a half extinguished vitality, will produce such weakly and delicate plants that the most generous treatment will fail to bring them to perfection. See then that your seeds are large of their kinds, full and plump. Then the soil must be warm, and moist, and rich. *Rich* it must be, or you may as well throw your seeds on the way side. It must also be kept clean and mellow, or friable. Weeding and hoeing are two operations that require daily attention. Weeds, even if small, absorb the food and moisture that belong to the crops, and the absence of the hoe soon shows itself in a crusty surface that interrupts the free process of growth. Kitchen garden plants are not like trees, that can send their powerful woody roots in all directions in search of food; their roots are delicate and fibrous, great feeders, requiring abundant, exhaustless supplies. The lettuce and cabbage tribe are especially fond of good living and cannot do without. No matter what sort of lettuce you may plant upon poor soil, depend upon it it will lack that icy crispness and delicacy of flavor that constitutes its chief excellence. A liquid manure tank is one of the necessities of the kitchen garden, and its contents should be freely and frequently applied. Any soluble manure may be used with rain water. Guano, when other manures are scarce, may be advantageously employed. A bag of fifty or one hundred pounds will be as good as several loads of manure, and it is so portable that it may be conveyed one thousand miles at a trifling cost. It is so easily applied too; a handful thrown into a pail or tub of rain water and dissolved, will make a capital stimulant for growing plants.

It is not necessary, nor can we spare the space, to enter into all the minutiæ of operations. Our purpose at present is to direct attention to the principles that should regulate the management of the kitchen garden, and to enforce the adoption of a *system*, without which no cultivation can be pleasant, creditable, or profitable. We must mention two or three fine things that are particularly worthy of attention. Our colored plate for this month exhibits—

1. The *Early Oral Rose* radish, the best for forcing and for an early crop that we have ever seen. They should be eaten when about the size figured in the plate. They attain maturity, or at least a proper size for use much quicker than the common *Early Frame* or *Long Scarlet*, which answer very well in the open ground later in the season.

2. The new *Chinese Rose Winter* radish, far superior in appearance as well as in tenderness and delicacy to any other winter sort, and keeps well.

3. The *Early Very Short-Horn* carrot, much the best for forcing and for an early crop. They may be sown, mixed with the *Early Oral* radish, in the same bed, and will be fit for soups in a very short time. They are used quite small. Large quantities of them are sent from France to London where we first saw them, not much larger than the figure of the *Oral* radish. It is quite distinct from the common *Early Short-Horn.—Horticul.*

The plates of colored drawings of all the choicest vegetables known, can always be seen at Warren & Son's Exhibition Rooms, Musical Hall, San Francisco.

Flour Mill in San Joaquin.—Mr. Dent is now building a flour and saw mill at or near Knight's Ferry. It is to be of very large capacity, and will be a valuable convenience to the farmers. The wheat crop in the San Joaquin valley, says the Republican, will be an unusually large one this year, and we shall require all the flouring mills we can construct.

Increase.—Mr. Carruth, in a late speech in the Senate, says that within the limits of the county of Sonoma, the population has increased, during the last year, to [illegible]. He says: "The [illegible] very well there. [illegible] the Tuleyome river, a part of the [illegible] the new [illegible] are all [illegible] that [illegible] the country.

Garden Furniture.

Perhaps on no subject connected with horticulture is there more need of information than suitable decorations for the garden, or *Garden Furniture*, if we may be allowed the expressive term, embracing arbors, seats, trellises, and other structures of use and ornament in the garden. How often, in viewing gardens of the greatest pretensions, is one compelled to go from one end to the other, through beautiful shady walks and quiet nooks, without finding a resting place—no rustic seat inviting us to enjoy to its fullest extent the quiet beauty of the scene.

In the country there is no necessity for large parlors—the garden is the country parlor. Our drawing-rooms are deserted by our friends and visiters—they are to be found examining our rare shrubs and flowers—promenading our garden walks—reclining on the lawn, enjoying the grateful shade and cooling breeze. How necessary, then, that our garden furniture should be convenient and appropriate; that proper resting places be provided, to insure the fullest enjoyment of ourselves and our friends.

As in all other matters requiring taste, we often see great errors made in the introduction of garden ornaments. How common is it to see elaborate carpenter-work, painted a brilliant green or dazzling white painful to look upon, supporting a slender climber, when a simple cedar pole and perhaps several wires would have been a much cheaper and better support. So in regard to seats, "summer-houses," &c. In our cottage grounds of an acre or two we make a great mistake in imitating the fine architectural designs that are very appropriate if used in the extensive grounds of some European palace, with which it is in keeping, but sadly out of place in the grounds of less pretending but perhaps not less beautiful cottage homes. As a general thing, simple rustic work made of the limbs of trees with the bark on, formed into simple and appropriate designs, is the most appropriate, though we have observed some pretty designs in iron. But even in the use of rustic work are seen some sad violation of good taste. The verandah is no place for rustic seats—the seats there should be in keeping with the style of the house; yet are seen some of these seats even admitted into the hall.

McIntosh's Book of the Garden says: "Around cottage and villa residences, nothing is so appropriate as the natural style of gardening, and no ornament so proper as rustic work; but that should always be of a substantial and a tasteful description. An ingenious correspondent in the Gardener's Magazine, on this subject remarks: 'One advantage of wooden rustic work is, that it can be adapted to a great variety of purposes. Thus very beautiful, and even very architectural temples may be formed of unbarked wood. Ornamental doors, every description of garden seats, and flower-baskets, and vases of very elegant forms, may be composed of the same material. Shady walks also, having the shady gloom and enriched effect of a Gothic cloister, may be made of wooden rustic work: indeed, there is scarcely any kind of ornament to which it may not be applied. I allude,' continues this correspondent, 'more particularly to what I call wood mosaic, which is, I believe, rather a modern invention. It is formed of split sticks, of various lengths and sizes, and having bark of different colors. The pieces are nailed to any flat surface of wood, and very beautiful and elaborate patterns may be produced by arranging the pieces according to their sizes and the various colors of their barks. Elegant garden seats, and vases of almost any shape, may be covered with this kind of mosaic work; but as it is not durable when constantly exposed to the weather, it is the most suitable for the inside of summer-houses and garden temples. In such situations, the richest specimens may be introduced, and, if varnished over, they would last for a number of years."—*Horticulturist.*

The Duchesse of Angouleme Pear.

Few varities of pears have attracted so much attention as the Duchesse of Angouleme. The immense size of the fruit,—its great beauty and rich flavor,—as well as the vigor, hardiness, and productiveness of the tree, have given it a character that entitles it to a place in the smallest collection. Some cultivators, have pronounced it a variable fruit, sometimes excellent, but often or lacking in flavor, and only to be considered a good pear. But this character has probably only been applied to it when grown in an unfavorable soil or locality, or, from some cause, the fruit has not been produced in its best condition. The Pomological Magazine, above quoted, describes it as "the very finest" of late autumn pears, and though this was twenty years ago, and many new kinds have since been introduced, we know of no variety of the same season, except Swan's Orange, that for general cultivation will surpass it.

The Duchess of Angouleme was originally found growing in a hedge, at Anvers near Paris, about thirty years ago; but [illegible] it has been rarely and [illegible] a pear are not [illegible] pear trees. The fruit [illegible] very large size; the ordinary weight [illegible] to sixteen ounces; but [illegible] to twenty ounces.

The tree is of upright and [illegible] habit, and [illegible] a [illegible] at the [illegible]

Taxes.—[illegible]

---

branches ascending at very acute angles; [illegible] shoots long and straight.

Wood.—Brownish yellow, thickly dotted with large prominent whitish specks, stout and rather long-jointed; old wood yellowish olive; buds, medium size, long, slender, and sharply pointed, diverging: Flower-buds, medium size, ovate, with slightly woolly scales.

Leaves.—Medium size, ovate, broadest in the middle, shortly pointed, slightly wavy, of a bright shining green, finely nerved, and nearly entire on the edge; petioles medium length, about one and a quarter inches long, and rather slender.

Flowers.—Medium size; petals narrow, oblong, nearly flat.

Fruit.—Very large, about four inches long and three and a half in diameter: Form, roundish oblong, tapering little to the stem, where it is very obtuse, with a very uneven and knobby surface: Skin, fair, smooth, rich deep yellow when mature, often tinged with blush on the sunny side, with several scattered irregular russety patches, and the whole surface regularly sprinkled with large russety specks: stem, medium length, about an inch long, thick and large where it joins the branch, and deeply sunk in a round cavity: Eye, rather small, closed, and deeply sunk in a much furrowed basin; segments of the calyx short, incurved, stiff: Flesh, white, fine, melting, buttery, and juicy: Flavor, rich, saccharine, perfumed, and excellent: Core, medium size: Seeds, medium size, plump.

Ripe in October and November, and keeps well.

Cranberry.

The species of Cranberry most commonly found in the United States is the *Oxycoccus macrocarpus*. It is an indigenous, low, trailing vine, growing wild in bogs and meadows, bearing a beautiful red berry of an exceedingly sour, though agreeable taste, much used in domestic economy for tarts and sweet-meats. The cranberry, says Mr. Kenrick, of Boston, is a plant of easy culture; and with but little expense, not a doubt exists that meadows which are now barren wastes, or yield nothing but coarse herbage, might be converted into profitable cranberry fields. According to Loudon, Sir Joseph Banks, who obtained this plant from America, raised, in 1831, on a square of 18 feet each way, 3 1-2 Winchester bushels, which is at a rate of 460 bushes to the acre. Any meadow will answer. Captain Henry Hall, of Barnstable, has cultivated the cranberry 20 years. They grow well on sandy bogs after draining; if the bogs are covered with brush, it is removed, but it is not necessary to remove the rushes, as the strong roots of the cranberry soon overpower them. It would be well if, previous to planting, the land could be ploughed; but Capt. Hall usually spreads on beach sand, and digs holes four feet asunder each way, the same distance as for corn; the holes, are, however, deeper. Into these holes, sods of cranberry roots are planted, and in the space of three years the whole ground is covered. The planting is usually performed in autumn. Mr. F. A. Hayden, of Lincoln, Mass., is stated to have gathered from his farm, in 1830, 400 bushels of cranberries, which brought him, in Boston market, $100.

An acre of cranberries in full bearing will produce over 200 bushels; and the fruit generally sells in the markets of Boston for $1 50 per bushel, and much higher than in former years. Although a moist soil is best suited to the plant, yet, with a suitable mixture of bog earth, or mud, it will flourish, producing abundant crops, even in any dry soil. There is said to be a variety of cranberry in Russia of a superior size.

Cranberries abound in vast quantities in the moist prairies in Michigan and some of the Western States. By means of a newly-invented rake, very simple in its construction and not expensive, 10 bushels may be gathered by one man in a day, and a cargo of 1500 bushels has been sent to one of the Atlantic States, from the northern part of Indiana, in a flat-boat, at one time. The price which this product often commands in the markets of the cities along the Atlantic varies from $1 50 up to $2 50 and even $3 50 per bushel. They can be gathered at the West at an expense of not more than 50 cents per bushel. The duty on them in England is not more than 2 cents per gallon by direct trade.

California Marble.—The Shasta Courier says they have in their possession a fine piece of black marble, taken from a quarry about [illegible] miles from Shasta. The formation is said to extend over several acres. The marble is now being burned for lime, and yields about 75 per [illegible]

A man [illegible]ty and lame from the Insane Asylum, cured, and a [illegible] by this discovered a valuable [illegible] in Calaveras County. The grain of the coarse a pure and the [illegible] present [illegible] a [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 13, 1854.

Capt. John A. Sutter.

Some two weeks since we briefly alluded to the "noble Pioneer," whose name honors the head of this communication. We wrote then under the inspiration of the moment, with only a few facts we had gathered; but these were enough to awaken in our hearts a feeling of sympathy for him who was suffering, and scorn for those who had caused it. What we wrote we felt, for we wrote in sight of the ruined walls of "Sutter's Fort." A fort that had in former times withstood the storms of the elements, and the storming of the savage foes from without. A place that had once been the home and shelter of the homeless and friendless, but which now was a ruin, and passed from the care and control of him who once held it free with all the broad and rich acres that surrounded it, but from whom it has been wrested, and much of it most foully too we believe.

Were this all, the noble pioneer would not be a keen sufferer at this moment. For three and a half years, nearly, has this early friend of California seen other portions of his own territory cruelly wrested from him, and no means of redress, until the Board of Commissioners shall decide upon his claims. For nearly all this time Capt. Sutter's claim has been before the Board of Commissioners, and although the Sutter claim is by far the most important case to be acted on, yet by some pretext or other this case is put off, until the noble old pioneer is sick at heart, at the cruel and repeated delays. The consequence of these delays has been ruinous to all his property, delaying year after year, continual costs of examinations and litigations, to prevent the wresting from him the little he has left, has so far reduced his means, that his homestead has passed into the power of the money lender, and unless a speedy aid is offered, unless some plan can be adopted to relieve present necessity, the last portion of all that is dear to him will have passed forever from his control.

Would that our voice could penetrate every dwelling and reach every heart. We would say to them—shall John A. Sutter's last years be miserable? Shall citizens, many of whom have received his generous aid, see his silvery locks made whiter still by the grief that consumes? Shall the home of John A. Sutter be sport to the officers of the law, and his fireside, the abode of his wife and children, be wrested from him by the strong grip of the usurious and heartless? God forbid! we shall raise our voice, even if we do it alone. We shall appeal to all who have hearts to feel, to add their influence in his behalf, and to strive that his last days may be his best days.

Who will not be willing to aid in so noble a work; who would not be glad to contribute to relieve John A. Sutter and his family from sorrow. Every citizen should aid; every town and city should aid, the State should aid, and they should do it quickly. Life is uncertain—sorrow saps the foundation of life—sorrow feeds upon the heart, and too much of it stills its beatings. Let what is to be done be done quickly, and before it is too late. A few brief weeks and it will be too late. This we know, and therefore we the more earnestly plead. Let the generous hearted move in this matter, and let the Legislature commence the goodly work.

What a glorious and cheering consolation to the men who shall so move in this matter, as to rescue the noble pioneer and his family from the calamities that hang over them. "It is more blessed to give than to receive," and a glorious and heartfelt satisfaction will it be to all who participate in such a work, for it will bless him that gives and him that receives.

A way to make times better for the Farmers.

We could write volumes upon the complaints that we hear from the farmers from several parts of the State. Every form of complaint is made. One says he does not know what to plant; one year all plant barley, the next all plant onions, the next potatoes, and when harvest time comes "their crops don't pay," and they can't tell what to plant. Another says he don't know the best time, and wishes to know. Another says he wishes to know the right kind of soil. A fourth would like to know if irrigation is essential. A fifth enquires how deep it is necessary to plough. Again, they ask the best time to get their crops to market, and would like to know whether it is better to sell at harvest time, and put the money at interest, or wait for high prices. We have all kinds of inquiries, and we are always glad to give such answers and advice as will give the best results to those who labor upon the soil.

Now, Farmers, we have adopted a most excellent plan to answer all the questions you wish to propose. Subscribe for the California Farmer (see terms upon the paper), and then write to us freely. Make as many inquiries as you please, touching every department of agriculture, and we will put your inquiries into the Farmer, answer them all to the best of our ability, and call upon others to give any further information they please, and thus we shall send out subjects of inquiry for many minds, call into action many of our experimental and practical cultivators, and elicit the largest amount of thought and action, which must result in good to our whole State.

Farmers! shall we not have your co-operation? again—would you avoid loss by planting a crop that will come to an overstocked market. Subscribe for the Farmer, and you will learn the condition of that article, the amount planted, where and when, and will then be better able to judge whether it will pay or not.

Would you know whether to sell your crops at harvest or to store them. Subscribe for the Farmer, and look to the prices current, and the state and prospect of the markets found there, and you will be informed how to act.

Would you know the best time to plant, or the soil best adapted to the different kinds of seeds, &c. Then subscribe for the Farmer, and you shall have the best information that the experience of the best cultivators can afford to answer every question.

Would you know the results of deep or shallow ploughing upon the crops. Subscribe for the Farmer, and you will find recorded the best practical results of the past five or six years in California.

Finally, if you desire to secure to yourself the best information you can, such as will enable you to plan wisely, grow successfully, harvest abundantly, and sell prosperously, subscribe for the Farmer, and it, in addition to all this, you wish to feel happy, visit your neighbors and induce them to join you in the formation of a "Farmer's Club" of twenty, ten or five, and each one subscribe for the Farmer; read it, write for it, help to make it what it can be made, what we desire to make it—the record of the practical working farmer; or, in other words, the California farmer's journal, the "best journal in the State."

Agriculture at the Capital.

Agreeably to the announcement, Dr. C. F. Winslow visited Sacramento, by invitation of the Assembly, to deliver an address on Agriculture before that body.

Agriculture has long been viewed as a dry subject for public addresses, and such addresses are not expected to draw very full houses, but contrary to ordinary rules, there was a most gratifying interest felt and an attendance that must have been highly pleasing to the able orator. A large number were present and quite a bevy of ladies, that gave grace and animation to the audience, and inspiration to the speaker.

It would be unjust to attempt a description or even note the points of the oration—for we call it by that name, as it pleases us best.

It was an oration of the very highest order, and we feel confident our readers will agree with us when they peruse it, as we shall present it to them shortly, and entire.

It was a sufficient proof of its ability—the deep interest with which a large audience listened to its delivery *one hour and a quarter*, and with the most profound attention, only interrupted by spontaneous cheers; and we venture to say, of the entire audience not one was present who did not feel highly gratified.

We trust the interest awakened at tho Capital upon this noble science will not diminish until a State Society is incorporaten, a Board of Agriculture connected with it, and a liberal provision made to encourage the Cultivators of the Soil. Were it not for the heavy debt of the State at present hanging over her, we should urge the immediate endowment of an "Agnitultral College" upon a liberal scale. Even as it is, with the burden of this debt upon the State, we believe it important to establish such an institution, for we believe it could sustain itself in a very few years and return into the treasury the sums required to establish it. We shall watch with hope the action of our legislators—that the good seed sown by the orator will quickly produce—the sixty and the hundred fold.

A valuable document in the shape of the "Report of the Massachusetts Board of Agriculture," is received by the courtesy of their most efficient and able secretary, C. S. Flint, Esq.

Irregular Mails.

There is no such thing as computing the injury that results to a community from the want of regular and reliable mail facilities. It would take but a little time to destroy the business and character of a village, and almost to depopulate it, if the appearance of the plague or the small-pox be announced within its borders; but these calamities could not be lasting. Death would mark its victims, finish its terrible mission, and depart, and soon the dark cloud would be removed, business revive, cheerfulness return, and briskness, activity and prosperity be distinctly manifest. But, let a village become notorious as a place without post roads or post offices, where no mail facilities are to be had, or where they cannot be relied upon, and the work of decay begins, and death to all prosperity is sure to follow.

There can be no greater evil befal a place than to be cut off from mail facilities. It is an evil greater than the plague or the small-pox, for men may run the risk of death from these if their business demands it, but to be shut out from those means of communication that are life to business—men will not endure it; and when these evils exist, a mark of desolation is made that cannot be mistaken; the residents are like persons shut out from the world—they are not advised of what is going on in the world around them—they neither hear from their friends nor read the newspapers.

We venture to affirm, that, were the means of communication with the interior towns made certain and regular, the circulation of newspapers would be increased 25 to 50 per cent. to regular subscribers. It is a crying evil, and one that must be remedied. Not a day passes that we, as journalists, do not hear regrets expressed upon this point, and numbers are saying, We would take the papers, could we ever get them to us, but our papers never come—we cannot get papers by mail—hardly letters.

Hear one correspondent: "The condition of things in our county is lamentable—no emigration, no improvement—indeed, the reverse is but too true. We are too far from market for anything but stock raising. We have no harbor to justify regular and easy communication with San Francisco. Hard times, low spirits, &c., is the order of the day here. We have no judge, no justice of the peace to administer the oath legally, and this seems likely to be the condition of things for some time to come. Great complaints are made of the irregularity of the mails, coming at best but once a fortnight, and the other offices above are very negligent about sending our mails forward. We hope for better times; in the mean time I try to do my best to advance the interests of our citizens, and of the Farmer."

Thus we see the fatal effects resulting from irregular mails—a declension of business, decrease of population, decreased value of property, long faces, &c. And it must be so—for when lawyers and justices leave a place, there cannot be much business left.

There is, however, hope for our friends. Let them subscribe for the Farmer, send us all the grievances they suffer, and we shall "keep it before the people" till the evils are remedied. Yes, let a goodly number join a club of twenty, send us a list of names, and all the evils they suffer, and we will do our best to relieve our friends by keeping these facts before the people. We know farmers are suffering much for the want of quick intercourse with the market.

AGENTS FOR CALIFORNIA FARMER.

Messrs Adams & Co. at all their offices throughout the United States or Europe.
Messrs. Wells, Fargo & Co., at their offices throughout the Country.
Mr. Chauncey Langdon, Travelling Agent for the northern section of the State.
Messrs. Langton & Co. *for Downieville, Foster's Bar, Goodyear's Bar, Minesota.*
Messrs. Leland & McCoombe—*Crescent City, Port Orford, Uniontown, Eureka, and Bucksport.*
San Francisco—Sullivan's newspaper stand, near the Post Office; Kimball's, Noisy Carriers Hall, Long wharf.
Benicia, Martinez, &c.—Messrs. Stiles & Dodds.
Union City and Mission San Jose—Messrs. Howard & Chamberlain.
Sacramento—Capt. James Kirk; Messrs. Gardiner & Kirk.

New York City, N. Y.—J. M. Thorburn & Co.
N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

To Sacramento Subscribers.—We have this day appointed Capt. James Kirk, as our Agent in Sacramento City, by whom our paper will be regularly supplied, and to whom our subscribers will make payments.

Our patrons will please excuse any remissness in not receiving their papers regularly heretofore. Our present agent will not disappoint them and will always have their paper handed to them as regular as the day comes, and we hope for the continued and generous support of our Sacramento friends.

Our paper will always be found at the store of Messrs. Gardiner & Kirk, newsmen, Third street, Sacramento—on mail days neatly enveloped and ready for mail. To those who wish to show their friends in the States how Farming operations prosper in California, this will afford a good opportunity.

A Premium---Farmers' Clubs.

With the hope of inducing such of our friends, and those who have a little leisure, to ride among their neighbors and introduce an Agricultural Paper, we take pleasure in offering the CALIFORNIA FARMER: and, to make it an inducement, we say to such friends—if you will get us five subscribers, and remit the amount, we will send you six papers, or for ten subscribers, twelve papers. We trust there are many friends who will cheerfully take a little pains to aid us, and thus extend the circulation of the Farmer, and make a useful vehicle for the Agriculture of California.

Subscribers will please be particular to name the Post Office to which papers are to be sent; or, if forwarded by express, which line they prefer.

We want good active agents to visit every county in the State for the Farmer. Young men can find a steady and profitable employment. Apply at this office.

MARKET REPORTS.

San Francisco, April 12, 1854.

For a little time past there has appeared more animation in nearly all departments of trade; quite an increase of trade for up river, and very full freights, two boats running on the Sacramento line daily. For a few days indications of a permanent advance on all staple articles—Flour, Pork, Hams, Butter, &c Barley advanced considerably; speculation reached Oil and other articles. This tone is somewhat changed, and many articles have remained or have receded. Grains of all kinds are plenty and not in demand. Potatoes are a drag; we note sales of 2,000 bags at 40 cents—a severe loss. Other produce remains heavy. We hope, however, for better times, this state of things cannot last; they must improve and therefore all must have courage.

We have received from the hands of a committee of the various Lodges of Masons, Odd Fellows, &c., their report upon the services rendered by Gen. A. M. Winn, of Sacramento, during the calamitous years of 1849–'50. We rejoice at this, for as citizens of Sacramento during those years, we know how well and truly Gen. Winn, served the cause of humanity, sacrificing his own pecuniary, personal and social comforts to relieve the sufferings of his fellow men. We trust our legislature will promptly and amply repay Gen. Winn for the full sum expended, with interest.

THE CRANBERRY.—We would call the attention of those who desire to cultivate this esculent, to the advertisement of Mr. Bates. The variety he advertises is very highly commended by the New York Societies, and any orders can be supplied in this country, as will be seen by reference to the advertisement.

RANCH FOR SALE.—We call attention to the splendid ranch advertised in this week's issue, and assure our readers it is an opportunity rarely offered. We know a bargain can be had.

MARRIED.

On the 6th inst., in Placerville, Robert Fisher and Mrs. N. J. Engleston.

In this city, on the 9th inst., by the Rev. Albert Williams, Mr. Richard Brown, jr., and Miss Isabella Foss, all of San Francisco.

Lots for Sale in Horner's Addition.

THE subscriber has removed his office, books, maps and records, to the old San Miguel Rancho House, one mile southwest of the Mission Dolores Church, where he can be consulted every day. Those who may wish to purchase in HORNER'S ADDITION, or Villa Lots of any required size, from one to twenty acres, with clear and undisputed titles, would do well to call upon him before buying elsewhere, for it will cost nothing to get posted up before purchasing. Those wishing to purchase will find it to their interest to call at the "Old Rancho House," where they can see an abstract of the titles, the identical lands, with their boundaries, advantages, elegant situations for residences, gardens, &c., &c.

J. M. H. can be seen at Horner & Co.'s Counting Office, on Davis street, corner of Broadway Wharf, between the hours of 12 M. and 3 P. M. [15] JOHN M. HORNER.

Splendid Ranch for Sale.

ONE of the finest Ranches, and in the highest cultivation, with full and promising crop in ground, will be offered, and immediate possession given to a bona fide purchaser. The Ranch contains 160 acres, pleasantly located upon one of our river banks, with dwellings and out buildings, and all in perfect order. To a person desirous of securing a permanent residence, one that is desirable, and that can be made profitable, this opportunity presents a chance rarely met with. About one-half of the purchase money can remain upon mortgage or exchanged for valuable property in this city.

Persons desirous of purchasing, may learn the particulars by calling at our place of business. WARREN & SON,
15 Musical Hall Building, Bush street.

Piano Fortes and Melodeons,
WOODWORTH & CO.

IMPORTERS of Piano Fortes and Melodeons, 130 Clay street, are the exclusive Agents for the sale of STODART'S PIANO FORTES and PRINCE'S MELODEONS, in California, and are constantly receiving them direct from the manufactory. Such arrangements have been made as will enable them to supply these celebrated instruments at manufacturer's prices, thus securing to purchasers the advantage of making personal selection from a large and complete assortment, and of avoiding the great risk and delay of importation.

Just received a stock of Piano Fortes for hire. 15 tf

ATWILL & CO.

BATES' SUPERIOR
UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts as have come directly under our own experience and observation.

Soil, Preparation, Management, &c.—Have tested the plants thoroughly in all kinds of soils, we have no particular preference in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, as it is very liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less so. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this fruit, but no soil or vegetable manure should be used, as the fruit draws nourishment from the atmosphere. The vines propagate and runners, like the Strawberry, and will flourish in moist and dry soils, but increase with good management. When the soil is prepared to grass and weeds, we prepare the ground by plowing the top soil at a moderate depth to prevent their growth. This may be easily done by plowing the sod, and [illegible] the soil in carts or otherwise. The vines may also be set in the soil so poor that grass will not grow to any advantage. Most of the Cranberry Farms [illegible] in marshes, [illegible] is reclaimed, but [illegible] cranberry derives its nourishment from the air.

If [illegible] grass and weeds, [illegible] it may be [illegible] with [illegible] the runners [illegible] a garden or meadow, and will [illegible] for [illegible] a [illegible] [illegible] [illegible]

REMOVAL.

DR. J. C. YOUNG has removed his office from 226½ Dupont street, to the corner of Montgomery and California streets, opposite Page, Bacon & Co.'s Banking House, where he will be happy to consult with his former patrons, and treat scientifically and with discretion all those who may require the services of a physician. The success of Dr. Young since his advent in this State, has been without a parallel, and he hopes by continued and untiring application to his profession, to remove from the public mind that lack of confidence which has so unhappily existed in regard to the Medical Profession in the State of California.

P. S.—All letters enclosing $10 will receive immediate attention. Direct Box 735, P. O.

N. B.—All papers in the State will please insert as Special Notice, the above, for one month, and send bill to Dr. J. C Young, M. D. 12 1m

Wanted.

AT the general Agency and Intelligence office, No. 87 Long wharf, 3d door below Sansome street, up stairs.

Houses, Farms, Lots for sale or to Rent.

Merchants, Farmers, Mechanics, Hotel Keepers, and Private Families supplied with help at the shortest notice.

Merchants' clerks, laborers and servants can find immediate employment by applying as above.

Money loaned on securities, personal and real estate.
T. H. PERKINS,

P. S. Particular attention paid to furnishing Farmers with help immediately upon receiving their orders. And in writing to us they will please specify the exact kind of help required, and the wages. Address T. H. PERKINS & Co.
Intelligence Office,
14 4t 87 Long wharf.

Wanted.

A PERSON who speaks the English, German and French Languages, is desirous of employment in any situation in which these qualifications may be available. He is prepared to make himself generally useful, and is willing to go into the country. Address W., at this office.

California Steam Navigation Company.

MEMORY.

On fancy's ardent pinions borne,
The mind its sorrows may forget;
The heart by various passions torn,
May cease to throb, but not forget.

Pale recollections will return,
With anguish struggling in her train,
And beauty of her sunbeams shorn
Will fly the haggard form of pain.

Hope's angel visage bovering o'er
Our aching head may ease impart;
But Oh! what sovereign's balm can cure
The sorrows of a wounded heart?

To me, no more the blissful hours
Of youth, of love, of hope are given;
No more my pathway strew'd with flowers
Shall seem the sunny road to Heaven.

For hoary time his wreath of snow
Has o'er my throbbing temples thrown,
And down the hill of life I go,
Deserted, friendless and alone!

As some frail bark by tempest riven,
On time's bleak boundless wave I lie,
By every storm, still farther driven
On the rough sea adversity.

Dark, deep and fathomless the wave,
For me no anchorage, hope or stay;
No solace, but the silent grave;
No rest, but in my bed of clay.

A FABLE.

It chanced upon a wintry day
A sportive child went forth to play;
Careering o'er the frozen ground,
An icy spray, well pleased, he found,
Bedeck'd with gems, in crystal wrought.
The frosty twig was quickly brought
To grace the mantle-piece. Beside
Bright spar and ore, it form'd the pride
Of that gay scene. The fire beneath,
Alas! soon dimm'd his diamond wreath.
The gems that deck'd his glitt'ring prize
Seem'd to have sought his tearful eyes;
For, once bedeck'd with pearls so thick,
That twig turn'd out a frosty stick.

Have you not seen the child full-grown,
His glitt'ring bauble made his own,
Find the loud charms he thought to clasp
Annihilated in his grasp—
The votary of wealth or fame
Find *that* a curse, and *this* a name—
The lover smit with heavenly charms
Find a mere mortal in his arms—
The very king, ambition-stick,
His sceptre find a frosty stick?

THE BOY AND MAN.—A few years ago, there was in the city of Boston a portrait painter whose name was Mr. Copley. He did not succeed very well in his business, and concluded to go to England, to try his fortunes there. He had a little son, whom he took with him, whose name was John Singleton Copley.

John was a very studious boy, and made such rapid progress in his studies that his father sent him to college. There he applied himself so closely to his books, and became so distinguished a scholar, that his instructors predicted that he would make a very eminent man.

After he graduated, he studied law. And when he entered upon the practice of his profession, his mind was richly stored with information, and so highly disciplined by his previous diligence, that he almost immediately obtained celebrity. One or two cases of very great importance being intrusted to him, he managed them with so much wisdom and skill as to attract the admiration of the whole British nation.

The king and his cabinet, seeing what a learned man he was, and the influence he had acquired, felt it important to secure his services for the government. They therefore raised him from one post of honor to another, till he was created Lord High Chancellor of England—the very highest post of honor to which a subject can attain; so that John Singleton Copley is now Lord Lyndhurst, Lord High Chancellor of England. About sixty years ago, he was a little boy in Boston. His father there was a poor portrait painter, hardly able to get his daily bread. Now, John is at the head of the nobility in England; one of the most distinguished men in talent and power in the House of Lords, and regarded with reverence and respect by the whole civilized world. This is the reward of industry. The studious boy becomes the useful and respected man.

Had John S. Copley spent his schoolboy days in idleness, he would probably have passed his manhood in poverty and shame. But he studied in school, when other boys were idle; he studied in college, when other young men were wasting their time; he ever adopted for his motto, "*ultra pergere*," (*press onward,*) and how rich has been his reward.

You, my young friends, are now laying the foundation for your future life. You are every day at school deciding the question whether you may be useful or respected in life, or whether your manhood shall be passed in mourning over the follies of misspent boyhood.—*Rev. John S. C. Abbott.*

ANECDOTE OF THE LATE SIR C. NAPIER.—Sir Charles was married to a lady of strong though gentle character, and he delighted in relating an adventure, which once befell the pair, very characteristic of both. He and Lady Napier were riding one evening, unattended, on the summit of the Mahableshwur Hills. The sun had just set; the pathway was narrow, bordered on one side by jungle, and the other by a deep precipice. Turning suddenly to his wife he desired her to ride on at all speed immediately to the nearest village and to send some people back to the spot where she left him, and not to ask him the reason why he sent her. She obeyed—hear it, ye inquisitive and disputatious wives—in silence. It was no slight trial of her courage as well as of her obedience, for the way was lonely and beset with many possible perils; but she rode rapidly and boldly forward, and gained a village at some distance in safety. The party met Sir Charles, however, about a mile from the place, following in his lady's track; and he then explained the reason of his strange and unquestioned command.

He had seen, as they slowly walked their horses, four savage eyes gleam at him through the jungle, and believed that they belonged either to a tiger or chenah—the hunting leopard. He was aware that if they both rode off, the creatures, following the instinct of their nature, would be sure to chase them. He feared lest if Lady Napier knew the fearful kind of peril they were in, she would be startled and unfit to make any attempt at escape, or at least that she would not consent to his judicious plan; so he tested her obedience, as we have seen, successfully. He remained himself confronting, and probably controlling the wild beasts with his eagle eye; for after a short gaze, and a muttered growl, they retreated into the jungle, and he was free to follow his wife.

"UP AGAIN AND TAKE ANOTHER."—This is a bit of philosophy that we have learned in childhood. No matter how hard the tumble, up again and take another. There is no use groaning over what cannot be helped. Rather, with a cheerful face, turn your back resolutely upon past calamity, and press onward.

Young man! who in the outset of life find your hopes disappointed, your anticipations frustrated, your plans wrecked, be not disheartened by present defeat. "Up again and take another."

Reformer! who would urge the world to higher aims and nobler purposes—who from social disorder would evolve a higher and more perfect civilization, be not daunted by a first repulse. "Up again and take another."

Young student! who find the pathway of learning beset by difficulties and discouragements, who overcomes one barrier but to encounter another, before whom the hills of wisdom seem to rise higher, gather strength from the difficulties you have already overcome with which to front those which are to come. "Up again and take another."

Finally, those to whom failure and disappointment in any form have come, learn a lesson of cheerful effort from this little maxim, "Up again and take another."—*True Flag.*

PUNCH says: "Little children are the lillies-of-the-valley of life."

A CARD.

FREE EXHIBITION HALL.—We desire to announce, and we do so most respectfully, that hereafter, during our Exhibition, our Hall, containing all the magnificent specimens of the Agricultural Exhibition, together with the choice Paintings and Embroideries, and many rare and beautiful specimens and curiosities from the "Islands of the Sea," will be open to the visits of all who wish to examine them, FREE OF CHARGE.

We would also announce to Artists that our Hall is offered to them FREE, to exhibit their work for exhibition or sale, and we further announce to all persons who have Paintings, Statuary Works of Art, Curiosities, or extra specimens of anything of domestic manufacture, that here is a place the most appropriate for its exhibition or sale, and where the most extended notice can be given to it. All who have works of art, or any of the curiosities of the country, or wonderful specimen of the Agriculture of California or the Pacific coast, will find this Hall the most appropriate place for the exhibition of the same.

We desire also to state that all the Agricultural papers and periodicals of the United States and the principal publications of Europe upon the subjects of Agriculture, Horticulture, and Floriculture and other scientific subjects, and to our patrons, and to the cause of Science, they are ever open, and we tender our best aid to developing to the utmost of our power the good resulting from them. WARREN & SON.

The Children and the Novel.

BY MRS. CAROLINE A. SOULE.

"WELL there," muttered Mrs. Lee, in a somewhat petulant tone, as she laid down her babe, "thank fortune, as the last one is abed and asleep. Now for a little comfort."

Carefully drawing the blankets around the tiny form, she rested one hand for a few moments upon the gently heaving breast, stirred the cradle with the other, singing the while a low lullaby.

Assured from its soft breathing and quiet limbs that it was indeed asleep, she turned from it quickly, drew her low rocker to the stand, picked up the light, and took from underneath a miscellaneous pile in her work-basket, an uncut novel.

"What a beautiful title," said she, all traces of weariness vanishing with electric rapidity from her countenance. As her eyes glanced over its pages, the dull look they had worn all day disappeared, and the light of anticipated joy flashed in its stead.

"I know that I shall be pleased with it; I feel that it will be interesting," continued she. "What charming names the author has chosen. None of your Johns and Hannahs, your Roberts and Margarets—oh no! here is noble Rodrigo, poetic Clarence, sweet Florilla, saintly Therese—why, there is not an ordinary name in the book. The writer must be one of unusual taste!"

Having hastily cut the leaves, she shaded her brow with one hand, grasped the charming book with the other, as though it were polished gold and she a miser, and commenced, in the phrase of enthusiastic novel readers, to devour the pages.

Rapidly did her eyes run over the first chapter. But then—she turned her head with a quick, impatient movement. Did she not hear a noise in the cradle? Yes, a little hand was lifted from beneath the cover.

"Too bad, too bad; he'll be awake all the evening now;" and she glided with a noiseless step to the child's side.

But the eyelids were still closed—the measured breath of slumber stole gently from the half-parted lips, and the offending hand rested in quiet beauty upon the soft cheek.

It was a fair, sweet babe, whose little heart had throbbed but one short summer. As it lay there, the spell of sinless sleep upon his brow, it seemed the type of all things pure and blest. Eden with all its loveliness, never charmed the gaze of Eve with such a picture. The holier feelings of the mother's breast were touched, as if by a hand from heaven. The angel began to trouble the deep waters of her soul as she stood beside that cradle bed; and when, after a vigil of several moments, the child still sleeping, she bent her head and imprinted upon its lips the kiss of love, the healing wave flowed for an instant—then ebbed, for the novel was not yet read.

Resuming her seat, Mrs. Lee again took her book. But the fiction seemed to have lost some of its fascination. For some time her glass vacillated between its finely printed pages and her heaped up basket. She even put on her thimble and threaded a needle. But a moonlight scene, where in a honeysuckle bower, the noble lover draws a trembling girl to his bosom, and pours into her ears the bewitching words of wild courtship, acted like magic on the reader's mind, and she became absorbed in the glowing picture.

The second and third chapters were soon perused, and she was entering with interest upon the fourth, when a sweet voice from the trundle-bed called out "mother, mother, mother."

Her ear caught the sound, but it made no impression upon her mind till it had been several times repeated; then turning quickly, in no very gentle voice exclaimed, "What do you want, Lizzie! I thought you were asleep an hour ago."

"I have been asleep, mother," answered the daughter a trifle hurt, "I woke up thirsty"—

"Because you were a naughty girl and wanted to play with me. Strange that I can't have a moment's comfort," and petulantly to the bed she went, turned the cover and then lay down herself to sleep.

"I was a very naughty girl, I can't deny. I ask pardon."

The words fell upon the mother's ear, but they fell unheeded; there was another sound in her heart.

"We always feel our blessings most when they are about to be taken away. Why did I not think of this before? Why did I not prize my darling more? Why did I not love him more? Why did I not—" and she sprang from the bed, and bent over the child, and pressed her lips to his, and wept over him.

"Mother, I am sorry I was naughty. I will get up water but you are sure to want some. Why didn't you drink last night, when I had a whole pitcher full for you?"

"I wasn't thirsty last night. Do please give me a drink and I'll go right to sleep."

"I am not going to run down stairs to-night; so just turn over and shut your eyes."

And she sat down again to her novel, leaving the thirsty child to its thoughts or dreams as the case might be.

Lizzie, as she said, wanted a drink very much, and so she turned and tossed and tried to think of everything but water, while that was all she could think of.

"If I only had one little swallow," murmured she to herself. "I guess I could get along till morning." But she might as well have have sought a pailful; there was no prospect of getting any. By and by, she spied upon the stove hearth a tin cup. "The baby's milk!" said she. "Perhaps that would be as good as water. I wonder if mother would let me have it." She looked toward the parent. She was absorbed in her book; her very being seemed bound up in it. The child knew too much to disturb her.

But perhaps she could get it without disturbing her mother, and she did want a drink so much. She hesitated for some time, then crept silently out of bed, stole to the cup, seized it eagerly and took a swallow. But it tasted better than she thought it would, and her thirst was such that she drained it. Alarmed at what she had done, she was in such haste to put it back that it slipped from her trembling hand, bounding against the stove, falling on the hearth, and rolling thence on the carpet.

"Why, Lizzie Lee!" screamed the mother, dropping her book and running to the child. "I should like to know what you have been about, spilt all the baby's milk I'll warrant;" as she took up the empty cup. Then seeing the carpet was quite dry, she seized Lizzie by the shoulder exclaiming in an angry voice, "what have you done with the milk, you little plague? Tell me this minute what's become of it!"

"I was so thirsty, mother," answered the child in a pleading voice, tears starting to her eyes, "I could not go to sleep, and so"—

"So you drank it, did you? you naughty girl," continued Mrs. Lee with increased vehemence of tone; "drank it, and I hav'nt another drop of milk in the house. I'll teach you to do such things;" and her hand came down heavily upon the shrinking shoulder, one! two! three times! A wild scream of pain burst from the child's lips. Another, and another, and angry and excited as the mother was, they pierced her heart like deep arrows.

The noise startled another child that slept in the same bed with Lizzie. Frightened from its sound slumbers, it shrieked in alarm, when the babe, waking at the same moment, joined its voice with the others, not in harmony, but in discords, that echo so often in the nursery, stunning the ear and bewildering the brain.

With quick steps, quick hands, and a softened tone, Mrs. Lee strove to calm the tempest she had raised. Lizzie's cries soon merged into piteous sobs, but Willie and the babe continued their loud screams, till the mother, in her perplexity, would fain have wrung her hands and sat down and wept with them. She ran from one to the other, soothing, singing and caressing. But they did not hush in the least, till as a last resource she took the babe in one arm, Willie in the other, and thus burdened paced the chamber. Her limbs ached with the effort, her voice grew plaintive, her heart sad and sore with the upbraidings of a conscience which she had strove long to stifle. She breathed sweet music in the ears of the little sobbing creatures that struggled in her arms, but not a word of anger escaped from her pale lips. She felt she was the guilty cause of all her trouble. A little forethought, a little self-denial, a little discipline of temper, and all had been well.

It was a long time ere she ventured to sit down and rock the children, and they did not soon close their eyes in sleep. They would start and scream, then draw back such long sighs, that the tears which trembled in the mother's eyes would flood her cheeks.

When, at last, they rested in a sweet, calm slumber, she was at a loss how to put them down, to release her weary arms without the risk of another confusion. There was one she could call upon her aid. No one? Yes there was the little timid, loving creature whose tender sleep was started with the excitement of an angry mother.

[illegible] the cradle, after rocking there a very low, gentle time

[illegible] was quite young for

[illegible] you [illegible] down [illegible]

[illegible] and [illegible]

clasped to her heart, her lips breathing childish words of affection over its unconscious form.

Very carefully did Mrs. Lee lay down her little Willie, and for some moments she sat beside him, smoothing gently his fair brow, twining his golden locks around her fingers, and pressing the softest and sweetest of kisses upon his still lips.

Then, going to Lizzie, she took from her arms the sleeping babe, and placing it in the cradle, bent over it, whispering the fondest terms of endearment.

Sitting down beside it, she covered her face, and thought grew busy. By and by, Lizzie stole quietly to the chair, knelt beside it, and buried her head in her mother's lap. Mrs. Lee's hands toyed with the soft brown curls that fell over it in such rich profusion, and several times pushed them off the forehead, when the child felt the mute pressure of her lips. For some time both were silent. At length Lizzie looked timidly up, saying, in a touching voice,

"I am so sorry, mother, I made you so much trouble. I'll try and never be thristy again, when you are reading."

The mother's heart started; she drew the child to her bosom, embraced it fondly, closely, as though she thought by pressure to still its painful throbbings. Then bearing her to the bed, she sat her down, and hastily left the room.

She soon returned, a glass of water in her hand. "Thank you, mother," said Lizzie, when she had quenched her thirst, "*you'll have a good time to read now*, for I shall go right to sleep."

With her eyes brimful of tears the mother bent over her child and kissed her again and again. And Lizzie, feeling that she was quite forgiven, and not dreaming that she had been more sinned against than sinning, threw her arms around her parent's neck, and gave back kiss for kiss. Then, nestling on the warm pillow of her little brother, she closed her weary eyes, and in a short time was sound asleep.

For a long time the mother knelt beside the little couch, and when she rose and sat down again by the stand, she left the novel where she had dropped it, but took from her basket an unfinished doll, and with rapid fingers plied her needle.

It was long ere she placed her head upon her pillow. When she did, the doll, completed and neatly dressed, lay by the side of Lizzie; the novel, half-read, upon the Lehigh, in the stove, a handful of light ashes.—*Waverly Magazine.*

A Vision.

A SCENE IN SAN FRANCISCO TWENTY FIVE YEARS HENCE.

"Coming events cast their shadows before."

"I would recall a vision which I dreamed,
Perchance in sleep—for in truth I thought,
A slumbering hour it, is capable of years,
And curdles a long life into an hour."

METHOUGHT that Time had shot suddenly forward, some twenty years and odd; and, in manhood's prime, and life and health, I stood upon a lofty eminence overlooking the city of San Francisco. Beneath and around me, on every side, a thousand lofty spires and towering edifices glittered in the sunlight, and far to the south and west countless habitations of humble pretensions, suburban cottages and lovely gardens seemed vieing in a common race to cover all the plain; and from grassy vale and shady nook looked cheeringly up, or from gentle hill-slope, or clinging to the mountain's steeper side, looked down and smiled. On the north, from North Beach to Clark's Point, and thence far away to the south, stretched the unbroken front of a great Commercial Emporium. At the very doors of her merchant princes a thousand richly laden keels rode proudly at anchor, or passing to and fro [illegible] crowd the Golden Gate, and whiten every ocean with her commerce. Steamers and sailing craft, of every class and size, were crossing and re-crossing and moving in every direction upon the Bay.

On Contra Costa, the city of Oakland stretched her snowy front; and thence, both north and south, as far as the eye could reach, villages of lesser note, the rural palace and the princely mansion, with here and there a village, [illegible] with a lavish and luxurious hand were strewn along the shore. City, town and hamlet, the hill, the valley, the mountain and the plain, the magnificent plain, and the dancing bay of the [illegible] Pacific, were before me. The sky above me was unclouded by a vapor;

[illegible]

That [illegible] was [illegible]"

And [illegible] the crowd of [illegible] was [illegible] yr- [illegible] [illegible] to my eye a [illegible] re- [illegible] [illegible]

It was [illegible]. The [illegible] [illegible] [illegible] and [illegible] [illegible] [illegible]

Equality; Agriculture, Manufactures, Mines." On the top of this shaft, rested a vase of pure gold, without ornament or inscription. In this was contained water from the Atlantic ocean. On either side of this stood a beautiful young woman, in the bloom of health, dressed in muslin robes of snowy whiteness, trimmed with gold and evergreens, and bearing appropriate emblems, typical of the genius of Peace and Commerce. Immediately in the rear of these, a figure representing Neptune with his trident, was standing in a rich and gorgeous chariot, drawn by dolphins; and falling from the rear of the chariot, and strewn the entire length of the platform were shells and precious stones and gold and silver ores. This was to typify, that our advance in the arts and sciences had induced even the "God of the Ocean" to forsake his native element, and, availing himself of human skill, to take the overland route from one part of his dominions to the other;—and, further, that the commerce of the seas would henceforward, take this route; while the shells and precious stones falling from his chariot, seemed to remind us that this great undertaking was destined to be literally paved with the riches of the deep. Immediately in the rear of this group, arranged on either side of the platform, were separate pedestals, four feet six inches in height by three feet square, placed at a distance of nearly six feet apart, and extending in parallel lines over two hundred feet in the rear. These pedestals were fifty in number; twenty-five on either hand, and emblematical of the "fifty free and independent States of the American Union," that included the Canadas on the North to the Isthmus of Darien on the south, and from Cuba in the southeast to the Russian settlements in the northwest, from the Equator to the Frozen regions. Upon each of these pedestals I read the name of a State, and on the tops standing erect, were fifty beautiful young women, between the ages of eighteen and twenty years, in the full bloom of health and womanhood. These are dressed in flowing drapery of white, and on the head, each has a crimson velvet cap, ornamented by a single star of gold. Each bore an emblem, vegetable, mineral or artificial, of her particular star, and an endless chain of roses and orange flowers in graceful festoons, extended from hand to hand, and was emblematical of the common interests which unite us as a people. The blue eyes and fair complexions of the North in union, though in contrast, with the dark eyes and olive complexions of the South. Immediately in the rear of these and occupying the remaining portion of the "car triumphal," was the President of the United States, members of the Cabinet and heads of Departments, deputations of members from both houses of Congress, foreign Ministers, etc., resident at Washington. Executive officers of several of the Atlantic States, deputations from all, and lastly a delegation of Aborigines, consisting of the chiefs and head men of the nations of the Plains. Then came another detached car, similar to that described in the first instance, containing a band of fifty musicians, playing "The Star Spangled Banner."

Thus appointed and arranged, the train arrived at the terminus over the Bay. At this point, a Christian minister, accompanied by the President and Secretary of State, with heads uncovered, proceeded from the extreme rear, through the long avenue of young women representing the several States; as they passed along, each successive State stood with head uncovered, in token at once of their respect for religion and fidelity to the General Government. This movement served also, as a signal for the multitude of spectators to follow suit, and who accordingly acquiesed during the following ceremonies:

Arrived in front of the "Triumphal Arch," the minister briefly invoked the blessing of Jehovah upon the great enterprise before them, and for the welfare of the country at large. He stepped aside and the Chief Magistrate of the Nation having closed the discoursive part of the ceremonies with a few appropriate remarks, a signal was given, whereupon the sisters "Peace" and "Commerce" gracefully inverted the golden vase and the waters of the Atlantic were mingled with the waters of the Pacific. The Bay of New York was wedded to the Bay of San Francisco, and the bright drops of the Hudson mingled and flowed with those of the Sacramento.

At that instant, amid the roll of drums and the clangor of martial music, the discharge of musketry, the roar of artillery and the deafening huzzas of a countless multitude on the land and on the water, I awoke from a *dream.—Times and Transcript of Sept.* 18, 1852.

Condition of Lower California.—A correspondent of the Los Angeles Star, thus depicts the present deplorable condition of the Lower Californians:

"The lower country has been left in a most deplorable condition. About one-half of the population are on the road to San Diego, as they were literally starved out of their homes, not even sufficient grain having been left to them to sow for the ensuing crop. Some five hundred horses were taken by Walker of different persons, some of which were killed, others were broken down and scattered over the whole country. Rancheros have been left without an animal or a saddle to herd their stock with, and whatever escaped the hands of Walker, fell into the hands of the Indians, who cannot even be pursued, as the people are deprived by Walker of the arms they used for self-defence. Doors were broken down, holes cut into the walls of houses, corn thrown on the ground to animals, cattle driven off, and to make short, every possible injury done to the inhabitants of the country, that could be thought of.

Cultivation of Fruits.

This subject we consider of the highest importance to California. Next to our "grain crop" will stand "fruit culture;" and if we consider the "vine" in the value of its fruit, and in the value of wine, present and future—the cultivation of fruits will ere long run almost parallel with it; for it is not only the varieties ordinarily grown, but our markets are destined to be supplied by our own products, with the orange, lemon, quince, pomegranite, fig, and other luxurious productions of tropical regions, and with increased attention to these, and a proper application of the knowledge requisite for their growth, all will be grown in abundance. We shall present from time to time, a sketch of the new fruits introduced into the old States from Europe, and those produced by our own cultivators in our sister States, with all their characteristics. We would call particular attention to the article we present below. This is a condensed history of the efforts of some of the best cultivators of the "old country," and also of several of the ablest and most earnest of our scientific and practical men of the older States.

"Of all the branches of that which, with many, it is the fashion to call terraculture, the cultivation of fruit is perhaps the most interesting. Its successful practice calls for the exercise of much skill, and the possession of some scientific attainments. The varieties of all the species, and indeed of some single species, being extremely numerous, extending through the whole season, thereby afford occupation and objects of interest for a large part of the year. Of the various branches of pomology, meaning to include in that term all that relates to fruit, the raising of new varieties from seed is perhaps the most exciting. Burdened, as the catalogues of the nurserymen are, with the names of hundreds of varieties of pears and apples, and with very many of those of other varieties of fruits, the question may be asked, Why seek to increase the number of varieties? To this the answer which readily presents itself, is, that we should not, in this or anything else, remain satisfied with present attainments, but should constantly strive to obtain something better than that which we already possess. Besides, this great amount of variety is found, by experience, to be apparent rather than real: that is, on trial very many, by far the largest proportion of the new kinds introduced, are found, for some reason or other, unworthy of general or an extended cultivation, Some cultivators have expressed the opinion, though it is not intended here to assent to the correctness of that opinion, that out of all the perhaps one thousand kind of pears borne on the nurserymen's lists, not more than twenty-five are worthy of preservation and propagation. Some fruit growers too entertain the belief, though it too is one that may not stand the test of facts and examination, that varieties of native origin, the qualities of the fruit being equal are, on some accounts, superior to those of foreign production. This, if so, furnishes a sufficient inducement to the attempt of raising new varieties from seed. But whether this is so or not, a hope and expectation of effecting, in some respects, an improvement, has appeared to many sufficiently reasonable to lead to the practice on a limited scale, and generally upon no well considered and adopted method, of that which is pursued most extensively in Belgium and France, the raising of new varieties of fruit from seed.

In the raising of new varieties of fruit in Europe only two methods that could be called systematic—though a third may have been practised, without its having been taught on any assumed or acknowledged principle—have been pursued: one inculcated by Dr. Van Mons in Belgium, and thence taking his name; the other, that known as Mr. Knight's, being that practised in England by Mr. Knight, late President of the London Horticultural Society.

Dr. Van Mons' theory seems to be founded on the idea that varieties of fruit long in cultivation show a disposition to depreciate, and that seedlings from the old varieties, instead of giving any promise or hope of any improvement, tend, in the qualities of their fruit, to the original type of the species, and from this is deduced, as the true method of proceeding, when improved and superior varieties are sought to be produced from seed, to sow those of the original wildings of the species, and that by the cultivation and production by seed, from those of new varieties through successive generations, the amelioration of the species will be effected, and numerous new varieties of superior excellence be obtained. Dr. Van Mons says, "the results of attempts to vary is to ameliorate. A fruit ceases to change only when it can be no farther ameliorated, and becomes fixed at its ultimate point of perfection. I have arrived at a point, as I had foreseen, where, instead of as at first, gaining only one good fruit among an infinity of bad, I have only one, or rather no bad among an infinity of good or tolerable. I call that the last stage when the pear produces none but good fruit." Again, he says, "We should not seek variation by hybridization, as, thereby, instead of perfection we cause degeneracy; the production of mongrels are only curious." And again, "Those who have followed my method and have sown seeds of my new varieties, have already obtained some excellent new fruits. The time is near at hand when no fruit will be cultivated excepting those producing themselves by seed."

Mr. Knight pursued a very different method, that of cross-impregnation, being that apparently condemned by Van Mons under the name of hybridization. Selecting some variety, he fertilized its flowers with the pollen of some other variety, so that the crossing or mingling of the two distinct varieties might result in the offspring in a decided improvement. It is unnecessary to express an opinion upon the comparative merits of the two methods: if success be the criterion of merit, that of Mr. Knight seems to have the advantage; for if Van Mons has produced a far greater number of new fruits, he also raised an infinitely greater number of seedlings; and of the whole number raised by each a very much greater proportion of those raised by Mr Knight were good, or a decided improvement, than of those raised by Van Mons. Besides, it is to be remembered, that of some species of fruit, as the pear, to which the attention of both these gentlemen was principally directed, the varieties within reach of Mr. Knight to be submitted to his process of improvement, were comparatively few, and of indifferent quality, and in estimating the results of his efforts the point from which he started is to be kept in view. In other species of fruits than pears, as in cherries, for instance, the success of Mr. Knight was more marked; some of the finest cherries now in cultivation being the results of his attempts to improve that fruit by the system of hybridization, or cross-impregnation, a system adopted in our own country by Professor Kirtland, of Ohio, in respect to the same species of fruit, with such eminent success.

Besides these two systems there is a third, if system it may be called, being the one generally practised in raising new varieties of fruit, and that consists in sowing the seeds of different varieties, promiscuously, or, if any selection is made, simply in selecting the seeds of the best varieties. This is the course, i. e., sowing the seed of the best varieties, presumed to have been followed in Belgium and France, by those to whom we are indebted for very many of the best varieties of new pears, and is that which has to a limited extent been successfully practiced in the United States. It may be said, perhaps, that the success of later Belgian cultivators in raising fine new seedling fruits, is a consequence of their taking advantage of the labors of Dr. Van Mons, in sowing seeds of his new varieties, and goes to confirm the truth of his theory. How this may be cannot here be shown, for seldom any record is made of the parentage of any fruit, and there is no mode of tracing its genealogy except from resemblance. But if true of new European varieties, it is not applicable to some of the finest of American origin, as the Seekel, the Dix, the Andrews, and others, where the age of the variety forbids the supposition of their descent from varieties owing their origin to Dr. Van Mons.

The offspring of trees or plants, uncultivated, or growing wild in a state of nature, are, with perhaps rare exceptions, like the parents, while that of those that have been for a length of time cultivated, and have thereby undergone some change in their organization or constitution, show a disposition to sport, as it is called, into varieties. But even here it is believed that the law "that like produces like," holds good to some extent, at least so far that a new variety of superior excellence is more likely to spring from the seed of a good than of a bad existing variety: and in many processes of cultivation this is a law or principle of very general application. The farmer saves his best ears of corn for seed; if an earlier variety is wanted, those that are first ripe. In the case of some vegetables and fruits, particularly, perhaps, in that of those that show the most disposition to break into varieties, as squashes, melons, &c., from the seed of some specimen ripening before the other a permanently earlier variety had been obtained. The florist who wished to raise a new line Dahlia, would hardly think of taking the seed from the single purple flower, the type of the genus, with the view of only attaining his object by the raising of successive generations, but would gather his seeds from the most double flowers. It sometimes happens that the descent of a new variety of fruit is clearly evidenced by the resemblance of the offspring to the parent. The Adams pear bears a strong likeness to its parent, the Bartlett, and seedlings from the Seekel have been produced that could hardly be distinguished from the original variety.

Although Dr. Van Mons unqualifiedly condemns "hybridization," yet he most probably was indebted to it for many of his productions, a cross-impregnation being often effected by the intermingling, or near proximity, of trees of different sorts, by means of insects, the wind, and like causes.

If called upon to advise what was thought the best method, one the most likely to be attended with satisfactory results, in view of all the circumstances of the case in raising new seedling fruits, the course recommended would be to sow seeds of the best varieties, and the best specimens of the varieties, selecting sorts that were healthy, and that show no disposition to disease, as being the one most likely to result in obtaining valuable new varieties.

Apples and pears being, on many accounts, the most valuable fruits we possess, their improvement has mainly occupied the attention of both amateurs and professional growers, though that of some other species, as cherries, have not been neglected.

More recently, the amelioration of some of the smaller fruits is exciting an interest, and seedlings of several are being raised to a considerable extent. Among others, the raspberry has received the attention of Dr. Brinckle, of Philadelphia, one of the most scientific and enthusiastic pomologists in the United States, and one to whom the country is under obligation for having made known several fine new pears and apples, originating from seed in Pennsylvania and Delaware. This class of fruits, the raspberry; blackberry, &c., is believed to be susceptible of material improvement, and wants, with respect to them, yet exist, that remain to be supplied; a white raspberry, as large as the Fastolf, and of as good flavor as the White Antwerp, remains a desideratum, and its acquisition is a triumph yet to be achieved. No successful attempts, so far as is known, have been made to improve the blackberry, and the variety distinguished here as the Improved High Blackberry, probably a seedling from the common bramble, owing its origin to accident, is yet the best, and though for size and flavor it leaves but little to be expected, is still, in some particulars, susceptible of improvement. There is another fruit, the Black Raspberry, commonly called the Thimbleberry, that is believed to be well worthy the notice of fruit-growers; it is agreeable to most palates, perfectly hardy, productive, and of the easiest cultivation. The manifest effect produced by the cultivation of the common wild kind, induces the expectation that it is capable of material amelioration.

A desire has for a long time existed for the production of a hardy grape, ripening at a sufficiently early period of the year to insure its maturity previous to the autumnal frosts, free from the foxy taste and odor, and hard pulpy consistence of even the Isabella and other native grapes, and, above all, not liable to mildew. The Diana has evidenced very considerable progress in this direction, so far at least as earliness and the quality of the fruit is concerned; but the berries and bunches are rather small, and in some respects it does not quite meet the general wish. The attention of many persons has recently been directed to the improvement of hardy grapes, and thus far, with encouraging success. Among others, Mr. A. W. Stetson, of Braintree, has obtained a grape resembling the Isabella, but much earlier, and, it is thought, superior to that variety. Mr. Bull, of Concord, another that has been highly commended. Mr. Blood, of Newburyport, has also two varieties, one somewhat resembling, in color at least, the Catawba, and the other the Isabella, that are both of good promise. Mr. Raabe, of Pennsylvania, three varieties, that have been described and commended by a Committee of the Pennsylvania Horticultural Society, and no doubt others. This subject seems to have engrossed much of the attention of Mr. Stetson, while it has also been a favorite pursuit with Mr. J. F. Allen, directed, it is believed, towards a somewhat different object. Mr. Stetson has exhibited, the past season, several new seedlings, one somewhat resembling the Grizzly Frontignan, in appearance, that is considered of great promise, and that, he believes, will prove hardy, though its power of endurance and ability to resist mildew, has not been thoroughly tested. He has now great numbers of seedling plants that have not yet fruited. The good fortune that has so far been met with, leads to the confident expectation that the attempts to improve the grape will finally be attended with eminent success, and the prophecy may perhaps now be risked, that within a few years hardy grapes, equal in quality to some now grown in grapehouses, will be objects of easy and general cultivation.

In pears, too, the success that has attended the endeavors to originate new varieties from seed, has been encouraging. We have already many that are valuable, and every year brings to our knowledge, new ones of much merit. In this connection, it seems but proper to name Mr. Francis Dana, of Roxbury, who has been distinguished for his good fortune in raising several fine new varieties of pears from seed, and whose example seems to confirm the views with respect to the raising of seedlings from the best varieties, given in the former part of this communication, he having raised his seedlings from seeds saved from the best sorts—views strengthened in his own mind, at least, by the personal experience, in the same pursuit, of the writer of this communication.

In describing new varieties of fruits, especially of pears, they being so numerous, especially of foreign origin, great embarrassment is experienced in not knowing, in all cases, whether the kind described is the true sort named. When the same variety has been received from different sources, under the same name, particularly if it answers in some respects what has been said of the variety, the inference, generally just, is that it is true: but, where different kinds, as is not uncommon, are received from different dealers, under the same name, it is not always easy to decide, which, if either, is correct.

Sometimes the only means at hand to identify a foreign variety, is the very general description given of it in the Catalogue of a European nurseryman, and these descriptions are often vague, uncertain, and sometimes incorrect, affording but little reliable assistance in the identification of varieties. No doubt honesty is practised, and correctness aimed at by the principal European dealers in trees, but, unfortunately, the consequeces of the dishonesty or carelessness of a single individual, may extend through the whole trade, when some variety has been erroneously disseminated by such individual. It has been said that certain kinds of pears, of great reputation in Europe, have never been permitted, to use a technical phrase, "to go out." And that there are individuals who could not resist the temptation, in view of the profit to be derived from the sale of such, to sell and disseminate, under the name of such new varieties, old and even worthless sorts. And that thus, where trees of some one particular variety have been disseminated under the name of such new kind, it has given rise to the opinion that the new name was merely a synonym of the old, when in reality it was a distinct kind. All these complications, in addition to the mistakes that are sometimes inevit-

able by the best conducted establishments, increase the perplexity and embarrassment frequently experienced with respect to new fruits of foreign origin. When descriptions are given, as is now proposed, of some new sorts, they are liable to be erroneous from the causes alluded to, and any opinion expressed with respect to the quality of any new fruit, as such frequently materially alter in years subsequent to those in which they are first produced, such opinion, it should be understood, is liable to be modified, perhaps entirely changed, by a longer experience.

[For the California Farmer.]

JOHNSON'S RANCH HOUSE, Bear River, April 9, 1854.

Away to the north east of Sacramento, about twenty-five miles, and situated upon Bear River, is a tract of land, which for fertility of soil and beauty of location, exceeds any which I have seen in this section. But two years since, when I passed this way, there was scarcely a house to be seen, where now extending up the river for miles, and upon each bank of it, the passer by may behold the houses of the "Lords of the soil," and which, to judge from the appearance of neatness and comfort by which they are surrounded, would seem to prove the old maxim true, that

"He who by the plough would thrive,
Himself must either hold or drive."

Particularly at this season of the year, when blooming nature is seen in all her loveliness, and the growing crops and blooming flowers present a pleasing and varied aspect to the eye, promising wealth to the farmer and exciting admiration from the lover of the beautiful must we appreciate the beneficence and wisdom of that great cause who has so essentially adapted all things to the comforts and wants of his subjects.

The present Spring has been thus far very dry and unfavorable to the farming interests, and the crops which at this time last year looked fine and flourishing, now show the want of rain. Upon most of the farms which I have thus far visited I find that wheat is the main article to the raising of which attention is this year being turned, and one gentleman whom I visited yesterday, has growing in one field, one hundred and fifty acres of it. This was sown about the last of December, and is now nearly ready to head. Here too, is to be seen the advantage to be derived from deep ploughing, particularly in a dry season like the present, as a part of the field which, for experiment, was ploughed very deep, is nearly four inches taller, and looks much more vigorous than the other side, which was sown at the same time, the ground being turned up at a less depth.

I have seen as yet but very few fields of barley, and those small ones, as the low price of that article the past winter has induced most of the farmers to turn their attention to the growing of wheat, and here I would say that if more uniformity was observed in the raising of grain, the farmers would derive a larger amount of profit for the fruit of his labor than heretofore. Experience will soon teach this, and much knowledge is also to be derived as to what the attention of the agriculturist should be turned, by information which can be derived from the public in different sections of the country, and it is through the medium of a public journal like the FARMER that he can in particular obtain and impart such information, not only for his own, but also for his neighbor's benefit. Much good also would result from the formation of Agricultural Societies in different sections of the State; and although from the new and unsettled state of the country, there are many obstacles to be met with at first, yet with a little perseverance and energy, together with unity upon the part of that portion of the community whose pursuit it is to till the soil, all these can be overcome and much good result from it, as we can see from observation and experience in many of the older States.

As I purpose to travel among the farming portion of the community to some extent for the next few weeks, in the northern and Western portions of the State; any information and favors which I may receive from them will be accepted with many thanks, and made known through the columns of the FARMER. C. LANGNON.

To the Editors of the California Farmer:

GENTLEMEN,—In studying what in medical language is called "epizotic diseases," I find that the distemper of dogs is closely allied to the small pox the human race are subject to. The idea is not original with myself, but has long been known and practised on, in England: and in Bankins abstract, No. 13, page 18, the practice of vaccinating with kine pox matter, young and valuable dogs, will be found mentioned. I have myself noticed that when small pox was prevalent, the distemper in dogs was prevalent, and in the few cases in which I have experimented, I have found the preventative efficaceous.

Hoping this may lead to farther experiment,
I am, &c.,
J. B. PHINNEY.

THE PROPOSED STATE UNIVERSITY AT SAN LUIS REY—FOUNDATION OF THE MISSION THEREOF, IN 1798.

Monterey March 15, 1854.

MESSRS. EDITORS: I forward you the translation made by an old friend, of a manuscript account of the foundation of the Mission of San Luis Rey de France, by Father De La Suen, for some time President of the Franciscan Missions of California, and acting as Bishop in the early part of this century. He was one of the companions of Junipero; and on the 27th of June, 1798, was buried in the old Mission Church at that place. Padre Ly Suen is the only one who complained of by La Perouse when he visited Monterey in September, 1786. The old Mission of San Luis Rey, about to become a seat of learning for our posterity, is said to be in better order than any other in the State. It is situated in dry, healthy and exceedingly beautiful country in one of the valleys of the Coast, after passing from the Great Colorado Desert and about twenty-five miles from San Diego. The soil has the singular faculty of producing the grains and fruits of both tropical and temperate zones, when proper attention is bestowed on their cultivation.

The old priest mentioned in the letter—Antonio Peyri—is one of the most celebrated characters in the past history of our State. After a residence of thirty-four years at San Luis Rey, he left California with the benedictions and esteem of all classes, and is said to have died in Spain or in Rome, a few years ago. When he left the Mission in 1832, the establishment was in the most flourishing condition, and had a population at times of 3000 Indians. The old man was exceedingly popular among the pioneer foreign residents, and treated our countryman, Jas. Pattie, with great hospitality in 1829, after his rough reception and imprisonment by Echandia. Pattie was the first American traveller who described the interior of this country, and the latter accounts entirely confirm the statements he published in 1832.

I am informed by Mr. David Spence that before the commencement of the trade in hides and tallow in 1824, Father Peyri's establishment owned, or had the fame of owning, from the wise management of its venerable founder, 80,000 head of horn stock, 4000 horses (wild and tame), 70,000 sheep, 200 yokes of working bullocks, large numbers of mules and hogs, and the best Church and Indians in the country. Grapes, peaches, figs, olives, pomegranates, nectarines, oranges, citrons, apricots, and all sorts of fruits grow with no other attention than planting and irrigation; also wheat, barley, Indian corn, and every kind of grain sowed. Yours truly,

ALEX. S. TAYLOR, of Monterey.

PULVENIZATION OF THE SOIL.—It has been stated, that the frequent working of sandy land makes it lighter and looser. Now there can be no doubt the fact is so, *immediately*, but it is quite the reverse *remotely*. Again, it has frequently been asserted, and that too by authority, that in plowing light land it should simply be turned over, and not reduced to a fine tilth, it being too fine and loose already. Now, this sounds strangely in the ears of a Jersey truck-farmer, who is compelled, in order to secure a fair return for his labor on our proverbially "light and barren soils," to bring it to the finest possible tilth, and no amount of labor to accomplish it should be withheld; and in the after-culture, the more frequently the plough and cultivator is used, the better; from the time the corn first makes its appearance until it is fairly out in silk, not a week should elapse without the passing one or the other between the rows, and no fear at all of rendering the land permanently looser or lighter, but quite the contrary; and this has been the uniform result with me, during forty years' practice.

Jethro Tull, in his immortal work on the horse-hoeing husbandry, remarks: "Tillage is beneficial to all sorts of land. Light land being naturally hollow, has large pores, which are the cause of its lightness; but this, when it is by any means sufficiently divided—the parts being brought nearer together—becomes for a time, bulk for bulk, heavier, that is, the same quantity will be contained in less room, and so, is made to partake of the nature and benefits of stronger land, viz: to keep out too much heat and cold, and the like; while strong land, being naturally less porous, is made lighter by a good division; the separation of its parts makes it more porous, causing it to take up more room than it does in its natural state; and then it partakes of all the benefits of lighter land; so that insufficient tillage leaves strong land with its natural pores too small, and its artificial ones too large, while it leaves light land with its natural and artificial pores both too large. I have known land so light as to be despised by its owners, who feared to give it due tillage, as they thought it would make it so light that wind could move it about, but if such has been thoroughly tilled, it never fails to become much stronger than it was before." And this appears to be the truth of the entire matter.

Camden Co. N. J. Z.

THE WHEAT CROP.—Well-grounded fears are entertained in some quarters, says the San Joaquin Republican, that California is producing more wheat than will be required for her own consumption. If San Joaquin county alone produces a million and a quarter of bushels, (and this is the estimate of the farmers themselves) and if the crop of San Joaquin county presents any index to the crops of other counties, then we shall have a harvest of not less than twenty millions of bushels. Then comes the question—what shall be done with all this grain? The milling facilities are not of sufficient capacity for the grinding of even a fraction of this enormous amount. Under these circumstances, it appears that the millers may make enormous fortunes and the farmers will lose. It is true that a war in Europe may enable our producers to realize, for immediately the first blow is struck by England, flour will jump up to nearly famine prices, as the supplies from the Baltic and Black sea will at once be stopped.

The object of these remarks is to call the attention of capitalists to the policy of erecting [illegible] works, since we are persuaded that the [illegible] will be [illegible] than [illegible] —*Ibid.*

HUSBANDRY ADAPTED TO MAN.—Says Mr. J. N. Bagge, in the New England Farmer: No one who has carefully observed the ingenious mechanism of man and the multiform works of the husbandman can fail to notice the adaptation of each to the other. The cunning hand, the strong arm, the broad shoulders, the robust body and the active mind, all require exercise, and each in proper proportion.

Other pursuits call into action only parts of the human frame. The right arm of the blacksmith by undue exercise becomes strangely disproportioned to his left. The manual dexterity of the manufacturer overbalances the powers of his mind. The mental activity of the professional man exceeds his physical endurance; so of most other vocations.

The rule is, that other things being equal, that pursuit which most effectually calls into use the greatest number of the faculties, and most regularly and evenly exercises the limbs, muscles and other organs, is the best adapted to man.

Where in the whole range of man's employments can an occupation be found so suited to this object as agriculture, or where a more perfect specimen of humanity, than a healthy, intelligent farmer?

God knows the fitness of things better than any of his creatures: hence, He ordained agriculture. He gave man his rural commission, He placed the first pair in a garden, and he directed that happiness and health should attend its pursuit.

To the pale, sickly and feeble, of every class we would say:

"Would you be strong, go follow the plow:
Would you be thoughtful, study fields and flowers;
Would you be wise, take on yourself a vow
To go to school in nature's sunny bowers:
Fly from the city, nothing there can charm,—
Seek wisdom, strength, and virtue, on a farm."

TO DESTROY THISTLES.—The Canada thistle is easily subdued, if they can be plowed. Plow in the fall and sow to wheat, and stock down heavy with the large red clover and timothy. In the spring, as soon as the ground is dry, or the clover is two inches high, sow plaster, as much as you please, from one-half to four bushels per acre. Get your wheat off as early as possible; let the clover grow as late in the fall as is convenient; then let nothing but calves or yearlings on to it, nor let it be fed more than just to keep the mice from nesting in it. The better you can make the clover grow, the more fatal to the thistle.—*Country Gentleman.*

POTATO ROT PREVENTED.—We learn from the February number of the Michigan Farmer, that a Mr. Webster, of Grand Rapids, in that State, has applied, with apparent success in the way of preventing rot among his potato crop, a composition consisting of one part salt, one part ashes, and two parts plaster. Of this mixture he put into each hill when planting, a table spoonful, and at the time of hoeing, he scattered broadcast about a bushel of it to each acre. About a bushel and a half was applied, in the whole, to each acre. Some rows were left in the field without any application of this mixture. The potatoes from the ashed and the unashed rows were kept separate, "and very soon those without the application began to rot, while the others remained quite sound and good."—*Ibid.*

THE POPE'S PRESENT DESTROYED.—The news that the block of marble sent by the Pope to the Washington Monument had been destroyed by unknown persons, has been commented on in very different terms by the journals of the day. Some say they are "glad of it," while others regard the act as an insult which our government ought to resent. The truth is that all extreme measures of this sort should be discountenanced in every possible way. All trampling upon law and authority, and all disrespectful speaking of them, should be frowned upon by every good citizen. I may have no sympathy whatever with the religion which the Pope professes, but that is no reason why I should do him injustice, or destroy the gift he has offered to the monument of the Father of Republics.

There are sometimes excuses for crime, which palliate its enormity, but they can never justify a wrong deed. As a private individual, the Pope has the same rights as any other man, and his pontifical character ought not to lessen his privileges to do good deeds, or to help on a good cause. —*Ibid.*

THE NEW HORTICULTURAL SOCIETY.—Being involved in debt, this society decided not to hold a summer show, but Mr. Barnum has come to the rescue. He proposes to have an exhibition of flowers at the Museum, and to pay all the premiums and all the necessary expenses of the Exhibition, including advertising, fitting up the halls, tables, &c., for the exhibition, and pay to the society at least one hundred dollars.—*Ibid.*

SUCCESS OF THE ERICSSON.—We take pleasure in announcing, on the authority of one of the parties interested in the caloric ship Ericsson, that they succeeded yesterday in running nine and ten revolutions per minute with one only of her engines, which has been improved in important respects since the late experimental trip. This secures the same number of [illegible] per hour in motion, with only half of the power to use. The other engine will be got in order by the first week in April, and after the success of that [illegible] Havre, [illegible] Liverpool. The owners now feel assured of a [illegible] ter. [illegible] —*N. Y. Courier.*

MINNESOTA.—We have received from O. H. Kelley, Esq., Corresponding Secretary, the following notice of the organization of a Farmers' Club:

Agreeably to the recommendation of the Territorial Agricultural Society, Farmers' Clubs are being organized; and we are happy to learn that old Benton county leads off in this enterprise, as she has done in county organizations.

"The Crow River Farmers' Club" was organized on Tuesday evening, March 10. The objects of the club are to advance the interests of Agriculture, to co-operate with the United States Agricultural Society, as well as the Territorial Society; to promote the introduction and improvement of Live Stock; to introduce to agriculturists the various useful labor-saving machines for farm-work; and, also, to establish an Agricultural Library; each member of the club to be furnished with a duplicate copy of every work at the expense of the club. A cabinet is to be collected, comprising every variety of grain and other productions of our latitude, and geological specimens. Admission fee, $5. This club has sufficient capital to carry out their intentions, and the right men are at the foundation of it. We congratulate the farmers in the southern part of Benton county, upon this organization; for we feel satisfied that it will be attended with great and beneficial results.

The Executive Committee hold meetings every month, and an annual meeting in August.

Correspondence and an exchange of seeds is solicited from State and County Societies, and also, descriptions and models from manufacturers of farming implements.

HOW TO SUBDUE A VICIOUS HORSE.—On looking over some old papers, the other day, we came across the following, which, if true, is worth knowing. It seems that a fruitless effort was being made in a blacksmith shop, to shoe a vicious horse which resisted all efforts, kicking aside everything but an anvil, and came near killing himself against that, when by mere accident, an officer returned from Mexico was passing, and being made acquainted with the difficulty, applied a complete remedy by the following simple process:—

He took a cord, about the size of a bed-cord, put it in the mouth of the horse, like a bit, and tied it tightly on the top of the animal's head, passing his left ear under the string, not painfully tight, but tight enough to keep the ear down and the cord in its place. This done, he patted the horse gently on the side of the head, and commanded him to follow, and instantly the horse obeyed, perfectly subdued, and as gentle and obedient as a well-trained dog: suffering his feet to be lifted with entire impunity, and acting in all respects like an old stager. The simple string, thus tied, had made him at once as docile and obedient as any one could desire. The gentleman who thus furnished this exceedingly simple means of subduing a very dangerous propensity, intimated that it is practised in Mexico and South America, in the management of wild horses. Be this as it may, he deserves the thanks of all owners of such horses, and especially the thanks of those whose business it may be to shoe or groom the animals.—*The Plow, the Loom, and Anvil.*

"THE MINES ARE NEARLY EXHAUSTED!"—These words are often uttered, and probably with great sincerity. That it is true no one, if he will reflect a moment, can believe. Nor is it at all probable that the best portions of our mines have been worked out. That many places easily accessible by water flowing in its natural channel have yielded largely we admit, and that the surface has been extensively dug up is also true. But the experience of every day proves that there are far more extensive deposits of the precious metal than could at first have been supposed, even by the most sanguine. Hitherto miners, with few exceptions, have done little more than skim the surface and even that has not been done to a very great extent, and during the rainy season only.

Since the introduction of water by canal companies, many locations, before supposed worthless, are now proving exceedingly rich, and are paying far better than any in '49 or '50, in proportion to the price of labor and living. Grounds thought not worth prospecting then are now pouring forth their golden treasures to gladden the heart of the miner.

Tunnels are being driven into the hills at many points, which weekly reward those who have the capital, enterprise and perseverance to grapple with and overcome the [illegible] and many hills, supposed to contain no gold are now being worked with great [illegible].

The mineral riches of California will [illegible] and stimulate the inventive genius of the age. The appliances of science with the energy and skill of our miners, will ere long develop resources that will startle and enrich the world. The child is yet unborn who [illegible] Nature's mineral treasures exhausted. We shall [illegible] at some future time.—*Miners' Journal.*

CALIFORNIA WOOL.—We are informed [illegible] Mr. [illegible] a [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 20, 1854.

Ourselves and Agriculture.

In the political world, it is demanded of those who take a prominent position, that they announce the platform upon which they stand. In various professions, theology, law and medicine, the creed or school of each is soon made manifest by the doctrines and forms each assume and defend. Those great heralds of news that daily and weekly issue from the press—the presiding and controlling mind is not long neutral either in politics or morals. The position is taken, the name adopted and the creed or party finds each conductor of the press a leading mind for the doctrines it has assumed and the cause it has espoused.

We would not that it should be otherwise. We desire to know the true character of each ship we meet upon the ocean of life, by the "flag" it bears. We have raised our banner and nailed it to the mast head, and we mean our friends shall know the "California Farmer," and find in it an advocate and a defender of its interests, as true and as devoted as a cause ever had, however that advocate may fall short in ability to do justice to so great and noble an enterprise as Agriculture. We know our deficiencies in ability, and we regret them the more, as we see how few are ready to engage in this work of advancing the cause of Agriculture; but with an earnest will and a confiding hope, that our cause must prevail, we have launched our ship and hoisted our banner—nailed it to the mast-head, and there shall it wave as long as we have a word of cheer, or a breath of hope to fill a sail. We have placed our right hand upon the helm, and, let the storm beat ever so wildly, we shall not desert our post, to advocate aught but Agriculture and kindred interests, or betray our trust by any temptations to plead for other than our cherished enterprise.

We desire, now that our ship is under full sail, that we may briefly lay before our readers, the present position of the Farmer.

At the commencement of the Farmer, we were associated with our friend, Dr. J. F. Morse, so well and favorably known as the former Editor of the Sacramento Union. After the issue of the first few numbers, the engagements of the Doctor in his profession, and in the issue of the History of the Valley of Sacramento, together with other engagements, made it necessary that we should assume the entire control of the Farmer, which we have done since the issue of the eighth number; and we cannot refrain from an earnest wish that our former associate may find much pleasure in the reflection that he has been instrumental in thus sending forth upon the ocean of literature, an Agricultural Journal upon the shores of the Pacific; and we most earnestly hope that his interesting work upon the Valley of the Sacramento, may, by receiving a larger portion of his time, become what he has the power to make it—a most deeply interesting history of one of the most interesting portions of California.

We regret losing the presence and associate labors of our friend; but wish him abundant success in the profession which he so much honors. We hope he will be sustained and prosper in the "History of the Valley" also.

When we commenced our sheet, it was with a strong determination that, so long as we should exert our influence, it should be worthy the confidence of the Farming interest of California.

With the opening numbers, we threw ourselves upon the generosity and justice of those whose interests we were advocating. We have made no extra exertions to extend our publication, but rather waited to see how earnest our friends were that an Agricultural Journal should be sustained.

The California Farmer we intend to be the "Farmers' own paper;" and we would most earnestly urge upon the cultivators of every portion of the State, to give us their influence, that we may extend every kind of information that shall be useful in every department of the science. Is it not for the interest of the cultivators that this should be done?

We have labored long and hard to advance the highest interests of Agriculture. We have toiled late and early; we have made as many sacrifices, we believe, as any reasonable person could ask. We have suffered by fire and flood, most severely; we have suffered by sea and by land, and yet we are ready and willing to toil on, so that we can but see this noble science receive that attention it deserves.

We ask the friends of Agriculture—those who have so often and so earnestly urged the establishment of an Agricultural Journal, and an Agricultural Society—to give to these objects that attention their importance demands. The "California Farmer" has been before the community, several months, and it speaks for itself.

The State Agricultural Society was organized in November; its constitution was adopted, the officers elected; and now shall that Society exert the influence necessary for so great a work as they have on hand? Its officers are able men, and located in various portions of the State; and if the cause of Agriculture is of that importance which is conceded to it, shall this Society, by its Government, make its influence known and felt. We call upon the officers of the State Society to consider this subject—the Season is advancing, it is time to act, and the California Farmer will lend its influence to aid them in all their plans. We are for WORK! WORK! WORK!! WORK!!! is our motto, and we ask of all to cheer us on in our work.

Farmers, will you not aid us by your subscriptions? Friends of Agriculture, will you not do the same? And will you not, both of you, furnish us with all the important facts that come within your reach? This is what we want. Give us the encouragement we need and what we will try to deserve, and we will make the California Farmer all you desire it.

We have received much to encourage—many kind words, many generous proofs of interest in its welfare—from friends in various parts of the State.

The Press have been kind and have done us good service from time to time, and we shall transfer to our columns the very handsome and encouraging notices they have been pleased to give us. We shall ever remember them with gratitude.

We now appeal to all the friends of Agriculture to aid in the important duties that devolve upon them. The State Society should be actively at work. County Societies should be organized. Preparation should be commenced for the Annual Exhibition under the auspices of the Society. And last, but not least, the California Farmer should be in the hands of every Cultivator in the State, and through its columns the Agriculturists should make their interests known.

The Basis of the Pre-emption Law.—We are frequently inquired of in relation to the primary acts necessary for securing the rights of the settler. We feel desirous to give all the information in our power at all times, to assist those desirous of becoming actual settlers upon the government property. For this purpose we have published the following data, that can be relied upon, as we have it from authority:

The "Pre-emption Law" requires the settler to take his land according to the legal subdivision, which is a "quarter section," or the east or west half of said quarter, but provided there is no conflicting claim on the adjoining quarter *he* can take *one* eighty-acre tract of one and one of another lying east and west of *each* other and forming a square body of 160 acres.

The land must be taken according to law, as the officers have no discretionary power in the matter.

In regard to persons having to build their own houses personally, they are mistaken—a person can purchase a house, and he will acquire his rights from the *date* of purchase, *not* from the time the house was erected by the second party; he may either purchase or hire some one to build for him. But he must be an actual settler on the land.

The Early Harvest Apple.

This apple is also called by other names, as follows: In Thatcher's Am. Orchardist, the Large Early Harvest; in Coxe's View of the Orchard, &c., Prince's Harvest, or Early French Reinette; in Guide to the Orchard, July Pippin; in Hort. Soc. Catalogue, 3d ed. 1842, July Early Pippin, and Lare Early; and in some American collections, Harvest, Yellow Harvest, Large White Juneating, and Tart Bough.

The Early Harvest is without doubt the finest apple yet possessed. Of good size and beautiful appearance, it has a crisp and tender flesh, and combines, in its flavor, that splendid admixture of sweet and acid, that gives a freshness peculiar among early apples.

Mr. Coxe, in his excellent work on fruit trees, describes the Early Harvest under the names above quoted from his book, and he is the first author noticing this variety. He does not, though, state its origin, or from whence he received it; but as it has not been identified among the great number of foreign kinds that have been introduced to American collections, there can be no doubt of its native origin.

Though at present more than thirty years since it was first brought to notice by Mr. Coxe, it is yet very little cultivated, in comparison to other sorts more recently introduced, and of inferior quality. The supply of fruit for our markets is exceedingly limited, and what there is, if large and fine, commands a very high price. That a variety so excellent should not have been much more extensively disseminated is something remarkable, and it is to be hoped this description of it may aid in making it better known to all cultivators.

The Early Harvest is a moderately vigorous and healthy growing tree, branching low, but forming, when full grown, a fine round head; it comes early into bearing and produces abundant crops. The young trees grow upright, and may readily be distinguished among others from the forked appearance of the lateral shoots, several of which spring from the extremity of the previous year's wood.

Tree.—Moderately vigorous, upright, the branches making very acute angles.

Wood.—Reddish chestnut, sprinkled with small whitish specks, moderately stout, short-jointed; annual shoots somewhat downy at the ends; old wood, brownish chestnut; buds, small, short, and flattened, with small shoulders: Flower-buds, medium size, frequently formed at the ends of the shoots.

Leaves.—Medium size, roundish obovate, rather light green, tapering to the point, wavy at the edges, and irregularly and rather obtusely serrated; petiols rather short, about half an inch long, rather stout.

Flowers.—Medium size; petals obovate, cupped.

Fruit.—Medium size, about three inches broad, and two and a half deep: Form, roundish, sometimes a little flattened at the base, rounding off to the crown, which is full: Skin, fair, smooth, pale yellow or straw color when mature, very slightly tinged with blush on the sunny side, with a few traces of russet round the stem, and some scattered spots of the same color, intermixed with white specks, over the surface: Stem, medium length, about three-quarters of an inch long, rather slender, and inserted in a moderately deep and somewhat narrow cavity: Eye, medium size, closed, and slightly sunk in a shallow, nearly smooth basin; segments of the calyx narrow, twisted: Flesh, white, rather fine, crisp, and tender: Juice, abundant, pleasantly acid, sprightly and well flavored: Core, rather close: Seeds, small.

Ripe from the middle of July to the end of August.

The Arabian Horse.

Mr. Youatt says:—"Although in the seventh century, the Arabs had no horses of value, yet the Cappadocian and other horses which they had derived from their neighbors, were preserved with so much care, and propagated so uniformly and strictly from the finest of the breed, that in the thirteenth century, the Arabian horse began to assume a just and unrivalled celebrity.

There are said to be three breeds or varieties of Arabian horses: the *Attechi*, or inferior breed, on which they set little value, and which are found wild on some parts of the deserts; the *Kadischi*, literally horses of an unknown race, answering to our half-bred horses—a mixed breed; and the *Kochlani*, horses whose genealogy, according to the Arab account, is known for two thousand years. Many of them have written and attested pedigrees, extending more than four hundred years, and, with true Eastern exaggeration, traced by oral tradition from the stud of Solomon. A more careful account is kept of these genealogies, than belongs to the most ancient family of the proudest Arab chief, and very singular precautions are taken to prevent the possibility of fraud, so far as the written pedigree extends.

The *Kochlani* are principally reared by the Bedouin Arabs, in the remoter deserts. A stallion may be procured without much difficulty, although at a great price. A mare is rarely to be obtained, except by fraud and excessive bribery. The Arabs have found out that which the English breeder should never forget, that the female is more concerned than the male in the excellence and value of the produce; and the genealogies of their horses are always reckoned from their mothers.

The Arabian horse would not be acknowledged by every judge to possess a perfect form: his head, however, is inimitable. The broadness and squareness of the forehead, the shortness and fineness of the muzzle, the prominence and brilliancy of the eye, the smallness of the ears, and the beautiful course of the veins, will always characterize the head of the Arabian horse.

His body may be considered as too light, and his chest as too narrow; but behind the arms the barrel generally swells out, and leaves sufficient room for the play of the lungs.

In the formation of the shoulder, next to that of the head, the Arab is superior to any other breed. The withers are high, and the shoulder-blade inclined backward, and so nicely adjusted, that in descending a hill, the point or edge of the ham never ruffles the skin. He may not be thought sufficiently high; he seldom stands more than fourteen hands, two inches.

The fineness of his legs, and the oblique position of his pasterns, may be supposed to lessen his apparent strength; but the leg, although small, is flat and wiry; anatomists know that the bone has no common density, and the startling muscles of the fore-arm and the thigh indicate that he is fully capable of accomplishing many of the feats which are recorded of him.

The Barb alone excels him in noble and spirited action; and if there be defects about him, he is perfect for that for which he was designed. He presents the true combination of speed and bottom—strength enough to carry more than a light weight, and courage that would cause him to die rather than to give up.

We may not, perhaps, believe all that is told us of the Arabian. It has been remarked that there are, on the deserts which this horse traverses, no mile-stones to mark the distance, or watches to calculate the time; and the Bedouin is naturally given to exaggeration, and most of all when relating the prowess of the animal, which he loves as dearly as his children; yet it cannot be denied that, as the introduction of the Arabian into the European stables, there was no other horse comparable to him.

The Arab horse is as celebrated for his docility and good temper, as for his speed and courage. In that delightful book, 'Bishop Heber's Narrative of a Journey through the Upper Provinces of India,' the following interesting character is given of him: "My morning rides are very pleasant. My horse is a nice, quiet, good-tempered little Arab, who is so fearless, that he goes, without starting, close to an elephant, and so gentle and docile that he eats bread out of my hand, and has almost as much attachment and coaxing ways as a dog. This seems the general character of the Arab horses, to judge from what I have seen in this country. It is not the fiery, dashing animal I had supposed, but with more rationality about him, and more apparent confidence in his rider, than the majority of English horses."

The kindness with which he is treated from a foal, gives him an affection for his master, a wish to please, a pride in exerting every energy in obedience to his commands, and, consequently, an apparent sagacity which is seldom seen in other breeds. The mare and the foal inhabit the same tent with the Bedouin and his children. The neck of the mare is often the pillow of the rider, and, more frequently, of the children, who are rolling about upon her and the foal; yet no accident ever occurs, and the animal acquires that friendship and love for man which occasional ill-treatment will not cause him for a moment to forget.

When the Arab falls from his mare, and is unable to rise, she will immediately stand still, and neigh until assistance arrives. If he lies down to sleep, as fatigue sometimes compels him, in the midst of the desert, she stands watchful over him, and neighs and rouses him if either man or beast approaches. An old Arab had a valuable mare that had carried him for fifteen years in many a hard-fought battle, and many a rapid, weary march; at length, eighty years old, and unable longer to ride her, he gave her, and a scimetar that had been his father's, to his eldest son, and told him to appreciate their value and never lie down to rest until he had rubbed them both as bright as a looking-glass. In the first skirmish in which the young man was engaged, he was killed, and the mare fell into the hands of the enemy. When the news reached the old man, he exclaimed that "life was no longer worth preserving, for he had lost both his son and his mare, and he grieved for one as much as the other;" and he immediately sickened and died.

Man, however, is an inconsistent being. The Arab who thus lives with and loves his horses, regarding them as his most valuable treasure, sometimes treats them with a cruelty scarcely to be believed, and not at all to be justified. The severest treatment which the English race-horse endures, is gentleness, compared with the trial of the young Arabian. Probably the filly has never before been mounted; she is led out; her owner springs on her back, and goads her over the sand and rocks of the desert, at full speed, for fifty or sixty miles, without one moment's respite. She is then forced, steaming and panting, into water deep enough for her to swim. If, immediately after this, she will eat as if nothing had occurred, her character is established, and she is acknowledged to be a genuine descendant of the *Kochlani* breed. The Arab is not conscious of the cruelty which he thus inflicts. It is an invariable custom, and custom will induce us to inflict many a pang on those whom, after all, we love.

The following anecdote of the attachment of an Arab to his mare, has often been told, but it comes home to the bosom of every one possessed of common feeling. "The whole stock of an Arab of the desert consisted of a mare. The French Consul offered to purchase her, in order to send her to his sovereign, Louis XIV. The Arab would have rejected the proposal at once, with indignation and scorn; but he was miserably poor. He had no means of supplying his most urgent wants, or procuring the barest necessaries of life. Still he hesitated: he had scarcely a rag to cover him—and his wife and children were starving. The sum offered was great—it would provide him and his family with food for life. At length, and reluctantly, he consented. He brought the mare to the dwelling of the Consul—he dismounted—he stood leaning upon her; he looked now at the gold, and then at his favorite; he sighed—he wept. 'To whom is it,' said he, 'I am going to yield thee up? To Europeans, who will tie thee close, who will beat thee—who will render thee miserable. Return with me, my beauty, my jewel, and rejoice the hearts of my children.' As he pronounced the last words, he sprung upon her back, and was out of sight in a moment."

Our horses would fare badly on the scanty nourishment afforded the Arabian. The mare usually has but one or two meals in twenty-four hours. During the day, she is tied to the door of the tent, ready for the Bedouin to spring, at a moment's warning, into the saddle; or she is turned out before the tent, ready saddled, the bridle merely taken off, and so trained that she gallops up immediately at her master's call. At night, she receives a little water; and with her scanty provender of five or six pounds of barley or beans, and sometimes a little straw, she lies

down content, in the midst of her master's family. She can, however, endure great fatigue; she will travel fifty miles without stopping; she has been pushed, on emergency, one hundred and twenty miles, and occasionally, neither she nor her rider has tasted food for three whole days.

To the Arabian, principally, England is indebted for her improved and now unrivalled breed of horses foo the turf, the field, and the road."

As already said, when speaking of the English race-horse, the Arabian is not equal to his English descendant. This has also been incontestably proved in the United States. Pure blood Arabians, of the highest pretensions, have at various times been imported into our country; but they have never compared, in either speed or bottom, with the English race-horse and his descendants.

Soils.

A FARMER should be well informed of the nature of soils, and of the various plants adapted to them. Some useful plants flourish best in what is called poor land; and, if cultivators were perfectly acquainted with the art of adapting plants to soils, much manore might be saved, that is wasted by injudicious and improper application.

It is supposed by geologists that the whole of this earth originally consisted of rocks, of various sorts or combinations. These rocks, by the lapse of ages and exposure to air and water, become disintegrated or worn in part or altogether to fine particles, that compose what are called earths or soils. These soils are chiefly silica (sand or earth of flints), lime (or calcareous earth), alumina (clay), and magnesia (a mineral substance). With these are blended animal and vegetable matters in a decomposed or decomposing state, and saline, acid, or alkaline combinations.

Plants are the most certain indicators of the nature of a soil; for, while no practical cultivator would buy or undertake to till land, of which he knew only the results of chemical analysis, yet every farmer and gardener, who knew the timber and plants a soil spontaneously produced, would at once be able to decide on its value for cultivation.

It was a maxim of Kliyogg, a famous philosophical farmer of Switzerland, "that every species of earth may be instrumental to the improvement of another of opposite qualities." All sands are hot and dry,—all clays, cold and wet; and, therefore, the manuring sandy lands with clay, or clay lands with sand, is best for grain and pulse. But it is not the natural soil only that the farmer ought to consider, but the depth of it, and what lies immediately underneath it. For if the richest soil is only seven or eight inches deep, and lies on a cold, wet clay or stone, it will not be so fruitful as leaner soils that lie on a better under stratum. Gravel is perhaps, the best under stratum to make the land prolific.

The best loams and natural earths are of a bright brown, or hazel color. Hence, they are called hazel loams. They cut smooth and tolerably easy, without clinging to the spade or ploughshare; are light, friable, and fall into small clods without chapping or cracking in dry weather, or turning into mortar when wet. Dark gray and russet moulds are accounted the next best. The worst of all, are the light and dark colored. The goodness of land may also be very well judged of by the smell and the touch. The best emits a fresh, pleasant scent on being dug or ploughed up, especially after rain; and, being a just proportion of sand and clay intimately blended, will not stick much to the fingers on handling. But all soils, however good, may be impoverished, and worn out, by successive crops without rest, especially if the ploughings are not very frequently repeated before the seed is sown.

If we examine tracts of land which have not been cultivated, we find nature has adapted different kinds of plants to most of the distinguished varieties of soils; and though some belonging to one may for some cause or other be found on lands of a different quality, they seldom thrive, or perfect their seeds so as to become general. The great care of the farmer ought, therefore, to be, by proper mixtures, to reduce his land to that state and temperament, in which the extremes of hot and cold, wet and dry, are best corrected by each other; to give them every possible advantage flowing from the benign influences of the sun and air; and to adopt such kinds of plants as they afford in this state the greatest nourishment to; and to renew their fertility by a judicious allowance of the most proper manures. Where these things are done, there are few spots so unfriendly to cultivation as not to repay his expenses and labor with a plentiful increase. But without these, the best tracts of land will in time become a barren waste, or produce little but weeds.

The color of soils is important. The Farmer's Journal observes, coal ashes were sprinkled over half the surface of beds, sown with peas, beans, &c., and on these the plants invariably appeared above the ground two or three days earlier, obviously on account of the increased warmth; it being a well-known fact, that dark colored bodies absorb caloric more readily, and in larger proportions than those of a lighter hue.

Soils which absorb the most moisture are the most fertile. Sir Humphrey Davy observed, "I have compared the absorbent moisture and I have always found it greatest in the most fertile soils; so that it affords a method of judging of the productiveness of land."—*Rural Economy*.

The treaty of commerce between France and Belgium is signed.

We learn are [illegible]

The Preparation of the Earth for the Intellectual Races.

BY C. F. WINSLOW, M. D.

IN the discourse to which I have the honor to invite your attention, I shall endeavor to trace the connexion of the most prominent events in the history of our planet, and to unbind, link by link, the golden chain which unites man with the earth, and the earth with its creator. The subject is vast in extent; but my design is only to present to your careful observation a picture of *a few* great landmarks in the progress of time, and to give a brief abstract of the present state of human knowledge, expressly adapted to the highest interests of this new Commonwealth. Without entering into the details of Agriculture itself, I have ventured to believe that it might, at this time, be more instructive and useful to unfold the great fundamental principles on which all agricultural sequences are based. Instead of going into the minutiæ growing out of the application of any particular science to the cultivation of the soil, I shall embrace, in one grand generalization, the affinity of all the sciences to Agriculture, and its relation, as a consequence, to the highest interests of human life.

Some of the most striking considerations you may observe to be original, and the application of the whole range of thought many persons may imagine bold and novel; but I shall solicit your patient attention and kind indulgence for a short time, trusting that a kindly and confidiug stroll, hand in hand with the Infinite Creator, may conduct us to brighter insights into his nature, and impart to us that sublimity of knowledge which can only be attained by a calm and profound contemplation of his works.

As salts exist in the ocean dissolved and invisible, so in the original condition of things the matter composing this earth existed as a solution in ether and was diffused throughout space. As the salts of the ocean crystalize by condensation and assume specific shapes, so primordial atoms subject to forces instituted by Supreme Wisdom, assumed solidity and became planetary spheres. Atoms endowed with similar degrees of the creative forces possessed similar properties and became the simple elements of nature, which have been brought to light by the power of the human understanding. The accumulation of elementary masses of condensed matter was attended with galvanic results so potent that complete fusion ensued to the earth, and what existed at first as molecules dissolved in ether, and afterwards as solid masses of varying metallic and mineral composition, or as gas and fluid, became, when ultimately mingled together, a glowing globe of compound and liquid rock, 8,000 miles thick, circling around the sun.

Such was the primeval condition of the planet which is now our delightful and inviting abode.

In process of time, the incandescent globe cooled on its surface, and in solidifying, a second condensation ensued under circumstances not favorable to the formation of such enormous crystals as probably existed when matter possessed greater freedom and mobility in space. The degree of fluidity, however, in the molten matter, was sufficient for such elective affinities to take place as resulted in the formation of the granitic or primitive rocks constituting, throughout its surface, the rib-work and solid foundation of the earth. Succeeding these events gases condensed around the sphere, forming an envelope of water charged with soluble matters a thousand fathoms deep, and an envelop of atmosphere many miles in height.

Thus God made the material world—a mere atom in space—but to us appearing so vast and mysterious, that no mortal powers have yet fathomed the forces by which its centre is vivified or its surface rendered so rich and prolific in animal and vegetable forms.

To transmute rock into fertile soil, fresh exertions of wisdom and power became necessary. The arrangement of the spheres in space subjected all subsequents events to the operation of fixed and eternal laws, and simplified the exertions and manifestations of the Infinite Will. As the globe made its annual circuit around the sun, a periodical change in the density of its mass ensued, the result of which has either been to elevate areas of greater or less extent above the ocean to form islands and continents, or to open fissures in the crust, to afford an outlet for melted rock. Thus, overlying the granite, we find sedimentary materials of such a nature as to show that the constituents of the granite had been comminuted, while in fusion, by contact with the primeval ocean. The process of granulation on the largest possible scale laid the first foundation for the future soil of continents. Here is the origin of the gneiss, the mica slate, and of some clays which have become so useful to mankind in the progress of civilization. These materials were so easily acted on and decomposed by meteoric and mechanical causes, that their silicious and alkaline elements were rapidly reduced to dust, and fitted for the admixture of the vegetable and animal remains which were subsequently destined to enrich their [illegible] and prepare the earth for the creation of the human race.

How marvellous in number are the cycles of ages which have elapsed [illegible] the creation of the earth, ere that creature in the [illegible] How clearly we discover that the [illegible] of the past was to [illegible] for the [illegible] [illegible] [illegible]

ishing mortal men with the magnitude of their frames, or the rapacity of their appetites. They were ingeniously designed for the noblest and most useful of all purposes—vast laboratories, whereby the marine races were to be transformed into new and fertilizing elements for the soil, and at last, they were to lay down their own unwieldy forms on the earth, and mingle their decomposing remains with the ancient rocks. Chemistry unfolds the interesting mystery that the secretions of reptiles and birds afford the most quickening principles of vegetable growth; and if we cast the eye over some of the most productive commercial operations of the present time, we behold whole navies transporting these products from one extremity of the globe to the other, for the purpose of imparting fresh fertility to exhausted soils. These decomposed materials of the amphibious races and of the sea birds, called guano, which have accumulated for ages on some solitary islands of the Pacific and Indian oceans, are only a grain of sand on the sea shore, in comparison with the vast amount of the decomposed remains of reptiles that were piled up with the drifting sands and deposits of the secondary ages. Some of the monsters of that day were sixty feet in length, and the aquatic birds were of such enormous size that their foot-prints left in the sand or mud of those ancient shores, subsequently hardened into rock, exhibit a length of eighteen inches, and are 5 feet apart. Now the mysteries of those wonderful ages are unfolded to human comprehension. The whole work of God had been to prepare the earth for man; but man's time had not yet come.

[TO BE CONCLUDED.]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 20, 1854.

The Wheat Crop.

If the Farmers of our State feel an interest in securing a just return for their labor, if the Wheat Growers would be secured in a fair price for this great staple of the State, then there must be some effort made on their part to furnish reliable data of the crops from each county.

It will be very easy indeed if those most interested will give a little—let a County Meeting be called in each county, and all the principal growers go prepared to give in the amount of acres they have planted and the probable return, and let this return be made to the California Farmer, and we will publish full reports and the sum total, and thus we shall be able to arrive at the *true* condition of the Wheat Crop of California. Farmers! will it not promote your interests to have this done? Do you not wish to know the amount raised in this State.

If the Farmers knew the entire crop, a value could be fixed upon the article and it would not be liable to the fluctuations which so often destroy the hopes of the husbandmen.

If the true condition of the crop could be presented, Farmers could control the price and not be compelled to sell under the influence of any operation of speculators whose only object is to depress a market and buy, and then excite it and sell. If then the growers would respect their own interests, the measuro we propose would be seen to be of great value, and the only one they could adopt to protect themselves. Let County Agricultural Societies be immediately formed by inviting all within the county to meet on a given day; send us word in season, and we will publish the notices free, and do all we can to aid them. Great good will result from it to all.

We most earnestly invoke the Wheat growers especially, to this measure, and to do it in season, for unless this is done, depend upon it you will be the sport of speculators the coming year. Already stories are in circulation to affect the value of the coming crop, and self preservation demands that each county should act, and act promptly. Farmers! the value of your crops depends in a great measure upon such action. Farmers! will you think of these things before it is too late?

Newspapers by the Cartload.—Who will say Californians are not a reading people? Adams & Co. brought up on the Senator, on Saturday evening, *a cartload of papers* for their up-river offices, and this was not all, more was to follow. Remember, reader, this is a semi-monthly quantity; large quantities of reading matter, in addition, is scattered by mail, and a very large quantity goes from every literary depot of magazines and papers, in addition, every mail. We should also add that Wells, Fargo & Co. send out very large quantities every mail. With these facts before us, who dares say Californians are not a literary people?

The Type Founder's Book of Specimens.—We have to return thanks to Mr. Pelouze, Jr., for a handsome volume of the above, from Bruce's foundry, New York. We are glad to know that we can now be supplied with all the fine cuts, equally as well as in New York, by Mr. Pelouze, the type founder of this city, on Washington street, just above Atwill's. Thus we are advancing, and soon shall be able to manufacture and raise all we need.

Home News.

Since our last issue the Golden Gate has arrived with, as reported, 1,500 passengers: a large portion of them being ladies and children. Also, the Cortes with 800 passengers; 226 being ladies. However full the steamers leave our shores, those are only flying visitants, they return to us again as the bird returns to its nest. Among the arrivals we observe the lady and daughters of Col. Pardee, the efficient manager of Wells, Fargo & Co.'s express establishment in this State.

The news from the mines is of the most cheering kind. Large yields from every section give proof of the inexhaustible resources yet to be developed.

The hopes of the farmer are brightening; crops of grain never looked better; and the prospect of an ample reward to the producer, is most gratifying. The repeated calamities by steamers, we are sorry to say, continue to scatter gloom upon our community; and so frequent have these disasters become, that some action should be had to check them, if life is held to be of any value.

The news of the sudden death of James Mills, Esq., of Sacramento city, has cast a gloom over a large circle. Mr. Mills was widely known and honored, and his loss will be deeply felt. An obituary notice, at length, will appear in our next issue.

Our main object being Agriculture, and our readers receiving the principal local news from other sources, we shall give mining news and local matters more in detail in our steamer numbers for the Atlantic States, than we do in our weekly.

Dr. Winslow's Address in Musical Hall.

The Agricultural address of Dr. C. F. Winslow, which was delivered at the Capital, was again delivered at Musical Hall, at the solicitation of the Hon. Paul K. Hubbs, the State Superintendent of Public Instruction, and H. O'Gready, Esq., the City Superintendent of Schools. The object of the delivery was for the benefit of the School Library. Dr. Winslow was introduced to the audience by Hon. Mr. Hubbs, by the following very complimentary remarks:—

Ladies and Gentlemen—About a score of years have passed since, sitting in my office on the Rue de Mondovi, adjoining the garden of the Tuilleries, in that great Babel of the world—Paris, a young gentlemen presented himself, with a letter of introduction, and named his intention to follow the great masters of that day in the pursuit of knowledge. Letters to parties of distinction placed him immediately in connection with them. The early dawn found him, during some two years, assisting in the various medical examinations and surgical operations of the hospitals, and the midday with Magendie, Dumas the great chemist, or beside that great man of our age—Arago. It was *then*, to me, matter of just pride to notice the marked attention awarded by those great masters, to his genius; it is *now*, with equal pride, I have the honor to present to this audience my friend Dr. Winslow.

Dr. Winslow then came forward, and commenced his address as follows:—

Ladies and Gentlemen—The repetition of a lecture for an object such as has been demanded of me, by my distinguished and honored, but too generous friend, the State Superintendent of Public Instruction, and such as has been announced to the public, by the City Superintendent of Public Schools, will hardly require an apology for my appearance here this evening; and as the nature of the subject is such as will recommend itself to the favorable attention of cultivated society, I shall venture to present the address without material alteration from the text, as it was presented at the Capital. At some point, here and there, it may appear a little out of place, but on the whole, it may not be inappropriate to any occasion; and without further explanation or comment, I shall proceed to repeat my remarks on "The preparation of the earth for the intellectual races."

Adams & Co., Bankers.—It must be highly cheering to this Pioneer Express and Banking House, to know the happy, world-wide influence they exert by their enterprise. In New York, Boston, Philadelphia, and over our entire country and Europe, the arrival of ocean steamers is synonomous with the announcement of news by Adams & Co. The immense amount of gold transmitted by them, influences and affects the business and interest of more persons and property, than any other house in the United States; and their name and fame is now paralleled only by their well-tested abilities and permanency. Well have they merited the honors they enjoy.

Agriculture at the Capital.—The address delivered by Dr. C. F. Winslow, before the Legislature, on Monday, April 11, we publish in part in this number. It affords us much pleasuro to present our readers with an address of this character, and we commend it most earnestly as worthy a careful perusal. Every reader will find, in the theories presented by the speaker, many views entirely new, but they will be found of the deepest interest, and to the scientific mind, will be as beautiful as they are new.

Opinions of the Press.

It is always cheering, when engaged in a great enterprize, to receive words of encouragement, and to know that our efforts are appreciated: it serves as a stimulus for still greater exertions. For the kind approval—of the Press—of our endeavors thus far to make the Farmer the medium of Agricultural information and usefulness, we are truly grateful. We have many more notices from other journals of the State, exclusive of those we publish to-day, all of which we have noted, and we hope to have it in our power to reciprocate every courtesy, and return, with interest, every kindness done us. Every publisher knows the need of such encouragement, for all have more trials than usually fall to the lot of mortals, and kindness and encouragement is "like water to a parched ground." If the Press, generally, will but aid us in the diffusion of Agricultural knowledge, the success of this science shall give to every paper, three readers where they now have one.

The California Farmer.—We hail, with pleasure, the appearance of a weekly paper, under this title. It is to be devoted principally to agriculture. The mechanical appearance of the paper is remarkably beautiful, whilst all its editorials evince ability of a high order. A journal of this kind has long been needed in this State, and we have no doubt it will be suitably supported.—*Evening News, Jan.* 6.

The Literature of Agriculture.—The second number of the California Farmer, just laid damp from the press on our table, is the most elegant specimen of typography we have yet seen in the State.—*Evening Journal, Jan.* 12.

* * The paper is a folio size, and is gotten up with excellent taste. The first number contains a variety of well-written editorials, and much information that will prove valuable to agriculturists. We bespeak for our new confrere a career of success that such an enterprise eminently deserves.—*Evening Picayune, Jan.* 7.

We greet with pleasure the first number of the California Farmer, a weekly journal of agriculture. It appears in a handsome quarto form, with thirty-two columns of matter, elegantly printed, of the most interesting character.—*Placer Times & Transcript, Jan.* 6.

We have received the first number of a handsomely printed agricultural paper, under the title of The California Farmer. It is filled with matter of interest and value to the agricultural community in general, and to the California farmer in particular. We trust that this enterprise will meet with that support which it truly deserves.—*Public Ledger, Jan.* 6.

The second number of this paper has appeared, and we are glad to see improves upon acquaintance. The California Farmer should be sustained by the farmers of California—*Public Ledger, Jan.* 14.

The first number of this new weekly made its appearance yesterday. It is printed on excellent paper, and its typographical appearance is highly creditable to all concerned in its publication, while the editorial columns give evidence of such skill and ability as cannot fail to win for the Farmer a permanent place in the affections of the people.—*Sun, Jan.* 6.

This handsome and useful weekly has now been before the public over three months, in which time it has won its way into the affections of our agriculturalists, amongst whom it has a large circulation. Its columns are well filled with excellent reading matter, both useful and instructive, combining information and entertainment. The Farmer is specially devoted to the support and advocacy of the agricultural and mechanical interests of California, and is deserving a liberal support from the friends of labor, whose rights and privileges have been so ably and manfully sustained in its columns.—*Sun, April* 7.

We have received the first number of the California Farmer, an agricultural journal published in this city. The editorial management and the typographical appearance are alike creditable.—*Alta Californio, Jan.* 7.

We have received the first number of a new weekly paper, published in this city, and devoted to the cause of Agriculture and Science. The paper is a folio in size, and is filled with matter of interest to the agricultural community of California. It is entitled to a hearty support from all interested in the prosperity of the State.—*Herald, Jan.* 11.

We welcome the first regular organ of the agricultural interests of California. No one interest in this State is more urgently deserving the exclusive attention of a newspaper than agriculture. Thousands of our most industrious and intelligent citizens are engaged in its pursuit; and to the farmers must California look, eventually, for the prosperity and increasing value of the country.—*Commercial Advertiser, Jan.* 11.

This work has now reached its fifteenth number, and may be considered on a permanent basis. The contents of the sheet and its mechanical execution reflect much credit upon its publishers and editors. We take pleasure in recommending it to the public of California.—*Ib., April* 8.

The first number of the California Farmer was laid upon our table on Thursday last. In typographical appearance, the specimen before us is exceedingly creditable, and its editorials evince a thorough knowledge of the agricultural capacity of California. Such a paper is needed, and should and undoubtedly will receive the unanimous support of the agriculturalists on the Pacific. The terms of the Farmer are $8 per annum. Office on Bush street.—*Golden Era, Jan.* 8.

The California Farmer, whose intended advent we noticed some weeks ago, has commenced its career. It is printed in quarto form, on good paper, of No. 1, Imperial, which makes it very convenient for filing and binding. The first number was issued at San Francisco, on the 5th inst. The farmers of this State have been sadly in want of just such a friend and instructor, and it is to be hoped they will not be sluggish in availing themselves of its individual aid.—*Marysville Herald, Jan.* 11.

The California Farmer, No. 1, has made its appearance. It is a handsome broad quarto sheet, well filled with matters of interest to the agriculturist. It promises well, and we wish it may enjoy an extensive patronage.—*Los Angeles Star, Jan.* 21.

OBITUARY.

Death hurls his shaft with relentless cruelty, and with fatal aim, striking down those most loved, piercing the hearts of the most hopeful. Death snatches from us those whose lives are the most useful; those whose influence for good is the most salutary, and whose loss will be the most deplored. When we have those around us whose influence diffuses happiness, those who seem to cast a sunlight upon all they meet; whose presence gives pleasure, and spreads a genial peace upon all—here is sure to come a blight upon this happiness, and a darkening cloud upon these hopeful scenes. Thus death would make us feel his power. Truly death is the "king of terrors." Other elements can be made to subserve the interests of man. Earth, air, ocean and fire are all under his controll, in a measure; but the elements of death are sown within his mortal natures, and their increase is his destruction.

Within the past week, this relentless foe has entered "a happy home" in our city, stretched suddenly down one of the heads of a family, leaving a fearful blank—one that cannot be easily supplied.

Mrs. Lydia Shannon, wife of Joseph Shannon, Esq., of this city, died on the 12th, after a brief illness.

We cannot find language with which to tender to the bereaved ones all the needed sympathy for the deep loss they have sustained. Mrs. Shannon was widely known and universally beloved; her presence was always welcome, and ever added a new source of pleasure to every social circle. Her own happiness consisted in rendering others happy. By the faithful performance of every duty, by the exercise of numberless deeds of benevolence and kindness, she had endeared her memory to a large circle of friends that mourn her sudden departure. Deeply afflicting as this loss must be to her family, they have a cheering consolation that their loss is her infinite gain.

"None knew her but to love,
None named her but to praise."

AGENTS FOR CALIFORNIA FARMER.

Messrs Adams & Co. at all their offices throughout the United States or Europe.

Messrs. Wells, Fargo & Co., at their offices throughout the Country.

Mr. Chauncey Langdon, Travelling Agent for the northern section of the State.

Mr. E. R. Highton, general and travelling Agent for Northeastern section of the state, to whom we commend our Agents for all information needed.

Messrs. Langton & Co. *for Downieville, Foster's Bar, Goodyear's Bar, Minesota.*

Messrs. Leland & McCoombe—*Crescent City, Port Orford, Uniontown, Eureka, and Buckeport.*

San Francisco—Sullivan's newspaper stand, near the Post Office; Kimball's, Noisy Carriers Hall, Long wharf.

Benicia, Martinez, &c.—Messrs. Stiles & Dodds.

Union City and Mission San Jose—Messrs. Howard & Chamberlain.

Sacramento—Messrs. Gardiner & Kirk.

San Luis Obispo—Dr. Thomas T. Harvey, P. M.

Union, Humboldt Bay—A. H. Murdoch, P. M.

Mount Farm, O. T.—Gen. M. M. McCarver.

Marysville—Geo S. Becker & Co.

Stockton—Rosenbaum & Joachimsen.

Bidwell's, Butte Co.—P. Freer.

Weaverville, Trinity Co.—H B. Davison & Co.

Yreka—Crum, Rogers & Co.

New York City, N. Y.—J. M. Thorburn & Co.

N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

MARKET REPORTS.

San Francisco, April 19, 1854.

The condition of trade, we can confidently say, is better. There is every indication of a better state of things, and as the price of merchandise is advancing and trade improving, we look for brighter days.

Barley advanced of late and again receded. Wheat is firm in prospect of wants in Europe. Potatoes are a drag.

Lots for Sale in Horner's Addition.

THE subscriber has removed his office, books, maps and records, to the old San Miguel Rancho House, one mile southwest of the Mission Dolores Church, where he can be consulted every day. Those who may wish to purchase in HORNER'S ADDITION, or Ville Lots of any required size, from one to twenty acres, with clear and undisputed title, would do well to call upon him before buying elsewhere, for it will cost nothing to get posted up before purchasing. Those wishing to purchase will find it to their interest to call at the "Old Rancho House," where they can see an abstract of the titles, the identical lands, with their boundaries, advantages, elegant situations for residences, gardens, &c., &c.

J. M. H. can be seen at Horner & Co.'s Counting Office, on Davis street, corner of Broadway Wharf, between the hours of 12 M. and 3 P. M. [13] JOHN M. HORNER.

Splendid Rancho for Sale.

ONE of the finest Ranches, and in the highest cultivation, with mill and promising crop in ground, will be offered, and immediate possession given to a bona fide purchaser. The Rancho contains 160 acres, pleasantly located upon one of our river bank, with dwelling and out buildings, and all in perfect order. To a person desirous of securing a permanent residence, one that is desirable, and that can be made profitable, this opportunity presents a chance rarely met with. About one-half of the purchase money can remain upon mortgage or exchanged for valuable property in this city

Persons desirous of purchasing, may learn the particulars by calling at our place of business. WARREN & SON.

15 Musical Hall Building, Bush street.

Piano Fortes and Melodeons.

WOODWORTH & CO.

IMPORTERS of Piano Fortes and Melodeons, 130 Clay st., are the exclusive Agents for the sale of STODART'S PIANO FORTES and PRINCE'S MELODEONS, in California, and are constantly receiving them direct from the manufactory. Such arrangements have been made as will enable them to supply these celebrated instruments at manufacturers' prices, thus securing to purchasers the advantage of making personal selection from a large and complete assortment, and at avoiding the great and many importation.

Just received a stock of Piano Fortes for hire 15 tf

THE BABY BIRD.

You'll be remembered [illegible] years since, "Fanny Forrester married to "Dr. Judson," the Missionary, and left the United States for India. The birth of their first child, a daughter, brought new joys to the heart of its fond parent, and the motives, in the gush of her affections, thus sweetly sings:

The last year's moon had left the sky,
A starling sought my Indian nest,
And folded, oh! so lovingly!
Her tiny wings upon my breast.

From morn till evening's purple tinge,
In winsome helplessness she lies,
Two rose-leaves, with a silken fringe,
Shut softly on her starry eyes,

There's not in Ind, a lovelier bird,
Broad earth owns not a happier nest;
Oh God! thou hast a fountain stirred,
Whose waters never more shall rest!

This beautiful, mysterious thing,
This seeming visitant from Heaven,
This bird with the immortal wing,
To me—to me, thy hand is given.

The pulse first caught its tiny stroke,
The blood its crimson hues, from mine;
'Tis life, which I have dared invoke,
Henceforth is parallel with thine.

A silent awe is in my room,
I tremble with delicious fear;
The future, with its light and gloom,
Time and Eternity are here.

Doubts—hope, in eager tumult rise;
Hear, oh my God! an earnest prayer—
Room for my bird in Paradise,
And give her angel plumage there!

FANNY FORRESTER.

DREAM NOT, BUT WORK!

Dream not, but work! Be bold! be brave!
Let not the coward spirit crave
Escape from tasks allotted!
Thankful for toil and danger be;
Duty's high call will make thee flee
The vicious—tho besotted!

Think not thy share of strife too great;
Speed to thy post—erect, elate:
Strength from above is given
To those who combat sin and wrong,
Nor ask how much, nor count how long
They with the foe have striven!

Wage ceaseless war 'gainst lawless might;
Speak out the truth—act out the right—
Shield the defenceless—
Be firm—be strong—improve the time—
Pity the sinners—but for crime,
Crush it—relentless!

Strive on, strive on, nor ever deem
Thy work complete. Care not to seem,
But be, a Christian true.
Think, speak, and act 'gainst mean device;
Wrestle with those who sacrifice
The many to the few.

Forget thyself, but bear in mind
The claims of suffering humankind;
So shall the welcome night,
Unseen, o'ertake thee, and thy soul
Sinking in slumber at the goal,
Wake to eternal light!

GOODNESS.—Let the misanthrope grumble as he will, there is many a sunny spot to cheer the path of life. An incident, trifling in itself, but charmingly illustrative of benevolence and virtue, passed under our window, last Monday.

A little girl was crying along the pavement, overburdened by two baskets of chips.

"What is the matter, child?" said a lovely young lady, in kindest accents.

"They are so heavy," replied the girl, setting down the load.

"Tell me where you live, and let me carry one for you."

She would not tell her residence.

"Well, my little friend, do you take one basket horse, and I will stay and guard the other, till you return for it."

With a bright smile, away trudged the tiny porteress, and there stood the benevolent lady—the daughter of one whose name is an honor to the city: whose unyielding integrity, the Chancellorship of the Exchequer could not move, "for modern degeneracy had not reached him." The child found her treasure safe, and that charming lady (God bless her!) stepped lightly on her way, her heart swelling with emotions that the wisest and the best might envy. She did a simple deed, and blushed to find it fame."—*United States Gazette.*

CHILDHOOD.—"O, what a nice place to cry," said a laughing little girl, as she nestled her head lovingly on her mother's breast!

The words were spoken playfully, and the little fairy was all unconscious how much meaning lay hid in them; but they brought the tears to my eyes; for I looked forward to the time when care and trial should throw their shadows over the laughing face; when adversity should overpower, when summer friends should fall off like autumn leaves before the rough blasts of misfortune; when the faithful breast she leaned upon should be no longer warm with love and life; when, in all the wide earth, there should be for that little one "no nice place to cry!"

God shield the motherless! A father may be left—kind, affectionate, considerate, perhaps—but a man's affections form but a small fraction of his existence. His thoughts are far away, even while his child clambers on his knee. The distant ship, with its rich freight, the state of the money market, the fluctuations of trade, the office, the shop, the bank; and he answers at random, the little lisping immortal, and gives the child a toy, and passes on.

The little sensitive heart has borne its childish griefs through the day unshared, she don't know the reason for anything, and nobody stops to tell her. Nurse "don't know;" the cook is busy, and so she wanders restlessly about, through poor mama's empty room. Something is wanting! ah! there is no "nice place to cry!"

Childhood passes: blooming maidenhood comes on, lovers woo; the mother's quick instinct, timely word of caution, and omnipresent watchfulness, are not there. She gives her heart, with all its yearning sympathies, into unworthy keeping. A fleeting honey-moon—then the dawning of a long day of misery—wearisome days of sickness—the feeble moan of the first born; no mother's arm in which to place—with girlish pride—the little wailing stranger; lover and friend afar; no "nice place to cry!"

Thank God! not unheard by Him who "wipeth all tears away," goeth by that troubled heart-plaint from the despairing lips of the motherless!

MUSIC.—There is a strange, unaccountable and dream-like beauty in music, which can subdue the proudest spirit, and, gliding into the hush of the heart, will nestle there, stilling its more tumultuous throbbings, and filling it with calm, peaceful memories of the far long-ago. All tribes and in all times have owned the spell, from the hour when Pan first taught the Thracian shepherd to carve his love-notes in the invisible air, and fill the summer nights with softest, sweetest flute music down to the present moment.

It is a language understood by all, and awakens strange pulsations even in the most obdurate heart.

Most of us have experienced the luxury of tears when listening to an old ballad. We know an old man who, having led a long career of vice and crime, was at length banished from his country; and who, while undergoing his period of punishment, amidst the wilds of a distant land, heard, in the summer eventide, a sweet female voice, singing in his own language the very song which had lulled him to his infant slumbers, when he knew crime not even by name. It had been often sung, too, by the cradle of an infant sister—a little one who had died young, and was now in Heaven—the mother, too, was no more.

But the song, the old song, had not lost its influence over him yet. Back came trooping upon him, the old memories which had so long slumbered down there in the depths of his heart—the mother and the father, the household gatherings, the old books, the old school-house—all came back upon him as fresh as if it were but yesterday, and overpowered by his feelings, he gave vent to them in a flood of tears.

Then the old man grew calm, and his latter days were his best days; and when the term of his banishment had expired, he came back to his native land, and there, in the old village-graveyard, amid whose grassy hillocks he had first played and gamboled, and where the mother and her little one were sleeping, he laid his weary limbs, and sank peacefully away into the common grave.

TIME.

PARTICULAL attention paid, as usual, to the cleaning and repairing of Watches, by

BARRETT & SHERWOOD,
City Observatory, Montgomery st. 4 t

PAINTS, OILS, GLASS, &c., &c.

Great Sale of Fruit Trees.

APPLE, PEAR, CHERRY AND PLUM TREES—RASPBERRY, CURRANT, FIG, GRAPE, &c.

WE shall offer every day, at 11 o'clock, in lots to suit purchasers, at our rooms, Musical Hall, the above varieties of Fruit Trees. They are in fine condition and worthy particular notice. WARREN & SON,
8 tf Musical Hall Building, Bush street.

Threshers, Separators and Cleaners.

PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any other machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—four for the separator, two for the power, &c.

Also, EMERY'S Threshers and Separators, of Two Horse Power.

We have also on the Golden Fleece, two of HALL'S (Rochester,) Latest Improved Threshers, Separators and Cleaners, Eight Horse Powers, all complete.

Also, four of HUSSEY'S REAPERS and MOWERS, all combined.
For sale by COIT & BEALS,
9 tf 94 Battery street, office up stairs.

Osage Orange, Raspberries and Currants.

20,000 Plants of strong growth, just received. 500 extra size Raspberries, the fair fruited that produce in such incredible quantities.
For sale by WARREN & SON.

FLOWERS! BRIGHT FLOWERS!

A GIFT FOR HOME.

"THROW PHYSIC TO THE DOGS."

WE convert the pill box into a Floral vase, and instead of the "nauseate drug," we offer the perfume of Flowers. Our beautiful collection of *California Flower Seeds* we now offer.

These are put up in handsome morocco cases, or homœopathic cases of glass bottles, with printed lists and directions, and with pressed flowers of the different varieties of each. These are of the most beautiful style that can be prepared, and are most appropriate gifts for home at this season.

We invite attention to them at our rooms, at Musical Hall Buildings. WARREN & SON,
5 Seedsmen and Florists.

BATES' SUPERIOR

UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.

Soil, Preparation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less moistened. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top sod at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.

If the land is poor, so that grass and weeds will not vegetate, then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable.

Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in meadow moss, and well boxed, which will enable them to go to a great distance in a fresh state.

The proper time for Fall transplanting is October and November; for Spring, from the opening of the same till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting, and during the winter for Spring. 15

SULLIVAN BATES,
14 Bellingham, Norfolk Co., Mass.

SIGN OF THE GOLDEN MORTAR.

ADVERTISEMENTS.—A limited number of Advertisements will be inserted at the following rates: For one square of eight lines, per month, $6. For business notices of five lines or less per month, $4. A slight reduction will be made to regular advertisers.

A Thanksgiving Scene.

ADELAIDE TALBOT was beautiful and lovely in her youth, dearly loved by all, but best by those of her own fireside circle. She was, indeed, the richest gem of that circle. When the long lashes were lifted from her ever changing cheek, you could look into the very soul of the high-minded, sunny-hearted girl. Six years before, she had stood in her father's low parlor on Thanksgiving eve—she had stood between that father and mother to whose faces she had lifted her soul speaking eyes, his bride of an hour. And as the good mother's raspberry wine, carefully bottled for the occasion, went round, she dreamed not that in that cup lurked a demon that should overthrow the altar just erected. Caleb Reynolds was now a drunkard and a deserter from his home. He had enlisted, it was thought, in an hour of intoxication—but his wife was left to learn it from other lips. He went without one word of farewell to the plains of Mexico—and never since had she heard of him. Poor Adelaide carried her crushed heart back to her father's house, longing only to lay in the grave. Have you even seen a tree in our Western forests blighted by "girdling," as the woodsmen call it—cut off from its connection with the life-giving earth, and then left to wither for years? I never pass such a tree without thinking of the slow death of the heart, to which some writer has strikingly compared it. It was thus that Adelaide stood among the other plants of her father's nurture. Have you ever seen from such a girdled tree a young shoot spring out, and striking down its fibres form a feeble connection with the bark below, and sustain a sure though sickly life in the tree? It was thus that little Robert came, to bind a few broken fibres from her early hopes and dreams on earth.

But we are forgetting our Thanksgiving—none of the aunties forget it however, or the cousins—and by the time farmer Talbot's "big sleigh" had emptied twice upon the old salt-sprinkled stone steps, all were brought home from church, and all were there.

All—except two unaccountable stragglers, "the boys," as two striplings nearly six feet high continued to be called, who were cultivating the sciences in a college not many miles away. And why were they not there? So questioned every one, and grandmamma did not answer—only cleaned her spectacles every few minutes on her apron, and peered out of her south-west window.

Meanwhile all the new comers were clustered in the "sitting room," making a merry use of the interlude between service and dinner. There was Robert, the eldest son, with his romping family and anxious looking wife. There was Charlotte—no, nobody knew her by that name—Lotti, blooming in her prime, and managing her little ones to a charm. There was Philip, "the old bachelor," though by no means a crusty one. Next to him sat a pale, stiff-looking cousin from the nearest factory village. Last, but not least, though in truth she was a little one—was the school ma'm—the youngest of her father's flock, the laughing, fun-loving Susie. She was not beautiful, as Addie had been, but there was such a world of good nature in her low, broad forehead and dimpling cheeks, that you loved her at first sight. I need not attempt her portrait, for I do not know that she ever sat still long enough to have it taken, except in church. This day she was here, and everywhere, among the children, kissing one, romping with another, and then tossing up Robert's baby, to the terror of its mamma and the delight of all others.

"You must let me go and help grandmamma take up the turkey, indeed you must," cried Susan, laughing, as she passed through the doorway followed by the white-aproned girl. One had sprung from the top of the arm-chair to her shoulder and sat crowing like a parrot on his perch.

As she advanced towards the kitchen, the outer door was thrown suddenly open and "A merry Thanksgiving to you!" burst from the lips of the intruders, and the renewed shouts of the children

"I dare say not," cried Edward, as he knocked the snow from his boots. "We chartered other sort of vehicles, hey, Will?"

"The fact is," exclaimed Will, "that we started with the sunrise this morning, but met with a most provoking 'breakdown' by the way. So, not to be cheated out of our Thanksgiving, we footed it through the drifts. We've lost Parson Wood's sermon, but we're in time for mother's dinner; and I assure you a walk of eight miles has given us a good pair of appetites."

So they sat down to dinner at last, all the loving and the merry ones. Grandfather hushed them for a moment, while he lifted his bronzed hands over the huge platter, and invoked bountiful Heaven in a lengthy but fervent "blessing." Then followed the usual clattering, and—but I need not describe it all—you see it as well as I do.

The "wish bone," (a great prize that,) fell to the share of the shyest one, little blue eyed Nelly, who carefully wrapped it in her white apron as a sacred treasure.

"Coz, may I break with you?" screamed her cousin Harry, from the other end of the table.

"No; I am going to break"—

"With whom, I should like to know?"

"With aunt Susie, then," said the little dove, nestling timidly to her side.

"Aunt Susie—ha! aunt Susie would look finely breaking a wish bone."

"And why not, Master Harry?" said Susan, merrily. "I assure you I have broken more than one wish bone at this very table."

"And did your wish ever come to pass—did they ever, aunt Susie?" cried three voices at once.

"Yes, did they ever, aunt Susie?" chimed in Edward, casting up from his plate a sidelong, demure glance, that brought blushes and dimples to her cheeks.

Susie had seen some quiet little flirtations. Suddenly her face grew serious. She caught Adelaide's expression of countenance, as the latter quietly rose from the table, and made some excuse for withdrawing.

The wish bone was broken to a charm—snapping exactly in the middle, to the infinite amusement of the juveniles, who had been making bets on the result. The "babies" went to sleep at the right hour precisely, and were packed into their snug cradles with blankets and pillows. The elders of the juvenile company were ensconced in a corner to play "button?" and the brothers and sisters clustered in quiet little knots. William and Susan sat by the window, not to sentimentalize over the moonlight that came flickering through the fleecy clouds, but to gather up the threads of confidential *tete-a-tete*—to chat of college scrapes, and—save the mark—school ma'am's roguneries.

Grandmamma had her knitting of course—bless the dear old fingers that had kept so many feet warm; and Susie, the modern substitute a crochet purse to net.

"William," said Susie, lowering her voice at a pause in the conversation, and glancing up furtively, "what do you think of Addie to-day?"

William stole a glance around. "Much as usual, is she not, poor thing?"

"See how she sits there with her fingers moving through Bobby's curls, and her eyes fixed on vacancy."

"This was her wedding night, you know."

"I tell you Willie, that Addie loves Reynolds with all her heart yet, as truly as she ever did on that evening. She has never spoken his name, even to me, since the day her father forbade it ever to be mentioned in his presence, but there is something terrible in this statue-like grief of hers."

"A sharp, quick bark under the window arrested the conversation

"Be quiet, Growler, old fellow, what are you about?" shouted William, and he was still.

Dear, silent Adelaide now brought around the tray of nuts and apples, and every one tried to make her share as he took a share, but her smile was as faint as moonlight on an icy lake.

Harry and Nelly had called aunt Susie over to the corner to name their apples, and all seemed quite silent for a few moments. The quick bark came again from the log, followed by a low protracted growl. Edward jumped up to investigate matters, but before he reached the door it was opened, slowly but firmly, and a tall, pale figure stepped within it, and stood—silently. The sudden paralysis of surprise bound every voice. A moment more, and with a short despairing cry, Adelaide dropped her face from her lap, and sprang across the room to the figure.

As it arms closed around her and her head sank like a broken lily upon the shoulder, farmer Talbot's gruff voice of welcome to the wanderer died away in a husky murmur. His arm was raised and his fingers pointed

"Father!"

The uplifted hand fell, and all was hushed for one long moment.

"Come you as a reformed man, Caleb Reynold's?" and farmers Talbot's tone was firm, though quiet.

"I do, by the help of God, my father," the stranger solemnly answered.

Farmer Talbot threw the glare of the candle on his features. "Caleb Reynolds never spoke like that," and the old man modulated each word, as if to steady his trembling voice. "Have you signed the temperance pledge?"

"I *have* signed it, and I have kept it for a year."

"Then, my son,"—the old man's hand was extended, but his voice was choked. He bowed himself down, and wept like a child.

But the arms hung loosely around Caleb Reynold's neck; the surprise had been too sudden, and gentle Addie had fainted. Not till they had won back the life tide to her cheek, and seen her again in the arms of her husband, turning to him that look of soulfull earnestness that her early years had won—not till then—did the others approach to welcome, with tearful embraces, their long lost brother.

"And is this our boy, Addie, whom I never saw?" murmured Caleb, pressing his lips to the little round forehead of the sleeper, She only replied by her tears.

No question further was asked; but Caleb soon spoke of his wanderings. Wounded in battle, and brought to the point of death, he had listened to the angel Reflection. But with reflection and bold resolutions came also remorse and despair. Who should win back to him the forfeited affections of his devoted wife? It was then that the lesson learned on the mother's knee came beaming up through the gloom of years squandered in dissipation. He went to the fountain of peace and drank of the "living water." Having fixed and finished his term of probation, he sought again his home.

"I knew," said he, "you would be all assembled here to-night; and I lingered, shivering, long before I could man my heart to come in among you."

"Brother," exclaimed more voices than one.

The clock in the corner struck nine—it was the hour of prayer. Farmer Talbot laid his hand on the family Bible, and wiped his glasses.

"Come my children, let us give thanks to the angels to-night, for this my son was dead, and is alive again—was lost, and is found."

The Blacksmith's Daughter.

BY KATE GLENMORE.

"I wish to exact a promise from you, Fred, on this anniversary of my birth-day; say, shall it be given?"

"Most assuredly, Lucy, if it be anything consistent, unless indeed it be that I shall relinquish my cigars?"

"No, Fred, that is not what I am aiming at so rest easy. I will not tease you on that point today; but it is one of infinitely more importance. So, say yes."

"Tell me, first, what I am to promise. It is too much like taking a leap in the dark, to say yes to an undefined proposition. My sister knows I would not willingly refuse her any request today."

"Well, then it is simply this, that you pay Susan Howard no further attentions."

"How so Lucy? what has Susan Howard done to offend you, or what can you bring against her that will justify you in making such a request?"

"I should not suppose you would ask that. Is not her parentage enough?"

"I cannot see why? She is the daughter of an honest and respectable blacksmith, who has always supported his family honorably, and given his daughters an education that will render them ornaments to the best society in our land."

"How absurdly you talk, Fred, where can you have picked up such sentiments?

I think society would be vastly obliged to you were you to introduce a blacksmith's daughter to grace its circles."

"Well it might be, Lucy; for now I understand your prejudices let me assure you there is not a girl among the circle of your acquaintance who, for the sterling qualities of mind and heart, can compare with Susan Howard."

"I know nothing of her sterling qualities, no doubt she is well enough for those who [illegible] and who [illegible] but I am sure you will not, when you are well [illegible] would [illegible] a girl of her position.

"I am sorry, Lucy, to hear you [illegible] Would [illegible] are to judge, not the possession of [illegible] This is one of the chief beauties of our republican institution, that it grants to every man and woman the power to become the architect of their own fortune. To be something, or nothing."

"All that sounds very nice for you politicians, and may doubtless have a very good effect in electioneering purposes; but I have no ambition, because I live under a republican government, to become so very republican in my feelings and associations. The distinctions of society should be observed, else what would it become?"

"So they should, Lucy, and so they ever shall. The distinction between vice and virtue, ignorance and intelligence, cannot be too nicely drawn, though I fear it would be to the exclusion of many who now swell the list of our would-be aristocracy, while the admission of our noble blacksmith and his intelligent family, would more than compensate for the loss of a score of them."

"How can you, Fred, persist in that which you know is so annoying to your family? The very idea of having a girl like Susan Howard associated with it, is too humbling to be endured."

"I regret exceedingly that your prejudices are so strong, Lucy, as I have decided upon asking Miss Howard to become your sister; so you see I cannot, with consistency, give you the required promise."

"If that is your decision further argument is useless; but you know my feelings towards her, and the welcome she will be likely to receive from me."

"Have you seen the member from C——, Fred?" asked Lucy Preston of her brother the day after his arrival in Washington, where she had been spending a few weeks with her father, a distinguished member of Congress from one of our New England States."

"No. Who is he? and what is he like?"

"His name is Howard; and I heard father say this morning, he was one of the most talented members of the House. He is certainly one of the most perfect gentlemen I ever met."

"Howard. Oh! I wonder if he has any sisters."

"Yes, several. One of them was here with him during the early part of the session, and judging from the quantity and quality of praise lavished upon her, she must be a paragon. She will be here again soon, as she is expected to grace Mrs. L——'s party to-morrow night."

"I must manage to get an introduction to her."

"I think I can effect that, as her brother has promised to favor me with one. I am really curious to see one who excites such unqualified admiration."

Mrs. L——'s spacious drawing-rooms were already filled with the elite of the capital, when Lucy Preston entered, accompanied by the talented and accomplished Mr. Howard.

Grave statesmen and politicians had lain aside the care and dignity of state and office, to participate in those fashionable follies that so invitingly promise to afford relaxation and amusement; and well were those promises fulfilled, as the radiant faces of beauty, and majestic manhood proclaim; as they here surrender themselves to the exhilerating sounds of music and keep time and pace with its voluptuous swellings, or they join themselves to that merry group where wit and humor is the presiding genius. While perchance, some more intellectual in their tastes, find a deeper source of enjoyment in the discussion of graver topics.

Lucy's eager eye took in at a glance the gay assembly, then wandered inquiringly from one group to another, to distinguish if possible the star which deserved precedence; but almost to her make gay and beautiful, and she soon is the fascinating companion of the gentleman on whose arm she leaned half forgot her womanly coyness and the proposed introduction; which the arrangement of Mr. Preston and Miss Howard, exceeded both [illegible] and astonishment. The supposed mixture of admiration that greeted their entrance [illegible] when their appointment was so suddenly changed to the deepest [illegible] and astonishment; for when the owner of the name she so much admired, and the undisputed favorite of the whole assembly of the evening, she beheld none other than her blacksmith's daughter. The [illegible] were a merry party [illegible] the rest of our readers [illegible] Lucy [illegible] Howard [illegible] blacksmith's son—[illegible] [illegible] [illegible] [illegible]

"The [illegible] Lucy [illegible] compared with [illegible] Fred! you [illegible] [illegible] [illegible]

Lecture before the Young Mens' Christian Association.

BY REV. S. WOODBRIDGE.

VAST as are the revolutions of the present age, they are far from being complete. Travellers inform us that one of the most striking contrasts between the old countries in Europe and the United States appears in the finished aspect of the one and the progressive attitude of the other. Ancient communities, with their cities, villages, palaces and farms, repose in the quietude of established order and arrangement, while our country is in a transition state; buildings are being constructed, streets opened, lands surveyed, every thing is changing and progressive. * * * *

When the Almighty had created the heavens and the earth, it is said that the earth was without form and void, that darkness was upon the face of the deep, and that the Spirit of God moved or brooded, as is the import of the original, over the abyss. Now, whether we consider with modern geologists that these brief words are the history of mighty changes, or suppose them to be the text of what ensues, describing the present construction of the earth, this at least is apparent, that chaotic elements may be employed by the Deity in working out His great designs toward the world.

In the present age we think we discern such elements—yet in a formation state, but capable of producing the most extraordinary results. Divinely originated and directed, they will change the very face of society, and will fill the earth with righteousness, joy and peace. Let us glance then at some of these elements, and behold in them the hand of God.

1. *Wealth.* One of the most prominent features of the present day is the successful pursuit of riches. This is the necessary result of the vast enterprises, of the ease of intercommunication, of the demand and supply of commodities everywhere encouraged. We are taught by political economists that capital is the accumulation of labor, or its representatives; that currency is a medium for exchanging the productions of labor. Now, when we consider the mighty auxiliaries brought to increase these results; when we see the winds that move the elements, fire, air, steam, electricity, the very sunbeams, harnessed to our machinery, traversing the ocean, careering on our highways, carrying our messages, pourtraying our likenesses—it becomes at a glance apparent that labor (in other words capital) must accumulate with enormous rapidity. Two hundred and fifty years ago North America had no money value. The real and personal estate owned in the United States is estimated by a late writer to be in the neighborhood of 20,000 millions of dollars, and its annual income to be nearly 2000 millions. Six years ago California was not probably worth five millions of dollars—the tax list of last of last year was over 100 millions. The proportionate value of property to the individual has also greatly increased. The money criterion has also been very fluctuating; but estimated by articles used in barter—wheat or clothing, and particularly among Protestant nations the change is amazing. Our poorest laborers are better fed, better clothed, and have more comfortable habitations, better instruction—yes, and have more intelligence, than had the aristocracy of Europe at the beginning of the 18th century.

It is easy to denounce covetousness, which is idolatry; and it is a kind of fashion to exclaim against wealth; and abused wealth, selfish wealth, uncharitable wealth, is the meanest of the reptiles that creep on God's earth—but open handed, great hearted, liberal wealth is a river of mercy to irrigate the world's desert and make it bud and blossom as the rose.

What, then, is God's intention? What can be done with this vast wealth thus accumulating with this currency that allows the tides of commerce to flow so easily and safely. * * * *

1. Produce the immediate effects of capital, build houses, ships, railroads, cultivate farms, establish factories, increase all needful appliances for comfort, art, knowledge and virtue. Convert every house to a parlor, every field to a garden.

2. Fight the battles of truth by the press, the judiciary, the police, by those vast armies and navies that shall contend in the fearful conflict of principles that threatens us in the future.

3. Fill the world with the fruits of goodness. Oh, it is only unsanctified wealth that we have to fear. It is not money, but the base, low, grovelling love of money that kills the heart and soul. This is the rich man burying his talent in the earth, who cannot enter into the kingdom of heaven. The rich men, tho rust of whose treasures have cankered the soul, are damned in the bitter woe of God's wrath. If the bearer of the shield of Minerva turned it toward himself, he changed to an inanimate stone, but if he hurled himself with it upon the foe, the snakey horrors of the Gorgon's head, flashing lurid lightnings, destroyed every foe. * * * * * *

III. *The Press.* I am sometimes almost disposed to believe that this tremendous element is in advance of its day and generation. But upon second thought, considering that, if the offspring of the age, it is intended also to lead its parent—that its business is to teach as well as learn—and its right of precedence is at once apparent.

Read the leaders in our newspapers. They are no longer the authoritative dicta of the ruler; or, if they pretend to dictate, they are laughed at. They are just what they ought to be—the eloquent appeal of the advocate, who arrays logic, and argument, and wit, in order to captivate the court he addresses. Do I in this disparage the Press? No! I exalt it! I give it a personal character; no blind reverence, like that of the Chinese devotee for a piece of printed paper, but an individuality—a full panoplied presence, great objects, and dazzling success. * * *

Popular opinion has not yet been guaged by the wisest and most far-seeing of our sages. Nor is it yet by far at its summit of power and influence. Union of sentiment and interest among a free and intelligent people must produce the most extraordinary results. A few generations so actuated would change the very face of the globe. The travelling public combine, and express their opinion, and straightway our steam boats and hotels become palaces; and roads of iron are built over which thunder ponderous cars at a rate of velocity that would distance the swiftest race horse at his highest speed. The inhabitants of a city combine and express their opinion, and aqueducts are built, parks laid out, cemeteries are formed, libraries are collected, and all luxuries of life are made subservient to our wishes. Christians combine and express their opinion, and all the instrumentalities of religious progress are created. The presses pour forth sacred writings in inexhaustible profusion. missionaries of all denominations go forth on their work of love and mercy, and the tremendous array of light and love and Christian faith against intemperance and vice indicates the speedy destruction of these enemies of human happiness.

V. The most scientific discoveries of the present age are an element of glorious portent to the future of our race. We have entered evidently upon a new career. It is not now a question merely how any desirable results can be accomplished, but also how it can be effected in the promptest, least laborious manner, and with the most multiplied effects. Had an individual one hundred years ago been able to foresee and describe a tythe of the great triumphs of mechanism at this day he would have been deemed only fit for the lunatic asylum.

And yet it is evident that we are only upon the threshold of still greater discoveries. We are yet comparatively but timid explorers, coasting upon the verge of the great continent of life. Some of those subjects, destined to produce the most important results—such as electricity and agricultural chemistry—are yet but evidently in their infancy, and no person living can even imagine what another century may produce. It is said that in favorable circumstances, with the common agricultural implements, one man produce sustenance for nine persons; so that under the best form of government only one in nine need employ their labor for the necessaries of life, and the residue could work for the luxuries, the refinements, the capital, the knowledge of all. But how if that labor be a Briarins? If, as a celebrated British agriculturist recently assumed, by means of machinery he can perform the work of one hundred men, and by increased steam power, (combined with chemistry to restore the riches taken from the earth) the labor of a thousand, what magical results may follow. More minds are liberated from one kind of service; the mind engaged there works in a higher capacity. And we are not dreaming when we may suppose that in time the great portion of the physical labor of the world will fall upon muscles that will know no fatigue or exhaustion, and that are capable of multiplying strength to an indefinite extent.

In the vast rush of mind toward the application of science to practical results we discover a sign of the times, and a promise for the future so resplendent that we turn from it as something so far beyond all former experience that it seems, though the result of careful analysis, too visionary even to be a reality. * * * *

Tell me not that we are too much in advance—that our impressions are too sanguine. We have come infinitely short of the prayer of our Lord.

Young men of the Christian Association of San Francisco, you are the proper persons to lead on in the movement from the city in which you reside, in the fore front of Christendom—from your position in this city, giving shape to that grand future that lies before us.

The hearts of all men earnest for truth are with you, anxious for your success.

With you is the spirit of God, moving you to regenerate the world, and honor, and glory, and victory, and eternal life.

DR. CLEGHORN states that after the burning or clearing of a forest in India, there invariably springs up a new set of plants, never known before. We observe the same result in North America. India has always been covered with a population more or less civilized, and in vast numbers, while America has never been populated at all, comparatively. The singular results here or there excite a high degree of interest. All the theories given out are unsatisfactory. One says the birds do it! How long will the seeds of the trees live when dropped by birds on the surface, and exposed to the weather for the season? Do we find a sound seed of any tree which has lain one winter exposed to the weather? Are not almost all seeds very perishable? Who buys last year's nuts?

Seeds buried at a great depth are found to germinate. But who buried on the surface the seeds of the new forest which succeeds the old one in populous India? We throw out these hints in order to induce citizens to examine closely the growth of new plants and trees on the clearings of our country, and to have the kindness to send to the Club all authentic information relative to it, that we may compile something reliable upon this curious and interesting subject. We add one desire, that close observation be also made on old cultivated farms. What agency has there been at work to re-plant it—what lapse of time after it is deserted before it becomes replanted?

The Largest Ship in the World.

THE Oriental Company's screw steamer Himalaya arrived at Southampton a few days since from London. She is the largest ship in the world, and is intended for the conveyance of the mails between Southampton and Alexandria. The amazing length and bulk of the Himalaya struck every one with surprise. She is ship rigged, not heavily so, and she drew 15 feet of water forward and 18 aft. She has a flush deck, and if a person walks up one side of it and down the other, seven times, he will walk a mile. Her width is as great as Metropolitan street. Her depth is enormous. The funnel is 24 feet in circumference, and is scarcely noticed on the deck. A person at one end of the deck, hallooing ever so loud, could not be heard distinctly at the other end. Relays of officers will communicate the orders of the commander to either end of the ship.

On the platform where the commander is stationed, there are series of bells to communicate with the engine department. On the Himalaya entering Southampton Water, Calshot Castle, the ancient defence of that entrance and the Solent, looked like a mole hill, when contrasted with the steamer, and could have been towed away—guns, artillery, men and all—in her hold. Nearly 200 passengers' berths are on board of her, 150 of which are first class, with rooms as large as those at hotels; 200 persons can dine luxuriously in the saloon. The fitting up of the steamer is superb, and the upholstery work is most expensive. All the curtains cost three guineas a yard, and damask five guineas. The ladies' saloon is a large, elegant and commodious apartment, with servants' room and bath room adjoining. The Himalaya is an iron ship, built by Mare, of Blackwell, and cost £22,000. She would have cost much more had she been built of wood.

The engines are by Penn, and are the direct acting trunk engines, such as were fitted into some of the screw line of battle ships—the Agamemnon, for instance. They work beautifully, and give immense speed. The Himalaya will bring Gibraltar within three days distance, Malta six days, and Egypt nine days. She would take 3,000 soldiers as far as the Cape of Good Hope in about three weeks, and 2,000 emigrants to America in a week. This magnificent vessel is as yet the crowning effort of a princely enterprise. The appearance and success of such a colossal steamer has been foretold, but never before realized. There can be no doubt that the great oceans will be bridged over by steamers like the Himalaya before long. At present, however, that ship is one of the wonders of the world.

On Friday this immense steamer left Southampton with the India and China mails. She took out about 90 passengers, specie amounting to $155,000, and about 200 tons of merchandise. Her commander is Capt. Kellock, an able and experienced officer. The officers and crew number 160 persons—the largest number ever employed in a merchant ship. Such is the enormous size of the Himalaya, that if the hull of ship in which Columbus discovered America were slung at her stern, she might almost pass for one of her boats.—*Liverpool paper, Jan. 25.*

Vegetable Instinct.

IF a pan of water be placed within six inches of either side of the stem of a young pumpkin or vegetable marrow, it will, in the course of the night, approach it, and be found in the morning with one of its leaves floating on the water. This experiment may be continued nightly, until the plant begins to fruit. If a prop be placed within six inches of a young convolvulus or scarlet runner, it will find it, although the prop may be shifted daily. If, after it has twined some distance up the prop, it be unwound and twined in the opposite direction, it will return to its original position, or die in the attempt; yet, if two of those plants grow near to each other, and have no stake around which they can entwine, one of them will alter the direction of its spiral, and they will twine round each other.

Duhamel placed some kidney beans in a cylinder of moist earth; after a short time they commenced to germinate, of course sending the plume upwards to the light, and the root down into the soil. After a few days the cylinder was turned one-fourth round, and again and again this was repeated, until an entire revolution of the cylinder was completed. The beans were then taken out of the earth, and it was found that both plume and radicle had bent to accommodate themselves to every revolution, and the one in its efforts to ascend perpendicularly, and the other to descend, they had formed a perfect spiral. But although the natural tendency of the roots is downwards, if the soil beneath be dry, and any damp substance be above, the roots will ascend to reach it.

SICK HEADACHE.—The following cure for the sick headache was furnished to the Boston Medical Journal, by Dr. N. S. Folsom, of Portsmouth, N. H.:

"Take any number of drops of Croton Oil, mix them with flour and molasses, and make as many pills as drops of the oil used. When the patient begins to feel the sick headache coming on, one-half of a pill is to be taken every hour in molasses, or something of like consistence, until it acts as a catbartic; and thus treat the sick headache at each attack. If thus taken, each attack will be less severe, and in some cases a few doses produce a permanent cure. He seems to think the Crotou Oil acts in three ways: 1st. By increasing the secretions. 2d. By counteracting the antiperistaltic action of the stomach and bowels; and 3d, by acting as a counter-irritant to the brain."

A New Descriptive Hen's-Nest.

UNDER this head, our venerable friend, the Knickerbocker, says in its March number that, he finds the following in a Southern journal:

"This is one of the most ingenious contrivances of the age, and is the invention of a downeast Yankee. The design is to deceive poultry into the speedy and liberal laying of eggs, which is accomplished by the peculiar construction of the machine. At the bottom of the nest there is a trap-door, which works on a hinge, being supported by a spring. The moment an egg is placed on this, the trap opens and lets it fall through into a cushioned apartment prepared for its reception. The consequence is, that the bird, just as she is preparing to cackle, glances at the nest, and seeing nothing, actually reasons herself into the belief that she has not laid at all, and resumes her position on the nest, in hopes of making a more successful effort. On the first trial of this curious contrivance before the Commissioner of Patents, to test its virtues, a singular result is effected. A large imported Russian hen was "located" on the nest, and left to her meditations. On account of pressing business, the hen was forgotten until the next day, when, to the utter astonishment of the commissioner, a half-bushel of eggs was found in the cushioned chamber below."

The Knickerbocker then goes on to intimate that the above Southern paper has been infringing on his own patent, long before obtained for the "*Self-Acting Hen-Persuader.*" We should be glad if our fun-loving neighbor would give us the exact date of the caveat for the said patent, for we too have a "claim" of an invention to register; but whether it is as great an antique as that of our venerable contemporary, we shall leave him to determine. Suffice it to say, that upwards of six years ago, in the seventh volume of our journal, a grave contributor of ours, in his veritable history of "Yankee Farming," thus causes one his heroines to speak:

"Du tell, Sargeant, now," interrupted the impatient Mrs. Doolittle, "have you hearn anything about that 'ere patent hen's neest, way down to Inventionville, that keeps the hens layin' all the time? We havn't had a egg all winter, and I am dreadful fearful we shan't get one for settin' in the spring. Mr. Doolittle says he don't believe a word on 't; but I do, every bit; for I see it in the almanac; and the way was, soon as the hen had laid the egg, it rolled down through a little trap-door into a basket, when the hen looking under her could'nt find nothin' there, so concludin' she'd made a mistake and hadn't laid, she begun agin, and so kept on layin' as many as three or four a day, sometimes. He only asks five dollars for his patent; and sartin true, if I had one now, I could sell eggs enough before settin' time, to buy Molly a bran new, silk frock, though she hardly desarves one."

WHEAT and Rye grow spontaneously in Tartary and Siberia. Wheat is also indigenous in Sicily. Oats grow wild in Abyssinia. Buckwheat is said to be a native of Asia. The native country of Barley is unknown. Indian corn is a native of America. Rice of Ethiopia. It was introduced into South Carolina from Madagascar, in 1693 or 4. Artichokes, Cabbage and Lettuce, are said to be natives of Holland; Asparagus of Asia; Onions and Garlic of various eastern countries; Horse Radish of China; Mustard of Great Britain; Beans of the East Indies; Pumpkins of America; Peaches and Cherries of Persia; Plums and Apricots of Asia; Hemp of Persia and India. Flax grows spontaneously in Persia, but the cultivated variety is supposed to have originated in Egypt. Tobacco is a native of America. It is supposed to have been introduced into England in 1586, by Ralph Lane and the colony under his command, who returned from Roanoke in that year. Probably it was introduced by order of Sir Walter Raleigh, under whose auspices the colony had been sent out, who had learned its use of the Indians, or in France, Where it had previously been introduced by Nicot, from whence it takes its generic name, *Nicotiana.* The Sugar Cane is a native of China or the East Indies, where sugar has been manufactured from it from a very remote period. Sugar is first mentioned by a European writer, A.D., 625, but for centuries after was sold only as a medicine, and previous to its cultivation in the West Indies it did not come into general use as an article of food.—*American Agriculturist.*

MERINO SHEEP were first introduced into this country in 1802, by Robert R. Livingston. The same year one hundred were imported at Hmmphreysville, Ct., by Gen. Humphreys, at that time Minister to Spain.—*Ibid.*

SCRATCHES IN HORSES.—This well known disease, a sort of cutaneous affection ending in cracks and sores, between the hinder joints and hoofs, is sometimes quite troublesome, and often difficult to cure. Several remedies are in common use, among which are, first, shearing off closely the hair, then washing well in soap suds, and then in salt water or beef brine—washing with soap suds and then rubbing off the scurf or scabs with a corn cob, and applying a thin coating of hog's lard. Another way is to wash with saltpetre after the soap suds washing has become dry, and after the saltpetre has become dry to apply a slight coat of turpentine with a feather or quill. All these remedies are quite similar in character, and are all useful, but we have never found anything equal to a solution of chloride of lime, applied after the first washing, and after the removal of the scabs where necessary. We have never seen this remedy recommended, but it is certainly eminently cleansing in its operation.—*Agricultural Exchange.*

Hints on Horse Breeding.

For a month or two before foaling, the mare should be allowed somewhat better food, and if worked at all, moderately and slowly.

There can be no truer philosophy, we think, than that a mare during the period of gestation, should be kept at her usual work, care being taken that she be not overworked. In the latter case, if abortion does not result, so much of the vital force of the mother would be expended, that a feeble colt would be the result. But a regular, systematic, daily labor will be of use both to the mother and to the offspring.

The appropriate work of the mare should be continued very nearly up to the full period of her gestation. In the latter part of the time it may be rendered lighter. At the time she is expected to foal, of course she will not be put to work. The whole thing is a natural process, and is intended by nature to interfere little with the ordinary habits of animals.

In regard to feeding, two words may say all that is absolutely necessary—*feed well.* If a mare is habitually well fed, there is no need to increase the quantity, or to enrich the quality. It is only those who are ordinarily trying experiments to see how near to starvation they may keep a horse, that would need to feed better just before foaling.

After the foaling, there is more need of care. The colt suckling draws more severely on the constitution of the mare, than the same colt living an almost stagnant life in the womb of the mother.

As soon as she has been foaled, she should be turned into a well sheltered pasture, and taken in during storms. If the grass is scanty, she should have two feeds of good bran or grain daily. Nothing is gained by starving and stinting the foal at this time.

We should say give her the bran mash at any rate, and after a few days continue with liberal feeds of grain. Every hour of the life of the colt while with its mother, tells on his subsequent value. He should be as fully fed as will consist with health, that like a character we read of, he may "wax fat and kick."

After the foaling, the mare should have nothing of consequence to do beyond the nourishment of her colt. And yet it is nothing uncommon to see a mare put to hot and hard drives with a very young colt by her side. This is gross hardship to the animal, and impolitic for the owner. If a brood mare in addition to the work of eight or nine months in the year, adds the product of a colt worth, at four months old, from fifty to a hundred dollars—she ought, we think, to be considered as having discharged her duty, and be entitled to three months run with her colt.

By this course the mare sooner and more perfectly recovers from the effects of her breeding, is in better condition for carrying a new colt—and the colt at her foot comes up a healthier, stronger and livelier animal.—*Iowa Farmer.*

Agriculture in Maine.

The farmers of this state have been holding a convention respecting their wants. They have taken the bit in their teeth, and tell their legislators plainly what they want, and what they will have. This is right, because they are right, and know what they want; and it is believed they will carry their point. The following resolutions were discussed and adopted:

Resolved,—That a more general diffusion of agriculture knowledge among the farmers of this State, is essential to the promotion of this highly important interest.

Resolved,—That an appropriation of the public lands belonging to the State, be asked from the Legislature, to establish an agricultural school, or schools, to be connected with a farm, or farms, for the purpose of promoting a systematic and scientific education in agriculture, among the youths of this State.

Among other speakers and discussions, the following appears to have attracted much attention:

Mr. Waring, of New York, was called upon to answer some questions, in regard to the value of Mapes' Improved Super-phosphate of Lime, as a fertilizer, and a very interesting discussion sprang up.

Mr. Waring gave a lucid explanation of the causes which make a dressing of that kind necessary, and mentioned instances of successful use of it. Other gentlemen gave an account of their experience in its use, which was favorable to using it, except in very dry weather.

The State Board of Agriculture of Maine, have held a very interesting session, at which the right spirit prevailed. The Board cordially approved the Resolves of the Farmers' Convention, and pledged their co-operation. The following order suits our case:

Ordered,—That the Board of Agriculture recommend to the Legislature, through their committee, that the laws of this State, relating to Agriculture and Horticulture, be so amended that the Treasurer of this State shall pay to the Treasurer of each Agricultural and Horticultural Society in this State, as many dollars as each society shall respectively receive by tax contributions, or otherwise, from the members of said Societies, not to exceed the sum of $[illegible] per annum; and there shall not be more than three such Societies in a county.

This was adopted in a modified form so that if there are three societies in a county, they may draw $[illegible], 1 two, $20; one not more than $[illegible].

They recommended the Legislature to pass an appropriation of [illegible] to aid [illegible] in each county that should connect an agricultural Department to their system of instruction.

Mr. Waring submitted a manuscript of an agricultural text-book for the use of schools, which was examined and reported on favorably to the Board.

Productive Milch Cows.

The Farmer and Visitor gives the following list of some of the best milch cows which the country has afforded, more particularly those of the short horn class. Many persons have been disappointed in Durham, as well as in other imported breeds, because they did not commence and breed from the very best milkers among them. Taking good and bad promiscuously among our native population.

We have long been satisfied that the proper selection, in this way has been greatly neglected; but selection is not all. Good succulent food, regularly given, and good management generally, are quite as important; but with both combined, the highest success is attained, as some of the following instances show:

John Hare Powell, of Powelton, Pa., had one that produced 36 quarts of milk daily and rising, 20 pounds of butter per week. Charles H. Hall, of Harlem, N. Y., had one that produced thirty-four quarts daily at four years of age, and E. W. Featherstonhaugh imported one that produced 36 quarts daily.

But to come nearer home, and to take our native cows; among the cows named by Mr. Colman as superior, and the single county of Berkshire, Mass., that of Mr. Colt of Pittsfield, produced 193 pounds of butter in 148 days, and that too from the first of December to the first of April! Mr. Campbell's cow, of Pittsfield, yielded 26 beer quarts per day, and Mr. Merrill's cow of the same town produced 30 beer quarts daily! A cow four years old belonging to Mr. Calvin Davis produced 225 pounds of butter in 172 days and fattened a calf in the same time!

A cow of Mr. Thomas Hodge, of North Adams, Mass., produced 425 pounds of butter in one year, 400 pounds of it being produced in nine months!

In 1851, the first premium of the Norfolk County Agricultural Society in Massachusetts, was awarded to S. J. Capen of Dorchester for the best cow. From the first day of September to the 20th, being 19 days, she gave on the average, 25 quarts per day, weighing 58 pounds—cow one-half Ayshire and one-half Durham. Samuel Henshaw, of Brooklyn, exhibited at the same time a Durham cow seven years old, which produced, from the 10th to the 19th of June, 1850, inclusive, 555 pounds of milk, or a fraction over 24 quarts per day, and for the same length of time in June, 1851, she gave 656 1-2 pounds of milk, or 28 quarts per day! And this cow had never had any grain or meal since Mr. Mr. Henshaw owned her!

At the Fair in Middlesex county, in 1851, the first premium was awarded to Alexander Wright of Lowell, for the best native cow. We extract Mr. Wright's statement entire, as follows:

"The native cow offered by me for premium was purchased out of a drove from Vermont, when three years old. She is now nine. She calved early in January, 1850. From the 10th of that month to the 20th of August, 1851, she gave 9027 quarts of milk, the measure being the common milk or beer quart, and the weight per quart of milk two pounds, when weighed warm from the cow. The greatest quantity given per day was in June, 1850, viz: twenty-one quarts and one gill.

Her next calf was dropped on the 12th of this month, and it was not without considerable trouble she was dried by the 20th of August, as above. Her milk is very rich in cream; it has been frequently tried and found to produce one pound of butter from seven quarts of milk. During winter, and a part of the summer, she is fed morning and evening, as follows, viz: one quart of Indian meal and one quart of shorts, with one gill of malt, are put in a pail and boiling water poured on till the pail is nearly full; the contents are stirred, the pail covered with a thick cloth and left till the next meal to cool. In winter she has a peck of carrots daily, at noon, in addition.

QUANTITY OF MILK GIVEN EACH MONTH.

January	1850.	20 days.	15 quarts.	300	quarts.
February	"	28	"	16	"	448	"
March	"	31	"	17	"	527	"
April	"	30	"	17	"	510	"
May	"	31	"	20	"	620	"
June	"	30	"	21½	"	630	"
July	"	31	"	21	"	651	"
August	"	31	"	20	"	620	"
September	"	30	"	18½	"	555	"
October	"	31	"	17	"	527	"
November	"	30	"	16	"	480	"
December	"	31	"	14½	"	449	"
January	1851.	31	"	14	"	434	"
February	"	28	"	14	"	392	"
March	"	31	"	33	"	403	"
April	"	30	"	12	"	360	"
May	"	31	"	12	"	372	"
June	"	31	"	13	"	390	"
July	"	31	"	9	"	279	"
August	"	20	"	4	"	80	"

This gives a daily average of but a small fraction less than 16 quarts, for 19 months and 10 days! And for nearly one year, viz: from Jan. 11, 1850, to Jan. 1, 1851, this cow averaged daily, a fractioo over 18 quarts per day.

These are only specimens from a long catalogue of cows that might be given, to show what good cows are capable of producing in the way of butter. And such are the ones our farmers should have. The cannot get such at once, and perhaps never only a few like them. But they can try, and trying is succeeding in a measure, for what one man can produce another can, as a general rule, by like exertion. By [illegible] short-horns or putting a cross of the short-horns and [illegible] of the short-horns and Ayrshire or Holderness, they may easily double the average quantity of milk and butter they now produce.

From the article headed "Art of Culture," in Liebig's Agricultural Chemistry, we extract the following:

The developement of the stem, leaves, blossoms and fruit of plants is dependent on certain conditions, the knowledge of which enables us to exercise some influence on their internal constituents as well as on their size. It is the duty of the natural philosopher to discover what these conditions are; for the fundamental principles of agriculture must be based on a knowledge of them. There is no profession that can be compared in importance with that of agriculture, for to it belongs the production of food for man and animals; on it depends the welfare and developement of the whole human species, the riches of States, and all commerce. There is no other profession in which the application of correct principles is productive of more beneficial effects, or is of greater or more decided influence. Hence it appears somewhat unaccountable, that we may vainly search for one leading principle in the writings of our agriculturists and vegetable physiologists.

The methods employed in the cultivation of land are different in every country, and in every district; and on inquiry as to the causes of these differences, the answer is, that they depend upon circumstances. (*Les circonstances font les assolements.*) No answer could show ignorance more plainly, since no one has ever yet devoted himself to ascertain what these circumstances are. Thus on inquiry in what manner manure acts, the answer by the most intelligent men is that its action is covered by the veil of Isis; and if demanded further for the meaning, it is discovered merely that the excrements of men and animals are supposed to contain an incomprehensible *something* which assists in the nutrition of plants, and increases their size. This opinion is embraced without even an attempt being made to discover the component parts of manure, or to become acquainted with its nature.

In addition to the general conditions, such as heat, light, moisture, and the component parts of the atmosphere, which are for the growth of all plants, certain substances are found to exercise a peculiar influence on the developement of particular families. These substances either are already contained in the soil, or are supplied to it in the form of matter known under the general name of manure. But what does the soil contain, and what are the components of the substances used as manure? Until these points are satisfactorily determined, a rational system of agriculture cannot exist. The power and knowledge of the physiologist, of the agriculturist and chemist, must be united for the complete solution of these questions; and in order to attain this end, a commencement must be made.

The *general* object of agriculture is to produce in the most advantageous manner certain qualities, or a maximum size, in certain plants or organs of particular plants. Now, this object can be obtained only by the application of those substances that are indispensable to the developement of these parts or organs, or by supplying the conditions necessary to the production of the qualities desired.

The rules of a rational system of agriculture should enable us, therefore, to give to each plant that which it requires for the attainment of the object in view.

The *special* object of agriculture is to obtain an abnormal developement and production of certain parts of plants, or of certain vegetable matters, which are employed as food for man and animals, or for the purpose of industry.

The means employed for effecting these two purposes are very different. Thus the mode of culture, employed for the purpose of procuring fine pliable straw for Florentine hats, is the very opposite to that adopted in order to produce a maximum of corn from the same plant. Peculiar methods must be used for the production of nitrogen in the seeds, others for giving strength and solidity to the straw, and others again must be followed to give such strength and solidity to the straw as will enable it to bear the weight of the ears.

We must proceed in the culture of plants in precisely the same manner as we do in the fattening of animals. The flesh of the stag and roe, or of wild animals in general, is quite devoid of fat. Like the muscular flesh of the Arab; or it contains only small quantities of it. The production of flesh and fat may be artificially increased; all domestic animals, for example, contain much fat. We give food to animals, which increases the activity of certain organs, and is itself capable of being transformed into fat. We add to the quantity of food, or lessen the processes of respiration and perspiration by preventing motion. The conditions necessary to effect this purpose in birds are different from those in quadrupeds; and it is well known that charcoal powder produces such an excessive growth of the liver of a goose, as at length causes the death of the animal.

Large Ox.—The Ogdensburg Sentinel says Mr. Perkins, of Hydepark, Vt. has an ox on exhibition in Ogdensburg which weighs [illegible] pounds. This Behemoth was raised at Hydepark, is now in his sixth year and is still growing, having gained the past year, nearly [illegible] pounds. He stands [illegible] feet 4 inches high, and measures from rump to [illegible] 12 feet 4 inches and from tip to tip 21 feet. He is considered the largest specimen of animal nature in the world. Mr. Perkins is on his way to [illegible], where he has [illegible] and will remain for a few days to let the animal satisfy his curiosity. Vermont have crowded for that purpose.

The Strawberry.—The sexual character of the strawberry is the subject of a very interesting report just made to the Cincinnati Horticultural Society by a committee who have come to the following conclusions:

1st. That all strawberries, in their natural state, have some blossoms, perfect in what are termed male and female organs, while some are decidedly pistillate, and others staminate.

2d. That when they are in some degree perfect in both organs, the fruit will be small and indifferent, except perhaps in the case of "Longworth's Prolific."

3. That if the staminate plants prevail, there will be but little fruit realized.

4th. That if they be all pistillate there will be a like result, and that of an inferior quality.

5th. That to insure a full crop, whatever be the theory, it is absolutely necessary that the pistillate plants predominate; indeed, that the staminate plants be very sparsely distributed.

A Good Cow.—During a recent visit to Massachusetts, we called on Mr. Henry Sabin, of Lee, to whom, in 1852, the Berkshire County Agricultural Society awarded the highest premiums for the best milch cow. She is a cross between Native and Devon, and in June, 1852, gave in one week 307 lbs. of milk; 66 3-4 lbs. of this milk was set and churned, and produced 3 lbs. 11 oz. of butter—equal to 17 lbs. of butter per week. In June, 1853, she gave, on several different evening milkings, 31 lbs. of milk. One day's milk was churned separately, and produced 2 lbs. 7 oz. During this time her pasture was not very good, and she was allowed a bucket of bran swill per day.—*Rural New Yorker.*

Gardening at Coloma.—The Coloma Argus says that quite a number of Gardens are opening in that vicinity, some of them on a large scale. The soil is rich and very productive, and is as susceptible of as high a state of cultivation as any in the Atlantic States; besides this, vegetables always command a good price and have a ready sale.

Later from the South.

By the arrival of the steamer Sea Bird, Capt. Haley, from San Diego, we have received San Diego and Los Angeles papers to the 22d. With the exception of the following from the Star of the 22d, they contain nothing of importance.

Walker's Party.—About the 7th instant a party of ten or twelve of Walker's men came up on the Sonora side of the Colorado and crossed the ferry nearly in a naked and starving condition. The party gave no satisfactory explanation why they separated from Walker. They stated that about ten days previous Walker crossed the river some forty miles below the mouth of the Gila, by means of rafts and swimming. They describe the whole of the command as being in a most miserable and destitute condition—wearing the same clothing with which they went to the country, and this is in tatters and rags. Walker himself is no better clad than the rest, and has but one boot and a piece of another. At their crossing they *cached* about seventy stand of arms. The Cucupa Indians were here detected stealing some of their stolen cattle, and in the attack upon them seven or eight of the Indians were killed. After this, Walker recrossed the river at the same point with only twenty-five men, and started back to Santo Tomas, with nothing to subsist on but beef—their only fare previously. They represented W. as having turned back in sheer desperation, without an object, or, if he had one, it was concealed, and because it was the best thing he could do. The party arrived at the fort in extreme destitution, and were kindly furnished with clothing and provisions by Major Heintzelman and Dr. McKinstry. They represent themselves as extremely sorry for having joined the expedition, and are on their way to the settlements to obtain employment. They say if they can gain an honest living, they will not "go soldiering any more."

Three steamers will leave this port on Monday next, carrying passengers and specie for New York, viz.—the Panama and Uncle Sam via Panama, and the Cortes via Nicaragua.

A large portion of the San Antonio Rancho (Peralta's) in Alameda county, was sold at auction in Clinton, on the 18th inst., and brought the very handsome sum of $60,000.

It is stated that about one-fourth of the buildings in San Francisco are "to let." Not all of these however are tenantless—but the present occupants are about changing their business locations.

The Packet from San Juan, and the Oregon, from Panama are due on Monday or Tuesday next.

The new [illegible] Senora, of the Pacific Mail Line, is expected to arrive at this port early in June. She sailed from New York on the 11th of March.

The [illegible] Texas Rifles, of the late [illegible] Line, is about proposed to [illegible] New York, and Panama.

Mount Gay Hagerstown has [illegible] the appointment of [illegible] on Monday [illegible] next.

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 27, 1854.

Uncertainty of Human Hopes.

History presents no series of events, in any country, where human hopes have been so suddenly blighted, where the faint prospects have been so quickly crushed, and where the heart has been made to feel so keenly the uncertainty of everything, as in California. Where is the pen so gifted, that could, in a just degree, shadow forth the heart agonies felt by thousands that this "land of gold" had separated for years from their families, so that they might earn a competency for them? When their fondest anticipations were nearly realized, and the future looked bright and joyous, "the cloud—no bigger than the hand"—suddenly appeared in the horizon, spreading a darkening hue over life's fairest prospects; and death would strike away the pillar of hope, making life a cheerless blank. How often has death entered the domestic circle and stricken down those upon whom all joys were centred—those whose influence alone made that circle complete. Mark these instances and we see how fearful the havoc death has made, and feel how "uncertain are human hopes." Mark those engaged in the mighty enterprises of life, laying plans for the future, and —like a gallant ship—sweeping the sea with prosperous gales, their hopes raised by bright anticipations, when suddenly "all's aback;" the gale in its fury has rent asunder every sail, swept away every spar, and the proud ship, once so hopeful, is now a shattered wreck.

California has a fate peculiarly her own. Her cities have all been desolated by the devouring elements; the plague has sent mourning through all her cities and villages; death knew no distinction, unless it were to strike where the blow would fall the heaviest. The fire and the plague followed the floods—leaving behind them their marks of cheerless desolation. Thus have the elements been sporting for years upon our shores, leaving the impress that can never be forgotten. Upon the sea, too, there has been this same fatality. On the ocean, in our harbors, on our rivers —there has been a series of calamities that have stricken whole families from our community, and wrecked many hearts; utterly robbing life of half its charms to those whom death spared. These all cause a conviction that there is a fearful fatality attending human plans and efforts in California. None escape: if it comes not in one form, it surely comes in another. If we call to mind what all have had to endure, in the varied scenes through which so many have struggled, we must admit the truth of the assertion that California, rich as she may be in her gold, has ever had to witness scenes so dark that even hope could could not illumine them. No week passes that we are not called upon to record calamities of more than ordinary character—calamities that startle, by the utter ruin they have brought upon those around us. Were we to cite cases in point, we would recall the disasters of many steamers, by which entire families have perished, and some of our best and most prominent citizens have been suddenly taken from us, in the midst of their usefulness.

See the obituaries that fill the columns of the daily journals; are not these facts sufficient to prove that California gold cannot shield us—but that "all that is bright must fade," and all our hopes are uncertain.

A striking instance of the fatalities so peculiar to California, is witnessed in the recent calamity of the destruction of the steamer Gazelle, at Oregon, and the death of David Page, Esq. But about a year since, Mr. Page had gathered his family around him, when the destruction of the Jenny Lind took from him wife and children, leaving him desolate and alone; and now, on the anniversary of their loss, he is called as fearfully and as suddenly, in like manner. Thus the best are taken from us, and the brightest hopes blasted. Are not such instances proof of the uncertainty of human hopes? The case of James Mills, Esq., of Sacramento: one steamer brings news so hopeful, the next dashes the cup to the earth, and scatters desolation in many hearts. But why record isolated cases; our cities are full of instances so fatal, so destructive of human happiness as not to seem real. Where is the heart that has not felt the icy chill that death sent to it? Whose eye has not swollen with bitter tears that have fallen upon the grave of brother, sister, wife or child? Whose cheek has not paled, and whose life has not for a time seemed a burden by the message that has been borne to them across the ocean, telling them a dearly loved, an aged parent is no more? And for what are all these sacrifices made? Is it for gold: can gold restore peace of mind; can gold heal the broken heart; can gold bring the dead to life? And yet will it not be found in that great day, that the havoc that has been made of human life and human happiness, has all resulted in a too sordid love of gold, which all history has told us from the time of the "first betrayer" to the present time, that it is the first great cause of the "wreck and uncertainty of all human hopes."

State Agricultural Society.

We rejoice to announce the passage of a bill to its second reading, to incorporate a State Agricultural Society. This speaks well for the legislators of California; they are now engaged in a subject that will tell more for the permanent interest of California, than all the canals, railroads, or manufactories of the State—however, these all are auxiliaries. Agriculture is the basis of all prosperity. Honor to our legislators who shall watch this great interest and give it the care it needs.

We found pleasure in perusing the bill which has been printed, and trust every section will be given to this institution, so that it can be efficient, to develope the resources of the State as speedily as possible. We would hope that the "Eureka State" would imitate many of the older States, and establish a "Board of Agriculture," and it would add very much to the efficiency of the State Society if this Board should be as a special direction to the State organization, and have authority to explore the State and bring to notice the many valuable resources that would otherwise be lost. Whatever the cost might be to the State, it would increase its wealth ten-fold by such an action We trust this will be done.

Wheat Crop.

The reports of this crop are so various, that it will be impossible to arrive at any certain data, unless the "Farmers will form their Clubs," hold consultations, and report in full, as suggested in another column. The State Journal, a few days since, in their report on the amount of wheat in fourteen counties, gave 55,000 acres, and 1,803,000 bushels, or an average of 30 bushels per acre, as the probable yield of this year's crop, although the larger portion of that of last year, averaged 50, and often as high as 60 and 70 bushels per acre.

The amount stated by the Journal is but a tithe of the crop. The San Joaquin county alone is reported at nearly as many bushels as is given by that paper for the whole fourteen; and, upon this basis, more than 20,000,000 bushels will be raised.

We shall be able, before long, to report from the various counties, reliable data; and we would again call upon the cultivators to aid in this matter, for it is to their interest that a careful estimate be rendered. The wheat crop of California will materially aid in the general improvement of business; it will be the means of retaining a large amount of gold here, which otherwise would leave the country, and will be expended in further developing the resources of our young State.

The almost certainty of a European war, and the short crops abroad, also, will materially advance the value of all breadstuff over our whole country, giving an ample reward to the cultivator of the soil. This is always followed by a general prosperity, for it will ever be found that when produce commands a high price, every kind of business is prosperous; and the reverse is always proved conclusively, that Agriculture is the basis of all prosperity.

Mode of Manuring Vines.

The observations which follow, should be extensively known, because they furnish a remarkable proof of the principles previously stated, both as to the manner manure acts, and on the origin of the carbon and nitrogen of plants.

They prove that a vineyard may be retained in fertility without the application of animal matters, when the leaves and branches pruned from the vines are cut into small pieces and used as manure. According to the first of the following statements, both of which merit complete confidence, the perfect fruitfulness of a vineyard has been maintained in this manner for eight years, and according to the second statement for ten years.

Now, during this long period, no carbon was conveyed to the soil, for that contained in the pruned branches was the produce of the plant itself, so that the vines were placed exactly in the same condition as trees in a forest that received no manure. Under ordinary circumstances a manure containing potash must be used, otherwise the fertility of the soil decreases. This is done in all wine-countries, so that alkalies to a very considerable amount must be extracted from the soil.

When, however, the method of manuring now to be described is adopted, the quantity of alkalies exported in the wine does not exceed that which the progressive disintegration of the soil every year renders capable of being absorbed by the plants. On the Rhine one litre of wine is calculated as the yearly produce of a square metre of land (10-8 square feet English). Now if we suppose that the wine is three-fourths saturated with cream of tartar, a proportion much above the truth, then we remove from every square metre of land with the wine only 1-8 gramme of potash. 1000 grammes (1 litre) of champagne yield only 1.54, and the same quantity of Wachenheimer 1-72 of a residue which after being heated to redness is found to consist of carbonates.

One vine-stock, on an average, grows on every square metre of land, and 1000 parts of the pruned branches contain 56 to 60 parts of carbonate, or 38 to 40 parts of pure potash. Hence it is evident that 45 grammes, or 1 ounce, of these branches contain as much potash as 1000 grammes (1 litre) of wine. But from ten to twenty times this quantity of branches are yearly taken from the above extent of surface.

In the vicinity of Johannisberg, Rudesheim, and Budesheim, new vines are not planted after the rooting out of the old stocks, until the land has lain for five or six years in barley and esparcet, or lucerne; in the sixth year the young stocks are planted, but not matured till the ninth.

Cultivation of the Radish.—How can radishes be raised to be tender, crisp, and palatable? I have often tried to have them fit to eat, but they grow to tops and are very wormy. A. L. S.

Few vegetables are here cultivated with greater facility than the radish; it seldom commands notice in the pages of our periodicals, because every one is satisfied that there is no secret in its management—sow the seed and a crop will follow. This, however, will not hold good in all cases, and occasionally it is found that even this common root demands that certain conditions be fulfilled; for frequently the produce of the radish bed is not fit for use. It is one of those roots which are not submitted to the process of cooking, and, for this reason, it must be produced at table in a tender and crisp state, or it will be rejected. All such vegetables owe this quality to the soil in which they grow, and several other points in their treatment. To produce tender and crisp flesh in any vegetable, rapidity of growth or development is essential; the tissue of which the substance is composed, must be quickly formed, so as to attain its full size before the influence of the air and sun can convert it into woody fibre, or at least so act upon it as to harden it. The radish, then, requires a light loamy soil, so open as to permit the swelling of the bulb or root, and yet firm enough to prevent the sun from acting with too much force on them while forming. The soil must be rich enough to promote rapid growth, and yet not too highly manured to induce a greater development of leaves than is absolutely necessary, as by this means, the size of the root would be diminished. A proper degree of coolness and moisture are the most essential conditions in the production of crisp and tender specimens. Stiff clay soil must be avoided, and during the latter part of spring and summer, a spot selected for the sowings, little exposed to the midday sun. Sow moderately thin, as when too thick the crop is inferior. Give plentiful supplies of water at this season; and if the soil is not very rich, a little manure might be added with the water. Avoid special applications of fresh manure, as this would produce an undue proportion of leaves.

The canker or worm which you complain of may arise from an undue amount of vegetable matter in the soil. If this be the case, add a quantity of sand, and apply a portion of salt when preparing the ground. Salt destroys the worms, and they do not agree with a sandy soil. Perhaps your soil has been worn out by continual cropping, and exhausted of certain necessary elements. You do not state the nature of your soil.—*N. Y. Agricultor.*

Ornamental Planting.—We commend the following extract from J. W. Proctor's Agricultural Address, to those who have *forgotten* to plant a single shade-tree near their large and costly farm-houses:

The objects met about the door-yard of a farmer's residence, are as *unmistakeable indices* of the character to be found within, as are the expressions of the human countenance, of the emotions of the mind. Where the rose, the dahlia, and the honey-suckle, have crowded out the pig-trough, the goose-pen and the sink-drain—be sure improvement has there found a habitation and a home. A few flowering shrubs in front; a climber or two by the door; a border carefully arranged by female hands, with female taste, are luxuries at the command of all. I have often heard an esteemed friend, too soon, alas! removed from these scenes of anxious solicitude, remark, she should prefer a cottage with only one small room, a bed-room and a kitchen, surrounded by cultivated grounds and a shrubbery, with an elm overshadowing the yard, to a spacious mansion without these appendages. What is more out of place which they labor, both as to comfort and as to than a square three-story house, in the country, with no shade-trees about it? Those who have not the benefit of shade-trees about their residences, are insensible of the inconveniences under health. I have heard it said, by one of the most intelligent physicians whose acquaintance I ever enjoyed, that the best preventive of the progress of cholera, and other malignant diseases, was the multiplication of shade-trees. To my certain knowledge, the best security against the spreading of fires in villages, is an abundance of shade-trees in the way, and in the yards between dwellings.

The Preparation of the Earth for the Intellectual Races.

BY C. F. WINSLOW, M. D.

[CONCLUDED.]

The secondary ages passed away. Old islands and continents sank beneath the sea, and after countless ages, they rose again to display new and more perfect forms of vegetable and animal life. The races of huge amphibious creatures with a single heart and cold blood had finished their work; and ponderous beasts with warm blood and double hearts, which breathe the air and feed on trees and shrubs and grass and some of which devour each other, were introduced and multiplied in endless numbers. This is the Tertiary Age, the age of *mammiferous animals*, through whose agency all the organic elements of nature were amalgamated, and laid down upon the earth, and stored up in successive strata for the agricultural epoch to ensue at the introduction of the human race. These, in time, passed away by the physical changes of the surface;—and, at last, after cycles of ages so infinite in number that no human thought can imagine or calculate their beginning, the most perfect work of the Almighty was created by a special act and planted in the rich alluvial valleys of Asia, which in the Hebrew tongue are called "Eden," or the abodes of pleasure and delight. Previous to that time "there was not a man to till the ground."

Thus the remarkable revelation by Moses of God's design in the introduction of man, is clearly sustained by following the physical history of the globe from chaos to the period when its surface was sufficiently stored with vegetable and animal remains to fit it for the highest developments of scientific agriculture. And it seems to me no less extraordinary than remarkable, while the first great truths from heaven were planted among the flags of the Nile, that they should never have attained their complete germination, until they have grasped the entire circuit of the earth, substantially encircling both hemispheres, and uniting the Asiatic and European civilizations amid the bull-rushes of the Sacramento. The operation of the mysterious laws controlling the motion and transmutation of matter and of society by life and death, though ever active and constantly attaining minor results, is nevertheless insensible. But the great events growing out of the aggregate of these changes, constitute landmarks in the history of the earth, which become the more conspicuous by appearing remote and widely separated from each other. Such are the conditions of time, and the relations of the ages, from chaos to Adam, and from Adam until now.

The instinctive foresight of many animals induces them to store up food for their future necessity, or for the nourishment of an offspring which is to appear at some subsequent period. So the intelligence of all varieties of the human family induces them to make provision for future want; and the strong commercial wisdom of enlightened communities not only creates the thousand forms of merchandise suited to the tastes and necessities of all races of men, but it transports these from one region of the earth to the other as the demands of society require. This is the result of intellectual foresight and activity—the finite exhibition of a principle which, in the Creator of the world, becomes infinite. Through the long ages occupied in the vegetable and animal growths and in the various geological formations and changes, the same economical ideas were manifested, and similar arrangements provided for all the various agricultural and commercial necessities of mankind. This fact is fully comprehended when we survey the present diversity of the earth's surface. Had the deposits of vegetable and animal remains continued forever in the same horizontal positions in which they accumulated, they would have been very unavailable to our present necessities. But the same forces which were exerted in the original state of matter to concentrate it into globes, and to move these globes through space, in ceaseless circuits around each other, are still displayed in such a manner as to create the physical and geographical changes of the surface, which everywhere arrest the eye of the most common observer. These forces, employed to produce the alternate elevation and depression of whole hemispheres in a quiet and inseasible manner, by a periodical change of density in the planet as it approaches or recedes from the sun, are oftentimes exerted in spasmodic outbreaks through various parts of the earth's crust. These local exhibitions arise from the tension of the whole molten interior of the planet; and those portions of the crust which are thinnest, or which have been weakened by previous subterranean action, yield the most readily to the pressure of the internal repulsive agency. Thus volcanic phenomena arise by the formation of fissures through the crust—and earthquakes, trap-dykes, craters, and inundations of lava ensue. These are the agencies employed to act beneath the crust for the purpose of disturbing the horizontality of original deposits. After these, comes the operation of atmospherical agencies which are so necessary to accomplish the disintegration and diffusion of the most ancient strata. Here we behold again the marvellous display of an infinite wisdom, and trace with an unmistaking eye, the links of adamant, which chain together the beginning and the end. The remote past, extending to chaos, and advancing step by step through the paleozoic ages, opens upon our wondering senses, like an immense panorama in which the events are so strange, great, numerous and complex as to overwhelm us with their grandeur, and to appear fab-

ulous and incredible. But the first display of forces by which matter was gathered up in space and formed into worlds, was connected beyond a question with the present condition of the globe, when the multiform deposits on its primitive crust are overturned and exposed, so as to become accessible to man, and to fit the soil for the most elaborate cultivation. Not a shower of rain falls on the hills, except those old store-houses of sedimentary rock, so full of siliciates and of the solid or dissolved remnants of the organic ages, yield up a portion of their fertilizing elements which flow over the plains or valleys endowing them with fresh energies, and enriching them with successive harvests of fruits and grain. The Nile in its annual inundations spreads itself over the broad vale of Egypt, loaded with the detritus which was first garnered up in the palæozoic seas. Thousands of years have not exhausted those fertilizing treasuries, and for thousands of years to come they shall continue to pour down their wealth upon the heated plains of Africa, and abundant fields of golden grain shall reward the toils of industrious husbandry. The great Sacramento valley is a counterpart of the valley of the Nile. The periodical overflows of the Sacramento and San Joaquin rivers are loaded with solutions and detritus gathered from the ancient rocks by countless rills which at last uniting into formidable tributaries, rush with impetuosity through the foot-hills of the Sierra Nevada. The gold which they transport is the least valuable of all their freight. The decomposed bones of one Ichthyosaurus or of one Mastodon would stimulate the growth of tons of wheat and barley, while the whole valley full of gold dust properly ploughed and harrowed, laid down with good seed and well irrigated, would breed a famine in the land.

But, all the products of the earth have their use, and are substantial articles of wealth, and they are not to be degraded below their real value by any system of philosophy. The same agency which turned up the coal beds and the strata so rich in the elementary materials of agriculture, has also exposed the metallic veins, and mankind has been endowed with faculties to discover the utility of iron, copper, silver and gold; and while one exerts an immense influence in extending his power, the other will not be without its influence in a more advanced state of civilization, in extending the warmest charities of the heart. Thus all the agents of nature will work together for the physical, intellectual, and moral development of human society.

It is not the object of a discourse so philosophical in its character as this, and extending over so broad a range, to enter into extensive details of any sort; but only, by a series of bold touches, to present a panoramic picture of the earth, and to show that, by special arrangements of Providence, it was directly prepared for the habitation of the intellectual races, and for the perfection of the immaterial nature with which they are endowed. The remains of man and his monuments are no where found below the surface, but through strata extending ten miles deep, we find the fossil exhibitions of previous life, advancing, in each successive series, from the original bare surface of the gneissoid rock, through higher stages of development, until, at last, man was created with the cow, sheep, and camel, which are so essential to all his pastoral and agricultural pursuits. It would be a delightful and instructive theme to walk with Adam and the patriarchs, and to dwell long on the nomadic employments which occupied primeval society during its unfoldings in Asia. But it is in Egypt that we trace the first developments of Agriculture, and discover its connexion with the mechanic arts, and with the refinement and wealth of nations. Even the pastoral and wandering tribes of Syria and Arabia became dependent on that prolific valley for bread; and science, learning and the arts flourished, and spread to the Indus on one hand and to Greece on the other. In Greece the same arts were cultivated under a new form of civilization, and added to them, were the luxuriant and sequestered groves of Athens, resounding with the eloquence of various systems of philosophy, and a hundred temples consecrated to mythological divinities whose especial province was to preside over the germination of the cereal grasses and the general fruitfulness of the land.

Some centuries later, we behold the great Roman dominion spreading over the east, and overwhelming all that is so resplendent in the history of the past, and endeavoring to appropriate to itself the refinements of agriculture, taste and the arts which had arisen in Egypt and been perfected in Greece. Wherever the Romans extended their arms over the barbaric races who inhabited Spain, Gaul, and Britain, they carried their agricultural tastes, and not only laid the foundation of new cities, but planted the vine and cereal grains, and introduced all the varied operations of husbandry. Such was the fruitful and smiling condition of the plains of Italy and of the whole south of Europe, that the fierce and naked sons of the German forests could not resist the temptation to invade them and enjoy their plenty. And though the fine arts and general learning were neglected and languished beneath the barbaric sky of the middle ages, nothing remained so undisturbed as the old implements and methods of cultivating the soil, and notwithstanding the rapid advancement of the white race, within two centuries, in astronomy, navigation, and some other lofty and useful pursuits, it is only within the present year that agriculture has begun to assume its proper position among the sciences. Botany, vegetable anatomy and physiology, in connexion with chemistry in the structure and habits of the cultivated varieties of the vegetable kingdom. Chemistry is exposing the nature of soils, and the nutritive, medicinal and economical qualities of plants. Meteorology is exhibiting the operation of the electrical forces and other phenomena which preside over the developement of germs, the circulation of the sap, and the formation of the ligneous fibre. Geology is unfolding to us the immense resources of the earth, and the rich composts of organic remains that have been garnered up from very remote ages to meet the endless wants of the pastoral and agricultural races. And while Physical Astronomy unveils the wonderful and mighty forces by which the earth is bound to the sun and to all other bodies in the universe, a new branch of inquiry which I propose to name Astrography, will, in the progressive development of science, explain the mysterious operation of the forces that elevate and depress the surfaces of the planets, and thereby create the great and numerous inequalities of mountain and valley which have exposed the sedimentary strata on the earth and rendered its face so fertile, and varied in temperature, and so suitable for all the wants of the human family. Thus, it may be observed, that researches in all the physical sciences directly extend the limits of agricultural knowledge;—and that agriculture as a science, is the complex offspring of all other departments of human learning; and, that it, embracing the kindred and more attractive pursuits of horticulture and floriculture, can only attain its *complete* development when all other sciences have reached their perfection.

Heretofore I have traced the history of the earth as especially intended for the ultimate habitation of man, and have endeavored thus far to show that the chief aim of the Creator was to store it with inexhaustible resources for man's *physical* aggrandisement. If you will grant me your kind indulgence a little longer, I will bestow a few reflections on what appears to have been even a higher aim of the Infinite will.

In tracing all the great geological and organic events,—and even the mutations of society,—as one order of circumstances succeeds another, we discover a tendency to improve on the past, and an undeviating advancement towards perfection. During the palæozoic, carboniferous, reptilian and even the mammiferous ages, the vegetable forms had not attained that degree of development and perfection which is found to exist in connexion with the appearance of the human race. Trees and plants bearing flowers and fruits attractive to the highest sensibilities and the most delicate faculties of appreciation, had not been created. But immediately preceding the advent of the human family they were called into being; and on the hill-sides and in the valleys, in the open plains and sequestered forests, they unfold their smiling petals, and hold out their varied fruitage to win the admiration, impart the most refined pleasure, and exalt the immaterial nature of man. Previous to this, the surface of the earth had not been so elaborated by the intermixture of organic remains, or so diversified in the elevation and temperature of its mountains and low lands, as to fit it for the multiform varieties of the vegetable family. Now we find it prepared, both in climate and soil, to nourish not only the imperfect types of the earlier ages, but the most complicated ligneous structures which adorn the colder zones. So various is the distribution of land and water,—of mountain ranges, broad plains and open or deep valleys,—of heat and cold,—and of the predominant elements derived from the different geological disintegrations and organic deposits, that the earth has at last become capable of sustaining an endless variety of vegetable forms. And this fitness for such diversified productions had never existed previous to the TERTIARY AGE. But now we behold the earth an immense Eden, luxuriant with every plant and "tree that is pleasant to the sight and good for food," and mankind placed in the midst thereof, with "the tree of knowledge of good and evil" overshadowing all, and the tree of life eternal unfolding its heavenly blossoms and winning mortals to repose beneath its blissful and everlasting shades.

The last vegetable germs planted on the earth by the Creator were those which produced beautiful and fragrant flowers and grateful fruits; and they are made capable of multiplying their forms and fragrance, and of being developed by scientific cultivation, to an extent not dreamed of by uninformed minds. Coincident with them appeared the last and most elaborate animal structure—that of the human race, endowed with lofty powers of understanding, and a spiritual efflorescence capable of the highest degree of expansion. These two classes of material and moral developments are intimately connected, and even dependent, one upon the other in the attainment of their ultimate perfectibility. They are linked inseparably together. The budding and blossoming of most lovely and odorous flowers are not only emblematical of, but they are positively united with, the growth and unfolding of the sweetest, most delicate and holiest affections of the human soul. Moreover, while it seems to especially appertain to the stronger and more masculine spirit of man to regard and cherish the forming of the fruit, the deep, humble, chaste, and sweet spirit of the cultivated woman, is exalted and beautified by its intercourse with flowers. So, under the spiritualizing influences of sickness and death, when all the hard and bitter memories of life are merged in the prospect of a more perfect state of being and of intercourse with angels and with the Creator, we instinctively gather around us the inspiring companionship of the sweet beauties and fragrance of vegetable forms, as types and emblems of the more perfect development of our own immaterial nature. Not only we, but after our frames are mingled with the common soil, the spirit of friendship and love,—the finite personification of the purest attribute of the Infinite,—still follows us, weaving garlands of flowers to connect the mortal with the immortal, and they are planted above our decaying forms, as living types of the heavenly nature which attains its full development only in the bosom of the Creator.

Thus God and the chaotic night of remote time are connected by the wonderful organic life of the geological ages with the human race, and with the present surface and soil of the planet, which are so essential to the happiness of man as a temporary, and to his intellectual and moral culture, and to his religious inspiration, as an immortal being. Eternity past is joined with eternity to come by a chain whose links are marvellous and beautiful as they are unbroken, from the beginning to the end. The past and future are alike connected with the fertilization of the soil, and with the creation of man to till that soil, for thereby he is fitted to perfect his physical and immaterial nature, to attain the highest refinements of civilization, and become prepared for still more exalted and enduring enjoyment.

Having traced some of the most remarkable events of the past, by bold and rapid touches of a pencil both feeble and unskilful, the final scene of the picture discloses the present age in peaceful possession of the broad alluvial valleys of this virgin and unbroken country. Its inhabitants, yet scanty, are surrounded with all the accumulations of scientific knowledge to aid in developing its resources. What a responsibility must rest on a community fully awakened to the providential character of their destiny! Cast your eye over the physical geography of the western slope of the North American continent, and behold this comely region of the earth. God, in his government of the great physical and moral affairs of the globe, has reserved it until the present age, to give a fresh and more vigorous impulse to the development of human society. It holds the same relation to the ancient nations and to old forms of civilization, as does the modern geological age to all that preceded it. It is the last stratum overlying all the rest, a sort of compound accumulation of all previous deposits, from which shall spring the most diversified abundance, and where the richest flowers and fruits shall flourish with perennial increase. The old nations lie buried thousands of years deep below us. The primeval Asiatic growths of intelligence are so profound and ancient, that like the slate-beds and limestones of the primitive seas, the mere rudiments of life are discovered by only a doubtful tradition. The misty spectres of old Egyptian dynasties,—with their pyramids, temples and sphinxes—sucking the lifeblood of the Hebrew tribes and of the common people, sweep before us and pass away, like the gluttonous races of the palæozoic ages. A succeeding epoch brings forth new forms of intelligence, and Greece—so beautiful and magnificent—so rich in letters, philosophy and the fine arts—instinctively rises before the mind, as an emblem of the verdant and prolific creations which adorned the earth during the carboniferous era. Stored away in the dark abysses of revolutionary time,—covered up by the fragmentary and refuse materials of a hundred generations, are those wonderful remains of Homer, Plato, Socrates, Euclid, Hippocrates, Xenophon, and scores of other immortal men, whose resplendent genius warms and illuminates these later times.

A new social fabric arose over the decaying institutions of the Peloponesus, and Rome, with her ponderous armies and devouring ambition, overwhelmed the world, playing the part of a secondary age, swarming with monsters alike distinguished for their cold blood and for their ferocity. On the ruins of this imperfect civilization, sprang other developments of society, improved and embellished by the addition of the christian element, and a spirit of scientific inquiry. This was a sort of tertiary age in the history of the moral world, when the old Spanish monarchy, the French empire, and British sway, were represented by the palæotherii, megatherii, and mastadons—the creation and destruction of whose huge forms were to prepare the earth for the great American epoch—the last stratum in the successive developments of human society. The mingling of the culture of decayed nations—the Oriental, Egyptian, Grecian, Roman, and Saracenic—with the christian and scientific elements of the modern era, constitutes that vast store of intelligence and wisdom—that rich subsoil from which are springing the thousand inventions and intellectual enterprises which adorn the human character as the flowers and fruits adorn the present surface of the earth. This favored land of our adoption is now in a state of partial submersion by the last great moral deluge. The richest alluvium is fast settling from the turbid waters that have rushed over it with such astonishing impetuosity, and an intellectual soil will soon be formed, whose vigor and fertility will well compare with the agricultural strength of its prolific valley bottoms. The last social stratum is forming from the accumulating detritus of all past races, and of all the kingdoms of nature, and from this shall spring the most elaborate and abundant growths of intellectual and moral enterprise.

As firm as are the throws of the Coast Range, California is still but a nursery of a more perfect race, at that, hurled in the primal ages and enriched with the stupendous contributions of all the centuries of the earth. While its very [illegible] the present and [illegible] of [illegible] and of every species of [illegible] and [illegible] are [illegible] its developed energies [illegible] industry and [illegible] to lay upon the [illegible] of wealth.

The very act of decomposing the rock, to prepare the foundation of a productive soil, has distributed a precious medium of commercial intercourse throughout the surface of the highlands and the beds of the streams, and exposed it to the easy access of toil, as a stimulus to all sorts of enterprise. The broad and prolific valleys of the land have gone through their pastoral epoch, and their deep and rich alluvial bottoms are inviting enlightened husbandry to unfold their exhaustless fertility. No dense forests cover the earth, to retard the hand of the ploughman; but an open and boundless fallow allures him to turn its surface, and to plant a hundred golden hopes with every grain of golden seed. The mountains send up cedars so many fathoms high, as to remind us of the gigantic productions of the ancient ages; while the valleys give nourishment to roots, cereals, and succulent vines, whose yields would appear fabulous, did we not possess substantial evidence of their extraordinary growth and plenteousness. A million flowers announce with a million voices—from the earth and from the heavens—that the fullness of time has arrived, when the human soul shall accept the silent and sweet revelations of nature, and vanish from the sunlight with the profound conviction that mortal life is only a bud of inspiration, created to blossom in the elysian gardens of immortality. From the broad declivities of the Sierra Nevada to the rock-bound shores of the neighboring ocean, and from the icy summits of the Siskiyous to the sunny vales of the vine-clad south, the genii of rural wealth lift their smiling faces from the soil, at the magic touch of the ploughshare and reaping-hook, and mingling their hymns with the inundations of the Sacramento, proclaim that lawgiver the greatest benefactor to the commonwealth, who advocates the most liberal enactments for founding agricultural institutions, for stimulating agricultural enterprises, and filling the barns of the people with overflowing abundance.

In reaching, at last, the closing view of this hasty and imperfect tableau, we find ourselves standing on the summit of the ages; and the immense vista of the past, filled with a succession of startling events, gradually receding before our eye, till all is lost in the profoundest night of chaotic antiquity. From the first dawn of a creative force, we behold, little by little, the unfolding of a scheme, at first indefinite in its object, but at last so clearly revealed, that we marvel at the amount of power, and at the infinitude of time, expended to lay down the agricultural and horticultural foundations of the earth. The great and unmistakeable fact bursts upon us that the time occupied—however incalculable and infinite its duration—was especially spent for purposes connected with the intellectual races. The whole scheme was planned and developed to prepare the earth for man. The inference is as positive as the duration of organic life is infinite and incalculable, that the creation of man is the last organic act intended by the Creator, and that his existence shall be without end, and his intellectual development eternally progressive. The history of the earth proves the truth of this declaration. For, now, nothing is wanting to stimulate the industry or the faculties of man. All past organic creations have stored the earth with their riches; and as human wisdom gathers together merchandise of food, raiment, and fuel, for long and adventurous expeditions, so the Almighty has consolidated stratum over stratum, of rich materials, which dissolve at even the touch of a dew-drop, and transform their solid shapes into esculent roots, herbs, and fruits. The economy of nature is such that no losses ensue to the surface of the earth. All that springs from it returns to enrich it still more. The preparatory ages have long since past. Even society has emerged from its infantile and preparatory stages, and science so completely controls modern civilization, that the human faculties have no rest, and seek none, short of perfection. That perfection, in the nature of things, can never be reached, and therefore, human progress becomes eternal: and as beautiful trees not only adorn the landscape, affording shade and nutriment to roaming herds, but mingle their decomposing substance with the earth, to stimulate the growth of new and more refined forms of organic being, so, not only do the *lives* of great and good men impart light and beauty to the social state, but their *death*, also, awakens fresh developments of intelligence and virtue. Thus, all nature tends to refinement; and though the processes of accomplishing its ends are silent, they are neverthless positive; and they appear slow because DURATION is the broad stage on which man is to act his part, and to consummate his destiny.

WITHOUT A PARALLEL.—The amount invested in school houses in Boston is $1,5[illegible],000. The yearly appropriations for education are $1,2[illegible],000, while the amount raised for all other yearly expenses is only $8[illegible],000. The amount expended for instruction in the common schools of Massachusetts last year was $1 50 for each child between five and fifteen years of age in the State. This is unquestionably the best [illegible] ever afforded upon [illegible]; [illegible] city out of [illegible] which [illegible] the [illegible] of the shadow of an approach to [illegible] ever been heard of—[illegible].

WATERING CATTLE.—[illegible] apply [illegible] to [illegible]. [illegible] are [illegible] to [illegible] of [illegible] and [illegible] a week. [illegible] and [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, APRIL 27, 1854.

Reclamation of Swamp Lands.

We have before us the bill for the reclamation of swamp and overflowed lands: after a perusal of the bill we are led to fear that by its provisions there will be little inducements for any one to enter these lands.

It will be seen that *one dollar per acre must first be paid*, and an additional cost of construction of drains and sewers taxed by the county officers.

We must note also that at the end of *twenty years'* effort, if the land is not reclaimed, it must revert to the State.

We would respectfully ask if it would not be a more enlightened policy on the part of our government to offer a *bounty* for reclaiming these lands instead of TAXATION, to those who make the effort to reclaim them.

The term reclamation, signifiies something lost; and we believe it is customary to offer REWARDS to those who restore lost property. Would it not be considered rather hard to any person, if after labor and and expense they should restore to a friend a valuable property—and instead of a *return of the cost*, and a grateful acknowledgement of services rendered, they should be subjected to still further costs and trouble?

If our government desire to bring into value the vast waste lands of California, they should offer a liberal inducement, and we would suggest that a certain number of sections be donated to those who will take possession and improve them and for the section that shall be found in the best condition after five years—as a committee shall adjudge—a premium of one thousand dollars shall be given. Let this be done, and the swamp lands and waste places of California will soon "blossom as the rose."

Let the Legislature of California act with a liberal hand, and the encouragement it shall give will soon revert to the State in the improved value of all her lands, and the increased prosperity of her people.

This bill, introduced by the able member from Yolo, we trust will receive the attention it deserves, and if the course pursued be a liberal one, great good will result from it—if not, the bill will be a dead letter, for no person will enter waste lands without a liberal bounty.

Afternoon Ramble.

STEALING an hour from busy care, we strolled away over the plank road to the Mission, to breathe the fresh air and note the progress of Horticulture and floriculture.

We paid a visit to the ground of Mr. Centre, at the Mission, recently under the care of Mr. Sontag, and now under the especial direction of Mr. Saul, a brother of the present proprietor of the famed "Newhurgh Nurseries" of the late lamented Downing.

We found great pleasure in viewing the fine collection of plants in the conservatory—many roses, carnations, verbenas, &c., in full bloom and evincing care, skill, and taste in their cultivation.

In the garden we noted a very fine trellis of trained peach trees, all showing fruit very abundantly. We saw also many well-grown peach, pear and cherry trees as standards; strawberry beds in excellent order, giving promise of a fine crop. Roses and other blooming plants ornament the borders.

Mr. Centre is doing much to cultivate a love of floriculture in the community by the taste manifested in his grounds, and the valuable varieties of trees and plants introduced.

We were invited to visit the new fruit garden now in process of laying out, opposite to the old garden. In this place Mr. Centre has many hundreds of thrifty *peach* and pear trees, in very fine order, planted in rows, at right angles. Between every row of trees strawberries are planted. The cultivation of the strawberry between the trees keeps the ground in good order, and gives the trees a vigorous and healthy tone.

Currants also are receiving special care, and as Mr. Centre is constantly extending and improving his grounds, we may expect in a short time to find this garden one of the finest and most productive in the State. Mr. Centre was very courteous and attentive, showing us through the grounds and giving us a sketch of his plans, &c. We saw and recognized young plants of the *Paulonia Imperialis*, a splendid shade tree, of very rapid growth. It will be very gratifying to those who feel interested in this science, to visit Mr. Centre's gardens, and we can assure them they will be much gratified by what they see.

There are many flower gardens at and around the Mission, and many extensive vegetable grounds. They all have the appearance of being well cared for.

While at the Mission we heard the "bell" of the "Old Mission Church" toll for "Vespers," and we felt an inclination to enter and witness the forms that still exist. The altar, with the candles burning, was there, and the priests, and all the accustomed forms and devotions were performed. *One Spanish woman and two children, only, were present without the rail.* We listened a little time and then turned away, feeling that such scenes could not interest us so much as those where nature was revelling in beauty and fragrance.

A stroll farther upon the hills, among the native flowers for a while, and we soon entered the omnibus and returned to the city, refreshed by our ramble.

GAS FIXTURES.—It is very gratifying to see the improvements in every department of mechanics in California. Already we are independent of other States for large and valuable machinery and for much of the ornamental work now used in every department of manufactures. It will interest all who are receiving the benefit of Gas light to visit the extensive manufactories of Messrs. Donahue & Co., corner Mission and First streets, one of the most extensive in the country. From the massive boilers and huge steamer machinery to the most finished and ornamental pipes and burners for gas—all are to be found here. It is important that the mining interest should be apprised of a manufactory where they can receive whatever may be necessary in mining operations, and cheerfully commend them to visit this establishment.

REV. S. WOODBRIDGE'S LECTURE.—We should publish entire this most able address, were it possible. In another column we have extracted portions of it, and feel assured our readers will appreciate them, and obtain, at the earliest moment, the entire Lecture. It is published in the Alta California of the 22d, and does honor to the head and heart of the author.

Interior Items.

THE following letter found in the pocket of the late James Sutton, who recently committed suicide in Sacramento, speaks volumes of warning to those who recklessly rush to this country without some definite and well digested end in view, and teaches those who are here the necessity of economy:

SACRAMENTO CITY, April 18, 1854.

Mr. William Mecasky—I write these few lines to let you know the reason of my death. I have been in this country since forty-nine, and I have never had to live on charity before. I have tried hard to get work, but cannot; and to live longer in the way I have been living is impossible. I have no more to say, but God bless you all, and give you a better end than mine.

JAMES SUTTON.

I have pawned my tools on J street for forty dollars, to pay some small debts that I owed. Amen.

SUICIDE.—An artist, named Benj. F. West, supposed to be from Salem, Mass., committed suicide a few days ago in Fremont township, Santa Clara county, by shooting himself through the head with a rifle bullet. Depression of mind, caused by destitute circumstances, is supposed to have been the cause that led to the deed.

Messrs. Judah, Edwards & Co. took out of their claim, in the vicinity of Mud Springs, one day last week, some rich specimens of quartz; the largest one weighing 21 lbs. and 10 ozs., and being estimated to be worth $1,000.

New diggings have lately been discovered on the south branch of the middle fork of the Consumes, both in the bed and on the banks. Some $1200 worth of dust was taken into Indian Diggings from that vicinity, and said to be as fine a lot as any ever produced in the country.

EDITORIAL CHANGE.—In consequence of a threatened permanent disease of the lungs, Dr. L. C. Gunn has retired from the editorship of the Sonora Herald. Under his management the Herald has attained a high position among the Democratic papers of the State. He is succeeded by Messrs. O'Sullivan & Murray, whom we wish every success.

The Sacramento River has been on the rise steadily for the past week, and has now attained a height nearly equal to that of last winter. The American has also raised, but not so much as the other. The warm sun has melted a goodly portion of the snows of four months' accumulation on the mountains, but as there is much more left we may expect high water for several weeks.

The Yreka Herald says that the miners in that vicinity are doing well, and that business in the city is brisk. Several brick yards are in operation, and the erection of quite a number of brick buildings is contemplated. The farmers and gardeners of that region are taking the necessary steps to irrigate during the dry season, by using the water of the Shasta river.

The Sacramento Democrat is informed that eighteen hundred ounces of gold were purchased last week in Downieville by Langton & Co. The fact speaks well for the mines in that region.

Twelve or fifteen four horse teams, loaded with Celestials, left Sacramento on Saturday, bound for the mountains. Large numbers have been passing along for several days.

Owing to the scarcity of water but little mining has been doing in the vicinity of Pilot Hill. The few that have water are doing well, and could a plentiful supply be obtained, it must be a flourishing camp during the summer, as it has the reputation of being a good mining locality.

Go'd Hill still maintains its well earned reputation, and the miners in that vicinity are doing a good average business.

The mining in the vicinity of Union still holds good. A large number of men are profitably employed, and the prospect for a good summer's work is cheering.

A specimen has been taken out at the Lower Springs, Shasta, by Mr. Pickett, weighing twenty five ounces of pure gold, without the slightest speck or stone in it.

At French Gulch a company of three Frenchmen had taken out six hundred dollars in one day. The miners generally are making from $8 to $16 per day.

The miners along the South Fork of the Yuba appear to be doing better this year than at any former time. One reason for their success is that the miners have more facilities for getting machinery into use, there being an abundance of lumber in the immediate vicinity

WRECK OF CLIPPER SHIP GOLDEN FLEECE. This fine ship, in going out of the harbor on Saturday afternoon, missed stays and went ashore about one hundred yards outside Fort Point, where she is laying broadside on, her mizen-mast gone by the board, and topmasts by the mast heads. Most of the crew and one of her boats were brought to the city the same evening. She was full of water, though resting easy; she had a large hole in her bottom, but not otherwise seriously damaged, and possibly may be got off. She was sold at auction on Monday, for $2,600. The purchasers, Messrs. Silas E. Burrows and and others, intend to get her afloat.

The Golden Fleece was owned by Wm. F. Weld & Co. of Boston, and is two and a half years old. She is not known to be insured. The cause seems not to have been mismanagement in sending her to sea with a drunken crew, as at first reported. On leaving the wharf, the steamtug towed her clear of the shipping as sail was being made on her, and as she cast off the tide was ebbing, with a good breeze from the west. It seems to have been one of that class of accidents which sometimes happen to the most careful and prudent.

LOSS OF BARK WALTER CLAXTON.—The bark Walter Claxton, Capt. Joseph Folger, started from Mendocino on Friday last, about noon, and when about ten miles out she was found to be partially filled with water. A heavy sea struck her about this time, laying her on her beam ends and she soon after turned completely bottom up. She had on board sixteen persons, including the officers and crew, who succeeded in getting a boat, but it was soon after upset. Capt. Turner, of the sch. Taranto, went to their assistance, and succeeded in saving three persons, at the risk of the safety of his own vessel and crew. The persons saved by her are, Henry Coons and John Moore, passengers, and Nicholas Holsen, seaman.

The Walter Claxton was a bark of 156 tons, and belonged to the California Lumber Company. The loss is about $20,000. She had 180,000 feet of lumber on board, her usual freight.

U. S. Land Commission.

AT the meeting of this Board on Tuesday, 25th April, the following cases were disposed of:

No. 433—Claim of Isaac Williams to Santa Ana del Chino, confirmed.
No. 457—Claim of Francisco Sopulveda to San Vincente o' St. Monica, confirmed.
No. 130—Claim of Francis Larkin et al. to Larkin's Rancho, confirmed.
No. 339—Claim of Juan Abila et al. to El Miguel, confirmed.
No. 60—Claim of Jose Dolores Pacheco to Santa Rita, rejected.
No. 292—Claim of Urbano, Odon et al. to El Escorption, confirmed.
No. 31—Claim of Ysabel Yorba to Guadualazca, rejected.
No. 737—Claim of Archd. A. Ritchie to part of Napa, confirmed.
No. 694—Claim of Ann McDonald et al. to part of Napa, confirmed.
No. 345—Claim of Manuel Sarfias to San Pascual, confirmed.
No. 406—Claim of Jose Supulveda to San Joaquin, confirmed.

AGENTS FOR CALIFORNIA FARMER.

New York City, N. Y.—J. M. Thorburn & Co.
N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

A Premium---Farmers' Clubs.

WITH the hope of inducing such of our friends, and those who have a little leisure, to ride among their neighbors and introduce an AGRICULTURAL PAPER, we take pleasure in offering the CALIFORNIA FARMER: and, to make it an inducement, we say to such friends—if you will get us FIVE subscribers, and remit the amount, we will send you SIX PAPERS, or for TEN subscribers, TWELVE PAPERS. We trust there are many friends who will cheerfully take a little pains to aid us, and thus extend the circulation of the FARMER, and make a useful vehicle for the Agriculture of California.

Subscribers will please be particular to name the Post Office to which papers are to be sent; or, if forwarded by express, which line they prefer.

We want good active agents to visit every county in the State for the FARMER. Young men can find a steady and profitable employment. Apply at this office.

Our paper will always be found at the store of Messrs. GARDINER & KIRK, newsmen, Third street, Sacramento—on mail days neatly enveloped and ready for mail. To those who wish to show their friends in the States how Farming operations prosper in California, this will afford a good opportunity.

MARKET REPORTS.

San Francisco, April 25, 1854.

The Grain Crops never looked better. The late rains will give a strength and a tone that will add a large per cent to the crop. Farmers are looking with hope to the present crop to relieve them from the losses of the past.

General vegetation, root crops, &c., never gave better promise, and the prospect of a good crop of various fruits is cheering. Grapes, Peaches, Pears, Strawberries, and Figs will form a handsome crop this season in our markets.

MARRIED.

On the 17th April, in this city, by Rev. A. Williams, Mr Henry G. McLean, of San Francisco, and Miss Kate Campbell, late of Boston.

[Boston and Halifax papers please copy.]

On the 25th April, in this city, Mr. Valentine Tacobold, of Leeds, Yorkshire, England, and Helen Hatton Dunn, from the county Fife, Scotland.

On the 23d inst., by Rev. S. H. Willey, Benjamin Franklin Reed, formerly of Massachusetts, and Mary Kennedy, of this city.

On the 20th April, in Sacramento, Mr. Lloyd Tevis and Miss Susan G., daughter of Col. Lewis Saunders, Jr., of that city.

On the 23d April, in Sacramento, W. R. Johnson and Miss Helen Rowman.

On the 24th April, in Sacramento, James Daly and Miss Mary Davies, eldest daughter of Mr. T. W. Davies, of Sacramento.

On the 29th April, in Sutter, Herman Leimbach and Catherine M. Bullhant.

DIED.

On the 20th April, in this city, at Wilson's Exchange, of chronic diarrhœa, Capt. Wm. E. Hendy, of Chelsea, Mass., aged 45 years.

On the 23d April, in this city, after a lingering illness, Sarah, the beloved wife of Peter A. Owens, Esq., in the 23d year of her age.

On the 25th April, in this city, Elizabeth Martha, wife of John B. Halford, of England, aged 27 years.

On the 15th April, in San Pablo, from injuries received by the explosion of the steamer Secretary, Stephen J. Wright, son of the Hon. Stephen A. Wright, of Rhode Island, in the 19th year of his age.

On the 15th April, was drowned off Point Quentin, Dr. John S. Becuer, late Superintendent of the State Prison at Marin city, aged 35 years, formerly of Philadelphia.

[Pennsylvania papers please copy.]

On the 21st April, of disease of the heart, Gilbert Lester, late of Patterson, N. J., aged 32 years.

On the 19th April, in Nevada, Samuel S. Green, aged about 36 years.

OBITUARY.

THERE are so many ways in which death approaches us, that we ever feel, even in health, that life is uncertain. We are continually reminded that the brightest and most cheering hopes are most like likely to receive a sudden blast. Most clearly is this verified by the case of James Mills, Esq., of Sacramento, whose death occurred recently. We received the facts of his death and his loss by last steamer.

Mr. Mills came to Sacramento in 1849, and his long residence gave him many friends. Mr. James Mills is the senior partner of the banking house at Columbia, and also partner in the banking house of D. O. Mills & Co., of this city. Mr. D. O. Mills and brother were lately on a visit to the East. Mr. James Mills was improving in health when his brother returned, two weeks since; but these hopes were de-troyed, and the next steamer brought news of his death. Thus have fond hearts been separated, and plans of human happiness been blighted. Mr. Mills was seized with an attack of paralysis at Sing Sing, N. Y., on the 18th March, and died at 5 o'clock P. M., same day. The loss of one so energetic and enterprising is a sad calamity—but California is witness to such calamities. Widely as Mr. Mills was known, so widely will his loss be deplored, and firmly as he had gained the esteem of friends, as firmly will his memory be cherished.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO.

ARRIVALS.

APRIL 19—Br ship Lord Warriston, Cubitt, 48 days from Hong Kong, with mdse.

I'LL PRAY FOR THEE.

[The following poetical gem, written by Miss MATILDA HERON, and originally published in the Philadelphia Spirit of the Times, more than five years ago, shows that the lady possesses other than mere dramatic talent. It is but proper to acknowledge that it, along with some others, was rather surreptitiously extracted from her scrap-book, during her visit to this city, and is now re-published without her privity. The excellence of the *stolen* article must be an excuse for the *theft*.—*Marysville Herald.*]

I'll pray for thee! when o'er the em'rald billow
Thy light bark ploughs alone its liquid way;
Yet ere my cheek at evening meets my pillow,
My thoughts in prayer to Heaven for thee will stray.

As clouds against the fair horizon parting,
Distill their darkness o'er the troubled sea,
So from my soul the burning tear-drops starting,
Fall o'er my breast, which trembling throbs for thee.

I'll pray for thee, when o'er thy pathway pleasure
Fills up the cup of peace I may not share,
And think beneath thy smile my own small measure
Would flow with sweets that must be gall elsewhere;

When palsied hopes, like aspen leaflets, shiver
Within the breast, which thou alone couldst stir,
And friendship's chords in their low murmurings quiver,
Lest in their strain the world should deem they err.

Another's smile may o'er me fondly glisten,
And I may languish in its purity;
While to his words with tenderness I listen
I dare not hope, but oh! *I'll pray for thee!*

—Philadelphia, January, 1849.

WHERE IS BEAUTY TO BE FOUND?

There's beauty in the rose!
When first the young bud opens, fresh and gay,
Throughout the air what heavenly perfume flows!
How many a blush these modest leaves display!
There's beauty in the rose!

There's beauty in the grove!
In the majestic stature of the trees;
In the dark leaves which their tall branches clothe,
And wave in union with the passing breeze!
There's beauty in the grove!

There's beauty in the sky!
In the clear azure of a summer's day:
The rainbow's colors; sunset's crimson dye;
And the dark night hung in her bright array:
There's beauty in the sky.

There's beauty in the sea!
In the wild grandeur of its rolling waves;
Its untold treasures, costly, fair, and free,
That lie deep buried in its coral caves:
There's beauty in the sea.

There's beauty in all things!
'Tis richly stamped on every thing of earth;
But richer beauty from that Being springs,
Whose unseen loveliness they shadow forth!
There's beauty in all things!

LITTLE THINGS.

Little drops of water,
Little grains of sand,
Make the mighty ocean
And the beauteous land.

And the little moments,
Humble though they be,
Make the mighty ages
Of eternity.

So our little errors
Lead the soul away
From the paths of virtue,
Oft in sin to stray.

Little deeds of kindness,
Little words of love,
Make our earth an Eden,
Like the heaven above!

THE PIN AND THE NEEDLE.—A pin and a needle being neighbors in a work-basket, and being both idle, began to quarrel, as idle folks are apt to do.

"I should like to know," said the pin to the needle, "what you are good for, and how you expect to get through the world without a *head*?"

"What is the use of your head," replied the needle rather sharply, "if you have no *eye*?"

"What is the use of an eye," said the pin, "if there is always something in it?"

"I am more active, and can go through more work than you can," said the needle.

"Yes, but you will not live long."

"Why not?" said the needle.

"Because you always have a *stitch* at your side," said the pin.

"You are a poor crooked creature," said the needle.

"And you are so proud that you can't bend without breaking your back," said the pin.

"I'll pull your head off, if you insult me again," said the needle.

"And I'll pull your eye out, if you touch my head," said the pin. "Remember that your life hangs by a single thread."

"I would rather be threadless than headless," said the needle.

While they were thus contending, a little girl entered, and undertaking to sew, she very soon broke off the needle at the eye. Then she tied the thread around the neck of the pin, and in trying to pull it through the cloth, soon pulled its head off, and threw it in the dirt by the side of the broken needle.

"Well, here we are," said the needle.

"We have nothing to fight about, now," said the pin. "Misfortune seems to have brought us to our senses."

"A pity we had not come to them, sooner," said the needle. "How much we resemble human beings, who quarrel about their blessings till they lose them, and never find out they are brothers till they lie down in the dust together as we do."

THE TEST OF LOVE.—All that Albert Drurer's wife cared about, was her husband's love, and of that she wished to be certain. She concluded, therefore, her honey-moon in this way: One night she became very ill, and the artist was alarmed. She desired some tea: the servant was called up—Susanna appeared, and now sat the good husband, and held the little teapot over the flame of the lamp to boil, till it became too hot for his fingers, and then Susanna held it by the handle till it was too hot for her; and willingly the master took his turn. Thus they both sat, talking in an under-tone, and looking at each other with anxious countenances, till it boiled. When, however, Susanna was gone, and Albert carried the tea to his dear, beautiful Agnes, there she lay laughing under the coverlet. She flung her arms around his neck, and said—"I only wished to see whether thou really carest for me. Now, drink thy own tea to cure thy fright," and he drank, whilst she blew upon his smarting fingers, kissing, meanwhile, the points of them. Whether every husband would be pleased after such a deception, we cannot undertake to say.

A TRICK ON BEGGARS.—At Florence, some few years ago, it was proclaimed that every beggar who would appear in the grand plaza, at a certain mentioned time, would be provided, by the duke, with a new suit of clothes, free of cost. At the appointed time, the beggars of the city all assembled, and the grand duke, causing all the avenues to the square to be closed, compelled the beggars to strip off their old clothes, and gave each one, according to the promise, a new suit. In the old clothes thus collected, enough money was found concealed to build a beautiful bridge over the Arno, still called "The Beggar's Bridge;" and the city, for the time being, was relieved of the beggars by which it had been previously overrun, as none would give to the well-dressed individuals who implored charity, not believing their tale of distress.

THE FIVE DAUGHTERS.—A gentleman had five daughters, all of whom he brought up to some useful and respectable occupation in life. These daughters married, one after the other, with the consent of their father. The first married a man by the name of Poor; the second, a Mr. Little; the third, a Mr. Short; the fourth, a Mr. Brown; and the fifth, a Mr. Hogg. At the wedding of the latter, her sisters with their husbands were present. After the ceremonies of the wedding were over, the gentleman said to his guests—"I have taken great pains to educate my daughters, that they might act well their parts in life; and from their advantages and improvements, I fondly hoped that they would do honor to my family; and now I find that all my pains, cares, and expectations, have turned out nothing but a *Poor, Little, Short, Brown Hogg.*

"Madam," said a boarder to his landlady, at breakfast the other morning, "your coffee is abominable—it's not settled." "Indeed," coolly retorted the lady; "you'd better settle for the coffee, and then complain."

AN Irish gentleman, the other day, in the excess of connubial affection, exclaimed—"Heaven forbid, my dear, that I should ever live to see you a widow!"

TIME.

Great Sale of Fruit Trees.

APPLE, PEAR, CHERRY AND PLUM TREES—RASPBERRY, CURRANT, FIG, GRAPE, &c.

WE shall offer every day, at 11 o'clock, in lots to suit purchasers, at our rooms, Musical Hall, the above varieties of Fruit Trees. They are in fine condition and worthy particular notice. WARREN & SON,

8-tf Musical Hall Building, Bush street.

Threshers, Separators and Cleaners.

PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any other machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—four for the separator, two for the power, &c.

Also, EMERY'S Threshers and Separators, of Two Horse Power.

We have also on the Golden Fleece, two of HALL'S (Rochester,) Latest Improved Threshers, Separators and Cleaners, Eight Horse Powers, all complete.

Also, four of HUSSEY'S REAPERS and MOWERS, all combined.

For sale by COIT & BEALS,

9 tf 94 Battery street, office up stairs.

Osage Orange, Raspberries and Currants.

10,000 Plants of strong growth, just received. 500 extra size Raspberries, the far famed that produce in such incredible quantities.

For sale by WARREN & SON.

FLOWERS! BRIGHT FLOWERS!

A GIFT FOR HOME.

"THROW PHYSIC TO THE DOGS."

WE convert the pill box into a Floral vase, and instead of the "nauseate drug," we offer the perfume of Flowers. Our beautiful collection of *California Flower Seeds* we now offer.

These are put up in handsome morocco cases, or homœopathic cases of glass bottles, with printed lists and directions, and with pressed flowers of the different varieties of each. These are of the most beautiful style that can be prepared, and are most appropriate gifts for home at this season.

We invite attention to them at our rooms, at Musical Hall Buildings. WARREN & SON,

5 Seedsmen and Florists.

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the Fire Proof Store No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Hecolt and Godleg.

Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any adulteration.

Ground feed of all kinds always on hand.

Every exertion will be used to merit a continuance of the vator heretofore so liberally extended to us. 1-tf

Catalogue of Fruit and Fruit Trees.

WE call the attention of Nurserymen and Orchardists to a new catalogue just issued by us, prepared with great labor and cost, giving the lists of the best fruits cultivated in Europe or America, with their synonyms. This catalogue embraces also lists of best Vegetables, Ornamental Trees, Flowering Plants, Seeds, &c.—being a perfect illustration of the best varieties of everything belonging to AGRICULTURE, HORTICULTURE, and FLORICULTURE, with brief directions for the cultivator in each department, and as *adapted to California.*

This work will be found a very great help to all engaged in cultivation.

Price $1 per copy. WARREN & SON,

5 Nurserymen, Seed-men, and Florists, Musical Hall Buildings.

New Drug Establishment.

A. T. McCLURE, having completed and moved into his fire-proof Brick Store on Bush street, has just opened and offers for sale a splendid and complete assortment of fresh Drugs of extra quality, received by recent arrivals from the Eastern States

Prescriptions carefully put up at all hours.

Country orders promptly attended to.

A. T. McCLURE,

6t No. 42 corner Bush street and Bryant Place.

10,000 FRUIT TREES,

Grape Vines, Fig Trees, Raspberry and Current.

WE invite all who intend planting Trees and Vines to call on us before they make their purchases, as we can offer them many advantages that cannot be found elsewhere. Our collections, we know, are the most extensive, and the quality the best that can be had. We therefore invite all to call on us: we can show them, in our Exhibition Rooms, the samples of the actual fruit they produce. WARREN & SON,

Musical Hall Buildings, San Francisco, and 15 J street, Sacramento.

GRASS SEED.

10,000 LBS. NEW GRASS SEEDS—Timothy or Herds' Grass, Red Clover, White Clover, Red Top, Kentucky Blue Grass.

Persons wanting the very best seed are requested to give attention to the above. WARREN & SON'S

Musical Hall Building, San Francisco. And J street, Sacramento.

Shells for Garden Walks.

A VERY handsome species of Shells for Garden Walks, have recently been discovered and are now ready for delivery: they will form a compact and beautiful walk, *hard*, free from weeds, and give a finished beauty far beyond the cost of material and expense of preparation.

Samples can be seen at, and orders received by the subscribers, who will give all needed information, and who will act as agents of the discoverers and proprietors.

BATES' SUPERIOR

UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.

Soil, Propagation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top sod at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.

If the land is poor, so that grass and weeds will not vegetate, then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable.

Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in meadow moss, and well boxed, which will enable them to go to a great distance in a fresh state.

The proper time for Fall transplanting is October and November; for Spring, from the opening of the same till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting, and during the winter for Spring. 15

SULLIVAN BATES,

ADVERTISEMENTS.—A limited number of Advertisements will be inserted at the following rates: For one square of eight lines, per month, $6. For business notices of five lines or less per month, $4. A slight reduction will be made to regular advertisers.

Twilight Musings.

BY JANE L. FLEET.

"Oh, spirit-land! the land of thought," thou art without limit and without boundary. Thought will wing its way back to the beautiful home of childhood, the loved friends of youth, and all endearing associations that cluster around one's early days. The heart may be cold to outward seeming, it may be ruled by ambition, hardened by the love of gold, or led on by the desire for fame; but however isolated man may be, however unloving he may seem, there will still be one vital spark in the affections that will kindle when, in some lonely hour, the thought of his youthful days, like the muse of a half-forgotten dream, sheds its radiance around him; and though the sensation may be evanescent, it will be so sweet that he will desire, were it possible, to break the bonds that bind him to earthly objects, and to grasp the visions of his youth, and revel in their pure light for ever; but he sighs to think that his happiest days are passed, and must ever be to him like a star that has fallen, a happy dream that has passed away, or a romance that has died in the dark shadow of reality.

The poet, when seeking a theme for his loftiest verse, will turn with affection and pride to his early home, where first he felt the divine inspiration of poetic fire; where first he roamed the wild wood, or listened to the warbler's note, gleaning something round which he might weave, with God-given power, his glowing fancies; and as he traces their pure imaginings, he feels that life is full of poetry and thought. Every breeze that trembles, every flower that lifts its chalice to the sun, and every bird that warbles its gladsome lay, wafts a cup of incense to the shrine of poetry; yet all the brilliant tissues that a loving heart could weave would still bow to early associations as the source from which the inspiring power had flown.

It matters not if the home be lowly, love and poetry will find sweet music in the babbling rivulet; affection within the cottage walls; rest on the green earth, and sublime beauty in the frowning precipice. It will find a calm delight in the hour of sunset, when the king of day is slowly sinking behind the western hills, pouring an unclouded blaze of light on all surrounding objects; and as its beams rest upon the hushed deep, gilding the green billows, and again reflecting back to earth with increased radiance, forming the paradise described in the glowing language of the poet, it will crown with laurels his anxious brow, and send a soothing whisper to his fainting heart.

The sunset hour is a fitting moment for reflection. Even like the sun must all mankind sink into their last resting-place, perhaps when in the same meridian of glory as this brilliant orb. It would seem as though the evening hour should be a peaceful one; such lovely harmony and quiet pervade all nature, that mankind should then bid adieu to the turmoils of the day; but it is not thus. The sun moves onward, still onward in its appointed course, through the beautiful, unfathomable depths of blue, yet seldom leaves the hearts of men at peace. Let us for a moment look into their various pursuits. The first scene presented to view is one of felicity: no cankering care intrudes; and should the glance into life last here, the echo would be happiness; but our thoughts cannot always linger where are woven the most beautiful threads in the "web of life." We pass on to those who entered the gay world with a loving heart: no sorrow darkened the beautiful brow; no care saddened the joyous spirit; yet contact with the world and its hypocrisy has bowed low the beautiful brow once crowned with the halo of merriment, and has crushed the joyous spirit from which no sound but sweetest music once whispered; or perhaps those who are blessed with a spirit to brook the falsehoods of the world, have lost that which they most prized, have been silent watchers at the death-bed of those they devotedly loved, and have seen the pure spirit wend its way to the Author of its being, and have said in the sorrow of the heart.

The [illegible] is loosened, the golden bowl broken, and I am alone."

There, too, the ambitious wealth-seeker, who has closed the door of his heart against every kindly feeling, has sacrificed every [illegible] to gain, to [illegible] soul to the [illegible] around [illegible] world, [illegible] is heard [illegible] day by day; his coffers [illegible] with their added contents; gems of costly dye, and pearls that well might deck a throne, flash before his eye; in his possession servitors in jewelled armor as in the olden days of chivalry; yet he awakes as from a dream, and says, I am not happy. His guiding star has fallen; no longer does the fascination exist to lure him on to the acquisition of wealth which he has bartered his soul to obtain. The waters of life close over him; his gold has not conferred happiness upon him in life, still less in death; his gold cannot procure his ransom from his God.

Death enters all homes, of the rich and of the poor, of the high and of the low. It has paralysed the efforts of age, and frustrated the schemes of manhood; it has dispelled the happy visions of youth by taking the fairest and brightest from the social group; it has clouded the bright dreams, and placed its signet on the laughing brow of childhood; and as the requiem of departed hopes is still sounding in mournful murmurs of the fading joy of earthly pursuits, we are led to exclaim:

"Oh! if no other boon were given,
To keep our hearts from wrong and stain,
Who would not try to win a heaven
Where all we love shall live again."

"Summer Days;"

OR, THE YOUNG WIFE'S AFFLICTION.

A DELIGHTFUL summer we passed, to be sure, at the —— Hotel, in the quiet village of S——. A collection of prettier women, or more gentlemanly, agreeable men, were never thrown together by the necessity of seeking country quarters in the dog-days. Fashion, by common consent, was laid upon the shelf, and comfort and smiling faces were the natural result. Husbands took the cars in the morning for the city, rejoicing in linen coats and pants, and loose neck-ties; while their wives were equally independent till their return, in flowing muslin wrappers, not too dainty for the wear and tear of little climbing feet, fresh from the meadow or wildwood.

There were no separate "cliques" or "sets." Nobody knew, or inquired, or cared, whether your great grandfather had his horse shod, or shod horses for other people. The ladies were not afraid of smutting their fingers, or their reputation, if they washed their children's faces; and did not consider it necessary to fasten the door, and close the blinds, when they replaced a missing button on their husband's waistband, or mended a ragged frock.

Plenty of fruit, plenty of fresh, sweet air, plenty of children, and plenty of room for them to play in. A short nap in the afternoon, a little additional care in arranging tumbled ringlets, and in girdling a fresh robe round the waist, and they were all seated, in the cool of the evening, on the long piazza, smiling, happy, and expectant, as the car bell announced the return of their liege lords from the dusty, heated city. It was delightful to see their business faces brighten up, as each fair wife came forward, and relieved them from the little parcels and newspapers they carried in their hands, and smiled a welcome, sweet as the cool, fresh air that fanned their heated foreheads. A cool bath, a clean dickey, and they were presentable at the supper-table, where merry jokes flew round, and city news was discussed between the fragrant cups of tea, and each man feel in love with his pretty wife over again,—or his neighbor's, if he liked!

It was one harmonious, happy family! Mrs. —— and her husband were the prime ministers of fun and frolic in the establishment. It was she who concocted all the games, and riddles, that sent our merry shouts ringing far and wide, as we sat in the evening on the long moonlit piazza. It was she that planned the pic-nics and sails, and drives in the old hay-cart; the berry parties, and romps on the green; and the little cosey suppers in the back parlor, just before bed-time, that nobody but herself could have coaxed out of the fussy old landlord. It was she that salted our coffee and sugared our toast; it was she that made puns for us, and wrote verses; it was she that sewed up pockets in overcoats, or stole cigars, or dipped the ends in water; it was she that nursed all the sick children in the house; it was she that cut out frocks, and pinafores, and caps for unskilful mothers; it was she that was here, and there, and everywhere the embodiment of mischief, and fun, and kindness, and as she flew past her handsome husband with her finger on her lip, bent upon some new prank, he looked after her with a proud, happy smile, more eloquent than words.

He was the handsomest man I ever saw—tall, commanding and elegant, with dark blue eyes, a profusion of curling black hair, glittering teeth, and a form like Apollo's. Mary was so proud of him! She would always wait to see him when she meditated any little piece of mischief, and it was encouraged or punished as the mood was in. He was just the [illegible] husband for her [illegible] and knew when to check, and to [illegible], and it needed but a word, a look; for her whole soul went out to him.

And so the bright summer days sped fleetly on; and now autumn had come, with its gorgeous beauty, and no one had courage to speak of breaking up our happy circle; but ah, there came one, with stealthy steps, who had no such scruples!

* * * * *

The merry shout of the children is hushed in the wide halls; anxious faces are grouped on the piazza; for in a darkened room above lies Mary's princely husband, delirious with fever! The smile has fled her lip, the rose her cheek; her eye is humid with tears that never fall; day and night, without sleep or food, she keeps untiring vigil; while,—unconscious of her presence,—in tones that pierce her heart, he calls unceasingly for "my wife!" She puts back the tangled masses of dark hair from his heated forehead; she passes her little hand coaxingly over it; she hears not the advice of the physician, "to procure a nurse." She fears not to be alone with him when he is raving. She tells no one that on her delicate breast she bears the impress of an (almost) deadly blow from the hand that was never raised but to bless her. And now the physician, who has come once, twice, thrice a day from the city, tells the anxious groups in the hall that his patient must die. Not one dare break the news to the wretched Mary! There is little need! She has gazed in their faces, with a keen, agonized earnestness; she has asked no questions, but she knows it all; and her heart is dying within her! No entreaty, no persuasion, can draw her from the bedside.

The old doctor, with tearful eyes, passes his arm round her trembling form, and says, "My child, you can not meet the next hour—leave him with me."

A mournful shake of the head is her only answer, as she takes her seat again by her husband, and presses her forehead low upon that clammy hand, praying God that she may die with him.

An hour of time—an eternity of agony—has passed! A fainting, unresisting form is borne from that chamber of death.

Beautiful, as a piece of rare sculpture, lies the husband!—no traces of pain on lip or brow; the long, heavy lashes lay upon the marble cheek; the raven locks, damp with the dew of death, clustered profusely round the noble forehead; those chiselled lips are gloriously beautiful in their repose! Tears fell like rain from kindly eyes; servants pass to and fro, respectfully, with measured tread; kind hands are busy with vain attempts to restore animation to the fainting wife. O, that bitter, bitter, waking!—for she does wake. God pity her!

Her hand is passed slowly across her forehead; she remembers — she is a widow! She looks about the room—there is his hat, his coat, his cane; and now, indeed, she throws herself, with a burst of passionate grief, into the arms of the old physician, who says, betwixt a tear and a smile, "Now, God be praised,—she weeps!"

And so, with the falling leaves of autumn, "the Great Reaper" gathered in our noble friend. Why should I dwell on the agony of the gentle wife; or tell of her return to her desolate home in the city; of the disposal of the rare pictures and statuary collected to grace its walls by the refined taste of its proprietor; of the necessary disposal of every article of luxury; of her removal to plain lodgings, where curious people speculated upon her history, and marked her moistened eyes; of the long interminable, wretched days; of the wakeful nights, when she lay with her cheek pressed against the sweet, fatherless child of her love; of her untiring efforts to seek an honorable, independent support? It is but an every-day history, but—God knows—its crushing weight of agony is none the less keenly felt by the sufferer!

—*Fern Leaves.*

Self-Conquest.

"WELL, Bridget, what do you think of the bride?"

"O, she's a pretty young thing; but if she had known as much as you and I do of her husband's mother, she never would have come to live with her. She's a regular old hyena, and if she don't bring the tears into those [illegible] eyes before the honey-moon is over, my name isn't Bridget. Why, she's the most owdacious old [illegible]! She overhauled all her warbrobe yesterday, [illegible] could get here; and, as I passed through the entry, I heard her muttering to herself, 'Silk stockings, humph!—ruffled under-clothes! Wonder if she thinks I'll have them ironed here? Embroidered night-caps with [illegible] and ruin!'

"I'll tell you what, Bridget, there will be a house full [illegible] that will be [illegible] I reckon."

"What! tears, Emma?—tears!" said the young husband, as he returned from his counting-room one day, about a month after their marriage; and, with a look of anxiety, he drew her closer to his breast. "Tell me, you do not so soon repent your choice?" The little, rosy mouth was held up temptingly for a kiss; and in those blue eyes he read the answer his heart was seeking.

"What, then, is your pet canary sick? Can't you dress your hair to suit you? Or are you in despair because you can't decide in which of all your dresses you look prettiest?"

"Don't be ridiculous, Harry!" said Emma, laughing and crying together. "I feel nervous, that's all. I'm so glad you've come home."

Harry felt sure that was not all; but he forebore to question her, for he felt very sure she would tell him all in good time.

The truth was, Harry's mother had been lecturing her daughter-in-law, all the morning, upon the degeneracy of the times;—hoped she would not think of putting on all the fine things her friends had been so foolish as to rig her out in!—times were not now as they used to be!—that if Harry gave her pocket money, she had better give it to *her* to keep, and not be spending it for nonsense;—that a young wife's place was in her husband's house;—and she hoped she would leave off that babyish trick, of running home every day to see her mother and sisters.

Emma listened in silent amazement. She was a warm-hearted, affectionate girl, but she was very high-spirited. The color came and went rapidly in her cheek; but she forced back the tears that were startling to her eyes, for she had too much pride to allow her to see them fall.

After old Mrs. Hall had retired she sat for a moment or two, recalling her words. "'Babyish,' to love my own dear home, where I was as merry as a cricket from morning till night; where we all sang, and played, and read, in mother's old room, and father and mother the happiest of us all—'babyish!' I won't be dictated to!" said the young wife. "I'm married if I am only nineteen, and my own mistress;" and the rebellious tears did come in spite of her determination. But then she thought of Harry,—dear Harry,—whom she had already learned to love so well. Her first impulse was, to tell him. But she had a great deal of good sense, if she was young; and she said to herself, "No, that won't do;—then he'll have to take sides with one or the other, and either way it will make trouble. It may wean his love from me, too. No, no. I'll try to get along without; but I wish I had known more about her, before I came here to live."

And so she smiled and chatted gayly with Harry, and hoped he had set it down to the account of "nervousness." Still the hours passed slowly, when he was absent on business; and she felt uneasy every time she heard a step on the stairs, lest the old lady should subject her to some new trial.

"I wonder what has come over our Emma?" said one of her sisters; "she has grown so grave and matronly. I half-hated Harry when he carried her off, and I quite hate him now, for she's so sedate and moping. I desire to keep my neck out of the matrimonial noose."

Shortly after this, Emma's mother sent her some little delicacy, manufactured by herself, of which she knew her daughter to be particularly fond. Mrs. Hall brought it into her room, and set it down on the table as if she were testing the strength of the dish, and said, "I wonder if your mother is afraid you'll not have enough to eat here. One would think you were a child at a boarding-school."

Emma controlled herself by a strong effort, and made her no reply, simply taking the gift from her hands, with a nod of acknowledgment. Every day brought her some such petty annoyance; and her father-in-law, who was old and childish, being quite as troublesome as his wife in their respects, it required all Emma's love for Harry to carry her through.

She still adhered to her determination, however, to conceal her trouble from her husband, although he noticed she was less vivacious, perhaps he thought the gentle [illegible] very becoming to his young wife, that he did not disapprove. In the [illegible] old Mrs. Hall [illegible] with a [illegible] very [illegible] needs. What [illegible] the [illegible] and [illegible] was a wide [illegible] Emma's [illegible]

[illegible]

the gruel was always "not quite right," the pillows not arranged easily behind her back, or she expected to find "Bedlam let loose" when she got down stairs, and various other encouraging prognostications of the same character.

"Emma," said Harry, "how should you like living five miles out of this city? I have seen a place that just suits my fancy, and I think of hiring it on trial."

Emma hesitated. She wished to ask, "Does your mother go with us?" but she only said "I could not tell dear Harry, how I should like the place, till I saw it; but I should fear it would take you too much from me. It would seem so odd to have five miles' distance between us for the whole day. O, I'm very sure I shouln't like it. Harry!" and the thought of her mother-in-law clouded her sunny face, and, in spite of herself, a tear dropped on her husband's hand.

"Well, dear Emma, now I'm very sure you will like it,"—and his large, dark eyes had a look she did not quite understand, even with all her skill and practice in reading them,—"and so I'm going to drive you out there this very afternoon, and we'll see," said he, gayly kissing her forehead.

"O, what a little Paradise, Harry! Look at that cluster of prairie roses! What splendid old trees! See how the wind sweeps the drooping branches across the tall grass! And that little, low window, latticed over with sweet briar; and that pretty terraced-garden.—O, Harry!"

"Well, let us go inside, Emma;" and, applying a key he held in his hand, the door yielded to his touch, and they stood side by side in a little rustic parlor, furnished simply, yet so tastefully. Tables, stands, and mantel, covered with vases, sending forth fragrance from the sweetest of wild-wood flowers; the long, white muslin curtains, looped away from a window, whence could be seen wooded hill, and fertile valley, and silvery stream. Then they ascended into the old chamber, which was quite as unexceptionable in its appointments. Emma looked about in bewildered wonder.

"But who lives here now, Harry?"

"Nobody."

"Nobody? What a tease you are! To whom does all this furniture belong,—and who arranged everything with such exquisite taste? I have been expecting every minute to see the mistress of the mansion step out."

"Well, there she is," said Harry, leading her gayly up to the looking-glass. "I only hope you admire her half as much as I do. Do you think I've been blind and deaf, because I've been dumb? Do you think I've not seen my high-spirited little wife, struggling with trial, day by day, suffering, enduring, gaining the victory over her own spirit, silently and uncomplainingly? Do you think I could see all this, and not think she was the dearest little wife in the world?" and tears and smiles struggled for mastery, as he pressed his lips to her forehead. "And now you will have nobody to please you here, but me, Emma. Do you think the task will be difficult?"

The answer, though highly satisfactory to the husband, was not intended for you, dear reader; so please excuse Fanny Fern.

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MAY 4, 1854.

Good News for Farmers.

We had almost said "we *stop the press* to announce." &c.; but we will rather say WE HASTEN THE PRESS, that we may lay before our readers the most GRATIFYING INTELLIGENCE of the passage of the bill to incorporate "A STATE AGRICULTURAL SOCIETY," and the grant of FIVE THOUSAND DOLLARS per annum, for FOUR YEARS, to be offered in Premiums to advance the cause of Agriculture.

Our pulse beats quicker and our heart feels a corresponding throb, and it is of joy at such intelligence from the Capital.

This news compensates us for years of effort and cheers us for the future; ill as we have been for days past, this is good medicine, 'tis the "Aqua Vitæ" to our spirit, and we can now look forward with the eye of faith and see the "rough places made smooth" and the "waste places a fruitful garden." The "hills shall break forth into singing," and the "desert shall blossom as the rose." Whatever fate may have in store for us—whether for weal or woe, we shall feel we have not labored in vain, for the cause of our heart will receive an impetus that will ere long place it in such a position that it shall command the attention it deserves.

With this sanction of our Legislature and with the means to operate with, we trust those whose duty it shall be to commence the work will not remain idle, but will act nobly when the bill shall have received the approval of the Governor—and we feel that he will have a proud satisfaction in writing the word APPROVED in capitals.

We shall ever remember the Legislature of 1854, and the day of the final passage of this bill. We will make it a "red letter day" in the history of Agriculture, and enroll every name that approves and aids such acts among the benefactors of the State. There is now a corresponding duty on the part of the government of the State Society when called upon to act, and we trust there will be no delay; but that we shall see a prompt and vigorous action.

There is also a duty on the part of the farmers. This bill immediately affects them, and will affect all their interests; and it will now devolve upon them to act. A State organization in full operation, with means. Every county should be ready to act, and be a faithful auxiliary, to second and carry out the work. Farmers, will you be ready? Will you accept the offered boon? Let us hear from you! Now is the time to manifest your appreciations of this action on the part of the State government.

One word more and our duty is done. Do you take the FARMER? If you do not; will you do so now? and if you do, will you write for it and tell us what is done in your county?

The most prominent features of the bill are—Authorities to hold four sections of land, Two thousand five hundred and sixty acres, for the purposes of college, schools, exhibitions, &c. The officers, to be a President, seven Vice-Presidents, two Secretaries, and a Treasurer. Annual meetings in October. The grants from the treasury to be five thousand dollars annually.

We shall soon publish the act complete, and shall take a pride in urging home its importance to the farming interests.

"Honor to the Legislators of California, for the noble regard of 'AGRICULTURE.'"

High Pressure.

NOT being familiar with steamboat tactics, we could not understand always the *true* meaning of *high* pressure and *low* pressure, as applied to steam navigation, until very recently. The great change that has taken place in the 4 o'clock line has let us into the secret.

The good old favorites—the "Senator" and its noble compeers—those splendid boats that comprised the "Sacramento line of steamers," have been taken from this route, and the Bragdon and Urilda have taken their place. How well this plan suits the community, the following article copied from the State Journal of May 1, shows.

The Steam Navigation Company have recently adopted the unpopular custom of sending to San Francisco as 4 o'clock steamers none but high pressure boats, such as the Urilda and Bragdon. These boats are of that class, though doubtless perfectly safe, that the Express Companies dare not or will not entrust their treasure on them; and a few days since Adams & Co. were compelled to hold over for one day their valuables, and send by the 12 o'clock low pressure boats. We hope that the Steamboat Company may so arrange it that in future they will despatch as good and the same kind of steamers at 4 o'clock as at 12 o'clock.

We have ever approved of the "combination," believing they would regard the wants of the travelling public, and, having control of ample means to work with, and as fine boats as need be, we felt that they had the power in their own hands; but we had faith to believe that they were wise enough to use it so as to win what is so essential to success—the favor of the public.

We have been aware that the cry would go forth—monopoly! monopoly! yet even though there is actually a monopoly of the business, we had the fact before us that this very monopoly had accomplished a great good—one that could have been accomplished in no other way—that of laying up, or removing from the waters many old and useless and dangerous boats—no less than *ten* we counted at Sacramento the present week. No other plan upon earth but this very combination could have removed such useless boats. Let us see, in the removal of boats that endanger life and property, a good of such magnitude that it may in some degree compensate for any extras that may be imposed, as it is termed, in a "high fare scale."

Some may say that an editor, to whom, by courtesy, (a just one, however, for they are laboring for the public good,) a free passage is tendered, does not feel the effects of such a combination. This is not so: an editor who performs his duty as a faithful chronicler of passing events, will speak according to his convictions, without fear or favor. We speak, therefore, and say promptly that we believe this combination "miss a figure" by taking off the old favorites of the "Sacramento line." It was evident to the public that it must be a losing matter for the company to keep both the 12 o'clock and 4 o'clock lines running during the present state of trade; but it was freely accredited to them, as an act evincing on their part a desire to meet the requirements of the public, even at a sacrifice; but, most unfortunately, just at the moment the combination was securing friends and silencing croakers, this plan was knocked on the head, our favorite steamers taken off, and the Bragdon and Urilda substituted. As soon as the change is made, its ill effects are perceptible. We have heard many and strong complaints; Sacramentans, and all in that region—the great majority of the travellers that sustain the boats—demur; and we see plainly that it will be a theme upon which a strong opposition will be built. Give us, then, gentlemen of the combination, give us back our old familiar friends the "Sacramento boats;" they are to us as household gods, and their quiet, dignified and brave moving through the waters give us an assurance of safety that no other boats in the world could give. We are satisfied with low pressure, gentlemen, and pray give us back our friends.

We have tried high pressure boats, but their puffing and wheezing disturbs our quiet nerves. They may do up river, but old Sacramentans will not stand it. High pressure!—now we understand it. Changes make strangers, and strangers make us *feel* the pressure. We have felt it, to the cost of *purchasing a passage*, which, among our old friends of the Sacramento line, has ever been accorded to every editor in a courteous and obliging manner. Yes! we all feel when *our pockets* feel, is an old saying, but in this instance we were made to feel the *authority*, the *power*, which can be used by a monopoly if they choose. But this is the first instance which has come under our observation of such an exercise of it, and feel glad *we were* the objects of it, for we can and do speak fearlessly. We have from the beginning approved this monopoly, believing, as before stated, good must result from it, by driving off useless and dangerous steamers, and establishing a line of safer ones. We believed also that the Company would find their interest in meeting the requirements and favoring the views of the travelling community. We do not expect *all* to be pleased, but the majority, and we hope so still, but the case alluded to, as affecting ourselves, arose from the *change*, and, taking passage on the Urilda, instead of the brave old Senator that we hoped to find, led us among strangers.

Presuming the same courteous privilege would be accorded to us, if known as the conductor of a journal, we were introduced to those in power, but received the reply that no privileges were accorded *without a special order to that effect from head quarters*. We readily yielded to this mandate, believing that it is best to "obey orders, if you break owners." We have no fault to find with the captain or clerk—they have duties to perform, and if such orders have been given, they are right; but we supposed that a special privilege, granted and known to all in their public instructions, required only a knowledge of the *fact* on the part of the officers, to ensure the enjoyment of that privilege; for surely this privilege must be a dead letter in most cases, if the recipients of it are obliged to go to the agent's office and obtain a *written permit*. We never heard of such an act before, and never expect to again, and as it would be an impossibility for editors to know when or where they should chance to be, this act must debar them from its enjoyment. *We paid our passage*, sat up all night, heard the puffing and snorting of "high pressure," and felt it too—borrowed pen and ink of the clerk (for this we are grateful) to write upon their own "high pressure," and arrived safe in the morning. The only difference between high pressure and low pressure is—the first cost us ten dollars, made us feel authority by debarring us a privilege, gave us a roll in the bay, a headache, and a long night's passage; and the latter would have saved us that same, and doubly, too, by the courteous enjoyment of a privilege, a quiet, smooth and pleasant passage of 7 or 8 hours, and freedom from pain or regret. With such a contrast, every one must say—give us back our old favorites, the Sacramento steamers. High pressure won't do, gentlemen of the combination—the people have said so. When houses like Wells, Fargo & Co. and Adams & Co. say it, as said in the above, it won't do, surely.

An Evening Stroll.

MOONLIGHT, star-light, gas-light. San Francisco offers all these to those who desire a pleasant promenade. Passing down Montgomery street, we could not help looking into the show windows of the splendid establishments that now ornament that great thoroughfare. We could not but note the fine display of costly wares at Tuckers. No person need want now for rich silverware, or costly watches, or jewelry. Tucker says no one can offer a better article, and no one can undersell him; for he will sell cheaper than the cheapest, and good as the best. It is not worth while for any to dispute this, for Tucker will do as he says, and therefore you had better try him.

Passing on, the next fine establishment we noticed was that of Barrett & Sherwood. A rich display of jewelry and watches, many of high value, attracted our attention. In this window one can learn the true time in Greenwich, in Washington, and in San Francisco. This is of great interest, as it revives old familiar household times and seasons, by giving us the time in the "old States" in contrast with our own time here.

We entered the store of the Messrs. Shreve, in Howard's buildings; in this place we saw some of the finest silverware we have ever noticed in California. We learn they are in the regular receipt of the very best that can be manufactured from the establishment of Jones, Ball & Poor, of Boston.

Speaking of moonlight, it is of but little account in San Francisco for a promenade, unless we could have our streets finished. When this is done, Montgomery street will prove a beautiful promenade by moonlight or starlight; and as we are now feeling the benefits of gas, we expect to see our citizens using our great thoroughfares as the promenade, when they can do so without risk of life or limb; but until this can be done they must stay at home.

The last idea we found while stopping in for a moment at Winn's, and a "second sober thought" rather convinced us that nothing would keep people at home, so long as they could indulge in "strawberries and cream." Speaking of Winn, we can say, "competition is the life of trade," for we notice fine music here as well as at Robb's. Music at a repast is delightful, and those who do so much as these caterers for the public appetite, deserve well. We trust both will be amply rewarded for their exertions.

"A word fitly spoken is like apples of gold, in pictures of silver."

The following kind notice of our weekly we clip from the "Pacific," of this week. We feel every word of encouragement as quickly and we act upon it as promptly as the wires of the telegraph respond to the actions of those who control it:

"*The California Farmer.*—We are pleased to see this ably conducted and handsomely printed Agricultural Weekly, making its appearance promptly. Its editorial management evinces knowledge, judgment and taste, and its mechanical execution is characterized by "neatness and dispatch." We trust that a journal so much needed in this fertile portion of the globe will be fully sustained. Its labors and influence will be productive of good fruits."

Yes, Brother of the Pacific, we are grateful, and we believe "a journal like the one we send out weekly is much needed." We have had many encouraging promises from those interested in Farming, and we are receiving letters every mail inquiring how various things shall be done. We shall answer all these inquiries through the FARMER. Those who desire correct information upon the points they name, should subscribe for the FARMER, and get it in detail. Farmers, will you not be instructed upon the very subject you desire to be informed about? Give then your word and act of faith,—build up and sustain an AGRICULTURAL PAPER, form County Societies, collect data, and then through the County Societies of each county this information will rapidly spread and the Farmer who subscribes for an agricultural paper will be posted throughout all the State. Where is the Farmer that is not able to take a paper and pay for it? Show us such a man and we will show you a man that is always behind the times in all his improvements and the business of his farm.

We have endeavored to offer you a Farmer's paper, that was worthy your aid and support,—will you give it that good cheer it needs? We shall look very anxiously to see what response you give! We have tempting offers to make to farmers if they will read the FARMER.

THE OREGONIAN.—This journal, published and edited by T. J. Dryer, Esq., comes to us this week bearing good news. We gladly record the establishing of two County Societies, as of great moment to the State, and Oregon is doing nobly. We note how readily those interested in Agriculture take hold of the work—this is the only way.

We commend in the highest degree the very honorable interest manifested for all that affects Agriculture by this journal—many very excellent articles, editorial and selected, are presented weekly to the readers of the Oregonian. Right heartily do we wish the Oregonian success, and every journal, that will once in a while forget politics, lay them aside and look after those things that affect the present and the future of California.

Medicine.

We have often heard of "gilding the pill," but never saw it fully exemplified till recently. Passing up the Broadway of San Francisco, we were arrested by a blaze of light, and, while thus brought to a stand still, had an opportunity to gaze at the magnificent establishment of Messrs. Little & Cole, Druggists, Howard's building.

Here is undoubtedly one of the most perfectly arranged apothecary establishments in the United States. There are undoubtedly many more extensive, but we look upon this place as a perfect "bijou"—chaste and beautiful, it is in such perfect keeping—all the proportions so beautiful, that it cannot be excelled. It was this recherche style that brought to our mind the "gilded pill," and we ask of all who go to this head quarters of Pharmacy, if, upon entering and examining all that the eye will feast upon—if, when the medicine is received, be the drug ever so nauseous, you will not truly feel that the pill you are about to taste is a gilded one. Did we need proof, we should remember the vase of beautiful flowers we saw in the saloon, the sight of which must rob every drug of the greater part of its bitter taste, and gild the pill that we must swallow. Messrs. Little & Cole have proved that they are as familiar with the art of beautifying as they are with the art of medicine. This establishment is also an ornament to the street and the city, and speaks well for all concerned.

We notice it is the Howard Buildings, and the outside improvements are a credit to the owner, W. D. M. Howard, Esq., and C. R. Bond, Esq., his agent, under whose directions such worke are carried on during his absence.

A Morning Ride.

How invigorating to the mind an early ride in the saddle. Breaking away from the harrassing cares and duties which press so heavily upon us in this country, it is indeed a relief to snuff the fresh breath of the hills, and inhale the fragrance from the morning flowers just opening to the light, and sending out their perfumed breath.

'T is a fine ride that over the "new mission road"—a good pony and an easy saddle, early morn and a clear sky, there is enjoyment beyond price. On our ride out, we could not pass the beautiful grounds of W. C. Walker, Esq., without a visit. Here one can note the rapid improvement that has been made in a short space of time. A very spacious and well-planned conservatory has been erected within the past year, and is now filled with the best collection of plants in the country. Several hundred camellias are here to be seen in excellent condition. Rare and valuable plants of many kinds have also been imported by Mr. Walker. In addition to this, he has erected a very neat and well-proportioned Rose house—and we venture to say that at this time there is not among the growers at the East a better or more healthy collection of roses, comprizing the same number, and for blooms, California will excel all others, even "La Belle France."

The grounds in front of the conservatory are well designed, and in a little time, under the skilful care of Mr. ——, the head gardener of Mr. Walker, the grounds will present a beautiful appearance. Mr. Walker deserves great credit for the advance he has made, under all the difficulties of making a new place—and amid the general and universal depression which so seriously affects a business that is esteemed a luxury. We commend his perseverance and admire his taste. We heartily wish him success, for he deserves it, and we advise our readers to call at the earliest moment and visit the Golden Gate Nursery, on the new plank road, near the toll gate.

"Martins" have come.—This bird of passage, whose cheerful notes announce the approach of spring-time, and give us a pleasing anticipation of genial sunshine, budding flowers, and abundant crops, is always a welcome bird.

We penned this passage from the fact that our old familiar friend "Martin," the able and indefatigable express driver and delivery agent of Adams & Co. at Sacramento, was passing down river with us—and, as he informed us, it was the first moment for *two years* that he had left his post above to visit his friends below—and we felt that his presence to them would be as welcome as the merry birds are to us, that announce the departure of cold weather and the return of spring again. We have often experienced the benefits of the prompt delivery of parcels from our friend Martin, and hope his visit below will be a pleasant one.

"Crowing" [illegible] to hand two [illegible] this week. We should be happy to publish the article in question.

United States Nursery.

We took a hurried stroll upon the plank road a few days since, and made a visit to the garden and grounds of Messrs. O'Donnell & Brother. We desire to call particular attention to these industrious young men. From a waste and barren hill side they have established a neat and flourishing garden. Such industrial efforts are worthy of all praise; such men are worthy of a generous support. We found here a neat and pretty greenhouse, well filled with a fine collection of plants, in a healthy condition; and a large variety of some of the most desirable plants in the borders and nursery.

We noticed the industry and energy that had converted a waste and barren sand-hill into a beautiful garden. We shall by and by note specially the various plants and shrubs worthy of notice; but we cannot leave this garden without urging those who are willing and who love to bid God speed to those who convert the waste into a flower garden, to call upon our young friends and worthy florists, to visit their garden, encourage their industry, buy a beautiful boquet, rose, German, fuchia, or any of the gems of which they have such an abundance.

Strawberries.—This delicious fruit has made its appearance in San Francisco, and many kinds give promise of great excellence. We have tasted of those grown across the bay, by Wilson Flint, Esq., and they were certainly of the very finest quality, and the largest berries and the best ripened we have ever seen of this variety; they are the true "Alpine Monthly."

We found those we tasted, at "Robb's," floating in the cream; and we have no objection to experiment more upon that variety. If Mr. Flint desires to know the capabilities of his vines to bear, we can tell him after testing a basket upon a balance taster which we carry in our mouth—and fruit growers should not forget the printer.

Speaking of this delicious fruit—California will beat the world in this luscious fruit in a short time. We recommend all our fruit-growers to experiment in raising *from the seed*. This is the important thing—in this new and fertile soil and country, raise new varieties.

Since writing the above we have been refreshed by the sight and taste of some of the same variety of fine strawberries, brought to us by Mr. Andrew D. Pryel, Gardener to Wilson G. Flint and G. O. Whitney, Esqs., the owners of Oak Forest Gardens, from whence this sample was taken.

These berries were the finest of the season and were refreshing to our palate. We recommend the variety as one that will prove of the highest character. Plants will soon be for sale and can be planted during all the summer, with proper care.

Gas Light in Public Buildings.—Owners of our large establishments, our places of public resort, have with much promptitude introduced gas into them, thus adding much to their appearance as well as utility. Among those we have seen improved, we know of none whose general appearance is more improved by this addition than "Musical Hall." This Hall is now the famed resort for all concerts, balls, and parties, and the proprietors, Messrs. G. Frank Smith & Co., have done much to make it the most acceptable Hall in the State.

They have recently added spacious dining rooms and drawing rooms, and are improving in various ways, so that it may rival every other place as a Public Hall.

To the original design of this fine building and Hall, the public are indebted to Henry Meiggs, Esq., as also to him they are indebted for some of the finest "Oratorios" and concerts on the Pacific shores. The energy and enterprise of this gentleman is only equalled by his liberality and his public spirit.

Sailing of the Steamers.—On Monday the U. S. M. steamer Panama left her dock at 2 1-2 o'clock, the Nicaragua steamer Cortes at 3 1-2 and the Independent steamer Uncle Sam at 4 o'clock. They were all crowed with passengers, and carried away the aggregate sum of $2459,631—of which the Panama took $912,181; the Cortes $1,237,500; and the Uncle Sam $310,000.

Agricultural Address.

We find the following excellent, humorous and satirical passage in an address delivered by G. R. Russell, Esq., some time since, before the Society for the encouragement of Domestic Industry and Horticultural Science in Providence, R. I. It is so true that it will apply everywhere, and proves [illegible] appropriate maxim—

[illegible]

It is also important, nay, imperature, that the heart as well as the hands, must be at work. It is well enough for the wealthy to employ stewards and gardeners of acknowledged skill to take charge of their grounds entirely, and do the laboring part principally. But it is far better for the proprietors to have such an interest in the success of his own plans, as to make him acquainted with the first principles. These acquired he will be led on step by step until he will become so much interested in the great work that he will before he is aware of it, have his mind and heart so engaged, that he will find himself at work. Here is the secret of success. Without this interest in this science, it will not be pursued long or successfully; for those that take no interest in their own pursuits, cannot expect them to be entirely successful or satisfactory, and more especially when a great work like that of horticulture is at stake. It demands the highest faculties of mind and body for its purposes.

We have long seen and felt the withering influence which has been cast upon this noble science, by the distain and even contempt which has been poured upon it as a menial service, as below the occupation of those who claimed respectability. Even at the present day, with all the advance that has been made, how difficult it is to bring the subject of agriculture and horticulture properly before the people—all, and every other subject before agriculture.

Such things ought not so to be. Agriculture is the great interest, and it should be a predominant one, with not only those interested, but with all classes—mercantile, commercial and mechanical. They should each feel its influence as making up their success; and not only our citizens, but our legislators too, they should as true guardians of the public weal, and the watchmen of her great interest, cast aside for a season subjects of lesser magnitude, and regard the interest of agriculture, upon which depends the permanency and prosperity of the State.

We have extended our remarks to a greater length than we intended; but we trust we shall be fully understood, for it is by reason of the want of heart to appreciate, in many engaged in, and the apathy with those outside, that agriculture languishes. We commend a careful perusal of the extracts.

"Playing farmer is a very interesting but somewhat expensive luxury. It is not only harmless but praiseworthy recreation to those that need not stop to count the cost. If it is a most effectual, it is also a refreshing and exemplary relief for a plethora of the pocket,—a bleeding useful to the propriety of obtaining experience vicariously. Unlike most methods of spending money for mere amusement, there is virtue in excess, and merit is due in direct ratio to the extent of outlay. The practitioner has little danger of injuring the constitution of his subject by repeated experiment. Mother earth is a tough old lady, and stands dosing and cutting up with admirable fortitude. Indeed, the more she gets, the better she looks, being decidedly in favor of the allopathic mode of treatment, and despising all infinitesmal application.

A gentleman farmer is usually understood, in this country, to mean one who possesses some capital in money, and very little, if any, in agricultural knowledge. He pays for his information as he gets it, and, if endowed with a moderate share of prudence, abstains from being lavish of his opinions before his practical hired laborers. When he assumes the direction of things, his orders have very much the appearance of a declaration of hostility against first principles, being often irreconcilable with each other, and somewhat at variance with the laws of nature. Like a newly made general at a militia muster, he is apt to get the rank and file into a hard knot without knowing by what earthly process he shall disentangle them, putting them as they were. He can sympathise with the sailor's embarrassment in ploughing, who managed tolerably well before the wind, but in going about missed stays, and involved the whole team in inextricable confusion. He fills his barn and corn-crib at an expense which may well entitle the contents of the latter to the graphic appellation of "golden grain." He talks learnedly of crops, and buys his vegetables; has the most wonderful cows, and often wants milk; is well supplied with newly invented churns, and is furnished with butter from a passing market wagon, although occasionally, the product of his diary enables him to exult over what seems to be a lump of white tallow. He is strong on poultry, mixing the ornamental with the useful, gives them crystal palaces with many curious devices to induce hens to become perpetual laying machines, and is lucky if he can eat a few of his own eggs at a dollar a piece depending for his family supply on his poor neighbors, who can at any time sell him as a favor hurriedly collected [illegible] old chicks and rickety haymows. He [illegible] for resort to his fruit as a perennial source of [illegible] does occasionally at least [illegible] element of [illegible] dispensing [illegible] and [illegible] of [illegible]. His [illegible] at work for him. [illegible] rubbing the apple trees, [illegible] and [illegible] the [illegible] and [illegible] curl or the yellows and becomes poor fire-wood; and after waiting for years for the rich harvest from his dearly bought imported pear stocks, he finds dependent thereon a few gnarled, wrinkled, warty excrescences, being apparently a cross from a stringy turnip and a third rate potato.

The experiences of the tyro-horticulturist are not entirely exempt from similar degrees of perplexity sorely testing his philosophy. There is a charm in the close shaved lawn, in the well kept flower ground, and hard rolled pathway. The shady trees and fragrant shrubbery, the murmuring bees, the silvery brook, and the Claude landscape, with its setting sun, are things which make the city visitor turn with abhorrence to his stifled home, jammed with its fellows looking alike uncomfortable, among kindred nuisances. He has not seen the means which bring about and preserve this beauty, and in delightful simplicity supposes that the whole is the result of a self-regulating machinery, that requires neither winding up nor repairing. The hoeings and scuffings, the prunings and weedings, the sweepings and rollings, and all the "hurry-skurry" of the morning, that the evening guest may find order and repose, are not fathomed by the plummet of his imagination. He has rural longings which must be gratified, and, after much seeking, he finds the paradise that is to embody his visions of earthly bliss. Some lurking doubt of his own qualifications suggests the expediency of a practical assistant, and he most effectually debars himself from obtaining information by choosing for his prime minister an imported underling, who, fresh from the drudgery of some long descended establishment of the old world, feels authorized to transplant himself to the new, a full blown gardener. Under the dictation of the latter, our beginner commences operations. He is told that every thing on the place is wrong; that a radical reform is necessary; and the mode of management practiced on the Duke's estate, where his tormenter last bungled, is dinned into him, until he believes there can be no other model, and blindly submits to his "manifest destiny." A fellow, who, in his own country, would not have been trusted to trim a gooseberry bush, now slashes and saws in orchard and garden, as though he were still soaking in the humidity of his old home. The tree, which there moulds in eternal damp, gasping for a ray of sunshine, is here mercilessly laid open to the scorching sun of a New England summer, and to its winter's cold and storms. He knows nothing of climate beyond the fogs and drizzle of his native land. He, however, gains some knowledge in destroying, awakening gradually to the astounding fact that difference of position and circumstance requires corresponding management—and his education is paid for by his employer. The latter finds that the promised beauties, that were to supersede the old arrangement, are slow in coming. The lawn of velvet, the pride of English gardening, is merely a patch of brown stubble; the hedge becomes top-heavy, presenting below a series of archways for the accommodation of such animals as have no objection to stooping. He sees that in the race between flowers and weeds, the latter glory in an exuberance which defies competition, while the former are behind time, being "no where." He discovers that brooks perversely stop running in summer, when most wanted, that no skill in hydraulics can make a fountain play without water, and that the carefully constructed pond is admirably adapted for depositing any thing that should be kept dry. Finally he begins to suspect that he himself is the most verdant thing on the place, and that for the purpose of carrying out the Duke's improvements it would be rather a convenience to have the Duke's income. How uncertain are human exectations! An advertisement proclaims that a valuable and highly finished estate is for sale, the red flag denotes the locality, and the auctioneer knocks it off at the cost of the additions, generously throwing in the original property. This picture is not intended to dishearten the aspirant for rural life; it is merely an endeavor to impress upon him the conviction, that in this, as in all other pursuits, it is not only necessary to be in earnest, but to take that interest which is not overcome by opposition and petty annoyances. It would be bad policy to keep those away who pioneer improvement and aid a good cause even by their failure. In storming a fortress, it is poor generalship to discourage the forlorn hope.

One more extract and we must close our long quotation:

There is a custom, on the increase, in our country or suburban residences, to leave every thing to others, and in humble but mistaken imitation of the supposed indifference in the lordly establishments of Europe, to glory in an ignorance in which there is no affectation, but which exists naturally, and requires little effort to reveal itself. The means by which order and harmony are created, are considered too [illegible] for the ethereal[ized] respectability of the [illegible] and even the results are disowned in public, as too [illegible] for direct acknowledgment. The [illegible] exhibition of horticultural [illegible] by [illegible] the gardens and [illegible] that the proprietor [illegible] and [illegible] rather ashamed to [illegible] his own [illegible] to [illegible] to proclaim to the world that he [illegible] efforts to do so by [illegible] that the [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MAY 4, 1854.

A Horse! a Horse!! a Visit for a Horse.

We are often urged to visit various portions of the State—to examine particular ranchos, vineyards, gardens, valleys, &c.—by friends who feel an interest in developing the localities under their control, and who really desire information and counsel upon these subjects.

We are urged most invitingly to do this by those who desire to extend to us that courtesy and hospitality which ever characterise the true farmer, and who feel that a little respite from care and labor would do us good. All this we most gratefully appreciate, and we shall be most happy to respond to the wishes of all our friends who are cultivators, even to the remotest portions of the State, as early as duty will permit. We intend to visit the principal localities of California, for the express purpose of obtaining those important facts so absolutely necessary for us to spread before our readers; to witness the operations of the Practical Farmer and Orchardist, and give the result of our observations in a series of reports on farming and gardening and sketches of California husbandry. But, kind friends, how can we reach you? 'Tis true we have fine steamers upon our rivers; equal to any in the Union, and we shall soon excel the older States. The owners and officers are as generous and courteous as heart could wish. Ever ready to facilitate any worthy enterprise and make the passage of those who labor for the public weal agreeable and pleasant. Stage companies too are always prompt and generous. But steamers and stages do not reach every point, nor cross the prairies to every comfortable home of the farmer. We wish to cross lots, jump ditches, leap fences, scale mountains, dive into valleys, and we must do it in a hurry; we must ride fast, if we could secure the time we desire to spend among our friends in the examination of their ground, and to do this we need a horse, a good horse, a fleet horse; one that will carry us like the "wings of the wind." We have owned two—noble animals both—one our ever ready "Brown Bucephalus; but some one took a liking to him and rode him off, without asking leave. The other, our fleet "Black Mule;" he went between two days—a short notice—and we are afraid to buy another. We therefore hint to our generous friends, many of them, we know, have more than they have a care for, and can spare "one of a thousand," and not feel it; we say, if they can only supply our wants by sending us a beautiful "Arab Steed," we shall soon come to them and show them a way by which they shall find treasures in the soil upon their homestead, that shall be worth a hundred horses. In fine we can give that information and suggest those plans that *we know should be commenced* and perfected, and which, if done, would place our cultivators among the happiest and wealthiest of the land.

Now, kind readers whose farm shall we visit first? Don't all speak at once; we cannot ride but one at a time. Relays are excellent for long and repeated journeys. So let them come gently and we shall come to you all. One at a time, and it shall not be our fault if we do not come quickly.

Woman and the Rose.

See that beautiful Rose! Its rich colors vie with the crimson and purple robes of royalty—aye, they exceed them, for the one is but the artificial fabric of mortals, beautiful however they may be; the other is nature's handiwork, fresh from the looms of the Almighty. Royal robes may deck a mortal being, but they may cover the heart of a Nero, as well as a Good Henry VIII.

But the petals of the rose still covered with the dewdrop bears the impress of purity and hides only the cell from whence issues the fragrant odors which ever delight the hearts of mortals. How emblematical of lovely woman—this queen of flowers. Woman, like the Rose, becomes the "admired of all admirers," and receives the homage justly due.

The butterfly plays around the rose, and flies from flower to flower, regardless of its beauty or worth. So the gay and flippant coxcomb tenders homage to woman, and heeds not her worth, but seeks only his own pleasure. And as the tiny foot or wing of the butterfly destroys a portion of the delicate flower, so the very presence and contact of the flatterer sullies and deadens woman's noble nature as oft as his presence is permitted. The bee, too, hastens from flowret to flowret, tarrying only to gather the sweets from out each honied cup, and the Rose, in its beauty and fragrance, becomes the especial object of his attention. So does the wily and deceitful destroyer of woman's fame and peace of mind pay his worship at her shrine. He seeks only the sweets that are for himself, and the longer his presence is permitted the more will the sweetness and beauty of woman's character be removed.

The TRUE worshipper of the lovely flower observes its early budding, and, gazing with deep interest as petal after petal unfolds itself, 'revealing newer beauties and shedding sweeter fragrance" upon him as he bows in admiration before it, until, satisfied that the object of his admiration is necessary to his happiness, he plucks the Rose, places it in his bosom, and claims it as his own. So the heart of the true and trusting would ever pay homage to woman, and behold with more pleasure and admiration the unfolding of beauty in her character than the worshipper of the richest floral gem that ever bloomed in Eden—and like as beauty of form and richness of fragrance give value to the Rose so, beauty of character and sweetness of temper make the value man would worship until he would claim her as his own, plucking her from out the too uncongenial soil of the world, and placing her next his heart as the object, next to God, worthy of man's purest affections.

Rain and its Effect.

From all quarters we hear of the impetus the late rains have given to the grain fields. As these late rains are unusual in their period and quantity, it is important that cultivators should be very particular to note all its effects—not only the rapid growth, but its effect upon the straw and upon the head of such as is already set. Watch and see if it give symptoms of weakness in the straw by giving it to sudden a start, and thus adding to its succulency and weakening it. Watch and see its effects upon the heads, upon each grain in the head, and see if there is any appearance of rust or blight in its incipient stages.

These changes in the seasons is the result of improved lands, settlement of the country, and civilization—and no class of the community is more interested than the cultivators of the soil.

Abundance of Fruit.

We call attention most particularly to the following letter from our enterprising Agent and Correspondent who writes from above. This statement of the orchard of Mr. Briggs is but the fulfilment of what we have always promised would result from an attention to planting Fruit Trees.

We saw in the *soil*, climate, temperature, all the necessary ingredients to insure success—but when we urged *home* the importance of planting *Trees*,—if we did so with earnestness, which is part of our nature,—oh, it was ENTHUSIASM, and if we recommended it when we had *trees to sell*, ah, that smack'd so much of the shop that many lost sight of the truth in the greater fear of spending a few dollars for *trees* that would never grow in *such a country*.

Behold the result of one man's perseverance, and the promised crop is but a just reward for his *confidence in nature* and his knowledge of the soil when right application is made of these gifts.

The report of our Agent, of the productiveness of these *trees*, of the "fruit hanging in clusters," is but the general report we are receiving from all who cultivate with proper care. We have letters making inquiries—and they ask, "What shall we do to prevent our trees over-bearing?" This is the question now—

"What shall do to prevent our trees over-bearing?"

How significant of the abundance that is in store for us in coming years! Yet it is only what we have ever asserted would be the result in California—and yet in urging the cultivation of fruit we have often been met with the cry—Grow fruit in California? Enthusiasm! gas! bumbug.

Behold the prospect, ye lovers of Strawberries and cream! Peaches! Melons! Figs! Pears! Grapes and Figs! *This present year*, you shall see the promise fulfilled:

BRIGGS RANCH, near Marysville, April 24.

MESSRS. EDITORS: With this I send some peaches which I picked from some trees growing upon the Ranch of Mr. G. G. Briggs, about three miles from Marysville upon the Yuba. Mr. B. has about six hundred Peach trees and sixty of them are bearing fruit, this being their third year (of age); but what is most singular is that most of the fruit is double, and even as many as five upon a single stem. Some of the trees have as many as thousand peaches upon them. The trees came from New York originally; but how to account for their fruitfulness? perhaps you can tell—I cannot.

Mr. B. has also a large lot of Apple and other trees; also, about forty acres of Watermelons planted; and gives an invitation to the Editors of the FARMER to pay him a visit when the fruit season arrives. Thinking that the above might be a matter of interest, I send it.

Respectfully, yours,
CHAUNCY LANGNON.

Professor Liebig.

We present the address of Dr. Liebig to the British Association for the Advance of Science, upon the subject of Agricultural Chemistry. It is the preface to his invaluable work on Agricultural and Animal Chemistry; a work that should be in the hands of every farmer of the land; a work that has immortalized his name as a man of science:

One of the most remarkable features of modern times is the combination of large numbers of individuals representing the whole intelligence of nations, for the express purpose of advancing science by their united efforts, of learning its progress, and of communicating new discoveries. The formation of such associations is, in itself, an evidence that they were needed.

It is not every one who is called by his situation in life to assist in extending the bounds of science; but all mankind have a claim to the benefits and blessing which accrue from its earnest cultivation. The foundation of scientific institutions is an acknowledgement of these benefits, and this acknowledgment proceeding from whole nations may be considered a triumph of mind over empiricism.

Innumerable are the aids afforded to the means of life, to manufactures and to commerce, by the truths which assiduous and anxious inquirers have discovered and rendered capable of practical application. But it is not the mere practical utility of these truths which is of importance. Their influence upon mental culture is most beneficial; and the new views acquired by the knowledge of them enable the mind to recognise, in the phenomena of nature, proofs of an Infinite Wisdom, for the unfathomable profundity of which, language has no expression.

At one of the meetings of the chemical section of the "British Association for the Advancement of Science," the honorable task of preparing a Report upon the state of Organic Chemistry was imposed upon me. In the present work I present the Association with a part of this report.

I have endeavored to develope, in a manner correspondent to the present state of science, the fundamental principles of Chemistry in general, and the laws of Organic Chemistry in particular, in their application to Agriculture and Physiology; to the causes of fermentation, decay, and putrefaction; to the vinous and acetous fermentations, and to nitrification. The conversion of woody fibre into wood and mineral coal, the nature of poisons, contagions, and miasms, and the causes of their action on the living organism, have been elucidated in their chemical relations.

I shall be happy if I succeed in attracting the attention of men of science to subjects which so well merit to engage their talents and energies. Perfect Agriculture is the true foundation of all trade and industry—it is the foundation of the riches of States. But a rational system of Agriculture cannot be formed without the application of scientific principles; for such a system must be based on an exact acquaintance with the means of nutrition of vegetables, and with the influence of soils and action of manure upon them. This knowledge we must seek from chemistry, which teaches the mode of investigating the composition and of studying the characters of the different substances from which plants derive their nourishment.

The chemical forces play a part in all the processes of the living animal organism; and a number of transformations and changes in the living body are exclusively dependent on their influence. The diseases incident to the period of growth of man, contagion and contagious matters, have their analogues in many chemical processes. The investigation of the chemical connection subsisting between those actions proceeding in the living body, and the transformations presented by chemical compounds, has also been a subject of my inquiries. A perfect exhaustion of this subject, so highly important to medicine, cannot be expected without the co-operation of physiologists. Hence I have merely brought forward the purely chemical part of the inquiry, and hope to attract attention to the subject.

Since the time of the immortal author of the "Agricultural Chemistry," no chemist has occupied himself in studying the application of chemical principles to the growth of vegetables, and to organic processes. I have endeavored to follow the path marked out by Sir Humphry Davy, who based his conclusions only on that which was capable of inquiry and proof. This is the path of true philosophical inquiry, which promises to lead us to truth—the proper object of our research.

Oregon Awake.

We publish the action of the farmers of Oregon in the formation of County Societies, for the promotion of Agriculture. This shows the interest they feel. Where are the farmers of California? Shall Oregon lead? Sonoma county of our own State has won the title as banner county in California. Who shall follow her lead?

We have offered premiums to Farmers Clubs, and a premium to those who shall send us the greatest number of subscribers the first six months. Who wins?

The Peach.

MANAGEMENT DURING THE FIRST YEAR.

The peach-stones, soon after they are extricated from the pulp, should be covered with earth to the depth of four inches, and remain in that condition till they are required for sowing, the following spring. Towards the end of March, or as soon as the ground is deprived of frost, let them be sown in good garden mould, two inches deep, and if possible in the place where the trees are intended to stand. As soon as the young plants have risen high enough to throw out branches the ground should be scraped over with a hoe, in order to destroy the weeds, and the side-shoots must be cut off near the main stem, care being observed not to injure the leaves which stand at the base of each shoot; for on the preservation of those leaves depend the health and vigorous growth of the young trees. As soon as shoots of choice varieties, with good eyes of the current year, can be obtained, the trees should be budded or inoculated, within one inch, or even below the surface of the ground. The buds may be known to be ready for insertion by the shield or portion of the bark to which they are attached, easily parting from the wood. Let the shoots, from which the buds are to be procured for inoculation, be taken only from the outside branches of healthy and fruitful trees. The buds usually preferred are those on the middle shoots, as they are not so liable to run to wood as those at the extremity, nor so apt to lie dormant as those at the lower end. Let the buds be collected in a cloudy day, or at an early or late hour of a fair one. When they are to be transported to a distance, they may be packed in moistened moss; or if shortly to be used, they may be put into a vessel of water: though in general they should be used as soon as possible after gathering. Before the buds are prepared, let the stock be made ready to receive them. At the part fixed on for inoculation, which should be smooth, and rather on the northerly side of the stock, make an incision, about an inch and a half in length, with a sharp knife, quite through the bark, but not into the wood, in the form of a letter I. This being done, proceed quickly and take off a bud by holding a shoot in one hand with the thickest end from you, and with the knife in the other hand, enter it about three-fourths of an inch below the bud, cutting nearly half way into the shoot, continuing it with one clean slanting cut, about three-fourths of an inch above the bud, sufficiently deep to take off part of the wood along with it, the whole to be about an inch and a half long; then directly with the thumb and finger, or point of the knife, slip off the woody part remaining on the bud, and observe if the eye of the bud remains perfect; if not, and a little hole appears in that part, it is unfit for use, or, as the nurserymen say, the bud has lost its root, and another must be prepared. This being done, place the back part of the bud or shield between your lips, and with the flat haft of the knife, or a piece of ivory or bone formed for the purpose, separate the bark of the stock for the admission of the bud, which must be closely inserted between the wood and bark in the aperture. Then cut off the top part of the shield containing the bud, even with the upper horizontal or cross-cut of the letter I, in order to let it completely into its place, and exactly join the upper edge of the shield with the bark of the upper transverse cut, so that the descending sap may immediately enter the bark of the shield, and deposit the granulated matter between it and the wood, so as to effect a living union. The parts are next to be immediately bound round with a water-proof bass ligature, or some substitute, beginning a little below the incision, proceeding upwards closely round every part, except just over the eye of the bud, and sufficiently tight to keep the whole secure, and to exclude the air and moisture. In a fortnight, at farthest, after performing the operation, such buds as have united may be known by their fresh appearance, and in three weeks, all those which have succeeded, must have their ligatures loosened, and in ten days more, entirely removed. In order to guard against the borer, (Ægeria.) let there be laid round each tree, in August, about a pint of coarse sand, so as to cover the roots and the tenderest part of the bark; and during the succeeding autumn, the same care should be observed, as in the early part of the season, to preserve the leaves.—*Browne's Trees of America.*

Agricultural Society of Polk Co., O. T.

A MEETING of the farmers of Polk county was held at Dallas, on the 3d April, for the purpose of taking into consideration the formation of an agricultural society. Hon. J. M. Fulkerson was called to the Chair, and J. E. Lyle appointed Secretary.

On motion of John Rigdou it was unanimously

Resolved, That we deem it expedient, necessary and proper to form ourselves into an agricultural society.

Resolved, That a committee of three be appointed to prepare and draft a constitution, and report the same to our next meeting.

Messrs. R. P. Boise, Isaac Hall, and J. E. Lyle were appointed said committee.

On motion of G. O. Burnett, voted that said committee procure some suitable person to deliver an agricultural address at our next meeting.

On motion of the Hon. H. N. Y. Holmes, voted that a copy of the proceedings of this meeting be furnished to the publishers of the several newspapers of this territory for publication.

On motion, the meeting adjourned to meet at the same place at 10 o'clock on the 4th Monday of May next.

J. M. FULKERSON, Chairman.
J. E. LYLE, Secretary.

Correspondence.

MONTEREY, April 20, 1854.

To the Editors of the California Farmer:

In the Illustrated London News of Feb. 11 last—a copy of which is enclosed—you will find an excellent botanical description, accompanied with an engraving, of the celebrated Arbor Vitæ of San Antonio Creek, in the County of Calaveras.

The gentleman who gives the scientific biography of this wonder of living vegetation was well known to me during his residence in this country, and it is no flattery to say that a more competent person could not be found to delineate its physical features. Besides extensive journeys through nearly every portion of Oregon and California, Mr. Lobb is pre-eminently fitted to form a correct judgment, from a thorough acquaintance with the order of cone bearing trees—having traversed the Cordillera of South America from the equator to near the Straits of Magellan—these countries, with Northwest America, affording the most magnificent specimens and varieties of this class of plants. Mr. Lobb is not only an experienced and diligent collector, but his taste has constantly led him to take the greatest interest in the Coniferæ, and his accuracy and care, I can say from personal knowledge, it is almost impossible to exceed.

The description by this gentlemen of our celebrated tree was made to the London Gardeners' Chronicle prior to the 11th February—Mr. Lobb having sent living specimens of the youthful brothers of the Calaveras giant, with a quantity of the seeds, to London, for the examination of the scientific, and for the purpose of propagating the species in England. The man of the Chronicle thereon dilates and exfoliates to that degree, that to any other but a lover of trees and flowers and running brooks, it would be thought expedient to confine him within the square of a soda water bottle crate; but finally you conclude it would be wiser to sew him up in a straight jacket, for, after a most inviting and delightful description of the the tree, he worries his brains into a vortex of names and quandaries, and finally falls from his excursive flights and heights into the domains of Nature's history, to proposing as a name for our noble Arbor Vitæ,—or, if you please, in Spanish· Arboldzo grandissima—what do you think?—what name could you possibly exercise your jealous California guessing at, by which you would arrive at a satisfactory solution of the enigma? Give it up, for I am impatient to let you know. He suggests and accords the name of a soldier—a mere piece of flesh—of a son of Mars—lately clothed in a Field Marshal's dress in the army of Britain, and called Arthur Wellesley, whilom Duke of Wellington, commander of her military forces till he grew grey with service, and then quietly laid down his life at the finality of his corporeal existence, amidst the benedictions of his countrymen, for sticking to them and by them through thick and thin. He says it ought to be called the "Wellingtonia Gigantea," and then goes on to call it so, and actually describes it as such; thus making the first assumption of a name, which, with most European and English readers, will cleave to it, unless we enter our vigilant and vigorous protest. And, in the name of California, I shall assume to do so, for a more preposterous piece of cockneyfied nonsense never tiltered through the brain down into the fingers through the ink of the pen of any denizen of the commercial Babylon of the modern world.

Without detracting one iota from the claims and character of the great Duke of Wellington, who was all his life a very monument of plain, sagacious, practical good sense—let us ask what right his admiring countrymen in the botanical or military line have for flying off to California to fasten his fame and glory to the most wonderful specimen of the living, spreading presence of the great Creative Author of all things, who planted this vegetable pyramid as a memento of his handiwork, when the Sierra Nevada was lifted from the volcanic centres of our planet, and emerged, with its snow-crested peaks, from a primeval ocean, which laved its bases! And the benificent Father of bountiful creation, 3000 or 5000 years ago planted with His own paternal hand in a silent valley of our California on the side of the eternal hills this sign of his love to that portion of the family of his children who should reside for all mundane time in this partition of the earth's extremities after passing through centuries of warfare in human blood, and petrified in their souls in the sanctities of religious faith and ritualistic bigotry—you after 3000 or 5000 years of experience, to subvert the shores of this [illegible] Bay, and [illegible] and their [illegible] [illegible] with pleasant and grateful thoughts under its wavy foliage and spreading branches—realizing the typical comparison of the all-embracing wings of nature's Universal Parent. Or, if left as a monument to men, to testify of the truth of the Chronicles of the Democratic Theocracy of the Jews, who, like true cosmopolites, have scattered from the cradles of humanity in the Asiatic Palestine, at that point of their history when Joshua, their first leader after Moses, wearied with the slaughter of the Amorites—"And Joshua said, in the sight of all the hosts of Israel, 'Sun, stand thou still upon Gibeon, and thou, Moon, in the valley of Ajalon.' And the sun stood still and the moon stayed, and hasted not to go down about a whole day." And at this great concurrence of human passions, when the mechanism of the universe of the Living God was arrested for a space of time, as asserted in the most ancient collection of historical and literary documents, we may imagine our Californian Arborial Methusaleh was planted, to mark a momentous epoch in the cycles of wordly events.

Now, I say, hath not Wellington's name been stuck by Englishmen to boots, shoes, dogs, cats, carts, horses, carriages—to streets, towns, cities, rivers, ships, counties—to puling infants, regiments of red coated soldiers, inns of rest for man and beast—to every conceivable thing under the sun, so as to weary and disgust the mind of independent man, born of the forests and prairies, with the very sound of his title? Then, why seek to fasten it on the magnificent specimen of nature's handiwork, placed in a far off valley in the bosom of the snowy mountains of the Northern Pacific, where its roots were laved with the waters from the primeval snows of our Cordillera; for 6000 years depositing their flakes of gold at its roots, to attract men from every clime to come and rest under its benificent pyramidal pile of leafy and bounteous refreshing green foliage of shade.

The heart of every Californian ought to rise up indignant at this assumption of a stranger, and in a still greater degree at the American savage who dared, with his barbarous axe, in open day, to slay this mighty giant of our mountains, built by the hands of God in the virginal youth of California, when the foundations of the eternal hills were laid by His majesty and omnipotence.

If Californians or botanists wish to bestow the name of a human being on this majestic plant, there are sufficient names in the history of our State and country far more applicable and proper than those of fagged out old Europe. There is Juan Rodriguez Cabrillo, who discovered California in 1542, and laid his bones on one of her ocean islands. There is Juan de Fuca, who discovered Oregon in 1592. There is Sebastian Vizcaino, who explored the coasts of California in 1602, and left the sickened, wasted remains of his brave sailors on her ocean shores, and returned to Spain and Mexico to weary out his noble spirit with petitions to kings and viceroys to be permitted to come and make settlements and converts among the tribes of half-civilized Indians, governed by the fabulous monarch of cities paved with gold, and living without the knowledge of the holy apostolic faith of Catholic Rome. There is Jonathan Swift, who immortalized his name by his account of the travels of Lemuel Gulliver, Esq., among the populous nations of the Lilliputians, found somewhere on her northern coast by that celebrated traveller about the year 1713. There is the name of Junipero Serra, who founded and settled the missions, and Christianized and civilized 15,000 savage Indians of her valleys and shores from 1769 to 1784. There is La Perouse, the Frenchman, and Vancouver, the Englishman, who mapped her coasts from 1786 to 1792—of Juan Perez, Estevan Martinez, and Juan Bodega, Spanish mariners, who explored her coasts and discovered the rivers, harbors, islands and capes long before Cook or other Europeans. And finally, to come to our own times, there is Fremont, who first explored and gave to the world a description and map of her interior territories, and helped in war with his own hand to bring this rich and beautiful country under the sway of American policy and democratic institutions. There is Gwin, who has worked with fidelity and sagacity for four years in Congress for her interests; and is there not Greenhow, who wrote the best or only chronology of her history and Oregon, and actually by his knowledge and evidence of original hidden records of truth, struck the beam of the scale, and by the timely use of his [illegible] and perspicacious pen [illegible] [illegible] in the adjustment of the [illegible] millions of dollars worth of land, and settled forever [illegible] by the preponderance of our [illegible] on the Pacific Ocean. The [illegible] man the sword. To prove it, take a voyage to China or India, and you will find five hundred millions of fellow men who own the sway of the literary and theological dogmas of Confucius, Brahmah, and Budh. This is a great mystery, but it is a greater truth. Soldiers' bodies are but food for powder, but men's souls are the embodiment of the divine life of the eternal Creator of the incomprehensible universe, and the scramble for its possession and subjection—the great game staked for by scholars and students, whose SERVANTS are priests and warriors.

Now, are not the men's names mentioned in the foregoing more worthy of our acceptance and of perpetuation in the annals of our empire than the fame, title and glory of a grey old warrior, buried with his nation's pomp in monarchical Europe, 15,000 miles away? I think so.

But the tree, I conceive, ought not to bear the name of a human being. It is God's tree—His gift to the children of Californians, to repose under its cooling shade in the heat of the noonday sun, and rest their wearied bodies from exhausting labor. Therefore Californians ought to baptise this primary wonder of botanical science, and not Atlantic or European strangers.

ALEX. S. TAYLOR, of Monterey.

Letter from Grass Valley.

GRASS VALLEY, April 20, 1854.

MY last was from Bear River. About two miles from Johnson's Ranch we reach the foot hills; here the vast level plain which extends so many miles northward from Sacramento finds its eastern limit, and from this point stretching our eyes away to the west we can see the Butte's with their rough and craggy peaks while beneath them we can easily mark the course of the Yuba and Feather rivers, whose golden sands have tempted so many to leave their homes and firesides to search for the yellow metal contained in their water beds; but in the soil which skirts their banks lies a far more sure and lasting fortune than was ever hidden beneath the waters and the golden harvest which the farmer reaps but grows the richer for digging, and is a claim which can never be worked out. Beneath our feet run the waters of Bear river, cold and muddy from their mountain source and washing and foaming along as if hurrying to mingle their muddy waters with those of the deep blue ocean. Near this place some shrewd Yankee, foreseeing the wants of the Farmer in this neighborhood, is erecting a flour mill with two run of stones, that will no doubt prove a profitable investment as well as a convenience to those in the vicinity. A little farther on towards the west is reached a little valley through which runs a small stream called Dry Creek; on four Ranchos situated here I found five hundred acres of Barley growing, being a larger amount than I have before met with in a similar circuit. It looked finely too, much better than the crops in the vicinity of Bear river, which appeared to have suffered from drought. A large number of Spanish cattle were grazing upon the plains in the neighborhood, and also a flock of about six thousand sheep were scattered over the plain, attended by two shepherds, and looked in fine condition.

We will now leave the valley with its rich and varied carpet of flowers, fine farms and hospitable inhabitants, and turn our steps towards Grass Valley.

A tramp over the hills, ever and anon stopping to admire some new and beautiful flower that presents its pretty and unobtrusive face to our view, while at intervals of a mile or two is found some fertile little spot, upon which the Farmer has located himself, far away from the noisy confusion of the busy city—but there is a love of intelligence here, and I often find the "FARMER" a welcome companion to their solitude. About two miles from Rough and Ready is a fertile tract of land containing about two thousand acres of fine soil, and called Penn Valley; upon ten Ranchos here I found seven hundred acres of Barley and three hundred of Wheat sown; besides these, there is a small crop of oats, and some acres of vegetables being raised. Some interest is also being manifested here in the culture of fruit trees. Of the ten farmers mentioned above, nine of them are subscribers to this paper; the tenth man, poor fellow, is a bachelor, and was absent from home when I called. I looked at his fine house and neat little farm and thought how much more comfortable and pleasant it would appear had he but a dear wife to grace his mansion; —a [illegible] but he had to [illegible] it [illegible] own [illegible] and I was [illegible]

We [illegible]

lar would express thanks to Mr. Taylor, for the interest he showed in advancing the cause of this paper. In my next I will give a few items in regard to Grass Valley, as my letter is already too lengthy to do so at present.

I have taken the number of acres of Wheat and Barley which is being raised upon the various Farms I have visited, and shall continue to do so, and present the result to the readers of the FARMER at some future day. C. L.

Marion County Agricultural Society.

RESPONSIVE to the following notice, that "a meeting will be held at the Court Room in Salem, on Thursday evening the 6th inst., for the purpose of taking preliminary steps for the organization of an agricultural society," the farmers of Marion County met in assembly to perfect arrangements for the complete organization of an agricultural association.

On motion of J. C. Geer, jr., Gov. John W. Davis was chosen temporary chairman. After a few happy remarks, prefacing the proceedings, the chair declared the meeting ready for business, whereupon, on motion of W. J. Herron, J. G. Wilson was appointed Secretary *pro tem.*

On motion of J. C. Geer, jr., that a committee of six be appointed to draft a constitution and by-laws for the government of an agricultural association, and report to an adjourned meeting hereof, the following gentlemen were nominated, viz.—Jacob Woodside, Thomas Ayers, David Crawford, Hiram A. Johnson, Samuel Brown, and Ralph Geer, and, upon motion confirmed as such committee.

Upon motion of J. Woodside, three additional members were added to the aforesaid committee, viz.—L. F. Grover, N. Cornoyer, Wm. J. Herren.

Pertinent and interesting addresses were made to the meeting by Messrs. E. M. Barnum, J. Woodside, J. C. Geer, David Crawford, H. A. Johnson, Samuel Brown, L. F. Grover, F. E. Eldridge, John T. Smith, Norris Humphrey, and W. Cox, and the best of feeling prevailed.

On motion of W. J. Herren, said committee were instructed to extend an invitation to the farmers of Polk county to join in the adjourned meeting with the farmers of Marion county.

On motion of C. P. Crandall, it was resolved that a committee of three be appointed to prepare and publish, previous to the next meeting of this body, an address to the farmers of Oregon, upon the subject of agriculture, and the means of promoting the farming interests of our territory. Messrs. Wesley, Shannon, A. W. Ferguson, and E. Parrish were nominated and by motion confirmed as such committee; and the committe was further enlarged upon motion to the number of five, by the addition of E. M. Barnum and Samuel Simmons.

It was further ordered that the proceedings of this meeting be published in the Statesman and Oregonian, and upon motion of W. J. Herren, it was carried, that this meeting stand adjourned until Saturday, May 13th, at 10 o'clock, at the court-house in Salem.

JOHN W. DAVIS, Chairman.

J. G. WILSON, Secretary.

The Good Effects of Gardening.

GARDENING is a civilizing and improving occupation in itself; its influences are all beneficial; it usually makes people more industrious and more amiable. Persuade a careless, indolent man to take an interest in his garden, and his reformation has begun. Let an idle woman honestly watch over her flower-beds, and she naturally becomes more active. There is always work to be done in a garden, some little job to be added to yesterday's task, to make it complete; books may be closed with a mark where one left off; needle-work may be laid aside and resumed again; a sketch may be left half finished, a piece of music half practiced; even attention to household matters may relax in some measure for a time; but regularity and method are constantly required, and are absolutely indispensable to the well-being of a garden. The occupation itself is so engaging that one commences readily, and the interest increases so naturally, that no great share of perseverance is needed to continue the employment, and thus labor becomes a pleasure, and the dangerous habits of idleness are checked. Of all faults of character, there is not one, perhaps, depending so entirely upon habit as [illegible]dence; and nowhere can one learn of order and diligence more prettily and more pleasantly than from a flower-garden.

But another common instance of the good effect of gardening may be mentioned: it naturally inclines one to be open-handed. The [illegible]ful returns which are made year after year upon our labors, shame us into liberality. Among the farmers who have lived on earth [illegible] many have been gardeners. Some [illegible] church may set out perhaps with a [illegible] to be niggardly with the fruits and [illegible] portion; but gradually [illegible] views change and [illegible] of money [illegible] [illegible] the free gifts of Providence [illegible] learn at last [illegible]

The Valleys are Moving.

We copy the proceedings of the meeting of some of the prominent citizens of the Sonoma Valley, in relation to a communication from their lovely valley to our city. This is progress, and we are proud to say Agriculture is the moving wheel. This is the great lever. Let the valleys awake to their own interest, and take measures to open rapid communications with the metropolis, so that produce can be brought into the market readily, and the value of the agricultural interest will begin to be seen and felt, and its influence will no longer be kept in the background.

At a meeting held on the 20th of Aptil, at the Union Hotel, Sonoma, for the purpose of facilitating the conveyance between this place and San Francisco, thereby promoting the general good of the valley, Col. J. Hooker was called to the chair and Morley E. Miller to act as Secretary. After an address from the Chair,

It was moved and carried, that a committee of five be appointed to draw up resolutions, and to report them on Saturday, 22d, at 4 o'oclock, relative to the object of the meeting, and to solicit subscriptions for the purpose of purchasing a steamboat to run between this place and San Francisco.

Committee appointed—Gen. Vallejo, Dr. Leavensworth, Capt. Graham, J. E. McNair, J. B. Boggs.

Adjourned to the 22d.

At a meeting on Saturday, April 22d, the report of the committee appointed at the last meeting being read, was accepted, after amendment, as follows:

To the citizens of Sonoma Valley, in Mass meeting assembled:

Your committee, appointed at a meeting held in Sonoma city, on Thursday the 20th inst., for the purpose of devising means by which the citizens of Sonoma Valley and vicinity may be enabled to communicate with the city of San Francisco, the metropolis of this State, by an easy and expeditious conveyance, and for that purpose to secure the permanent and continuous navigation of Sonoma river by means of a steamboat, beg leave to report: That they are unanimously of opinion that the navigation of our river is entirely practicable by steam, and that the transportation and communication necessary for our citizens between here and San Francisco demand that a steamboat should immediately be placed on the river to run continuously, be the expense what it may. Your committee propose that books should be opened for the subscription of stock, and that the meeting appoint a committee of five for that purpose, who shall give public notice to the citizens when they may attend and subscribe. Your committee recommend that the shares in the contemplated combination be fixed at $50 each, and that each share be entitled to one vote; and further, that as soon as the subscription list shall reach the sum of fifteen thousand dollars, the committee above mentioned be authorized to give public notice of a meeting of the stockholders in Sonoma, to organize and elect a President and Board of Directors.

M. G. Vallejo, Chairman.
Robert Graham.
T. M. Leavensworth,
J. B. Boggs,
J. E. McNair.

It was resolved that these proceedings be published in the Sonoma Bulletin. The meeting then adjourned till Saturday, April 29.

"Farmers! Write for your Paper."

The above paragraph stands at the head of the Prairie Farmer, one of the best and most ably conducted of our agricultural journals. Its editors are possessed of that kind of "brain power" which makes their paper always instructive and often highly amusing. But I have not taken up the pen at this time for the purpose of commending the Prairie Farmer, for it will commend itself wherever it circulates; but to call attention to the text it furnishes.

The life of an agricultural paper is "the plain, practical communications of good sensible farmers." Their experience is the only *book* on which a farmer can safely rely. On them then rests the responsibility of sustaining their papers and making them valuable, for without their assistance no paper of this class can be sustained. Hence the necessity of the call that stands at the head of this article. But it is to be regretted that to this call, which is substantially adopted by all our papers, so few should be willing to respond and that there should still exist the well founded objection that they do not contain a sufficient amount of practical matter to make them instructive and interesting to the common farmer. In this more than to any other cause, is their limited circulation to be attributed. It is strange that while there are writers in abundance upon the various theories, and the general principles of agriculture that there should be so few of a practical character. The want of more practical writers, those that give in detail their various methods of cultivation, treatment of stock, arrangements and plans of farm buildings, &c., is by none more sensibly felt than by the conductors of our journals. They try in every possible way to get observing, thinking men to communicate the results of their experience, and would gladly fill a much larger space with articles of that class if they were to be obtained. Now this state of things ought not to exist; our periodicals should be better sustained on this point, and it remains for the intelligent cultivators of the soil to do it, for no others can. They have the material at hand, and all that is required is a little exertion on their part to put it in form and submit it for publication. But putting matter in form, or rather committing ideas to paper is a task which many of our most observing and successful farmers are unwilling to perform. They not only underrate their own abilities, but entertain erroneous views of the qualifications necessary to constitute a good writer on the subject of practical agriculture. They think that one should possess all the advantages that an early and thorough education gives; should write correctly and should be accustomed to write for the press. This is not absolutely necessary. Which class of articles are most generally read and are highest prized—those written in every day, comprehensive language and are short, or those that may possess literary merit, but are so encumbered with words and are of such length as to make them objectionble to the common reader.

For nior than twenty years I have been a constant reader of our agricultural papers, and to them I am mainly indebted for the success which has thus far attended my efforts to reduce farming to a system and make it satisfactory and profitable. And of all the various Writers that have appeared in the columns of those papers, none have been studied with so much profit as those who have given in detail their experience in the different departments of farm husbandry. Many of these writers were evidently what are termed uneducated men, and had to depend in a great measure upon the editor for the correction of their articles, yet the facts were set forth in so plain and brief a manner as to carry conviction to my mind, of their truthfulness and value. The time may come when none but the learned farmer will be called upon to write for his papers, but that time is not yet. Therefore the call now is both to the learned and the "illiterate," and if they will obey that call they will no longer have reason to complain that their papers are mostly filled with articles which to them are of little value. As I have myself experienced, (and do still experience,) all the difficulties that can possibly stand in the way of an unlearned beginner in writing upon the subject of practical agriculture, I will offer a few words of advice to such. Become thoroughly acquainted with your subject; avoid preliminaries; go at once into the merits; be truthful and accurate in your statements, in regard to soil, situation, products, &c.; leave out minor particulars that can readily be inferred; use every-day language such as you use with your friends; talk to us just as you would to them and don't try to accomplish too much. Write plain, be short. Follow these rules and you will improve yourself, impart instruction to thousands of readers and pay in part the debt you owe to others who have written for your information.

L. C.

Troy, Feb. 7th. —*Farmer's Companion.*

On Rearing and Managing Trees.

Vast sums of money are annually spent in this country on trees; it would be impossible to make a close estimate of the amount, but we cannot be very far out of the way in putting it at a million of dollars. We believe that we could show by figures that this is not, as it may appear to many, an immoderate estimate; for more than one quarter of that amount may be set down to Rochester alone. This gives us some idea of the extent and importance of our arborical interest, yet it attracts little attention. The men engaged in rearing and planting trees are not those who make much noise in the world. We have no arboricultural societies to collect information and incite to experiment and observation—no public gardens or arboretums to test theories or modes of culture—the whole matter thus far has been left to individual effort and enterprise; and as both growers and purchasers of seed usually proceed upon principles of economy, no great improvement has been made on old methods;—at least, this business has not advanced in the same ratio as some other branches of the useful arts and sciences. How many of those engaged in the planting and culture of trees have attempted to acquire the slightest degree of knowledge concerning their structure, the functions of the different parts, and their relative connection and influence on each other? Not one in five hundred. A man giving a hundred dollars for trees does not consider it worth his while to consult the best books that have been written on the subject—he does not consider that a dollar spent in that way might save him fifty in the management of his plantation. A few words of oral instruction perhaps from some one as ill-informed as himself, or a few hints which he finds on the cover of a nurseryman's catalogue, supply all the needed information. We are happy to admit exceptions—numerous too. Books and papers are read and studied—but the few who read and seek information from such sources are, when compared with the number of persons who plant trees, like a drop in the bucket. Frauds of all kinds are perpetrated upon people thus exposed by ignorance; for there is no pursuit under the sun exempt from dishonest and tricky persons. It is not surprising that we hear, every year, people complain bitterly of their trees. "They were nice trees, rightly planted, and properly cared for." There are many reasons for these failures: and if people were as fully informed as they should be on this subject—if they possessed a correct knowledge of the essential properties of a tree fit for safe and successful removal, and understood properly what good planting and good treatment consist in—they could readily account for their losses.

We propose to offer a few suggestions in regard to the qualities of trees. In the first place, a very large number of the trees sent out from the nurseries are not fit to be planted. It must be generally admitted that *hardiness* is one of the most important qualities of a tree, to fit it for safe removal. It is well known that nearly all purchasers of trees prefer such as are tall and straight, with a smooth, glossy bark, indicating thriftiness. Nurserymen must consult the tastes of their customers, and they are compelled to adopt a system of culture producing such trees as they find most saleable. They must either do this or abandon the trade. To produce these tall, smooth-barked trees, they must manure their ground highly, and plant closely. In these dense nursery plantations the light is pretty effectually excluded from all parts of the tree except the top; and as, according to an unalterable law of nature, plants and trees shoot toward the light, the tops push upward, and no side branches are formed. Those who have not seen this exemplified in the nursery, may have seen it in the forest. If a number of elms or maples, for instance, are planted closely in a group, and others separately, on the same sort of soil, we find that those planted close together shoot up rapidly, forming tall, smooth, naked trunks, having only a few branches at the top; and those standing apart in the open space grow in height less rapidly, but produce numerous side branches, the trunk is thick, the bark rough, and the trees are so different from each other as to have scarcely a characteristic in common, save the foliage. These tall trees, grown in the shade and shelter, are almost destitute of roots. In a natural state the roots bear a due proportion to the branches. We find that a tree standing in the open field, and having a wide-spread head has roots extending three or four times the distance that those of much more lofty trees do, growing in a thick grove or forest. It is on this account that trees left standing when the forests are cut down seldom survive the shock of the first gale; they are broken or torn up by the roots. Nature beautifully adapts everything to its situation and circumstances. The tree in the depth of the forest is sheltered on all sides, and requires but few roots to resist the force of the wind, or branches to protect its trunk. The tree in the open field, exposed on all sides, requires an ample supply of both.

Science of Mowing.—The scythe should hang natural and easy, and it should be kept in first rate order. As you approach the standing grass, let the heel of the scythe move to the very point of commencement, and let it stop the very instant it has done its work. Thus there is nothing lost by a backward or forward swing. If the grass stands up so as to admit of moving on, measure with your eye the utmost capacity forward of your scythe; take a quick, easy gate, moving your right foot well up to the standing grass, and your body with it, though leaning back by bending the knees a little forward, so as to bring your whole weight to bear upon the scythe without twisting the body from right to left, as many do; thus giving ease to each clip, and an ability to repeat in an advanced position without fatigue.

Note.—If you swing six inches too far back, and six inches too far in pointing out, it makes twenty-four inches loss! This applied to a scientific forward motion, will give a great gain on ordinary mowers.

Scientific Farming.—The importance of conducting agricultural operations upon scientific principles, is beginning to be acknowledged and appreciated by all good practical farmers. Indeed, if in this day of agricultural progress, a man be found who opposes or ridicules scientific farming, the inference may be drawn, with a good deal of certainty, that either his prejudice or his ignorance is more powerful that his perception of truth. We advise all such men to subscribe for, and read, some good agricultural newspaper. They may then learn "how a wet soil may be drained—how a dry soil may be irrigated—how a barren soil may be enriched—how a rich soil may be made more productive—how a heavy soil may be made lighter—how a loose soil may be made more compact—how a bleak soil may be sheltered—and how waste lands may be converted into fertile fields."

From China.

By the arrival of the bark Pathfinder, on the 1st inst., we have dates from Hong Kong to the 9th of March.

The government of the Philippine Islands has established a regular monthly steam communication between Manila and Hong Kong.

The papers contain no reliable or important information in regard to the state of affairs between the Imperialists and the rebels. The China Mail says they have no reliable intelligence, except that many of the missionaries were lending the rebels every aid in their power. "Whether Christianity will be benefited by their support of such a dissolute scum as now hold Shanghae, is an open question." It was reported that a large body of Mongolians, supported by several thousand horsemen, were on their way to Nanking, to exterminate the rebels. The statement, however, rests only on Chinese authority.

The ship Mandarin, which arrived at Shanghae on the 15th February, brought the new American Consuls for Shanghae and Amoy—R. C. Murphy and T. H. Hyatt.

From Japan we have the important intelligence that Admiral Pontiatine, commander of the Russian squadron, had gone to Nangasaki, and received from the authorities a notice that, in consequence of the anxious desire of foreigners to open intercourse with them, and of the willingness of their own people to trade, it had been decided to open the commerce of Japan to all nations. The information is said to be reliable, though a Canton letter of the 4th of March discredits the story. With regard to commercial intercourse, the Japanese officers stated that, after centuries of seclusion, some preparation was necessary, and therefore a year must elapse before any treaty or privileges to trade could come into operation. Thus the plumes have been shorn from the crest of Com. Perry, and by a Russian, too!

Correspondence.—We call attention to the able and interesting communication of our traveling agent, Mr. Langdon. This very pleasant description awakes an interest in the subject of agriculture, and we hope many of our practical farmers will take up the subject and write us an off-hand familiar letter occasionally, and tell us of their whereabouts.

MARKET REPORTS.

San Francisco, May 3, 1854.

Since our last, copious showers have refreshed the earth and given a new feature to Agricultural prospects. Grain never looked so well, or promised so abundantly, and the Farmer having been saved a vast amount of labor in the watering process, his attention has been given to other branches, to great advantage. There is a prospect that California will become an exporter of Flour the present season.

Barley is steady. Potatoes are advertised at 25c ₱ bag.

General marketing in Vegetables commands satisfactory prices,

Fruits will be abundant; Grapes, Peaches, Figs, Melons, Apples, Plums and Apricots will gladden the eyes of all, and the market is already supplied with delicious Strawberries enough to make the mouth water; they brought $6 ₱ box when first introduced, and were purchased by Robb & Co.

Business has been much depressed in every branch and the country has been again drained of her precious treasures to the tune of two and a half millions, and so long as this continues we can never expect prosperous times; the Treasure must be kept at home, by home productions and home manufactures, and then we shall see prosperity.

AGENTS FOR CALIFORNIA FARMER

Messrs. ADAMS & Co. at all their offices throughout the United States or Europe.

Messrs. WELLS, FARGO & Co., at their offices throughout the Country.

Mr. CHAUNCEY LANGDON, Travelling Agent for the northern portion of the State.

Mr. E. R. HIGHTON, general and travelling Agent for Northern section of the state, to whom we commend our Agents for all information needed.

Messrs. LANGTON & Co. *for Downieville, Foster's Bar, Goodyear's Bar, Minnesota.*

Messrs. LELAND & McCOMBE—*Crescent City, Port Orford, Uniontown, Eureka, and Bucksport.*

San Francisco.—SULLIVAN'S newspaper stand, near the Post Office; KIMBALL'S, Notary Carriers Hall, Long wharf.

Benicia, Martinez, &c.—Messrs. Stiles & Dodds.

Union City and Mission San Jose—Messrs. Howard & Chamberlain.

Sacramento.—Messrs. Gardiner & Kirk.

San Luis Obispo.—Dr. Thomas T. Harvey, P. M.

Union, Humboldt Bay—A. H. Murdoch, P. M.

Mount Firm, O. T.—Gen. M. M. McCarver.

Marysville—Geo S. Becker & Co.

Stockton—Rosenbaum & Joeckinsen.

Bidwell's, Butte Co.—P. Freer.

Weaverville, Trinity Co.—H B. Davison & Co.

Yreka—Crum, Rogers & Co.

New York City, N. Y.—J. M. Thorburn & Co.

N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

MARRIED.

On the 1st May, in this city, by Rev. J. M. Homer, Mr. Origin Morrey and Miss Delina Cheney, all of this city.

On the 1st May, near Sacramento, Mr. D. L. Williamson and Ellen Emery.

On the 29th April, in this city, by Rev. F. T. Gray, Isaac M'Kim Bowly and Miss Angelina Douglass, both of New York city.

On the 30th April, in Sacramento, Mr. Abraham Vandemark and Miss Martha Burrell, of Illinois.

On the 24th April, in Downieville, by Rev. Mr. Bonner, R. H. Taylor, formerly editor of the Marysville Herald, and Miss Mary Jane Lehigh, all of Downieville.

On the 29th April, in this city, by Rev. J. E. Benton, Samuel B. Ahlen and Miss Mary Gillis, all of this city.

DIED.

On the 1st May, in Sacramento, of consumption, Mr. Wm. Fallis, formerly from Montreal, aged 30 years.

[Quebec and Montreal papers please copy.]

On the 1st May, in this city, Augustus F. Fay, aged 31 years, of this city, formerly of Southboro', Mass.

On the 1st May, in this city, of consumption, Alfred Stewart, late member of the Marion Rifles, and of Vigilant Engine Company, No. 9.

On the 2d May, lost overboard, from brig Kingsbury, while coming into this port, Joseph Murden, seamen, aged 19 years, of Norfolk, Va.

On the 28th April, in this city, Mary Ann, daughter of Patrick and Mary Noonan, aged 5 years.

[New Orleans papers please copy.]

On the 23d April, in Portland, Oregon, Nancy, wife of D. H Lownsdale, aged 33 years.

On the 23d April, at Monterey, Mrs. Maria Louisa, wife of Pacific Ord.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO.

ARRIVALS.

APRIL 26—Steamer Major Tompkins, Hunt, 13 hours from Santa Cruz, via Pigeon Point, with produce.

Br ship Orleans, Evans, 60 days from Hong Kong; mdse.

Bark St Mary, Lawrence, 77 days from Punta Arenas, C A, via Acapulco 36 days; mdse.

Bark Madonna, Russell, 3 days from Humboldt Bay; lumber.

Schr Iowa, Gregg, 3 days from Humboldt Bay; lumber.

Sch Favorite, Wheelwright, 13 hours from Tomales; lime.

APRIL 27—Steamer Columbia, Dall, 56 hours from Columbia River.

Schr Gen Morgan, Way, 12 hours from Bodega; lumber.

Schr Rambler, Woodbury, 24 hours from Tomales; produce.

APRIL 28—Schr John Dunlap, Ellis, 2 days from Monterey, with produce.

Schr Odd Fellow, Austen, 30 hours from Santa Cruz; lime.

Schr Velasco, Copeland, 2½ days from Santa Cruz; lime.

APRIL 30—Clipper ship Archer, Thomas, 106 days from New York, with mdse.

Brig Colorado, West, 5 days from Humboldt Bay; lumber.

Schr Page, Phillips, 5 days from the island of San Miguel, via St Simon's Bay, in ballast.

Schr Astoria, Willoughby, 2 days from Pajaro; produce.

Schr Vaquero, Wilcox, 7 days from San Pedro, in ballast.

APRIL 30—Steamship America, Howland, 56 hrs from Oregon.

Steamship Peytona, Sampson, 2½ days from Oregon.

Brem brig Rodolic, Wupper, 50 days from Tahiti; oranges.

Brig Susan Abagail, Caruo, 7 days from Columbia River; with lumber.

Brig Wm Penn, Huffington, 4 days from Humboldt Bay; with timber.

Brig North Bend, Lent, 24 hours from Mendocino; lumber.

Schr S D Bailey, Garcia, 6 days from Santa Barbara; ballast.

Schr Alfred Adams, Briggs, 24 hrs from Santa Cruz; lumber.

MAY 1—Clipper bark Pathfinder, Lawrence, 49 days from Canton, with mdse and 148 passengers.

Bark Sarah Warren, Gove, 10 days fm Puget Sound; lumber.

Bark Clara Devene, 8 days from Columbia River; lumber.

Bark Archibald Gracie, Vandetwerd, 5 days from Oregon; 185 M ft lumber.

Bark Burnham, Kinney, 12 days from Penn's Cove (Puget Sound), with piles.

Brig Kingsbury, Cook, 5 days from Oregon; 142 M ft lumber.

Brig Detroit, Hall, 6 days from Oregon; lumber.

Brig Merchantman, Pray, 9 days from Puget Sound; lumber.

Schr Ario Pierce, 2 days from Trinidad; with pickets.

Schr San Diego, Crafton, 3 days from Port Orford; 30 M ft cedar lumber.

Schr Tennessee, Ellis, 5 days from Oregon; lumber.

MAY 2—Ship John Haven, Ricker, 147 days from New York, with mdse.

Ship Flowers, Thomas, 12 days from Stellacoom (P S); piles.

Bark Harriet Thompson, Johnson, 4 days fm Oregon; lumber.

Brig Agate, Collins, 4 days from Oregon; lumber.

Brig S R Jackson, Given, 7 days from Columbia River; 125 M ft lumber.

Brig Zoroaster, Crosby, 9 days from Puget Sound; lumber.

Brig Grecian, Phillips, 9 days from Oregon; lumber.

Schr Minna, Pulsifer, 60 days from Hong Kong; with mdse.

Schr Panamiscove, Wood, 4 days fm Coose Bay, 30 cds wood.

Schr Maryland, Smith, 5 days from Shoalwater Bay: 3000 bskts oysters.

Sloop Mona, Vanbaum, 12 hours from Tomales; with clams.

CLEARANCES.

APRIL 26—Steamships Columbus, Dow, for Panama: Isthmus, Hilliard, San Diego; ship Telegraph, Harlow, Hong Kong.

APRIL 27—Brig Fawn, Barrett, for Umpqua River.

APRIL 28—Ships Aurora, Brown, for Manila: Flying Cloud, Cressey, Hong Kong; schr Laura Bevan, Martin, San Pedro.

APRIL 29—Steamship Uncle Sam, Mack, for Panama; stmr Sea Bird, Haley, San Diego; Br ship Lord Warriston, Cubitt, Hong Kong.

MAY 1—Steamships Panama, McLane, for Panama; Cortes, Cropper, San Juan del Sud: bark America, Wing, Astoria.

MAY 2—Schr Gazelle, Dorcott, for Eureka, Humboldt Bay.

HAVING established himself at the above locality for the purpose of transacting the Real Estate business, in all its branches, will give especial attention to sales of every description of Real Estate, examination of titles, conveyancing, &c.

A Register for property, at either public or private sale, will be kept at the office for the inspection of purchasers, 16

REMOVAL,

WE HAVE REMOVED to the *CORNER OF BATTERY AND RICHMOND STREETS,* (opposite Delong, McNeil & Co's,) up stairs.

☞ Our *HARDWARE BUSINESS* will be confined principally to Importing and Jobbing. The AGRICULTURAL WAREHOUSE to be continued as formerly.

16 BRYANT & CO.

Ketchum's Patent Mowing Machines.

A LIMITED supply of the above justly celebrated *Mowing Machines*, that will mow from 12 to 15 acres of grass per day as well as can be done with a scythe. For sale by HENRY McNALLY, No. 185 Washington street, 15 1m (between Battery and Front streets.)

Lots for Sale in Horner's Addition.

THE subscriber has removed his office, books, maps and records, to the old San Miguel Rancho House, one mile southwest of the Mission Dolores Church, where he can be consulted every day. Those who may wish to purchase in HORNER'S ADDITION, or Villa Lots of any required size, from one to twenty acres, with clear and undisputed titles, would do well to call upon him before buying elsewhere, for it will cost nothing to get posted up before purchasing. Those wishing to purchase will find it to their interest to call at the "Old Rancho House," where they can see an abstract of the titles, the identical lands, with their boundaries, advantages, elegant situations for residences, gardens, &c., &c.

J. M. H. can be seen at Horner & Co.'s Counting Office, on Davis street, corner of Broadway Wharf, between the hours of 12 M. and 3 P. M. [15] JOHN M. HORNER.

Splendid Rancho for Sale.

ONE of the finest Ranchos, and in the highest cultivation, with hill and promising crop in ground, will be offered, and immediate possession given to a bona fide purchaser. The Rancho contains 160 acres, pleasantly located upon one of our river banks, with dwellings and out buildings, and all in perfect order. To a person desirous of securing a permanent residence, one that is desirable, and that can be made profitable, this opportunity presents a chance rarely met with. About one-half of the purchase money can remain upon mortgage or exchanged for valuable property in this city.

Persons desirous of purchasing, may learn the particulars by calling at our place of business. WARREN & SON,

15 Musical Hall Building, Bush street.

Piano Fortes and Melodeons.

WOODWORTH & CO.

IMPORTERS of Piano Fortes and Melodeons, 130 Clay street, are the exclusive Agents for the sale of STODART'S PIANO FORTES and PRINCE'S MELODEONS, in California, and are constantly receiving them direct from the manufactory. Such arrangements have been made as will enable them to supply these celebrated instruments at manufacturer's prices, thus securing to purchasers the advantage of making personal selection from a large and complete assortment, and of avoiding the great risk and delay of importation.

Just received a stock of Piano Fortes for hire. 15 tf

"PRESS ON."

BY PARK BENJAMIN.

Press on! there's no such word as fail!
Press nobly on! the goal is near—
Ascend the mountain! Breast the gale!
Look upward, onward—never fear!
Why should'st thou faint? Heaven smiles above,
Though storm and vapor intervene;
That sun shines on, whose name is Love,
Serenely o'er life's shadowed scene.

Press on! surmount the rocky steeps,
Climb boldly o'er the torrent's arch;
He fails alone who feebly creeps,
He wins who dares the hero's march.
Be thou a hero! let thy might
Tramp on eternal snows its way,
And through the ebon wails of night
Hew down a passage unto day.

Press onward! if once and twice thy feet
Slip back and stumble, harder try;
From him who never dreads to meet
Danger and death, they're sure to fly.
To coward ranks the bullet speeds,
While on their breasts, who never quail,
Gleams, guardian of chivalric deeds,
Bright courage like a coat of mail.

Press on! if fortune play thee false
To-day, to-morrow she'll be true;
Whom now she sinks, she now exalts,
Taking old gifts and granting new.
The wisdom of the present hour
Makes up for follies past and gone—
To weakness strength succeeds, and power
From frailty springs—press on! press on!

Press on! what though upon the ground
Thy love has been poured out like rain?
That happiness is always found
The sweetest, which is born of pain.
Oft 'mid the forest's deepest glooms
A bird sings from some blighted tree,
And in the dreariest desert blooms
A never-dying rose for thee.

Therefore press on! and reach the goal
And gain the prize and wear the crown;
Faint not, for to the steadfast soul
Come wealth and honor and renown.
To thine own self be true, and keep
Thy mind from sloth, thy heart from soil:
Press on! and thou shalt surely reap
A heavenly harvest for thy toil!

THERE ARE TWO WAYS TO LIVE ON EARTH.

BY CHARLES SWAIN.

There are two ways to live on earth,—
Two ways to judge,—to act,—to view;
For all things here have double birth,—
A right and wrong,—a false and true!

Give me the home where kindness seeks
To make that sweet which seemeth small;
Where every lip in fondness speaks,
And every mind hath care for all.

Whose inmates live in glad exchange
Of pleasures, free from vain expense;
Whose thoughts beyond their means ne'er range;
Nor wise denials give offence!

Who in a neighbor's fortune find
No wish,—no impulse,—to complain;
Who feel not,—never felt,—the mind
To envy yet another's gain!

Who dream not of the mocking tide
Ambition's foiled endeavor meets,—
The bitter pangs of wounded pride,
Nor fallen power that shuns the streets,

Though fate deny its glittering store,
Love's wealth is still the wealth to choose;
For all that gold can purchase more
Are gauds, it is no loss to lose!

Some beings, whereso'er they go,
Find nought to please or to exalt,—
Their constant study but to show
Perpetual modes of finding fault.

While others, in the ceaseless round
Of daily wants, and daily care,
Can yet cull flowers from common ground,
And *twice* enjoy the joy they *share!*

Oh! happy they who happy *make*,—
Who *blessing*, still are blest!
Who something spare for others' sake,
And strive, in all things, for the best!

THE MAGICIAN AND MARKET WOMAN.—McAllister, the famous magician, was passing through one of our markets the other morning, accompanied by a friend, when they suddenly passed before an old woman who had a few dozen eggs to sell.

"Are these fresh?" inquired Mac.

"Yaw, dey ish frcsh," was the reply.

"I may try a few, I suppose, to provo them, if I pay for all I break?"

"Yaw," said the vender of eggs, and McAllister immediately proceeded to break one.

"Good gracious?" he exclaimed, with feigned astonishment, "what is this?" and he picked out of it a $20 gold piece. The woman started with surprise. McAllister broke another egg—the woman eyeing him closely—and to her increased surpriso, out dropped a $10 gold piece. The magician took up another egg, which he broke, when out fell a $5 gold piece upon the stand.

"I rather like these eggs," he quietly remarked, breaking another, and picking up a quarter eagle piece from among the ruins. By this time the Dutch woman began to get excited and taking her basket exclaimed—

"I doesh not like to shee mine eggs all prokes upon to ground!"

"Oh, nonsense, my good woman, what is that to you, so you get your pay," returned Mac.

"At all events let me have one moro egg," and so saying he took another egg, which he broke and extracted from it another gold piece.

The woman refused to sell any more at any price. Whereupon the magician and his companion, paying for the damage they had done, continued on their stroll through the market. After some little time they returned to the scene of the egg exploit, when to their utter astonishment, behold! the Dutch woman had a crowd around her, and was smashing her eggs as fast as she could, but looked in vain for the gold pieces.

"Why, what is the matter, good woman," said McAllister.

"Vere is de eggs mit de golt?" shrieked the woman.

"Why, you don't know how to sort them—let me—I'll take this one—"

"No you shan't," exclaimed the vender, snatching the egg and breaking it herself, but with the same mortifying result.

"I guess the good ones are all gone," said the magician, "but as you haven't many left, I'll take the lot at your regular price."

With a sigh the woman consented, and handed over the basket. McAllister at one began to break them—one—two—three—four—each time producing a gold piece! The Dutch woman could stand it no longer, but seizing one side of the basket dashed her fist in among them, to the demolition of the entire stock. But alas! Not a single gold piece could she find. McAllister threw her one, to compensate for her disappointment, and then slipped away—but not before the crowd began to get an inkling of who he was, and mention, audibly, the name, McAllister, the Great Magician!

AN editor in the land of steady habits says: "There is but one city in Vermont, and not one soldier. We have no police, and not a murder has been committed within this State for the last ten years. We have no museums nor crystal palaces, but we have homes, genuine homes, that are the centre of the world to their inmates, for which the father labors, votes, and talks—where the mother controls, educates, labors and loves where she rears men, scholars and patriots."

"SUCH A GOON UN!"—The Lowell (Mass.) Advertiser out-Billy Blacks Billy Black herein: What's the difference betweeu an attempted homicide and a Cincinnati hog-butchery? "Don't Gasp!"

One is an assault with intent to kill, and the other is to kill with intent to salt!

"I'LL take the *responsibility*," said a parent, as he held out his arms to take the baby.

THE state of life is most happy whose superfluities are not required and necessaries are not wanting.

A NEW YORK paper says no family can live in New York, in any degree of elegance, on less than five or six thousand a year.

TIME.

PARTICULAL attention paid, as usual, to the cleaning and repairing of Watches, by

Great Sale of Fruit Trees.
APPLE, PEAR, CHERRY AND PLUM TREES—RASPBERRY, CURRANT, FIG, GRAPE, &c.
WE shall offer every day, at 11 o'clock, in lots to suit purchasers, at our rooms, Musical Hall, the above varieties of Fruit Trees. They are in fine condition and worthy particular notice. WARREN & SON,
8-tf Musical Hall Building, Bush street.

Threshers, Separators and Cleaners.
PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any other machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—four for the separator, two for the power, &c.
Also, EMERY'S Threshers and Separators, of Two Horse Power.
We have also on the Golden Fleece, two of HALL'S (Rochester,) Latest Improved Threshers, Separators and Cleaners, Eight Horse Powers, all complete.
Also, four of HUSSEY'S REAPERS and MOWERS, all combined.
For sale by COIT & BEALS,
9 tf 94 Battery street, office up stairs.

Osage Orange, Raspberries and Currants.
10,000 Plants of strong growth, just received. 500 extra size Raspberries, the far famed that produce in such incredible quantities.
For sale by WARREN & SON.

FLOWERS! BRIGHT FLOWERS!
A GIFT FOR HOME.
"THROW PHYSIC TO THE DOGS."
WE convert the pill box into a Floral vase, and instead of the "nauseate drug," we offer the perfume of Flowers. Our beautiful collection of *California Flower Seeds* we now offer.
These are put up in handsome morocco cases, or homœopathic cases of glass bottles, with printed lists and directions, and with pressed flowers of the different varieties of each. These are of the most beautiful style that can be prepared, and are most appropriate gifts for home at this season.
We invite attention to them at our rooms, at Musical Hall Buildings. WARREN & SON,
5 Seedsmen and Florists.

POLLEY & CO.,
OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the Fire Proof Store, No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Haxall and Gallego.
Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any adulteration.
Ground feed of all kinds always on hand.
Every exertion will be used to merit a continuance of the vator heretofore so liberally extended to us. 1-tf

Catalogue of Fruit and Fruit Trees.
WE call the attention of Nurserymen and Orchardists to a new catalogue just issued by us, prepared with great labor and cost, giving the lists of the best fruits cultivated in Europe or America, with their synonyms. This catalogue embraces also lists of best Vegetables, Ornamental Trees, Flowering Plants, Seeds, &c.—being a perfect illustration of the best varieties of everything belonging to AGRICULTURE, HORTICULTURE, and FLORICULTURE, with brief directions for the cultivators in each department, and as *adapted to California.*
This work will be found a very great help to all engaged in cultivation.
Price $1 per copy. WARREN & SON,
Nurserymen, Seedsmen, and Florists,
5 Musical Hall Buildings.

New Drug Establishment.
A. T. McCLURE, having completed and moved into his fire-proof Brick Store on Bush street, has just opened and offers for sale a splendid and complete assortment of fresh Drugs of extra quality, received by recent arrivals from the Eastern States
Prescriptions carefully put up at all hours.
Country orders promptly attended to.
A. T. McCLURE,
6t No. 42 corner Bush street and Bryant Place.

10,000 FRUIT TREES,
Grape Vines, Fig Trees, Raspberry and Current.
WE invite all who intend planting Trees and Vines to call on us before they make their purchases, as we can offer them many advantages that cannot be found elsewhere. Our collections, we know, are the most extensive, and the quality the best that can be had. We therefore invite all to call on us: we can show them, in our Exhibition Rooms, the samples of the actual fruit they produce. WARREN & SON,
Musical Hall Buildings, San Francisco, and 15 J street, Sacramento.

GRASS SEED.
10,000 LBS. NEW GRASS SEEDS—Timothy or Herds' Grass, Red Clover, White Clover, Red Top, Kentucky Blue Grass.
Persons wanting the very best seed are requested to give attention to the above. WARREN & SON'S
Musical Hall Building, San Francisco.
And J street, Sacramento.

Shells for Garden Walks.
A VERY handsome species of Shells for Garden Walks, have recently been discovered and are now ready for delivery; they will form a compact and beautiful walk, *hard*, free from weeds, and give a finished beauty far beyond the cost of material and expense of preparation.
Samples can be seen at, and orders received by the subscribers, who will give all needed information, and who will act as agents of the discoverers and proprietors.
12 tf WARREN & SON.

Transportation Wagons—To carry four tons each—Iron Hubbs, to screw up in dry weather,
Hickory Whip Stocks;
Harness, for Express Wagons;
Ladies' Side Saddles;
Grind Stones—50 Berea, small size—grind stone frames complete;
Pick Handles, Axe Helves;
Plantation Hoe Handles;
Ox Yokes—100 complete;
Ox Bows—100 pair;
Hand Carts—3 fine ones;
Walnut Axles—For light Wagons;
Gold Washers, Mining Pans;
Tuttle's Goose Neck Hoes;
Cucumber Pickles—half gallons, boxes 1 doz each;
Stone Jugs—three, two and one gallon;
Garden Engines, on wheels, complete, with hose and pipe;
Top Onions—for seed;
Marrow Fat Peas;
Early Charitou Peas;
Buckwheat—for seed;
Osage Orange Seed;
White Celery Seed;
Mountain Sweet Water Melon Seed;
Yellow Skin Onion Seed;
Hemp Seed—for Birds;
GRAPE VINES—one thousand Isabella;
do do five hundred Catawba—three years old, from Dr. Underhill's celebrated Vineyards, Croton Point.
Camelia Japonicas—Fifty, in fine order, assorted colors;
Moss Rose Bushes, in variety;
Perpetual Rose do do;
Hops, in tin, a superior article;
Borax; Buckwheat Flour;
Rye Flour, in tins;
Cotton Twine, patent;
Sail Twine, patent cotton;
Clothes Lines, in variety;
Bannisters, of Mahogany;
Nowells, of Black Walnut;
Fencing Wire; Butter;
Mexican Spurs; Invoice of Mexican Bits, &c., of the highest finish, &c.
For sale by COIT & BEALS,
9-6m 94 Battery street, corner of Clay.

BATES' SUPERIOR
UPLAND BELL CRANBERRY.
THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.
Soil, Propagation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.
In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top soil at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.
If the land is poor, so that grass and weeds will not vegetate, then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable.
Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in meadow moss, and well boxed, which will enable them to go to a great distance in a fresh state.
The proper time for Fall transplanting is October and November; for Spring, from the opening of the same till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting, and during the winter for Spring. 15
SULLIVAN BATES,
14 Bellingham, Norfolk Co., Mass.

SIGN OF THE GOLDEN MORTAR.
JUSTIN GATES, wholesale and retail Druggist, 76 K street Sacramento, offers for sale at greatly reduced prices, a large and well selected assortment of
Paints, Oils, Turpentine, Brushes, Alcohol, Lamp Oil, Neatsfoot Oil, Quinine, Morphine, Opium, Camphor, Tartaric Acid, Cream of Tartar, Soda, Tapioca, Hops, Cloves, Castile Soap, Indigo, Bay Water, Congress Water, Shaker's Herbs and Roots, Tilden's Extract, Seidlitz Powders, Supporters, Trusses, Syringes, Patent and Botanic Medicines, Dental and Surgical Instruments, Lubin's Extracts, Electric Concentrated Preparations, Perfumery (all kinds), Osgood's Chalmogue, Townsend's, Sands' and Myers' Sarsaparilla, Ayers' Cherry Pectoral, Dr. Jones' Expectorant, Alterative Pills, Moffat's Bitters and Pills, Green Mountain Ointment, Halloway's Ointment and Pills, Wright's, Brandreth's and Cook's Pills, Davis' Pain Killer, Mexican Mustang, Nerve and Bone Liniment,
Choice Wines and Liquors for the Sick,
Superior Old Port Wine Bitters.
Agents for Dr. Robinson's Mountain Extract,
CURES THE FEVER AND AGUE IN ONE DAY.
☞ Don't forget, "Sign of the Golden Mortar," 76 K street, Sacramento. 13-1m

SUPERIOR FURNITURE.
THE largest and best stock in Sacramento may at all times be found at the Old Stand of B. F. & D. MOORE, No. 77 Third street, where they still persist in selling as much below their competitors as their superior facilities will admit of. Having on hand the most splendid and substantial assortment of all kinds of Furniture ever offered in Sacramento, we feel confident, with prices to suit, that none can go away empty that may favor us with a call.
Our stock consists of Bureaus, Secretaries, Wardrobes, Stands, Tables, Bedsteads, Lounges, Sofas, Painted Mahogany, Black Walnut, Satin and Rosewood Setts—some of the finest and cheapest ever offered in this market.
Also, Mattresses, of Curled Hair, Patent Felt, Moss, Wool Straw, and Straw with Cotton Tops, Also, Feather Pillows, and Feathers for Beds, with a large stock of Quilts, Comforts, Sheets, Blankets, &c., &c. [From the Pioneer.

Love of the Beautiful.

BY J. SWETT.

A LOVE of the Beautiful in Nature and Art constitutes an essential element of true scholarship. Education is the continuous and systematic training of all the powers of man's nature, with a view to their perfect development; and in any system the cultivation of taste and imagination, the affections and sensibilities, must hold a prominent place.

Love of the Beautiful, to a certain extent, is common to all, and gives to life much of its refinement. Like other qualities of man's nature, it is susceptible to cultivation, and, of thus becoming a source of pure and exalted enjoyment.

The half-clad Digger-Indian, who, possessing the form but wanting the noblest attributes of humanity, roams through our pleasant valleys and over the swelling slopes of mountain land, where seas of wild flowers spread in waves of beauty, feels some light emotion of pleasure as he gazes on the landscape; but how is it to be compared to the delight of the artist whose soul becomes a part of the scene! On the untrained eye of one the picture falls like the image on the lifeless surface of the Camera; to the other, it opens the windows of the soul, and there creates a new spirit of harmony and beauty.

The Beautiful in Art, is a modification of the beautiful in Nature to the higher wants of humanity. It is an embodiment of the Ideal, a creation of the mind from elements derived from a close study of the Natural. The rude swain before the finest paintings sees only colors and canvas; appreciates nothing of the harmonious blendings of light and shade, of delicate penciling, of lines of beauty, and inimitable touches of spiritual expression; but the painter, as he bends over them enraptured, perceives the embodiment of the highest and grandest conceptions of Genius.

Love of the Beautiful, has been a distinguishing characteristic of all nations that have attained to the highest perfection of refinement and civilization.

The present is emphatically a practical age,—one condemning a utilitarian system of education; but it may justly be questioned, if the tendency be not to an extreme:—if, in the zeal for progress and the love for improvement, the ideal has not been too exclusively sacrificed to the actual, as the taste to the useful, and the cultivation of the higher powers of man's nature to the exercise of the lower.

Those are many who regard education as a means not an *end*; who value knowledge, not for the intrinsic worth it possesses, but because for money it can be made useful; who would cultivate taste not because of its intrinsic capacities for development, but because such improvement could be made to minister to the physical wants. To such is the *end* of life, material. Instead of constituting the aspiring soul to the high tops of science to look abroad over the wide fields of truth, they would limit her range of vision to the narrow confines of material progress. Man, with such views, is but a practical, commonplace being, and ever as the old fiery system of universal dominion of the material over the spiritual, the reign of brute force, of might, with such views, is as contrary to the revelations of Christianity; to the progressive spirit of the age, as the old

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MAY 11, 1854.

To our Subscribers.

The nineteenth number of the California Farmer we lay before our readers for perusal. From its commencement to the present moment we have waited cheerfully, toiled earnestly and looked anxiously for a response to what we deem our deserts as publishers of a work devoted to the cause of Agriculture. If every subscriber who has promised his support to this paper, could realize the anxiety we feel at the result of their action, their movements would be like the telegraph, instantaneous. Conscience tells us we have labored faithfully and earnestly. From our subreribers we hear kind words of approval. Were we rich we should regard the words like the flowers of the field; they would please us while they lasted, and they would endure according to their truthfulness. Flowers are beautiful, pleasant and agreeable always, and so are pleasant words; but fruits are better, more enduring, and suit the appetite better.

If our readers are our friends—if our paper is worth reading, we shall see the fruits of our labors in a prompt and generous response.

Nineteen weeks we have waited for many of those who desired an "Agricultural Paper." Nineteen weeks we bave waited for some of our agents who promised well, and this is the first time we have ever gently hinted to them that they have a duty to perform as well as ourselves. Those who desire that the California Farmen shall be what we desire to make it, and what we intend it shall he, we trust will approve this gentle hint, and give us kindly assurauee that that duty shall be performed.

We are resolved to improve continually, and to take inmediate measures for visiting the different countics to meet the cultivators, and to know from a personal observation the condition of the Agriculture of the State. We desire to make improvement speedily, and if the amounts due us were in our hands, we could do so now. Yet when we look to those who could do more for us we feel a regret in doubting the value of those promises that have been made to us from many whose names have been, as we felt at the time, kindly sent to us.

"The laborer is worthy of his hire." God knows we have labored to the best of our ability to carry forward this cause, and by His blessing we shall continue to do so. There are those we have enrolled as the true and firm friends of the enterprise; but we are constrained to say there are those also whose names cause us to fear they do not look upon this subject as earnestly as they should.

Now, kind reader, to which class of names shall we affix yours? The one that blesses by words and acts, or by words only. We shall wait a little for the response to this enquiry, hoping to be able to show a list worthy to be called the active friends of Agriculture. The last issue gave you the information that the State was ready to aid in advancing this great interest, and it becomes the farmers in every part of the State to act in concert and act promptly. If the friends of Agriculture will awake to their own interest, and furnish us with the information relative to their wants, the capabilities of the soil in their districts, and unite with us in the efforts needed to give to the Farmer that ready support as the medium of all Agricultural information, we will give to them results that shall gladden them by a return of prosperous days.

We repeat our determination to make the California Farmer all that it should be, so far as our efforts can make it, and to have it reach our friends promptly as the day comes, (if the mails will permit.)

Steamboat Monopoly.—It is most gratifying to us to note the promptness with which this great monopoly meet the wishes of their patrons. It is the best assurance that we were right in the views we advanced. The "high-pressures" were supplanted this day (Monday,) by the excellent steamer Wilson G. Hunt, Capt. Pool, and it was pleasant to make a trip upon this favorite steamer again and meet familiar friends. If any one doubts the benefit of this combination, let them visit Sacramento and look across the river and see a dozeu old boats laid up, and then bear in mind the safety in travelling only upon the very best boats with ease, comfort, rapidity, and *no racing*. No reasonable man will wish to go back to the old unsteady and unsafe fashions again.

The "crack" steamers Golden Gate, and Sierra Nevada, leave on Tuesday next, for the East.

Sacramento.

If there is a city in the world that deserves well at the hands of "dame fortune," it is the city of Sacramento. No people upon earth, nor citizens of any metropolis have ever been called upon to endure so many and oft repeated calamities, as this famed city of the plains. With all this suffering, still, like the proud eagle, her course has been onward and upward. No calamity seems to retard her progress, no frowning of fortune to hinder her advance; in spite of all these, every improvement needed has been perfected, and every public work that marks the progress of the age has been added to make her more secure, and to give to her citizens those safeguards, facilities, improvements, and even enjoyments that make a city destined to rank high among the cities of the earth.

Sacramento city has never received the least portion of the credit she deserves for her undying determinations to conquer and to overcome the accumulation of difficulties by which she has been surrounded. It is not saying too much to aver that this city is now by far the finest laid out city in the State, having all her principal streets graded and planked; a levee complete and secure; water works ample and in perfect order; a most efficient and well provided fire department with fire-proof houses; an excellent police and of reliable action. These, with a new government, whose promptness in meeting emergencies give our citizens a renewed confidence, that in spite of all difficulties, and amid all the depressing influences that retard, Sacramento will meet her obligations, redeem her public pledges, and sustain her credit abroad and at home.

These accomplished, is it not sufficient to entitle her to a just meed of praise. Now the capital of the State, and with hope for the future, every day marks her advance in everything that gives tone and character to her institutions. We can add, as the most sure guarantee of her future prosperity, her churches, schools and academies are flourishing, and no city can excel her in the character and influence exerted for good that results from the social circle that is larger in this city than any other of the State, in proportion to her population. We trust the day of trial to this city has passed; indeed, we have little to fear and everything to hope.

The Gopher.

This little animal has became so notorious that every farmer and gardener has vowed vengeance against him. Numerous plans and contrivances have been adopted to catch and destroy this sly little pest; every species of invention, every variety of trap has been tried, and none yet has been completely successful. The nighest approach to it has been a plan tried by Messrs. O'Donnell & Brother, on the Mission Road—the United States Nursery. They are particularly troublesome there, and we saw an invention that may in some measure thin them off. Their plan is to find the "lead" of the Gopher, or his usual track; this done, a pliable or spring stick is driven into the ground some 2 feet from the track; this stick is then bent in a hoop form, and made fast to a slip noose, that is again made fast to a wire, which is placed in the ground, filling the space of the gopher track. This wire is so arranged in connection with spring rods and the trap itself, that the movement of the gopher forward is certain to catch him in the noose and to suspend him in the air. That it may be more fully understood, the noose is in the track of the gopher, and his hole is stopped by a round mud ball; the trap (a figure 4) is placed, and the gopher, wishing to move forward, presses the ball against the trap, which springs, and the noose catches and suspends him in the air. We saw two thus caught, and we look upon this trap as a well-devised and successful plan to catch this very troublesome animal.

Sacramento River.—We noticed the banks of the river upon our downward trip on Monday, and found the water nearly up to their tops, in many places the ground in the rear being lower, and water was springing up through and thus injuring the early crops of onions. Most sincerely do we hope the farmers may be spared any further disasters, for they have been tried enough; we have reason to hope, for we notice the Sierras are free from their snowy robes.

In the plains beyond, everything looks prosperous and smiling—crops of grain bow their heads to you as you pass, saying "*we are heary.*" The fields of tall clover and high grass are many; and the flowers and fruits promise an abundance of each. Gardens in good cultivation dot the wide prairies for miles around, and add a new pleasure to a pleasant ride.

Agricultural Reports.

We would call especial attention to the very able Report of the Committee on Agriculture, by Hon. W. S. Letcher, of Santa Clara, which is published in our paper to-day. Where every portion is of so much importance, we need not point to particulars.

This Report speaks in right language, and we trust our legislators will calmly and deliberately examine the various themes alluded to, and weigh their importance, and we believe every mind must be convinced of the necessity of immediate and liberal action. We sincerely hope that the appropriation may be increased so as to enable the State society to act promptly and with effect. A handsome bounty, offered early, would induce the effort to introduce Tea, Cotton, Rice, &c., immediately, while a nominal sum would not cause any one to engage in it extensively. The society should have the means to offer five hundred dollars as a bounty to the person who should first introduce Rice, Tea, Coffee, Sugar, Cotton, or Tobacco. A successful effort of either would be millions to our State Treasury in a few brief years. California must act quickly and promptly—the present year thousands of the inhabitants of China and probably Japan will flock to our shores, and with them the means and the knowledge for the advancement of agricultural science, and if we are ready, we can secure that aid that must rapidly advance us in knowledge and power. We most earnestly hope that the recommendations of the Committee to establish a Board of Agriculture will receive the approval of our Legislators.

It is all-important that an examination of the capabilities of the State, its resources, and its prospects, should be immediately commenced, and this should be made thorough and in detail. This would reveal to our people resources and treasures that we have, as yet, hardly conceived of. Rich as are our mineral resources, our agricultural wealth must far surpass them. The mines and their treasures are but the means designed by a wise Providence as the capital with which to till the soil, build our dwellings, rear churches, school houses, and institutions of learning—establish manufactories, foundries, ship yards, and other mechanical works for the employment of our people, and thus build up a prosperous commonwealth. Our prayer is that our Legislators may act with enlarged and liberal views at this important moment, and, thus acting, they can demand of our home government a corresponding action on their part—action that will secure the hearty co-operation of the United States Government and secure to us the means of establishing what is so important upon the Pacific shores—an Agricultural College, liberally endowed.

Lightning Thoughts.

"I'll put a girdle round the earth in forty minutes.—[Shakespeare.

Little did Shakespeare think how prophetic were the words he was uttering when he wrote the paragraph we have quoted, yet it will become a propheey. One can hardly realize how quickly "thought flies" until they have spent a little time at one of our telegraphic stations. It was our pleasure thus to enjoy, a few evenings since at the station in Clay street. We conversed with the Sacramento office, and received answers quick as thought could fly—the answers were instantaneous. Sentences returned in a second or two, and messages to friends quickly as the "lightning's flash.

Where shall be the limit to invention? The mind of a Fulton has almost annihilated space by steam upon land and sea—a Maury has marked the course of the proud ship upon the ocean, and a Morse has answered the question that the Deity propounded to Job—"Can a man take the lightnings and say, lo I am here?" A few years more and the dwellers upon the Pacific Coast can readily converse with their friends upon the Atlantic—and a few moments only will be required

What mightly strides has science made within the last few years. The mind thrills in view of the progress, and while dwelling in anticipations upon what is in the future one can hardly conceive of any advance that can be made in the transmission of intelligeuce, and yet, progress is the word.

We were most courteously attended while viewing the telegrahic operations, and were politely shown the batteries and each and all the varied arrangements of this important engine of power and usefulness. To Messrs. Stockton and Patterson we are much indebted for the pleasure enjoyed and the deep interest excited in our mind at this most wonderful invention—we would say the *most* wonderful of the age, and one that will make the name of the inventor IMMORTAL.

The Benicia Mills.

We desire to correct an error unintentionally made in our prices current in regard to the price of the Benicia Flour. It was quoted below its market rates, and we are most happy to state that such is the esteem in which it is held, and the ready demand made at the mills, than none of it has ever been sold less than $13, and it now commands from $13 to $14, and none of it has ever been sent to this city unless by a special order, on account of its superior quality—the agencies at Marysville, Stockton, Colusi and Shasta taking all that can be made. The mills have three run of stones, and turn out one hundred barrels of flour per day. The flour is made from wheat grown in the valley; thus those having flour from these mills are sure of having pure flour. We were pleased to see the agent personally—Thos. Farmer, Esq.—a thorough practical miller, who favored us with a call, and gave us facts he assures us we can rely upon. The agent resides at the mills, and will be glad to show them in operation to all who feel an interest in these matters.

We make this correction relative to the Benicia Flour the more readily, for we feel confident no one will ever charge us with a desire to underrate home productions, but rather to give them all preponderance. The error occurred in not receiving the data from the mills instead of other sources.

The Improved Breed of Stock.

In another column we present to our readers a description of an Alderney Cow, with the necessary data to secure a "valuable milker." The importation of stock of high character, and the crossing of the various breeds of cattle should demand the attention of some of our best farmers and stock raisers.

A great benefit to the State would result from a wise attention to this subject. It requires, however, a knowledge of the subject, and a disposition to engage in it to benefit the State and advance the character of our stock on the part of those who should advance their capital for that purpose now, for an enterprise of that kind "don't pay;" but again it would pay by-and-by, and the return would be compound interest in a short time. We hope the time will soon come when stock of all kinds will command corresponding high prices in California, to any ever received in the old States.

What is most wanted on the part of those who engage in such an enterprise, is capital, knowledge of stock and public spirit—these in due time will bring a just reward. The cattle upon a thousand hills in California, in coming years, will be known and ranked as the finest in the world, for we have the climate, and sustenance for all seasons of the year, and without many of the drawbacks experienced in other countries. We trust we shall hear from those who feel an interest in this subject, and have suggestions from them.

A Hint for the Steamer Combination.

What say you gentlemen—in these times, that men call so awfully dull, and when the bravest of our business men get the blues, and ready to steal away anywhere—would it not be a wise plan to offer an inducement to travel? Would it not be better to carry up river 200 passengers regularly and 200 down regularly at six dollars, than to average only 100 at ten dollars. The passage money would be thus increased $200, besides the profits of berths and suppers. This is a matter of dollars and cents, gentlemen, and although we have always advocated No. 1 boats and fair liberal prices, yet now, in the present very depressed state of trade, if more money can be made to flow into your pockets, and the community be induced to travel more, and be made to feel that you do desire to accommodate it, is it not worth while trying? You know you hold the power—you can try it—if it don't work well, you can abandon it, for it must be as you say. There are many cases where persons will not travel in the boats if they can avoid it. We saw one person yesterday go to the telegraph office and do his business in that way, at an expense of $7 or $8, although he confessed he would much rather have had a a visit, had the fare been $6 or $8 even. Two others declined going on account of the cost—which, with the expenses there, amount to about $40. It bears heavy upon those who are compelled to travel, and especially those whose business is so much crippled, or lost, that they have no $40 for a trip, and they content themselves by remaining at home. All this is lost to the company. We can only say, "A hint to the wise is sufficient."

It is the principle of evaporation producing cold, that occasions the injury which persons sustain by sitting in wet clothes.

Mail Facilities.

Every day brings us regrets from the farmers that they can neither receive their letters or papers—and we feel it to be a matter of vital importance to us as well as them. Many instances have come to our knowledge of delays beyond any excuse. It seems to us as if those in the charge of country routes as well as from the principal points did not care at all about the small offices—and yet these are points in the mining and agricultural districts, where the real wealth of the country lies.

We have several letters upon our table before us, each regretting this difficulty, and on account of the impossibility to get the FARMER. This we feel for the mail facilities to the farmer and miner should be as prompt as those to the merchant, and manufacturer, and ship owner—and there is but one way to remedy this evil. Farmers and miners must write and demand of the Postmaster General here to have these difficulties removed. We know Col. Henley will most cheerfully do all in his power, for he has proved it thus far, and it only requires the knowledge of this inconvenience and loss to be made known to him to secure his attention to the subject, and his prompt exertions to have the remedy applied.

Strawberries.

IF any one wishes evidence of the success that attends the growing of strawberries, they can satisfy themselves by a visit to Robb's saloon. We saw some most remarkable sized ones from the Contra Costa side, that were worth a visit even to look at them, and we were pleased to see they were fully appreciated, for while examining them a gentleman purchased *four tumblers* of them and paid the handsome price of TWENTY DOLLARS for them. They were the "Boston Pines," a variety that we can recommend as one of the very finest for this climate.

We also received from Mr. A. P. Smith, of Sacramento, three bottles of seedling strawberries, of extra size. They came to us preserved in water, to show their size and form. These give promise of excellence, and we commend the growing of seedling fruits of all kinds, as the climate is favorable for it.

Mr. Smith has a very fine garden upon the banks of the Sacramento river, and cultivates very successfully fruits and flowers. He has a very neat greenhouse, well filled with fine plants. His grounds are always in order. It is a pleasant ride from Sacramento city and a fashionable resort, where a pleasant stroll among the flowers will amply reward the visiter. Those strangers who visit the City of the Plains, should by all means visit Smith's Garden.

Hints about Poultry.

THE editor of the New York Evening Post, (the poet Bryant,) occasionally gives his readers a chapter of his rural experience at his country residence on Long Island. The following practical hints about poultry may be read with profit.

At the present time the subject of poultry is attracting a great deal of public attention. The "hen fever" prevails extensively. Public exhibitions are taking place in different places, and accounts of sales at most extravagant rates are published.

Whether the large sized varieties of fowls which are all the rage now amongst fancy breeders and dealers, are really preferable to the old barn yard fowls, is a question on which there are two opinions among those who have tried both. To say nothing of the enormous prices which they occasionally command—when fools can be found to pay such prices—they weigh heavily in the market scales, or fill a large platter on the dinner table. But, on the other hand, they are great gormandizers themselves, and the chickens are generally considered difficult to raise.

But it is not our purpose to-day to enter on a comparison of the different varieties of fowls so much as to throw out a few hints which may be of value to keepers of any and every variety.

In the first place roosters should be changed as often as once in two years, if not annually; and pains should be taken, in replacing them, to procure strong, healthy, and perfect birds. The hens will lay better, and hatch more chickens.

Secondly, but not all number of hens should be kept to one house or together. We have known repeated instances in which keepers of poultry have become discouraged at their failure to lay and have determined to kill them off. They have commenced reducing the number, which was perhaps forty or fifty, and when they got down to ten, were surprised to find every one of the hens laying, and the supply of eggs [illegible]

[illegible] backwheat, thrown at a trifling cost, and left on the ground where they can stroll over it, and feed at their pleasure, will keep them as fat as butter.

But the main and most important point to which we wish to call attention, in connection with this subject, is the great value of the manure of poultry. The hen-roost is the place to which most farmers should go for their guano. If obtained there, it will invariably be of good quality. There need be no fear, for those who get their guano from this source, that it will turn out to be a bed of spurious importation or of an inferior kind. Then, there are no heavy bills to pay for it. The bills of the hens every farmer can provide for, but the bills of the guano dealers not every one is prepared to meet. And we doubt whether even intelligent farmers who have tried it, would estimate it at more than one-hundredth part its actual amount, the quantity of excellent manure that can be made in this way in one year.

The hen-roost—duck-roost—geese-roost—and turkey-roost—should be supplied with several loads of peat, swamp muck, or loam, spread even over the surface of the floor, and on this there should be scattered a thin layer of sand or gravel. Rainy days, when the work can be done as well as not, and as often as practicable, this should be all shovelled over, and the manure mixed with the other ingredients. The compost soon becomes strong, when it can be removed, and a fresh supply of the most suitable material convenient to be obtained, thrown in.

The house is thus kept sweet and clean and healthy for the fowls; and if any farmer will adopt this plan, and practice it faithfully for five years, and keep an accurate account, not only of the crops raised directly from the compost made with the poultry manure, but from the manure made by feeding those crops out in their turn, he will be amazed at the result; first, in the amount of cash which he will have realized, and secondly, in the effect, in the way of permanent improvement of his farm. Try it.

Report of Committee on Agriculture.

MR. SPEAKER: The Committee on Agriculture to which was referred a Bill, to "incorporate a State Agricultural Society, have had the same under consideration, and beg leave to report:

Your committee, appreciating the vast importance of the subject, would be wanting in the discharge of a high and imperious duty to the State and the people, were it to permit the occasion to pass, without making use of it, to commend the subject to the earnest and favorable consideration of the House.

This is not merely a bill to create an incorporate society whose influence only affects those immediately interested, and has no bearing upon the State, or upon the great masses of the people—but it is a bill, the provisions of which will act upon every interest, affect all classes of our citizens and touch with electric power every branch of industry throughout the entire State.

Four years ago, the agricultural resources of this State were comparatively unknown. Prior to that time, so little attention had been given to the subject, that much of the soil which experience has demonstrated to be highly productive, was deemed almost valueless. A crude and miserable process of agriculture had induced the the impression that but a limited portion of our soil would justify cultivation, without irrigation and consequently immense tracts of our highlands and mountain slopes were regarded as fit only for pastural purposes. This error has given way before the speeding plow, and it is now found that the cultivation of those lands in grain, will yield us rich returns as the cultivation of the valley lands, and instead of the agricultural resources of the country being circumscribed, and confined to a few valleys, limited in extent, and requiring irrigation, highlands and mountain sides are found to be equally productive and valuable.

It is a pleasant and cheering picture, to see hundreds of pleasant homes and wide spreading fields laden with rich abundant harvest on lands which but a few years ago were deemed almost unfit for cultivation.

Thus, has the experience of a very brief period of time demonstrated the great fact, that the agricultural resources of California are vast and almost incalculable—not only capable of abundantly supplying the millions destined to inhabit the great Pacific empire now springing up with magic rapidity, with all of the necessaries and luxuries grown in the most favored regions of the world but of producing a large surplus for external commerce.

It is conceded that agriculture is the basis of the wealth and prosperity of all civilized nations, and that the condition of agriculture in a country, furnishes a true and unerring index of its moral, mental, and social progress. It is indeed impossible in the nature of things, for a people or a nation to attain any degree of eminence without possessing an enlightened system of agriculture.

Advanced agriculture [illegible] kindred branches of horticulture and [illegible] particular attention to [illegible] plants a tree or [illegible] appreciation of the [illegible] the beauty of the other [illegible]

[illegible] you could go in the country fortresses more impregnable than can be devised in any other way.

Then to protect, to foster and encourage by every legitimate means this vast department of industry, appears to your committee, to be one of the first and most imperative duties of the Legislature of this State. California in its relations to agriculture, is a peculiarly interesting country.

We are now in our infancy. We leave the lights of experience to guide us; we are cognizant of the fatal errors other States and other people have committed; we see and know those errors. Then, let us, while we have a virgin soil, unparalled in variety and richness of production, at once introduce a system of agriculture that will secure to us and to the State the highest degree of prosperity for the time being, and enable us to transmit—unimpaired by our negligence or folly—the great advantages which we now enjoy, to those who will succeed us. Let us establish a system which experience has demonstrated to be productive of the most benificent results in other States, and lay now, the sure and enduring foundations of future prosperity and greatness.

It is believed by those well informed on this subject, that the immense sum of twenty-five millions of dollars is annually employed in the import provision trade of California.

Is it not important to arrest this vast drain upon the country? We have also reliable information that within the past year there has been imported more than half a million barrels of flour, making from five to ten millions of dollars for this single article. The latter sum will now, and hereafter, in all probability, be retained in the country, as the home production will fully supply the home demand.

Now in view of the general importance of the subject, other States are moving in the matter, and stretching forth the hand of encouragement and protection; why should not California do so likewise?

A much greater necessity exists here than in other States.

At present our staples consist of very limited variety, and of these a surplus will soon be produced, hence the vast importance—the overruling necessity of encouraging the cultivation of new products, and before the extensive cultivation of new products can be with prudence engaged in, experiments must demonstrate the adaptation of our soil and climate to their production. It must be ascertained that such new products can be successfully and profitably cultivated. Your committee believe that the surest and speediest mode of attaining the great ends in view, is the immediate organization of a State Agricultural Society, with liberal appropriation for its support. This appropriation is not asked for merely to support an institution as such, but to enable it to perform duties, the accomplishment of which shall give back to the State, the richest returns—to build up, make permanent and perpetuate the most vital interests of the State—to open those fountains from which issue streams that will refresh forever the hills and valleys of this "bright land." This interest is receiving liberal encouragement in other States, and California now presents features in agriculture, that shall, if properly regarded, be as momentous as any the world ever saw. Our vast tule lands can be reclaimed, and fields of rice, cotton and tobacco can be made to flourish and add their untold value to the wealth of our people and State. Tea, coffee and sugar will also be numbered among the rich products of California if that wise care so much needed, be given to nourish the germ which is now in embryo.

The opening of China and Japan reveals sources of wealth in the forms of new and varied products of the Celestial world; and shall California avail itself of these offerings that progress holds out to us?

The sheep and the goat can feed upon our thousand hills, yielding their fleeces for our manufactories. Our sunny slopes will be adorned by fruitful vineyards and beautified by groves of the mulberry, affording food for the worm that shall clothe our people with the costly silks that now draw our treasure to other nations. The people, too, of the Celestial kingdom will bring their knowledge, both of agriculture—of which they possess vast stores—and of the manufacturing of those costly fabrics, adding all these to our own sources of wealth.

To accomplish these great objects a stimulus must be given; the State must extend the hand of encouragement and protection. We therefore recommend the establishment of a "State Board of Agriculture" and the passage of the Bill referred to, providing for the incorporation of a State Agricultural Society," with liberal appropriations in land and money for its support.

All of which is respectfully submitted by order of the Committee. W. S. LETCHER.

Mechanism of the Horse.

AT the [illegible] of the New York State Agricultural Society, in 1851, a report on [illegible] was made by John B. Wheeler of Burlington, Vt. the object of which appeared to be to call the [illegible] to the importance of a [illegible]

[illegible] This report began by asking the question, What is a horse wanted for?" And the answer given is,—"He is wanted for speed on the road, and for conveying heavy loads quickly." The authors of the report deem this the "peculiar attribute of the horse," and they go on to say that it is found in the "blood horse in the highest perfection" and that therefore "too much cannot fully be said of the importance of a liberal dash of blood in all grades of horses. On the road it is necessary, and at the plough or the truck it will tell wonderfully." From the indefinite expression "a liberal dash," we might be left to guess at the amount of the blood of the race-horse which draft or truck horses should possess, but some light is thrown on this by what follows. "The farmer, with half or three-quarter bloods, can plough his half acre a day more than with common farm horses." He can safely reckon that his *blood* will haul his load some miles further in a day than a common team." The meaning of the last sentence probably is, that the racing blood of the horses (not the blood of the man) would enable them to do more work in a day than could be done by horses which had not this blood.

The report proceeds to speak of the importance of a "thorough acquaintance with the anatomy of the horse"—of the mechanical laws concerned in the movements of the horse—of the necessity of "rope-like muscles," and various other matters, assuming some positions very inconsistent with the laws of mechanism and anatomy.

We are pleased, however, that the absurdities of this report have been shown up by one who has proved himself fully competent to the task. M. Cuming, of St. John, N. B.,—who we understand is a member of the Royal College of Veterinary Surgeons of London and Edinburgh,—has given it a critical and elaborate review, through the colmuns of the Country Gentleman. Want of space precludes our giving the review in detail, but as the subject is one of much interest and importance to farmers, and in fact to all who either breed or use horses, we are confident we shall render a service by making the following extract:

The "remarks" in the report, are ostensibly on thorough-bred horses only, and seem designed to enlighten on two topics; namely, the purposes for which they are most useful, and the form of parts best suited to fulfil these purposes. As on neither of these points does the dicta of the "remarks" seem to agree with the acknowledged teachings of science; and as this difference, if it exist, is of consequence to be determined, I propose briefly to consider some of the leading statements of each.

The blood horse beats every other animal for speed; therefore, the blood horse is the most suitable for draught. Such, whether logical or not, is the style of argument of the "remarks." But instead of saying so plainly at the beginning, as a foundation on which to base the rest of the position, they introduce it like the thick end of a wedge, at the end. To point out, therefore, the unsoundness of the reasoning on which the "remarks" proceed, the point of the wedge must be looked for. This is to be found in the first sentence. "What is the horse wanted for?" asks the report. "He is wanted for speed on the road, and for conveying heavy loads quickly." It is this "conveying of *heavy loads quickly*," that forms the first points of divergence from the data of science ending in the broadly palpable error of making the fine boned, quick tempered, blood or race horse, the most suitable animal for the plough the wagon or the truck.

Fast motion and heavy draught, are things incompatible together. Carried to an extreme, they are physically so; even within moderate limits, they cannot be profitably combined. For the purposes of draught generally, that horse is the best that will haul the greatest amount of weight from one point to another in a given time—say a week, a month or a year,—no matter what his rate of speed may be. The rate of speed at which a horse even a blood-horse can use his muscles most advantageously for draught is walking at the rate of about three miles an hour; certainly much better under four. For all increase above this, the load has to be reduced in a ratio greater than the speed augments. For example take a horse capable of drawing a load of 30 cwt. at three miles an hour, load him with 15 cwt. and drive him six in the same time or with 7 1/2 cwt. and drive twelve, and mark the difference at the hour's end. Those who have tried the experiment, find that at double the rate of speed one-third of the load instead of one-half is enough. And for this there is an obvious physiological cause. The [illegible] of the horse are produced by muscular contraction, but this contraction does not take place instantaneously. Like every other animal action, it occupies a definite space of time, [illegible] and this time is governed by the amount of force to be overcome. The greater the resistance the longer time does the contraction take. Hence their full power [illegible] heavy weights moved any [illegible] lower knees than [illegible] working at a [illegible] would [illegible] weight of only a quarter [illegible] the greatest [illegible]

B

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MAY 11, 1854.

Education of Farmers.

We publish in this week's issue, the letter of "Cincinnatus," and make it a theme for our editorial of this week.

"'Tis education forms the common mind—
Just as the twig is bent the tree 's inclin'd."

Perhaps there is no one cause why the great class of farmers are so ignorant upon the subjects connected with their employment, as that which has arisen from wrong impressions, fixed in early years, connected with their moral and religious training. Under the severe training of stern views, it was made a sin to walk the fields of a Sabbath-day, and view the "beautiful things of earth," those that God had planted to make our pathways through life joyous and happy. Thus the young mind was in its early buddings chilled by the mandate that taught it to believe it wrong thus to enjoy, and thousands of young hearts that would have become "true students of nature," and an honor to the cause of Agricultural Science, those that only needed a gentle hand to instruct and to point out the purposes for which God created the earth and the things that grow upon it, were turned away from their aspirations and too often led into paths that ruined their prospects for life.

Had all parents been faithful and watched the bent of the child, and when in its ramble through the field its eye caught the bright flower, and as it plucked it, crying out, "look how beautiful;" had that parent seized that moment, to make the impression, that heart would ever have loved and cherished the flowers that gladden our vision, and as the luscious fruit caught the wishful gaze of the child—had the parent gratified the child with its possession, at the same time taking that moment to impress upon the child the plan of the Creator in sending us the various fruits in their seasons, each variety of that nature and character so beautifully appropriate, lasting by their season only till the next in order were ripe—the child would have become so imbued with nature, as to desire a knowledge of that employment which gives to us the flowers and fruits in their seasons.

How few parents have ever been in the habit of taking the child by the hand and leading it forth to investigate the flowers, the fruits, the grains, the grasses, and all the other wonderful products of earth, that God gave for our food and raiment. Alas! these have been forgotten, while all the attention has been turned to finding "a suitable trade" to which they could apprentice the child. The original trade to which the Deity directed the mind of him whom he had made after his own likeness and similitude, has been forgotten, and parents have greatly erred. This is one of the great causes why so few have ever been taught to love the Science of Agriculture, that embraces all that is beautiful as well as useful.

We would wish the early impressions and efforts of the child, as it turns to nature, to study and copy her—should be sealed as were those of Sir Benjamin West. All must readily remember the anecdote of his copying his little sister in the cradle; his mother coming in saw with a mother's fondness his early genius, caught up her son and gave him a fond kiss. That kiss sealed the impressions of beauty that were floating before his visions in the sleeping child in the cradle; and says Sir Benjamin, "that kiss made me a painter." What would have been the result had the mother of West seen no beauty in the early genius of her child? The world would have lost one of her greatest painters, and a mother her richest reward.

So with the works of nature. If parents would watch every opportunity of developing in the minds of their children, that taste for rural life which God gave them, we should not hear so much complaint that cultivators of the soil are wanting in the knowledge of the earth.

We were about writing upon the "advent of flowers," and "May-day," and had already begun an article, when we received the "Pacific" of this week, and found in the leading article, sentiments so congenial, so worthy to be spread before the world, that we copy them entire, and urge a careful perusal of them. Here is a way to educate, make May-day a glorious day; do away with severity, dance, sing, be joyful, as we welcome the works of God in the flowers of Spring, the fruits of summer, and the fields of Grain at Autumn. Teaching like this will lead the minds of children to look to the earth and the blessing flowing from it, till they desire a knowledge of all things therein, and this will teach them to say: "The whole earth is full of His glory."

We thank the "Pacific" for the theme of May-day, and for their generous advocacy of Agriculture, and we rejoice to notice the improved appearance of that paper in all its departments. We wish it complete success.

"May Day has come and gone. It has come with its usual festivities. It has gone, leaving its usual pleasant memories. Sabbath schools and day schools have celebrated it. The sweet bright flowers have crowned their Queens, and fields and groves and halls invited the glad feet and echoed to the joyous songs of happy childhood.

It is well. For May Day is one of the sunny days of life. It is the blooming month of the year. It is the gay season of nature. The air is loaded with perfumes. The very earth is carpeted with beauty. The winds have begun to breathe softly, the sun to shine mildly, and the birds to sing sweetly, and all things animate and inanimate to tell joyously of God. It is meet for hearts of old and young to respond to nature's voice, and now and then be free from care. Smiles and gladsome songs, and social pleasures at home or abroad, may be on some days, and why not on May Day, the heart's best gratitude to Him who made it beautiful.

We have been made glad, and our hopes made buoyant, and our good resolves made firm by the late excursions and festivals of our schools. Groups of children on such occasions always do us good. We love to see the youth youthful. Boys and girls will soon enough be men and women, burdened with the toils and anxious with the cares of life. Let them have their boyhood and girlhood in its season. They will be better and happier all their life for the free sports and simple pleasures of their early years. That child loses much who loses the light-hearted and innocent joys peculiar to childhood. That parent or teacher does a child great harm and wrong who discourages and denies the little one all indulgence in the sportive and ever frolicsome instincts of nature. While more serious things should in their place and time be impressed on the mind as it will bear them, let the first years of life be mainly left to the gushing and bounding instincts of nature, its depravities alone corrected, and its excesses alone restrained. The laugh, the shout, the play, the glee of boys and girls in its time and place, are as harmless as the antics of the lambs and kids upon the hills. There is necessity also for them, both physical and mental, that demands such recreation with the authority of law. And there is as great a necessity, and as clear a duty to develope properly the physical as the intellectual and moral nature. We would teach a child to pray as soon as he or she could lisp the name of God. And long before that time the child should be taught to be silent as we bow in prayer at the family altar. But we would as certainly if the child was lonely and longed for a companion in needed sport, bend to the child's wants, and roll with him or her upon the floor, or run or *dance* even in the yard or through the hall. We would teach a child pious sentiments; especially the doctrines of the catechism; and so plant the best seeds of pious growth in youth, but we would also please the child's eye with bright pictures, and gladden the child's heart with pleasing toys. We would teach a child to give to the poor and go as early as is profitable to the house of God, but we would also indulge the child at suitable times in spending money, and in social playing parties with neighborhood or school companions. Character would thus become symmetrical, and life, we believe, more happy and useful.

Therefore were we glad at the late festival of the schools, to see the decorated hall, the holiday attire of a thousand happy children, the coronation of their own selected queen, the march, and even dance around the pole wreathed with flowery garlands. It did us good. It did every parent and teacher good. It did every child good. We envy no one's feelings, and desire no one's fellowship, who could look upon such a scene of simple enjoyment, and not bless God for such a sight upon these shores.

We believe in early piety. We advocate religious instruction and example at home and in school. We would everywhere and always train a child for God and Heaven. We believe it the duty and the highest privilege of parents and teachers. But there is such a thing as severity in discipline that defeats the very object in view. There is a narrow and foolish prejudice that looks upon all recreation with a jealous eye, and holds too tight a rein on every instinctive impulse towards worldly pleasure. The only wise or safe rule is moderately to allow a child that which is in itself innocent, however capable of perversion and abuse, rather than build up such high walls as by total exclusion from the world to tempt the child recklessly to overleap them.

This simple rule would have saved many a pious father and mother the pain of seeing their sons and daughters plunging excessively into pleasures when once they have passed out from under parental authority. No sight is more sad, and no consequences are more to be deplored, than children leaving home like prisoners let loose from galling confinement ever to remember their parents as their jailors simply, and their home as the prison of their youth. The religion of their parents, thus made unnecessarily austere, will become forbidding, being remembered as the escaped captive remembers the chains that bound his hands, and the stocks that held his feet.

There is no need of such severity. God gave us childhood and youth as well as manhood and womanhood, and there is no necessity of denying to the former the innocent social pleasures peculiar to their age and disposition, in order properly to train them for the labors and responsibilities of the latter. We believe that a *pleasantly* spent childhood, where the intellectual and religious sentiments and habits are not neglected, better on the whole for mature years than one spent otherwise, though under the strictest religious training.

We love the Sabbath. We love it none the less because we love May Days. Nor will our children, even though they *dance* around the pole made beautiful with flowers."

Letter From Butte County.

Butte County, April 30, 1854.

Mr. Editor: Sir—In regard to the Wheat Crop in this county, (although this is a mining county,) we shall raise twice the amount of Wheat that we can consume, and farming must be a losing business in this county unless we can have two or three good Flouring Mills. All the farmers are raising more or less Wheat, some as high as 500 or 600 acres, and there is not a flouring mill in the county, although we have an abundance of water power and all the facilities afforded in any part of the State for steam mills.

There could not be so good an investment made here as a flouring mill, as we now have to go from 25 to 75 miles to get to the Marysville mills. I am informed there is to be a small mill built at Chico, in the north part of the county. This will be of but little use to those in the centre and south part of the county, as it will be farther to it than to the old mills at Marysville, in Yuba county.

All our crops look remarkably well. I wish you success in your new undertaking.

Very truly,
Yours.
James W. Johnson.

(We thank you, friend Johnson, for your letter, It will induce some one, we hope, to take a hint and place a mill in your vicinity. And the information respecting the crops is valuable. Shall be glad to hear from you always. Ed.)

Letter from Alameda.

Sims Farm, Alameda County.
April 29, 1854.

Editors Farmer: You request the farmers to write for the California Farmer, that you may make it the best journal in the State; and wonder why they do not write more. We are quite desirous of seeing the Farmer a useful and interesting journal: Now let me give you a few reasons why the farmers do not write more. First, our mail facilities are such that it is nothing but a vexation to have anything to do with them. Second, and not the least important, is the lack of a sufficient education to make our productions of such a character as are generally expected to appear before the public and more especially for the edifying of others. To the no small mortification of many of us, the education of the farmer has been sadly neglected. We therefore feel a reluctance in writing when we know the critic's eye will scan every line and sentence.

Heretofore, when a young man has been educated above that of an A B C scholar, no one advises him to take hold of and exercise his talents and energy in behalf of Agriculture; the prevailing opinions of those whose company he has been lately keeping are adverse to such a course—it would be sowing seed on barren ground—nothing short of Doctor of Law, Medicine, &c., will do—farming will do for the ignorant.

The farmers are first to brave frontier life, open the way for the doctor, lawyer, merchant, tradesman, and even speculator; subject themselves to exhorbitant demands both from State and profession, and yet their education has been not even of secondary importance.

If a lecture on Agriculture is to be given before our learned legislators or an intelligent audience in some large city, a practical farmer is not called upon to perform the task, and for the very simple reason that they are not considered to have in their possession the requisite knowledge, therefore, a learned Dr. A. or B. comes forward and performs that which every farmer should be capable of doing.

This, Mr. Editor, is the situation of many of us, and with which we will have to grapple through life. Hoping with what little influence we may exercise in favor of the cause to bring about a better condition of things for posterity,

Respectfully yours.
Cincinnatus.

(The above is a picture we must all admit to be true in a great measure; but we feel it is not always so. There are farmers who are capable, fully, to electrify an audience, and if farmers will call county meetings, announce them through the "columns of the Farmer" in season, we will pledge ourselves to bring those into the field that will create a "new era in farming." Cincinnatus is already in the field, and the good work is begun. Who follows Cincinnatus?

Cincinnatus points out the truth plainly, he tells us the general want of education. We know its ill effects upon the science, and we pointed to the cause of this in No. 10 of the Farmer. *There lies the evil*: parents supposed any boy would do for the farm—and thus the evil has been perpetrated. Shall we all labor for its removal? Ed.)

Treatment of House Plants.

Water, heat, air, and light are the four essential stimulants to plants; water, heat, and air, to promote growth; and light to render that growth perfect.

Water, heat, and air, man can command at his pleasure by artificial means; but over light, as an element of the perfect growth of plants, we have less control. To be beneficial to plants light must come directly from the sun; and therefore the plants should be so placed, that it may act upon them with as little as possible of that refraction and decomposition which it suffers when it passes obliquely through glass, or any other medium except the air. Plants grow in the open air, and with such free exposure to the light as their habits require, not only develope all their parts in their proper form, but their leaves, flowers, and fruits, have their natural colors, odors, and flavors. Plants excluded from light have not their natural color, odor, nor flavor, they make little or no charcoal in the woody part, the leaves are not green, and if they do flower and fruit, which is rarely the case, the flowers are pale and scentless, and the fruit is insipid. This has been proved by many experiments, of which the blanching of celery and endive by earthing up, and that of a cabbage by the natural process of hearting, are familiar instances. A geranium placed in a dark room becomes first pale, then spotted, and ultimately white; and if brought to the light it again acquires its color.

If plants kept in the dark are exposed to the action of hydrogen gas, they retain their green color, though how this gas acts has not been ascertained. Some flowers too, such as the crocus and tulip, are colored though grown in the dark.

Light seems to be fully as essential to plants as air or heat, and while it acts beneficially on the plants and leaves, it appears to be injurious to the under surfaces, at least of some plants; for in whatever way a plant is placed, it contrives to turn the upper surfaces of its leaves to the light. Professor Lindlay is making some experiments on this subject.

Plants in rooms turn not only their leaves, but their branches to the window in which the light enters, and a plant may, by turning it at intervals, be made to bend successively to all sides; but such bendings weaken the plant, and thus it is an excessive or unnatural action. This turning of the plant to the light is always of course in proportion to the brightness of that light as compared with the other sides of the plant. Flowers, too, open their petals to the light, and, close them in the dark, or in some cases, as in that of the crocus, when a cloud passes over the sun. The same flower, and also some others, will open their petals to the light of a lamp or candle, and close them again when that is withdrawn.

It follows as a necessary consequence, that in rooms, plants should be placed as near the windows as possible, that the windows should have a south exposure, and that they should be as seldom as possible shaded with blinds or otherwise. If placed at a distance from the windows, plants should be frequently changed, and to place them permanently on tables or mantel-shelves is bad management.

A Sign of the Times.—The Sacramento State Journal says: "We are informed by a well known contractor and builder, that there are forty-five 'gangs' employed in making brick in this city, who turn them off at the rate of *eight millions* per month. What better evidence could we have, or what surer indication of our future prosperity and growth. Eight millions! if one-half of them are put into buildings when the balmy breath of another spring shall bring the perfumes of the flowers to gladden us, it will breathe upon the solid walls of tall and shapely edifices, whose high heads, reared to heaven, will laugh to scorn the croakers and timid doubters who, one year since, said Sacramento never could be rebuilt; *we* laughed at them, and time has justified us.

Rise of the Waters.—The Sacramento river is swollen considerably, and the prospect is that the lower banks upon the river will be covered. The rains have been very heavy indeed, and while it is a blessing to the large grain growers, it may be death to the hopes of the river cultivators.

The Golden Hill News is the name of a new paper in this city, printed in Chinese characters, and to be issued weekly.

According to the daily papers, burglaries are rapidly increasing in this city. It behooves our citizens to be on their guard.

We return thanks to Messrs. Adams & Co., and to Messrs. Wells, Fargo & Co. for express favors liberally extended to this office.

Harvesting.

It is a rule as a general rule, that the proper time to reap Wheat or Rye is when the straw begins to shrink and become white about half an inch beneath the ear. This appearance is a sure indication that the grain has ceased to receive nourishment from the roots of the plant; and by cutting early, provided it is not taken to the barn or stack too green, the following advantages will be gained: 1st. The grain will make more and whiter flour. 2. There will be less wasted by the grain's shelling. 3. By commencing harvest early, you will have a fairer prospect of finishing before the last cuttings become too ripe, so that much of the grain will shell out in reaping and securing the crop. 4. If you cut your grain as soon as it is fit, your straw and chaff will contain much more nourishment than if bleached and made brittle by the sun, air, dew and rain, all of which combine to deprive it of most of its value for fodder. 5. Should you plough in your stubble immediately after harvest, or mow it and secure it for fodder or litter, (either of which modes of management is perfectly consonant with the rules of good husbandry,) the stubble will make much better food for your cattle or manure for your ground, than if it had yielded all its sweets and much of its substance to the greedy elements above mentioned.

If your Wheat or rye is much affected by blight or rust, it should be cut even while still in the milk, and then exposed to the sun and air till the straw is sufficiently dry and the grain so much hardened that it is fit to deposit in the barn or sack. The heads, in such cases, should be so placed by the reapers as not to touch the ground. This may be done by laying the top ends of each handful on the lower ends of the preceding one.

If your grain is encumbered with grass or weeds, you must cut it pretty near the top, in order to avoid as much as possible these extraneous substances. It is also necessary to reap rather earlier than might be otherwise expedient, that you may have time to dry the weeds without danger of the grain shelling out. If your grain is very ripe when you harvest it, the bands should be made in the morning, as the straw is then moist and pliable. And Dr. Deane recommends, in such cases, to bind the sheaves when the air begins to be damp towards evening, as the least degree of moisture toughens the straw.

It has been recommended by several English authors to bind Wheat and Rye with only one length of the straw. If it is pretty long, and not very dry, this may be good economy. You save the trouble of making bands; your wheat will dry better in the sheaf, as the sheaves must of course be small; and though it may take some more time to pitch and handle it, the advantages, in many cases, turn the scale in favor of binding Wheat with single lengths of straw.

In storing Wheat or Rye, some persons deposit the sheaves on a mow of hay; but this is a bad plan, as the grain presses the hay so that it is not to become musty, and communicate a musty or mouldy taint to the superincumbent grain. It may be placed on a scaffold of rails, laid on the beams, and over the floor of a barn; though it is not so easy to procure it for threshing as if it were laid on a scaffold of less elevation. But this disadvantage may be more than compensated by its being in a situation favorable for drying. If there be a deficiency of barn room, the sheaves may be stored in stacks. In that case, care should be taken that the grain may not draw moisture from the ground, by laying boards or rubbish under the stack. A better method still, is to have a tight floor of boards mounted on four blocks, set in the ground, and so high as to prevent the entering of vermin.

In building a stack, care should be taken to keep the seed ends of the sheaves in the middle, and a little higher than the outer ends. No fowls can then come at the grain, and the rain that falls on the outer ends will run off, and not pass toward the centre. The stack should be thoroughly topped, that the rain may be completely turned off.

Oats. It is advised to harvest oats before the straw has turned completely yellow. The straw is of little value, if permitted to stand till it becomes destitute of sap. Though oats should be well dried on the ground, after cutting, they should not be raked or handled when they are in the driest state. They should be gathered mornings and evenings, for then the straw is made limber and pliable by the moisture of the air. If they are housed a little damp, there can be no danger, if they have been previously thoroughly dried.

Barley. We are told by the wise men of agriculture, that some of the rules observed in harvesting Wheat, Rye, and Oats, do not apply to Barley. Worlich's Domestic Encyclopedia states that "in respect to the time for mowing barley, farmers frequently fall into the error of cutting it before it is perfectly ripe: thinking it will attain to perfect maturity if it be of a swash. This is a very common error, for the leaves in the field, and afterwards rakes but an indifferent malt; it also threshes with more difficulty, and is apt to be bruised under the flail. The only common test of [illegible] of perfection is from the straw and husks of the straw. [illegible] with all expedition, [illegible]

Ploughing.

Ploughing is the most important of agricultural operations. On the manner of its performance depends all the subsequent operations of tillage on the same land. A large volume might easily be written on this subject, but we shall confine ourselves to practical hints, expressed as concisely as is consistent with perspicuity.

In all stiff, heavy, and adhesive soils, that are much disposed to moisture, it should be a common rule not to plough them while wet in any considerable degree, especially if there is much clay in their composition. When such land is ploughed wet, the particles are apt to cake, or run together into hard lumps, requiring much trouble and labor to reduce to a fine state. Besides, much injury is produced by the treading of the team and greater power is necessary in performing the operation. But, on the other hand, such soils are ploughed with much difficulty if very dry; unless before the ploughing they were in a state of tillage, and not baked very hard. To break up grass ground composed of a strong loam, or a soil in which there is clay in any considerable quantity, when in a dry state, is next to impossible. You might almost as well attempt to plough up a brick pavement or slate rock. Green sward in general can hardly be ploughed too damp, if it be not miry. Marshy, moory, peaty or mossy descriptions of soil should in general, when already reduced to a state of tillage, be ploughed when the season is dry.

In dry, sandy, and perhaps in some of the more mellow kinds of loamy soils, the business of ploughing may be performed when the earth is in a state of considerable moisture. But very dry sandy land, whenever the weather is hot and dry, should merely be stirred in such a way as may be necessary to prevent the growth of weeds; otherwise the great exhalation of moisture in such seasons may render them too dry for the vigorous growth of the seeds or plants growing or sown upon them. The cultivators of this kind of soil have, therefore, many advantages over others who are engaged in the more stiff and heavy sorts of land, in being able to perform the various operations of arable husbandry with much less strength and expense of team, and by being much less interrupted by the wetness of the seasons. Stiff clayey soils, which are already under the plough, may be beneficially ploughed in dry weather, and it is said that stirring such soils in dry seasons causes them to imbibe moisture, but in sandy soils the opposite result is produced by the same means.

It is very customary, and, as a general rule, very correct to recommend deep ploughing. But this rule has a great many exceptions, and the cultivator who should be governed by it without regard to the nature of the soil and the proposed crops, would only labor hard to injure his land and reduce his products.

It may not be amiss to attend to what some writers have observed, respecting the dangers and disadvantages of ploughing deep, without regard to the nature of the soil and other circumstances. It is observed in "Dickson's Agriculture" that, "though deep ploughing has been recommended by some modern writers, upon particular kinds of land, where the bottom and top were of two opposite qualities, and neither of them perfectly good, that a mixture may sometimes be very beneficial, and the experiment of going beneath the common depth sometimes answer; but that when the top and bottom for eighteen or twenty inches in depth consist of the same soil, it is not believed it is ever worth while to exchange the upper part, which has been enriched for centuries back, for a part less rich, merely because it is more fresh. On retentive soils, where the practice of loosening them to some depth by other implements is omitted, deep ploughing is however extremely necessary."

In an "Essay on the Best Means of Converting Grass Lands into Tillage, by James Roper Head, Esq.," it is observed that "it seems reasonable to prefer light to heavy ploughing; because, all things being equal, it must be preferable to have a small depth of soil to cultivate and improve; and inasmuch as the fibres of grass in general are fed from the upper surface of the earth alone, if they find sufficient pabulum, all that lie underneath their nourishment, and has been with much labor moved by the plough, is like a stock in trade, which requires an extra capital, unproductive of interest.

"I have endeavored by all means to search into the nature of sainfoin, clover and lucerne, and my opinion is, that the long penetrating tap-roots of those grasses force the earth in search of moisture only; that the tap-root is the mere support and duct: that the branches of the crown of the plant are fed alone by the upper portion of the soil, and that the luxuriancy of their produce depends [illegible] the superficiality of the soil or subsolus (sous) of the ground [illegible] the average fatty of the soil of the upper stratum, which alone feeds and furnishes it nourishment."

An [illegible] in the Board of Agriculture" written by John M. Mason, Esq. [illegible] "Why are [illegible] whose old grounds [illegible] by [illegible] This [illegible] was [illegible] a [illegible]

poared two very obvious reasons for the failure; first, the subsoil brought to the surface to form a seed bed had long been deprived of the ordinary influence of the atmosphere and the rains; consequently must have been cold and infertile. Secondly, the dry tenacious sward having been placed half broken under the seed bed, the natural moisture of the ground, and that which falls in rain, was speedily and habitually evaporated. Unless in a season of uncommon moisture, a crop under such preparation could not prosper."

Sir John Sinclair speaks highly of the advantages of deep ploughing in some circumstances and in some crops, but says, "it is a general rule never to plough so deep as to penetrate below the soil that was formerly manured and cultivated, excepting upon fallow, and then only when you have plenty of lime or dung to add to and improve the new soil." The farmers of Flanders, which is said to be the best cultivated part of Europe, gradually deepen their soil by ploughing or digging up fresh earth as their manure increases. Mr. Arthur Young observes that in poor, hungry soils some proportion ought to be observed between the depth of a ploughing, and the quantity of manure annually spread. The same writer informs us that the depth of ploughing in various parts of England, on an average, is four inches; in loamy soils four and three quarters, and in clayey soils three inches and a half.

Disputes have arisen among farmers in this country and in Europe relative to the best manner of laying a furrow slice. Some contend for turning the furrow slice completely over and laying it quite flat; but others say that it is most advantageous to place each slice in such a manner that its outer edge may extend a little over the inner edge of the one drawn next before it. In several districts in England it is usual to lay the furrow quite flat; and this is particularly the case where there are no ridges; but in Northumberland, and in Scotland, a contrary system is adopted. It is founded on this idea, that as two of the principal objects in ploughing are, to expose as much as possible to the influence of the atmosphere, and to lay the land so that the harrows may, in the most effectual manner, raise mould to cover the seed; these objects are most effectually accomplished by ploughing land of every description with a furrow slice about seven inches deep, forming the angle forty-five, the point which ought to be referred when determining the merits of different specimens of ploughing. For that purpose, the depth of the furrow should bear a due proportion to the breadth, that is, about two-thirds or as six inches deep is to nine broad. This is the general, if not the universal opinion of the Scotch farmers. The angle forty-five is strongly recommended in Bayley's Essay on the Construction of the Plough, in his Durham Report, and in Brown's Treatise on Rural Affairs. In the southern counties of England, however, they generally prefer to turn the furrow quite flat, or horizontal, and state, as a reason for that practice, that the weeds, grass, &c. ploughed under, cannot be smothered unless the roots are turned completely bottom up, and the turf covered so closely as to have no communication with the atmosphere.

In Flanders, the farmers use an instrument called the *binot*, which is highly esteemed. By this instrument the land is not turned over, as by the plough, and the weeds buried: but the soil is elevated and pressed into ridges, and is thus better exposed to the beneficial influence of the frost, and becomes much sooner dry in spring than if the land is turned over flat. When furrow slices are set up edgeways by the plough, they become small thin ridges, are more easily pervaded by frost, and are in a situation to attract more of the fertilizing influences of the atmosphere, than if they are turned over so as to lie in a horizontal position. Perhaps this mode of ploughing land may be advantageous in stiff hard soils, where several ploughings are necessary to prepare for for the reception of the seed. If land of this description is broken up in the autumn or summer preceding the sowing or planting of the seed, and cross-ploughing in the spring is made use of, preparatory to putting in the seed, we are inclined to think that the "feather edged ploughing," as it is sometimes called, (in which the furrow slices are not laid so flat as to exclude the air from between and from the under part of the furrow slices,) is to be preferred. Ploughing previous to winter setting in is of great use to clays, or stiff lands, exposing the surface to the frost, which mellows, and reduces it in a manner infinitely superior to what could be accomplished by all the operations of man. If, then, exposing the surface of stiff soils to the frost is of great advantage, the more surface there is exposed the greater the advantage; and if the furrow slices are set partly or entirely on their edges there must be, as before intimated, more surface exposed than if laid perfectly flat. And if they were turned in such a manner as to form an angle of forty-five degrees, the outer edge of the furrow set on the inner edge of that which [illegible] would be [illegible] for winter grain to spring up between the furrows, which may be the case if the [illegible] are set sprightly on their edges. There would likewise always be a [illegible] of the furrow [illegible] Moreover, if ridge-ploughing is at all advantageous, we should [illegible] a [illegible] a ridge of [illegible] [illegible] a [illegible]

laid flat as it is turned upside down. The harrow also more readily takes hold of a soil when the furrows form ridges or protuberances, and thus a proper mould is procured for the covering of the seeds, or earthing up plants in a growing crop. And if there is danger of the lands lying too loose, repeated harrowing, and rolling with a heavy roller after sowing, will furnish a certain remedy.

The Alderney Breed of Cows.

Common consent has given the name of Alderney to the Channel Island breed of cattle, so long celebrated for the quantity of milk they give in proportion to their size: but above all, for the extraordinary richness of its quality. But there is every probability that these cattle were originally a Norman breed, imported and improved in Jersey, and then sent to Alderney; and thus a common stock, famous far indeed beyond the cows of Normandy, have been produced, which are considered so valuable in this country as to produce prices varying from £20 to £30.

The produce of these animals, both in milk and butter, is very great, and may be taken, in fair specimens, at twelve quarts of milk daily, and ten pounds of butter in the week, during the months of April, May, June, July and August; and instances are recorded of cows giving twenty quarts of milk in the twenty-four hours, and as much as fourteen pounds of butter per week. From this it is clear that the cream is of very rich quality; the milk itself is superior to much of the town-made cream—the cream almost resembles cream cheese. It is considered too rich by many for making cheese; but instances are recorded of successful cheese-making from this milk. M. Le Feuvre, of La Hogue, succeeded in making superior cheese from this milk, equal indeed to double Gloucester. Fourteen quarts of milk would give a pound and a half of cheese; and the whey or drainings of twenty pounds of this cheese would produce four pounds of butter. Compared with the milk of any other cows celebrated for dairy purposes, that of the Alderney is very superior. An experiment was made, during the months of May, June, July and August, between eight Alderney and eight Kerry cows. In the first month the Alderneys gave 25 per cent. of cream against 10 per cent. of the Kerrys; in June, 20 per cent. against 10; in July, 23 per cent against 10; and in August 16 per cent. against 13; giving an average of some hundred per cent. more cream than the Kerry—a breed of cows somewhat celebrated for dairy purposes.

But more—three pints of cream from the Alderneys produced 1 lb. 8 oz. of butter; from the Kerrys, 1 lb. 4 oz. And this was taken in the month of August, when it will be seen the milk of the Alderneys was somewhat falling off. The experiment was made by Mr. White, on the farm of the Hon. R. Clive, of Oakley Park, and deserves every credit, as it seems to have been carefully and intelligently made.

We are indebted to Col. le Couteur for almost all we know of this breed of cattle. In many respects they resemble the Ayrshire cow; and, indeed, so close is the resemblance that Mr. Quayle, in his "Agricultural Survey of Jersey" communicated to the Board of Agriculture, states that the Ayrshire is a cross between the short-horned breed and the Alderney.

As the qualities of the Alderney breed of cattle are exclusively milk-producing, we expect to find anything but beauty of form; and, indeed, until within the last twenty years, a more rude misshapen animal it is difficult to conceive. Possessing cattle superior to others for the richness of their milk, a hardihood and endurance extremely great, and being sustained by the inferior herbage the island produced, the Channel Islanders were satisfied with their ungainly form. They might be thus described:—Large cheeks, thin hollow neck, hollow back, thin hams, flat sides, long between hip and ribs, crooked legs, high shoulders, drooping rump, tapering chest.

The specimens of improved forms of cattle that began to receive the attention of agricultural societies, tended to call attention to the improvement of the Alderney breed; and hence a society sprang up, under the Presidency of General Thornton, and by selecting the best specimens drew up a scale of nine articles, and to each of these attached a number of points—thirty of which were assumed to be perfection in a cow. These are much more definite and we think practical, than those of Mr. [illegible]; and we cannot help giving them, because they [illegible] the proper criterion of an improved Alderney cow. They are for cows and heifers.—

Horses---A few Words to Farmers.

It is a bad practice to take a horse from the plow or cart, and put a saddle on his back; but it is quite a different thing for the farmer to keep, for his own riding, a stout, well-formed horse, that, should a demand for extra horse-labor at any time arise, can be put into the plow or cart with a confidence that, in that capacity, it will work well and willingly.

While on this subject I think a word of caution necessary. I have known farmers breed from mares only because they were useless. I have known a mare whose health incapacitated her from work, and who had, consequently, to be turned out to grass for the season, put to the horse that her services might not be wholly lost! The infirmities of the mare are perpetuated in her wretched offspring—they become hereditary, and the breeder at length finding his pockets the worse for his experiment, gives up with the reflection that "horse-breeding is a losing concern." No mare, however good, should be bred from, without a careful and deliberate consideration of her qualifications as a brood-mare; and this is a point wherein many farmers err greatly. A person has a mare that has proved a valuable servant, and is, consequently, a favorite: he wishes, if possible, to "preserve her breed," and accordingly takes a foal out of her, after, perhaps, a long life of toil. Another mistake is the following, and it is a common one: a man sees a handsome horse and takes a fancy to him; he happens to possess a mare, it is the season, and without a moment's consideration of how far that individual mare is suited for that individual horse, he puts her to him, and obtains—what? a mongrel nondescript, presenting a combination of bad qualities, and not one redeeming point. Both parents must be selected with a reference not only to their respective points of excellence, but to the relative adaptations which the points of one present to the points of the other. Breed from none but sound parents; accidents, however, are not to be regarded as unsoundness; but in purchasing a mare for breeding, it is necessary to be perfectly certain that the defect, if such exist, be a mere accident, and not a congenital malformation. See that both parents are as free from moral as from physical infirmity, from faults or vices of temper or disposition. A defect of one parent may sometimes, however, be removed, or rendered null, by the other possessing a counteracting excellence to a preponderating extent; but, above all things, take care that the same defect be not possessed by both parents. Make up your mind as to the description of animal you intend to breed. Nothing is more unsatisfactory, or so likely to turn out an unprofitable speculation, as breeding a nondescript—a brute fit neither for the carriage nor the plow—for the saddle nor the cart; and it is, with some few exceptions, within the power of the breeder, by a judicious selection of parents, to insure a certain offspring. Few things are more certain than horse-breeding; for the rule, "like produces like," in most cases holds good from generation to generation. It is better to be on the safe side, and to avoid even such mares as have suffered from accidents.

Harvesting Grain.

It would seem to be almost superfluous, at this late day, to urge upon our farmers the importance of cutting grain before it becomes fully ripe; yet notwithstanding the numerous articles which have been written and published upon this subject, and the very decided convictions expressed by the most judicious millers and grain dealers in favor of early harvesting—especially where the grain is intended for bread making or flouring—there are many who still adhere to the old practice, and will by no means allow their crops to be harvested till the grain is fully ripe. Prejudice is a tyrannical master, and no class of the community appears to be more fully under its control than our agricultural class. In New York, and, indeed, in all the great wheat growing States, the practice of cutting this grain before it is dead ripe prevails universally. The exact time when it should be harvested, is now, with the grain-producing part of the community, no longer a matter of doubt or speculation; all being fully convinced that the right period is indicated by that change which the grain experiences when passing from its milky state to that of complete hardness, and when the kernels, without being sticky, are yet not sufficiently hard to resist the pressure to resist the pressure of the thumb and finger. The farina of the grain being perfected, all that is necessary to render it fit for flouring is the hardening of the mass: and this, it is abundantly established, may be as well perfected after the straw is cut as before. Beside, grain that is allowed to stand till it is fully or dead ripe, makes darker flour, and is not so heavy; it scatters in harvesting, and does not command in our markets so high a price. The straw of grain, when it is cut before the period of perfect maturity, is also much more valuable; it also much more valuable; it possesses a degree of succulence or saccharine sweetness which renders it a good food for stock—a use to which the straw that has stood in the field till it has become dead or perfectly matured can never be applied.

I have cut oats when the straw was just turning from its green to its golden hue, and have found the grain as plump and full, and far brighter in color, than that which had stood in the field till ripe. The straw of oats when harvested early, and properly cured, is nearly as valuable for cattle feeding as the best clover hay; and when chaffed or mixed with chopped roots or meal, it makes a feed eagerly partaken of by stock of every description.—*Germantown Telegraph.*

Weekly Summary of News.

UNITED STATES.

By the arrival, on Thursday last, of the U. S. M. steamer Oregon, the Nicaragua steamer Pacific, and the Independent steamer Yankee Blade, we have New York papers to April 5. The Oregon reports having been brought to by a Mexican frigate off the port of Acapulco, and boarded by a Mexican officer, who declared the port in a state of blockade; but, after some negociation, they were allowed to enter. The Pacific was obliged to pass on, being refused entrance. The Yankee Blade had got inside before she was observed by the cruisers.....According to their reports, the steamers bring an aggregate of 2,096 passengers.....The Nebraska Bill was considered defeated—it having been referred to the Committee of the Whole on the State of the Union, and placed on the calendar, behind some three hundred other bills, which must all be disposed of before it can be touched, except by a two-thirds vote, and a suspension of the rules.....The Black Warrior had been released by the Cuban authorities, on payment of a fine of $6900, and she sailed from Havana on the 24th ult.....John Mitchell has published a letter to the Irish citizens of the United States, calling upon them not to take up arms in favor of England. He says their duty is to study how to make her present difficulties fatal to her power. .....The Legislature of New York passed the Maine Liquor Law on the 23d, but the Governor vetoed the Bill.....A flood of counterfeit bills on the Cranston Bank, R. I., had been circulated in New York by a gang of counterfeiters, who were detected, and about twenty of them arrested.....There is a general strike among mechanics for an advance of wages in New York city. The movement is extending eastward.....Some hard fighting had taken place at the city elections in New Orleans, between the "Know-Nothings" and the adopted citizens. Three men were killed at the polls, and others seriously wounded.....The great State Race for $20,000 came of at New Orleans on the 1st April, and was won by the Kentucky horse Lexington, in two straight heats.....The Irishmen, to the number of 6000 (of whom 2000 were uniformed companies) turned out in New York to celebrate St. Patrick's day. They were all understood to be fully armed. The circumstance had excited considerable comment.....There are accounts of terrible railroad, steamboat and other accidents from all parts of the country. Since the 1st of January, 1853, nine hundred and fifty people have been killed, and eight hundred and forty-nine wounded by accidents on American railways and steamers.

EUROPE.

From Liverpool the latest accounts are to March 22d, received by the Baltic. The English government was only waiting the arrival of the message with the Czar's refusal. So soon as the official refusal comes to hand, announcement will be made to both houses of Parliament, and war will be formally declared. .....It is stated on the authority of the Paris correspondent of the London Morning Chronicle, that the telegraphic announcement of the Czar's refusal—in terms short, dry and disdainful—was received by the French government via Berlin on the 18th, and that as soon as the English minister became acquainted with this answer, he despatched a courier, by way of the Prussian ports of the Baltic, to Admiral Napier, in order that he may be prepared to act upon his instructions.....Sir Charles Napier's fleet arrived at Wingo Sound on the 15th, all well. The frigates and vessels of the second class will enter the Baltic by the Sound, and the larger vessels by the Great Belt. The English ships have applied to engage sixty Prussian pilots at Stettin.....A force of 27,000 Russians is on the way to strengthen the garrison at Revel. The commander of the troops at Revel had proclaimed that probably the town would be bombarded by the English and French. Women and children were therefore advised to quit the city.....The British steamer Furious and French steamer Vauban had been near enough to Sebastopol to see a boom extended across the harbor, and to count six ships of the line guarding the entrance, with four more in the creek, besides several frigates and brigs. The Russians are preparing to block up the mouths of the Danube by stretching chains across the river.....Since the prohibition of the export of corn from Odessa, the price had fallen from 9 to 3 silver roubles. Heavy failures were feared at Odessa.....The allied fleets were still at Beycos Bay, but would shortly re-enter the Black Sea. Two Austrian ships of war were also at Beycos, and three others were expected.....Up to the present time the Russians have made no formal attempt to take Kalefat, and so far as appearances indicate will not at present do so. Their plan of operations now seems to be to throw a force into the mountainous part of Bulgaria, and to endeavor to raise the Kayah population, proceeding on the supposition that Kalefat being a fixed advanced post, will absorb a large portion of the Turkish force, thus leaving the country behind entirely undefended. No action had taken place since previous advices..... Four French ships of war, under the command of Admiral Deschenes, have sailed from Toulon to join Napier's fleet in the Baltic.....Sir Charles Napier, in the steam frigate Valorous, arrived at Copenhagen on the 20th.....St. Petersburg advices report that the export of gold from Russia is prohibited.....A report of the capture of a Russian convoy, with treasure to pay the troops, at Kars, had reached Constantinople.

CHINA.

By recent arrivals from China, Hong Kong papers to the 18th March—being nine days later than our advices published last week.....The "Jorge Juan," the first regular steamer between Manila and Hong Kong, arrived at the latter port on the 26th February.....Accounts from Loo Choo, brought by the storeship Supply, announce that the natives have become friendly with the Americans, and that both coal and gold in large quantities are to be found on the islands. The American fleet had sailed for Japan.....At Shanghae the Custom House is once more fairly established, and from a sketch of the city and environs which we have seen, (says the Register,) we cannot understand why this was not done before. By this sketch it appears the rebels are shut up within the city walls, and that the Imperialists hold the whole surrounding country, and it does not appear as if Shanghae was at all necessary to the trade. An eye witness describes the place as completely shut up, shops closed, nothing doing, and everything looking desolate. There are ample supplies of rice in the city, and the country people find means to convey different articles of produce into it, so that, as there must be still a considerable amount of wealth inside, there seems to be no very immediate chance of its capture. The usual fighting had been going on, and it is said that in a sortie of the rebels, three Europeans, who were leading them, were mortally wounded.....The Chinese papers appear to think that the rebels are losing ground. A number of towns and cities in the interior have been lately retaken by the Imperialists.....A Portuguese lorcha brought to Hong Kong the news of the loss of the celebrated American clipper Oriental, Fletcher, master—crew saved. The Oriental was bound to America with a full cargo of teas from Fuh-chow-fu, between which port and Amoy she got on some rocks, and became a total wreck, February 25 She was bound to New York, where it is understood both ship and cargo are fully insured.

AUSTRALIA.

The bark Jessie Byrne, at this port from Australia, brings Sydney papers to the 21st February. They contain no local news whatever of interest.....There are no statistics of the yield of gold. The reduced license fee is paid willingly, and evasion of it of rare occurrence.....A public meeting was held at the Exchange, in Sydney, February 15th, for the purpose of presenting Capt. Ludlow, of the American ship Monmouth, with a testimonial. The meeting was fully attended, and much enthusiasm was exhibited. The Herald of the 15th, gives the following general statement of the case: The good ship Meridian was wrecked on her voyage from London to Sydney, on the uninhabited island of Amsterdam. The Captain, Mr. Heruiman, with one or two other persons, were lost. More than a hundred of the passengers and crew, by great exertions, contrived to get to the island, where they remained for several days. At length a sail was observed in sight, and the ship neared the island, but a sudden adverse wind sprung up, and the ship was blown away. Four fearful days of suspense were passed, and again the vessel appeared. With great difficulty, and after several days of great toil and anxiety, the commander had the satisfaction of welcoming more than one hundred persons on board his ship, thereby saving them from starvation. Instead of pursuing his voyage, the captain turned his ship's head to the Mauritius, and there landed the whole. The conduct of captain Ludlow, of the American whaling ship Monmouth, will become a matter of history. There was manifested about the whole affair a nobleness, a generosity and a perseverance, which language fails to convey. The handsome sum of £160 was subscribed for a testimonial before the meeting adjourned.

Since writing the above, the schooner Helene, Meyes master, has arrived, bringing Melbourne dates to the 18th February, a few days later than those received via Sydney, per Jessie Byrne The papers contain no news of general interest. From the Morning Herald of the 18th, we clip the following:—A nugget weighing 52 lbs 4 oz. was taken from the Eureka (Ballarat Diggings) last week. This is not mere report, nor is the weight exaggerated, as I have myself seen it. A hole was bottomed yesterday on the same line, and during the day, the party obtained from the bottom of the hole, alone, 60 lbs. weight of gold. Scotchman's Gully and New Chum's Gully are yielding great quantities of the precious metal, so that there can be no doubt, now, but that the whole of the land between Ballarat and Bennyoung, if not beyond, is auriferous.....We are informed by an excellent agricultural authority, that the cereal crops now sowed and in stack are unusually light. There is a great deficiency in the produce of hay and wheat, and in many localities the potato is a complete failure from drought, and some sown in November and December, have never come out of the ground at all, whilst the yield of the crop previously sown shows a great diminution.

SANDWICH ISLANDS.

The clipper schooner Sovereign arrived here on the 7th inst., 13 days from Honolulu. We have papers to the 23d ult., from which we glean the following items of importance:—The foreign census of the Islands has been taken, and is published at length in the Polynesian, as are also the reports of the ministers of the government. During the year 1853 the native population of the Islands has decreased 6,513. The convictions for crime were 3,173, or one out of 23 of the population; 1,059 of these convictions were for drunks, and 860 for fornication and adultery. The liquor drank amounted to 14,689 gallons. The total revenue was $326,620, including $139,457 of foreign imports; the expenses, $265,795.....The Legislature of the Island assembled on the 5th of April. The House of Nobles has 25 members, including the king, queen and four ministers, of whom three are foreigners. All the other members are natives. The lower House has 27 members, including eight foreigners.....E. H. Allen, Minister of Finance, recommends that the port be freed from all restrictions on commerce, and that no specific exemption be made of duty on imports. He gives the arrivals of merchant vessels thus: 1850, 469; 1851, 446; 1852, 235; 1853, 194 He recommends the extension of the city into the harbor, and encouragement of steam navigation.....We have compiled the following statistics for the year 1853, from the different reports: One hundred and nineteen foreigners were naturalized; 53 of them were Americans. Sales of 12,011 acres of public land were made for $15,065. Licenses amounted to $26,760. There are 423 public free schools with native teachers, who teach in the Hawaiian tongue; of these 343 are Protestant schools and 79 Catholic. The children taught number 12,205, or about 35 to a school. The expense of these schools was $31,256 for the year. In addition to the public schools there are nine private schools. The natives are anxious to learn English, and it is said that they who do not learn it will soon be strangers on their own soil.....In the Legislature numerous petitions were presented for reduction of the salaries of the King and other officials, against permitting preachers to hold office, to discharge all foreigners from office except Wyllie.....A fire occurred at Kahului, on Maui, in a building belonging to S. Reynolds. The loss was $7,000. The natives would not aid to put out the fire without pay.....The bark John Wesley, sailed on the 16th March for this port, and on the 30th was lost while at anchor at Kalua, during a severe gale. The U. S. mail was saved, but 5,500 barrels of oil were lost. All the passengers were saved.....From 1,200 to 1,500 acres of wheat have been sown at Makawao, and the crop promises to be a fair one. The mill to grind it will be completed early in the month of May, in time for the first crop that can be harvested.

OREGON.

The steamer Columbia, at this port May 8, from Oregon, brings papers to the 5th inst. They are almost totally devoid of news. The people are actively engaged in discussing the propriety of the establishment of a State government; meetings for and against the project have been held throughout the territory.....A man named Hannah, or Hannen, was killed near Salem, on the 27th ult., by the falling of a tree. He was engaged in felling the tree, and it is supposed that when nearly chopped off, it split up, and flying suddenly back struck him on the head, breaking the skull and causing instant death.....The "Umpqua Weekly Gazette" is the title of a new Oregon journal just started at Scottsburg; D. J. Lyons editor.....The Surveyor General's Office is to be removed from Oregon City to Salem, on the 1st of August next.....Just as we were going to press, (says the Oregonian) we learned by a letter from David Birdsey, formerly of this city, that the Indians on Rogue River are fighting among themselves. The Applegate Indians (so-called) have killed Jim, the war chief of that tribe which caused so much trouble with the whites last year. Ton prospects are that a general war between the different tribes will ensue. If so, it will save the whites the trouble of exterminating them.

MARKET REPORTS.

San Francisco, May 10, 1854.

The fine refreshing rains of the past fortnight have saved an immense quantity of every variety of grain and vegetables that were in a suffering condition for the want of moisture, where irrigation would not answer. Barley, Wheat, and Oats, in fact all the crops look well, and promise abundantly. Fruits begin to come in and the crop this year will be very abundant.

Business remains much depressed, without a prospect ahead that is reliable.

The retail vegetable market presents an excellent variety of almost every desirable product and in well grown condition. It is rather strange that with the number of gardens near San Francisco, there should be so few Tomatoes and Peas; these can be grown early here as well as elsewhere.

MY GOD DIREOTS THE STORM.

The spirit nf the tempest ebook
His wing of raven hue,
Above the sea and hollow winds
Howled o'er the waters blue.

Up rose the mountain billows high,
And swept a stormy path;
Darkness and terror mingled there
Their ministry of wrath.

A lonely bark, by bounding seas,
Tossed wildly to and fro,
Dashed o'er the billow's foaming brow,
To fearful depths below.

Crash echoed crash!—the quivering spars
Broke o'er the leaning side,
And left the bark, a shattered wreck,
The stormy wave to ride.

The sturdy seamen struggled hard
To hold the yielding helm,
And hold the ship's prow to the surge,
That threatened to o'erwhelm.

And when the plunging ruin spurned
Their impotent control,
They flew to drown their gloomy fears
In the accursed bowl.

Upon the raging ocean then
Helpless was left the bark,
To the wild mercy of the waves,
Amid the tempest dark.

Upon the deck, alone, there stood
A man nf courage high;
A hero, from whose bosom fear
Had never drawn a sigh.

With folded arms, erect he stood,
His countenance was mild—
And calmly gazing on the scene,
He bowed his head and smiled.

A wild shriek from the cabin rose—
Up rushed his beauteous bride;
With locks disbelved, and in tears,
She trembled by his side.

"O why, my love, upon thy lip,"
She cried, "doth play that smile,
When all is gloom and terror here,
And I must weep the while?"

No word the warrior spoke—but he
Drew from beneath his vest
A poinard bright, and placed its point
Against her heavbig breast.

She started not, nor shrieked in dread
As she had shrieked before;
But stood astonished, and surveyed
His tranquil features o'er.

"Now why," he asked, "dost thou not start?
May not thy blood be spilt?"
With sweet composure she replied,
"*My husband holds the hilt!*"

"Dost wonder, then, that I am calm,
That fear shakes not my form?
I ne'er can tremble while I know
My God directs the storm!"

LOVE ME, LOVE MY PILGRIM.

BY GRACE GREENWOOD.

Playmates of my childish days,
When life lay before our gaze
Like a lovely realm of fairy;
When, with all its castles airy,
Bright the great world o'er us shone,
Like gardens of old Babylon—
Do you still remember?

In life's whirl can you forget,
Scenes and joys that haunt me yet?
Spring-day rambles after flowers,
Strolls through summer's moonlit bowers,
Autumn feasts and harvest mirth,
Laughter round the winter's hearth—
Ah, do you still remember?

All your school-girl joys and sorrows;
All your algebraic horrors;
All our tiresome moods and tenses;
All our little confidences—
Terrors of examination—
Fun and frolic of vacation—
I'm sure you still remember?

Gentle friends of later times,
Listeners to my early rhymes,
Sympathizers in rumauce,
Gay companions in the dance;
If my memory still you hold,
If you love me, as of old—
Love my Little Pilgrim!

By the hopes and flowers we've gathered;
By the April showers we've weathered;
By our compacts and our break-ups;
By our quarrels and our make-ups;
By our vows, to love forever—
Love my Little Pilgrim!

Friends who by my side have stood,
In my sobered womanhood;
You who vow my simple word
Hath your soul's deep waters stirred;
You are fond and true, I know,
Countless times you've told me so—
Then love my Little Pilgrim!

P. S.—Editorial friends will best prove their love and constancy by copying the above [appeal for the paper called the Little Pilgrim]. G. G.

Fanny Fern says: "I tell you, that editors are just the fattest, sleekest, most intelligent and loveable set of human beings in existence; and the only reason they don't own up is, because they don't want to let the world in general know how many little favors and perquisites fall to their lot!

"They go down to the office after a careful toilet and a comfortable breakfast, make up a fire in the stove, hot enough to roast an Icelander, 'hermetically seal' every door and window, put on a pair of old slippers, light a cigar, draw up a huge easy chair, stick their feet up twice as high as their head, and proceed to business; that is to say, between the whiffs of that cigar they tell excruciatingly funny stories, poke each other in the ribs, agree to join the Mutual Admiration Society, retail all the wire-pulling behind the scenes, calculate which way the political cat is going to jump, and shape the paragraphs accordingly; tell who threw that large boquet at the last night's concert, to Madame Fitz Humbug; shake hands and make room for the 'hail fellows well met' that drop in to see them; keep their intellects sharpened up by collision with the bright and gifted—in short, live in one perpetual clover field, and when they die, all the newspapers write their fine obituary notices, and give them a pass to paradise. I would like to know if that looks like a vexed existence?

"Proud would we feel to tell of the wedding cake, and flowers, and fruits, and annuals, embroidered purses and tasseled smoking caps, pretty little notes, braided watch chains, the handkerchiefs they get perfumed, and gloves they get mended for nothing. How everybody nudges his neighbor, when they appear at lecture, or concert, or opera, and says: "There's that clever fellow, the editor of the Comet!" How he has a season ticket by a Frog Pond; how he has—but there's no use in telling all a body knows! Christopher Columbus! an editor's life a vexed existence!"

"Let those laugh now who never laughed before,
And those who always laughed, now laugh the more."

Hospitality of Rogues.—A French gentleman was lately walking in the Crystal Palace with an English friend, when the conversation turned upon the pickpockets of London; the former boasting that he did not fear them but defied them. His companion determined to play a trick, and siezing a favorable moment, abstracted his handkerchief from his pocket. At the same moment the joker felt himself touched on the shoulder by a very elegant gentleman, who took him aside, and said, with a gracious smile:

"Sir, I see that you are one of us; permit me to offer you the first duties of hospitality, by returning to you your snuff-box, which I this moment made a seizure of."

The Englishman, slightly confused, but very well satisfied with the result, bowed, took his box, restored the handkerchief to his friend, and continued his route, with his hands in his pockets.

Anecnote of Burns.—In severity of sarcastic remark, Burns was unrivalled. In a mixed company, one evening, the conversation turned on the death of a friend, one of those present said he would like to attend the funeral, and wished Mr. Burns to loan him a black coat.

"As I am invited to the same funeral," said Burns, "I cannot lend you my coat, but I can suggest a substitute."

"What is that?" asked the other.

"Throw your character over your shoulders, and that will prove the blackest coat you ever wore."

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the Fire Proof Store, No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Haxall and Gallego.

Public attention is particularly directed to the "Bay State Lower Mills' Brand," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any adulteration.

Ground feed of all kinds always on hand.

Every exertion will be used to merit a continuance of the ator heretofore so liberally extended tu us. 1-tf

Catalogue of Fruit and Fruit Trees.

WE call the attention of Nurserymen and Orchardists to a new catalogue just issued by us, prepared with great labor and cost, giving the lists of the best fruits cultivaed in Europe or America, with their synonyms. This catalogue embraces also lists of best Vegetables, Ornamental Trees, Flowering Plants, Seeds, &c.—being a perfect illustration of the best varieties of everything belonging to Agriculture, Horticulture, and Floriculture, with brief directions for the cultivators in each department, and as *adapted to California*.

This work will be found a very great help tu all engaged in cultivation.

Price $1 per copy. WARREN & SON,
Nurserymen, Seedsmen, and Florists,
5 Musical Hall Buildings.

Great Sale of Fruit Trees.

APPLE, PEAR, CHERRY AND PLUM TREES—RASPBERRY, CURRANT, FIG, GRAPE, &c.

WE shall offer every day, at 11 o'clock, in lots to suit purchasers, at our rooms, Musical Hall, the above varieties of Fruit Trees. They are in fine condition and worthy particular notice. WARREN & SON,
8-tf Musical Hall Building, Bush street.

Threshers, Separators and Cleaners.

PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any other machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—four for the separator, two for the power, &c.

Also, EMERY'S Threshers and Separators, of Two Horse Power.

We have also on the Golden Fleece, two of HALL'S (Rochester,) Latest Improved Threshers, Separators and Cleaners, Eight Horse Powers, all complete.

Also, four of Hussey's Reapers and Mowers, all combined.

For sale by COIT & BEALS,
9 tf 94 Battery street, office up stairs.

FLOWERS! BRIGHT FLOWERS!

A GIFT FOR HOME.

"THROW PHYSIC TO THE DOGS."

WE convert the pill box into a Floral vase, and instead of the "nauseate drug," we offer the perfume of Flowers. Our beautiful collection of *California Flower Seeds* we now offer.

These are put up in handsome morocco cases, or homeopathic cases of glass bottles, with printed lists and directions, and with pressed flowers of the different varieties of each. These are of the most beautiful style that can be prepared, and are most appropriate gifts for home at this season.

We invite attention to them at our rooms, at Musical Hall Buildings. WARREN & SON,
5 Seedsmen and Florists.

Having on hand the most splendid and substantial assortment of all kinds of Furniture ever offered in Sacramento, we feel confident, with prices to suit, that none can go away empty that may favor us with a call.

Our stock consists of Bureaus, Secretaries, Wardrobes, Stands, Tables, Bedsteads, Lounges, Sofas, Painted Mahogany, Black Walnut, Satin and Rosewood Sets—some of the finest and cheapest ever offered in this market.

Also, Mattresses, of Curled Hair, Patent Felt, Moss, Wooll Straw, and Straw with Cotton Tops. Also, Feather Pillows, and Feathers for Beds, with a large stock of Quilts, Comforts, Sheets, Blankets, &c., &c. Also, a very large stock of Chairs, Wood, and Cane Seats of all descriptions: also, of Hair, Cloth, Spring, Plush, Velvet and Carpet Bottoms, with Rockers of all kinds; all of which will be sold at reduced rates.

13 4t Also at 130 Jackson street, San Francisco.

BATES' SUPERIOR
UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.

Soil, Propagation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top soil at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the sod so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.

If the land is poor, so that grass and weeds will not vegetate then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable.

Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in meadow moss, and well boxed, which will enable them to go to a great distance in a fresh state.

The proper time for Fall transplanting is October and November; for Spring, from the opening of the same till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting, and during the winter for Spring. 13

SULLIVAN BATES,

THE CALIFORNIA FARMER

Any Journal of Useful Sciences.

VOL. 1. SAN FRANCISCO, THURSDAY, MAY 18, 1854. NO. 20.

THE CALIFORNIA FARMER,
AND JOURNAL OF USEFUL SCIENCES,
PUBLISHED EVERY THURSDAY MORNING.
BY WARREN & SON.
Office in Musical Hall Building, Bush street.

TERMS.—Eight dollars per annum, in advance; or delivered by carrier at one dollar per month.

ADVERTISEMENTS.—A limited number of Advertisements will be inserted at the following rates: For one square of eight lines, per month, $6. For business notices of five lines or less per month, $4. A slight reduction will be made to regular advertisers.

[From the Country Gintleman.]

The Poetry of the Vegetable World.

Of all the recent contributions to our literature we regard those worthy the highest esteem, which divesting the sublime truth of science from the technicalities of schools, present them in simple and undisguised beauty to the unlearned; filling the humblest mind with a sense of the majesty and infinitude of nature, irresistibly moving it onward in the path of inquiry and upward to the Source of Knowledge and Life.

This *Literature of Science* is a peculiar feature of the present time. It owes its noblest development if not its origin to Humboldt, that great high priest and favorite of Nature, to whom she has unveiled her hoarded mysteries, and whom she guards so carefully from Age and Decay. Meanwhile, against the hour when Humboldt enters upon a diviner life, she seems preparing worthy successors to his wisdom and renown; men who will not cease to question her until the whole universe of mind and matter, the laws written over the earth in clouds, in stones and nodding flowers, be read as contexts to the record of inspiration.

Hugh Miller, or our own Hitchcock, tracing the footprints of the Creator on the firm foundations of the earth, Hunt, gathering the whole circle of the sciences into one poetic bow of promise for humanity, and the author of that unique little volume, the "Stars and the Earth," which so beautifully adapts the truths of astronomy to the explanation of that great problem of theology —the omnipresence of God, are ministers of a new natural religion which we should hail in its dawning.

"The Poetry of the Vegetable World," as its name imports, is not in its general bearings unlike the works already mentioned, though coming fresh from the study of its pages we will not disguise our preference for it, or our gratitude to the American editor who, by freeing it from some obnoxious and as yet unproven theories, has given it to us in a greatly improved form. It is a book to be studied as well as read, and contains throughout the most delightful recognition of the moral aspects of the material world. Nor is it without important practical suggestions; in proof of which we extract the following from the Chapter devoted to the History of Vegetation.

"From the hand of Nature, man received the inheritance prepared for him, the vegetable and animal worlds, dead matters, and then forces; how has he managed his inheritance?

The meanest purpose of the vegetable world is doubtless to serve the *economy* of man because nature here merely satisfies for each individual what, be they even so refined and glossed over by cultivation, are but animal requirements. The import of the vegetable world for the regulation of the numerous and comprehensive physical processes of the earth, appears more lofty. The glow and rainlessness of deserts, the fullness of tropical life, uniformity and variability of climate, the life of animals and of man in the mass, have their conditions in the luxuriance and nature of vegetation. Here the subject concerns not only the individual, but whole countries, regions and generations, whose existence is bound up with the formation of the vegetable world *as a whole*. Lastly, *plants symbolize the Eternal;* the vegetable creation is the rich altar cloth of the temple of God, in which the recognition of beauty and sublimity of form as constitutes the worship.

Is man in opposition to the vegetable world? Altering many things, he has laid hands upon it and the great phases of his history are catalogued on the green leaf of vegetation. How has he husbanded it? The history of cultivation would answer excellently; he has by wise care converted the new, myriad-kinded material of nature into good and serviceable gifts which bless and honor. We do not mean that where interest and actual necessity have driven him he has used for his own purposes [illegible]

[illegible] and [illegible]

[illegible] temple of God to universal worship? Oh no! In his selfish labors, in the tears of his brother rendered miserable by his crimes, in the cry of the scourged slave, the continual remembrance of God had become troublesome to him and he declared the Divine breath in nature to be but a nursery tale that he might no longer be frightened by his conscience. Beauty, the expression of the Divine Nature was driven by selfish profit out of the vegetable world, and the individual, caring for himself alone, inclosed a little space wherein to use the beauty of nature, *not for worship*, but as a sensual pleasure. This is now the reality, yet one should not despair of humanity, for in it lies the germ of the Divine.

A broad band of waste land generally follows in the steps of cultivation. If it expands, the centre and cradle dies, and only on the outer borders are found green shoots. It is only difficult, not impossible, for man, without renouncing the benefits of culture, to make reparation for the injury he has inflicted; he is appointed Lord of Creation. Thorns and thistles mark the track he has traversed through the earth. Before him once lay original nature in her wild but sublime beauty. Behind him, he leaves the desert—a deformed and ruined land; a thoughtless squandering of vegetable treasure has so changed the character of nature that man flies in terror from the arena of his actions, leaving the impoverished earth to barbarous races or to animals, so long as another spot in virgin beauty smiles before him.

Thus did cultivation, driven out, leave the east, (and perhaps the deserts formerly,) robbed of their coverings; like the wild herds of old over beautiful Greece, thus rolls this conquest with fearful rapidity through America, and the planter now often leaves the already exhausted land, the eastern climate becomes infertile through the demolition of the forests, to introduce a similar revolution into the far west. But we see too, that the nobler and more cultivated men even now raise their warning voices, put their small hand to the mighty work of restoring to nature her strength and fulness, yet in a higher stage than that of *wild* nature, rather dependent on the law of purpose given by man, arranged according to plans which are copied from the development of manhood itself.

All this is at the present but a small enterprise, but it preserves our faith in the vocation of man and his power to fulfil it. In future times when he rules, leads and protects the whole he will free nature from the tyranny with which he now abuses her; we see in the grey, cloudy distance of the future, a realm of peace and beauty on the earth and in nature, but to reach it man must long study her laws, and *above all*, free himself from selfishness."

While the importance of the vegetable world to the economy and development of man is thus ably shown, I am still more interested in those parts of the book that display its higher, more spiritual uses. The editor justly says, "the spirituality of nature lies beyond the reach of pure science; in vain are its microscopic researches; in vain its most refined analyses, for this principle, like the principle of life, is immaterial, and exists not in material nature where we seek it, but in ourselves.

I think the crowning beauty of this work will be found in the æsthetical part, in which the truths that underlie the symbolism of plants are fully brought out. We are shown how science, that, at the outset, *appears* to *un*spiritualize nature by the explanation of phenomena, if legitimately pursued restores to the mind all the poetry of its early faith, enriched by the ideas in harmony with all, and with the author of all.

"The development of science closes itself into a ring; at the highest stage of culture we again receive, with consciousness and refined insight, that with which the unconscious childish understanding set out. Contemplation of nature again becomes the worship of God, but only after we have separated all the ungodly, human, all the scientifically explicable out of nature, and nought is left but the mystery of beauty. In it buds forth the foreshadowing of a higher significance of all phenomena, its reception is religion, is the purest and most elevated worship of God to which man can raise himself; in it is the most immediate revelation of *the Holy* that man is capable of receiving. Let us add, to avoid misconception, that the [illegible] nature is not the highest [illegible] material world, this is the [illegible] and the noblest [illegible]

The Volunteer Counsel.

John Taylor was licensed, when a youth of 21, to practice at the bar of Philadelphia. He was poor, but well educated, and possessed extraordinary genius. The grace of his person, combined with the superiority of his intellect, enabled him to win the hand of a fashionable beauty. About a year afterwards, the husband was employed by a wealthy merchant of the city to go on a mission as land agent to the West. As a heavy salary was afforded, Taylor bid farewell to his wife and infant son. He wrote back every week, but received not a line in answer. Six months elapsed, when he received a letter from his employer that explained all. Shortly after his departure for the West, the wife and her father removed to Mississippi. There she immediately obtained a divorce by an act of the Legislature, married again forthwith, and, to complete the climax of cruelty and wrong, had the child's name of Taylor changed to that of Marks—her second matrimonial partner. This perfidy nearly drove Taylor insane. From that period his course became eccentric in the first degree. At last a fever carried him off at a comparatively early age.

At an early hour on the 9th of April, 1840, the Court House in Clarksville Texas, was crowded to overflowing. Save in the war times past, there had never been witnessed such a gathering in the Red River county, while the strong feeling apparent on every flushed face will sufficiently explain the matter.

At the close of 1839, George Hopkins, one of the wealthiest planters and most influential men in Northern Texas, offered a gross insult to Mary Elliston, the wife of his chief overseer. The husband threatened to chastise him for the outrage, whereupon Hopkins loaded his gun, went to the house of Elliston, and shot him in his own door. The murderer was arrested and bailed to answer the charge. This occurrence produced intense excitement, and Hopkins, in order to turn the tide of popular opinion, or at least to mitigate the general wrath which at first was violent against him, circulated reports infamously prejudical to the character of the woman who had suffered such cruel wrong at his hands. She brought her suit for slander. And thus two cases, one criminal and the other civil, and both out of the same tragedy, were pending in the April Circuit Court for 1840.

The interest naturally felt by the community became deeper when it was known that Ashley and Pike, of Arkansas and the celebrated S. S. Prentiss, of New Orleans, each with enormous fees, had been retained by Hopkins to conduct his defence.

The trial of the indictment for murder ended on the 8th of April, with the acquittal of Hopkins. Such a result might have been foreseen by comparing the talents of the counsel engaged on either side. The Texas lawyers were utterly overwhelmed by the arguments and eloquence of their opponents. It was a light of a dwarf against giants.

The slander suit was set down for the 9th, and the throng of spectators grew in numbers as well as excitement; and what may seem strange, the current of public sentiment now ran decidedly for Hopkins. His money had procured pointed witnesses, who served most effectually his powerful advocates. Indeed so triumphant had been the success of the previous day, that when the slander case was called, Mary Ellison was left without an Attorney—they had all withdrawn. The pigmy pettifoggers dare not brave the sharp wit of Pike, and the scathing thunder of the learned Prentiss.

"Have you no counsel?" enquired Judge Mills kindly, looking kindly at the plaintiff.

"No, sir, they have all deserted me, and I am too poor to employ any more," replied the beautiful Mary, bursting into tears.

"In such a case, will not any chivalrous member of the profession volunteer?" asked the Judge, looking at the bar.

The thirty lawyers remained silent as death.

Judge Mills repeated the question.

"I will, your honor," said a voice from the thickest part of the crowd of bystanders behind the bar.

At the tone of the voice many [illegible] their seats and perhaps [illegible] that impressive thrill that [illegible] quiver—[illegible] ringing and [illegible]

The [illegible] was [illegible] dim, dreamy, almost unconscious; and his clothing looked so shabby that the court hesitated to let the case proceed under his management.

"Has your name been entered on the rolls of the State?" demanded the Judge, eyeing him suspiciously.

"It is immaterial about my name being on the rolls," answered the stranger, his thin bloodless lips curling up into a fiendish sneer. "I may be permitted to appear once by the courtesy of the court and bar. Here is my license from the highest court in America!" and he handed Judge Mills a broad parchment. The trial immediately proceeded.

In the examination of witnesses the stranger evinced but little ingenuity, as every one thought. He suffered each one to tell his story without interruption, though he contrived to make each one tell it over two or three times. He put some cross questions, which, with keen witnesses, only served to correct their tales, and he made notes, which always tend to embarrass mighty memories. The examination being ended, as counsel for the plaintiff he had a right to the opening speech, but to the astonishment of every one he declined, and permitted the defence to lead off. Then a shadow might have been observed to flit across the features of Pike, and to darken even the bright eyes of Prentiss. They found that they had caught a Tartar, but who he was they found it impossible to guess.

Col. Ashley spoke first; he dealt the jury a dish of that close dry logic that has rendered him famous in the Senate.

The poet, Albert Pike succeeded in a rich vein of wit and a hail-torrent of ridicule, and you may be sure neither the plaintiff nor the plaintiff's ragged attorney were forgotten nor spared.

The great Prentiss concluded for the defendant with a glow of gorgeous sentences, and a final burst of oratory that shook the house with cheers, the jury themselves joining, notwithstanding the stern "order" of the bench. Thus susceptible are the Southern people to the charms of impassioned eloquence.

It was then the stranger's turn. He had been perfectly abstracted during all the previous speeches. Still, straight, and motionless in his seat, his pale smooth forehead shooting up like a mountain cone of snow; but for that eternal twitch that came and went perpetually across his cheeks, you might have taken him for a mere man of marble, or a man carved in ice. Even his dim dreary eyes were invisible beneath those shaggy eyebrows.

But at last he rises before the bar railing, not behind, and so near the wondering jury that he might have touched the foreman with his long bony finger. With eyes half shut, and rigid as a pillar of iron, his thin lips curl as if in measureless scorn, slightly part, and the voice comes forth. At first it is low and sweet, insinuating itself into the brain as an artless tune winding its way into the deepest heart like a magic incantation; while the speaker proceeds, without a gesture or the least sign or excitement, to tear in pieces the argument of Ashley, that melts away at his touch, as frost before the sunbeam. Every one looked surprised. Its logic seemed at once so brief and so luminously clear that the merest peasant could comprehend it.

Anon it came to the dazzling wit of the poet lawyer Pike. Then the curl of his lip grew sharper; his face kindled up, and his eyes began to open, dreary no longer, but vivid as lightning red as fire-globes, and flaring like meteors. The soul seemed in the eye. The full heart [illegible] out of the face. In five minutes Pike's wit seemed the acme of folly and his finest satire horrible profanity, contrasted with [illegible] and [illegible] by just and [illegible] the forum [illegible]

Then with [illegible] on Prentiss [illegible] of Hopkins [illegible] and [illegible] that all trembled as with [illegible]

The [illegible]

feet ditches that no sophistry could overleap, and no stretch of ingenuity evade; and having thus, as one might say, impounded his victim, and girt him about like a serpent in a circle of fire, he stripped himself for the work of massacre.

Oh! then, but it was a vision both glorious and dreadful, to behold the orator. His actions became impetuous as the motion of an oak in the hurricane. His voice became a trumpet filled with whirlpools, deafening the ear with crashes of power, and yet mingled all the while with an undersong of the softest cadence. His face was like a drunkard's—his forehead glowed like a heated furnace—his countenance looked haggard like that of a maniac; and ever and anon he flung his long bony arms on high as if grasping after thunderbolts. He drew a picture of murder in such appalling colors that in comparison hell itself might be considered beautiful. He painted the slanderer so black that the sun seemed dark at noonday when shining upon such an accursed monster; and then he so fixed both the portraits on the shrinking brow of Hopkins that he nailed them there forever. The agitation of the audience nearly amounted to madness.

All at once the speaker descended from his perilous height. His voice wailed out for the murdered, dead and the living—the beautiful Mary—more beautiful every moment as her tears flowed faster—till men wept, and lovely women sobbed like children.

He closed by a strong exhortation to the jury, and through them to the bystanders. He entreated the panel, after they should bring in their verdict for the plaintiff, not to offer violence to the criminal, however richly he might deserve it; in other words, "not to lynch the villain Hopkins, but leave his punishment to God." This was the most artful trick of all, and best calculated to insure vengeance.

The jury returned a verdict of fifty thousand dollars; and the night afterwards Hopkins was taken off his bed by lynchers and beaten almost to death.

I have listened to Clay, Webster and Calhoun—to Dewey, Tyng, and Bascom—but have never heard anything in the form of sublime words even remotely approximating the eloquence of John Taylor—massive as a mountain, and wildly rushing as a cataract of fire. And this is the opinion of all who ever heard the marvellous man.

The Heart.

We are told that the heart is deceitful above all things, and desperately wicked; in many cases this is true; but none will affirm that there are not hearts that are warm in feeling, pure in thought, holy in meditation. That the heart is prone to go astray, every day's experience proves; but then there are some things attendant upon its wandering that makes us overlook its errings.

The heart is the source, the foundation from whence proceeds all that make up a man. The tongue may lisp out the words of friendship, but if the heart is not responding, it will be useless for any to put on the mantles of peace, for the heart will betray the deception. "From the fullness of the heart, the mouth speaketh." The heart is a fearful and a wonderful thing; in it lurk all that render life pleasant and endurable. Hope, joy, peace, faith, charity, and love, all have a rest in the heart; unless it is filled by the opposite extremes, envy, hate, malice, and all uncharitableness. When the heart has twined itself around an object—when it has found something it thinks deserving of its love, there is not a force on earth that can change it. If you tear the treasured one away, it will be like a broken harpstring, where music still lingers, though hushed by discordance and violence.

The heart can never forget the object of its affection. The eye may turn coldly on the loved object, but could the vision pierce through the casements of the heart, it would behold a different scene; in lieu of coldness, a red hot furnace would be raging in its centre. And it is thus in its hatred; it cannot forget; you may separate it from the despised—years may intervene ere it beholds its form; but, at the first glance of recognition, the wrong, the insult, the scoff, the cruelty of vanished years, rushes like a torrent of lava through its channels, and it will stand on the ground it occupied years before.

At one time the heart mounts up on the glaring pinions of passsions; at another it dissolves itself in repentant tears; at one moment it mourns vanished hopes; at another it smiles in the sunshine of happiness. At one moment it gives its blood as a balm to the suffering—at another it looks coldly on the wretched. At one moment it soars to the throne of the Redeemer—at another it is content with things of earth. But whatever its object, it is ever toiling—it takes no rest; like the foaming cascade, it throbs, heaves, till death ends its joys or woes.

Carefully, then, ought so dreadful an agent to be dealt with, lest an inmate that will disturb its peace forever be placed in its keeping. We ought not to forget at the same time that a smile of ours is garnered up in the storehouse of its memory, and returns, though years may have passed since it was delivered to its trust. J. Q. A. W.

—*Waverley Magazine.*

Strawberries.—We notice the success which attends the growth of the Strawberry, in the valley of San Jose. James F. Kennedy, Esq., has, as we note by the San Jose Telegraph, produced fine specimens of "Hovey's Seedling," and "Black Prince." Mr. Kennedy will also ripen the "Longworth's" prolific, a fruit much larger here than the Hovey's. Already the first ripened this season has measured three inches in circumference. Who would doubt the success of fruit growing in California?

The Judgment of the World.

"Is he poor?" "Then they'll hang him."

What a commentary upon the justice and equity that exists in the world, as too often shown from man to man, and yet do we not witness in our intercourse with the mass of men this very spirit?

The man is measured and guaged by his wealth and his position in society established not by his ability, his talents, his genius or his moral character, but by his thousands invested in real estate, in stocks, in bank or in merchandise. Is he rich—it is enough, no matter how acquired, he is rich—his influence is courted, his patronage solicited and thousands stand ready to do his bidding; if his reputation is assailed or his honor doubted, he carries the revolver to defend them, and should he be called to act (oh, in self defence of course!) and should shoot down in the street the man that dares ts call his name in question, he may be tried, but—*he is rich*, very rich—and, is acquitted.

But if a man of the highest sense of honor, a man of the finest feelings, a man of talent, great capabilities and of more than ordinary genius, but a man on whom the frown of fortune has set her darkening seal—one who has been the continual sport of misfortune, until his opportunity of being useful to others is at an end—let such a a man, goaded on to madness by mental suffering, stung to the quick by the contumely and scorn he may be obliged to bear from hundreds who are far below him yet the very men that may have fattened on his bounty—let such a man in an ungarded moment strike in defence of himself or those dear to him, and though he may slay a thing in the form of a man, one unfit to live—such a man, let it be he said of him,

He is poor! Then they'll hang him.

Such is the judgment of the world: There is no country where this can be more clearly verified than in California; and no one conversant with society but can see the same feeling pervading all the walks of life—it pervades all classes, is in all business transactions, and shines out most in the political circles.

It is this most cruel wrong that is done to so many, that causes hundreds to be thrown out of business and induces others to engage in the political arena; they feel that as *poor men*, they can never expect to be anything, and if they can only secure an *office*, there is a prospect of advancement—at least it commands a standing, gives an influence, and that influence they intend shall bring them money, they engage meaning to get *wealth*, honestly if they can, and holding a place of power they *soon learn to get money*, knowing the necessity of wealth to procure standing in society; but mark the result upon many young men, upon all who are driven by necessity to engage in politics to acquire wealth and standing. Mark the consequences upon the character and see the price they pay for wealth. By their associations the mind becomes by degrees deadened to many of the finer feelings that once gave a charm to life—and the price paid for wealth and standing is a depreciated moral character and a constitution shattered by dissipation and irregularity ever attendant upon the devotee of a political life. We say not in every individual instance, but the mass, and we know we shall be sustained in this assertion.

And in this connection is the sentence quoted as aptly applicable when the political tool can no longer serve his party—when he is poor, off with his head—when his influence is gone, then hang him. How bitter has been the cup that has been drank by many who having sacrificed time, health and conscience for party, and have been sacrificed, have exclaimed in bitterness of heart. "'Tis thus with human beings;" "they fly from those who cannot serve them," "and kneel to those who can do them good," thus showing the selfishness of man.

We might extend these remarks *ad infinitum*, and picture a thousand scenes in every-day life more applicable than those we have used, and we may do so hereafter, for we know how true the quotation, and were led to these comments by hearing it expressed in relation to one of the acts recently committed—"Is he poor?" "Then they'll hang him,"—and felt that however painful was the truth, it was the no less true.

The Gold Dust Comes.—On our last two trips from Sacramento, we noticed the well filled bags of Gold Dust of Adams & Co., under the charge of their able and efficient agent Mr. Woodward. We learned that the amount of those two lots was over $350,000. This is handling Gold Dust in earnest. Poor country is it?

[For the California Farmer.]

A Trip to San Jose and New Almaden.

BY H. GIBBONS, M. D.

On the morning of the 20th of April, in the midst of a southerly rain storm, C—— and myself set off from San Francisco in a light carriage, with a pair of fleet horses, intending to breakfast at the "Pulgas,"—distant thirty-three miles. The toll-collector on the plank road demanded no toll, C—— having already settled that matter at the rate of $80 per annum, which might be considered a liberal charge in the Atlantic States, for the use of two miles of wooden road. There had been rain enough to lay the dust without making mud. We rolled rapidly over the hills beyond the Mission, enjoying the fresh and pure air of the country, and the interminable and glorious flower garden which California every where offers to the eye at this season of the year. The landscape was wanting in trees, the smoothly rounded hills being carpeted with uniform verdure, shaded with yellow from the profusion of flowers of that hue.

A distance of ten miles brought us to a level road, and trees now began to diversify the prospect. At first, the evergreen oak is the only tree. You are struck at once with its misshapen forms, produced by the incessant sea winds of summer. All the trees northward and southward from San Francisco, for fifty or a hundred miles, exhibit the influence of the wind on their form and inclination. Sometimes they are inclined slightly from the ocean. Many of them stretch out their branches on one side only, as if a tree of good proportions had been chopped perpendicularly through the middle, and the half to the windward removed. The direction to which they inclined, always shows the direction of the prevailing winds, which varies much in different sections. As you approach San Jose they lean southward, while in the direction of Sacramento they lean northward, the sea wind being defected from the inlet at San Francisco in these opposite directions.

Presently the Bay and the Willow make their appearance; the former is a beautiful tree, well worthy of cultivation for ornament. Its leaves, when bruised, exhale a delicious fragrance, so pungent when freely snuffed, as to cause a peculiarly painful sensation in the nostrils. The country becomes more wooded as we advance, and some twenty-five miles from the city we enter the San Mateo Ranch. This is a beautiful tract, embracing many square miles, now parcelled out into farms and held by American settlers. There stands the old adobe where Saint Matthew formerly presided—in name at least, fit emblem is this dilapidated building, of the ancient Spanish and Mexican rule, while the neat and tasteful cottages distributed over the country mark the new regime.

Next comes the Pulgas Ranch, the ranch of the Fleas, as the name implies; but not the only one in California in possession of this tribe of jumpers. Substantial fences bound the road and intersect the country. The soil is more productive and the wild oats make their appearance. After traversing this tract for several miles, we come to a portion of it parcelled off into numerous small farms, separated by roads which lead you through delightful shades. The neat cottages, the substantial fences, the numerous gates, remind you of scenes in your old home on the Atlantic shores. On all the roads and corners you have the luxury of sign posts. At the house of a friend we breakfasted and dined at one operation, and after a few hours of rest and rambling afoot, over the farms, we took the road for San Jose.

The limit of the Pulgas Ranch and also of the County of San Francisco, is the San Francisquito Creek, a small stream dedicated to *little* St. Francis. Like the other streams on the route, it contains but little water now, but is liable to be much swollen by the winter rains. The road continues perfectly level, and though new to both of us, it is marked beyond mistake by the line of telegraph posts with the crosses on the top, which are said to have impressed so deeply the old population with the religious character of the Americans.

Several miles distant, on the right hand, is a range of lofty hills which protect the country from the sea winds, and at a like distance, on the opposite hand, is the Bay, which is almost constantly visible from the road. It is skirted by a wide tract of low, marshy land, with here and there an indenture or a creek, used for an "embarcadero,"—an abbreviated term for the vulgar English, "landing." In all directions Yankee industry is conspicuous. Villages have sprung up at the landings, masts are congregated along shores, and white sails speckle the Bay; teams laden with lumber ply constantly from the Redwoods, while the pulling of steam and the humming and ripping of saws fill the late solitude with unwonted noises. The hills that I have spoken of are covered with a dense growth of Redwood, whose cone-shaped profiles are distinctly visible for many miles, strongly contrasting with the spreading round-topped oak which occupies a lower level.

From the county line to San Jose is twenty-five miles, making the whole distance from San Francisco about fifty-five. San Jose is some ten miles miles beyond the head of the Bay. The road bears off to the left, and brings you to the pleasant village of Santa Clara. An alluvial flat, level as a floor, extends four miles around the village. The road is bad, full of mud holes and dry holes. On either side the husbandman is at work, and the soil is covered with crops of grain and vegetables. It is the deep, black soil here visible that enables the valley of Santa Clara to produce those gigantic onions, beets and other vegetables with which the market of the metropolis is supplied.

Approaching the town, you see on an eminence to the right, the large brick building of the Methodist College. An old pile of adobes, rusty and scaly, within the town, shows you where Saint Clare "located" many years ago, for the benevolent purpose of christianising the natives. The front of the Church is daubed with paint in fanciful style, perhaps to suit the taste of the children of the forest. Certain it is, the Mission buildings, with their decoration belong to a very different school of architecture, from the fragile and varied cottages of which the village is mainly constituted.

From Santa Clara to San Jose is a causeway over a low, flat, country, having the same soft, watery and productive soil. The road is skirted for two or three miles with trees, mostly cottonwood and willows, planted by the old Padres. This was once a superb avenue, and it is beautiful even now, though the trees have been broken and twisted by the storms of many years. Three miles from Santa Clara you come to the dominions of Saint Joseph. Conspicuous at the entrance is a massive brick structure, recently erected by the Catholics as a female boarding school. The shops, and hotels, and doctors' and lawyers' offices, and everything else, remind you of Yankeedom, while the brown linn and blanket garments of many of the inhabitants inform you that old California is not yet done away. The streets are of exemplary widths, and there are no shade trees to intercept the view. The people have been *slow* in this respect.

The drive from the Pulgar occupied three hours, and as it was long before night, I walked out with a friend to look at the suburbs. About the town but few flowers were in bloom, and the wild mustard had almost monopolized the soil. A mile to the west, through the fields, we came to Cayote Creek, which affords a striking illustration of the peculiar character of the water courses of California. Though the rainy season is scarcely ended, it is now a mere rivulet, a few yards in width. But the trough in the bottom of which it flows so gently, is a hundred yards wide, and six to twelve feet in depth—washed out to this extent by the winter rains. The name was probably given it owing to its propensity to burrow into the soil, like the common little wolf of the country.

[To be continued.]

"Sun" shine.—How pleasant is it amid the dense clouds that darken the sky, and chill the earth, making our pathway dull and gloomy, to have a warm sun burst out from the heavy covering above, and cast its genial warmth upon us and lighten our path by its cheering rays. Thus, in the natural world without. But there is a greater than all this, a ray of light and a glow of warmth that is far above all these. It is when the spirit is cheered by kind words truthfully spoken, and the glow of kindly feeling excited by acts of generous good will. Such are sunshine to the soul. We have enjoyed this feeling recently by experiencing this glorious Sun's shine upon our humble efforts, and we tender our neighbors of the Sun most kindly greeting for the genial ray that they have cast upon us. Our wish for them is that clouds or storms may never cross their pathway in life.

Wells, Fargo & Co.—We notice the large increasing business of this influential house. We were informed by their conductor that on Tuesday last their amount of Gold Dust from Sacramento amounted to $200,000. A nice pile.

Empire Engine Co., of Oakland, paid our city a visit yesterday. They looked well.

Governor's Approval.

STATE AGRICULTURAL SOCIETY

It was our pleasure to be present in the legislature on Monday, when the message of our Governor was read with the bills he had approved, among them the State Agricultural Society, with $5,000 appropriation. Thus this important, we say one of the *most important* bills of the session, has now become a law.

We trust the Farmers of California will appreciate this action of our Legislature and remember the friends who have given the cause their constant and earnest attention. Among those to whom we feel deeply indebted for important information and facts relative to progress and to measures in forwarding the bill in the Assembly we name Hon. W. S. Letcher, of Santa Clara. Well may the citizens of that beautiful valley be proud of their able representative, for faithfully has he regarded their interests, ever on his post, ready for duty, and we heard with great pleasure a member remark that the member from Santa Clara had never been known to have an unkind word or disagreement with a member during the session, but had ever maintained a dignified and courteous course, winning the approbation and friendship of all.

To Hon. H. Griffith, of Yolo, we have also been much indebted, and to this gentleman the friends of Agriculture owe much. Much of his time has been given to subjects of interest connected with Agriculture, and great good will result from his efforts. If all members were as watchful of measures of public good as the member from Yolo, our State must progress most rapidly.

To the member from Santa Cruz, Hon. Mr. Stow—also a true advocate of this great interest, the State is indebted for faithful services; and to Major Stemmons, from San Joaquin, whose interest was given for its advancement.

We feel it a pleasing duty also to record the prompt and efficient action of Senator Crabb, who espoused the cause when an opposition arose from Senator Gregg. Such services as those of Senator Crabb should not be forgotten by the farmers of California. Let them remember their friends and when the time comes for the people to elect their Senators and Representatives let the agricultural interests be regarded, and let that interest be manifested in our Legislative Halls. Now that the bill has become a law, let prompt action from the Society now established ensure great results.

Hail Storm.—A very severe hail storm was experienced at Sacramento city on Sunday noon last—its duration was some twenty minutes. Many of the hail stones were as large as peas, and the change in the temperature was so great, and the storm so severe, that the ground was white, literally covered with the hail stones. We stood at the window of our residence upon the Ridge, at Sacramento city, and as the hail stones fell so briskly, we were reminded of our old "New England home," where hail storms are of common occurrence. This storm was very severe, beating down tender plants, cutting and injuring plants and flowers, and if it extended any distance must have been very injurious to tender vegetables, to strawberries, peaches, melons and young fruit trees. Verily, we have a change of climate, for we have had abundant rains within a few days, thunder, lightning, frosts and hail storms—who will deny that the climate is changing? After the storm had passed we gathered a quart bowl of the hail stones, and had a fine drink of ice-water.

More Wool.—We learn that Mr. Sidell of Martinez, has a fine crop of wool from a flock of twelve hundred sheep, and that the fleece is full, fine and heavy. Mr. Sidell will press, bag and retain his wool for such future demand as may arise *in this country*, and not send it away, as has been done in times past. There is no fear but that there will be a demand for it. A supply of wool in this country will cause a demand for manufactures. This will enhance the value of wool, and thus call attention to a new and valuable branch of home industry. Sheep raisers and wool growers will please furnish us with the statistics, that we may again furnish them with useful date.

First Meeting of the State Society.

A call will be made for the meeting of the officers and members of the State Society in the next number.

Time, place and particulars will be given, and we trust a numerous attendance will be had, as business of importance will be acted upon, particularly for the State Fair, under the auspices of the Society.

Academy of Natural Sciences.

Mr. Editor—Please inform me about the exhibition of the California Academy of Natural Sciences. I am told they have not been very successful in their efforts to procure specimen Peaches two months before they are ripe, and Tulips six weeks after they are gone, and have concluded to postpone their "show" for six months. Is it so?

Horticulturist.

In reply to our correspondent, we would say that we have looked most anxiously for the promised Horticultural Exhibition of this Society. We had anticipated a pleasure in being a looker-on upon the results of the efforts of such a combination of talent—not doubting that "in union there is strength," and that in the coming exhibition there would be a display of articles from all parts of the State, and that from the efforts of so many scientific minds, and from resources so vast as California possesses, we should behold such an array of wonders in Geology, Mineralogy, and Conchology, in addition to Agriculture, Horticulture, Floriculture, needlework, painting, &c. &c., as had never been seen before. 'T is true, we had some misgivings as to the exhibitions of Grapes, Peaches, Melons and Figs in May; but we supposed there were no limits to *science*, and we were ready to acknowledge everything on seeing them, even at this early season. We feared, too, that it was rather late for our beautiful native flowers: then we supposed the "Academy of Natural Sciences" knew best, and we were prepared for almost anything, and we really regret losing the hoped-for enjoyment, but suppose we must submit patiently, and wait for the First Annual Show of the State Society with as good grace as possible.

"Kate Hayes."

We wish we could write a criticism upon music and upon artists—how we would set them by the ears. We would make them jealous of each other, until their very jealousy should work the gangrene out of each heart, and, instead of being rivals, they should be friends.

We sincerely and most deeply regret our community have not had a better opportunity of hearing the lady whose name stands at the head of this article. We are no astute critic that writes for pay, regardless whether it be true or false; but we write as we feel the need of uttering thoughts that must have utterance. Often as we have been delighted with the simple and beautiful songs of many of those who to-day were favorites, and who to-morrow are forgotten, we believe the Pacific shores never had so true and perfect a representative of the beautiful music of "Norma," as Kate Hayes, and we do believe it would be hard to find her equal. The simple ballads of the "Swan of Erin" are those that reach the heart, and we trust ere long the many friends of this lady will have an opportunity to testify their appreciations of her ability and worth.

We know the price that must be paid in certain cases, if one would be justly appreciated; but there are those, thank God, who, conscious of real merit, will not bow the knee to Baal, e'en though they may know that "thrift will follow fawning." To the high minded, the pure and virtuous, this is too great a price to pay for even a just appreciation of real talent. We sincerely hope to see this sweet songstress announced again, for we believe the memory of the past will recall sweet recollections, and thus ensure justice which should ever be paid to the deserving.

Mercantile Library.—This most popular institution held its first meeting in the "Musical Hall," on Thursday last, for the Introductory Lecture from their able and talented president Col. Turner. As the hour for assembling arrived the gathering crowd was an index of the great popularity of this institution and of their president, whose recent return from the States was so gratifying to his very large circle of friends. The hall was very full and the address an interesting one. The history of the Society, its rise and progress, its present position, its means of usefulness, and its prospective power of good, were themes ably handled, and we trust great good will result from this Lecture.

Truffles in California.—We have been shown a truffle which was found growing in Santa Cruz. The truffle is a root resembling a potato in size, shape and external color. The inside is of a dark brown color and is of a spungy cheesy structure. The truffle is a great delicacy, and heretofore has been obtained only from a small district of France, where it is [illegible]. It grows wild and is [illegible]. It is worth three dollars a pound in Europe. The country adds another to the extensive list of [illegible] and they are of great importance.—*Alta*

El Dorado Building, Sacramento.

We have never been more gratified, than we were this present week, on our visit to Sacramento, to notice the change in El Dorado building on the corner of 2d and J streets. For some three years this has been the largest gambling saloon in the county, paying a license to state and city of six thousand and four hundred dollars. Could these walls speak, how many voices would cry—Here have I been ruined—here have I lost the earnings of years of toil—here have I been stripped of money and clothing by my passion for gambling. But we are rejoiced to know that so great a change has been made in public opinion that these temptations to the community are nearly all closed. This once famous resort has been thoroughly changed, and two very splendid stores now improve and ornament this prominent locality. We called on Messrs. Keyes & Co. and were politely shown their establishment—a most spacious store, nearly one hundred feet long, with broad front and high ceiling, making one of the very best stores in Sacramento. Messrs. Keyes & Co. are opening one of the largest and best selected stocks of clothing ever shown in Sacramento, and from their knowledge of the business, their ability to please their customers, we feel assured that all who desire to be furnished with ready made garments, or garments to order, or any article in the furnishing line of a gentleman's wardrobe, will be suited by calling on Messrs. Keyes & Co., El Dorado Block, J street, Sacramento city. We cannot omit to say that this change in the business of this famous building has been accomplished by the improved tone of moral sentiment in the community, and that has been wrought by an influence brought to bear upon the public mind from the homes—the social circle, whose purifying power has done so much good in our city.

An Act to incorporate a State Agricultural Society,

AND APPROPRIATE MONEY FOR ITS SUPPORT.

The People of the State of California represented in Senate and Assembly, do enact as follows:

Sec. 1. There is hereby established and incorporated a Society, to be known and designated by the name and style of the "California State Agricultural Society," and by that name and style shall have perpetual succession; and shall have power to contract and be contracted with, to sue and be sued, and shall have authority, to have and use a common seal, to make, ordain, and establish and put in execution such by-laws, ordinances, rules and regulations as shall be necessary for the good government of said Society, and the prudent and efficient management of its affairs; Provided, that said laws, ordinances, rules and regulations shall not be contrary to any provision of this charter, nor the laws and constitution of this State, or of the United States.

Sec. 2. In addition to the powers above enumerated, the Society shall, by its name aforesaid, have power to purchase and hold any quantity of land not exceeding four sections, and may sell and dispense of the same at pleasure. The said real estate shall be held by said Society for the sole purpose of establishing a model experimental farm or farms, erecting enclosures, buildings and other improvements calculated and designed for the meeting of the Society, and for an exhibition of the various breeds of horses, cattle, mules and other stock, and of agricultural, mechanical and domestic manufactures and productions, and for no other purposes.

And it is further enacted, that if from any cause said Society shall ever be dissolved, or fail to meet within the period of two consecutive years, then the real estate held by it, together with all the buildings and appurtenances belonging to said estate, shall be sold as lands are now sold, by execution, and the proceeds deposited in the State Treasury, subject to the control of the Legislature.

Sec. 3. An annual meeting of the members of the Society shall be held on the first Tuesday of October, annually, at the city of San Francisco, unless otherwise ordered by the Society.

Sec. 4. The fiscal, prudential and other concerns of the Society shall be under the control and management of a President and seven Vice-Presidents, a Corresponding Secretary, Recording Secretary and Treasurer, to be styled a Board of Directors, who shall be elected at the annual meeting of the members of said Society. The said officers shall hold their office for one year and until their successors are duly chosen, and shall have power to fill vacancies in said Board that may happen during their continuance in office.

Sec. 5. For the purpose of carrying into effect this act, F. W. Macondray, of San Francisco county, is hereby appointed President of the Society; E. L. Beard, of Alameda county; J. K. Reed, of San Francisco county; D. W. C. Thompson, of Sonoma county; H. C. Mallon, of Santa Clara county; W. N. Thompson, of San Francisco county; C. J. Hutchinson, of Sacramento county; J. W. Osborne, of Napa county, Vice Presidents; J. L. L. F. Warren, of San Francisco county, Corresponding Secretary; C. V. [illegible], of San Francisco county, Recording Secretary; J. [illegible], David Cheever, of San Francisco county, Treasurer; who shall call the first meeting of the Society at the city of San Francisco, and who are hereby authorized to solicit and receive subscription to said Society, as hereinafter specified.

Sec. 6. The members of this Society shall be composed of such persons as shall pay the sum of ten dollars to the Treasurer annually, and such persons shall be members only for the year for which they shall have thus paid the amount aforesaid.

Sec. 7. The members of the Society, by a majority of the votes present, shall determine in what amount, and on what objects the funds of the Society shall be awarded as premiums at the exhibition succeeding their meeting, of which notice shall be given in some newspaper in the city of San Francisco, and such other newspapers as the Society may direct.

Sec. 8. There is hereby appropriated from any money in the Treasury not otherwise appropriated, the sum of five thousand dollars annually, for the space of four years, to be paid in September each year, to the Treasurer of said Society, on a requisition on the Treasurer of this State, signed by the President and Recording Secretary of said Society, which said sum shall be used only for the purpose of paying premiums, and for no other purpose whatsoever. And it shall be the duty of the Recording Secretary to make a statement annually of the expenditures of said Society, and forward copies of the same to the Committee on Agriculture, of the Senate and Assembly, provided any persons in this State may compete for and receive such premiums.

Sec. 9. No compensation shall be allowed to any officers of this Society for services, except to the Corresponding Secretary for his actual expenses, and to the Recording Secretary; and the amount allowed to the latter shall, in no case exceed two hundred dollars per annum; and no part of said compensation shall be taken from the fund appropriated by the State.

Sec. 10. The Society may by a majority of the votes present, at any annual meeting, prescribe the duties of, and require bond and security from any of its officers.

Sec. 11. In case of failure or inability to serve of any of the persons mentioned in the fifth section of this Act, the Governor is hereby authorised to appoint some suitable person or persons to fill the vacancy or vacancies thus occasioned; and the said persons herein named, or those appointed as above directed, shall not be required to pay the subscription of ten dollars before they shall have authority to act in the organization of this Society.

The act was nearly unanimous in the Assembly, and passed fifteen to seven in the Senate, on the 12th, was approved by Governor and committee on the 14th.

Live Oak Fence.

On a visit to Mr. Stockton's farm in San Gabriel, the other day, we noticed that the live oak posts, of which a part of his fence is formed, in the moist land, had sprouted, and were putting out green shoots, a thing most unexpected to himself. The fence was built about the commencement of the wet season, and oak was used, supposing it would resist rot better than other timber. If this is a new thing it is worth repeating by every farmer, for oak is more valuable than willow or cotton wood. Others will doubtless try the experiment, and though the growth may not be so rapid, yet the durability and greater value of the timber makes it more desirable than these trees. If this accidental discovery of Mr. Stockton were generally improved upon, we should soon see long lines of living fence stretching over the plains to relieve the tiresome monotony; and our farmers, while they secure a firm enclosure, will raise their own firewood. This is a desideratum worthy of serious thought. Wood is now brought to this city from a distance of eight or twelve miles, and the increasing demand is each day pushing the timber farther from market, and increasing the price. The oak, when once firmly rooted in the ground does not require the irrigation necessary for soft woods, and will flourish in comparatively dry soil, as its roots strike deep into the earth, and obtain sufficient moisture from the springs below to sustain them in the dry season. This it is more durable as a fence, more valuable as a timber, cleaner as a shade tree, and after its growth has become vigorous requires less care in the cultivation than the trees commonly used for live fences. We hope some of our friends who cultivate the bottom and irrigable lands of the city will try the experiment.—*Los Angeles Star.*

Severe Frosts.—From our correspondents in various portions of the San Jose Valley, we hear of damage done by the late frosts. We make the following extracts from a letter received yesday:

"The frost has done great injury in our valley, —at our establishment, and all the [illegible] I have seen have suffered. The old [illegible] say they never saw the like. There has been a constant frost every night and cold weather the day time all the time. Nothing green. The [illegible] are generally to a [illegible] Many [illegible] Nursery [illegible] have the appearance of [illegible] The grain [illegible] and [illegible] have all suffered; [illegible] of them [illegible] all."

[illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MAY 18, 1854.

We Want Citizens.

The present embarrassed condition of trade—we might say unaccountable stagnation of trade—in every branch of business and in every section of our wide spread Commonwealth, demands of the citizens some prompt action on their part if they would avoid a greater evil that is sure otherwise to come. We mean a heavy and permanent decline in real estate and a disastrous loss upon all merchandise. We should look the evil full in the face and meet it like men, and there is but one way to remedy the evil and save the country from a more serious embarrassment.

We want more citizens, PERMANENT CITIZENS, not comers and goers, but real *bona fide* citizens, men of families—actual settlers—cultivators of the soil, manufacturers, mechanics, artisans, miners,—men who shall labor to develope the resources of our State, men to till the soil—raisers of stock, dairymen, plow makers, wagon builders, blacksmiths, tanners, shoemakers, tailors, &c., in such men we want the sober, industrious and law-abiding men—such men build up a State.

We want more producers, and we want more consumers—and while we want these, we want LESS IMPORTERS. We have imported too much that should have been extracted from our own soil—this heavy importation of foreign productions has induced a too rapid growth of all our cities—and the fact cannot be kept out of sight longer. Our cities have outgrown the population, and the consequences are now being felt. The mercantile interest so far outweighs all others, that other interests are neglected and many that should have remained where they were better qualified to act and where they would have been more prosperous, have embarked in the mercantile and the result has been a general derangement of all departments, that can only be rectified by an increase of population. And this must be speedy if we would save the country from a too serious and too long embarrassment.

The citizens of the old States would come if better facilities existed—that is, more rapid facilities. The voyage around the Horn or the trip across the plains, is too long and too laborious and fatiguing and the route by steamers is too expensive for the thousands that would come if the cost could be made according to their means. If the Pacific Mail Co. would seize the present opportunity to advance the public interest, and put a new face upon the prospects of the country, they have the power to do so with great advantage to themselves, and great good to thousands. Reduce the passage from the other side in all the first class boats, and put on all their other boats, now lying idle, and make their smaller good boats a second class and low fare line. A movement of this character could secure the approbation of the public and win favor, bring a large increase into the coffers of the company, and at the same time rapidly increase our population — each steamer with her passengers giving assurance of a change of times for the better. An increase of population—a population of permanent settlers, we believe to be the only measure of relief to the unhappy state of things in California.

State Agricultural Society.

The Assembly bill to incorporate a State Agricultural Society, and appropriate money for its support, was brought before the Senate on Thursday last, read a third time and passed. (The bill appropriates $5,000, for four years, for the purchase of premiums.) Mr. Sprague moved to strike out the appropriation, and was seconded by Mr. Keene, but the amendment was lost. The bill passed by the following vote:

AYES—Messrs. Bryan, Catlin, Coffroth, Colby, Crabb, Crenshaw, Grewell, De La Guerra, Hudspeth, Livermore, Lyons, Mahoney, May, McFarland, Peck, Wade, Walkup, Whiting,—18.

NAYS—Messrs. Gardner, Hager, Keene, Leake, Lent, Sawyer, Smith, Sprague,—8.

This prompt and decisive action on the part of our senators is alike honorable to them and to the State. The good that will be accomplished with the means placed thus opportunely into the treasury of the State Society, will cast its reflex influence upon those Senators and Representatives that have thus faithfully regarded the important interest of Agriculture.

The establishment of a State Society with means to commence operations upon a liberal scale the first year, we hail as a boon of no ordinary character: it is an act on the part of our legislators that in after years shall be to them a source of immeasurable satisfaction. They will see the rapid development of the real wealth of the country—her AGRICULTURE—and enjoy a conscious pride in the satisfaction of knowing they have been in a great measure instrumental in hastening the work onward.

With the publication of the Act of Incorporation we shall publish the names of those members who have advocated and sustained this wise legislation, and make them a matter of record, that we may refer to them in after years with pride and pleasure. We shall also make a record of those names that opposed the bill, and while we freely accord to every man, especially legislators, a perfect freedom of opinion and action upon all subjects submitted to them, we shall not fail to express freely our own and to declare boldly that in a measure of such vast importance to the fundamental interests of our State it betrayed a short-sighted policy as well as an ignorance of these great interests, to oppose a measure so fraught with the means of accomplishing so much good.

Massachusetts Agriculture and Middlesex County in Particular.

We publish the Report in part of the Secretary of the Board of Agriculture of Massachusetts, as presenting very important and interesting data, and, in connection with the proposed premiums of the County of Middlesex for the ensuing year, the advance made is at once comprehended.

Massachusetts is the Pilgrim State, and the pioneer of agriculture. The rude machinery of other days has given place to the finest agricultural implements of the world. The Plow to which allusion has been made in the Secretary's Report—"twelve years after the landing, *no plows were in the country.*" Such has been the advance, that, at the World's Fair, in London, Massachusetts bore away the palm, and obtained the premium for the BEST PLOUGH—thus sending back improvements upon their own inventions, and even surpassing them.

The following is the Report alluded to above:

I propose, in my first Report, to review the past and present condition of the Agriculture of Massachusetts. The past will be found, it is thought, full of interest and instruction; the present, full of encouragement and hope. The discussion of special subjects will be left to a future occasion, except such suggestions as seem to spring naturally from the facts stated. This seems, indeed, to be the only course that can be pursued. Previous to the organization of the present Board, there has been no permanent department or public officer, whose special duty it was to collect the facts necessary for the guidance of the Legislature and the various societies in their efforts to advance the cause of Agriculture among us. The principal object of the Board, during the past year, has accordingly been to procure the desired information. It is these doings, which I have the honor to report for your consideration.

We cannot, without some little reflection, make full allowance for the difficulties surrounding the early settlers of New England. We must remember that they exchanged a country far advanced in civilization—and notwithstanding its rude tillage, and its large tracts of uninclosed moors, probably better cultivated than any other on the globe—for one entirely strange to them, possessing a climate and a soil unlike any they had known before. They had to begin a life in which their previous experience could afford them little or no aid, in a wilderness that must be subdued in the midst of a thousand obstacles. The system of cultivation they had learned and practised at home could not serve them here. They had to start anew, and acquire, painfully and laboriously, the knowledge applicable to their situation. If we find their progress to be slow, let us not wonder at it; we should rather wonder that they advanced at all, or even that they did not perish in the wilderness amid the privations and the sufferings of winter.

For many months after their arrival, they had no beasts of burden: when at last a few cows were brought over from the mother country,* they were poorly fed on coarse meadow hay, and often died from exposure and lack of suitable food, or fell a prey to the wolves and the Indians. From the difficulties and expense of importation, the price was so high as to put them beyond the reach of many even in moderate circumstances. A red calf soon came to be cheaper than a black one, on account of the greater probability of its being mistaken for a deer and killed by the wolves. When cows were so high as to sell in 1636 at from twenty-five to thirty pounds sterling, and oxen at forty pounds a pair, a quart of fresh milk could be bought for a penny, and four eggs a the same price.

It should be borne in mind, also, that the cattle of that time, even in England, were not to be compared with the beautiful animals now to be seen there. The ox of that day was small, ill-shaped, and every way inferior to the ox of the present time. The sheep has, since then, been improved to an equal or even greater extent, both in form and size, and the fineness and value of its wool. The draught horse, so serviceable on the farm, long the pride of London, and now equally so of Boston, and the noble breed of race horses, so celebrated for their fleetness, were then unthought of. It is difficult to appreciate fully the changes which the increased attention to agriculture has effected in domestic animals even in the last century.

During the early part of the last century the average gross weight of the neat cattle brought for sale to the Smithfield market was not over three hundred and seventy pounds, and that of sheep twenty-eight pounds. The average weight of the former is now over eight hundred pounds, and of the latter eighty pounds. On account of the high price of cattle at that period, and the risks they run, it is not probable that the settlers purchased even the best specimens of the animals then bred in England. Such being the state of things, it is easily imagined that the first cattle imported into this country proved of a very inferior quality.

Nor was the difficulty of procuring agricultural implements the least of the obstacles the early settlers had to encounter. Some were imported from the mother country, but all could not obtain them in this manner. The only metal to be had was made of bog ore, very brittle, and liable to break and put a stop to a day's labor. The implements of agriculture seem, for the most part, to have been made from this metal, and with comparatively little fitness for the purpose. Even those imported from the mother country were not only of the rudest construction but were also extremely heavy and unmanageable; for the men of that time had not discovered the art of diminishing weight without lessening strength. The process of casting steel was not invented till more than a century later, and then it remained a secret in Sheffield for some years. The number and variety of implements have been infinitely increased, even in the last half century, to meet the wants of a more advanced husbandry, to which, indeed, these mechanical improvements have, in their turn, largely contributed.

It is true that the Pilgrims, on their arrival in this country, had the benefit of the plants at that time cultivated and used as food by the Indians, yet they were wholly unaccustomed to these, and were ignorant of the mode of using them as food, and of the manner of their cultivation. Indian corn, the staple product, and the pride of America, had never been seen by them. Pumpkins, squashes, potatoes and tobacco, were almost equally strange to them.‡

When their necessities taught them the value of these plants, they were not slow in adopting the Indian methods of cultivating them. As the general cultivation, in the colonies, continued much the same for many years, with only slight modifications on the introduction of the plow, it may not be inappropriate to turn our attention, for a moment, to the agriculture of the natives.

It is well known, that most of the hard work necessary to supply their limited wants, fell to the lot of the women, assisted, sometimes, by old men and little boys. Among their thankless tasks was that of farming, which they carried on to an extent quite remarkable, when we consider the rudeness of the tools with which they worked, and the circumstances in which they were placed. They had no art of manufacturing metal, and of course could have no proper implements of agriculture. Their cultivation was not so rude, however, as one would naturally suppose. They made a kind of hoe by tying the shoulder blade of a moose, bear or deer, to a stick or pole.

The land, when selected, was cleared, by keeping up a fire around the foot of each tree till its bark was so burned that it would die. They then planted their corn. When a tree fell, it was burned into pieces of such a length that they could be rolled into a heap and burned to ashes. In this way, by degrees, a piece covered with wood, was wholly cleared. An industrious woman could burn off as many dry fallen logs in a day, as a strong man could, at that time, cut with an axe in two or three. They used a stone axe, made much in the same way as the hoe above described, to scrape the charred surface of the logs, and hasten the burning. This mode of clearing was common through the western part of the State. In the eastern part, the tree was sometimes girdled with the axe, and thus killed, was allowed to dry, and then burned by kindling a fire around it, as above described.

They taught the settlers to select the finest ears of corn for seed, to plant it at the proper time, and in a proper manner, to weed it, and to hill it. They were accustomed to dig small holes four feet apart, with a clumsy instrument, resembling the one described, which, in the eastern part of the State, was sometimes made of large clam-shells. Those living in the vicinity of the sea-shore, put into each hole a horse-shoe crab or two, upon which they dropped four, and sometimes six kernels of corn, and covered it with the implement with which they had dug the hole. In the interior, a few small fishes in each hill were used as a fertilizer. Beans were planted with the corn after it had come up, and grew up supported by it. Great attention was paid by them to the protection of their growing crops. Not a weed was to be seen in their fields, and the corn was carefully guarded against destruction by insects and birds. To prevent loss by the latter, a small watch-house was erected in the midst of a field of corn, in which one of the family, often the oldest child, slept, and early in the morning rose to watch the blackbirds. It was their universal custom to hill the corn about two feet high, for its support, and spots may often be seen at the present day, which were evidently cultivated by them. The colonists very generally imitated this custom, and it has been continued down to our own times. The men planted and cured their tobacco, which was, ordinarily, the only plant they worked upon, the woman managing all the rest.—*Flint's Report of Mass. Board of Agriculture.*

The Middlesex County Agricultural Society present, in their premium lists, an inducement to agriculturists that shall stimulate them to renewed exertions, and thus develope hidden treasures in the soil that could be brought forth in no other manner. The example of this county should be followed by every County in this State, where the subject of agriculture is prominent, and premiums should be offered in proportion to the advancement of the science.

We annex the different subjects embraced, and wish our space would give them in detail.

For best Farm, two premiums, $25 and $12	$37
Reclamation of bog meadows, two prizes	20
Grand prize for the introduction of Cranberries by artificial means for three years successfully	50
For plantations of Forest Trees—Oak, Ash, Maples and Sugar Maples, eight prizes	73
Fruit Trees, five prizes	43
Fruits of various kinds, thirty two prizes	80
Vegetables, six prizes	30
Mulberry Trees, four prizes	40
Specimens of Silk, three prizes	20
Experiments in Crops, Grains and Vegetables, 7 prizes	86
Live stock, thirty-one prizes	164
The Dairy, three grand prizes, $75, $50, and $25 for best cows	150
Fat Cattle, three prizes	18
Swine, four prizes	19
Horses, four prizes	25
Poultry, six prizes	15
Ploughing match—double, single, and horse teams,—twelve prizes	84
Spading match, five prizes	16
Home made Bread, prizes to married women and girls	15
Butter, four prizes	7

Needlework, machinery, household manufactures, agricultural tools and implements, all have due attention, and a liberal allowance of special prizes. The total amount of cash premiums is over one thousand dollars, besides valuable prizes in Books, &c. Such exertions to arouse a proper interest are beyond all praise.

Letter from Napa.

DAISY BANK, near Napa,
May 8th, 1854.

MESSRS. EDITORS:—In your paper of the 27th April, I see the credit is again given to Sonoma County, of being the first to form an Agricultural Society. Now, as our Society was the *first* County Society organized in this State, we insist upon it that "honor should be given to whom honor is due," and *Napa County* hereafter be referred to as the "banner county," and receive the credit to which she is entitled as Pioneer in the cause of Agriculture, and the *first* to set the ball in motion which is destined to roll over our State until every nook and corner shall be lighted up with the sparks that follow in its train, and the beneficial results arising from a practical application of the scientific principles of Agriculture be known and acknowledged by all.

Yours very respectfully,

J. M. HAMILTON.

IMPROVED BREED OF SWINE.—We have been highly gratified by the sight of three of the finest specimens of *swinish beauties* we ever saw. They have just arrived from Boston, are of the "Suffolk Breed," and a very great acquisition to the stock of the country. Raisers of stock should by all means go and see them, for it is very seldom the Suffolks can be found so pure as these specimens. It is by the importations of such stock that our country is benefitted, and occasions of seeing stock of the right character should not be lost sight of by any any who wishes to have the right standard for a guide. These "piggy's" can be seen at George's Stable's, corner of Bush and Kearny streets. To Mr. George, we are kindly indebted, Mr. G. calling for us to go and see what really is worth many miles' travel.

CALIFORNIA WOOL.—We saw a large scow, loaded with wool, going into a storehouse in this city. Upon inquiry we found it came from San Jose, the product of a flock there. We could not learn the owner or purchaser; but we saw in "this lot of wool," indices of our future woolen manufactories—the day cannot be far distant when our mountain streams shall be converted into mill streams, and the flocks that gambol upon our hills shall give their fleece to manufacture the broadcloths, cassimeres and other woolens that clothe our people, and the wealth now sent away shall be retained to sustain our "home manufactures."

* The first cattle were imported by Edward Winslow, in the ship *Charity*, March, 1624. Having been sent out as agent by the Plymouth Colony, he brought over four animals, three of which were heifers. One authority says they arrived in the ship *Ann*, the first voyage of which was made in 1623; but there can be no doubt that the cattle referred to, at the time of the distribution of cattle in 1627, came in a subsequent voyage made by that vessel.

† The colonists do not seem to have been provided with plows; for we find that twelve years after the landing at Plymouth, the farmers about Boston, having no plows, were obliged to break up the bushes with their hands and hoes, to prepare their lands for cultivation; and even so late as 1637, there were but thirty-seven plows in the whole State. It was the custom, even to a much later period, for one owning a plow, to do most of the plowing in a town; going about from one part of the town to another. The town often paid a bounty to one who would buy and keep a plow in repair, to do work in this way.

‡ The potato was so rare in England at the beginning of the 17th century, as to be served up only in very small quantities. It was sold at two shillings a pound, for the Queen's table, and were used as a fruit, baked into pies, seasoned with spices and wine, and sometimes eaten with sugar.

Farmer's Clubs.

This subject should awaken the attention of every well wisher to the farming interest. The very first communicated in the letter of our corresponding "Cincinnatus" demands the establishment of Farmer's Clubs. At such meetings, in a familiar conversation they will soon be led on to the discussion of the various subjects that demand their attention, and by degrees, subjects for general debate will be introduced, spoken upon, written upon and acted upon, until farmers will feel that this is the only way they can acquire that general information so valuable and necessary to their success.

By the establishment of Farmers Clubs, cultivators will be brought together, made acquainted with one another and with the plans of action throughout their districts, learn what are successful and what are not successful, and thus advance their own knowledge and promote their own success as well as that of others.

Action of this kind will do more to give a permanency to the cause of Agriculture than any other effort that can be put forth. Of course we mean that these clubs should make their doings known to the public through the columns of the public papers, and the FARMER stands ready to aid them freely.

SAN JOSE AGRICULTURE.—We clip the annexed paragraph from the San Jose Telegraph:

Our agricultural friends will be pleased to learn that at a public meeting held on Saturday last, the first steps to organize an Agricultural Society for the county were taken, and a committee appointed to draft a constitution and by-laws, to be submitted to an adjourned meetiug of citizens, to be held at the Mayor's office in this city on Saturday, 20th inst., at which time we hope to see a large attendance of our country friends.

We rejoice to see the citizens of this great valley moving. This is the right spirit, and great good must result from it. Organize County Societies, and prepare for the First Annual Exhibition of the State Society, and resolve it shall be worthy of this great State.

What Farmers Need.

DURING the last ten years, great progress has been made in the knowledge of the principles of Agriculture. Still greater progress has been made in the improvement of Agricultural Implements. A well instructed young farmer knows more of his profession at this day than the most talented men did fifty years since; and there is scarcely an operation in the tilling of the soil for which an efficient labor-saving machino is not provided. In Great Britain, steam engines are in common use on farms for agricultural purposes. In America, with the gang-plow, seed-drill, harvesting, haying and threshing machines, horse-rakes, &c., a man may put in a crop, and send it to market, almost without using his hands, except to drive the horses. In fact, he has little else to do than ride about on the machine, and direct it. But there is a peculiarity about this progress that does not attach to any other business in the world. *It has not arisen with or from the farmers themselves.* It has been forced upon them, and they have often received such benefits ungraciously. Thus they have added much to the labor and anxiety of those toiling for their good. Does any one question this fact? Then, I ask, who has studied the nature and composition of plants; the character of soils and manures; the principles involved in draining, &c.? Farmers? No! It is to chemists and physiologists, and to men of similar pursuits that the credit of unfolding this knowledge is due. Who have invented and provided the beautiful and ingenious instruments in daily use? Mechanics and engineers. Who have published books on these subjects, and scattered agricultural literature broadcast over the country? Rarely those brought up as farmers. Our State Legislatures are chiefly composed of farmers—their constituents are farmers. Is there a single instance in the United States of such a Legislature voluntarily suggesting and commencing any plan for the intellectual improvement of Agriculturists, as such? To whom is our only *national* work, the Patent Office Reports, to be ascribed? To politicians, lawyers, doctors, and such like. Whose are the great names that we delight to think on in connection with agriculture? Judge Buell, Henry Clay, Daniel Webster; Tucker and Moore, printers; the Allens and Emerys, manufacturers; Liebig, Salisbury, Lee, Johnson, chemists; Delafield, an exchange-broker—Johnson, of Albany, a lawyer; Colman, a minister;—but it is vain to recapitulate names; it is the same in Europe, where the leaders and improvers of this great art have been men of other professions, and who, often only late in life, have turned their attention to farming.

I do not make these remarks to disparage farmers—I am myself a farmer, and the earnest love of my heart is devoted to the profession—but I speak thus to call attention to the fact. There is no good for its being so. Whatever may have been the case formerly, farmers, at this day, and especially Western farmers, are as intelligent a body of men as the country contains. There may be others more learned, but few possessed of clearer heads or better judgments, or that lead more virtuous lives. What then is the reason farmers do not make improvements? Why do they permit so many brains to toil for their benefit and yet they themselves do so little with their minds? The reason is probably twofold. 1. That living so much alone, they lose the stimulus to mental exertion that society affords. 2. That they are not educated professionally, and therefore know not how to observe accurately, nor to unite old principles in order to form new combinations. Education is general and particular. Who has not seen among the emigrants that come to our shores, impoverished English or Irish gentlemen, men of the highest culture, possessed of every educational advantage, but who never studied a profession? And what position do they take? They are useless to themselves and others and are obliged to descend to the simplest manual labor to gain a livelihood. So it is among our farmers; they are intelligent, able men in most respects, but their agricultural education has been of the most old-fashioned and mechanical sort, the education of the hand and not of the head; and so they do not progress. We have thought too meanly of our business. We have not pride enough in our labor. We have looked down so long that we cannot raise our eyes. We are content, as farmers, to be mere *body-workers*, instead of *mind-workers*, forgetful that the only difference between us and our cattle is that we have minds and they have not. But what is mind unless it is exercised?

Young men of the West! To you I especially address myself. I am a young man; all my hopes and feelings are young: I pant for improvement and advancement. We cannot expect elderly men to change their opinions or habits. They have acted their part in life; they belong to a different era; but we can exalt our profession; we can render it glorious, and make it the highest honor to be called a farmer, instead of the term being one of reproach—instead of its curling with disdain the proud lip of the city beauty. Besides Washington, how many Presidents have been farmers? The smallest professions have provided the greatest number of celebrated men, and why? Because barristers and soldiers receive a very strict professional education; if nothing else, they know law and fighting well. But shall this state of things continue? WE must give the reply. We must give it in action, and not in words. We must come out and insist upon the same privileges other citizens enjoy.—*Corres. Farmers' Companion.*

Requisite Points of Fowls for Breeding.

MUCH judgment is required in propagating all kinds of stock, with a view to improvement; still, accident sometimes favors our designs and a haphazard course may occasionally result more favorably than well conceived judgment, though generally proving a hodge-podge affair.

The are certain points in all animals that must be fully developed in their conformation to constitute them perfect in form, strong in constitution and well adapted for the object to which the particular species are appropriated;—hence, the most perfect form of each respective kind to breed from, should be selected, which, too, should be sound and healthy, and to insure a certain description of offspring it is necessary to breed from those of a positive character—all of which is quite as applicable to poultry as any of the domestic animals.

The breeder should first endeavor to inform himself fully, that he may select his stock with judgment as to their real merits.

In calling attention to the requirements of stock fowls, (those to breed from), I will state the points I consider of so much importance as to be strictly adhered to in all my selections to breed from, and absolutely necessary to obtain first class birds of every breed.

The Asiatic varieties are inclined to too much length of legs, increased by injudicious breeding; great heighth has been too much the object with many breeders and I am surprised to see at this day when proper selections can be made, so much importance attached to that point. The birds, best proportioned and most perfect in form should always be preferred to those of great size when inferior in the most essential points. I have now in my yards those varieties whose rear feathers trail marks when walking in the snow an inch deep. The cocks with no longer legs than a due proportion to size of body.

If imperfections must unavoidably exist in either parent, my experience has proved it should be in the hens. They have the greater influence in imparting size to the progeny but stamp them with the characteristics of the male.

It is requisite a breeding cock should be long from his eyes to point of hill, and that strong and heavy which is evident at an early age—the eye large and full. A short, round headed cock is a dull inanimate bird, like the owl, his prototype in that feature. His neck should be thick and stiff—breast deep, full and projecting. Thighs should be somewhat long but heavily muscled, a point which should not be overlooked—the legs of good size, but very important they should be short and standing perpendicular, and by all means wide apart. The particular form and position of the legs I consider among the most important points to be observed; without that proper formation a bird is generally deficient in others. I have never seen one with good legs but what his general form corresponded. When of proper dimensions they sustain the body erect, give symmetry, with loftiness and activity. A long shanked fowl is generally knock-kneed—awkward gaited and of frail constitution—a clumsy treader—horribly mangling the hen's backs. He should be broad and set across hutts of wings, back short, and somewhat depressed, by the tail being high set up. A long sweep back is frequently found in connection with a long shanked "critter," possessing a lank form and loosely feathered, deficient in all worth kept to make Homœopathic broth, having scarcely vitality sufficient to keep him alive and the sooner that fail him, the better for his owner, unless no better could be procured, or his Harem is composed of the most perfectly formed hens. His crow should be long and shrill, which gives evidence of full developed lungs, a sure test of strong vitality. Without a full capacious chest, neither man, beast or bird possesses a strong constitution, nor will they take on fat readily. Color is a mere matter of fancy, though the dark hues are considered the most hardy; however, the plumage should be decided and brilliant. The hens should possess the same peculiarities of conformation as the cocks, and if breeders will attend to the above requisites and to making crosses yearly, they may depend on having choice birds, possessing length, breadth and depth of carcass, good coustitution, full meated, firm stately step, will fatten readily and of the most productive qualities.—*M. Freeman in Farmer's Companion.*

Sporting Intelligence.

[From the Commercial Advertiser.]

(The following report of the great race on the 7th inst., will be readily recognized as coming from our old friend and sporting correspondent, Col. T. K. Battelle, to whom we have been indebted for similar favors. He is always adequate to the task and his reports are reliable:)

On Sunday, 7th inst., the great twenty mile race came off over the Union Course, between Mr. C. C. Green's bay horse, George Morgan, and Mr. Shears' bay horse, Fred. Kohler. For the last three weeks the latter has had the call and been decidedly the favorite, much money being posted that he would win the race with ease, Mr. Shear himself posting large sums that such would be the result. Mr. Green, of Sacramento, the owner of George Morgan, bet Mr. Shear a large amount on his horse, and $100 even that he (Mr. G.) would out-bet him (Mr. S.) on the day of the race, which he did by thousands. Upwards of *thirty thousand dollars* changed hands on the result. The backers of Morgan were mostly composed of our San Francisco lads, who are always willing to back their opinion on the *square*, and bet their money even if they think they have a fair show. A large delegation from Sacramento were on the track, and posted their money with a *looseness* on their favorite. Each horse being known as a *flyer* and fast, there was not much speculation on the result.

George Morgan was trained and driven by the people's favorite, John Crooks, who has by his honesty, integrity and perseverance won troops of friends willing to bet thousands on his veracity, and if required pile it up mountains high on any occasion when he tools a nag on the field. Mr. Crooks weighs 168 pounds, consequently Morgan carried 23 pounds over weight.

Fred Kohler was driven and trained by a young man at the *bellows*, known as Charley Shear—who, by the way, will prove himself a "Hiram," and perhaps a "Robinson," or a "Chifney," when he gets at their *age*. However, he managed his horse well, and would have won the race had he had the speed to do so. Suffice it to say, the young man did the best he could, and would have jerked his backers out clean, if it had laid in his power so to do. In justice to young Shear, we can in honor say he tooled his horse in an expert and accomplished manner, being evidently determined to do his best or die. At the conclusion of the race young Shear was congratulated by a number of old field sportsmen, who took him by the hand cheerfully, remarking that he drove the race like a veteran, and would have won had it been in his horse.

Nearly four thousand people were on the Course, and there was much betting—every one going off perfectly satisfied that the race was fairly conducted by impartial judges. Everything went off pleasantly under the direction of the gentlemanly and accomplished proprietor, C. S. Ellis, Esq., who, since his sojourn among us, has made many friends who respect him as a sportsman and a true lover of that noble animal, the horse.

The bugle sounded, and the crowd fell back. Morgan stripped in splendid order, and showed bottom and game that gave his backers confidence, as he moved up and down by the stand, at an easy, level gait. Fred Kohler next came, looking in good trim, but evidently too fine and much drawn to make a bruising twenty mile race, but showing good spirit and pluck. His having the advantage of twenty pounds or more in weight gave extra courage to his backers. The bugle sounded and here they came for

THE RACE.—Kohler had the pole. On the first turn, Kohler broke, Morgan leading six lengths in the clear to the score in 3 19. 2d mile, Morgan ahead, in 3 22. 3d mile, Kohler closed the distance at the first quarter pole, and passed the half at a lap—at the third quarter they were both together, coming by the judge's stand in 3 13 1-2, Morgan ahead. 4th mile, they went side by side—first Morgan then Kohler, who outfooted Morgan, and came by at his ease in 3 11 1-2. Passing the judges stand, both were lapped to the third quarter pole, when Kohler broke and Morgan came home winner of the fifth mile in 3 09 1-2. 6th mile, Kohler closed the gap at the half mile pole to a length, Morgan passing the judges' stand ahead and going easy, in 3 14. Getting on to the 7th mile Kohler made a break and shot ahead some six lengths to the half mile pole when Morgan closed the gap at the last turn and passing the judges' stand was won upon Kohler's wheel—Kohler broke in the 11th mile, Morgan ahead at the first quarter when he broke and Kohler passed him and opened a gap of three lengths, which Morgan swept in and lapped him at the half mile pole. They went in this position to the third quarter when Kohler broke, evidently tired, and Morgan on the home stretch opened a gap of three lengths, making the mile in 3 17 1-2. 9th mile, Morgan still gained on Kohler, and at the half mile pole was eight lengths ahead. On the third quarter Kohler broke, his jockey shook him up, and he closed the gap, lapping Morgan as they passed the stand in 3 18 1-2. 10th mile—the race became interesting, Kohler going under the whip and Morgan well in hand. At the half mile pole Morgan was eighteen lengths ahead and came home easy in 3 21 1-2. 11th mile—Morgan opened a large gap and was never lapped during the race. The end of the 12th, 13th, 14th, 15th, 16th, 17th and 18th miles, Morgan was near three-quarters of a mile ahead. At the 20th mile Morgan was within two and fifty rods of Kohler, who was completing his 19th mile. Neither jockey knowing that the race was ended went in to make time and save their friends. The consequence was they each went one more mile, which Morgan did in 4 01, at his ease, winning the race and money, by nearly a mile. Neither horse was much distressed: Kohler died on the 11th mile, and continued to die by degrees on the distance (twenty miles growing beautifully less.) Morgan had the call, a little at even among the betting: large sums changed hands privately, and much money was staked in Sacramento, Stockton and other cities up country.

Morgan made his 21st mile in 4 01 1-2, and had he been pushed, would have done it in much less time.

RECAPITULACION.

UNION COURSE.—Sunday, 7th May, 1854. Match $6000; $3000 a side—twenty miles out in harness—weights, 145 pounds.
Mr. Green names ..... h. g. George Morgan, 1
Mr. Shear names ..... b. g. Fred'k Kohler, 2

	70..43¾			70..43¾	

NOTE.—The judges announced the whole time to be 70 31¼. We have compared the above with their time tables, and find it agrees with them. The whole time by their watches, kept going from start to the end was 70 31¾, and the difference can be readily accounted for in noting the exact time of the respective miles.

A SPICE ORCHARD.—In one of his late letters from the East, Bayard Taylor gives an account of a visit to a nutmeg orchard on the Island of Penang:

"On our returning to the ship," says Bayard, "we visited a nutmeg plantation. The trees, which are from 20 to 30 feet in height, are planted is rows, at intervals of about 20 feet. The leaf is dark green and glossy, resembling that of the laurel, and the fruit, at a little distance, might be taken for a small russet-colored apple. When ripe the thick husks split in the centre, showing a scarlet net-work of mace, enveloping an inner nut, black as ebony, the kernel of which is the nutmeg of commerce. The clove tree, not now in its bearing season, has some resemblance to the nutmeg, but the leaf is smaller and the foliage more loose and spreading. As we drove through the orchard the warm air of noon was heavy with spice. The rich odors exhaled from the trees penetrating the frame with a sensation of languid and voluptuous repose. Perfume became an appetite, and the senses were drugged with an overpowering feeling of luxury. Had I continued to indulge in it, I should ere long have realized the Sybarite's complaints of his crumpled rose leaf."

FINE GEESE.—We learn from an authentic source, that at the late exhibition of poultry at the Crystal Palace, the *Michi Ganders* took the first premium, as being, by far, ahead of anything else on the grounds.——POULTRY IN ENGLAND.—In Ayleshury, the sale of ducks realises £15,000, ($75,000) a year. In Norfolk and Cambridge the small farmers pay their rents with the produce of their poultry.——The poultry mania in Great Britain has caused a decrease in the importation of foreign eggs to the extent of more than two millions and a half in one month, by increasing the quantity and improving the quality of the fowls reared at home.——A cock has been sold within this year for £100, ($500) and 22 fowls have realized by auction £420. A pair of Toulouse geese have fetched £50, and ducks proportionate prices.——The number of eggs of [illegible] and ducks and other poultry, commonly eaten as food in this kingdom, is almost incredible. The aggregate number cannot be less than 1[illegible]000 and the value at the lowest [illegible] millions sterling. Ireland alone produces nearly 500,000,[illegible].—*Farmer's Co[illegible]*

ASHES FOR THE PLUM.—A [illegible] the Country Gentleman says: A [illegible] from your pages, as well as the [illegible] crop of plums, th[illegible] account in some years. [illegible] dry [illegible] by [illegible] of your correspondents the [illegible] raised [illegible] Green Gage [illegible] broke [illegible] of three [illegible]

San Jose County.—The meeting of the citizens of San Jose county who are favorable to the formation of a County Agricultural Society, will take place on Saturday, the 20th inst., at San Jose City. All who desire to advance the interests of Agriculture in that great valley and all who feel interested in the cause generally, are invited to be present. A constitution will be presented for adoption and the work commenced in earnest.

We trust delegates will be present from Union City and the Mission, and that a true pride and interest will be manifested on the occasion.

We have received so many invitations to visit that section, and as we shall be near that city on the day, we shall make it a point to be present and note the interest that is awakened. Napa county has led the van as the Banner County—San Jose follows; what county comes next?

California Peaches.—On Thursday last we paid a flying visit to the farm of Mr. George H. Beach, four miles below Marysville, on the left bank of Feather river. There we were treated to the sight of an orchard of three thousand peach trees, all growing luxuriantly, and many of them full of promising young peaches. Besides the peach trees, there is a multitude of apple, pear, cherry, and plum trees, and grape vines of many varieties, all doing finely. We had a pleasant and instructive confabulation with Mr. Shepherd, the accomplished aborist and gardener, under whose scientific and practical eye all these have been planted and nurtured. It is his opinion that this is the very climate for the peach, and that he will be able, in a few weeks, to exhibit specimens of that fruit that will challenge competition against the world. He is not so sanguine in his hopes of the apple and pear, but, very wisely, leaves their success or unsuccess as a problem for time to solve. All of these fruit trees were brought from the great nursery of *Raspberry Hill*, near Brooklyn, Connecticut. We must not forget to thank Mr. Shepherd for the delicious strawberries with which he regaled us, and which so delightfully filled up the interstices of conversatiou. He may look for us again in peach harvest.—*Express.*

Interior Items.

The Sonora Herald says a large salt spring has been discovered in the neighborhood of Springfield, from which bushels of incrustated salt, of a good quality can be gathered.

The Calaveras Chronicle gives a long and glowing description of the great cave, which is situated ten miles from Mokelumne Hill, on the road to the Mammoth Tree Grove. The proprietors of the cave are erecting a large hotel, to be opened for the accommodation of visitors about the first of June.

A correspondent of the San Joaquin Republican writes from Stanislaus river that he had succeeded in recovering the body of Thomas Edwards, who was drowned at Mauley's Ferry on the 4th ult.

The Empire County Argus says gambling is quietly decreasing in Coloma.

The examination of Sullivan, who killed Col. Sharpe, was concluded at Marysville last Friday. He was held to hail for his appearance at the District Court to answer the charge of manslaughter in the sum of $8000.

The weather in Placerville has been disagreeably cold during the last week, which has injured the gardens in that vicinity materially. Old Sol has evidently had the "shine taken off of him."

The Marysville Express gives an account of a row which occurred at Pine Grove, on Feather river, which, after several fights, resulted in the expulsion of a man named Bess and his family from that region. He kept a public house, which together with his liquors and fixtures, were totally demolished.

Upwarns of one hundred and fifty children attend the schools in Placerville.

The Shasta Courier gives the following particulars concerning the execution of four Indians on Trinity River:—The four thieves were brought to Mr. Doll's ranch by a party of friendly Indians. They confessed that they had laid a plan to rob a train of mules in a few days on Scott mountain. They also confessed that they had killed twenty-one Chinamen and 3 Americans. One of them was the largest Indian ever seen in that part of the country. When they ascertained that they were to be executed, they set up the most piteous cries, but as they were a portion of a band who refused to live with the friendly Indians, or at peace with the whites, and as there happened to be a large number of professedly friendly Indians present, it was thought best to shoot them at once. They were accordinly tied up and shot.

The old El Dorado saloon, on the corner of J and 2d streets, Sacramento, instead of being used for gambling purposes, as has been the case for the past five years, is now fitted up for stores, and the corner one will in a few days be occupied by Keyes & Co., of San Francisco, as a brauch of their clothing warehouse, and the adjoining store is already rented to a hatter.

A lager-bier celebration took place at Sacramento on Saturday.

The Placerville Democrat of Saturday says:—"The miners at the various localities in this vicinity are doing as well, at present, as at any time for the last two years, All who pursue a systematic course of labor are making wages, while some are making strikes that remind us of the early days of mining in Hangtown. The reports generally are of the most cheering character, and promise well for the future prosperity of our village."

The Nevada Journal gives a glowing account of mining operations in that vicinity. The Buckeye Tunnel Co. have taken out $16,902 in five weeks; during the nine months previous they took out $80,784—working five and six hands. An interest of one-sixth in the Live Yankee Co. sold the other day for $6,000. Just below this, a claim in a company not yet to the lead sold for $4000, and another for $1500. The Empire and Mount Vernon Companies are averaging 40 ozs. per day each.

The Mariposa Chronicle of Saturday says:—Our accounts from the different mining camps continue highly gratifying. Miners are no longer compelled to buy on credit, but are able to come down with the dust, and the difference between the credit and the cash systems can readily be seen in the long line of teams in our streets, and the bustle and confusion and smiling faces of our merchants.

Gold Mines in the Coast Range.—The San Jose Telegraph of the 11th inst. says that rich deposits of gold have recently been discovered in the coast range of mountains east of San Jose valley, and about 15 miles distant from the mission of San Jose. The placers were discovered in a valley which is reached after crossing the third range of mountains in the chain which divides the valleys of San Jose and San Joaquin.

Hundreds have already assembled at the spot, and stores and boarding houses are being constructed for the accommodation of the miners. A gentleman who left the diggings on the 8th, estimated the number of persons on the ground at between five and eight hundred, and the average yield at eight dollars per day. The mines are due east from the hot springs.

A correspondent of our well-conducted and spicy cotemporary, the Sun, calls the above statement a humbug—stating that hundreds of old miners have been in search of these diggings for several weeks without seeing the color of gold.

Weekly Summary of News.

THE FILLIBUSTERS.

The steamer Southerner arrived from San Diego on Monday, bringing as passengers Col. Wm. Walker and the remainder of his party, who have surrendered themselves to the United States authorities. The following is a summary of their movements since last heard from: On the 6th of April Walker and his party, which consisted of 35 men, started from the Colorado, at Howard's point. On the 12th they arrived at La Cidentura, when they found that the defence had been resumed by Melendrez, and that Lieut. Carroll and John Patten had been taken prisoners and killed. On the 17th they reached San Vicente. Here they met and disledged a party of men under Melendrez. On the morning of the 19th they moved on to Guadaloupe, and from thence Walker and 12 men proceeded to San Tomas, where they surprised Melendrez, and killed and wounded several of his men. The head-quarters of Walker have been at Guadaloupe until the 26th of April, at which time Melendrez sent a flag of truce to Walker, offering him and his men a free pass out of the country if he would lay down his arms and make a formal surrender. Walker read the message, threw it on the ground, and kicked the courier from his presence. That afternoon an attack was made upon the Fillibusters, and an engagement ensued which lasted about three hours, when Melendrez's forces took flight—having sustained a heavy loss. Commissary Sergeant John E. Towns was killed, and Adjutant Samuel Rutland was slightly wounded. On the morning of the 30th, the Fillibusters narrowly escaped being surprised on the Ensenada road, by an ambushed force, with whom they had a fight which lasted the whole day. At dusk Walker's party were entirely surrounded by the fire which had been made in the dry grass; yet they fought their way out. In this action six of the enemy were killed and nine wounded. Wm. Anderson, of the Fillibusters, was slightly wounded. On the 6th, in marching from the Lower Machada to Lagia Juanea Ranch, they met a scouting party of the enemy, and kept up a running fight with them for ten miles. On the afternoon of the 8th, Walker's party were marching for the United States line, Melendrez sent word to Walker that he could not be permitted to cross the line, unless he first laid down his arms. Walker sent him word that if he wanted the arms, he might come and take them,—at his peril. After parading round the Fillibusters considerably, the enemy left, and were seen no more. The party then marched on to the U. S. line, where they were met by a detachment of United States troops, under Major McKinstry and Capt. H. S. Burton, to whom they surrendered, and in whose charge they were brought to this city as prisoners, for violating the U. S. Neutrality Laws.....The number of Fillibusters killed in the whole expeditiou, from their account, amounts to 10; died, 7; wounded, 8. Who is to blame?

LOWER CALIFORNIA.

Col. Norris arrived in Los Angeles previous to the 6th, from the desert by way of Turner's Pass, having completed his contract for surveying the government lands. He brings us favorable intelligence from the Tejon. He reports the country beyond the mountains to the east of Lake Elizabeth as the best kind of grazing land. Bunch grass prevails in the greatest abundance, growing to the height of one and a half feet. Water is to be had in abundance also, and timber in many places—the cottonwood is the prevailing timber. He estimates that there are ten townships of government land in that vicinity, most desirable for grazing. This section is reached through Turner's pass, about forty miles north of this city. The pass may be travelled at all seasons, and the road is becoming better every day from the constant travel of the government trains. On the Mohave the party lost ten horses, stolen by the Indians, but recovered nine of them next day. The Indians escaped. At the Tejon, after a month of very warm days and dry weather, a rain, accompanied with thunder, lightning, hail and snow on the mountains, and severe cold, had put a very improving face upon all things. The crops look well, and promise great abundance. There are some twelve hundred Indians at the reservation. The Col. reports everything well and prosperous, and gives much praise to Lieut. Beale and his employees for their energy and perseverance in their labors.....The Los Angeles city election resulted in the choice of Stephen C. Foster for mayor.....In San Pedro, Mayor Banning, a whig, was elected by a majority of one—having received two votes.

OREGON.

By the arrival of the Peytona on Tuesday evening, we have Portland papers to the 13th—being eight later than last advices. The papers are principally filled with Eastern news and politics. Active discussions were going on as to the propriety of forming a State Government.....The annual rise of the Columbia river, caused by the melting of the snows on the mountains, began earlier this year this year than usual. The rivers are within a few feet of the usual stage of the high waters in June.....The crops throughout the country are said to look unusually well, particularly the spring grass .....The Oregonian has late advices from Yakima, stating that gold is being found in increased quantities.....The temperance men are organizing in every section of the country, and nominating tickets for the ensuing election.

THE CITY.

A murder was committed in this city on Wednesday evening last under the following circumstances: The victim was Henry Dunn, proprietor of the new paper just issued in this city called the Pacific Police Gazette. The assassin, named Foley, was an employee on the paper, and was arrested on Sunday night for being drunk and disorderly. Dunn procured his release; Foley did not thank him for the favor. At about 6 o'clock on Thursday evening, Dunn returned to his house, and found Foley, who was partially intoxicated, insulting his wife. He ordered him to leave the house, and on his refusing to obey, Dunn took hold of him and proceeded towards the station house for the purpose of giving him into custody. When near Virginia street, Foley drew a dirk from his cane and stabbed Dunn twice, killing him almost instantly. The deceased exclaimed, "I am stabbed, and there is the man that did it," pointing to Foley, who was running away. Mr. J. L. Van Bokkelen, who was near, immediately gave chase, and succeeded in capturing the murderer. Foley gave the name of McFarland when brought to the station house. The Coroner held an inquest upon the body, and returned a verdict that the deceased came to his death at the hands of Foley, who was guilty of wilful murder. The prisoner was brought before Recorder Baker on Friday, and, after a preliminary examination, was committed to jail to await his trial. We learn that twelve hundred dollars have been raised for the family of Dunn. This liberality is characteristic of the inhabitants of San Francisco.....Judge Baker has sent in his resignation of the office of City Recorder, to take effect on the first of June. He will carry with him into private life the respect and goodwill of all, for his fearless and straightforward course of action while on the Bench.....The walls of several brick store houses in the vicinity of the U. S. Bonded Warehouse, are noticed to be cracked to an alarming extent. If immediate steps are not taken to close these seams, we shall soon have to record their fall, and perhaps a consequent loss of life.....A large cistern is being constructed on the corner of Folsom and First streets. There is room for a few more in that vicinity.....The purchase of the Alta California building for the County Recorder's office has been concluded, and the occupants are preparing to move.....The Committee of Engineers selected by the Common Council have reported adversely to the completion of the Hoadley grades.....Rev. S. D. Simonds has resigned the post of editor of the Christian Advocate, and the paper will hereafter be conducted by the publishing committee.....A well now being dug at the U. S. Marine Hospital has reached the depth of 220 feet, with no signs of water.....Don Luis De Valle's sentence has been postponed until Monday next.....We have heard it rumored that the Nicaragua Steamship Company had purchased the steamer Golden Age, and that she is shortly expected here from Australia.....M. Dillon, the French Consul, was cited before the United States District Court on Tuesday, for a violation of the Neutrality Laws, and gave bonds in the sum of ten thousand dollars.....The splendid steamship Golden Gate left for Panama on Tuesday. The Nicaragua steamship Brother Jonathan left for San Juan at the same time.....A new Hall, on Washington street, near Montgomery, was dedicated to the use of the Sons of Temperance on Tuesday evening.

Shipment of Treasure.

The following is the treasure list of the steamers which left on Tuesday:

PER GOLDEN GATE.

Page, Bacon & Co...	$512,000	Spotz & Newhouse....	$10,300

		Total.....	$2,347,444

MARRIED.

On the 10th May, in this city, at Grace Church, by the Right Rev. Bishop Kip, Hugh Pehn, M. D., member of the Royal College of Surgeons, England, and Josephine Moren Carjohn.

On the 11th May, in this city, by Rev. C. B. Wyatt, Redmond Gibbons and Fannie, third daughter of the late Robert Lyon, of Baltimore.

On the 14th May, in this city, by the Right Rev. Bishop Kip, Mr. Henry L. Twigge, of this city, and Miss Mary Ann Dill, of Spottswood, New Jersey.

On the 11th May, in this city, by Right Rev. Bishop Alemany, Wm. H. Rhodes, Esq., and Mrs. Jeannie G. Powell, all of this city.

[Galveston papers please copy.]

On the 11th May, in this city, by Rev. A. Williams, Mr. O. M. Perkins and Miss Cornelia, eldest daughter of Stephen C. Fowler, Esq., of this city.

On the 13th May, in Sacramento, by H. F. Kellum, Esq., Mr. Andrew J. Thomas and Miss Frances M. Webly.

On the 15th May, in Sacramento, Irwin McGuire, of Bodega, and Miss Sarah Conditt, of Sacramento.

On the 15th May, in Marysville, William W. Preshury and Mrs. Arietta E. Smith.

On the 14th May, by the Rev. F. E. Prevaux, Mr. Ephraim Brown, of Georgetown, California, and Miss Elizabeth M. Follansbee, of Amesbury, Mass.

On the 4th May, in Ione Valley, by R. D. Styles, Esq., Mr. Milton A. Houston and Miss Mary Phillips, both of that place.

On the 20th April, at Fort Yuma, California, in the presence of a Justice of the Peace, Lieut. N. H. McLean, U. S. A., Acting Assistant Adjutant General for the Southern District of California, officiating in the ceremony, Mr. Thomas Benj. Burke, late of the U. S. A., and Miss Nancy Skinner, of Springfield, Illinois.

On the 9th May, in Sonora, Mr. G. F. Smith, of Stanislaus county, and Miss Jane Bell, of Sacramento.

DIED.

On the 13th May, in this city, Mr. Henry A. C. Eveleth, son of the late Samuel Eveleth, Esq., of Boston, aged 26 years.

On the 11th May, in this city, Lewis Henry, son and only child of Lewis and Ann Eliza Mayer, aged 3 months and 9 days.

[New York papers please copy.]

On the 10th May, in Marysville, Thomas Simkins, late proprietor of the New York Ranch on American River.

On the 7th May, in Nevada, J. L. Randall, late of Union county, Illinois, aged 32 years.

On board the steamship Sea Bird, Julius Suitz, aged 2 years and 6 months.

On the 6th May, at Gold Hill, Augustus, son of Dr. J. D. and Martha Tilson, aged 2 years and 3 months.

On the 21st Feb., in Deseret, Caroline C. Page, daughter of David and Elizabeth A. Pettegrew, aged 27 years.

On the 4th March, in Salt Lake city, Mary Isabella, daughter of Joseph Horne, aged 3 months.

MARKET REPORTS.

San Francisco, May 17, 1854.

Would it were possible to record a better state of things in the various departments of trade and commerce, but it cannot be done. A general lull seems to pervade all the various branches of it, and yet all wear a cheerful spirit in despite of it. There seems to be no demand for any articles of merchandise in quantities, purchasers only buying for immediate wants.

Grain is quiet; Provisions, stationary; Flour, steady; Lumber, no sale and much depressed, at present rates mills run at a loss. The buying and harvesting season being about to commence, implements for this branch of industry are now in request.

We would urge upon Wheat growers caution in making contracts, for we believe it to be for their interest not to be hasty in selling to deliver. We believe the condition of Europe is such as to give them a prospect of a liberal reward for their labors. It is of the highest moment to them, that a Convention of Wheat Growers should be called at an early day, that they may take measures to secure to themselves all the benefits of their labors. We hope they will take the hint.

Special Premiums for Subscriptions.

In addition to the standing inducement for the getting of subscribers for the "Farmer," we will make a present of Harper's Illustrated Family Bible to the person who procures the most Subscribers in the first six months of our publication. This we regard as one of the most beautiful bibles ever issued. Who will have the prize?

AGENTS FOR CALIFORNIA FARMER.

M[illegible] Adams & Co[illegible] Offices throughout the United States of Europe.

M[illegible] Wells, Fargo Co., at their offices throughout the Country.

Mr C[illegible] Langdon, Travelling Agent for the northern part of the State.

Mr E[illegible] Langton, General and travelling Agent for Northern portion of the State, to whom we commend our Agents for information needed.

M[illegible] Langton & Co. *for Downieville, Foot's Bar, Goodyear's Bar, Marysville.*

M[illegible] Leland & McCombe—*Crescent City, Port Orford, Umpqua, Eureka, and Bucksport.*

San Francisco—Sullivan's newspaper stand, near the Post Office; Kimball's, Notary Carriers Hall, Long wharf.

Benicia, Martinez, &c.—Messrs. Stiles & Dodds.

Santa Clara City and Mission San Jose.—Messrs. Howard & Chamberlain.

Stockton.—Messrs. Gardiner & Kirk.

Sacramento Union—Dr. Thomas T. Harvey, P. M.

Crescent, Humboldt Bay—A. H. Murdoch, P. M.

Mormon Farm, O. T.—Gen. M. M. McCarver.

Marysville—Geo S. Becker & Co.

Nevada.—Rosenbaum & Jonckmeen.

Bangor, Butte Co—P. Freer.

Weaverville, Trinity Co—H. B. Davison & Co.

Yreka—Crum, Rogers & Co.

New York City, N. Y.—J. M. Thorburn & Co.

N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

Our paper will always be found at the store of Messrs. Gardiner & Kirk, newsmen, Third street, Sacramento—on mail days neatly enveloped and ready for mail. To those who wish to show their friends in the States how Farming operations prosper in California, this will afford a good opportunity.

☞ We desire Agents to report as early as possible, that we may be prepared in our issues for a sufficient number to supply the demand. Be sure and report promptly.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO.

ARRIVALS.

MAY 10—Stmr Crescent City, Montgomery, 3 days from Coose Bay, via Crescent City 40 hours.

Brig Metropolis, Swinson, 3 days from Columbia River, with lumber.

Brig J W Havener, Bagley, 4 days from Columbia River, with lumber.

Brig Halcyon, Eldridge, 3 days from St Helens, with lumber.

Schr Conn Simbrick, Edwards, 30 hours from San Boneta, with 802 sacks barley.

11th—Bark Brontes, Raud, 8 days from Puget Sound, with piles, etc.

Bark Ella Frances, Mitchell, 10 days from Puget Sound, via Cape Flattery 4 days, with lumber.

Brig Quaddy Bell, Hatch, 31 hrs fm Humboldt Bay; lumber.

Schr Astoria, Willoughby, 24 hrs from Santa Cruz; produce.

Schr L Foster, Sargent, 10 days from Puget Sound, via Cape Flattery 4 days; lumber.

Schr Lou Choo, Charles, 36 hrs from Santa Cruz, with flour.

Schr Alfred Adams, Briggs, 36 hrs from Santa Cruz; lumber.

12th—Ship Harriet, Otis, 167 days from New York, with mdse.

Br ship Isabella Horcas, Robinson, 59 days from Hong Kong, with mdse and 382 passengers.

Brig Lyra, Woods, 35 hrs from Crescent City; sq timber.

Brig J B Lunt, Richrdson, 72 hrs from Oregon; lumber.

13th Dutch bark Jacoba, Cornelia, 60 days from Hong Kong, with mdse and 375 passengers.

Bark Delegate, Gillan, 15 hours from Mendocino; lumber.

Brig Glencoe, Carlton, 6 days from Port Discovery, P S, with piles.

Schr Odd Fellow, Austin, 24 hours from Santa Cruz; lumber.

14th—Br ship Chalmers, Smith, 140 days from London; mdse.

Brig Wilcott, Falconer, 3 days from Oregon; lumber.

Bark Ariana, Ankers, 4 days from Puget Sound; piles, etc.

Schr Curlew, Thomas, 2 days from Santa Cruz; lumber.

15th—Stmr Southerner, Dillard, 3 days from San Diego; mdse.

16th—Stmr Sea Bird, Haley, from San Diego.

Stmr Peytona, Sampson, 60 hours from Oregon.

Bark Powhattan, Libbey, 5 days from Puget Sound; piles, etc.

Bark Chalcedony, Lovejoy, 4 days from Puget Sound piles.

Brig Sarah McFarland, Nash, 2 days fm Port Orford; lumber.

Brig Geo Emery, Diggs, 9 days from Puget Sound, via Cape Flattery 5 days; piles and sq timber,

Brig June, Kingston, 3 days from Oregon; lumber.

CLEARANCES.

MAY 10—Ham ship Wilhemsburg, Miller, for Hong Kong; brig Argyle, Wiley, Talcahuano.

11th—Bark Hungarian, Champlin, for Hong Koug; brig Zoroaster, Crosby, Crescent City.

12th—Ship Archer, Thomas, for Hong Kong; bark What Cheer, Baker, do; Chil bark Calderon, Rooney, Ports on Pacific; schrs Minna, Pulsifer, Hong Kong; Sovereign or Ka Moi, Honolulu.

13th—Ships Charlotte, Holbrook, for Ports in the Pacific; Immagondra Sara Chasina, Snouk, Java; brigs Wm Stovebl (Br), Christie, Callao; Judson, Bunker, Society Islands; schr Tennessee, Ellis, Rambler, O T.

15th—Steamship Golden Gate, Watkins, for Panama; ship Monsoon, Baker, Callao.

16th—Steamship Brother Jonathan, Seabury, for San Juan; ship Herald of the Morning, Baker, Callao.

Public Notice.

THE copartnership hitherto existing between the undersigned, transacting business as Bankers and Express Carriers in the State of California, and in the Eastern States of the United States, under the name, firm and style of ADAMS & CO., expires this day by limitation. D. H. HASKELL, ALVIN ADAMS, W. B. DINSMORE, S. E. SANFORD, S. M. SHOEMAKER. *

*By C. E. BOWERS, their Attorney in fact.

Dated San Francisco, May 12, 1854.

THE UNDERSIGNED have this day formed a Copartnership for the transaction of **Banking and Express business** in the State of California, under the firm, name and style of "ADAMS & CO."—the principal office continuing at the same place, in the city of San Francisco.

Dated San Francisco, May 12, 1854.

ALVIN ADAMS,
(By C. E. BOWERS, his Attorney in fact,)
D. H. HASKELL,
I. C. WOODS.

THE UNDERSIGNED, composing the firm of ADAMS & CO., of New York, Boston, Philadelphia, and all other principal cities and towns of the Eastern States, will hereafter carry on the **Express and Forwarding business** to and from the said cities and towns in the Eastern States and the City of San Francisco. The Banking and Express firm of Adams & Co. in California, at the city of San Francisco acting as our agents.

Dated San Francisco, May 12, 1854.

ALVIN ADAMS,
WM. B. DINSMORE,
S. E. SANFORD,
S. M. SHOEMAKER,
(By C. E. BOWERS, their Attorney in fact.)

Public Notice.

WE, the undersigned, ALVIN ADAMS, late [illegible] of the firm of ADAMS & CO., and DANIEL H. HASKELL and ISAAC C. WOODS, late [illegible] of the firm of [illegible] & Co., hereby certify that we have formed a Copartnership under the name, style and firm of ADAMS & CO., for the purpose of transacting the business of Bankers and Express Carriers, in the State of California, and in the Eastern States of the United States, and that the principal office of the said firm in California will be at the city of San Francisco, on the 1st day of May [illegible].

ALVIN ADAMS,
(Their Attorney in fact,) C. E. BOWERS.

Splendid Residence.
RANCH, GARDENS AND FIRM.

THAT beautiful residence at the head of the "Steamboat slough," on the Sacramento river, known as ROBB'S RANCH, now under a high state of cultivation, with fine Buildings arranged for health and comfort—contains 6 rooms, beside kitchen, pantry, &c.

The crops, now looking prosperous, are 10 acres onions, 10 acres of potatoes, and 10 acres of cabbages, sweet potatoes, melons, &c.

A Flower Garden ornaments the lawn in front. A Hotel is near the place, and the Marysville boats stop every day each way.

The Farm contains 160 acres.

A person wishing a beautiful residence, where the crops will in a little time pay the purchase money, will do well to examine this estate.

Terms of sale liberal. Title of the most undoubted kind.

For further particulars apply to the subscriber, at Robb's Saloon, Clay street. T. P. ROBB.

Or at the office in Merchant street, of WM. NEELY JOHNSTON, or at the office of the California Farmer, to
20 tf WARREN & SON.

PLOWMAN'S SONG.

BY THE "PEASANT BARD."

Sweet are the fields where the clover is springing,
And blithe is the carol that floats from the bough;
And soft vernal breezes a gladness are bringing
To cheer me as gaily I follow the plow.

Though hard be my toil, and dew-drops of labor
Make damp the brown locks that encircle my brow,
No envy I feel for my ease-loving neighbor,
For pride more is mine, as I follow the plow.

The lordling may boast of his titular story;
The vote-seeking gramlec obsequious bow;
What care I for all their nonsensical glory?—
A NOBLE OF NATURE, I follow the plow.

I muse upon those, while turning the furrow,
Who, call'd like Elisha, are glorified now!
Though hand delve in earth, yet the mind need not burrow.
But spring to the light, as I follow the plow!

A MOTHER'S LOVE.

A mother's love, how pure, how deep,
How ceaseless in its flow!
Love, that a life-long watch can keep,
And no abatement know!
When her frail children first draw breath,
It kindles to a flame,
And till her eye-lids close in death,
Burns ever on, the same!
That flame burns on, still clear and high,
In sunshine and in storm,
Though grief may dim her watchful eye,
Or labor bow her form!
Alike where steadfast virtue crowns
Her children's honored name,
Or on their guilt a stern world frowns—
Burns ever on, the same!
Alone, the mother's quenchless love,
Where'er her children stray,
Shines like the day-star from on high,
Upon their pilgrim way!

—*Boston Cultivator.*

SHINE.

BY W. A. FOGG.

Shed thou a light, however small
That light may be;
Not for thyself alone—but all—
God gave it thee.

The stars each with the other vies
In giving light,
But e'en the dimmest in the skies,
Adorns the night.

The moon with silvery splendor veils
The lesser star,
But when the moon's effulgence pales,
'Tis seen afar.

Then let us shine in holy deeds
Where'er we rove—
Where'er we find a heart that needs
The light of love.

And, though 'mid greater, 'tis unseen
Where it is given,
Know that its humble, modest sheen,
Extends to Heaven.

Vainly he lives, though he ascends
The height of fame,
If with the poor man's prayer ne'er blends
His honored name.

And he who may of gold have gained
A countless pile,
But who has ne'er the cheek, tear stained,
Lit with a smile.

Then let us shed in every heart
Love's sacred light,
Trusting the joy it doth impart
In God's sight.

And that it shall ere long reflect
Back on our own,
When, clothed in light, we stand erect
Before His throne.

"WHAT IS A LETTER?"—It is all things to all men. Like the chameleon, it has a thousand different shades of color to the receiver—now stirring up the angry passions of our nature, or striking the keenest sorrow to the soul—buoying up the heart to struggle on against adversity, or awakening the tender emotions of love—here scattering desolation broadcast, or there lighting up the landscape with the sunshine of joy. "What is a letter?"—A senseless scrawl to the world, but to the one for whom it is intended, perhaps regarded as a treasure beyond price. A letter from a stranger hand, at times arrests our attention and excites the deepest interest. A thousand letters from all parts of the country, from all ages and sexes, pass through our hands unheeded or unnoticed, beyond the attention which business requires. But here is one that we read over twice. Why? It is from a stranger, and locality we know nothing of. But that particular letter has something about it that interests us, but what we know not. Fancy—busy fancy—is at work in our brain, conjuring up the image of the writer of that letter—the place it comes from—and bringing the whole before us plainly as though we were really in the presence of our ideal creation. But a moment after the dream is over, though it has left its impress on the memory, and the letter is separated from the common herd. On this subject we can appreciate the lines of the poet in answer to the above query:

What is a letter? Let affection tell!—
A tongue that speaks for those who absent dwell;
A silent language uttered to the eye,
Which envious distance would in vain deny;
A link to bind where circumstances part,
A nerve of feeling stretched from heart to heart,
Formed to convey, like an electric chain,
The mystic flash,—the lightning of the brain,—
And thrill at once, through its remotest link,
The throb of passion, by a drop of ink.

EARLY MARRIAGES.—A writer in the New Orleans Picayune says, in speaking of this interesting subject that:—The notion that it is imprudent for young persons to marry is totally fallacious. Experience has proved this in innumerable cases. As soon as a young man is able to support himself, he is able to support a wife, and the sooner he takes one the better. Let him select a sensible young woman; one suited to himself in age, disposition and circumstances, win her affections and marry her; and, if they are not happy, nothing on earth could make them so. One instance—Edward married at twenty-one the girl of his choice, Maria. He was a poor clerk; she had no dowry but good sense and a loving heart. They commenced house-keeping, on the humblest scale; but love and the sunny cheerfulness of youth enriched poverty itself, while the grace and neatness of the wife threw a halo of refinement round their humble home. Industry and a frugality which never descends to meanness, increased their worldly goods, until by degrees they rose to affluence. After thirteen years of wedlock, their affection is as warm as it was in the flush of youth; and the husband prizes the kiss sweetening his departure, and the smile which welcomes his return, as highly as when they were bestowed by the blushing bride.

Such might have been the history of hundreds of surly, selfish old bachelors, and sour, snappish old maids, if they had only been more wise, and less prudent. Such might have been the history of hundreds of jarring couples, if, instead of waiting for a moon-tide sky and golden freight, they had, with suitable partners, launched their bark on the unknown sea of Matrimony, in the morning of life, with love for a cargo and hope for a helm."

DON'T CARE.—The only spirit which will enable one to get along in this world, whether man or woman, is that of don't care. Live as irreproachable as you will, practice every virtue, be prudent almost to ascetism, love your neighbors if they'll let you—and be good and charitable, still curious tongues will clatter. people will *make something* to talk about, so if you want the least peace of mind, just don't care.

It is very hard to find the warm friend practising deception, peculiarly trying to have your best motives suspected, but the moment these things come home to you, make up your mind to brave it with a "don't care." Suppose you sit down in the chimney corner to fret and worry and get up a little comfortable misery, will it change the heart of the deceiver? or tie the slanderous tongue?

Be sure you are *right;* do your whole duty, as you know it, and then if deception or calumny assail—hold your head higher, walk with a firmer step, and greet all your trials with a universal "don't care."

That's about the only way to get along comfortably, and keep all important blessings in a state of preservation—yclept health and spirits. —*Olive Branch.*

THE TEACHER STUMPED.—It happened in a school room one day, while a class of very small boys and girls were reciting a lesson in arithmetic. It was about their first lesson.

"Five from five leaves how many?" asked the teacher, of a little girl of some six years of age.

After a moment's reflection, she answered—"five."

"How do you make that out?" said the teacher.

Holding her little hands out towards him, she said, "here are five fingers on my right hand, and five fingers on my other. Now, if I take the fingers on my left hand away from the fingers on my right hand, won't five remain?"

The teacher was "stumped," and obliged to "knock under."

MUSICAL ANECDOTE.—There is a story told somewhere of a celebrated musician who lay upon his dying bed. A youth entered his apartment, sat down to a piano and commenced playing a tune. For some reason he stopped abruptly in the midst of a strain, and left the room. The air was a favorite one with the dying Son of Song, and the notes untouched, so haunted him as he lay there, that he rose from his couch, seated himself by the piano, took up the tune where the youth had left it, played it out, returned to his pillow, and in a moment was dead.

Two young ladies of Indianapolis, who, by-the-by, belonged to the *bon ton*, were out riding in a buggy by themselves, and after driving through the various fashionable avenues, they concluded to try the plank road. Well, to the plank road they went, and while trotting briskly along they were suddenly arrested by a toll-gate keeper, who demanded toll. "How much is it?" asked the girls. "For a man and horse," he replied, "It is fifty cents." "Well, then, get out of the way, for we are girls and a mare! Get up Jenny;" and away they went, leaving the man in mute astonishment.

How many fond mothers and frugal housewives keep their pretty daughters and their preserves for some extra occasion, or for some "big bug" or other, until both turn sour! This seems to us marvelous poor economy.

As storm following storm, and wave succeeding wave, give additional hardness to the shell that encloses the pearl, so do the storms and waves of life add force to the character of man.

WHY is a clock the most humble thing in existence? Because it always holds its hand before its face, and however good its works may be, it is always running itself down.

DONAHUE'S UNION IRON WORKS,
[THE FIRST ESTABLISHED IN THE STATE.]
Cor. of First and Mission streets, Happy Valley, San Francisco.

THE undersigned calls the attention of the citizens of California and Oregon to his unequalled facilities for doing work with rapidity and cheapness. He has made, and will continue to make, such additions to his time and labor-saving machinery, as the increasing wants of the State require, and hence solicits public patronage.
Saw and Grist Mill Irons,
Quartz Crushing and Amalgamating Machinery,
and Castings of either Iron or Brass of every description (having a most extensive assortment of ready made patterns) made promptly to order.
STEAM ENGINES from the manufactories of William Burdon, Brooklyn, New York, and other celebrated makers, constantly on hand and for sale.
BOILERS of every description furnished at lower rates than can be afforded elsewhere, the iron for the same being imported direct, and the machinery for shearing, punching and riveting being driven by steam power. Patent Steam and Water Gauges Steam Whistles, Cocks, India Rubber Steam Packing. Ready made Bolts and Nuts, Belting Lace and other Engineer's Findings for sale.
2 3m JAMES DONAHUE.

Threshers, Separators and Cleaners.

PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—four for the separator, two for the power, &c.
Also, EMERY'S Threshers and Separators, of Two Horse Power.
We have also on the Golden Fleece, two of HALL'S (Rochester,) Latest Improved Threshers, Separators and Cleaners, Eight Horse Powers, all complete.
Also, four of HUSSEY'S REAPERS and MOWERS, all combined.
For sale by COIT & BEALS,
9 tf 94 Battery street, office up stairs.

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the **Fire Proof Store, No. 49 K street**, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Buxall and Gallego.
Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any adulteration.
Ground feed of all kinds always on hand.
Every exertion will be used to merit a continuance of the ator heretofore so liberally extended to us. 1-tf

Catalogue of Fruit and Fruit Trees.

WE call the attention of Nurserymen and Orchardists to a new catalogue just issued by us, prepared with great labor and cost, giving the lists of the best fruits cultivated in Europe or America, with their synonyms. This catalogue embraces also lists of best Vegetables, Ornamental Trees, Flowering Plants, Seeds, &c.—being a perfect illustration of the best varieties of everything belonging to AGRICULTURE, HORTICULTURE, and FLORICULTURE, with brief directions for the cultivators in each department, and as *adapted to California.*
This work will be found a very great help to all engaged in cultivation.
Price $1 per copy. WARREN & SON,
Nurserymen, Seedsmen, and Florists,
5 Musical Hall Buildings.

Flowers! Bright Flowers!!
A GIFT FOR HOME.
"THROW PHYSIC TO THE DOGS."

WE convert the pill box into a Floral vase, and instead of the "unseen drug," we offer the perfume of Flowers.
Our beautiful collection of *California Flower Seeds* we now offer.
These are put up in handsome morocco cases, or homeopathic cases of glass bottles, with printed lists and directions, and with pressed flowers of the different varieties of each. These are of the most beautiful style that can be prepared, and are most appropriate gifts for home at this season.
We invite attention to them at our rooms, at Musical Hall Buildings. WARREN & SON,
5 Seedsmen and Florists.

SIDE HILL PLOWS,

FOR cultivating Potatoes—the best article that can be used. No Farmer should be without them. Constantly on hand and for sale by WARREN & SON,
14 1s2w Musical Hall Building, Bush street.

BATES' SUPERIOR
UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.
Soil, Propagation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.
In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top soil at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.
If the land is poor, so that grass and weeds will not vegetate then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their culture both easy and profitable.
Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in meadow moss, and well boxed, which will enable them to go to a great distance in a fresh state.
The proper time for Fall transplanting is October and November; for Spring, from the opening of the same till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting, and during the winter for Spring. 15

[From Dicken's Household Words.]

The Blind Man's Wreath.

"My boy, my poor blind boy!"

This sorrowful exclamation broke from the lips of Mrs. Owen, as she lay upon the couch to which a long and wasting illness had confined her, and whence she well know she was never more to rise.

Her son, the only child of her widowed hearth, the sole object of her cares and affections, knelt beside her, his face bowed upon her pillow, for now only, in a moment of solemn communion with his mother, had she revealed the fatal truth, and told him she must die! He had watched, and hoped, and trembled for many weary months, but never yet had he admitted to himself the possibility of losing her; her fading cheek and sunken eye could not reveal to him the progress of decay, and so long as the loved voice maintained its music to his ear and cheered him with promise of improvement so long as her hand still clasped his, he had hoped she would recover.

He had been blind since he was three years old; stricken by lightning he had totally lost his sight. A dim remembrance of his widowed mother's face, her smoothly braided hair, and flowing white dress, was one of the few recollections entwined with the period before all became dark to him.

The boy grew up, tall, slender, delicate, with dark pensive eyes that bore no trace of the calamity that had destroyed their powers of vision; grave, though not sad; dreamy, enthusiastic, and requiting his mother's care with the deepest veneration and tenderness. In the first years of his childhood, and whenever his education did not take them to London and elsewhere, they had resided near a town on the sea coast, in one of the prettiest parts of England.

Independently of the natural kindness that very rarely fails to be shown towards any person that is blind, there was that about the widow and her son which invariably rendered them acceptable guests; for their intellectual resources and powers of conversation, were equally diversified and uncommon. Mrs. Owen had studied much in order to teach her son, and thus, by improving her natural abilities, had become a person of no common stamp; her intellectuality, however, being always subservient to, and fitly shadowed by, the superior feminine attributes of love, gentleness, and sympathy; for Heaven help the woman in whom these gifts are not predominant over any mental endowments whatsoever!

When they walked out together his mother took his arm; he was proud of that, he liked to fancy he was some support to her, and many pitying eyes used latterly to follow the figure of the widow in the black dress she constantly wore, and the tall, pale son on whom she leaned confidingly, as if striving with a sweet conception to convince him that he was indeed the staff of her declining strength. But gradually the mother's form grew bent, her step dragged wearily along, and the expression of her face indicated increasing weakness. The walks ended; and before long she was too feeble to leave her bed, excepting to be carried to a summer parlor, where she lay upon a sofa beside an open window, having flowers at the casement and the pleasant sunshine filling all things with joy, save her foreboding heart and the anxious son incessantly hanging over her. Friends often came to visit them, and departed with a deep sadness as they noted the progress of her malady, and heard the blind man ask each time whether they did not think her better—oh, surely a little better than at the time they last touched her!

Among all these, no friend was so welcome, or brought such solace to the sick room as Mary Parker, a joyous girl of nineteen, one of the [illegible] of the country, and the admiration and [illegible] of all who knew her. Mrs. Owen had [illegible] poor Mark, and Edward used to [illegible] her—a lady of [illegible] the fairy of six years old or [illegible] his skill, [illegible] he could [illegible] country, [illegible] Now [illegible] as Mary [illegible]

As she became older, there was no change in the frank and confiding nature of their intercourse. Mary still made him the recipient of her girlish secrets, and plans, and dreams, just as she had done of her little griefs and joys in childhood; asked him to quote his favorite passages of poetry, or stationed herself near him at the piano, suggesting subjects for him to play, that he extemporized at her bidding. Bright and blooming as Mary, the life of every party, beaming with animation and enjoyment, no attention was capable of rendering her unmindful of him; and she had often refused to dance, to talk with dear Edward Owen, who might be sad if he thought himself neglected.

And she visits daily the invalid; her buoyant spirits tempered by sympathy for her increasing sufferings; but still diffusing such an atmosphere of sunshine and hope around her, that gloom and despondency seemed to vanish at her presence. Edward's sightless eyes were always raised to her bright face, as if he felt the matchless influence it imparted.

His mother had noted all this with a mother's watchfulness; and, on that day, strong in her love, she had undertaken to break to him the fact all others shrank from communicating, she spoke also of Mary, and of the vague hopes she had ever cherished of one day seeing her his wife.

"No, mother, no!" exclaimed the blind man. "Dearest mother, in this you are not true to yourself! What! Would you desire to see her in all her springtime of youth and beauty sacrificed to such a one as I!—to see Mary, as you have described her to me, as my soul tells me she is, tied down to be the guide, and leader, and support of one incapable of making one step in her defence; whose helplessness alone in the eyes of men, would be his means of sheltering and protecting her! Would you hear her pitied, —our bright Mary pited—as a Blind Man's wife, mother?"

"But Edward—if she loves you, as I am sure she does—"

"Love me, mother! Yes, as angels love mortals, as a sister loves a brother, as you love me! And for this benignant love, this tender sympathy, I could kneel and kiss the ground she treads upon; but beyond this—were you to entreat her to marry your blind and solitary son, and she in pity answered yes,—would I accept her on such terms, and rivet the chains she had consented to assume? Oh mother, I have not studied you in vain, your life has been one long self-sacrifice to me; its silent teachings shall bear fruit! Do not grieve so bitterly for me. God was very merciful in giving me such a mother; let us trust Him for the future!"

Ah, poor tortured heart, speaking so bravely forth, striving to cheer the mother's failing spirit, though all to him is dark, dark, dark!

She raised herself upon her pillow, and put her arm about his neck, and listened to the expressions of ineffable love, and faith, and consolation her son found strength to utter, to sustain her soul. Yea, in that hour her recompense had begun: in loneliness, in secret tears, with Christian patience and endeavor, and an exalted and faithful spirit had she sown; and in death she reaped her high reward.

They had been silent for some minutes, and she lay back exhausted, but composed, he sitting beside her, holding her hand in his, fancying she slept, and anxiously listening to her breathing as it seemed more than usually oppressed. A rustling was heard amid the flowers at the window, and a bright young face looked in.

"Hush!" said Edward, recognising the step. "Hush, Mary, she is asleep!"

The color and the smiles alike passed from Mary's face as she glided into the room. "Oh Edward, Edward, she is very, very ill!"

"Mary! darling Mary!" said the dying lady, with difficulty rousing herself; I have had such a pleasant dream; but I have slept too long. It is night. Let them bring candles. Edward, I cannot see you now."

Night, and the sun so brightly shining! The shadows of the grave were stealing fast upon her.

Other steps now sounded in the room, and many faces gathered round the couch; but the blind man heard nothing—was conscious of nothing, save the painful labored respiration, the tremulous hand that fluttered in his own, the broken sentences.

"Edward, my dearest, take comfort. I have hope. God is infinite mercy."

"Oh Edward, do not grieve so deeply! It breaks my heart to see you cry. For her sake—for my sake too!" Mary knew how to bid him, and encouraged the [illegible] and [illegible] terrified her to [illegible]

From [illegible] Mary [illegible]

of her thoughts, and a smile lighted her pale face.

"As I hoped, as I prayed, to die! My children both. Kiss me, Mary, my blessing, my consoler! Edward, nearer, nearer! Child of so many hopes and prayers—all answered now!" And with her brigh vision unalloyed, her rejoicing soul took wing, and knew sorrow and tears no more.

Four months had passed since Mrs. Owen's death, and her son still stayed at Woodlands, the residence of Mary's father, Col. Parker, and about three miles distance from Edward's solitary home; hither had he been prevailed upon to remove, after the first shock of grief had subsided.

Colonel and Mrs. Parker were kind-hearted people, and the peculiar situation of Edward Owen appealed to their best feelings, so they made no opposition to their children devoting themselves unceasingly to him, and striving by every innocent device, to render his affliction less poignant and oppressive. But kind as all the family were, still they did not compare to Mary, who was always anxious to accompany him in his walks, seemed jealous of her privilege as favorite reader, and claimed to be his silent watchful companion, when, too sad even to take an interest in her reading, he leaned back in his chair, and felt the soothing influence of her presence. As time passed on, and some of his old pursuits resumed their attraction for him, she used to listen for hours as he played upon the piano. She would sit near him at work, proposing subjects for his skill, as her old custom had been; or she would beg him to give her a lesson in executing a difficult passage, and rendering it with due feeling and expression. In the same manner, in their readings, that they gradually began to carry on with more regularity and interest, she appeared to look upon herself as the person obliged, appealed to his judgment, and deferred to his opinion, without any consciousness of the fatigue she underwent, or the service she rendered.

One day, as they sat in the library, after she had been for some time pursuing her self-imposed task, and Edward, fearing she would be tired, had repeatedly entreated her to desist, she replied gaily:

"Let me alone, Edward! It is so pleasant to go through a book with you; you make such nice reflections, and point out all the finest passages, and explain the difficult parts so clearly, that it does me more good than a dozen readings by myself. I shall grow quite clever now we have begun our literary studies."

"Dear Mary, say rather, ended; for you know this cannot always go on so. I must return to my own house next week; I have trespassed on your father's hospitality, indulgence, and forbearance too long."

"Leave us, Edward!" and the color deepened in her cheeks, and tears stood in her bright eyes. "Not yet!"

"Not yet? The day would still come, dearest delay it as I might, and is it manful thus to shrink from what must and ought to be? I have arranged everything: Mr. Glen, our clergyman, has a cousin, an usher in a school, who wishes for retirement and country air. I have engaged him to live with me as companion and reader. Next week he comes; and then, Mary, farewell to Woodlands!"

"No, not farewell, for you must come here very often; and I must read to you still, and you must teach me still, and tell me in your own full thoughts and beautiful [illegible] of better and higher things than I come [illegible] to care for. And then our walks—oh Edward, we must continue to see the sunset from the cliffs, sometimes together. You first taught me how beautiful it was. I told you of the tints upon the sky and upon the sea, and upon the boats with their glistening sails, and you set the view before me in all its harmony and loveliness, brought it home to my heart, and made me feel how cold and insensible I had been before."

"Ah, Mary," said Edward mournfully, "near you, I am no longer blind!"

The book she had been reading fell unheeded on the floor, she trembled, her color went and came, as she laid her hand timidly on his arm; indescribable tenderness, reverence and [illegible] sion were busy within her soul.

"Edward, you will not change in [illegible] towards us; this [illegible] you from your oldest and dearest friends—your mother's friends! Let me [illegible] your friend, your—sister!"

"Sister, [illegible] Sister [illegible] oh you say so! [illegible] it [illegible] Mary [illegible] and he knew [illegible] [illegible] My [illegible]

She drew back, and a few inaudible words died away upon her lips; he could not see her appealing, tearful eyes. Mistaking the cause of her reserve, he made a strong effort to regain composure.

"Do you remember when you were a child, Mary, how ambitiously romantic you used to be, and how you were determined to become a duchess at least?"

"And how you used to tease me by saying you would only come to my castle disguised as a wandering minstrel, and would never sit at the board between me and the duke, Edward? Yes, I remember it all very well, foolish children that we were! But I, at least, know better now; I am not ambitious in that way any longer."

"In that way? In what direction, then, do your aspirations tend?"

"To be loved," said Mary fervently; "to be loved, Edward, with all the trust and devotedness of which a noble nature is susceptible—to know that the heart on which I lean has no thought save for me—to be certain that, with all my faults and waywardness, I am loved for myself alone, not for—for any little charm of face that people may attribute to me.

Edward rose abruptly, and walked up and down the room, that from his long stay in the house had become familiar to him. "Mary," he resumed, stopping as he drew near her, "you do yourself injustice. The face you set so little store by, *must* be beautiful, as the index of your soul; I have pictured you so often to myself; I have coveted the blessing of sight, if only for an instant, that I might gaze upon you! The dim form of my mother, as I last beheld her in my infancy, floats before me when I think of you, encircled with a halo of heavenly light which I fancy to be your attribute, and a radiance hovers round your golden tresses such as gladdens our hearts in sunshine."

"Ah, Edward, it is better you cannot see me as I am! You would not love—I mean you would not think of me—so much!"

"If I could but see you for a moment as you will look at the ball to-night, I fancy I should never repine again."

"The ball to-night! I had quite forgotten it; I wish mamma would not insist upon my going. I do not care for these things any longer;—you will be left alone, Edward, and that seems so heartless and unkind!"

"Mary," said one of her sisters, opening the library door, "look at these beautiful hot-house flowers that have arrived here for us. Come Edward, come and see them too."

They were so accustomed to treat him as one of themselves, and so used to his aptitude in many ways, that they often did not appear to remember he was blind.

The flowers were rare and beautiful, and yet no donor's name accompanied the gift. Suddenly one of the girls cried out laughingly, "I have guessed, I have guessed. It is Edward! He has heard us talking about this ball, and must have ordered them on purpose for us. Kind, good Edward!" and they loudly expressed their delight; all except Mary, who kept silently aloof.

"Mary does not like her flowers?" said Edward, inquiringly, turning in the direction that she stood.

"No," she replied sorrowfully, "it is the ball that I do not like, nor your thinking about decking us out for it. As if I cared to go!"

"Look at these lovely roses," said the eldest sister, as they were selecting what each should wear; would not Mary look well with a wreath of these roses in her hair?"

"Yes, yes," exclaimed Edward eagerly "and I the weave it for her! You know Mary, it is one of my accomplishments; you were proud of my garland when you were a little girl. Will you trust my fingers for the task?"

"If you really wish it if [illegible] trifle, yes," said Mary gently, with a trouble expression upon her face usually [illegible] [illegible] [illegible]

will be, without her voice, without her footstep! And yet this is what awaits me, what is inevitably drawing near. Next week I leave the roof under which she dwells; I shall not hear her singing as she runs down stairs in the morning; I shall not have her constantly at my side, asking me, with her sweet childlike earnestness, to teach her to repeat poetry, or to give expression to her music. The welcome rustle of her dress, the melody of her laugh, will soon become rare sounds to me! Within, around, beyond, all is dark, hopeless, solitary. Life stretches itself wearily before me, blind and desolate as I am! Mother, mother, well might your sweet spirit shrink, as you contemplated this for your miserable son! How strange those last words! I thought of them to-day, while I made her a wreath of roses, and her sisters told me of the numbers that flock around her. Every flower brought its warning and its sting!"

"Edward, have I not made haste? I wished to keep you company, for a little time before we set out. You must be so sad! Your playing told me you were sad, Edward."

She was standing by him in all the pride of her youth and loveliness: her white dress falling in a cloud-like drapery around her graceful form, her sunny hair sweeping her shoulders, and the wreath surmounting a brow on which innocence and truth were impressed by nature's hand.

The sense of her beauty, of an exquisite harmony about her, was clearly perceptible to the blind man; he reverently touched the flowing robe, and placed his hand upon the flowery wreath.

"Will you think of me, dearest, to-night? You carry with you something to remind you of me. When you are courted, worshipped, envied, and hear on every side praises of your beauty, give a passing thought to Edward who lent his little help to its adornment."

"Edward, how can you speak so mockingly? You know that in saying this you render me most miserable."

"Miserable, with roses blooming on your brow, and hope exulting in your heart; when life smiles so brightly on you, and guardian angels seem to hover round your path!"

He spoke in a manner that was unusual to him; she leaned thoughtfully against the piano, and, as if unconscious of what she was doing, disengaged the garland from her hair.

"These poor flowers have no bloom, and this bright life of mine, as you think it, has no enjoyment when I think of you, sad, alone, unhappy, returning to your desolate home, Edward."

"Dearest," he returned, inexpressibly moved, "do not grieve for me. Remember, my mother left her blessing there!"

"Was it only for you, Edward?"

There is a moment's silence; he covers his face with his hands, his lofty, self-denying spirit wrestles with himself; when, gently the wreath is laid upon his knee, her arm is passed around his neck, her head with its glory of golden locks is bowed upon his breast.

"Oh Edward, take the wreath, and with it take myself if I deserve it! Tell me that you are not angry, that you do not despise me for this—I have been so unhappy, I have so long wished to speak to you."

"Mary, Mary, forbear! You try me beyond my strength; beloved of my soul, light of my sightless eyes, dearer to me than language can express, you must not thus throw yourself away."

He would disengage the arm that is clinging to his neck, but she nestles closer still.

"Mary!" he cries wildly, "remember! Blind, blind!"

"Not blind near me—not blind for me. Here, Edward, here my resting-place is found; nothing but death shall separate me from you. I am yours, your friend, your consoler, your wife. Oh, tell me you are glad."

Glad! His previous resolutions, his determination to owe nothing to her pitying love, all faded in the unequal happiness of that hour, nor ever retured to crown the life which Mary's exertion rendered henceforth blessed.

This is no fiction, reader, no exaggerated picture; some, who peruse this, will testify out of the depths of their heart, how, in respect and admiration, they have watched Mary fulfilling the promise of her beautiful sympathy and love. She has never wavered in the path she chose to tread; she has never cast one lingering look at all she resigned in giving herself to him. Joyour, tender, happy, devoted, she has seemed always to regard her husband as the source of all her happiness; and, when the music of children's voices has been heard within their dwelling, not even her motherly love for those dear faces whose sparkling eyes could meet and return her gaze, has ever been known to defraud their father of a thought, or a smile, or the lightest portion of her accustomed care.

No, dear Mary! Years have passed since she laid her wreath on his knee; the roses, so carefully preserved, have long withered; but the truth and love which accompanied the gift, are fresh and bright as then: rendering her, as her proud husband says, almost equal even while on earth, to those Angels among whom, in Heaven, he shall her—SEE her, at last, no longer blind!

CROPS IN SANTA CLARA.—The San Jose Telegraph of Thursday, says: "The recent rains and extreme cold weather that visited us the past week have in the estimation of many, been beneficial to the farmers, by checking the rapid growth of our wheat fields. It is unusual for our Valley to be visited thus roughly by the winds of heaven, at this season of the year. The crops of the Valley are promising, and an abundant yield is anticipated."

[For the California Farmer.]

A Trip to San Jose and New Almaden.

BY H. GIBBONS, M. D.

[CONTINUED]

SEVERAL artesian wells have lately been sunk in the Valley, about a mile west of San Jose. From a depth of 120 feet, copious streams of pure and excellent water flow with considerable force. It is more than probable that water may be found in any part of the Valley, to rise to the surface from the same depth.

Hiring a carriage with fresh horses, we set out for the mines next morning. Heavy showers had fallen in the night, and the clouds continued giving an occasional sprinkle, making the road slippy and unpleasant. After travelling a mile, the track was by the side of a dry water course, about ten rods in width, with a flat, gravelly bed. This is the Guadaloupe Creek, or all that is left of it in the summer. Near its sources in the mountains there is generally a supply of water in its bed. For ten miles we pursued our course, mostly by the side of the dry creek, on a road perfectly level and beautifully shaded with trees. In warm weather this must be a superb ride.

At length we reach the end of the narrow plain or valley, and find ourselves hemmed in by rugged hills on either hand, as well as in advance. Here is the village of New Almaden—the old Almaden, which has given its name to the new, being the location of a celebrated quicksilver mine in Spain. The workmen with their families compose the population of the village. A few of the houses are of brick, and they look neat and comfortable.

Our horses are left at the tavern, and we sally forth afoot. A neat and substantial brick wall surrounds the "works" where the ore is smelted, and the metal packed for transportation. The furnaces with their tall chimneys, and the various buildings, are constructed of good brick, and all have an air of durability and good management. But we will defer a more minute inspection of this department till we shall have seen the mining operations.

The mine is near the summit of the hill, and you reach it by a way of moderate grade, more than a mile long. At the start, our elderly friend B—— hacked out of sight, affrighted by the long ascent and the sticky mud. Before we reached the summit, C—— and myself were almost ready to wish we had followed his example. However, having taken the first step, we were bound to take the last. We met a train of one hundred mules laden with ore in sacks, and driven by Indians. When we had travelled in a heavy, wading gait, for a mile, as we supposed, we stopped one of these men to ask the remaining distance. Like all the civilized Indians in the country, he spoke Spanish, but did not comprehend our tongue. However, taking in the object of our inquiry, he pointed upward, exclaiming, "one mile," which alarming piece of intelligence seemed to embrace all the information he could give us in English. When we asked how far it was back to the works, he pointed down the hill, exclaiming mucho! and up, exclaiming poquito! from which we took great encouragement, inferring of course that *much* was behind, and the *little* before. And so we found it, the next turn of the road bringing us to the entrance of the mine—a horizontal tunnel in which runs an iron railway.

Looking into the black-hole, a few lights were visible, apparently at a short distance, and about as luminous as stars of the fourth magnitude. In we marched for a few rods, without sensibly gaining on the lights, when the rattling of wheels and the cry of "clear the track!" sent us out by long strides. When the cars had emerged with the load, we resumed the dark route, feeling our way along a narrow plank in the middle of the track, on either side of which mud and water were disposed in unknown quantities. On, on, on, there was no end to the dismal tramp. What had appeared but a few yards, stretched out to the fourth of a mile. The candles were about as splendent when we reached them as at a distance. They sufficed, however, to show us several galleries radiating from the end of the tunnel, and numbers of dark figures gliding about like so many imps in the lower regions. One of these approached us. "What you want? go 'bout? see mine?" Supplying us with torches, he led the way down a shaft, inclined about 45 degrees, and winding variously and branching into other galleries. Halting before a child's play house—no, a miniature temple, surmounted by a crucifix with a candle burning before it—our guide gave us an opportunity of being religious; then hurried us onward, upward, downward, sideways, zigzag, till we come to a large apartment in which a score of miners were at work digging out the ore, while others were carrying it off on their backs. Falling in with the troop of carriers, we soon stood at the mouth of a perpendicular shaft, down which they were vanishing, one after another, on a long pole cut with notches for steps. Into this dismal abyss our guide directed our footsteps. But C—— had already got enough information on mining, and shook his head most resolutely against further explorations in that direction. In vain the hombre urged the descent as "mucho bueno." "American women go all about mine—see every thing." Though I was willing to undertake the primitive ladder, C—— was inflexible, and we retraced our steps. It was quite agreeable to emerge from these plutonic shades and again to breathe in sunlight.

The ore is a combination of sulphur and mercury, known as *Cinnabar*. Some of it is as heavy as iron, and contains upwards of 80 per cent. of metallic quicksilver. It is not disposed with any regularity, but exists in veins and pockets, intersecting the rock in every direction. In finding it the miners have no rule, but simply to follow up the veins, or to penetrate the rock until they strike a new pocket. It is so abundantly distributed, however, that they can scarcely go amiss in their operations. This mine was formerly worked by a shaft from the summit of the hill, descending perpendicularly. A great amount of labor is saved by the tunnel.

For many miles in extent the neighboring hills are known to contain the Cinnabar. It is tolerably certain that other localities will sooner or later be opened, which will vie in richness with the present mine. As yet, however, no attempt of the kind has been made, though a company, or companies, have been organized for the purpose.

A Sporting Lady.

A PEDLAR travelling in the wild portions of Delaware and Sullivan counties, in the State of New York, gives the following description of a lady hunter with whom he met:

"The only article of female apparel visible was a close fitting hood upon her head, such as is often worn by deer hunters. Next, an India rubber hunting coat; her neither limbs were encased in a pair of snug fitting corduroy pants, and a pair of India rubber mocassins upon her feet. She had a good-looking rifle upon her shoulder, and a brace of double barrelled pistols in the side pockets of her coat, while a most formidable hunting knife hung suspended by her side. Wishing to witness her skill with the hunting instrument, I commenced bantering her with regard to shooting. She smiled, and said she was as good a shot as was in the woods; and, to convince me, took out her hunting knife and cut a ring about four inches in diameter in a tree, with a white spot in the centre. Then, stepping back thirty yards, and drawing up one of her pistols, put both balls inside the ring. She then, at thirty-five rods from the tree, put a ball from her rifle in the very centre. We soon came to her father's house, and I gladly accepted an invitation to stop there over night. The maiden hunter, instead of sitting down to rest, as most hunters do when they get home, remarked that she had the chores to do. So out she went; fed, watered and stabled a pair of young horses, a yoke of oxen and three cows. She then went to the saw mill, and brought a slab on her shoulder that I should'nt like to have carried; and with an axe and saw, soon worked it into stove wood. Her next business was to change her dress and get tea, which she did in a a manner which would have been creditable to a more scientific cook. After tea, she finished up the usual housework, and then sat down and commenced plying her needle in the most ladylike manner. I ascertained that her mother was quite feeble, and her father confined to the house with rheumatism. The whole family were intelligent, well educated, and communicative. They had moved from Schoharie county into the woods, about three years before, and the father was taken lame the first winter after their arrival, and had not been able to do anything since, and Lucy Ann (as her mother called her,) had taken charge of, ploughed, planted and harvested the farm, learned to chop wood, drive team, and do all the necessary work. Game being plenty, she had learned to use her father's rifle, and spent some of her leisure time in hunting. She had not killed a deer yet, but expressed her determination to kill one before New Year's. She boasted of having killed any quantity of partridges, squirrels, and other small game. After chatting away some time, she brought a violin from a closet, and played some fifteen or twenty tunes, and also sung a few songs, accompanying herself on the violin, that showed she was far from destitute of musical skill. After spending a pleasant evening, we retired. The next morning she was up at four o'clock, and before sunrise had the breakfast out of the way, and all her work out of doors and in the house done, and when I left, a few minutes after sunrise, she had on her hunting suit, and was loading her rifle for another chase after the deer!"

MOUNTAIN ICE.—The Empire County Argus says there are four companies in the vicinity of Georgetown who have great quanties of ice housed, and will soon supply the towns in that vicinity. We were shown some two feet in thickness, taken from the head of Pilot Creek Canal.

San Jose Valley.

WE have passed the last few days in this great Valley, in an examination of the various nurseries, gardens, orchards and vineyards of the many able cultivators, and we have been as much delighted as surprised at the great advance that has been made in two years. We have taken copious notes of each place visited, and shall give them in detail in our succeeding numbers. We have enjoyed much, and have been under many obligations to friends who have conveyed us from place to place, and whose kindly hospitalities were as generous as their attentions were courteous. We have notes of the beautiful mansion of E. O. Crosby, Esq., who with great public interest has improved the main street by planting shade trees, and whose gardens, most tastefully designed by Mr. Low, promise to be very beautiful. In the garden of Judge Daniels we noted many rare and valuable trees and plants, indicating great care and skill in their cultivation. The French gardens, the City gardens, the nursery and grounds of Messrs. Provost & Co., are in fine order. The nursery, garden and stock farm of Dr. Bascom, affords gratifying evidence of the marked success which ever attends personal care and interest in this science. The large and extensive park and gardens of S. Franklin, Esq. of this city, is a splendid farm of nearly a thousand acres, in perfect order; also the famed Stockton Ranch, under the enthusiastic and attentive care of J. F. Kennedy, Esq., where the promise of fruit in coming years would astound any one, and who regaled us with fruit that would surpass the best in many of the markets in the older States.

But in this hurried sketch we cannot do justice; we intend to be minute in our next, and do justice to those cultivators that have accomplished so much that is an honor to themselves, the county and the State. To these friends of Agriculture, for their courtesies to us personally and their interest to the CALIFORNIA FARMER, by a liberal increase to our list, we are most grateful, and will try to deserve more by doing better.

San Jose Agriculture.

IT was our good fortune to be present at the Meeting of the Agriculturists of San Jose, on Saturday last. This meeting was an adjournment of a former one, to conclude the formation of a County Agricultural Society, the doings of which will be found in another column. We were as much surprised as gratified to meet so large a number at this meeting. We counted forty persons present; all, every one interested, and nearly persou becoming members of the Society that day organized, and the means we saw paid in to set the "ball in motion."

In the presiding officer of the meeting we recognized a gentleman who is now one of the vice-presidents of the State Society, H. C. Malone, Esq. We noticed too the able and faithful representatives of the best interests of that great county, W. S. Letcher, Esq.; present and active in advancing the best interests of the Society were Judge Daniels, Judge Divine, J. F. Kennedy, Esq., Dr. Bascom, and many other influential citizens, practical and scientific cultivators, whose presence and active exertions argue well for the future of this Society.

We predict a most prosperous course for this association, and as we have promised to examine the many beautiful cultivated spots, we shall give the details of them in a future number. For the courtesy and kindness manifested to us and to the CALIFORNIA FARMER, we are most grateful, and shall strive to merit all the good that has been so kindly said of us and our efforts. We have been most kindly and courteously received by the friends of Agriculture in this county, and we shall ever gratefully bear it in remembrance. After we have fulfilled our promised visits to this county, we shall say more, for there are materials enough here to write upon for months.

TO CORRESPONDENTS.—We have a large number of communications on hand, which shall appear early. We call attention to the interesting communication from C. L., the "Trip to San Jose," and the letter from Wayne county, Pennsylvania, from a lady correspondent, headed "Claims of California on Women," who has kindred here, and who desires that woman should be duly regarded and occupy a high position in society, and that woman should command that influence by her worth. The letter is a noble one, and we hope to have more like it.

LONE MOUNTAIN CEMETERY.—We call attention to the card of this rural home of the body, and would notify the citizens that the dedication of this place will take place on Tuesday next, at 11 A. M.,—particulars in the daily papers.

Agricultural Meeting in Santa Clara.

SATURDAY May 20 1854.

A meeting of the Agricultural and Horticultural Society of Santa Clara County was held this afternoon at the Court House, to hear the report of the committee appointed to draft a Constitution and By-Laws for the Society, and for other business.

On motion, H. C. Melone was temporarily called to the Chair, and E. P. Reed appointed Secretary.

The committee (through their Chairman, J. F. Kennedy, Esq.) reported a Constitution and By-Laws.

On motion, the same were received and the committee discharged.

Mr. Letcher, of Santa Clara, moved that those wishing to become members of the Society, hand in their names to the Secretary. The motion was carried, and nearly every person present sent up his name.

Wm. M. Stafford, Esq., moved to take up the Constitution and By-Laws by sections, and consider the same. Carried.

The Constitution and By-Laws were then read and unanimously adopted:

CONSTITUTION.

ARTICLE I.

This Society shall be called "The Santa Clara County Agricultural and Horticultural Society."

ARTICLE II.

SECTION 1.—The officers of this Society shall consist of a President, Vice President, Recording Secretary, Corresponding Secretary, Treasurer, and Board of Managers, who shall be elected annually, after the first election, on the third Saturday of September, and shall hold their offices until their successors shall be qualified.

SECTION 2.—The Board of Managers shall consist of seven members; and the President, Vice President, Recording Secretary, Corresponding Secretary, and Treasurer, who shall be *ex officio* members of the Board.

ARTICLE III.

This Society shall meet semi-annually, on the third Saturday of the months of August and February, at the county seat, and fifteen members being present shall constitute a quorum to do business.

ARTICLE IV.

The President shall preside at all meetings of the Society; and of the Board of Managers; shall put all questions, maintain order, and shall sign all orders drawn on the Treasurer.

ARTICLE V.

The Vice President shall preside at all meetings of the Society and Board of Managers in the absence of the President, and shall exercise the same authority, as the President could if personally present.

ARTICLE VI.

The Recording Secretary shall keep correct minutes of all the proceedings of the Society, record the Constitution and By-Laws, preserve a register of the names of the members, and collect and pay over to the Treasurer all monies due to the Society; he shall be responsible for the safe keeping of all the books and papers belonging to the Society, except those of the Treasurer and Corresponding Secretary. He shall certify all accounts and records under the direction of the Board of Managers, and countersign all orders on the Treasurer, when signed by the President. He shall make reports of his accounts at such times as may be required by the Society or Board of Managers. He shall report the name of each member in arrears, to the Society, immediately preceding the election of officers. He shall give the members and Board of Managers proper notice of all meetings. He shall be exempted from serving on committees.

ARTICLE VII.

The Corresponding Secretary shall correspond with such individuals and societies as he or the Board of Managers shall deem expedient; and he shall keep copies of all letters sent, and keep on file all communications received, by the Society, and he shall lay before the Society all communications and correspondence, at each of their stated meetings, and shall make an annual report, of the state of the Society, and of all matters of interest relating thereto, and transmit it to the State Agricultural Society, at its yearly meeting, provided said report be approved by two-thirds of the Managers.

ARTICLE VIII.

The Treasurer shall keep a record of all receipts and disbursements, and report the same semi-annually, or at such periods as the Society or Board of Managers may require. He shall pay no money, without an order, signed by the President, and countersigned by the Recording Secretary. At the expiration of the term of his office, he shall deliver all books, papers, monies, vouchers, &c., into the hands of his successor.

ARTICLE IX.

The Board of Managers shall meet for business quarterly annually, on the third Saturday of the months of July, October, January and April. A majority of the whole Board shall form a quorum, and shall have power to fill all vacancies in their body, and shall have power to call meetings of the Society, and transact any business that they deem beneficial to the Society, and the Agricultural and Horticultural interests of this county.

ARTICLE X.

All necessary books and stationery shall be furnished by the Society, for the Secretaries and Treasurer.

ARTICLE XI.

Every person on admission into this Society, shall pay such dues as shall be prescribed by the By-Laws, and shall be required to sign the Constitution of the Society.

ARTICLE XII.

This Constitution shall not be altered or amended unless such proposed alterations or amendment shall have been read before the Society at one of the stated meetings previous to any action and then it shall require a vote of two-thirds of all the members present to adopt it.

BY LAWS.

SEC. 1.—Any citizen of this county may become a member of this society by signing the constitution and paying an initiation fee of three dollars.

SEC. 2.—Every member shall pay into the society at each stated meeting, the sum of two dollars and fifty cents.

SEC. 3.—All monies after paying the current expenses of the society shall be appropriated for the benefit and advancement of the Agricultural and Horticultural interests of this county.

SEC. 4.—The recording secretary and treasurer shall receive for their services such compensation as the board of managers shall deem adequate.

SEC. 5.—The president shall determine the order of business, and appoint all committees, and fill all vacancies for the meeting.

SEC. 6.—All elections shall be by ballot, and be decided by a plurality of votes and each member present shall be entitled to one vote and no more.

SEC. 7.—No person shall be eligible to hold any office in the society who shall have been unless he has been a member for six months.

SEC. 8.—Any member of the society may be expelled for misconduct by a vote of two-thirds of the members present at any regular meeting of the society.

SEC. 9.—Any motion to alter, amend, or rescind any of these by laws, must be in writing and at a stated meeting; it shall be read, and if seconded, shall be considered as pending and a vote of two-thirds of the members present shall be necessary to adoption.

Mr. O. P. Watson moved to appoint a committee of five to report officers for the society to act at the annual election. The motion was carried and the President appointed O. P. Watson [illegible] Wm. M. Stafford and J. Miller a committee [illegible]

[illegible] Or I. P. Reed
[illegible]
[illegible]
[illegible]
[illegible]
[illegible]

Joseph Aram, Wm. R. Bachelor, Dr. Langhorn, L. Robinson.

On motion, the nominations of the committee were confirmed.

The President elect took the chair.

Mr. Joseph Aram moved that the same committee report the names of seven gentlemen to constitute a Committee on Agriculture, and the names of five gentlemen to constitute a Committee on Horticulture. Carried.

In the absence of the committee, Mr. C. Melone introduced to the consideration of the Farmers of Santa Clara county, the claims of "THE CALIFORNIA FARMER," an Agricultural paper published in San Francisco.

Mr. Letcher also stated the many beneficial effects which would follow its circulation through our valley.

Col. Warren, the publisher of the CALIFORNIA FARMER, being present, was introduced to the meeting by the President, and made an interesting speech, which was listened to with marked attention.

The committee returned with the following report:

Your committee recommend the following gentlemen as a Committee on Agriculture, viz: H. C. Melone, Oliver Cottle, Isaac Bird, J. B. Weller, O. P. Watson, Geo. W. Peck, H. C. Skinner.

On Horticulture—Joseph Aram, J. F. Kennedy, Wm. Daniels, Lewis Prevost, John Morse.

On motion, the recommendation of the committee was adopted.

Mr. Watson moved that Col. Warren be made an honorary member of this society. Carried, unanimously.

Judge Daniels moved that the Society meet again on the second Saturday of June, at 2 o'clock. Carried.

Mr. J. F. Kennedy moved that the Secretary present a copy of the proceedings of this meeting to the Editors of the SAN JOSE TELEGRAPH and CALIFORNIA FARMER, for publication, and also to give notice of the meeting in June. Carried.

H. Divine, Esq., moved that the Secretary be authorized to procure a suitable book in which to transcribe the Constitution, By-Laws, names of members, and proceedings of the Society. Carried.

Mr. Letcher introduced the following:

Resolved, unanimously, That Col. Warren, Editor of the CALIFORNIA FARMER, be, and he is hereby, invited to deliver a lecture on the subject of Agriculture, in this city, on Monday evening next.

The resolution was unanimously adopted, and Messrs. Melone, Stafford and Watson appointed a committee to procure one of the churches, to accomodate those who wish to attend the lecture.

Moved and carried that this Society be appointed a Committee of the Whole to obtain members to this Society.

There being no further business, on motion, the Society adjourned.

E. P. REED,
Recording Secretary.

Gen. Sutter.

WE had the pleasure of taking the hand of our noble Pioneer on Saturday last at San Jose. The General looked and acted with the same spirit of noble and polished courtesy, and tried to conceal from his friends the grief gnawing at his heart-strings. We could see at times the working of sorrow's machinery in the saddened shade that passed over his high forehead at the mention of the past, or hope for the future. How hard to drink a bitter cup—but how much more bitter is the cup if offered by an unfriendly hand; and still more bitter to have the nauseous dregs forced down and know we did not deserve them. Thus with the subject of these remarks.

Gen. Sutter is having a poisoned chalice held to his lips daily and is forced to drink. This bitter cup is the ruin he sees daily creeping over all his prospects. Large portions of his lands have been wrenched from him in various ways, and the repeated delays in his case, now before the Commission, is a source of the deepest sorrow to him and his family. Thousands have been saved from ruin and distress by him; and alas! how few show their appreciation of the good he has done by acts or words even to cheer him on his way.

STRAWBERRIES.—Splendid specimens of strawberries, of the variety somewhat celebrated in the East—"Longworth's Prolific"—were exhibited upon the table at the County Agricultural Meeting at San Jose on Saturday last. A very fine cluster of eight or ten berries are nearly 3 inches in circumference. They were from the gardens of Judge Daniels of San Jose, who very kindly placed them in our hands with a wish that we should enjoy the fruit of the earth. Such a decision from a Judge we could not demur from, and we hope it will be our good fortune always to be "judged" by in this way. We never appeal from such decisions—ever!

"KATE HAYES."—We are sincerely gratified to learn the announcement of this lady for a series of Concerts in the Musical Hall. We trust a true and just appreciation will be given to merit, and [illegible] proof [illegible] the services of [illegible] a dollar.

English and American Gold Mines.

IT is important for us that we should note the actions of nations as well as men—it will give us an insight into the motive power—that inner wheel that accomplishes so much.

The discovery of Gold in Australia has given an impetus to the trade and commerce of Great Britain that has been felt in all her manufacturing commercial and agricultural departments, and has given a vast increase and benefit to former languishing interests. So clearly has this discovery been seen that the British Government have felt called upon to confer honor and title and a rich inheritance on the first discoverer—all this as a reward; yet there is no evidence that this discovery was anything more than accidental. A thousand others have done as much. But mark the difference—the British Government gave to the discoverer one hundred thousand dollars, and other rewards, while we have here in our midst one who was the principal cause of the discovery of Gold in California, upon whose property the gold was found, and one who readily yielded to powers he could not resist, however unequitable was the power; one whose whole life in California has been a series of kind and generous deeds to his fellow-men; and although the discovery of this gold has affected the interests of more people and States of the Union than any interests or causes that have transpired since the landing of the Pilgrim Fathers. And yet the American Congress has taken no notice of the first discoverer—no medal—no token of honor—no rich inheritance has been bestowed upon JOHN A. SUTTER, and now he is suffering, and the country becoming rich. John A. Sutter's mill—John A. Sutter's fort—are in ruins, and fast passing away, and the author of them—the discoverer of gold that has enriched our country needs aid. And shall England be just and generous, and the American Congress the reverse? Forbid it, Truth! We pray this delay of justice may not be a denial of justice, but that a most ample and just decision may soon be announced, and the noble pioneer have the means to pass the few years yet remaining in comfort, peace, and happiness.

Potatoes and Potatoe Starch.

IN our trip through the great valley of San Jose, we could not shut our eyes upon the facts that were so abundant before us, in the immense loss the farmers have sustained in their potatoe crop. Thousands and tens of thousands of bushels lay piled up in the fields, there to lay and grow. Many we saw already had a fine covering of foliage—having commenced growing. For a distance of fifty miles, we saw at short intervals, at nearly every residence, from one or two hundred bushels, to many thousands. Immense quantities also in sacks lay piled up, and growing through the sacks. Farmers gladly give them to those who will cart them off. Such is the feeling of antipathy resulting from an overcrop, and the loss it has occasioned that the very hogs rather turn up their noses at them, and in fact a friend said to us that his hogs would not eat them unless they were boiled.

The result of the immense crop the past year of this prolific vegetable has been ruinous to the prospects of many farmers. The loss occasioned is estimated in millions of bushels. We wish there could be found a way to rescue our farmers from a portion of this heavy loss by converting the potato into some food for animals or man, or some other use, but can think of only one plan that appears at all feasible, and that is Starch—Potato Starch. What the cost would be or how difficult or expensive it might be, we have to others. We only give it as a hint, and ask—Could not the manufacture of starch be made profitable, when the material can be had free of cost? It could not be very expensive to erect a light wooden building for the purpose and the other material could not add much to the cost.

We trust attention may be awakened to this in season to save a portion at least of this immense crop, and if it can be done it should be done quickly.

VOLCANO.—This town is [illegible] in population and importance. We are informed that diggings were never better [illegible] and that the town is [illegible] before. Probably [illegible] than in any other [illegible] Jose Valley. A [illegible] ten the next [illegible] to Carson [illegible]

[illegible]

KILLED BY A BEAR.—We have received the following intelligence from our correspondent at San Luis Obispo:—"It becomes my painful duty to apprise you of the death of one of your subscribers, Dr. J. B. Clements. He rode out last Saturday morning to hunt deer, having just purchased a most superb large double barrel shot gun, large enough as he supposed to kill 'grizzlies'—by using six-shooter balls for buck-shot—but poor man his first trial cost him his life. He had ridden some few miles from home, came to the foot of a mountain, dismounted, and went a short distance up the mountain, along a regular trail made by the passing of game, where it is supposed he met the bear, and a deadly conflict ensued. He body was found this afternoon, (15th) most shockingly mangled: his fine gun lay near by with both barrels empty, and broken off at the breach, having been used, as a last resort, as a club. Never did a community have greater cause for lamentation, a heart-sickening lamentation. The Doctor was universally esteemed, not only as a physician, but as a man of extraordinary good qualities. He leaves a wife and four little boys to mourn his irreparable loss.

"T. J. HARVEY, P. M."

IMPROVING WHEAT.—We noticed many fields of Wheat in San Jose county that were unusually strong in the straw, and giving great promise of an abundant yield. Upon inquiry we learned that it was the practice of several of the cultivators to mow their wheat fields previous to their jointing, and thus throw back the strength into the roots again, retarding the growth for a time. The result would be a more vigorous straw, a bolder, better head, and at the same time an almost entire eradication of weeds, wild mustard and other grasses that would injure the crop, besides giving a fine green or dried crop of *two tons per acre*. We saw many fields thus completely clear of foreign substances, which presented quite a different appearance from those not thus treated. We suggest attention to that mode of treatment.

GOLD FROM THE SIERRAS.—We saw a very nice dish of golden sand from the newly discovered mines in the mountains on our visit to San Jose the present week. We were unable to ascertain the richness of the claim, for we only saw the material as it was washed, and in the hands of a third party. Here was the fact, however—the gold, and from the Sierras. Whether it is in quantities, or whether it will pay, we have not learned—the future will decide.

MUSICAL.—Mrs. Robb, (late Miss Goodenow) made a very successful re-appearance at Sacramento during the last few days. Those present speak very highly of the lady's performance, as also of the other performers. We rejoice at the reception given to this lady at Sacramento and the success attending her efforts.

COLUMBIA has just been incorporated as a Town, and their first election for town officers came off on Tuesday, 17th May.

ON Monday morning, 15th inst., the office of Adams & Co., at Jackson, sent down nine hundred ounces of dust, the result of their Sunday's transactions.

TUNNELLING.—Nearly three years since a number of tunnels were commenced on one of the hills of the dividing ridge between Sutter Creek and Amador. They were worked successfully to the extent of about 100 feet each, when the workmen encountered a fall in the lime rock of about seven feet, where the water came in so strong as to compel the companies to suspend operations, and although they had therefore then paid expenses the works were abandoned. A new company has lately commenced work in one of these tunnels, and have sunk down the seven feet, have stemmed the [illegible] are now reaping the reward of their [illegible] and perseverance.

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, MAY 25, 1854.

The Chinese.

The great numbers of this people that are rushing to this country has excited in the minds of many of our legislators and other citizens a degree of anxiety and alarm which we believe totally uncalled for.

We have had large sums of money expended in legislating against the Chinese—against the coolies, and an excitement has been made, totally unwarranted, and without that reflection on the age we live in, or the spirit and progress of that age. We hear often of their ignorance of our language, our laws, and our institutions,—that they are *low*, debased and selfish, and of no benefit to our State, but, on the contrary, injurious—giving but little to the support of trade or commerce, living by themselves, and gathering as miners the gold, or as traders the wealth of our country, and bearing it away—thus impoverishing during their stay, and depriving us of our resources on leaving. We are told they are particularly criminal and vicious, and, disregarding or not knowing the nature of an oath, they stand in the way of a just execution of our laws, which are made to operate as a check upon just such a class of people as the Chinese are said to be by their opponents.

Admitting that they are far beneath the other races—admitting that their influence for the time being is anything but good—admitting that they drain our State of a portion of our gold, shall we, American citizens, fear that our principles or institutions are to bo undermined or destroyed by the introduction of a few thousand Chinese of debased character and habits?

Shall California be the first to say that foreigners shall not leave those shores where monarchs and despots bear sway, and where ignorance runs riot, and fly to our free land, and live under our free institutions, and receive the benefits that must result to them and to their nations? God forbid! Admitting all the dark picture presented of their *present condition*, we fear no lasting evil—we fear no danger that we cannot guard against. If our institutions are endangered, guard them the stronger. If they will not bear a trial of this kind, they cannot stand.

It has been said the Chinese are more ignorant or more depraved than the African race. Admit all, everything that can be said and yet we fear them not.

We live in a great age—an age of progress, and the Anglo Saxon march is onward, and our institutions are wielding their mighty influence to ameliorate the condition of all, of every nation, kindred, tribe and tongue, upon whom these glorious principles are breathed. Africa, benighted Africa, has felt them, and is rapidly receiving the boon of blessings by the return of the released slave, who bears healing balm in tho education and Christianization he received here. Ireland down-trodden Ireland has felt them, and will be redeemed, and every other nation has felt them, and must feel them still more. And this vast country, destined yet to hold a population of hundreds of millions, has plenty of room for those that God in his good providence knows are best needed here for the future.

It is the age of Progress, and we must legislate and act for the future, as well as the present. California is destined of God to be a vast commonwealth—her cities and seaports must command the wealth and commerce of the World. "The hills and the mountains are full of gold and silver," and hither shall come "men from out of all nations of the earth." The prophet hath spoken it—and shall man resist the decree of the Almighty. "It is hard to kick against the pricks," and those legislators and those citizens who do not examine the signs of the times will find they toil in vain, for they cannot hinder the designs of Providence or the march of progress. California is destined to become a large grower of Cotton, Rice, Tobacco, Sugar, Tea and Coffee, and where shall the laborers be found? Americans will not become the working men on our tnle laud, in our Rice fields and our Cotton plantions and other departments of tho same kind of labor. At tho South, this is the work of the slave, but slavery cannot exist here. California is a Free State—her citizens have spoken it—human progress has uttered it—God has said it. Then where shall laborers be found? The Chinese! And everything tends to this—those great walls of China are to be broken down, and that population, educated, schooled and drilled in the cultivation of these products, are to be to California what the African has been to the South. This is the decree of the Almighty, and man cannot stop it. And not these products alone, but the cultivation of the Mulberry tree, and the manufacture of silks are clearly foreshadowed and will be accomplished. And shall Californians, by a short-sighted policy, retard the operations of Providence? Let reflection take the place of hasty judgment, and a better policy be pursued. If the Chinese come by thousands, make them feel that we have laws that must be obeyed, and institutions that must be inviolate, and for their own good let them see that these great institutions are strong, durable, deathless, and then open our arms and make them feel that it is a free country, where greater blessings can be enjoyed than in any other on the face of the earth. Then shall we be recognizing Providence and human progress, and nations will be redeemed from ignorance and depravity and make good and valuable citizens.

Massachusetts vs. California.

The Secretary of the Board of Agriculture of Massachusetts presents us in his grain tables with the following data, and we present them to our readers in contrast to those of California. The following are the average crops of Massachusetts, as reported to the Board, and with them in contrast the crops, as reported to us by the record at the exhibition of last year.

	Massachusetts.	California.
Barley, per acre	21 bush	60 bush
Wheat	17½	50
Oats	30	45
Rye	14½	40
Carrots	700	1500
Beets	800	1500
Ruta Baga	500	1000
Mangel Wurtzel	800	1500
Onions	400	600
Potatoes	150	250

In many cases the crops of Barley in this State upon entire ranchos will average 75 bushels, and those of Wheat 60 bushels. Potatoes, in many instances, yield 300 to 350 bushels in large fields. In some cases that have come to our knowledge, the yield of root crops has been 25 and 30 tons to the acre, and Onions have yielded ten or twelve tons to the acre, and even sixteen tons have been grown.

Will farmers please make record and report to us? It must be borne in mind that our systems of farming are yet in infancy, and in some cases reported the cultivation was very imperfect, while in Massachusetts there is no excuse for want of success.

Extract from our Correspondent C. L.

"I think, as far as my observation extends, and I have taken considerable pains to make inquiry, that in the northern section of this State, there is about an equal number of acres sown with Wheat and Barley; and I find but very few persons intend to cut Hay this year. That article will, in my opinion, command a good price this coming winter. Much attention is being given to the cultivation of Fruit Trees and the Vine, and I have seen no instance where they did not seem to thrive."

Cabbages.—A correspondent of the Horticulturist says:—It may not be generally known that cabbages readily grow and are easily propagated by slips. A stump may be put out in the spring and the sprouts as they vegetate cut off, the cut allowed to dry, and then planted. When cabbages or cauliflowers throw off side shoots, they may be used in the same way. Cabbages thus raised have short stalks, and are sure of being true to the parent. I have often pursued this method when short of seed.

Heavy Sheep.—A London Correspondent of the National Intelligencer says he had heard much of the great weight to which sheep are sometimes fed in England, and his belief was really staggered by some of the reports; but he saw in one butcher's shop four sheep, which had been raised and fed in Gloucestershire, whose weight when slaughtered and dressed for sale as mutton was 250, 245, 216, and 197 pounds respectively. A shoulder, cut fairly from the largest, weighed 42 1-2 pounds. Two Lincolnshire sheep in the same shop weighed 216 and 201 pounds respectively.

Elastic Horse Shoe.—We are glad to find that the inventive genius of the day has been exercised for the direct benefit of the animal of all others the most worthy of such regard. Mr. J. O. Jones has invented and patented, and is now manufacturing in this city, an Elastic Horse Shoe, which is regarded by those who have seen and used it as an effectual preventivo for all the troubles to the feet of the horse which are caused by constant concussion upon stone pavements and hard roads. The shoe is made of German spring steel, with India rubber inserted in the heels to give it elasticity.—*Traveller.*

[For the California Farmer.]

Notes by the Way.

BY C. L.

One would think Grass Valley, from its name, to be a very pretty place, and as we approach the place over a rough road and craggy hills, many a vision of pleasant dales and their blooming flowers present themselves to "our mind's eye;" but these soon vanish, when we find ourselves in the midst of a busy little village surrounded by hills, upon whose sides may be seen the eager miner, toiling away with his pick, while from their summits the huge pine stretches its evergreen top aloft towards the clear blue sky, the buzard of the mill saws and clamping of the quartz crushers tells us that the inhabitants are moved by the same impulse which governs most of the human family, striving to get rich, and some of them with good success too, and do you doubt this, visit the mill of the Gold Hill Co., examine the quartz rock and look at that lump of gold just taken from the retort, and you will soon be convinced of the truth of it. But there is now and then a little cot, whose well laid grounds and the air of pleasantness with which it is surrounded, denote that its owner appreciates, somewhat, "natures beauties," and applies some pains and labor to develope them. Most conspicuous among these I noticed that of the far famed Lola Montes, who, having retired from the gaze of that public who seemed not to appreciate her talent, has surrounded her self with a forest of plants and shrubbery, and, like a sensible woman, is devoting her attention to their cultivation.

Here too dwells "Old Block," whose chips are so familiar to every person in the country; but do not think that he looks as unpromising as the engraving in that book would make him, and let me assure you that you cannot spend an hour more pleasantly than in his company—"may his shadow never be less." Nevada and Rough and Ready are both mining towns, and but little attention is paid to Agricultural pursuits in either of them, for a farm in a mining locality is ever open to invasion by the miner; and here I might state that I have frequently noticed how little respect is shown in this State, but more particularly in our mining districts, to the habitation of the dead, and I have sometimes observed graves dug about and almost laid bare by the miner in his seach for gold. Is there no remedy for this? Is the grave sacred? Shall it remain undesecrated? When death with his cold finger has touched this frail body of ours and sent it to that bourne from whence no traveller returns, and the soul, obedient to the decree which the Almighty command has given, has winged its way to him that give it; when the tear of sorrow has been shed, and aching hearts bursting with grief have followed the remains of what was once dear to its final resting place, and the damp earth has closed over the form of that we loved—we have been wont to consider that as a sacred spot, to scatter flowers over it, and erect there a marble tablet to mark the place. The wanderer, when after years of absence, he returns once more to home and friends, and finds one seat vacant in the family circle, what impulse moves him? Whither does he first turn his steps? 'Tis to the grave. True that form is no longer animate with life, the eye is closed and ear deaf. That heart that once beat within cannot return our sorrowful burst of affection, yet perchance its soul hovers near, and smiles upon our mournful grief. Did you ever behold a mother as she closed with her fingers the ssightlessorbs of her child, kissed the pallid lips that once drew their life from her breast, and watched her as day after day she visited the grave of her infant? Was not that sacred ground? Father, mother, sister and brother, when their journey upon earth is over, and we have placed them in that receptacle for all the living, do we not tread lightly over their ashes, plant the cypress and rear the granite monument to their memory. The old church yard and its young grassy mounds, how distinct are our youthful recollections of them, as we gazed each Sabbath from its ivy clad windows, perchance upon some new made grave, and castiug our eyes upon the venerable and aged ones who were listening to the voice of their pastor, wondered which of them should be taken next, never realizing in our childish simplicity that the young as well as the old must die, and what boy was there amongus with heart so bold as to run over those little hillocks with their pulseless tenants, or indulge in a merry jest or boisterous laugh within that sacred enclosure. Ah! reader, a mother was lain there: my young soul had already tasted the bitter cup, and one of those whitened slabs marked tho hallowed spot to the orphan. Years have since fled, but is not that sacred ground? The old church bell in its lofty spire, how often have we counted the strokes of its iron tongue, as it tolled the dirge of some departed one, and paused as it marked our own age, then breathed more freely as it continued to announce its deathly message, or listened to its mournful peals as it marked the funeral tread of those who were paying the last sad tribute to departed earth. All these associations, is not the grave a sacred spot? We were taught thus in our fatherland, but in California it is not so. Where are our cemeteries with their sculptured marble, to perpetuate the memory of the departed—shaded walks which almost rob death of half its terrors—for deep drooping willows that seem ever in silence to weep for those who rest beneath? Where the more quiet kirk-yard of the country village with its plain white fence and simple urn to show that the dead can rest in quiet there? It is not enough that far from home and friends the weary mortal draws his fleeting breath with no kind hand near to close his eyes, or catch the last whisper that breathes from his lips; but when the dark valley is passed, and some kind friend seeks to find the spot where he lies. 'Tis often in rain he does so, and there is nought to distinguish it from those about.

We hope that our citizens will look to this, and if it be too much trouble to place some little slab to tell who rests beneath, they will at least try and keep the ground hallowed, that its slumbering tenants may rest undisturbed until the summons shall be given to awake them.

[For the California Farmer.]

Claims of California on Women.

Ma. Editor—A part of the people of the Eastern States are averse to sending the best women to California. This is a fatal wrong. The very best material only should be used for the foundations of an empire. What do the weather beaten sons do without woman's affection to solace them? Give them freely. Let government provide a free passage for starving seamstresses, if they cannot go themselves. Let the States awako to this matter. Who are filling their pockets with the price of blood in the shape of gold? Filthy lucre is stark naught compared with rising blessedness of field and fireside where the heart—the home—the heaven of happy humanity is sweetly cultured and blessed of the Most High. Give settlers a chance and keep the gold there. America has subserved European aristocracy long enough. Let her now feed republican dignity and greatness, and feed and foster their own blessed manhood. But for the wealth derived from American industry, Europe would have dwindled to insignificance long ere this. Let women be induced to seek a settlement in California. The same God—the same sun—loves and lights tho pathway there as here. Women, good and true, can endure more than men. Let them go. *

Season for Pruning Fruit Trees.—Much has been said and written by orchardists, in regard to the best season for pruning apple trees. One writer recommends doing it just as the frost is leaving the ground in the Spring, and before the buds burst; some, while the trees are in bloom or very soon after, whilst others contend that Fall or Winter is decidedly preferable. From more than forty years observation, I have become fully satisfied that no season of the year is so objectionable as the Spring, when the buds are expanding; the sap, thin and in full flow, the loss as it oozes out is quite injurious, and causing the wounds to assume a dark unhealthy appearance, which is an unmistakable omen of decay.

Each season has its advantages as well as disadvantages, but none is preferable, in my estimation, to Summer, when the days are the longest; the sap then is not so thin and watery as in the Spring, consequently less liable to bleed, and tho wounds heal much more rapidly. I am of opinion that very light pruning is decidedly preferable to heavy for the health of the tree, and even none at all I should prefer, rather than to kill trees by inches, as too many do by heavy pruning. But let pruning be done when it may, I think much benefit is derived from applying a coating of cement to the wound to exclude the air and prevent its cracking. I have tried various kinds, and find nothing more economical than to melt four lbs. of rosin in one pint of linseed oil, and apply warm, with an old, moderately stiff paint brush.—*T. Tabor in Boston Cultivator.*

Keeping Quinces.—A new fact of domestic economy has been communicated to us by Mrs. B. Shurtleff, of Chelsea. At the usual time of gathering quinces, they were put into barrels, the barrels filled with water and placed in a cellar. A few days since they were opened, and the quinces found perfectly sound—not one had decayed in the least. We are indebted to Mrs. Shurtleff for a specimen of the fruit which has thus been kept through the winter, and had just been prepared with sugar in the usual way. It has the aroma, peculiar flavor, and all the qualities of fresh quince. From Mrs. S.'s experiment, we should think this mode of keeping quinces an important desideratum.—*Boston Cultivator.*

Prairie Ramblings.

[illegible] of a week in the busy city had subsided, the week had closed and with it [illegible] of a day's [illegible] on the bay of [illegible]. The sun had gone down behind the lofty oaks upon the distant prairie, gilding their tops with its departing ray; a mass of golden clouds brightened the western horizon—the upper edge gleaming with a fringe-like drapery of crimson cloud that let the last light of day through them in silvery beauty till it darkened in twilight rays.

The stars came bursting one by one from out their blue home above, and the entire arch was hung with diamond drops. Soon the moon lifted herself, like some stately queen, from her bed in the distant ocean, and shed over this magic city her bright silvery light, until the beautiful stars shrunk back into their blue vault again, as if afraid of her brightness.

I wandered forth musingly. The scene was delightful; all was still; the air was mild and balmy; there was a bright beauty at this hour that tempted me to wander more. My mind went forth to the far-off prairie, where the wild flowers revelled in Nature's lap, and where their fragrant odors are sent forth with a free and lavish hand.

Yielding to my inclinations, I mounted my steed and rode forth with a heart free and happy. There was no sorrow in that heart, save that which memory gave as it called up the features of those my soul treasured, that were "far away," and can there be a more fitting time for the soul to commune with those it loves than the calm and holy twilight hour?

My steed caught the inspiration of his rider, and sallied forth gaily—needing neither whip nor spur. There seemed to be a sympathy between the horse and rider, for he moved over the blooming prairie in perfect keeping with the glorious beauty that surrounded us, snuffing up the breeze and leaping on as he passed the shady glen, and then quietly prancing upon the flowery path as he emerged into the moonlight again. I had left the busy hum of the city far behind; the broad and beautiful prairie lay outstretched before me. As I looked back to the distant city, it seemed more like a fairy land, inhabited by spirits, than the abodes of the rough and money-getting creatures called men. I neared the banks of American river, and as the rapid stream rushed on, the trees upon its banks bowed to kiss the rippling waves as they dashed by on their course to the ocean.

There was a music in the waters—such music as is only heard when the better nature of man is living, and he recognizes the good, true and beautiful around him. Every ripple of the waters seemed a musical chord—the tide sweeping over its rocky bed made a melody truly refreshing. The moon was so bright that the birds awoke and began their songs again—the rabbit and hare left their burrows and played in the path; animals and birds were merry, believing the god of day had risen—so bright seemed Luna tonight. Never, never, was a scene more temptingly beautiful. The mighty oaks, that stood upon the plains as far as the eye could reach, were reflected in brightness, like fountains in some princely garden and the bright lawn before me seemed but the park that adorns such gardens, where "fountains cool the heated air." On and on I rode—now across the broad prairie, and now upon the river's bank—now plunging into the deep ravine, and anon up the mountain side, until I stood high up overlooking many miles around. It is upon such a night as this, and upon such a place, that spirits are abroad and hold communions, and methought I could feel their influence over me for good

> "There are moments, I think, when the spirit receives
> Whole volumes of thought on its unwritten leaves—
> When the folds of the heart in a moment unclose,
> Like the innermost leaves round the heart of a rose."

Thus thought I, and my own spirit went far off to my native home, and revelled amid its kindred—kindred by blood, and kindred in spirit too. Thoughts came thick and fast, and in an hour I had lived over again many years of my life, and recalled many of its dearest reminiscences.

I had ridden near twenty miles along the banks of the American River, and amid scenery that surpasses the much-lauded scenes of the older countries—scenery that is most wondrously beautiful—but alas! the beauties that nature offers us so lavishly are neglected and cast aside too often, unless we could, like Aladdin, by a touch convert them into Gold! When shall men cease to grasp at the shadow and lose the substance?

A little latticed I halted, that both horse and rider might be refreshed. A pleasant cottage on the roadside invited me, and, upon entering, I found myself in a pleasant "boudoir of a room." As I cast my eyes around, I remembered in months gone by one whose presence at this place gave it a charm, and whose cheerful welcome and accomplished demeanor betokened a mind and heart far above the associations of the place and time. But the [illegible] gone, and the place was no longer the same. I had been robbed of its truest [illegible] and after a brief rest I was [illegible] in the saddle, and speedily rapidly o'er the plain and up the [illegible] I reached my [illegible]

This [illegible] Words are too feeble to [illegible] the beauties of this vast [illegible] and the emotions that stir the [illegible] heart. Nature [illegible] to prepare for the [illegible] and [illegible] and [illegible] Spirit [illegible] and [illegible] and [illegible] and

The Grass Valley Telegraph has the following interesting article on the Grasses of California, the information contained in which has been communicated to the editor by Dr. Cleveland: There are ten distinct varieties of grasses, all of which, save one, (blue grass, brought from Missouri in '50), were taken from the ranch of J. B. Underwood, Esq., two miles from Grass Valley. They all exhibit thrift of high perfection in their growth, while the majority of them, by their limited culm and vast blades are distinguished as among the most nutricient and desirable species known.

We enumerate them in the order of their value:—1st. Blue-Grass; 2d. Bunch; 3d. California Timothy; 4th. Heavy Top; 5th. California Blue; 6th. Swamp; 7th. Rat-tail; 8th. Tickle, similar to this well known variety in the Western States; 9th. Wire; 10th. File. The Blue grass upon which are reared the noble cattle and fine steeds of Kentucky, succeeds most admirably on the farm of Mr. Underwood. Some eighteen months since he sowed a small quantity of seed about the numerous springs which burst from the foot of the mountain where his lands lie, and it is mingling miscellaneously with the Creole graminæ, above which its blue tops are seen waving in triumphant luxuriousness, and true American-like, bids fair to crowd out every indigenious variety.

With the grasses, the Doctor exhibited to us, forty-three stalks of Black-Rye, growing from one seed, all flourishing and of fine size, likewise, a species of clover, entirely new, which, from its very offensive odor is christened Carlon. This, Mr. U. thinks will prove a fine fertilizer; it attains to more than a foot in height, its bloom is charming, which verifies the adage "trust not too much to color," it fails, as the clovers of the Western States, to exhaust by salivation, and most grateful to the taste—the fattening herds revel in its luxuriousness. The Botany of the mountains is mostly new and novel, and we trust that its supreme beauty and meritorious character will ere long give it a place within the pale of science.

Quartz.—The quartz vein lately discovered at Cherokee Flat, and which created so much excitement at the time, has lately been closed. This arises, we understand, solely from an arrangement among the shareholders, and not because the vein has ceased to be productive.

We take the following humorous paragraph from the Jackson Sentinel of May 17: "It is ludicrous to witness the thorough contempt with which our shirtless Indians regard the Chinamen. They consider them the lowest species of anything human, and insult and abuse them at every opportunity. One Indian has no hesitation in elbowing through a crowd of Celestials, knocking them right and left, pulling their tails, and treating them with every sort of indignity. It would seem that they are pleased to find themselves not quite the lowest in the scale of humanity, and we think if there can be any comparison between the dirty digger Indians and the sweet-scented sons of the Flowery Kingdom, that the advantage is all on the side of the former. The arrival in town of a hand-organ and a monkey, is the occasion of much sport to the Indians, who style the monkey "the little Chinaman."

A Nut for Geologists.—A correspondent of the Empire County Argus says that while tunneling in Mamaluke Hill, the rafters of a building were found in a perfect state of preservation, one hundred and fifteen feet below the surface.

A Premium---Farmers' Clubs.

With the hope of inducing such of our friends, and those who have a little leisure, to ride among their neighbors and introduce an Agricultural Paper, we take pleasure in offering the CALIFORNIA FARMER: and, to make it an inducement, we say to such friends—if you will get us five subscribers, and remit the amount, we will send you six papers, or for ten subscribers, twelve papers. We trust there are many friends who will cheerfully take a little pains to aid us, and thus extend the circulation of the Farmer, and make a useful vehicle for the Agriculture of California.

Subscribers will please be particular to name the Post Office to which papers are to be sent; or, if forwarded by express, which line they prefer.

Weekly Summary of News.

UNITED STATES.

By the arrival of the P. M. S. S. Co.'s steamer J. L. Stephens on the 18th, we have Attaulle papers to the 20th of April..... The most important news is the rejection of the Gadsden treaty in the Senate by a vote of twenty-six to eighteen.....The New York papers contain an account of an unusual number of marine disasters that have occurred on the coast. The Times says: Intense excitement has prevailed during the past forty-eight hours among the shipping merchants of this city, with reference to the reports of shipwrecks on the coast, attended with terrible loss of life. The vessels are supposed to be the emigrant packets Humboldt, from Havre, and Powhattan, from Liverpool—both wrecked on Absecom Beach, N. J. Up to the afternoon of the 19th, fifty-eight bodies had been washed ashore. The Powhattan had about 200 emigrants on board, and not a soul was saved, nor does a vestige of the wreck remain.....D. W. Van Aeruum, the forger, has been surrendered to the British Government, under the Extradition Treaty.....The Cochituate Bank, Boston, had suspended payment, owing to the failure of one of its officers, who is largely interested in iron manufacturing. He is said to owe the Bank $100,000. The liabilities of the Bank, exclusive of capital, is $362,000.....New Orleans papers state that the bark Grape Shot, from New York city, with George Law's muskets on board, is lying at the mouth of the Mississippi. The Spanish Consul has despatched intelligence of her arrival to Havana.....The trial of the brothers Ward, charged with the murder of Professor Rutler, was commenced on the 17th at Elizabethtown. About 150 witnesses have been summoned, among whom are Secretary Guthrie and Col. Preston, member of Congress.....The Charleston Courier says that in addition to the fine of $6,000, the consignees of the steamship Black Warrior had paid $3,000 as back dues.....The Anti-slavery Convention, in session at Cincinnati, adjourned on the 14th, sine die.....The Pennsylvania Legislature has finally passed the bill to sell the public works of the Commonwealth for $10,000,000, and it is now before the Governor for his signature. The bill also charters a company, to be composed of the purchasers of the Canals and Columbia Railroad, to conduct these works under certain prescribed regulations. The original cost of the whole line from Philadelphia to Pittsburg was about $30,000,000. They have never been very profitably managed by the State Canal Commissioners, although the annual gross revenues have been liberal.....On Saturday, the 15th April, the Crystal Palace was temporarily closed; until such arrangements can be made for its re-opening as shall secure the objects aimed at in its reorganization. The subscriptions to the $100,000 fund have now reached the sum of $87,270.....Mr. Lane, the delegate from Oregon, had introduced a bill to authorize the people of that territory to form a Constitution and State Government preparatory to admission into the Union as a State. The bill was referred to the Committee on Territories.....There are about sixty divorce cases pending before the Supreme Court of the little State of Rhode Island.....The new steamer Metropolis, for the Fall River route, was about ready for launching, at Green Point. She is the largest steamer ever built, being 350 feet long, 45 feet beam, and 15 feet hold. She is timbered up to the level of her staterm oom door, and is thus in reality 25 feet hold.

THE WAR.

The U. S. steamer Hermann, at New York, brought the news so long expected, of the declaration of war by England and France against Russia. Hon. Capt. Blackwood, the Cabinet courier who was charged to deliver the British ultimatum to the Czar, returned to London on the 25th ult. He arrived at St. Petersburg on the 13th, and delivered his message. The Emperor had left the capital for Helsinfors, in Finland, after he became acquainted with the nature of the summons, and before the arrival of the courier who was the bearer of it. Count Nesselrode, however, was instructed to inform the Consuls of England and France as to the summons to evacuate the principalities that no answer would be returned. In consequence of this the Earl of Aberdeen in the House of Lords, and Lord John Russell in the House of Commons, brought down a message on the 27th ult. from the Queen, announcing the failure of negociations carried on by Her Majesty, in concert with her allies, with the Emperor of Russia, and the consequent necessity of adopting other measures to repress unprovoked aggression on the dominions of a friendly power. Some further papers, Her Majesty said, should be laid before the house, and she expressed her assurance that, no endeavors having been spared to maintain peace, she relied upon the loyalty of her subjects and the bravery of her army and navy under the emergency which the non-fulfilment of her just expectations had occasioned. The London Gazette of the 28th contained the official declaration of war.....Proceedings of a similar nature had taken place in the French Legislature, almost at the same moment—the Minister of State having read to the Corps Legislatif in the name of the Emperor, a message announcing that the final resolve of the Cabinet of St. Petersburg had placed Russia in a state of war with France. The Emperor also declared that the whole responsibility of the rupture rested on the Emperor of Russia. The Emperor went on to say that he relied on the Legislative body and the country during the present grave emergency..... War having now been declared both by England and France, the preparations for hostilities were being hastened by the British Government. It has been finally decided to send the entire British cavalry force, destined for the East, through France,—embarking for the Mediterranean at Marseilles.....A division of the British fleet—25 strong—passed the Great Belt on the morning of the 25th ult.....A despatch of the 5th March, from Odessa, states that a division of the Russian fleet had just left Sebastopol with the object of provisioning and reinforcing the the Russian forts on the Circassian coast.....The Cunard screw steamer Teneriffe sailed from Liverpool on the 18th for Malta, and the Cambria, from Kingston, sailed on the same day—both with troops.....The Convention between Turkey, England and France has been published. It embraces five articles, as follows: 1. England and France engage to support Turkey by force of arms until the conclusion of a peace that shall secure the independence and integrity of the Sultan's dominions. 2. The Porte shall not conclude peace without the consent of her allies. 3. The allies shall evacuate the Turkish Territories after the war. 4. This treaty to remain open for the adhesion of other Powers of Europe. 5. Turkey guarantees to the subjects of the Porte, without distinction of creed, perfect equality in law. Several protocols are attached, regulating the details..... It is confirmed that the Russians have crossed the Danube in great force, the object being to strike a decisive blow before the arrival of the Anglo-French force. On the 23d of March, the Russian detachment, under Prince Gortschakoff, forced the passage of the Danube above Tulkea, and captured 11 guns and 2007 prisoners, and occupied Tulkea together with several forts on the right bank. Gen. Ludors crossed with the main body of the army from Galatz without much loss. Not less than 50,000 Russians are now on the Turkish side of the Danube. On the 24th, Gen. Luders began preparations for the siege of Matschin.....On the 25th, the Russians attempted to cross the Danube at Olteuitza, when a desperate battle ensued, *and the Russians were repulsed with dreadful carnage.* The Russians lost 3000 men, and the Turks themselves were so badly cut up that had to retire to their entrenchments.....The Russians were making stern preparations for hostilities in the Baltic. All the lighthouses and buoys are removed, and formidable fleets of gunboats are collected in shallow waters at the principal points. Masses of rock are dragged along the ice to intricate parts of the channel, to block it when the ice shall melt. All the houses in Cronstadt not capable of defence were pulled down. New batteries were erecting everywhere, and 200 additional gunboats had been ordered forthwith. The Czar and his sons were personally superintending the preparations.....Great enthusiasm was manifested at Malta between the English and French troops there assembled. Being the first time that the soldiers of the two nations have ever stood together in friendship, they vied with each other in tokens of cordiality. Even the musicians had fraternized—the bands of the English performing the air of "*Pariant pour la Syrie,*" and the French playing "God save the Queen."

ITALY.

The Duke of Parma had been assassinated, and the Duchess appointed Regent during her son's minority. The Italian papers give the most contradictory accounts as to the circumstances of the Duke's death. One paper relates circumstantially that he was stabbed by a soldier whom he kicked for not showing him proper respect. Another says the assassin was an officer whose sister the Duke had spoken lightly of. And a correspondent of the London Press states that the assassination was perpetrated in open day, by a man wrapped in a cloak, who stabbed the Duke in the stomach, and who escaped, though pursued by an aidecamp. The Duke was conveyed to the Palace, where he expired in a few hours. If we may believe all stories, his character was infamous.

AUSTRIA.

Although Austria continues to refrain from any action that can be construed into committing herself to either side, it is asserted that the passage of the Danube by the Russians has given her a much greater inclination to side with the Western Powers.....The Austrian Bank had declined the proposition to make advances to the Government on the State domain.

MEXICO.

By the J. L. Stephens we learn that Santa Anna has withdrawn his invading from Acapulco without carrying out his promise to take the castle at all hazards. His Serene Highness offered Gen. Alvarez $100,000, a general's commission, and free pardon to all his revolutionary associates, which had no avail, and Santa determined to make his way off on the Carolina. His officers, however, preferred to take him along with them, and the evacuation took place on the night of April 25th. The troops of Alvarez went in pursuit of the enemy on the 26th cutting off great numbers of men and horses, and—according to their own account—driving Santa Anna before them, so that he reached Chilpancingo with only one thousand of his brave army. Gen. Alvarez wrote back that the river Papacallo ran red with the blood of the dead and wounded. True Mexican gasconade!.....Acapulco has been declared free to whalers, and the tariff has been reduced to that of "Cuvallos."....A detachment of Government troops, accompanied by several staff officers, and having in charge a small convoy of silver, fell into an ambuscade of the revolutionists of the South, led by Villalba, near the Mescala, and were entirely routed.....The Indians continued their ravages all along the frontier of Durango, and appear to manage things pretty much their own way. It is probable this will continue until a frontier is established peopled by a different race.....It is calculated that under the new decree the Mexican army will consist of 16,000 troops of the line and 30,000 active militia.

THE CITY.

We clip the following funny-looking thing from the Times and Transcript, for the benefit of whom it may concern:

KNOW NOTHINGS.

**—* *—y* x — = st—we don't know—W. H.—Wednesday, P. section. By order— Scribum—

SIERRA.

....The Chronicle says: The most fiendlike murder ever perpetrated in California has been committed in our city. We will be brief with the facts. A Mexican woman named Antonia, living in an alley leading from Dupont street, between Jackson and Pacific streets, was called upon Saturday night by a countryman of hers, who told her that if she would go with him she would receive a letter from her son. The woman locked up her house and went with him. On Sunday morning the persons occupying the adjacent room found Antonia's trunks in the alley, rifled. After considerable search, her body was found in an unoccupied house in Union street; her hands and feet were tied, and a rope had been wound several times around her neck. The neighbors say that the woman possessed in considerable sum of money, and much valuable jewelry, all of which is missing. The rings had been taken from her fingers, and from her ears. Leon Cervantes, the supposed murderer, was arrested on Tuesday, and is being examined as we go to press. He had on his person twenty-three hundred and eighty dollars.....On Saturday forenoon, the dwelling house of George De Gear, on Jackson street, near the corner of Mason street, fell. The street is being graded, and the house was insufficiently propped. An infant was carried down in the falling house, and was afterward found safely lying in its cot.....Last Friday night several apartments of the International hotel were entered and robbed of money to the amount of some hundreds of dollars, besides half a dozen watches, and other property.....Numa Hubert, of the Assembly, and George T. Hunt, attorney at law, engaged in a duel on Sunday, near the Pioneer Race Course. The weapons used were pistols; distance 12 paces. At the third fire Mr. Hunt fell mortally wounded. His antagonist's ball had entered the right side beneath the ribs, and lodged near the spine. He died at five o'clock the same evening. An inquest was held and a verdict returned that "deceased came to his death from the effects of a pistol shot wound received from a weapon in the hands of a man named Hubert, the same being done with intent to take the life of the deceased." The morning press takes especial pains to inform Hubert that a warrant has been issued for his arrest, and that it probably will not be served for some time!.....Ten 32-pounders have been mounted at Fort Point—four on the water battery and six on the top of the hill. Two hundred and fifty men are at work on the improvements in that vicinity.....The room of Mr. J. Freeman, No. 77 Kearney street was entered on Sunday night and robbed of a gold watch and $75 in money. The watch was under his pillow.....Recorder Baker has consented to recall his resignation. Rogues at large will again tremble in their shoes.....On Thursday afternoon, the members of the Volunteer Engine Co. were out in full force for the purpose of trying their engine for the last time. They proceeded to the Plaza, and drafted and played through 200 feet of hose—throwing water about forty feet over the flag staff. The Sun expresses its regret at losing "one of the best disciplined companies in the city."

MARRIED.

On the 21st May, in this city, by Rev. S. H. Willey, Mr. A. B. Rowley and Miss Angeline A. Herring, all of this city.

On the 17th May, by Rev. B. Brierly, Benj. H. Reed, Esq., and Mrs. Betsy N. Hull, both of this city.

Notice.—Lono Mountain Cemetery

THE Grounds of the Cemetery being now enclosed and about 20 acres of avenues opened and graded, and a temporary macadamized carriage road opened from the Presidio, through the government reserve, the proprietors take pleasure in announcing that on and after Thursday, May 4, the grounds will be open for the inspection of the public, until on or about the 20th inst., when they will be dedicated to the purposes intended, of which due notice will be given. The avenues are in course of construction for light carriages, and many now in progress of macadamization. The principal entrance is to be on the line of Buchanan street, when extended, which road it is intended to have opened during the present summer. For further information, inquire of the Superintendent, at 110 Montgomery street.
21 E. BLAKSTAN, NATH'L GRAY, W. H. RANLETT.

TRADE AND SPADE.

BY CHARLES MACKAY.

Between two friends in days of old
A bitter strife began,
And Father Spade with Brother Trade
Disputed man to man.
"You're vain, undutiful and proud,"
Said Spade with flashing eyes,
"You earn your thousands while I starve;
You mock my children's cries:
You ride in state with lordly looks;
You dwell in bower and hall;
You speak of me reproachfully;
And honor in my fall.
So from this hour, in shine or shower,
We'll learn to live apart;
I ruled the earth ere you were born,
I cast you from my heart."

And Trade lost temper in his pride;
He uttered words of scorn;
"You do not know the ways of men,
Amid your sheep and corn;
You doze away the busy day,
Nor think how minutes run;
Go put your shoulder to the work,
And do as I have done.
You've all the earth to yield your wealth—
Both corn and pasture land;
I only ask a counting house,
And room whereon to stand.
And from this hour in shine or shower,
We'll learn to live alone;
I'll do without you well enough—
The world shall be my own!"

And thus they wrangled night and day,
Unfair, like angry men,
Till things went wrong between them both,
And would not right again.
But growing wiser in distress,
Each grasped the other's hand;
"'Twas wrong," said Spade, "to rail at Trade;
He loves me in the land,"
And Trade as freely owned his fault;
"I've been unjust," he said,
"To quarrel with the good old man,
Who grows my daily bread.
Long may we flourish, Trade and Spade,
In city and in plain!
The people starve while we dispute—
We must not part again."

And all the people sang for joy,
To see their good accord,
While Spade assembled all his sons
And piled his plenteous board.
He fed them on the best of fare,
Untaxed the foaming ale,
And prayed in England's happy shore,
That Trade may never fail;
And busy Trade sent fleets of ships
To every sea and strand,
And built his mills and factories
O'er all the prospecting land.
And so we'll sing God save the Queen!
And long may brother Spade,
And the sake of both the rich and poor,
Unite with brother Trade.

TO THE BABY.

BY FRANK FORTUNATUS.

Crow, kick and stretch, baby!
Though crowing be a *foul* offence,
It cannot touch thine innocence—
And though thy tiny, unskilled ear,
(Like that of noisy chanticleer)
No knowledge hath of time or tune
At present, it will alter soon,
And you may try a higher strain;
But till such time, I say again,
Crow, kick and stretch, baby!

Crow, kick and stretch, baby!
Though kicking may not be genteel,
Except in polka, jig, or reel,
Thou canst not yet essay to dance
The latest hop brought o'er from France;
And so thy feet should privileged be
To kick the air right merrily.
Till thou has learned the power of song,
And thy young limbs are lithe and strong,
Crow, kick and stretch, baby!

Crow, kick and stretch, baby!
Stretching was e'er the wisest plan
For helpless babe or grown up man:
Man, shrinking 'neath the frown of care,
Should stretch, to keep his head in air,
And babe, if he would thrive and grow,
Should stretch himself from top to toe;
Then, till the diff'rence 'twixt the two
You learn, I'll tell thee what to do—
Crow, kick and stretch, baby!

ETIQUETTE OF THE BALL ROOM.—When you are sure of a place in the dance, you go up to a lady, and ask her if she will do you the honor to dance with you. If she answers that she is engaged, invite her for the next dance, and take care not to address yourself afterward to any ladies next to her, for these not being able to refuse you, would feel hurt at being invited after another. Never wait until the signal is given to take a partner, for nothing is more impolite than to invite a lady hastily, and when the dancers are already in their places; it can be allowed only when the set is incomplete. A lady cannot refuse the invitation of a gentleman to dance, unless she has already accepted that of another, for she would be guilty of an incivility that might occasion trouble; she would, besides, seem to show contempt for him whom she refused, and would expose herself to receive an ill compliment from him. Married or young ladies cannot leave a ball-room, or any other party alone. The former should be accompanied by one or two other married ladies, and the latter by her mother, or by a lady to represent her. We should avoid talking too much, or whispering continually in the ear of our partner; it would occasion remarks. At private parties, the master of the house should see that all the ladies dance; he should take notice of those who seem to serve as *drapery* to the walls of a ball-room, or *wall-flowers*, as the familiar expression is, and should see that they are invited to dance. He must do this unperceived, in order not to wound the self-esteem of the unfortunate ladies. Gentlemen whom the master of the house requests to dance with these ladies; should be ready to accede to his wish, and even appear pleased at dancing with a person thus recommended to their notice. Ladies who dance much, ought to be very careful not to boast before those that dance but little or not at all, of the great number of dances for which they are engaged in advance. They should also, without being perceived, recommend to these less fortunate ladies, gentlemen of their acquaintance. In giving the hand for ladies'-chain, or any figures, those dancing should wear a smile, and accompany it with a polite inclination of the head, in the manner of a salutation. At the end of the dance, the gentleman re-conducts the lady to her place, bows, and thanks her for the honor which she has conferred. She also curtesies in silence, smiling with a gracious air.

A GOOD JOKE.—The following story, though rather old, of Neil McKinnon, a New York wag, surpasses in impudence anything within our recollection. Read and speak for yourself, gentle reader:—

When the celebrated "Copenhagen Jackson" was British Minister in this country, he resided in New York, and occupied a house in Broadway. Neil, one night, at a late hour, in company with a bevy of rough riders, while passing the house, noticed it was brilliantly illuminated, and that several carriages were waiting at the door.

"Hallo!" said our wag, "what's going on at Jackson's?"

One of the party remarked that Jackson had a party that evening.

"What!" exclaimed Neil, "Jackson have a party and I not invited? I must see to that."

So stepping up to the door he gave a ring which soon brought the servant to the door.

"I want to see the British Minister," said Neil.

"You must call some other time," said the servant, "for he is now engaged at a game of whist, and must not be disturbed."

"Don't talk to me that way," said McKinnon, "but go directly and tell the British Minister that I must see him immediately on special business."

The servant obeyed, and delivered his message in so impressive a style as to bring Mr. Jackson to the door forthwith.

"Well," said Jackson, "what can be your business with me at this time of night which is so very urgent?"

"Are you Mr. Jackson?" asked Neil.

"Yes, sir, I am Mr. Jackson."

"The British Minister?"

"Yes, sir."

"You have a party here to-night, I perceive, Mr. Jackson?"

"Yes, sir, I have a party."

"A large party, I presume?"

"Yes, sir, a large party."

"Playing cards, I understand?"

"Yes, sir, playing cards."

"Oh, well," said Neil, "as I was passing I merely called *to inquire what's trumps?*"

DINN'T LIKE THE JUG.—A wealthy, popular, and gay young gentleman once boasted that he could walk home with any one of the members of a certain Union of the Daughters of Temperance from Church; he accordingly, after services were over, on the next Sabbath, spruced up to a fair damsel, and with a polite bow, tendered his arm. The young lady, as by instinct, drew back as from a serpent, and exclaimed: "No, sir. I'll never put my arm through another *jug handle as long as I live.*"

If young ladies would use their influence in this way always, what a wonderful singing of the pledge there'd be; and how many young men, now rushing down the broad road of destruction to the drunkard's grave, would turn off in the quiet path of temperence and virtue, to sparkle as bright gems in society—and what a fearful blank would be left in the black calendar of crime.

Ladies, will you exercise this influence?

A CURIOUS BOOK.—Mr. Jefferson made an original book out of the New Testament, an account of which is given by him in a letter to John Adams, dated October 13, 1853, when Mr. J. was seventy years old. He took two copies of the New Testament and cut out the sayings of the Saviour, rejecting every verse which was not evidently his; these he pasted in a book, and his compilation is described as covering forty-six pages. He wrote to old John Adams that this arrangement had placed before him "the most sublime and benevolent code of morals ever offered to man."—*Boston Transcript.*

WHITFIELD'S habits were singularly nice and cleanly, upon the principle that everything about a minister should be "*spotless*" He was known to say, that he could *not die easy* if his gloves were out of place. He had the gentlemanly love of order, which required his table to be elegantly spread even if only a loaf, or his favorite dish, *cow heel*, were to be set upon it.—*Fraser.*

"I SEE through it," as the old lady said when the bottom of her wash tub fell out.

A VOCALIST says he could sing "Way down on old *Tar River*," if he could get the *pitch*.

THEODORE PAYNE. SQUIRE P. DEWEY.

THEODORE PAYNE & CO.,
REAL ESTATE AND STOCK AUCTIONEERS.

OFFICE AND SALES-ROOM CORNER CALIFORNIA AND MONTGOMERY STREETS.

THEODORE PAYNE ..... AUCTIONEER.

Messrs. PAYNE & CO. respectfully inform the public that they have established themselves as above, for the purpose of transacting the

Real Estate business, in all its branches,

For the conducting of which they esteem themselves peculiarly qualified, by having given it their special attention for over two years past, and many years less familiar with all questions affecting titles, &c. &c.

They will give their especial attention to the public sales of estate, by Administrators, Assignees, Receivers, Mortgagees, &c., carefully complying with the forms of law.

A Register for Property, at either public or private sale always open at their office 5 6m

DONAHUE'S UNION IRON WORKS,
[THE FIRST ESTABLISHED IN THE STATE.]
Cor. of First and Mission streets, Happy Valley, San Francisco

THE undersigned calls the attention of the citizens of California and Oregon to his unequalled facilities for doing work with rapidity and cheapness. He has made, and will continue to make, such additions to his time and labor-saving machinery, as the increasing wants of the State require, and hence solicits public patronage.

Saw and Grist Mill Irons,
Quartz Crushing and Amalgamating Machinery,

and Castings of either Iron or Brass of every description (having a most extensive assortment of ready made patterns) made promptly to order.

STEAM ENGINES from the manufactories of William Burdon, Brooklyn, New York, and other celebrated makers, constantly on hand and for sale.

BOILERS of every description furnished at lower rates than can be afforded elsewhere, the iron for the same being imported direct, and the machinery for shearing, punching and riveting being driven by steam power. Patent Steam and Water Gauges Steam Whistles, Cocks, India Rubber Steam Packing. Ready made Bolts and Nuts, Belting Lace and other Engineer's Findings for sale.

2 3m JAMES DONAHUE.

Threshers, Separators and Cleaners.

PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any other machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—four for the separator, two for the power, &c.

Also, EMERY'S Threshers and Separators, of Two Horse Power.

We have also on the Golden Fleece, two of HALL'S (Rochester,) Late 1 Improved Threshers, Separators and Cleaners, Eight Horse Powers, all complete.

Also, four of HUSSEY'S REAPERS and MOWERS, all combined.

For sale by COIT & BEALS,
9 tf 94 Battery street, office up stairs.

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the Fire Proof Store, No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Haxall and Gallego.

Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any admixture.

Ground feed of all kinds always on hand.

Every exertion will be used to merit a continuance of the favor heretofore so liberally extended to us. 1-tf

SIDE HILL PLOWS,

FOR cultivating Potatoes—the best article that can be used. No Farmer should be without them. Constantly on hand and for sale by WARREN & SON,

BATES' SUPERIOR
UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.

Soil, Propagation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top soil at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.

If the land is poor, so that grass and weeds will not vegetate then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality, can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable.

Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in meadow moss, and well boxed, which will enable them to go to a great distance in a fresh state.

The proper time for Fall transplanting is October and November; for Spring, from the opening of the same till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting, and during the winter for Spring. 15

SULLIVAN BATES,
14 Bellingham, Norfolk Co., Mass.

Valuable Plants.

Miscellaneous Goods.

Thermometer Churn, large size;
BASKETS—3, 4, 2 and 1 bushel;
do Market and Clothes Baskets, in nests;
Coffee and Rice Huller, Fencing Wire;
REAPERS—Hussey's Patent;
MOWERS—Ketchum's do;
THRESHERS—"Hall's" and "Pitt's," eight horse,
do "Emery's," two horse power
Horse Revolving HAY RAKES;
STRAW CUTTERS—Assorted sizes;
Hay Rakes, on wheels;
do do two and three bow rakes;
Fanning Mills—50, assorted sizes;
Ames & Rowland's L. H. Shovels;
Crow Bars;
Circular Saws—(Hoe & Co.) 60, 56, 40 and 32 inch, &c.;
PLOWS—100 Allen's Eagle, rod, wheel and colter;
Sausage Cutters and Stuffers;
Excelsior Soap,
6 Ox Carts—Iron hubbs, superior;
Transportation Wagons—To carry four tons each—Iron Hubbs, to screw up in dry weather,
Hickory Whip Stocks;
Harness, for Express Wagons;
Ladies' Side Saddles;
Grind Stones—50 Acres, small size—grind stone frames complete;
Pick Handles, Axe Helves;
Plantation Hoe Handles;
Ox Yokes—100 complete;
Ox Bows—100 pair;
Hand Carts—3 fine ones;
Walnut Axles—For light Wagons
Gold Washers, Mining Pans;
Tuttle's Goose Neck Hoes;
Cucumber Pickles—half gallons, boxes 1 doz each;
Stone Jugs—three, two and one gallon;
Garden Engines, on wheels, complete, with hose and jet
Top Onions—for seed;
Marrow Fat Peas;
Early Charlton Peas;
Buckwheat—for seed;
Osage Orange Seed;
White Celery Seed;
Mountain Sweet Water Melon Seed;
Yellow Skin Onion Seed;
Hemp Seed—for Birds;
GRAPE VINES—one thousand Isabella;
do do five hundred Catawba—three years old from Dr. Underhill's celebrated Vineyards, Croton Point
Camelia Japonicas—Fifty, in fine order, assorted colors.
Moss Rose Bushes, in variety;
Perpetual Rose do do;
Hops, in tin, a superior article;
Rosin; Buckwheat Flour;
Rye Flour, in tins;
Cotton Twine, patent;
Sail Twine, patent cotton;
Clothes Lines, in variety;
Bannisters, of Mahogany;
Newells, of Black Walnut;
Fencing Wire; Butter;
Mexican Spurs; Invoice of Mexican Bits, &c., of the highest finish, &c.

For sale by COIT & BEALS,
9 6m 94 Battery street, corner of Clay.

THE CALIFORNIA FARMER

The Journal of Useful Sciences.

VOL. 1. SAN FRANCISCO, THURSDAY, JUNE 1, 1854. NO. 22.

THE CALIFORNIA FARMER,
AND JOURNAL OF USEFUL SCIENCES,
PUBLISHED EVERY THURSDAY MORNING.
BY WARREN & SON.
Office in Musical Hall Building, Bush street.

TERMS.—Eight dollars per annum, in advance; or delivered by carrier at one dollar per month.

ADVERTISEMENTS.—A limited number of Advertisements will be inserted at Lucrative following rates: For one square of eight lines, per month, $6. For business notices of five lines or less per month, $4. A slight reduction will be made to regular advertisers.

Gudbrand of the Mountain.

THERE once lived a man whose name was Gudbrand; and as he possessed a farm in a remote spot on a declivity of a mountain people called him Gudbrand of the Mountain.

He lived so happy with his wife, and they agreed so well, that she thought everything her husband did was for the best, and that it could not have been improved upon. Let him manage any how she always found means to be delighted with what was done. This worthy couple were the owners of a piece of arable land and a hundred dollars in their strong box, besides a couple of cows in the stable. One day the wife said to Gudbrand, "I think we ought to send one of our cows to town and sell it in order that we may have a little pocket money at our disposal; for we are such industrious people that we ought to have a few shillings in our purse as other folks have, particularly, as we don't wish to touch the hundred dollars in the chest. And really I don't know why we should want more than one cow, and I shall be the gainer by having only one to attend instead of being bothered with two."

Gudbrand thought this all very proper; and so he immediately took the cow and started to town to sell it. But it happened that there was nobody in the town that was willing to purchase the cow.

"Never mind," thought Gudbrand; "I'll go home again with my cow; I have both the stable and the yoke ready for her, and the way is no longer for going back than coming;" and with this cheering reflection he plodded home again in the most contented mood.

He had not gone far before he met a man with a horse he wanted to sell. Now Gudbrand thought it were better to have a horse than a cow, so he made an exchange with the stranger.

When he had gone a little further he met another man driving a fat pig before him, and then Gudbrand thought it would be still better to have a fat pig than a horse, and so he exchanged with the man. He then went on, and after a while he met a man with a goat. "It is certainly better anyhow to have a goat than a pig," thought Gudbrand, and again he made an exchange with the owner of the goat. He went a good deal further till he met a man with a sheep, and with him he likewise made an exchange on the principle "that it is always better to have a sheep than a goat." On going further he met a man with a goose, and then Gudbrand exchanged his sheep against the goose. After this he went a long way, till he met a man with a cock, and he at once made an exchange; for he thought, "after all, it is still better to have a cock than a goose." He then walked on and on till it began to grow late, when feeling very hungry he sold the cock for three pence, and then he bought something to eat; "for, after all," thus reasoned Gudbrand of the Mountain, "it is better to bring one's self back safe and sound than a cock." He then sped on his way home till he reached the farm of his nearest neighbor, wherein he went just as Hans the ploughboy was driving home the cattle.

"Well! how did you fare in town?" inquired the old folks.

"Why, but so so," answered Gudbrand. "I can't say much for my luck, neither have I much regretted my loss. And hereupon he related all that had occurred from beginning to the end.

"Well! but I hope you shall get a warm reception when your wife sees you reach home," quoth the farmer. "Lord help you, I shouldn't have been your share."

"I have got a cow, however," rejoined Gudbrand of the Mountain; "but whether I shall get much praise for such an excellent bargain, I dare not pretend to say, as I have done what

"Good evening," replied the wife, "praised be God! you are come back again, are you?"

Sure enough, he was back. Then the wife inquired how he had got on in town. "But so so," answered Gudbrand; "I can't much boast of my luck. On reaching town, nobody would purchase my cow, so I changed it for a horse."

"Ah—there, indeed, you do deserve my thanks," said she. "We are so well off that may as well drive to church as other people, and if we have the means of getting ourselves a horse why should not we? Pray, good-man, go and bring him in." "Stop," replied Gudbrand, "I have not got the horse exactly, for after going on a bit I changed it for a pig."

"No! did you?" cried the wife; "why, that is the very thing that I should have done myself! Thank you a thousand times, my dear husband. Now I shall have some bacon in the house to offer the folks that come to see us. What, indeed, could we do with a horse? People might say we had grown too grand to go to church as we used to do. Prithee, goodman, go and fetch in the pig."

"But I haven't got the pig any more than the horse," said Gudbrand; "for on going somewhat further, I changed it for a mich goat."

"Why, what capital notions you always have!" exclaimed the wife; "for when I come to think of it, what do we want with a pig? People might say, they are eating up their substance. But now that I have a goat, I can have milk and cheese, and without parting with the goat either. So, goodman, let's see Nannygoat."

"But I haven't got any goat either," answered Gudbrand, "for on going a little further, I changed the goat for an excellent sheep."

"Now, did you?" cried the wife; "well, to be sure, you have done everything that I could have wished, just as if I had been at your elbow all the time! What, indeed, should we want a goat for? I should always have been running after it and climbing up hill and down dale. But with the sheep I shall not only have wool to make cloths with, but something to eat into the bargain. So prithee, goodman, go and fetch the sheep in."

"But I no longer have the sheep," said Gudbrand; "for when I had gone a little further, I exchanged it for a goose."

"Oh, thank you a thousand times over for that!" cried the wife; "for what could I have done with the sheep? I have neither distaff nor spindle, nor do I wish them either, and care still less for the plague of weaving cloths that we can just as well go on buying as we have done hitherto. And now I shall have an opportunity of tasting a bit of goose, which I hankered after so long, and of stuffing my pillow with down. So goodman, go and fetch in the goose."

"Ah, but I have no goose to fetch," replied Gudbrand, "for after going a little further, I changed it for a cock."

"Only think now of your hitting on the very thing I should have chosen!" exclaimed the wife. "Why a cock is for all the world as good as if you had bought an alarum watch; for the cock crows every morning at 4 o'clock, and so we shall be stirring by times. After all we did not need a goose, for I don't know how to dress goose's flesh: and as to my pillow, I can stuff it otherwise just as good. So, go your ways, goodman, and fetch the cock."

"But I have no cock either," said Gudbrand; "for, after going somewhat further, I felt so tremendously hungry that I was fain to sell the cock for three pence, in order to be able to come home alive."

"And right well did you do!" cried the wife. "Let you set about what you may, you are sure to do everything to my liking. What does it signify whether we have a cock or not? Surely we are our own masters, and can lie in bed of a morning as we please. And now, thank God that I have got you back again—you are so clever at everything—I want neither cock, goose, sheep, goat, fat pig, horse or cow."

Gudbrand now opened the door. "Have I won the hundred dollars?" cried he. And the neighbor was forced to own that he fairly had.

[From the Pioneer]

A California Scene.

BY J. M.

THE valley of the [illegible] I should [illegible] about four hundred miles long and from sixty to a hundred miles in width, having [illegible] and overlying a [illegible] a solidly [illegible] Taking my stand on this spot I obtained one of the most remarkable views that ever met my eye. It was in the Spring, when Nature was dressed in her most lovely attire. The scene was better suited to a painter than a feeble pen; but I could not help reflecting, how inferior are the works of art when compared to the majesty of God's handiwork. The grand, sublime and beautiful, on the most magnificent scale, were blended into one and the same view. I was filled with awe and wonder when for the first time I stood on Table Rock and gaze upon the Falls of Niagara; but no such peculiar sensation came over me, as on this occasion. That was a unity; this a combination of many elements in exact harmony.

On the west was the Sacramento Valley, stretching out as far as the eye could reach in almost every direction, spotted here and there with clumps of trees, which mark the winding course of the American river until its placid waters combine with those of the Sacramento, and flow still onward to the ocean. A little farther to the right, was the Coast Range, presenting a long line of craggy cliffs, piled one upon the other in so confused a mass as to give one the idea that the refuse of creation had been "tipped up" there, hurly-burly, without any particular reguard to arrangement; opening its massive walls to the right and left, as if in proud submission, to permit the waters of the majestic Sacramento to pass on. Still farther on north, rising majestically above the other peaks, and looking down upon them as if in scornful derision, the Buttes stand out, a kind of guardian sentinel over the inferior portion of the mountain family, a huge guide-post to direct the traveller along his way. This is what Benton proposed as an everlasting monument of Washington and of the glory of America. What an idea! Only think of a sign-board extending across that huge pile, the glittering letters carved out two miles apart which the emigrant as he passes over the peaks of the Sierra Nevada at the distance of one hundred miles, reads plainly, making out the words—WASHINGTON and AMERICA. Apparently but a short distance to the south, the Table Mountain modestly rises its form and looks very much as though it had been beheaded. Trees are visible on its rugged sides; but the top is flat, giving it the appearance of the base of a cone or a table, from which it received its name. Still further to the south, and almost buried in the distance is Mount Diabolo, which overlooks the Bay of San Francisco. The Mexicans have long had a superstitious belief that evil spirits had their abode there. Turning to the east, the grandest spectacle is here beheld. Below, the gentle waters of the Macosumnes wind slowly through the valley; flowers of every line meet the eye; at least a hundred varieties fill the air with their delicious odors; grass of luxurian growth waves in the breeze; while above, commencing apparently but a few miles distant, and extending to the utmost limit of view on either side the Sierra Nevada are covered with deep snows. Not like distant clouds as seen in the west on a summer evening, piled up like bags of cotton, but one continuous line of deep, deep snow. These snows continue till late in the summer, wasting gradually away, when the heat becomes so intense that they yield to its warm embrace; all except here and there a spot on the more elevated peaks. Between, among the hills which rise gradually, one after another, and along the upper part of the Mo[illegible] nes as you ascend into the mountains, are thousands of miners busily delving, like so many moles from morning till night, day after day, washing in the cold water which flows from the everlasting snows above them.

But a short distance from this locality, where the hills begin to present an abrupt form, and the traveller begins to grow weary from the prospect before him, is a spring of perennial flow, from whose waters many a tired pilgrim has slaked his thirst. I sat down by its side, thinking more of the journey before me than of quenching my thirst. Near by I observed a grave, [illegible] at each end was a roughly hewn post, [illegible] decayed, upon one of which had been carved with a knife, "C. Mason," the name of him who slept beneath. It was a [illegible] I learned that it was my friend and [illegible] Charles Mason, of Connecticut. He [illegible] of a w[illegible] —[illegible] a br[illegible] [illegible] pa[illegible] In [illegible] t[illegible] [illegible]

along the peaks, and his council was listened to by his companions. Time passed smoothly on, till relentless disease seized him as his victim, and prostrated his manly form. His malady commenced with a diarrhœa, but terminated in a fever. Confined to the rough couch of his narrow tent, he passed day after day in lonely meditation, as he felt his strength fast wasting away. "O, that I could see my mother!" would he often exclaim on suddenly awaking from a feverish dream. But no mother stood by him to smooth his burning brow, and with guardian-angel care, ease his rough passage from life: no sister bent over him as he contended with the fell destroyer; but a few cold, unfeeling strangers only were there, as the icy hands of death closed around him, and his manly spirit was released from its earthly tabernacle. He died. No friend shrouded his remains, and prepared him for the coffin; no parents shed tears of affection over his clayey form; no sobbing wife or sisters bent over his coffin-lid to catch the last lingering look; no throng of mourners followed him to the tomb; no church-bell tolled at his departure; no venerable clergyman uttered a prayer at the funeral, and administered heavenly consolation to the weeping. Wrapt in his own blanket, a few neighboring miners bear him a few paces back of his tent, and deposit him in the ground. Hurriedly, the coarse gravel is thrown in upon the uncoffined corpse. He is buried. There, by the side of that cool spring, at the foot of the Sierra Nevada, sleep the remains of Charles Mason. No marble monument marks the spot; no lettered tomb-stone stands at the head of the grave; no rose-bush or weeping-willow grows there, planted by the hand of affection; the dear mother cannot pay her weekly visits there, and shed burning tears over the grave of her only son. But then the mournful howl of the coyote is heard; the wild birds scream in the mountains, and the hoarse winds whistle through the branches of the tall pines. As the widowed mother gathers her little family around the domestic altar, and lifts her feeble voice to heaven in prayer on every returning eve, one seat is vacant; one seat is vacant around the fire-side of the family circle; one vacant seat at the table; one in the old church pew.

More than two years elapsed before that sorrow-stricken family could hear anything of the late of Charles, and then not till accident enabled me to forward them the melancholy intelligence.

How many have thus found their graves among these mountain ranges, who left home with strong hopes and stout hearts—visions of gold dancing through their minds. How many sleep thus lonely on the plains; how many on the Isthmus; and over how many has the earth waters closed, as their lifeless remains were consigned mournously over the railing of the steamer and the unsea[illegible]worthy sailors. Many an unrecorded tale of sorrow, suffering and death has followed in the train of California gold-hunters.

Call it weakness if you please, but when the life-giving spirit shall quit this mass of flesh and bones, my prayer to Heaven is that this lifeless form may find a lodgment in the old family church-yard by the side of my mother.

"I [illegible] my d[illegible] [illegible] prayer,
[illegible]
For I'd be [illegible]
To know [illegible]
That I [illegible]
To lie [illegible]

RULES FOR THE JOURNEY OF LIFE.—The following rules, from the pen of Dr. Watts, are thrown together as general maxims in the journey of life: Never [illegible] what others may [illegible] they may appear to you. Never [illegible] when the people are [illegible] [illegible] and make [illegible] of the [illegible] [illegible] [illegible]

A Trip to San Jose and New Almaden.

BY H. GIBBONS, M. D.

[CONCLUDED.]

Having explored the mine to our satisfaction. C—— and myself turned our faces towards the village. In order to avoid the mud of the road, we struck into the pathless herbage, and gained vastly by the transaction both in distance and in time, which we doubled at least, to say nothing of dripping foliage, briar bushes, ravines and perpendicular steeps, causing us to sit down rather abruptly without intending to. We also found a few plants peculiar to such localities, and an abundance of ticks.

The next thing was to examine the works. It would require too much space to describe properly the process of smelting; but the reader may form some idea of it from the fact that the ore is heated in close furnaces, in contact with lime or limestone, so that the lime may unite with the sulphur of the mineral, allowing the metal to escape in the form of vapor. I have already stated that the ore is a sulphuret of mercury, composed of the two substances named, in the proportion, when the ore is unmixed with rock, of about 85 per cent. of the mercury and 15 of sulphur. Most of the ore, however, is mixed with quartz, limestone, and other extraneous substances, so that in the aggregate it yields not more than from ten to twenty per cent. of quicksilver. This metal boils and evaporates like water at the temperature of 160 degrees of Fahrenheit, which is a little above the melting point of lead. Passing off from the ore in the form of vapor, it condenses instantly when it comes in contact with a surface of lower temperature. I may as well add, for the benefit of such readers as do not understand anything of chemistry, that the process of distillation, applied to metals or solid substance, is called sublimation.

To avoid the escape of the mercurial vapor and the consequent loss, the ovens in which it is heated must be perfectly tight. It is important also for another reason that they should be thus constructed; for the fumes are very pernicious to the workmen. Hence the vapors from the oven are made to pass through a succession of chambers and finally through a body of water before they can escape into the chimney. This is necessary for an additional reason—that small quantities of arsenic and other metals are apt to be contained in the ore, the fumes of which are not easily condensed. To carry these off, the chimnies are made very high. But with all the care that can be used in these respects, it is almost impossible to preserve the atmosphere pure. Men that work in such establishments are almost sure to suffer in health sooner or later. If the furnaces are imperfect they fall victims to the poisonous effluvia in a very short time.

At New Almaden you see a long row of furnaces, ten or twelve in number, arranged in pairs, each pair having a common chimney. They occupy a space of 200 feet in length. Preparations are going forward to erect a second range of furnaces of the same magnitude.

During the process of sublimation the quicksilver runs out in small streams, by apertures in the bottom of the chambers. It is conducted into a trough which hands it into a common receptacle, from which it is taken to be bottled for transportation. The bottles are of iron, and hold about three quarts, or 75 pounds, the metal being nearly 13 times as heavy as water.

The superintendent was absent, and therefore we did not obtain all the information to be desired; but the men who were engaged in weighing out and bottling the quicksilver, were very obliging in answering our enquiries. To illustrate the density of the metal they threw into the large pot from which they were dipping it for packing, a twenty-eight pound weight of iron, which, of course, floated like wood. After carefully weighing the proper quantity, the bottle was put in a kind of vice and an iron plug tightly screwed into its mouth by means of a strong lever. In this state it is ready for a market. Eight hundred bottles are usually made in a week, or 60,000 pounds. At this rate, the annual product would be nearly 1,400 tons: at 75 cents a pound, which is not far from the market price, the value of the quicksilver exported in a single year from these mines approaches the enormous sum of two and a-half millions of dollars. When the additional furnaces now in process of erection shall have been completed, the value of the product will be increased to upwards of five millions of dollars.

It is interesting to compare the mines of New Almaden with the other principal mines in the world; except in this region, the ores of mercury are not found in America north of Mexico. Whether Mexico produces any considerable quantity of quicksilver, I am not prepared to say; but Peru has furnished a large supply for nearly three hundred years. Of late the annual quantity has been nearly 200 tons. It is almost exclusively employed in treating the ores of gold and silver which abound in South America.

In Hungary, Bohemia and other parts of Germany, are a number of mines, the aggregate annual product of which is 70 tons.

The only mines that will compare with those of California, are the mines of Almaden in Spain, and Idria, in Austria. The former mines were known 700 years before the Christian era, and Pliny informs us that in his day Rome received annually 700,000 pounds of quicksilver from them. So abundant is the ore, that though it has been mined for so many centuries, the depths of the excavations is only 1,000 feet. With a corps of 700 miners and 200 smelters, the annual product for a series of years has been estimated at 1,100 tons. The mines of Idria have been known since 1497, and the workings are upwards of 800 feet in depth. About 150 tons are made annully. A much larger quantity might be produced, but the Austrian government has restricted the amount, in order to keep up the price of the metal. In this mine the ore is combined with Bitumen, which renders it combustible. In 1803 a conflagration took place, which was extinguished by drowning out all the excavations. It is said that upwards of 900 persons, living in the neighborhood, were seized with tremors and other serious disorders, from inhaling the fumes which filled the atmosphere.

It appears therefore that the three principal quicksilver mines in the world are those of Idria, Almaden and New Almaden, and that the product of the last named, if my information be correct, exceeds that of either of the others.

Until a period comparatively recent, the entire product of the Almaden mine, in Spain, was shipped to Mexico and South America, to be applied to the extraction of gold and silver from their ores. The largest proportion of all the quicksilver in the world is applied to this purpose; but an immense quantity is used in the arts, in making looking glasses, gilding and silvering brass and copper in the manufacture of pigments, drugs and so forth.

I have now wandered sufficiently about the globe, and it is about time to be getting home; but before parting with the reader and with New Almaden, let us see the second lion of that locality,—the Soda Spring. Our host arms himself with a glass and a bottle of syrup and leads us back of his house a hundred yards, where a beautiful steamlet wanders across the path. On the back of this is a large spring, bubbling up with considerable force. The water has the sharp taste of Zeltzer water from the mountain. It appears to be completely saturated with carbonic acid gas. Poured into the tumbler with syrup, it effervesces in the most lively manner, and in drinking it, you would not know by the taste but that it was just drawn to order from a fountain in Chesnut street. Besides the carbonic acid, it contains iron, magnesia and lime. The stones over which it flows are covered with a copious deposit of iron in the form of a yellow oxyd. The name of Soda Spring is improperly applied, as its peculiar qualities do not depend on soda. We were informed that cattle are remarkaly fond of the water, and will cross the stream of pure delicious water that flows by, to imbibe from the carbonated spring.

The water of this spring is aperient and tonic, thus possessing qualities decidedly medicinal. I have no doubt its virtues are quite equal to those of many other springs that have a world-wide celebrity. If the proprietor can but divert towards it the tide of fashion, he will make his fortune. Physicians might urge the necessity of imbibing one quart of this carbonated water for every ounce of poison in the form of spirituous and fermented liquors, and if they could succeed in inforcing the rule universally, the results would be glorious. There would be a rapid reduction of murders by madmen, duellists and others; a depopulation of station houses and jails; a wonderful diminution of disease and death, especially of sudden deaths, and a deplorable leanness of doctor's bills in certain quarters.

San Jose.—We have on hand sketches of "Stockton Ranch," "Mayfield Farms," "Summerville," and other cultivated spots in this Valley. Also the beautiful park and gardens called "Brookside," at San Mateo, which will appear, with other matter and communications in succeeding numbers.

Exchanges Solicited.—We have received numerous invitations from abroad; all will be duly attended to and their reception noted.

Thanks for Congressional favors from our delegation.

The "California Farmer."

To those desirous of preserving files of the Farmer for binding, we would state that the size of the paper would make the volume too large, were the whole year made into one. We therefore design to form two volumes each year, and commence Volume II. with No. 27. Those who have become subscribers since the commencement of the year, can have the back numbers, by sending to us, at the subscription price.

We earnestly hope those who have not yet remitted the amount of their subscriptions will feel that it is unjust to us, and to the enterprise we have commenced, to delay the payment longer. This hint we feel will be all that is required.

Ladies' Department.

We rejoice to notice that our Agricultural journals are beginning to awake to the important influence that woman exerts in all that gives interest to rural pursuits. It is the mother that gives the early lesson—it is the mother that leads the child forth, and gives it its first impressions of the beautiful things of earth. It is the sight of the mother at work in the garden that leads the child to make a thousand enquiries about the Flowers, the Fruits, the Grain, the Birds, and the Fishes: and it depends in a great degree upon that mother whether her child shall receive an influence that shall induce him to love and lead a life in the country, that God made, where peace and happiness are found, or have his mind turned from such pursuits to the city, that man made, where high life, luxury, fashion, and misery are found.

The influence of woman is felt everwhere—it leads everywhere, among civilized nations; it leads the fashion for dress, it directs the fashion for amusements, its power is felt in the moral and religious tone of every community. Her influence makes home all that home is worth—the very garden of the heart, where

> Sweetest flowers forever bloom
> Where perfect fruit shall grow,
> Giving to man "a happy home"—
> A little heaven below.

It is this influence that is needed to direct the attention of the public mind to a greater love of rural life, and to mould the minds of the youth of both sexes to a higher regard for the science of agriculture, as the source of more happiness and prosperity than can be found in any other branch of our national industry.

We have noticed with great pleasure in the Genesee Farmer able letters from J. S. Woodward and Theda Garrett, N. Y. We also see the good influence of Mrs. M. J. Bailey in the Oregon Spectator. Both papers have established a "Ladies' Department," and, as our correspondence increases, we shall be most happy to give place to a "Ladies' Department" in the Californnia Farmer. We earnestly appeal to our fair and home-loving friends to give us their influence to make this department what it should be—the bow of promise to man.

"Roving Jack."

We especially commend the following letter of our friend—there is an off-hand style that pleases us—a bold, honest utterance of truths that should be heard in high places. We know the miner and farmer suffer for the want of regular and reliable mail communications—aye, suffer; why should this be? Occasionally errors could be excused, but constant irregularities such as "Roving Jack" so well describes, are not excusable: and then, the government officers, the "tax gatherers," are always prompt! why not the mails? We hope our friend will continue to keep the "fact before the people," that "Uncle Sam's mails," are not what they should be.

We are truly grateful to our roving correspondent for the interest he has manifested for the Farmer. We will hereafter place his name upon our "honorary list" and the Farmer shall go to him in duplicate, that he may ever have one extra, to scatter where there is an opportunity to "sow good seed."

We hope for a regular weekly communication from our friend, and will promise him in return, a visit—yes, we will have that "chat" together, and we will climb the hills, scale the mountains, rove over the plains and vallies, and cull the brightest and sweetest flowers—and, yes, we will preach the cause of Agriculture to our friends in each of your happy counties. So friend Smith, we are coming:

"Snellings, May 15, 1854.

"I have taken no little pains to have the Farmer read, if possible, by every man, woman and child, whig, democrat, northern abolitionist and southern secessionist west of the Rocky Mountains—I have started them and bid them God speed to the rude hut of the toiling clodhoper, heralding the glad tidings of great joy which shall be to all industrial fraternities from the first disobedient blacksmith "Vulcan" down to the joyous juvenile corn-dropper of the present day, that in San Francisco the laborer has an able, very efficient, and fearless advocate, and just as soon as government may in their wisdom deem it a measure worthy of their consideration to establish post routes and offices in these neglected regions, they may hope to be able to forward their subscriptions with some degree of certainty that they will receive a rich compensation in the shape of an Agricultural Journal in return.

"I wrote you that I was much pleased with your paper—so I was, and I am unchanged. I requested that you would send it to my address immediately, beginning at the first. You did not send me the first numbers, but commenced at number eleven and sent me five copies regularly up to number seventeen, and that is the last I heard from the California Farmer until your note of the 5th of May. Now, gentlemen, I am much pleased with your newspaper; it is a well conducted sheet and is got up with a degree of taste and ability that reflects honor upon the proprietors. My earnest prayer is for the perpetuity and prosperity of the journal and the enterprising owners. I want the Calinornia Farmer regular; I am not satisfied to do without it.

"I would suggest as an important measure that you appoint an agent somewhere in this range—there should be one on this river. There has recently been an express line established between Mariposa City and Visalia, the county seat of Tulare. If you had an agent here he could make an arrangement with the line to carry your paper to subscribers in Tulare county—and my word for it, that county presents in the perspective one of the widest fields in the State for the circulation of an Agricultural Journal, and yours is the first and is legitimately entitled to the benefits to be derived from the patronage of the present farming population. You have not, I think, one agent throughout the vast extent of the rich and desirable farming district that is situated in the counties of Stanislaus, Mariposa and Tulare; this I consider bad policy. You should take steps to give your paper note; if it does not at first pay well, it finally will. Your journal is bound to take with an intelligent community. I am saying considerable for a stranger, but I can't help it—its a way I have got; this pen, like all pens that happen to fall into my clutches, is run mad and there is no telling where it will stop; I have been trying to stop ever since I wrote the first ten lines. I should like to see you, and descant with you upon some of the many beauties of the country I have travelled over lately. I should like to see you come out boldly against the indifference evinced by the government officials in reference to the establishing of mails in the southern interior of this State. The fact is, we never should know we belonged to that great republic, was it not that we now and then have our minds refreshed by the importunate entreaties of numerous passing itinerant *tax* collectors. By the way, if you could make an arrangement with this fraternity, it would be a good (?) thing, as they are generally *around; they are.*

"I shall make every effort in my power to get you a few subscribers. I expect some of my friends have already sent for the Farmer. I am going again to Tulare in a short time, and will do what I can for the Fanmer.

"Rovino Jack of Californnia."

The Heaviest yet—$250,000.—Away goes the gold! Mr. Woodward, the agent of Messrs. Adams & Co., showed to us on Monday last, on the down trip from Sacramento, the gold on its way to the States—a very pretty little fortune, done up in twelve bags—only a quarter of a million. Thus the gold of our mountains is borne onward and away, by every steamer. This continued drain of our precious metals must be stopped, and it *can be done*, if the Agriculturists of California will awake to their true interests. The gold of the mountains can be made to develope the agricultural wealth, to encourage manufacturers and to stimulate the mechanical industry of California. So mote it be.

Gale of Wind.—A very heavy gale of wind commenced at Sacramento on Saturday night, about 9 o'clock, and continued to increase till morning; it remained blowing a steady hurricane through Sunday, lulled a little at evening, increased through the night and blowed very hard in the morning and all day Monday. Such a gale has never been known in Sacramento since the Great Fire.

Management of Peach Trees.

The following directions we approve of so highly, that we especially commend them to our readers. They are from the Horticulturist, and were prepared by the able and practical cultivator "Barry," himself. The system of "pinching" we believe will soon become the only system to those who commenced with young trees, for "just as the twig is bent the tree's inclined" can be more successfully illustrated by inclining every twig in a right direction *without bending*. By watching its early growth and the head and beauty of the tree in its early life, this system saves the tree many wounds and great loss of strength, which old customs forced upon it. We entreat attention to it:

Pinching.

This is a most important operation. It consists in the suppression of the herbaceous extremities of young shoots. These are taken off by pinching them between the nails of the thumb and fore finger. It is done with the view of diminishing the growth of those shoots which push too vigorously; while at the same time the sap that these would otherwise have appropriated is turned to the advantage of the weaker shoots. Pinching differs from disbudding, inasmuch as it is only a temporary way of checking the excessive growth of a young shoot; while disbudding is its total extinction.

For this reason we pinch nearly all the young shoots, the growth of which we find it necessary to moderate, wherever they may be situated; and this is also frequently done with the view of assisting the developement of other shoots. Thus we pinch the terminal shoot of a branch that has reached the desired length, in order to stop the sap, and turn it to the advantage of the lower shoots and eyes, a greater development of which is necessary to the end in view.

Pinching requires a great knowledge of the mode of vegetation of the Peach tree. It is indispensable for trees on walls, and it is more especially necessary for the upper parts where the sap flows most strongly. This operation is performed at no fixed period, but is done when the tree requires it. It must be several times repeated from the end of April till August, the particular periods being regulated by the state of vegetation in different trees, and by that of different parts of the same tree. When the balance of the tree is threatened, recourse must be had to pinching. It is well, therefore, to watch the progressive indications of the flow of sap; for in consequence of strong shoots resulting elsewhere from its check by the first pinching, the operation frequently becomes necessary on them. Those young shoots, which, by their appearance or position, promise to become very strong, should be pinched before they reach the same length as the others that are less favorably situated, and not so well established. The former should be pinched when three or four inches long; the others must be left untouched till they attain the length of from twelve to sixteen inches. In every case we must bear in mind the necessity of preventing the eyes that form on the young shoots, and especially those on their bases, from becoming blind, which might take place if the shoots were allowed to grow too long. We must also avoid, as much as possible, the pinching of them before they are of sufficient length, as it is likely to make them produce laterals. I usually pinch the young shoots behind a leaf, so that the tree does not appear to have undergone the operation; and many cultivators wonder at the regularity and well-balanced strength of its shoots.

Some laterals cannot be prevented from forming on the young shoots that are retained, and particularly on those which have been pinched. The laterals which push on the leading shoots should, for the most part, be pinched when six to eight inches in length, above the second, or from that to the sixth leaf, according to their strength. On the leading shoots, pinching should be preferred to disbudding, which entirely destroys the origin of the lateral. Pinching, moreover, is favorable to its good organization, by encouraging the eyes that are formed along its base, and which fit it for becoming a fruit-branch on the prolonging shoot when the latter shall have become a wood-branch.

It is by no means uncommon for the terminal shoots of fruit-branches, situated on the upper sides of the principal branches, to grow to an extent likely to prove hurtful to the successional shoot. The former must then be pinched, but leaving it so long as not to make too much sap flow to the latter. If this pinching cause some of the eyes to burst into laterals, it must be discontinued, and the shoots must be cut down to the lowest lateral by a summer-pruning. If, in its turn, the young successional shoot acquire too much strength in consequence of these operations, we must endeavor to moderate it by pinching. If unsuccessfully, some of its eyes push laterals, it must be cut down, by summer pruning, on a [illegible]; or, if [illegible] on its lowest [illegible].

With respect to the laterals which break out [illegible] young [illegible] pinching is [illegible] for the [illegible] in the [illegible] for the [illegible] the latter. The latter [illegible] a few [illegible] always [illegible] the [illegible].

[illegible] I have [illegible], for [illegible] and [illegible] [illegible] of [illegible] young [illegible] [illegible].

Thinning the Fruit.

The danger of frosts, which are often so fatal to the blossoms of the Peach tree, obliges us, at the time of pruning, to retain more flowers than is absolutely necessary; and if the weather be favorable, too many fruits is the consequence, fructification being a very trying process, the trees might be injured by its being allowed to take place too extensively; therefore an excessive setting of fruit must be prevented. Nevertheless, in years when only a moderate quantity sets, the thinning should not be made till the month of June, the time that the stone is formed, which is a crisis at which much fruit drops. When those that remain appear secure, the superabundant ones are removed, so as to leave only as many as the tree can bring to perfection, and nourish without exhausting itself. In this operation the fruits that are too close together are thinned out, so as to distribute the whole equally, and as near as possible at uniform distances, giving the preference to those that are best placed, and of a regular form.

We first thin out those fruits that are at the tops of weak branches, or on branches of which the successional shoot appears weak; and there is always a less number left on the lower than on the upper parts, although the former have more flowers. The fruits to be removed must be detached by turning them with the thumb and the two first fingers, without jerking, taking care not to break off those intended to remain. When the growth of the tree is well balanced, the number of fruits left on each wing must be as nearly equal as possible; and if the thinning is well done, a sort of regularity is obtained which would make one believe that they had been placed on by hand. The green Peaches taken off may be turned to account by the confectioners. Notwithstanding the number of fruits dropped and thinned out, I still leave on each square-trained Peach tree, about four or five hundred Peaches, which, from their beauty and nearly equal size, will well repay the trouble I take.

But in abundant seasons, if we did not thin till the stone is formed, the tree would be weakened. In such a case, the thinning should be made at two different times: the first in June, when all that are evidently superfluous should be thinned out; and the second after there is no danger of their dropping.

The greater or less quantity of fruit is a means of equalizing the strength of the different parts of the tree, as will be further explained.

Drying Potatoes for Seed.

A. N. C. Bollman, Counsellor of State and Professor in the Russian Agricultural Institution at Gorigoretsky, says that "thoroughly dried potatoes will *always* produce a crop free from disease." In an interesting pamphlet, it is asserted as an unquestionable fact, that mere dying, if conducted at a sufficiently high temperature, and continued long enough, is a complete antidote to the malady.

The account given by Professor Bollman of the accident which led to this discovery is as follows: He had contrived a potato-setter, which had the bad quality of destroying any sprouts that might be on the sets, and even of tearing away the rind. To harden the potatoes, so as to protect them against this accident, he resolved to dry them. In the spring of 1850, he placed a lot in a very hot room, and at the end of three weeks they were dry enough to plant. The potatoes came up well, and produced as good a crop as that of the neighboring farmers, with this difference only, that they had no disease, and the crop was therefore, upon the whole, more abundant. Professor Bollman tells us that he regarded this as a mere accident; he, however, again dried his seed potatoes in 1851, and again his crop was abundant and free from disease, while everywhere on the surrounding land they were much affected. This was too remarkable a circumstance not to excite attention, and in 1852 a third trial took place. All Mr. Bollman's own stock of potatoes being exhausted he was obliged to purchase his seed, which bore unmistakeable marks of having formed part of a crop that had been severely diseased; some, in fact, were quite rotten. After keeping them for about a month in a hot room, as before, he cut the largest potatoes into quarters, and the smaller into halves, and left them to dry for another week. Accidentally the drying was carried so far that apprehensions were entertained of a very bad crop, if any. Contrary to expectation, however, the sets pushed promptly, and grew so fast that excellent young potatoes were dug three weeks earlier than usual. Eventually nine times the quantity planted was produced, and, although the neighboring fields were attacked, no trace of disease could be found on either the herbage or the potatoes themselves.

This singular result, obtained in three successive years, led to inquiry as to whether any similar cases were on record. In the course of the investigation two other facts were elicited. It was discovered that Mr. Losovsky (living in the government of Whitebsk, in the district of Sebege), had for four years adopted the plan of drying his seed potatoes, and that during that time there had been no disease on his estate. It was again an accident which led to the practice of this gentlemen. Five years ago, while his potatoes were drying, he put one in his pocket, and on [illegible] home threw it [illegible] it remained [illegible] the spring. Having then chanced to [illegible] it all dried up and was [illegible] a [illegible] [illegible] of [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, JUNE 1, 1854.

Artesian Wells of San Jose.

We desire to awaken the attention of all the farmers to the subject of artesian wells. As a means of irrigation, we look upon the artesian well as a perfect triumph. With a power like this, the farmer may overcome the burning heat of the fiercest sun or the longest summer. With this mighty weapon the waters may be made to flow over a thousand acres perpetually and a living verdure clothe the driest soil.

We were conveyed by our kind friend Dr. Bascom, from the city to the ground of Messrs. Yontz & Myers, where these famous wells have been prepared, and although we may attempt to describe them, nothing we can say could present the half of their interest or value. They must be seen to be appreciated. These wells are seventy-eight feet deep; at the depth of fifty feet a vein of blue clay was found; at the present depth (78 feet) the augur struck into water, which followed the instrument with great force. The water gushes up through a 7-inch pipe with great power, and rises twelve feet above the level of the ground. The water is very soft and pure, and is conducted into basins and led in all directions wherever wanted over the grounds. The flow is so powerful that force could hardly stifle or suppress it; with our whole strength we could not shut off the water, by pressing a tub upon the pipe, over half a minute, and we believe any attempt to stop it would result in rending the pipes asunder and tearing up the earth. So constant is the flow and so great the volume of water that a thousand acres could be readily supplied with all needed for irrigation. It is sufficiently powerful to carry a mill-wheel. We were amused with a fact we learned: Upon the first flow of the water, before any direction was given to it, it was so copious that many acres of the neighboring grounds were flooded and the proprietors became alarmed and were threatening prosecutions for damages; upon a little reflection however they soon found it was a *blessing* rather than an evil, and gladly received the boon thus offered to them freely.

The whole cost of these wells does not exceed $3 to $1 per foot, complete.

We look upon this achievement as one of the triumphs of the age, especially for California, and we advise all farmers who need the means for irrigation, to visit San Jose, and examine for themselves these wonders of the day. We shall refer to them again. We are under many obligations to Messrs. Yontz & Myers, for attentions and information that will be valuable to us and to Agriculture.

Fencing Stuff.—Industry makes thrift! We observed large quantities of split fencing stuff in our rides around the valley of San Jose, and upon inquiry of our friend Mr. Hatfield, we learn that large quantities of it are manufactured at "Red Wood Canyon," and brought into market at San Jose and used as fencing stuff. It makes a good and an economical fence, and will last until the farmers can prepare the "Osage Orange" hedge, which is destined to be the "living fence" of California. Mr. Hatfield informed us he had ready for market over one hundred thousand of these fencing picketts, and was offering them at $60 per M—6 1-2 feet long, and 3 inches square.

Grafting Wax.—As we are so often inquired of relative to the best materials for grafting wax, and as a wax is needed more or less at all times of the year, for trees that are wounded or broken by wind and storms, we give the ingredients for a wax we have always used in the New England States:

Take one pound mutton tallow (mutton is best, though beef tallow will do); two pounds beeswax, and four pounds very best rosin; melt them slowly but well together; when well united and hot, pour the substance into cold water. After your compound is cool, work it well by hand.

This remains soft by a little working for use, yet it is solid enough to resist the weather.

Ornament Your Grounds.—We trust none of our readers will neglect to decorate their yards with trees and shrubs. It is just as easy to have about us neat, handsome grounds as those that shock all sense of propriety and beauty. They make home more dear and attractive; develope and educate tastes and desires for the beautiful and lovely in our children, which may prove a source of perennial joy.

Correspondence.

We are gratified always, to know that an interest of the right kind is felt in the "literature of agriculture," as well as the scientific, or practical parts of it, and that its friends in various parts of the State are becoming more and more awakened to its importance, as the following letter will show. We shall always be glad to hear from our friend and hope each and all will feel the need of their personal effort in the use of their mental as well as their physical powers, and that their influence shall be felt upon those around them, until all within their circle are actively engaged. The following are extracts from the letter referred to, which is dated

"San Luis Obispo, May 16.

* * * "Indeed, the Farmer is not only destined to be, but has become one of the necessaries of life. In this age of progress, when the various sciences are contributing so liberally to the wants and necessities of man, and since the Press with its world-wide mouth, is ever ready, yea eager, to convert the secrets, or newly-born discoveries of the lucky few, into common prosperity, it really becomes as necessary to read as to eat. And, that man, who *can* read, and *will not*, under such a pressure, yea *high*-pressure of inducement, is unworthy to be entrusted with the keeping of a soul, and deserves to labor and toil as the ox for mere physical existence or sustenance.

"Since the world is growing big with intelligence, so much physical labor is not requisite for the sustenance of man, and what is done, is being done so scientifically, as to render the operation *pleasurable*, rather otherwise. Man thus cheered and encouraged, feels no burthens, his labor is but healthy exercise, a necessary recreation; his few hours of labor but give him an appetite, not only for bread but for food for the intellect, the soul. After dinner, and after supper, we sit down with a hearty good will, and feast our better part on the passing improvements of the age; we behold with delight the great intellectual march, pressing into the service of man everything—even the elements we breathe, exacting new and extra service. Oh, how blessed is the man, who lives in the latter half of this nineteenth century, seeing so much done to lift man out of the mire and dirt of ignorance, from a level with the mere brute that perisheth. So much done, to exalt and ennoble man, and induce him to honor his God for having created and crowned him with so many blessings. Next to God, stands the Farmer as a benefactor, who supplies the world with bread and meat, and all eatables; who feeds the babes and boys of the world, while their intellect is being developed to make them *men*, noble men, and noble women,—statesmen, presidents, and mothers of presidents. Gentlemen of the various honorable professions, arts and trades, quil drivers, counter leapers, and gentlemen loafers, *all*, when you meet a Farmer that has a decent soul in him, make your obeisance to him, heartily, as one of God's nobility. He that will not *honor* the Farmer, and aid him in every possible way in his business, is not worthy the bread that procrastinates his final *doom*.

"Shame upon the Farmer, or Ranchero, who would plead poverty or inability to pay the pittance demanded by your weekly magazine of knowledge, when one bit of a bullock, that grows up almost without labor, will pay your demands for five or six years.

Gentlemen, you need not fear; you have commenced a noble work, you have proven yourselves competent to the task, and you will without doubt be amply rewarded. * * *

"And now I wish to call the attention of Californians to the White or Ever Bearing Mulberry. While tree planting is being encouraged, I would recommend the White Mulberry, as being both ornamental and useful. They commence bearing in the spring and cease only when pinched by winter cold, affording the best of feed for poultry and pigs, and are not bad to take for children too. They are easily propagated from sprouts or cuttings, and they grow quick. In North Carolina, some have regular orchards of them for their pigs. I would give more for a dozen sprouts of them than of any other tree I could name.

Evaporating Pans.—H. G. Buckley, of Kalamazoo, Mich., has invented an improvement in pans for boiling salt, sugar, and other similar substances. The pan is divided into the necessary number of compartments, and through these metal pipes are arranged transversely, passing through the sides and having their ends closed with loose stoppers which can be removed for cleaning the pipes. They are connected to a single flue which receives the heat from the furnace. A patent has been applied for.

Peach Trees.

It is highly important that the cultivators of the Peach should look well to the growth and the condition of their Peach Trees this present year. In all the grounds we have visited—at the Mission, in this county, at Sacramento, and throughout San Jose—we have noticed a marked difference in the growth and condition of the trees that are imported from the East, and those brought from the lower country or raised from California pits. Every tree that we have examined, either raised from the stone of a California Peach, or from trees raised here, have been most seriously affected with a blight upon the leaves, and a loss of the crop. This is a very important fact, and we have the opinion of several of our best and most scientific fruit growers that have been most careful observers of the same facts, that with our sweeping winds and cold, chilly Spring atmosphere, it will be impossible to overcome the objection to southern trees; but that in order to be safe, our Peach Trees must come from the north altogether. Such has been the decisions to which we have arrived, and we have the names of many cultivators who join in sustaining the same views.

We earnestly invite all the cultivators to watch their Peach Trees and observe their condition, and note those raised here in contrast to the northern tree, as we should like to have them give us the result of their experience.

Flax Culture.

On our recent trip to San Jose, while examining the effects of irrigation from the artesian wells of Messrs. Yontz & Myers, our attention was drawn to a patch of Flax sown by Mr. Myers as a matter of experiment. Mr. Myers is a Pennsylvanian, and familiar with flax growing, and he assured us that the specimen he showed us far exceeded anything he had ever seen in the old States. The plants before us were about eight or ten inches high, branching strong from the root into three, four and five stocks, and of most luxurious growths. Mr. M. felt confident that flax could be grown with the most flattering success, and he intends to cultivate both flax and hemp.

The following letter from a correspondent of the Genesee Farmer, gives some information of moment, and we copy it for the benefit of all; flax can be made a staple product in California:

"I visited Ireland last summer for the express purpose of knowing how they manage their flax after it is pulled. I have three brothers in the north of Ireland, all extensive flax-growers, who have been in that business for many years. I remained there from the time the flax was in blossom until it was scutched. I was also in a number of the most extensive linen factories. I found but one opinion among the manufacturers, that was, that any chemical process for separating shove from the lint, that had yet been tried, was injurious to the lint. The whole process adopted there, can be used here, with one exception, and that is pulling, which is the most costly part of the labor. For that, I intend to cut with a reaping machine, having the ground well rolled when the seed is sown, making a smooth surface. The machine will cut within two and a half inches of the surface. In Ireland, three-fourths of all the lint is dressed by steam power. The shove is quite sufficient for fuel for the engine, and a boy can attend it; it performs the breaking and scutching very perfectly. Flax can be steeped, spread upon the grass a few days, and gathered and bound in bundles and taken to the flax mill, at as little cost as any other way, and perhaps less. The manufacturer cuts all the lint before carding, from three to five inches in length; it is then roped and spun, the same as cotton. I bought some yarn spun in one of these factories so fine as to have twenty-two dozen in one pound, spun by machinery. If you wish, I will send you a little flax, which will pay to export when dressed. It is worth $2 50 per stone of 16 lbs.—the break and scutch, 21 cents per stone. It is not dried before breaking. I sowed a little of the white flax seed last year; it grows about eight inches taller than the brown seed, and I think will be adopted by those who intend saving the lint. Hugh McElroy.—Sidney, Shelby co. Ohio.

Remedy for Potato Rot.—The Country Gentleman says: Our readers may remember that we published in our last volume a statement from Mr. Barrett of Cayuga, that he and his neighbors had prevented all rot in their potatoes for several years, by simply sowing ashes over them at the rate of three bushels per acre, once a week for about six weeks, commencing immediately after the second hoeing. Rev. Lyman Smith, of Charlotte, Vt., confirms this statement in a letter to the N. E. Farmer. He says he has prevented the rotting of potatoes by sprinkling the tops with ashes, as soon as they made their appearance, a table spoonful to each hill; after hoeing, apply the same amount again. The ashes were applied immediately after a shower, or upon a heavy dew. After such applications he has no rotten potatoes. The experiment is certainly worth trying, and we hope some of our readers will make the application and let us know the result.

The Great Cave in Calaveras.

It was our good fortune, says the Calaveras Chronicle, to be enabled this week to visit this great natural curiosity—one of the most wonderful objects in California—where nature exhibits how far her handiwork transcends the most exquisite productions of man. No powers of description can convey an idea of the immensity of this cave, the grandeur of its lofty columns and fretted domes, and the elegance of the designs, abundantly scattered through the several chambers, forming a richness of ornament not to be attained in the most costly structures of man's creation.

The cave was discovered in October, 1850, by Captain Taylor, while prospecting in the vicinity. It is entered by a roomy passage, with a gradual descent of about 8 feet, leading to a chamber 148 feet long 35 wide, and varying from 5 to 25 feet in height. The floor of this room is level, and a part of the roof is as level as if finished with stucco. From this we proceed to another chamber, the peculiar feature of which is the waterfall. This presents the precise appearance of water falling over the rocks, which are covered with a crystallization, as if the work of petrifaction had been sudden. In this apartment is an object worthy of contemplation—an immense rock is supported at a considerable elevation, resting on a point a few inches broad, and yet it does not seem as if it had fallen, the roof and sides being complete; leaving this, we reach the extreme chamber in the southern wing, by a passage 200 feet long, 25 to 40 feet wide, having a richly ornamented dome, 60 feet high.

Turning in a northerly direction, we trace a passage 300 feet long, from 10 to 30 feet high, and arrive at what is called Washington Hall, 140 by 120 feet, varying from 10 to 30 feet in height. The proprietors propose to fit up this as a dining hall, and an ample and gorgeous saloon it would make. The roof is arched, supported by pillars and buttresses, which are ornamented by crystals of endless variety. A short passage leads to the Bishop's Palace, 84 by 65 feet, having a lofty altar in the centre—a Virgin Mary in one of the niches, and an organ appropriately filling up another of the sides of this chamber. Adjoining is a lake, 70 yards long. Leaving this, we reach the most elaborately finished room in the sublime edifice, called the Bridal Chamber. The ceiling is thickly studded with stalactites of the purest crystal; the walls are covered by a curious frosting, and the columns are light and graceful. Here is another organ; and adjoining is a small room or closet. Nature seems to have exhausted her decorative art in furnishing this elegant chamber; and here, too, as usual, man has displayed his Vandalism, by defacing and destroying her choicest productions. After this, we have a number of small apartments, connected by intricate passages. All the rooms are richly ornamented. The proprietors have placed staircases in several places, and also laid planks along some of the passages, and nothing is omitted to render a visit in every way satisfactory. Among the crystalline formations, we recollect a large epaulette and representations of various animals.

Messrs. Angell and McGhee have taken charge of this wonderful cave since 1851. It is situated at a place called McKinney's Humbug, distant from Mokelumne Hill about ten miles. These gentlemen are erecting a very large hotel at this point, which will be fitted up in the most comfortable manner, and is to be finished about the 10th of June, when parties can be accommodated with rooms and every luxury. It is on the direct road to Mammoth Tree Grove, which is only 11 miles distant. The season has now arrived when travelling in the mountains is really delightful, from the luxuriant display of wild flowers, the rich foliage of the trees, and the abundant crops which everywhere meet the eye. No one should allow an opportunity of visiting this cave to pass unimproved.

Danger of Painted Pails.—A correspondent of the Scientific American calls attention to the fact that pails painted in the inside are not suitable to be used for holding water, or any domestic purposes. He says, "The oxyd of lead with which they are painted is a dangerous poison, and I know that it is productive of evil in many cases. Last week, having occasion to take a drink of water from a painted pail, which had been in use for some months, I was convinced from the taste of the water, that it had taken up a portion of the paint, and having analysed the water I found it to contain a very minute quantity of it, sufficient, however, if a large quantity of water were taken, to produce those fearful diseases peculiar to lead poisonings."

Machine for Cutting Garments.—J. Harraday, of New York city, has invented a machine for cutting garments, the object of which is to cut several pieces or thicknesses of cloth or other fabric at the same time, of a uniform size and shape, so that the corresponding parts of a number of garments or pieces of furniture may be produced by one operation. This is effected by placing them upon a table or bed, and conducting them in a proper direction towards the edge of a knife, having a reciprocating motion through the fabric and the table, in a vertical direction. The opening in the table is furnished with a sharp edge projecting above the surface of the table, to prevent the cloth from being drawn in, and thus choking the knife. This is made of peculiar shape, and is capable of being turned so as to cut in any direction.

Plough vs. Spade.

Which is the better implement? That is the question. The [illegible] of Gisborne, and the letter of our good correspondent "Sinope," have brought this case to trial. We appear for the defendant.

The case of the plaintiff seems to be, that the plough is a reality and the spade a humbug; that the plough is an instrument of unknown antiquity, the value of which is established by usage beyond the memory of man, while the spade is a poor insignificant modern contrivance; that the plough invariably beats the spade, as any country gentleman knows, because the first is more efficient than the spade; that the plough is good upon "cloddy" land, where the spade is useless; and finally, that the spade led to Irish pauperism, leaving the plough to remedy the mischief. Such appears to us to be the plaintiff's case, as far as it can be collected from the pleadings in Gisborne's Essays on Agriculture, edition of 1854, pp. 247-8.

To this we reply, that of all the misstatements we have ever seen, the plaintiff's are the greatest; that there is no truth in any one single allegation; and that the real difference between the respective cases of Plough and Spade, a difference we are far from denying, was either unknown to him or not mentioned, and such as in no degree affects the main argument. We say that in reality the plough belongs to the category of barbarous implements, such as hatchets and adzes, and that the spade is a distinguished member of the family of saws and planes. As none but a barbarian places a hatchet above a saw, or an adze above a plane, unless in exceptional cases, so must he it still be a barbarian who would think of giving precedence in rank to plough over spade.

What is this plough, this much vaunted instrument, really good for? Can it break into the depths of the soil, and continually bring to the surface the unexhausted and inexhaustible elements of fertility? Can it turn up land 24 inches deep? Or, having so turned it, can it leave behind, in a loose, permeable state, the earth in which roots are to penetrate? These are the results attained by the spade, and they are the results to which the cultivator, be he farmer, or be he gardener, must mainly look for any great improvement in his crops. But the plough can do nothing of the kind. At the worst it scrapes off the surface of the soil, or turns in a little stubble, or pretends to bury weeds; at the best it loosens the staple five or six inches deep, but the deeper it goes, the more it compresses the soil it travels over, consolidating on the one hand as much as it loosens on the other.

Deep cultivation is indispensable to complete success in husbandry; the plough is but a shallow operator; therefore, complete success in husbandry is unattainable by the plough. That is a fixed principle, the truth of which all good gardeners fully understand. Their entire practice is founded upon it, as is clearly pointed out by Mr. Bailey, himself one of our most experienced horticulturists, in an excellent article lately published in our columns.

Nowhere are crops so heavy as in good gardens. People say that this is due to the manure; but many of our readers can tell a very different tale; for they know from experience that the steward or farm-bailiff takes especial care that the gardener is not over-supplied with so valuable an article. The reason is that the plough is not a garden implement; the trust of the gardener is in his spade. Not that the importance of manure is in any degree denied; it is needed in a garden much more than in a farm, for without it heavy root crops and succulent vegetables are unattainable; and it is as certain as anything can be, that in good land cereal crops do not need manure, if they have proper tillage. We say this to prevent misapprehension, although it is immaterial to the question before us, which should be strictly limited to the comparative merits of the plough and the spade as implements for cultivating land.

Mr. Gisborne says: "Do the roots of esculents wish to penetrate into the earth, at least to the depth of some feet? We believe they do. We are sure of the Brassica tribe, grass and clover. All our experience and observation deny the doctrine that roots only ramble when they are stinted for food; that six inches well manured is quite enough, better than more. Ask the Jerseyman: he will produce a parsnip as thick as your thigh and as long as your leg, and tell you the advantages of fourteen feet of dry soil. You may hear of parsnips whose roots descend to unsearchable depths. We will not appeal to the Kentucky carrot, which was pulled out by its roots at the antipodes; but Mr. Mechi's was a dozen feet or more. Three years ago, in a midland county, a piece of good land, in good cultivation, and richly manured, produced a good crop of cabbages. In November of that year, we saw that field broken into in several places, and at the depth of four feet the soil (a tenacious marl, stiff enough for brick earth) was occupied by the roots of cabbage—not sparingly—not mere capillaria—but fibers of the size of packthread."

This is an important admission on the part of the plaintiff in the case before us, though every gardener knows it to be true. Such being the fact, let us ask how far the plough is capable of rendering land fit for the vigorous growth of plants whose roots commonly penetrate the soil to the depth of three feet. All the penetration is to be effected by six inches of earth, the lowest [illegible] three feet. All the [illegible] is to be effected by the [illegible] from the [illegible] to the [illegible] from the [illegible] to the [illegible] and [illegible] the [illegible] to the [illegible] to the [illegible] to

Weekly Summary of News.

OREGON.

By the arrival of the Columbia, on Saturday last, we have the Oregonian and Weekly Times of May 20. The latter paper says: We have to chronicle one of the most cold-blooded and atrocious scenes ever enacted in Oregon—that of a wife murdering her husband while at supper, and of his daughter of 16 years aiding and abetting! The scene was enacted in Clackamas county. On Saturday night last, Mr. A. J. Lamb returned from his field, and his wife spoke to him kindly and set him some supper. While at the table, she stepped up behind him with a heavy axe, and struck him on the head. Wishing to make sure of him, she struck him again, breaking his skull so badly that he cannot possibly survive. After committing this inhuman deed, the monster took to the woods, but was brought back the same night. She and her daughter are now in custody at Oregon City. Lamb had his senses perfectly the next day, and gave his deposition in the matter. As near as we can ascertain, the causes of this inhuman act are somewhat as follows:—It seems that this woman and her daughter had determined to elope with a man named Collins, who last summer lived in that neighborhood. He is supposed to be in California, and they had become impatient in waiting for him, and had written a letter to him stating that they were ready to go wherever and whenever he chose. This letter was discovered by Lamb this spring, and consequently was not forwarded. This Collins, we learn, seduced a man's wife, last summer, in that vicinity, and a divorce has been obtained—and a very reasonable presumption obtains that he had seduced both this murderess and her daughter. Lamb was an industrious and quiet citizen, and was much esteemed.....The crops throughout the country are said to look extremely well, particularly the spring grains.....The Oregonian has advices from Yakima, stating that gold is found in increased quantities.....The papers are filled with political matter, to the almost total exclusion of everything of a general interest.

AUSTRALIA.

By the arrival of the schooner Spray, we have received Australian papers to March 22.....The accounts generally from the mines are not encouraging, which may perhaps be owing to the changing of the season from dry to wet, and consequent change in the nature of the diggings.....In anticipation of the war in Europe, some attention had been called to the defences of the harbor of Sydney, and preparations were being made to fortify its entrance.....The Sydney Empire says that the occupation by the French of the Island of New Caledonia is now beginning to be regarded as *an fait accompli*, and the inhabitants of Sydney are inclined to regard it with some complacency, as it is evident that these neighbors, having no near market of their own, must resort to ours.....A private Escort Company was formed last year for the purpose of bringing down into Sydney the gold produced on the Orens River Gold Field, lying on the borders of this colony and Victoria. During the first year of its existence this company brought into Sydney gold to the amount of more than half a million. Its expenses were so enormous that it has been discontinued.....The weekly amount of gold brought into Sydney is about 2500 ounces, but a much larger amount is believed to be brought down by private hands—as the safe state of the roads tempts the purchaser to evade the escort fee.....Each week also serves to develope the richness of this country in other minerals than that which has caused such a revolution in its circumstances. Very rich copper mines have been opened at Bathurst for some few years, and more recently at Ophir. The indications are quite extraordinary for richness, and even with the present enormous cost of labor a great deal has been done to develope them. But the cost of the carriage, and the superior attractions of the gold field, where every digger is his own master, have prevented the Companies owning the mines from working them to a profit. With ordinary facilities of communication there is no doubt that they would be highly lucrative concerns.....On the morning of March 1st, between six and seven o'clock, a fire broke out on board the screw steamer West Wind, lying off Sandridge, Melbourne, which has unfortunately totally destroyed that ship. No authentic information can be arrived at as to the origin of this calamity. The ship was insured to the amount of £10,350.....The mining prospects of the colony have received some encouragement during the past ten months from a discovery which has been made in the vicinity of Braidwood, on what are called the Southern Diggings. A very large number of miners are at work upon this field, and although no individual instances of great success have yet occurred, the increased amount of gold which is brought into Sydney from this field shows that a fair average return is secured by those at work there. About one thousand miners are at work.....In the Western Gold field a quartz vein has recently been discovered at Tambaroom, which is expected to yield largely when the proper machinery is erected for crushing.....During this week a private escort arrived in Maitland from the Hanging Rock, bringing 500 ozs. of gold with a nugget of 28½ ozs., taken from a hole on the newly-discovered ridge at Oakenville Creek..... A nugget of fifty pounds weight had been turned up at the Ophir diggings by two or three laboring men. The treasure was found in a bed of red clay, and contains but little admixture of quartz.....An electric telegraph has been constructed between Melbourne and Williamstown. A line was also in contemplation between Melbourne and Sydney, at a cost of £125 per mile.....A movement was on foot at Sydney for the formation of a Liquor Law League, to agitate for legislative enactments for the entire prohibition of the sale of intoxicating beverages. In Sydney alone, with a population of 70,000, there are 400 licensed public houses, and it is affirmed that such an amount of wine and spirits was imported last year that every human being in the colony might have floated on his individual allowance in a boat.....The winter diggings were about commencing, and several showers of rain had already fallen.....A meeting had been held at Bathurst and £10,500 subscribed for the erection of an iron suspension bridge across the Macquarie. .....In the month of March, no less than 15 deaths had occurred from drunkenness in New South Wales.....The English ship Rose of Sharon arrived at Melbourne with a cargo of 503 Chinese from Hong Kong.....A Miss Osborne committed suicide near Bathurst, by hanging herself on the morning appointed for her marriage.....The American steamship New Orleans was put up to public competition on Tuesday morning, and bought in for £10,500.....The aspect of the commercial interest is marked by extreme caution and inanimation. The markets are at present glutted with every variety of goods. Although large deposits are lying in the Banks, which bear no interest, there is a deplorable want of enterprise to turn them to useful and fructifying account.....The exports of Colonial Produce for the past year, as exhibited by the Custom House records, inclusive of the shipments from the outports of Newcastle, Moreton Bay, and Twofold Bay, amounted to a total of £4,122 in value.

MEXICO.

The steamer Southerner arrived at this port from San Diego on Tuesday evening, bringing the Los Angeles and San Diego papers to the 20th, and Mexican papers to the 5th.....The Star has commenced its fourth volume, and the Herald is much enlarged and improved, but they contain no items of general interest.....The Mexican papers say that a company has been formed to light the city of Mexico with gas.....Senor Rone Mason had returned from Havana—having engaged the largest opera troupe ever seen in Mexico, among whom is Madam Sontag.....The press is still under strict surveillance, and the authorities of the different ports have been ordered not to admit any printed matter in which the government is in any manner criticized.....In Mexico it was confidently believed that the Gadsden treaty would be ratified.....The Indians continue their incursions in the north. In an engagement which took place between them and a body of Mexicans, the Indians had seventy killed. This may check further incursions.....Santa Anna has contracted for building two steam frigates in New York..... According to the recent census returns, there are 7,661,520 souls in Mexico—rather a decrease than otherwise.....The army is said to amount to fifty thousand men, well equipped, and in fine condition.

THE CITY.

Another murder, under the name of a duel, was perpetrated on Wednesday morning last. It appears that two parties named Benson and Menzie had been connected in business, and having quarrelled, were induced by some friends to resort to the duel. On coming on the ground, one of the parties was found to be armed with a heavy dragoon pistol, and the other with a small pocket pistol. After the men being placed, the word was given to fire, when the small pistol missed fire. At the second fire, Benson's pistol again snapped, and the ball of his opponent took effect in the arm-pit, when he dropped. As he had not brought any means of conveyance, the victim was allowed to lie on the ground, until some of the spectators induced the second of the victor to take him home in his carriage, where he expired at 10 o'clock on Thursday morning. The deceased was 24 years of age, and a native of the west of England. No arrests have been made. Comment is needless.....The National Lancers paraded on Monday, attired in their new uniform, with the U. S. regulation equipments, which they have just received from New York. The company exercised in rifle shooting—firing standing, upon a walk, and upon a gallop. The target was well riddled..... A large portion of the new grade of the Plaza is completed. If the arrangements are properly carried out, the Plaza *may* be no ornament to the city.....Gilmore, who murdered Mr. Twitchell, at the Potrero, some time ago, and who was tried and convicted of manslaughter, but had a new trial granted, has been released from jail under bail of $5,000.....The ship Dutchland brought another cargo of Chinamen to this port on Saturday.....The Lafayette Hook and Ladder Co. leave Jackson street wharf at 9 o'clock this morning, on an excursion to Oakland, for the purpose of celebrating their first anniversary. .....The Marine Telegraph which has been constructing between this city and Fort Point, went into operation on Saturday last. It is owned by Messrs. Patten & Brother and Robert S. Martin, the latter of whom is well known as a most energetic and active marine reporter for the leading papers of this city. .....A handsome flag-staff, eighty feet in length, has been presented to the Monumental Engine Co. by some friend of the company, and is being dressed, preparatory to being placed in front of their engine house in Brenham Place.....It is said that a branch of the mysterious order of "Know-Nothings" has been established in this city.....Our *annual* May fire broke out at about quarter-past 2 o'clock on Tuesday morning, in the rear of a small grocery kept by Mr. Wagner, on Dupont street, a short distance above Broadway. We copy from the Chronicle: The fire spread rapidly, and by this time the engines could be got to work had made good headway, extending up towards Vallejo and over to Kearney. The burnt district includes most of the buildings on the square bounded by Dupont, Kearney, Broadway and Vallejo streets—about fifty wooden buildings. Loss about $75,000. The fire was stopped at half-past four.

The Baltic Fleet.

As everything bearing upon the tremendous struggle now going on between the principal powers of Europe, must necessarily be of interest to our readers, and as the steamers now due will probably bring us the news of some decisive action between the Russians and the allied fleet in the Baltic, we republish from a London paper a list of the British portion of the fleet, together with its strength in men, guns, and steam power.

THE FIRST DIVISION OF THE BALTIC FLEET.

First-rate ships, screw.	Guns	Men	H.-pr	Commanders.
Duke of Wellington..	131	1100	780	Sir C. Napier, K.C.B.
Royal George.....	120	990	400	Capt. Codrington, C.B.
St. Jean d'Acre	101	900	600	Capt. Hon. H. Keppel.
Princes Royal	91	850	400	Capt. Lord C. Paget.
Cressy	80	750	400	Capt. Warren.
Edinburgh.....	60	600	450	R. Admiral Chads, C.B.
Illenheim.....	60	600	450	Capt. Hon. F. Pelham.
Hogue	60	600	450	Capt. W. Ramsay.
Ajax	58	600	450	Capt Warden.

STEAM FRIGATES, &c.

Ships.	Guns	Men	H.-pr	Commanders.
Impérieuse (screw)...	51	530	360	Captain Watson, C.B.
Euryalus (screw)	51	530	400	Capt. G. Ramsay.
Arrogant (screw)....?	47	450	360	Captain Yelverton.
Amphion (screw)	34	320	300	Captain Key.
Dauntless (screw)	33	320	650	Captain Ryder.
Leopard (screw)	18	300	560	Captain Gifford.
Dragon (paddle).....	6	200	560	Captain Wilcox.
Valorous (paddle.....	16	220	400	Captain Buckle.

Thus the first division of the Baltic fleet will consist wholly of steamers, amounting to 17 ships, 1017 guns, 9870 men, 7570 horse-power.

SECOND DIVISION.—(SHIPS OF THE LINE.)

Sailing.	Guns	Men	H.-pr	Commanders.
Neptune	120	970	..	Rear-Admiral Corry.
St. George.....	120	970	..	Capt. Eyres.
Waterloo.....	120	970	..	Capt. Lord F. Kerr.
St. Vincent.....	101	900	..	Capt. Scott.
Prince Regent	90	820	..	Capt. Smith.
Monarch	84	750	..	Capt. Erskine.
Boscawen	70	730	..	Capt. Glanville.
SCREWS.				
Cæsar	91	850	400	Capt. Robb.
James Watt.....	91	850	600	Capt. Elliott.
Nile	91	850	600	Com. Martin.
Majestic	80	750	400	Capt. Hope.

FRIGATES, SLOOPS, &c.

Screws.	Guns	Men	H.-pr	Commanders.
Miranda	15	175	220	Capt. Lyons.
Archer	14	160	202	Capt. Heathcote.
Conflict	8	180	400	Capt. Foote.
PADDLES.				
Odin	16	220	560	Capt. Yelverton.
Bulldog.....	6	160	500	Capt. W. K. Hall.
Gorgon.....	6	160	320	Com. A. Cuming.
Driver	6	160	200	Com. L. Cochrane.
Rosamond	6	160	280	Com. Wodehouse.
Prometheus.....	6	145	200	Com. Rice.
Alban	3	60	100	Com. Otter.
Lightning	3	60	100	Capt. Sullivan.
SAILING.				
Frolic	16	130	..	Com. Nolleth.

Making in the whole a fleet of 44 vessels, 2200 guns, 16,000 horse-power, and 22,000 sailors and marines!

MARKET REPORTS.

San Francisco, May 30, 1854.

The condition of trade is far from promising to those who were expecting any revival of it. Few articles have been active except those in most demand for daily use. There is no speculative movement and prices remain about the same in all general merchandise.

The Wheat Crop of California is now demanding the attention of the community and various estimates are made as to the probable amount that will be produced. 500,000 barrels Flour were imported in 1853, and about 200,000 the present year. There is stock on for about two months, and only about 1500 barrels on the way, to add to the crop of the present year. Over 20,000 barrels have been imported within the last two months. Some estimate the crop of California at 500,000 barrels, but we are of opinion that it will reach 600,000, enough to supply our own wants, leaving shippers from abroad no possible chance to realize cost and charges. The great Chilian combination intend forcing this market, but they will find it a losing game.

Barley is in the hands of a combination and remains at quotations.

Provisions are nominal, with large arrivals.

Lumber is abundant and a drug.

Harvesting Implements are scarce and Reapers and Threshers have advanced largely.

Strawberries and Cherries are in the market; the former fine, the latter scarce.

In addition to the standing inducement for the getting of subscribers for the "Farmer," we will make a present of HARPER'S ILLUSTRATED FAMILY BIBLE to the person who procures the most Subscribers in the first six months of our publication. This we regard as one of the most beautiful books ever issued. Who will have the prize?

Kate Hayes.—Since our last issue, this lady has given three concerts at Musical Hall, which were complete triumphs. The enthusiastic reception she met must have been extremely gratifying. The orchestra, under the direction of Mr. Geo. Loder, performed admirably, *of course*, and added materially to the success of the concerts. We hope this lady may be induced to continue her concerts.

Rassette House.—We call particular attention to the advertisement of this most commodious and elegant house. Our friends in the East will hardly credit us if we tell them that our hotels are five stories high, and can accommodate five hundred boarders. But this is actually so, and we take great pleasure in recommending this hotel to those coming to California.

Pacific Iron Works.—We learn from the proprietor of this Foundry that they have set up within the last four months eight flouring mills, and recently they have built one of extra power and finish for Bassham and Kincaird of San Jose. They have also built a very fine one for S. S. Johnson & Co. of Santa Clara. This increase of flouring mills shows the great advance making to secure the State in the manufacture of her own breadstuffs. The Pacific Works are worthy a visit.

MARRIED.

On the 30th May, at the Oriental Hotel, by Rev. W. Ingraham Kip, Joseph W. Winans and Sara Adelaide, youngest daughter of Alexander Bodman, Esq., all of Sacramento.

On the 16th May, by Rev. Mr. Briggs, John F. Miller and Miss Harriet Fearn, both of this city.

On the 28th May, in this city, by Rev. A. Williams, Mr. James H. Wingate and Miss Amelia Helena Obelein, both of this city.

On the 15th May, in Volcano, by E. A. Kingsley, Esq., Mr. Andrew B. Reade and Mrs. Louisa Else, both of that place.

On the 14th May, in Portland, O. T., by Rev. P. G. Buchanan, Mr. James Bothwell and Mrs. E. J. Patterson.

On the 5th May, in Douglass county, Mr. Isaac Boyle and Miss Margaret Monture, all of Douglass county.

On the 11th May, by Rev. J. D. Boon, John Bash and Miss Elizabeth Walker, all of Marion county.

On the 21st May, in San Diego, by Rev. J. Reynolds, Mr. Samuel Kirkhuff, of Williamsburg, Penn., and Custoria Stewart, of San Diego Viejo.

On the 8th May, at Mr. Fogle's, in Cloverdale, Los Angeles county, by Rev. A. Bland, Mr. Phillip H. Stigles and Lidia E. Bond, all of Cloverdale.

On the 27th May, at Oak Grove Ranch, San Joaquin county, by Benj. G. Weir, Esq., Harry J. Raphael, of Stockton, and Miss Jane Kitchen, daughter of Mr. Andrew Kitchen, of Boston.

On the 22d May, by Rev. J. Lewis Shuck, Mr. Wm. Shaffer and Miss Elizabeth Wagner, all of Marysville.

On the 14th May, Mr. John Bash and Miss Elizabeth Walker, all of Marion county, O. T.

DIED.

On the 16th May, in Los Angeles, of consumption, Mr. Alex. Campbell, aged about 21, formerly of Tennessee.

On the 24th May, in this city, Emeline, wife of Wm. C. Hall, Esq., aged 41 years.

On the 24th May, in this city, of consumption of the lungs, Mrs. Jane W., wife of Samuel J. Williams, in the 43d year of her age.

On the 25th May, in this city, Lyman W., only son of Lyman Clark, aged 7 months.

On the 25th May, in Nevada, of scrofula, Wm. Grimes, aged 22 years, formerly of Ohio.

On the 27th May, of dysentery, Allen R. White, in the 27th year of his age, late of Portland, Oregon.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO.

ARRIVALS.

May 24—Clipper ship Red Rover, Putnam, 120 days from New York, with mdse.

Schr Mt Vernon, Luvejoy, 36 hours from Santa Cruz: lime.

25th—Br ship Lord Dufferin, Matthew, 189 days from Liverpool, via Callao 18 days, with 810 tons coal.

Schr Pilgrim, Fisher, 2 days from Humboldt Bay; lumber.

26th—Stmr Major Tompkins, Hunt, 14 hours from Santa Cruz.

Br bark Robert Syers, Boggs, 163 days from Sydney; coal.

HENRY A SMITH & CO'S

GRAND RAFFLE

$100,000,

CONSISTING OF

TEN THOUSAND DOLLARS IN SLUGS!

Farm, Rancho, Building Lots, Watches, &c., &c.

Guaranteed to come off at the

AMERICAN THEATRE,

ON THE FOURTH OF JULY, 1854.

TICKETS ONE DOLLAR EACH.

To be had of the proprietors, at their office, north-west corner of Montgomery and Merchant streets, or at all the principal bar & stores, hotels and saloons throughout the city and State.

1st Grand Prize—Ten Thousand Dollars in cash..... $10,000

2d Grand Prize—One handsome Residence, consisting of three acres of land, with a beautiful cottage house, in the city of Oakland, on Broadway, within five minutes walk of the steamboat landing. The proprietors own the property under the Peralta title and two years possession—the same, with a warranted deed, will be given the drawer. Valued at.. 5,000

3d Grand Prize—One Ranch, consisting of 160 acres of land, with a good House, Farming Utensils, &c., &c. This valuable Ranch is located in San Jose Valley, and is held under a confirmed Spanish title. A warranted deed will be given the drawer. Valued at.. 4,000

4 to 254—Two hundred and fifty Valuable Building Lots in the city of Oakland, the Brooklyn of San Francisco, situated on Broadway, within five minutes' walk of the landing. These lots are unquestionably the most beautiful sites for residences in the State, and are too well known to need description. The proprietors hold the Peralta title and have possession. The drawer will receive warrantee deeds. Size, 25x100. Valued low at $200 each..... 50,000

255 to 465—Two hundred and ten Fine Gold Lever Watches, Hunting Cases, each of equal value. Valued at $100..... 21,000

466 to 666—Two hundred elegant Chinese Shawls, high colors. These shawls are of the same quality as are sold daily in this city at $60 each, each one of equal value. Valued at $50..... 10,000

We, the undersigned, are acquainted with the parties owning the property offered in this Raffle, and also know the Real Estate referred to, and we assure the Public that we consider the title to the property is indisputable.

Hon. D. S. SHATTUCK,
JAMES A. MORRISON, M. D.

The proprietors in conducting this Raffle bind themselves to carry it on in a manner that will be satisfactory to all who may buy tickets. The drawing will be done by gentlemen chosen by the holders of Tickets, each county in the State sending a committee of one for that purpose. Maps of the Real Estate, and samples of the property may be seen at our office, corner of Montgomery and Merchant streets.

For the responsibility of the proprietors of this Raffle, and that it will be conducted with honesty and integrity, we refer to

His Excellency JOHN BIGLER,
Hon. J. W. DENVER, Secretary of State,
J. B. HARDENBERG, Mayor of Sacramento,
Hon. LEWIS ALDRICH,
Maj. W. H. HARVEY, Sergeant-at-Arms of Senate,
E. WILSON, Wilson's Exchange,
DAVID JONES, Hotel, Sacramento City. 22.

LONE MOUNTAIN CEMETERY.

OPENING SALE OF CHOICE BURIAL LOTS.

FIFTY BURIAL LOTS,
Each lot 12:25 feet, containing 300 superficial feet.

WAINWRIGHT, RANDALL & CO., AUCTIONEERS.

Will sell at Public auction, at our salesroom, No. 100 Merchant street, on TUESDAY, June 6, at 12 M., Fifty Choice Burial Lots in Lone Mountain Cemetery.

A public sale is made in order that those wishing the choice of Lots may have an opportunity to obtain them.

These Lots are portions of the six sections that are now opened, graded, surveyed and ready for use, and are the most Choice Lots in the Cemetery; they are all beautified by evergreen Shade Trees and Shrubbery.

The entire Cemetery is enclosed with an elegant and substantial fence, thereby protecting the grounds from injury, and the avenues were well graded, Macadamized, and embellished with shade trees. All the improvements necessary to the complete adornment of the grounds are rapidly progressing.

An opportunity is now offered to Families, Public Institutions and Societies to select Lots of sufficient size, combined with beauty of location, to meet their desires.

Plans of the sections, giving full particulars of each lot, can be seen at our office, any time previous to day of sale.

Terms made known on day of sale. td

Notice.—Lone Mountain Cemetery.

THE Grounds of the Cemetery being now enclosed and about 20 miles of avenue opened and graded, and a temporary macadamized carriage road opened from the Presidio, through the government reserve, the proprietors take pleasure in announcing that on and after Thursday, May 4, the grounds will be open for the inspection of the public, until on or about the 20th inst., when they will be dedicated to the purposes intended, of which due notice will be given. The avenues are in condition for light carriage, and many now in process of macadamizing. The principal entrance is to be on the line of Rush street, when extended, which road it is intended to have opened during the present summer. For further information, inquire of either of the proprietors, at 110 Montgomery street.

21 F. B. AUSTIN. NATH'L GRAY. W. H. RANLETT.

New Agricultural Warehouse.

NEW FIRM!—NEW GOODS!

THE undersigned, having purchased the entire stock in trade of *Messrs. WARREN & SON* in the *SEED AND AGRICULTURAL BUSINESS*, will continue the business under the name and style of BAKER & HAMILTON, at No. 11 J street, *Sacramento City*, and beg leave to present themselves to their friends and the cultivators of the State for that share of patronage which has heretofore been given to this long established Agricultural Warehouse. The undersigned intend, with every season, to keep a full supply of all the necessary articles in each department, and trust that the old friends of the late firm will favor us with a call.

LIVINGSTON I. BAKER,
ROBERT HAMILTON.

WARREN & SON present their grateful acknowledgments to their patrons for the favors of many years past, and in taking leave of them personally assure them that they will be as readily and well supplied by their successors, Messrs. Baker & Hamilton, in whom they most cordially recommend.

Warren & Son are happy to state that in being liberated from the commencement of business to which the past years have called them, they will visit different portions of the State, become personally acquainted with the localities and the cultivators, and thus gather those important facts so necessary to the cause of Agriculture. Warren & Son will call personally on those interested in Agriculture, and supply them with copies of the CALIFORNIA FARMER—a work to which they will now devote their best efforts, and look to the Farmers for a support of the work. 21

THE FARMER.

BY A. W. PIKE.

While poets sing, and laurels bring
To deck the warrior's brow,
My wreath shall be, all green and free,
For him that holds the Plow.

All hail the hand that tills the land—
A noble work to do,
By God designed to raise the mind
And make it happy too.

'Twas Heaven's will that man should till
The soil on which he stood—
Plant Earth's broad field, that it might yield
A harvest rich and good.

Then why should man dislike the plan
Which the Eternal made?
Quit the bright Plow, and meanly bow
To some low humble trade?

All Farmers good have long withstood
The sneers of fools and fops—
Whose use on earth, e'er since their birth,
Has been—to eat his crops!

In rosy morn, at day's first dawn,
He's up for labor's wreath,
To breathe the air, so pure and fair,
Which gives him perfect health.

Throughout the day, without delay,
He labors, fresh and strong,—
Arranging crops, as best he may—
Nor thinks the hours too long.

His manly form doth brast the storm,
Nor dreads the winter cold·
Nor Sol's hot rays, in summer days—
For labor makes him bold.

He ever stands with open hands,
To feed the needy poor;
A steward true, o'er all his lands,
And keeps an open door.

Then hail the hand that tills the land,
A noble work to do,—
By God designed, to raise the mind
And make it happy too.

YIELD NOT TO DARK DESPAIR.

Hast thou one heart that loves thee,
In this dark world of care,
Whose gentle smile approves thee—
Yield not to dark despair.

One rose, whose fragrant blossom
Blooms but for thee alone;
One fond confiding bosom,
Whose thoughts are all thine own—

One gentle star to guide thee,
And bless thee on thy way,
That e'en when storms betide thee,
Still lends its gentle ray.

One crystal fountain, springing
Within life's dreariest waste,
Whose waters still are bringing
Refreshment to thy taste—

One tuneful voice to cheer thee,
When sorrow has distrest;
One breast when thou art weary,
Whereon thy head to rest—

Till that sweet voice is failed,
And cold that heart so warm,
Till clouds thy star have shaded,
Heed not the passing storm:

Till the kind voice that blessed thee
All mute in death doth lie,
And the fount that oft refreshed thee,
To thee is ever dry,

Thou hast one tie to bind thee
To this dark world of care,
Then let not sorrow bind thee—
Yield not to dark despair.

A DOUBLE EMBARRASSMENT.—Differences in religious faith are obstacles to marriage among several denominations.

Somewhere in Prussia, a beautiful young lady, a Christian, fell desperately in love with a young Jew, who, as the story goes, was equally beautiful and accomplished. He loved her most dearly, but the laws of that country do not permit a marriage between a Jew and a Christian. The young man having business at a distance, had not been absent many days before he received the following truly cousoling note:

"MY DEAR FRIEND—The difficulties which have so long stood in the way of our marriage have been put an end to, and by the intervention of your guardian angel, as you have so often called your faithful Miua, who yesterday became a Jewess."

Scarcely had this been despatched, when the love-sick beauty received the following from her Adonis:

"MY DEAR MINA—The obstacle which presented itself to our union, in the unfortunate difference in our religious faiths, no longer exists, and I shall hasten to complete our mutual felicity; I yesterday became a Christian."

How the matter was arranged under the double embarrassment we are not informed.

OUR ARTISTS ABROAD.—"Dear-a-me," said Mrs. Philpipes, reading the Sun, "wot fellers them artists is; there's that Powers, been 'on a bust' there the last six months; and as if that's not enough to shame us 'Mericans, there's another one on 'em has been and tuk a copy from Reuben's! Ef I had a been Reuben, I'd a sued him—yes, I'd a showed wot it was to take such things. They say artists has a finer taste than anybody else, but they have no right to please their palettes at other people's expense." Three fallen stitches in the incipient stocking testified to Madam's earnestness.

STUCK.—This is a newsboy's term. They understand it because it is something more than they can stand under. It often happens that a green specimen of the genus newsboy gets stuck with more papers than he can sell, and then his fellows laugh rather than cry over his misfortune. He gets but little sympathy, and he is not permitted to sell out at "prices below cost," as some of the wet-goods merchants do, as that would injure trade.

We saw a specimen last Sunday. A boy had got stuck, and about 1 o'clock he vented a feeble cry of "'Ere's Sunday papers for one cent." Another of the fraternity, just then coming around the corner, heard the cry, and collared the delinquent.

"How's that, you little blackguard, you sell Sunday papers at one cent?"

"I don't care; I'm stuck."

"Well, if you are, you aint agoing to spoil the trade. Will you quit?"

"No. I won't quit, if I can get anybody to buy them."

"Won't you? Then I'll make you."

Hereupon the regulator of other people's affairs took the usual course to hammer obedience into the delinquent with his fist. It did not succeed quite so well as it might if the other European powers, in the shape of half-a-dozen juvenile Irishmen, had not come in for a share in the free fight, and finally settled the quarrel in favor of free trade. The regulator of commerce went off grumbling.

SEEDLESS APPLES.—The following is stated by the Memphis Eagle as the method to procure apples without seeds or cores: "Take the ends of the limbs of an Apple tree, where they hang low, so as to reach the ground; dig a small hole for each end under the tree; bend it down and bury it in the hole, confining it down so that it will remain. Do this in winter, or the beginning of spring. The end of the limb thus buried will take root and put up sprouts or scions, which, when they become sufficiently large to set out, dig up at the proper season, and transplant them in the orchard where you wish them to remain. When they get large enough to bear, they will bear apples without seeds or cores."

FAST ANCHORED.—One of the Albany editors says, that the only reason why his house was not blown away, was that it had a heavy mortgage on it.

Public Notice.

THE copartnership hitherto existing between the undersigned, transacting business as Bankers and Express Carriers in the State of California, and in the Eastern States of the United States, under the name, firm and style of ADAMS & CO., expires this day by limitation.

D. H. HASKELL,

DONAHUE'S UNION IRON WORKS,

[THE FIRST ESTABLISHED IN THE STATE.]

Cor. of First and Mission streets, Happy Valley, San Francisco.

THE undersigned calls the attention of the citizens of California and Oregon to his unequalled facilities for doing work with rapidity and cheapness. He has made, and will continue to make, such additions to his time and labor-saving machinery, as the increasing wants of the State require, and hence solicits public patronage.

Saw and Grist Mill Irons,
Quartz Crushing and Amalgamating Machinery,

and Castings of either Iron or Brass of every description (having a most extensive assortment of ready made patterns) made promptly to order.

STEAM ENGINES from the manufactories of William Burden, Brooklyn, New York, and other celebrated makers, constantly on hand and for sale.

BOILERS of every description furnished at lower rates than can be afforded elsewhere, the iron for the same being imported direct, and the machinery for shearing, punching and rivetting being driven by steam power. Patent Steam and Water Gauges, Steam Whistles, Cocks, India Rubber Steam Packing. Ready made Bolt and Nut, Belting Lace and other Engineer's find ings for sale.

2 Jan JAMES DONAHUE.

Threshers, Separators and Cleaners.

PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any other machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—one for the separator, two for the power, &c.

Also, EMERY'S Threshers and Separators, of Two Horse Power.

We have also on the Golden Fleece, two of HALL'S (Rochester,) Latest Improved Threshers, Separators and Cleaners, Eight Horse Powers, all complete.

Also, Four of BUSSEY'S REAPERS and MOWERS, all combined.

For sale by COIT & BEALS,
9 tf 94 Battery street, office up stairs.

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous east men and trade in general, that they have opened a branch of their business at the Fire Proof Store No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Hazell and Gallego.

Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any rebolt grains.

Ground feed of all kinds always on hand.

Every exertion will be used to merit a continuance of the favors heretofore so liberally extended to us. 1-tf

Manny's Patent Reaper and Mower combined.

THREE of the above celebrated machines, which can be used as a Reaper or Mower,—for sale by

HENRY McNALLY,
15 1m N. E. 183 Washington street, (near Battery st.)

$100,000 WORTH OF FURNITURE

NOW OPEN FOR INSPECTION AT

HOWES & CO'S

No. 180 Montgomery Street,

(Opposite the Metropolitan Theatre.)

COMPRISING everything suitable to furnish the *PARLOR, OFFICE, DINING ROOM, CHAMBER* or *KITCHEN*—at wholesale and retail.

All persons who wish to furnish

Hotels, Offices, or Dwelling Houses,

Are respectfully invited to examine our stock before making purchases, as we feel certain that we can offer greater inducements to purchasers than any others in the City. Our goods are purchased by a

Partner in the Eastern States.

For CASH, consequently we are enabled to sell all kinds and qualities of Furniture at the Lowest Market Prices.

We shall enlarge our store in the course of fifteen or twenty days, and until that time we are prepared to offer *GREAT BARGAINS TO OUR CUSTOMERS*—rather than be at the trouble of removing our goods to some other place, we prefer to sell

☞ *VERY CHEAP FOR CASH.* ☜

☞ Goods delivered to any part of the city, free of charge.

Orders promptly filled, and goods packed properly for country dealers.

Come and be convinced. HOWES & CO

Opposite the Metropolitan Theatre. 14 tf

BATES' SUPERIOR
UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.

Soil, Propagation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top soil at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this in mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.

If the land is poor, so that grass and weeds will not vegetate then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable.

Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in meadow moss, and well boxed, which will enable them to go to a great distance in a fresh state.

The proper time for Fall transplanting is October and November; for Spring, from the opening of the snow till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting and during the winter for Spring. 15

Office in Musical Hall Building, Bush street.

TERMS.—Eight dollars per annum, in advance; or delivered by carrier at one dollar per month.

ADVERTISEMENTS.—A limited number of Advertisements will be inserted at the following rates: For one square of eight lines, per month, $6. For business notices of five lines or less per month, $4. A slight reduction will be made to regular advertisers.

Napoleon and his Brothers:

AND A VISIT TO AN EX-QUEEN.

I WOULD ask you, gentle reader, to follow me through the torturous streets of Milan, and after pausing a moment before the glorious *Duomo*, let us turn towards the left without delay, for within the walls of the adjoining palace is about to be enacted one of those scenes that influence the destinies of the world.

Let us ascend together the grand staircase of the royal palace, and traverse some of the apartments newly decorated by the glowing pencil of Appiannic.

We may gently open the door of the cabinet we are now approaching, and, unseen ourselves, gaze upon the spectacle within. You recognize at a glance the figure which now presents itself to your view. There is no mistaking that simple green uniform—the closely-fitting white pantaloons and Hessian boots. See that head, finely modelled as an antique statute—those dark locks thinly scattered on the ample brow—the keen blue eye, whose glance seemed to pierce through the veil of futurity—the firmly compressed lip—the teeth of dazzling whiteness—what calmness in his whole aspect! It is the consciousness of strength, the serenity of the lion! When these lips open, nations listen: when this eye kindles, the plains of Austerlitz shoot forth flames like a volcano. At this hour, the man you see before you has one hundred and twenty millions of human being under his command—he is none other than Napoleon the great—the *Jupitur Tonnans* of France.

After a few moments spent in tranquil waiting, the door opens and gives admittance to a man dressed in a blue coat with closely-fitting gray pantaloons and Hessian boots. Our eyes no sooner rest upon him than we discover in him a certain family resemblance to the Emperor. He is however, taller, slighter, and of a darker complexion; this is Lucien—the true Roman, the Republican of ancient days.

These two men, who had not met since the battle of Austerlitz, each cast upon the other one of those searching glances which penetrate the inmost soul—for Lucien was the only one of the Bonaparte family who possessed the same magic power of the *eye* as Napoleon.

He advanced a few paces and then paused—Napoleon hastened towards him and held out his hand.

"My brother!" exclaimed Lucien, at the same time clasping the Emperor in his arms; "my brother! how I rejoice to see you!"

"Leave us alone, gentlemen," said the Emperor, waving his hand towards a group of attendants who were standing by.

They bowed and left the room without uttering a word. These three gentlemen who so promptly obeyed the Emperor's command were, Duroc, Eugene and Murat; a marshal, a prince, and a king.

"I sent for you, Lucien," said Napoleon, as soon as he and his brother were left together.

"And you see that I lost no time in complying with the wish of my elder brother," replied Lucien.

Napoleon knit his brow.

"Never mind! you are come, and that is what I desired for I want to speak to you."

"I am all attention," rejoined Lucien, slightly bowing.

"What projects have you in view at present?" asked Napoleon, looking hold of Lucien by one of the buttons of his coat and gazing at him kindly.

"What projects have I in view?" replied Lucien, with surprise; "such projects as are natural for a man who has been retirement for from the world. My present present at present is a peace which I have

"Lucien," said Napoleon, "you are [illegible] whilst I [illegible] by your side [illegible] ever [illegible] you [illegible]

"*Indifferent* to you! Remember the 18th *Brumaire*. *Rebels!*—and when have you ever known me to excite any rebellion?"

As Lucien spoke thus, he fixed upon the Emperor a look of sorrowful reproach; but the latter replied, impetuously:

"Not to serve me is to rebel against me! Lucien," he continued, seizing his brother's hand, "you know that amongst all my brothers you are the one I love the best—the only one capable of carrying on the work I have commenced. Will you renounce your tacit opinion to my will? When all the kings of Europe are at my feet, will *you* deem it humiliation to bow your head before me? Shall it always be my *brother's* voice that is to sound in my ears, 'Cæsar, forget not that thou art mortal!' Lucien, once more I ask you, will you enter into my views?"

"May I ask your Majesty how much is involved in that question?" replied Lucien, casting upon his brother a distrustful glance.

The Emperor advanced towards a round table which occupied the centre of the apartment, and laying his finger on an outspread chart, turned towards Lucien, and thus addressed him:

"I have reached the crowning point of my destinies, Lucien; I have conquered Europe. I have now only to decide it as best suits my purposes. Both the *power* and the *will* are mine; now, therefore," added he, with a gracious, yet determined air, "choose the kingdom over which you would best like to reign, and I pledge you my word as an Emperor, that the very moment you make your choice that kingdom shall be yours."

"And wherefore, may I ask, do you make this proposition to me, rather than to any of your other brothers?"

"Because you are the only one after my mind, Lucien."

"How can that be, when my principles are so opposite to yours?"

"I hoped you had changed them in the course of the four years during which we have been separated from each other."

"In that hope you were mistaken, my brother. I am still the same I was in '99. I would not exchange my civic chair for any throne in Europe."

"Fool! madman!" muttered Napoleon to himself, as he paced the room with hasty strides. "Blinded indeed he must be not to perceive that I am commissioned by destiny to arrest the progress of that guillotine-wagon which they have mistaken for a republican car of triumph!"

Then suddenly pausing, and turning towards his brother, he continued—

"Look around on the kingdoms of the world, and tell me which amongst them is ripe for thy dream of liberty, sublime as thy dream may be? Is it Germany, where there is no living thing save the universities—a sort of republican pulse beating in a monarchical body? Is it in Spain, Catholic only since the thirteenth century, and scarcely yet beginning to interpret truly the word of Christ? Is it Russia, whose *head*, indeed may think, but whose *body*, galvanized for a moment by Czar Peter, has sunk into a state of chronic paralysis? No, Lucien—no; the time is not come. Renounce thy Eutopian dreams; give me thy hand as my brother and ally, and to-morrow I will make thee chief of a great nation. I will recognize thy wife as my sister, and restore to thee my cordial friendship."

"I understand your meaning well," said Lucien; "you despair of convincing me, and you wish to buy me over."

The Emperor started.

"Suffer me to speak," continued Lucien, "for this is a critical moment, and one which can never return to either of us. I do not blame you for having misjudged me; you have closed the mouths of so many, and stopped their ears with gold, that you naturally expected to find me equally pliable. You wish to make me a king, do you say? Well, I accept the offer—if you promise me my kingdom shall not be a mere prefecture. You trust a nation to my hands? Be it so. I care little which it my chance to be; but I can only accept it on condition that I shall be allowed to govern it according to its wants and true interests. I desire to be a father, not a tyrant—to be loved rather than feared. From the day on which I place the crown of Sweden, of Spain, of Wurtemburg, or of Holland on my brow, I shall no longer be a Frenchman—a Savoyard, a German, or a Dutchman; I shall henceforth know no other title than that of king. Remember it well. We shall then no longer be brothers in fact, but in name only. If you are against me, I will assert my [illegible] you [illegible] and remember [illegible]

I [illegible] a king—[illegible] a [illegible]; and by the [illegible] I will [illegible] ready to be [illegible] you [illegible] by myself."

"The same as ever! the same as ever!" murmured Napoleon.

Then suddenly, with a movement of impatience, he exclaimed—

"Lucien, you forget that you are bound to obey me, as you would your *father*, or your *sovereign!*"

"Thou art my senior, not my father—my brother, not my king. Never will I bend my neck to thy iron yoke—never, never!"

Napoleon became deadly pale; his eyes flashed fire, his lips quivered.

"Reflect on what I have said to you, Lucien."

"Reflect, rather, Napoleon, on that which I now say to you. You have *scotched*, not *killed* the republic: for you dared not look it in the face. The spirit of liberty, which you fancy you have smothered beneath your overwhelming despotism, is gathering now vigor, and spreading in all directions. So long as you are victorious, it will not raise its voice; but let fortune become adverse to you, and then you will see how little you can reckon on that France, which you have made so great, but still enslaved! Every Empire created by force and violence—by force and violence will fall. And then, thou Napoleon, falling from this giddy height of power, thou wilt be broken in pieces." (thus saying, he flung his watch to the ground), "broken, seest thou, even as I break this watch; whilst we, relics of thy former greatness, shall be dispersed over the face of the earth, and reckoned accursed because we bear thy name. Sire, farewell!" Lucien left the room.

Napoleon stood motionless, and his eyes fixed on vacancy. At the end of five minutes a sound was heard as of carriage wheels rolling out of the palace yard. Napoleon rang the bell.

"What is that noise?" said he to the usher who answered the summons.

"It is the carriage of your Majesty's brother. He is setting out on his return to Rome."

"Very well," was Napoleon's laconic rejoinder. And his countenance assumed once more that expression of frigid calmness, which concealed, as beneath a mask, his strongest and most impetuous emotions.

Ten years had scarcely passed away ere this prediction of Lucien's met with its full accomplishment. The Empire, raised by force, had been overturned by force. Napoleon was crushed; and this family of Eagles, who had built for themselves an aerie in the Tuilleries, were scattered, proscribed fugitives, beating their weary wings hither and thither over the world. *Madame Mere*—this Imperial Niobe, the mother of an Emperor, three kings, and two archduchesses—had retired to Rome; Lucien into his Principality of Corino; Louis to Florence; Joseph to the United States; Jerome to Wurtemburg; the Princess Eliza to Baden; Madam Borghese to Piombino; and the Queen of Holland to the *Chateau* of Arenberg.

Now, as the *Chateau* of Arenberg is situated only half a league from the town of Constance, I felt a desire to pay homage to this fallen majesty, and to see how much of the Queen might still be retained by a woman when destiny had torn the crown from her brow, and wrested the sceptre from her hand, especially when the ex-queen was none other than the graceful daughter of Josephine, the sister of Eugene Beauharnais.

The Chateau d'Arenberg is not a royal residence; it is a pretty country seat fitted for the abode of any private gentleman. The emotion which I experienced as I approached its precincts arose, therefore, entirely from the thoughts which stirred within my breast, and in no degree from any external grandeur in the aspect of the mansion. Suddenly, at the distance of about thirty paces from me, I perceived three ladies, accompanied by a young man entering from a side avenue. My first impulse was to retreat; but it was too late, and instinctively my eyes rested on one of the party was the ex-queen. I advanced towards her.

Little could she imagine the feelings which then possessed my soul. Scarcely, perhaps could I have believed, that never in her days of [illegible]—when seated on the throne of her royal [illegible] at the Hague, surrounded by the [illegible] power and beauty—never in those happy days had she been approached by any man under the influence of such overwhelming emotion as that which now possessed my breast.

She probably perceived, in [illegible] was passing in my mind for [illegible] had to [illegible] with a [illegible]

"It is very good of you," [illegible] [illegible]

It is well, my heart; [illegible] [illegible]

The Queen took my arm, and we walked for sometime together; then she led me into the saloon. The first thing which arrested my gaze was a magnificent portrait.

"How very beautiful!" I exclaimed.

"Yes," said Madame de Saint Luc. "That is Bonaparte at the Bridge of Lodi."

"That painting must be by De Gros, I should think. Is it not so?"

"Yes; it is by him."

"Taken from life, doubtless. The resemblance is too striking to be a mere copy."

I stood for a few minutes absorbed in thought, and then, suddenly rousing myself from the reverie, perceived that Madame de Saint Luc was gazing upon me with a smile. She too well understood the cause of my abstraction to expect from me excuses, which I never dreamt of offering.

She rose from her seat, and enquired whether I was ready to follow her?

"Most certainly," I replied.

"Come, then," said she, "and I will show you my imperial reliquary."

She then conducted me towards a piece of furniture, resembling a closed book case, with glazed doors, upon the shelves of which were ranged various objects which had once belonged to Josephine or to Napoleon.

First, a portfolio, marked with a "J." and an "N.," contained the private correspondence of the Emperor and the Empress. All the letters were autographs, and were dated from the battle-fields of Marengo, of Austerlitz, or of Jena; some of them written on the carriage of a cannon, and containing the announcement of victory!

It was, then, whilst looking upon this very object before me, that the eagle eye had closed in death—his lips had touched this satin—it had been moistened by the dying breath; and now, scarcely a month ago, this child, in whom so many fond hopes had centered, he too, had died, his eyes fixed upon the portrait of his father. Time and liberty may, perchance, reveal to us the providential secret of his double death; in the meanwhile, let us in silence prostrate ourselves and adore.

I asked to see the sword which had been brought back from St. Helena, by Marchand, and bequeathed by the Duke of Reichstadt to Prince Louis, (the present Emperor, Louis Napoleon;) but the Queen had never yet received this dying legacy, and began to fear that, possibly, it might never reach her.

The dinner bell rang.

"Already!" I exclaimed.

"You can look at these things to-morrow," she rejoined.

After dinner we returned to the saloon. In the course of about ten minutes, Madame Recamier was announced. She too, was a queen—queen of beauty, and of wit; and it was as a sister that she was received by the Duchess de Saint Luc.

It was not, therefore, a little surprising to me to hear these two ladies speak of the period of the Directory and the Consulate as of a familiar time. At length a request was proffered to Madame de Saint Luc, to [illegible] herself at the piano.

"Do you wish me to play?" she enquired, half rising from her seat, turning towards me.

"Oh yes!" I [illegible] with eagerness.

She sang some ballads, which she had lately set to music of her own composition.

"Might I venture to ask you one favor?" I said.

"Will, what is it?" [illegible]

"That you would sing me one of your old ballads," I replied.

"Which?"

"[illegible]"

"Ah! that [illegible] earliest [illegible] I [illegible] in 1801. How [illegible] [illegible] [illegible] born [illegible]

"I was [illegible]

I [illegible]

I [illegible]

[illegible]

of them to music; and I sang them to the Emperor the night before he set out. My poor mother! I can still fancy I see her before me, watching the expression of her husband's countenance, that she might see what effect this ballad was likely to produce upon his mind. He stood by my side, silent, and as if absorbed in anxious thought, until the last tones were hushed; then hastily advancing towards my mother, he said, in a tone of deep emotion—

"'You are the best woman I ever met.'"

"He went into his cabinet, and shut the door. My mother burst into tears; from that moment she felt her doom was sealed. You can now understand how full of sad associations that song was to me. Whilst you repeated it, it seemed to me as though every chord of my heart thrilled responsive to your touch."

"Forgive me," I exclaimed. "I ought to have remembered that it must needs be so. I would not now, on any account, ask to hear it."

"Oh yes! I will sing it for you," rejoined the Queen, as she once more took her seat at the piano. "So many other sorrows have passed over me since then, that I now look back upon that period of anxiety with comparative tranquility; for it has ever been to me a soothing thought that my mother, although separated from the Emperor, was ever dear to him.

She swept her fingers across the piano—a plaintive preclude was heard—then she sang with her whole soul. Surely it must have been such tones—such accents as those—which once moved the heart of Napoleon!

Seldom, I imagine, has it fallen to the lot of any man to experience emotions of a more peculiar character than those which agitated my breast on this eventful evening."—*London Athenæum.*

Combinations:

There is always some particular feature in the actions of men, that marks each year, as time rolls on in its unceasing course. This feature forms itself into a general action among men, and increases in power and influence, until it is brought before the public mind in the great plans that affect the public weal—each period of time having some one grand feature; often assuming a character and creating an influence that is felt by the entire State or nation. This feature of the time becomes as it were, a mania, and the causes that lead to it appear unaccountable. The feature, (or this strange phenomena to which we have alluded) of the present day, is assuming a form and character, and is in strict accordance with the age in which we live, the circumstances that surround us, and affect that age, and, if we call it by name, as indicative of its character and power, it is *combination.*

If the reader will look back a few years he will readily note something characteristic of those years which he will recognize as the feature of that time—from the "cotton speculation," about 1820, to the "gold fever" of 1849. To come directly to California, every year has been marked by some event speculative that proves this theory. The speculation in tacks, in '50, in shovels in '51, powder in '52,—quartz mining, flour speculation, land titles, water lots—all were features that marked the time, though only for a short period in each succeeding year. These features assume a larger scope and more extended influence as they approach the grand climatric. About once in every seven years these minor matters are exhibited everywhere in all the ramifications of trade; but all tending to some great final results that affect States and nations, which are known and felt as a monetary crisis, viz.: 1829, 1837, 1842, 1849 1854. We are now coming to an era in these events that shall not only affect one State or nation, but the world.

This era will result from combination, though clouds and darkness, tears and blood, may for a time obscure the good that will flow from it. This era will dawn upon us ere long and the world will emerge from error by the means of this very combination, and the golden era—an era of brighter and better days—dawn upon the world.

Within a brief period this spirit of combination, the great feature that marks this age, has been seen not only in California, but in most of the older States and in Europe. There has been a growing spirit of combination under the impression that in "Union there was strength," and various railroads of the East have formed a combination; at the West the canal owners; among manufacturers also, and the heavy operators in grains, flour and other staples. In Europe the lines of the steamers have combined, manufacturers have combined, and in our own country the railroad owners have combined; the steamboat owners have combined, (*vide* Steam Navigation Co.) and very wisely too; the ocean steamers have caught the infection and have combined; the grain grower and the miller all show the same feeling. These are the indications that herald the great shock that mark this age with events never to be forgotten.

Does the reader not see also that a greater and mightier combination has begun, which we believe the great climax of the age: it is the event to which we alluded in the opening of this article, the combination of the "allied powers of Europe." This event alone will hasten on, even through seas of blood, a brighter and better page in the history of the world. There is no unmixed evil, no unmixed good, and from these events of minor interests have sprung the final events which will change the character and destiny of nations and the world, these all resulting from the power of *combination.*

Stockton Ranch, San Jose.

Among the many finely cultivated spots that we have recently examined, we would note this celebrated ranch. We were kindly conveyed by Dr. Bascom from his residence to "Stockton Ranch," and were most courteously received and entertained by J. F. Kennedy, Esq., the official agent of the proprietor of these extensive grounds.

The orchards, though young, are laid out with great care, with every variety of fruit trees. Their healthy condition, excellent form and well trained head and branch, gave assurance that the "science of Horticulture" was well understood. We noticed one feature in the system of growing fruit trees at Stockton Ranch, which we most heartily approve, and it is one we shall always and invariably urge as absolutely essential; we mean the growing trees low, *to commence forming the head of the tree near the ground.* This method will shield the ground and give the wind less power to injure the tree. All the trees at this orchard we perceived were formed in this way.

We were *led* into the "strawberry patch," not unwillingly, however, "and such a sight." We heard the words "pluck and eat." They were so luscious that we began to be alarmed lest we might endanger our health—but then, the Doctor was near us, and we observed the Doctor continued tasting, and so we tried another variety, and another—but to be serious: We have cultivated with our own hands acres of strawberries in New England for years, but we never have seen beds of this fruit give such promise. Mr. Kennedy showed us several beds that were planted last November, that were now in full bearing—luscious rich clusters of ripe fruit in abundance were upon every vine—the vines of luxuriant growth and very large. The strawberry grounds covered about two acres—principally "Early Scarlet," and "Black Prince," both fine varieties.

We were shown another enclosure where we saw growing "Hovey's Seedling," "Hovey's Pine," "British Queen," and the celebrated "Longworth's Prolific." All these fruits we know well and have eaten, and we pronounce them all superior fruits. Hovey's Seedling is a fine fruit, if planted near the Virginia Scarlet; Hovey's Pine, a superior fruit; British Queen, good, but shy bearer; Black Prince excellent, and Longworth's Prolific we hesitate not to pronounce the *very best strawberry* known—we have good accounts from the old States of this variety, but if it could be seen here as it grows, it would be justly appreciated—it will distance all its competitors. Mr. Longworth may well be proud of it. California will justly appreciate the Longworth's prolific.

In addition to this fruit, we found the grape in a high state of cultivation—many of the finest varieties of foreign grapes, in addition to the California—all giving promise of a full crop. We noticed other fruits also, including the fig, gooseberry, currant, nectarine, apricot, &c.

We noticed here very large fields of onions, very forward, already some three inches in diameter.

The entire grounds, the orchards, grapery, fruit-gardens and vegetables, were in the most perfect order, and in that advanced state indicative of future abundance.

After a full examination of the grounds we went to the top of the mansion house to view the scenery around. It was a feast for the eye and heart—one of the most grand views conceivable,—a wide extended valley for miles, dotted here and there with clumps of evergreen trees, fields of waving grain, and herds of cattle. Neat white cottages enlivened the scene, and presented a picture of beauty and luxuriance that is rarely seen.

A feast of strawberries smothered in cream, at our evening meal, finished this interesting visit to "Stockton Ranch," one of the garden spots of this "Great Valley."

The skill and care evinced in these grounds we had been anticipating somewhat, for we knew the practical part of portions of them were under the charge of Mr. Bernard S. Fox, an able and scientific cultivator formerly in charge of the nurseries of Hovey & Co., of Cambridge, Mass.

We were informed that this "beautiful residence" and the extensive grounds are now in the market, to be sold in lots or entire. To any one who can command the capital and who has a taste for "rural life," this presents an opportunity rare equalled. We bid them "go and see."

Puebla de San Jose May 30, 1854.

Mr. Editor: Would you allow me a few remarks on your valuable paper, so to make it an indispensable one for nearly all, because three-fourths of the population has more or less interest or taste for agriculture or horticulture, and very often for both. These two sciences are so connected together, that they can hardly be separated. Your paper, under the head of California Farmer, must be of course devoted to farming interests, but I think it could be at the same time a horticultural organ; we need such an organ here in this promised land, where the best fruits in the world, and finest flowers of all descriptions can be obtained.

As Agriculture is more useful, you can devote to it as many pages as necessary; but as your paper has eight pages, you could have one, more or less, headed Horticulture, in which you can publish the most interesting facts concerning it. This would make your paper a very desirable one for all the farmers and horticulturists.

Another argument in favor of my idea, is, that you would have with you the fairest half of the world. The ladies being the flowers of the human race, they naturally belong to Horticulture; while we men are the farmers, and consequently belong to Agriculture. Now reflect, and consider how important it is for the benefit of all, that Agriculture and Horticulture should be united! They must walk side by side in your estimable paper—we all love the flowers, and if you do something for them, we will all be with you. I know that you already say something about them from time to time, but not enough. Respectfully, yours,

L. Prevost.

(We heartily approve the above suggestion, and will cheerfully comply. We will commence our "Horticultural column" the next number. Our friend Provost will please note the "Ladies' Department," we add this week—and next week the "Horticultural;" and we shall have pleasure in then giving a few thoughts, in addition to our notes, respecting a certain fine "Jardine de Horticulture" we visited when at San Jose.—Ed.)

Mr. Editor:—I am very glad to see you calling the attention of farmers to the subject of artesian wells, as the stimulus to Agricultural enterprises. The geological structure of the great Sacramento valley leads me to believe that complete success in irrigating its broad and prolific plains will result from boring artesian wells. It would not be strange if in some places water rose to a much greater height than is observed in the valley of San Jose. The irregularities of the surface of the foundation rock, over which the detrital deposits have gradually accumulated, may render success greater in some localities than in others; but as a means of irrigation, the system of boring must be the main dependence of the Agricultural interests, and it will probably be found sufficient, and its cheapness must recommend trials sufficiently numerous to test its utility. But farmers in the broad and deep valley, stretching between the Sierra Nevada and coast range, should not be disappointed if they have to sink their bores much deeper than their neighbors in the valley of San Jose. The detrital accumulations are much deeper probably in the Sacramento than in the San Jose valley, but the sources of the springs are higher, and it would not be strange if splendid and lofty fountains, in some places, should follow boring to great depths. At any rate the plan of boring for water as a means of Agricultural irrigation ought to be put to the test throughout the entire boundaries of the Sacramento valley, wherever an enterprising farmer can employ his means for that purpose. The amount of fruitfulness that would be stimulated is beyond account, and while no Agricultural country on the globe is so liable to a famine as California, no country could be so strongly fortified against such a state of things as could this by a universal adoption of artesian wells throughout the valley regions of the State.

I am very glad, my dear sir, to see you still persevering in your devotion to the Agricultural interests of this commonwealth. They are the highest interests of this State, next to a sound moral and religious education, and they should go hand in hand together to build up the commonwealth on the most solid and durable formations. Your paper is, without exception, the most useful in the State, and having the substantial and industrial interests of the people at heart, ought to be more liberally patronized than it appears to be. I hope you will persevere against your discouragements, and perhaps ultimately you may receive the commendations which your industry and enthusiasm entitle you to receive.

Respectfully yours,

C. F. Winslow.

San Francisco, June 2, 1854.

(We are grateful to the Doctor for every cheering word, and will persevere still.—Ed.)

State Agricultural Fair.

The Committee of the State Agricultural Society, who were instructed to make arrangements for the transportation of stock and productions upon the various lines of steamers, waited upon the Steam Navigation Co., and were most courteously informed by their president, R. Chenery, Esq., that this company would readily and cheerfully transport all live stock, produce, manufactures, &c., intended for the State exhibition, *free of charge.* Such liberality on the part of this powerful company is the best evidence needed of those who desire to render good service to the public at all times, and such liberality should be duly and properly appreciated.

We trust with this generous aid on the part of this line to help on the fair, the stock raisers and the producers will be making their best efforts and be ready in season.

Meeting of the Agricultural Society.—This was an epoch in the agriculture of California, and with our whole heart we rejoice that the wheels are set in motion, and successfully, too. A State Society already organized—officers elected—plans devised — committees chosen—County Societies ready to aid—funds ready at call—fields of grain ready to harvest—fruit abundant in prospect—friends and patrons anticipating much from these cheering prospects. We urge all who cultivate the earth to a careful attention to this matter; and, reader, if you have not the Farmer, subscribe for it forthwith, and we will keep you advised of all the principal doings in the State, in relation to those things in which you are most interested.

Agricultural College.—About $12,000 have been subscribed to the capital stock of an Agricultural College, to be located at Geneva, N. Y. The farmers in two villages north of Seneca River contributed $2,000. The Geneva Gazette says that every farmer who takes an interest of fifty dollars secures to himself the right of sending any of his stock or animals to the veterinary department of the college free of all charges for treatment or medicines.

Agricultural Education.—The trustees of the University of North Carolina have, in compliance with the demand for more practical education, established Professorships of Analytical and Agricultural Chemistry, and Civil Engineering—the department of Chemistry by Professor B. S. Hendrick, and that of Engineering by Prof. C. Phillips. We were gratified to learn that the Chemistry Department is in successful operation, the number in attendance being larger than was anticipated.

Meat For New York.—The New York Tribune furnishes a variety of interesting statistics in relation to the number, weight and value of the animals butchered weekly in New York. The number of beeves slaughtered during the first three months of the present year amounted to 36,249, the estimated value of which amounts to $2,120,562, or an average of $267,230 per week, which the city pays to the country for beef alone. The number of sheep and lambs butchered in the same time was 90,616—swine, 67,672—calves, 10,376.

Young animals should be kept growing until the reach maturity. If they are suffered to get poor, they invariably retrograde, and never attain a full size.

Gooseberries and Currants.—We have received fine specimens of the above from Mr. David Spence, of Monterey. They will be duly noticed next number.

It is stated that 1,900,000,000 yards of cotton manufactures were exported from England the past year.

The Gold Coinage of the San Francisco Mint, for the month of May, was $373,875.

Deep Plowing!

SECOND SLI!—A GOOD INVESTMENT!

MESSRS. EDITORS: This being a cold and rainy day, I have taken my seat to drop you a few lines, and enclose my subscription for your valuable paper. I have been reading it for two years, and have received from it a great deal of very valuable information; but the most important of all is upon the subject of deep plowing. Upon this crop alone, I have been benefitted this year $500 in my cotton crop alone. "Marvellous!" says one, "how can this be?" Well, here I will give you the figures, and they show for themselves: I planted this year 140 acres in cotton, and the same last year. Now, under the old surface skinning-system, the average crop was about 800 pounds per acre. *This year*, I mean, under the "gutting system," (as the anti-deep plowers say,) I made 1,000 pounds per acre, for all of the crop, and as bad a crop year as I have ever seen in this State, and I have been a citizen of it for ten years. Well, now for the figures themselves:

	140 acres at 800
Surface-skinning system, - -	112,000 lbs. cotton
Under the deep plowing system	140 acres at 1000
	140,000 lbs. cotton
	112,000 subtract,
	28,000

Now, you see there is a difference of 200 pounds in favor of *deep* plowing; at $2 per hundred, this making $560—a sum sufficient to enable me to buy four line mules to *plow deep* next year.

If you think this communication will induce any brother planter to try the experiment of deep plowing, you can publish it if you think proper. I forgot to mention in the proper place that my lands are sandy, and covered principally with pine timber. I am trying to induce every farmer to take your paper, but with some it is an "up hill business." Allow me to subscribe myself your friend, P. L. MAY.

—*Southern Cultivator.*

PLANTING FRUIT TREES.—"Jock, when ye hae naething else to do, ye may be aye stickin' in a tree; it will be growing, Jock, when ye're sleeping."—*Heart of Mid-Lothian.*

1. Would you leave an inheritance to your children? Plant an orchard. No other investment of money and labor pays so well in the long run.

2. Would you make home pleasant—the abode of the social virtues? Plant an orchard. Nothing better promotes among neighbors a spirit of kindness and good will than a treat of good fruit, repeated often.

3. Would you remove from your children the strongest temptations to steal? Plant an orchard. If children cannot obtain fruit at home, they are very apt to steal it; and when they have learned to steal fruit, they are in a fair way to steal other things.

4. Would you cultivate a constant feeling of thankfulness towards the great Giver of all good? Plant an orchard. By having constantly before you one of the greatest blessings given to man, you must be hardened indeed if you are not influenced by a spirit of humanity and thankfulness.

5. Would you have your children love their home, respect their parents while living, and venerate their memory when dead—in all their wanderings look back upon the home of their youth as a sacred spot—an oasis in the great wilderness of the world? Then plant an orchard.

6. In short, if you wish to avail yourself of the blessings of a bountiful Providence, which are within your reach, you must plant an orchard—and when you do it, see that you plant good fruit. Don't plant crab apples, nor wild plums, nor Indian peaches. The best are the cheapest.—*South. Agr.*

PERIODS OF GESTATION IN DOMESTIC ANIMALS.—It is frequently very important for farmers to know how long the different domestic animals go with young. The following table is believed to be very nearly exact:

Mare	11 months.	Bitch	2 months
Jenny	11 "	Cat	8 weeks.
Cow	9 "	Rabbit	4½ "
Goat	4½ "	Rat	5½ "
Ewe	5 "	Mouse	4½ "
Sow	4 "	Guinea Pig	3 "

The period of incubation of Domestic Fowls is:

Swan	6 weeks.	Pea Hen	4 weeks.
Turkey	4 "	Guinea Hen	3 "
Goose	4 "	Common Hen	3 "
Duck	4 "	Pigeon	2 "

CATTLE FOR CALIFORNIA.—The Van Buren (Ark.) Intelligencer of the 8th April, says that large parties of California cattle drovers have been buying over vicinity during the past week. [illegible] are still being collected for the [illegible] to leave during the week. We [illegible] a rough calculation, that over three thousand head of cattle will have been driven from the counties of Crawford, Sebastian and Logan, for the last three weeks. We learn that large droves are also being purchased in other portions of the State and Cherokee nation. Capt. Doolittle of Fort Gibson has purchased with about 1,200.

Organization of the State Agricultural Society.

A meeting of a majority of the persons named in the Act of the Legislature of the State of California, passed May 12, 1854, for the purpose of carrying into effect the "Act to incorporate the State Agricultural Society," was held at the counting room of Messrs. Macondray & Co., on the 3d of May. Present: J. W. Macondray, President; E. L. Beard, C. J. Hutchinson, H. C. Malone, D. W. C. Thompson, Vice Presidents; C. V. Gillespie, Recording Secretary; J. L. L. F. Warren, Corresponding Secretary; David Chambers, Treasurer.

The meeting was called to order by the President, and, on motion of Mr. Hutchinson, seconded by Mr. Malone—

Resolved, That the Statute of the State of California, entitled "An Act to incorporate a State Agricultural Society," passed May 14, 1854, be, and is hereby accepted.

On motion of Mr. Warren, seconded by Mr. Chambers—

Resolved, That a Committe be appointed by the President to prepare a general report, announcing the premiums to be hereafter offered, and in the meantime to solicit the coöperation of all citizens in the State to furnish facts and information to enable them to classify the premiums; and that circulars with a list of premiums will be issued by the Society at an early day.

Messrs. Hutchinson, Thompson, and Warren were appointed said Committee.

On motion of Mr. Hutchinson, seconded by Mr. Chambers—

Resolved, That a committee of three be appointed to examine cultivated farms, and select the three best for premiums.

(This Committee will be announced in our next issue, and their plans of examination.)

On motion of Mr. Hutchinson, seconded by Mr. Malone—

Resolved, That the Committee appointed for the examination of Farms, advertise that those persons who are desirous to offer their Farms for premiums, at the proposed State Agricultural Fair, to be held next autumn, be requested to communicate such wish by letter, addressed to the Chairman of the Committee on Farms, at the City of San Francisco, on or before the 15th inst., in order that the farms can be examined with the growing crops.

On motion of Mr. Hutchinson, seconded by Mr. Gillespie—

Resolved, That the Fair and Cattle Show of the State Agricultural Society be held in the city of San Francisco or its immediate vicinity, commencing on Wednesday, the 4th day of October.

On motion of Mr. Gillespie, seconded by Mr. Hutchinson—

Resolved, That a committee be appointed to take legal advice in regard to the organization of the State Agricultural Society, and draft By-Laws, to be reported at the next meeting.

Messrs. Chambers, Gillespie and Warren were appointed said Committee; and, on motion, Mr. Macondray was added.

On motion of Mr. Thompson, seconded by Mr. Warren—

Resolved, That Mr. Hutchinson and Mr. Chambers be requested to consult the California Steam Navigation Co., relative to the conveyance of articles intended for the Exhibition.

On motion, adjourned, to meet on the 17th inst., at 9 1-2 A. M.

F. W. MACONDRAY, President.

C. V. GILLESPIE, Rec. Sec'y.

MUSIC ON OUR RIVER STEAMERS.—The large number of passengers on the down trip of the W. G. Hunt, Capt. Poole, on Monday, were anticipating a rich treat of "music by moonlight," and on the water too, having the new group of mountaineers, the "Quartette Club," on board; but the want of a piano deprived all of the pleasure, by the way. Would it not be a good thing to introduce, on board each of our fine river steamers, one of Woodworth's best? We believe it would pay a good per centage, by inducing an increase of travel. Think of it, gentlemen of the combination, for we know you stand ready to meet the wishes of your patrons, and how many pleasant parties might be tempted to take an extra trip—a moonlight pleasure party. There is no knowing till you try. Try it, gents, try it.

Floating Capital in the United States.

By the Report of the Secretary of the Treasury, we collect the following as the amount of the stocks and bonds in circulation of the United States, the several States, cities, counties and towns, insurance and railroad companies, and miscellaneous companies, with the amount held in Europe. The total amount of each will surprise many, as the aggregate is so large: it only shows, however, the wealth of our country and the capital necessary to advance the several interests. The Treasurer's Report does not include California.

Aggregate [illegible]	Total	Held by
United States stock	[illegible]	[illegible]
State stocks	[illegible]	[illegible]
Loans of towns	[illegible]	[illegible]

LADIES' DEPARTMENT.

THE following truthful sentiments are worthy of being sent world-wide. We alluded to them in our last and we now clip them from the Genesee Farmer, and hope *our ladies in California* will feel an interest of the same kind:

"I have always been an admirer of the FARMER, and thought it took about *the* course for an agricultural journal; yet there is one thing which I notice in the present volume that I hardly like, and about which my sister—who is no less assiduous in perusing the FARMER than myself—complains a great deal, and that is, the absence of the '*Ladies' Department.*' Although it may be nothing that concerns me, yet I venture to suggest that you devote a portion of each number of the FARMER to the interests of the ladies; for verily, is it not as essential that woman be instructed in all that appertains to the home, and the management of the house, &c., as it is that man should know how to improve the products of the farm and the orchard? Surely, when I think of the truth of the adage, that 'a woman can throw more out of the window with a teaspoon than a man can throw in at the door with a shovel,' and see so many practical illustrations of its truth, I am convinced that as much depends on the skilful management of the women as the men. And how shall woman be skilful, unless she be instructed; and how shall she be instructed, unless there be some portion of our agricultural journals devoted to her interests? Indeed, I believe you could take no course that would be more gratifying to the majority of your intelligent subscribers, than to again insert a Ladies' Department' in the FARMER. With every wish for your success, I am Truly yours,

"J. S. WOODWARD.

"Hess Road, N. Y., Feb., 1854."

[COMMUNICATED.]

WHEN we contemplate the fearful effects of alcoholic spirits on the human family, we cannot but wish the "Daughters of Temperance" God-speed in their efforts to suppress this dreadful vice. Mothers, wives and daughters may well rush to the standard of temperance, and rally around this moral reform, and endeavor by every means in their power to rescue the rising youth from the direful evils of a drunkard's grave. Women of California have a mission; let them ere it be too late take a social stand in this great work—for, alas! it is a great work, to them the prejudices of society, to rise above the fashions of the world and in some instances to conquer appetites already formed for the intoxicating draught. Who imagines for a moment, when first forming a taste so dangerous, that they are encouraging an enemy as fatal as a midnight assassin? Arouse then, mothers of San Francisco, we beseech you, and lend your aid—and look to Almighty God for his blessing. G.

WE like the sprited interest in the following extract from another lady writer—here is proof of readiness to *work*, that the cause shall progress. What a glorious wife is such a lady for a farmer, "a real help meet":

"If I have any of the volumes you wish, you can have them, except the first. That I would retain as a specimen of the agricultural enterprise of the Genesee country in 1831. But if there are any statistics, or other information in that volume, that would be of interest either to yourself or the public, I will gladly copy it, or you can have the loan of the volume if you choose.

"That you may be successful in convincing American farmers of the real dignity of their vocation, and live to see Agricultural Schools and Colleges crown your efforts in their behalf, is my wish."

RURAL LIFE.—The following article, which we find in the New England Cultivator, over the signature of "A Farmer's Wife," we commend to the perusal of the lady readers of the FARMER as the evil it complains of is becoming too common to pass by unnoticed:

"It may by many be deemed irrelevant for ladies to write and speak on the subject of agriculture but when we consider that the happiness of a large share of American ladies depends upon the progress of agricultural knowledge, and the comforts of rural homes, all should be willing to concede them a voice in diffusing a healthy sentiment on the subject.

"We, who have passed the meridian of human life, know that the mothers, wives and daughters of the rural population were formerly healthier and more capable of enduring fatigue and toil than the present generation. The cause of this deterioration of health and physical vigor may be attributed to the efforts of the rural class to copy the manners and customs of the city.

"I do not wish to lose sight of the fact that the present age [illegible] improvement than any preceding. What is the [illegible]. Is that the [illegible] instead of being imprisoned for the greater part of the day, are [illegible] and [illegible].

"It is to be deplored that in many [illegible] sisters to imitate the habits and [illegible] [illegible] the [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, JUNE 8 1854.

Progress of Agriculture.

Those who have never visited the great valley of San Jose, can have but little idea of its extent, its beautiful scenery, the fertility of the soil or the wealth that is revealed by its agriculture.

The continuous fields of waving grain, bounded only to your vision by the horizon, each field measuring hundreds of acres, bespeak a wealth for the future, a resource in the soil, that sets at defiance the idea of want, and gives promise of an abundance that shall know no end.

In our recent visit to this valley, and in the examination we had of the soil, its locality, the crops now maturing, the trees bending under loads of fruit, we found material enough for a volume. The people of this State even, have but little conception of the immense crops harvested in California, much less do the people of the old States believe in the reports that go from time to time from this side. We venture to assert that the potatoes that will lay upon the ground and rot, in the San Jose valley the present year, will count in bushels by millions. We saw one pile that was the length of eight rails of fence (ninety-six feet), about thirty feet wide, and some two feet above the fence, seemingly enough to supply the State. These, with vast quantities all over the county, and other counties also, will be lost unless some plan is devised for using them.

This loss of the potato crop, however severe and ruinous to many, will lead the cultivators to a better system of farming; it will induce them to look to the wants of the community and the probable demand for an article, before they put in their seed. It is the loss that has resulted to many in past years, from excessive crops of barley, of onions, and of potatoes, that has and will convince the grower, of the necessity of a better understanding of the wants alluded to, and that has and will convince them of the necessity of County Agricultural Societies, and their frequent meetings for the discussion of these and other important matters so necessary to the prosperity of the farmer. Napa county took the lead and formed Society No. 1, at Napa City. Santa Clara county followed and formed Society No. 2, at San Jose.

These movements bespeak progress. That these Societies may accomplish all the good in their power, they must be active, have frequent meetings, constant discussions of matters of moment, preparations for County Shows, correspondence with other counties, inducing them to form also, and making ready for the Great State Show in October next.

Without a moment's delay or an opportunity missed. County Societies should obtain the agricultural statistics of their county, and make them a matter of record. These are important matters, too important to be lost; the interest of the farmer requires it, and we trust it will not be neglected, but attended to efficiently and transmitted to us and we will give it wings and thus keep the whole State advised of the Agriculture of California.

The columns of this journal are always open to this great interest and all that appertains to it, and we hope every farmer and every friend of the farmer will not only make the California Farmer the medium of his communications, but become a subscriber, and give it their influence and support. If every present subscriber would but agree to secure us *two* more, it would enable us to accomplish great good in return. Our whole time is now to be given to this work and to a survey of the State and its agricultural resources, and we ask the interest and influence of the friends of this science, to aid us, and we will try and deserve their kindest regards.

Agricultural College at Mount Vernon.—We see that it is proposed to petition Congress to purchase the Mount Vernon Estate for the purpose of establishing an Agricultural College and Experimental Farm. This has been attempted before, more than once, and it was found that the public mind was not ready for it, it may not be for some time. Yet we trust it will be urged earnestly, and this sacred spot secured to the government and made beautiful. It is indeed holy ground, and the idea is a noble one. Washington was the earliest, most devoted, and most zealous friend of this science, and how appropriate to have these grounds devoted to the advancement of the cause he so much loved—the association of his residence with his former labors, and his tomb with his teaching, would make all who visit that spot realize that though "Washington is dead, he yet speaketh."

Agricultural Implement Association.

By our exchanges we see it stated that Col. Cartwright, of Northampton, Eng., has proposed a plan of supplying that county with all the improved agricultural machines necessary for all the different departments of tillage, harvesting, &c.

His plan is to organize companies in each county with ample capital, say $60,000—one main depot of $10,000 capital, and ten other depots of $5,000 capital each. At these several stations, there should be seed drills, steam ploughs, sowing and reaping machines, threshers, and harvesters of all kinds; the capital to be raised in small shares of £20 or £100 each.

These machines were to be purchased by the quantity at manufacturer's prices, thus making a large saving, and then placed in the stations to be leased out in the several districts as they are wanted, thus relieving every individual from the necessity of buying for himself a costly machine—but only paying a fair price for the use of it at the proper season, the machinery always being kept in good order, and in warehouses at the stations.

It has been ascertained that a very large loss is sustained every year by every individual, in costly machinery, from interest, by want of care and their expenses out of season. This could be saved by having proper persons to see to them and careful storage when not in use.

It has been ascertained by careful estimates, that the income arising from such a plan would be that stockholders would be able to divide 50 per cent. of their capital every year, and *secure their harvesting free*. Of the feasibility of the plan there can be no doubt. If such results could be accomplished in England, what would be the dividends in California?

In England or the Atlantic States a reaper costs but one-fifth or one-eighth the amount that is paid in California, and the companies would import the machinery in quantities—and as the numbers that would have machinery would be very large, much beyond those who would be stockholders, the income would be proportionably increased. The amount required in California is so very large for all the requisite machinery, that a plan of this kind might be made of very great benefit, and profit also.

We would like to hear from our friends on the subject.

Agricultural Schools.

Every agricultural paper in the old States is urging the need of Agricultural Schools. In many States the subject has been introduced into the courses of regular study. This is as it should be, and every State government, in the location of school lands, should have in mind this important subject and select locations with reference to beauty of scenery, fertility of soil, and convenience to streams and sources of water. Beauty of scenery will induce a greater love for the science; fertility of soil, quick success in crude experiments among new beginners, where practical agriculture is added to theoretical; and streams of water will give greater success to both. California has not yet located her school lands! We earnestly hope those to whom it shall be entrusted will remember that they are acting for the future as well as the present.

Potato Rot.

This calamity (for the potatoe rot is a calamity) made its appearance during the last year in California, and were it not for the over-abundant crop, would have resulted in a serious evil. As it is, the foundation of the disease is among us, and it behooves all cultivators to examine well the condition of their crops the present year.

One extreme generally follows another, and it may be that the present year will be as far short of the wants of the people as the last year was over and above. This may result from two causes—first, less quantity planted and much of that from diseased seed arising from their exposure to the severe cold of the last winter, and second, from seed containing the original disease and from the wrong practice of planting upon the same ground that produced the disease last year.

We would now call attention to the interesting article copied from our exchanges from abroad, upon the importance of Drying Potatoes for Seed, published in our last number.

The Best are Cheapest.—We see that at a sale of imported stock in Cincinnati, in December last, two cows were purchased by C. M. Clay at $2300. S. Meredith, of Iowa, also purchased two cows at $1800. This stock is of the high-bred herd-book Durham. Liberal as the price may seem, the balance of the stock was withdrawn from sale.

Water Works of Sacramento.

This great enterprise has been completed and the works are in the full tide of successful operation. When we consider the condition of Sacramento—her many trials, and then witness her noble efforts to rise above them, we feel that she is indeed a pattern city, and her citizens men of never failing energy.

We were most courteously shown through the new building erected for these works, by the Superintendent, Joseph Nevett, Esq.—(a more judicious appointment could not have been made.) The building is very spacious, the lower story occupied in part by police stations and prisons, the the second story for the offices of mayor, aldermen and city government. The water tank is upon the top of the building. The water is conducted by two powerful pumps, which are in a building in the rear of the main one where the well is built. We intend in future numbers to give the particulars of the construction of the building and the plans in detail. The entire cost has been $250,000 in city scrip bearing an interest of ten per cent. per annum. We are pleased to know that the income will meet that interest and lay the foundation of a sinking fund that will pay the debt.

Sacramento! raised from the floods—her streets graded and finished—her levee made secure—public buildings finished—water works and engine houses completed! What a commentary upon the power of human energy!

Discrepant Opinions.—At a late discussion on the value of roots for feeding cows, before one of the Agricultural meetings at Boston, several interesting statements were made. J. W. Proctor said the product of the carrot crop was 16 to 20 tons to the acre—and the value in market was half that of hay—making a good acre of carrots equal to 10 tons of hay. Col. Lincoln and others had found carrots to increase the quantity of milk; and another gentleman had found them to produce as much butter from his cows in October as in summer. He had fed for two weeks on carrots; then for two weeks on ruta-bagas—he could see no difference in the results. His cows did not eat more than half as much fodder when supplied with roots. On the other hand, Russel, of Pittsfield, had tried turnips three or four years, and he thought cattle eat more hay when they had roots than without them. He had tried carrots and held much the same opinion with regard to them. Porter, of Bradford, thought carrots good food for cows, but did not think they increased the measure of milk. S. Sprague thought that turnips do not fatten cattle. Another person fed turnips to two cows; one fattened, the other did not.

Now, what is the reason of the discrepant opinions? Simply the want of precision and accuracy. This is the great cause of all the diversity of opinion among farmers on agricultural subjects. The quantity of roots given is *guessed* at—the quantity of hay consumed is estimated as loosely—the measure of milk yielded is stated merely to be increased—and one or two experiments perhaps, conducted in this unsatisfactory manner, are made to constitute the ground-work of an opinion, which is ever afterwards held with much tenacity. When shall we see an accurate system of weighing and measuring, in the performance of experiments, in connexion with a close observation of all controlling causes; and a repetition of trial so often and so diversified as to remove all doubt as to the operation of accidental causes.

Banner County for Agriculture.—Napa county is truly the "Banner County" in the formation of County Societies in California. We would inform our friends at Napa that Santa Clara has spoken for No. 2—and we suggest to both these counties the importance of opening a correspondence with each other by their Secretaries, and as often as convenient send delegates from one to the other. Great good will result to each society from such action.

Keep Down your Weeds.—The old maxim, that *one* year's seeding makes *seven* year's weeding, is particularly true in California.

Another evil however is added to the miserable habit of leaving weeds to grow upon the soil.—they impoverish the soil rapidly, and grain fields are nearly ruined by permitting their growth. No good farmer will permit a *hedge of weeds* to grow around his field.

Ancient Agriculturalists.—The first three men in the world were a gardener, a plowman, and grazier! If any one object that the second of these proved a murderer, it will be recollected that as soon as he committed the crime he quit our profession and began to *build a town*.

Plow Often.—Breaking up the surface soil often, permits the action of light and heat, prevents the soil baking and keeps it in health. Ground kept in constant cultivation needs little or no irrigation.

Management of Ewes.

TREATMENT AT THE LAMBING SEASON, &c.

At this particular season, I know of few subjects more appropriate, or more worthy a place in your valuable columns, than a few remarks on the treatment and management of ewes before and after parturition. It cannot fail to be fresh in the memories of most—the unusual amount of fatalities that occurred to ewes during the last lambing season; many farmers in this locality being losers to the tune of from 5 to 20 per cent. of their whole flocks. To account for such an unusual occurrence, seems to me perfectly explicable, as I am inclined to believe, that by proper treatment it never would have taken place; and no more mysterious a panacea for its total prevention would have been required than a liberal supply of nutritive food, combined with proper shelter during the protracted snow storms.

In cold, stormy weather, animals of all grades require more food, in order that the body, suffering from the lowness of the temperature, may have an increased supply of carbon, by the conversion of which into carbonic acid the body is kept up to its natural warmth. If such a supply is not forthcoming, the consequences are emaciation of body, deterioration of wool, a host of diseases; and death itself is a concomitant usually attendant on such neglect. It is a mistake common among farmers that any refuse food will suffice for brood ewes during the winter months, such as turning them into a field noted for the coarseness of its herbage, and possessing so little nutrition that it will scarce fatten a sheep per acre during the summer months. Indeed, they seem to be of the same opinion as the Scotchman, who cared very little for the quality or cleanliness of his food, provided he had plenty of it. Now, I dissent entirely from this way of treating them; and I maintain that, if it pays to keep them well. From the greatly increased and increasing consumption of animal food in this country, it is a duty incumbent on the farmer, for the general as well as his own individual interest, to produce the greatest amount of meat from the least quantity of food, and in the least possible time. For the furtherance of such an object, nothing is of so much importance as liberal treatment and care of the animal during the early stages of its existence. Unless a brood ewe is kept in an even, good condition, it is quite impossible she can either be healthy herself, or give milk to rear a healthful lamb. It certainly is not absolutely necessary that a ewe should be so fat as to be what is called "cloven about the tail;" but the nearer she approaches that state, the better.

I beg to give a short account of the way in which my flock, consisting of 100 ewes, are managed. The tups are put to in the first week of October, two being quite sufficient to serve 100 ewes. Before and during the time the tups are among them, they are liberally supplied with turnips, in addition to their grass. It is of the highest importance to have them in a mending condition at that time; and the increased fall of lambs well pays for all extra food given.

When all are served, and by which time the grass begins to fail, they have a supply of tops and small turnips daily, to keep them in their good condition, until within a short time of lambing, when a more liberal supply is given.

During the snow storm last year, they had a feed of swedes daily, care being taken not to give more at once than was consumed in one day; a supply of hay, and one pint of bruised oats to each sheep, per diem; a supply of salt (which they have all the year round) *ad libitum*. By such treatment they were kept in a healthy, thriving condition; and not the death of one ewe occurred in the flock. For 100 ewes, I have at this date 131 yearlings now fattening on turnips, cut and put in troughs. Some of them are fat now. I expect they will be so by the beginning of May, at which time they will average 72 lbs. of mutton each sheep. They are the Bakewell Leicester breed. I consider, if a little of the Cheviot blood could be introduced, they would be all the better for it.

Now, when I contrast some of the statements made by my neighbors, I am fully convinced that my exemption from the fatality was wholly and entirely owing to the liberal way in which my flock was feed.—*M. in Mark Lane Express.*

Farmer's College in Ohio.—The Genesee Farmer says: Ohio is in a fair way to call into existence the first agricultural college in the United States—an honor that will in future years redound more to her glory than any which any member of the confederacy has yet achieved, not excepting our own "grand canal." It gives us great pleasure to see the Ohio Cultivator lend a helping hand in this noble enterprise. That print truly says: "The losses that our State annually sustains by the impoverishment of her soil, by deficient crops and misapplied labors, arising from ignorance of the principles of agricultural science, we have no doubt are greater than would be the cost of establishing an agricultural school and experimental farm in every county, and of educating all the sons and daughters of our farming population."

Great Cattle Show in Ohio.—A private letter from a gentleman in Springfield, Ohio, has the following: "Our Agricultural Society have purchased 10 acres of ground, and enclosed it with a good fence, and will erect substantial buildings this summer. We are going to have an Exhibition next September, free to the whole United States. Gross premiums, $7,000.

The Use of Fruit.

Bowel complaints usually prevail most during the hot season of the year—the latter end of summer and autumn, when fruits are most abundant—it is inferred according to the *post hoc propter hoc* mode of reasoning, that the one is the consequence of the other. It were about as reasonable to attribute the occasional occurrences of a sea scurvy in the navy to the use of lemon juice, lime juice, or potatoes. These articles of diet are powerfully anti-scorbutic, and so are ripe fruits anti-bilious; and diarhœa, dysentery, and cholera are complaints in which acrid and alkaline biliary secretions are prominent conditions. I have seen cases of dysentery, diarrhœa, and liver disease in people who have been long resident in tropical climates, and, from the history which I have been able to obtain respecting their habits and diet, I have come to the conclusion that these diseases were induced and aggravated, not by the light vegetable and fruit diet most in use among the natives, but because Englishmen generally carry out with them their European modes of living. They take large quantities of nitrogenous and carbonaceous food, in the shape of meats and spirits, rather than the light native food, as rice and juicy fruits, and the vegetable stimulants and condiments, the native peppers and spices so abundantly provided by Nature. It is well known that, though large quantities of animal oil and fats, wines, spirit, and malt liquor, which contain a large amount of carbon, may be consumed with comparative impunity in cold climates and in winter, when the carbonaceous matter gets burnt off by the more active exercise and respiration; in hot climates and in summer this element gets retained in the liver, and ultimately gives rise to congestion of that organ and its consequences—diarrhœa, dysentery and bilious disorders. Though in extensive practice for fifteen years, in a district abounding with orchards and gardens, I can not remember an instance in which I could distinctly trace any very serious disorder to fruit as a cause; though one might reasonably expect some mischief from the amount of acid and unripe trash often consumed by the children of the poor. We would not be supposed to advocate either immoderate quantities of the most healthy fruit, or the indiscriminate use of unripe or ill-preserved fruits. But we do contend, as the result of experience, that not only is a moderate use of ripe or properly preserved fruit harmless, but that it is highly conducive to the health of people and especially children, and that it tends to prevent bilious diarhœa and cholera. I am inclined to view the abundant supply of fruit in hot climates, and during the summer and autumn, and the great longing of people, especially of children (in whom the biliary functions are very active,) for fruit, to a wise provision of an over-ruling Providence, which generally plants the remedy by the side of the disease, at a time when the biliary system is in most danger of becoming disordered. I have generally observed that children who are strictly and perhaps injudiciously debarred from the use of fruit, have tender bowels, and I have noticed that they are almost universally pallid; and, on the other hand, children who are allowed a moderate daily proportion of sound fruit, are usually florid, especially among the poor. I therefore imagine that the use of it facilitates the introduction of iron, the coloring principle of the blood, into the circulating system. When living in the country, with the advantages of a large garden and plenty of fruit, I always permit my children to have a liberal portion, and never had occasion to treat them either for diarrhœa or skin eruptions, though it is a very common opinion that cutaneous diseases are often brought on by the too free use of fruits. On first removing my family to the city, the usual supply being cut off, three of the younger ones became affected with obstinate diarrhœa and dysentery, which resisted all the ordinary modes of medicinal treatment. My opinion on the subject induced me to give them a good proportion of ripe fruit every day, as grapes, oranges, ripe apples &c., when all the symptoms presently subsided, and they have never since been troubled either with bowel complaints or skin eruptions to any noticeable extent. The editor of the Lancet, in animadverting on the health of London during the week ending August 20, makes the following remarks:—"The deaths ascribed to diarrhœa are 126, of which 115 occurred among children. The tender age of nearly all the sufferers, 97 of them not having completed their first year, is sufficient to dispel the popular error that the use of fruit is the exciting cause." Several years ago a serious and very fatal epidemic then called English cholera, prevailed in the neighborhood where I was living. It chiefly attacked very young children and old people and was almost as rapid in its progress as the Asiatic cholera. This epidemic occurred in the autumn, and many people influenced by the common prejudice, dug holes in their garden and buried all their fruit, and some even destroyed their trees. I made many inquiries into the previous habits of the victims of the epidemic and in almost every case I learned that fruit had not for some time previously formed any part of their diet. One [illegible] highly recommended the use of fruit [illegible] a severity of cholera, [illegible] to the administration of sulphuric acid and to the use of fruit, and the [illegible] of their good effects. [illegible] experience. [illegible] very extensive [illegible] fruits, would [illegible] the prevention [illegible] —*Med. Times*

Farm Books---Good Suggestions.

There is one subject of interest to farmers, which, though it be a little hackneyed, I must even venture some comments. This subject is none other than the oft-proposed yet seldom practised project of preparing, during the leisure time of winter, detailed plans for the year's campaign. The benefit of such practice have often been urged upon the attention of agriculturists, yet, to secure the adoption thereof, there is needed line upon line and precept upon precept. Plans upon which much thought has been expended, and which have been matured by reflection, possess as much superiority over the hastily concocted schemes, begotten by necessity, as does ripened over wind-fallen fruit. All soils, whose fertility is not inexhaustable, require a judicious rotation of crops, in order to produce the most profit, that is, render to the tiller the largest quantum of pleasure, and increase the capacity for the production of food. Such a rotation requires reflection, a thorough system, and a forethought reaching a few years into the future. These requirements cannot be met by hurried calculations, and the plans hastily devised most frequently prove to be ill devised.

The necessity for forming calculations, when the time for executing them has arrived, leads to confusion, greatly impairs the energy of execution, and makes the farmer a slave, with his work for a driver.

In view of these and a variety of other considerations, I would say to you, friend farmer, procure a blank book of goodly size, in which, as a frontispiece, place an accurate map of your farm, marked off in lots and sections, regularly numbered and lettered. Thus fortified, devote the first page to lot No. 1; reflect upon the quality of your land, its present condition, the character of its cultivation, &c., and then decide upon the crop you wish it to bear. This done, lay down a course of culture, including tillage, manuring and after cultivation, with all the concomitants: then calculate and affix the dates at which the various processes shall be performed. The next page you will use to note down the proceedings and remarks thereupon; and the next leave blank for the purpose of chronicling the results at the end of the season. Thus proceed through the farm.

The next labor is to make out a time table, allotting a fixed time to every operation of the season, and a work to every day. This accomplished, you possess as complete a plan as ever Bonaparte drew of a campaign. It is true that the allotments of the time table must, of necessity, be varied a little as the season progresses, on account of the weather and other interruptions. Nevertheless, it is a valuable general guide. You will now own a book of reference which will be of invaluable service, not only for the present year but for every future one; as it will contain plans, results, facts, and deductions, which will form a safe basis for practical improvements, and a sure start point for progress.—*Cor. Albany Cul.*

Flouring Business at Oswego.

As the city of Oswego is now probably the most extensive flour manufacturing point in the world, a brief history of the growth of the business there, derived from a tabular statement and accompanying explanations, published in the Palladium of that city, will undoubtedly be interesting. In 1826, the Erie canal being completed, emigration began to set to the west from the eastern towns and cities, and the population of Oswego had become such as to form a smart town. In that year Messrs. Alvin Bronson and T. S. Morgan built the first flouring mill in Oswego, on the east side of the river. Mr. Henry Fitzhugh also built a mill adjoining, both of which were subsequently destroyed by fire.

From that period the flouring business at Oswego has been gradually increasing in magnitude, slowly at first, but quite rapidly during the last ten years, until at the present time, there are 17 mills—including those burnt last season, and now rebuilding—with 90 run of stone capable of manufacturing over 9,000 barrels of flour a day. If we add to this array of powerful mills, those at Fulton, which may properly be brought into the calculation, as this branch of business of the two places is intimately connected, it gives an aggregate of about 115 run of stone, capable of making 12,000 barrels of flour and consuming 50,000 bushels of wheat per day. At the lowest calculation, the capital invested in mills and elevators, will reach nearly $1,000,000; the number of men directly employed in running them, and in coopering, will exceed 1,400; and the number of persons deriving support from the labor therein, is not less than 3,000. The active capital used in the purchase of grain, of course, varies with the season's business, but must be very large. In regard to the nature of the business the Palladium says:

"Large fortunes have been rapidly made and lost in the milling business. It is accompanied with a good deal of excitement, and few there are who engage in it that do not run more or less into speculation; and its votaries have to [illegible] that [illegible] is an unrelenting [illegible] business. Last winter [illegible] is probably no [illegible]

[illegible] that the [illegible] for [illegible] are [illegible] a general [illegible] country. [illegible] new [illegible] [illegible] and the [illegible] [illegible] [illegible]

Weekly Summary of News.

UNITED STATES

The new steamship Sonora, at this port on the 1st, from Panama, we have New York papers to the 5th of May.....The steamer City of Glasgow has not been heard from, and is supposed to be lost, with 350 souls on board.....The Senate has confirmed the Gadsden Treaty, with amendments.....The Erie Canal was opened on the 1st of May.....The Ohio Legislature has passed a stringent liquor law, and it only awaits the signature of the governor. It provides for punishing by fine and imprisonment for selling liquor to parties intoxicated, or who are in the habit of getting intoxicated.....The reopening of the Crystal Palace took place with appropriate ceremonies May 5. The stock has advanced rapidly.....A new three dollar gold coin is being struck at the Mint in Philadelphia.....Hon. D. M. Barringer, late Minister to Madrid, had arrived at New York. He was waited upon by the Cuban exiles, who were anxious to testify their respect for him.....Hon. Luther Severance, late U. S. Commissioner to the Sandwich Islands, is afflicted with an incurable cancer, which has already destroyed his lower lip and chin.....Kossuth's sisters are about opening a hotel at Yellow Springs, Ohio.....Matthew F. Ward, on trial for the murder of Professor Butler, had been acquitted. The citizens of Louisville had requested Mr. Crittenden, who defended him, to resign his seat in the Senate, and requested the Wards to leave the State. A mob had burnt the effigies of the Wards in front of the door. ....A tremendous fire occurred at No. 231 Broadway, New York, at which ten firemen were killed by a falling floor. An inquest was held on the bodies, and the returned bills against the architect, carpenter, and mason who rebuilt the building, and also against the lessees, who had the work done.....One of the heaviest storms known occurred at New York on the 1st of May. Great injury was done to property, particularly to the Railways. The Croton Aqueduct was injured, buildings undermined, and several persons drowned. The gale struck the steamer Ericsson, and careened her over, when she filled and sank in eight fathoms water. Those on board were all rescued. The ship will be raised.....Ex-Governor Davis was buried at Worcester on the 23d.....The National Printers' Union met at Buffalo on the 1st. About thirty delegates are present.

THE WAR.

The U. S. M. steamer Pacific arrived at New York on Monday, May 1, bringing Liverpool dates to April 19.....We make up a summary of the most important items: Admiral Boxer and staff passed through Paris on the 17th, on his way to the East. Prince Napoleon embarked at Marseilles, 17th, for Constantinople.....From the Baltic we have the news that a commencement has been made—the British frigate Tribune having taken five prizes and a number of prisoners. The ships were loaded with lead, sulphur, and other articles contraband of war. ....All the Russian ports are formally declared under blockade by the allies.....The fleet was in sight of Bornholm on the 16th. ....It was rumored that three French ships would be withdrawn from the Baltic to reinforce the Black Sea fleet.....The French squadron which sailed from Brest to reinforce Napier consists of the line of battle ships Indivisible, Jemappes, Tage, Breslau, and frigates Darien, Pourvoyante, and Semillante..... Letters from Stockholm, of the 16th, state that the Russians had dismantled all the fortifications on the island of Aland, and had retired with guns and stores to the mainland. The Czar had further ordered that all pilots and men capable of bearing arms should retire from the islands to the mainland of Finland, and also to remove or burn all ships and boats. This system of defence is to be pursued all along the shores of the Baltic.....On the 1st of April the fleets left Varna in the direction of Sevastopol.....The whole allied fleet is now in the Black Sea.....It was rumored that Odessa was about to be blockaded. Correspondence from thence, dated April 1st, says: "We are here in a state of great excitement. For several days we have seen a great many English and French sails. They probably intend blockading us, for they do not leave the spot, but keep always in sight. Large masses of troops are being concentrated here. Our garrison is at this moment 20,000 strong, and fresh men are coming in daily from Bessarabia. By all this, it is quite clear that our place is not going to be evacuated, but defended. We have made up our minds here for the worst, and several families have already retired inland. The forts are all armed, and tents are pitched for the troops on the outskirts of the city. Our trade is at an end, and prices are becoming ruinously high. The English Consul General was still here up to yesterday. The Russian troops in the Dobrudscha must be victualled from here —hence its importance in this war."....March 27, the frigates Sidon, Firebrand, and Magellan were detailed for the purpose of intercepting the supplies which the Russians may attempt to send to their troops. They had orders to seize all ships found in communication with the Russian land force.....From the Danube we learn that eight thousand Russians attempted to storm Rassova, but were repulsed. Seven thousand five hundred men had been landed to reinforce Varna. The Cronstadt Satellite of the 4th announces the passage of the Danube by the Turks at Sumnitza on the 27th March. It was further rumored that the Turks had taken Turna, and were advancing in the rear of the Russians. No pitched battle had taken place up to April 9, either at Rassova or Silistria, but much fighting and cannonading had been going on from March 30 to April 7, by which the list of killed and wounded had been much augmented.....Russia had called out additional reserves, to the number of 120,000. ....The Czar is to reside alternately, during the war, at Revel and St. Petersburg. The Grand Duke, his eldest son, is to proceed to Helsingfors, and the Duke Constantine will assume the command of a portion of the Russian fleet, which, protected by 800 pieces of cannon, will take up a position within the fortified seven islands of Sweaborg. There are no Russian ships of war before Revel, because the fortifications of that city cannot sufficiently protect a fleet.

CIRCASSIA.

The English steamer Sampson, which had been surveying on the coast of Circassia, returned to Constantinople on March 21, bringing the tidings of a complete victory gained by the Circassians over the Russians. Early in March the Circassians, provided with arms and ammunition, attacked the Russians, and, after a severely contested battle, drove them into the castles on the coast. These castles were surrounded and repeatedly attacked during four continuous days. Finally the Russians, fearing they would be cut to pieces, blew up their magazines, and sought shelter in their ships. The Sampson further reports that the Circassians fell upon the garrisons who were retreating from two hill forts and put them to the sword. The Circassian coast is, at present, free from the enemy.

GREAT BRITAIN.

The Parliament was not in session—it being the Easter holidays.....Strikes had taken place among the operatives at Stockport, and from ten to twelve thousand people had quit work....The Greek firms in London, Liverpool and Manchester are reported to have contributed funds in aid of the insurrection against Turkey. The Manchester firms were said to have subscribed £10,000.....Henry U. Addington has resigned his office of Under Secretary of State for Foreign Affairs, and has been raised to the rank of a Privy Councillor. Mr. Addington was Secretary of Legation at Washington in 1822. He is succeeded as Secretary by Mr. Edmund Hammond.....Major Francis Stawiarski, of the Polish army, had offered to the Earl of Aberdeen to raise a Polish legion to serve with the allied land forces in Turkey. He is informed that his offer is referred to the State Secretary for War and the Colonies.....The precise day is not fixed, but there is no doubt that the new Crystal Palace at Sydenham will be opened by the Queen about the end of May. ....Mr. Holford, a rich merchant, who had long resided in Regents Park, London, died on the 9th, and bequeathed his large fortune to the Prince of Wales.....The ship Rainbow, now on the berth at Liverpool, for the West Indies, is the first ship ever commanded by Sir John Franklin.

DENMARK.

There are two versions given of the cause of the late Ministerial crisis in Copenhagen. The first is that the Danish Minister of War failing to obtain the King's consent to the dismissal of Lieut. Col. Andra, as well as of Professor Hall, the Provisional Deputy of the Minister of Justice as Auditor of the Army, himself resigned, as did the other ministers. The other version is that the resignation was caused by Sir Charles Napier's visit to the King. It was reported that the Government had refused to permit Danish pilots to steer English ships of war. When Sir Charles Napier threatened to complain of this personally to the king, the Ministry declare that His Majesty was sick, and could not be seen. Napier persisted, obtained an interview, and got his consent. Hence the resignation of the discomfited Ministry.

OREGON.

The steamship Peytona arrived from Oregon on Saturday evening, bringing full files of papers, but no news of importance. ....The Portland Times of the 27th has the following: Gen. Palmer, the Superintendant of Indian Affairs for Oregon and Washington, has just returned from a visit of near two months among the Indians. He informs us that he has succeeded in getting all the Indians in the Rogue River vicinity to go on the reserves under the treaty, with the exception of Tipsey's band. From Deer Creek and Illinois River the Indians have all removed —and there is now no tribe or band between Jacksonville and Crescent City. On the Coquille River there had been some disturbance, in which two whites and several Indians were killed. The real murderers were found, tried, and hung. He met over 200 Port Orford Indians in Council. The Chief complained that the whites ill-treated their women, by coming about their wigwams in the night, and, in case of denial, the whites would threaten to shoot them. At Gen. Palmer's request, Gen. Wool has detached 21 men from Port Orford, to keep the rowdies in order.....The farmers of Washington County are about forming an Agricultural Society.

THE CITY.

On Sunday morning last, about 3 o'clock, our city witnessed another of those disgraceful outbreaks which are becoming so common, known as squatter riots. The Sun states the case substantially as follows: It seems that three men, James Larkin, John Larkin, and Patrick McMahon, bought a lot of ground, on First street, from a person named Keating, for which they paid about $7,000. Keating gave them title deeds and all the necessary documents, and impressed them with the belief that the sale was real, and the title good. They accordingly took possession. Mr. Polsom, however, claims the lot as his property, and some time ago arrested Keating for having taken possession of it. About 3 o'clock, John Larkin and McMahon being on the watch, they were assaulted by a party of about 40 men, when a good many shots were fired by both sides. John Larkin received two balls through the left arm, breaking the bone close to the shoulder, and another through the right leg, breaking it very badly. McMahon was shot in the right breast, near the shoulder, the ball breaking his collar bone and producing a serious wound; he also received another ball in his left elbow. The assaulting party then proceeded to demolish the house. One of the band, named George D. Smith, was shot dead....The Grand Jury have indicted Recorder Baker for malfeasance in office, wherenpon Mr. Baker publishes a card, in which he says he "stands arraigned before the world as a defaulter, upon false figures, false charges, and false conclusions;" and he "charges them with having wickedly and maliciously made false representations." Mayor Garrison and Comptroller Harris also publish a card asserting the Recorder's innocence.....The Jury also find a true bill against Messrs. Gordon & Steen, the owners of the steamer Secretary, accusing them of "gross and wilful culpability." To this, Messrs. Gordon & Steen reply that the Jury "have taken a course gratifying to the private malice of some of them, who prostitute the sacred functions of the Grand Juror into a vent for petty spleen," and pronounce the charge "a wilful, wanton, and most injurious slander." The members of the late Grand Jury reply that "abuse is not argument—special pleadings not facts—and quibbles at best but perversions of truth;" and they publish all the evidence taken before them. A droll state of things, this!....Capt. Pierce, of the schooner T. Franklin states that three men engaged him on Friday evening last, to take them to Sancelito. When near Seal Island, they bound him hand and foot, and robbed him of a silver watch and $150 in money. They then took the schooner into Racoon straits, where they anchored, cut away the masts, and otherwise mutilated her, and took him ashore. They then untied his feet, and forced him to accompany them about ten miles into the mountains, to a place having the appearance of an old camp where they remained until Wednesday evening, 31st ult., keeping the prisoner tied all the time, and guarded. They then took him to the bay, where they embarked in a boat, and landed at a small wharf near Fort Port. They then carried him into the sand hills, when two of the party left. The other kept guard until the evening of the 1st, when he also left. Capt. Pierce, in about two hours, gnawed through the rope that bound his arms, and, unloosing his feet, made his way to the city.....The Superintendant and teachers of schools in this city addressed a letter to the Rev. T. F. Gray, on the eve of his departure for the East, thanking him for his labors in behalf of education.....Bogus coin is in circulation in this city, resembling a French franc. They are light, and have a slippery feeling.....During the fire on Wednesday morning last, Mr. Davis, of Crescent Engine Co., discovered four lighted candles, under as many curtains, in a building adjoining the county prison. In no adjoining room he saw a colored man named William Scott deliberately light a candle, and set it against the partition, where it would certainly have caught fire, had not Mr. D. promptly extinguished it. Scott was arrested, and the Recorder sent him to the Court of Sessions on a charge of arson.....Miss Heron gives a benefit to the Fire Department at the Metropolitan Theatre, on Friday evening next.....On Monday evening last, as a Mr. Myers and his wife were walking along Stockton street, they were attacked by two men with bayonets, and wearing the uniform of the U. S. Army. Mr. Myers succeeded in keeping the villains at bay, until some persons came to his assistance, when they were scared, and placed in custody of several persons representing themselves as policemen, who marched off with them, since which time nothing has been seen of the marauders or those who were evidently their accomplices. Mr. Myers managed to retain the bayonet of one of the scoundrels, which will probably lead to his detection, as the number on it corresponds with that on his musket.....A duel took place on Tuesday afternoon between Messrs. Ellecker and Dube, with swords. At the end of eight minutes, Mr. Ellecker was wounded in the arm, and after a desperate combat of ten minutes more Mr. Dube fell, dangerously wounded, by a thrust which he received full in the breast. ....We are happy to announce that Dr. Cole, who accidentally shot himself a few days since, is recovering.....On Wednesday morning, about 3 o'clock, a man was fired at five times on Clay street. One ball took effect in his hand.....At the inquest on the body of George Smith, Mr. Carey deposed that he took with him *only* thirteen men, armed with two double-barrelled guns, four axes, and some Colt's revolvers, for the purpose of clearing off the squatters.

Halibut!—The first big fish that has come to California on a gold hunting expedition, saw the elephant yesterday at Barry & Patten's. As usual, California alters all general rules, and instead of the big fish swallowing the man, the man actually swallowed the fish!

MARKET REPORTS.

San Francisco, June 7, 1854.

The condition of trade remains the same, without animation in any branch, unless we note the article of Flour, in which a speculative movement has been made, giving it a firmer tone. Lumber pours in, without demand, and hangs heavy. Grain remains the same. Provisions plenty, prices a little less. Agricultural implements plenty, of all kinds, except harvesting machines. From all the facts we can gather, we are of opinion the Grain crops will be harvested without injury, and be an ample supply for all the bread stuff wanted for our home trade, and a little to spare.

Cochituate Baths.

No. 57 Sansome street, between California and Pine,
SAN FRANCISCO.

The proprietors of this well known Establishment, desirous of meeting the wants of a discerning public, have remodeled and thoroughly renovated the entire premises, added several new rooms and new furniture complete.

In making these improvements, we have had particular reference to the accommodation of the LADIES, and have provided a Private Entrance and Ante-Room, with *Extra large Bathing Rooms*, adjoining, expressly for their accommodation.

We have made many important improvements and additions, which cannot be particularized in a short notice, but will be readily appreciated by our friends and patrons. The

Hair Dressing and Shaving Saloon,

has been greatly enlarged, and furnished with a new set of Chairs, Mirrors, &c., imported expressly for this Establishment, and of a style and quality superior to any in the State.

Prices as usual—single baths 75c; ten tickets for $5.

N. B.—A fine assortment of Shirts, Undershirts, Drawers, Collars and Cravats, Scarfs, Socks, Perfumery, Combs, Brushes, &c. &c., constantly on hand, for the accommodation of our customers. (23) San Francisco, 1854.

ROBB & CO.'S
Ice Cream, Breakfast, and Tea Saloon,

We, the undersigned, are acquainted with the parties owning the property offered in this Raffle, and also know the Real Estate referred to, and we assure the Public that we consider the title to the property is indisputable.

Hon. D. S. SHATTUCK,
JAMES A. MORRISON, M. D.

The proprietors in conducting this Raffle bind themselves to carry it on in a manner that will be satisfactory to all who may buy tickets. The drawing will be done by gentlemen chosen by the holders of Tickets, each county in the State sending a committee of one for that purpose. Maps of the Real Estate, and samples of the property may be seen at our office, corner of Montgomery and Merchant streets.

For the responsibility of the proprietors of this Raffle, and that it will be conducted with honesty and integrity, we refer to

His Excellency JOHN BIGLER,
Hon. J. W. DENVER, Secretary of State,
J. B. HARDENBERG, Mayor of Sacramento,
Hon. LEWIS ALDRICH,
Maj. W. H. HARVEY, Sergeant-at-Arms of Senate,
E. WILSON, Wilson's Exchange,
DAVID JONES, Hotel, Sacramento City. 22

☞ The sale below is POSTPONED until SATURDAY, June 10, at 12 M., owing to the impossibility of getting the maps and plans ready for a sale at an earlier day:

LONE MOUNTAIN CEMETERY.

OPENING SALE OF CHOICE BURIAL LOTS.

FIFTY BURIAL LOTS,
Each lot 12x25 feet, containing 300 superficial feet.

WAINWRIGHT, RANDALL & CO., AUCTIONEERS.

Will sell at Public auction, at our salesroom, No. 100 Merchant street, on TUESDAY, June 6, at 12 M., Fifty Choice Burial Lots in Lone Mountain Cemetery.

A public sale is made in order that those wishing the choice of Lots may have an opportunity to obtain them.

These Lots are portions of the six sections that are now opened, graded, surveyed and ready for use, and are the most Choice Lots in the Cemetery; they are all beautified by evergreen Shade Trees and Shrubbery.

The entire Cemetery is enclosed with an elegant and substantial fence, thereby protecting the grounds from injury, and the avenues were well graded, Macadamized, and embellished with shade trees. All the improvements necessary to the complete adornment of the grounds are rapidly progressing.

An opportunity is now offered to Families, Public Institutions and Societies to select Lots of sufficient size, combined with beauty of location, to meet their desires.

Plans of the sections, giving full particulars of each lot, can be seen at our office, any time previous to day of sale.

Terms made known on day of sale. tf

New Agricultural Warehouse.

NEW FIRM! — NEW GOODS!

THE undersigned, having purchased the entire stock in trade of *Messrs. WARREN & SON* in the *SEED AND AGRICULTURAL BUSINESS*, will continue the business under the name and style of BAKER & HAMILTON, at No. 11 J street, *Sacramento City*, and beg leave to present themselves to their friends and the cultivators of the State for that share of patronage which has heretofore been given to this long established Agricultural Warehouse. The undersigned intend, with every season, to keep a full supply of all the necessary articles in each department, and trust that the old friends of the late firm will favor us with a call.

LIVINGSTON I. BAKER,
ROBERT HAMILTON.

WARREN & SON present their grateful acknowledgments to their patrons for the favors of many years past, and in taking leave of them personally assure them that they will be as readily and well supplied by their successors, Messrs. Baker & Hamilton, whom they most cordially recommend.

Warren & Son are happy to state that in being liberated from the confinement of business to which the past years have called them, they will visit different portions of the State, become personally acquainted with the localities and the cultivators, and thus gather those important facts so necessary to the cause of Agriculture. Warren & Son will call personally on those interested in Agriculture, and supply them with copies of the CALIFORNIA FARMER—a work to which they will now devote their greatest efforts, and look to the Farmers for a support of the work. 21

Splendid Residence.

RANCH, GARDENS AND FARM.

FOR SALE, that beautiful residence at the head of the "Steamboat slough," on the Sacramento river, known as ROBB'S RANCH, now under a high state of cultivation, with fine Buildings arranged for health and comfort—contains 6 rooms, besides kitchen, pantry &c.

The crops, now looking prosperous, are 10 acres onions, 10 acres of potatoes, and 10 acres of cabbages, sweet potatoes, melons, &c.

A Flower Garden ornaments the lawn in front. A Hotel is near the place, and the Marysville boats stop every day each way.

The Farm contains 160 acres.

A person wishing a beautiful residence, where the crops will in a few years pay the purchase money, will do well to examine this property.

Terms of sale liberal. Title perfect and indisputable.

For further particulars apply to the subscriber on Bush's Block, Commercial street. T. P. ROBB.

Or to Messrs. Wm. McELY JOHNSTON, or at the office of the California Farmer.

THE WOOING.

BY N. STONE.

[We give place with pleasure to the following "Rural Song." It is not accompanying the song, the author expresses the hope that "it may serve as a suggestion to some abler hand to produce a set of lyrics adapted to the tastes and feelings of our rural population, such as would be made to and sung by the laborer at his plow, by the family at the fire-side, and at social gatherings of rural neighbors. If such could be given to the rural community, I am persuaded it would do much to elevate their tastes and create in them a love for home and rural pursuits."—*Country Gentleman.*]

O come with me to my cottage low.
Where o'er the fields fresh breezes blow;
Where the trees are green and the sky is blue,
And flowers are blooming ever new.
O come with me and be my bride;
O'er flowery fields thy steps I'll guide;
And through the meadow's sweet perfume
I'll lead thee to my cottage home.

Chorus.—I'll deck thy path with roses sweet,
Bid daisies bloom beneath thy feet;
And violets with fragrant breath,
Shall make thee smile with joy and health.

I'll plow the fields to give thee bread,
And trees I'll plant to give thee shade;
And fruits of every hue shall be
A daily gift of love to thee.
The music of the lowing kine,
And song of birds shall all be thine,
And hum of bees in busy toil
Full sweetly on thy ear shall fall.
I'll deck thy path, &c.

When winter comes with lowering skies,
And dark'ning storms begin to rise,
And angry blasts sweep o'er the plain,
With drifting snow or freezing rain;
Then, in our cottage, bright and warm,
Secure from wintry blasts and storm,
We'll sing and smile the hours away
Till Spring's soft breezes round us play.
I'll deck thy path, &c.

JUDGE NOT.

Let us not judge the guilty
Till all the truth we know;
Some small extenuation
Perchance the facts will show:
Few in great crimes have revelled
Just for the sake of crime;
There is some provocation
That prompts them at the time.

Hunger will push the starving
Even for food to stay—
Strong and unbridled passion
Will lead the best astray.
Anger will bring swift mischief,
Unless the heart be changed,
And wrongs will haunt men ever
Until they be revenged.

And ye who calmly sitting
'Neath your own vine and tree,
Unmoved by cold and hunger,
Unknowing what they be;
Unmoved by wrong or passion,
Or want since breath ye drew,
Judge not men strongly tempted—
They know not what they do.

Did ye been in their places
Ye would have done the same,
And felt ye could not help it—
And yet 'tis sin and shame.
All men will find repentance—
All need to be forgiven,
Sinners and those who judge them
All need the grace of heaven.

SMILES. — How often the world mistakes smiles for positive indications of happiness. It looks upon the glittering sunshine dancing upon the surface of the waves, and heeds not the dark depths beneath. Many a fair and laughable face conceals a broken heart. By-the-bye, some people are inclined to believe there is no such thing as a broken heart. We do not agree with them. We are confident that hundreds of young creatures go down to the grave—their minds unstrung, their heart-strings riven by the world's neglect and unkindness.

There are many bright and seemingly flourishing rose-buds that bear concealed amidst their fragrant leaves a hideous worm—a worm that soon eats their leaves away.

Thus it is with many, many human hearts. The lips may wear a bright smile, and yet in the lone bosom lurks the canker-worm, whose presence brings death.

CURRAN was a rare wit, but even he sometimes met his match. He was once examining a cross-grained, ugly-faced witness, from whom he sought to obtain a direct answer. At length he exclaimed —"It's no use trying to get the truth out of you, for I see the villain in your face."

"Do you, sir?" said the young man, smiling; "why, I never knew my face was a looking-glass before."

A COUNTRY schoolmaster happened to be reading of the curious skin of an elephant.

"Did you ever see an elephant's skin?" he asked.

"I have," shouted a "six-year-old" at the foot of the class.

"Where?" he asked, quite amused at his earnestness.

"On the elephant!" said he, with a provoking grin.

"HERE, you little rascal, walk up and give an account of yourself. Where have you been?"

"After the girls, father!"

"Did you ever know me to do so when I was a boy?"

"No, sir—but my mother did."

THE HEARTS OF THE MICHIGAN LADIES.—Among the toasts offered at the recent railroad banquet at Detroit, the following, by Col. Prince was heartily cheered:

"The Ladies of Michigan—God bless their little hearts."

The "Saginaw Enterprise" thus indignantly responds:

"We don't know this Col. Prince, and don't want to, but we'll wager our old hat, and only one, that he is a 'furriner,' and don't know any more about Uncle Sam's family of girls, and especially the Wolverines, than he does of the inhabitants of Jupiter. 'Little hearts,' indeed, Mr. Prince. Perhaps you may be authorized to represent the ladies of some other locality, but in Michigan you can't come to tea.' We have some small women, physically—small, but oh dear!' Mr. Prince—but they have big hearts, so big hearts, so large that we fear you might lose yourself, should you ever be so lucky as to find a place in one of them. The Michanders who cheered that toast must have imbibed rather too freely."

IF an acorn be suspended by a piece of cord about half an inch from the surface of some water contained in a glass, and permitted to remain without disturbance for a few months, it will burst, send a root into the water, and shoot up a straight tapering stem, having beautiful little green leaves. In this manner a young tree may be produced on the mantel shelf of a room, and become an interesting object.

"COLONEL Wilson is a fine-looking man," said a man the other day.

"Yes," replied another, "I was taken for him once."

"You! why you are the ugliest man I ever set eyes on."

"I don't care for that; I was taken for him; I endorsed his note, and was taken for him—by the Sheriff's officer."

"How is it," said a gentleman to Sheridan, "that your name has not an O attached to it; your family is Irish, and no doubt illustrious?"

"No family has a better right to an O than our family," said Sheridan, "for they OWE everybody."

A SICK LAWYER.—A lawyer, being sick, made his last will and testament, and gave all his estate to fools and madmen! Being asked the reason for so doing, he said, "from such I got it, and to such I return it again."

THE Chicago Press says that "there is a Western boy in that city fifteen years of age, and who measures six feet and eight inches in low heeled boots. His father and mother are both larger and taller than himself, and their name is Long."

Public Notice.

THE copartnership hitherto existing between the undersigned, transacting business as Bankers and Express Carriers in the State of California, and in the Eastern States of the United States, under the name, firm and style of ADAMS & CO., expires this day by limitation.

D. H. HASKELL,

DONAHUE'S UNION IRON WORKS,

[THE FIRST ESTABLISHED IN THE STATE.]

Cor. of First and Mission streets, Happy Valley, San Francisco

THE undersigned calls the attention of the citizens of California and Oregon to his unequalled facilities for doing work with rapidity and cheapness. He has made, and will continue to make, such additions to his time and labor-saving machinery, as the increasing wants of the State require, and hence solicits public patronage.

Saw and Grist Mill Irons,
Quartz Crushing and Amalgamating Machinery,

and Castings of either Iron or Brass of every description (having a most extensive assortment of ready made patterns) made promptly to order.

STEAM ENGINES from the manufactories of William Burdon, Brooklyn, New York, and other celebrated makers, constantly on hand and for sale.

BOILERS of every description furnished at lower rates than can be afforded elsewhere, the iron for the same being imported direct, and the machinery for shearing, punching and riveting being driven by steam power. Patent Steam and Water Gauges Steam Whistles, Cocks, India Rubber Steam Packing. Ready made Bolts and Nuts, Belting Lace and other Engineer's Findings for sale.

20 3m JAMES DONAHUE.

Threshers, Separators and Cleaners.

PITT'S EIGHT HORSE POWER, complete, with extras.—This machine was made to be exhibited at the Baltimore and Richmond Agricultural Fairs, held respectively for Maryland and Virginia. It is superior in every respect to any of the sort ever shipped from New York to California, and is intrinsically worth nearly double that of any other machine. (Ex Golden Fleece.) In addition to the parts usually sent, there are six wheels—four for the separator, two for the power, &c.

Also, EMERY'S Threshers and Separators, of Two Horse Power.

We have also on the Golden Fleece, two of HALL'S (Rochester,) Latest Improved Threshers, Separators and Cleaners, Eight Horse Power; all complete.

Also, four of HUSSEY'S REAPERS and MOWERS, all combined.

For sale by COIT & BEALS,
9 tf 94 Battery street, office up stairs.

POLLEY & CO.,

OF THE BAY STATE MILLS, would announce that for the better accommodation of their numerous customers and trade in general, that they have opened a branch of their business at the Fire Proof Store No. 49 K street, between Second and Third, where they will always keep on hand a large stock of California FLOUR; also, Haxall and Gallego.

Public attention is particularly directed to the "BAY STATE LOWER MILLS' BRAND," an article we have every confidence in warranting, being made under our own inspection, from new Wheat, without any adulteration.

Ground feed of all kinds always on hand.

Every exertion will be used to merit a continuance of the favor heretofore so liberally extended to us. 1 tf

Manny's Patent Reaper and Mower combined.

THREE of the above celebrated machines, which can be used as a Reaper or Mower,—for sale by

HENRY McNALLY,

BATES' SUPERIOR

UPLAND BELL CRANBERRY.

THE PROPRIETOR has been induced to present this Circular to the public on account of the numerous applications from distinguished Horticulturists, Amateurs, Land Agents and others, in different parts of the Union, personally and by letter, wishing information in regard to cultivating this valuable fruit upon ordinary upland, and would respectfully invite the attention of Gardeners and Fruit Growers, to such facts only as have come directly under our own experience and observation.

Soil, Propagation, Management, &c.—Having tested the plants thoroughly in all kinds of soils, we have no particular choice in their selection. We know of no kind of soil in which they would not be likely to grow well if managed according to our method. We should not choose a perfect clay soil, extremely liable to bake, nor a perfect sand, containing no power of vegetation.

In extensive field culture, the Bell Cranberry flourishes well in soils varying from moist to dry. No great degree of moisture is necessary, providing it is more or less uniform. Any soil that the strawberry can be grown on to advantage, is well adapted to the growth of this plant, but no animal or vegetable manure should be used, as the fruit draws most of its nourishment from the atmosphere. The vines propagate by runners, like the Strawberry, and will flourish in almost any soil and location, under good management. Where the land is rich and liable to grass and weeds, we prepare the ground by removing the top soil at a sufficient depth to prevent their growth. This may be easily done by plowing the sod, and removing the top soil in carts or otherwise. The object in doing this is to make the soil so poor that nothing will grow to obstruct the growth of the Cranberry Plants, bearing this to mind, that I am fully satisfied, from long experience in the business, that the Cranberry derives its nourishment only from the air and moisture.

If the land is poor, so that grass and weeds will not vegetate then it may be plowed and harrowed without other preparation. If these rules are followed there is no difficulty whatever in their cultivation. Persons having a garden of moderate size, and wishing to raise their own Cranberries of a superior quality can do so by obtaining a few plants, and with a small amount of labor at the commencement, will find their cultivation both easy and profitable.

Persons wishing for Plants can have their supply of the subscriber. The Plants will be carefully packed in dried moss, and well boxed, which will enable them to go to a great distance in a fresh state.

The proper time for Fall transplanting is October and November; for Spring, from the opening of the snow till about the 25th of May. Persons wishing for Plants, are requested to order as early as the first of September, for Fall transplanting and during the winter for Spring. 15

THE CALIFORNIA FARMER

The Journal of Useful Sciences.

VOL. 1. SAN FRANCISCO, THURSDAY, JUNE 15, 1854. NO. 24.

THE CALIFORNIA FARMER,

AND JOURNAL OF USEFUL SCIENCES,

PUBLISHED EVERY THURSDAY MORNING,

BY WARREN & SON

Office in Musical Hall Building, Bush street.

TERMS.—Eight dollars per annum, in advance; or delivered by carrier at one dollar per month.

ADVERTISEMENTS.—A limited number of Advertisements will be inserted at the following rates: For one square of eight lines, per month, $6. For business notices of five lines or less per month, $4. A slight reduction will be made to regular advertisers.

The Fond Wife:

OR, FIRMNESS OF THE FEMALE SEX.

I HAD for several months been in constant attendance on Mrs. St. ——, a young married lady of considerable family and fortune, who was the victim of that terrible scourge of the female sex, a cancer. To great personal attractions, she added uncommon sweetness of disposition, and the fortitude with which she submitted to the fearful inroads of her malady, together with her ardent expression of gratitude for such temporary alleviations as her anxious medical attendants could supply, contributed to inspire me with a lively interest in her fate. I can conscientiously say, that during the whole period of my attendance, I never heard a syllable of complaint fall from her, nor witnessed any indications of impatience or irritability. I found her one morning stretched upon the crimson sofa in the drawing room; and though her pallid face and gently corrugated eyebrows evidenced the intense agony she suffered, on my inquiring what sort of a night she had passed, she replied in a calm tremulous tone, "Oh Doctor, I have had a dreadful night; but I am glad Capt. St. —— wasn't with me, for it would have made him very wretched." At that moment a fine flaxed haired boy, her first and only child, came running into the room; his light blue laughing eyes glistened with innocent merriment. I took him on my knee and amused him with my watch, in order that he might not disturb his mother. The poor sufferer, after gazing on him with an air of fondness for some moments, suddenly covered her eyes with her hand. (bow slender, snowy, and almost transparent seemed that hand) and I presently saw tears trickling through her fingers, but she uttered not a word. There was the *mother*.

The aggravated malignity of the disease at length rendered an operation inevitable. The eminent surgeon who, jointly with myself, was in regular attendance on her, feelingly communicated the intelligence, and asked whether she had fortitude enough to submit to an operation. She assured him with a quiet smile that she had for a long time been suspecting as much, and had made up her mind to it, but on two conditions—that her husband (then at sea) should not be informed of it, and that she should not in any wise be bound or blindfolded.

Her calm and decisive manner convinced me that remonstrance would be useless. Sir —— looked at me doubtfully. She observed it, and said, "I see what you are thinking of, Sir ——; but I hope to prove to you that a woman has more courage than you are willing to give her credit for."

In short, after the surgeon had acquiesced in the latter condition—to which he had especially demurred—a day was fixed for the operation, subject, of course, to Mrs. St ——'s state of health. When the Wednesday arrived, it was with some agitation I entered Sir ——'s carriage, in company with himself and his senior pupil, Mr. ——. I could scarcely avoid a certain nervous tremor—unprofessional as it may seem—when I saw the operating case on the seat of the carriage.

"Are you sure you have everything ready, Mr. —— ?" inquired Sir ——, with a business-like air which irritated me. On being assured in the affirmative, and after cautiously casting his eyes over the instruments to make assurance doubly sure, we drove off. We arrived at St. ——'s residence—a few miles from town—about 2 o'clock in the afternoon, and were immediately ushered into the room in which the operation was to be performed—a back parlor, the window of which looked into a beautiful garden. I shall never be pardoned, I fear, for acknowledging that the glimpse I caught of the pale and disordered countenance of the servant as he retired, after showing us into the room, rather disconcerted me; for in addition to the deep interest I felt in the fate of the lovely sufferer, I had always an abhorrence of the operative part of the profession, which many years of practice had failed to remove. The necessary arrangements being at length completed—consisting of a hateful array of instruments, cotton, warm water, &c.,—a message was sent to Mrs St —— to inform her that all was ready.

Sir —— was holding a locket and not a very [illegible] agitated for [illegible]

door was opened and Mrs. St. —— entered, followed by two attendants. Her step was firm, her air composed, and her pale features irradiated with a smile, sad, however, as the cold twilight of October.

She was then about twenty-six or seven years of age—and, under all the disadvantageous circumstances, looked that moment a beautiful woman. Her hair was light auburn, and hung negligeetedly over a forehead and neck white as the purest marble. Her features were regular—her nose and mouth exquisitely chiselled—and her complexion fair almost to transparency. Indeed, a very eminent medical author has remarked that the most beautiful women are generally the subjects of this terrible disease. A large Indian scarf hung over her shoulders, and she had on a white muslin dressing-gown. And was it this innocent being who was doomed to writhe beneath the torture and disfigurement of the operating knife? My heart ached. A decanter of port wine and some glasses stood on a small table, she beckoned me towards it, and seemed about to speak.

"Permit me, my dear madam, to pour you a glass of wine," said I.

"If it would do me good, Doctor," she said, in an under tone. She barely touched the glass to her lips, and then handed one to me, saying with assumed cheerfulness, "Come, Doctor, I see you need it as much as I do. Yes, Doctor," she continued with emphasis, "you are very, *very* kind and feeling to me." When I had set down the glass, she continued, "Dear Doctor, do forgive a woman's weakness, and try if you can hold this letter, which I received yesterday from Captain St. ——, and in which he speaks very fondly, so that my eye may rest on his dear hand-writing all the time I am sitting here, without being noticed by any one else—will you?"

"Madam, you really must excuse me—it may agitate you; I must beg—"

"You are mistaken," she replied, firmly; "it will rather compose me. And if I should"—expire, she tried to say, but her tongue refused utterance. She then put the letter into my hand, hers felt cold, clammy, but I could not perceive it tremble.

"In return, madam, you must give me leave to hold your hand during the operation."

"What! do you fear me, Doctor," she replied, smiling, "but do not refuse my request."

At that moment Sir —— approached with a cheerful air, saying, "Well, madam, is your tete-a-tete finished? I am anxious to get this matter over, and give you permanent ease." I don't think there ever lived a professional man who could speak so assuringly as Sir ——.

"I am ready, Sir ——. Are the servants sent out?" she inquired.

"Yes, madam."

"And my little Harry?" Mrs. St. —— asked, in a fainter tone. I replied in the affirmative.

"Then I am prepared," she said, seating herself in a chair.

One of the attendants then removed the shawl from her shoulders, and Mrs. St. —— herself, perfectly composed, assisted in displacing as much of her dress as was necessary. She then suffered Sir —— to place her on the corner of the chair, with her left arm thrown over the back of it, and her face looking over her right shoulder. She gave me her right hand, and in my left I endeavored to hold Capt. St. ——'s letter, as she had desired; she smiled sweetly, as if to assure me of her fortitude; and there was something so indescribably affecting in the expression of her eyes that it almost broke my heart. I shall never forget that smile as long as I live. Half closing her eyes, she fixed them on the letter I held, and did not once remove them until all was over. Nothing could console me at this trying moment but a conviction of the consummate skill of Sir ——, who, with a calm eye and steady hand, commenced the operation. At the instant of the first incision her whole frame quivered with a convulsive shudder, and her cheek became ashy pale. She hoped that she might faint, so that the earlier stage of the operation while she was in a state of insensibility. But it was not the case; her eyes continued riveted in one long, burning gaze of fondness on the beloved handwriting of her husband, and she moved not a limb, nor uttered more than an occasional sigh, during the whole of the protracted and painful operation. When the last bandage had been applied, she whispered almost inarticulately, "is it all over, Doctor?"

"Yes, madam" I replied, "and we are going to carry you up to bed."

"No no—I think I can walk—I must try." said she endeavoring to rise; but no Sir —— assured her that the [illegible] indulged [illegible] she fainted and we carried [illegible] to the carriage in haste. [illegible] and [illegible] that Sir —— had a [illegible]

over her mouth, apprehensive that the vital energies had at last sunk under the dreadful struggle.

She recovered, however, and, under the influence of opiate draught, slept for several hours. * *

Mrs. —— recovered, though very slowly; and I attended her assiduously, sometimes three times day, till she could be removed to the sea-side.

I shall not easily forget an observation she made to me the last visit I paid her.

She was alluding one morning distinctly and delicately to the personal disfigurement she had suffered. I, of course, said all that was soothing.

"But, Doctor, my husband"—said she, suddenly, a faint crimson mantling on her cheek—adding, falteringly, after a pause, "I think he will love me yet."—*Diary of a Physician.*

Gossipings of our Village.

BY ELLA ST. CLAIR.

"CLARENCE Weston returned!" exclaimed half a dozen voices in concert, as the intelligence was announced in our circle one evening, and we all gathered around the speaker with surprise and anxiety depicted on every countenance for further information concerning him; for all knew the early history of an individual whose sudden exit from his native village some years before, had caused so much excitement and anxiety among his friends.

"Yes, yes," exclaimed the old man, "he has come back to his native hills once more, to seek a home in the old familiar haunts of his youthful days, and, as he told me to-day, to retrieve, in an humble way, the errors of his past existence. I was the first to meet him on his arrival, yet, so changed is he, that I should have passed him by without recognition, had he not suddenly paused, and rushed into my arms. I recognized him then for the rich melody of his voice is the same as in former years, though the accents fell tremulous with deep agitation upon my ear. As we came in view of the churchyard, his emotions of grief became most intense, and he expressed a desire to visit alone those sacred mounds, beneath whose green suds sleep his loved and lost treasures, and so we parted, but not until he had promised to give a history of his travels to the anxious inhabitants of his native village."

The narrator paused here, seemingly lost in his reflections, and our party dispersed.

Next day the village church was filled by a deeply interested and sympathizing audience, as Clarence Weston, the voluntary exile, entered, and passing up the long aisle, paused suddenly before the altar and stood pale and trembling before them. One universal burst of welcome met his appearance, and then, as the haggard features of the prodigal turned fully upon the audience, they bowed their heads and wept! At length he essayed to speak.

"My friends," said he, in a subdued voice, "I have called you *friends*, for I behold in your interested countenances to-day, something that assures me that you cannot shut a degraded being from your hearts and homes and kindly sympathies. Language is beggared to-day—it cannot even picture forth a tithe of the intense feelings that are struggling in my breast. It cannot begin to tell of the thousand tender recollections that come struggling up, till memory totters on her shattered throne. You are all acquainted with the early portion of my history; you know the devotion of my fond parents, whose gray hairs an only son's profligacy brought down to the grave, and you all, no doubt, remember the eventful day when I stood here before the altar with her whom you, with one consent, designated as the most beautiful girl in the village, and as good as beautiful. Here before this altar I stood and promised to love, cherish and protect her, who lavished the wealth of her love upon a profligate like me. Ah, but the tempter came, and with all the alluring fascinations of persuasive eloquence held the fatal chalice to my eager lips. Were it not for that one fatal cup, I were not here to-day in the character of an exile, an outcast, and a ruined man. But I bowed submissively at the gilded shrine, and not all the soft persuasion of the still small voice, not all the tender, earnest pleadings of angel innocence could arrest my mad career. [illegible] passed three precious years of my [illegible] the beautiful flower I had promised to cherish faded; and when the last turf was laid upon her pulseless breast, I [illegible] and all the horrors of [illegible] me in picturesque [illegible] with a thousand [illegible] breast, and I [illegible] cusations. I [illegible] ry would [illegible] to get my [illegible] and [illegible] that [illegible] to forget how she twined her white arms around my neck, and prayed with her dying breath that I might meet her there, and then, smiling a sweet farewell, she was gone. Yes, she prayed for me, you all know that—me, that had so abused the rich mine of love she had poured out upon me in my degradation and misery, for I was miserable, as none may know, save those who have been caught in the tempter's snare. I could not forget that prayer, though I wandered on for two long years, and I humbly trust, through God's goodness and forbearance, it has saved me, though indeed I am but a wreck of my former self."

The speaker here addressed a heart-stirring appeal to the young men to shun his example, and closed his affecting narrative with the same thrilling eloquence that told how deeply he was impressed with a sense of his situation.

He is now engaged in persuading others to shun the fascinations of the alluring cup, and teaching from his own sad experience that the only safe way is to "touch not, taste not, handle not" the accursed poison.

Syrian Marriage Ceremony.

WE passed the entire day at the marriage of a Syrian Greek girl. The ceremony began with a long procession of Grecian, Arabian, and Syrian women, who came some on horseback, others on foot, through the paths bordered by aloe and mulberry trees, to attend the affianced during this fatiguing day. For many days and many nights, already, a certain number of these females have never left the house of Habib, and have not ceased to utter cries, songs, and shrill and prolonged groans, like those songs the vintageurs and haymakers pour forth in France during harvest. These clamors, these lamentations, these tears, and these premeditated rejoicings, are to prevent the bride from sleeping for several days and nights before the marriage. The old and young men of the husband's family do the same things on their side, and do not allow him to snatch any repose during eight days. We do not understand, in the least, the motives for this conduct.

Introduced into the gardens of Habib's house, the women enter the interior of the divan, to pay their respects to the young lady, to admire her dress, and to witness the ceremonies. We were left in the court, or introduced into an inferior divan. There a table was placed in the European style, covered with a multitude of preserved fruits, of cakes of honey and sugar, liquors and sherbets, and during the entire evening this collation is renewed in proportion as it has been destroyed by the numerous visitors. I succeeded in obtaining entrance, by exception, even into the divan of the women, at the precise moment when the Greek archbishop was giving the nuptial benediction. The girl stood by the side of her intended, covered from head to foot with a veil of red gauze, embroidered with gold. For an instant the priest has put aside the veil, and the young man has been able to catch a glimpse, for the first time, of her to whom he has united his existence. She is eminently beautiful. The pale hue of her cheek, arising from fatigue and emotion, a paleness rendered more striking by the reflection of the red veil, and the innumerable ornaments of gold, silver, pearls and diamonds, and by the long tresses of black hair which fell in every direction over her person. Her eye-brows painted black, as also her lashes and the borders of her eyes, her hands, with the extremities of the fingers and the nails, stained red with the henna, and point-lé in [illegible] and monospic designs, all gave to this [illegible] beauty a tone of novelty and [illegible] for us, profoundly impressive. Her head [illegible] time to regard her. He [illegible] and expiring himself from his watchings and fatigue by means of which [illegible] exhaust the strength of even love itself.

The bishop [illegible] from the hand of one of his priests a crown of [illegible] placed it on the head of the girl took it off again placed it on the [illegible] of the young man [illegible] to replace [illegible] the veil of the bride [illegible] placed it several times [illegible] on head to the other. He [illegible] pot rings by turns, on the [illegible] finger. The [illegible] from the same [illegible] they drank the [illegible] wine. After [illegible] the female friends [illegible] young bride to [illegible] [illegible] [illegible]

Our Duties to Japan.

There are some matters which are likely to arise with this populous nation, which it is of the highest moment for us duly to consider before we attempt the proffered intercourse.

First impressions are always lasting; and as the action of Com. Perry has placed our government before that nation in a favorable attitude, let no action of our people bring the nation into reproach. It is to be hoped that all our citizens will abide the time fixed for an interchange of the commodities of the two nations and not prevent, by a wrong action, an honorable and successful issue to the treaty so happily concluded.

It is also a most solemn duty on the part of our government, to prevent the introduction of those pernicious and death-dealing articles which have so often ruined the fairest prospects of many new countries which have been opened to the trade of the American people. We allude to the shipment of spirituous liquors, and we would add in connection, if it can be accomplished, opium also.

Let one nation receive the benefits arising from an intercourse with us, and let them hail it as a blessing; and not, as they fold the stars and stripes around them, feel they have nourished in their bosoms that which shall at last "bite like a serpent and sting like an adder."

Eastern Advertisers.—Nurserymen, manufacturers of agricultural implements, flouring mills, mill stones, machinery, seedsmen, and all who are interested in the great field of agriculture, will find it greatly for their interest to make their business known through the columns of the California Farmer. Our circulation now extends to Oregon and Washington Territory; also to all the valleys of our great State, and a single order from one customer would more than pay the cost of advertising with us liberally. A reference here, or a remittance, is always necessary unless an arrangement is made by contract, for advertising.

Foreign Exchanges.—We have on hand several valuable communications and extracts for future numbers, from our friends and exchanges in England and France, from which we learn that the Agriculture of California so far surpasses their conception as hardly to be credited among the *possibilities*. They seem to find it hard to realize the idea of fifty bushels of grain to the acre, and when we reach sixty, seventy, and upwards, they think it like the "gold stories." We promise to satisfy them the present year.

Sacramento State Journal.—The interest this valuable paper has taken in the cause of agriculture, and the generous aid it has always given to every enterprise that tended to its advancement, has made us desirous of perusing it daily—we have however not been fortunate in receiving it very regular; how is it neighbor, shall we not be enlightened regularly? shall we blame the post office? In your issue of the 10th, we notice a long extract from the original communication in our columns from the pen of Dr. Gibbons, on the Almaden Mines, and without credit to the Farmer—*another omission*, is it, neighbor?

Congressional Favors.—We are constantly reminded of the obligations we are under to our delegation in Congress, by the arrival of valuable documents containing the action of our national representatives; and it is most gratifying to know that California exerts a due influence in all important matters. We venture the assertion that no State in the Union has abler men than California in the councils of the nation.

Mercantile Library Lecture.—The next lecture before this valuable institution will be delivered on Friday evening, at Musical Hall, by Rev. Dr. Scott. The simple announcement of the name of the lecturer, we know, will be sufficient to draw all that this Hall can accommodate. No institution is doing more good to this city in her intellectual interests, and none more deserving of a liberal and generous support.

Express Favors.—We can only repeat what we have often said, that we are continually placed under obligations to the gentlemanly messengers of Messrs. Adams & Co., and Messrs. Wells, Fargo & Co. for up river exchanges and for various documents, papers, &c., that add materially to the interest we are striving to promulgate.

To Correspondents.—A valuable communication from J. L. Russell, N. H., is on file; Edgarton, and Flavio received and will have place; Etta, Josephine, and Augusta, will receive our our earliest attention.

Iron Foundries.

Our friends in the old States would be rather surprised could they peep in upon us and see the advance we have made in a short time in our manufactures, especially our iron works. The magnitude of the works of the P. M. S. S. Co., at Benicia; the perfection of whose work cannot be realized in the East. The extensive and varied works of Messrs. Gordon & Stein, of this city, where a person can find a boiler for a large steamer, with all the heavy castings and the most delicate finished specimens that may be required. A foundry, the value of the business done is rarely equalled in the oldest foundries East.

We have also the foundries of Messrs. Donahue & Co: these are very extensive, performing every species of work in boilers, castings, water guages, quartz crushers, with all their machinery, steam engines, &c. The Pacific Iron Works, where one may see the molten iron changing into various forms of being destined hereafter to move on land or water, or prepare the food necessary for man or beast. In other words, here are made the boilers for the ocean or the land, mill irons, machinery for all and every purpose, and as perfect as can be made.

We are proud to herald the facts as denoting the advance of California in science and the arts. By a reference to our advertising columns our words are verified.

St. Charles Hotel.—This fine building is most conveniently located for the great numbers that reach our city by the steamers, and we can most cheerfully commend it to our readers as one of the very finest hotels in this great metropolis. We found much to gratify us in our promenade through the parlors, drawing rooms, halls, and chambers. One of the first and most important requisites to a good hotel, is cleanliness; and from our own personal observation and examination of this hotel, we feel assured the St. Charles will vie with any in this city. Another important feature is ventilation, and in this respect also this hotel has regarded one of the essentials. There are *one hundred and sixty rooms*, furnished in the neatest and best manner, and sufficient accommodations for three hundred visitors; we can also assure our friends from every part of the State, that they will even find in this hotel those comforts which a traveller needs, and from the attentions of the proprietors those courtesies which makes one feel they are "at home."

Bradley's National Daguerrean Gallery.—This establishment enjoys the reputation of being one of the best in the country, and so it ought. We are glad to welcome its proprietor back from the East. He brings with him all the latest improvements, including apparatus for taking pictures much larger than any heretofore known, and a splendid assortment of the improved Stereoscope cases. Mr. Bradley is himself an excellent artist, and his skilful operator, Mr. Connelly, who conducted the business during Mr. B.'s absence, is ever on hand to suit patrons. If you have the blues, go and get a good picture, and hear one of the Doctor's funny stories, and, our word for it, you will be in a better humor.

The Telegraph Office in Sacramento Plundered.—The State Journal gives the following account of a daring robbery committed in the Telegraph Office in that city:—"Mr. Strong, the operator, before retiring to rest discovered that they key of his door (which closes with a spring lock), was missing. About 2 o'clock in the morning he was awakened from sleep by hearing footsteps in his room, and was able to distinguish two men, one tall, the other short—their faces could not be seen. He immediately jumped up and spoke to them, but no sooner did he open his lips than he was felled to the earth by a severe blow on the side of his head. A towel was stuffed into his mouth—his hands, arms and feet tied with a strong rope, and thus pinioned he lay until 7 o'clock on Thursday morning, when he was discovered by Mr. Patterson, the operator of the other Telegraph Line, whose office is in the same building. While thus confined, the scoundrels took from his pocket the keys of his trunk, opened it and stole therefrom $270 in cash, after which they left."

Hay Crop.—The farmers of our County have been busily engaged for the last two weeks in gathering their hay. In the lower part of Placer County the crop this year will prove a great decrease from the quantity usually gathered. This year there will be scarcely ten tons cut to fifty last year. In some localities, which last year produced the most luxuriant red clover, this year are grown over with thistles and weeds. An additional amount of stock running at large has also tended to destroy some of the best mowing land. We have not yet seen any account of the probable prospect of the crop further down in Sacramento Valley, but if it should prove no better than in the uplands, the price of hay the coming fall and winter will be exhorbitantly high.—*Placer Dem.*

Great Enterprise.

We present our readers with a full description of the splendid Piano manufactory of the Messrs. Chickering, of Boston, copied from that gem of newspapers, the Boston Evening Transcript. We knew the late lamented Chickering well. His devotion to the science of music, and his ever open hearted generosity to all who needed his sympathy and aid, will live in memory, as long as the tones of music shall vibrate upon the chords of that instrument which is synonymous with his own name.

This mammoth Piano manufactory is probably the largest building in the United States, excepting only the National Capitol at Washington, and is unquestionably the most perfect and extensive pianoforte establishment in the world. Considered in this light alone, it is an object of attraction, ornament and pride for our city; but its general interest is doubly heightened by the reflection that the vast enterprise is one of an entirely private character, projected by one of our most successful and celebrated native pioneers in the mechanical departments applicable to the developments of Music, and in its magnitude indicating the rapidly increasing culture of the divine art in this country.

This gigantic structure was put under contract May 16, 1853, the land upon which it stands and necessary grounds contignous having been purchased of the city of Boston the month previous. The premises comprise an entire square of about 200,000 feet, or about five acres, situated on the westerly side of Tremont, between Camden and Northampton streets. Such is the present state of forwardness of the building, machinery, &c., that it is calculated the new establishment will be under full operation by next autumn. Its novelty induces us to give a somewhat extended sketch of its details.

To obtain the most perfect foundation possible, the peat and mud covering the lot to the depth of 3 feet, were removed, leaving a grade of solid clay into which all the bottom stones (3 feet broad) for the walls are imbedded in trenches. The cellars and area are graded to the depth of three feet, with good grading gravel.

The plan of the building forms a hollow square. The principal front is on Tremont street, and sets back 18 feet from the line of the street. This front measures 245 feet on the street by 52 feet deep, exclusive of a projection in the centre for the tower, which is of octagon form, 21 feet at the base, and rising to the height of 110 feet. The north wing, fronting on Northampton street, is 262 feet long by 50 wide. The south wing, fronting on Camden street, is 250 feet long by 50 wide. The open area between the buildings measures nearly an acre, but only equals the surface of one of the floors in its full extent.

The whole edifice stands 5 stories high on the three streets, and six from the hollow square. All the stories are 11 feet in the clear between floor and ceiling, except the front and centre on the second floor, designed for the grand staircase, entrance hall and warerooms, which is 22 feet high, and the staircase 8 feet wide. The floors above these are suspended by 2 inch iron rods from strong trusses, upon which the roof rests.

A building for a steam engine, saw mill, &c., 60 feet by 70, having wings 32 feet wide and 2 stories high, connecting the two wings of the main building on the westerly end, closes the square, and makes the fourth front.

The foundation walls of the entire building, which are 3 feet thick at the bottom and two feet at the top, are built of granite from the Rockport quarries, and contain about 2000 perch, laid in cement. The first stone was laid June 15th, 1853. The walls of the building, which are 16 inches thick, are built of Hubbel's Charlestown brick, and contain *three millions* in number, laid in cement and lime mortar. The first brick was laid July 21st, 1853. About 2500 casks of lime and brick were used in laying the stone and brick.

The timber and lumber throughout the building are of Southern and Eastern pine and spruce, of which about 1,650,000 feet were used, requiring over 300 casks of nails. There are 196,000 feet of planed boards in the floors, which are all double and would, if spread out, cover the space of *nine acres*. The buildings have 22 outside doors and 900 windows, containing 11,000 lights of glass. The roof, measuring 43,500 feet, is covered with tin, painted both on the upper and under sides, and inclines on inch per foot towards the square, giving the appearance from abroad of one entire flat roof, and thus adding to the massive effect of the building. The roof water is taken in copper gutters, through copper conductors, into ample drains in the area, and from thence to the large sewer in Tremont street. A heavy iron fence encloses the 18 feet which the building is set back from the street, with grass inside and a sidewalk 16 feet wide on the outside.

The main building and wings are separated by fire-proof, vaulted brick walls 2 feet thick, with double sets of iron doors, doubly bolted and barred—which, with the facilities at hand for water, renders the destruction of more than one building or wing at a time next to an impossibility. As a further safeguard against any conflagration, the city has four hydrants, one at each corner of the building, to which hose is attached, and enters the area of the building under the sidewalks. The whole establishment will also be constantly and amply supplied with Cochituate water through 3-4 inch iron pipes, and there is a wash-room and hose in every apartment. With these various and efficient protections it would seem that the premises are even more secure from damage by fire than is ordinarily the case.

A first-class upright beam engine of 120 horse power—capable of raising 1980 tons to the height of one foot in a minute—is being built by Mr. Otis Tufts of East Boston, to be in operation next month. This is expected to be a model piece of Tufts' machinery, which has long been celebrated for its excellence. There are two sets of boilers, which will be placed in a building in the rear of and not connected with the main buildings, to avoid danger from accidents. The engine will drive all the machinery used in the entire buildings, and also heat the establishment by the exhaust steam. This kind of heat has been decided upon by the proprietors, after careful study and investigation, as being the best adapted to their purpose, besides decreasing the liabily of danger or accident by fire. All the glue, coils, &c., will be heated by steam. One apartment, in size 245 by 50 feet, will be kept at a temperature of 80 degrees the year round for a dry room, for keeping seasoned stock for sounding-boards. Elevators, or platforms, 10 feet by 6, are operated by steam in each wing, to pass up or down between cellar and attic, thus performing all the necessary moving from one room or story to another in the easiest and most expeditious manner.

The whole of the grand building is to be devoted exclusively to the manufacture of Pianofortes, and all the interior arrangements for the business are on a scale to correspond with what we have already described. The rough stock will be taken in at a lower door in one wing, and passing up this wing, through the main building, and down the other wing, will be delivered in the warerooms finished—so that almost literally "forests will enter at one end of the building, and come out perfect pianofortes at the other." The entire first floor will be filled with the requisite machinery, such as planers, lathes, all kinds of saws, &c., &c., and will probably exhibit the finest and largest display of machinery in any one building, occupied by any single individual or firm in the country. This machinery was all made at Lowell, under the superintendance of Mr. L. A. Cutler, the experienced engineer and machinist of Chickering's establishment. In the evening the whole building will be lighted with gas from about 600 burners. Every known improvement will be introduced into the various departments of the manufactory, in order to make it and its work as near perfection as human skill, employed with the most ample means, can suggest.

The edifice, as above completed, was contracted for and built by Mr. Moses Standish, carpenter. The excavation and grading were done by Mr. Stephen Tucker. The mason work by Messrs. Moses Standish and Charles Woodbury. The iron work by Mr. James Perkins. The plastering and stucco work by Mr. Samuel P. Tolman. The painting and glazing by Mr. Hosea Noyes. Painted shades to every window in the building, executed by Mr. Daniel Lloyd, are being put up by Messrs. Charles H. Bruce & Co. The lightning rods were furnished by Mr. Charles A. Orcutt, the patentee.

All the designs and working plans were made and superintended by Mr. Edwin Payson, a practical builder, who has discharged his task in the most satisfactory manner, having been connected with the work since its earliest commencement. From the nature of the case Mr. Payson's duties have been quite arduous, and requiring an uncommon degree of mechanical skill, inasmuch as no particular style of architecture could be strictly followed; yet he has succeded in producing a building most admirably adapted to its business, remarkably symmetrical, considering its vast proportions, and altogether combining rare elements of taste and perfect utilitarian simplicity.

The entire manufacturing establishment will be under the superintendence of the eldest of the late Mr. Chickering's sons, Mr. Thomas E. Chickering, who has, since his father's death, made all contracts, accepted all plans, and had the general direction of the building—also laid out the plans for finishing the interior, and adapting it to the manufacture of pianos.

The second brother of the firm, Mr. Charles F. Chickering, has the sole charge of the retail business, and the splendid warerooms in the Masonic Temple; while the third and youngest brother, Mr. George H. Chickering, is at present, as previous to the death of his father, engaged in the manufactory.

The first pianoforte made by the late lamented Jonas Chickering was in the year 1825, and sold to the late Mrs. Snelling Powell, the actress. From this time the demand has gradually increased, and though for a long time the manufactory has turned out from 25 to 30 pianos weekly, yet during the past two years the firm have received some 300 orders beyond their ability to supply. The whole number of Chickering Pianos manufactured up to the present time is but little less than *fifteen thousand*.

When the new manufactory shall be in full operation, an army of at least 400 workmen will be employed, and it is then calculated that the number of pianos finished each week will be about 60, or 3000 per year. With their enlarged and immense facilities, the Messrs. Chickering will continue to do their full share towards increasing the popular taste for the refining and elevating art of Music.

On Thursday evening last, at the bowling saloon of Allen & Parker, it is said that Tom Snyder, from Sacramento, knocked down three hundred pins with 30 balls—a feat never before performed in San Francisco.

A mammoth bouquet, composed of 10,000 violets, arranged in the form of a dome, surrounded by 300 camelias, was recently presented to the Empress of France, by the Horticultural Society of Toulouse.

HORTICULTURAL DEPARTMENT.

STATE SOCIETY MEETING.—An adjourned meeting of the several committees of the State Agricultural and Horticultural Society will be holden on Saturday, June 17, at the Counting Room of the President, F. W. Macondray, Esq., at San Francisco. It is hoped every member will be present, and all who desire to take an interest and become members of the State Society also.

SANTA CLARA SOCIETY.—A very interesting meeting of this Society was held at San Jose on Saturday last. Several new members were added, and a spirit of enthusiasm was manifested that argues well for the county show this autumn. Various subjects of interest were themes of discussion and elicited quite a debate.—This is the way to accomplish good. Go-a-head, gentlemen, success will be sure to follow such labors. Among the subjects discussed was the importance of the cultivators of this great valley holding a convention for the purpose of establishing an extensive warehouse for the sale of produce of the entire county, and doing all the commission business of the county, and with this the importation of all agricultural implements, seeds, &c., as suggested by the CALIFORNIA FARMER in its last number. We are glad to note this early move in this important matter.

Blight on Peach Trees.

A CORRESPONDENT from Oregon, one of our best nurserymen, Gen. M. M. M'Carver, writes us as follows in regard to fruits: "I have a very flattering prospect for fruit. My Apple and Pear trees are very full, with a sprinkle of Quince, Apricot, Cherry and Plums. I have Catawba, Isabella, and California Grapes. My Peach trees yield but a small crop this year—I shall not have more than 50 or 100 bushels, as my trees have all taken the blight; the leaves blister and curl up and many of them fall off the tree, together with the peaches. Is there no remedy for this disease? Some trees appear not to have it. Perhaps we should propagate from these trees alone. Can you make no suggestions for our relief?" In answer to our correspondent, in regard to this disease, we refer him to the facts detailed in regard to the same disease, which has appeared in San Jose and other places, and which we attribute to the Southern peach of this country. The imported peach, thus far, has escaped.

HORTICULTURE IN NAPA CITY.—The "banner county" hold their regular meeting on Saturday next, June 17, in Napa city, at 10 o'clock, A. M. We trust the Agriculturists of that county and the neighborhood will rally and awaken a new interest for this Society and for the State. The 17th June is a glorious day, and most appropriate to advance the cause of rural life and its blessings. The monument on Bunker's Hill tells the price at which these blessings were purchased, and shall we not hold them dear. Remember this anniversary!

GOOSEBERRIES AND CURRANTS.—We have received from our friend D. Spence, Esq., of Monterey, two glass jars, each of fine Gooseberries and Currants. They would do credit to any exhibition. We have at various times received from Mr. Spence specimens of his productions, and always good ones. We anticipate from him at the "State Exhibition," next October, something extra, and we are grateful for the interest always evinced by our friend, and regret the anticipated exhibitions of the "Academy of Natural Sciences" *did not come off*, else we should have exhibited them for him at this public fair.

AGRICULTURE IN AMHERST COLLEGE.—We are happy to see that a movement has at last been made to provide for instruction in agriculture in this State. It is proposed to begin a systematic course of study at Amherst College, under the charge of Professor J. A. Nash, who has recently returned from a tour of observation and study abroad. One prominent feature in the arrangement is, that young men while pursuing the agricultural course, under Prof. Nash, will have access to the lectures on Geology, by President Hitchcock, and also to the lectures on Chemistry, Natural History and Philosophy, under the most favorable circumstances, as well as to the various cabinets of the College, which are among the most valuable in the country. The expenses are so reasonable as to put this valuable course of instruction within the reach of the young men who [illegible] very limited, and we hope that many [illegible] will avail themselves of it.—*Boston Traveller*.

Familiar Sketches of the Natural History of California.

BY ALEX. S. TAYLOR, OF MONTEREY.

THE PHALAROPE.—This beautiful little water bird is found in immense flocks in the months of May, June, and July, in the lagunas near Monterey. The waters of these lakes are not potable, but partake of a singular mixture of mineral solutions, which it is not easy to describe without chemical analysis. There are three of these ponds, all of which are alive with the greatest abundance and variety of water insects, which makes them the resort of the different classes of California water birds at the various seasons of the year.

The Phalarope of Monterey measures 7 1-2 inches from the crown of the head to the end of the tail. The beak is small, covered with feathers, of a lead color; the eye is black, surrounded by a ring of white featherets; on each side of the neck it has a band of reddish brown feathers, and under the eyes a band of puro white; the breast and belly are of pure white, and the back ash color, having two reddish brown stripes; the wings are of ash color, and have a row of white tipped feathers in the middle; the outer feathers of the wings are 4 1-2 inches long; the legs are ash color, two inches long; the feet are connected by broad membranes, notched at short distances, It has three toes, and a rudimentary one behind, each of which is terminated by a small claw. The bird weighs only one and a half ounces. This bird is one of the most graceful in its motions that can be conceived. At this season of the year it abounds in immense numbers in our neighborhood, feeding on the stores of insects on the margin of the saline lagunas. It is a very familiar bird, not starting until a person is within five or six yards of it, when it takes flight, to alight at a short distance—generally hovering over their dead companions, with shrill cries, for a few seconds. It sits on the water like a duck, and generally swims as fast. It rarely resorts to the sea-side. It flies swiftly in large flocks, turning every moment with great agility—their bodies at times reflecting with the brightness of a sunbeam. It is considered very delicate eating, each bird affording only a mouthful to the epicure. It takes its final departure in the latter part of the summer.

THE BLACK CURLEW OF CALIFORNIA.—This splendid bird is one of the most beautiful objects of natural history in California, and is found in considerable numbers in the summer season in Monterey county, where it is sought with avidity by the sportsman. Farther south, in the counties of Santa Barbara, San Luis Obispo, and San Diego, it is found in large flocks. The meat is tender and delicate, and is much sought after by epicures, as the flavor is more esteemed than the ordinary brown colored curlew of our State, commonly called by the natives Seriapiqua.

The black curlew measures two feet one inch from the end of the tail to the tip of the beak. The beak is four inches and a half long, carved down, and dark, with a red flush. The legs are seven inches long, also flushed red. The wings from tip to tip, measure two feet and a half. The body of the bird is of a beautiful black color—golden brown on the head, breast, and neck; on the wings the color is a shining green, flushed black. The bird, when full grown, weighs about 2 1-2 lbs.

DEPOSITS FROM FRESHETS IN THE SACRAMENTO.—During the subsidence of the late freshet of the Sacramento, (says the State Journal) an opportunity has presented itself for examining the amount of earthy matter deposited on the banks of this stream. It is about five weeks since the river reached its highest point, and has remained in that position during the greater part of that time, until within the past week, in which it has fallen a little more than two feet. During one month it is found that a deposit of eight and one-half inches has taken place, or by a single freshet. Within one year a pine log having a diameter of of twenty inches, has been completely buried, and a deposit of thirteen inches over its diameter. These measurements are made directly in front of the city, where the banks of the river are straight, and where they are subject to the action of a direct and strong current, and the effects of waves produced from the paddles of our steamers, and where few eddies exist; therefore the conditions are more unfavorable for an extensive deposit, than in situations where these circumstances are not found. What then must be the extent of this deposit under favorable circumstances, as upon points, or in places where there are large bends and natural eddies existing? By careful inquiry we find that at the distance of one or two miles below the city, deposites have taken place within two years, which have shoaled the water several feet in different localities and has extended itself from sixty to eighty feet outward from the original banks, and that one of the recent beaches is now used by the fishermen for drawing their seines upon. Under the circumstances, it seems to us a matter of much moment for consideration, whether serious obstacles may or not, at no distant day, be thrown in the way of navigation or force the river to cut out new channels lateral to its present course.

RAIN.—Sacramento was visited on Monday morning, about 4 o'clock, with a very heavy shower of rain, which [illegible] Wind from the [illegible] day was cloudy and the [illegible] A slight shower occurred [illegible] o'clock, the same morning.

LADIES' DEPARTMENT.

DOES it not seem strange, Messrs. Editors that is should be deemed necessary to admonish either husband or wife, to make each other happy? One would suppose that the spontaneous impulses of each heart would promote the other's happiness; else why did they unite their fate; why promise to "love, cherish, honor and obey?" (by the way I think the "obey" might as well be omitted.) Can a husband and wife be happy independent of each other? They must be singularly constituted if they can. It is not to be denied that a husband or a wife must be particularly fortunate to encounter no disappointments, or meet with no trials, and their temper must be remarkably amiable, never to ruffled. They should meet with ready sympathy in all difficulties, from each other.

If after marriage men and women, would be particular to continue those little attentions they before deemed so necessary, they would be surprised what a happy effect it would produce on their own feelings, for nothing so much increases our happiness, as the certainty that we have imparted happiness to others.

Mrs. Welden, in her article on this subject, says, "must a wife use deception enough to smile and look cheerful, even though her heart is breaking because of neglect and unkindness?" This is an extreme case, and if a wife has been so "neglected," and received so much unkindness that her "heart is breaking," she would indeed merit our deepest commiseration. Those who understand the position of a wife and mother, well know that she must have many trials of patience and endurance, that few, even of the best of husbands, can appreciate or understand. She has many perplexities and vexations, many *petty* troubles, which are more trying to the temper than greater or real troubles. But no woman is fit to fill the all-important station of wife and mother unless she can meet those trials with a cheerful, enduring spirit.

With Mrs. Welden I can say, "I do not think much of a woman whose heart swells with no higher aspirations than to cook good dinners and unexpected treats for supper." With her, I say, "wives and daughters *discipline yourselves*, educate your daughters" (and sons too,) to make home happy. Cultivate a taste for everything beautiful in nature or art; embellish your homes with everything attractive that comes within your reach. "Endeavor to inspire" all around you with a love of beauty, in every form, and consequently with a "love of the God of Nature," and with the equally important love of the beauty of a cheerful spirit! You will not find this incompatible with a willingness to cook "good dinners, or nicknaks for supper." If a husband comes in from his labor, wearied, fretted, and it may be cross,—for the kindest of these "lords of creation," will get cross sometimes—it is a wife's "right," as it is her duty, and her privilege, to endeavor to scatter the cloud, and win him to good nature.

No man, however intellectual, and few, however commonplace, neglectful, or ill-natured, but will be won by little attentions, nameless but important in effect. True, a wife may have had her own trials, but she will not find a long dissatisfied face win his sympathy half as readily as a nicely prepared, and tastefully arranged, favorite supper.

Then to wives I would say, interest yourselves in *all* that interests your husbands; consult his tastes, and if need be, to keep his love, "pet" him. It is far better to keep it by petting him than to lose it. And to husbands, "cherish your wives;" you have taken them from a dear home circle, and their all of earthly happiness depends on you. "Give honor unto the wife as the weaker vessel, and as being heirs together of the grace of life." To both, learn to sympathize, and feel an interest in everything that concerns the other, and in turn let each strengthen and support the other, that you may be happy yourselves, and spread the influence of your happiness around you. This is the advice of one has been a wife for twenty-seven years.—*Cor. Far. Compan.*

Influence of Rural Life.

EDITORS FARMER'S COMPANION: In looking over the last volume of the Transactions of the N. Y. State Ag. Society, I was interested so much in an Essay on the Influence of Rural Life and its Pursuits on the Human Mind, that I am fain to condense a short extract; hoping it may serve to inspire many an humble toiler in our beautiful renewed action, and lift his aspirations upward, with that hope which, with energetic perseverance, is sure to mount triumphantly over many a rugged obstacle.

The writer remarks that "Rural life has ever furnished, and will ever continue to furnish, those qualities of mind which are essential to true greatness. As in the physical world from [illegible] in mountain side is hewn the rough block of [illegible] or of marble, that is transported to the distant city, there to be polished by the hand of art, and to become the part of some stately [illegible]; so the world of mind, the young [illegible] the hills and valleys of rural [illegible] and [illegible] to the lordships of [illegible] come hither and [illegible] to [illegible] study and [illegible] nect, [illegible] the metropolis. [illegible] were [illegible] such positions [illegible] and [illegible] [illegible] that [illegible] [illegible] [illegible]

THE CALIFORNIA FARMER.

SAN FRANCISCO, THURSDAY, JUNE 15, 1854.

Chinese and Japanese Agriculture.

The greatest achievement of the age—the orightest and most glorious conquest of the nineteenth century, has been heralded to the world, and recorded upon the pages of History. That brilliant achievement which gave so glorious a victory to the American flag, and enrolled the name of Perry in deathless fame upon the pages of American history—even that victory, won in defence of Liberty, will fade before the mighty results that shall be made manifest by the recent victory achieved by the same deathless name. The first victory was one of Truth and Might for Right—its price, blood and treasure—its results. Liberty. The last is the triumph of human progress, won by wise legislation, under the banners of peace—its results, the extension of human freedom and republican institutions and the enlightenment of nations.

The peaceful and most honorable achievement of Com. Perry, in the preliminary treaties he has made between the authorities of Japan and the United States, by which that vast territory will ere long be accessible to our nation, is an event of so much magnitude that its full reality cannot be comprehended at once—like to the eye long unused to sight, when the film is removed, vision at first is imperfect, and we see "trees as men walking." Bye and bye we shall see clearly, and the glorious results that must be felt in our country are beyond all human calculation. Vast as may be the trade with this nation, in her manufactures, mercantile or commercial interests, there is benefit resulting to the United States far beyond all this. The Agriculture of China and Japan, the discoveries that will be made in these kingdoms of new and rare species in every department of agricultural science, the knowledge we shall obtain of their systems of culture, the advantage to be derived by an exchange of the products of our country, the introduction into that country of all our new and improved agricultural implements, our seeds, plants, trees, and breeds of stock, in exchange for those more valuable to us, will be an era in agriculture, even the conception of which is radiant with glory, and of such value to our country that it cannot be estimated.

All the expeditions that have been made by scientific men have only tended to an assurance of what is yet to be revealed. We have long been convinced of this, and, impressed with these convictions, we have urged the importance of the Agriculture of California, her rich resources in this great interest, her peculiar position on the Pacific coast, as most appropriately adapted for the advancement of Agricultural knowledge, and the diffusion of Agricultural interest and influence by means of a National Agricultural College in California—the mission field of the world.

The memorial which we transmitted to Congress on the subject urged this matter as follows:

Were strong arguments needed to support a call and claim upon Congress for an institution of this kind for this State, now, and in preference over any and every State in the Union, we reply:

No other State in the Union has ever had drawn to it in so short a time such vast numbers of all nations, and none therefore has ever been placed in a position to exert so wide an influence. California is the great mission ground, whereon to preach the value of our free institutions in their practical bearings, and the benighted of other nations are coming to us to receive those lessons that shall be borne back to those they have left behind them, for good or evil, for freedom or servitude, as this great country shall by her people and her institutions instruct them.

That these instructions may be beneficial and lasting, we must educate the young. We must present to them convincing proof on our part, as a people, that we desire their permanent good; and to do this we would open institutions of education, as free from all political and sectarian bias as is possible in the nature or circumstances of society—and in no way can this be better effected than by a College liberally endowed, where the youth of all nations shall find the doors open wide to receive them, and where they could be instructed in the natural sciences, and particularly the many youth who must eventually become the cultivators of the soil.

The present position of California, her relation to and with the Chinese, and the future and almost certain intimate connection with the Japanese and the Asiatics—present a view to the reflecting mind of the most intense interest.

This view alone opens to us a world where our influence tells upon countless millions. Shall that influence be exerted, and for good? Shall it be exerted now? Shall California be the mission field, and shall our nation be the first to occupy it? God grant that it may be so.

Already this field is "ripe for the harvest;" for there are now within the borders of this State the people of that nation that counts by thousands and tens of thousands, and they are but the heralds of the countless numbers that soon must follow, and in this great science of agriculture, while we extend to them protection and education, we shall be receiving in return, those revealments of that knowledge which that nation has possessed, as we may say, centuries in advance of us, and which will greatly add to our knowledge, wealth and greatness.

By the brief reports that have reached us, we hear of the groves of spices whose aromatic breath perfume the air; of the sugar cane, wheat and other grain. Cotton, rice, hemp and tobacco plantations, the growth of silk, and its manufacture of tea and various other staples that are sources of trade.

In the "Flora" of the two kingdoms no imagination can conceive what is yet in store for us, or for the luscious fruits that will be successfully introduced into this country from thence. They need our implements for their improvement; they need our stock of all domestic animals for their use, and we need their products and the knowledge they possess in this science: knowledge long retained in those nations and hidden from the other portions of the world.

We know the good that will be accomplished by this achievement of Commodore Perry, cannot at present be appreciated; but we repeat, it is next the revolution that gave us our liberty—the greatest triumph of the world—always yielding the christian religion the precedence; and since the revolution, the victory we now proclaim. That all the good that should be accomplished by this achievement may be ratified, we again appeal to our delegation in Congress to look upon this feature of this age, and to give to the agriculture of California her position in relation to this science, and to her position a relation to the influence she is to exert upon China and Japan in coming years, that thoughtful care and attention which all these great interests demand. These interests are momentous, and with the same prompt, earnest, decisive action which has characterised the doings of every member of the California delegation of late, our own proud Eureka State will be "like a city set on a hill." The streams of light that shall flow from her conquest in agricultural science, shall prove a blessing to every State and nation of earth.

To every friend of agriculture we bespeak an interest, we commit again these important interests into the hands of those in Congress, whose greatest pride will be the good they accomplish for their State and country.

Mortality Among Cattle.

A very singular and fatal complaint has broken out among the cattle. In the vicinity of Georgetown, over in El Dorado county, we understand quite a number of cows have died from a cause unknown. On Friday last, a valuable cow, belonging to Mr. Chas. A. Young, in Secret Diggins, died very suddenly. About the middle of the afternoon, she laid down with some other cattle, and in about an hour and a half died, without any apparent cause. Judge wilson, about ten miles this side of Sacramento, last week, also lost a very fine cow in the same way. After death, their milk-bags turned to a very dark color, and it is supposed from this fact, that they were poisoned to death by some noxious weed. We remember of reading accounts of large numbers of cows dying last year, in Sonoma and Napa Valleys, from similar supposed causes. Can the editor of the California Farmer give us any information upon this subject? It would doubtless prove very acceptable to our farmers and dairymen, who have considerable capital invested in stock.—*Placer Democrat.*

In answer to the above: We would be truly obliged if those who lose stock thus suddenly would note all the particulars of each case, the action of the animals, the time and manner of the attack, and its continuance, together with the appearances after death—we shall thus be better able to describe the disease, if known.

Cattle are constantly subject to diseases of various kinds, often the result of improper treatment, or of causes connected with the climate which it is difficult to avert. Nothing is lost by careful attention to stock, in providing them with shelter from storms and from too great heat when sickly, and in supplying them with wholesome food and enough of it, pure water, &c.

The particular disease to which our attention has been called is not described sufficiently for us to determine in relation to it, or for any one to judge unless it was a common disease—this is an *uncommon* one, or entirely new.

Garget produces inflammation and hardened state of the udder, but is not a dangerous or suddenly fatal disease, and occurs while the calf is young; and the remedies are simple: Epsom salts, 1 lb; aniseseed, 1 oz; warm water, 3 pints; bathe the udder in hot water three times each day, and rub it with the following ointment: yellow Basilicon 4 ounces, camphor 1 ounce rubbed down with a little spirits of wine, strong mercurial ointment 2 ounces, soft soap 1 pound—rub these well together. Although we do not think this the disease referred to, it is well to have this remedy at hand where there is a large dairy.

We are more inclined to the belief that *poison* is the cause of this sudden death, by the swelling of the bag; its discoloration, we think, must arise from the fluids; it may also be from some *plant* or *shrub* that has caused great thirst and thus induced drinking and flowing to the udder.

We remember being in Castalia, Ohio, in 1845, when a disease similar to this swept off great numbers of cattle. It arose from eating a peculiar shrub; and after various experiments, thorough cures were effected by the cattle drinking at their *sulphur springs*. We would recommend the use of sulphur water; it is simple and can do no harm.

The disease of *Red and Black Water* is fatal, and often suddenly; but we are not versed in its symptoms.

Will the farmers and dairymen please note the symptoms of this and similar diseases, and report cases to us? If they will give us all the light they can, we will spread it.

The Farmer will be the *best medium*, for this and kindred subjects that affect the interests of all the cultivators, dairymen, stock raisers, &c., and if they will all *subscribe for the* Farmer, we can do them all good service.

Summerville Lodge.

A pleasant drive of about two miles from the city of San Jose brought us to a broad prairie land, and riding through a "mustard field" of many acres, the mustard often two feet higher than the top of the buggy, we came to the entrance gate that opened to "Summerville Lodge," the residence of Dr. Bascom, an excellent practical horticulturist.

This fine farm of 160 acres is situated away from the city a pleasant distance, and has been put in a high state of cultivation under the personal care and labor of the Doctor himself. The farm is appropriately divided into enclosures for grain fields, orchards, stock yards, vegetable grounds, and fruit gardens, each department giving evidence of judicious plans and a constant personal supervision.

In the grain fields we noticed the plan of mowing the wheat before the jointing, thus strengthening the straw and giving a firmer and better head and stouter grain, besides a fine crop of green fodder or hay of some two tons per acre. We noticed, too, the entire removal of all weeds by this process.

The orchards of Dr. Bascom reflect great credit upon his system of culture: careful planting, constant watching, low formed heads, adopting the *pinching* instead of the pruning system: his success in budding and grafting, his selection of the best varieties only—these were objects that attracted our particular attention and convinced us that the Doctor had his *heart* as well as his hands in the work, and that both had been most industriously employed.

All the fruit trees were in perfect health, and of rapid and thrifty growth, consisting of apple, pear, peach, cherry, plum, nectarine, almond, grape, gooseberry, and currant.

We here particularly, that characteristic in the peach tree of which we spoke in No. 21 of the Farmer, viz: the peculiar disposition of all native and southern peaches to curl in the leaves and drop their fruit, while side by side, the northern and eastern peach was fruitful and thrifty. The Doctor's experience agrees with our own respecting the peach.

The northern peach trees were in good bearing, and the almonds with large fine fruit. The strawberries and small fruits were all in fine order—the vegeteables grounds well cultivated, free of weeds, and the earth in good soft malleable order. The grapery, though young, promised an abundant crop; the clusters were large and with heavy shoulder branches.

We noticed around his residence (a most tasteful cottage house), many of the choicest shrubs and vines with which we were familiar in "New England," but rare in this country yet. We were very much interested in these grounds, for we noticed this fact: the Doctor believes and practices in the belief that what is worth doing at all, *is worth doing well*—and such we saw verified. The very best care and cultivation marked every portion of the grounds, and we wish every cultivator in the valley would visit the Doctor and copy his example, imitate his system of high cultivation, his order and cleanliness in the garden and orchard by an entire extirpation of all weeds and rubbish: Evidences of this kind mark the successful cultivator; it denotes the man who has his "heart in his employment."

We examined out upon the stock yard a large number of swine, and here too all was in keeping with the same system—good yards well fenced, water, fine buildings for stormy weather and for the shelter of young stock, boilers for preparing food, and in fact all that was indicative of good management, such as we delight too see.

After a very pleasant sojourn within the hospitable mansion, and being refreshed in physical man also, we were kindly conveyed by the Doctor to other places, which will be the theme of future remarks. For the kind attentions we received at the hands of our friend, to us personally, and to our interest, most gratefully we wish him success in basket and store, hoping another year to find the Doctor and his family enjoying an abundance as the fruit of his labors.

California Coal.

Steadily, firmly, proudly; step by step, California moves on in her pathway to become a truly independent State. The arrival of the ship Lucas, from Bellingham Bay, with a cargo of coal, we hail as an epoch in the history of California. A brief time since and such a fact announced would not have been accredited. Coal was $100 per ton, and the question has been seriously entertained of the ability of sustaining all needed steam power by reason of the scarcity and cost of this important article. All shipments of recent date have been from Chili and Vancouver's Island, and those have offered little or no profit.

The recent discovery is one of priceless value to our State; the very announcement that inexhaustible mines of good coal have been found, will lay for the future the keel of a thousand steamers, and be the basis for the erection of as many manufactories.

We have been informed by one of the proprietors that the quality is the very best bituminous, the quantity inexhaustible, and ere long the price will be within the reach of all. It is now offered at $15 per ton. The mines are near to lighterage and deep water. Such a discovery will soon establish an industrious population and build up towns and villages filled with mechanics, manufacturers and farmers, the very people that build up a State. This is indeed a glorious epoch in the history of California, each year reveals new sources of wealth, and gives convincing proof of her future greatness. Let the citizens of California but watch these indications of permanency with a just regard and the triumph is sure.

Instead of seeing the vast amount of her mineral wealth sent away for products easily grown upon our own soil, that wealth will be retained here to build the homes of an industrious people, to rear schools and colleges, and to erect the manufactories and mechanical workshops that shall give employment to the people. Three years since and there was a prevalent opinion that even the most common vegetables could hardly be grown; but these doubts have all passed away, and the crops of endless acres supply the entire State. At the present day all the great staples, breadstuffs, solid provisions of beef, pork butter and cheese are nearly supplied. To these we now add the recent discovery of coal—one of the most important events of the age for the Pacific. One year more and California will be independent of any foreign market for all these products. A brief period only will elapse before every kind of luxurious fruits will be grown in sufficient abundance to supply more than our own wants. Other products necessary are creeping in upon us steadily, and we may hope successfully. Tea and, rice, and it may be sugar and coffee, will in a few years be the growth of California enterprise. And this is not all, "our wine vats will be running over with new wine;" the products of our own cotton fields, and the fleece of our sheep "from a thousand hills," we will send for products that we may need. These we offer instead of gold: our own productions only in exchange, keeping our gold at home. Soon we shall indeed be able to "sit under own vine and fig tree with none to molest or make afraid."

It is stated that bees greatly improve the fruitification of fruit trees. Orchards in which several hives are kept always produce more fruit than others in which there are none. In the provinces on the Rhine the fruit are more abundant and finer than in any other part of Germany, and there it is the custom to keep large quantities of bees. Plants, too, which bees visit thrive better in the neighborhood of hives,

Brookside.

The great stage road from the city of San Jose to this city is one of the finest drives in the State. In addition to the fine smooth road, the scenery is very beautiful—large farms under fence, well cultivated, splendid country residences, and other features attract the attention of the tourist, and afford him so much interest and pleasure, that he is not wearied at all with a fifty mile ride.

At the "Half-way House" the eye of the lover of the picturesque will be quickly drawn to an fine gateway opposite. Opening this, a carriage drive down a magnificent lawn meets the vision ere it catches the splendid mansion in the distance. For a while the eye gazes in admiration. There is a quiet beauty that gratifies even the connoiseur of beauties. Enter the gateway with me, reader: this is "Brookside," the residence of F. W. Macoudray, Esq., of San Francisco. A finely rounded and smoothly rolled gravel walk leads you down to the mansion. A chaste design, after the gothic villa style, and placed in the centre of a wide prairie or park of 260 acres of the finest lands, gently undulating and rising in the distance, into pretty hills, covered with heavy wild oats. Around the mansion a perfect finished and closely shaved lawn of living verdure: near to it a fine grapery, containing many of the very best varieties of foreign grapes, showing fruit; figs trained, and standards; superior specimens of and fine vines in frames within the grapery.

In the gardens, specimen pear trees and other fruit trees, vines, &c. These, with a select vegetable patch we noticed were all in the very finest order. The grapery and ground were under the charge of Mr. Donald, a skillful and most excellent gardener, devoted to his duties, and possessing the confidence of his employer, he has accomplished wonders in a short time. A ramble around the grounds brought us to the river side. At the lower slope of the grounds we found a perfect gem of a retreat for a hot day. Here along the banks of the winding river we saw some of the largest and finest "Æschylus Pallida" we have ever seen. This tree (the native Buckeye), is not sufficiently appreciated.

These noble trees were, many of them, three and four feet in diameter, and fifty and sixty feet high, covering a wide space of ground, and overhanging the banks of the river for a long way, making a perfect shaded arbor, completely shutting out the sun. Beneath their spreading branches were arranged seats and tables, and also swings, a perfect boudoir of a spot for rural pleasures. Emerging from this agreeable shade, the eye is again struck with their beauty and the senses regaled with their fragrance: the long racemes of flowers yielding pleasant odors in the breeze.

We noticed also, that very singular natural fruit, the "Holly-leaved Cherry;" specimens of the fruits were exhibited at the Fair last season. The tree has the leaf of the "English Holly," the wood of the Plum; the fruit has the pulp of the Cherry, and the stone and meat of the Almond. It is a very singular species, containing four distinct characteristics. We noticed that this species was duly appreciated here. Young hedges were growing around, and within, the Osage Orange, which is destined to become the principal hedge of California.

We intend to give a more detailed description of this most beautiful spot, at a future day. Our time was too brief for what we desired to accomplish; but when we remember that only a little over *one year since*, this spot was a wild, uncultivated wood and prairie, and now one of the most chaste and beautiful spots in the State, we see what can be done where there is a will and a taste for it. This was one of the most gratifying spots we had seen. Nature had done very much; but art and science came to her aid. These, with the long experience of the liberal proprietor, whose former skill in horticulture was renewed again, and with the aid of his skillful gardener, Mr. Donald, in one year has done wonders. He has converted a wild into a garden, and made the desert blossom with the rose. The very name of this residence, "Brookside," is indicative of something lovely in nature, and most truthfully has it been verified in the chaste designs and lovely grouping of every feature in and around Bookside.

Grain Crops of 1854.

We gather the following facts relative to the Grain crops of several States from our exchanges, and all those of California, as in some measure as to the actual condition and prospect. The editor of the Chicago Tribune has recently made an excursion through Canada, New York, a part of Pennsylvania, New Jersey, Delaware, Maryland, Virginia, Ohio, and Indiana, and gives the following information in reference to the growing crops of winter wheat, by personal observation and careful inquiry of intelligent persons:

Throughout Canada, the breadth of ground covered with wheat is considerably larger than last year, and very little has been winter-killed, the earth having been covered with snow nearly all the winter months, and the fields present a very thrifty appearance. In New York, there is probably no increase of acres, and the fields have suffered some from frost, though favorable weather during May and June will cause a good yield in the aggregate. In New Jersey, there is supposed to be less land covered, but the prospect is good—never much better. In Pennsylvania, there is a large increase in acres, and the fields look matted, and present a dark green color, indicating a luxuriant growth. Several persons from the western counties reported the condition of the crop in their locality equally favorable. In Maryland, especially in the beautiful and rich section of country around Frederick City, where nearly half of the cleared lands are in wheat, the crop promises equal to any we ever saw. The number of acres is also one-half greater than last year. The same is true, we were told, of Washington county. Along the line of the Baltimore and Ohio Railroad, as far west as Cumberland, there is also an increase of acres, though altogether not much, and the crop looks well, remarkably so, considering the broken and mountainous character of the country.

In Eastern Virginia, the prospect was said to be good, and in Shenandoah, Rockingham, Page, and Augusta counties, which constitute the best wheat sections of the State, the number of acres sown is one-fourth larger, and never was a better crop expected. Along the Ohio river counties in Virginia there is not much sown, but the crop looks fair. In Ohio there has been considerable complaint that the young sprouts were seriously injured, especially in the river counties, but, so far as we could observe, the fields looked thrifty. In the interior counties also, the condition of the crop was favorably reported. In Indiana the crop looks thrifty, and the amount of acres covered is considerably larger. In the southern counties, we heard there was not a good prospect, but that is not a wheat-growing section, and a partial failure there cannot sensibly affect the crop of the whole State.

On the whole, we are confident there have been few springs within a period of fifteen years when the wheat crop looked more promising in the States mentioned than it does at this time. The high price which wheat has commanded since last harvest has doubtless caused an increase in the number of acres sown of at least one-fifth over last year, and, should the season prove generally favorable, the surplus cannot fall short of 50,000,000 bushels. Nevertheless, slight causes, apparently, such as *rust*, may reduce the average yield so much as to leave but little surplus for export.

We gather also from our correspondents at Rochester, N. Y., that the crops are in the most promising condition; very little injury is expected from late frosts, rust, or blight of any kind.

At Rochester, farmers are in high spirits, land sells high, $100 readily per acre. Wheat is $2 per bushel, and as large quantities of wheat and corn have been sown and planted, and there is a a prospect of continued demand for all that can be raised, prices will be fully sustained for the next year. The troubles in Europe go to strengthen the market, and the firmness in the grain market gives stability other to branches of business.

With us at home in California, there has been no year when the crops promised a better yield. From every county in the State where attention has been given to grain crops at all, the crops surpass all former years. This arises from a better system of planting and cultivation and a better understanding of the *season* of planting. Butte county is represented as raising wheat enough and to spare, and many of the upper counties proclaim heavy crops. Napa, Sonoma, Suisun, San Jose and Santa Clara valleys are offering immense yields of wheat.

We hear of some defects, rust, blight, &c., but we believe there is nothing of any moment, and that the crops generally will be very abundant, amply sufficient for all that California wants for her own use and for seed the year to come.

We are satisfied of one thing better still—the *farmers are to reap the benefit of their own labor.* They will be able by a fair price to relieve themselves from embarrassment, and not be compelled to sell at a sacrifice, as in the past year.

We would suggest that the wheat-growers of California should call a convention, at the earliest day, and take such steps as will secure to them all the benefit of their labors, by becoming thoroughly conversant with the quantity grown,—where grown—when it will be marketed and all further steps necessary for their own benefit. A union of this kind will secure them all the utility of success, and result in a general benefit to all.

Strawberry Culture at the South.

We urge attention to the preceding valuable directions in the planting, cultivation and growth of the Strawberry, reminding our readers that strawberry beds can be made at any period of the summer, in suitable locations, and with suitable care, persons in want, by addressing us, can always be supplied with the very best varieties, and with full directions for planting.

We are indebted to the Water Cure Journal for the following practical hints on strawberry culture at the South.

Mr. Peabody has given to the public, in an essay on the subject, his plan of culture, and the principles on which it is founded, together with the results of his long and successful experience. This method is causing a revolution in the cultivation of this fruit thoughout the South. The same principles, modified in this practical application to adapt them to differences of climate, should be brought to bear at the North and West. Their truth has been amply demonstrated by actual, practical and permanent success. We copy from the essay referred to, the following important passages, commending them to the thoughful consideration of our readers, almost all of whom may and should be, to a greater or less extent, cultivators of that most delicious fruit, the strawberry:

THE FACT.

We had never thought of achieving any thing very wonderful in strawberry culture, until our success had been doubted, and ridicule thrown upon our method of culture, by some of the most eminent of the horticulturists of the North. But those who are disposed to doubt and ridicule will find it a hard matter to close their eyes against the blazing light of truth. It is a fact too notorious now for any one of respectability to dare to dispute, that we do cultivate acres of strawberries without animal manure of any kind; and that we have *a constant succession of fruit from March until September;* and this, too, in this hot climate of the South. We now begin to think we have achieved something *wonderful*, but not so wonderful when properly understood.

A HINT FROM NATURE.

We feed the plant for fruit instead of for vine; and in this consists our success.

Intelligent experimental cultivators have long since discovered that plants have a specific for their wood, leaves and fruit. Physiologists know full well that it takes different substances to form the bones, flesh and muscles of animals. And profiting by these hints in nature, we stint the luxuriant habit of the strawberry vine, and force the fruit.

THE SECRET.

The whole secret of strawberry culture is, to *cultivate for fruit, and not for vine or blossom.* Much depends upon the locality of the strawberry bed. No tree or plant should be near it; the strawberry loves shade, but not a shade that sucks its very life-blood out. The lowest part of the garden, the bank of some little stream of water, are proper localities, and where it is possible, select new land. As to the soil, our beds are on as poor pine land as gopher or salamander ever built into pyramids, and we believe it is pretty generally conceded now, within a circle of a few hundred miles, that we do *occasionally* have a strawberry. We do not know but a stiffer land may suit them better, but ours does well enough, and we are not disposed to act like that foolish man who "was well, wished to be better, took physic, and died." The strawberry may be transplanted any time from September until March. The plant, properly taken up, is very tenacious of life, and bears transplanting well.

Agriculture in Oregon.—We rejoice to see the farmers of Washington county, Oregon, awaking to their highest interests. A meeting had been called at Hillsboro, on Saturday, June 10th, for the purpose of organizing a County Agricultural Society. Great good will result from such an organization, and we trust communications will be opened with our State and County Societies, through their secretaries. The California Farmer would be pleased to hear from them.

Properties of Soils.

Jethro Tull, who wrote more than a century ago on the subject of agriculture, maintained that if a soil be worked to a proper depth, and perfectly well pulverized, nothing more is necessary to insure an indefinite succession of the most luxuriant crops, without the aid of manures; and it must be confessed, his practice gave some apparently strong confirmations of his theory. By carrying tillage far below the surface, thus securing the minute division of the earth to a great depth, and rendering it permeable to the roots, he insured the free access of air and moisture, which are among the first and most important requisites in the growth of vegetables.

But Tull wrote before agriculture became a science, and omitted to estimate the large amount of fertile ingredients, which every cubic foot of the soil, and which can only be supplied by the addition of fresh materials. A [illegible] would tend, so far to reduce the soil, as to render it necessary to add manures or [illegible] must inevitably fail. The [illegible] could only, for a [illegible] crop [illegible] worthy of [illegible]

From [illegible] moved from the adhesiveness of strong clay, or the openness of loose sand. Good loam and fertile, alluvial soils always possess this property. When stirred by the plow, the spade or the hoe, the earth ought to fall and crumble readily, although it should be wet. Such a condition secures a ready admission to the roots, which thus easily pervade the soil, and draw their necessary support from it in every direction. Under draining, and the addition of coarse manures to clay, fermented manures and ashes to sand, and lime and gypsum to both, will materially enhance their friableness.

Color is an essential feature in soils, and like friableness, it has an important relation to their capacity for heat and moisture. Dark-colored earths, and black in the highest degree, absorb heat more rapidly than any other when exposed to a temperature above this own; and it escapes with equal readiness when their relative temperature is reversed.

Fall Ploughing.

A week or two ago I sent you a few thoughts on the importance of deep and thorough culture. I will now, with your permission, offer a few more on the proper season for performing it.

In general, the drier ground is when ploughed the better, except in very light gravelly, sandy soil. A very large portion of the sand in this valley is so tenacious, having been tramped over so much in the wet season by stock of one kind and another, that it requires time and continual judicious management to bring it into a lively, healthy state of tillage.

The fall is undoubtedly the best time for general ploughing, as early as the state of the soil and weather shall permit; and so far as old ground is concerned, where crops of grain or vegetables have grown the previous summer, it is not necessary to wait for the rain; the sooner it is ploughed after the crop is taken off, the better, and all the stubble weeds, potato vines, and litter of every kind turned completely under. The farmer in this valley must not depend on the frosts to chasten and pulverise the soil, and it is necessary that he should make use of all the means under his control to brake up and let loose the rich treasures locked up in the soil. The straw from the threshing floors, and all the trash that can be collected, of every kind, instead of being burned up, or thrown into the creek, or suffered to lie and decompose on the surface of the ground, if spread on the field and ploughed completely under in the fall, would, in the process of decomposition, help greatly to enlighten and pulverise the soil, and let loose and make available to the roots of plants the rich treasures of the earth. Plants, like men, sometimes starve in the midst of plenty; for the tender roots often find it as hard to penetrate the soil in which they are placed, as the poor man finds it to penetrate the miser's strong-box.

But not wishing to occupy too much space at one time in your valuable paper, I will, Mr. Editor, check up for the present. The subject, however, is inexhaustible.—*Cor. San Jose Telegraph.*

Machinery in Farming.

ITS ABSOLUTE NECESSITY.

It is not enough that farmers avail themselves of all the advantages which chemistry affords in its application to their art; it is not enough that they learn how to save as much as possible of the manures made on their premises, and the best methods of applying these and also purchased specific manures; it is not enough that they know at what seasons and to what depths their soils should be cultivated: They must perform as many of the operations of farming by machinery as machinery can be made to perform to advantage.

There is no other way in which agriculture can keep pace in respectability, pleasure and profit, with the other arts. Without this expedient it will be outstripped by them, and sink, steadily, in comparative rank.

By machinery, as we use the word here, we mean all mechanical contrivances, which can be substituted for manual labor, and combined with manual labor so as to increase its productiveness.

And the policy which we recommend includes also animal labor as a substitute for human labor, and as a more powerful co-operator with it.

So far as a horse or an ox can be made to do the work of five men, the horse or the ox earns the net product of five men's labor for the employer. If one man cultivates as much corn, and cultivates it as well, with one horse attached to a cultivator, and one man, as his neighbor cultivates with ten hoes in the hands of ten men, it is easy to see which of the two is travelling the faster on the road to wealth.

So in cutting grass, in planting and harvesting grain, in shelling corn, and in various other operations of the farm, machines can do the work for a small percentage of the cost of manual labor.

We do not mean that every machine [illegible] invented and offered to the farmer should be purchased by them. Not every [illegible] substitute machinery for manual labor [illegible] ful. The large majority of [illegible] way deserve. But in every [illegible] many a [illegible] that the thing [illegible] ly does [illegible] a machine [illegible] at a [illegible] year [illegible] year [illegible] [illegible] [illegible]

AGENTS FOR CALIFORNIA FARMER.

Messrs Adams & Co. at a their offices throughout the United States or Europe.

Messrs. Wells, Fargo & Co., at their offices throughout the Country.

Mr. Chauncey Langdon, Travelling Agent for the northern section of the State.

Mr. E. R. Higbton, general and travelling Agent for Northeastern section of the state, to whom we commend our Agents for all information needed.

Mr. Wm. M Lester, Travelling Agent for Sacramento City and County

Messrs. Langton & Co. *for Downieville, Foster's Bar, Goodyear's Bar, Minesota.*

Messrs. Leland & McCoombe—*Crescent City, Port Orford, Uniontown, Eureka, and Bucksport.*

San Francisco—Sullivan's newspaper stand, near the Post Office; Kimball's, Noisy Carriers Hall, Long wharf.

Benicia, Martinez, &c.—Messrs. Stiles & Dodds.

Union City and Mission San Jose—Messrs. Howard & Chamberlain.

Sacramento—Messrs. Gardiner & Kirk; Baker & Hamilton.

San Luis Obispo—Dr. Thomas T. Harvey, P. M.

Union, Humboldt Bay—A. H. Murdoch, P. M.

Mount Farm, O. T.—Gen. M. M. McCarver.

Bidwell's, Butte Co—P. Freer.

Weaverville, Trinity Co—H B. Davison & Co.

Yreka—Cram, Rogers & Co.

Mokelumne Hill—I. Coffin.

San Jose—E. Reed.

Marysville—R. A. Eddy & Co.

Stockton—C. O. Burton.

Sonora—Young & Roberts.

Columbia—A. Hunnewell, P. M.

Placerville—Nash & Davis.

Nevada—A. W. Potter.

Coloma—D. G. Waldron & Co.

New York City, N. Y.—J. M. Thorburn & Co.

N. B.—We want Agents in all the principal localities, and persons disposed to act can have the opportunity, if satisfactory to all parties.

☞ We desire Agents to report as early as possible, that we may be prepared in our issues for sufficient number to supply the demand. Be sure and report promptly.

☞ To Advertisers.—We would call the attention of those who desire to have their advertisements produce quick returns, to the pages of the California Farmer. The Farmer will reach sources of trade entirely new and unattainable by any other means, and thus secure large and immediate profit to those who desire to make known their business. By a glance at our advertising columns, it will be perceived that we present the best known and most extensive houses, and as we have space for but one or two of each branch, these will be the most prominent houses, and thus give more influence to them.

☞ To Subscribers.—In order to make it perfectly convenient to remit to us from the East, the amount of subscription to our paper, we will receive bills on any of the State banks that are readily current in New York—these can be remitted by mail to us at our publishing office, and the receipt will be acknowledged and the paper regularly mailed. We can assure the friends of Agriculture, abroad as well as at home, that every token of their approbation; every evidence of their generous support, shall be met with a corresponding evidence on our part that we will merit their kindness.

Human Skeletons found Fourteen feet below the Surface.—A correspondent of the State Journal, writing from Rattlesnake Bar, says that a short time since, while a party of miners were working into a flat, about a mile below here, they discovered the remains of two human beings, at the depth of fourteen feet from the surface. The remains rested upon the bed rock, and above them were deposited some three or four different strata of sand and alluvial soil, each evidently deposited at different times. And there was not the least appearance that this strata had ever been disturbed, the remains evidently were there before the deposits were made. As additional evidence of this, a miner, perceiving that one of the skulls was filled with dirt, had the curiosity to empty it into a pan, and upon reducing it, he found that it contained many particles of gold. As there is no reason to believe that the formations above these remains are of a more recent date than those deposited in all the high flats that border on the American river, we may conclude that the immense placers in this neighborhood have been deposited with comparatively recent years. In further proof of this, I may add, that it is not unusual to find in the deep hill or flat diggings vegetable substances, above which lay numerous and different strata of conglomerate, evidently having never been disturbed.

Kindness to Animals.—We have seen horses, says the Albany Cultivator, that were used for driving a ferry boat, pass unled from the stable to the boat, step on board; walk to the machinery and "back" themselves downward through a narrow door on the wheel ready for work, entirely unattended; while most other horses could scarcely be driven on board. An invariable feeding of oats immediately following the act, sufficiently accounts for this remarkable movement. The animal quickly understood the connection between his position on the wheel and his breakfast.

Weekly Summary of News.

CHINA.

The burque Sophia, which arrived at this port on Monday from Hongkong, brought copies of the China Mail to March 30, from which we take the following: There is no late news of the rebellion by way of Shanghae, beyond the fact that the insurgents have not been beaten out of Tuh-lin, and the Emperor orders two of his generals to combine their efforts and drive them out, but without seeming to be very confident of their success. ....If the intelligence we have derived from other sources may be relied on, the progress of the rebellion in other parts of the Empire has recently been more marked than in the North, or than at any period since the capture of Nanking. We are told that Nganking was recaptured from the Imperialists in the end of December, and has since been occupied by the rebels. There are circumstances, however, which throw some doubt on the information. It comes to us by way of Canton, and should have been earlier and better known by way of Shanghai.... We are further told that a month later, the rebels had retaken Wu-chang, the capital of Hu-peh province, with Han-kau, the large commercial town near to it. Within a week 3,000 soldiers have been despatched into the province of Hu-peh. Contributions in money have been called for, one man worth about a million of taels having paid 200,000 taels, or upwards of £60,000. ..Disturbances are reported in the native district of the Nankin rebel, but we have no precise means of ascertaining the extent of these disturbances. The Nan-hoe has issued orders to the different neighborhood of Canton to increase their vigilance in watching the streets at night; and meetings of the inhabitants in some quarters have been held, and resolutions passed in conformity with the recommendations of the Nan-hae. ....A chap named Chin-Sin-shan, who had commenced plundering on his own hook, at the head of a band, had been captured by the authorities.

JAPAN.

We received important information from Com. Perry's squadron on the 7th inst., brought by the schr Restless from Honolulu. Capt. H. A. Adams, bearer of dispatches, arrived in the sloop-of-war Saratoga at Honolulu, on the 29th of April, in 25 days from Japan; he could not leave Honolulu till the 20th of May. The point of interest in this intelligence is the fact that Com. Perry has concluded a treaty of amity and friendship with the Empire of Japan, at Kennegawa, near the city of Yeddo, on the 28th of March, 1854. The long doubtful attempt has been entirely successful, and to the United States belongs the honor of making the first international treaty with Japan. The China papers say that our trade with Japan will not be opened until March, 1855.

OREGON.

By the arrival of the steamship Columbia, Capt. Dall, at this port on the 12th June, from Portland, we have dates to the 10th inst.....The whigs have carried Washington county by an average majority of 64 votes. All their candidates were elected. The whole democratic ticket is elected in Clackamas—with one exception, J. B. Prescott, a County Commissioner is elected as a whig. Yamhill county is split up between democrats, whigs and temperance men. Two whigs are elected to the Legislature. Marion has elected a full democratic ticket, with the exception of Sheriff, which officer run independent. Nathan Olney, democrat received 35 out of the 50 votes cast in Wasco county. Benton county is reported to have gone whig.....On the question of a State Convention, Washington, Clackamas and Yamhill counties, have gone against it by decided majorities. Wasco county was unanimous against the proposed convention. Marion is reported to have given a large majority against it. The full results had not been ascertained when the steamer left, but enough is known to warrant the assertion that the State Convention will not be held this year.....A cannon burst in Portland on the night of the election, which came near wounding several persons.....We have information, says the Oregonian, that a party of eighteen men are now at work on the Yakima river, washing gold, and that they are making fair wages. The waters are yet too high to give them a fair chance to ascertain the extent or richness of these new mines.....The weather continues quite cool. A warm stove we find to be comfortable during the greater portion of the day. Crops, however look well—wheat particularly. We have occasional showers of rain, which prevents a "dry up."

THE CITY.

The election for an Alderman for the Third Ward, on Monday, resulted in the choice of J. W. Van Zandt, (dem) by 60 majority.....Wm. Sherlock and E. W. Cany, charged with riotous conduct in causing the squatter riot on the 4th inst., were sent to the Court Sessions.....On Monday afternoon, as some workmen were tearing down a frame building on California street, near Battery, the roof fell, bringing with it a man named Blackburn, and breaking his right leg.....Two Chinaman fought a duel in the vicinity of the Lake House a day or two ago. Cause—Woman. Weapons—Bamboo sticks, about six feet long. Both were beaten.....Dr. John Y. Lind, late Secretary of the Senate, has received the appointment of Assistant Physician to the U. S. Marine Hospital, and has entered upon his duties..... The house of Wilbur Martin, on Pine street, was broken open by a robber on Thursday evening; but, on receiving a pistol ball, he decamped, leaving some blood behind him.....Part of the new engine ordered from Baltimore for the Monumental Co., of this city, arrived on the clipper Union, on Saturday. The Sea Serpent, with the remainder, is daily expected.....It currently reported that three or four vessels are being fitted out for Japan, including the schooner Frolic.....Previous to the arrival of the clipper Challenger, on Friday last, there was not an American clipper in our harbor.....The indictment against Recorder Baker has been quashed, on account of informality. ....The San Francisco Blues made their first parade yesterday morning, accompanied by Kendall's Band.....The story that the State officers had issued ammunition to the Battalion of Militia in this city, is without foundation.....The "Mountaineer Quartette Club" gave their first Concert on Tuesday evening, at the Musical Hall. It was quite successful. We presume the concerts will be repeated.

SHIPPING INTELLIGENCE.

PORT OF SAN FRANCISCO.

ARRIVALS.

June 8—Schr Spray, Barry, for Whampoa.

June 10 Ship Lecoure, Scammon, Hong Kong; New Grou bark Arturn, Tremock, do; Mex brig Cornelia, Nye, Mazatlan; schr T A Alleu, Watt, do.

A Premium---Farmers' Clubs.

With the hope of inducing such of our friends, and those who have a little leisure, to ride among their neighbors and introduce an Agricultural Papen, we take pleasure in offering the CALIFORNIA FARMER: and, to make it an inducement, we say to such friends—if you will get us five subscribers, and remit the amount, we will send you six papers, or for ten subscribers, twelve papers. We trust there are many friends who will cheerfully take a little pains to aid us, and thus extend the circulation of the Farmer, and make a useful vehicle for the Agriculture of California.

Subscribers will please be particular to name the Post Office to which papers are to be sent; or, if forwarded by express which line they prefer.

MARKET REPORTS.

San Francisco, June 14. 1854.

The continued stagnation of all kinds of business operates severely upon the interests of the country. Real estate is receding in value; rents are falling. Many kinds of merchandise is selling less than cost of importation—these all affect the general prosperity and present a feature unpleasant to contemplate.

The Grain crop will be abundant. Reports do rise of injury by rust and blight; this has arisen from the bad practice of planting the same seed repeatedly upon the same soil, of which we called attention in the early issues of the Farmer.

Barley—new crops come in yet slowly, and commands highest quotations. The combination of the Flour dealers was not perfected—Flour is unsteady.

Provisions abundant and heavy; less than quotations,—the Lumber market is overstocked and can be purchased low.

Agricultural Implements have been in great demand. Reapers and Threshers have found ready sale.

LARGE IMPORTATION of Summer Clothing, ex steamers John L. Stephens and Sierra Nevada. We are now receiving a choice assortment of single milled Cassimere Pants, Fancy and White Drilling, do; and Summer Coats of every description, which with our already unprecedently large and varied stock, comprises *every article required for a Gentleman's Wardrob*.

We have just received a small invoice of *CHILDREN'S and YOUTH'S CLOTHING*, and as we design giving particular attention to that branch of our business, we would invite the attention of the Ladies, in making selections of clothing for their children, to an examination of our stock. We shall receive by steamer invoices of the richest and latest styles children's suits, manufactured by our house in New York, and cut in the prevailing styles.

Punctuality observed in filling orders, and no deviation in price.

BRANCH OF KEYES & CO.,
24 Sacramento.

St. Charles Hotel,
CORNER OF DAVIS AND WASHINGTON STREETS,
San Francisco, California.
J. HARPER and J. L. MERRITT.....Proprietors.

THE undersigned take pleasure in announcing to the travelling public that they have completed the above spacious Hotel, and are now prepared to receive their guests. The great improvements and conveniences for travellers in the house warrant them in hoping that they will receive a liberal patronage. They have rooms capable of accommodating three hundred lodgers. The table will always be supplied with the best the market affords, and the prices for board will be as reasonable as the times will admit.

Its close proximity to the steamboat landings renders this house very desirable for transient visitors, as also for people arriving in the State and those leaving for the other States.

☞ There will be a Night Watchman, and guests can procure rooms at all hours of the night.

24 HARPER & MERRITT, Proprietors.

☞ To Purchasers of Groceries:

THE FAMILIES of the city and the miners in the country, before purchasing elsewhere, are requested to call at our Store, where everything in the Grocery Line can be had, not only of the finest quality, but at the lowest market prices.

Our Flour is of the best brands, and our Hams are not surpassed in the country. We have always on hand a large collection of Pic Fruits, of natural preserves and Dried Fruits, all kinds of Sugars, Coffee, and Teas can be had at the cheapest rates. We have also the choicest Wines of France and Germany constantly on hand. All the staple articles of domestic consumption are selected with care and offered to the public at the most reasonable rates. Orders from the country will be forwarded with dispatch, as may be directed, and all orders in the city promptly attended to and delivered free of cartage. Come and judge for yourselves.

466 to 666—Two hundred elegant Chinese Shawls, high cost. These shawls are of the same quality as are sold daily in this city at $60 each, each one of equal value. Valued at $30..... 10,000

We, the undersigned, are acquainted with the parties owning the property offered in this Raffle, and also know the Real Estate referred to, and we assure the Public that we consider the title to the property is indisputable.
Hon. D. S. SHATTUCK,
JAMES A. MORRISON, M. D.

The proprietors in conducting this Raffle bind themselves to carry it on in a manner that will be satisfactory to all who may buy tickets. The drawing will be done by gentlemen chosen by the holders of Tickets, each county in the State sending a committee of one for that purpose. Maps of the Real Estate, and samples of the property may be seen at our office, corner of Montgomery and Merchant streets.

For the responsibility of the proprietors of this Raffle, and that it will be conducted with honesty and integrity, we refer to
His Excellency JOHN BIGLER,
Hon. J. W. DENVER, Secretary of State,
J. B. HARDENBERG, Mayor of Sacramento,
Hon. LEWIS ALDRICH,
