## SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, January, 1961. Washington 25. D.C.  
April, 1961.

---

For sale by the Bureau of the Census, Washington 25, D. C. Price 10 cents (single copy).  
Subscription price: \$1.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transhipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

4 ACCURACY OF THE DATA ON IMPORTS OF COTTON MANUFACTURES

VERIFICATION OF THE DATA ON A 10 PERCENT BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957 an attempt was made to obtain verification from Customs officials for data on all cotton manufactures, and about 90 percent of the total value of the data shown in imports for those months was verified by Customs officials prior to publication of the data. Beginning with imports for the month of October this verification procedure has been limited to a 10 percent sample of cotton import shipments. This change in procedure was based on the assumption that by October, importers would be able to report their imports in reasonably accurate terms, since they would have had three months in which to become familiar with the new commodity classifications. The verification of the 10 percent sample for October and subsequent months has two purposes: (1) errors made by importers and found in this 10 percent sample are being called to the attention of the importers so that they will not make similar errors on future importations; (2) the 10 percent sample gives some information as to the accuracy of classification of total imports as reported by the importer.

ANALYSIS OF THE 10 PERCENT VERIFICATION

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verification provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on a 10 percent sample for the period October 1957-October 1960, it appears that classifications for about three percent of the importations have been declared incorrectly by importers. However, since the average value of the shipments reported incorrectly during this period was about 25 percent lower than the average value of all cotton manufactures, the value of the imported cotton manufactures reported incorrectly in the statistics is expected to be somewhat less than three percent of the total. It should be noted that the effect of the errors on figures for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one of the commodities or groupings is overcounted, and another is correspondingly undercounted. On the other hand there is, of course some cancellation of errors in the figures for individual classifications.

Of the 20 commodity groupings shown on page 5 of this report, one (33) had net overcounting or undercounting in a ratio in as much as 1 out of 20 in the sample. For this commodity grouping there were 6 errors out of 89 in the sample.

For the other 19 there were either no errors found in the sample of 20 or more, or errors were found in the ratio of less than 1 out of 20.

Of the 114 individual commodity classifications under which cotton manufactures have been reported during the period October 1957-October 1960, the following 76 had 20 or more items in the sample.

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	
109	181	322	445	545	692	882
111	182	332	455	549	700	892
112	205	342	470	552	705	905
121	210	362	503	562	712	910
122	220	372	505	572	722	915

Eighteen of the above 76 classifications (011, 021, 032, 121, 302, 312, 362, 372, 420, 445, 470, 520, 527, 682, 700, 722, 872, and 892) had net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample. For commodity number 011, there were 7 errors out of 70 in the sample, for commodity number 021, 3 out of 44; for commodity number 032, 3 out of 30; for commodity number 121, 10 out of 148; for commodity number 302, 3 out of 33; for commodity number 312, 3 out of 45; for commodity number 362, 3 out of 41; for commodity number 372, 3 out of 20; for commodity number 420, 9 out of 91; for commodity number 445, 18 out of 153; for commodity number 470, 2 out of 30; for commodity number 520, 4 out of 54; for commodity number 527, 6 out of 55; for commodity number 682, 13 out of 53; for commodity number 700, 6 out of 89; for commodity number 722, 10 out of 101; for commodity number 872, 6 out of 39; and for commodity number 892, 4 out of 41. For the other 58, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodity groupings or commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

JANUARY 1961

5

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)
	TOTAL IMPORTS	.....	19,817,004
	COTTON YARN AND CLOTH	.....	6,399,176
01	Cotton yarn (011-042) Lb.	1,051,312	527,107
03	Ginghams (105-107) Sq. yds.	4,653,305	1,089,997
05	Velveteens in the piece, cut or uncut (108-109) Sq. yds.	153,071	158,241
07	Other cotton fabrics, not ornamented (111-182) Sq. yds.	20,482,037	4,623,831
	MADE-UP GOODS OF BROAD-WOVEN FABRICS	.....	1,604,713
09	Pillowcases, plain (205-210) No.	719,984	129,533

## SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, February, 1961. Washington 25, D. C.  
June, 1961.

For sale by the Bureau of the Census, Washington 25, D. C. Price 10 cents (single copy). Sub-  
scription price: \$1.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transshipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF THE DATA ON IMPORTS OF COTTON MANUFACTURES

VERIFICATION OF THE DATA ON A 10 PERCENT  
BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

## ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through November 1960, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through November 1960, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	332	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 6 classification errors out of 90 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Eighteen of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
<u>a. Overcounted:</u>					
011	87	7	445	156	8
121	154	10	470	30	2
302	33	3	682	55	13
312	45	3	700	90	6
372	22	3	872	42	6
<u>b. Undercounted:</u>					
021	38	2	520	54	4
032	38	3	527	56	6
362	43	3	722	103	10
420	94	10			

For the remaining 58 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

## SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, March, 1961. Washington 25. D.C.  
June, 1961.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transhipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF THE DATA ON IMPORTS OF COTTON MANUFACTURES

### VERIFICATION OF THE DATA ON A 10 PERCENT BASIS BEGINNING OCTOBER 1957.

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

#### ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

##### Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through December 1960, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through December 1960, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	322	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 7 classification errors out of 93 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Eighteen of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
<b>a. Overcounted:</b>					
011	92	7	445	164	21
121	157	10	470	32	2
302	35	2	682	58	14
312	49	4	700	93	7
372	24	3	872	42	6
			892	41	4
<b>b. Undercounted:</b>					
021	49	3	520	54	4
032	38	3	527	57	6
362	44	3	722	105	10
420	101	10			

For the remaining 58 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

##### Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

MARCH 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)

## SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, April, 1961. Washington 25, D. C.  
July, 1961.

For sale by the Bureau of the Census, Washington 25, D. C. Price 10 cents (single copy). Subscription price: \$1.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transhipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF THE DATA ON IMPORTS OF COTTON MANUFACTURES

## VERIFICATION OF THE DATA ON A 10 PERCENT BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

## ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through January 1961, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through January 1961, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	332	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 7 classification errors out of 94 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Nineteen of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
a. Overcounted:					
011	98	7	445	167	20
121	164	10	470	33	2
302	35	2	682	59	14
312	49	4	700	94	7
372	24	3	872	42	6
			892	42	4
b. Undercounted:					
021	49	3	520	57	4
032	39	3	527	57	7
362	45	3	632	193	10
420	106	10	722	108	10

For the remaining 57 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, May, 1961. Washington 25. D.C.  
July, 1961.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transhipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF THE DATA ON IMPORTS OF COTTON MANUFACTURES

## VERIFICATION OF THE DATA ON A 10 PERCENT BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

## ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through February 1961, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through February 1961, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752

122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 6 classification errors out of 94 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Twenty of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
<b>a. Overcounted:</b>					
011	102	7	445	171	22
121	170	10	470	33	2
302	37	2	682	59	14
312	49	4	700	94	6
372	25	3	872	42	6
			892	42	3
<b>b. Undercounted:</b>					
021	49	3	520	57	4
032	39	3	527	58	6
362	46	3	632	212	11
420	108	11	722	110	10
			732	29	2

For the remaining 56 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

MAY 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, June, 1961. Washington 25. D.C.  
August, 1961.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transshipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF THE DATA ON IMPORTS OF COTTON MANUFACTURES

## VERIFICATION OF THE DATA ON A 10 PERCENT BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

## ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through February 1961, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through February 1961, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	332	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 6 classification errors out of 94 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Twenty of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
<u>a. Overcounted:</u>					
011	102	7	445	171	22
121	170	10	470	33	2
302	37	2	682	59	14
312	49	4	700	94	6
372	25	3	872	42	6
			892	42	3
<u>b. Undercounted:</u>					
021	49	3	520	57	4
032	39	3	527	58	6
362	46	3	632	212	11
420	108	11	722	110	10
			732	29	2

For the remaining 56 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

JUNE 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)
	TOTAL IMPORTS	.....	16,832,126

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, July, 1961. Washington 25. D.C.  
September, 1961.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transshipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

VERIFICATION OF THE DATA ON A 10 PERCENT  
BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through March 1961, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through March 1961, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	332	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 6 classification errors out of 97 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Nineteen of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
a. Overcounted:					
011	105	7	470	34	2
121	179	11	515	20	1
302	38	2	682	59	14
312	49	4	700	97	6
372	29	3	872	42	6
445	172	21	892	43	3
b. Undercounted:					
021	50	3	527	59	6
032	39	3	722	113	10
420	114	12	732	29	2
520	59	4			

For the remaining 57 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

UNITED STATES GENERAL IMPORTS OF COTTON  
MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

JULY 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States      Imports of Cotton,  
Statistics, Report FT 130, August, 1961.      Washington 25, D. C.  
November, 1961.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transhipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

VERIFICATION OF THE DATA ON A 10 PERCENT  
BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through April 1961, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through April 1961, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	332	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 7 classification errors out of 101 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Eighteen of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
a. Overcounted:					
011	108	7	470	37	2
121	184	13	682	59	14
312	49	4	700	101	7
372	32	4	872	42	6
445	175	22	892	44	3
460	21	4			
b. Undercounted:					
021	50	3	527	59	6
032	39	3	722	118	11
420	117	12	732	30	2
520	59	4			

For the remaining 58 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

AUGUST 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)
	TOTAL IMPORTS	.....	21,133,224
	COTTON YARN AND CLOTH	.....	7,172,032

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, September, 1961. Washington 25. D.C.  
November, 1961.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transshipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF THE DATA ON IMPORTS OF COTTON MANUFACTURES

## VERIFICATION OF THE DATA ON A 10 PERCENT BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

## ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through April 1961, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through April 1961, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	332	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 7 classification errors out of 101 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Eighteen of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the samples follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
a. Overcounted:					
011	108	7	470	37	2
121	184	13	682	59	14
312	49	4	700	101	7
372	32	4	872	42	6
445	175	22	892	44	3
460	21	4			
b. Undercounted:					
021	50	3	527	59	6
032	39	3	722	118	11
420	117	12	732	30	2
520	59	4			

For the remaining 58 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FT 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, December, 1961. Washington 25. D.C.  
January, 1962.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transshipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

VERIFICATION OF THE DATA ON A 10 PERCENT  
BASIS BEGINNING OCTOBER 1957

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports, was verified before compilation and publication in the regular reports. Beginning with imports for the month of October 1957, the verification by Customs Officials has been limited to a 10 percent sample of cotton import shipments. The errors found in the 10 percent sample verification are used primarily (1) by Customs to call the attention of individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of total imports as reported by the importers.

ANALYSIS OF THE 10 PERCENT VERIFIED SAMPLE

Overall and Commodity Totals

In view of the limited number of items in the universe (and in the sample) for many of the individual commodity classifications, the 10 percent verified sample of entries provides more information as to the degree of reliability on a cumulative basis than on a monthly basis.

Based on the 10 percent sample for the period October 1957 through April 1961, it appears that classifications for about three percent of the importations have been declared incorrectly by the importers. However, since the average value of the shipments reported incorrectly during the period was about 25 percent lower than the average value of all cotton shipments, it is expected that the value of shipments reported incorrectly is somewhat less than three percent of the total. It should be noted that the effect of the errors on the totals for individual commodities or commodity groupings may actually be greater than the dollar value of the errors themselves, since one error frequently means that one commodity or commodity grouping is overstated, while another is correspondingly understated. On the other hand, there is, of course, some cancellation of errors in figures for individual commodities.

During the period from October 1957 through April 1961, 20 or more items have been selected in the sample for all of the commodity groupings (on page 5 of this report), and for the following 76 of the 114 individual commodity classifications under which cotton manufactures have been reported:

011	141	223	400	510	622	732
021	152	227	405	520	632	742
032	161	230	415	523	642	752
042	162	235	420	527	652	762
105	171	302	425	535	672	872
107	172	312	440	540	682	882
109	181	322	445	545	692	892
111	182	332	455	549	700	905
112	205	342	470	552	705	910
121	210	362	503	562	712	915
122	220	372	505	572	722	

With the exception of commodity grouping 33, which had a net overcounting of 7 classification errors out of 101 items in the sample, there were either no errors found in the sample

for the remaining commodity groupings, or errors were found in a ratio of less than 1 out of 20. Eighteen of the 76 commodity classifications had a net overcounting or undercounting in a ratio of as much as 1 out of 20 in the sample as follows:

Commodity Number	Sample Items	Net Errors	Commodity Number	Sample Items	Net Errors
<b>a. Overcounted:</b>					
011	108	7	470	37	2
121	184	13	682	59	14
312	49	4	700	101	7
372	32	4	872	42	6
445	175	22	892	44	3
460	21	4			
<b>b. Undercounted:</b>					
021	50	3	527	59	6
032	39	3	722	118	11
420	117	12	732	30	2
520	59	4			

For the remaining 58 commodity classifications, there were either no errors found in the sample of 20 or more, or errors were found in a ratio of less than 1 out of 20. The value overcounting or undercounting for any individual commodity or commodity grouping might of course be higher or lower than the item overcounting or undercounting, although on the average it could be expected to be somewhat lower since the average value for errors was lower than the average value of non-error shipments.

The comparison of error items found to total items in the sample for commodities with less than 20 in the sample is not particularly meaningful. Information on the results of the sample verification will continue to be shown on a cumulative basis, beginning with results for the October 1957 data, in subsequent issues of Report FI 130. Information on the proportion of items in error will then be shown for additional commodities as the cumulative sample reaches 20 for each of them.

Country Totals

In order to obtain some indication of the extent of mis-reporting of cotton manufactures by country of origin, the 1960 verified sample of import shipments was distributed by country. Twenty or more items were found in the sample for each of the following countries:

Canada	France	India
Mexico	W. Germany	Philippines
Sweden	Austria	Hong Kong
Norway	Switzerland	Taiwan
Denmark	Spain	Japan
United Kingdom	Portugal	U.A.R.
Netherlands	Italy	Madiera
Belgium	Israel	

The countries listed above accounted for more than 98 percent of all sample shipments selected during 1960. Classifications declared incorrectly by importers were less than 3 percent for each of these countries except Sweden (7%), Norway (5%), Netherlands (8%), W. Germany (4%), and Italy (4%). Because of the small number of items in many of the commodity by country cells, and the distribution of errors among the individual commodities, the error rate for such totals would not be meaningful.

**UNITED STATES GENERAL IMPORTS OF COTTON  
MANUFACTURES, BY GROUPINGS OF COMMODITIES**

5

OCTOBER 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)
	TOTAL IMPORTS	.....	18,393,952
	COTTON YARN AND CLOTH	.....	6,580,468
01	Cotton yarn (011-042) Lb.	1,700,824	842,948
03	Ginghams (105-107) Sq. yds.	3,436,405	723,279
05	Velveteens in the piece, cut or uncut (108-109) Sq. yds.	467,176	457,901
07	Other cotton fabrics, not ornamented (111-182) Sq. yds.	17,589,143	4,556,340
	MADE-UP GOODS OF BROAD-WOVEN FABRICS	.....	2,016,450
09	Pillowcases, plain (205-210) No.	368,367	69,189
11	Dish towels, not jacquard-figured, not terry woven (215-220) No.	892,244	37,088
13	Handkerchiefs, whether or not ornamented, etc. (223-230) Doz.	707,616	1,055,509
15	Table damasks and manufactures of (235) Lb.	306,369	423,681
17	Other manufactures of broad-woven fabrics (292-392) Lb.	580,499	430,983
	APPAREL NOT KNIT OR CROCHETED	.....	6,709,541
19	Blouse and blouse and skirt sets, not knit or crocheted (400-420) Doz. <sup>1</sup>	31,085	188,314
21	Sport shirts, not knit or crocheted (425-450) Doz.	106,903	654,716
23	Dress and work shirts (455-499) Doz.	62,470	597,072
25	Body-supporting garments (503-505) Doz.	191,328	535,982
27	Trousers, slacks and shorts (outer) except as part of blouse and short or blouse and trouser sets, not ornamented, etc. (510-545) Doz.	148,884	1,259,656

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES

## SUPPLEMENT

The table which follows presents quantity data for United States general imports of cotton manufactures (in country of origin by commodity arrangement) in terms of 60 of the 64 commodity categories of cotton textiles enumerated in Appendix 3 to the GATT statement of July 21, 1961, entitled "Arrangements Regarding International Trade in Cotton Textiles." Data for four categories (i.e., carded and combed lawns and voiles) are not now available, but will be shown separately beginning January 1962. Data for carded lawns and voiles are included in this report under category 26, while information for combed lawns and voiles are included under category 27. Complete commodity descriptions and units of quantity for each of the numbered agreement categories are as follows:

### CLASSIFICATION OF COTTON TEXTILES IN THE GATT ARRANGEMENTS

Agreement category	Commodity Description	Unit of quantity
01	Cotton yarn, carded, singles, not ornamented, etc.....	Pound
02	Cotton yarn, plied, carded, not ornamented, etc.....	Pound
03	Cotton yarn, singles, combed, not ornamented, etc.....	Pound
04	Cotton yarn, plied, combed, not ornamented, etc.....	Pound
05	Ginghams, carded yarn.....	Square yard
06	Ginghams, combed yarn.....	Square yard
07	Velveteens.....	Square yard
08	Corduroy.....	Square yard
09	Sheeting, carded yarn.....	Square yard
10	Sheeting, combed yarn.....	Square yard
11	Lawns, carded yarn.....	Square yard
12	Lawns, combed yarn.....	Square yard
13	Voiles, carded yarn.....	Square yard
14	Voiles, combed yarn.....	Square yard
15	Poplin and broadcloth, carded yarn.....	Square yard
16	Poplin and broadcloth, combed yarn.....	Square yard
17	Typewriter ribbon cloth.....	Square yard
18	Print cloth type shirting, 80 x 80 type, carded yarn.....	Square yard
19	Print cloth type shirting, other than 80 x 80 type, carded yarn.....	Square yard
20	Shirting, carded yarn.....	Square yard
21	Shirting, combed yarn.....	Square yard
22	Twill and sateen, carded yarn.....	Square yard
23	Twill and sateen, combed yarn.....	Square yard
24	Yarn-dyed fabrics, except ginghams, carded yarn.....	Square yard
25	Yarn-dyed fabrics, except ginghams, combed yarn.....	Square yard
26	Fabrics, n.c.s., carded yarn.....	Square yard
27	Fabrics, n.e.s., combed yarn.....	Square yard
28	Pillowcases, plain, carded yarn.....	Number
29	Pillowcases, plain, combed yarn.....	Number
30	Dish towels.....	Number
31	Towels, other than dish towels.....	Number
32	Handkerchiefs.....	Dozen
33	Table damasks and manufactures of.....	Pound
34	Sheets, carded yarn.....	Number
35	Sheets, combed yarn.....	Number
36	Bedspreads.....	Number
37	Braided and woven elastics.....	Pound
38	Fishing nets.....	Pound
39	Gloves and mittens.....	Dozen
40	Hose and half hose.....	Dozen pairs
41	Men's and boys' all white T. shirts, knit or crocheted.....	Dozen
42	Other T. shirts.....	Dozen
43	Knitshirts, other than T. shirts and Sweatshirts (including infants).....	Dozen
44	Sweaters and cardigan.....	Dozen
45	Men's and boys' shirts, dress, not knit or crocheted.....	Dozen
46	Men's and boys' shirts, sport, not knit or crocheted.....	Dozen
47	Men's and boys' shirts, work, not knit or crocheted.....	Dozen
48	Raincoats, 3/4 length or over.....	Dozen
49	All other coats.....	Dozen
50	Men's and boys' trousers, slacks and shorts (outer), not knit or crocheted...	Dozen

See footnotes at end of table.

CLASSIFICATION OF COTTON TEXTILES IN THE GATT ARRANGEMENTS—Continued

Agreement category	Commodity Description	Unit of quantity
51	Women's, misses' and children's trousers, slacks and shorts (outer), not knit or crocheted.....	Dozen <sup>1</sup>
52	Blouses, and blouses combined with skirts, trousers, or shorts.....	Dozen
53	Women's misses', children's and infants' dresses (including nurses' and other uniform dresses), not knit or crocheted.....	Dozen
54	Playsuits, sunsuits, washsuits, creepers, rompers, etc. (except blouse and shorts; blouse and shorts; blouse and trouser; or blouse, shorts and skirt sets).....	Dozen
55	Dressing gowns, including bathrobes and beachrobes, lounging gowns, dusters and housecoats, not knit or crocheted.....	Dozen
56	Men's and boys' undershirts, (not T. shirts).....	Dozen
57	Men's and boys' briefs and undershorts.....	Dozen
58	Drawers, shorts and briefs (except men's and boys' briefs), knit or crocheted.....	Dozen
59	All other underwear, not knit or crocheted.....	Dozen
60	Nightwear and pyjamas.....	Dozen
61	Brassieres and other body supporting garments.....	Dozen
62	Other knitted or crocheted clothing.....	Pound
63	Other clothing, not knit or crocheted.....	Pound <sup>2</sup>
64	All other cotton textile items.....	Pound

<sup>1</sup>Includes trousers, slacks and shorts imported in sets with blouses.

<sup>2</sup>Includes skirts imported in sets with blouses.

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, November, 1961. Washington 25. D.C.  
February, 1962.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transhipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF DATA ON IMPORTS OF COTTON MANUFACTURES

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports was verified before compilation and publication in the regular reports.

For the months of October 1957 through October 1961, the verification by Customs Officials was limited to a 10 percent sample of cotton import shipments. Errors found in the 10 percent sample verification were used primarily (1) by Customs to call the attention of the individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of imports as reported by the importers. Cumulative analyses of the 10 percent verified sample are presented on page 4 of the October 1957 - October 1961 issues of this report.

For the months of November and December 1961, the verification by Customs Officials was expanded to full 100 percent at the following seven Customs ports:

Boston, Mass.	Norfolk, Va.
New York, N. Y.	New Orleans, La.
Philadelphia, Pa.	Los Angeles, Calif.
San Francisco, Calif.	

(An analysis of importations by Customs port of entry revealed that the selected ports accounted for about 95 percent of total cotton textiles imports.) Changes made by Customs during the course of the expanded verification, which were received by Census before compilation of the monthly statistics, are reflected in the compiled data in this report. Changes received after the statistics are compiled will be reflected in any future publications of the data. It is estimated that about 90 percent of the entries for the selected Customs ports were verified before compilation and publication in the regular reports.

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

NOVEMBER 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)

UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES Supplement

(The table which follows presents quantity data for United States general imports of cotton manufactures (in country of origin by commodity arrangement) in terms of 60 of the 64 commodity categories of cotton textiles enumerated in Appendix 3 to the GATT Agreement of July 2, 1961, entitled "Arrangement Regarding International Trade in Cotton Textiles." Data for four categories (i.e., combed and combed lavins and voiles) are not now available, but will be shown separately beginning January 1962. Data for combed lavins and voiles are included in this report under category 26, while information for combed lavins and voiles are included under category 27. Data shown in the column for "cumulative to date" represent cumulative totals from October 1961 through the current month.)

### SUGGESTED BRIEF CITATION

U. S. Bureau of the Census, United States Imports of Cotton,  
Statistics, Report FT 130, December, 1961. Washington 25. D.C.  
March, 1962.

## GENERAL EXPLANATION

### COVERAGE

The statistics shown in this report include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions are not reported as United States imports, but imports into Hawaii, and Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped through the United States in transit from one foreign country to another is not reported as imports and is excluded from the data shown in this report. Also excluded is information on imports covered by informal entries or individually valued less than \$100 and reported on formal entries (consumption entries only). Information on the possible undercounting of the statistics shown in this report as a result of the exclusion of these "low-value imports" may be obtained by writing to the Bureau of the Census, Washington 25, D. C. Articles not of cotton but classified for Customs purposes as cotton articles by similitude to cotton under the provision of the Tariff Act of 1930 (as amended) are also excluded.

The general import data represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse immediately upon arrival. These data differ from statistics on an import for consumption basis shown in most United States import statistical publications which represent imports of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, and merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels.

### SOURCE OF INFORMATION

The source of information for all of the imports included in this report, is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

### VALUATION

The values are in general based on market or selling price and are in general f.o.b. the exporting country. (Transportation costs to the United States may inadvertently be included in the case of merchandise which is not subject to an import duty based on value.) United States import duties are excluded.

### COMMODITY INFORMATION

Information on commodity by groupings of commodities is reported in order of the numbered classifications presented on page 4 of the July 1957 issue of the report.

For commodities or groupings of commodities for which the unit of quantity pounds is reported, the weight represents the net weight of the commodity rather than the weight of the cotton component of the commodity only.

### COUNTRY OF ORIGIN

The country of origin is defined as the country where the merchandise was produced or manufactured. In the event the importer can not readily obtain information as to the country of origin for a shipment, it is credited, for statistical purposes, to the country of shipment. Where it is known that the country is the country of shipment instead of origin, the country is footnoted in this report. Countries reported by the importer as country of origin may sometimes represent the country of shipment instead of origin for merchandise which is transhipped before it reaches the United States. Extra care is being taken to detect this type of reporting error, however. Countries are reported as defined in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A, Statistical Classification of Commodities Imported into the United States. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

### REVISIONS TO PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report will be shown in the back of subsequent issues of the report.

### SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics in general will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. Copies of this publication are available for reference at Public Libraries. Regular subscribers to FT reports are automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). A catalog of United States Foreign Trade Statistical Publications is also available. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

## ACCURACY OF DATA ON IMPORTS OF COTTON MANUFACTURES

For the months of July-September 1957, an attempt was made to obtain 100 percent verification by Customs Officials of import data for all cotton manufactures. During this three month period about 90 percent of the total value of these imports was verified before compilation and publication in the regular reports.

For the months of October 1957 through October 1961, the verification by Customs Officials was limited to a 10 percent sample of cotton import shipments. Errors found in the 10 percent sample verification were used primarily (1) by Customs to call the attention of the individual importers to the particular types of errors being made in an attempt to prevent similar reporting errors in the future, and (2) by Census to obtain information as to the accuracy of classification of imports as reported by the importers. Cumulative analyses of the 10 percent verified sample are presented on page 4 of the October 1957 - October 1961 issues of this report.

For the months of November and December 1961, the verification by Customs Officials was expanded to full 100 percent at the following seven Customs ports:

Boston, Mass.	Norfolk, Va.
New York, N. Y.	New Orleans, La.
Philadelphia, Pa.	Los Angeles, Calif.
San Francisco, Calif.	

(An analysis of importations by Customs port of entry revealed that the selected ports accounted for about 95 percent of total cotton textiles imports.) Changes made by Customs during the course of the expanded verification, which were received by Census before compilation of the monthly statistics, are reflected in the compiled data in this report. Changes received after the statistics are compiled will be reflected in any future publications of the data. It is estimated that about 90 percent of the entries for the selected Customs ports were verified before compilation and publication in the regular reports.

UNITED STATES GENERAL IMPORTS OF COTTON  
MANUFACTURES, BY GROUPINGS OF COMMODITIES

5

DECEMBER 1961

Commodity grouping number	Commodity grouping description and unit of quantity (and commodity numbers included in the commodity grouping)	Quantity	Value (dollars)

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES Supplement

(The table which follows presents quantity data for United States general imports of cotton manufactures (in country of origin by commodity arrangement) in terms of 60 of the 64 commodity categories of cotton textiles enumerated in Appendix 3 to the GATT statement in Appendix 3 to the GATT statement of July 21, 1961, entitled "Arrangements Regarding International Trade in Cotton Textiles." Data for four categories (i.e., carded and combed lambs and voiles) are not now available, but will be shown separately beginning January 1962. Data for carded lambs and voiles are included in this report under category 26, while information for combed lambs and voiles are included under category 27. Data shown in the column for "cumulative to date" represent cumulative totals from October 1961 through the current month.)

# UNITED STATES GENERAL IMPORTS OF COTTON MANUFACTURES

FISCAL YEAR 1961 (BASE YEAR)

(The table which follows presents quantity data for United States general imports of cotton manufactures (in country of origin by commodity arrangement) in terms of 60 of the 64 commodity categories of cotton textiles enumerated in Appendix 3 to the GATT statement of July 21, 1961, entitled "Arrangements Regarding International Trade in Cotton Textiles." Data for four categories (4, 6, 7, 8) of carded and combed lams and voiles are not shown separately. Data for carded lams and voiles are included in this table under category 26, while information for combed lams and voiles is included under category 27.
