Wyatt's Spring Catalog  
Over Fifty Years of Service  
1881 - 1936

For Better  
Farms and Gardens:

Our 1936 Spring Catalog, a copy of which we are happy to place in your hands at this time, contains many interesting features to which we invite your attention and which we hope will interest you.

A new high has been reached in the perfection of varieties and of the thousands of novelties introduced to the horticultural world during 1935 we offer you only those which have proved their merit in your community and under your conditions.

A new low in prices is being made, not because prices are declining generally, for they are not, but because we are using the experiences of the fifty-four preceding years. The natural product of experience in service is efficiency, and the efficiency that we've gained enables us to serve you better, raise standards of quality and perfection, and to do so more economically than ever before.

Along with this catalog goes our assurance that we are aware of, and appreciate the confidence placed in us during the past, and that we are in 1936 more than ever before better equipped to render friendly, efficient service to Southern farms and homes.

Extending our heartiest wish for your health, happiness and prosperity during 1936, we are

Yours very truly,

JOB P. WYATT & SONS COMPANY

WGQ:S

THE JOB P. WYATT & SONS CO. GIVE NO WARRANTY, EXPRESS OR IMPLIED, AS TO DESCRIPTION, QUALITY, PRODUCTIVENESS, OR ANY OTHER MATTER OF ANY SEEDS, BULBS OR PLANTS THEY SEND OUT, AND THEY WILL NOT BE IN ANY WAY RESPONSIBLE FOR THE CROP. IF THE PURCHASER DOES NOT ACCEPT THE GOODS ON THESE TERMS THEY ARE TO BE RETURNED AT ONCE. PRICES QUOTED ARE SUBJECT TO MARKET CHANGES AND TO BEING UNSOLD WHEN ORDER IS RECEIVED.

*"You'll get it **QUICKER** from **WYATT'S!**"*

The spirit of **SERVICE** predominates at **WYATT'S** and by service we mean more than the act of filling, packing and shipping your order—much more. **WYATT'S SERVICE** on your seed order begins 12 to 24 months before your order is received!

In order that **WYATT'S** customers get the very best strains obtainable we contract with specialists to **PLANT AND PRODUCE ESPECIALLY FOR SEEDS**, each and every variety you get. This means that our service on your order had to be begun 2 years beforehand and that every **WYATT** customer has his order filled with seeds from every part of the world! The Turnip seeds on your order were grown especially for **WYATT'S** in England, the Carrot and

Beet seeds were produced for us in France, the Spinach grown under contract for us in Holland—and so on. Many of our best strains of vegetables and flowers are grown in this country—Muskmelons and Cucumbers in Colorado, Beans in Idaho, Flowers from California, Florida, Denmark, Germany and the best Cotton, Tobacco and Lespedeza seeds in the world are produced right here in North Carolina—and so we offer you not only best strains but seeds produced especially for your order under the most nearly perfect conditions. Before any seeds go out to you they're **TESTED**. We know that our customers get the very best seeds obtainable and that **WYATT'S TESTED SEED SERVICE** on every order is complete.

### HOW TO ORDER AND SAVE TIME and MONEY

**We Pay Postage**—On all vegetable seeds offered in this catalog by the packet, ounce, quarter pound, pound, two-pound, and five-pound quantities, we pay the postage to every state and guarantee safe-delivery to your home. Order your seeds by number.

**YOU PAY POSTAGE**—On Field Seeds, Poultry Supplies, Implements, Insecticides and Fertilizers, you pay postage, express or freight, except otherwise specified in this catalog.

**CASH WITH ORDER**—Customers will please remit when ordering. If goods are wanted C.O.D., 25 per cent, or one-fourth of the amount, must accompany the order. No plants shipped C.O.D. No plants shipped to Florida.

**HOW TO SEND MONEY**—Remittances should be made by postoffice money order, express money order, drafts or checks. Where it is not possible to obtain these, the letter should be registered.

**STAMPS**—We will accept stamps in good condition (one or three-cents stamps preferred) the same as cash, but we ask those remitting stamps to wrap them in oiled paper, if possible, to prevent their sticking together or to the order.

**PRICES SUBJECT TO CHANGE**—This catalog is printed in November and the market on many items of garden and field seeds has not yet been established. Consequently prices on those items indicate value at the time these pages are printed. Orders will be filled, if at all possible—at prices printed in this book, but **ALL PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.**

### BETTER SEEDS ...for... RELIEF GARDENS

We will supply you carefully tested seeds on your relief orders. Just send the order given you by relief officer to Wyatt's.

We will accept relief orders for seeds, when issued by any State, County or City Relief Agency or Office, in exchange for vegetable seeds at prices named in this catalog. The Relief Orders you send in payment for seeds should state that it is for seeds only: must be on printed form of the Relief Office; must have written or printed on it the amount it is good for in dollars and cents and be signed by the authorized Relief Agent. The printed form should show that it is issued by state, county or city relief office and signed by the authorized relief officer and should also be signed by the person ordering the seed in the place for signing for receipt of the seeds. Seeds selected must be vegetable seeds only and no quantity larger than one pound of any one variety will be supplied on these orders.

**Non-Warranty** —Owing to the many conditions beyond our control which might affect the germination and crop, and in accordance with the universal custom of the seed trade, Job P. Wyatt & Sons Co., gives no warranty, express or implied, as to description, quality, productiveness or any other matter, of seeds, bulbs or plants it sends out, and will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned. This does not mean that we lack confidence in the seeds we sell, but we have no control over the seeds after they leave our possession, especially as to methods of planting, cultivating and fertilizing, all of which are important factors in the success of any crop. Crops are dependent for success or failure on so many things besides seed that it is impossible for us to give any warranty or guarantee.

### PLANT ORDERS

All orders for plants, such as Cabbage, Beets, Lettuce, Onions, Strawberry, Asparagus and Rhubarb Roots, also Baby Chicks, are shipped from our Grower's station and entirely separate from seeds and bulb orders. If you order seeds and also plants you will receive the seeds by return mail and the plants will be forwarded to you separately within a few days, weather permitting.

### 55 YEARS EXPERIENCE

For over a half a century the Job P. Wyatt & Sons Company has served thousands of friends and customers throughout the entire South. Fifty-five years of service means more than mere proof of our ability to serve—it means that we have had 55 years of experience in selecting strains and varieties best adapted to the conditions of the South. This year we offer again seeds that are the Standard of Quality and varieties that represent the very latest improvements.

# VEGETABLE PLANTING CALENDAR

This planting Calendar is prepared so it's easy to follow and we suggest you use it as it will be found very valuable when planting your garden. Of course planting time varies depending on your location and remember this calendar is based on Raleigh and farther south so naturally for farther north planting time would be later. If you live north of Raleigh your planting would be one week to one month later. New York latitude would average one month later. Depth of planting may be slightly varied with soil density—this is, on light sandy soils seeds or bulbs are planted deeper than on heavy or clay soils.

Let Wyatt's assist you with your garden problems and we will be glad for you to call on us for any particular information you may need regarding planting.

# WYATT'S CABBAGE SEEDS

Days indicated represent time from setting plants to heading

**CULTURE**—If the plants are started in a seed-bed, they should not be crowded or they will run up weak and slender and will not endure transplanting well. When 4 to 6 inches high, transplant to open field, setting the plants as deep as the first leaf stems; give frequent and deep cultivation, drawing the earth to the plants at each working. Set the early varieties 18 inches apart in rows 2½ feet; the larger and later sorts, 2 feet apart in 3-foot rows. They need a light and well watered soil, rich in nitrogen. One ounce will produce about 1,500 plants; ½ lb. will produce sufficient plants to set an acre. Thousands of successful growers depend on Wyatt's Tested Cabbage Seed. Be sure to plant the best seed from Wyatt's.

**No. 151—Early Jersey Wakefield**—A very popular variety with both home and market gardeners. It is the earliest of all varieties and is planted by the large growers for shipment to northern markets. The heads are pointed, of medium size, uniform and with few outer leaves. The quality is excellent. The universal popularity demands that more than ordinary attention be given to the selection of plants for breeding purposes, having in mind earliness, sureness to head, solidity and uniformity of growth and maturity. In Wyatt's Early Jersey Wakefield this careful selection has been critical and continued through many years and we are confident no finer stock can be obtained at any price. Every year we sell thousands of pounds of this variety. Plant Wyatt's strain and avoid disappointment. 63 days. Prices: Pkt. 5c; oz. 15c; ¼ lb. 50c; lb. \$1.75; 2 lbs. \$3.25; 5 lbs. \$7.50; 10 lbs. \$14.00.

**No. 152—Charleston Large Wakefield**—Our stock is the improved Long Island strain. It matures about ten days later than Early Jersey Wakefield. The heads are blunt pointed but broad at the base and fully one-half larger than the Jersey Wakefield. It is a favorite with shippers on account of its bardness, earliness and size of head. 73 days. Prices: Pkt. 5c; oz. 15c; ¼ lb. 45c; lb. \$1.50; 5 lbs. \$6.50; 10 lbs. \$12.00, postpaid.

**No. 154—Copenhagen Market**—The large round heads average 8 lbs. in weight. They are very solid and have a small core. The plants are short stemmed, the heads being produced almost on the surface of the ground. A most productive variety, attractive and always tightly folded. 75 days. # WYATT'S CARROTS

## ONE OF THE MOST WHOLESOME VEGETABLES CULTIVATED — AND A SURE CROP

No. 183. Carrot, Wyatt's Chantenay

**CULTURE**—One ounce of seed for 100 feet drill, 3 to 4 pounds per acre. For several generations the carrot has been one of the common garden vegetables but only in recent years has it come to be recognized as one of our most nutritious and wholesome foods. Health authorities assert that carrots contain in high degree those elements which constitute a nourishing article of diet. The plant has no serious insect enemies and is rarely subject to disease. The culture of carrots is easy, being practically the same as that of beets. When practicable it is best to plant them in soil that has been richly fertilized the previous season. Freshly manured soil will often produce divided roots. Plant the seed  $\frac{1}{2}$  inch deep in loose, well prepared soil, making rows 16 to 24 inches apart. Cultivate as soon as the plants are well established and thin to 2 to 4 inches in the row, according to the size of the variety. Plantings may be made from early spring until mid-June and again in the early fall.

**No. 183—Chantenay**—A half-long variety most extensively used for both home garden and market. It is a medium early variety and matures in about 65 days, besides it is very productive. The roots are smooth, uniform and blunt. The roots grow  $5\frac{1}{2}$  inches long and are a deep golden orange color, making an attractive appearance. Wyatt's stock is extra select and is planted by many of the leading growers. 65 days. Prices: Pkt. 5c; oz. 10c;  $\frac{1}{4}$  lb. 25c; lb. 90c; 5 lbs. \$3.50, postpaid.

**No. 184—New Red Cored Chantenay**—This new variety is a decided improvement over the old type as it is quite free from the ordinary yellow core found in most carrots. It is a medium early variety, half-long, smooth, blunt-rooted sort. The color is deep orange and the flavor is delicious. 68 days. Prices: Pkt. 5c; oz. 10c;  $\frac{1}{4}$  lb. 35c; lb. \$1.25; 5 lbs. \$5.00, postpaid.

**No. 185—Danvers Half-Long**—This fine half-long variety commands approval wherever planted. It has a handsome orange red color and the smooth roots taper to a blunt point. It is principally grown for a late main crop and produces a very high yield per acre. The roots average 6 inches long. 68 days. Prices: Pkt. 5c; oz. 10c;  $\frac{1}{4}$  lb. 25c; lb. 90c; 5 lbs. \$3.50, postpaid.

**Carrots for Stock Feeding**—Carrots are highly nutritious and are rich in sugar and starch and make a wholesome addition when fed with corn and fodder. Plant in March, April and May in rows  $2\frac{1}{2}$  to 3 feet apart and sow 4 lbs. of seed to the acre.

**No. 187—Large White Belgian**—This variety is grown exclusively for stock feeding. The roots measure 10 to 12 inches long and are rather thick. The flesh and skin are pure white. Prices: Pkt. 5c; oz. 10c;  $\frac{1}{4}$  lb. 25c; lb. 75c; 5 lbs. \$3.00, postpaid.

# WYATT'S CAULIFLOWER

Wyatt's Snowball Cauliflower No. 191

One ounce of seed will produce 1,500 plants,  $\frac{1}{2}$  pound sufficient for an acre.

**CULTURE**—Cauliflower will do well in any land that is suitable for cabbage, and in general the same cultural directions apply as for cabbage. Plenty of moisture is necessary for their development, especially at heading time. Sow seed in hotbed in November, transplant into cold frame for protection during the winter, and set out in the fields early in April, in rows 2 to  $2\frac{1}{2}$  feet apart, and 18 to 24 inches apart in the row. For late crop, sow seed about the 15th of April, transplanting when plants are large enough. Cultivate like cabbage. When the head commences to form, draw the outside leaves over the head to protect from the sunlight, thus keeping it white.

**No. 191—Wyatt's Snowball Cauliflower**—The leading variety for either home garden or market. It is adapted to forcing as well as to early outdoor planting, and even late summer growing. It is a remarkable sure header and matures in about 85 days after planting. The plant is compact and pro-

# WYATT'S ROASTING EAR AND SUGAR CORN

## SWEET OR SUGAR VARIETIES

One pound will plant about 200 hills;  
12 pounds will plant an acre

**CULTURE**—Plant 5 or 6 grains, 1½ inches deep, 3 feet apart, in rows 3 feet apart. When plants are 4 inches high pull out all but two plants to the hill. For very early Corn, the hardiest and earliest varieties can be planted the latter part of March, if the weather is mild, but Sweet Corn should not be planted until April, or until the Spring weather opens and the ground gets warm, as it has a tendency to rot in the ground if planted too early or during a continued cold or rainy spell of weather. It should be planted at intervals of every two weeks until August, so as to have Corn for use during the entire season.

## VEGETABLE ROOTS

**CULTURE**—Dig or plow out a trench 15 to 18 inches deep, put in plenty of well-rotted manure, covering it with a few inches of soil, then set the roots 1½ to 2 feet apart and cover with 4 inches of soil. For an acre, 1½ pounds of either Green Curled or Spring, and from 3 to 7 pounds of the Scotch. Scotch Kale being particularly subject to the attacks of insects, both before and after coming up, it is necessary to sow it very thickly. Scotch Kale should be sown from the first to the last of August, and the Green Curled from the middle of August until the first of October. Spring Kale is sown nearly all the year round, either in drills or broadcast, and should be sown at intervals of 10 days in order to always have it tender. Sow ½ inch deep in rows 2½ feet apart, allowing from 6 to 10 inches between the plants, and cultivate as cabbage. Kale, being a very strong feeder, heavy manuring is necessary to make a good crop.

When the weather is sufficiently warm, set plants in open ground, allowing 3 feet space between rows, and 2½ feet space between the plants in the row. Hoe frequently, keeping the soil loose and fine. Earlier plantings may be made in open ground if protected by Hotkaps. One ounce will produce 1,000 plants; ¼ lb. will sow an acre.

Black Beauty produces fruits fully as large and ready for use ten days to two weeks earlier than the New York Purple. The plants branch very freely near the ground and grow in well rounded bushes. The grand, large fruits are thick, of most attractive form. The skin is a rich, lustrous, purplish, black—the satin gloss and rich coloring adding greatly to its beauty. The intensely brilliant coloring is uniform over the whole fruit and does not fade or change to a lighter color. 120 days. # WYATT'S COLORADO GROWN CANTALOUPE

**CULTURE**—The Melon delights in warm rich soil with perfect drainage, and can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woods-mould and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about

10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

# WATERMELONS

WYATT'S WATERMELON SEEDS ARE PRODUCED UNDER CONTRACT IN THE FINEST SOUTHERN MELON GROWING SECTION

**Culture**—Prepare hills 8 to 10 feet apart each way, by thoroughly working into the soil an abundance of well rotted manure. When the ground is warm, plant six to eight seeds to the hill, covering 1 inch. When plants form first leaves, thin to three plants to the hill. One ounce will plant about 50 hills; 3 to 4 lbs. to the acre. Earlier plantings can be accomplished by protecting with Hotkaps.

**No. 446—Wyatt's Wondermelon**—The New Wondermelon has gained in popularity in recent years and is now planted by many of the large melon growers in the South. It is a white-seeded melon, grows uniformly large and long, resembles the Tom Watson, but is thicker, more solid and usually larger and heavier. Melons weighing 60 to 80 pounds are not unusual and many prize winning weights have been reported. Every bit of the brilliant red flesh of this melon is sweet to the rind; it is free of cores or hard centers and the rind is thin, yet sufficiently tough to stand ordinary handling. The melon is a dark glossy green with small crease like markings on the larger sizes, a most attractive product for market display. We can strongly recommend this melon but advise intending planters to be sure and get the true stock direct from Wyatt's, 85 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c; 5 lbs. \$3.00; 10 lbs. \$5.00, postpaid.

**No. 461—Wyatt's Stone Mountain**—A beautiful large, round melon gaining in popularity each year. Stone Mountain is the sweetest of all watermelons and is almost round in shape. Its deep dark green color and rich scarlet flesh make it a ready seller. It weighs 50 to 80 lbs. and always brings the highest price at local and nearby markets, but we do not recommend it for long distance shipping. It is remarkable for the few seeds it contains and its unusually solid, good, rich meat. Stone Mountain is very prolific, a splendid drouth resister. Our stock of this variety is extra selected and true to name. 90 days. Prices: Pkt. 5c; oz. 15c; ¼ lb. 35c; lb. \$1.00; 2 lbs. \$1.75; 5 lbs. \$3.75; 10 lbs. \$6.25, postpaid.

**No. 456—Improved Tom Watson**—A very handsome, large fruit, frequently 2 feet long and 12 inches in diameter. The dark green rind is a contrast to the bright scarlet flesh, which is of splendid texture and flavor. 90 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 20c; lb. 65c; 2 lbs. \$1.25; 5 lbs. \$2.75; 10 lbs. \$4.75, postpaid.

**No. 443—Schochler**—Of recent introduction, the Schochler is really a remarkable melon. It grows to an immense size, single specimens weighing as high as 80 lbs. and carloads averaging 50 lbs. each. Schochler is a rich green melon with dark red meat, fine grained, no white parts and delicious flavor. It is not a very prolific sort and usually produces 3 or 4 melons to the vine. The rind is medium thick but strong and withstands shipping. 90 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.25; 5 lbs. \$5.50, postpaid.

No. 446 Wyatt's Wondermelon

**No. 451—Thurmond Gray**—A great shipper. It is a handsome melon of large, oblong shape. The flesh is bright red, solid, firm, of melting flavor. The vine is a remarkably strong, vigorous grower and a heavy bearer of large, silvery-gray melons with very tough thin rind. The melons measure from 20 to 30 inches in length. 45 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 20c; lb. 65c; 2 lbs. \$1.25; 5 lbs. \$2.75; 10 lbs. \$4.75, postpaid.

**No. 450—Irish Gray**—It is sweet, the flesh is red, crisp and free from stringiness. 85 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 20c; lb. 65c; 2 lbs. \$1.25; 5 lbs. \$2.75; 10 lbs. \$4.75, postpaid.

**No. 448—Halbert's Honey**—A very early melon of medium size, oblong in shape, handsome dark green in color with a rich, crimson flesh of exquisite flavor. The rind is just a little too thin to stand distant shipping or too much handling. 85 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 20c; lb. 65c; 2 lbs. \$1.25; 5 lbs. \$2.75; 10 lbs. \$4.75, postpaid.

**No. 458—Citron**—This is a melon for sweet pickles. Do not plant close to watermelons, for they will cross and ruin the watermelons. 95 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. \$1.00, postpaid.

# WYATT'S PEPPERS

One Ounce of Seed Produces About 1,000 Plants

**CULTURE**—Sow the seed in hotbed or a window box at a temperature of about 70 degrees on or about February 15. Transplant to the open ground when all danger of frost is over, in rows 3 to 5 feet apart and plants set 15 to 20 inches apart in the row—about 9,000 plants are required to set an acre. Cultivate frequently and keep free from weeds. A mixture of sheep manure and chicken manure is most desirable for distributing in the rows a week or ten days before the plant is set out. When the plants are well set and started at about 7 inches high, guano or any well-rooted manure hoed into the surface soil will also increase plant growth and fruiting qualities. We are large growers of Pepper seed. Can supply large orders. The seed is grown from well selected and transplanted plants which show purity and excellent quality. All our Pepper seed are true American grown—we have no cheap pulp mill or imported stocks to offer.

## No. 601—Wyatt's Worldbeater

The name of this Pepper gives you an idea of how good it really is. It is a new introduction, combining the long form and earliness of the Ruby King and the large size of the Chinese Giant. It is exceedingly productive, a good shipper, and one of the most attractive Peppers on the market. The peppers are 4-lobed, 5 inches long and 3½ inches in diameter. Its color is first a dark green, changing to a very brilliant scarlet when ripe. It is not unusual to pick 15 to 25 fine Peppers from a single plant. Because of its thick flesh it makes an excellent shipper and we want all of our customers to try at least a small quantity of it this season. 110 days. Prices: Pkt. 5c; ½ oz. 15c; 1 oz. 25c; ¼ lb. 75c; lb. \$2.25; 5 lbs. \$10.00, postpaid.

## No. 592—Wyatt's California Wonder

Here's a new Pepper of real merit. It's nearly as large as, and earlier than Chinese Giant, but is blocky or square-ended, just the shape you've been looking for. It will sit upright and is ideal to stuff and bake, or to serve whole with salad. Its walls are exceptionally thick, heavier and firmer than any other sort, and the flesh is deliciously sweet and spicy, with no bite to it. Some specimens in our trials measured 4½ inches across and 5 inches long, and weighed 1½ pounds. The bright, attractive green changes to a brilliant light crimson. 112 days. Prices: Pkt. 10c; ½ oz. 20c; oz. 35c; ¼ lb. \$1.25; lb. \$4.25; 5 lbs. \$18.75, postpaid.

## No. 591—Chinese Giant—

One of the best large, mild, red varieties. The plant has a short, stocky growth, and the fruits are thick, blocky, 4 to 5 inches in diameter, and of equal length. The color is a brilliant shiny scarlet. Makes an excellent mango for stuffing. 110 days. Prices: Pkt. 10c; ½ oz. 25c; oz. 40c; ¼ lb. \$1.25; lb. \$4.50, postpaid.

# WYATT'S SQUASH

**CULTURE**—Squashes should not be planted until danger of frost is past and the ground has become warm, but plant the Winter kinds as soon as safe in order that they mature. Plant in hills 5 feet apart for bush varieties, and 6 to 8 feet apart for running varieties, putting 6 to 8 seeds to the hill, finally leaving but 3 plants. A rich, warm, mellow soil is conducive to high yields and early maturity, but Squashes grow quite well in almost any well drained soil. It pays to enrich each hill with rotted manure or commercial fertilizer. During the early stages of growth keep the plants well sprinkled with "Slug Shot" or Tobacco Dust, to save them from insects. The Winter Squashes may be grown in cornfields in the same manner as pumpkins. In the small garden, Squash may follow early beets, early cabbage, corn salad and spinach.

One ounce of the bush varieties to 40 hills; 2 to 3 lbs. to the acre.

One ounce of the large-seeded varieties to 15 hills; 3 to 4 lbs. per acre.

# TOMATOES

All Treated With Semesan To Prevent Damping Off and Wilt  
An Extra Service—No Extra Cost

**CULTURE**—1 ounce is sufficient for 100 feet of drill; 4 ounces will produce enough plants to set an acre. The tomato flourishes best in warm, light soil, moderately rich. For early use sow  $\frac{1}{2}$  of an inch deep in January or February in a hot-bed, or, if only a few plants are wanted, they may be sown in a box. In order to get the plants strong and stocky, they should be transplanted when 2 to 3 inches high. When all danger of frost has passed set out in the open ground in rows 3 feet apart, leaving the same distance between the plants, and if convenient, furnish a support for the vine. For late crops sow in the open ground as above directed. Wyatt's Tomato Seeds are planted by many of the leading truckers in the South.

# HERBS FOR BEAUTY-FLAVOR-FRAGRANCE

In Cultivation Before the Christian Era, Herbs Form the Most Fascinating Group of Subjects in Modern Gardening\*

For all-round interest most gardeners will admit that the versatility of the aromatic herbs make this group of plants among the most fascinating. A small assortment of herbs will furnish food, flavoring, medicine, fragrance in the garden and in the home, beside their beauty as garden subjects and cut flowers. Herbs thrive in most soils and should be sown early in the spring. Thin out to about one foot apart. Those grown for foliage should be cut before they come into full bloom and hung in bunches or spread thinly where they can dry quickly.

This fascinating study, one that was practised so diligently thousands of years ago—Herb gardening—is once more coming into popularity. Be the first to have a complete herb garden in your neighborhood. Our stock of herb seeds is one of the most complete in America.

We are also pleased to offer and recommend to our customers the two first ranking books on herbs. "The Herb Garden" by Frances A. Bardswell (\$3.00 postpaid) noted English authority and "Gardening with Herbs" by Helen Morgen-thau Fox (\$2.50 postpaid) eminent American author of garden subjects.

## WYATT'S PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry or too moist.

# WYATT'S GIANT ORCHID FLOWERING SPENCER SWEET PEAS

WYATT'S SPENCER SWEET PEAS are produced for us under almost perfect growing conditions in the fertile Lompoc Valley in California. As is true of all other Wyatt's seeds, our special strain of Sweet Peas is the very best. Four tremendous ruffled flowers on long stems often 14 inches, clear refined colors and vigorous, long blooming plants are characteristics of all varieties of Wyatt's Sweet Peas.

**CULTURE**—One ounce will sow from 15 to 20 feet. Sow from November to March. For spring plantings we recommend the sowing of Sweet Pea seeds slightly below the ground level in a bed thoroughly pulverized 2 feet wide by 12 to 18 inches deep. Well rotted (but no other) compost or a liberal sprinkling of Bone Meal might be added when the bed is prepared and when the peas are growing slight applications of Bloomaid or Vigoro at 4- to 6-week intervals should be made.

For the largest flower, leave only the terminal bud to a single stem plant, pinching off all other buds as they appear, clear to the ground. # WYATT'S "WONDERLAWN" LAWN GRASS

View of Fairway and Greens on the beautiful Carolina Pines Golf Course, Raleigh, North Carolina. Wyatt's Grass Seeds used exclusively

## HOW TO BUILD A LAWN

The first requisite for a lawn of any kind, be it permanent or merely temporary, is good soil. Good soil from a point of plant growth must have these three vital parts: Plant food, moisture, humus. Most of us are familiar with the first two of these but some of us are not so familiar with the third—humus. Humus is that part of an ideal soil that renders it porous and loamy. It prevents heavy soils from packing or baking and adds "body" to light or sandy soils, thereby increasing their moisture holding capacity. Therefore, since plant foods must be in a liquid form before they are available to plants, humus is the most important of the three vital parts of an ideal soil. Heavy soils without humus are so tightly packed that they have no room for moisture. Loose sandy or light soils, while having great capacity for moisture, drain so rapidly that they become very dry too often for healthy plant growth. And so we see then that humus added to heavy soil increases its capacity for moisture while preventing its packing or baking and when added to sandy or light soil increases its ability to retain moisture.

Wyatt's Peat Moss, listed on this page, is the finest type of humus available since it is perfectly pure, containing no weed seeds nor harmful bacteria and has a moisture capacity of 15 times its own weight. Where the area is too great to permit the use of commercial peat for humus we recommend successive plantings of cover crops for turning under, legumes much preferred. Humus derived in this manner has the advantage of being much higher in plant food content than commercial peat. A third source for humus is through the use of animal manures. We do not recommend manures unless they are known to be thoroughly rotted and free of weed seeds and harmful bacteria. As the humus is used by the growing plants it must be replaced from a compost heap made of leaves from trees or grass clippings or from some equally generous source, and scratched into the lawn from time to time. However, once the soil is well built up with humus and a constant supply for the future is provided the problem of growing a permanent lawn or anything else is solved.

After the soil has been thoroughly broken and a fine seed bed prepared and allowed to settle the seeds may be sown, on the scarified surface, using 1 pound to each 200 square feet. After seeding the lawn should be rolled. Germination will be hastened if the surface is moistened with a very fine mist from the hose every day until the grass is up. When the lawn is established it should never be sprinkled but instead soaked once a week.

**No. F97—Alfalfa, Kansas Grown**—We offer nothing but the very finest grade of genuine Kansas Grown Alfalfa and our seed is usually 99 per cent or better pure Alfalfa. The hay is remarkably palatable and the feeding value worth nearly twice that of the very best Timothy. Droughts have no effect upon Alfalfa, as its roots penetrate to astonishing depths. Alfalfa can be sown in either fall or spring. The cleaner the ground, the better the stand will be. Sow on deep, well drained, good loamy land. Alfalfa will not grow on acid soils, and to correct this condition spread 1 to 1½ tons of finely ground lime to the acre after plowing and a few weeks before sowing. Cutting should be done always as blooming begins. Sow 30 to 40 lbs. to the acre. Prices: Lb. 40c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$2.75; 25 lbs. \$6.00; 100 lbs. or more at 22c lb.

**No. F87—White Blossom Sweet Clover or Bokhara**  
This is known as Melilotus Alba. It is adapted to a wide variety of soils: is used for pasture, for forage, for ensilage, for bees, for turning under to improve the land. The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 20 lbs. per acre. Prices: Lb. 35c; 5 lbs. \$1.40, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.00; 100 lbs. or more at 10c lb.

**No. F82—Red Clover**—A valuable farm crop in northern part of the Cotton Belt. Equally good for pasture, hay or soil improvement. Even the first crop makes rich feed and is most valuable for hay. Sow in fall or spring. September and March being the best months. 15 lbs. per acre. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$3.00; 25 lbs. \$6.75; 100 lbs. or more at 25c lb.

**No. F91—Common Lespedeza or Japan Clover**

It grows on galled hillsides and on all soils, even on the poorest, and being a legume will extract nitrogen from the atmosphere and store it in the roots for later crops. Its abundant long tap-roots and laterals, when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter that will increase the yield of succeeding crops. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 lbs. per acre. Prices: Lb. 35c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.50; 100 lbs. or more at 18c lb.

**No. F94—Tennessee 76 Lespedeza**—

This variety is best for eastern North Carolina, Virginia and South Carolina. The leaves and stems are fine and it produces a great quantity of hay even on poor land. Tennessee 76 grows 12 to 24 inches high and is three weeks later than Common. The close resemblance in the seeds of these two varieties prompts us to urge all of our customers to use every care when buying Tennessee 76. Why not buy pure stock direct from Wyatt's? Then you'll know you've got the genuine Tennessee 76. Sow 25 to 30 lbs. per acre.

PRICES: TENNESSEE 76—(recleaned): Lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$1.75; 25 lbs. \$4.00; 100 lbs. or more at 15c lb.

**No. F92—Korean Lespedeza**—This popular new Japanese type clover

is coming into large demand. Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet, and has never been killed by a drought. When a good crop of Korean Lespedeza is turned under it will double the corn yield in one year. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soy beans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed; or wait until seed have formed on bottom branches, which seed shatters to the ground for reseedling. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 20 to 25 pounds of seed per acre. Prices: Lb. 30c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.75; 100 lbs. or more at 10c lb.

# WYATT'S GRASS SEEDS FOR HAY AND PASTURE

Sudan Grass No. F73

**No. F73—Sudan Grass**—A wonderful quick growing summer hay crop. As big a yielder as Johnson grass, but it has none of the latter's objectionable features, for Sudan grass can never become a pest, as it is an annual. Its greatest value is for hay, which is well liked by stock. The hay is equal to timothy in feeding value. It is also strongly drought resistant. Sow it after the ground becomes thoroughly warm, either broadcast or in rows two feet apart, and cultivate like corn. When sown in rows it grows six to seven feet high; when sown broadcast it grows four to five feet high. Sudan grass may be profitably grown with cowpeas and soybeans, as being of erect growth it supports the pea vines and makes the cutting easier and allows them to cure more quickly; the mixture will give a better-balanced ration than either fed alone. When grown with cowpeas or soy beans make the sowing of Sudan grass after the peas or beans are planted and covered. Almost any soil, from heavy clay to light sand, will grow Sudan grass. Sow 5 to 6 lbs. to the acre in 2-foot rows; 20 to 25 lbs. broadcast. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 75c; 25 lbs. \$1.50; 100 lbs. or more at 5c lb.

# WYATT'S SORGHUM SEED

Amber Sorghum No. F192

**CULTURE**—Plant when the ground becomes thoroughly warm, about two weeks after corn planting, on a rich, well drained clay loam, in rows 3½ to 4 feet apart, and cultivate as you would corn. After the flowering stage is passed, but not earlier, it may be pastured or cut for fodder. Sorghum may be grown with cowpeas and soy beans either in rows or broadcast. Sown alone, 50 lbs. per acre.

**No. F194—Wyatt's Sugar Drip Cane**—No new sorghum has been brought out that can compare with it in yield of syrup. It makes a large, juicy and succulent growth. It will yield about 65 per cent of the weight of the cane in juice when extracted by a good farm mill; a stronger mill should extract as much as 75 to 80 per cent. Prices: Lb. 25c; 2 lbs. 40c; 5 lbs. 65c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

**No. F196—Texas Seeded Ribbon Cane**—This is a real syrup cane and highly prized everywhere by syrup makers, for its rank and vigorous growth and heavy juicy stalk, which produces a large yield of syrup. Grows 10 to 12 feet high and produces dark, heavy, oval-shaped pendant heads. It matures late but makes a heavy growth of green foliage for fodder and ensilage. Prices: Lb. 25c; 2 lbs. 40c; 5 lbs. 65c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

## SORGHUM AND CANE SEEDS FOR FORAGE

**No. F192—Early Amber**—One of the earliest sorghums and furnishes a large yield of most nutritious forage which may be fed either green or cured. If planted early it will yield two cuttings a season, stooling out thicker each time it is cut. If grown with cowpeas or soy beans the quality of the hay is improved and a more nearly balanced ration may be had. The proportions recommended are 15 lbs. Early Amber Cane, ½ bushel of soy beans and 1 bushel cowpeas to the acre broadcast. Grows 10 to 12 feet high. Sow broadcast 1 to 1½ bushels to the acre; 5 to 6 lbs. plants an acre in 3½- to 4-foot rows. Prices: Lb. 25c; 2 lbs. 40c; 5 lbs. 65c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

**No. F193—Early Orange**—With taller and heavier stalks than the Amber, although not as early or as popular. Prices: Lb. 25c; 2 lbs. 40c; 5 lbs. 65c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

**No. F195—Red Top**—(Sumac)—Its slender stalk and abundance of leaves make it desirable for hay. Resists drought better than the Amber and Orange. Prices: Lb. 25c; 2 lbs. 40c; 5 lbs. 65c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

## SEEDS FOR FORAGE AND GRAIN CROPS

**No. F292—Egyptian Wheat or Shallu**—Sometimes called Chicken Corn. It grows tall, stools out, frequently three or six stalks from a single root. Cut when at the dough stage, and a second cutting may be obtained. When grown for grain, the tops are cut, cured in a dry place and threshed like other grains. For cattle, horses, hogs, and poultry, the grain may be fed either whole or ground. It is of high feeding value, and will take the place of corn. Plant 8 to 10 lbs. to the acre in rows 3½ to 4 feet apart. Sow broadcast at the rate of 25 lbs. per acre. Prices: Lb. 30c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.50; 100 lbs. or more at 13c lb.

**No. F31—White Kaffir**—Grows 4 to 8 feet tall, making a straight, upright growth. It has a strong stem with enormous wide leaves. Sow in rows, 3½ feet apart, drilling seed thinly. With cowpeas, sow broadcast 15 pounds of Kaffir to a bushel of peas; sow alone broadcast 40 pounds to the acre. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

**No. F294—Broom Corn**—(Evergreen)—A fine crop for dry land farming where there is a market for the straw for brooms. It has practically no food value. Plant in 3½-foot rows, thinning out to stand 8 to 10 inches in the row and cultivate like corn, 6 lbs. per acre. Prices: Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.10, postpaid. Not prepaid, 10 lbs. \$1.60; 25 lbs. \$3.25; 100 lbs. or more at 12c lb.

**No. F289—Teosinte**—A single seed producing from thirty to sixty stalks, each 10 to 12 feet high, gives some idea of what an enormous yield may be had from Teosinte—the Louisiana Experiment Station reported a crop of more than 50 tons on an acre. If cut when 4 or 5 feet high, it makes an excellent fodder, starts immediately into growth again, and will give several more cuttings as large as the first. If sufficient is planted a continuous supply of nutritious green feed can be had daily right up to frost. Plant in May or June in drills 3½ to 4 feet apart; 3 to 4 lbs. plants an acre. Prices: ¼ lb. 15c; 1b. 50c; 2 lbs. 90c; 5 lbs. \$2.10; 10 lbs. \$3.95, postpaid. Not prepaid, 10 lbs. \$3.50.

**No. F293—Milo Maize**—The plant makes fine feed and ensilage, especially when mixed with soy beans or cowpeas, and the grain is fattening for cattle and poultry. For fodder and ensilage cut when in the dough state; at this stage it has a feeding value practically equal to corn. It grows on all soils. 6 to 8 lbs. will plant an acre. Prices: Lb. 25c; 2 lbs. 40c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

## WYATT'S RECLEANED MILLETS

**No. F185—Tennessee Golden Millet**—German or Golden Millet makes a quickly grown, easily cured and large yielding, nutritious hay crop. Relished by horses and cattle. Seed thickly, not less than 50 lbs. to the acre, any time from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Growing millet with an early variety of cowpeas, like Whipoorwill, is becoming quite popular, 40 lbs. of millet being sown with a bushel of cowpeas. The crop should be cut when the millet is coming into bloom, regardless of the maturity of the cowpeas, for at that stage the feeding value of the millet hay is the highest. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 75c; 25 lbs. \$1.50; 100 lbs. or more at 5c lb.

**No. F186—Pearl, or Cat-Tail Millet**—One of the best and most nutritious of the continuous cutting green forage plants. Grows 10 to 12 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during a season. It does well even on poor land, and surprisingly well in dry seasons. All kinds of stock eat it greedily. Should not be planted until the ground is thoroughly warmed. Sow 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: Lb. 30c; 5 lbs. 90c, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.75; 100 lbs. or more at 10c lb.

**No. F187—Japanese Millet**—(Billion Dollar Grass) Also known as Barnyard Millet. Distinct from other millets; grows 4 to 6 feet high, yielding an enormous crop. Sow in May, June or July, 20 lbs. to the acre broadcast; or sow in 15-inch drills and cultivate until it is 18 inches high. When green, feed a moderate quantity at first, gradually increasing the quantity as the animals become accustomed to it. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. 80c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

Early plantings can be cut in time to put the same land in corn, peanuts, cow-peas, millet or other summer crops. Prices: 8 lbs. (peck) 55c; bu. \$1.45, postpaid. Not prepaid, peck 25c; bu. 85c; 5 bu. or more at 75c bu.

# WYATT'S TREATED and TESTED TOBACCO SEED

ARE TREATED TO PREVENT WILDFIRE, BLACK FIRE, ANGULAR LEAF SPOT AND OTHER TOBACCO DISEASES.

**CULTURE**—A very clean piece of land is best for the tobacco plant beds, hence it is customary to burn a piece of land in the woods for plant beds. ## WYATT'S N. C. CERTIFIED TOBACCO SEEDS

There is no reasonable argument against the use of Wyatt's North Carolina State Certified Tobacco Seeds when it is taken into consideration that one ounce of Certified seeds will produce enough strong healthy plants to set from one to three acres, and that the seeds have been harvested from only those plants that measure up in every way to the very highest standard set by the North Carolina Crop Improvement Association. The North Carolina Crop Improvement Association has carefully inspected the growing of the crops and the seeds have been tested for 1936. Prices: Oz. \$1.00, postpaid.

Oliver 8 Foot, 24 Tooth Rake

## OLIVER SELF DUMP RAKE

THE OLIVER SELF DUMP RAKE is built with a strong rigid frame of hot riveted angle steel. A heavy truss rod runs the entire length of the frame and supports the center of the rake. It is a bridge trussed frame that is built to prevent sagging or twisting. The rake teeth are lifted, and the hay dumped, by a pair of strong lift rods operating from each wheel. The ends of the lift rods are shaped into pawls to fit into the ratchets in the wheel hubs. The large number of ratchet teeth in the wheel hubs cause the rake to dump, the instant pressure is applied to the foot dump pedal. The rake teeth drop to the ground immediately, without leaving an un-raked strip next to the windrow.

The teeth are made of heat treated high carbon spring steel. They are strong, but have sufficient springiness to prevent breakage when they encounter an obstruction.

The wheels are unusually strong. The concave tires are 1 3/4 inches wide and 54 inches in diameter.

Oliver Mower

## OLIVER STALK CUTTER

OLIVER STALK CUTTER is steel built throughout with heavy angle steel frame and equipped with latest type steel wheel with dust-proof boxing, which makes it one of the strongest and most durable machines on the market, one that has had a thorough test under the most exacting conditions, thereby proving its worth.

Oliver 9 Blade Stalk Cutter

## OLIVER MOWER

THE OLIVER MOWER is a fast-cutting, long-lasting machine, in which every part does its share.

The Oliver Mower Frame is strongly built and braced with a solid cross member to the pitman drive end, and braced back again to the tongue. This Big Frame holds the driving parts in rigid alignment and provides the solid base that allows the cutter bar the flexibility it needs, while holding it to its straight cutting line. The Oliver Frame is big, sturdy and solid. It will last and do its work, for many years to come.

In the big frame the full length solid axle runs in long roller bearings, spaced far apart, to give the lightest bearing load, which aids in securing the easiest draft.

All gear teeth of the spur gears, and also the bevel gears are correctly designed to mesh and secure the greatest power with the least loss to play and friction.

The clutch is of the four-jaw dog type, wide on its faces to keep down wear, positive and sure in action. It is controlled by a two pad, double acting foot lever that throws it quickly, either in or out.

No mower has any higher cutter bar speed than the Oliver—many are slower. This higher speed is very essential in cutting wild hay and especially so when mowing roadsides.

# SULFOCIDE

## *The Bean Spray*

Sulfocide was so named by a group of Florida bean growers because it completely filled their requirements, kept the plants free from disease, stimulated growth, increasing yield, and when used as a dip stopped rot in shipment. - One customer asked his dealer, "What is that magic stuff that Carter Jones uses? He ships 'speckled' beans and gets returns."

**Anthracnose** is carried over in the bean seed, consequently spray first as the beans come through the ground and before the first leaf is formed, with Sulfocide, 1 quart to 50 gallons of water to which 1 pound of soap first dissolved in hot water is added. Repeat as often as necessary to keep the vines free of disease. A spray after each picking is very important. It will revive the vines and greatly increase the yield.

For **leaf roller, bean beetle** and chewing insects, mix  $\frac{1}{2}$  pound of fresh Kayso,  $\frac{1}{2}$  pound of Calcium Arsenate or 1 pound of Magnesium Arsenate to 50 gallons of water and then add 1 quart of Sulfocide. Omit soap. Bean growers in Florida seldom need a poison. Do not put Arsenate of Lead on beans.

"On beans we have used Sulfocide from May 1st to the middle of Sept. (in N. J.) and experienced no burning, regardless of weather conditions. I often pick my Curry Rust Proof patches four to five times, and still get good quality of

# *SULFOCIDE as a dip for perishable vegetables*

—The dipping of vegetables in a solution of Sulfocide (1 to 150 or 200) and soap (1 lb. to 50 gals.) covers them with an invisible film of sulfur that has produced remarkable results in reducing decay enroute to market. It is tasteless, harmless and odorless when dry. You can greatly increase your profits by cutting losses in shipment at so little cost. Dip beans for anthracnose, strawberries for ripe rot, tomatoes for phomo rot, and other vegetables too.

"For speckled and moldy beans after they are harvested we dip in a solution of Sulfocide. The specks will dry without further development. If they are not dipped in the solution within 48 hours, the specks would develop to such an extent that the entire package would be worthless. I dipped one lot of 40 hampers which netted me a little over \$2 each, while those that were not dipped did not bring express charges."—W. H. M., Fla.

beans I have used Sulfocide on hundreds of acres of beans."—H. R., N. J.

Beans sprayed with Sulfocide will not rust or blight.—T. F. R. Iowa.

## Tomatoes—Egg Plants—Peppers

For anthracnose, blight and red spider, commence spraying in the seed beds as soon as the plants have put on three leaves, using 1 quart Sulfocide to 50 gallons of water, to which 1 pound of soap, first dissolved in hot water, is added. Spray often enough to keep the new growth covered.

447-20-5-35

For aphid on tomatoes and egg plants use 1 quart of Sulfocide and 2 quarts of Summer Scalecide to 50 gallons of water. For aphid on peppers use 1/2 pound of Black Leaf 40 to 50 gallons of Sulfocide and soap spray.

Tomatoes, egg plants and peppers should be dipped as soon as picked in a solution of 1-1/3 quarts of Sulfocide to 50 gallons of water to which 1 pound of soap has been added as a spreader.

Vats or barrels may be hauled to the field and the picked fruit is carried to the end of the row and poured into this fungicide. They are then

dipped out and placed in field crates. The Sub-Tropical Experiment Station at Homestead, Fla., has reduced phomo rot on sprayed tomatoes to 1 to 5% by dipping in Sulfocide and soap.

"I have always raised fine tomatoes, but the fight to keep off blight had been a losing one. However, since using Sulfocide every plant is perfect and visitors say they have never seen such tomatoes anywhere."—W. E. L., N. C.

"Sulfocide is the best thing I have ever used for killing red spider on egg plant."—G. P. B., Fla.

## Potatoes

Sulfocide is one sulfur spray that can be used safely, effectively and economically on potatoes. It is much simpler to use than bordeaux and just as effective. Commence spraying when the plants are from 3 to 6 inches high using 1-1/3 quarts of Sulfocide to 50 gallons of water. Repeat this spray often enough to keep the new growth covered. This will take care of **blight** and **flea beetle**. For **potato bugs** add 1 pound of Calcium Arsenate to each 50 gallons of spray.

If you have an aphid attack spray with 1-1/3 quarts of Sulfocide and 2 quarts of Summer Scalecide to each 50 gallons of water. This is just as effective as nicotine and less expensive.

"On potatoes I have had most satisfactory results in preventing the ravages of the flea beetle and early blight. I have used it for several years on hundreds of acres of potatoes and if for any reason a field got missed I have felt it a severe financial loss."—H. R., N. J.

# WHAT IS SULFOCID? • HOW TO SPRAY!

---

Sulfocide is a pure penta sulphide of sodium in liquid form. It is unlike any other sulfur preparation. It is perfectly stable in the container, but the dilute solution is held together so lightly that when sprayed out, it is broken up by the action of the air, leaving a deposit of a true colloidal sulfur on the fruit and foliage just where you want it. This sulfur is many times finer than it is possible to grind it. It is so fine that it is invisible, and when dry, tasteless, harmless and odorless; and cannot be washed off even with hot water.

While Sulfocide has been in successful use for many years, its wonderful possibilities have never been fathomed, or its action fully understood.

"There is no better spray that I have used or known to be used for potatoes, egg plants, peppers, tomatoes, and especially beans. It is the greatest blight preventative for beans that I have ever known."—W. H. M., Fla.

"We have used with success and satisfaction your Sulfocide for many years. We use it on most everything. A little goes so far."—T. B., N.Y.

## When and How To Spray

Fungus diseases can be prevented, but they can seldom be cured. Therefore early spraying is very important, and additional sprays should be put on at frequent intervals to protect the new growth.

A New Jersey Grower writes:

"Sulfocide continues to give us the best of satisfaction on potatoes. We commenced spraying when 4 to 8 inches high with Sulfocide alone 1 gallon to 150 gallons of water, and it is efficient in controlling fungus diseases and the flea beetle."

Use nozzles with the finest opening, making a fine misty spray, on a rod bent at the end so that the bottom as well as the top of the leaves can be wet. Do not use excessive force that will whip the plants or you will cause bruising and injury.

# Strawberries

Commence spraying when the plants begin to bloom, and repeat every 7 to 10 days right through picking, using 1 quart of Sulfocide to 50 gallons of water to which  $\frac{3}{4}$  pounds of soap or  $\frac{1}{2}$  pound of casein lime spreader is added. Some Sulfocide in the water used to rinse the sand off strawberries will retard decay in shipment.

"We recommend spraying berry plants just before picking time which will help the berry as well as the plant and better still we recommend dipping the picked berries in the solution of Sulfocide."—L. B. M., Plant City, Fla.

# Cucumbers—Melons—Squash

Spray first when the plants come up, and repeat every 7 to 10 days to keep the new growth covered, using 1 quart Sulfocide to 50 gallons of water and add 2 quarts of Summer Scalecide. This kills aphids and protects against blight and wilt. It also seems to act as a repellent against the beetle. If you must use a poison, add 1 pound Calcium Arsenate to 50 gallons of spray. Never use Sulfocide with arsenate of lead, or on plants dusted with arsenate of lead, unless fresh Kayso is put in spray tank first.

"One of our growers sprayed his cucumber patch 3 times with Sulfocide after his vines were slightly affected, and he had a good yield of mosaic free cucumbers."—Pickle Co., Ill.
