listen only to the words which he pronounces in prayer.

On the *hafaza* devotes the duty of writing down the actions of men; the one on the right hand keeps an account of the good deeds, and the one on the left the evil, and will be a witness on the judgment day. When the man performs a good deed, the angel on the right hand immediately writes it down; when he commits a sin, the same angel begets his companion not to write it. He gives the sinners rest—perhaps seven hours, according to the writers—for which he has time to repent. Some commentators even allow that a compensation may be arranged, and that every good action effaces a bad one. Unbelievers also are said to have guardians (*Qur'an*, lxxxvi. 4).

When the *hafaza* see that the man over whom they had charge has died, they do not know what to do, and they pray to Allah, who tells them to go to the grave of the deceased and repeat the formula of adoration (tebūh, takbir, tāqdis), which, on the judgment day, will be counted among the merits of the deceased.

According to verses in the *Qur'an* into which they have been introduced by Christian tradition, in lxxxi. 11, they are called *kārum kitābind*, 'sage writers', including theovers of human actions; in lxxxi. 12 they are called *hafaza*; but in xli. 12 they are at the same time called *muqaddim*, 'those who declare each other'. This like presentation shows how the commentators, trying to explain it, say that it is a perfectly logical division, and that the second verbal form 'opposite here stands for the third form *gāφa*. The *Qur'an* (i. 17) uses the word *rūf* in denote the guardian angel of men, and *Qahēr* (Tafsir, xiii. 63, line 16) shows that *Qur'an* xiii. 13 was read by 'Ali ben-Ra' with the following variants: 'he has in front of him a *rūf*, and behind him a *rūf*.' There may be some connection between these terms and those referring to the two stars which, during the course of the year, appear at dawn at the West, and at dusk at the East, and the observation of which serves as a foundation for a division of the year into twenty-eight manzūr or *rūf*-a division which is very fruitful in popular practices. The belief in guardian angels, then, over and above Christian traditions, might become connected with an ancient theory.

In the crowd of angels who have no special character, certain authors distinguish the 'pious travellers' (as-sayyāhiin) who scour the country with the intention of frequenting only the gathering where the name of Allah is not being repeated. They then ascend to Allah, who questions them and, on their evidence, pardons his fervent worshippers the faults they may have committed. According to a passage in Ibn al-Athir (Liṣān al-ʿārabi, 1520, 236), one of those could enter any place in which there was an image or a dog.

We cannot explain the circumstance that has drawn the names of Hárrat and Mārrat from the anonymous crowd of spirits into the broad day-light of the Holy Book (*Qur'an*, ii. 97). Traditions have developed rapidly to explain their history, and since the 9th cent. they have been copiously explained by commentators (*Tafsir*, i. 3412). In *Qur'an* it is said that the woman had been thrown into a well in the town of Babylon, where, loaded with chains, they will teach mortals the art of magic until the end of the world. In order to punish them, Allah has commanded them to teach this accursed science; but they have to warn those who consult them that they are rebel angels, and to advise them not to intrude upon the name of 'A'īlah. The woman came to her when the prophet was away, and told her that, being uneasy about the absence of her husband, she had consulted a sorceress; carried away at a gallop by two black dogs (one of the ordinary disguises of *Ibīsh*), the two women had been arrived at the Babylon, 28 leagues, where the woman said, 'Let us go down, we, who have fallen angels had put the inquirer in possession of magical parchments which she was coming to ask the prophet to deliver her.

Who are these two angels, and what was their crime? This is not the place to study in detail the different versions which are prevalent in Arabic lore, about the later writings of Kazwini, for example, the legend has, under Mu'ta- zilite influence, been contracted into an account of a more serious kind, but deprived of characteristic details. We shall give here the chief traits of the most fully developed legend, which seems to be the most ancient.

The first men in the world soon gave themselves up to all kinds of debauchery and crime. The angels who looked on at those horrors from the heavens deplored the meanness and gentleness of Allah. 'Be more tolerant,' he said to them; 'if you were exposed to the passions which agitate men, you would soon commit all their crimes.' Thus they entreated Allah and begged Allah to put them to the test; and he consented. They chose two of the most noble angels—Hārūt and Mārūt, who descended to earth. Allah allowed them to live there in their own way, and prohibited them only from polytheism, adultery, violence, and theft, and to remain well until one day, when a woman came before them; whether by chance or chosen as judges, they had to decide in a quarrel which had arisen between her and her husband. Their judgment was beautiful; she excuted the desire of the two angels.

Tradition gives us her name; she was called Zabara in Arabic, Bālabū in Aramaic, and *Ashaib in Persian* (i.e. Venus). She set conditions on her favours: according to some, she asked her lovers the word which enabled them to ascend to heaven every day, obtained it, and remained attached to the firmament in the form of the planet Venus (Zabara), while the two angels remained prisoners on earth for having misused the sacred word. According to other traditions, they commanded them to worship an idol; or she made them drink wine, the intoxication of which led them to murder a beggar who was passing. In any case, Allah called or recalled them to the sky, and punished the angels.

On the intercession of Solomon, Idris, or some other good personage, he bath of them chose between their firmament and an everlasting chastisement. They chose the former, and were chained in the well of Rābīl, which, according to some, is Babylon, and to Melka: a presentiment of that Demi-devil famous for his magical traditions. We may mention, as a strange association, that two angels who brought magic to men were Mīkhāl and Jadhrī.

This legend may have reached Muhammad through Rabbinic traditions, especially according to the version which shows the woman tempter ascending to heaven with the password of the two angels, and remaining there in the form of the planet Venus. Geiger (*Was hat Mohammed a. d. Judenthume aufgenommen?* Leipzig, 1902, p. 107 f.) mentions a tradition in which the two angels are called Shamłazi and Anazāl (Schwab, p. 209); the daughter of the earth who seduces them is referred to under the name of Aster (= 'star'; see Schwab on the word 'Bidūk'). But we must seek the origin elsewhere; it is in connexion with the cult of Mīthra and Anahīta that we again come across the names of the two spirits. Fravats and Amerats—not to mention the tradition on the Chaldean origin of magic (cf. vol. i. p. 796).

Paradise and hell are peopled with spirits whose exact description has not been given by any writer. At the entrance of the earth was placed an angel called Ridwrān, whose name is probably a rough interpretation of a passage in the *Qur'an* (iii. 15). We do not know in what class to place the *hura* (hār-al-āin), who are said to share with other women the society of the blessed, and who, shining and pure, are exempt from physical suffering, like all the inhabitants of paradise (*Qur'an*, xliv. 54, lv. 20, lv. 56 f., lv. 22, etc.).

The teaching is much clearer in regard to hell. It is guarded by a terrible angel Mālik, assisted by sbēres (sibēnayis), who in their turn have guardians (*hafaza* or hawwād jāhānum) at their command. The sbēres escape from them by reciting this formula. Mālik bears up the sbēres, which bursts into laughter and replies to their complaints with jokes; but he is milder in the case of believers guilty of mortal sins, who, according to the prevailing theory, will one day get free from hell by the intercession of Mūkammād. He is mentioned in the *Qur'an* (xliii. 77).

We have already seen that 'Iblīs was the wicked angel, who, assisted by his son, tempts mortals
He was cursed for refusing to prostrate himself before Aставил, created from clay, when he had been created from fire (quran, xxxix. 6-; T. c. Allah cursed him, calling him 'stained' (rasu`). He has command of the unbelieving jinn, who are his agents with men.

The orthodox doctrine, as we have just seen, is very high of the name of the spirits. But, in imitation of the Jewish Qabbala and under the influence of conjuration formulae, the Muslim practice has developed this nomenclature in a peculiar way: it has commemorated the supreme name of Allah in his ninety-nine secondary names. Thus there is formed an interminable list of names of angels in -a`l, and of names of jinn in -as, which fill all the works on magic. Without entering into details, it may be useful to recall here a hadith which Kazwini mentions (i. 59), following 'Ilu Ab`as:

Each of the seven heavens is inhabited by a group of angels, who are engaged in praising and worshipping Allah. Those who inhabit the lower heaven which encircles the earth have the form of cows, and are under the command of an angel called 'asaf; in the second heaven dwel eggs under the angel Miqal; in the third, vulvas under Sbad`il; in the fourth, horses under Sadiq; in the sea, houris, and the Kalkilih, in the sixth, young boys under Bahib; in the seventh, men under Rabbil. Lastly, beyond the veil which hides the heavens, angels encircle the earth, and are the guardians of the Dead. Allah in different languages which resound like tearing thunder.

In a word, the ancient beliefs of the pagans Arabs have been preserved by peopling the Muslim world with demons for which, with more or less success, the favourite names of the servants of Allah have been given without touching on the critical study of the hadiths.

DEMONS AND SPIRITS (Persian).—Demonology plays a prominent part in the religion of Persia because of the pronounced dualistic tenets of Zoroastrianism. The opposing forces of evil and good are believed to be in constant warfare until the last millennial cycles of the world pre¬cise the day of judgment, when perfected man shall, by the aid of the heavenly hosts, overcome the power of evil (druy) for ever, and righteousness (Av. aza) shall reign supreme.

The general designation for 'demon' in the Avesta is da`a, the same word as the later Persian d, 'devil,' and it is etymologically identical with Skr. de`, 'deity,' Lat. divus, 'divine,' although diametrically opposed in meaning. This direct opposition between the Indian and the Persian terms is generally ascribed to a presumed religious schism in pre-historic times between the two branches of the Indo-Iranian community; but there is considerable uncertainty about the interpretation, and the solution of the problem has not been rendered easier by the fact mentioned below—that the names of the divinities who appear as demons in the Zoroastrian system have recently been found in ancient inscriptions discovered in Asia Minor.

The word da`a is masculine in gender, the demons in Zoroastrianism are commonly conceived to be of the male sex; but there is a large class of she-devils or female fiends, druya, derived in name from the feminine abstract druy, 'deity,' 'essence of evil in the Avesta, a word comparable with the neuter deva, 'false¬hood," 'lie,' in the Old Persian inscriptions. Bes¬ides these she-demons there are numerous other feminine personifications that embody the elements of sin as much as do their masculine counterparts.

In numbers, according to the Avesta, the hosts of evil are legion (Yt. iv. 2). The Gathas speak of the demons as 'the seed sprung from evil thought, deceit, and presumption' (Ys. xxviii. 34), for that reason they are elsewhere described as being 'the seed of darkness' (Festul. viii. 80). Their creator was Ahirman, who brought them forth to wage war against heaven and earth, as is told in the Pahlavi Zendavestan (ii. 3-46). Plutarch (De Is. et Osir. xlvii.) rightly interpreted the spirit of Zoroastrian demonology when he described Ahirman as having caused a number of demons equal in activity to the Divine forces denoted by Ormuzd, the world-egg in which Ormuzd had placed his four-and-twenty 'gods' (theoi). Zoroaster's mis¬sion was to banish these diabolical creatures from the world, and it is easy to understand why the Avesta should place the world-egg in which Ormuzd had placed his four-and-twenty 'gods' (theoi). Zoroaster's mission was to banish these diabolical creatures from the world, and it is easy to understand why the Avesta should place this world-egg in which Ormuzd had placed his four-and-twenty 'gods' (theoi). qualities and as discharging multifarious diabolical functions. Their names are Aka Manah (Evil Thought), Indra, Sauru, Nāoīkāthalya (paralleled with three Indian deities), Taurvi and Zairielia (personifications respectively of overpowering hunger and deadly thirst); and, lastly, Aēsma, (cf. above, p. 138), Taurvi and Zairielia. The fact that three of these demoniacal names are identical with gods in the Indian pantheon has been alluded to above, but their figures on the whole are not really sharply defined, though their malign character appears several times in narratives related to innumerable passages which enumerate them (Vend. x. 9 f., xix. 43; Bund. i. 27, xxvii. 7-12, xxx. 29; Ep. Mān. i. 9; cf. also Dot. xciv. 2; Dink. ix. 54). Reference has likewise been made to the fact that the Iranian Background of this group of demon-like beings is the 14th cent. B.C., recently discovered by Winckler at Boghaz-keui in Asia Minor, the names Indra and Nāsātya—the latter noteworthy by its Indian form (with s) in contrast to the Iranian form Nāsōn, appear as demons and not as deities. Until the full connection of the passages in these inscriptions is made known by the discoverer, it appears premature to theorize in regard to the possible bearing of the ahumans upon modern folklore and the presence of the present Indo-Iranian religious schism. The mention may be merely a direct reference to Indian deities without having any immediate connexion with Iran.

Of the sixfold group of arch-fiends, the most clearly defined is the assaulting and outrageous demon Aēsma, whose name has been thought to be reflected as Asmodain in the Book of Tobit (see F. Windischmann, Zoroastr. Studien, Berlin, 1896, p. 138; A. Kobut, Trakt. Anglogische und Demonologische, Leipzig, 1896, p. 75; F. Spiegel, Erdt. Alterthumskunde, Leipzig, 1877, i. 132; E. Stave, Einfluss des Parazines auf das Juden-, Haaien, 1898, p. 203; J. H. Monnot, The Iranian Background of His Name, Zeitschrift für orientalische Kirchenkunde, xli. (1907) 558; for the opposing view, see Ginzelz, in JFR ii. 217-229).

By the side of these six arch-demons there are named in the Avesta and supplementary Zoroastrian texts more than fifty other demons, personifications of evil forces in the world (for the complete list, see Jackson, op. cit. infrav, pp. 659-662). It will suffice to mention a few of these, such as Tarωnanti, 'Arrogance'; Mithoza, 'Dread'; Aži, 'Shame'; Zemah, 'Destruction'; Zemakha, 'Winter'; and a score or more of personified malignant forces.

The special cohort of fiends (droyes), as already noted, is headed by the Druk paramount, or the demonic embodiment of deceit and falsehood, who draws in her train a ribald crew of followers, corporeal and incorporeal, entitled in the Avesta droyesnts, or droynts, 'the wicked.' Foremost among these agents in exercising pernicious activity is the Druk Nosēm (cf. Gr. rōikos), 'corpse-fiend,' the veritable incarnation of pollution and contagion arising from the decomposition of a dead body. Of a similar character in the Avesta is Parsa Mez (Pesh. Mez., xix. 8; Yt. vi. 4, xiii. 130), the same as Sēj in the Pahlavi texts (Bund. xxvii. 26; Dink. ix. 21. 4, vii. 4. 37), a form of wasting decay and decrepitude that creeps on unseen. Fiercely malignant in her influences and angerfilled (Yt. iii. 9. 12. 16), who embodies the spirit of whoredom destructive to mankind; while little better are the seductive

Pairikā, 'enchantresses' (the late Persian Peres) and their male partners, Šatmās, 'sorcerers.'

Among demoniacal monsters is Aški Dahāka, 'the Serpent Dahāka,' a tyrant out of whose shoulders grew two snakes from a kiss imprinted between them by Ahraman. Zoroastrism throughout Zoroastrianism is represented as the personification of the thousand years of oppressive rule over Iran by the Babylonian Empire in early days; and he appears equally in the derived demonology of Winckler, in Manicheism (cf. Bull. xlii. 19. 37), as well as in Armenia (above, vol. i. p. 500), while his name, with the signification of 'dragon,' is even found in Slavic (Brenner, Slov. etymolog., Wörterb., Heidelberg, 1898 ff., p. 36). A dozen other the souls of dead and decaying of Iranian demonology are pre-Christian Armenians see above, vol. i. p. 779 f.).

A. V. WILLIAMS JACKSON.

DEMONS AND SPIRITS (Roman).—The Romans and Latins, and the races of Italy who were nearest of kin to them, believed in demons, possessed but little in the nature of mythology or folklore before they passed under the spell of the Hellenic culture. The early Italian conception of the supernatural power had not much about it that was definite or personal. There was a vague consciousness of a Divine influence (numen) which worked in different spheres and with different manifestations; but the allotment of distinct departments to clearly conceived personages, more or less superhuman, and the gradation of these personages to form a hierarchy, were alien to primitive Italian thought and feeling. In the earliest form of belief, only two classes of beings were intermediate between the human and the Divine. These were the souls of the dead, and certain spirits who attended on the lives of individual human beings.

We shall first deal with these attendant spirits, who, when attached to men, bore the name genii, and, when attached to women, the name famuli. These creations are rey of the soil of Italy, and the faith in them was less affected by contact with the Greeks than any other article of indigenous Italian religion. It hardly needs to be said that the history of cultus of cultus paralleled to this notion of an invisible personality, separable from, yet closely attached to, the life of the visible man. The fraeviši of the Persians and
the ka of the Egyptians were not unlike, and the Greeks viewed the psyche in a somewhat similar fashion. Even barbarous peoples often abstract from the individual some striking characteristic or characteristics which they contemplate as belonging to a more or less spiritual person distinct from the man himself. Such a concept is the genius, and it was a warlike spirit also wilderness, the races he lived in the old Roman house. The corresponding power in the case of the matron is her junio, and the later goddess Juno is merely a generalization and a glorification of the separate inferior goddesses. That no parallel god emerged on the male side is an anomaly of a common kind. In the genius were also embodied all faculties of delight, so that phrases such as indulgere genio, 'to do one's genius a pleasure,' and defraudare genius, 'to cheat the genius of an enjoyment,' were common. But the intellectual qualities which we denote by the borrowed word genius never specially pertained to this ancient spirit. The genius was the spot called genius by its nature. The genius and the junio were at first imagined not only to come into existence along with the human beings to whom they were linked, but also to go out of existence with them. Yet they were not entirely effaced from the mind, for the new idea of the soul, which was not only to exist over the fortunes, but also the temperament of their companions. There was undoubtedly a sort of fatalism connected with the belief in spirits. The Greeks often conceived of a particular psyche, or soul, as existing in the house of sin in a similar manner, and therefore they usually represented genius by a gyō. But occasionally salus is viewed exactly in the light of the Roman genius. In a well-known passage (Ep. ii. ii. 188), Horace does not hesitate to call the genius a god, though he at the same time declares him to be subject to death. The snake was the common symbol of the genius and the junio; hence the pairs of snakes which are painted on the walls of many houses at Pompeii. It was not uncommon to keep a tame snake in the dwelling, and the superstition believed that the genius was incorporated in it. Simple altars were erected to the spirit, and offerings were made to him.

In course of time the ideas attached to the genius were in many respects changed and expanded. By a sort of logical absurdity, genius of the great gods were invented, and shrines were erected to the genius of Jupiter and others, while any collection of human beings gathered together, in a city, for instance, or a guild (collegium), or a camp, might have its attendant spirit. Thus a genius publicus was worshipped at Rome. But the imagination that things of places not connected with men were thus companioned—an imagination involved in such phrases as genius urbis annonae or genius loci—sprang up only in a late age.

In the Imperial time, the servitude between the Emperor's genius and his imperial household had many notable consequences, and subserved some political purposes. Augustus was able to allow the veneration of his genius to become part of the public worship of Rome without flouting Roman prejudice, though he was compelled (officially) to confine the deification of his person to the provinces. When it became customary for oaths to be taken by the Emperor's genius, it was possible to introduce a sacrilegious punishment for perjury, which had previously been left to the Divine vengeance.

When Eastern religious influences spread over the Western part of the Roman Empire, and new developments in philosophy aided these influences in transforming culture, old ideas concerning the genius underwent contamination. The genius, which had been supposed to die with the man, was now held to be identical with the soul which survived the body. Hence on the later tombstones of this name sometimes describes the spirit of the deceased. Servius, the commentator on Virgil, tells us that the vulgar did not clearly distinguish between genii, lares, and manes. This confusion had been helped by learned speculation from the time of Varro onwards. Therefore, not to consider Roman and Italic beliefs concerning the state of the dead.

That a cult of the departed existed from primitive times is clear from many indications. The earliest form of the Roman religion, not the ancient purificatory ceremonies for the appeasement of the ghostly world. The vanished spirits were not without an influence over the living which was to be dreaded. The month of February took its name from the genius of the mare, who in the Roman calendar was called Brutus. Each family in the community had its special concern with the ritual. The ghosts were supposed to approach some openings in the earth, to which the name manus was given. Such was the dedication of the spot called Campus Martius, and another place in front of the temple of Apollo on the Palatine. The ceremony called lustratio ('purification'), which was performed for the newly-born child, for the army in times of peace, and for the whole assemblage of past and present warriors every five years (when the censors were said concordare lustrum), seems to have had its origin more in fear of the unregarded dead than in any actual security of the person of the god; and the ornament called bulla worn by the Roman child appears to have contained charms originally intended to ward off ghostly anger, to which the young were specially exposed. It is believed that the worship of the lares, or household spirits, was one form of the cult of the dead, and, till recently, they were followed by the moderns. There is, however, much evidence to show that the veneration of the spirit began outside the house. The earliest mention of them is in the ancient hymn of the Arval Brothers, where they appear amongst the protecting divinities of the fields. Originally each house possessed only one lar familiaris, and later, a use of lares applied to the spirit of the household' is not earlier than the late Republic. It is possible that the lar familiaris was at first the mythical founder of the separate family, just as each gens had its mythical ancestor. But the existence of early times of lares in every comitatus, or quarter of the city, and of lares perennis and other lares connected with localities, points the other way. And the worship connected with them was joyous in character, not funeral. The scholars who identified the lares with the departed souls were influenced, perhaps, by a supposed and improbable connexion between lar and larva (which is the name for an unsatisfied and, therefore, dangerous ghost), and by the primitive custom of burying the dead within the house of the living. The phrase di manes, which is familiar to us on Roman tombstones, appears to have been the earliest applied to the general divinities who ruled the world of shades. Their appearance in Roman religion must have been comparatively late. The term manes, properly 'good' or 'kindly,' is euphemistic, like the name Eumenides, given to the Greek Furies. The application of manes to disembodied men is secondary, especially when the word indicates a single ghost. Yet, from an early time, the ancestors in the other world were deemed to be in a sense Divine, and were called
**diē parentes. The leumnes are the same as the**

**loures** the spirits with whom, for whatever reason, the living find it hard to maintain a permanent
peace. The name is connected with *leumantia*, a
purificatory ceremony held at Rome in the month
of May.

When the West was invaded by the religions of the East, including the Christian, and when philosophy, especially in the hands of the Neo-
Pythagorean and Neo-Platonic schools, developed much mystical doctrine about things Divine, the
belief in beings who were more than men and less
than gods became universal. The whole world
now abounded in demons of limited power for good
or evil. The testimony to this perversion is
scattered broadcast over later literature, from
Aphipus onwards, and over the remains of Imperial
art. The deified emperors were like the Greek
 irresponsible, and to them the name *diē*, which had in earlier days not been distinguished from *dēi*, was
appropriated. Magic and astrology blended with
the faith in demons, which, when Christianity pre-
vailed, were regarded as wholly bad, and were
identified with heathen divinities. The minds of
men were laden with a burden of which they were
never to rid themselves, and the symbolism sprang out of the
Reformation movement.

**DEMONS AND SPIRITS**

**Slavie.**—There is abundant evidence of the persistence of the belief in demons and spirits among the Slavic people
even to the present day, especially in districts
where primitive ideas and customs have not yielded to the
advancement of civilization. Popular imagina-
tion traces the agency of supernatural beings in
every part of the surrounding world—house and
hovel, meadow and forest, in every nook and
corner the possible hiding-place of an invisible
spirit, which, however, may on occasion assume a
visible form. In seeking to classify these beings
under leading categories, it is found that in
the Orient the demons assume to various extent the
different forms of the animate stage of thought, and which,
on the other hand, should be described rather as
demons, demanding the prayers, offerings, and
worship of human beings. As to the various classes
of demons themselves, such as dream-spirits and
spirits of disease, domestic spirits and Nature-
spirits, it is likewise no easy task to draw distinct
lines of demarcation between them.

The origin of demonic beings is explained in a
cosmogonic legend of dualistic character, which, it is
ture, belongs to a relatively late period, and is
derived from a foreign source.

According to this story, which is widely known among the
Slav, the following tradition existed from the
Middle Ages, and is quite inde-
pendently of the Good. As a result of the combined work
of both—God and Satan—the world itself came into being. Satan,
in the form of a water-fowl, made his way to the bottom of
the primate ocean, and in his beak brought up rock and sand, with
which he covered the earth. When frayed the waters the
Satan, however, secretly retained in his mouth a portion of the sand, and made
therewith all the rugged and inaccessible places—mountains,
gerous rivers, deeps, straits, and huge islands. Satan then tried
drowned God, who, fatigued with the effort of creation, was now
able to create it. This exhaustion made him take refuge in the
place of the earth, which caused floods to rush forth thereon: thus arose great
water and abysses, into which, however, Satan himself was at
length flung, and thus became ever afterwards the
sufferer under the water (q.v.)

Deity, Satan also created the work of creation, and monstrous
plants and animals are the result of his efforts. Desiring to
form a retinue for his other service such as would correspond to
the angelic hosts of God, he was advised by the latter to
reach to his hands, and to follow the water down to the
bottom of the ocean behind him. From these drops sprang an innumerable multitude
of evil spirits, who, on their own head, as their own. It is believed
in Russia that the same thing takes place when a man
is engaged in washing himself lets the water drip around him.

According to another form of the legend, demons
were produced from a stone upon which blows were
deght by God and Satan respectively. Satan's arrogation
and the growth of him, which induced him to
revolt, with the result, however, that the angelarch Michael
hurled the wicked host from the earth to the
abysses below heaven and earth; one remained
in the air, another in the forest, a third in water, etc., while
the rest sank down to the underworld. The demons have their secret
habitations in all places—in the air, in woods, waters, and the like. It is a popular belief that the
conflict between the Good and the Evil principle still endures,
and manifests itself in thunder and lightning. The
thunderstorm is brought about by the thunder-god—Eliphaz or Michael—
who pursues the evil host with a bolt of fire. Every object
injured, every person or animal killed, by the lightning-flash
is caused by the Devil. In popular belief, no
touch the gods, but the demons; even the term thunderstorm wins salvation, as also the notice that the
wood of a tree shattered by lightning contains a powerful counter-
active to the work of evil spirits.

The people of Little Russia explain the genesis of demons by
another myth, with which, however, is known
in Russia as that which we have just sketched. According to them, evil
spirits are the children of Adam. Our first parents, it is related,
had twelve pairs of children, but only seven came
to visit them, Adam tried to conceal half of his offspring from the
Divine. The children who were thus hidden were transformed
into demons.

Although many demons are destroyed in their
warfare against God and good men, yet their
numbers are not diminished. On the contrary,
their ranks are always being reformed, either
by marriages amongst themselves, from which issue
new generative powers, or by sex with human beings. Further, their numbers may be recruited by the human
children who become de-
mons—a transformation which takes place when a
child is cursed by its parents, or dies unbaptized,
or when it is taken away by a demon. If a child
is changeling (p. v.) left in its place. The powers of evil
also gain possession of all who die a violent death,
such as suicides and children overthrown in sleep;
hence the idea that it is dangerous to try to save a maiden
child from this mode of coming into
the world. Those who are drowned, etc., as the devil will feel himself
wronged in being balked of his expected
victim, and may take vengeance upon the rescuer.

The demons are believed to correspond to each
woman with human beings. They injure
man by causing accident and disease, or they give
him help and protection. A common idea is that
a demon sits upon the left shoulder of every human
being, ready to take possession of him at any
moment of weakness, and it is therefore advisable
that when a person yawns he should guard his
mouth by making the sign of the cross, and so
prevent the fiend from gaining entrance into his
body. But, if an individual takes with the devil (and a compact
is hereby made between the two) to
sign the document), the devil undertakes
on his part to serve the man in every possible way,
and especially to make him rich. In the course of ages Satan has taught mankind the
arts of iron-
working, brewing, and distilling, as also the use
of tobacco. He was the discoverer of fire; he built
the first mill and the first wagon. The arts of
reading and writing were also invented by him.

Moreover, when in the disguise of a
good man, he incurs the resentment of fugitive
man; he may appear under the disguise of a
friend or a lover, and it is even believed that he can serve his ninions by taking their place in the ranks of the army. It is also said that, when he wishes to gratify his lust, he visits witches in the form of a flying fiery serpent; such, for example, are the Ledavatuci of the Huzulcs and the Polish Jezibohy, whose form is a female spirit, sometimes that of a fascinating maiden.

It is with witches that the evil spirits and demons have their most active intercourse. At certain seasons, and especially on the principal feast days of the year, to Satan the witches visit the sitting-places of the demons, where they drink, dance, and wallow in debauchery. The demons on their part are ready to abet the witches in carrying out those magical operations which, according to popular belief, are never executed by supernatural agency. Such, for instance, are the machinations by which the sorcerer causes untimely births, inflicts love, sells dismissal among friends, anything in a word, which does mischief to mankind. The transactions are performed in the name of the evil spirit, and, when they are followed by an adjuration, this usually takes the form of an appeal 'to the host of uncanny spirits in conjunction with Satan.' The part which the sorcerer has in view. Such an adjuration of the infernal spirits implies, of course, that the sorcerer has by word and action taken the final step in his abandonment of the Christian faith and of all that is connected with the church and its forces. He takes the cross from his neck and tramples upon it; he avoids the use of sacred words, and declares himself an apostate from Christ and His saints. A person who has thus given up any respect for his health in his very appearance; it is believed that he no longer washes himself or combs his hair. In little Russia, a woman who desires to become a witch goes at midnight to some river, where the evil spirit comes forth to meet her, and must previously have trodden a saint's image under foot, and removed the cross from her neck.

According to the superstitious belief, reflected also in the language of incantations, the evil spirits dwell somewhere in the North or West, in a 'nocturnal' land, while the good angels are in possession of the realm lying to the East. The region peopled by demons is dark, shrouded in mist and cloud, and lies deep down in an abyss which is not widely diffused, it is the hosts of Satan live in a subterranean region, whence they issue forth upon the world at the bidding of their prince; or in deep waters, unclean places, dense forests, and marshes where the sun never shines. Bushes of elder and willow by the water-side are in some localities believed to be the favourite haunts of demons. They leave their lurking-place in the vicinity of water on the 6th of January, i.e. Epiphany, when the priest blesses the water; then they migrate to an abode in the meadows. In Passion week, again, when the meadows are consecrated, they pass into trees and cornfields, and then, at the festival on the 1st of Azg that, they will lie in ambush which is consecrated on that day—and return to their own element. Another favourite resort of demons is the cross-roads (q.v.), where evil spirits come together from all quarters of the world. The skill with which they are adapted to supply a lodging for demons. They like to tarry in the neighbourhood of a spot where treasure is concealed. On Easter Eve and the Eve of St. John, when the bracken is supposed to flourish, the demons endeavour to prevent the blossoms, which possess extraordinary magical virtues, from falling into the hands of human beings. At the hour of noon they muster at their favourite spots on the banks of lakes and rivers, and it is therefore dangerous to linger in the open at that time. There is, indeed, a special midsummer demon, the Ies poledenyni. It is believed that the spirits retire from the earth and return to Hell in the middle of November, only, however, to resume their expeditions as the first signs of spring, when Nature re-awakes from her winter sleep.

Hell, the never lake of fire and smoke, is, in a special sense, the home of these evil spirits. Here Latysiper, with his wife and attendants, swims and sails about, torturing the chairs of the place of eternal fire is depicted as a bathroom or stove, in the heat of which the souls are tormented. The belief in hell-fire and the discovery of iron have conspired to foster another notion, viz., that the demons are smiths. In Russian incantations we find mention of three such demonic smiths, the three brothers. The idea of a trio of friends is also current in the folklore of other Slavonic countries. The oldest demon of all, Latysiper, is very frequently referred to as Herod—a name which probably denotes both the murderer of the innocents and the slayer of John the Baptist. Other names applied to the devil are 'the satan' (Slavonic), 'the aston (of his hosts), Juniper (of the Chaldeans), and Satan. According to the legends, the chief of the infernal forces is bound with a chain, which, however, in consequence of the sins of men, wears thin, and would long ere this have given way altogether, but for the fact that the devil is continually being reconstituted; it is restored at every Easter-tide to its original strength.

In addition to the demons named above, we find here and there a large and powerful female being, whose chief characteristic is a neck, which, through its height, makes her, in a word, a being of great stature, and plays great part in Slavonic legend.

This is the Babacaja (Russ.), Jeda (Pol.), or Jezibohy (Slovak), a hideous old beldam, whose children are the evil spirits, or who, as the devil's dam," sends forth her subject spirits into the winds. She is said to steal children for the purpose of gratifying her craving for human flesh; to fly in company with the spirit of death, who gives her the souls of the dead for food, and to stir up storm and tempest in her flight. The legends also tell that she has teeth and breasts of iron, with which she rends her victims, and that her home is in a far-distant forest.

Among other Slavic names applied to evil spirits may be mentioned the following: sert (Bohem.), sert (Russ.), Bajart (Pol.); djevar (Russ.), djeval (Bohem.); bela trge (adversary); bokur (the crafty); djugeti (shadow); djugeti (unclean), dedilj (grandfather). The last-mentioned (Little Russian) epithet is applied to both the domestic spirit and the devil, and in this it resembles the Bohe, Beelzebub, Ie. 'the great godling' (cf. dibbik = dibulohi as also the Bohem. Spiritus = Lat. Spiritus, Slovak piskulik, which corresponds to the O. Pruss. piskulka). This is one of the numerous facts which indicate that heathen demonology and the Christian conception of the devil conceived in the idea of a single 'unclean power.' In order to avoid giving offence to the demon by uttering his name, the people refer to him simply in the third person, as 'the' or 'himself.'

The demons are represented also as capable of assuming human form, and as having the qualities and propensities of human nature. It is to be noted, however, that they often show in every case some peculiar feature which distinguishes them from mankind. Thus, the demon's body may be black, or covered with hair; or he may have a horn, or a tail. In many instances he is recognized also simply as a spirit; he can be recognized by his red and fiery eyes, or by the absence of some prominent organ of the body, such as an eye or an ear; or, again, by the resemblance of his feet and ears to those of a domestic animal. A large number of demons, without eyelashes, is suspected of being a demon. The water-spirit often appears in human form, and his real nature is then recognizable only by the water that oozes
from his hair and clothes. The devil, again, has a special liking for music, and dances to it. He is also fond of drinking. Demoniac beings have strong erotic tendencies; one of their common manœuvres is to waylay women and girls, or, again, to appear before a young man in the guise of a beautiful and alluring maiden. It may also be mentioned that some demons even demand food, but, as immaterial beings, may be put off with mere odours and fumes.

Demonic beings stand in awe of things connected with the Church, and consecrated objects generally; and these accordingly are the most potent amulets against their evil practices. Of such prophylactic articles the most important is the cross; and everything that bears that symbol shares its power. Other effective expedients are found in sacred tapers, holy water, and holy oil from the latter. The glowing firebrand is in all cases a specific against demoniac agency.

Those demons and demonic spirits which make their abode in human beings—the witch, the vampire, the demoniae—have also the power of assuming an almost endless variety of form. When present invisibly in his body, or in his animal appearance—from other by night. It is also believed that the demons have an aversion to wheat and flax, as the consecrated wafer is prepared from the former, and holy oil from the latter. The glowing firebrand is in all cases a specific against demoniac agency.

The Jegomija of the Serbs, again, may remain invisible. The Jegomija-spirits are said to fight with one another among the mountains, their missiles being human or animal beings; and, while they are about their work, they are known by their flashes of light, or by thunder and lightning. Upon their influence depends the state of the weather, and thus also the fruitfulness of the soil.

A special instance of demonic metamorphosis is found in the Slavic werewolf—the Vukodlak (Bohem.), Vlaciokolak (Russ.), Vukalac (Serbo Croat.), Vlakolak (Bulg.). The werewolf is a man who can change himself into a wolf, or who has really become a wolf by the enchantment of a witch. The belief in such transformations has been widely current for centuries; as far back as the 12th cent., eclipses of the sun and moon were attributed to the werewolf. The werewolf figures largely in legend. A person who has the power of changing at will into a wolf always shows some point of difference—in his beard or in his animal appearance—different from other people. It is believed that his father was a wolf, and that he himself was born into the world feet first. In the upper part of his body he resembles a human being, while the lower part suggests the wolf. He may also have a human mouth and demoniac heart. To become a werewolf is a matter of no great difficulty. One need only drink a little water taken from the footprints of a wolf, or turn over a fallen tree, and then put on a wolf’s skin; on the night thereafter the werewolf appears, bringing terror to man and beast. In some districts of Bulgaria it is believed that the Vlakolak is a spirit which has been formed from the blood of a murdered man, and that he haunts the scene of the murder, and causes the place to become arid.

Among all the Slavic peoples, and especially among the Serbs, the werewolf is often confounded with the vampire or upyr (Serv. vampir, Lit. Russ. vupir). The werewolf is the soul of a dead man, which comes forth out of the grave for the purpose of working injury upon the living. The Serbs believe that impious people, and especially witches, become Vukodlak after death, and drink the blood of sleeping persons. When an unusually large number of deaths take place in a village community, the calamity is attributed to the Vukodlak. Word passes from mouth to mouth that the ghostly evil-doer has been seen as he moved around with the mortal cloth upon his shoulders. The people then go to the churchyard for the purpose of identifying his grave. They take with them a foal, and the grave upon which the foal stands still is opened, and the body taken out and impaled with a stake through the calf. The vampire, and cases of similar measures are resorted to when the people seek to deliver their homes from the nocturnal visits of the vampire. In Russia, for instance, a stake of aspen or maple is thrust into the corpse, or else the grave, of the vampire, thereby preventing the evil-doer from rising again. In some districts the corpse is burned, or the blood-vessels severed below the knee. Besides the vampire of the dead, however, who finds pleasure in tormenting sleeping persons by night, we hear also cases of demonic agency among the living.

We hear also of vampires who were originally children begotten of mankind by the devil, or children who died unbaptized. In point of fact, any ordinary individual who is tormented after death; if an unclean animal or bird—dog, cat, magpie, cock—sucks casually over his dead body, or if he is not buried according to the ordinary ritual of the Church, he thereby becomes a vampire. The vampire may be recognized in the grave by the fact that his corpse does not decay, but retains a ruddy colour in the face, and has the mouth smeared with blood. His limbs bear marks which show the gnawing of his teeth. When at length he is buried, and his body is laid in the grave, he assumes the form of an animal, or, indeed, of an object of any kind. We may also note here that, according to a popular superstition in Little Russia, every witch is subject to an upyr, who was born with her and with whom she cohabits.

To the same class of tormenting spirits belong the mora, mura, or masa (Russ. and Pol.), moruchka (Russ.), Kikinora (Russ.), morovas (Wend. and Bulg.); cf. the Ger. nach or Malheur, 'mare', 'nightmare'. They might be described in almost the same terms as the vampire. They, too, are the souls of living men, which leave their bodies by night, and visit sleepers for the purpose of tormenting them. In Russia and in Saxony, however, the mora is thought to be the soul of a child that has died unbaptized, or has been cursed by its parents; or it is a spirit which dwells in the cemetery and makes itself visible in the shape of a graceful being. Popular superstition invests it with certain features which distinguish it from ordinary human beings. The soles of its feet are flat, and its eyelashes meet. A child who at birth has visible teeth, or one who, having been taken from his mother, continues to sneeze again, eventually becomes a mora. A similar development is expected in the case of a child whose mother during pregnancy happens to go out of her room just as the clock strikes the hour of noon. Further, should the Church take place during baptism, the child being
baptized is thereby doomed to become a mora. It is also believed that a witch can spiritually make herself a mora. The characteristic pursuit of a mora is to plague her sleeping victims with bad dreams and oppression of the chest, while she is sucking on their breasts. During the visitation the sleeper is incapable of speech and motion. But the mora does not confine her evil practices to human beings; she likewise torments domestic animals, draining them of milk and blood. Nevertheless, it is not a difficult matter to rid oneself of the cruel attentions of the morn. All that is necessary is to offer her a gift of some edible substance, such as bread, salt, or butter. An effective means of keeping her at bay is to place beside some object, such as a double triangle (the so-called 'mora’s foot'), a mirror, a broom, a steel article, etc.

The further we trace the mora or kikinora towards the East, the more she does shed her distinctive characteristics and become identified with the household spirit, or deva, which are ascribed the traits which belonged originally to her. She has now become an inmate of the house, revealing her presence by her nocturnal movements. She makes her round with people, puts them into a state of terror and causes discontent, raves the work of the sewer or spinner, sits spinning upon the stove, or busses herself with tasks that belong to the housewife. She is a little old woman, and lives behind the stove. When the inmates of the house wish to rid themselves of her presence, they sweep the stove and the corners of the room with a besom, and speak the words: ‘Thou must go away from this place, else thou shalt be burned.’

In the parts of Russia the mornas are believed to be repulsive-looking dwarfs, who may be found as crying children among the fields. In Siberia the kikinora has become a forest-spirit.

Analogous to the mora is the nocturnal demon which is known among the Slovaks, Poles, Serbs, and Russians as the nocinta (‘night-hag’). When a child suffers during the night from some unknown ailment, terrors, about and crying, the trouble is set down to the nocinta, who takes the child by tickling it or sucking its blood, or disturbs its sleep by her mere touch. The liability to such disturbance is attributed to the mother’s having neglected her child the evening before. In external appearance the night-hag has no special stains very indistinct; she is simply a female demon who wanders around in the darkness of night. In some localities the nocintas are supposed to form a group of twelve sisters. It should be noted, moreover, that a similar name, podanoctasites, i.e. the ‘midnight-woman,’ is sometimes applied to the Virgin Mary. In the Government of Archangel people safeguard themselves from the nocinta by drawing a circle round the cradle with a knife, or placing the knife within the cradle, or by putting an axe, a doll, and a spindle beneath the floor, or by driving a piece of wood into the wall. The incantations accompanying these actions always contain an expression of the fact that the ‘nocturnal demon’ will no longer play pranks on the child, but seek to find amusement in the things thus offered her. Sometimes an obliteration of bread and salt longing to her, part of it being rubbed upon the head of the sick child, and the rest placed under the stove. The hag who terrorizes children by night is also known in Russia by the names kriksy (cf. krk, ‘scream’) and plaeksy (cf. platat, ‘cry’). In Bulgaria a corresponding part is played by a frightful wood-hag called goska makea, whose head somewhat resembles that of an ox.

Among the White Russians the belief has been traced that the nocturnal spirit produces illness in children from within, having first found his way into their bodies.

This superstition introduces us to the demons of illness, or some so-called. Certain diseases are commonly believed to emanate from supernatural beings who have found an entrance into the body of their victim, and thence proceed to torment him. This holds good in particular of fevers, epilepsy, insanity, and plague. Among the White Russians, when the nature of the malady can be determined, it is supposed that the patient is tormented by an ‘unclean power.’ In such cases the body of the afflicted person is rubbed with a piece of bread, which is then offered to a dog, cat, or cow; especially the domestic spirit is entreated to accept the offering thus made, and to absolve the sick man. This is engaged on an errand of this kind must not cross the thresholds.

Here we have a vestige of the cult of the dead; sometimes it is said in so many words that the offering is intended for the dead. There are occasions upon which an individual may very easily fall into the power of the demon of disease. Such an occasion is birth, together with a certain period thereafter, during which the child is baptized. It is imagined that the unclean spirits swarm round the house of the mother, and are disposed to every possible means of working injury both to her and to her child.

The demon of fever is believed to be one of the three, seven, twelve, or seventy-seven so-called Lichoradka-sisters (lichoradka = ‘fever’). In order to secure its grace the people speak of her by such endearing epithets as ‘godmother’ and ‘aunt.’ She wanders over the whole world, causing illness wherever she goes, and is represented either as an ugly, lean, naked, and hairy beldam, or as a young and beautiful nymph. Offerings are presented to her with a view of obviating her attacks. If the infection has come by way of the earth, an obliteration of corn is made at the particular spot. But the gift is more frequently cast into the seventy-seven pieces, which he then throws into a river as he utters the words: ‘Ye are seventy-seven; here is a portion for each of you; eat, and meddle not with me.’ When the festival commemorating the dead is celebrated in White Russia, the Lichoradka gets a share in the feast. Among other measures adopted in battle with the disease, the following is of special interest.

An attempt is made to deceive the demon in such a way as will prevent her recognizing the sick person when she returns to attack him again. The patient’s name is changed; his face is covered with a mask, and words are written on the door to say that he is not at home. Another expedient for scaring the demon is to fire a gun. The diseased person is made to eat bitter and fiendish things, or he is fumigated with some evil-smelling substance, in order to render the demon’s sojourn within the body as uncomfortable for herself as possible. The most reliable prophylactics of all, however, is a certain incantation which occurs in an interesting story about the origin of the Lichoradka-demons.

According to this incantation, they are the daughters of Satan and the oldest and most ferocious of all is the one known to her son John the Baptist was put to death. At the command of their father they issue forth from their subterranean home to plague the inhabitants of the earth.

A frequent disguise of the demon of pestilence is the figure of a woman—the black woman, one of the Bulgarians (in Russia, the Morovoya panna, čuma, or cholera; in Servia, the kuga), but it may also take shape as a bird or an animal—a cat, horse, or cow. The Morovoya panna, clothed in white and
When a birth occurs, the newly-born child is visited in the Roman Catholic, the Russian, Turkish, and Slavic (Bohemian, Polish, and Sloven. Rodjenice, Sudnice, Sudjenice; Bohem. Sudicky; Bul. Rodzenici, Orinici)—beautiful, richly-attired, diaphanous maidens. They ordain the destiny of the child, and determine the manner of its death. It is generally believed that the decisive forecast is that pronounced by the one who speaks last. In order to induce the Fates to assign a favourable destiny to the child, gifts and offerings are presented to them. Among the Southern Slavs and Bohemians these presents are in the form of food—bread, salt, or wine—placed on the table, or, it may be, in hollows among the rocks, as it is believed by the Slovenians that the Rodjenice live in rocks and mountains. In Bulgaria, on the evening upon which the visits of the Orinici is expected, it is customary to partake of a special supper, after which three pieces of bread are placed at the head of the newly-born infant, in the hope that they may prove an acceptable offering to the august visitors. It may be included among the prophetic persons serving by speaking of the demon under endearing names, and thus regaining her favour.

Mental derangement, 'possession,' affords one of the clearest instances of the sojourn of a demon in a person's body. Such a phenomenon is accompanied by the Ekob Klikobilastvo malady prevalent in Russia—a state of supposed demoniacal frenzy which can be induced by the machinations of a witch. At her command the evil spirit takes up his abode within the body of the sufferer, and makes him give vent to abnormal sounds, such as neighing, barking, and the like. The sufferer may be relieved by the use of consecrated objects or the adjurations sanctioned by the Church, or, again, by cutting on harness, or by burning a substantial cake at the feast of Epiphany. There is, however, another theory of the origin of lunacy: the disease is sometimes attributed to an evil spirit (forest demon, etc.), which of no set design simply flies past a person.

The truculent spirit of pestilence resembles in outward appearance the personified figure of Death—the Bohemian Smrtina žena or Smrtnice. The latter also is a woman, haggard and dressed in what is beneath the windows of a house in which some one is dying. If she sits down at the head of the bed, the last hope of recovery is gone, but, if she places herself at the foot, the invalid may get well again. The people believe that she is guided by putting crosses or saints' images upon the bed; but they are ready, on the other hand, to admit that Death is deaf to prayer. In Little Russia and Moravia it is thought that Death lives under the earth, in a room lit by innumerable candles, some of which are just being lit, and others upon the point of going out. The candles stand for human lives, over which Death holds sway. This attribute of power over human life belongs both to the spirit of Death and also to the Fates.

The whole course of a man's life, from its first hour to its last, is pre-ordained at his birth by the goddesses of Fate. This belief, inherited from the Aryan, is one of the beliefs which seems to have been preserved among the Southern and Western Slavs. In the written documents of these peoples, as far back as the 12th cent. A.D., we find mention of these goddesses and of the sacrificial festivals instituted in their honour. Among the Eastern Slavs, on the other hand, the belief in three Fates who control the lives of all human beings does not appear ever to have had any outstanding vogue. Here, in fact, their function was taken over by the Dolja (the Sreco or 'Fortune' of the Serbs)—personification of the good or evil fortune of the individual.
DEMONS AND SPIRITS (Slavic)

though long dead, still attends to the interests of his descendants. Here and there we find a survival of the belief that all who die in any particular house become the household spirits. At the festivals held in commemoration of ancestors, prayers are paid to the household spirit as well. In point of fact, the latter is often called Děl, or (in Galicia) Dîloka, 'housefather,' and those who have seen him describe him as a little hag with grey hair and a long beard, clad in old-fashioned garments and resembling in outward appearance the existing head of the family. With the last-mentioned cases, we are connected the designation of 'Landlord,' Bohlí, placed in díla, sometimes given him; cf. the idiomatic use of 't'inni.

In certain localities he is referred to as the 'one who lives on the stove,' as the stove is his favourite resort. Although he is not a Christian, he does not like to be spoken of as a devil and an inconvenience which may enrage him, and incite him to vengeance by visiting with a disease the person applying the term to him. Consequently people are careful not to offend him in this way, even avoiding the use of his right name. It is sufficient to refer to him as 'he' or 'himself.' When any one has fallen ill in consequence of having insulted the household spirit, prayer is made for him thus: Perhaps the invalid has incurred the displeasure and slighted you, or kept the cattle-shed unclean: forgive him, and make him whole. Every house has its Domovoj, who has also a wife and even a family. He engages in such tasks as devolves upon the painstaking head of a house. He bestirs himself night and day; and people have even seen him as he moves about the yard with a light in his hand, seeming always to have something to do. Strange noises, movements of doors, mysterious voices, and other heard during the night, are all attributed to his doings. He is of a merry and facetious disposition, and many of his actions, both manifestations of his good humour. The cleanliness and good order of the establishment are his great aims. A strange sight is the Domovoj, on the other hand, causes nothing but misev and inconvenience, and every effort is made to dislodge the intruder. People believe that, in guarding the house, the true Domovoj often comes into conflict with some alien household spirit; and it may also be mentioned that he protects the household against the violence of forest-spirits and witches.

When the domestic spirit finds anything about the house not to his liking, he manifest his displeasure in various ways. He indulges in all kinds of violence; throws dust upon the floor, annoys people and animals in their sleep, and even destroy the whole place by fire. Like the woman, he leaps upon the sleeper, pressing upon him and causing difficulty in breathing. A person with hairy hands who touches the Domovoj in the dark may expect something good to befall him, but to touch him with a smooth or cold hand is a presage of ill-luck. It is believed generally that when any unusual is about to take place in the household, the Domovoj gives warning thereof by letting himself be seen, by his movements, or by his faint utterances. We may observe in passing that the Wends believe in a spirit whose special function it is to preside over the message of death. This is the Bôtschthak, 'God's paint,' a little woman with long hair, who cries like a child beneath the window.

When a person moves into another house, or migrates to another district, he prays the household spirit to accompany him. At the offering of bread and salt is placed somewhere for the spirit's acceptance, and the head of the house appeals to him with the petition: 'I bow before thee, my host and father, and beseech thee to enter our new dwelling; there shalt thou find a warm place, and a morsel of provender which has been prepared for thee.' In some localities the housewife heats up the stove of the old house, then draws out the glowing brands, which are to be carried to the new residence, and finally, turning towards the recess at the back, utters the words 'Welcome, grandfather, to the new home!' Occasionally we come upon the belief that, if the old Domovoj fails to return, is destroyed by fire, it is a sign that the domestic spirit has never left it. On other occasions likewise, the goodwill of the household spirit is usually secured by means of special gifts. A dyed egg or other portion of food is placed in the yard for his use, prayer being made at the same time for his friendship. Part of the evening meal is left upon the table in the belief that the Domovoj will come there the night and eat it. In the evening, again, broth is placed on the kitchen table in a meal of eggs on the roof, for the purpose of inducing him to take more interest in the fortunes of the house. Before Lent the head of the house invites the Domovoj to supper by going into the yard and bowing towards the four quarters, while the meal is allowed to remain on the table during the succeeding night.

In Russia the household spirit is known also by other names, which vary according to the locality in which its activity seems to focus. When it resides in the cattle shed, he is called Chlevnik; in the yard, Domovoj; in the drying-kiln, Osinnik; in the bathroom, Pohromnik. A vital condition of successful cattle-rearing is that the Chlevnik should have a liking for the cattle, so that he will not molest them by night. The breeder must accordingly try to discover, or else guess, the particular colour of cattle which his Chlevnik favours, or the particular place where he wishes his services, and stand there when an animal is purchased and brought home. It is thought advisable to present an offering of food to the spirit, with the prayer that he will give the new-comer a good reception, guard it from mishap, and provide it with a warm bed. In many districts we find the Domovoj and the Chlevnik included in the group of ill-disposed spirits, and every effort is made to expel them from the homestead, either by striking the walls and corners and sprinkling them with holy water, by placing upon the roof an overturned barrel or a magpie that has been killed. In the province of Archangel, when the women enter the cattle-shed in the morning, they entrust to Chlevnik to go out by the window. The Osinnik lives in the bathroom, behind the stove or under the seat. It is dangerous for any one to go there alone in the evening or by night, as the spirit who presides there may work him harm. When the inmates of the house bathe, they leave a little water in the bath, and a little soap upon the bench, as it is believed that the Osinnik and other domestic spirits will wish to bathe a little later. To ensure the propriety of the bathroom, a black hen is buried under the threshold as a sacrifice. As regards the Osinnik, again, the people beseech him to grant them a successful threshing. He is solicitons that the drying-kiln should not be heated on the great festival-days. Should this be done, the Osinnik may avenge himself by destroying the building with fire. When the workers have completed some task in the drying-house, they thank him for his faithful service. Those who desire to be on amicable terms with him drop the blood of a cock round about the kiln.

What has been said above regarding the household spirit applies more particularly to Russia. Among the Western and Southern Slavs, however, a less important place is assigned to him. Here, in fact, he has acquired the attributes of a protective and ministrant spirit. The Galician dîloko,
DEMONS AND SPIRITS (Slavio)

the Bohemian šetěk ('old one'), hospodářček, and šiška, the Wendish šédk ('goose'); the Polon. skrzet, and the Slovakian skrát are each of them ready to give their services on condition that the person requiring help will make a compact with them, or summon them by incantations, or present offerings of food to them. But there are other ways of securing the good offices of such demons. Thus, a man may give a written undertaking assigning to the demon his own soul, or one of his relatives, or some part of his body. The spirit is invoked either under the stove-pipe or at cross-roads. He may also be brought forth from an egg; the egg of a black hen is carried about in the left breast for seven days, after which period the demon comes visibly out of the egg. The spirit, who has the appearance of a little old man, bestows money and corn upon his protector, protects his property, and fodder his cattle. The Polish skrzetek is a winged creature which supplies corn, and, when flying about the vicinity, devours a little of the crops. Its Wendish counterpart is the plon, a dragon in the form of a fiery sphere; a common saying about a rich man is: 'He has a plon.' The plon may assume various shapes, and the proper place to confer with him is the crossroads. He appears in the folklore of all the Slavic peoples. Another widely prevalent idea is that every house has its own 'lucky serpent,' which has its habitat under the floor or the stove, and brings wealth to the house. It is generally supposed that the house has both a male and a female serpent, the former representing the head of the house, the latter his wife. The death of either of the serpents presages the death of the corresponding member of the family. Similarly the Bulgarians have their stikhija or tolosom, a household spirit in the form of a serpent. The škrat of the Slovenian folklore dwells in woods and mountains—a belief which indicates that this demon was originally a forest-spirit: cf. the scrat, or skolot, of the Germans.

This brings us to the domain of Nature-demons, and here we have, first of all, the large group of forest-spirits and spirits of the fields. In Russia the forest-spirit is named Ljésy, or Ljjesy, or Ljješa, or Ljesčina, in Bohemia, Hejkal, or the 'wild man.' In outward appearance he resembles a human being, but his skin and hairy body betrays his natural state. The hair on his back and his beard is green. Other points that differentiate him from mankind are his solitary eye and his lack of eyebrows. He has the power of changing his size at will, showing himself sometimes as large as a tree and sometimes no taller than a man. He can also transform himself into an animal, his favourite disguise being the shape of a wolf. He is said to retire under the earth during winter. The beasts and birds of the forest are subject to him, and he frequently drives them by his barks and imitations of their voices. It is said that before he leaves his cave he blows his own nose, and that he can deliver himself from animals, and, unless the man is all the more circumspect, his spirit-wife may vanish without leaving a trace behind. In certain localities it is supposed that these forest-nymphs are human children whom some one has cursed, and that they can deliver themselves from the curse only by marriage with a human being.

The characteristics of the forest-spirits are almost without exception, the spirit of the forest, man and animal, and the Russian Vila and the Bulgarian Rusalka. With regard to the Vila (Bulg. Samovila, Juda-Samovila, Samodiva) the belief still survives that they are the souls of deceased children or virgins. They are beautiful, white-robed, light-footed damsels, who dwell in woods, mountains, and lakes, and fly in the clouds. They too are noted for their dancing and exquisite singing. They have been observed washing their garments and drying them in the sun. They have an immense amount of intercourse with mankind, and in popular legend they sometimes even intermarry with men. They are represented in folk-songs as the adopted sisters of popular heroes. Should a person, excused by reason of emigration or by intruding upon their kolo-dance, they take revenge by shooting the unfortunate man with their deadly arrows. It is believed among the Bulgarians that blindness, deafness, and apoplexy are the work of the Samovilas. The weather is variable according to some extent on them, as they have the power of causing tempest and rain. In many districts the people offer sacrifices to the Vila in the form of flowers, fruits, or garments, placed upon trees or stones.

What has been said of the Vila holds good, for the most part, also of the Russian Rusalkas—deli—
cate female beings who live in forests, fields, and waters. These likewise are souls of the dead, mainly of unbaptized children, and women who have died by drowning. Among the Little Russians and the Slovenians they are sometimes called Marki, Mavje, 'the dead.' They are said to solicit human beings for food, and that theft, or any such object may deliver them from the curse under which they lie. With their ravishing songs in the night they draw people irresistibly into their power, and then tickle them till they die. Another of their most powerful incantations is the ignis fatuus. The Wends, we may note in passing, think that the Blu'd, 'will-o'-the-wisp,' is itself the soul of an unbaptized child. When the crops begin to ripen, the Rusalkas find their favorite abode in the cornfields. They have it in their power to bless the earth with fruitfulness. It is also said that they take pleasure in spinning, and that they hang their clothes on trees. During Whitensweek—a period which in many districts is dedicated to them and to the souls of the departed in general—they come to women in visible form, requesting gifts of shirts and clothes, and such garments are accordingly presented to them by being placed upon trees. Among the Wends the costume was in ancient times called 'the week of the Rusalkas.' At that season is held 'the escort of the Rusalkas,' a procession in which a straw doll representing the Rusalka is carried out of the villages, and set upon the banks of the river to summon the water. This ceremony has been explained as symbolizing the expulsion of the Rusalkas from the place, in view of their propensity to inflict damage on the ripening grain. But in all probability the procession was connected with the Spring festival. The name Rusalka, and the conception of the Rusalka festival, had their origin in the Greco-Roman solemnity called 'Rosalia,' 'dies roseae,' observed in spring in memory of the dead. The design of commemorating the dead may still be traced in certain ideas associated with the Rusalka festival, as, e.g., in the belief that a person who does not take part in the memorial function for the dead, and does not offer sacrifice to them, thereby becomes liable to the vengeance of the Rusalkas. It should also be mentioned that, just as the name Rusalka is derived from 'Rosalia,' so the word Vika has been explained as a survival from another memorial festival, 'Vikas' being observed among the Romans, viz. the 'dies viarum.'

In some districts a distinction is drawn between forest Rusalkas and water Rusalkas. The latter have their abode in rivers and cascades; they disport themselves upon the surface of the water, and comb their long hair upon the banks. They also prowl after bathers, and bathing is therefore avoided during the Rusalka festival. Similar traits are popularly ascribed to the 'water spirit' (Russ. Vodljan, Morskoj tvar; Sloven. Povodnji; Wend. Vodny muž, Nyks; Bohem. Vodník, Hestrman; Pol. Topiels, Topnik), and also to the 'water-people,' as it is believed that the water-demon has a favorite tree which is taken as the abode of the children, and even cattle. Every body of water has its presiding demon, who dwells in a magnificent palace far below. A water-spirit can make a new lake for himself, passing out of his old one without any disturbance. His house is in the vicinity of mills, but, as mills and weirs block his way, he often destroys them in his rage. When any one is drowned, the water-man is the cause, and it is dangerous to rescue a drowning person, as one thereby provokes the animosity of the demon. The souls of those who have died by drowning are immured in his house. He is said to marry women who have been drowned and girls who have been expatriated. He has, in fact, a special liking for inveigling women into his toils. He plays all sorts of pranks with people; he chases the traveller, or seats himself upon the cart of the heedless waggoner; and the victims of his perversity, fearing his resentment, generally repent without means. A hyacinth is found at the height of the middle of the day, and it is at that time that the female water-wraith of the Wends comes forth from the water. In Bohemia people tell how he dances with moonlight on his head. He sometimes indulges in strong drink, and, when drunk, makes an uproar and jumps about, thus disturbing the ordinary flow of the stream. It is not seldom that happens that the water-spirit and the forest-spirit have fierce encounters with each other. When the wife of the water-spirit requires the midwife, he applies for human help. He gives timely warning of coming floods to those with whom he is on friendly terms. Millers and fisher-men seek to win his goodwill by sacrifices. For his use the miller casts fat, swim's flesh, or a horse into the water. In former times, when a mill was built, it was the custom to present a live offering—sometimes even a human being—to the water-man. The fisherman, after Pentecost, superseded the cost was in ancient times called 'the week of the Rusalkas.' At that season is held 'the escort of the Rusalkas,' a procession in which a straw doll representing the Rusalka is carried out of the villages, and set upon the banks of the river to summon the water. This ceremony has been explained as symbolizing the expulsion of the Rusalkas from the place, in view of their propensity to inflict damage on the ripening grain. But in all probability the procession was connected with the Spring festival. The name Rusalka, and the conception of the Rusalka festival, had their origin in the Greco-Roman solemnity called 'Rosalia,' 'dies roseae,' observed in spring in memory of the dead. The design of commemorating the dead may still be traced in certain ideas associated with the Rusalka festival, as, e.g., in the belief that a person who does not take part in the memorial function for the dead, and does not offer sacrifice to them, thereby becomes liable to the vengeance of the Rusalkas. It should also be mentioned that, just as the name Rusalka is derived from 'Rosalia,' so the word Vika has been explained as a survival from another memorial festival, 'Vikas' being observed among the Romans, viz. the 'dies viarum.'

In some districts a distinction is drawn between forest Rusalkas and water Rusalkas. The latter have their abode in rivers and cascades; they disport themselves upon the surface of the water, and comb their long hair upon the banks. They also prowl after bathers, and bathing is therefore avoided during the Rusalka festival. Similar traits are popularly ascribed to the 'water spirit' (Russ. Vodljan, Morskoj tvar; Sloven. Povodnji; Wend. Vodny muž, Nyks; Bohem. Vodník, Hestrman; Pol. Topiels, Topnik), and also to the 'water-people,' as it is believed that the water-demon has a favorite tree which is taken as the abode of the children, and even cattle. Every body of water has its presiding demon, who dwells in a magnificent palace far below. A water-spirit can make a new lake for himself, passing out of his old one without any disturbance. His house is in the vicinity of mills, but, as mills and weirs block his way, he often destroys them in his rage. When any one is drowned, the water-man is the cause, and it is dangerous to rescue a drowning person, as one thereby provokes the animosity of the demon. The souls of those who have died by drowning are immured in his house. He is said to marry women who have been drowned and girls who have been expatriated. He has, in fact, a special liking for inveigling women into his toils. He plays all sorts of pranks with people; he chases the traveller, or seats himself upon the cart of the heedless waggoner; and the victims of his perversity, fearing his resentment, generally repent without means. A hyacinth is found at the height of the middle of the day, and it is at that time that the female water-wraith of the Wends comes forth from the water. In Bohemia people tell how he dances with moonlight on his head. He sometimes indulges in strong drink, and, when drunk, makes an uproar and jumps about, thus disturbing the ordinary flow of the stream. It is not seldom that happens that the water-spirit and the forest-spirit have fierce encounters with each other. When the wife of the water-spirit requires the midwife, he applies for human help. He gives timely warning of coming floods to those with whom he is on friendly terms. Millers and fisher-men seek to win his goodwill by sacrifices. For his use the miller casts fat, swim's flesh, or a horse into the water. In former times, when a mill was built, it was the custom to present a live offering—sometimes even a human being—to the water-man. The fisherman, after Pentecost, superseded the
storm. Their practice is to steal little children whose mothers have negligently left them by themselves. The Russians likewise have a Poldanitsa, or Zitsa mutka, the protectress of the cornfield, who especially at the harvest time, when the corn begins to shoot, persecutes the children whom she finds idly straying among the fields, and in Northern Russia parents warn their children against going amongst the reye lest the Poldanitsa burn them. In Bohemia the Poldanice is supposed to be the spirit of the midday bell, and to live in the belfry. Of a somewhat similar character is the Moravian Klenanitsa, who stalks amongst the children and contraps the children whom she finds still out of doors.

In many parts of the Slavic world we find, besides the 'noon-wife,' a male 'midday spirit,' who in Bohemia is called Poldanek, and among the Wend's Sper, while there is also a special field-spirit, the Russian Polevoy. The Poleznek is a little boy in a white shirt, who at midday passes from the forest into the fields, and punishes those whom he finds doing damage there. He calls to people by their names, and these who follow his call he leads to the far-off hills. The Polevot or Polevich, on the other hand, is a personification of the tilled land, and his body is therefore black, like earth, while his hair is the colour of grass. The wind sighs with the tilled earth, and the wind is also known as Ded, resides in the last gathered sheaf, which is accordingly dressed to look like a doll, and is borne in festive procession to the landlord.

We come, finally, to the Nature-demons whose sphere of action is the air. In Bohemia there is a special spirit of the wind, Vetnice or Melzina, 'the wind-mother,' a white, barefooted being. When the wind roars, the people say that the Vetnice is sobbing, and to comfort her they throw bread and salt into the air for her food. Her voice is believed to bear prophetic import. In Russia likewise we find the 'wind-mother,' and also the 'wind-father,' while the Wend's speak of a 'wind-keeping.' The wind is thought to proceed from the demon's breathing or his movements. Then there is a group of 'wind-brethren'—sometimes four, sometimes twelve—who dwell at the ends of the earth, and who are constantly blowing against one another. It has been confounded the four angels or evangelists borrowed from the sphere of Christian ideas, and supposed to live in the four quarters of the globe. In Russia we still find sporadically the belief that the wind, and especially the whirlwind emanates from evil spirits, and that the devil is the chief commander. In the tempest and whirlwind it is believed that Satan himself or the soul of a witch is speeding along, and, if a knife be thrown into the gust, it will inflict a wound upon the hurrying wind. When the demon is pursued by the thunderstorm, he may transform himself into an animal or a human being. An idea current among the Wends is that the whirlwind is really an invisible spirit, who may be seen, however, by pulling off one's shirt and looking through the sleeves. In certain Russian incantations the whirlwind is spoken of as the captain of the winds, who are personified as evil spirits, and he is styled 'Whirlwind, the son of Whirlwind.' His aid is implored by such as seek by magical means to arouse a responsive affection in the breasts of those they love. In Russia even frost is represented by a spirit. He is depicted as a grey-haired, white-bearded old man, who works in his menses enveloped in a mantle of ice. At Christmas he receives offerings of potage, and is invited to partake of the Christmas fare, in the hope that he will not expose the grain to damage by frost.

Our discussion would remain incomplete without some reference, finally, to the fact that in the popular mind, more particularly in Russia, certain days of the week are personified. We have already had an indication in the case of the Irish phenomenon, viz. the development of the 'Rosalia,' the memorial festival for the dead, into the personified Rusalka. In popular poetry, moreover, we find that the notion of evil spirits being associated with human attributes is occasioned by the evil spirit. The days of the week similarly personified are Friday (Sjatnitsa, which is also known by the Greek name Paraskeus) and Sunday (St. Nedelja). With dishevelled hair, and bodies covered with sores, these two spirits are said to travel from village to village—a fancy which implies that women who perform such work as sewing or spinning on Friday or Sunday really wound the day with the articles they use. The sulphuric liquids thus imbibe them, while on the other land, to those who observe these days, they show favour by helping them in their household duties, promoting the growth of their flax, enhancing the fertility of their land, and, as one poet, remarks, to whom it is granted to be married people. It was a custom among Bulgarian women not so very long ago to make offerings of bread and eggs to Friday. It only remains to be said that the ideas relating to these female personifications of days have been greatly influenced by the worship of the Virgin Mary and other patron saints, and therefore really belong to a sphere of thought which lies outside the belief in spirits and demons in the stricter sense.

DEMONS AND SPIRITS (Teutonic).—The ancient Teutons, like almost all other primitive peoples, believed that the whole surrounding world of Nature was alive with demons and spirits. This belief has survived, and is reflected by the confusions of religions thought till the present time, or lies in the course of ages given rise to new phantoms of the human mind. The operations and occurrences observed in the natural world were all attributed to these imaginary creatures from evil spirits, and that the devil is the chief commander. We still find sporadically the belief that the wind, and especially the whirlwind emanates from evil spirits, and that the devil is the chief commander. In the tempest and whirlwind it is believed that Satan himself or the soul of a witch is speeding along, and, if a knife be thrown into the gust, it will inflict a wound upon the hurrying wind. When the demon is pursued by the thunderstorm, he may transform himself into an animal or a human being. An idea current among the Wends is that the whirlwind is really an invisible spirit, who may be seen, however, by pulling off one's shirt and looking through the sleeves. In certain Russian incantations the whirlwind is spoken of as the captain of the winds, who are personified as evil spirits, and he is styled 'Whirlwind, the son of Whirlwind.' His aid is implored by such as seek by magical means to arouse a responsive affection in the breasts of those they love. In Russia even frost is represented by a spirit. He is depicted as a grey-haired, white-bearded old man, who works in his menses enveloped in a mantle of ice. At Christmas he receives offerings of potage, and is invited to partake of the Christmas fare, in the hope that he will not expose the grain to damage by frost.
souls. Thus, e.g., the demons of the wind coalesced with the moving host of souls, and the worship once accorded to the latter was transferred to the former. Hence arises our uncertainty as to whether Vodan-Öðin was originally a wind-demon or a leader of the souls of the dead.

While demons or spirits had their origin in the surrounding world and the phenomena of Nature, the belief in the soul was suggested by occurrences in the sphere of human life. Animism, the belief in the soul as a separate entity apart from the body, continued through all the Teutonic tribes. Thus, the soul, equally with the body, was an independent entity, and might leave the body and wander about in the interval of sleep. It was supposed to have its seat in various parts of the body, as in the liver, or the head; but it might also reside in the breath or the shadow; a man without a shadow had sold his soul. The soul could readily assume various forms; it sometimes appeared as an animal (sometimes a serpentine form), or as a phantom, or as a phantom of a man turned into the form of a dog, a bear, or a wolf, in which case the soul was called a *runnr*, 'one who can change his shape.' This vagrant soul sees what is hidden from the bodily eye; it can look into both the past and the future. It was this belief which in the Teutonic peoples gave rise to the Teutonic conception of prophecy. When the soul was out of the body, moreover, it was endowed with active powers of an abnormal character; it could work injury or bring benefit to other men, and according as the powers of malevolent and good spirits were transferred to it. Persons who could at will thus cause their souls to leave their bodies, whether in sleep or in a trance, were regarded as magicians.

The powers of the dream-soul, however, were as nothing compared with those specially attributed to the soul of the dead. The Teutons thought of the latter as a grasping, maleficient being, which returns to its place, claims its former possessions, and takes vengeance upon any one who withholds them. It was this belief of the Teutonic soul and its evil powers that prompted the numerous duties which, according to primitive Teutonic ideas, the survivors owed to the dead (see art. ANCESTOR-WORSHIP [Teut.] and AYRYAN RELIGION). These various duties arose out of the belief that, unless the dead are treated with due honour and respect, they will return and do harm to the living. This superstition was once universal, and is not yet finally eradicated from the mind of any of the Teutonic peoples. There is probably a decay in the Teutonic belief in the whole Teutonic area where the people are entirely free from the belief in ghosts and haunted places. Persons who in their lifetime were regarded as wizards, or who had died an unnatural death, would, it was believed, come back for the express purpose of injuring the living. When such injury showed itself, the bodies of the malevolent beings were exhumed and burned, or transfixed through breast and heart with a stake, so that they might be held fast in their graves. Throughout the Middle Ages impiement was still practised as an apotropaeic penalty for such crimes as rape or the murder of a relative (cf. Brunner, *Zitschr. d. Sittenreg.-stifflung für Rechtgeech*, xxvi. [1905] 259 ff.).

What leaves the body at death is the breath, and the breath was therefore the soul or spirit. But wind—agitated air—is also breath. When the breath leaves the body, it unites with other souls, and joins the soul-host. It was a widely diffused belief that a wind came when the spirits were coming for their new associate. The departing soul goes to the 'woden her, da dio boson geister ir wunning hän.' As early as the time of Tacitus (Germa. 43), the Harli, with their painted bodies and black shields, used to imitate by night the 'raging host.' Belief in this raging host—or, as it was variously called, the wild hunt, *Hollas' troop, Perchata's host, the Norse *gandrei*, 'the spirits' ride,' *Aasguardreia*, 'Asgard's chase,' or *Hulderfolk*—is not even yet extinct. In certain places, and above all at cross-roads (q.v.), the spirit-host rouses itself to special activity, and at certain seasons it manifests itself. The principal time for this manifestation was the long winter night in the season of Epiphany; as, among the Teutons, the festival of Christmas had taken the place of the ancient heathen festival of the dead. It was believed that at such times the souls of the dead took part in the celebration and feasting. Special sacrifices were made to the souls of those who had died in the foregoing year. At no other season of the year were superstition and divine divination so rife. All manner of figures and masquerades were resorted to in personating the various forms of the soul-host (Goth. *tideis, A.S. gjudi, O.N. jôl*). The more vehement the rush of the spirit-host in the wind, the more bountiful would be the ensuing year, and accordingly offerings were made *til ara*, 'for a good, fruitful year.' A more widespread belief is that the spirit-host manifested itself most frequently over battlefields. The slain were believed to continue their strife in the air. This belief finds expression in the Hildensage, according to which she summons the fallen Vikings every morning to renewed warfare on the island of Hoy in the Orkneys (Snorri Sturluson, *Edda*, i. 434). Popular belief also gave the spirit-host a leader—Wode or Wodan, a word which is a collective form for the 'raging host' (cf. Eng. *wood*, Scot. *wood*, 'mad'). In process of time Wodan was deified, and in some Teutonic countries came to be regarded as the supreme god.

Among the Teutons the belief in the soul gave rise to a great variety of demonie and legendary beings. From the superstition that the soul could leave the body in sleep or in the trance arose in particular the conception of *incebri—*souls that went forth to torment and torment others in their sleep. The natural phenomenon at the root of this idea is the nightmare, which the physiologist traces to a congestion of the blood during sleep. The imaginary being to which this distressing condition was attributed is known by a great many different names, the most widely diffused of which is of the form *mare* (O.H.G., A.S., and Scand. *mara*; Germ. *Mahr* or *Mahre*; English 'nightmare'). In Central Germany the term *Alp* has come into use, as well as in the Scroth-Matte and Matten, *Schede*; in Western Germany, *Letzel*, *Trenpe*; and in Oldenburg, Waldemaride—all applied to the nightmare, and frequently used also to designate the witch. The *incebri* ride upon the *mare* and torture them to death. In the Middle Ages persons who were suspected of injuring their fellow-men in this way were frequently prosecuted at law. Not only human beings, however, but also animals, and even trees, might be the victims of the *mare*. She afflicted people by squating on the breast; she sucked the milk of women and cows; she wreaked such malice upon horses that
in the morning they were found bathed in sweat and with their hair all awry. She found her way into the sleeper's room by the keyhole, or through a crack, and these were also her only possible means of obtaining the form that she needed. In his grasp, all that he found was a straw, but, if he spoke the name of the person who had been thus tormenting him, he discovered a naked woman.

Among those who could cause their souls to pass out of their bodies and injure others was the Hexen of the Western Teutons (A.S. hægisse, O.H.G. hagazusu = strio, furio), the Scandinavian troll, the English 'witch.' These terms, however, had a wider application, and denoted also those who dealt in sorcery with magical powers of a most efficacious kind. It was really in virtue of their magical powers that the Hexen could disengage their souls from their bodies, and they were therefore also called vårdurén (M. H.) taðrisir, 'hedge-riders,' or kreduljargar, 'prickly riders.' In these excursions they could assume an endless variety of form: they might take shape as a whale, a bear, a raven, or a toad. Bad weather, thunder, and hail were generally attributed to them. According to the belief of the Middle Ages by the Oriental belief in the devil. The witch was now supposed to be in league with the Evil One; she was one who had sold her soul to him and received the gift of magic in exchange. Thus arose the belief in the witches' meetings on the so-called Brockelsbergs, where the hags abandoned themselves to love-making with the devil. From this again sprang the disagreeable trials for witchcraft, which lasted till the 18th century. It was also commonly believed that witches continued their necromantic practices even after death, and, when indications of such activity appeared, their bodies were exhumed and either burned or impaled as a warning.

Closely related to the trolls and witches were the Norse Völves (O.N. vítur). These likewise were sorceresses, but they used their magical powers as a means of intercourse with the dead, and they never knew anything regarding secret things and the future. To their peculiar trade belonged the magic wand, the magic chair, and other accessories; while they had a retinue of boys and girls to chant their magic songs and so induce the trance in which the souls of the Völves left their bodies. These human Völves—the 'wise women' of other Teutonic peoples—were held in great veneration; in the winter nights of the season, when the spirit-host swarms around, they travelled from village to village and performed ceremonies. Thus Óðin, for instance, rides to such a grave, awakes the Völn from the sleep of death, and receives from her the interpretation of Balder's dreams (Baldtrødræma). A male counterpart to the witch is the werewolf, i.e. man-wolf. This was a superstition current among all the Teutonic peoples (O.H.G. werewolf, A.S. werewolf, O.N. værapfær or aflfær), and is found far beyond the limits of Teutonic lands.

The werewolf was a human soul which roamed about in the shape of a wolf, and wreaked horrible cruelties upon other human beings. A person who chooses, or is forced, to wander about in wolves' form has the power to hold him fast in his grasp, all that he found was a straw, but, if he spoke the name of the person who had been thus tormenting him, he discovered a naked woman.

Among those who could cause their souls to pass out of their bodies and injure others was the Hexen of the Western Teutons (A.S. hægisse, O.H.G. hagazusu = strio, furio), the Scandinavian troll, the English 'witch.' These terms, however, had a wider application, and denoted also those who dealt in sorcery with magical powers of a most efficacious kind. It was really in virtue of their magical powers that the Hexen could disengage their souls from their bodies, and they were therefore also called vårdurén (M. H.) taðrisir, 'hedge-riders,' or kreduljargar, 'prickly riders.' In these excursions they could assume an endless variety of form: they might take shape as a whale, a bear, a raven, or a toad. Bad weather, thunder, and hail were generally attributed to them. According to the belief of the Middle Ages by the Oriental belief in the devil. The witch was now supposed to be in league with the Evil One; she was one who had sold her soul to him and received the gift of magic in exchange. Thus arose the belief in the witches' meetings on the so-called Brockelsbergs, where the hags abandoned themselves to love-making with the devil. From this again sprang the disagreeable trials for witchcraft, which lasted till the 18th century. It was also commonly believed that witches continued their necromantic practices even after death, and, when indications of such activity appeared, their bodies were exhumed and either burned or impaled as a warning.

Closely related to the trolls and witches were the Norse Völves (O.N. vítur). These likewise were sorceresses, but they used their magical powers as a means of intercourse with the dead, and they never knew anything regarding secret things and the future. To their peculiar trade belonged the magic wand, the magic chair, and other accessories; while they had a retinue of boys and girls to chant their magic songs and so induce the trance in which the souls of the Völves left their bodies. These human Völves—the 'wise women' of other Teutonic peoples—were held in great veneration; in the winter nights of the season, when the spirit-host swarms around, they travelled from village to village and performed ceremonies. Thus Óðin, for instance, rides to such a grave, awakes the Völn from the sleep of death, and receives from her the interpretation of Balder's dreams (Baldtrødræma). A male counterpart to the witch is the werewolf, i.e. man-wolf. This was a superstition current among all the Teutonic peoples (O.H.G. werewolf, A.S. werewolf, O.N. værapfær or aflfær), and is found far beyond the limits of Teutonic lands.

The werewolf was a human soul which roamed about in the shape of a wolf, and wreaked horrible cruelties upon other human beings. DEMONS AND SPIRITS (Teutonic) 633

fylja (‘following spirit’), which attended a person either as his soul or as his guardian spirit. As a form of an animal; while, as a tutelary spirit, it was a female being who appeared, especially in dreams, to its protecté, and warned him of danger or urged him to action. The fyljafjöld sometimes come singly, sometimes in troops. After a battle or funeral, the tutelary spirit, associated with his heirs, and in this way occasionally becomes a family-fyljafjöld. The Norse valkyrs differ so far from the fyljafjöld in that they are almost always found in groups, and especially in groups of nine. The numbers of the ancient and folklore, frequently mentioned both in the southern and in the northern sources (cf. Dio Cass. lxxi. 3; Flav. Vopiscus, Vita Aurelii, 37; Paula Diaconus, l. 15; Saxo Gramm. i. 233 ff., 361, etc.) become val-

kýr in O.N. valkyrja) after their death. They are armed with helmet, shield, and lance; they ride through air and sea; the manes of their horses shed dew and hail upon the earth. Their appearance suggests war and bloodshed. In Norse poetry they are closely associated with Oðin; they are hismaids, his ‘wish-maidens’ who carry out his commands, who strike down in battle the heroes destined for Valhöll, and bear them thither with the列车 of dead, and thus test the worth of the men for the einherjar. The group of wish-maidens also included Brynhild-Sigdrifis, who disobeyed the commands of her lord by giving the victory to another king, and was in consequence pierced with the ‘thorn of glory’ and burnt to ashes by a flame until such time as Sigurður should awake her and set her free. It is a moot point whether the Norns, the ‘Fates’ of Norse mythology, who have many features in common with the valkyrs, should be regarded as souls or as demons. A similar ambiguity attaches to the elves, who are sometimes represented as souls, sometimes as purely demonic beings. Both the name and the idea of these products of religious fantasy are common to all the Teutonic races. Snorri Sturluson (Edda, l. 18) classifies them according to their domiciles as ‘elves of light,’ who are whiter than the sunbeam and live in the air, and ‘elves of darkness,’ who dwell in the earth, and are blacker than pitch. From the elves of the sun the sun takes his name of Ásrodull, ‘elf-ray.’ Their head is the sun-god Freyjr, whose abode is Alfheim, ‘the realm of the elves.’ The ‘elves of darkness’ are sometimes all but identical with the dwarfs, and this explains why the dwarf-handed smith Æsiildir (Wieland) is called ‘lord of the elves.’ In M.H.G. poetry the king of the elves is Alberich, who found his way to the West Franks as Oberon. In England, owing to the influences of the Iceni, the elves are in fairy-like superstitious dwelt mainly on the bright and beautiful elves, who thus became objects of popular favour. A similar development took place in Scandinavia, where, especially in Sweden, the elves were thought of as comely maidens, who live in hills and mountains, hold their dances on the green sward, and by their ravishing songs draw the traveller to destruction. Further, the elves are sometimes to the thunder, and thus, like German, the word was used only in this sense from the 16th century.

The Elfen of German poetry are really of English origin, having been introduced into Germany towards the end of the 18th century by the translation of Shakespeare.

The elves of ancient times are often identical with the wights (Goth. wihts, fem., O.N. vettir, neut.). The conception of the wight likewise developed on various lines according to locality. In Old Norse superstition wights were tutelary spirits who had their abode in groves, hills, and waterfalls, and were able to dispense fortune or misfortune to human beings. In German folklore they were vividous spirit-like creatures who assisted men in their work, and demanded gifts in return. To the same class of soul-like, or demonic, beings must be assigned the dwärfir (O.H.G. twerg, A.S. dwellor, O.N. dvergar). Their abode, however, was confined to a particular place, and their field of activity was similarly circumscribed. Popular imagination depicted them as diminutive old men—sometimes deformed—with large heads and long white beards. They lived in mountains or under the earth, and were thus known as the ‘goblin’—or, for the more exotic dwellers. They shunned the light of day, for the sun’s rays would transform them to stone. Among their possessions is the tusk-carp or magic hood which enables them to become invisible at will, and endows them with shape-changing power. Their principal occupation is smith’s work; their forge is situated within the hills, and accordingly dwarf-legends flourish most profusely where there are ore-bearing mountains, and where mining is carried on, or where the products of their skill are highly prized. Such arts, however, are not their only characteristic; they are distinguished also for craft and cunning. They are often thought of as united in a realm of their own, with a dwarf-king (Laurin, Heiling, Alberich) at their head, who is the personification of the wealth of the world. In mountains they are possessed of immense treasures, from which they draw to reward such persons as pledge themselves to their service. See, further, art. FAIRIES.

An elfish origin is to be assigned to the household spirits, who protect the home, and bring it good fortune and wealth. They were frequently regarded as having an animal form, especially that of a serpent or a toad, and they lived under the threshold, in the roof-beams, or on the hearth, at which places it was usual to present offerings of milk or other food in a dish. The household spirit is also met with as a manakin with the figure of a dwarf, and in this form is known under many different names: in Scandinavia, ‘kaputar,’ ‘house-gods,’ survive as Kobolds, or goblins; the Germans have also the Butze, the Hütchen, while in England we have Puck (Scott. ‘brownie,’), and in Scandinavia the Gotmar, the ‘house-wrait’ (‘house-spirit’), and Nisse. In many places it is still believed that these household spirits are the souls of deceased ancestors or other beings. Supersition assigned a guardian spirit not only to the house, but to the ship, in which he was known as the Klofbautermann (Germ.). He dwelt in the mast, and the sailors believed that he was a child’s spirit which had come into the vessel in the felled tree of which the mast was made. The Klofbautermann warned the sailors by certain noises of any imminent danger, assisted them in their work, and, like the domestic spirit, received
payment for his services in the form of gifts. If the ship went down, he flew away, but first bade farewell to the steersmen. Miners likewise had their guardian spirit, the Schachtmännle ("shaft-manne"), who assisted them in the workings, and whose faces wrinkled with their disbelieving hair, are often clad with moss. It is a common notion that they are chased by the storm-giant, the Wild Hunter, Wode, or the giant Fasolt, and that they seek refuge among men, and liberally reward those who inclose them. These wood-nymphs are also endowed with occult powers, especially the power of curing disease—a belief originally suggested by the mediæval properties of plants found in the woods. The forest-spirits, however, are sometimes males, mostly of gigantic size, and always of the same hideous appearance as the females.

There are many points of resemblance between the forest-spirits and the field-spirits. The latter likewise were originally spirits of vegetation, which popular imagination first of all detached from their native sphere, and then elaborated in detail. Field-spirits grow with the stalks of grain, and become visible when the wind blows across the fields. Superstitious associations of the forest-spirits with the wind, and with male figures, was the land suggested the animal shape ascribed to these spirits. They are known by many different names, as e.g. in Germany, Kornwolf, Rogenkund ("rye-dog"), Haferschock ("oat-goat"), Recknies ("rye-sow"), Bullenvater ("barley-sower"), in Sweden, Æsde ("glow-sow"), in Norway, Herregudshuk ("the Lord's goat"), etc. Sometimes, again, the field-spirits were of a human type; hence the Kornmutter ("corn-mother"), the Recknieshauf ("rye-country"), the Lehenblini (especially in Denmark), and, in male form, the Alte ("old one"), or the Gertswalde ("barley-gatherer"). The "grass-demon" lived in meadows, the "clover-mammikin" in clover-fields. When the corn was cut, the spirit flitted from one swathe to another, and the person who cut the last sheaf caught the "old one," the "corn-mother," etc. That sheaf was formed into some kind of figure, and presented with due ceremony to the landlord; then a dance was held around it. Just as a hay raft was fully stored in the barn until the next seed-time, and then used for the purpose of stimulating the spirit of vegetation to renewed activity. But that could be secured only by killing the old spirit, and this was done by throwing a log of firewood on it and then letting it loose and chasing it through the fields, till at last it was overtaken and killed. As the spirit of vegetation was believed to be in the people who happened to pass by while this ceremony was being performed, they were seized and bound by the reapers, and had to buy themselves off with a gift.

A still greater fertility of invention is exhibited by the Teutonic belief in water-spirits. Almost every body of water was connected with the yearly renewal and decay of Nature, and thus, like the field-spirits (see below), become spirits of vegetation. These demons remain quiescent in the woods during winter, but awake to activity with the re-birth of Nature. In the spring the people used to carry home young trees and green shoots, in which the demons were supposed to live, and plant them near their houses, as it was believed that persons who came into contact with them were the benefactors of the re-awakened spirits. But the forest was likewise the abode of supernatural beings of a more independent type, and principally female in form—the femme agressees, qua silvatica uscent ("Burchardus," 1548, p. 198), who appear suddenly, yield themselves to their lovers, and then as suddenly vanish. These are the "wild maidens," the German Moor, Holz-, and Buschhexen, the Frägen and Saligen, the Swedish skogsfruer (wood-nymphs), and the Danish askfruer (ash-nymphs) of present-day superstition. Their bodies are usually covered with hair, their faces wrinkled with disbelieving hair, and are often clad with moss. The spirits who haunted such places were marked out from others by their prophetic gift and their
supernatural wisdom. One of the water-spirits thus endowed was the Norse Mimir, into whose war-boot, of woven goats' hair, Mimir poured his gain wisdom, and to whose knowledge he resorted when he desired light upon the future. The demons who resided in rivers, streams, and seas were in the main hostile to mankind: they tried to seize men and drag them down into the watery kingdom, and were therefore propitiated with offerings, frequently, indeed, with human sacrifices. Such hostile spirits are known to the various Indian tribes, and also among the Germans (Germ. Niz [masc.] or Nixe [fem.]). Eng. nick, also, Norw. nök, Swed. nökk. The nixe was fish-like in the lower half; the upper part, or sometimes the head only, was of human shape. He wore a green garb, and his teeth were also green. He lived with his family at the bottom of rivers and lakes. The female nixes were noted for the beautiful singing by which they attracted human beings into their toils. They sometimes entered the human body, and were occasionally armed with a book, with which he dragged people under the water; he was accordingly also called Hakenmann ("hook-man"). In Denmark the water-spirit is known as Hassmann ("haunting, haunting spirit") or Svampen ("fungus") as Stromkørl ("river-man"); in Norway, the land of waterfalls, we find the Grim or Porsgrunn, as the spirit of waterfalls; in Iceland, the Skrimal ("monster"), Vatnaskrati ("water-wraith"), and Mánagarmr.

The Old Norse mythology gave great prominence to the water-demons Ágir and his wife Rán. Ágir, whose name is connected with Goth. aher, "water" and Gr. aithros, was the spirit of the calm still sea—one with whose gods were on hospitable terms, His consort Rán—or Sjörun, as she is still designated in popular speech—was of similar character. She was the man-sealing demon of the sea, a being who had no heart in her body, and who lay in wait for sailors with her net, or tried to derail the ship with her arms, and drag it down to the depths. Of similar character were herne daughters—personifications of the serifing bishops—who during the storm offered their embrace to the seamen, and, like their mother, pursued the ship. The Midgard-serpent—the snake-shaped monster which coils itself round the earth—and the Fears-wolf, which contends with Odin at the annihilation of the world, as also Grendel and his mother, who lived in swamps by the sea, and at night stole from the palace of the gods Hröðgar, are also frequently included among the sea-demons.

Throughout the entire Tenteonic race, as we have seen, there prevailed the belief that all the natural elements were ruled by spirits, and that the good and evil forces at work were summed up in soul-like, or spirit-like, beings friendly or hostile to man. Demons and spirits caused rain, tempest, and thunderstorm. Demons pursued the sun and the moon, and brought about solar and lunar eclipses. They promoted or hindered the growth of vegetation. Disease and pestilence were their evil work. They hovered around human beings on all the important occasions of life; at birth, when they sought to gain possession of the child; at marriage, when they tried to stop the marriage; in mischief-making; and at death, when they endeavoured to draw the living after the dead. Savage man sought to guard himself against their machinations by all manner of ritual devices, which are retained in the present customs of the present day. He shot at them, he lit fires, he hung up glittering objects, he uncovered certain parts of the body, he avoided stepping on the threshold under which they lived, and was especially careful of protecting himself or driving them away. The ideas underlying such practices, thus brought down by the Tenteons from the earliest ages, are found to correspond with ideas which prevail among the primitive races of the present day.

**DEMONS AND SPIRITS (Tibetan).—** The Tibetan lives in an atmosphere charged with malignant demons and spirits; and the great practical attraction of Buddhism for him is that it can protect him, so he is led to believe, against the multitude of these spirits. It is highly probable that he should be remembered that in the higher Hindu civilization of India the ostensible object of the Brahmanical sacrifice was also to chain the demons. The great majority of the Tibetan demons are of a non-Buddhist character. A considerable proportion of the aboriginal evil spirits have been adjusted by the Lamas to the type of somewhat analogous bloodthirsty demons in the later Tantrik Buddhism of India and Tibet; but these are to be considered as propitiated on the lines of the Indian ritual. But the larger number demand the rites of the pre-Buddhist religion to which they belong, namely, the Bon (see Tibet). These spirits are mainly personified natural phenomena, but several are animistic and fetishes, and all are saturated with sacrificial ideas.

The word for "spirit," namely Dau, is that which is adopted for the gods of the Brahmanical and Indian Buddhist pantheons, and is therefore propitiated in a manner similar to those aboriginal gods who are supposed to live in the sky, even though they be unfriendly to man. The demons, or Dull (pronounced Dui), are always evil genii or hends of an actively malignant type; they are rather common.

These indigenous spirits may be broadly divided into the following eight classes:—

**E. MOCK.**
DENES

(1) Good spirits (Las), mostly male, white in colour, and generally genial, though the war-god (Sta-tha) is as fierce and powerful as the greatest fiend. The countryside gods (Pul-tha) and household (Sadora) spirits (Sa-bdag) have been made deities of Lamasism. (2) Ghosts and goblins (Tzern), all male, red in colour. These are usually the victims of sudden death. These and similarly vengeful ghosts are married to deceased discis-bodied priests. They especially haunt the vicinity of temples.

(3) Devils (Dud), mostly male, black in colour, and very malignant. They are the most frequent of all the Tera (or Lha-tre), male and female, or literally ‘father’ and ‘mother.’ They are persecutors of Lamasism, and cannot be properly appeased without the sacrifice of a pig. Planet fiends (bZang) have been held in colour-producing diseases. Fifteen great ones are recognized. (4) Lamas are usually the vengeful ghosts who have died in consequence of injury or neglect, or are manifestations of the clairvoyant faculty of ordinary shepherds. These are the dieron-huntresses (nang-bdag), and are sometimes the spouses of certain of the above demons. The twelve tshom-sna (pronounced Tamma) especially inhabit the snowy ranges.

Many of the above are local genii, fixed to particular localities. Of these the most numerous are the ‘earth-owners’ (Sa-bdag), truly local spirits inhabiting the soil, springs, and lakes, like the nagas of the Hindus. Others more malignant, called gn-an, and believed to cause pestilential disease, infest certain trees, rocks, and springs, which are avoided in consequence or made into shrines for propitiatory offerings. They are believed to belong to the army of the gigantic wild sheep, the gn-an or Ovis am-nou, which, according to early Chinese accounts, was worshipped by the Tibetans, and the horns of which are revered on the altars at the tops of the snow-capped ranges. At every temple there is or was a local spirit represented as an idol or fresco within the outer gateway, usually to the right of the door, and worshipped with wine and occasionally with bloody sacrifice; and it is given a more or less honorific name. One of the fiercest of the country fiends is Pe-kor (not Pe-hor, as spelt by some writers), who has been adopted as a special protector of monasteries by the Yellow-hat sect of Lamas. There are also the House-god, the ancestral gods, and the personal spirits of familiars, good and bad, of the individual.

The representations of these spirits at their shrines, or on altars, or in their masks at the masked dances that are held to please them, have cut some of them have the head of a beast or bird, and they are pictured by the Tibetan artists as clad in the costume of the country. The local spirits sometimes may be represented by mere sticks.

Living sacrifice is not offered to these spirits nowadays, but the dongs, effigies of animals which are offered indicate, in the opinion of the present writer, the prevalence of animal sacrifice in pre-Buddhist days. The animals most commonly represented in these ways are the dog, sheep, and yak. Actual blood and the brains and flesh of animals slain by butchers in the ordinary way are frequently offered in bowls made out of human skulls, as in Indian Saurit bees.

Of the special implements used in Tibetan demon-worship an important one is the three-cornered dagger called cup-po or phur-bu. This is used by the priests to stab and perforate the demons, or to impale them when it is stuck into the ground. What appears probably to be a Buddhist variation of this worship is the feast offered in charity to the devils from time to time. The occasion is accompanied by the blowing of human thigh-bone trumpets and the beating of skull drums and gongs, and are afterwards dismissed in an imperative way.

The evil spirits of Indian Buddhism bear the four names of the four directions in Tibetan, usually the literal etymological translation of the Sanskrit names:

These, as well as the other deities of Indian Buddhism, are usually represented by Tibetan artists in conventional Indian dresses, in contradistinction to the indigenous deities.

L. A. WADDELL

DENES.—A most important aboriginal group of tribes north of Mexico, Saskatchewan, up to the temperamental disparity of its component parts, it affords an excellent field for the study of psychic peculiarities and the gradual development in opposite directions of the mental faculties. Within the bosom of the present-day Indian there is a marked infestation of sub-arctic forests. All its tribes, however, are more or less remarkable for their pronounced sense of dependence on the powers of the invisible world. Religious feeling and its outward manifestations pervade their whole lives, though by some careless travellers they have been regarded as destitute of any religion.

The Denes, also improbably called Athapascans, from Lake Athabaska, the habitat of one of their tribes, are divided into Northern, Southern, and Pacific Denes. The Northern Denes, whose ranks are now reduced to about 19,390 souls, people the wilds of Canada from the Churchill River, and almost from the Mackenzie to the sea. There are also the House-god, the ancestral gods, and the personal spirits of familiars, good and bad, of the individual.

The representations of these spirits at their shrines, or on altars, or in their masks at the masked dances that are held to please them, have cut some of them have the head of a beast or bird, and they are pictured by the Tibetan artists as clad in the costume of the country. L. A. WADDELL
sidered its fountain-head, its natural chief, and the controller of the children, who, after marrying, stay with him, unless the mental superiority and better circumstances of another paternal relative claim them for his own followers. They soon form groups of kindred families, over which he presides as patriarch. The matter of course, are the chief men of his family; and they take care that the social unit, the family not being recognized as such. His power, however, is very limited: directing the movements of the band, giving orders for camping, and, occasionally, very good advice are about the sum-total of his prerogatives. His influence, of course, depends greatly on the number of his suite, and their efficiency as hunters. Hence it is the Déné's ambition to have as many children as possible, especially of the male sex, acceptable to them, as proof of the birth of several children. While some unimportant men had but one wife, the majority had two, and the lodges of the chiefs might contain from two to eight. D. W. Harmon ('A General Account of the Indians on the East Side of the Rocky Mountains,' p. 224) cites one who had eleven, with more than forty children, and W. H. Dall (Travels on the Yukon and in the Yukon Territory, p. 111) expresses his belief that the Déné, when he was a factotum, had his daughter-in-law and her husband among his relatives. A few cases of polyandry were also found among the Sékanais, a Rocky Mountain tribe.

Five methods of contracting marriage may be said to have obtained among the Northern Dènes. Marriage by mutual consent was exceedingly rare before the advent of the missionaries. Some such arrangement can, however, be placed to the credit of a few mountain tribes. 'Will you pack my beaver-snares?' the dusky youth would ask of the object of his choice. A hesitating 'Perhaps' would seal her fate, and, without further ado, the couple would thenceforth become man and wife. Wooing the bride's parents, that is, working for them and endeavouring by every possible good office to become acceptable to them, was proper to the British Dénès (cf. CARRIER INDIANS). In the common gateway to sexual intercourse east of the Rockies was wrestling. Two young men would publicly wrestle for the possession of a maiden, and the same took place in connexion with any marriageable woman as well. No husband could ever consider himself secure in the company of his wife, as he was liable to see her any day snatched away from him by a stranger man. So much so, indeed, that we are still not satisfied with an account of the eastern tribes, asserts (A Journey from Prince of Wales's Fort to the Northern Ocean, p. 104) that 'a weak man ... is seldom permitted to keep a wife that a stronger man thinks worthy of her notice.' He adds that some professional wrestlers 'make almost a livelihood by taking what they please from the weaker parties, without making them any return' (ib. 106). A fourth way of contracting marriage was even more suggestive of savagery. A man would simply seize by the hair and drag to his tent the object of his passion. Finally, occasions were not wanting when women were bought as so many chattels, and gradually one was reserved when the same object of traffic was later ransacked by wresting from her quondam purchaser, the unfortunate creature being thus a passive party to transactions whereby she was 'married' according to the two different methods of obtaining a partner.

From this it will be inferred how exceedingly low was the position that the woman occupied in primitive society. She was merely a drudge, the factotum of the household, a slave to her husband, buffeted even by her own male children, fobed from them though she invariably was. Her fate was more satisfactory among the Navahos; and, by reason of the rank to which she might occasion-
propped comb to scratch her head, thereby avoiding immediate contact between her head and her fingers.

So deleterious were believed to be the emanations from the menstruating woman, that the taboos of which she was subject extended even to the contact with any weapon, or implement, designed for the capture of animals. Captain G. Back records the ‘consternation’ and hasty flight of a poor woman who had unwittingly trodden on her husband’s gun—an object which the explorer declares (Narr. of the Arctic Land Expedition to the Mouth of the Great Fish River, p. 124) did not usually meet with any lighter punishment than ‘a slit nose or a bit cut off the ears.’ The same legal uncleanness attached to a new mother, and a like sequestration followed, which was then protracted to a month or five weeks after child-birth. During that period the father would not, as a rule, see his child.

Speaking of legal uncleanness, we must not forget to mention that some such state was also supposed to be consequent on the shedding of human blood. Hearne relates that, after his Déné companions had massacred over twenty inoffensive Esquimaux, all those immediately concerned in the affair considered themselves debarr'd from cooking either for themselves or for others. Before every meal they painted their upper lips and the greater part of the cheeks with red ochre. They would not drink from any other pipe than their own, nor would those who had had no hand in the massacre touch the murderer’s dish or pipe. This, as well as the abstaining from many parts of the game they ate, was regularly followed for an entire month, after which ‘the men, without a female being present, made a fire at some distance from the tents, into which they threw all their ornaments, pipe-stems, and dishes, which were soon consumed to ashes; after which a feast was prepared, consisting of such articles as they had long been prohibited from eating; and, when all was over, each man was at liberty to eat, drink, and smoke as they pleased; and also to kiss their wives and children at discretion,’ which they had previously been forbidden to do (op. cit. 206).

Much married as the Déné usually were, they regarded continence as essential for success in certain undertakings. No hunter would ever dream of leaving for any important trapping expedition, if not first being gifted with a wife. His wives for quite an extended period. Did he succeed in capturing a beaver or a bear, he would carefully see to it that no dog—an unclean animal—should be permitted to touch any of its bones. The skull and molars, especially, were reputed sacred, and were invariably stuck up on the branches of a tree or, more commonly, on the forked end of a tent-pole. The fear lest an unclean animal—dog, fox, or wolf—might profane the same by contact therewith was the reason prompting these precautions. Should such a dreadful contingency occur, the hunter immediately desisted from exerting himself in any way, being firmly persuaded that all his efforts towards trapping any game of the same species would prove futile.

To understand these superstitions and most of those relating to menstruating women, we must remember that, in the Déné cosmogony, all the present faculties of Nature were originally endowed with human-like features. They fought, and the fowls of the air, the men of the earth, were men like ourselves, the animals distinguished by potent faculties which we do not possess. These wonderful powers, though now somewhat attenuated, were supposed still to exist. A share of them possessed by a few privileged individuals constitutes what we call magic. This is the connecting link between man and beast, and also the means whereby one may commune with the world of spirits, and by whose aid a person is enabled to succeed in his quest after happiness and the necessities of life. Hence the sympathy or antipathy which may exist between hunter and animal, with the former treating the latter. The language of the best Christianized Déné has retained to this day unequivocal traces of these zoothetical ideas. If unsuccessful in his hunt after game, the modern Déné will not say: ‘I had bad luck to kill that animal,’ but: ‘Beavers or beavers,’ as the case may be, ‘did not want me.’ The spirits, which have their seats in the various parts of the universe and are co-existent with them, are good, bad, or rather noxious or friendly. The evil spirits, on the occasion of breaches of the moral law, or the neglect of the traditional observances, attack man and dwell in him, causing thereby madness, fits, and other nervous disorders, disease, and death. The kindly spirits manifest themselves to him during his sleep, or suddenly in the woods or elsewhere, under the shape of the particular entity—animal, sun, celestial phenomenon, etc.—with which they are so connected. The man’s passion mind mundane being and indwelling power are almost one and the same. This manifestation is a token of their wish to act towards him as protecting genii, in return for some consideration shown to their protectors. These are the personal totems (mamitoues), the only ones known to the unadulterated Dénéas (cf. Totemism). The adopted party will thereupon show his regard for his protector by not suffering the particular being to which he is connected, to be wounded, abused, or any manner of other way; by exposing in his lodge its spoils (if an animal, or its symbol, if a heavenly orb, etc.), or carrying on his person a reminder of it in the shape of its tail, a feather flowing from his head-dress, or a chain on his coat, consisting of a single phrase repeated ad infinitum. Magic and song, in the mind of the American native, have a most intimate correlation, and few important attempts to influence the spirits one way or another would be left to chance. There is a regular order, a form to the working and the noising of drums. Should his appeal for help be heard, he will give expression to his gratitude by burning, or throwing into the water, any piece of property on hand, goods or clothing, or in later times tobacco.

In the North this was the only kind of sacrifice known to the Dénéas. At times it took a propitiatory or routatory character, being intended to obtain favours or avert calamities. The personified elements, especially wind with the tribes dwelling on the banks of the large Northern lakes, were the most common beneficiaries of such offerings, unless we add thereto another class of spirits, which have some resemblance to the genii locorum of the Romans. These were believed to haunt places prominent for some natural peculiarity—the steepness of a hill, the magnitude or striking appearance of a rock, etc. It was usual for any wayfarer passing by such spots to offer a stone to the spirit for its material comfort and entertainment, which can be traced to the wastes of Tartary (cf. Huc, Souvenirs d’un voyage dans la Tartarie, Paris, 1839, t. 251.), and the Déné practice may even be compared with the prayer-machines set up on mountain-tops in the brutish creation.

Instead of quietly revealing itself in a dream or a vision, the mamitou occasionally prostrated the
Dénes to the extent of depriving him of his senses. In such accidents the bystanders, who, not knowing what to do, would always interfering with the spirit, he was habitual association, or being attached to, a particular spirit or genius. They would insist that the mind of the smitten individual had been attracted by some powerful spirit, with which it was communicating. To them any kind of fainting malady was much the same as an attack of the same. Romanticists have gradually realized as belonging to the class of mysterious influences. Swooning is still called by the Carriers ne-bha'-n-thê-zat, or the attack of a spirit. When loud chanting, enhanced by louder beating of drums, had succeeded in banishing the spirit, the operator was supposed to return from the spirit world, and he was looked upon with a veneration bordering on awe. Henceforth he was regarded as possessed of the mysterious powers over Nature, and the spirits controlling it, which we call magic. The history, and his intimations were reported to whenever it was a question of countering the influence of the evil spirits which cause the death — public calamities. In a word, he was a regular shaman, and the religious system of which he had become the chief representative was the shamanism of the north-eastern Asiatic races in almost all its purity (cf. SHAMANISM). Among the Navahos of the South this is still at the base of the religious edifice; but the belief in the power of men to furnish the subject of the shaman, and the influence of environment have notably modified it by the addition of rites and elaborate ceremonies based on the remembrance of the many adventures of their culture heroes (cf. NAVAHOS).

The functions of the shaman shall be found fully explained in the article SHAMANISM. Sufice it to say here that they were seven-fold among the Northern Dénes. Shamanistic conjuring with that particular American race was curative, preventive, inquisitive, religious, receptive, or magico-religious, or prophetic. A rôle which was perhaps proper to the profession in the North was that of father confessor. Auricular confession of personal delinquencies to him who might be represented as the nearest aboriginal equivalent of a priest — though he could not strictly be called by such a name for the lack of any regular sacrifice or cult — was one of the religious institutions of the prairie forests of northern Canada. Of the shaman among the Western Dénes, Harmon wrote as early as 1829:

When the Carriers are very sick, they often think that they shall not recover unless they divulge to a priest or magician even the smallest secret which they may have committed which had hitherto been kept secret. In such a case, they will make a full confession, and then they expect that their lives will be spared. They believe that to keep even a small secret, or a crime, that as fully believe that they shall suffer instant death. ("Forsaken Indian: Living West of the Rocky Mountains," in Journal of Voyages, N.Y. ed. 1868, p. 256.)

The present writer had recorded the same custom long before he saw the old trader's volume. On the other hand, in the course of his Trad. ind. du Canada nord-ouest, p. 481., P. Petitot gives a Chippewa (Eastern) text furnished him in 1863 by an old shaman of Great Slave Lake, of which the following is a partial translation:

'The man who is sick as a consequence of his sins... sit by the shaman, to whom he confesses his misdeeds. The shaman asks him many a question, remigrants him in order to discover the unknown. Finally, the patient having confessed everything, the shaman draws down on him the Far-Out Spirit, his own familiar, which, entering into the sick man, takes away his sins, whereupon disease immediately leaves him.'

The greatest importance was attached to dreams. It was through the medium of dreams that most of the powers that could not in any other way be reached, or could not be of use to man, were accessible. People appeared on their beds to the vision of the Dénes, and to this day the Dénes consider dreaming as a token of occult powers over Nature and man. For this reason they are loth to wake up any sleeping person, as he or she may just be enjoying a dream, that is, communing with the spirits. Anybody talking in his sleep is nôke's nôke's regarded as a great sorcerer or shaman.

Though the spirits are much more in evidence than any other hidden power in the Dénes theology, they were not without the notion of a Supreme Being governing the world and punishing the wicked. In the West, the nature of this ruling principle was not very clear, though it was generally recognized as present. They were the powers of the great forces — wind, rain, and snow. Thunder they still firmly believe to be a gigantic bird of the eagle genus, the winking of whose eyelids produces lightning, while the detonations are due to the clapping of its wings. This deity was, indeed, paramount and personal in the estimation of those Indians is made evident by the usual formula of their oaths. Yvttore acult'sat: 'That which is-on-high heareth me,' and Yvttore nakt'salzat: 'I say it in presence of the Celestial Tower.' The Celestial Tower), are forms used by the old Carriers to this day. The new generation has another name for the Supreme Being, based on more adequate knowledge due to the missionaries. The modern missionaries have informed them that the American Indians attribute the work of creation to a prodigal hero, of a human nature, but exceedingly powerful, generally more or less tricky and not too scrupulous, whose many deeds and miraculous adventures have left their traces in various parts of the world. This is the culture hero of the Americanists, the Esats of the Western Dénes, who borrowed his personality from the N. Pacific coast tribes, and the Finséntweyëgë, 'the One who is lost across the ocean,' of the Central Dénes, the principal tribe of the Pacific group of Dénes. But the Eastern Dénes know of a God who is Creator as well as Ruler of the universe. He is, however, less spiritualized with them than his Western kin since they lend him human attributes. Inkîfwein-wëtyëgë, 'He sits on the zenith,' is the name by which the Hare Indians know him, and, according to Petitot, that tribe makes him: 'father, father, my father is in the zenith, the mother in the nadir, and the son travels incessantly from the one to the other. The father by his mere volition made the earth and all it contains, after which he lit the celestial orbs, the sun and the moon; most of the stars and constellations were originally inhabitants of our own globe—at the prayer of his son, who, having perceived the earth during one of his voyages, sang out: '-0 my Father who sittest on high, do light the heaven's eye.'—That is the Earth (the earth) my brothers-in-law (men) have been wretched for a long time' (Petitot, Monographie des Dên-Dindjë, p. xxiii).

Most of the tribes have also a tradition pointing to the extinction of mankind by water, with the exception of the Wise One, among the Eastern Dénes, or Esats, the chief legendary hero of the Western tribes. In the legends relating these events the musk-rat and the beaver, two animals famous for their nimbleness and skill, are said to have instrumental in reconstructing the earth, after it had been destroyed through the submersion of its highest mountains.

The sacredness of the number seven among the Jews is a matter of common knowledge. That number is among the majority of the American aborigines replaced by four; but both seven and four yield in sacredness to the number two in the legends and traditions of the Western Déne tribes. By the side of, and opposition to, the Spirit of the Being of the nation is, according to Petitot, a counterpart of our devil in the theology of the North-eastern tribes. If we are to believe that author, the knowledge of such an entity preceded the advent of the missionaries, and it was called the 'Bad One,' the 'Forsaken One,' the 'He that passed through heaven,' etc., according to the
DENÉS

various localities. The older Carriers call him today by the first-mentioned name; but the present writer is inclined to believe that they owe this notion to intercourse with the whites.

No tribe worshiped the Deity in any way; no cult of any kind, sacred dances or public prayers, obtained in the North. The only dance whose object was not mere recreation took place in connection with the scalp dance (cf. PRODIENCIES AND PORTENTS [Amer.]). But in the South the Bushwaees have elaborate rites and know of public praying, though their requests are addressed more to the personified elements and their culture-heroes, or semi-deified ancestors, than to the Supreme Deity.

As to man, he is believed to be made up of a perishable body and a transformable, and therefore surviving, soul—if this be the proper word for an element which is perhaps as much the effect as the cause of life. The name given it by most tribes literally means in the West 'warmth.' Yet it is to-day used to designate the principle of life, while the Eastern Denés have for the soul animating the body words varying according to the dialects, though all the above noted words are counterparts for the Lat. spiritus. Analogous terms serve in the West to express not the vital principle, but the outward sign of life, breath, and, by extension, life itself.

But on this principle, or physical condition, there is ne-tsen, man's shadow, usually called 'second self.' This is a reflexion of the individual personality, invisible in time of good health, because then confined within its normal seat, the body, but which on the approach of sickness wanders out of its home, and roams about, seldom seen but often heard. Its absence from its proper corporeal seat, if too prolonged, infallibly results in death.

Finally, ne-zul in the Dené psychology may be said to represent the second surviving principle after death. Strictly speaking, the word refers to the impalpable, dematerialized remnants of one's individuality, or a transformed self adapted to the conditions of the next world. That world is very generally believed to be situated underground, and watered by a large river, in which the shades catch small fry for their subsistence, visiting their nets in double canoes—a craft otherwise unknown in N. America. Their condition there seems to be unchangeable as long as they have not perished in the last funeral rites according to the customs of their tribes are constantly wandering, fed on mice, toads, toetus, and squirrels, or even cast into the waters of the big river instead of being ferried across, while others are reported to be playing ten on the grass, or dancing to the tune of a song, the main burden of which is the words she'ga ts'áchine, 'we sleep separated from one another,' i.e. 'there is no more any matrimonial union between us.'

Metempsychosis was strongly believed in by the Eastern Denés. Petiott writes in his Monographie des Dené-Dinkjè, p. xxx: 'I have been unable to eradicate from the mind of a certain girl the persuasion that, before her birth, she had lived under the name and with features unknown to me, nor could I prevent an old woman from claiming the child of her neighbour, under the pretext that she recognized in him the moral image of her deceased son. I am personally acquainted with several such cases.'

The art of CARRIER INDIANS makes it clear that such survivals are not exceptional to the East. Yet, we must add that the Western Denés now seem to have entirely discarded them, while the beliefs connected with menstruating women, the spirits, and shamanism still lurk in the minds of many, and are professed by a few. With others, they are at best obsolescent. This re-incarnation of the soul did not always result in a mere exchange of bodies of a similar kind. The author just quoted further says that he has known a poor mother who was lamenting because an old shaman had assured her that she had seen her dead son walking by the shore of the lake under the form of a bear. He adds: 'It is seldom that we see any man of influence die without hearing soon after his former companions claim that they have seen him metamorphosed into a bipedal caribou, a bear, or an elk.'

The original mode of disposing of dead bodies in the North seems to have been by enclosing them within rough wigwams of skin, long propped at the ends, which were raised from 3 ft. to 7 ft. above ground on stout poles or posts. Any object which might have belonged to the deceased either accompanied him in his final retreat into the earth, burnt, or hidden in the branches of trees. Sometimes the remains were concealed within trees hollowed out for the purpose, or naturally hollow through age and decay; but in the East it was much more usual simply to abandon them where they fell. They were never buried, except among the Chilcotins, a South-western tribe, while their neighbours, the Carriers and the Babines, cremated them, after the custom of the coast Indians.

Such were the Denés when first met by the whites. The Apaches were the first representatives of the nation to make the acquaintance of the pale-faced strangers, in the persons of the Spaniards of Mexico. Then, in the North, the first signs of our civilization occurred in the vicinity of Hudson Bay, where the Fur Trading Company named after that inland sea established posts, from one of which Arthur Dobbs wrote in 1744 the earliest printed reference to the Denés, which is, so far as we know, from the writer's knowledge. In 1771-72, Samuel Hearne, one of the traders, reached the Arctic Ocean in the company of a large band of Eastern Denés, who then perpetrated the unprovoked massacre of Eskimos that nearly exterminated the tribe. Though the writer was unable to note the period of the massacre, he tells us that in 1796, descended the noble stream now known under his name, and in 1798 penetrated as far west as the Pacific Ocean, always accompanied by a few Northern Denés, who did not succeed in securing him a peaceful reception at the hands of all the new Dené tribes. About 1811, the Yellow-Knives repeated on the poor Eskimos the exploit of Hearne's companions, killing thirty of them near the mouth of the Coppermine River, which were the last survivors of the former band of Denés, acting under provocation, destroyed Port Nelson, on the Liard River, and murdered its inmates. Ten years thereafter (1823), the Dog-Ribs and Hares, long oppressed by the Yellow-Knives, fell upon them unawares and cut off a large number of them. Then came the visits of the Arctic explorers, Sir John Franklin, Captain G. Back, and Dr. King, Thomas Simpson, Sir John Richardson, etc. The dates attached to their respective works in the following bibliography are safe indications of the epochs of their travels among the Denés.

Finally, we have the missionaries. The Catholics reached Isle-à-la-Crosse in 1845, Lake Athabasca in 1847, Great Slave Lake in 1852, Peace River in 1855, and the Lower Mackenzie in 1859. Father Petiot, a prolific ethnographer, was the first minister of the gospel to visit Great Bear Lake, which he did for the first time in the course of 1866. The mission work has since had good, if not always good, prospects; and has made numerous converts well received, and readily made numerous proselytes: 1859 saw the establishment of the first Protestant mission at Fort Simpson, on the Mackenzie, after which outposts were started among the Lou- sianne Indians of the Rocky Mountains. Today practically the entire nation in the North is Christian, about nine-tenths having adopted the Catholic faith, and the remainder the Protestant.

See HUPAS and NAVAHOS for Central and Southern Athapascans.
DEOGARH—DEVRISS

A. G. MORICE.

DEOGARH.—(Sk. deve-goda, “fort of the gods’).—A town in the Santal Parganas of Bengal, lat. 24° 30’ N., long. 80° 42’ E., containing the home Baidyanath’s temple. Devgaogarh, Devygarh, Natha, “lord of physicians,” an epithet of Siva. By a folk etymology the place is connected with one Bajij, a member of a Dravidian tribe, who by one account was a Gwāla, or cowherd, by caste. It is said that he was so distinguished by his laziness and indolence of the Brahman priests of the shrine, that he vowed that he would daily, as evidence of his contempt for them, strike the image of the god with his club. One day, as he perpetrated this, the idol spoke and blessed him because, though not a worshipper, had rescued the carelessness of his priests. When asked to claim a boon from the god, Bajij prayed that he might be known as Natha, “lord,” and that the temple be built after his name. This wish was granted, and the sacred spot has been known since that as that of Bajijnath. It has been suggested without any valid reason that the legend implies some connection between the primitive cultus and the rites of the Dravidian tribes. According to the Hindu legend, the temple is of ancient date. It is built of large stones; Rāmakāya, king of Lālka or Ceylon, who in the epic of the Rāmakāya is the ravisher of Sīth, wife of Rāma. It is said that he got possession of a famous idol of Siva to aid him on his flight with Rāma, and on his way south hauled to purify himself at the site of Deoghar. Finding no water, he dashed his hot into the ground and formed a pond. End, when the Rāmakāya was set down, seeing the place to be fair, it refused to move further with Rāma, and has been there ever since, known by the name of Maheva Rāṇaśvara, “lord Rāṇa’s.” The same story is told to account for the position of many other sacred images in India (Cunningham, Archaeological Survey Reports, viii. 143 ff.; Oppert, Original Inhabitants of Bharata-varsha, 1869, Part 2, Minor Races (nearly anthropological)).

The early history of the shrine is obscure. When the British occupied the country, they tried, but with ill-success, to manage the handlings and collect the offerings of pilgrims. Finally it was decided to allow the priest who was known as ojhā (Sk. upadhāya, ‘teacher’). In front of the temple is a remarkable structure, consisting of two massive monoliths supporting a third stone of similar shape and size. It is known as the Swinging Platform (alud-mahir), and was possibly originally used in the ritual of swinging the idol. The chief temple is that of Siva, and close by is a later shrine of his spouse, Gauri, ‘the yellow, brilliant one,’ which is joined to that of her consort, Gajanana, the vulture, thus typifying the union of the god and the goddess. At the back of the god’s temple is a verandah in which suppliants for his favours—recovery from disease, the blessing of children, and so on—make their vigils. With the usual catholicity of modern Hinduism, the chief shrines are surrounded by those of the lesser gods—Rama and Lakṣmi representing Viṣṇu in this Saiva atmosphere; Sūrya, the sun god; Sākta, goddess of learning; Manasa, the snake-goddess; Hannām, the monkey-god; Kāla Binirava, god of destruction; and Annapārā, ‘she who gives wealth in grain.’ But all these shrines bear marks of neglect. To illustrate the fusion of Islam with Hinduism, Gait (Census Report Bengal, 1901, i. 176) remarks that ‘Muhammadans are often seen to carry sacred water to the shrine of Baidyanath, and, as they may not enter the shrine, pour it for a libation on the outside verandah.’

DEOON—See HOLINESS AND SIN.

DEVRISS (dareviš).—A Pers. word signifying ‘mendicant’ (corresponding with bikhāra, the name borne by the Brahman in the fourth stage of his existence), applied, in Persian and Turkish, to the ascetics of Islam, whose Arab. name is zūdlat, which appears to mean originally ‘satisfied with a little,’ in ac-
cordance with the usage of this phrase in the Qur'an (xii. 20). Its connotation does not appear to differ from that of ṣīfī (q.v.), 'weaver of wool,' a term applied by the early Islamic writer Jaḥīz († A.H. 225 = A.D. 838), Ḩayyānīn, i. 100) both to the Persian dervishes and to the monks, whose purpose in order to indulge their laziness, pretend to disapprove of labour and wage-earning, and make their mendicity a means of obtaining the reverence of their fellows. Most Muslims, indeed, take a less cynical view of the ascetic, who is supposed to abandon his possessions before taking to the mendicant life, in the belief that they stand between him and the attainment of the higher life. And, though many dervishes are mendicants, this is only with the purpose of ritualistic ceremony; the bulk of the members of Orders belong to the labouring and trading classes. In Arab. literature the name first occurs (in the form ḏarīyyah) as the epithet of one Khalīd, who in the year A.H. 201 (= A.D. 816) endeavoured to organize the citizens of Baghdad for the suppression of anarchy. In Pers. literature of the 6th and 7th centuries, and even later, the dervish is a holy man who has overcome the world; and in S. Arabia it is the usual term for the sense of shud dhīr as a term of dignity. In general, we may distinguish between ṣīfī and dervish as between theory and practice; the latter holds a certain philosophical doctrine, the former practises a particular style of life. The practice of asceticism, and the wearing of wool in indication of it, are, of course, as early as the time of Muhammad, and far earlier; according to the most authentic accounts, the Prophet himself gave little encouragement to asceticism, which rarely enters the plans of the Sufis, and was, in case of the ascetic mystics of the Orders, though not strictly adhered to, at all events. But the notion of religious exercises in addition to those prescribed by the ordinary ritual, culminating in ecstasy, meets us early in the history of Islam; and with this went theories of states and stations in the religious life which belong to the subject of Sufism.

It is not till the 6th cent. of Islam that we hear of actual Orders of ascetics; attempts which are made to trace them further back are mythological. In the earlier centuries, and in the 7th they are familiar. The unity of an Order is constituted by a special form of devotion, whereby its members endeavour to induce what spiritualists call 'the superior condition'; it usually consists in the repetition of religious formula, especially the first article of the Muslim creed, and each Order has its dhikr, as this process is called; other religious exercises of the same sort bear the titles Ṣikārah and Ṣawīyyah.

The first founder of an Order is supposed to have been 'Abd al-Qādir (q.v.) of Jīlān, who died A.H. 561 (= A.D. 1166); but that founded by Ahmad al-Rīfālī, who died A.H. 578 (= A.D. 1182), was nearly contemporaneous. Of both these persons we possess biographies, and, indeed, in the case of the former a series of works, chiefly homiletic in character. In general, the founders of Orders are historical personages; some have left works, and in other cases there are authoritative treatises, revealing the development of the formula, which, in most cases, can only be acquired through oral instruction, and by persons who have undergone probation.

The founding of Orders has gone on steadily since the 6th cent. of Islam; and their enumeration is no easy matter, since it is difficult to distinguish between independent and branch Orders. Von Hammer enumerated 36, of which 12 were supposed to have existed before the rise of the Ottoman empire, and 24 to have sprung up after that event; the former number includes some that are mythical, whereas the latter is too small. The most interesting, in some ways, is the Bektashi Order, which constitutes the body of dervishes in Islam with Christianity, and which (according to G. Jacob, who has made a special study of it) retains many vestiges of Christian doctrines and rites. Next after this comes the Naqshbandi, which is widespread; the Sūfūriyyah, Rīfā'īyyah, and Ḳāsīrūn also play important roles, while some political importance is ascribed to the Maḥmūdīyyah.

In certain provinces of the Ottoman empire there is a shāfiī order, or order of dervishes, the bulk of whom are responsible to the Government for their conduct.

The acts which enter into the life of the member of an Order are in part disciplinary, in part devotional. The devotional acts take the form of a service, called ḥalāt, which with certain communities is daily, with others weekly; probably the form which it most commonly takes is that of the repetition of formula, especially la ṣīrūn ṣīru ṣīru, a vast number of times with various differences of intonation, or of the meaning of words; elaborate rules are given in some of the books belonging to the Orders, regulating the bodily motions which should accompany the production of each syllable. Ḥudūdūr familiar to the visitor, who, going to visit the Maulawis in Sufi circles, is sometimes shown the next by the formula or a group of the formula, in some of the books which including the formulas in the service, of the Ḳīfī dervishes in Scutari, who, first sitting, and then standing on their right and left feet alternately, and bending sideways, repeat the formula of the Unity, a word which same may be seen in Cairo. At the service of the Ḥudūdūr dervishes in Tashkent, visited by Schuylcr (溉ziristan, New York, 1876, i. 159-161), the repetition of the formula was accompanied by a violent movement of the head over the left shoulder towards the heart, then back, then to the right shoulder, then down, as if directing all movements to the heart. Indeed, the directions in the books of the sect imply the use of the heart in pronouncing the formula of the Unity, though the process seems scarcely intelligible. In most of the performances the motions gradually accelerate as they proceed, and different forms of ecstasy have a tendency to be produced.

Besides the usual forms of discipline are prescribed to neophytes in many of the Orders. One of these is 'solitude,' Ḫalātūh, a discipline of the Khalwats, who are called thereafter, and who are ordered to recite long prayers in complete solitude, or to remain in the monastery or cells which cells are provided in the monasteries (called takīyyah, or Ṣawīyyah). With the Maulawis the aspirant has, it is said, to serve 1001 days in the kitchen of the Order. With some other Orders the discipline consists, like the devotion, in trials of the power to recite the formula of the Unity a vast number of times with the least expenditure of breath, and promotion is made dependent on the attainment of a certain standard in this matter.

The numbers of the Orders are also distinguished by certain peculiarities in their attire, whether in shape, substance, or colour. Great importance is attached to the head-gear, and the number of tork, or gores, of which it is composed. This word in Arabic signifies 'abandoning,' and the number is said to symbolize, perhaps, the number of occasions abandoned by the dervish. Some Orders wear gaiters; some carry stones in their belts, said to signify hunger; the Maulawis are distinguished by a wide skirt (worn at their services) called ṭanūr, or oven, which is composed of the even of misfortune whence the head has been withdrawn.

'The sheikhs of the Orders wear robes of green or white clot, and any of those who in winter line them with fur use that kind
called petit gris and zillah marten. Few dervishes use cloth for robes, but in some cases felted cloth called abdi, such as is made in some of the cities of Anatolia, is most usual. Generally all dervishes wear a sort of inner garment which is often not more than a sort of the beard. Some of the Orders still wear long hair ' (J. F. Brown, The Dervishes, p. 210).

On the tombs of some of them are mystic signs.

In general, the dervishes are credited with mystic powers, and as early as the 7th cent. of Islam we are informed of various wonders which the Kifis could perform: they could eat living serpents and go through a fire undamaged. (2) It is possible, however, that they extinguished the fire. Some of their wonders seem to have puzzled Lane, the author of Modern Egyptians (London, 1816). Oman, in his work on the Mission of Islam to the British and Portuguese (London, 1867, p. 323 ff.), describes a fire-bath undergone by a Sayyid, trusting to the power of Hussain. He had apparently taken care to drench his feet with water before walking over the coals, but those who attempted to do it, not knowing how it were done, were scalded. The Order spread, others zawiya have witnessed these miracles can often give an explanation: the serpents with which the 'Isawi play have their venom removed; similarly, in the ceremony of the Duceh, practised by the Egyptian Sufis, whose Serpents rode over the fire in the year 1901, it appears that the horse had been carefully trained, and it was arranged that he should step nowhere where serious injury could result. It is, of course, possible that in some of these cases there is no conscious effort, and hypnotism accounts for anything that is wonderful; but in many places the holy man appears to be a low form of conjurer. The biographies of the founders of the Orders have a tendency to embody many manifestations of supernatural power; but it is probable that, like those admitted into the lives of Christian saints, they are thought to be edifying rather than historical.

The Orders of dervish, an early period to a definite form of organization, of the nucleus is the zawiya, or retreat: such a place is usually built by or for the founder of the Order, and is inherited by his successors, who in most cases are his actual heirs. As the Order spreads, other zawiya are erected, which, however, maintain a filial relation to the parent institution; i.e. the presidents of the former are appointed from the latter. The name shaita is properly applied exclusively to the father of the Order, but of the Khatif, i.e. 'substitutes': it was on this principle that the successor of the Sudanese Malhi was known in Europe as the Khalifi. The non-official members of the Order are called 'disciples' (talabah or mouth). The head of a dependent dervish is called mungddom: the revenues are in charge of a trustee, or wakil.

Membership of an Order does not necessarily interfere with the normal duties of life; the dervishes of Egypt are said to belong mainly to the class of small shopkeepers. The performances are thought, however, by some observers to have a tendency to produce insanity, or, at any rate, nervous disorders. Begging is in theory forbidden by some Orders, but in practice permitted, and certain dervishes carry a bowl or wallet for the purpose.

French writers hold that the underlying idea of most of the Orders is the declaration of the Islamic world, and the eventual expulsion of Europeans in the future. Those who wrote against this are accused of a number of French writers, partly employed by the French Government to investigate this important element in their African possessions.

D. S. MARGOLIOUTH.

DESCARTES.—i. Life and writings.—René Descartes was born on 31st March 1596. It seems to be well established, however, that the place of his birth was La Haye, in Touraine, not far from Poitiers. At eight years of age he was sent to the famous College of La Flèche, recently established by the Jesuit fathers and endowed by King Henry IV. The eight years passed at La Flèche had a profound influence on Descartes' future life, and he always spoke of his instructors with the deepest gratitude. After leaving school, young Descartes, who was provided with a moderate competency from his father, proceeded to travel, though he first of all spent some time in Paris, where he found his lifelong friend, Père Dary, who was largely biographical. In the course of the Thirty Years' War, Descartes volunteered for service with Prince Maurice of Nassau, then in Holland. But, while serving as an unpaid soldier, he did not lay down his sword; and, indeed, at this time wrote certain fragmentary works, most of which are lost, such as Meditations entitled Cogitationes Privatae—discovered comparatively late in the Library at Harewood. These early works may also be mentioned the Compendium Musicæ, which was not intended for publication, but was brought to light after the author's death. Of those enumerated in an inventory found after Descartes' death are: (1) a treatise entitled Considerations on the Sciences; (2) a paper on Algebra; (3) reflexions called Democritae; (4) observations entitled Experimenta; (5) a treatise begun under the name of Preambula; Initium Divinæ temporum, and entitled Olympia. Descartes' biographer, Baillet, who wrote very soon after his death, mentions yet another work entitled Studium Bonæ Mentis, which was addressed to a friend,—very probably Mercurius Pined and which was largely biographical. In the Cogitationes he tells of his 'conversion' in the year 1619, when with the army in its winter quarters at Neuberg, on the Danube. Smitten with remorse for sins committed, he resolved to follow after the footsteps of Truth. He then made a pilgrimage to the shrine of Our Lady of Loreto.

Descartes, on quitting Maurice's army, volunteered to serve with Maximilian, Duke of Bavaria, and chief of the great Catholic League, in his war against Frederick, the Elector Palatine, who had been crowned at Prague in 1619. But, as far as we can judge, the young soldier was much more occupied with his speculations than with the profession which he had taken up. Indeed, it seems very doubtful whether he actually fought at the battle of Prague, which decided the Elector Frederick's fortunes. With the Elector his children fled, and, curiously enough, one of them was Elizabeth, just four years of age, and permitted to correspond with and visit him. During these exciting years the events took place which are so well described in the biographical portion of the Method, where Descartes tells of the mental struggle through which he passed, from Africa; and he tells of the up his mind as to the course he was to pursue in his future life. It was at this time that he decided to sweep away the opinions which up to that time he had embraced, so that he

'...might afterwards be in a position to admit either others more correct, or even perhaps the same which now prevail, in any other way, on the contrary, if I firmly believed,' he said, 'that in this way I should much better succeed in the conduct of my life, than if I built only upon the foundations, and upon principles which in my youth I had taken on trust.'
After the battle of Prague, Descartes joined the Bavarian army once more, but it was not long before he gave up military service and started upon his travels. After nine years' absence he returned to Paris, where he was accused of favouring the sons of Frenchmen expelled from the Netherlands. Descartes' father put him in possession of the property to which he was entitled, and he found himself in consequence in easy circumstances. He started off on further travels almost at once, and made his way to Dantzic and then to Riga, where he had redeemed his promise of making a pilgrimage to Loretto. On his return journey he made scientific investigations in regard to the height of Mont Conis. Once more he returned to Paris and he is said to have written his French treatise on the subject of geometry, in order that it might be read by any of his countrymen who chose to do so. Its conclusions had long been cogitated, and they expressed the mature result arrived at by one who desires to know not only what is true, but also why it is believed. It is a simple and sincere record of personal experience, a 'Pilgrim's Progress' of the human soul. It was not the first important book written by Descartes. Of extant treatises we have the Regula ad directionem ingenii, written almost certainly during his earlier life, but left incomplete, and a treatise called Le Monde, which was never published; but the Method has a place possessed by no other of Descartes' works in the estimation of posterity.

Descartes' next work was almost equally famous, Meditations on the First Philosophy. The Meditations is a study of Truth in its highest aspect. It is not, like the Method, a charming biography and philosophy of life: it is a more profound study of the facts of existence, and an exposition of Descartes' system in all its fullness. In this book he deals with the great question of Philosophic Doctrine. Always intent on his object, we have the materialistic or 'sensational' standpoint clearly set forth, and in his reply Descartes gives an interesting exposition of the Cartesian idealism, which he opposes to his doctrine. Arnauld, the fourth author of 'Objections,' on the other hand, is by no means so hostile as his successors and Gassendi, and to him Descartes replies with suavity and consideration. He is simply concerned about the application of Cartesian principles to the doctrines of theology and morality. His sympathies are with St. Augustine, and he holds that we must believe what we cannot know. The last 'Objections,' by the Jesuit father Daniel, are accepted by Descartes at the last time. Gassendi always follows with interest. The 'Objections and Replies' are, however, deserving of the best consideration. The difficulties that occur in accepting Descartes' doctrine, and the arguments that may be used in their defence.

The next treatise written by Descartes was the Principles of Philosophy, published in Latin in the year 1644. In this book its author enunciates the same doctrines that he set forth in the Method and the Meditations. He praises his mistress Philo-

From which of the two texts does this natural text seem to be derived?
various psychological manifestations may be rationally explained by purely mechanical causes, was safely placed for publication in <i>Elevier</i>'s hands. Then he left the 'dear solitude of Egmont for Paris, where he passed his days in Stockbridge were destined to be short. The exequient young Queen was not only occupied in endeavouring to establish an Academy of which she intended to make the most of in Paris, but also she desired to be instructed in philosophy at five o'clock in the morning, and Descartes was in the habit of coming to the house early and being called upon to explain what might have been anticipated in a bitterly cold climate. He fell ill of an inflammation of the lungs after nursing his friend Chanut through the same illness and died on 11th February 1650, at the age of fifty-four. He was buried at Stockholm, but later his remains were removed with considerable difficulty to Paris and laid in the church of St. Genevieve du Mont. In 1449 the remains were removed to the church of St. Germain-des-Prés, where Descartes was buried in the faith of his forefathers, but it was not long before serious suspicion fell upon his teaching, and his works were placed upon the Index. Cler- seil, his friend and one of the translators of his works, who after Descartes' death wrote a panegyric on his virtues, records in <i>l'ceur</i> of his desire to have his name remembered after his death, to leave the traditions of this body; suffer then this separation with joy and courage.'

In addition to the works mentioned above, there was published after his death an unfinished work entitled <i>La Recherche de la vérité par la lumière de la nature</i>, an interesting dialogue upon Cartesian principles between three friends in a country house. The dialogue appears in the <i>Programma</i>, which was written in refutation of his opponent Regius (<i>Le Roy</i>).

2. System of philosophy. — It is true in more than a traditional sense that Descartes is the father of modern philosophy. Philosophy as a word came into existence. His was an age when men were confronted with the new conception of Nature and of man, and were led to new methods of investigation. The great upheaval which we call the Reformation brought about a form of individualism which ended in a reaction against the new standards judged to be as arbitrary as the old. But the real work of the Reformation had already been brought about in Protestant and in Roman Catholic alike. Man learned to be himself, and was no longer restrained by artificial bonds. The spirit of investigation was everywhere. All phenomena of Nature were of interest, and all men tried to obtain exact knowledge, and thereby to strengthen their powers of originality and self-reliance. The 17th century—the century in which Descartes lived — was the period in which science became a reality, and in which the scientific spirit became the spirit of the age. Historically, too, it marked a period of transition. At our most bleached on the part of the House of Valois had been ended by the assassination of Henry III., and on the accession of Henry IV., religious warfare was brought to a conclusion; his death was an inexpressible loss to the French nation, least long been held captive; the hour has now come for thee to quit thy prison, to leave the traditions of this body; suffer then this separation with joy and courage.'

Descartes' work in the midst of this time of unrest and ferment was that of a great systematizer. He took all those new ideas that had come into being and endeavoured to bring them into a definite, concrete, and comprehensible system. In rejecting the old dogmas of the Schools, the New Learning came to provide something better able to satisfy the inquiring mind; it brought with it certainty of his new method. But his days of change in the world have become of infinite importance and interest, and that is not the knowledge of it, and also the knowledge of man, should be certain and definite. The problem, then, that Descartes had to deal with was the reconciliation of two sides, now come into prominence—the spiritual and the physical, the soul and the body, the point of view of orthodoxy and the point of view of science; and it is because this is a modern problem that the New Learning is needed. But Descartes' attempt to bring about this reconciliation was the first of many on similar lines. His object was to arrive at certainty—a certainty which he believed could be reached only by following definite rules laid down by his Method, and by beginning with the Doubt which is the absolute essential before any successful quest after Truth is made—'de omnibus dubitandum est,' as he expressed it, where doubt must be applied to all those inherited traditions and beliefs which form, to his mind, a mass of incongruous opinions; we must ruthlessly reject what cannot be justified to ourselves as truth; we must free ourselves from all prejudice and uncertainty, and his philosophical doubt is in nowise scepticism, but the doubt that precedes true knowledge.

Descartes' system of philosophy was thus, above all, a method, and the interesting thing about this method is that it preserved itself to this day as his life-history might. The order of his experiences was simply the order of his method writ large. This is what makes the immortal little book called by the name of the Method a masterpiece of spiritual biography, as an account of moral and mental development, as it is also a masterpiece of direct and simple style. It was in his quiet room, in that cold winter with the army on the Danube, that Descartes turned his thoughts not to seek happiness here or there, for it is only to be found within him. The world and he, the spirit and the body, mind and matter, are really one. Traditions, hypotheses, assumptions of all kinds should be rejected, and the modem spirit came into existence. His was an age when men were confronted with the new conception of Nature and of man, and were led to new methods of investigation. The great upheaval which we call the Reformation brought about a form of individualism which ended in a reaction against the new standards judged to be as arbitrary as the old. But the real work of the Reformation had already been brought about in Protestant and in Roman Catholic alike. Man learned to be himself, and was no longer restrained by artificial bonds. The spirit of investigation was everywhere. All phenomena of Nature were of interest, and all men tried to obtain exact knowledge, and thereby to strengthen their powers of originality and self-reliance. The 17th century—the century in which Descartes lived — was the period in which science became a reality, and in which the scientific spirit became the spirit of the age. Historically, too, it marked a period of transition. At our most bleached on the part of the House of Valois had been ended by the assassination of Henry III., and on the accession of Henry IV., religious warfare was brought to a conclusion; his death was an inexpressible loss to the French nation, least long been held captive; the hour has now come for thee to quit thy prison, to leave the traditions of this body; suffer then this separation with joy and courage.'

Descartes' work in the midst of this time of unrest and ferment was that of a great systematizer. He took all those new ideas that had come into being and endeavoured to bring them into a definite, concrete, and comprehensible system. In rejecting the old dogmas of the Schools, the New Learning came to provide something better able to satisfy the inquiring mind; it brought with it certainty of his new method. But his days of change in the world have become of infinite importance and interest, and that is not the knowledge of it, and also the knowledge of man, should be certain and definite. The problem, then, that Descartes had to deal with was the reconciliation of two sides, now come into prominence—the spiritual and the physical, the soul and the body, the point of view of orthodoxy and the point of view of science; and it is because this is a modern problem that the New Learning is needed. But Descartes' attempt to bring about this reconciliation was the first of many on similar lines. His object was to arrive at certainty—a certainty which he believed could be reached only by following definite rules laid down by his Method, and by beginning with the Doubt which is the absolute essential before any successful quest after Truth is made—'de omnibus dubitandum est,' as he expressed it, where doubt must be applied to all those inherited traditions and beliefs which form, to his mind, a mass of incongruous opinions; we must ruthlessly reject what cannot be justified to ourselves as truth; we must free ourselves from all prejudice and uncertainty, and his philosophical doubt is in nowise scepticism, but the doubt that precedes true knowledge.

Descartes' system of philosophy was thus, above all, a method, and the interesting thing about this method is that it preserved itself to this day as his life-history might. The order of his experiences was simply the order of his method writ large. This is what makes the immortal little book called by the name of the Method a masterpiece of spiritual biography, as an account of moral and mental development, as it is also a masterpiece of direct and simple style. It was in his quiet room, in that cold winter with the army on the Danube, that Descartes turned his thoughts not to seek happiness here or there, for it is only to be found within him. The world and he, the spirit and the body, mind and matter, are really one. Traditions, hypotheses, assumptions of all kinds should be rejected, and the modern spirit came into existence. This may sound easy, but nothing is more difficult, and in Descartes' opinion there are only a few who should undertake the task, and those who do so must be modest and ready to accept with humility the ridicule that will be given them. He then states certain rules to be followed—rules which simply make for accuracy and thoroughness of thought: 'Do not accept what is not clearly known, divide your difficulties into parts so far as possible, work on one of them at a time. The world for, therefore, the spirit is directed in this way to a life of highest value, and that is that he exists, inferred from the fact that he possesses consciousness—<i>Cogito ergo sum</i>, as he puts it in his immortal phrase. Descartes saw clearly that in order to think he must exist. His philosophy is turned on the fact of his personal existence. The senses may indeed mislead us, and we cannot place absolute confidence in what has even sometimes deceived us; but, however much I may have been deceived, the fact remains that I am— As a thinking being.

'I had the persuasion that there was absolutely nothing in the world, that there was no sky, no earth, neither minds, nor bodies; I was not conscious of anything before, at the time the sun did not exist; I did not exist! Far from it! I assuredly existed, since I was persuaded. But I had not a doubt about it, it was impossible for me to doubt, it was the very being of the idea that flew through my mind. I am then certain that I am. It is necessary that there exist, that I exist, that I am, and that I think.'

'This is clearly a great step forward; it signifies that a new phase in philosophy has been entered on, a change of front as great as the Kantian transformation of a later date, which in a measure foreshadowed, 'I think' is present in all our ideas and even in doubt itself. We are brought back from the external and unrelated facts of consciousness to the basis of Truth on which all
other truth is founded. We have arrived at the conception of thought as the groundwork of all knowledge. Further on in the Meditations he says that in thought is found that which properly belongs to the self.

"The mind is not capable of thought. I am — I exist; this is certain; but how often? As often as I think; for perhaps it would not be I, but the mind, which I should really wish to think, that should at the same time cease to be. I now admit nothing that is not necessarily true; I am, therefore, precisely speaking, only a thinking body, a mind understanding a reason — terms whose signification was before unknown to me."

In this we have a firm foundation on which we can build, setting aside the old disputations of the Schools and great 'dualisms' and 'otherisms.' Understanding or reason is for the first time made the basis in a philosophic comprehension of the world as it presents itself to us. Descartes says that the outside world is not perceived in its true signification by the senses or imagination, but by the mind alone.

They [outside things] are not perceived; he says, because they are understood; that is, rightly comprehended by thought. 'I readily discover,' he goes on, 'that there is nothing more clearly apprehended than my own mind.'

Having got so far, he goes on to apply his method; he shows how, when the mind is cleared of all preconceived notions and prejudices, what is known becomes known clearly and distinctly. This signifies that we must now apply ourselves to making our knowledge absolutely certain, so that we may be sure that we are ascertaining what is true.

"I am certain that I am a thinking thing, but do I not therefore know what is required to render me certain of a truth? In the first knowledge there is nothing that gives me assurance of its truth except the clear and distinct perception of what I affirm, which would not indeed be sufficient to give me assurance that what I say is true, if I did not happen to know that anything I thus clearly and distinctly perceived should prove false, and, accordingly, if I were not to act as a general rule, that all that is very clearly and distinctly apprehended must be true."

With the attitude of doubt the so-called secondary qualities, dependent as they are on the relations of one object to another and to the sentient subject, are naturally first brought under the ban of criticism. These qualities do not appear to be fixed in any object, but they are understood, however, what possesses the two attributes of extension and capacity of motion; and hence Descartes appeals to the truths of the mathematical sciences. Even they, however, might be false; some philosophers led us to the while deceiving us in what we accept as truth. Hence we must reject even these apparent truths and fall back upon our own minds. Here again we find modes of consciousness in feeling, willing, imagining, etc., 'so that I must also abstract from these and concentrate upon myself as I am, without borrowing in any way from elsewhere.' In this way we reach Descartes' thinking substance, which, as he points out, is present and is affirmed, even as it denies or doubts; and on the other hand we have the external object as extension.

Descartes maintains that amongst the ideas that are clear and distinct we must recognize that of God as a Perfect Being of whom we have a clear and distinct conception. The idea of God cannot be, he says, be derived from our limited existence; its origin must be in one who contains all in Himself. From the idea of perfection he infers the existence of it in God as its originator. The idea of perfection involves the clearest and most logical argument which is so frequently brought forward by later philosophers. But, if such a God exists, we have a guarantee that we cannot be deceived, for such a perfect Being could not deceive us, and therefore we may accept the teaching of our consciousness. The errors of the atheists — no small class at the time, if Mersenne is to be believed — are by Descartes said to be due to their anthropological ways of looking at God, and to their forgetting the fact that, while men's minds are finite, God is infinite.

It is thus evident that Descartes considered that in his essence man is a thinking and an extended being who has a clear and distinct understanding of himself as an extended and unthinking thing, and thus that man as mind is absolutely distinct from body, and may exist without it. It is this dualistic conception of mind and body that constitutes the difficulty in forming any adequate conception of the universe according to Cartesian principles. The question arises as to how we can possibly reconcile the two sides — the outside world, or extension, as Descartes called it, on the one hand, and ideas as to consciousness, on the other. The qualities of the object are reduced to bare extension, and those of the subject to bare thought. As a matter of fact, Descartes introduced this new view of the outside world as extended, that is, as that which occupies space, and has extent, breadth, and depth; and it was to this extension that he applied the mathematical reasoning for which his name is famous. And confronting it he have the Intelligence, Thought, or Reason which apprehends this external distraction. This is the same philosophic conception. But the difficulty comes when we try to explain how the one side acts upon the other. We have before us two entities, one of which is passive and inert, and yet is acted on by a unifying intelligence eternally pure, and thus upon the relationships which make it comprehensible by us; while, on the other hand, we have the mind, which is wholly immaterial and spiritual. How is the transfer of the so-called natural to the spiritual? How does the physical action convey anything to the perceiving mind? Doubtless there was in Descartes' mind a solution of the difficulty. He would have considered that there is a unity to be found in thought, and that this is the way by no means clearly worked out. Indeed we have but intimations of it which are only comprehended in the light of later developments in thought. The mind is conscious of the infinite as having in it more reality than itself."

"Our consciousness of God is prior to our consciousness of self. For how could we doubt or desire, how could we be conscious that anything is wanting to us, and that we are not altogether perfect, if we had not in one way the idea of a Perfect Being in comparison with whom we recognize the defects of our nature?"

Though there is no doubt that Descartes' system was a dualistic one, the progress made by him in his search after truth was immense. He took knowledge as the one great and important fact, and sought out its elements as best he could. He played a notable part in the great discovery which meant so much in his age, that the world is governed by law. It has been said of him that 'he established liberty of mind and sovereignty of reason.' In his writings he brought the whole of Nature within the reign of law, and showed how both the starry heavens and the earth beneath are governed by the same inevitable physical law. He showed also how such views are consistent with a philosophic outlook. Perhaps one of his greatest claims to our gratitude rests on his work in Mathematics (see below), that is to say, not in his well-known discoveries in Geometry and in the development of the application of Algebra to the solution of geometrical problems, but in the fact that these might be, but, in the large sense of the term, in his scientific work. For Mathematics in those days included all the immense amount of work done in the direction of Physics, Astronomy, Optics, Physiology, and the other branches of science. Descartes was not an investigator of the type of the present day — a patient observer of a mass of phenomena from whose careful examination
some results might be deduced. He had his theories well defined before he began his work, and laid them down in what we should consider a dogmatic fashion. But, this granted, he applied himself to examine man in all his aspects. In Physiology, for instance, he forms his theory, and then he enunciates it, explaining how the human body might be and might act. A great deal—indeed most—of what he tells us about the physiology of the body, though very interesting and in a degree excellently not very correct, in the view of later investigation. But then Descartes has the credit of maintaining the theory of the body as a machine, a very complicated machine of course, but one which acts as a machine. He narrated what he knew to be true about the machine, and also what he considered was probably true, and formed the whole into a system which was perfectly clear and intelligible to those who had only the facts presented before them. In our view, any of those facts, both physical and physiological, are to the least degree absurd, but still it was better to have a comprehensible theory such as he gives than nothing at all. That is to say, it was better to have this false as a basis of reasoning than to remain in the confusion of the theories of the day. He pictured a physical world in which everything was explained—springs, rivers, mines, metals, seas—sometimes explaining facts that are not so well understood, in his works de Homme and La Formation du Jetus, a wonderful machine-man carrying on all the processes of digestion, circulation, growth, sleep, etc., and endowed with sense-perception and ideas, multiplied and III as the result of this wonderful clock. To him to know the beginning of things, and the laws that govern action, was to know the whole, for the operation of physical law, once set in motion, can clearly explain the rest. This was the theory that represented the pantheism of Spinoza. The Infinite alone is affirmative, the finite only is in so far as it is not; and so we are led on to the denial of the finite, and then the absolute unity swallows up all difference in itself.

In his last published treatise, the Passions de l'âme, Descartes shows how the various psychological manifestations may be explained by purely mechanical means. He sets forth there the differences between soul and body; though it pertains to soul, and heat to body. The soul cannot give heat to the body, or we should not have death: a dead man, in Descartes' view, is just a broken watch. After explaining how this world was not fixed and eternal, he considers the thought pertaining to the soul, i.e., the actions of our will which directly proceed from and depend on it, and the passions which are the various kinds of perception found in us. 'The soul from its seat in the brain spreads throughout the body by means of the spirits, nerves, and even blood, which last, participating in the impressions of the spirits, can carry them by the arteries into all the members.'

If the image which is unified in the gland inspires fear and has relation to what has formerly been hurtful to the body, the passion of fear is aroused, and then the passions of courage and the reverse, according to the temperament of the body, or the strength of the spirits impelled by the movement of the spirits, and bring with them certain movements of the body. The will, however, unlike the passions, is always free: the action or will of the soul can only be indirectly affected by the body, as it has been in one instance, by the action on the actions which bring them about, and are only indirectly affected by the soul, excepting when it is itself their cause. The soul, however feeble, may indeed obtain absolute power over the passions, although with difficulty. This was a just appreciation of the value of good and evil, and our good judgment regarding them enables us to resist the influence of our passions. 'If we clearly saw that what we are doing is wrong,' he says in the same book, 'it would be impossible for us to sin, so long as we saw it in that light.' Will and intellect must be united in the perfect man, as they are united in God. Here also we are met with the unexactly described theory of spiritual mind on matter. How the movement of the passions can be altered by reason is a question which is not answered.

[3. Services to Mathematics.—From the time of the Greeks until Descartes the work of extending the new results which had been obtained in Geometry, though Mathematics had been greatly advanced, notably by Cardan and Vieta. Descartes made great progress in Algebra, and gave new life to Geometry by the introduction of coordinates.]

Descartes was not the first to realize that a curve might be defined as the locus of a point whose distances from two given straight lines are connected by some known law, but he was the first to see that the integral in a plane can be completely determined by its co-ordinates and conversely. This was largely due to the introduction of the law of co-ordinates, and the method of the double sequence. Here, for instance, he saw that several curves might be drawn with the same axes, and their intersection found algebraically. After this, their tangents were easily determined, though Descartes' own method was indirect, and applicable only to curves with an axis of symmetry. On this axis he found the equation of a circle touching the curve at any given point, and then found the tangent to the circle at the point of contact. He defines the tangent as the limiting position of the secant.

Descartes classified curves according to the relationships of the lines moving parallel to the axes, by whose intersection it can be described, and their roots and velocities are "commensurable" (i.e., if $y$ is an algebraic function of $x$ as in equation (5), the equation $y = ax^2 + bx + c$ is the cycloid), it is "mechanical." This is roughly equivalent to the Newtonian division into algebraic and transcendental curves. In order to classify the curves, Descartes presented a table in which he analyzes his curves, and for which Pappus, which may roughly be summarized as follows: To find the locus of a point the product of whose perpendiculars is a given straight line, one may find that on others. Where $m + n = 1$ we have a straight line, where $m = 0, n = 1$ a parabola. This was known to the ancients, who had also conjectured that $m = 1, n = 2$ a conic. Descartes classified curves where neither $m$ or $n$ exceed 2 as of the first genre, where neither exceeds 3, as of the second genre, and so on. Thus one genre corresponds to two of our degrees. He also discussed curves which are the loci of a point whose distances from the fixed points are independent, in particular the Cartesian ovals, where the product of the distances is constant.

The foregoing work is found in the first two books of the Géométrie; the third book is algebraic. It is important, as introducing our modern index notation, and the use of the last letters of the alphabet for variables (Vieta had used the vowels), and the first for constants. Descartes refers to algebraic equations, and indeterminate coefficients freely, and was the first to realize the advantage of taking all the terms of an equation to one side. The method of solving equations, and a solution of cubic and quartic equations. It shows how to construct an equation with given roots, to determine the signs of the terms or coefficients, and to estimate the number of positive and negative roots, to increase or multiply the roots of a given equation by a given quantity, to eliminate its second and third degree, and so on, so that a number of roots of an equation is equal to its degree. Solutions of cubic and quartic equations are given, and Descartes believed that his method could be extended to those of higher degrees.

Descartes' mechanism is largely inaccurate, but very suggestive, being the first systematic account of the universe on mathematical principles. Of his ten Laws of Motion the first
two correspond to Newton's first Law, while the other eight are incorrect. But, by his recognition of these basic principles, and by his careful observation of a moving particle, he rendered invaluable service to Dynamics.

His work is today without characterized by great originality and boldness of thought. It is generally in a condensed form, and meant rather to be suggestive than rigidly logical, but it is none the less important as the foundation of all modern Mathematics.

Lubrano.—The tercentenary of Descartes' birth was celebrated at the Sorbonne on 31st March 1869, and in the ensuing of the following year arrangements were made for issuing a new edition of the works of Charles Adam and Paul Tannery (Léopold Cerf). This admirable work is now completed. for the first time. The two volumes to which I have, as far as possible, a complete edition of Descartes' works in the tongues in which they were written, and with an invaluable correspondence carefully edited and arranged. The first volume is a biography by M. Adam, Descartes, as vie et ses œuvres, 1888. The early editions of the collected works were two Latin texts—one by Elsevier in vols., Amsterdam, 1713, another published in 7 vols. at Frankfort, 1697. Then there is Cousin's Fr. ed. in 11 vols., Paris, 1824-26. This includes the correspondence. The main source of our information about Descartes' life comes from the Vie de Descartes, written by Hallet in 1693 in two large vols. of this a short abridgment was made, and issued in English in 1892. A modern and scientifically critical life, called The Life and Times of Descartes, published, London, 1903, by Elizabeth S. Haldane. Foucher de Careil published various manuscripts which he discovered in the 19th century. The Latin text of the Principles were translated into English by J. Veitch, London, 1896, and G. H. in a new ed. of Philosophical Works by E. S. Haldane and G. R. T. Ross has been issued (1911) by the Cambridge University Press.

Thus the recognition of Descartes' rationalism is enormous; the following works may be mentioned: J. Mill, Hist. de Descartes annes 207, and since 1857, Paris, 1871-1870; F. Boussenart, Histoire des phénomènes, Paris, 1804; A. Fouclic, de Careil, Descartes et la princesse de Palestrina, Paris, 1862; also Descartes, la princesse Elizabeth et la reine Christine, Paris, 1873; J. P. Mahaffy, Descartes, in Blackwood's Philosophical Classics, 1859; N. Smith, Studies in Cartesian Philosophy, London, 1901; Alfred Fouillée, Descartes, 1878; Longueville, L. A. Liard, Descartes, Paris, 1882; see also the various Histories of Philosophy, such as that of Kuno Fischer (Eng. tr., London, 1897), and the Ehrman edition of the Complete Works.

Descendents to Hades (Ethnic).—I. Introductory.—Myths or legends of visits paid by mortals or immortals to the underworld for some definite purpose are of common occurrence, and some are of remote origin. They are intimately connected with primitive and savage man's ideas of the dead and the dead, joined with ideas of the descent and ascent of those who have been severed from him by death. Before a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. As a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. Before a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. Before a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. Before a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. But a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. Before a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man might claim, or be looked upon as having affections, for those who have been severed from him by death. thought have died and come to life again; and, in many cases, their minds being haunted by the current ideas of Hades, they relate as actual visits of the soul there what has been experienced in dream (Tytor, ii, 48). Such trance visits of the apparent class of spiritualism are known, and warranted by the spirit traditions where detailed stories of the visit—all greatly are—told (Plato, Rep. x; Pliny, HP vii. 52; Ashton, Shinto, 1905, p. 181; Schenck, Gesch. der ind. Visionstätt., Leipzig, 1892, p. 341; Ang. de der Chính: Ges. Worterbuch, Dusseldorf, 1836, p. 36). Or the dream experiences may occur in ordinary sleep, or accompany the hallucinations of illness. In some cases they have assumed the stereotyped form of a folk-tale. A Maori woman told of a visit of her spirit, which descended to Reinga, the place of the dead, exactly like this world. Her father’s spirit commanded her to return and look after her child, and to beware of eating the food of Reinga. She was pursued by pious demons, but this time her spirit escaped them by throwing down a root which they stayed to eat. Then her spirit rejoined her body (Shortland, Trad. and Sup. of the N. Zealanders, 1856, p. 190; for another tale see Morley, Myths, Retold, and Their Influence, p. 36). In a story from the Hervey Islands the spirit of a man apparently dead descends to Hades, but by a stratagem he escapes being eaten by the fag M i r, its ruler, who bids him return to earth (Scott, ed. of Tylor, Myths, 1860, p. 72). In a Japanese story Ono-no-Kimi died and went to Hades, but was sent back by its ruler because his allotted time was not exhausted (Hearn, Unfamiliar Japan, 1894, i, 65). Many stories of dream visits to the land of the dead are found among the American Indians, with elaborate descriptions of that land, based on current beliefs, and telling of the dangers of the way, the narrow bridge spanning the river of death, and the events of the life of the spirit there. (Ind. Tribes, Philad. 1853-6, iii. 283; Tanner, Captivity and Adventures, N. Y. 1830, p. 290, etc.).

Savage medicine-men very commonly claim the power of sending their spirits during a trance into the under-world. Thus the Eskimo angelsok is secured bound and, during a dark solemnity, visits the torngak, or spirit, in Hades. He then appears unbound and gives an account of his visit (Grantz, Hist. of Greenland, 1826, p. 269). In Melanesia and Polynesia these and other tales of descent exist (Coldington, The Melanesians, Oxford, 1891, p. 277). Sorcerers in Borneo who have visited the under world will show a piece of wood or stone given them by the spirits there (L’Anthrop., Paris, x, [1890], 728; cf. Alphonse de Quatrefages, vol. i, p. 429). Among the Karoes, necromancers claim the power of going into the unseen world to bring back the ta, or soul, of a sick man when it has wandered away (Mason, ASBle xxiv, 201). In Siberia the shaman is supposed to conduct the souls of the dead to the lower world and there secure for them a favourable welcome by gifts of brandy (Radloff, Aus Sibirien, Leipzig, 1884, ii, 321). For a Chinook instance of the souls of shamans visiting Hades to recover the soul of a sick man, see CHINKOOLS, vol. iii. p. 562.

Visions of Hades were doubtless known to the ancient world, and they may have suggested an artificial introduction of them for religious or other ends. There, at the mouth of a cave of Tefphonius in Lebanon, the inquirer, after a due ritual, descended to an underground region, where he was perhaps shown scenic representations of Hades, or, under the influence of opiate vapours or narcotics, fell into a trance and experienced in dream what he deemed to be realities. These experiences, to judge from the vision of Timarchos, were visions of the Other-world, of Tartarus and Acheron, (Plutarch’s stories, of which there are several, see Rouse, Hades, 39. 51f.). But a literary use was also made of tales of such dream experiences, and there are many accounts of descents to Hades or visions of the Other-world, of the visit of Odysseus, Plutarch’s stories of Thespiacan apparitions, (de Tert. Just. Dix.; Enseb, Prop. Evang. xi, 36), the visit of Aneas, Lucian’s story of Cleomedes (Philo, 25), as well as burlesque accounts of descents to Hades in the tales of Aristophanes, and that of Menippus told by Lucian (see also Rohde, Psyche, Freiburg, 1894, p. 289). The scenes of Hades, as described in Homer, were reproduced by Polygnotus on the walls of the Lesehe at Delphi (Paus. x. 28, 4).

A late Egyptian demonic papyrus of the 1st cent. A.D., but probably representing a story of far earlier date, tells how the high priest of Memphis, Setne Khaunna (c. 1250 b.c.), descended, under the guidance of his wife, to the lower world, where he saw the judgment of souls and the various halls of Amenti, or Hades, and the state of the dead there (Griffith, Stories of the High Priests of Memphis, Oxford, 1900, p. 45 ff). In Hindustan the beliefs of Buddhism and of the Vedanta are represented in the form of a story of a visit to hell or of visits paid there, perhaps based on actual visions induced by meditation and asceticism, and shaped in accordance with the current dogmatic beliefs. They served to buttress the latter, and were perhaps worked up from actual experiences in a previous existence. In other instances they are told of people who fell into a trance, or whose souls were summoned too soon to the Other-world and were then permitted to return to the body (Schenk, 91 f). In later Persians the Book of Arda Viraf (ed. Hang and West, Bombay, 1872) relates how this pious Parsee priest was selected by lot to take a nectaric, so that his soul might go, while he was still alive, from this world to the next and bring back a report of the fate of souls. The bliss of the righteous and the tortures of the wicked are described in detail, and the book is still read and firmly believed in by all classes of the Zoroastrian community. Several editions of it are extant. In later Judaism the authors of such works as the Book of Enoch (ed. Charles, Oxford, 1893) and the Book of the Secrets of Enoch (ed. 1896) describe visits to Sheol and to the various heavens, with their different divisions for the righteous and the wicked.

There can be no doubt that most of these narratives, especially where they describe the punishments of sinners and the bliss of the righteous, served the purpose of teaching a dogmatic eschatology and of urging men to be righteous. The same phenomena are met with in the history of Christianity. There are records of genuine visions of the Other-world such as have been experienced by the devout or imaginative in all ages, and based on recollection of what had been heard or read, as Tertullian shows of a female visionary known to him (de Anima, 9). Of such a class are the visions of SS. Perpetua and Saturus, with their reminiscences of passages in canonical or apocryphal Scriptures (Robinson, Passion of S. Perp. TS, Cambridge, 1892, i. pt. 2). But there are also innumerable literary versions of visionary or actual visits to hell, purgatory, and paradise, perhaps based on these, but in many cases borrowing freely from Greek or Jewish sources. This is most marked in the description of the various divisions of Hades (found in Egyptian, Oriental, and Jewish instances), and in the frequent mention
of the narrow and dangerous bridge of the under world, an early instance of which occurs in the Dialogues of Gregory the Great (iv. 36; see also art. III). The prototype of all these visions, to which Dante have imitated or have been inspired, is found in the Apocalypse of Peter (c. A.D. 100-150), on which many later visions are based. These stories (which, with wearisome iteration, tell how the seer or visitor or, in some cases, the soul of the dead person raised to life by an apostle or saint 1 was led through the regions of torment, of purgatory, or of paradise) were highly popular in the Middle Ages, when there existed a passionate desire for exact details of the Other-world, and they were used to enforce dogmatic teaching. But they held their place as early as the 11th cent., and also in later times in the fabliaux, by the troubadours, and by Rabearlos, who helped to discredit them (Wright, S. Patrick’s Purgatory, 1844, p. 7; Lecky, Hist. of Europ. Morks, 1850, ii. 232; Rabearlos, bk. ii. ch. 30). Their scenes were also reproduced by art, e.g. on the walls of ancient Greek churches, just as Dante’s poem affected Italian painting from the time of Dorgona onwards (see Heusy, Les Supplées de l’Enfer d’après les peintures de l’époque byzantine, Ann. de l’asso. pour Pencourag. des études grecques, Paris, 1871, p. 114 ff.). The cave of Trophonius had also its double in the Irish St. Patrick’s purgatory, expressly mentioned in the 13th century. After ritual preparation, the pilgrim was allowed to enter, and, in the windings of the cavern, under the influence of its hot vapours, he fell asleep. In most cases his dreams took the form of preconceived notions of the ruler of that region. But they sometimes had the form of a new case, and sometimes the pilgrim perished in the cavern (Wright, 139, 153, 155). Possibly some scenic representations may have been used, and there seems to have been an actual bodily experience of the torments described, as the pilgrims in some of the future penalties. Several literary accounts of visits and visions at this famous spot, beginning with that of the descent of Ossain in 1153 by Henry of Savoye (of which English and French versions exist (D. Lacy, Ossain Miles, Edin., 1837; Marie de France, Poésies, ed. R. Bouquet, Paris, 1820, vol. ii.), had a great vogue in Europe.

In the Norse Elder Edda the 11th or 12th cent. Sturluson, ascribed to Snemdir, describes a son’s vision of his mother, who tells him of his death, and how he at last reached the place of torment, and saw the tortures inflicted there on various classes of sinners. Then he describes the joys of heaven. Pagan and Christian ideas are curiously intermingled, as if the poet had had his feet two feet fair at once, or was a heathen with glimpses of Christianity (Vigfusson-Powell, Corp. Poet. Boreale, Oxford, 1883, i. 292 ff.).

3. Descent to rescue a dead relative. — This series of stories is one of the most pathetic in all mythology, showing man’s instinctive belief that love is stronger than death, while the savage examples are quite as touching as those from higher levels. Of the savage legends, the most numerous versions occur among the Amer. Indians, Polynesians, and Melanesians.

A Wyandot story tells of a brother who went to the land of souls to seek his sister, who had died. He met an old man, who gave him a calabash in which to put his spirit. After several failures he captured her, and hastened back to earth. There he summoned his friends to witness the revival of the dead body, and a woman opened the calabash, and the spirit flew back to the land of souls (Codrington, 1872, i. 235). There are numerous variants of this tale, and generally there is the curious misapprehension that the brother of a wife, the soul escapes (see Looman, Prim. Superst., Philad., 1881, p. 47; Lamoignon, Moeurs des Sauvages, anses. en Nouvelle Holland, 1823, p. 365; Folklore dans les deux mondes, Paris, 1894, p. 290 ff.; W. H. 591; Blair, Anecd. of the Prim. and Savage, vol. i. p. 683). In some cases a woman’s spirit is allowed to return to her husband without her visiting the land of souls, but again she loses her, or he himself dies shortly breaking a taboo. 2

[2] This is the Maori version of the Transformation Flight, already met with in a Maori instance, 1.2.]
celebrated), the other telling of the rescue of Ἰδατ from Hades at the intervention of the gods. The present poem bears more abundant traces of the latter myth than of the former, though it also hints at a descent for purposes of rescue; Ἰδατ descends violently, and threatens to break down the doors of Hades. He is received by Paus. Dieterich, *Rel. of the Ancient Bab.*, 1887, p. 221 ff.; Jastrow, *Ed. of Bab. and Assyria*, Boston, 1899, pp. 503 ff., 588 f.; see *ERE* ii. 315f.). The recovery of Ἰδατ by Ἰδατ is also suggested by the fact that there was a Greek myth telling how Admetus descended to Hades to redeem Adonis (Tammuz) from Persephone (*Apol. of Aristides*, § 11). At the sanctuary of the Syracide *Ἀρδηφίδης* sexual relations with the priestesses representing her were believed to the one from Hades, as Adonis had been freed from it (*Euseb. Vita Const.* iii. 55; *Boussuet, Hauptprobleme der Gnosis*, Göttingen, 1907, p. 72).

The so-called prayer of a Nara-Nava Shaman has a certain likeness to the Ἰδατ myth. It is a kind of prayer-spell, describing the action of the gods as the shaman desires them to act. He feasts and dances and invokes them to appear in the inner world. The war-gods are therefore to descend and rescue it from the "underground witch." They pass gate after gate, seatfed after seatfed, and they work in the great circle that others than the supplicant's soul. Returning through chamber after chamber, they bring the dead to me before I am restored in beauty (*Matthews, Amer. Anthrop.*, 1888, i.).

The Greeks had several descent-myths, that of Orpheus being the best known, thanks to Virgil's version. After the death of Eurydice her image haunts him, and he determined to seek her in Hades. He descended there, and the sweet notes of his lyre enchanted their denizens. Pluto and Persephone were moved to pity. Eurydice would be restored one condition—that Orpheus should precede her and not look back till they arrived on earth. Just before reaching the fatal limit, his love overcame him. He looked round and lost her for ever (*Verg. Georg.* iv.; *Pausa. i*. x. 4-6; *Apollodorus*, ii. 3. 2).

The Orphic poem *Ερώτημα εἰς Ἅδου* has not survived, but it may have had for subject the descent of Orpheus. Foucart thinks it was a ritual poem containing instructions for the dead in Hades, like the Orphic tablets engraved on sheets of gold, and the Egyptian *Book of the Dead* (*Recherches sur l'origine et la nature des mystères d'Éleusis*, Paris, 1895, p. 7; cf. also *Dieterich, Nêpûs*, Leipzig, 1893, p. 128 f.).

Dionysos, as certain myths taught, was also said to have descended to Hades to bring back Semele, and, according to local Argive tradition, he descended to the Amarys, having shown him the way. His return from Hades was annually celebrated there, and in all probability the myth had become fused with that of his resurrection (*Pausa. i*. 31. 2, 37. 5; *Apollodorus*, iii. 5. 3). Another myth told how *Ἀλεστία*, the wife of *Ἀδμήτης*, having willingly died in his stead, was delivered by *Ἡράκλεις*, who, seeing the grief of her husband and people, descended to Hades to rescue her from death. In a variant of the myth, Persephone was his rescuer (*Apollodorus*, i. 9. 15; *Hyginus, Fab. 50*; *Eurip. Alestís*).

Another myth—the subject of a lost poem of Hesiod—related that *Θεσε芦* agreed to assist *Πρίθαρος* in carrying off *Περσεφόνη* from Hades. They descended there, but, according to one version, were not invited; for, expecting to receive gifts, they sat down on the chair of Forgetfulness, to which they were held fast by coils of serpents. *Ἡράκλεις* caused the relics of both to be cast into a cauldron, and fetched Cerberus (*Pausa. i*. 31. 5, x. 29. 2; cf. the euhemerized version, see *i*. 17. 4, and *Plut. Thes.* 31. 35; *Epit. Vat. ex Apollod. Bibl.* ed. Wagner, Leipzig, 1891, pp. 58, 155 f.). Cf. also the myth of *Casser* and *Pólux*. For the Pythagorean descent, see *Rothe*, 456; *Dieterich*, 129.

In Scandinavian mythology descent-myths are connected with Balder's death. Hermód offered to descend to Hel to recover Balder. Taking Odin's horse, he travelled for nine days through dark valleys till he reached the river Gjöll, crossed by a bridge covered with gold and guarded by Modgrud. After some delay she permitted him to cross, and at last he reached the place of the dead and saw Balder. He left his horse; Sáynir, *Rel. of the Ancient Bab.*, 1887, p. 221 ff.; Jastrow, *Ed. of Bab. and Assyria*, Boston, 1899, pp. 503 ff., 588 f.; see *ERE* ii. 315f.).
learn certain magic words from his wise lord. By avoiding the beer of *Tuana* he was able to return and describe on earth the horrors he had seen (Schiefner, *Kalewala*, Helsingfors, 1852, rone 16). A Japanese myth tells how the deity Oho-no-mochi was supposed to take a secret ladder, out of which the daughter married. The lord of Hades tried to compass his death by setting him tasks, but, after help from his wife and a friendly mouse, he finally escaped with the treasures of the god, and forced him to give the addresses of the shades (Aston, 108, *Ke-jì-kì*, 71 ff.). This myth of descent includes some common *Marchen* formulae. Herodotus (ii. 122) relates an Egyptian story of Khamsininsu (Raques III.) to the effect that he descended to Hades and played a game with Demeter (Isis) sometimes winning, sometimes losing, and that he ascended, bringing with him a gift from her a napkin of gold.

This tale is not corroborated from the monuments or texts. Possibly it is a modification of the myth of Theseus with the five days of the month at a game of dice (Plut. de Ind. 12). Some suggest that the myth may have been alluded to the name of Rameses in consequence of a representation on his temple of his playing at dice with a woman (Ancient Egypt, v. p. 93). The die was played at a game with counters, and the story of Setne tells how, having descended into the tomb of Neferetkaptah in order to obtain his magical power, they played a game at a stretch with him and were beaten, but eventually escaped with it by magical means (Griffith, 15, 18 ff.).

A Hindu myth in the Katha-Upanishad tells how Nâchiketas, delivered by his father to death, remained without food in the kingdom of Yama, who granted him fulfillment of all wishes. Nâchiketas then desired his restoration to life and reconciliation to his father, the knowledge of the sacrificial fire, and the knowledge of the nature of death. Yama offered him gifts if he would forego the last wish, but he was insistent and it was granted to him (Oldenberg, *Buddha*, London, 1892, ii. 70 ff.) to inquire of the ghost of Tiresias (Od. xi.), and the descent of Âncæa to speak with his father Anchises (En. vi.), are well-known poetic examples of seeking a boon from the world of the dead. The story of Persephone, the myth of Theseus in his *Metamorphoses*, tells how, among the tasks exacted of her before she recovered Eros, was that of going down to Hades to bring back from Persephone a box of beauty. Through innumerable perils, and subterranean races of beings, he succeeded and returned to earth, where she opened the box, to find, not beauty, but a deadly sleep. The myth of the descent of Herakles to bring the dog Cerberus from Hades (one of the labours exacted by Eurystheus) is mentioned by Homer, who says that Herakles and Athene escorted him (Od. xi. 626, II. viii. 367). But the myth was later amplified, and we learn how he descended by the entrance near Cape Temarum. After many exploits, including the liberation of Thespius from his jail, he demanded permission from Pluto to carry off the honed. This was granted provided he did it without weapons. On the shore of Acheron he met Cerberus, and, seizing him by the throat, ascended with him to earth, showed him to Eurystheus, and then returned with him to Hades (Apollod. ii. 5, 12).

Those who have seen a parallel between the labours of Herakles and the adventures of the Bab. Gilgames, and a possible derivation of the former from the latter, have pointed to the journey of Herakles to Hades and that of Gilgames beyond the limits of the world, through dangers and darkness, across the ocean and the Waters of Death (probably connected with the River of Death, the Hades), to the paradise of the Water-nymphs, that he might learn from them the secret of immortality (Sayce, *Rel. of Anc. Egypt and Bab.*, 1902, pp. 436 ff., 446; *ERE* ii. 316; Jastrow, 516). In another Bab. myth, the purpose of which may have been to show how a god superseded the ancient goddess of Hades, a conflict having arisen between the gods and Eresh-kigal, goddess of Hades, Nergal was chosen to descend to the under world to fight with the monster Eresh-kigal, gate after gate (fourteen in all), dragged the goddess from her throne, and would have slain her. But she begged for mercy, and offered to become his wife and to give him dominion in Hades, which he accepted (W. F. Albright, *El-Amarna*, Berlin, 1931, i. 104; Sayce, 288, 428).

In Scandinavian myth, Odin, in order to discover the cause of Balder's evil dreams, rode down to Niflhel, till he reached the hall where mead was standing brewed for Balder. He roused the Sibyl from her barrow by spells, and learned from her the tidings of Balder's fate (Vignisson-Powell, i. 181 ff.). For Celtic myths of visits to the under world (e.g. *Hyrnian*) to obtain the gifts of civilization, see *BLEST, ABODE OF THE* (*Celtic*), §7.

Manipanian mythology presents an interesting myth of the descent of Hibil Ziwa, before the creation of the world, to the lower realms, in order to fulfill the revenue of their rulers, the keepers of light. He descends in the night of the great Raza (an embodiment of the mysterious Name) to the seven worlds of darkness (not, of course, the regions of the dead).

In each world which he descends he remains for many thousands of years, unknown to and unseen by his lord. Finally he reaches the seventh and lowest world, and speaks to his lord, the giant Krun. Krun partially swallows him, but Hibil enters his innards to pieces and is digested, and obtains from him a pass and seal-ring by which the might of the opposing demon will be brought to nought. Then he ascends, sealing the doors of each world so that none can pass through. In the fourth world he obtains the form of its ruler and obtains by craft the Menorah and Genara, the strength of the world of darkness. By a similar charm of form he learns the greatest of all the worlds, and obtains its magic mirror. Then he leaves it, taking with him Ruhâ, daughter of his lord, pregnant with Ur, the demon who is to oppose the worlds of light. Finally, after sealing all the doors of the worlds, he returns to the light kingdom, and is hailed with joy. The remainder of the myth describes his repeated unseen visits to the imprisoned Ruhâ and Ur, their robbing of his magical talisman, and his final overpowering of them (Brandt, *Mand. Schriften*, Göttingen, 1893, i. 125 f.). The story is full of well-known folk-tale formulae, and, while the descent through seven worlds recalls that of Ishtar, he is main incident is based on that of the hero of the dragon of chaos, Tiamât (cf. Brandt, *Mand. Rel.*, Leipzig, 1889, p. 162). Another myth relates how Mandâs d'Hayâ descends to the lower worlds and confronts Gishâ and his son, and his son on Mt. Carmel and plans a revolution against the powers of light. Mandâs appears among them in their own form, whereupon they desire to make him their ruler. He agrees on condition that they reveal to him the secrets of their mysteries: when they have done this, he reveals to himself in his true form and overpowers them (Brandt, *Mand. Rel.*, 34, 38; Norberg, *Z. f. Assyriol.*, 13, 14, 16, 17, 18, 19, 20, 21, 22, 23).

For a Burial instance of descent to seek a boon, see *ERE* ii. 9, and for a Quichê myth of two heroes descending and overcoming the lords of the underworld, *ib. 308*.

5. Descent out of curiosity.—This motive is occasionally found with. In an Ainu example, a youth, learning that a certain cave led to Hades, entered it, and, after passing through darkness, found himself in a beautiful land where he saw many of his friends and relatives. On his return he met a spirit descending, which proved to be that of a dear friend who had just died (Bateholer, 226; cf. a variant in Chamberlain, *Aino Folk-tales*, 1888, p. 42, where the visitor is ignoromously treated and never wishes to see Hades again).

Several Norse legends, reminiscences of earlier beliefs, describe the adventures of mortals who set out to seek the Land of Living Men, part of the older underworld (for these see *BLEST, ABODE OF THE* [*Tenotonic*], § 4; and for Amer. Ind. instance, *ERE* iii. 251 f.).

1 Jastrow (556) thinks that it may originally have been told of Nergal that, like Tamuz, he was carried off into Hades.
6. Descent to Hades (Ethnic).—The freeing of a soul in pain in Hades has already been found in Hindu instances. This idea, as well as that of the general release of the damned or the annihilation of their tortures, is a natural outgrowth of existing legends of rescue from Hades, but it occurs mainly in the epic period. Several kinds of this idea are found in Hindu and Buddhist mythology.

In the Rāmāyana (vii. 31.5), Rāvaṇa enters hell, and, as he advances, finds it deserted, and the souls of the dead, whom his desire to free, experience an unexpected happiness. He encounters Yama in light, and would have been worsted for the holy host, but for the intervention of the gods. Yama bestows on Rāvaṇa the tabu of Hades.

In the Mahābhārata (vii. 3.386.4), Uddhisthīka is shipwrecked, and turns to the gods. When he is about to descend to the other world, he learns that his relations are in hell, and beseeches the gods to let him share their dwelling. “What is heaven without them? alone where are they unless my heaven. He is conducted thither, and, on his coming, a cool wind arises and the torments cease. He refuses to leave hell, since his presence makes its denizens happy. Now the gods appear, and he learns that all he has undergone is but a trial of his faith. For a descent of Vishnu, as the god who destroys the universe, see Avatāra Mantra, Oxford, 1897, p. 706. In other cases, those who have transgressed slightly and are sent to hell suffer only formally because of their virtues. He is conducted to free the damned, e.g. Jánaka in the Pādu Kakūdrug (Wilson, JRS v. 299).

In the Lolita Vistara, at several moments of Buddha’s existence—he descends from heaven, on his journey to Bodh Gaya. One story is said to have been projected from his body which lit up by its splendour the 2000 worlds, caused all evil, suffering, and death to cease, and filled the breath of life into those who were in ruins. This descending to the hell Avidhāya, to the region of the pretas, and the kingdom of Yama. Darkness was the local abode of despair, of thirst and hunger, or other torment, found themselves free from pain and were filled with great joy. At Buddha’s birth he prophesies for the one who, being sent to hell, will cause the rain from the great cloud of the law to fall, and all beings will be the sufferers of Avichi and the kingdom of Yama were appeased (Lol. Vist. 1, 240, 347, 79, 80, in AMO, vol. vi., Paris, 1894). The North Buddhist legend of Avalokiteśvara, he who shows the wrongdoing way to Nirvāṇa, furnishes a striking instance of this group of descent-stories. In the Mahāmāyaviśākha-bōkha-bhārata, it is said that he would bring all misery to an end, including the tortures of Yama’s kingdom. To effect this, he visits the hell Aviti and cleverly deft to light, and saves the victors from their pains. Mild air takes the place of flames, the cauldron of boiling water in which men suffer burns, and the sea of fire is changed to a lake. The victors find themselves in a place of joy, and Yama shows him reverence. The saving work is pursued in the city of the pretas where Avalokiteśvara frees their denizens from tortures and, granting the gift of right knowledge to the damned, leads them as Bodhisattvas to the Subhāvatī world (Cowell, JRS vi., is given an opportunity to free the damned, e.g. Jānakā in the Pādu Pārāsāṅa (Wilson, JRS v. 299)."
DESCENT TO HADES (Christ's).

1. Summary.

The Descensus Christi ad inferos is an article in the doctrinal tradition of the entire Christian Church, but the several main divisions of the Church, viz. the Eastern or 'Orthodox' (§ 2), the Roman Catholic (§ 3), the Lutheran (§ 4), and the Reformed Churches (§ 5), differ greatly from one another in their Confessional interpretations of the doctrine. Moreover, while in Protestantism generally this limit, and other modern times have been abandoned, yet a few theologians have essayed to interpret the doctrine on fresh lines (§ 6). These attempts at reconstruction, it is true, fail to find justification either in Scripture (§ 7), in the Patristic Church tradition (§ 8), or in less, the idea of the Descensus is well worthy of our interest, as its original meaning, which is not identical with any of the Confessional views (§ 9), is bound up with certain fundamental conceptions in the primitive Christian interpretation of Christ's divinity, and probably asserts itself here and there in the NT as a presupposition in the minds of the writers (§ 10). The endeavour to trace the idea to influences from non-Christian religions is thus quite unwarranted (§ 11). The Descensus belongs in fact to a group of primitive Christian conceptions which are inseparable from views then current but now abandoned, and which accordingly can now be appraised only in a historical sense, i.e., as expressions of Christian beliefs of which, while adequate enough for their time, have at length become obsolete (§ 12).

2. The doctrine in the Greek Church.

In the Greek Church, or rather the Eastern of the Orthodox Churches, there is a wrongly so-called Ecumenical Creed which contains the clause 'descendit ad inferos,' viz. the Symbolon Apostolicum and the Symbolum Athanasianum, are not recognized with the Nicene Creed, the so-called 'orthodox' or 'stamningolottenianum—the third of the 'Ecumenical' Symbols—which makes no mention of the Descensus. This explains why even the more elaborate catechetical manuals emanating from these Churches sometimes ignore the doctrine altogether (e.g. Konstantinos, Kathergos, Athens, 1868, p. 46 f.). None the less, however, is the Descensus an element in the Eastern tradition. Even discounting the testimony of the Confessio orthodoxa of Petrus Majellis (i.e. 160 (Kimmel, Appendix liber, symbol. etc., Jena, 1859, pp. 73-76), which both show a levelling of Western and Eastern views regarding the Descensus, therefore, may have been framed under that influence, we have the less questionable evidence of genuinely Eastern Church catechisms of the present day, as also of recent expositions of the Eastern theology.

3. Roman Catholic doctrine.

These obscurities are avoided by the Roman Catholic doctrine (cf. Wetzer-Welcker, 'Theologie,' Freiburg, 1882-1903, vi. 124-139, and the literature given there). The dogma declaratum, it is true, is simply that Christ—as is affirmed by the Apostolicon and the Athanasianum—'descendit ad inferos' in the interval between His burial and His resurrection, and that in this Descensus His soul 'per se, non per potentiam tantum descendit.' (Conc. Senem., trad. par un Russe, Paris, 1859-60, ii. 195 f.; Androusson, Dogmatics, Athens, 1907, pp. 211-214).
Descent to Hades (Christ's) 655

anni 1140; Denzinger, Enchiridion symbolorum 39, Freiburg, 1908, no. 385). The Symbol of the fourth Synod of Toledo (683) certainly supplements the article of the day with a clause expressing the purpose of the Descent, viz.: "to sanctify and subdue the iniquity of the devil," the same as that of the Council of Orange, 364, while the Cathachismus Romanus, which deals fully with the Desensus (i. 6, quest. 1-6), has only a 'high dogmatic, but no primary symbolic authority' (Kirchenlex. xi. 1653). There is, nevertheless, no manner of doubt that even Article in which the modern cathachism agree with the Cathachismus Romanus is to be claimed as Catholic doctrine in the sense of dogma formule (ib. iii. 1884). Hence the official Catholic doctrine of the Desensus is as follows:

The scene of the Desensus is laid in the place "quo anima sanctorum ante Christi domini adventum exipiebantur" (Cat. Rom. i. 6. 3), i.e. the forecourt of Hell (Deharbe, qu. 231, etc.), the Limbus patrum, according to Martin, 1. 388 (cf. Blesl, p. 79), or the sinus Abrahae (Lk 162, Cat. Rom., loc. cit., for 'ante quaeus Christus morreretur et resurget, coelit portae nemini unquam patentur') (cf. He 9-10; Cat. Rom., loc. cit. qu. 6). It was into this Limbus patrum, according to Martin, that Christ, in His Spirit, did not 'for potentiam tantam,' but 'et praeceptione' (Cat. Rom., loc. cit. qu. 4)—descended, in order to manifest His power and glory even in the under world (Deharbe, qu. 233. 2; Cat. Rom., loc. cit. qu. 6; 'eripiens animum spoliis') and to comfort and deliver the souls of the just held captive there, i.e. to take them to Heaven (Cat. Rom., loc. cit. qu. 3 and 6; Deharbe, qu. 233. 1 and 241). All this is probably clear enough to the laity; but the theologians of the Roman Catholic Church encounter difficulties in regard to Christ's reappearance in the sepulchre, and the places Lk 235, Ac I, and 1 P 329. All Catholic theologians solve the first difficulty in the same way as the Cat. Rom., with the help of Scholastic logic solves it:

'Christo jam mortuo, eis anima ad inferos descendit bisque tandem misit, quandum ejus corpus in sepulchro fuit: eximaeque personae aperte manifesto manifestum, quum anima eum corpore discerrett, unamque bene divinatus vel ab anima vel corpore separata est' (qu. 1).

A second difficulty arises from the fact that in Lk 235 the place in which Christ tarried after His death and of the way of His but is given as 'Paradise.' Now, clear as is the distinction made by many theologians, in harmony with the Cat. Rom., between Limbus (which involves no 'poena daenii') but only the 'carentia visionis Dei' (cf. Lods, Symbolik, Tub. 1862. i. 270) and in which, according to the Cat. Rom. (loc. cit. qu. 3), the fathers 'sine ullo doloris sensu, beatas redemptionis sp sustentati, quies habitatione frucfentitur') and the Gk. damosamator, the former is nevertheless a part of the inferi, of Hell, is it permissible then to locate 'Paradise' in Hell (cf. Kirchenlex. vi. 130)? Many theologians have done so without misgiving (cf. Martin, ii. 93: 'forcourt of Hell, sinus Abrahae or Limbus patrum, also simply called 'Paradise') but sometimes a distinction is made

between paradisus inferior and paradisus superior (= Heaven). The Cat. Rom., whose interpretation is adopted by Kirchenlex. vi. 135 and Sinmar (Dogmatik, i. 338), expands the matter more felicitously thus:

'Christi ascenstionem charismatum lucem captivitatis, coramque animas immensa hatetia gaudioque impeti; quibus etiam captivitatis et tormenti, quae in Dei visione consistit, imperitii. Quo modo si complexionem est, quod latroide pro dieris ferae, qui hominum, quae loci. Luc. 23. 43.'

Here, accordingly, the Limbus patrum, which after the liberation of the fathers is left absolutely empty, has, in virtue of Christ's presence, become Paradise, even before their departure—has been 'transformed, so to speak, into a heaven' (Kirchenlex. vi. 135).

With this particular point, however, is connected a third difficulty. Christ did not ascend to Heaven till forty days after His departure from Limbus, and only then 'did He take with Him to Heaven' the souls of the just whom He 'had liberated' from that place (cf. Lk 241). Where, then, were the souls of the fathers during these forty days? For attempts to answer this question the curious may be referred to Kirchenlex. vi. 136.

The greatest difficulty of all is presented by 1 P 329 (cf. 4). This is not one of the passages traditionally cited in support of the Desensus; the usual dicta probantia are Ac 232, 31, Eph 4, 9, 10; Mt 17, 18. This is, according to Martin, iii. 15 (cf. 1 Co 1528), 1 Thes 424; (Penetrabo omnes inferiores terras, and impavidos omnes domniestes, et illuminabo omnes sperantes in Domino), Zec 13 ("Tu quoque in sanguine testamenti tui enimseti vinctos tuos de lacu, in quo est aequum aqua"). Augustine, indeed, in a celebrated letter (ad Eusebium, Ep. cloix, al. xcix.; Migne. PL xxxiii. 769-718), in which many passages reads like a modern treatise on the Desensus, emphatically denies that the two Petrine passages bear upon the subject at all (op. cit. 5. 15, p. 715, and 7. 21. p. 717). He explains 1 P 329 as referring to a preaching of the pre-existent Christ to the contemporaries of Noah who were overwhelmed in their sins (loc. cit. 6. 17, p. 716), and applies 4 to a preaching of the gospel in the life this to the spiritually dead (7. 21. p. 717).

And this, or explanation, is expanded, with approval, by many medieval theologians, including Thomas Aquinas, who writes (Summa, 3. 52, 2 ad 8):

'His qui in carcere conclusus vivet, salus in corpore mortali, quod est quasi quidam carcer animae, spiritus suo profecto liberavit, sed in genere praedica conatus suis effectus et inspicat anima dominumque, et illuminavit omnibus sperantibus in Domino,' Zec 13 ("Tu quoque in sanguine testamenti tui enimseti vinctos tuos de lacu, in quo est aequum aqua").

At present, however, the exegesis which—largely under the influence of Hundhausen (Dissertatione Pentiologicis et Hierosolymitanae in den Apostelfursten Petrus, Mainz, 1873)—finds most favour is that which makes the earlier passage (329) refer to the Desensus. The unbelieving contemporaries of Noah, accordingly, are supposed to be mentioned only by way of example, and the statement that Christ's preaching in the under world was vouchsafed even to such repentant souls in the place of perdition is narrowed down to mean that His preaching was made known to the condemned without a special Desensus to them at all, or, in other words, that the effects of the Desensus extended also to the lost (Sinmar, 1. 339 ff., following Hundhausen, p. 350). Now this modification of the text itself is 1 P 329 brings it into harmony with a view which Aquinas (Summa, 3. 52, 2c) had advanced without reference to that passage...
the language of Scripture to make it suit Catholic dogma. Thus, after expounding the doctrine of the Descent to the limbus patrum, they cite the passage in question in the following form: 'He descended to the dead, but in soul He went to the spirits who were in prison, and preached, i.e. proclaimed redemption to them' (Grosser Katechismus f. d. Bistummer Bepoern, p. 75; Paderborner Kat., p. 33; similarly the Quaestiones 8—Dehauer, op. 231, and Frierer Kat., p. 26). It is a singular fact that Aquinas (Summa, 3, 52, 2) speaks also of an 'effectus' of the Desensus upon the souls in Purgatory: 'Hillis qui defeaturbant in purgatorio speandi delecta dedit. And in a special quasuo (3, 52, 8) he even discusses the problem whether Christ, in virtue of His Desensus, delivered souls also from Purgatory, and solves it as follows:

'But souls are not taken, quales etiam nunc virtute passionum Christi a purgatorio liberantur, tales sibi prohibet per desensus Christi ad inferos a purgatorio esse liberantur.'

The strange thing is that Aquinas should think of souls as being in Purgatory at the time of the Desensus. The Catholic doctrine is that all who have died in original sin (which could not be absolved before the death of Christ) are in Hell. Even the saneti patres who believed in the Messiah, and who, according to Aquinas (3, 49, 5 od 1), had to believe that their actual sins and their faith and works, must be regarded as having been in Hell, or, at least, in the 'fore-court' thereof, by reason of their original sin; and it is believed even today, that when the children of Christian parents die in an unchristianized and not yet cleansed from original sin, they go to Hell—to a region, it is true, resembling that in which the patres dwelt, viz. the limbus infantum (Loofs, Symbolik, I, 209). Unless, therefore, there have been exceptions to the rule of this doctrine (the Innocents whose festival occurs on the 28th of December need not be regarded as forming an exception, since their baptism of blood would avail instead of baptism by water, and their soul therefore go to the limbus patrum), or unless a great migration from Hell to Purgatory took place at the instant of Christ's death—a theory likewise not easy to accept—we must believe that Purgatory was as empty at the death of Christ as the limbus patrum was after His Desensus.

4. Lutheran doctrine.—The doctrine of the Desensus set forth in the Formula of Concord, and thus regarded by orthodox Lutherans as bearing the seal of their Church, is of a peculiar character. It cannot be understood without a retrospective glance at Luther himself. We must, however, distinguish between his real theological view and his presentation of the subject in his popular discourses. As a theologian Luther of course (a) adhered at first to the Catholic tradition (Prosnotversozung of 1513-15, Weimar ed. iii. 103, 29; 317, 37). But (b) he could not continue to hold this view after asserting that the faith of the 'fathers' for the Catholic Church, with our (ed. Predigten über I Mosis, 1557, Weimar ed., 100, 4: 'vides Adamam Christianumuisse ut nos'; Erlangen ed. [German], 33, 99). He had come to believe (cf. J. Rosthin, Lutheri Theologici, 2nd ed., Berlin, 1890, ii. 341)—even (see below)—that the 'fathers,' like departed believers in Christ, continue until the resurrection in a perfectly happy sleep of the soul, since they are, so to speak, enclosed and safeguarded in the belief in God's word as in a bosom ('Abraham's bosom', Lk 16:22; Kirchenpostille, Erl. ed. 3, 12f). Similarly, he thought that the souls of the wicked in the state of death are tormented by their unbelieving evil conscience until they are cast into Hell at the Last Day; and with reference to the 'Hell' of Lk 16:22 he writes:

'The hell mentioned here cannot be the true Hell, which will come into being at the Last Day.... But it must be a place where the soul can live, and where it has no rest: therefore it cannot be a merely temporary place. We judge, therefore, that this hell is the evil conscience—without faith and the word of God—in which the soul is buried and confined until the Last Day, when the person, body and soul together, will be cast into the really bodily Hell.'

A view of the Desensus corresponding to these ideas regarded the sleep of the soul had already been set forth by Luther in the Operations in Psalms of 1519-21:

Luther still adhered to this theory in 1530 (Enarr. in Ps. 10, Erl. ed. Opp. exeget. xvii. 125ff., ed. 242; [Germ.] xxxviii. 145ff., ed. 144); and, in fact, if we would set forth his own distinctive view of the subject, we must keep these thoughts before our minds. There is nothing to suggest that he ever abandoned the theory that Hell was the predestination, existence until the Last Day; he seems to have remained constant to the opinion to which he gave utterance in 1526:

'That there exists a special place in which the souls of the condemned are retained—as a place—it is only very obscurely an exact meaning of it—I regard as mere delusion, for even the devils are not yet in Hell' (Expos. of Jewels, Weimar. ed. xiii. 225; Erl. ed. [Germ.] xiii. 378).

But he was not quite certain that the conception of the Desensus corresponding to this idea was correct. He was in 1537 sojourning in the province of the steel and exhaustive, and, accordingly (c) while he had in 1523 sought to expound the Petrine passages on impossible lines, and in a sense which ignored the Desensus (Ausefigung d. Petrusbriefes, Weim. ed. xii. 367f., 373f., Erl. ed. [Germ.] li. 458ff. 467; in a second form, Erl. ed. lii. 152f. 162), we find that subsequently, in his lectures on Genesis (c. 1537)—which, it is true, do not survive in a verbally authentic form—he takes account of the hypothesis that the verses may throw light on the Article "descendit ad inferos" (Erl. ed. Opp. exeget. ii. 222). He deems it possible that Peter was thinking of a preaching of the mortuus Christus to mortini of the time of the Deluge, but believes that this was restricted entirely to 'infantes et alios quos scilicet de causa uel diabolicorum uel creducerent' (loc. cit.). (d) A little later Luther seems to have made a further advance. In 1543, according to Melanchthon's statement (Corpor. Rec. v. 58), he was disposed to think—--with Melanchthon himself—that Christ's preaching in Hades, as referred to in 1 Peter, might have effected the salvation of the nobler heathen; while in an edition of his lecture on Hosea, issued with his own consent by Veit Dietrich in 1545 (Letter of 16th Oct. 1545 to Veit Wette, Luther's best friend in the same city, Weimar, 1523-36, v. 261), he gives—if, that is to say, he ever read this edition of his lecture—his sanction to a similar exegesis (Erl. ed. Opp. exeget. xxiv. 339), which, however, is not found in the transcriptions of the lecture of 1524 (Weim. ed. xii. 152f. 153f.)—in the Dietrich edition. In any case, Luther was far from certain that the views of the Desensus which went beyond the position stated above (in 6) were correct. Hence, in 1544—and here we have his last utterance on the subject, for he died in the same year—after verbal transmission—he pronounced a 'non liquet' upon all conjectures that would add to the simple fact of the sojourn of Christ's spirit in inferno:
In his popular discourse Luther joins hands with the artists, whose pictures of the Descent portray Christ—i.e., in the way in which he can be portrayed, i.e., in the body—as going down to hell, dissolving Satan, taking him in truth, and carrying away those who are his (cf. Erl. ed. [Germ.] xix. 3-41). Thus, in order that 'children and simple folk' might attain to a clear idea of Christ's triumph over Satan, and to his omnipresence which became part of their receptive faith—Luther did not hesitate repeatedly (cf. even the short form of the Ten Commandments, 1529 [Weinl. ed. viii. 217 = Erl. ed. [Germ.] xxii. 8], and elsewhere, e.g. in the Hauspostille [Erl. ed. [Germ.] x. 1-17]), and notably in an Easter sermon preached at Torgau on the 13th of April 1533 [Erl. ed. [Germ.] xix. 40-54], to speak of the Descent as if 'the Lord Christ—the entire person, God and man, with body and soul—had journeyed to hell, and in person demolished hell and bound the Devil' (cf. Erl. ed. [Germ.] xix. 4 41f.). But these expositions are obviously clothed in the language of popular metaphor, and there is not the slightest doubt that they disclose their exotic character. He makes this quite clear in the exordium of his Torgau discourse:

'And it pleases me well that, for the simple, it [the Descent] should be pictured, sung, or spoken, in a manner (i.e. as represented by the artists), and I shall be quite content if people do not view themselves with great and subtle thoughts as to how it was carried out; for they did not take place in the body all, as he remained in the grave for three days' (Erl. ed. [Germ.] xix. 41).

It is instructive to note, as bearing in the same direction, what Luther adds to the words quoted above regarding the Descent of the whole person:

'Please God, the banner, doors, gate, and chains were of wood, or of iron, or did not exist at all' (op. cit. p. 45). Yet these utterances of Luther's Torgau discourse, notwithstanding their unmistakably exotic and metaphorical cast, came at length to be formulated as dogma. Owing, in some unexplained way, to local controversies regarding the Sacrament of the Lord's Body and Blood, Luther's commentaries on the Descent (F. H. R. Frank, Theol. der concordienford., iii., Erlangen, 1803, pp. 418 ff.), the framers of the Formula of Concord (and even of its fore-runner, the so-called Book of Torgau) deemed it necessary to lay a special Article (ix.) of the Desensus Christi.' Their ostensible reason for so doing was merely 'simplicitatem fidei in symbolo apostolico comprehendere retinere' (J. T. Müller, Die symbol. Bücher d. evang.-luth. Kirche, stereotype ed., Göttingen, 1862, p. 868 f.). But when, in Art. ix., with a reference to Luther's Torgau discourse, they declare: 'Simpliciter ergo credimus quod tota persona Deus et homo, post sepulchrum ad inferos descenderit, Satanam devoretur, potestatem inferorum evertitur, et diabolum omniprem viniet et potentiam ripuerit' (f. 696. 2), it is clear that the statement has behind it the whole argumentation of Art. viii. on the 'Comunicatio idiomatum' (ibid. f. 697. 3).

Lutheran orthodoxy, in maintaining (in opposition to the Reformed theology: see § 5 below), as an element of the true doctrine, that the Descensus was an act which, occurring after the mortuum superavit, and immediately before the Resurrection, involved the entire person of Christ, and belonged to the state exaltationis, was simply proceeding upon the lines laid down by the Formula of Concord. But, in seeking to establish these positions, it appealed to the Petrine passages (1 P 3:9) which was not cited by that Article, asserting that the preaching of Christ was a 'praediction (verbatim) elenchet,' and therefore a 'triumphum agere' (Hallass, in H. Schmid, Die Dogmatik d. evang.-luth. Kirche, i., Frankfort, 1838, § 38, note 21).

In so doing, however, it also makes a complete surrender of the 'separatae fidei,' as its Christology compelled it to qualify the 'descendit' by the phrase 'secundum humanum naturam,' for 'secundum divinam naturam jam ante in inferno per dominium omnium reipublicae est' (Quenstedt, in Schmid, op. cit. § 38, note 29). Of course, in fact, the 'descendit' becomes more attenuated still, since, according to the doctrine of Christ's omnipresence, His humanity is—after His exaltation, to all eternity—wherever His Divinity is.

The supernaturalis motus non localus (Hallass, in loc. cit. note 22) is thus merely the first phase of the non-local ubiquitous corporis. According to the Tübingen school, indeed, the humanity of Christ was not to be separated from His non-local omnipresent Divinity, even at the beginning of His rest in the grave, or at any time, in fact, after His conceptio (Dorner, Gesch. d. prot. Theol., Munich, 1867, i. 218ff.).

5. Reformcd doctrine.—If the Lutheran doctrine may be regarded as a modification of the Catholic—and it can be explained only by reference to the latter—the view of the Reformed Churches, so far as a single generic view of the question may be attributed to them, is characterized by a complete abandonment of the Roman dogma. It is true that Zwingli, in his first discourse at Berne (Werke, ed. Schuler and Schultes, Zürich, 1829-1842, ii. 1. p. 211), kept close to the Catholic interpretation, asserting that it was common and before Christ and believed in the coming Messiah were delivered from Hades; and that later (Fidei expositio 7 [Werke, iv. 49]), while of opinion that the 'descendit' of the Apostolicon signifies only that Christ really died ('inferis enim communi communitatem esse est'), he still clung to that view, which rests upon a peculiar exegesis of 1 P 3:20. Leo Jud, again, in his Catechism of 1534, finds no more in the 'descendit' than 'vere mortuos est': 'He died and was buried—went to Hell indeed, i.e. He really died' (A. Schweizer, Die Glaubenslehre der evang.-ref. Kirche, ii., Zürich, 1847, p. 349). Then Calvin, while deeming it an error to take the 'descendit' as equivalent to 'septulstus est' (Inst. 1536 [Opp. i. 70]: 'nunc parturient comites de descensu superfluo'); emphatic repudiation in Inst. 1539-54 [Opp. i. 529] and 1559 [Opp. ii. 375]), nevertheless characterizes the Roman view as a 'fable' not only in Inst. 1539-54 (i. 694.), but also later (Inst. 1559-54, 7. 27 [f. 126 f.]; 1560-59, 9. 1560, 9); the idea that the souls of the dead are confined in a prison he regards as simply 'childish' (1559, 2. 16, 9 [ii. 376]). From 1530 to 1539 the only meaning which he drew from the Petrine passages—without applying them to the Descensus at all—was as follows:

'veritatem redipusionem per Christum partae exhibitat et plane manifestatur esse eorum spiritus qui ante id tempus defuncti fuerunt.' 'Fideis,' he believes, 'tunc pape et præsenis aspecto perspexerunt ejus visitationem; contra repulit ... omnium sibi aperte communia tunc paulo ante, ut dictum sit omnium spiritus ascenderet mortalibus malis luctus.'

To Calvin's mind the true sense of the article 'descendit ad inferos' was this:

'Christum aulitum et Deus fruus ac divini judicii hororrem et severitatem suscipit, ut irre Dei intercederet ac ejus judicati nostre mensis adhuc existente (Inst. 1536, p. 691; cf. 1559, 2. 16, 19, i. 526): 'Nihil actum est, si corpora tantum morte defunctus etiam Christus, sed omnem mensum post mortem erat, ut divinus omnium severitatem senserit, quae et irae ipse intercederet et satisfaceret justo judicii (under enim cam oportunit istum corporum capsii asternaeque mortis horrore quasi nonus manibus luctur).'

Calvin is thinking here, not of the experiences through which Jesus passed after His death, but of the agonies of soul which preceded his death. To challenge this interpretation on the ground that
it conflicts with the sequence of the Symbolical change, he regards as frivolous:

"Ubi enim quae in hominum consentius passus est Christus exspecta fuerunt, opuscula subjiciatur inviolata ibid et in-commerce non obstante quod ceram Deo sustinuit" (Inst. 1569, 2. 10, 49, 397d).

In the Reformed Churches of the succeeding period, as is shown by F. Wendelin (Systema, 1656, p. 719, in Schweizer, ii. 359), the views of Leo Jud and Calvin, taken in toto or in part, prevailed generally within the Lutheran communion (cf. Dietelmaier, pp. 170, 180, 204-209). In the Reformed Churches neither of the Confessional views referred to in § 5 ever gained a position of absolute sanctity. As a matter of fact, it was in this section of the Church—in which the serious study of historical questions was entered upon earlier than among the Lutherans—that the verdict of the Confessional interpretations was first shattered. Besides the great theologian G. J. Vossius († 1649), two renowned English scholars, John Lightfoot († 1675) and John Pearson († 1686), succeeded in undermining the confidence hitherto placed in the formulated views, and for these thinkers the Descensus was meant no more than the sojourn of the Spirit of Jesus in the realm of death. Then in the period of the Illumination the dogma largely lost its earlier signification, nor did the theology of the Reformed Church aim otherwise.

But a fresh theory of the Descensus was advanced, and found favour in many quarters. The distinctive feature of the new interpretation was that it associated the preaching of Christ in Hades with a superhuman—though not, as had been denied the opportunity in this life. The expression of 1 Pet 3:19 was regarded as a preaching of the gospel; the contemporaries of Noah (v.28) were supposed to be referred to only as examples, or as abnormally depraved, and it was thus inferred, a majore ad minus, that, if salvation was proffered to such as these, a similar invitation must be granted to all who have not been called, or called effectually, in this life. To a certain extent re-form section.—6. Modern interpretation and re-statement.—In the Greek and Roman Churches the formulated doctrine of the Descensus was largely maintained. The last above defined periods (and 3) have maintained an all but absolute predominance since medieval times; of the few divergent tendencies the more important are mentioned by Dietelmaier (Hist. dogmata de Descensus, i. 1762, pp. 128-129, 141-143, 179). Within the pale of Lutheranism, again, a great variety of views gained a footing at the very outset. Luther himself advocated more than one interpretation (cf. § 4); Johannes Agricola, in his Christi Kinderzucht, presented views similar to those afterwards maintained by Calvin (cf. G. Kauerauf, Joh. Agricola, Berlin, 1881, p. 72), and with these views, again, Joh. Aepinus of Hamburg († 1559) incorporated the theory that the Descensus was really a vicarious descent of the Spirit of Jesus into that infernum in which sinners deserve to suffer until the Final Judgment and the inception of Gehenna fire (P. H. K. Frank, Die Theologie des Descensus, 4 vols., Erlangen, 1858-66, iiii. 397-415); many others have approximated to the position of Aepinus (Frank, p. 415 f.), while Joh. Brenz (†1570), in the interests of the ubiquitas corporis Christi and the non-local character of 'Heaven' and the infernum, was inclined to favour a spiritual theory of the Descensus, which amounted to little more than the notion that the crucified Christ is supposed by human beings to have gone down to Hell and to have utterly perished (Frank, pp. 418-420; for other theologians, cf. Frank, pp. 416 f., 420-424, and for Urbanus Rheginus and Matthäusis, Dietelmaier, p. 179 f.). From the issue of the Formula of Concord till the middle of the 15th cent., however, there was no formulated doctrine of the Descensus presented in Scripture (see below, § 7) or in the tradition of the Church (§ 8) is another question.

7. Re-statement compared with Scripture.—Of the various passages of Scripture which have at one time or other been appealed to to support one or other interpretation of the Descensus drawn from the OT need not be discussed here, as it is only by an obloque
exegesis that references to Jesus Christ could be found in them. Nor do the NT passages—Mt 12, 18, Ac 2, 10, etc.—speak of a Descensus of the nature implied by the 'Orthodox,' Catholic, Lutheran, Calvinistic, or 'modern' interpretations; the only place which Augustin considers—already considered here—are 1 P 2:8 and 4, which are very generally regarded as the loci classici for the Descensus, though, as we have already seen, Augustine and Aquinas (cf. § 3), Calvin (§ 5) and—for many years at least—Luther (cf. § 4), denied that the verses in question refer to the subject at all.

1 P 4:6 must certainly be surrendered. For, while Augustine's idea that the rex pedis is equivalent to ininfé (Ep. cxviii. 7. [PL xxxii. 718]—an expression which, though it is considered here as a sojourn of Jesus, or of His soul (Ac 2), in Hades. We shall have an opportunity below (see § 10) of gauging the significance of this datum. The only place which presents any considerable preference for the first form of explanation (1.1), and especially for that of Spitta (Lb), though hardly shares the confidence with which the latter scholar refers the expression to the denomination uttered, according to the Book of Enoch (xii. 4, ed. Fleming and Radermacher, Leipzig, 1901, p. 34 ff.), over the fallen angels by Enoch: so many ideas of like nature must have been current in Apostolic times. But, even if either of these interpretations be right, the III. is the right one, i.e. if we are to postulate a preaching of Christ in the interval between His death and His resurrection, yet 1 P 3:18 gives as little warrant for the 'modern' conception of the Descensus as for all others. (§ 15). If, therefore, we consider the whole train of thought which sets out from 3:18 and reaches its middle point in 4:1; for the emphasis is laid upon the idea that the dead, though it has been their lot κρατήσαι αγέλη, never to return, is to be understood. This agrees with the traditional view which, though it was written, but who in their lifetime had—as the Christians declare—descended to Hades. This is the interpretation which follows, and which 1 Peter also adopts, so far as he knows, was never referred to in connection with the Descensus; while Irenæus, who often speaks of the Descensus, and brings many Biblical passages to bear upon it (cf. ad loc. Her. v. 31. 1, Massett [ed. Harvey, Cambridge, 1873]), moreover, was acquainted with 1 Peter and regarded it as authentic (op. cit. iv. 9. 2 [ii. 170]), never quotes the passage at all, nor, in dealing specially with the Descensus, does he even allude to it.

3. Re-statement of the modern claim, that the 'Descensus' is a term of the Latin Church tradition.—It is absolutely certain that the early Church tradition regarding the Descensus moves in an orbit quite apart from the 'modern' treatment of the conception. As regards the Western Baptist Confession, it is well known that the 'Descensus' is a term of the 'Second Advent' school of thought, which has no place in the modern-day Syriac Symbol (Hahn, Bibliothek d. Symbole, Breslau, 1897, p. 22 ff.), makes its first appearance in the Symbol of Aquileia by Rufinus (Hahn, p. 42, cf. notes 63; cf. also the Constantinian formula of 360 (Hahn, § 4), in which the 'Descensus' is found in the Fourth Syriac formula of 239 (Hahn, § 163; sa eli tē kataphēna kateklēthēna, the kindred formula of Nice of the same year (Hahn, § 164), and the Constantinopolitan formula of 360 (Hahn, § 167). But, long before these Confessions saw the light, the Descensus was regarded as important, and not only by the Latin Church, but also by all other Christian churches, as the expression of a dogma of the utmost importance, which has been and is still further sounder in the East and the West. This appears, to begin with, from the existence that among the things 'qua estatissa veritate de Christo concipita sunt' Augustine places the fact...
DESCENT TO HADES (Christ's)

"quod apud inferos fuit." (Ep. clxv. 5. 14; cf. i. 4. 12: 'Christo ad inferos descendente,' and 2. 3: 'Christum in infernum satia constat, qui eis nosi infidelis negaverat fuisse apud inferos Christum?') but in point of fact the idea of the Descensus can be clearly traced through Clement of Alexandria (cf. § 7), Tertullian (de Anima, 7 and 55, ed. Reifferscheid, Vienna, 1890, p. 308, 14 and 387 ff.), and Irenæus (adv. Haer. iii. 26. 4, Massuet, ed. Harvey, ii. 108; iv. 22. 1 [i. 228]; iv. 33. 1 [i. 256]; iv. 33. 12 [i. 267]; v. 31. 1 [i. 411], and Arians, TÜ xxi. p. 42). (Irenæus, Dial. 72, ed. Otto, 1876-81, ii. 5 and one of the 'presbyters' of Irenæus (cf. adv. Haer. iv. 27. 2 [ii. 241]). Now, what significance did these Fathers attach to the idea? In answering this question it will be well to begin with the popular account of the Descensus given in the second (i.e. the so-called Descensus) of the Gospel of Nicodemos, which probably belongs to the 4th cent. A.D. (Evangelia apocrypha, ed. Tischendorf, Leipzig, 1876, pp. 322 ff. and 389 ff.). Here it is told in most dramatic style. When Her last days end he makest Hades, set free the OT saints, and take them to Heaven, while He cast Satan, who desired to detain Him in Hades, into Tartarus (Gr. text, cap. vi. p. 329; Lat. text B, cap. viii. p. 325—326). The story was added, cap. v. p. 409: 'tradidit eum inferi potestati.'

According to this account, therefore, there are two elements in the Descensus, viz. Christ's deliverance of the OT fathers from Hades, and His victory over Satan. The latter is not found in the early Church, but is being a mythological expansion—traceable as far back as Origen (in Gen. hom. 17. 5, ed. Lommatsch, Berlin, 1831-48, viii. 290)—of the NT conception of Christ's victory over Satan combined with Ap 22. 1: the former is the deliverance of the saints—corresponds to the tradition which can be traced back to Justin's time. And this conception of the Descensus may be regarded as distinctively that of the early Church is corroborated by the following facts: (1) Irenæus (in all the passages quoted above) and Justin (loc. cit.) give Scripture proofs of the view in question, and they also cite an OT (apocryphal) passage as follows: 'Commotus est Dominus, sanctus Israel, mortuorunm sanctitatis sui, spiritus sancti, et descendit ad eos evangelizare salutem, quae est ab eo, nt salvaret eos.' (Iren. iii. 20. 4 [i. 105]; cf. A. Resch, Ausserkanon. Paralleltexte zu d. Evangelien, TÜ x. 1 and 2, p. 372 ff. (2) It is evident that the early Church's anger of Christianity, was acquainted with this view: according to Origen (c. Celsum, ii. 43 (ed. Kotschau, Leipzig, 1899, i. 109)), he speaks of Christ thus: 'μυ παντα τη των ὡν ζωται καινων εις των πατριω των ζω." (3) Marcion's conception of the Descensus is obviously a characteristic travesty of that recognized by the Church; thus, according to Irenæus (adv. Haer. i. 27. 3 [i. 218 f.]), Marcion taught: 'Calm et eis qui similes sunt ei, et Sodomaque et Aegypcis et similis et omnes omnino gentes quae in capite permissione adnigutatis ambulaverunt, salvatis esse a Domino, cum descendit in inferos, qui ante illos, qui ante illos, qui ante illos, qui ante illos. (4) Abel autem et Enoch et Nof et Nisius religiosi justi et eos qui sunt erga Abraham patriarcarum, cum omnibus prophetis et his qui placuerunt Deo, non participasse salvam salutem, unum sunt asem conmper tendantem eos, et tunc tenere suam suspiciat, non accurrerunt! (5) Jesum necesse crediderunt sancti òmnia; et poenitus recusassim animas (ipsum quidam inferos didi.)

Moreover, we cannot appeal to Rufinus as a witness against the theory that the conception of the Descensus thus travestied by Marcion was the accredited doctrine of the early Church. It may well be that Rufinus did not know what to make of the 'descendit ad inferos' in his own Symbol. His first remark regarding it is: 'visi eberi eadem videtur esse in eo, quod sequitur dictum,' while, further on, he says: 'ab omnibus ad inferos; ideo intellego 1 P 3:20, which, as he thinks, tells us 'quia opus [Christus] in inferno egerit.' (Comm. in Symbol. cap. 18 and 28 [Migne, PL xii. 356 and 361]). After all, it is quite true that the Article 'descendit ad inferos' bears essentially the same meaning as the people of that day found in the Article 'sequeultus est.' Christ went to Hades, according to the hellenists, be because He died and was buried: 'Christus Deus,' says Tertullian, 'quia et homo, mortuos secundum scripturas, et sequeultus secundum easdem, hunc quoque legi satisfacti, forma humanae mortis apertum inferos functus' (de Capta, 33 [ed. Reifferscheid, i. 388, 1-3]). We must not forget that Jews as well as Greeks regarded the grave and Hades as identical; the Didascalia Apostolorum contains a passage—one, moreover, of the quasi-Symbological character—of Jesus' liberation of the OT saints into immediate connexion with His death: 'quicruderibus est sub Paulio Pilato et domini, ut evangelizaret Abraham et Isaac et Jacob et sanctas annes universas tamen assumam quum resurrectione quam est mortuos eam.' (vi. 28, 81; cf. Tischendorf, Gr. Kanon 38711').

9. Original signification of the doctrine.—We proceed to ask whether the conception of the Descensus thus recognized by the early Church—which has been preserved most faithfully in the Orthodox Eastern Church, and still looms through the Roman Catholic doctrine, but which differs radically from the formulated views of the Protestant Churches, as also from the 'modern' conception of the Descensus as a preaching to unbelievers—was the original. But this really leads to the antecedent question whether the view shown to have been held by Tertullian, Irenæus, and Justin can be traced further back. In the Papias (Simil. ix. 16. 5) we find the theologoumenon: 'οι ανσταλεται και οι διδακαλεις ανηριζονται το δομο του νιστο του θου καινοθετεται . . . εκθεναι και τοις προσκυνεται.' Clearly, however, Irenæus knew nothing of a 'Descensus ad inferos' in the sense ascribed to it by Tertullian, Irenæus, and Justin. The present writer is, nevertheless, convinced—with J. B. Lightfoot and other scholars—that an idea of the Descensus very similar to the one, which can be traced back even in Ignatius. Speaking of the prophets, the latter says that they had hoped and waited for Jesus Christ, ετ θεσ 'συν στατους ως πιστων ανθρωπων . . . και τοις προφηταις και τοις αποστολοι και τη ολοκληρωμα.' The view to assume, then, that the ideas of Ignatius regarding the deliverance of the OT saints from Hades were identical with those of Tertullian and Irenæus? The present writer is of opinion that they were not quite identical. In order to become convinced of this we must first examine the eschatological beliefs of Irenæus and Tertullian. Here Tertullian is the clearer of the two. He says, quite unmistakably, that 'no one enters Hades before the judgment of the world, nor the great universal salva, pl deixirn clausa, cum transactio cinem mundi reserabuntur regna coeolorum'; (de Anima, 55 [ed. Reifferscheid, i. 388, 17 ff.]). Until the Last Day, therefore, the dead are in an intermediate state; the universe of Scripture, incidentally refers to 1 P 3:20, which, as he thinks,
DESCENT TO HADES (Christ's)

Win God (Osee εντολή, Rom. i. 2, ii. 1, etc.), to go to the Father's bosom.' (ib. vii. 3; cf. E. von der Goltz, Igs. als Theologie, Leipzig, 1894, p. 38). Do these words imply that Ignatius, as one about to become a martyr, longed for the 'prerogative' (cf. Tertullian's phrase quoted in preceding ed.) of 'statim genues dominum esse.' Such an interpretation seems quite at variance with the manner in which he speaks of himself elsewhere. He must have supposed, accordingly, that, although Christians will not attain the resurrection of the body until the Last Day, yet they do not fall under the bondage of death, i.e., Hades, but pass by the gate of death to eternal life. It is clear that, according to Ignatius, that which Christians experience immediately after death was imparted, in virtue of Christ's descent, also to the OT saints. That these reflections of Ignatius are of a more primitive character than those of Irenaeus and Tertullian appears probable from the fact that they exhibit a higher degree of self-consistency, and are in perfect accord in the last resort clearly a section of the 'inferi,' identical with the 'sinners Abrahae,' where 'expectandae resurrectionis saeculorum captitut.' (ib.) Irenaeus, who, it must be confessed, appears not to have fully mastered the subject of the place of the saints before him, held a view essentially the same (cf. L. Atzeberger, Gesch. d. christl. Eschatol, innerhalb d. vornic. Zeit, Freiburg in B., 1896, p. 238 ff.). But he seems to think of the πεποιθήσεως (i.e. the doctrinal opinions of the Christians) in a more traditional sense than Tertullian, and yet, according to Christian writers, he had, held with what we may call provisional bodies (cf. what is said, op. cit. p. 330, about Enoch and Elijah). Now, we see at once that, with respect to the views of Irenaeus and Tertullian, the same questions urge themselves upon us as arose in connexion with the recognized doctrine of the Eastern Church (see above, end of § 2). According to the beliefs of the two Fathers regarding Paradise, all that Christ could accomplish on the occasion of His Descentus was to open that world to those who confided in it as a place where the OT saints in a better region of Hades. Did Ignatius too share this view? And is this the original idea of the Descensus? The former question—little as Ignatius says of the matter—may, as we think, be answered in the affirmative (cf. the parallels already noted above). But the hypothesis is belied by the first of the Ignatian passages already quoted (Phil. v. 2), according to which the prophets are συναναπέραντες πνεύματος τοῦ κόσμου, i.e., they look forward, exactly like the Christians, to the ἀναστάσεα τοῦ κόσμου. It is certainly possible that Ignatius agreed with Irenaeus in believing that prophets and patriarchs had acquired provisional bodies. But the true significance of the later references to the previous writer, as he himself was concerned, he does not look forward to a sojourn in Hades; he hopes, at his approaching decease, to
made here only to a few points. (1) This earliest phase of the conception shows not the slightest influence of that high esteem accorded, from the days of the Apologists, to the pious heathen who lived before Christ; it numbers with the Church of God only the saints of the Old Covenant. (2) It does justice to the primitive Christian conviction that Christ was the θεοτόκος (Col 1:15, Col 1:15), the One who brought life (Pau, John, I P 1, Heb., Ac 4:13, 167). (3) It ignores the distinction between the Resurrection and the Ascension of Christ, as Mt 27:50, if not simply a mythical representation of the thought expressed in He 10:12, viz. that Christ set open the way into the holy place δα τοι καταστήματος.

11. Hybrid origin of doctrine excluded.—The Johannine must accordingly be regarded as a distinctly Jewish Christian idea which goes back to the later decades of the primitive Church, and as such it has a strong claim upon our interest. The conception, in fact, holds a quite peculiar position, for it is the sole vestige of an idea which, independently of the Bible—with marked modifications and variations, indeed—still retains a place in the tradition of all the main divisions of the Christian Church. Even so, however, the modern mind cannot but feel that the idea of the Christ cannot now accept it as part of our faith. The Jewish-Christian beliefs regarding Hades and the sojourn of the soul therein, as also those regarding Heaven, which underlie the idea of the Descensus, belong to a cosmology which even the most determined laudator temporis acti cannot now accept. The conception, moreover, is really inseparable from these underlying beliefs, and, when the latter crumble away, nothing of the former remains. We can appreciate the doctrine of the Descensus in a historical sense, i.e. as a conception which brings into strong relief the primitive Christian conviction

Finally, it seems to the writer to be beyond question that the idea of this is derived from Mt 27:50-54. It has been aptly observed by Reuss ('Ausserkanon Paralleltexie z. d. Evangelien,' TU x. 1 and 2, 1893-94, p. 302) that the Gospel of Nicodemos indicates the sense in which the opening of the gates and the resurrection of saints narrated in these verses was understood, since it is hardly possible to doubt that the writer of the First Gospel favoured a similar view. We might even ask, indeed, whether the rendering of the καταστήματα by τοις θανάτοις of '反之' in Mt 27:50 is not simply a mythical representation of the thought expressed in He 10:12, viz. that Christ set open the way into the holy place δα τοι καταστήματος.

12. Specifically early Christian character of doctrine.—The conception of the Descensus, as defined above (§ 9), must be regarded as a distinctly Jewish Christian idea which goes back to the later decades of the primitive Church, and as such it has a strong claim upon our interest. The conception, in fact, holds a quite peculiar position, for it is the sole vestige of an idea which, independently of the Bible—with marked modifications and variations, indeed—still retains a place in the tradition of all the main divisions of the Christian Church. Even so, however, the modern mind cannot but feel that the idea of the Christ cannot now accept it as part of our faith. The Jewish-Christian beliefs regarding Hades and the sojourn of the soul therein, as also those regarding Heaven, which underlie the idea of the Descensus, belong to a cosmology which even the most determined laudator temporis acti cannot now accept. The conception, moreover, is really inseparable from these underlying beliefs, and, when the latter crumble away, nothing of the former remains. We can appreciate the doctrine of the Descensus in a historical sense, i.e. as a conception which brings into strong relief the primitive Christian conviction
that the resurrection of Jesus Christ was something altogether different from a simple, vague image.

The descent of man. — See EVOLUTION.

DESIRE. — The inner nature and outer scope of human desire are such as to raise important questions concerning man's relation to the world and his estimate of his own life therein. In both a theoretical and practical manner desire propounds certain questions for philosophy: on the one side, it is asked whether man can desire anything but the pleasurable; on the other, it is questioned whether his attitude toward desire should be one of acceptance or rejection. Just as perception establishes a theoretical connexion between the mind and the world, so desire elaborates a volitional relation between the soul and Nature, so that man is led to wonder whether, like the animal, he could silently take his life for granted or, self-conscious and self-propelled as he is, should question the authority of natural desire over him. Owing to the problematic nature of desire, it becomes necessary to inquire concerning the exact psychological type and ethical worth of this human function; to this constructive task must be added critical considerations drawn from aesthetics and religion. Thus we must investigate what desire really is, and in what way, and to what extent, it is supposed to exercise away the human soul.

1. Psychology of desire. — The nature of desire is such as to place it between instinct and volition; it is superior to instinct inasmuch as it is a definite and conscious form of activity, while it is inferior to volition in its capacity to give a directed, impersonal idea. Belonging to the emotional process, desire has the nature of active feeling; all feeling tends to arouse activity in either mind or body, so that desire may be regarded as feeling plus activity—a process according to which a painful want is satisfied or a pleasurable experience retained. Nevertheless, desire is related to both cognition and volition; but, where such connexion is involved in relating the ego to its object as idea or act, desire follows an indirect path, which involves instinctive and personal considerations. In a certain sense, the position of desire in consciousness is exceptional; and the psychological manner this expression is performed directly, while ideas are entertained in a purely mental manner not coloured by desire; in contrast to these more staid forms of cognitive and conative activity, desire expresses a condition of intensified human interest.

(a) The volitional factor in desire occasions a problem whose nature is expressed by the question, Does one always desire pleasure? If desire were purely aotional, it could easily be pointed out that desire is ever related to the pleasurable, aversion to the painful; but the presence of conation spoils the simplicity of this hedonic arrangement, and makes necessary one which is more extensive and complicated. Perceiving the influence of the will's activity, Aristotle was led to say: 'There are many things, so to speak, which we should choose on account of something else than pleasure' ('αξιοντα γαρ επι ευτιχειας ηταν αραιομενα πληροι της επιλογης [Eth. Nic. x. 6]).

In contrast to this Aristotle's enthusiasm for desire urged a hedonism on the basis of which he insisted upon identifying desire with a sense of pleasure:

'I believe that desiring a thing and finding it pleasant, aversion to it and thinking it unpleasant, and desire desiring an object indicates a volitional decision in favour of it, as worth while, still this does not mean emotional delight in it as something pleasurable. The later hedonism of Sidgwick admits this, and its antithesis to the anxiety for the economic implications of the older hedonism, declares:

'What I am concerned to maintain is that men do not now normally desire pleasure alone, but to an important extent other things also' (Methods of Ethics, London, 1901, i. ch. iv. § 4).

In identifying the pleasurable and desirable, the hedonist has confused desire in its active condition with the passive experience of delight, but the human mind is so constituted that it can choose other than delightful experiences. From the evolutionary standpoint, desire is related to pleasure, aversion to pain, upon the basis of the hedonic law which declares that the pleasurable is indicative of the beneficial in the organism, the pain of the harmful.

Every pleasure, says Herbert Spencer, 'increases vitality; every pain decreases vitality. Every pleasure raises the tide of life; every pain lowers the tide of life' (Data of Ethics, New York, 1852, § 269).

But the claim that the pleasure-giving is equivalent to the life-increasing, the pain-giving to the life-decreasing, is based upon purely biological considerations, and is discussed by Spencer in the chapter entitled 'The Biological View'; when he advances to consider the part played by the human mind in the evolutionary plan, he repudiates the original hedonic scheme, by claiming that
man submits to guidance, not by simple, but by reasoned and independent guidance, which are far removed from the sense of bodily benefit or injury (ib. § 42). The evolutionary conception of conduct is thus called upon to admit the presence of something like a disinterested play of consciousness, whereby man, emancipated from purely biologically determined principles, chooses either pain or pleasure according to his idea of what has worth for the will.

(b) The cognitive factor in desire appears first of all in the presence of a presentative element which involves the idea of an object or end, so that recognition as well as conation tends to separate desire from the realm of purely instinctive feeling. As Sully says, 'where there is no knowledge, there can be no desire' (The Human Mind, ii. 190).

Such knowledge consists in the memory of former pleasurable experiences which we would have repeated, or the idea of similar feelings which we could realize. The perceptible appreciable result to be obtained by activity in the direction of the desired object distinguishes desire from instinct, which functions immediately without the idea of an end. As Bergson has expressed it, 'there are things instinct alone finds, but it never seeks them' (L'Evolution créatrice, 1910, p. 164). On the other hand, desire is directed not only to the object as such, but to the pleasure of the object, to an object rather than merely some pleasurable experience with its qualities, where one reads a book or listens to an opera, not merely for the attendant pleasure of the personal or the performance itself, but for an end that the person or having heard such an opera. Desire is satisfied, not merely by pleasure, but by means of a conscious experience with an object, such as a foreign country which one visits. With its broad interests, the intellect transcends immediate pleasures, and advances to the idea of thrill which is afforded by contact with reality. In this way, art, which necessarily demands the disinterested, may mean more to the mind than actual life, just as tragic art, with its constant suggestion of pain and defeat, may be more entertaining than the comic, with its ideas of happiness and success. Through his desire for intellectual excitement, man has demonstrated his ability to rise above pleasure, just as he has shown in their performance that he can give of value to him than to entertain pleasurable emotions. Desire thus involves an ideal as well as a purely cognitive element, for by its very nature it contrasts the actual condition of the ego with an ideal; the ideal of the future is the not yet attained. This reference to the future is indicative of the difference between desire and pleasure; for, where pleasure is necessarily contemporaneous, desire is ever antipatatory, so that, as pleasure enters, desire departs. One desires pleasure when he does not possess it, but, when pleasure comes, the delight in it dispels the mere desire for it. In this way arises the larger question concerning happiness, which is sometimes conceived of as the possession of the good, sometimes as the pursuit of it.

(c) In addition to the conative and cognitive in desire, there is a third element, without recognition of which the problem of desire cannot be sufficiently presented; this is the egoistic. Desire indicates a form of activity streaming forth from the ego, while it is aimed at a form of experience calculated to affect the ego's condition. In themselves, both action and thought possess an impersonal character, emanating from the authentic forms of reality found in the outer world; desire, however, makes use of these fundamental forms of mental reality only so far as they are of personal interest to the ego which desires to direct its faculties of conation and cognition in some particular channel. Desire is so identified with personal interest that esthetic and religious systems which are far removed from the sense of bodily benefit or injury (ib. § 42).

The evolutionary conception of conduct is thus called upon to admit the presence of something like a disinterested play of consciousness, whereby man, emancipated from purely biologically determined principles, chooses either pain or pleasure according to his idea of what has worth for the will.
Desire directed towards an end. But in the moral consciousness of man the actual desire cannot be an end, and, therefore, moral morals, which arose ideologically in conduct; and yet it is suggested that, were man truly man, the intelligible rather than the empirical ego, then the spontaneous desires of the human heart would represent genuine values of spiritual life. Man as a vessel lives according to idealized desires, so that, where Nature originates through organic striving and instinctive activity, reason continues this preliminary work by creating subjective values, whose essence consists in that which would be desired by man in his moral perfection. Inasmuch as ethics must begin with man as he is, it finds it necessary to express this idea of value by means of rectitude and duty. As a result, ethics, like psychology, cannot advance beyond the limits of mediocrity and partiality. Man through desire is put in a condition of sufficiency, wherein interests take the place of ideals, and man transcends Nature only to the degree of elaborating the idea of the human species, and not that of individual human species. Thus, the logico-ethical view of man is made up by the aesthetic-religious one, according to which desire is repudiated.

3. Aesthetics of desire. In the artistic world, human desire is not accepted in its immediacy, but is subjected to spiritual scrutiny. Where the constructive mood of aesthetics prevails, desire is increased by the perception of beauty, which Stendhal (1785–1842) defined as "a promise of happiness that is interior in the soul; a poetic satisfaction of sensibility that rises from the heart, asVolume the success of the infinite and the highest perfection of the soul. The critical mood is uppermost, beauty is regarded as the vanishing of desire in the form of disinterested contemplation. One is aphrodisian, the other anti-aphrodisian, in its effect upon desire. Even among the Greeks, desire was not the goal of beauty, as the desiderative in aesthetics, and it was in this spirit that Plato condemned the poet, not only because his creative art yielded an inferior degree of truth, but because the excitement expressed is an inferior part of the soul—the passionate rather than the reflective. This criticism he applied to the drama especially (Rep. 604–5).

Aristotle conceived of art as having the function of producing the soul from such desires as cause distress by being in tension and strain, and over the soul; accordingly, he defines tragedy as the imitation of an action where the effect is produced by men acting and through pity and fear effecting a purification of such passions (śākṣa kāraṇāmdharmasya yāpyatahom anvairuddhikārāvāpyaṃ kārāvāpyaṃ [Poet. ch. vi. 2]). Modern aesthetics has met the problem of desire upon a basis more psychological, while it has been less rigorous than was Hellenism in its judgment of the desirable in beauty. The general effect has been to place the disinterested in the position of the desiderative, which idea was first formulated by Kant, although Burke's The Sublime and the Beautiful (1756) and Baumgarten's Aesthetics (1750–58) showed him where beauty might be found. Kant seeks to indicate the possibility of a feeling-judgment, or taste; the latter he describes by saying:

"Taste is the faculty of judging of an object by an entirely disinterested and spontaneously disinterested [Critique of Judgment, tr. Bernard, 1892, § 5]."

In Kant's mind, desire is fatal to beauty, as to virtue also; hence his insistence upon the disinterested in aesthetic feeling.

Schopenhauer was more voluntaristic, more pessimistic; hence, his doctrine of desire is more stark. Thronged by desires, with their perpetual hopes and fears, so long as we are the subject of willing, there can be no lasting happiness or peace for us. . . . Thus the subject of willing is ever stretched upon the revolving wheel of Ixion, pours water into the stew of the pot, is the ever-tirelessly pining Tantalus." (Waltz as Will und Vorstellung, § 33).

This constant condition due to human desire is relieved from time to time by satisfaction, in whose ecstatic moments the subject, raised above the desiderative, enjoys the stillness of the will to live:

'It is the process condition which Epicurus prized as the highest good, as also the condition of the gods; for we are for the moment delivered from the shameful strivings of the will, we celebrate the Sabbath of the spirits, and feel the infirmities of will, while the wheel of Ixion stands still' (48.).

Wagner follows Schopenhauer in postulating renunciation of desire as the most perfect aesthetic condition, although he finds it hard to explain how the particular art of music, which involves the highest excitement of the will, can consist with the state of stillness demanded by the aesthetic ideal (cf. Beethoven, Schriften u. Dichtungen, Leipzig, 1888, v. 9, p. 72). In the Ring des Nibelungen, Wagner indicates a double doctrine of desirelessness: first, in Siegfried, whose superabundance of power raises him above want; secondly, in Wotan, who learns to relinquish the gold of beneficent desiring (cf. Plato, Crit., Act ii.; Aristotle, Nic. Eth. 1093); in contrast to these aesthetic attacks upon desire, based upon a dread of the will to live, other Schopenhauernians consider beauty as consisting in a removal of the natural function of willing. Nietzsche thus criticizes Schopenhauer and Wagner, and returns to the views set forth by Stendhal, as also by Flaubert.

'Stendhal,' says he, 'a not less sensual but more happily constituted nature than Schopenhauer, lays stress on a different effect of beauty; beauty promises happiness. With him the very stimulation of will (interest) by beauty seems to be the fact' (cf. op. cit. iv. 48.).

In this positive treatment of desire, Nietzsche is followed by Sudermann, whose literary art constantly repudiates all restraint. With Sudermann, this affirmation of desire is carried out consciously and with apparent sincerity, and, instead of following the animal instinctiveness of Maupassant, he uses the sensual with the aim of inculcating an egoistic ethical doctrine. Much the same may be said of George Moore in distinction from Oscar Wilde, because by in and out, with purpose of developing a trans-traditional morality (J. Huneker, Overtones, New York, 1906, iv. 2). This contradiction between the two views of desire is due to a difference in interpretation of the ego and its position. Many who believe in the reality of spiritual life are inclined to eliminate desire by removing the ego from the field of activity, while those who are aware of no beyond know no reason why man should do aught but further the native tendencies towards self-realization. But, even where the ego's desires appear to be the most obvious things in experience, the artistic consciousness distrusts desire as something tending to delude the mind which appeals to the stillness of the inner life. This occasional elevation in art is the rule in religion.

4. Desire and religion. Since spiritual religion consists in a detachment from the world of impressions and a repudiation of immediate impulses, it is necessary to consider its relation to desire. With various religions, the attitude towards desire is determined in accordance with their general attitude towards the world. Thus Taoism, which regards reality as something empty of content and wanting in attributes, upholds renunciation of desire; Buddhism, with its ascetic tendency, urges its complete extirpation; Christianity, while not wanting in this critical attitude towards the natural in both man and world, advises one to train the desires.

*Digitized by Microsoft®*
The leading principle in Taoism is that of emptiness and inactivity, wherein the dialectical superiority of the Tao consists (Tao Teh King, tr. Legge, 1891, chs. 11, 37). Accordingly the man of Tao seeks by the repression of desire to reduce himself to a life of inactivity. With more concise language seeks to withdraw the mind from external impressions like colours, tones, flavours, and the like (ib. ch. 12). This course of repression is further called 'returning to the root'—a teaching which calls attention to the tendency on the part of all forms of vegetable life to return from their full-flowering to their original condition. 'This returning to their root is what we call the state of stillness,' says Lao-tze, who counsels the disciple to produce this state to the utmost degree (ib. ch. 16). The man of Tao is considered 'different from ordinary men, in that he has so repressed his desires as to have become infant-like and primitival. "I am like an infant, which has not yet smiled," says he. The mind is that of a stupid man; I am in a state of chaos' (ib. ch. 20, cf. chs. 23, 28). Inasmuch as the 'Tao does nothing for the sake of doing it,' the Taoist is without desire, inactive, and simple (ib. ch. 37).

Buddhism treats desire in its major rather than its minor manifestations. The Noble Truth Concerning Suffering' (in the Mahavagga, tr. Davids and Oldenberg, Oxford, 1881, i. 1). This truth is fourfold. It is based upon the individual's attachment to life, to his desire for continuous existence and attainment, that suffering is removed by detachment from desire, the way of which lies along the eightfold path wherein is found the destruction of sorrow (cf. 'Dhammaraka,' tr. Davids, SBE xi. [1906], § 38). While Hinduism repudiates belief in the lust of the flesh, Buddhism regards suffering as the consequence of desire. Buddhism seeks to identify these ideals, Windelband ('Hist. Philos. tr. Cushman, New York, 1906, § 47) believes the likeness to be but superficial. The former is the virtue of ethical indifference to all passions; the latter is passionlessness which is based upon the perfect satisfaction of all desire. On this account, it was looked upon, by both Epicureans and Cynics, as acquired only through a limitation of desire (ib. § 45). It was in this spirit that Horace wrote his famous epistle beginning 'Nil admirari proper est una' (Ep. i. vi., where Seneca expressed the same apathetic sentiment in his 'sine admiratione' (de Vita Beata, iii. 3). In de minimis non curare and aversion to future acquirement, the same attitude, concerning man to cease desiring things beyond his power (iii. 24). Marcus Aurelius rehabilitates Horace's 'nil admirari' with his own δυναμον, whereby, like Maximus his master, he extolled the present life (i. 15). See also the 'Greek' article, below.

While Christianity does not attack desire upon the same cosmological grounds as Taoism, Buddhism, and Stoicism, it does not fail to relate the function of desire which it condemns, to the world which it repudiates. In the great value-judgment of the Gospels, 'What doth it profit a man, to gain the whole world, and forfeit his life?' (MK 8:36), the principle at work is that of detachment from the world. On the psychological side, this is expressed in terms of will, where it is declared, 'Whosoever would save his life shall lose it' (6:47). This is the condition exalted by the Stoics, where the will of the rational soul is directed towards the desire—ν̑ν ãν εκδιακονεῖ (1 Th 4:7); St. Peter speaks of the believer as one who has escaped the corruption in the world through desire—τν̑ν κάρμαν εν ἐσπευδή (2 P 19); and St. James speaks of the tempted man as one who is drawn away by his own desire—σπυρτίζεται ἐπεθυμία (Ja 1:14). St. John relates these forms of the mind to the world, and thus tends to give a dialectic of desire. In this way, the content of the world is likened to desire in both a sensuous and an intellectual form: πν̑ν τὸν ἐν τοῖν κάρμα, ἐπεθυμία τῆς αμβροοκτησει καὶ ἐπεθυμία τῶν ἀθροοκτησεων (1 Jn 2:16); the latter is based upon the principle of asceticism, which aims at detaching the ego from the immediate world, that it may find its true place in the world of spiritual life. This doctrine of detachment from life is now under discussion in religious circles.

While current thought accepts desire as a fact of experience and develops it according to ethics, religion, like art, refuses to take it for granted and tends to repudiate it altogether. Such a tendency appears repudiated because it leads to a futility and to the repudiation of the reality of life at the moment when life becomes ideal' (J. Huneke, Iconoclasts, New York, 1908, p. 337); and in Ernest Hello, who attacks desire under its armour of the pride of life (cf. L'Homme, Paris, 1894, Le Dieu, du désir, éd. Villiers, 1896). In a manner, J. K. Huysmans, who passed from the sensual to the spiritual, has revealed an austere world-withdrawal whose path is indicated in En Route (Paris, 1896), while its result is elaborated in La Cathédrale (1898, § 358), wherein Hello, cloistered at Chartres, glorifies the inner life, 'la vie contemplative,' which he contrasts with 'la vie active' (op. cit. 28, ch. v. p. 125, ch. xi. p. 390). Huysmans, who mentions Hello (ib. ch. vi. p. 138), reveals the same combination of Catholicism and Mysticism that guided the former to his striking attitude towards human desire. The economic interest, which to-day predominates, tends to forbid the artistic disinterestedness and religious renunciation which seek to neutralize desire, so that the present age might well be called the age of desire.

CHARLES GRAY SHAW.

DESIRE (Buddhist).—There is no more intimate, more radical self-expression of the conscious individual than that which is conveyed by the term 'desire.' It is the one genuine subjective register of the human character. A man is known by his works, but he knows himself by his desires. When these emerge, if they do emerge, in action, external limitations
of environment and opportunity permit only a distorted output of the ideal act, which had taken shape in the exalting flame of desire. Religion and ethics are therefore deeply concerned with desire. A fortiori, whether Buddhism is considered to be religion, or ethics, or both, desire should bulk very largely in its doctrines, and the attitude to it doctrinally should have held crucial in our judgments respecting them. Buddhism faces the phenomenon of desire as frankly and as critically as other systems, and perhaps even more so; and this is because it is essentially a religion and does not start from the external universe and its first or final cause, but with the heart of man.

Discounting the remote and immaterial planes of existence (rūpa-loka and arūpa-loka), the world of desires is, by Buddhism, conceived and named in terms of desire. It is kāma-rūpa-kāra, the sphere of kāma, i.e. desire understood simply as wishing for what is pleasant; and kāma-loka, 'world of desire': kāma includes both desiring (kāmattī kāma) and that which is desired (kāmīyattī kāma). Now, as might be expected, in Buddhist philosophical treatises the universe is regarded as a natural phenomenon, and is neither praised nor condemned, while, with respect to the life of laymen, kāma, that is, natural desires and the enjoyment thereof, is not, as such, condemned. In the oldest narrative of the birth of the Buddha (Dīgha-Nikāya, ii. 13; Majjhima-Nikāya, iii. 121), it is written that his mother, a lady of pure and virtuous life, was living before his birth in the enjoyment of the five modes of sense-desire (paṭhika kāmoyāna, i.e. of sights, sounds, odours, tastes, and contacts). Again, in the Sīkṣāvatāra-suttanta (Dīgha, iii. 180f., called by R. Childers 'The Whole Duty of the Buddhist Layman'), the Buddha does not warn the young layman off a single form of natural desire or enjoyment, but only says, 'It is the desires which we wanton desires. For those who had left the world and devoted their lives to holiness and missionary work, the case was different. The kāmas were for them constant sources of danger, and were considered as leading to evil, snakes, dust, bones, dreams, and other perils and disappointing objects ('Psalm of the Sisters' [Therigāthī, London, 1909, p. 144f.]). They belonged to the pursuit of sensual pleasures and the life of the world. An ascetic avoids, in his religious life, human kāmas; it is time to seek after celestial kāmas (Dīgha, iii. 60). But, for one who was aiming at the highest goal, there was really nothing to choose between either human or celestial desires and objects of desire. The word kāma was unadorned by Buddhism. He did not therefore cease to desire, for, though his quo vadis was different, he aspired to a goal none the less, and, if he obeyed the injunctions of his Order preserved in its scriptures, he pursued neither with greater ardour and singleness of purpose than he had ever felt over worldly objects.

If, in the earliest version of those scriptures surviving, viz. the Pāli Pitakas, natural desire and its objects—in a word, the kāmas—are usually mentioned in terms of depreciation, it must be remembered (1) that the Pitakas were compiled by religious, and that the greater part of the Suttas are discourses addressed to religious; and (2) that Buddhism started as an evangel of protest, reform, and regeneration against worldliness and superstition, and evans do not compromise. But it is characteristic of this gospel that it does not seek to quench earthly desires (mundana kāma) by heavenly desires (ābhīva kāma).

In the first place, the summa bonum of arhatship, of complete emancipation of heart and mind, could be won only in this earthly region of the kāma-loka, with the single exception of the highest sphere of the arūpa-loka, where it was believed that some mortals attained parinibbāna, i.e. completion of perfected life and final death, who here, on their way to perfection, had not only lived to touch the Path, but had begun to tread it! (Dīgha, ii. 200; Sānāgutta, v. 346, etc.); yet this parinibbāna is never regarded as a climax and glorious consummation, but rather as an epilogue to the life here below of those who, in a 'world of desire,' and in virtue of unceasing desire, had attained to the assurance of victory in spiritual evolution (nibbāna).

Secondly, whereas the Buddhist Dhamma is essentially a method for diverting and transforming the nature of desire, before those whose quest was for the highest, no supranandana place as the proper object of desire, nor before any one did it hold up a superhuman being or person in that light. It is true that re-birth is a natural phenomenon, and is neither praised nor condemned, while, with respect to the life of laymen, kāma, that is, natural desires and the enjoyment thereof, is not, as such, condemned. In the oldest narrative of the birth of the Buddha (Dīgha-Nikāya, ii. 13; Majjhima-Nikāya, iii. 121), it is written that his mother, a lady of pure and virtuous life, was living before his birth in the enjoyment of the five modes of sense-desire (paṭhika kāmoyāna, i.e. of sights, sounds, odours, tastes, and contacts). Again, in the Sīkṣāvatāra-suttanta (Dīgha, iii. 180f., called by R. Childers 'The Whole Duty of the Buddhist Layman'), the Buddha does not warn the young layman off a single form of natural desire or enjoyment, but only says, 'It is the desires which we wanton desires. For those who had left the world and devoted their lives to holiness and missionary work, the case was different. The kāmas were for them constant sources of danger, and were considered as leading to evil, snakes, dust, bones, dreams, and other perils and disappointing objects ('Psalm of the Sisters' [Therigāthī, London, 1909, p. 144f.]). They belonged to the pursuit of sensual pleasures and the life of the world. An ascetic avoids, in his religious life, human kāmas; it is time to seek after celestial kāmas (Dīgha, iii. 60). But, for one who was aiming at the highest goal, there was really nothing to choose between either human or celestial desires and objects of desire. The word kāma was unadorned by Buddhism. He did not therefore cease to desire, for, though his quo vadis was different, he aspired to a goal none the less, and, if he obeyed the injunctions of his Order preserved in its scriptures, he pursued neither with greater ardour and singleness of purpose than he had ever felt over worldly objects.
As on a crag, on crest of mountain standing,  
A man may reach the people far below,  
Even so to Thon, O Wisdom fair, ascending  
Of the terraced heights of truth, Look down, from grief released, upon the nations  
Sunken in grief, oppressed with birth and age.  
Art thou, therefore, the Conqueror in the world?  
Thou freed from debt!  
Lord of the pilgrim-band,  
With averted eyes and bowed head  
Teach us the Truth—therefore we'll understand  
(Dialogues, ii. 32; Vin. Text, i. 541).

The faith and devotion evoked by the person of the Buddha and by the nature of his doctrine are also usually described in terms of satisfied desire, namely, *pasiso, pasanna,* the passages being too numerous to quote (but cf. *Sawyutta,* v. 351, with *Buddhist Psychological Ethics,* 174 n.). Nevertheless, the desire itself for a Buddha, and for the salvation he should bring, is expressed in terms of altruistic desire for the good and happiness of all men. It is 'out of compassion for all creatures, for the advantage and the welfare and the happiness of gods and men,' that a Buddha arises.

Who from all ill and sorrow hath released  
Me and so many many stricken folk  
(Theravada, 453; cf. Dialogues, i. 1114, p. 241).

Mediately therefore, in the desire for the Buddha, the impersonal desire for universal good, as well as the desire for personal salvation, finds expression. This is 'desire' as the English word is not English, we might say, is elastically won by the *Dhamma* to devote their lives to it, a career of mental and moral training was prescribed, which, judging by the terms employed, called into exercise the emotional and volitional, no less than the intellectual, faculties. The exercises might be in the expansion of a concept or sentiment—satisfaction, irradiation (*phara*), they called it—or in concentration of attention and will (*samadhi, jhana,* etc.), or in control of consciousness, recollection, self-collectedness (*sati)* (exercised whenever possible) in no case, however, was the training to be carried on with cool impassivity, except in certain advanced stages. The sincere student is constantly described as being aglow or ardent (*uttari*), strenuous or earnest (*appamutto*), full of energy and endeavour (*viriya, viyadha, ussotthi*), and filled with eager active desire (*tibbachanda*); but the emotional side of consciousness is not encouraged, except in intimate connexion with the conative or volitional. The desire, therefore, for intense knowledge, which is as unselfish as our own 'desire,' which, like 'desire,' is sometimes used with a sensual or passionate import, is more allied to will than *kama* is, and is explained by commentators as meaning *kuttam-kamottari.* Few concepts, indeed, are of greater interest in Buddhist culture than this evolution of *chanda.* For instance, *dakkha,* the generic term for 'ill,' 'misery,' or 'pain,' is said to be 'rooted' in *chanda* (*Sawyutta,* iv. 328), as, indeed, are 'all states of consciousness' (*Abhutatara,* iv. 330). On one occasion the end of the Buddha's system of holy living is called the removal of desire (*chanda-pa*khana *Sawyutta,* v. 272). Yet this is stated to be accomplished by certain exercises in which *chanda* is called into play. 'What then,' is an inquirer's comment, 'would you put away desire by desire?' And the Thera replies to the Brahman: 'Was there not desire, elict, thought, deliberation in your mind, when you set out to find me in this garden? And now that you have found me, is not all that abated?' Again, a homely simile of the ass who does not make himself into a valued ox by walking after the herd saying 'I, too, can bellow,' serves to illustrate that the mature student is his displaying eager active desire (*tibbachanda*) for the highest virtues and the most advanced mental development (*Abhutatara,* i. 229).

Finally, the Buddha is represented in the *Avata-majjhikas,* in which he proclaims his wish to dispel the passion with which a bhikkha 'might desire' (*abhinikkhecit*), may severly be satisfied ('Buddhist Suttas,' *SBE* xii. 210 ff.

Hence in Buddhist ethics, desire is, as much, not only not immoral, but an indispensable instrument for attaining higher (no less than meaner) ends; it becomes a source of danger only when the object of desire is such as to engender no lasting satisfaction to desire when it is attained.

And hence it is strictly in accordance with the spirit of the older writings, if with an added tinge of intense emotion, when the author of the *Milinda Questions* desires that *Abhikusa* be realized, not by quiescent meditation, or in hypnotic trance, much less by mortification of desire, but by rational discontent, strong anguish, and longing, followed by a forward leap of the mind into peace and calm, then again a transient zeal, in which the aspirant 'strives with might and main along the path,' and so on.

It had been the fate of Buddhism, before the authorities quoted above became accessible, to become for the general English reader synonymous not only with pessimism but with the 'extinction of desire.' And the error still persists. This is largely due to the fact that the earliest translators of the canonical works of Buddhism were for the very reason that they had a psychological training. The anthologies of the *Dhamma* and *Sutta-Nipata* were rendered into English prose by those various Indologists, Max Muller and Fausboll, and between them they render no fewer than sixteen, or sixteen and a third, books, moral, or vicious, or unregulated desire, by the one unqualified word 'desire.' St. Hilaire, Burnouf, and Fouxon do much the same disservice with the one over-worked word *desire.* Warren (Buddhism in Tibet), Warburg (Buddhism in Japan), and so on. On the other hand, it is not to a desire, a yearning, an impulse, a resolution, that the founder of Buddhism is represented as having renounced the world and dedicated his life to the service of his fellow-men. See also art. Love (Buddhist).

C. A. F. RHYS DAVIDS.

**DESIRE** (Greek).—I. Socrates and the pre-Socratics.—The beginning of ethical investigation in ancient Greece is usually assigned to Socrates. And, no doubt, Socrates did in a special manner direct men's attention to ethical principles and concepts, and give the impulse to the further study and elaboration of the philosophy of morals. He was also who, by his rigorous insistence on self-control (*epheirese*) as the supreme virtue, gave the special prominence to a gentler, a more passive, a higher and a lower nature, with the tendency on the part of the lower (the desires) to usurp the mastery; thereby initiating a point of view that was to dominate Greek philosophy henceforth, definitely formulated for all time by Plato. Moreover, he himself could 'saw delights and live

Digitized by Microsoft®
laborious days' better than any man of his time, so that he could not only teach robust ethical doctrine, but show it also by example. But, long before the time of Socrates, the subject of desire had thrust itself upon men's notice, and from old precepts had been emunctuated for the practical regulation of life, even though it were only from the prudential standpoints of Hesiod (see his Works and Days), the Gnostic poets, and the Seven Wise Men. This explains the existence of Orphism and Pythagoreanism, which—religious more than philosophical—had the highest welfare of the heart, that heart symbolized a system, distinctly mystical, for the purification of the soul and the cultivation of the higher life. This was avowedly ethical in its character, and, being cathartic, had the subjugation of the desires and the development of rational life as a basical principle. But, apart altogether from the poets and the moralists and the mystics, the pre-Socratic philosophers, who are usually represented as devotees of physics and physical speculation, were, like, and indispensable for life—perhaps the ethical teaching of Heraclitus of Ephesus, in particular, and of Democritus of Abdera, forms an interesting side of their philosophy. Sir Alexander Grant does them less than justice when he says: "Metis and a head of these early philosophers... seem to belong rather to the personal character of the men than to the result of their systems" (Ethics of Aristotle, 1, 103).

The great impact that inspired ethical analysis and ethical thinking came from Socrates: an epoch in Greek philosophy was marked when, under the sanction of the god at Delphi, he insisted in the way that he did on the principle 'Know thyself' (γνῶθι σεαυτόν); and the question of desire found its first impressive handling in his greatest disciple Plato, in the true Socratic spirit.

2. Plato.—(1) In his psychological analysis of human nature, Plato regarded the soul of man as consisting of three parts—the rational (δύο μορφῶν ἄτομον), the fiery or spirited (δύο θυμοῦ οῖκον), and the appetitive (δύο σωφρύματος).

There is a great temptation to interpret this as an anticipation of or foreshadowing of the modern psychological threefold division of mental processes into intellective, feeling, and conative or volitive. But, when we remember that each soul, according to Plato, had its own distinct habituation in the body—the rational soul being situated in the head or cranium, the spirited soul in the breast or thorax, and the appetitive soul in the belly, below the breathing organs, then it is clear that the three souls are represented as having their counterparts in the Ideal Bodies which are represented in the philosophical guarantors of the State, the second in the soldiers, and the third in the artisans and husbandmen—we see that the Platonic psychology is a lessoned to teach anything to be found in the psychologies of the present day.

Between the three souls, or three parts of the soul, there is a distinction of native authority or value. The rational soul, being immortal, is naturally supreme, placed where it is in the body (viz. in the commanding position of the head) in order to guide and control the others. The spirited or courageous soul is the seat of ambition, honour, and glory, and is indispensable for the individual and the state in any sphere, and is by nature ancillary to reason, though, on occasion, it may require restraint. But the third soul is that which needs careful watching and curbing—viz. the appetitive or lustful soul, the seat of desire, of insatiable passion, and, therefore, pre-eminently of lawlessness and insubordination. This is the 'black' horse of the allegory of the Charioter in the Phædrus, which must be bridled, clipped in bridle, and to which the whip has to be unsparingly applied until it is subdued and tamed. It is also the 'many-headed monster' of Republic, 588 C. From the place that the appetitive soul occupies in the body (below the head, in the region of the belly and the intestines), there is proximity in the liver, which (according to Plato) is the organ of imagination, issuing oracles in dreams and acting as a mirror registering the wishes, commands, and reprobations of the rational soul, thereby encouraging, warning, and, if need be, terrifying the recalcitrant transgressor, with the design of checking him in his wayward course.

This doctrine of desire is clearly of an ethical character, and is specially suited to ethical purpose. It is not so much a deductive logical analysis of the notion, or even a systematic psychological exposition of the subject, as a suggestive statement of the hierarchy of principles in human nature (for the different souls, though separated locally by Plato, may be united in that way in the appreciation of their various functions and a grading of them according to worth. It is, above all, an enforcement of the truth that, for the highest health and welfare of the individual, the desires must be strictly and radically checked through their very nature to tend to transgress limits, to usurp authority; and this, if unchecked, means moral shipwreck and disaster (see Appetite).

In Phædrus, however, a psychological analysis of desire occurs, viz. the division of appetites into those that are proper to the good, and those which are improper. The first desires (and the proper appetites) are those that are suited to the basical life, as beauty, and the second desires (and the improper appetites) are those that are suited to the individual's character, as patriotic love.

But Plato's doctrine of desire goes deeper than this: it penetrates to the very centre of man's being, to what may be specifically designated his natural spiritual wants. The highest form of desire is represented as philosophical Love or Eros, which is inseparably connected with the Plato's theory of Ideas and the doctrine of Reminiscence (ἀνάμνησις). The object of this kind of desire is set forth in the Phædrus as the Beautiful, as Beauty Absolute, the super-celestial Divine essence, which is reached by the individual through the mediation of the perception of beauty in objects of sense, especially in the beauty of bodily form, as seen in beautiful youths; and, in the Symposium (211 C), the mode of ascent is declared by Diotima of Sparta, as follows: 'To begin from the beauties of earth and mount upwards for the sake of that other beauty, using these as steps only, and from one going up to another, until a certain stage is reached from fair forms to fair practices, and from fair practices to fair notions, until from fair notions he arrives at the notion of absolute beauty, and by that last word we mean to say Form is, This, my dear Socrates, said the stranger of Mantinea, is that life above which others which man should live, in the contemplation of beauty absolute.'

In the Republic it is set forth as the Good, which is the supreme transcendental Idea, permeating being, and giving meaning to intelligibles and opposibles alike in the realm of Knowledge. In the Timæus, the Good is identified with God; and, as 'likeness to God' (εἰσχρώματος ὦς) is the chief end of man, according to Theaetetus, the ultimate object of man's highest desire is the Deity. Nor is the Deity a mere abstract term to Plato; it expresses the ideal of holiness, as well as of knowledge or contemplation; so that, in the assimilation of the Divine by man, character no less than intellect is involved. But, in order to become conform to the great Idea, the soul needs to be purified, and purification is a thing of degrees, so that σάρκας becomes the leading note, and σάρκας 'elected by personal effort in a Cosmos governed by God—a doctrine which is, as J. A. Lloyd used to express it (The Myths of Plato, p. 352), 'the great contribution made by Plato to the religious thought and practice of Europe.' Hence, in Protagoras (349, 350 A), 'holiness' (καθαρός) is added to the four cardinal virtues; Socrates in Xenophon called it 'purity' (εὐσεβία). With this is specially to be
associated the Platonic eschatology (for purification does not cease at a man's death), where the soul is represented as finally purified through a series of metempsychoses—as seen, for instance, in the Report, in the myth of Er, the son of Armenios, and in the doctrine of Eros, with its essentially elevating and purifying character, as described in the Phaedrus myth.

(3) In line with this is Plato's proof of the immortality of the soul (see Phaedo and Symposium), drawn from men's universal longing or desire for continued existence and for the everlasting possession of the Good—a proof that became popular in Western Christendom through St. Augustine's acceptance of it, and which finds its poetical expression in English in Addison's 'Cato' and in Tennyson's 'The Two Voices.' One view is that the desire continues to live hereafter because men everywhere cling to life 'together with good' and shrink from death; the presupposition being that whatever crops up as a general craving among men is due to an ancient necessity, but, the god of Death, because of their thirst for knowledge and their desire of being made better. They find that with Hades is true Wisdom—he has experience and is the great Philosopher; and he determines everything and isointerprets the oracles, and with himself better, they cling to him as disciples to a master. Thus desire is seen to be a stronger bond than necessity: necessity coerces, desire seduces.

Aristotle (1) In the analysis of desire as given in de Anima, Aristotle uses the term 'desire' (δέσις) generically, including in it, as species, spiritedness or passion (θυμός), appetitive desire (έστιφία), and the wish (θέλησις). Of these, wish (θέλησις) attaches to the rational part of man, and the other two to the irrational (iib. 9. 432b, 5). When, again, he enumerates and arranges in due order the functions or faculties of the soul (vegetative, sentient, conative, noetic—passive and active), and specifies the functions of the vegetative (δέσις), the sensory (αναδεσις), and the conative (τα θέλημα) soul, he has described three faculties, which sometimes he brackets along with the sensitive faculty (δάσεις και θελήμα), sometimes gives an independent position subsequent to it (i. 3. 414c, 31); and sometimes, he is in doubt as to their arrangement.

With regard to all the faculties or functions, however, it is to be remembered that the independence ascribed to any one of them is only relative; each has its place in the graded system arranged in the order of implication, the higher presupposing the lower (though not reversely)—the earlier form always exists potentially in the later' (de An. ii. 3. 414b, 29). Aristotle is very persistent on the unity of the soul; so that the faculties are not absolutely separate, as if each were self-contained.

But it is in the Ethics, in connexion with will, that we have Aristotle's fullest handling of desire; and since the two accounts together, we obtain the following summary.

Will is the desire (δέσις) of something regarded as a good, i.e. as bringing satisfaction or pleasure to the person desiring it—which is what Aristotle designates δέσις. But, obviously, if there is an object towards which desire is directed and upon which it is set, this implies an ideal or conceptual element in the process—some notion of what the object desirable and desired is; in other words, it involves imagination or representation (διάστασις). Further, inasmuch as between desire as a psychical state and the attainment of its object there is an interval of time interposed, this indicates that there is need not merely for actualization of the desired object, and, consequently, need of deliberation with a view to choice—especially when more than one set of means appear competent to effect the end. This process of deliberation in connexion with desire, or action, and habit, is Aristotle's 'things that are within our own power' (τα εφ' ἑμών), Aristotle calls δεσιμα. When deliberation is completed, choice or determination ensues. This is πράσματα, which is regarded by Aristotle as distinctive of man, the higher desiderate of the animals. In choice after deliberation δέσις again appears; for the individual identifies himself not only with the end, but with the means necessary to effect the end. Hence, deliberate choice is in separably conjoined with desire, and is termed δεσιμα δεσιμα.

From this brief analysis it is evident that Aristotle connects desire very intimately with will; maintaining, indeed, practically, that there can be no will without a desire and having it is its truth thereby established. With this may be joined an attractive Platonic thought regarding the future life and men's desire of knowledge and of virtue. In Crotalus (403, 404) the dead are represented as desiring to return to the earth. Hades, the god of Death, because of their thirst for knowledge and their desire of being made better. They find that with Hades is true Wisdom—he has experience and is the great Philosopher; and he determines everything and interprets the oracles, and with himself better, they cling to him as disciples to a master. Thus desire is seen to be a stronger bond than necessity: necessity coerces, desire seduces.

(2) It is evident, further, that, according to Aristotle, in the determination of right conduct (and here we enter the ethical bearing of the psychological doctrine) desire and reason act together—neither is sufficient by itself. Hence, πράσματα, or the practical, e.g. is explained as reason motivated by desire (πράσμα δεσιμα), or as desire guided by understanding (δέσις δεσιμα, Eth. Nic. vi. 2). The doctrine of 'the practical syllogism' brings this out distinctly.

The syllogism, as we have come to understand it, is a demonstration of practical for two reasons: first, because it deals with men's actions (πράσματα), not with their mere thinking or reasoning as logically correct; and, secondly, because it attaches to the practical or moral, not to the theoretical, reason. Being a 'syllogism,' however, it has a specific formal character—it is expressive as conclusion, and necessary conclusion, from premises, although it is not maintained that moral actions, in the case of 'the plain man,' are always conscious, voluntary or deliberate. Indeed, by the unconscious spontaneous or logical reasoning of the plain man, there is equally an unconscious spontaneous moral reasoning; but, when analyzed, it is the philosophical man who is found to be only the unsophisticated form of what may be philosophically generalized and systematized. And this systematization and analysis is what is comprehended in scholastic phraseology and assimilated to each of the other.

In the 'practical syllogism,' we are dealing with end and motive—with the idealized expression of what is a thing's being so or not so, and of the means by which it may be attained. The procedure whereby we accept an end and work towards it through desire and intellection is clearly of the nature of syllogistic reasoning, though the conclusion of the procedure is not a definite theoretical consequence satisfactory to the logical reason, but an action, or series of actions, necessitated by the principle that we adopt. It is a matter of 'principles,' of living moral principles, not of abstract propositions; and hence the conclusion is not abstract but practical, and embodied in human conduct.

And so, in the practical syllogism, Aristotle is giving a syllogistic form to action—at analyzing the process that underlies moral conduct, so as to bring out its rational character. In making choices, we need a guide; a view to action is a general principle—the principle, namely, that a man ought to do or not to do a certain kind of thing. The major premise of the resultant action. The minor premise is the perception that such and such a particular action is or is not the kind of thing that is required. This follows, as not pursuing or not doing of that particular action. The great implication in the practical syllogism is that, if one accepts a principle as a guide of life, and the end is adequately understood in terms of action that principle dictates. For example, if I allow that I ought to pursue the happiness of all, and accept the principle that happiness and well-being are the prime end, to accepting whatever conduces to the fartherance of that end, and to behaving accordingly. On what ground, however, the principles that an individual is capable of knowing in his life, Aristotle does not always determine in the same way. Sometimes he says that they are intuitive—i.e. they may be infallibly and satisfactorily, beyond the need of proof. At other times, he bases them on experience; and, still again, on moral character. The effect of this is clearly felt, I think, in general. Moreover, intuition and experience are not contradictory.
Whether or not the 'practical syllogism' is fully expressive of what exactly takes place in moral action, as Kant has rendered it (in his choice, and, therefore, for his conduct), it serves admirably to emphasize the fact that intoleration and desire enter into deliberative volition and choice, and that we cannot explain the phenomena without taking account of both, and of both acting in unison, 'like the ball and the socket in the organic unity of the joint' (οὖν ἄ γεγραμμένον [cf. An. iii. 10. 433b, 22]).

(3) Over and above this psychology of desire, with its application in ethics, Aristotle also recognizes desire as a movent power in the higher reaches of ontology and cosmology. For God to him is, first and chiefly, the Prime Mover of the universe, the Source of all motion in the world; 'Himself moved the whole. He is the object of desire ( ὄψεσις) as well as of intellective ( πνοήμα) to the universe. As otherwise expressed, God, as the unmoved eternal active principle, moves the heavens as the beloved one moves the lover: He is the attractive force, the final end, of all existence — the final cause, produces motion by being loved, and, by that which it moves, it moves all other things' (Met. xii. 7. 1072b, 4). This teleologically conceived is no myth, as Stewart (Myths of Plato, p. 259) would make it out to be: it is the measured and subdued emanating of the grand ontological conception that God of necessity is good, and that the cosmos, which, in Aristotle's view, exists from all eternity as a cosmos (a ὄντος), is more (αὐτόν) than a mere daily (μέρα) or absolutely independent, but is eternally dependent on and derived from the Deity; it exists because it is turned over towards being; it exists as an act of God and is so being sustained by Him. It is therefore emphatically asserted that the world is not fully explicable on merely mechanical principles: Mind is the ruling factor, and so the explanation of existence, to be satisfactory, must be teleological.

4. Stoics and Epicureans.—(1) We get back to a purely ethical and practical consideration of desire when we turn to the Stoics. Desire was a topic of supreme consideration with them; indeed, their doctrine of desire may almost be said to have constituted their philosophy. For to desire is to love, it is man's great characteristic that he was made to be virtuous. He is a being endowed with rational insight into the true values of things, and with power over his own inclinations and impulses. Hence, more than mere contemplative, he can sit absolutely loose to everything that is not under control of his own will,—to fortune and to fame, even to death itself,—and can find his freedom only in his love of virtue and his abnegation of his desires. A man should have one great desire, and that is the desire of virtue, of a noble life, of pure and upright character; all else is indifferent, and, if surrendered to, would sap his moral vigour and degrade his nature. 'In the world, but not of it,' should be his motto; and to be master of his own soul, supreme in the realm of his motives and intentions, is the only end that is worth pursuing. The principle underlying this was precisely that which Kant reproduced in modern times when he said: 'There is nothing in the world which can be termed absolutely and altogether good, a good will alone excepted' (opening of the Grundleg. zur Metaph. d. Sitten). To submit to any other desire but that of virtue seemed to the Stoics to be elevating what is contingent and beyond one's power — extraneous, therefore, to one's will (which alone is in one's power)—to a place which it has no right to occupy, and which, if allowed to it, can only spell ruin. Consequently, everything that is not the love of virtue is, to the Stoic, to be resisted. The desires are, one and all of them, perturbing; and it is characteristic of the wise man that he is calm, unperturbed, uncontrollable—he is self-sufficient (αὐτοκράτηρ), independent of and above every non-rational spirit of action: 'The view taken is everything; and that rests with yourself.' Despair the view, at will; and, blissful, all headlong rush into the calm, still waters, and a waveless bay' (Marc. Aurel. Med. xii. 22). The desires are not simply weaknesses, they are 'contrary to nature'; they should be not merely controlled, but eradicated.

The ideal of the Stoic is a self-governed, a self-impassive being—the embodiment of stern virtue, scorn of emotion and desire. The same might be said of the ideal man of the Cynics (g.v.), from which the Stoic conception was originally drawn: with them, in Cynic mysticism, was accompanied with a contempt for social conventions and for mental culture that was abhorrent to the Stoic.

(2) It was different with the ideal man of the Epicureans, whose maximum beneum was pleasure. And yet the Epicureans were keenly alive to the ethical danger that lurked in the desires. For, although pleasure was to them the ultimate end of action, and so the object of desire, they quite clearly recognized the tendency of the desires of man to outrun discretion and, if uncontrolled, to deprive a man of that calm and peaceful state of mind ( ἀραπαία) which was his goal. Consequently, they could counsel, and Epicurus himself did counsel: 'If you would not make Pythocles and his riches, but diminish his desires. But in this they differed from the Stoics, that, whereas the Stoics counselled the impossible task of eradicating the desires, the Epicureans, like Plato and Aristotle, counselled moderating and directing them. The desires, they saw, are a part of human nature, and, therefore, legitimate springs of action, but only if they are kept under rational control. Some of them, they said, are natural and necessary; others are useful, but not necessary; and others are neither natural nor necessary. And they recognized a distinction of worth amongst them, the goods of the mind being to them of greater value than those of the body. Hence, their Hedonism was a robust character.

'Says Epicurus: 'When I was sick, I did not converse about my bodily ailments, or discuss such matters with my visitors; but continued to dwell upon the principles of natural philosophy, and more particularly how the understanding, while participating in such disturbances of the flesh, remains one's unperverted possession of its proper good. And I would advise,' he adds, 'give the doctors a chance of blistering and making wounds, but let life go on cheerily and well' (Marc. Aurel. Med. ix. 4).

5. The Neo-Platonists.—'Back to Plato' was the cry of the Neo-Platonists; but not back to Plato through them to have only the ethical life of reason be influenced by him. On the contrary, Plotinus himself owed much to Aristotle, and some of the greatest of the Neo-Platonic teachers (e.g. Porphyry) were among the most eminent of the expositors of Aristotle. The Neo-Platonists were essentially religious philosophers and mystics, and the purification of the soul and its gradual deliverance from sense and matter was their supreme aim. Hence, they laid special stress on that part of the teaching of Plato which dealt with ἀναθεωρείσθαι, and, taking into their system Orphism and Pythagoreanism also, in so far as they served their purpose, they advocated a mode of living which, if consistently pursued, would lead to the abnegation of the world and the absorption of the individual in the Divine. The great end of all was to get away from the trammels of the body, which was regarded as by nature vile, as both a clog and a prison-house to the soul and the source of sin and ugliness that implies all that is absolutely non-virtuous, to be, as the Stoics, to be resisted. The desires are, one and all of them, perturbing; and it is characteristic of the wise man that he is calm, unperturbed, uncontrollable—he is self-sufficient (αὐτοκράτηρ), independent of and above every non-rational spirit of action: 'The view taken is everything; and
DEUTSCH-KATHOLICISMUS

absolutely complete, from its original source, the Universal Soul or Animis Mundi, and has to be made good by an ascent or return. The steps by which this is done are the various virtues, which, according to Porphyry and the later Platonists, form modern thought, bearing the stamp of the path of perfection and self-accomplishment.

And first there is the career of honest and worldly prudence, which reaches to the, head of the citizen (Sophist). Secondly, there is the progress in purity which ears earthy things behind, and reaches the angelic height of passionate desire (Amor); thirdly, the step is the Dodecatheon, which by intellectual energy is turned to behold the truth of things (Theoretic virtus).

Lastly, in the fourth grade, the mind purifies itself in self-sustaining virtue, making itself an “exemplar” of virtue, and is even a “father of gods” (Paradigmic virtus) (W. Walpse, Hegel’s Philosophy of Mind, Oxford, 1894, p. 19).

Not yet, however, has the soul, in its efforts to get free from matter and the thrall of the desires, reached its highest aim. That aim is union with the Absolute, undisturbed contemplation of the One, the Ineffable Being, when subject and object are identical. This is obtained, not through practical virtue or through intellectual cognition (though these prepare for it), but by moral or spiritual perfection, as explained by the suspension,” says Porphyry (Scotiamtia 30), “of all the intellectual faculties, by reposing and the annihilation of thought. As the soul now sleeps when sensing, so it is the ecstasy, or the annihilation of all the faculties of her being, that she knows that which is above existence and above truth.

Thus are the desires effectually vanquished by mysticism in absolute union with God (Eros), desire is not.

DEUTSCH-KATHOLICISMUS

is the name given to a movement of reform that sprang up within the Catholic Church in Germany about the middle of the 19th century. The object of the movement was to establish a type of Catholicism which should be in harmony with the spirit of the times, leaving the Church free in matters of doctrine and in the expression of his religious views, and so far take account of the spiritual sentiments of the Roman Catholics of Germany as to permit the use of their mother tongue in the services of the Church. The latter were in some respects similar to those of Febronianism in the 18th cent., which strove to make the Catholic Church in Germany independent of the Roman curia by putting an end to the spread of the work of the latter. The ‘German Catholic’ movement, however, took a course different from that of the Febronians, inasmuch as it neglected the political-eclesiastical factor, which had eventually proved the decisive factor in the conflict between the resolutions of the Ens Congress (1788); and this difference between the two reform enterprises finds outward expression in the circumstance that, whereas the movement which disturbed the closing year of the 18th century in the German archbishops, the schism of the so-called ‘German Catholics’ had not a single active supporter in the higher ranks of the clergy.

One of the vital elements in the situation which gave rise to ‘German Catholicism’ was contributed by the rise of Ultramontanism, i.e. of that movement in the Roman Catholic Church which, after the frightful disasters experienced by that Church during the French Revolution, looked to the Jesuits for its rehabilitation, made common cause with that Order, and sought to disseminate the type of religion characteristic thereof. In the period following upon the restoration of the Jesuit Order in 1814, Ultramontanism had made headway in Germany as in other countries, but it had also aroused opposition in a corresponding degree. Although the immediate occasion of the rise of ‘German Catholicism’ was given by the protest made against the proceedings of an individual bishop, yet this protest really sprang from the broader grounds of a fundamental contrast with the Ultramontane form of religion; and it was to this difference that the schismatic movement owed all the vigour—which—for no long time indeed—it was capable of putting forth.

Another potent influence in the rise and development of ‘German Catholicism’ was contributed by the progressive tendencies of the day. The reactionary policy pursued by the various governments of Europe after the Napoleonic wars was incompetent to quell the wide-spread liberal movement instigated by the great Revolution. On the contrary, the disposition to break away from the bonds of autocracy and the leading-strings of estrangement, and the striving after liberty to mould life and conduct on lines independent of hoary convention, asserted themselves and gained ground in every department of human experience—in politics, in social relationships, and even in the province of scientific research. As the Roman Catholic Church, however, is inherently conservative, and was not merely antipathetic to such longings, but was inclined rather, under the influence of the newly revived Jesuit Order, to support the path of deliverance from the prevailing welter of things in a return to the principles of the Middle Ages, it could not fail to come into conflict with the liberal spirit that was making itself felt even within its own fold.

‘German Catholicism’ appeared first of all as simply the criticism of an incident in practical religious policy, viz. the exhibition of a relic as
an object of devotion. Very soon, however, it
drew the whole course of ecclesiastical procedure
and religious doctrine within the range of its
structures. Eventually it took an decisive step of
organizing its adherents in communities, thus
placing them in the position of schismatics. That
the whole course of this development was traversed
within the term of a few weeks was due to the fact
that the adherents identified themselves with the
movement were already alienated from the Church
of Rome, and that the bishops who had to deal
with the rising lost no time in lengthy delibera-
tions, but proceeded at once to administer penalties
of such severity as to drive the refractory elements
into open rupture.

2. Origin and development.—The immediate oc-
casion of the schism was the exhibition of the seam-
less robe of Christ which belonged to the Cathedral
Church of Trévès. The 'Holy Cloth' was regarded by
that Church as its supreme treasure, and had been
exhibited previously at special seasons as an object
of reverence. When Bishop Arnold of Trévès,
ignoring the doubt cast upon the genuineness of the
cloth, reported that he had seen it on 4th November 1844, a most
extraordinary sensation was aroused. He certainly
scored a great triumph in bringing vast multitudes of
pilgrims to the city, and so far the affair formed an
effective demonstration of the power of Catholi-
cism. But, on the other hand, Ronge's method of
strengthening Christian belief gave great umbrage
to many. Those within the Roman fold who took
objection to the bishop's action found a champion
in a private named Ronge, who, in an open letter to
Arnoldi, first published in 'Injektionshefte Texter-
ländsblätter,' urged a vigorous protest against what
he called a Götzenfet, an idolatrous celebration.

Johannes Ronge was born on the 16th of October 1813, at
Breslau, as a Silesian, and was trained and eventually
ordained as a priest at Breslau. He was in the capacity of chap-
lain at Grottkau, but had been suspended on account of certain
publications, and was now a teacher at Lammershe, Upper
Silesia. Having neither inclination nor aptitude for the cler-
al office, he had become utterly alienated in spirit from the
Catholic Church, and, as he refused to retract his letter when
called upon to do so, he was sentenced to degradation and ex-
communication by his superior, the bishop of Breslau, on the
4th of December 1844. This act of censure, however, failed to
reduce him to submission; its actual effect, indeed, was to
stimulate his radical disposition to its utmost manifesta-
tion. He challenged the claims of the Roman hierarchy in numerous
published articles, and what was at first a criticism of the pro-
cedings at Trévès, developed into a full-scale assault upon
the authority of the Catholic Church as 'Der Heil'g' Götzenfet,'
instituting an open breach.

About the same time a Catholic priest named Czerski had
arrived at conclusions similar to those of Ronge, though quite
independently. Czerski was born on the 12th of September 1813,
in Western Prusia. While attending the Seminary at Poznán,
he was embroiled in a number of clerical conflicts, but at length
took office in the Cathedral Church of that town. While in
this position he made a profound study of the Scriptures, with
the result that he became quite unsettled regarding the funda-
mental institutions of the Roman Catholic Church—the princi-
ple of the Pope, the hierarchy, auricular confession, the sacrifice
of the Mass, etc. With such doubts in his heart, he was trans-
ferred to the position of vicar at Scheidenmühl, where, as
a matter of fact, the congregation was no less critically disposed
towards Catholicism than he was. It was, however, a purely
personal matter which at length brought him into direct conflict
with ecclesiastical authority; he was suspended from office
consequence of his relations with a young woman. But his
conscience would not allow him so to do, and when, renouncing his
office, he abandoned the Roman Catholic Church altogether,
they followed his example (19th October 1844). A few months
later, sentence of degradation and excommunication was passed
upon him.

Ronge's challenge found considerable support
throughout large sections of Catholicism in Ger-
many. He travelled widely as an agitator, exert-
ing himself to maintain the movement and organize
his followers. The first congregation of the new
sect was constituted at Breslau. But even in the
operations preliminary to this step the seceders
faced themselves by the difficulty of finding a common basis in the heterogeneous elements in the 'Universal Christian Church,' as its adherents
called it at first. Nor was this embarrassment
one of a merely incidental and transitory character;
the contrary, it indicated a real and inherent
weakness of the whole movement, asserting itself
whenever an attempt was made to unite the com-
munities which sprang up in large numbers through-
out the country. For the purpose of effecting such
a union, a Conference, attended by 31 delegates
from 15 congregations, was held at Leipzig, from
the 23rd to the 25th of March 1845. The proce-
dings of this Conference are given in the official
report, 'Die erste allgemeine Kirchenversammlung
der deutschen-katholischen Kirche (Leipzig, 1845),'
edited by R. Blum and F. Wigard. It was here
decided that the Constitution of the new cause should be
entitled 'Deutsch-Katholizismus,' and that the Bible as its doc-
trinal basis; a short Confession was also adopted.
It was made a proviso, however, that neither
Scripture nor this Confession was to rank as an
externalictory, but was to be regarded as standards only in so far as they
harmonized with rational thought. The verifica-
tion of Christianity in a life of Christian love was set
forth as the prime duty of the members. It was
resolved to retain the sacrament of the Lord's Supper
and the Lord's Supper (under both kinds), but to have
done with the Papacy, the hierarchy, auricular
confession, the celibacy of priests, the adoration
of saints, relics, and images, indulgences, pilgrim-
ages, etc.—In short, to effect a total rupture with
the separation from the Roman Church and its dis-
tinctive institutions. In the order for public
worship, the liturgy of the Mass and the use of
the Latin language were dissolved. The constitu-
tion of the new church was to be prepared by the
German General Assemblies to be regularly called.

Such was the ground-plan for a new religious
body, but the plan presently met with opposition
within the community itself. The abandonment
of the Apostolic Confession gave unbridgeable to
the 'German Catholics' at Berlin, and led to a separa-
tion there. Czerski himself was dissatisfied with the
resolutions of the Conference, as he had been
thwarted in his endeavour to obtain Confessional
recognition of the Divinity of Christ. Ronge's
influence on the other side proved too strong.
This difference, however, did not lead to a breach,
but, as Czerski gave way and simply claimed the right
of all parties to adhere to the results of the posi-
tion... But, while imminent disintegration was thus avoided, the
harmony was attained, and the movement became
even more revolutionary. The adherents of Ronge,
in fact, drawn together as they were by the most
diverse motives, were so united, their groupings,
formed an aggregate so heterogeneous that every attempt to secure
a basis of union came to naught. It was
maintained that even the Leipzig Confession was not
to be held as binding, and there was a general
desire to discard everything of the nature of dogma
but, of course, no real progress towards unity could
be made on such negative lines, and it still remained
impossible to define the scope and aim of the new
church, as the visible embodiment of that religion
of liberty which had lain at the bottom of the
tyranny of dogma. The outcome of this vagueness
and indecision was that many Roman Catholics, who,
while favourably disposed to a broader conception
of Christianity, were by no means ready to relin-
quish Catholicism itself turned away; 'Deutsch-
Katholizismus;' and that some who desired to see
no further dealings with Christianity allied them-
selves with the new movement. Ronge's incapacity
for grappling with this critical state of affairs soon
became evident to all, and, as there was no leading
spirit to step into his place, the cause soon lost all
its attractive power. After 1847, indeed, Ronge
was a spent force in public life. He died at Vienna
in 1887; Czerski, in 1893.
3. The 'Friends of Light' (Lichtfreunde).—The subsequent development of 'German Catholicism' reached its final stage in close connection with the history of the 'Friends of Light'—a parallel movement among Protestants which had sprung up in 1841. In that year certain Evangelical clergy in the Prussian province of Saxony instituted a society which claimed for its members the right of unrestricted scientific investigation and of complete freedom in personal development. They called themselves Protestant Friends, but were popularly known as Lichtfreunde, which became their accepted designation. Their meetings were thronged; the number of divines resorting to them constantly increased; teachers also began to attend, and soon the laity followed. As the leaders of the movement were clergymen of the National Church, collision with the ecclesiastical authorities was inevitable. In 1840 the consistorium of Magdeburg reprimanded a minister named Sintenis for having spoken of prayer to Christ as a superstition. Sentence of deposition was passed upon G. A. W. Wilke in Magdeburg and of Konigsberg; while others, such as W. E. Bultzer and A. T. Wilsicenus, anticipated formal dismissal by voluntarily abandoning their office. In all these cases the point at issue was essentially the same, viz., whether the law of the respective States should be permitted to take an independent attitude towards the doctrine and the order of public worship recognized as statutory in the National Church. The claim of liberty was obviously against the law as established. Protests were received, however, they were a matter of profound significance for the whole Evangelical Church of Germany, as the clergymen in question did not stand alone, but were supported by larger or smaller groups of members. The process of development of the church discipline was followed by secessions from the Established Church, and disaffected congregations were formed in Konigsberg, Halte, Magdeburg, Nordhausen, Halberstadt, Hanburg, and other places.  

4. Relations between the 'Friends of Light' and the 'German Catholics' down to 1858.—These two bodies soon developed intimate mutual relations to such a degree that both bodies coalesced within Protestantism and the other within Catholicism did not constitute a ground of difference, as it lay in the very nature of both movements to attenuate all the peculiar elements of the creed, and to deprecate them as of value generally assigned to them. This latter were at one time or another in the course of freedom and progress, and in both the more radical section, which aimed at disengaging religion from the prevailing ecclesiastical conditions, gained the upper hand. Between the two, accordingly, there existed an essential affinity, and it was due to something more than critical considerations that they showed a tendency to come together. The growth of this tendency was greatly hastened by the circumstance that both bodies suffered alike from the coercive measures of the public authorities; it was, in fact, persecution from the side of the various governments which brought about their union.

Where the governments of the different States regarded 'Free Protestants' and 'German Catholics' alike with suspicion, seeing in both an embodiment of the revolutionary spirit which made itself felt throughout Germany in the early forties of the 19th century. The practical expression of this猜疑 was at one time or another in many forms, and every method of repression permitted by the legal systems of the several States was resorted to. In some cases the new sects were treated as illicit religious associations, while in others the designation 'religious associations' was denied them; in many districts they were simply let alone; in others they were proceeded against with all the rigours of the law. The Revolution of 1848 put an end to this state of things and gave complete liberty of action to the 'Friends of Light' and the 'German Catholics' alike. The immediate effect of the change, in the case of the former at least, was a notable increase in the number of their congregations. This was more particularly the case in Middle and North Germany, and here it became evident that the dissentient cause found its most fruitful soil in urban populations. Another characteristic phenomenon was that the membership of the various congregations was subject to frequent and sudden fluctuations, while the lines of demarcation between 'Free Protestants' and 'German Catholics' became more and more unsettled. These facts render it difficult to obtain accurate statistics regarding the numerical strength of the movements. We must restrict ourselves to the statement that, according to the most reliable authorities, the combined membership of the two bodies during the period of their greatest vogue, i.e., before 1848 and after 1867, may be reckoned approximately at 150,000. The closeness of the relations between the two may be gauged by the fact that the third 'German Catholic' Council and the third 'Free Protestant' Conference met in the same year, 1848. The opening of the Second Empire, on the other hand, appeared to aim at suppressing all liberal tendencies in State and Church, thus inaugurating the 'period of reaction.' As both the 'Friends of Light' and the 'German Catholics' lay under suspicion, and were regarded as illegal and clerical organizations, the governments of the State, the governments resorted to every available means to render impossible the continued existence of these bodies. The first blow in the revived policy of repression was struck on the occasion of the double Convention at Leipzig in 1850. Just as the proceedings were about to begin, the police appeared upon the scene and broke up the meetings, and within the next few years all the States of Germany adopted measures against which this incensed the 'Friends of Light.' The ruthless procedure of the Prussian government in particular provoked the indignation of its victims. Even the religious services of the Free Congregations were interrupted by soldiers. Such of the judicial acts of these governments as were rendered known being that civil life were not recognized by the legislature, so that, for instance, marriages performed by them were treated as mere illicit unions. They were forbidden to celebrate the Eucharist; a rigorous examination was ordered for confirmation, or to officiate at funerals. This policy of persecution, however, was finally abandoned when Prince Wilhelm of Prussia (afterwards Emperor Wilhelm I.), in consequence of the illness of his brother, Friedrich Wilhelm IV., assumed the regency in 1858. Thereafter the 'Friends of Light' and the 'German Catholics' were able to maintain and develop their position without let or hindrance from the authorities.  

5. 'German Catholics' and Free Congregations after 1858.—In 1850 the majority of the two bodies brought the friendly relations long subsisting between them to a focus in a corporate union, thus forming the Association of Free Religious Communities (Freikirchenverband, later 'religiöse Gemeinden'). The biennial Conference of representatives from the various congregations was instituted; but the resolutions of this Conference have the validity of 'councils' merely, and apply only to questions of organization. The individual congregation accordingly has absolute freedom in the management of
its own affairs, as is meanwhile guaranteed by the constitution of the society, which provides that 'freedom to act in all religious matters according to one's own increasing knowledge' shall be one of its own accepted principles. The object of the society is set forth as 'the promotion of a practical religion independent of dogma.' In 1890 the Union embraced 24 congregations with an aggregate of 17,000 members. Twenty-four congregations with some 5890 members remained outside the Union. The majority of the original 'German Catholic' communities joined the 'Bund,' and many of these kept alive the memory of their origin by continuing to use the old name, either by itself or in conjunction with the designation freireligiöse. Amongst other appellations still in use are 'Christian Catholic' and 'Free Christian,' and even 'Bund Evangelical Catholic Church.' It is no longer possible, therefore, to draw a sharp distinction between 'German Catholicism' and the Free Religious Communities. It is only the 'Kingdom of Saxony' that the former has chosen to maintain its independence in an organized form. 'The German Catholic Church in the Kingdom of Saxony' has a membership of about 2000, and is represented in Dresden, Leipzig, and Chemitz among early large congregations.

We learn from these figures that the movement, which originated in the early forties of the 19th cent., embraces at the present day a very insignificant portion of all Protestantism. The new society soon lost its better educated adherents, and it now appears to find its main support amongst working people who have left the State Churches. The Free Religious Communities form the residual elements of an originally powerful movement, and now to their continued themselves in the horns of a practical dilemma. On the one hand, they must renounce all definite formulation of doctrine, in order to avoid falling back into the dogmatic Church; on the other hand, they condemn in other Churches; while, on the other hand, for the work of instruction, of preaching, and of gaining new members, they cannot well do without distinct principles expressive of their actual religious beliefs. In consequence of this embarrassment, the Free Religious Communities show great diversity in practice. Some still make use of the Scriptures in religious instruction; some still maintain their adherence at least to Christian ethics; but there are others who has abandoned all connexion with Christianity whatever, and take the forms of instruction, of preaching, of gaining new members, they cannot well do without distinct principles expressive of their actual religious beliefs. In consequence of this embarrassment, the Free Religious Communities show great diversity in practice. Some still make use of the Scriptures in religious instruction; some still maintain their adherence at least to Christian ethics; but there are others who has abandoned all connexion with Christianity whatever, and take the forms of instruction, of preaching, and of gaining new members, they cannot well do without distinct principles expressive of their actual religious beliefs. In consequence of this embarrassment, the Free Religious Communities show great diversity in practice. Some still make use of the Scriptures in religious instruction; some still maintain their adherence at least to Christian ethics; but there are others who has abandoned all connexion with Christianity whatever, and take the forms of instruction, of preaching, of gaining new members, they cannot well do without distinct principles expressive of their actual religious beliefs.

The Lord's Supper continues to be observed in many congregations, but Baptism has been set aside. The course of religious instruction is brought to a close by a sort of confirmation, or 'initiation of the young' (Jugendwese), which forms the gateway to full membership in the community. In this ordinance the candidates for confirmation are given a pledge that they will seek truth, do right, and live after a perfect manner. Thus the Christian element still persists in these communities in no longer the vital factor for them, and their past history goes to show that in course of time they will eliminate it altogether.

**DEVADATTA.**—A Sakya noble, probably a cousin of the Buddha, who joined the Order in the 20th year of the Buddha's movement, but held opinions of his own, both in discipline and in doctrine, at variance with those inculcated by the Master. He received a certain amount of support, both within the Order and from laymen, but seems to have remained quite a. in years before the death of the Buddha. At that date he was induced to retire in his favour, and, being refused, stood a new Order of his own. It is curious that those dissensions, and this final rupture, which must have had such an important influence on the early history of the Buddhist community (if the traces of them a thousand years afterwards), should receive so slight a notice in the earliest documents relating to Buddhist doctrine. Devadatta is not even mentioned in the Sutta Nikaya, or in the collection of longer Dialogues (the Digha Nikaya). In the other three collections of Suttas he is a few times barely referred to, in the discussion of some ethical proposition, as an example. In the minds of the editors of these collections the doctrine itself seemed so much more largely than original or historical matter, that Devadatta and his schism are all but ignored: but in the oldest collection of the rules of the Order (in the Pali Vinaya), under the head of 'Kapphila,' a chapter is devoted to the final episode in Devadatta's life. The story of the movement of the matter will therefore be most conveniently divided into: (1) the Vinaya account, (2) the isolated passages in the early books of doctrine, and (3) the later narratives.

1. The Vinaya account.—This is in the 18th bhikkhukhita (chapter) of the Sutta Vibhaiga, relating to dismissions in the Order. It commences with an account of the circumstances under which six young monks of the Sakya clan, one of whom was Devadatta, entered the Order together.

This must have been in the 20th year of the Buddha's ministry, as shown by a comparison of Theragatha, 1598, with Fl. ii. 226. The latter passage tells us that Ananda (one of the six) attained arahatship in the year of the Buddha's death; the former states that he had been 25 years in the Order before he died. Twenty-five years before the Buddha's death brings us up to the 20th year of his ministry.

Throughout the passage in question the details given concern the others. At the end it is stated that, whereas each of the other five soon attained to some particular stage of the religious life, Devadatta attained to that magic power and charm which a worldly man may stand upon only after a long period of searching. He then proceeds to Rajagaha, where the brethren inform him of Devadatta's prosperity. In reply, the Buddha discourses on the text that pride goeth before a fall, and concludes with a verse on honour ruining the true man.

In the next episode Devadatta asks the Buddha, in the presence of the king, to give up to him the...
devadatta

leadership of the Order, on the ground that the Buddha is now an old man. He is refused, and a formal act of the Chapter of the Order declares that, in future, whatever he may do, Devadatta shall be considered by the people as acting or speaking, not as a member of the Order, but for himself alone. Then Devadatta incites the Crown Prince to kill his father, and to help himself to the Buddha. The various attempts, all of which are unsuccessful, are described in detail.

There follows an episode in which Devadatta, with four adherents, whose names are given, lays before the Order five points which are incorporated in the rules of the Order. They are: (1) that the bhikkhus should dwell in the woods, (2) that they should live entirely by begging, (3) that their clothing should be exclusively made of cast-off rags; (4) that the houses in which they live should be like bhikkhu huts, and (5) that they should not eat fish or meat.

The existing rules were more elastic. It will be sufficient here to state roughly that: (1) bhikkhus were not to dwell in the woods during the rainy season—it was considered unhealthy; at other seasons they might wander about, or dwell in hermitages in the woods or forests. (2) they might beg, or accept invitations, or live on food provided at the residences of bhikkhus; (3) they might receive presents of clothing, made either personally to one bhikkhu or to the group, or to the community, or to the house where except in houses of the laity, and even there they might stay for a limited period, if on a journey; (4) they might accept any food or drink they might catch or kill for the purpose of the meal. The five points recur at Vin. iii. 171, and are therefore probably correct.

The five points were rejected. Devadatta rejoiced, and told the people that, whereas Gautama and his bhikkus were luxurious and lived in the enjoyment of abundance, he and his would abide by the strict rules of the five points. Five hundred of the younger bhikkhus accepted tickets that he issued, and joined his party. The success of the schism seemed assured.

The following and final episode introduces Devadatta, surrounded by a great number of adherents, discussing with his disciples, Sāriputta and Moggallāna, the principal disciples of Gautama, are seen approaching. On seeing them, Devadatta exults, and, in spite of a warning from Kokkālīka, he bids them welcome, and they take their seats. Devadatta makes an unlimiter but conventional speech, stretching his length far into the night. Then, feeling tired, he asks Sāriputta to lead the assembly while he rests. Devadatta falls asleep. Sāriputta leads the talk on the subject of preaching, and then Moggallāna leaves the subject of the talk. Sāriputta suggests that those who approve should return to the Buddha, and most of the assembly do so. Kokkālīka awakes Devadatta, points out what has happened, and says, 'I warned you.' Then hot blood comes forth from Devadatta's mouth. Sāriputta, on his return, proposes that the renegades who had come back should be readmitted to the Order. This Gantuana declares unnecessary, and the chapter closes with eulogizing discourse. First, we have a parable of the elephant who ate dirt and lost their beauty and died. Just so will Devadatta die. Then the eight qualifications of one worthy to be an emissary are pointed out. Next, the eight qualifications of Devadatta, which doom him to remain for an eon (kappra) in states of suffering and woe, are given. Finally, another paragraph gives three reasons for the same result.

It is probable, from the details, that the eight have been elaborated; the three, no doubt, to match the Devadatta's qualifications parallel in number with those of Sāriputta, the ideal emissary.

isolated passages.—In Majjhima, i. 192 a Suttanta is dated as having been delivered shortly after Devadatta went away. Not a word is said about him; but the discourse discusses the object of religion, which, it is said, should be cultivated, not for the sake of gain or honour, not for the sake of virtue, not for the sake of mystic concentration, not for the sake of knowledge, but which has its being in emancipation of mind.

The objects here rejected are precisely those for which, in the Vinaya passages, Devadatta is said to have striven. At Majjhima, i. 392, a Jain is urged to put Gāntana on the dharmarāja (Devadatta) to kill the Buddha. The passage is important, because it shows that, before the time when the Dialogues were composed, and a fortiori before the time when the Vinaya account arose, the episode about the future fate of Devadatta was already in existence, and was widely known in the community, and even outside of it.

The Milinda (p. 107 ff.) has a greatly altered and expanded version of this 'double horned dilemma'; and it is probable that the whole of the dilemma portion of that interesting work is based on the schism of the dilemma in this Sutta.

The Sarīputta (at ii. 240-242) has the episode of honour bringing ruin to the mean man, in the same words as Vin. ii. 188, but divided into two stories; and at i. 153 it puts the concluding verse of that episode into the mouth of the god Pārśivā. At the beginning of the Vin. i. 156 Devadatta and his followers are called 'men of evil desire.' In four passages the Anguttara has, word for word, episodes occurring in the Vinaya account. Besides these, it discusses at iii. 402 the statement about the impossibility of even befall Devadatta; and at iv. 402 ff. it discloses a view held by Devadatta that it was concentration of mind (and not the ethical training of the 'Aryan Path') that made a man an arhat.

This is the only one of these isolated passages in the oldest books which really adds anything to our knowledge of Devadatta. In the later books of the Canon there are two or three more references to him. Thus the episode at Vin. ii. 198 recurs at Udāna, v. 8, and that at Vin. ii. 203 at Itivuttaka, no. 80, and at Udāna, i. 5. Devadatta's name is included in a list of eleven leaders in the Order who are called buddha, 'awakened.' This is the only passage in the Canon which speaks of Devadatta with approval; and in none of these periods belongs to the schism. Lastly, in Vin. i. 115 it is said that Devadatta, before the rule to the contrary had been promulgated, allowed the local chapter of the Order, when the Pātimokkha was being recited, to have his confession of guilt. H. Oldenberg has shown, in the Introduction to his edition of the Vinaya, that the word, as we now have it, is composed of material belonging to three periods, the oldest of which goes back nearly, if not quite, to the time of the Buddha. The chapter analyzed above belongs to the latest of these periods. The episode found also in other parts of the Canon belong to the earliest period. The summary at the beginning of this article is based exclusively on such episodes.

3. the later notices.—In books later than the Canon, the above story of Devadatta is often told or referred to, and with embellishments which purport to add details not found in the earlier versions.

In addition to the standard story, there is one additional detail which is regarded with suspicion: namely, some are evidently added merely to heighten the edification of the narrative, all are some centuries later than the alleged facts they, for the first time, record. It will be sufficient to mention a few of the most striking.

The Mahāvastu, iii. 176, and the Mahāvamsa, ii. 21, give contradictory accounts of Devadatta's parentage. Had these two traditions (the former hand only exists in the Ganges texts, the other in Ceylon) agreed, the evidence might have been accepted. The Milinda (at p. 101) states that Devadatta was swallowed up by the earth; and

1 Aṭṭ. ii. 73; Sakh. ii. 33; Vin. ii. 185; Aṭṭ. iii. 123; Vin. ii. 185; Aṭṭ. iv. 199; and again 484 = Vin. i. 502.
DEVAYANA

(at p. 111) that, at the moment of his death, he took refuge in the Buddha. Both traditions were accepted in Ceylon in the 5th century A.D. (see the commentary on the Dharmasamudra, i. 147). A statement of Fa Hien's (Legge's tr., p. 60) shows that the first of these traditions was still current in India at the end of the 4th cent. A.D. The same authority (p. 62) tells us that they had still, at that time, followers of Devadatta who paid honour to the three previous Buddhas, but not to Gautama. This is possibly confirmed by Yuan Chwang, more than two centuries later, and in another locality; but Watters (ii. 190) thinks that the pilgrim himself may have supplied the name Devadatta. Yuan Chwang elsewhere (Watters, i. 339) credits Devadatta with the murder of the nun Uppala-vanṇā; but we have no confirmation of this unlikely story, and it depends probably on a Chinese misunder-
standing of some Indian text. We have two 5th cent. biographies of Uppala-vanṇā, and it occurs in neither.

T. W. RHYS DAVIDS.

DEVAYANA.—This term in ancient Vedic thought and speculation denoted the path or paths leading to the gods, the road which the gods themselves were wont to traverse in their descent or ascent between heaven and earth. In the earliest literature of India it formed part of the recognized terminology of the priests and poets; and it passed through a long course of development and refinement, during which it gained clearness of definition, and was brought into relation with other movements of religious thought. In a lower, more popular, mechanical sense, devayana was also the car or vehicle (yajña) of a god; but no special significance or importance seems to have attached to this use of the word. The correlative to devayana, the way of the gods, was pitṛyāna, the path of the ancestors, which assumed importance only in the later speculation, and perhaps was consciously invented on the analogy of the former word, to express an inferior path or process, at a time when yajña was highly specialized and appropriated to the conception of a higher or the highest degree of bliss.

Hence in origin at least both terms belong to a lower stratum or form of religious belief, and are conceived in a material or semi-material sense. The term pitṛyāna especially answered to the primitive and wide-spread conception of the life after death, which pictures it as a meagre con-
finement of the present, reproducing the conditions and occupations of worldly existence, where the ancestors dwell in weal or woe according to their deserts, but where all is more or less unreal and speculative, and the prospect exerts no determining influence on the actions or conduct of the present individual. As the word devayana, almost from the very beginning, the term devayana, so soon as it was interpreted in the human sphere of the fortunes and destinies of men, was conceived apparently in a higher and more ethical sense, and for the most part connoted Divine escort, companionship, or guardian care, on a road which had its termination in a paradise of blessedness and good; the elements and conditions of which conception were necessarily contributed by earthly experiences, and the pleasures enjoyed were those of earth, renewed, how-
ever, in a more or less etherealized and exalted form in fellowship with beneficent and righteous gods. The travellers by the pitṛyāna attained only to a lower goal, where the superhuman associates were at the best the gods of the lower world, but where the company was for the most part those mortal men who had preceded them on the path. These all shared the same colourless and temporary existence, from which they were to tread the same cycle of renewed birth, life, and death, in this world. Thus finally, with the growth of speculation with regard to the future, and the consciousness of merit and demerit attaching to conduct and penalty, the ways of the gods and of the fathers were brought into association with the great Indian doctrines of saṁātāra, 'transmigration,' and inevitable karna; and were incorporated into the rich store of Indian beliefs that had reference to the life beyond the grave.

The earliest conception of a 'path of the gods' is to be found in the hymns of the Rigveda. There apparently it is always associated with Agni, the divine priest, the guide and messenger of the gods. Agni—both the sacrificer and the sacrificial flame—bears the offerings to the gods, and conducts the gods to receive the offerings which are prepared for them. He knows the path that leads to the gods, and is the true messenger of the gods. (ii. 12. 3, 3, 2; 'That same path 2 leads either to the gods or to the fates.' On both sides two Messengers are recognized: they search him who deserves to be selected, and allow him to pass who deserves to pass.')

The way was prepared for the philosophical development which the doctrine received in the Upaniṣads and later systems of Indian thought and teaching. The purification which the soul underwent to fit it for the communion and company of the gods was conceived as a process not completed in one act or at one time, but carried on through a series of gradated stages or degrees; and it was only at its close that the emancipated soul was admitted to the fullness of bliss.

The earliest enumeration of the 'stations' on the two paths is found in the Chāndogya Upaniṣad (v. 10. 1):

'Those who know this (i.e. the so-called doctrine of the five stages, and the latter path as men after death, see note), and those who in the forest follow faith and austerity (śamāna) enter into the flame, from the flame to the sky, from the sky to the height of the moon, from the height of the moon to the six months of the sun's northward movement, from the six months to the year, from the year to the sun, from the sun to the moon, from the moon to the lightning,'

'They are led to Brahman; and it is further

1 Riggs, i. 72, 7, cit. of 2, 4, f. 1, cit. of Atharv. iii. 15, 2, etc.; and, for the paths between heaven and earth, which Agni knows (Riggs, vi, 13. 4, f. 11, etc.), see Meded. Vereen. Mythology, Strassburg, 1887, p. 35 ff.

2 i.e. the funeral fire; see SBE xii. 257 and note; and cit. of Sat. Brahman, xiii. 3. 3. 4.
explained that this is the way of the gods, from which is born (cf. iv. 15).—

* But they who live in a village (yajnattaha) practice sacrifices and slaying, enter into the smoke, from the smoke to the name of the god or the dark half of the month, from the dark half of the moon to the six months of the sun’s southward movement. But they do not reach the year. From the months they go to the world of the fathers, from the world of the fathers to the ether, from the ether to the moon. . . . Having dwelt therefrom of the good (v.15-5) ①

The same Upaniṣad uses an explanation of the fact that the moon appears as a station on both paths. On the devayāna it occupies a place beyond the sun, intermediary between that and the lightning, but in the half of the Brahman.

1. Those who know neither of these paths become worms, birds, and biting things. ③

A further question much discussed had reference to the qualifications necessary for those who on the higher path attain to light and immortality. The primary qualification was universally admitted to be knowledge, i.e. knowledge of the supreme or Brahman. Difference of opinion, however, appears to have excited the main question as to the degree of knowledge the possession of which would admit of ceived into the moon is an ancient and widely accepted view, and probably accounts for the position which the moon occupies as a station common to the two paths.

The world of Vyāga, and thence through the worlds of Indra and Prajñā-pādi to the abode of Brahman.

Having identified the passage in the Upaniṣad (v. 15), I explain at length the philosophy of the Brahman. The author of the Kaṇḍ. Up. appears to regard the moon as a testing-place or opportunity for the highest saints determined by the degree of knowledge which the disembodied soul is proved to possess. The wise find a permanent home; the ignorant are dismissed to a new earthly existence which is graduated according to their deserts. ③

 Provision is also made for those who are ignorant of the ways, i.e. for out-castes who have no knowledge of the gods and no capacity or right to study the scriptures. Elsewhere, however, this ‘third place’ appears to be conceived as a lot of punishment or degradation reserved for those who, from the philosophical thought of India the two conceptions are not incompatible, and the latter, indeed, is almost necessarily an accompaniment of the former.

Verily, man, verily, verily, I say unto you, he that persisteth in the knowledge of the world’s end, and he that doeth not, he shall perish and be cast away. Verily, the journey of the soul is broad—black and white, wet and dry, height and depth, day and night. Verily, the soul of him that is without fear is颜色.”
The same question of qualifications for the higher path, the path that led to Brahmān without return, was considered in relation to the doctrine of the yoga (g.v.). Bhāg. Gītā, viii, 24 f. appears to suggest that the immediate destiny of the yogvin, or ascetic, depends upon the time of death, whether in the half or the latter third of the northern or southern progress of the sun (SBE viii, 80 f.). Rāmacandra, however, rejects this inference, and asserts that the text enjoins on all yogins the duty of daily meditation on the two paths, quoting in proof of his contention the words that follow: 'no yogin who knows these two paths is deluded' (ib. viii, 27). The text, therefore, has no reference to the time or season of the year at which death takes place (SBE xlvii, 472 f.).

Anomalous as the development of doctrine took place in harmony with the teaching of the Vedānta, and the importance attached to knowledge of the highest Brahmān, the supreme knowledge (parā vidyā), as the one avenue of escape from attachment to the world and the possibilities of rebirth. Those, on the other hand, who were possessed only of the lower degree of knowledge (aparā vidyā), the knowledge of the Brahman nirguna ('endowed with qualities'), were still entangled in the snare of delusion and liable for a long time to be reborn. It became, then, necessary to find a link of connexion between the new metaphysics which exalted the secret esoteric wisdom, and the older authoritative teaching of the two ways. It was not possible, however, without a certain liberalization of the knowledge of Brahmān even in an inferior degree departed on the devayāna, the path of the gods, or to consign them to a lower destiny; for all such the scripture declared that there was no return. A solution of the difficulty was found in the doctrine of the kramamuktī, 'emancipation by steps or stages.' The question is discussed by Sāṅkara on Ved. Sūt. iii, 3, 29 (SBE xxxviii, 231–235; cf. ib. 124 f.), where and explains that a twofold meaning underlies the phrase 'going on the path of the gods.' In the case of those possessed of the highest knowledge, the knowledge of the unqualified Brahmān (nirguna), it is a mere phrase; for they are already in union with Brahmān, and by reason of their position in any path to which that end. But all who have only the knowledge of the qualified Brahmān (saguna) advance on that road. And, since it is said that they attain to Brahmān and do not return, it is for this reason that this path is called 'devayāna': Brahmān they eventually win perfect enlightenment and gain the highest knowledge. During this period of probation and imperfect knowledge the soul is in possession of complete bliss and unrestrained capacities of will power, etc. (āśīrayogā).

As it approaches the highest light, it finds itself, assumes a new form, and is truly and finally set free. This is the doctrine of the kramamuktī. And it is further explained that all thus enter into absolute and final emancipation at the end of the world-cycle.

A variety of the teaching concerning the paths, which is merely an elaboration of the doctrine of the two roads, and remained without further significance or development, postulated four paths from earth to the gods, which were explained as corresponding to four forms of sacrifice. Both the restriction (SBE xviii, 650–652); also on ib. 1, 17 f., iv, 3, 1 f., where the two paths are discussed, and are said to be dependent upon intellectual and works (SBE xviii, 594 f., 744 f.; see also Sāṅkara, loc. cit.).

1 Cf. also Rāmacandra on Ved. Sūt. iv, 4, 3, 7 (SBE xviii, 755 f.); Dāṇḍin, Ārya Dīpikā, Phāla, pp. 228 f. (400 f.). The Sāṅkṣārastra Upādhyāya contains a supposition or pre-ordination of the doctrine: 'When that god is known, all fetters fall off, sufferings are destroyed, and birth and death cease. From meditating on him there arises, on the dissolution of the body, the third state, that of universal lordship (āśīrayogā); but he who only is alone is satisfied' (Sūt. Up. i, 11).
DEVELOPMENT (Biological)

ated with sexual maturity. The fact is that, in studying development, we are considering the living creature in its time-relations, and definition is a matter of convenience. In the present article we propose to restrict ourselves for the most part to the problems of embryonic development.

Let us state very briefly some of the outstanding facts of development. We know that the germ-cells, and their nuclei in particular, form the physical basis of hereditary phenomena, at least the mode of development; that a genetic continuity is kept up from generation to generation by a lineage of unspecialized germ-cells, which do not share in body-making; that this accounts for like tending to be inherited; that fertilization is an intimate and orderly union of two individualities, condensed and integrated for the time being in the ovum and the spermatozoon; that the spermatozoon, besides being the bearer of the paternal half of the inheritable materials as a liberating stimulus, contributes to the egg nucleus and introduces into the ovum a peculiar little body, the centrosome, which plays an important part in the subsequent division of the fertilized egg-cell. We know that the mode of all development is by the division of nuclei and the development out of the living matter into unit-areas or cells, each presided over by a nucleus; that differentiation comes about very gradually, the obviously complex stage of the egg-plant being simple; that paternal and maternal characteristics, as far as the nuclei of the germ-cells bear these—are distributed in exact equality by the nuclear or cellular divisions, and that the paternal and maternal contributions thus form the warp and woof of the web which we call the organism, though the expression or realization of the bi-parental heritage varies greatly in individual cases. In many cases the parental contributions seem to include ancestral traits, which may be found in development or may lie latent. We know that development is a regular sequence of events which requires, stage by stage, an appropriate external environment; that there are continual interactions between the developing organism and its environment; and that there are continual mutual adjustments of the different constituents of the developing organism. In certain aspects the development appears like the building-up of a mosaic out of many independently hereditary parts of the organism; in other aspects it appears as the expression of an integrated unity, with subtle correlations between the parts, and with remarkable regulative processes working towards an unconsciously predetermined end. We know also that in a general way the individual development of organs often progresses from stage to stage in a manner which suggests a recapitulation of the steps in the presumed racial evolution.

It may be said that the data for the study of development are threefold, viz. (a) embryologists have worked out the sequence of stages in the development of a large number of types; (b) experimentalists have shown in a variety of instances that particular changes in the external conditions are followed by particular changes in the developing organism; and (c) students of heredity have distinguished various modes of inheritance which obtain, such as 'blended' and 'Mendelian.' The facts known to us are many and various, as we have briefly indicated, and they are continuously increasing in precision and penetration; yet it seems doubtful whether we have got much nearer an understanding of development as Aristotle, to whom facts were so few. It seems as if his de Generatione remained the most important contribution to the subject. How little light we have to shed not in regard to the deep problems of development, such as those suggested by the following questions: How are the heritable characteristics of the race summed up potentially within the minute germ-cells? How do they gradually manifest themselves in the individual organism? And what we call differentiation results? What is the nature of the compelling necessity that mints and cobs of the chaff are dropped out of a living organism? What is the regulative principle of the development of the many-structured organism? Is there some sort of the fully formed organism, and if so, what are the results of which the theory of development must be consistent. Thus there are numerous inquiries into the external factors of development, such as light, temperature, oxygen, and even various properties of the nutritive medium. Experiments are devised which alter or remove one factor at a time, and the significance of the factor is inferred from the resulting changes, transient or permanent, in the developing organism. It appears that an organism in an appropriate environment, that changes in this environment may occur without permanent prejudicial effects on the organism, but that the latitude of endurable change varies greatly for different types of organisms or less plastic than others. It appears that some of the environmental factors, like oxygen and water, are analogous to nutrition; that others, like the osmotic pressure or the presence of calcium salts in the water, are conditions of embryonic coherence; that others, like light and heat, are accelerants and inhibitors; and that particular combinations of factors are required as the 'liberating stimuli' of particular characters in development. But it does not appear, however, that we can speak of the environmental factors as being in any other sense directive.

A second kind of inquiry asks, What in point of fact goes on in the development of the fertilized egg-cell? We know that there is an expression of the inheritance that is just another spelling of the word development; but what processes are known to occur? This is an inquiry into the physiology of development. In the young department of science, too young for safe generalization. It is also difficult to disentangle the physiology of growth from that of development, yet every one is agreed that mere growth is not development. What processes are known to occur? (a) We know of various sets of chemical changes significant in different ways. Thus, to cite three different cases, the fermentative changes in seeds make the legacy of nutritive reserves available; the anabolic formation of nucleic substances seems to bring about cell-division; the diffusion of the products of internal secretion certainly affords the liberating stimulus to certain previously unexpressed parts of the inheritance, for instance the sex of the sprout. (b) We know also of a continuous succession of cell-divisions. That, indeed, is how all development goes on. The original idea of Roux, that there is qualitative nuclear division, shuffling the pack of inherited materials, has regard to development are many, and various, as we have briefly indicated, and they are continuously increasing in precision and penetration; yet it seems doubtful whether we have got much nearer an understanding of development, such as those suggested by the following questions: How are the heritable characteristics of the race summed up potentially within the minute germ-cells? How do they gradually manifest themselves in the individual organism? And what we call differentiation results? What is the nature of the compelling necessity that mints and cobs of the chaff are dropped out of a living organism? What is the regulative principle of the development of the many-structured organism? Is there some
A third line of investigation concerns the initial structure of the germ, and one result stands out—that in many cases the egg-cell contains pre-formed, sometimes pre-localized, organ-forming substances, which, by the process of differentiation, should develop into the corresponding structure, should development proceed. Thus, the old view of the ovum as homogeneous and isotropic has given way before experimental proof of heterogeneity. It may be that, in the heterogeneous, anisotropic cytoplasm of the egg, there is the foundation of the progressive differentiation that follows, and it may be, as Driesch and Boveri suggest, that the dividing nuclei—each a microcosm—are differently stimulated to expression in different areas of the cytoplasm, and hence they call forth new differentiations in these, in ever-increasing complexity of action and reaction.

Another line of investigation inquires into the natural influences of the parts of the developing organism. An egg divides into a ball of cells (or blastomeres), and it seems reasonable to suppose—what experiment confirms—that the prospective value of a particular blastomere depends on its position in the developing organism. If a colony of polymorphic Hydroids, such as Hydractinia, it is probable that the prospective value of any young poly—whether it is to become nutritive, reproductive, or sensory—depends, in part at least, on its position in the colony. It is not, however, in the development of an embryo, it is probable that there are subtler than spatial correlations between the developing cells or groups of cells. Driesch has especially emphasized this idea of the mutual stimulation of developing parts. Further research is necessary before we can securely estimate the action of parts upon one another. This, indeed, brings us right up against one of the distinctive riddles of development—that there is, on the one hand, so much inter-dependence of parts, and yet, on the other hand, so much power of self-differentiation.

In regard to the question so often asked, whether we can understand development in terms of chemistry and physics, the scientific answer must be that we cannot at present in the very least describe embryonic development—that wonderful individual unpacking of a racial treasure-box—in terms of chemistry and physics. There are chemical and physical processes underlying the course of development, but toward study, but a knowledge of them does not help us greatly to understand the result. There is nothing known in regard to development that is at variance with the conclusions of chemistry and physics, but we cannot give a purely chemical rendering of the observed facts. Nowhere is the autonomy of Biology clearer than here. Driesch in particular has done great service in showing that mechanistic formulae will not suffice when we come to deal with organic development, notably when we consider the localization of the various successive steps of differentiation. But many who are at one with him on that point are unable to follow the constructive hypothesis of an entelechy which exerts a directive influence on the transformations of energy that go on in development.

J. ARTHUR THOMSON.

DEVELOPMENT (Mental).—I. Introduction.

During and after the period of bodily growth and development, from infancy to adult life, the individual gradually acquires and completes his mental powers. The study of mental development has as its aim to determine the conditions which govern this gradual process, and its successive stages both in the way of attainment of special functions or capacities. It has been remarked that, while some of the lowest animals are born 'grown up,' being able from the first to secure food for themselves and otherwise to live a life similar to that of the adult, we ascend the scale of animal life the longer is the period of immaturity, infancy, or development which the individual undergoes. This is not a mere accident: the length of infancy has a direct relation to the age of the animal’s species in the evolutionary scale, in other words, to the complexity of its structure and functions, the variety of its adaptation to environment, and especially the degree of plasticity, power of modifying behaviour, which it possesses. The argument applies equally to the physical and the mental aspects of evolution.

Comparative tables show that the ratio of the period of immaturity to that of the adult life, which is an increasingly small fraction as we ascend the scale: thus chimpanzee, 1:16; chimp, 1:16; dog, 1:16; cat, 1:16; rat, 1:16; rabbit, 1:11; guinea-pig, 1:13. (Chamberlin [after Hollis and Bell], The Child, ch. 4). The same differences are to be observed from the human savage, or barbarian, Papuan, Fuegian, Bushman, Eskimo, is adult, and begins to take a man’s or woman’s part in the tribal work, at from 10 to 15 years. It is evident that the date of perfect maturity has been progressively advancing to 21, 25, and even 30 years for many of the races of man.

It must be supposed that the ordinary forces making for evolution have determined this increasing length of infancy and immaturity, the latter the following considerations: (1) Completed growth means rigidity; the more firmly a structure is organized, the more completely a habit is fixed by the organic mechanism, the more difficult it is for either structure or habit to be modified to suit new conditions; hence longer infancy means more gradual and therefore more effective adaptation to the general environment. (2) Completed development means completed adaptation to a number of special forces in the environment; the period of development is that during which selection occurs among the forces to which adaptation is to be made; thus longer infancy means ultimately more specialized adaptation to, and greater control over, the environment. (3) The main value of mental as contrasted with physical development is to give the individual a mastery of the means of economizing behavior—by selective attention, by language, by technical skill, by thinking, abstraction, and reason—the mastery of those varied means of economizing experience which the race has in its evolution perfected; such powers cannot be transmitted by physical means be re-acquired by each individual by imitation or education; the longer development corresponds, therefore, to the greater refinement of these powers, which, with regard to physical structures as well as to mental achievements, the individual must by exercise and activity acquire even those functions for which it has no natural endowment. The simple structure does not become the complex organization, without effort on the individual’s part, whether or not the individual is supposed to pass through the same stages of growth as those by which its ancestral line has come down from simpler life-forms (recapitulation theory). Hence, the higher the evolution of the race, the longer must be the period occupied by the individual to reach its type (K. Groos, Play of Animals, ch. 2, Eng. tr., London, 1888; Chamberlain, op. cit., E. Claparède, Psychol. de l’enfant, chs. 2 and 4).

2. Relation of development to evolution.—The recapitulation theory, once accepted as almost a truism, has recently met with much criticism. It has been applied to mental development most frankly and vigorously by Stanley Hall and his school. According to these writers, there are three ways in which the individual reveals the story of his race. (1) There is the actually observed correspondence between the stages and order of development and those of races of more remote origin (that is, recapitulation). (2) There is the occasional appearance, even in adult normal life, of mental forms which are echoes of primitive mental stages; these occur more especially in states of mental weakness, fatigued condition, illness, hypnotism, sleep, hypnosis ("reverberations," reminiscences"). Our souls, like our bodies, represent the organized experiences of past ancestors: fears,
DEVELOPMENT  (Mental)

affections, thoughts, which appear even in quite healthy states, may be 'rudimentary spectres' (Stetnard Hall) due to survivals from distant ages of man. (3) A given individual may show arrest of mental development, stopping short at a stage which the race in general has long since passed; in such a case we have a 'reversion,' or an atavism (q.v.), in which the characteristics of remote ancestors dominate, in the child's development, those derived from his parents or near ancestors. The mind, like the body, thus consists of segmentary divisions or strata derived from different periods of evolution; the older strata are naturally those which are most fixed and uniform throughout a race (e.g. the primitive instincts); the more recent strata are more variable in the different individuals (e.g. the forms of intellectual development); again, the older strata represent the foundation from which the more recent have been derived, and on which, therefore, the latter must be built up by the individual: hence not only does the individual, as a matter of fact, tend to develop along racial lines, but parents and teachers ought to encourage and stimulate the younger strata to a further adequate and proportional development of all the different powers ('culture-epoch theory').

The recapitulation theory has been defended (1) in the stages at which the different senses mature; (2) in the order in which abstract ideas are acquired, at which discrimination of the different qualities within the same sensory group appears; (3) in the appearance of the different instinctive activities; (4) in the play activities of children; (5) in the successive objects of imitation which children select for themselves; (6) in the stages of intelligent behaviour, and in the development of abstract thought; (7) in the development of emotion; (8) in language. The principle has been greatly over-driven by its supporters, and probably the development and evolution is limited to the broad general lines of development and evolution respectively. Special objections apply to the culture-epoch theory both as an interpretation of the facts of observation and as a basis for educational policy, but in the course of its discussion many valuable suggestions have been made. The child is not mentally, any more than physically, a mere miniature adult; its powers do not differ merely in quantity from those of the adult; they differ also in proportion and in kind.

Nature and nurture.—The question is still very far from settled as to the respective influence in development of factors which are present in the individual at birth, and of factors which come from the environment and operate from without. The arguments for the former, in the case of mental development, are: the tendency of the individual to reach the type or standard of his race, materially as physically; the remarkably close resemblances which the adult individual shows to his parents and nearer ancestors, in character as in body—a resemblance which is still greater, in the adult body, between parent and child when both are considered at the stage of infancy or childhood; and the phenomena of atavism, so far as they are certified. Such facts suggest that, as the bodily germ-cell contains elements, or at least conditions, by which the future growth of the individual body is determined, so the mental organism is determined along definite lines, with definite limits, and definite proportions between the parts, so the mind, or perhaps we should say the brain as the basis of mind, also has its development pre-determined from the first. In support of this the statistical observations of Galton, Pearson, Heymans, and others have been adduced on the resemblances and correlations between the mental capacities of different individuals and their parents or other members of their family.

The result of Galton's observations on the prevalence of eminence and genius in different families may be placed in this form: that the chances of an eminent relative being an eminent relative are as 1 to 4, while the chances that an ordinary man, or a man chosen at random without reference to eminence, will have an eminence relative is only as 1 to 4. Again, if both parents are artistic, the probability of a child being artistic is 2 to 1; while, if neither parent is artistic, the probability is 1 to 4. Another and later statement shows that, while 35 families, of a certain relatively high degree of eminence or capacity in the fathers, will contain at least 6 sons of the same capacity, as many as 5000 families of average or mediocre ability in the fathers will be required to furnish the same number of sons of that higher degree of eminence (F. Galton, Hereditary Genius, London, 1869, Natural Inheritance, London, 1895. For further references, see J. Arthur Thompson, Heredity, London, 1903).

Again, Karl Pearson dealt with families statistically in regard to such characteristics as intelligence, vivacity, originality, popularity, temper; he had previously compared them with respect to such factors as stature and capacity of skull, stature, etc. The application of the correlation-formula may be simply explained in this way, that if every brother had always the same colour of hair, then the correlation-index would be 100; if the brothers were no more different from each other than brothers who were such a law that in every case of two brothers was tall and the other short (of course in exact proportion), then the index would be ± 100. The index for Karl Pearson and Heymans for the hair was 0.54, for the skull 0.49, for the stature 0.51; while for the most characteristic different, the hair, the index was 0.52, in other words, practically the same as the physical index. These are comparatively high degrees of correlation, and suggest that the same cause has been operative in both cases considered in the statistical measurement. Now, it is quite obvious that post-natal conditions have nothing to do with the colour of the hair or with the size of the skull; hence it is equally unlikely, he argues, that the environment has anything to do with the intellect, or vice versa, of the individual. Later, more particular and accurate tests gave similar results, although the correlations were not quite so high; in any case, the brother of a bright child is much more likely to be bright than the brother of a dull child; brightness or dullness of any type is not a product of environment, and is not due to education or environment, and not only is it the general mental character that is inherited in this way, but even quite specific characteristics in the most extreme cases, as in twins and freaks, is inherited. If the question, see E. L. Thorndike, Educational Psychology, New York, 1906, ch. 6).

On the other side, Loeb and his school are able to produce an increasing mass of evidence showing that the development of the bodily organism, since it can be enormously modified by changes in the environment, is to a large extent directly due to the action of external forces. Hence the mental development may be a product of environment and opportunity rather than of innate factors. Thus, the conclusions of Galton and Pearson, for example, are insecure so long as we do not and cannot exclude the environmental influence: just as the children of parents who are able to have healthy bodies because of the sufficient and proper food which their parents (because of their healthiness) are able to provide them, so the children of mentally gifted parents tend also to be mentally gifted because of the adequate stimulation which they receive from the conversation, the life, the surroundings of their parents, and their parents' friends; it is a question not of innate, but of external, conditioning. See, further, art. HEREDITY.

3. Relation of mental to physical development: periods of development.—It has been shown (see BODY AND MIND, BRAIN AND MIND) that the development of the mental powers is in intimate

DEVELOPMENT (Mental)

relation with that of the bodily organs, and especially the brain.

The term 'development' is here used in a wide sense to cover both growth and developmental proper; strictly it is preferable to reserve 'growth' for increases in size or amount of tissue, while 'development' is reserved for increases in organization and connection of parts; but these processes occur simultaneously in physical development, and it is extremely difficult to draw any line between them in mental expansion.

The stages of physical growth and maturity have been utilized by the periods of childhood generally; broadly, we may take four periods of several years each: (1) childhood, from birth to 7 years (about the time of the completion of the second dentition); (2) the period of girlhood or boyhood, from the 7th to the 14th year; (3) the period of adolescence or growth, from the 14th to the 21st year; and (4) from the 21st to the 28th year, by which time the mental development, as well as the skeletal growth, is approximately completed. The first period is also divided into infancy (the first two years, a combination of first dentition) and childhood proper (to the 7th year).

(1) Characteristic of the first period are the development of the senses, which at first are extremely imperfect; rapid body and brain growth; the acquisition of the fundamental motor coordinations—walking, grasping, climbing, etc.—and the acquisition of speech; emotions are readily excited, but are of short duration; the prominent instincts are the self-preservation ones, experimental play; The second period is marked by a slower bodily growth; the brain is relatively fixed in its size and weight before the middle of this period, but undergoes rapid development or organization during the latter half of it; the acquisition of speech and logical thought, and the development of reasoning, are accompanied by susceptibility to emotional excitement; the individual is easily fatigued; bodily and mental habits are being formed and fixed; the beginnings of abstract thought and of self-consciousness present themselves; action is co-ordinated with reflective intelligence and thought. (3) In the third stage there is, again, at the beginning; a rapid advance in the important stage, which is followed by a period of slow growth to its completion at about 21; there is a strengthening of the social consciousness; greater interest is shown in adults and their work; it is also the period of idealism, of romance, and greatly increases in social development — 'storm and stress'; the mental powers begin to be definitely fixed and proportioned; even play takes a more serious form—in tests of endurance, self-control, skill, and ability. On this important period, see Stanley Hall's Adolescence, and art. Adolescence, vol. i. p. 101. (4) The last period referred to is that in which the general mental character is finally hardened or set. (On the problem of the faculties, see the historical summary in Chamberlain, ch. 4, or Clarke, ch. 4, par. 1). The development of the brain is peculiar in this respect, that at birth it bears a higher proportion relatively to the rest of the body than at any other period of its growth; while the weight of body of the newly born infant is to that of the adult as 1 to 20, the corresponding ratio in the case of the brain alone is 1 to 3.5 (see the tables given in H. W. Donaldson, Growth of the Brain, London, 1891). Nearly the full weight of the brain, however, and therefore its completed 'growth,' is reached between the 7th and the 10th year, whereas the full stature is not attained until about the 21st year, and the body muscles increase in weight to the 50th year or later. On the other hand, the brain after the 7th year undergoes changes of great importance in its organization; growth is replaced by development, in the proper sense of the word, although there has also been some degree of development during the earlier stages.

According to Flechsig's discoveries, the sensory areas of the brain are the first that lose a functional maturity, that is, they are the first whose connecting fibres acquire the medullary sheath (Localization der gesamten Fügungen, Leipzig, 1890). The earliest fibres to be functionally organized are those which supply the skin (organ, brain); next, those which supply the eyeball (sight, hearing, smell, taste, in connexion, location, sensations of position); these connections begin to form even in the first year before birth, and are completed in the first few months after birth. Within this region are the fibres connected with the organs, and with the extremities, that are first completed; then follow those connected with the trunk, and with special muscles that are afterwards used for speech. They convey the grosser masses of sensation with which the feelings and emotions of higher knowledge. Injury to, or destruction of these regions leads to an entire loss both of visual and auditory memory, and the state which has sometimes been called 'apoplexy,' or agensis, that is, an apparent inability not only to name familiar objects or to recognize them when seen, but even to use them when placed in the hand; yet at the same time power to perform other periods of 'intellect' and term 'intelligence' might fairly be used to cover the mental activities which are retained in such a case. The parietal and per-frontal region, standing in the closest relation with the area for the tactial, kinesthetic, and organic sensations, is that which runs parallel with the development of the character, and self-consciousness; there is a certain fact about injury to it is that it will bring a loss of interest, spontaneity, and power of concentrating the attention, in short, a general derangement of the character.

The close relation between normal development of the brain and normal mental capacity, between abnormal development or one-sided development, and genius, between defective development and imbecility, etc., have been referred to elsewhere (Brain and Mind); modern appeals for improved hygiene in schools, medical inspection of children, feeding of abnormal children, special classes for defective children, and the avoidance of over-stRAIN, have their ground or justification in the intimate correlation between the development of the body and that of the mind; and, needless to say, in the case of the child, even more than in that of the adult, the health of the mind is mainly dependent upon that of the body.

4. The conditions of development.—It has already been shown (ch. 2 and 3) that the brain, as a whole, say how far development proceeds from internal, and how far from external factors. It may be urged that, just as a child will reach a certain predetermined height, provided that it obtains adequate nourishment and conditions, so, in weight and so, in length, as no amount of extra feeding or exercise will enable it to go beyond this height, while under-feeding, and under-exercise, and injury will make it fall below
it, so it is in the case of the mind. The child is born with the possibility of so much mental capacity, so much 'intelligence,' or retentive memory, so acute a sense of sight or hearing, etc.; care and practice will enable it to reach these fixed limits or pass beyond them, while neglect and want of exercise may keep it far short of them. The conclusion is that the function of the teacher or parent is limited to the providing of the necessary material for development, that the amount and direction of the development are, however, determined already by the nature which the child has received at birth. It is probable that the two most important factors in the question are, on the one hand, the activity of the child, which is partly a matter of congenital faculty, and partly a matter of healthy nutrition; and, on the other hand, opportunity of exercise and practice. The child who is constantly moving about not only improves his health in general, but also puts himself within reach of varied stimuli by which his mental powers are evoked, and in the course of time developed; while the sluggish child does not come so much within reach of stimulation, and therefore has a relatively slower development. Opportunity, both in the direction which the child may take, and in the educational advantages or disadvantages, and especially those factors which depend on the health, culture, and economic position of the parents. Nature determines that the fundamental instincts shall appear in a certain order, and has co-tended its share to the complete development; but, if stimulation and exercise are not provided, any instinct, when it appears, will remain undeveloped, and therefore the whole mental growth will suffer a certain amount of distortion.

Play and imitation.—The principal internal conditions of development are the two 'instincts,' if they may be so called—play and imitation. Play in the wide sense includes all activities or tendencies which do not contribute to the immediate needs of the organism, which are spontaneously carried out, and which give pleasure in their operation apart from any result derived from them. The natural view of play is such as is expressed in Spencer's surplus power theory, viz. that play is the outcome of the excessive amount of stored nervous energy in the young, the exercise of which is not required for the organic needs, or of the tendency or faculty of imitation, according to which the child copies adults in the conditions adult nature postulates (Principles of Psychology, 1872, vol. ii, pt. 8, ch. 9). The theory with which Groos (Play of Animals and Play of Man [Eng. tr., London, 1910], Baldwin (Pref. to Groos' Play of Animals), and others seek to replace this is that play has a biological function, viz. that of preparing the immature individual for the activities of adult life, without exposing it to danger such as would be implied if it had to acquire the same experience apart from the parent's protection. There is a 6.123 volume of the mental powers (or in each of the relative centres of the brain) a tendency to expression or exercise, and, long before there is real need for such powers, this exercise is obtained through play; thus the play of children follow roughly the stages of the race evolution, as Hugh Miller suggested (My Schools and Schoolmasters). The corresponding instincts and interests develop successively in the child's mind; as they develop in their order, each in turn seeks its own satisfaction or expression, and this takes the form of play. A specially important feature of play is that it prepares the way for intelligence, or, rather, it is the means by which intelligence gradually comes to replace the instincts in the individual; the more fixed and limited the environment of an organism is, the more rigid are its instincts, the less developed is its nervous system, and the less is its power to adapt itself to changes in the environment; on the other hand, the more varied the environment, the less rigid, although perhaps more numerous, the instinctive tendencies are, and the greater is the development of intelligence; play enables the instincts to be sufficiently exercised without dominating the development as a whole. In general, then, play is a preparation for the adult life; hence, the higher the physical and also the mental development ultimately achieved, the longer, as a rule, is the period of play; this, according to Groos, is the object, the biological function, of youth; animals do not play because they are young, but they have a period of youth in order to play. This play includes the simple experimentation of the child, as that of the infant when exercising its muscles and its senses upon the objects around it; thus it obtains experience of the qualities of objects, and at the same time strengthens and develops its own active powers. Nature has provided ample means for this experimentation-play in the pleasure which the child manifestly obtains from it, and which is, here as elsewhere, the correlative and index of the memory, or, to use another term, the latent power, of the organism.

Next follow those plays by which the organism as a whole is strengthened physically, and by which the memory is organized and experience consolidated; finally, plays in which the higher mental powers are exercised, as when children develop the instincts, are brought out and exercised. The following is Groos' classification of the plays of the child (Play of Man):—

1. Playful experimentation:
   (a) With the sensory apparatus.
   (b) With the motor apparatus.

2. Playful use of the higher mental powers.
   (1) Experimentation with the mental powers, memory, imagination.
   (2) Experimentation with the feelings (physical pain, emotional suffering, surprise, fear).
   (3) Experimentation with the will.

   (a) Playful exercise of impulse and action (Principles of Psychology, 1872, vol. ii, pt. 8, ch. 9).
and the attraction of its attention by them; (b) in the complexity of the actions imitated; (c) in the fluidity of the imitation, other actions being more limited and more faithful copies, the latter being more spontaneous, original, and dramatic in their form (cf. the development of children's ideals with age in Earl Barnes, Studies in Education, ii. [1902] and a recent study by Yarou-
duck, in Arch. de physiol, no. xxviii., July 1908. The biological function of imitation is, like that of play, to prepare the individual for adult life, while he is being protected from the dangers that might otherwise arise in the experience of the child, imitating its parents, its teachers, or its friends, acquires the habits of expression and of action which they already have, and also—a more important matter—acquires their habits of emotion, their mental attitudes. Imitation thus becomes a form of heredity, replacing physical heredity, bringing the same advantages more rapidly, and at less cost. The child tends through it to resemble its parents, not only physically but also mentally (Baldwin, Mental Development, p. 232 ff.).

5. The original activities. — The child is born with a complex nervous structure, by which adequate response is provided to a large number of stimuli from the environment, in the form of reflex, automatic, and instinctive actions. Some of these actions are carried out before consciousness, and therefore, presumably, before mind is present, or at least active; and even in later development we still find that a large part of the body is carried on quite automatically, and with-out the intervention of consciousness. The question arises as to the relation between consciousness on the one hand, and reflex activity on the other, in development. It is still sometimes argued that consciousness has no biological function, and that the whole mental development is simply a result of, and therefore sequent to, the bodily and cerebral development itself, which in its turn is determined by purely physiological and physical forces. H. Ziegler, A. Bethe, J. Loeb, J. P. Nuel, and other modernists in Comparative Psychology would entirely exclude the use of consciousness (not merely the word, but the thing) from biology. On the other side, it is held that consciousness is, or becomes, of primary importance, that the reflexes present, or provided for, at birth are organized into higher combinations, and modified on the ground of experience (Lloyd Morgan, Intro.-to Comp. Psychol., ch. 11, London, 1894; Animal Reactions, p. 190). And, in fact, that the reflex actions themselves are a product of conscious effort in the ancestors of the individual (Wundt, Physiol. Psychol., Leipzig, 1903, iii. 276 ff.). Thus consciousness or mind is now and has been in the past the main force making not merely for mental, but also for physical development and evolution. There is a law of economy by which every action, as it is repeated, becomes less and less of a conscious action, until in the end it is carried on automatically; thus the value of this is that the energy of consciousness, or the physical energy underlying consciousness, is thereby set free for other activities; wherever an action is resisted, or prevented, by any cause issuing in its ordinary way, there consciousness is immediately present; wherever a new circumstance arises which requires a different reaction from any provided by the reflex or automatic systems, there again consciousness arises. On the other hand, the less resistance there is the smoother the action, the more familiar the situation the less is consciousness directed towards it. Consciousness thus represents the 'growing point' of the organism; correlated with it are changes in the central nervous system, and in the body as a whole, which ultimately become the basis of organized intelligence and will (cf. J. Jastrow, The Subconscious, London, 1906, p. 278).

The special activities and powers involved in the process of mental development may be classified as follows: (1) the physiological reflex actions; (2) the sense-organs, sensations, and sensory reflexes; (3) perception, in relation to the primary attention-reflexes; (4) affection and instinctive behavior; (5) feelings and emotions; (6) will; (7) memory, its conditions and varieties; (8) imagery and imagery types; (9) language and abstract thought.

(1) Physiological reflexes are those connected with the circulation of the blood, the respiration, the digestion, and other processes of bodily metabolism; of these it is not necessary to treat in this connexion, since they are entirely removed from the control of the child's consciousness, except so far as they are a part of sense-processes proper, although to which reference will be made later. These processes take place at a much more rapid rate in the infant than in the adult.

The metabolic activities of the infant are more pronounced than those of the adult, for the sake, not so much of energy which are spent on the work without, as of energy which are spent in a while harnessed to the rapidly increasing life. It is a 'metabolism directed largely to constructive ends' (M. Foster, Text-book of Physiology, 1897, p. 154).

(2) Sensation. — The normal child is provided at birth with the external apparatus for all classes of sensation, and these are connected, through nerve fibres, with the central organs in the brain; but, as has been remarked above, this connexion is not immediately functional, but of considerable times after birth. The child at first is deaf, is 'light-say,' is insensitive to colours, and to a large extent to taste, so that the sense of touch and perhaps the muscular sense are the only ones which at birth show certain degree of development, and are connected with the tests which have been made, the sensitivity in general increases very rapidly in the first few years, reaching its maximum development probably about the loth year, after which there is a slight decline in sensitivity proper, although the power of discrimination remains capable of great improvement thereafter (J. A. Gilbert, Studies from Yale Psychol. Lab., 1895, 1894; E. Meumann, i. 102 ff.). The sensorial reaction-time also improves in rapidity from the time after which the reflexes are present, or provided for, at birth are organized into higher combinations, and modified on the ground of experience (Lloyd Morgan, Intro.-to Comp. Psychol., ch. 11, London, 1894; Animal Reactions, p. 190). And, in fact, that the reflex actions themselves are a product of conscious effort in the ancestors of the individual (Wundt, Physiol. Psychol., Leipzig, 1903, iii. 276 ff.). Thus consciousness or mind is now and has been in the past the main force making not merely for mental, but also for physical development and evolution. There is a law of economy by which every action, as it is repeated, becomes less and less of a conscious action, until in the end it is carried on automatically; thus the value of this is that the energy of consciousness, or the physical energy underlying consciousness, is thereby set free for other activities; wherever an action is resisted, or prevented, by any cause issuing in its ordinary way, there consciousness is immediately present; wherever a new circumstance arises which requires a different reaction from any provided by the reflex or automatic systems, there again consciousness arises. On the other hand, the less resistance there is the smoother the action, the more familiar the situation the less is consciousness directed towards it. Consciousness thus represents the 'growing point' of the organism; correlated with it are changes in the central nervous system, and in the body as a whole, which

The development of visual sensation may be taken as an illustration of the problem and of the obstacles to its solution. There is very great difficulty in determining whether a child has or has not a power to perceive and distinguish different colours. Even where speech is appealed to, the results are by no means conclusive. The earliest attempt to determine the order in which the different visual sensations are arrived at was that of Preyer in 1882 (op. cit. infra, ch. 1). The tests were begun in the third quarter of the second year of life, and continued to the fourth year. He found that the colours yellow and red were those which were most constantly and according named, or picked out when the names were given, while green and blue came last; by the beginning of the 4th year the child could name all but the very dark or light shades correctly. With a similar method Mme. Shin (op. cit. infra) found that her subject (a little girl) was successfully taught to name all the colours and to pick out red and blue correctly, before the end of the second year. By a special method, appealing to the preference of the child, as shown by its selection of one from a pair of colours, Baldwin (Mental Development, pp. 30, 50) concluded that a child of 9 months can distinguish all the colours except one of a pronounced preference for blue. The above were individual studies. From a thorough collection of test for children, by Shinn and others, from birth to 7 years, by a 'matching' method, Garbin (J. Am. Med. Ass' n., vol. xxiv., Florence, 1894) concluded that a child begins to develop the power of discrimination between different shades of the first month of life; and to distinguish different objects by their shade or brightness in the second month; it is not till the middle of the second year that he has acquired the capacity for distinguishing red from blue. Hence it is probable that the child was acquainted with red and then it is red which is first marked out; green begins to be added about the end of the second year, and yellow in the

Digitized by Microsoft®
course of the third year, while it is not till the fourth that he can distinguish much colour. The first year's shades of the same colour become easily distinguished, but the colour vision is still relatively imperfect until the sixth year. Thus although by the end of the fifth year he cannot name any colour, and that only 25 per cent can name the six main colours given above; the power to distinguish the colour space which he can follow, in about a year or a space, the power to distinguish the colour in question. Ziegler, in 1905 (Inaugural Dissertation, Zürich, n.d., but c. 1903) found, with more accurate methods, to determine the degree of colour sensitivity in 200 children, one half boys and one half girls, at the age of beginning school in the Munich schools gave a distinct preference in accuracy of matching to orange, violet, blue, and yellow in that order, and an approximate preference which was matched. Black and white were invariably correctly placed. It does not, of course, follow that the order of correctness in matching corresponds to the order of development; on the contrary, it may be concluded that the colours were preferred on account of accommodative values, their novelty, etc. In the naming method (the child giving the name) the order of correctness was black, white, red, blue, green, yellow, with violet and orange last; the darker shades of colour the whole were better named than the lighter, presumably because they were more familiar to the children; none of the boys could name orange; but only 6 per cent of the girls. Every one of the tests employed brought out the fact, already suggested by others, that there is a much more accurate sense of colour than boys. Neither Garlisch nor Ziegler found that any one of the children they examined was colour-blind (a total of 250 in all) is well known, that colour sensitive occurs much more frequently among men than among women; in the former cases the frequency is a little from 1 to 6 per cent. It is probable that by properly devised means of training, the colour sense of children might be greatly developed, and that the mental capacity of children already improved.

(3) The development of perception from sensation takes place through the exercise of the sensory reflexes, which play a large part in the process of attention. Thus a child does not at first see objects either as clearly, as distinctly, as proportionately, as the adult instincs. In the earlier months it sees no colours, but only light and shade; it has no means of determining the distance at which any seen object is; it is unable to fix an object so as to obtain a clear image of its outlines and details; it is unable to distinguish, and indeed has no conception of, the third dimension; objects are probably seen as blobs of light and shade merely; it has no power of distinguishing a real from a reflected or imaged object; in short, it can hardly be said that the mental or object-consciousness at all, through sight (Preyer, op. cit. ch. 1). All these powers are gradually acquired through exercise and the resulting co-ordination of the movements of the eyes with the visual sensations. The two principal mechanisms in question are those of accommodation, by which the object is clearly focused, of fixation, by which the object is brought into the centre of the retina—the part of the eye which is most sensitive to form as well as to colour, and of convergence, by which binocular vision is determined, and the two eyes are guided so as to obtain single vision of solid objects. These co-ordinations are only acquired, as has been said, through exercise; and, while the interest of interest, is not presented, that it raise fails to take place. This is an illustration of the importance of environment in deciding development.

The following gives some idea of the dates at which these phenomena are observed, according to Preyer and others (cf. Kirkpatrick, op. cit. infra, ch. 4). The protective reflex closing of the eyes when bright light falls upon them is present almost immediately after birth, and is of the nature of an reflex (adaptation) to increase or decrease of light; the blinking reflex, when an object is brought close to the eye, is immediately present; but occurs after a few weeks; systole or independent movements of the two eyes and the eyelids (e.g. one eye remaining fixed, the other being moved, or the eyelids being turned downwards while the eyelids remain fixed) occur occasionally until the beginning of the second month; voluntary fixation is not complete until about the end of the first quarter year; voluntary and accidental fixation, etc.

The interpretation of visual impressions in the early months, with bodily movements not established till much later.

This history really describes the origin of the visual perceptions of space in childhood. The power of visual space is innate or acquired is impossible to answer, because it is wrongfully put. The child is not born with a space which he can distinguish or even acquire derived from the senses (Kant), but neither is it a space a product of sensations and associations formed. It is only derived from the sensations: it is a result of interaction between sensations, feelings and desires, impulses and movement. In each case the 'distinction' is conceived, but which are only realized and combined through the acquired experience of the child (cf. Wundt). Stimuli (evidence from the born-blind, who have been enabled, by an operation, to see in later life, is conflicting. It does not prove that they at first see only colours and brightness, not things or objects, as Preyer argues. It is true, however, that they are entirely incapable to appreciate distance (see B. Bourgeois, Perception and Espace, Paris, 1902, ch. 13, for a complete account of these observations, up to that date, that similar 'sync.' of sensations, feelings, and attention-reflexes goes to form the actual perceptions (extent, hardness and softness, sharpness and bluntness, etc.) and the auditory perceptions (rhythm, time-interval, melody, speech, etc.).

(4) An instinctive action is a response evoked in direct relation to a perception of some kind, while a reflex action is called out by a single sensation or by a purely physiological stimulus. It is manifest that although there is undoubtedly a much greater power of control, and liability to modification on the ground of experience, in the instinctive than in the reflex action (see discussion on Instinct and Intelligence in Prin. Journal of Psychology), it is possible that by properly devised means of training, the colour sense of children might be greatly developed, and that the mental capacity of children already improved.

Such an instinct implies three things: a need on the part of the child (organic sensation, feeling, impulse), an object capable of satisfying this need, and some consciousness on the part of the child of the possibility of the satisfaction to the want or need. It is the want or the interest which determines the direction of the attention towards the object. Thus the child's whole interest is absorbed at first by the needs of food and clothing. Food-taking and food-seeking are the first to express themselves; the giver of food, and articles used in connexion with its food, are the first objects which it learns to distinguish and recognize; later the needs of its sense-development cause interest in objects for the more sensations they give, bright lights and colours, loud noises and musical tunes, etc. At this stage the instinct of play appears, especially of experimentation play and of movement play. In its early years a child is naturally self-centred; it is biologically of advantage to the race that the individualist instincts should be strong at this time. Accordingly, its wants are strongly expressed and vigorously insisted upon. Yet there is no constant and exclusive interest in other persons, until from the fourth or fifth year, when selfishness in the strict sense of the word begins to appear, controlled, however, by the equally instinctive desire for social approval. The constant desire of the normal child, together with that directed to other children, his shyness towards strange elders, but ready acceptance as playmates of other children, about his own age, seen for the first time; his eagerness to accompany the adults of his family in all their actions; in all their activities; his constant repetition of the
actions of adults in his play; his treatment of animal pets, younger children, dolls, etc.—are illustrations of the force of the social instincts and of their part in the development of the social consciousness that be individualist and social instincts combine in (i) the impulse of self-display, adornment, etc.; (ii) the impulse to co-operate with others for common ends, in games, or in school and home life, or for mutual protection; (iii) the impulse of competition and rivalry, which tends to the rapid development of the physical and mental powers; (iv) with expanding imagination, the sympathetic feelings arise, and the impulse to help, to protect, or to defend, which the expressions of the, or of the muscular actions by which it is carried out; but there probably is some consciousness of the position of the food in the mouth, the parts of the tongue touched by it, etc., and it is by this sensation that the action is definitely initiated; it is probably only at a later stage that the muscular sensations themselves become conscious. The impulse, then, is simply the motor effect of the sensory aspect of the pleasure at the end of the food, which is then developed into a purely active movement of the mouth, etc., and is the result of a series of sensations, including the sensation of the food in the mouth, the parts of the tongue touched by it, etc.; these impulses are always in conjunction with some need of the organism, either prolonged as in the case of hunger, or momentary as in the case of physical pain. A second stage of the development of the impulse to tears is to be regarded as the stage when the child begins to select stimuli or sensations on the basis of personal interest, built up by experiences; (b) when memory occurs of the movements by which these sensations have been automatically or reflexly performed, the stage for the first time starts to form impressions which may be painful. The term ‘impression' is used to express the stage when the child begins to feel that the impressions which have previously given it pleasure, and not merely to react on impressions that have arrived of themselves. Correlatively with this, it begins to avoid consciously those impressions which have been already experienced as painful, and also to neglect or inhibit impressions which have proved indifferent to it, not being accompanied by any positive or negative feeling tone. In this development perception gradually arises through the combination of sensations of the same or different classes with each other, or with sub-conscious memory images; in this way one impression gradually becomes a sign or symbol of another. The pleasurable or pain-attachment to the direct impression is now

1 On this, see W. James, Principles of Psychology, 1895, vol. II, ch. 17 on 'Sensation,' 19 on 'The Perception of Things,' and exp. 20 on 'The Perception of Space.'
transferred to the indirect, as when the child shows pleasure at the sight of a rattle, after experience of the agreeable noise which the rattle gives in its hands, or shows pleasure at the sight of its food, before the actual tasting of it. It is unnecessary therefore to make the memory of either experience should arise, and in the vast majority of cases such memory probably does not arise; there is simply a transfer of feeling, and in consequence a transfer of action from a direct impression to a more indirect one uniformly connected with the latter. It is in the case of these indirect impressions that interest gradually develops, and that conscious and individual selection begins to take place.

(b) The movements themselves enter consciousness partly as muscular and actual experiences, partly also as visual experiences—in the case of those movements which the child can see itself carrying out. As soon as the memory begins to be able to 'fixate' such consciousness, the child learns to modify its actions, or to choose between various possible actions, in response to sensations, through remembering the success or failure of the previous reactions.

(c) In the co-ordination of movements there are also the inhibition of unessential movements, and the reinforcement and connecting together of series of necessary movements. Reflex action is excessive, uneconomical, and generally contains a large number of movements not required to the removal of the stimulus (H. Ebbinghaus, Grundzüge der Psychol., pt. i., Leipzig, 1897, p. 124); for example, the movements of a young child when irritated by a pin in its clothing. With the development of perception, the movements become more economical, and are brought under the control of consciousness, until in a particular case the necessary act is carried out in the shortest time, and with the minimum of effort. It must be supposed that in this case the impulse has come to be associated with the entire reaction, which has been constantly repeated in every experience of the kind; while those actions which were unessential, and therefore were not repeated, or not always repeated, are less firmly connected with the impulse, and become associated with other parts from it. Corresponding with this limitation in simpler cases, there is the forming of chain actions, or series of actions, in more complex cases—for example, in learning to walk; the several movements have once been brought together, the chain action through conscious effort, to be gradually cemented to each other, so that later, without conscious effort, the one tends to follow the other in the same order as that in which they were acquired (see Preyer, ch. 11). Consciousness still retains a grasp, as it were, of the whole of movements, as is shown when any resistance is met, or any error occurs; but it does so only in a general way, covering a larger and larger span in its grasp, as skill and practice increase (J. Jastrow, op. cit., chs. 2 and 4).

The terms 'habit' and 'practice' refer to the forming and cementing of such co-ordinations. When out of several possible ways of doing a thing, or of acting, one has actually been adopted, then, if the situation is repeated, the former action tends to be adopted again, merely from the fact of its earlier occurrence. The same is true of a connexion or series of actions. The greater the number of repetitions, the stronger the tendency to repeat it. This is habit, the primary and universal condition of all mental development. Since will consists, as we have seen, in selective activity, it is formally opposed to habit; but, in reality, neither it nor any other higher mental power is possible except on the basis of habit. Walking, running, listening, looking, smelling, tasting, dressing, speaking, and hundreds of other skilled actions, which form elementary parts of mental processes and habits, are in us habitual acts become unconscious and mechanical through repetition. Adults and children differ widely in the rapidity with which a habit is formed, in the tenacity with which it is retained, and in the promptness with which it is exercised. With age the power to form new habits slowly declines, and also the power to resist or overcome habits when formed. To some extent this is due to the decreasing vitality of the nervous system, but mainly to the fact that habit corresponds to the organizing of connexions between different parts of the cerebral system; the greater the number of these, and the greater their strength or firmness through repetition, the less the likelihood of a new associative connexion being formed or old ones broken up (see James, op. cit., ch. 4; Ebbinghaus, Grundzüge der Psychol., pt. ii., Leipzig, 1902, p. 672). The development of the will is also conditioned by the general changes both in the intensity of our sensations and in the manner in which they attach. At first, as we have seen, the child's feelings are entirely determined by its organic needs; later, repetition and instinctive experimentation and play bring new experiences of pleasure and pain, and this alters the connexions with the requirements of the organism; the objects of such feelings are retained in memory, and the thought of them, or the perception of them, forms new motives of action; the actions are governed by ideal rather than by direct sensory motives. (On the development and influence of feeling, see T. Ziegler, Das Gefühl, Stuttgart, 1893.)

The most direct indication of the nature of an individual's will is to be found in the characteristics of his special attention (p. 470). Neither will nor attention, however, is to be regarded as a general power, which can be directed indifferently upon this or that impression or action, or can be moved from one to the other. They are simply general tendencies for attaching themselves to particular objects, which possess certain features in common. The characteristic of acts of attention is that a part of the field of consciousness is selected from the rest, and that the mind, or the individual under observation, can be brought to attend more or less to these acts of attention. The means by which this change is effected are either external, as when the senses are focused upon the objects, and the like; or internal, as when convergent and associative ideas are called up from past experience. The underlying conditions are the intensity of the impression or idea itself, the strength of the interest to which it corresponds, the focusing of attention, and the development of the muscular system by which the focusing or 'fixating' and controlling of impressions is effected. In all these respects the child undergoes a gradual development. A distinction is usually drawn between spontaneous or natural, and voluntary or acquired, attention; the former is supposed to be characteristic of the child, the latter a product of education. These are not, however, differences in attention itself; they are differences only in the interests which lie behind the act of attention.

Thus interests are either primary—those provided by the innate instincts of the child—or secondary—those due to the acquired experience and reflexion which life and education call out.

1 On the whole question of the nature of our consciousness of movement, and its function in mental development, see Wundt, op. cit., ii. 474 f., 536 f., iii. 307 f.

2 Th. Ribot, Psychol. of Attention, Eng. tr., N.Y. 1889 (Chicago, 1890).
It is, therefore, natural that voluntary attention to objects which are primarily without interest in themselves should succeed the more elementary expressions of attention in childhood. It is clear that, where an individual is capable of prolonged primary attention, he will be incapable of the concentration which voluntary attention presupposes. This occurs, for example, both in idiot and in imbecile children, and to a certain extent causes typical differences between normal individuals also. Wherever, owing to the weakness of the brain or nervous system, sensation is less vivid, or movement is less rapid and less vigorous, or instincts and feelings less strong, there the attention will be correspondingly difficult to escape or to hold, with resulting defect in mental development. Ability to work for continuous spells, and ability, who profit by discipline, to appreciate rewards and punishers, depend mainly enough to associate them with one another and to compare them with similar experiences in the past.

A second typical difference in attention is that between concentration and distribution; the term ‘concentration’ refers to the effect which attention usually has of lowering or limiting consciousness, or at least effective consciousness, to some small portion of a real or ideal situation; the mind is absorbed by some particular interest, and impressions that would otherwise have stimulated feeling and action are kept on the verge of consciousness, or entirely repressed. The familiar illustrations of absence of mind on the part of geniuses will readily occur as an instance. Concentration or specialization is thus a condition of effective mental progress. Distribution of attention, on the other hand, refers to the power to appreciate and attend to a number of diverse impressions or ideas simultaneously; it is in many ways a valuable power, as, for example, in the teacher, who must, within his main attention is given to his subject, also have regard to the positions and actions of the different children in the class; the conductor of a choir, the director of an orchestra, and the organizer generally, are instances of the same ability. It is immaterial, for our present purpose, whether there is any real division of attention in a given moment, or whether distribution depends rather on rapid alternation of the attention from one fact to another. In the normal individual, concentration and distribution are for one another; the greater the one, the less the other. But concentration does not necessarily mean intensity, nor does distribution necessarily mean that the different impressions attended to at the moment are ineffectively appreciated. It obviously depends upon distribution and training to what extent distribution can be carried. Children, and animals also, show great concentration, where the primary instincts are involved, but defective concentration in the case of secondary interests; one of the chief problems of the teacher is to increase the concentration-value of the latter. Some children are never able to acquire this power to the normal extent, and in consequence remain all their lives an easy prey to distraction.

A third typical difference is in the steadiness or fluctuation of the attention. Meumann uses the term ‘fixating attention’ for the former of these types; it is that which is able to keep away side impressions and ideas, and to take up only the impressions that are directly before it; in this way it represents an objective, observing, recording type of mind; thus a picture, a sentence, or any group of materials, when attended to, is appreciated as it is.

The ‘fluctuating’ type, on the other hand, is liable to be caught by sensory impressions and by memories or ideas which are not directly connected with the object presented; hence it tends to transform the material given to it into a superficial outline view, passing rapidly from one to the other to imaginatively. In childhood the latter is much more frequent, and, in fact, may be regarded as a characteristic child form of attention; the power to see or hear things as they are or to be acquired by education (Menmann, i. 499 f.).

(7) Memory. In memory, three phases or functions must be distinguished — immediate memory (as illustrated by ‘learning by heart’), retention, and reproduction or recognition; these three phases are subject to different conditions, and vary independently in other in different individuals, and at different stages of mental development. Immediate memory has been shown to improve steadily with age (as tested, for example, by the number of syllables or words which can be reproduced after a single exposure, or by the length of time required to learn a given number of syllables or words by heart), and Meumann has found that even into late adult life this capacity is endowed with great improvement through practice.

The method of memorizing also changes with age, the young child depending entirely on mechanical association between the different members of the series to be learned, the adult depending more and more upon associations of meaning, upon rhythm and other forms of grouping. On the other hand, retentiveness, as measured by the rate of forgetting, or the amount forgotten after a given interval, increases with the age of the person (E. Meumann, ‘Expérimentations’, 170 f., and esp. p. 192). That is to say, young children have greater difficulty in learning than older children; with practice an individual may improve in this faculty almost up to the middle age; at the same time, children retain what they have learned for a longer time and more accurately than the adult under the same conditions. The memory which goes back to early childhood (earlier than the 5th year) are relatively rare, the fact that children seem to have become deaf before the 5th year tend to lapse of the auditory memories, and inability to acquire new auditory impressions, that children who have become blind before the 5th year, and even to some extent up to the 7th year, lose their visual memories, and rarely, if ever, in after life have visual dreams, and the corresponding phenomena in the case of amputated limbs (J. Jastrow, W. James [see M. de Manacine, Sleep, London, 1897, ch. 4])—all these facts correspond accurately with the incomplete development of the cerebral connections before the end of the 5th year. Finally, reproduction, that is, the rate, accuracy, and fertility of association, and of voluntary memory, in which there are stronger individual differences, tends to improve with age and with practice continuously up to about the 50th year.

A much-debated question is how far training or practice in one field of memory is transferable to another—a question closely connected with the question as to whether memory is a general power or faculty, or simply a combination of particular experiences which are somehow stored in the brain of the individual. In the latter case it is obvious that memorizing any particular material, while it improves in the general improvement there are occasional retardations, e.g., at the age of 10 to 12 (girls) and 12 to 14 (boys). Girls are in advance of boys till about 10, when the difference is reversed. It is said that the young profit less than adults from practice, but that any gain is more permanent.

VOL. IV.—44
creases the amount we are able to recall, and through association of ideas makes it easier to learn simile or material, still do not add to our stock in any other field, or help us to acquire such more easily. Exercising the visual memory improves that memory itself, but does not improve the auditory memory, without special practice in it. Also, the greater number of observers decide against such transfer of improvement, or the possibility or value of 'formal training'; on the other hand, some recent studies (Meumann, Winch, etc.) seem to show that a very substantial gain can actually be transferred, whatever the interpretation of it may be. The interpretation to which most of the facts point is a training of the attention, that is, of the nerve-centres and muscles which are involved in the accurate and ready uptake of sensations, not in the field of observation; and those muscles also by which the control or suppression of distracting impressions, and the reinforcement of associative impressions, are carried out. Such capacities can un school teaching and the necessary use of force can be exercised by any person, from one kind of visual material to any other—and, as the experiments show that the transfer is greater with a material similar to that in which the improvement has been actually acquired, this entirely confirms the above practical conclusions are: (a) that much of what a child learns at school and afterwards forgets is not necessarily pure loss—the exercise in learning is to a great extent at least transferable to later occupation, with the appropriate mechanical and meaningless materials, for the formal exercise of the senses, and especially of the memory, seems to be indicated as a pedagogical method by the experimental results.

(8) Imagination and imagery types.—Fechner, Galton, Charcot, and other more recent observers have given ample evidence that individuals in adult life differ widely, and in certain typical forms or regards the sensorial material in which they 'think' is carried on; the visualist dealing mainly in images derived from optical experiences; the auditive in images of sound derived from acoustic experiences; and the kinesthetic or motor type in images, memories, or even 'nascent sensations' in the body, as in the case of the sensations of the past. 'Thinking,' however, has two broadly different senses, according as it means picture-thinking, as in reverie, or word-thinking, as in talking, reading, or scientific thinking. Much of our important thinking is done by means of words as signs or representatives of experiences, without employing the actual memory pictures of the experiences themselves. The majority of individuals are probably of a mixed type, both for picture and even perhaps for verbal thinking; but the enormous predominance of visual experiences in our lives compels all of us to use visual memories to a large extent, while the methods of school teaching and the necessary use of the ears and vocal muscles in speech, render most of us of an acoustic-motile type in word-thinking. Again, the majority of individuals are probably unable to give to their favourite method of imagination such an exclusive exercise or training, as is necessary to develop purity of type; a boy who is articulated to an architect, and who is by nature an auditory, must cultivate visualizing or fail in his profession. It seems to be proved that in children, perhaps owing to the method of education, auditory imagery predominates in the early years, but is more and more displaced in importance by visual imagery as age increases; again, that even in the case of visual imagery the vividness and 'warmth' of imagery decrease with age; thus, according to one report (Miss Calkins) at least 9 per cent of students have very little or no colour imagery; while in the average scientist, according to Galton, the power has all but entirely disappeared, and is entirely lost; abstract thought tends to weaken imagery—in other words, verbal tends to replace picture or object-thinking. The following are some of the indications by which the type of a given individual can be discovered by the individual, or dialogues and conversations in plays and novels (auditive), or the extent to which words and facts of skill are remembered, in the individual's accounts of them; and how far organic sensations and memories accompany the seeing or the hearing or the affecting of emotional passages in literature, etc.; also by the trade or occupation which is preferred by an individual, his hobbies, the kind of games, his education in art or in literature, and especially his creative powers in these fields.

(3) The verbal type is indicated: (a) by the way in which an individual acts about learning a heart or poem in a book; whether he does so by frequently repeating the passage over, aloud or half aloud (kinesthetic), or whether he translates the printed words into inner speech (auditive), or learns it by repeatedly thinking the words upon it and reading it aloud, or taking the passage over in the mind; (b) in the last case the subject is usually able accurately to refer to the page or book, when recalling it; the former cannot be printed up before his mental vision; he can readily find the passage in a book where he has left off reading, and can refer to any desired passage. The various slips that are made in speaking or writing are good indications of whether the subject is thinking auditive or in visual words. (c) former confusing words a sound, the latter confusing words with a similar appearance. (d) in syllables or meaningless material, the visualist retains the consonants more accurately, the auditive the vowels; and again the visualist's errors tend to be those of omission, while the auditive's tends to be errors of order or of position. (d) the visualist can with great ease read backwards a series of impressions laid to heart, since they are, as it were, printed up before his mind, while the auditory or kinesthetic has great, or at least greater, difficulty in doing the same; the one takes a short, the other a long time to accomplish. (e) the time to accomplish the task is still at all. (f) Segal (Arch. f. d. gesamte Psychol. xii, (1905)) adds the following signs: the visualist frequently shuts his eyes and covers them when recalling a memory; his recall is slower than that of the auditory; usually the latter remembers the material in groups, whereas the visualist remembers parts singly and separately. But visualists retain poetry or prose more accurately than others, and do not repeat parts already given, while auditory and kinesthetics reproduce more rapidly, but in less quantity, and often with unconscious repetitions. When he does not repeat the material in its proper order, it is with the last few words or syllables that the auditory begins; and when the task is accomplished, the material as a rule disappears at once out of the memory. In regard to the importance of these differences for mental development, it should be remembered that the question is never one of an exclusive use of a single element in imagery; that the predominance of the one over others; but occasionally there occur cases in which one or other form of imagery is completely lacking. Normally, however, every one is both an object-thinker and a word-thinker at different times, and uses in the former case alike visual, auditory, and motor imagery. Nevertheless, it is true that in children object-thinking predominates greatly over verbal thinking until about the age of 14, when, in civilized life, word-thinking begins to occupy a larger space; thus, when a child under 14 is reading or listening to speech, it tends to fill out the meaning of the words, in mind, to a much greater extent than the adult does. It has been pointed out that, while the majority of adults are visualists in object-thinking, the majority are also acoustic-motile in word-thinking. Children probably use a greater variety of kinds of imagery than adults. Nevertheless, it will be found that visual imagery predominates in the classes or forms of the objects, and in general the type is uncertain until the age of 16.
or so. There is throughout a higher prevalence of pure visualists among girls than among boys. It is of course clear that a child will learn more easily, more quickly, and retain a longer time material learned through his special and coordinating form of imagery; and conversely, that the teacher will naturally teach, and will best teach, by the use of his special form. Hence a certain amount of consideration and attention in school work, both to the type of the child and to the type of the teacher. On the other hand, as has been remarked, the average child is of a mixed type, and the average teacher also, while under normal conditions familiarity with different types is essential for all. The conclusion is that the teachers should try to convey knowledge of any subject by as many fuses as possible, and that care should always be taken to determine whether apparent incapacity in a child to learn a particular subject (e.g. geography) is not due rather to a deficiency in the type of imagery to which appeal is made than to dullness or immaturity. (A full account of recent work on this subject is to be found in E. Meumann, Exper. Psychologie, i, esp. p. 435.)

It is a matter of dispute how the power of abstraction, and thinking in general, are related to imagery; there can be no doubt that, genetically, the concrete image precedes the abstract, or symbolic, thought. But in general a training of the imaginative faculty is of great value in preparation for scientific thought and practical reasoning (see Add, L'Intelligence, Paris, 1905; E. Meumann, Intelligenz und Wissen, Leipzig, 1908). On the general subject of the psychological nature of thought and its relation to imagery, see the discussion by Titchener of the work of Ach, Binet, Block, Messer, and Watt, in his Experimental Psychology and the Thought Process, N. Y. 1909.

(9) Language and abstract thought. Many lines of evidence both from race psychology and from individual psychology go to prove that the language of a parent is in no sense whatever innate in the child, and that none even of the conditions which have led to the differentiation of its parents’ language from other languages is innate. (On this question, see L. W. Stern, Helen Keller, Berlin, 1905.) What is really innate is the instinct of expression and the various special forms which this instinct takes—facial, vocal, and manual, etc. As it is certainly on these that language has, racially, been built up, so in the child they precede all knowledge of language. As illustration of the former inference, shows that any child can learn any language with ease if provided it is brought up among a people speaking that language; and that no child has any special difficulty even in learning the language which is most remote in its sounds, signs, or grammar from the language of its parents. Again, it is known that the most complex thoughts and emotions are equally well explicable in any mode of language whatsoever, including under this not merely speech and ordinary gesture languages, but even such highly artificial languages as those taught to deaf-mutes, etc.

The stages at which a child acquires the language of its environment may be stated as follows: (1) the reflex and instinctive expressions of emotion on the child’s own part; (2) the limitation of the sounds made by its parents and other children in its speech; (3) the frequent repetition of signs and sounds—complexes found pleasant to itself; on the receptive side (4) the gradual discrimination of the sounds heard in the speech of its parents; (5) the association between a particular sound and the object at which it is directed as a child (cf. Preyer, ch. 16; Amund, Die Entwicklung von Sprochen und Denken beim Kind, Leipzig, 1889; Chamberlain, ch. 5; and Amund, Fortschritte in Kindersprachkunde, in Arch. f. d. gesamte Psychol. ii, 1894), which it is referred by the parents; (6) the formation of an image of the meaning or connotation of the words, derived from these associations (perception); and (7) the gradual concretion of such ideas by experience. The conditions of development are keen in common perception on the part of the child, opportunity of hearing varied speech in its environments and freedom to exercise its linguistic powers, in play or otherwise, as it seems inclined.

The relation of writing to speech may be touched upon here. Evidence shows that the child is car

6. Abnormalities of development. — Defective children. — Where there is an actual loss of one or more of the senses, whether through injury or defect of the organ, or from lesion of the central organ in the brain, the resulting defects are due rather to lack of material than to any defect in the mental powers themselves, and can be compensated by adequate training, as is the celebrated case of Laura Bridgman and Helen Keller show. A psychical abnormality of this kind, defective children may be grouped in the following classes: backward children, the feeble-minded, imbeciles, idiots, and the demented. The last are those who, though injury in childhood to the central nervous system, or through a disease of that system both congenital and progressive, gradually lose any acquired mental faculty they may possess, and therefore not only fail to develop further, but actually regress, perhaps to a purely instinctive or even reflex and automatism, or vegetative level. Idiocy, on the other hand, springs from a defect or defect of the cerebrum, either congenital or occurring in early childhood, carrying as its consequence a general intellectual and especially a lowered sensitivity whatsoever, organic or vegetative in movement, as a consequence of which the individual is almost or entirely unable to acquire the education which is regarded as the standard in his country and position. In this there may be all degrees, depending upon the extent of the injury, and in the period of life at which it occurs. In imbecility, there is not, as a rule, any marked physical or

1 On the following is Stern’s classification of the stages in the development of language from the point of view of the forms or sounds. (3rd quarter of the year; (4) first stage of language: stage questions about the negation of objects (3rd quartet); (5) first sentence (syntactical stage); sentences about the negative: negative sentences (end of the 3rd quarter of year); (6) restoration: subjects with a negative in the predicate (4th quarter of the year); (7) sentences with an object (for the 2nd quarter of the year); (8) sentences with a question (for the 2nd quarter of the year); (9) examination questions as to the where, how, and whither (3rd quarter); (10) questions as to why (in the 3rd year). Stern’s remarkable parallelism between the stages by which the normal child acquires its language, and the stages by which Helen Keller, beginning at the end of her 7th year, acquired the same form of development through the finger-alphabet which Miss Sullivan began to teach her at that age (op. cit. p. 48).
even cerebral defect; on the contrary, imbeciles
are frequently of great vitality, and of full physical
development; nevertheless the existence of some
functional defect of the brain is proved by the
peculiar instability of their mental character,
and, as a result, the difficulty which there is in
extending their education, mental and moral, up
to the standard of the time. These classes may
be grouped together as abnormal; their differences
from the normal are so great, and in their out-
come unfit them to so great an extent for participa-
tion in social life, that no one would seek to rank
them with either normal children or normal adults.
On the other hand, the gradual development to a
class which is, as it were, on the lower edge of the normal group; they are
simple variations, on the negative side, from the
average, corresponding to the specially talented and
gifted on the positive side. The backward
child is one who is much slower in development
than his neighbours, and in consequence falls below
the standard of his years; at school he is placed
along with children three or four years younger
than he is, post-feeble-minded, or simply
feeble-minded, again, is not only slow, but unable at
any time, or under any conditions, to overtake
the average child in education; he can, however,
taught a simple trade, and by special methods
can be brought to a level of intelligence and
morality by which he is enabled to take a place
among his fellows.

Various suggestions have been made as to the
most prominent symptom by which the degree of
defect their fellows be estimated; two, the ability to acquire
the power of speech (Esquirol, who divided idiots
and imbeciles into five classes, according to degree of
facility which they were able to acquire in this
respect); the presence or absence of primary and
secondary instincts (Dubois, etc.). Almost certainly
the most valuable of these is that on which Sollier
lays chief stress—the power of attention. The
inability of the idiot or imbecile child to learn
(whether language, industrial work, or moral
habits) depends primarily on the two characteristics
of his attention—its low intensity, or strength,
or degree of concentration, and its instability,
or liability to distraction and dissipation. The
spontaneous attention (still less the voluntary attention of the idiot cannot be
caught, except for a few objects associated with its most funda-
mental physical needs: (1) because, owing to the
brain, its sensations are excessively blunt or dulled, and (2) because for the same
reason, his organs of movement, on which the
possibility of attending depends, are also imperfect
in the highest degree. In the lowest degree of
dehydocy there is no possibility of attention; in the
second degree (simple idiots) the attention is with
difficulty and occasionally held by a few objects;
in the latter case, by efforts which strengthen the
sensitiveness, or which build up associations between
the few objects that are apprehended and the
corresponding actions; some degree of education may
be accomplished; in the former none is
possible. On the other hand, in the case of the
imbecile, it is not so much the intensity of the
attention as its stability that is at fault; it is
fugitive and unstable, unable to be retained for
the length of time by a single object; hence memory
is weak, impressions do not remain long enough
before the mind to be retained; associations are
not formed between separate sense-qualities or
between perceptions and notions; sustained activity
and serial thought are alike impossible.

The lower instincts, however, are usually sufficiently
strong to give the sensations and perceptions which
appeal to the imbecile considerable attention;
hence education is possible to a relatively
high degree, through the direction and control of
this attention by the teacher. Imbeciles may
learn to speak, although they rarely learn to write
or read; and, however feeble speech does not with
them carry the power of concentrated and deliberate
thought or reflection. On the moral side, Sollier
divides these defects by the terms extra-social,
which he applies to the idiots, and anti-social,
which he applies to the imbeciles.

The former, as the term implies, is essentially a solitary, unable
to come into relation with, or to understand any of
the purposes of, his fellows; he neither imitates
nor plays with others, and, while entirely incapable
of appreciating anti-social deeds, his weakness
overwhelmingly remains for the most part passive, inert, and
therefore harmless. The imbecile, on the other
hand, having the lower instincts strongly, and the
higher weakly (or not at all), develops, in general, almost
no doubt instinctively, with being able to
appreciate either the feelings of others,
their duties, or their rights; he has intelligence
enough to pick up and appreciate the evil, but not
the good, around him, and is not in danger both to his fellows
and to himself. In the case of the backward
and simple or weak-minded child, the attention is also
defective; the reaction time is slower, the span
or width of a single act of attention is narrower, the
portion of the most part less than in the
average child. In the case of the idiot, the
defect is primarily due to an organic lesion of
the brain, and in the imbecile to a functional defect (see art.
DEGENERATION), but in the backward
child the defect may ordinarily be found in some
sonic physical weakness, in the digestive or
other internal system, by which the brain is
relatively poorly nourished, and in consequence
both fundus and more feeble and develop more
slowly than in the average child. The evil can to
some extent be remedied by physical regimen, and
the great danger in such cases is that of intensifying
the disease by over-pressure in school work.
There can be no doubt in general, that where it is possible,
such children ought to be treated separately from others—in separate classes, or still better in separate
institutions. Binet, Decroly and Degand, and de
Sanctis have worked out series of standard mental
tests by which the degree of the
child of a given age can be diagnosed in a simple
and rapid, but adequate, way. It is natural that
some difficulty should be experienced at first in
arriving at such a series, appealing to the different
mental powers in the order of their
importance, which shall be agreed upon by a sufficiently rep-
representative number of observers; but, when it is
successfully accomplished, it will form a most
useful basis of reference, both in the initial
determination of the grade of a child and in
estimating the degree of progress which may be attained under any particular system of training
and education (see A. Binet and T. Simon, Annexé
psychologique, xi. [1905], iv. [1908].)

DEVIL'S ADVOCATE.—See Advocate.

DEVĪ PĀTAN (Devi-pattana, ‘city of the goddess Devi’).—An ancient village in the Gonda District of Oudh, supposed to be one of the oldest seats of the Saiva cultus in Northern India. Legend connects the establishment of the cult in this place with Karna, the hero of the Mahabharata, and early writers have been absorbed in the story and most probably the existence of a temple at Ayodhya, and perhaps the same description for the petty shrine of the goddesses of the pre-Aryan races, who had been adopted into Hinduism. A temple is said to have been erected in the beginning of the 15th cent. by Ratanmāthi, the third in descent from the famous Gorakhnāth, the defied saint, whose worship has spread almost over the Nālī valley and many other parts of India. Its importance was sufficient to attract the attention of the iconoclast Auranzib, who partially destroyed it. This temple seems to have been dedicated to Siva, and when repaired was converted into the present building, where the shrine of the Mother-goddess in the form of Pārvati or Durgā is conducted. The religious faith in conjunction with the shrine takes place early in the spring, and is largely attended by pilgrims from the Plains and the lower slopes of the Himalaya. Benett, describing the fair in 1871, writes: ‘Some 25 buffaloes, 250 goats, and 250 pigs were sacrificed daily at the temple. Under the altar a large hole was dug, filled with sand, which was changed twice a day, and the old sand buried; all the blood was thus absorbed. There was no filth lying about, and no stench.’

DEVOITION AND DEVOTIONAL LITERATURE.—Introductory.—In a general sense, devotion has frequently been regarded as co-extensive with, or at least as embracing, the entire field of facts relevant to religion. Sometimes the attitude of the human will towards the Divine (however conceived), which is a common feature of all religions, and the dominant characteristic in every religion of the spirit, has been illegitimately isolated and its true function distorted; consequently devotion and religion have often been used as synonymous terms. Aquinas writes: ‘Devotio nihil est nisi quae tenet quae voluntas quaedam prompte tradendi se ad ea quae pertinent ad Dei fannulatum’ (Summa, ii.2, lxxxi. 1). But surely this definition is too wide in scope. Even where devotion has not been confused with religion, it has been regarded as a synonym for worship, or ‘whatsoever men worship for religion’s sake’ (Tomson’s marg. note [N72, 156]). But, while devotion suffuses all genuine religion, and will find expression normally in a form of worship directed towards an object or objects as spiritual, unseen, or Divine, it certainly ought not to be defined as ‘an object of religious worship.’

The idea of devotion is expressed in a concrete manner by the devotee—one set apart for a unique purpose, dedicated by a vow to the service of a deity; and perhaps we may best define devotion as the inner, intimate, essential side of worship. It is the attitude of the worshipping soul towards God; or, more widely viewed, the self-dedication to a deity, or to something which we have, or think we have, a time with some of the qualities or claims of a deity. In its higher reaches it calls into play the entire forces and resources of man’s personality.

Devotion, then, involves the deliberate movement of the will towards the object of worship.

‘Devotion signifies a life given, or devoted, to God. He therefore is the devout man who lives no longer to his own will, or the very spirit of the world, but to the sole will of God, who considers God in everything, who serves God in everything, who gives all the parts of his common life parts of piety, by doing everything in the name of God, and under such rules as are conformable to His glory’ (Law, Serious Call, Lond., 1888, ch. i).

In the theistic religions, especially in Christianity, where the blossom and fruit are incomparably rich, the definite and full determination of the will towards Deity is the first step in the direction of a devout life. The higher experiences of the consecrated life are unattainable apart from this initial and insistent act. The will of the individual is wholly determined towards the being or beings conceived as Divine, and, apart from this ardent attachment, devotion, strictly speaking, cannot exist. It is thus marked from true religion as a ‘propitiation or conciliation of powers superior to man’ (J. G. Frazer, GP, 1900, i. 63) by this spontaneous self-committal.

‘True devotion springs from the will: it is the choice and the love of the highest good manifested to the soul, and, wherever the will of man is found choosing, and adhering to, the highest known Ideal of that which you have the true child of God (G. Religions, Books of Devotion, London, 1903, ch. ii).’ or, as Thomas & Kempis express it, ‘great devotion consists in giving up thyself with all thy heart to the Divine Will, in seeking the things which are thine own, either in small or in great, in time or in eternity’ (Imitation of Christ, bk. iv, ch. xcv).

In this self-determination of the soul both intellectual and emotional appetites are present in varying degrees; no movement is made apart from desire; the intellect by itself, as Aristotle pointed out, moves nothing. Some conception of the end of devotion is necessary before the heart and the affections are yielded in free spontaneity to their Divine object. Thus, in all religions which create and foster the devotional spirit—notably in the Christian religion—the soul intensely, sincerely, and lovingly desires, and moves in faith, reverence, and purity of intention towards, communion with God. Even the pagan Mysteries and the most ancient sacrificial feasts bear witness to this fact.

r. This approach of the soul towards the Divine, with its definite, conscious experience of the Divine presence, is seen in the distinctive exercises and practices of devotion. These are infinite in variety, but primacy must be given to prayer.

‘Devotion,’ writes William Law, ‘is neither private nor public prayer, but prayer whatever private or public exercise or particular parts or instances of devotion’ (Serious Call, ch. i).

Without attempting any survey of the various forms prayer, and especially the devotions of the various religions, we may mark its unrolling and universal characteristics throughout the devotional life of the varied races and generations of mankind. Remembering the true saying of Kierkegaard—that a heathen would at least an idol pray in reality to the true God, but he who outwardly and impersonally prays to the true God.
in reality prays to an idol—we see that the value of the external observance depends on the internal disposition of the suppliant. Prayer must be pure and ingenuous, forasmuch as, from any element of sophistication. Where prayer is viewed so largely and so generally, sometimes so exclusively, sometimes so vaguely, it is obvious that its possible perils are very great. Material wants and mundane considerations obtrude themselves, while the spiritual needs are crowded out, forgotten, ignored—sometimes even unrecognized. But, though not without its dangers, the act of asking a boon of the Unseen, if it be the sincere expression of the spiritually enlightened, is an act which not only describes the fervent longing of the human soul, but also suggests the intimacy of a genuine spiritual communion. It is an aspect of the great passion to establish communication with the Divine or with God, which expresses itself in an outgoing of the human spirit towards the object worshipped and adored. As such, it is an inalienable mark of the devout soul wherever placed, in crude and elementary religious environment as truly, though not as fruitfully, as in realms of high spiritual culture and atmosphere of more refined phases, it becomes not merely a spiritual intercession, but passes in a sublime elevation of soul from soliloquy to silence, from spiritual striving to contemplative calm. The higher reaches of the devotional life are sacred to the progress of the soul and the prayer of 'union' which Madame Guyon describes in her Autobiography (Eng. tr., London, 1897) as 'emptied of all form, species, and images.'

2. Allied to and often confounded with prayer is the act of praise, the tribute of homage which the human renders to the Divine. The relation between prayer and praise is so intimate that, in experience, it is found that instinctively and imperceptibly the one is constantly passing over into the other. This is so true in the hymnology of the Veda, which embody 'some of the earliest religious conceptions of the Hindus' (M. Williams, Hinduism, London, 1901, ch. ii.), as it is in the Jewish Psalms or in the spiritual songs of the Christian Church; and, although they are all primarily adapted to worship in an institutional ceremonial sense, they yet express with true poetical passion the personal devotional life of their particular age. The outward dissimilarities of certain definitions of the forces of Nature' (M. Williams, op. cit. p. 23); a post-exilic theology is implicit in the Psalter; but under all the outward forms of 'temple festivals, processions, and ceremonial' there is present and discernible the thrill of the individual soul, as, in reverence and thanksgiving, homage and gratitude, it prostrates itself before the Divine.

We may certainly affirm that beneath all external expressions, which, of course, reflect the particular sentiments (sometimes, it may be said, immature, and even repugnant, to a developed moral sense) of a people, age, or religion, the elements we have noted are all in its essence and in the difficulty, it is true, in emphasis and in the degree of intensity by which they are sustained; but it may be doubted if any one of them is ever entirely absent. From the manner in which they are present and blended, it is clear that exercise of prayer as a personal outburst in East and West does appear ultimately to result in a qualitative distinction, i.e. to be different in kind. It may, indeed, be regarded as an established fact that the place of prayer in the devotional life is seen most clearly and recorded most completely in religions where the subduing and overwhelming sense of Divine holiness, love, and beneficent energy prevails, and in which the soul's searching sense of guilt is finally submerged—not merely in mercy, but in victorious grace.

In illustration of this, we may note the contrast presented between the attitude of the devout Buddhist, who embalms his lord Gautama in the richest and most splendid sarcophagi of gold and silver, and the attitude toward God, as expressed in the superb and richly varied praise of the Sarpaganga literature (A. M. Fairbairn, Philos. of Chr. Rel., London, 1902, p. 234 f.), and the attitude of the devout Jew towards God, as expressed in the superb and richly varied praise of the Sarpaganga literature (L. T. K. Cheyne, Book of Psalms, London, 1888, p. 118). This contrast is further heightened by a consideration of Christian hymnody, in which, from the θαυματοσωτήρ, ὁδῷς, φόλα προσηλυτικά (Eph. 205) of the early Christians to the sacred lyric or hymn of the Church to-day, the holiness and grace of God are conspicuously honoured and celebrated as much in private devotion as in public worship.

3. The act of adoration, the prostration of the soul in profound reverence, utmost adoration, highest love, is usually associated with the outburst of gratitude or thanksgiving addressed to a deity. As one ascends in the scale of religions, the ethical and spiritual meaning of the adoring soul becomes more significant. In the Vedic and the prayer of 'brilliant gaiety,' passing often into hilarity and levity (as among the Greeks), was subtly united with sacred offices and exercises (cf. F. Granger, The Worship of the Romans, London, 1885, p. 271), it is clear that the outward semblances of the act could not conceivably denote the rich and profound spiritual significance which is so manifest a content of the reverent honour given by the devout Christian to the sacred and adorable Trinity.

The sentiment of adoration is seen at its highest only where the idea of God is marked by supreme moral and ethical excellence. Thus, in Chins, even where there prevails a persistent worship of ancestors which aims at the maintenance of friendly relations with the souls of the dead, or a devotion to Shang-ti and popular divinities, adoration occupies no high place in the desire of the worshippers. In Christianity, on the other hand, devotion seems impossible apart from adoration, and manifests itself as marked by the hymns which are 'addressed to certain definitions of the forces of Nature' (M. Williams, op. cit. p. 23); a post-exilic theology is implicit in the Psalter; but under all the outward forms of 'temple festivals, processions, and ceremonial' there is present and discernible the thrill of the individual soul, as, in reverence and thanksgiving, homage and gratitude, it prostrates itself before the Divine.

We may certainly affirm that beneath all external expressions, which, of course, reflect the particular sentiments (sometimes, it may be said, immature, and even repugnant, to a developed moral sense) of a people, age, or religion, the elements we have noted are all in its essence and in the difficulty, it is true, in emphasis and in the degree of intensity by which they are sustained; but it may be doubted if any one of them is ever entirely absent. From the manner in which they are present and blended, it is clear that exercise of prayer as a personal outburst in East and West does appear ultimately to result in a qualitative distinction, i.e. to be different in kind. It may, indeed, be regarded as an established fact that the place of prayer in the devotional life is seen most clearly and recorded most completely in religions where the subduing and overwhelming sense of Divine holiness, love, and beneficent energy pre-
p. 2041 f.), is the prelude to meditation proper, which
Raysbrooke defines as a ‘concentration of all the interior and exterior forces in the unity of the spirit
and in the bonds of love’ (L’Ornement des passions
spirituelles, tr. M. Maeterlinck, Brussels, 1900, bk.
iv). Meditation or active contemplation is then ‘a
long process of internal quietude, of abstraction from
sense, and of absorption in reason,’ by which the
human soul is attained to the Divine; and the self
~inhabited along with other spiritual possessions, ‘the
power of seeing into eternity’ (Theologia Germanica,
14th cent.). By this interior process of meditation the
whole personality is raised to a higher level, for the act of
contemplation, the abysmal depth of personality,
and releases mysterious spiritual forces otherwise
hidden and unknown. Of this, William Law writes in
‘The Spirit of Prayer’:

‘There is a root or depth in thee from whence all these facul-
ties issue forth and act, or, which branches from
the body of a tree. This depth is called the centre, the
found, or bottom, of the soul, and is so infinite that the
thing can stand, or give it any rest, but the infinity of God’ (The Liberal and
Psychical Writings of W. Law, ed. W. Scott Palmer, London,
1903, p. 43).

Only the spiritually strenuous and purposeful
accomplish this, for it is not merely ‘the
yielding to an instinct, the indulgence of a natural
passion for revenge.’

‘All the scattered interests of the self have here to be
collected; there must be a deliberate and unnatural act of atten-
tion, a deliberate emptying of disordinate images from
the consciousness—a hard and ungrateful task’ (E. Underhill,

Spiritual meditation is, indeed, a difficult thing.
St. Teresa, who finally achieved so much in this
respect, confessed that, when she first made the
attempt, she felt the impossibility of collecting
her thoughts and fixing her attention; and it was
not until more than fourteen years had passed
that she was able to practise meditation without the
aid of a book.

Boehme, in his Dialogues on the Super-sensual
describes the process of meditation as the cessation
of individual activity, and urges the direct and
steadfast fixing of the eye upon one point:

‘For this end, gather in all thy thoughts, and by faith press into the Centre which is held upon the Word, which is
infinite, and which hath called thee. Be thou obedient
to this call, and be silent before the Lord, sitting alone with Him
in the loud silence, and hidden and become a unity, being centered
in His unification in Himself, and attending His will in the patience of
Hope.’

This is a blessed foretaste of the supernatural satisfac-
tion of the contemplative.

5. Again, devotion is expressed, not only in the
loving fulfilment of all these duties commonly
named ‘religious,’ but more particularly and
appropriately in definite spiritual exercises. In that
great devotional classic, The Spiritual Exercises
of St. Ignatius (Eng. tr., London, 1880), the spiritual
development of the individual is shown to be de-
pendent upon the rigorous training to which the
powers of the mind, heart, and will are subjected.
After retiring into solitude and prayer of quiet
contemplation, in which the soul listens only to
the ‘whispering silence,’ the exercised spirit passes
on, in absorbed intensity, to the various methods
and rules by which the desired goal is to be attained.
Thus the value of these means of deep contemplation
lies in the fact

that, when followed in docility and fidelity with
whole-hearted abandonment, the soul is led to the
end for which it was ordained by God. They are
rules which become more and more authoritative by
constant obedience.

‘The number, length, and nature of the exercises are to be
adapted to the age, capacity, and inclination of the person in
retreat; and the way to that end is not all may find what
is suitable to their wants’ (Bodington, op. cit. 130).

All forms of spiritual exercise, whether such as
are involved in the ‘ladder’ of mystic states and
perfections of Neo-Platonic mysticism, the method
of Persian Sufism, or the way of Christian mysti-
cism, are aspects of self-discipline—of the vita
purit-propia. Self-discipline, strenuous and prolonged,
has always been deemed an essential factor in
devotion; and the devout has always been insistent
upon the renunciation of self. Whether it is the
Christian mystic who speaks of self-surrender, or
the Indian mystic who teaches that the illusion of
the finite can be overcome only by entering into the
universal life with the Soul who practices detach-
ment from all that is not God that the heart may
give itself for its only work—meditation upon the
Divine Being—a deliberate self-abandonment is
requested by each alike, though the nature of that
abandonment is variously interpreted and differ-
ently enforced. Perhaps the asceticism of our Lord
(Clem. Alex. Strom. iii. 6) supplies us with the key
to a true understanding of the place and power
of self-discipline. It does not appear that poverty,
the Gnostic Life (ed., under the inspiration of
Gerard Groot and Florisius. The importance
of the ideal has never been questioned by the
devout. According to St. Francis of Assisi,
poverty is
a treasure so high excelling and so divine that we
be not worthy to lay it up in our vile vessels; since,
is that celestial virtue whereby all earthly things
and fleeting are trodden underfoot, and whereby all
the waves of the soul are stilled, whereby all love
of the soul so freely she may join herself to God
Eternal (Fioretti, ch. xiii.).

The essence of self-discipline has been said to be
self-simplification’; this can be attained only
by the soul viewing with sacred indifference the
supernatural, deceptive, or vain things of earth.
Thus, it comes to be seen that inward and outward
poverty is the Indispensable thing; the goal
of the devout soul is, like the Kingdom of Heaven,
attainable only by ‘the poor in spirit.” It is in
such essential vital detachment, according to St.
John of the Cross, that
the spiritual feeds quiet and repose, for, coveting nothing,
nothing wears it by idleness; and nothing oppresses it by
dejection, because it stands in the centre of its own
indifference; for, as soon as it covets anything, it is immediately
exhausted thereby’ (Atent. of Mount Carmel, tr. David Lewis,
London, 1903, ch. xii. n. 10).

Fasting, ‘a piece of devotion whereby the primitive
believers effected very great things’ (Anthony
iv.), has been persistently taught, encouraged, and
practised as a form of self-renunciation and
method of self-mortification, so that it is not all
find what is suitable to their wants’ (Bodington, op. cit. 130).

Digitized by Microsoft®
to Robertson Smith, (Ed. Sem., 2, London, 1894, p. 433), fastings of this kind, such as fasting was designed especially with a view to the partaking sacramentally of holy flesh. We may well believe this to be the fact, inasmuch as the sacrificial rites of all nations express in their devotional aspect the surrendered self of the creature to the Creator. It does not seem open to doubt that all ancient sacrifices were related to the basal belief in the possibility of communion with the Deity; and the discipline of fasting as a preparation to the partaking, however remote which is in some kind of Divine fellowship was the prescribed method of the Oriental peoples. If it is true, as has been affirmed, that 'both the idea of sacramental worship and the forms under which it is performed by the Christian Church are the almost universal heritage of mankind' (W. R. Inge's Essay in Contentio Veritatis, London, 1902, p. 279), it will not be regarded as a singular thing or strange survival that the concurrent act of fasting should appear with perennial persistence. And further, if a vital communion with the Unseen is conditioned by a transparent sincerity of will and intention, fasting may well have approved itself as a sign of, as well as a means towards, such self-discipline in the soul. Such a fast is expected in the Christian Church, where the avowed aim of the faithful is to be "one with the Lord and He with us," and the devout person seeks to present himself a reasonable, holy, and living sacrifice, 12th-century fashion of fasting before communion certainly finds its explanation, if not its justification, not so much in the practice of the universal Church as in the acknowledged need of self-disciplinary exercise for those who would worthily and reverently prepare themselves for the receiving of the Lord's Supper.

"Let us," says Jeremy Taylor, "receive the consecrated elements with all devotion and humility of body and spirit; and do this hounest to it, that it be the first beverage we drink that day, unless it be in case of sickness or other great necessity; and that your body and soul both be prepared to its reception with abstinence from sensual pleasures." (Holy Living, London, 1649, ch. iv. sect. x.)

It is admitted that such fasting 'is not a duty commanded by God,' but it is undeniable a custom well sanctioned by authority of the most devout. In the more general sense, fasting has been endured by the devout almost universally; and by many saints it has been ardently embraced as a valuable means towards the discipline and correction of the human nature's insatiable hunger of the spirit. It cannot be denied that, as a spiritual exercise, evoking, training, and shaping the mysteries potentialities of the soul, fasting under its various forms does effect in many instances most fruitful spiritual developments, and justifies itself as a 'gymnastic of eternity.'

6. In this connexion we note that spiritual raptures and ecstatic experiences of peculiar significance follow, though not invariably, the self-disciplinary exercises of the devout. Catherine of Siena and Catherine of Genoa may be cited as types of devout souls who constantly resorted to the discipline of fasting, and experienced the enrichment of life which ecstatic states confer. The saints, not infrequently, considered the spiritual exercise as a means of artificially producing or inducing 'ecstasy.' This spiritual state and 'dazzling obscurity,' while it has affinities with the 'ecstasy' of philosophic communion and ecstacy of the Neo-Platonists,—must be carefully distinguished from all those extraordinary forms of ecstasy which at different periods have been sought for successfully by barbarous orgiastic worship or by rude and crude rites of initiation.

Here, obviously, the 'ecstasy' was of an illuminative character; this constituted its inner grace and spiritual value. This 'ecstasy,' according to Richard Rolle, may take the form of 'being ravished of fleshly feeling,' and on this manner saints sometimes are ravished to their profit and other men's learning; as Paul ravished to the third heaven. (The Fire of Love, ed. Lond., 1896, bk. ii. ch. vii.)

The essential mark, however, of this spiritual ecstasy would seem to be a supreme and overwhelming joy in the possession of a new knowledge gained not as the prize of toil and thought, but in the upper chambers, the rarest gifts of the Holy Ghost. Certainly such 'ecstasy' is no more the product of human sagacity than it is the fruit of an assumed or pretended sanctity.

7. This leads to a consideration of the fact previously stated, that ecstasy is a movement, from the movement of the individual will towards the Divine, such movement being expressed in the various activities already noted, the supreme phase of devotion passing from the service of God, expressed through the various forms of mysticism, to the union of all elements of religious feeling which distinguish by their intensity and seriousness communion with God. 'I sought,' says Jacob Boehme, 'only for the heart of God, therein to hide myself' (Aurora, 1687, of Jacob Boehme, translated in London, 1764, p. 257). This is no mere 'nordic condition of mental emotion,' but the end desired with an incorruptible sincerity by all devout persons at all times. Among the Greeks, for example, one secret of the attractiveness of the Eleusinian Mysteries lay in the fact that the esoteric symbolism employed therein ministered, not to a sickly dreaming, but to a magnificent desire for an intimate spiritual communion with Deity. Since the advent of the Christian Church, there has been a wide range of spiritual exercises and disciplined employments, sought, with all their fiery strength, the path which afforded close, indeed immediate, access to God—through Christ to God. This 'subjective intensity,' the inward inner necessity, the danger, witnesses to the zeal with which they pursued their quest. Thus, if the communion of man with God is to be attained, the devout soul, whether inside or outside the Christian Church, has always seen that the Divine life, potential or actual, within him must be tended with 'an intense solemnity and energy.' To the Christian, devotion is based on the certainty of communion between God and man through Christ. It springs from a faith in Christ (or, to use Luther's word, a 'right trust') which involves ultimately, if it does not embody presently, a moral union with Christ; and there is no devotion comparable for a moment with the devotion of pure spiritual humanity which is offered up by the soul that has found the new life in Christ and is entrenched in that reality of regeneration which is the certainty of its so great salvation. As Christ is the perfect means whereby the soul of man may realize itself in full and unclouded spiritual communion with its Creator, so the practice of devotion has gathered and drawn from the human life of the Lord—that consummate achievement of stainless communion—not only its supreme ideal and heroic statement, but its rarest and most precious power. 'Non comprehenditur Deus per investigationem sed per imitationem,
We must, in our devotion, as Thomas à Kempis urges, copy the life and conduct of our Lord, 'if we wish to be truly enlightened, and to be delivered from all stains of original sin' (bk. i. ch. i.). Neither must the call to fellowship with the Saviour’s sufferings be evaded or disdained, nor the eyes closed to the imperative demand for ‘mediatorial ministries.’ The passivity of Quinetian can never be the ideal of the devotionalist.

‘With him the corner-stone, The living stones conjoin; Christ and his Church are one, One Body and one Vine’

(Wesley, Hymns on the Lord’s Supper, no. 129.)

In sacrificial service, not only in sacramental worship, the devout soul shares in the joyous travail of the spiritual Kingdom, sustained by the effectual irresistible energies of the Holy Spirit of God.

8. Devotional literature is the outcome, the record, or the expression of a vital devotion. Devotion may exist and manifest its presence without any attempt to express itself in literary form; but every true book of devotion involves the pre-existing and spontaneous impulse and the works and morbid or mauldin books on devotion, whether marked by grandiloquent language or spiritual insipidity, may generally be detected by their atmosphere of moral enervation, or an asceticism that makes them unreadable by the genuinely devout man unconscious of his devotion; and all the great devotional classics, even those most intimately personal, are marked by the absence of anything approaching, in sincerest degree, the spirit of devotion. Spiritual books and works, and the spirit of devotion, are among the most spiritually moving books in the world. The great books of devotion elude our attempts to classify them, though we may trace affinities and mark divergencies. They all owe their existence to the spirit of conspicuous devotion which marked the lives of their authors; and, although respectively they exhibit the fashions of a particular age and reflect pre-eminently the spiritual needs and satisfactions of their own special time, they owe their persistent power to the presence in them of an unconscious self-revelation of spiritual insight, and the faculty of inducing and begetting a deeper devotional life in those who are in some measure the preachers of their doctrines.

9. The devotional movements, which have been established and enriched by books so widely divergent in many respects as the Sermons of Bernard of Clairvaux, where the ‘illuminative way’ is described with searching insight as the rising to the love of God with heart, mind, and soul; Tauler’s Sermons; the Theologia Germanica; A. Baker’s Holy Wisdom; Louis of Granada’s Sinners’ Guide; Sulpici’s Spiritual Combat, in which, despite obscurities and perversities, there shines the lamp of a true saint; the pious reflections of Pascal’s Thoughts; the Journal of George Fox; and the mystical Devotional Works of John Norris. Perreyve’s Journal du malade, Gratry’s Meditations, with their striking and suggestive sincerities of thought, Soucal’s Life of God in the Soul of Men, and Milman’s Love of the Atonement all unite to disclose to the expectant soul some of the angust possibilities of faith, prayer, and sacrifice. The work of Alphonso de Rodrigues, On Spiritual Prayer, is devotional, and is, perhaps, our greatest, or rather, our only business, the union of our souls with God by love, is set forth with arresting ardour and spiritual knowledge; the Poems of George Herbert and his Priest to the Temple, barrined by analysis. Theologian Kelbe—must be named as occupying distinct and honoured places in the impressive library of devotional literature, although, of course, they do not ‘unite all great attributes in an equal degree.’

In the realm of devotion, doubtless books wait to be scaled, untrdened territories allure the intrepid spiritual explorer, and vast spiritual tracts are yet to be surveyed; thus, while we hold steadfastly to the precious devotional gains of the past, we believe that greater works than these may be achieved by the soul following the Supreme Spiritual Director who guides us into all truth.

W. MAJOR SCOTT.
DEW.—The cooling of the ground causes, during clear nights, a deposit of some of the atmospheric moisture held in suspension during the day. It was not till 1814 that the main facts of the process of the formation of dew were established. Mention of Wells' famous theory—a perfect example of the inductive method—is in vain, since primitive speculation upon the origin of dew has joined with observation of its value to plant-life in attaching to it various ideas of spiritual mystery and various uses in ritual.

In the OT the origin of dew is one of the mysteries of creation; the deposition of dew is gentle, sudden, and invisible; its evaporation in the sun is a metaphor for speedy departure or disappearance. Early observation, of course, distinguished dew from rain, and noted their consequences from the clouds 'by the knowledge' of Jahweh. The closer connection of dew with mist and fog naturally involved some confusion in both language and observation. This is of some importance in the Biblical and post-Biblical literature.

'The spirit of the dew has its dwelling at the ends of the heaven and is connected with the chambers of the rain, and its comings and goings are in judgment.' The conjunction is in inverted commas, and the character of the mist is connected, and the one passes over into the other. The young warriors of the royal Messiah are compared, for numbers and freshness, and perhaps brilliance (see also below), to the dewdrops from 'the womb of the morning.' The sunbeams are born by the 'head' of the angelic hosts. The withholding of dew is a dire calamity, and one of the most terrible of curses. We have here, in fact, the best illustration extant in folklore or literature of the pastoral and agricultural importance of the dew-fall. That importance is greatest in Eastern countries which have no irrigation to supplement an insufficient water-supply, and where every drop of moisture counts. But in Palestine the genuine dew of spring and autumn is of far less importance than the night-mist of summer. This is not dew, but moisture condensed in the air before it reaches the ground. It is brought from the sea by the west winds, and for abundance and consistency may be compared to the mist of the marshlands. Neill, who analyzed the phenomenon, is of opinion that the tal ('sprinkled moisture' of the OT; EV 'dew') signifies in the majority of cases not dew proper, but this characteristic night-mist. Such mists from the sea have an extraordinary influence on vegetation, more in accordance with the OT descriptions than that of dew. But the same term is employed, and the two phenomena were hardly differentiated.

It is far from certain that it is ground-moisture, and that it bears upon life and growth, early thought upon several various ideas. In connexion with the belief that growth in plants is dependent upon the influence of the moon, Frazer notes that, since dew falls most thickly on cloudless nights,

1 Job 38; 2 S 17:10; Dt 25:12. 2 Hos 6:5. 3 Ps 28; 4 Fr. 36. 5 Mt. 1:25. 6 Ex. 1:23 (Ed. Charles) 32:29. 7 De 35:27, Is 51:19, 66:24, Gn 27:38, Ps 119:10, 111:16, 114:16. 8 Is. 11:16. 9 Ps 119. 10 Ps 112:16. 11 Ps 116. 12 Ps 112:15. 13 Eki, a.v. 'dew.' 14 Cf. the phōs moros of Greece phōs = 'shower' as well as the Latin fumus, Arabic ḥamūs, Hebrew ḥamās, and the Sanskrit 'rāgītā.' 15 Cf. the ḥamās of the Upanisads. 16 Cf. the ḥamās of the Upanisads. 17 Cf. the ḥamās of the Upanisads.

the inference that such deposit in particular and all moisture in general were caused by the moon was a clear result of primitive observation. Alemann says that Dew is a daughter of Zeus and the Moon. Greek and Latin folklore regarded the moon as the great source of moisture, and the sun as the great scavenger of it. 'As the humid power of the moon was assumed to be greater when the planet was waxing than when it was waning, they thought that the amount cut during the increase of the moon would be saturated with moisture, whereas timber cut in the wane would be comparatively dry. Hence we are told that in antiquity carpenters would reject timber felled when the moon was growing or full, because they believed that such timber teemed with sap; and in the Vesuvius at the present day people believe that wood cut at the new moon does not dry. In the Highlands, peasants give the same reason for cutting their peats when the moon is on the wane; 'for they observe that if they are cut in the increase, they continue still moist and never burn clear, nor are they without smoke, but the contrary is daily observed.'

It is possible that the fact of plants growing more during the night than during the day was known at an early date. The contrast between the light of the moon and the torrent force of the sun is obvious. Plutarch observes, 'the moon, with her humid and generative light, is favourable to the propagation of animals and the growth of plants; while the sun, with his fierce fire, scorches and burns up all growing things.'

Equally natural is the inference that things grow with the waxing, and decrease with the waning, of the moon. The deposition of dew on plants corroborates such observations, and introduces another line of thought. The connexion of moisture with life and growth is most strikingly proved by vegetable phenomena. Hydrostatical turgor is the essential condition of growth. Pliny's remark shows the extension of the principle to animal processes:

18 Even the blood of men grows and diminishes with the light of the moon.

Thus, primitive philosophy views the moon

19 as the great cause of vegetable growth, first, because the planet seems itself to grow, and second, because it is supposed to be the source of life and moisture.

A contributory inference is the connexion of the changes of the moon with the monthly periodicity of women. The Arabs and Greenlanders, like the majority of primitive peoples, regard the moon as male. The young man is able to impregnate women. Girls are afraid to look long at it; no woman will sleep on her back, without first spitting on her fingers and rubbing the spittle on her stomach.

The symbolical practice of last-cited may be compared with several scattered facts. The cosmology of the Hindus, in its theory of the marriage of heaven and earth, employed the very obvious symbolism of rain as the impregnating fluid; and the soul, as the male and life-giving principle, purusa, descends in the form of rain and re-issues from men as the germ. This notion of the philosophers of the Upanisads is but a crystallization of the general connexion of moisture with life. Such ideas are in flux, and constantly passing into each other; but a tendency is clearly observable to regard dew as a sort of heavenly seed, fertilizing earth and its products, and stimulating growth.

The union of sky and earth, which results in the propagation of plant-life, is a world-wide theory; and synaesthetical ritual is extensively employed to

The dew, in other words, is the concrete concomitant of the spiritual substance. It may be conjectured that the miraculous power, conferred by fern-seed, of discovering hidden treasure is derived from the jewel-like seintillations of dew-drops.

A good illustration of such homologies between the concrete and the spiritual is to be seen in the OT account of manna and its deposition. Like fern-seed, it came with mystery, and, like fern-seed, it was to be gathered according to a stratagem. Its invariable antecedent was the dew, and, in the same way as it apparently crystalized out of the dew in the wilderness, so we may imagine the idea and the story of it to have crystalized out of the fluid notions concerning dew.

At even, 2 says Jahweh, yea shall eat flesh, and in the morning ye shall be filled with manna. And it came to pass at even, that the quails came up, and covered the camp from one to another, it was manna (What is this?), for they saw not what it was. 4 When the sun waxed hot, it melted. It was like coriander seed to the eyes of the Israelites. The connexion with dew is more precisely noted in the second account.5 And when manna did fall upon the camp in the night, and in the morning it was dry. 6 After eating the manna, and when the hand, the branches found that the manna automatically ceased.7 It was the corn of heaven (Nun) 8 (RV 'the bread of the night'), and from heaven it was rained upon the people with the quails, and the water, with the preservation of clothes, manna was a magically supported existence in the wilderness. The writer of Deuteronomy refers to the fact that they knew not what was this bread, neither did they say what is this name which is bread of heaven. 9

The whole account, with its significant analogies, is important as illustrating the psychological process by which a concrete idea may take shape in visual perception aided by imagination. Fern-seed, which sparkles like fire, and vanishes like dew, is, we suggest, an imaginative product of dew, as elusive as its source; manna, we suggest also, is equally an imaginative product of dew developed along another line—that of the ideas of food stimulated by starvation. Coming after or upon the dew, as the literal light food from heaven, the food of angels, easily passing through the flesh, as a true potable, it is as elusive as dew in its behavior and as unsatisfying in its results. But it supports like miraculously for those who are in a state of supernaturalism. Most certainly it is erroneous to base the story of manna on such actual phenomena as the secretions of the Tragia minnifera or other plants. 10 The comparison with coriander seed amounts merely to its standing for the essence of light, but not its nature.

These ideas may be more closely illustrated. The people of Halmahera hold that dew is the food of spirits.11 In Minahassa it is said that the first man fed on dew. Further, an essentially spiritual connexion is claimed for dew. The people last cited believe that the final end of man is to be merged in dew. The Balinese hold that the soul returns to earth, after being dissipated into the air by the creation of the body, in the form of dew. Thus the Maori belief is that the soul dies eight or nine days before it finally changes into water and disappears in mist.12

The dew, on the other hand, is the concrete concomitant of the spiritual substance. It may be conjectured that the miraculous power, conferred by fern-seed, of discovering hidden treasure is derived from the jewel-like seintillations of dew-drops.

A good illustration of such homologies between the concrete and the spiritual is to be seen in the OT account of manna and its deposition. Like fern-seed, it came with mystery, and, like fern-seed, it was to be gathered according to a stratagem. Its invariable antecedent was the dew, and, in the same way as it apparently crystalized out of the dew in the wilderness, so we may imagine the idea and the story of it to have crystalized out of the fluid notions concerning dew.

At even, says Jahweh, yea shall eat flesh, and in the morning ye shall be filled with manna. And it came to pass at even, that the quails came up, and covered the camp from one to another, it was manna (What is this?), for they saw not what it was. When the sun waxed hot, it melted. It was like coriander seed to the eyes of the Israelites. The connexion with dew is more precisely noted in the second account. And when manna did fall upon the camp in the night, and in the morning it was dry. After eating the manna, and when the hand, the branches found that the manna automatically ceased. It was the corn of heaven (Nun) (RV 'the bread of the night'), and from heaven it was rained upon the people with the quails, and the water, with the preservation of clothes, manna was a magically supported existence in the wilderness. The writer of Deuteronomy refers to the fact that they knew not what was this bread, neither did they say what is this name which is bread of heaven. 

The whole account, with its significant analogies, is important as illustrating the psychological process by which a concrete idea may take shape in visual perception aided by imagination. Fern-seed, which sparkles like fire, and vanishes like dew, is, we suggest, an imaginative product of dew, as elusive as its source; manna, we suggest also, is equally an imaginative product of dew developed along another line—that of the ideas of food stimulated by starvation. Coming after or upon the dew, as the literal light food from heaven, the food of angels, easily passing through the flesh, as a true potable, it is as elusive as dew in its behavior and as unsatisfying in its results. But it supports like miraculously for those who are in a state of supernaturalism. Most certainly it is erroneous to base the story of manna on such actual phenomena as the secretions of the Tragia minnifera or other plants. The comparison with coriander seed amounts merely to its standing for the essence of light, but not its nature.

These ideas may be more closely illustrated. The people of Halmahera hold that dew is the food of spirits. In Minahassa it is said that the first man fed on dew. Further, an essentially spiritual connexion is claimed for dew. The people last cited believe that the final end of man is to be merged in dew. The Balinese hold that the soul returns to earth, after being dissipated into the air by the creation of the body, in the form of dew. Thus the Maori belief is that the soul dies eight or nine days before it finally changes into water and disappears in mist.
following beliefs are particularly significant. The Sea Dayaks report that souls die seven times after the death of the body. 

*After having become degenerated by these successive dyings, they become practically annihilated by absorption into the air and then by a final dissolution into various jungle plants not recognized by any name.*

The Oto-Nzadju and other peoples of the East Indian Islands speak of the souls of the dead as plants. The Tuvalangi Daraks say that the soul after a time descends upon the rice in the form of dew. The more souls there are to descend upon it, the richer is the rice harvest. In reference to manna, it may be noted that the East Indians believe that, if the soul of the rice be absent, the grain has lost its nutritive property; a man may eat it but will never be satisfied. The soul of the Lushai turns into water, and evaporates as dew. If dew falls on a man, his child will be a re-incarnation of the dead. 

Here the idea of moisture in relation to life, and of unindividualized haze or mist, out of which individual forms are precipitated, meet again in dew. Thus, while the Hill Torajadas believe the soul to be a close female relative—believed to be the 'daughter' of 'vapour of the land'—forms clouds; and the Tracey Islanders say that the first man was created out of vapour. Thus the descent of the soul to earth and its ascent from earth go hand in hand. Part of it is reproduced in the form of moisture and produces dew. The ascending dew is rahmani; this is the second soul, nyawa rahmani, residing above the heart. The dew which ascends to the sky is rahori, the third soul, 'lustre of breathing'; residing in the heart; the dew which descends as rain is dysmanti, the fourth soul, 'soul of the body,' residing in the whole body. This account illustrates the spiritual potentiality of the idea of dew.

The special development of the idea of dew in both the Athenian and the Hebrew religions.

(1) In Athenian mythology, Herse (Dew) and Pandrosos (All-dewy) are daughters of Ceereps and Agrales. A rite, termed 'Eppaspaphos or Erphos, was performed in honour of Athene. Little is known either of Herse or the rite which seems to have been performed by Pandrosos. The statement of Moris, that the Eppaspaphos 'carried dew to Herse' in the Arrhephoria is uncorroborated. But the arrhephoria, or herepaphoria, are verified as 'maiden trained in the service of Athene, and living near the temple of Athene Polias.' In Athens, they bought a mysterious offering by an underground passage from the temple of Aphrodite & Kyros, not to Herse, or to Pandrosos, but to Athene. Farrel concludes that the fruits of the earth appear to have been in some way consecrated to Athene. It is also evident that at Athens she came into some contact with the earth-goddess. To reconcile her cult with Athene's, it may well have happened that the latter goddess was given two of her titles, namely, Pandrosus and Bhe.

Pandrosos is thus no individual spirit, nor originally an epitaph of Athene, but an epithet of the Earth Goddess, in reference to her dew conveying a spiritual connexion with crops. The ceremony embodying this connexion was transferred to the centralized deity of Attica—Athene. The dew-carriers are mentioned in inscriptions, but there is no such verification of the existence of Herse. She is, to be sure, a mere name, developed from the terms Eppaspaphos and Eryphosaphos. But it is a question what these terms themselves imply.

The story of Eppaspaphos being given to the three sisters, Herse, Pandrosos, and Agrales, to nurse, Pandrosos alone being faithful to her trust, is explained by Miss Harrison as an etiological myth, invented to account for the rite of Arrhephoria or Herepaphoria. The scholiast on Aristoph. Lysistrata, (490) observes: 'Some say, on account of the e, it is Eryphosaphos, because maidens carry nameless things' (Eppaspaphos) on account of the e, Eryphosaphos, because maidens walk in procession in honour of Herse, daughter of Ceereps. The terms Eppaspaphos and Eryphosaphos are also used for the young of animals, such as lamb and suckling pigs. A remarkable feature of the Thesmophoria, as the scholiast on Aristophanes says, is that in connexion with the fertility of the crops, was the casting of pigs into the fields or into Eryphosaphos, under whose protection the bringing out of the rotten flesh, presumably the following year. These services were performed by the Thesmophoros, and the flesh was used as a manure and in many agricultural rites as a magical fertilizer of the fields. Miss Harrison suggests that the ephosaphos or Eryphosaphos 'carried dew' was used like young animals, and that they were used in a manner and for a purpose similar to those of the Thesmophoria. The Arrhephoria is certainly associated with the Thesmophoria and Skirphoria, and it is in accordance with the principles of myth-formation that, as she suggests, both the name Herse and the story of Eppaspaphos was borrowed by a rite that had become mysterious.

Prelfer, on the other hand, had regarded Herse as a Dew Goddess—a personification of the Dew. Later German scholars regard her as a nymph of the same class as Aurox and Thalle—personifications of the 'growth' of the crops. No reliance is to be placed on the scholiast's reference to Eryphosaphos. Any 'mysteries', that is, ritual object—even a branch laden with dew—might be styled Eryphosaphos, just as much as a young animal or its flesh. And the word Eryphosaphos has the forms Eppaspaphos and Eryphosaphos. Eppaspaphos as a 'young thing' is a metaphor, a priori later in origin than a primitive agricultural ritual, and therefore unlikely to be the original meaning of the name of the ceremony. The scholiast on Aristophanes says: 'Maidens walk in procession in honour of Herse'; there is here no mention of dew, but he says, 'In the same procession maidens carried branches laden with dew, and omitted to mention the fact, branch-carrying being a regular detail of processions. Ofried Muller suggested that the arrhephoria carried simply leafe branches laden with dew, symbolical of a petition for a supply of dew during the heat of summer. 

Thus we have a ceremony similar to the widespread European custom of carrying May boughs dipped in dew. In Athens and in the Athenian custom there may have been a magical demand for dew rather than a prayer for it, but the branch is the important object, the focus of the demand for growth and fruitfulness of the crops; and the dew may be merely an accessory, a kind of prop, which on occasion, on, the whole, seems the most probable. Herse may be unreal as a deity, but the fact remains that the Athenian mythologists, if not the Athenian priests, actually personified the Dew, while the herepaphos only carried sacred dew. Though unverified, Moeris' statement may have hit the truth, and what they carried may have been dew. Here it is possibly significant that the arrhephoria carried their offering from the temple of Aphrodite & Kyros, just as some of the dew may have been in the gardens of the goddess of procreation, and possibly the generative symbolism
of dew was a factor in the ritual (see above). The
dew would thus serve to impregnate the fields.

In the case of Apollo Hespos at Vati, the epithet
seems to be the same character as Panodos, (2)
The post-Biblical liturgies of dew to the Hebrews show an interesting development of the ideas of the OT concerning dew. The Book of
Ezocoh, after describing the dwelling of the spirit of
the dew, and the relation between its clouds and
the clouds of the mist, speaks of 'winds
coming from the middle of the twelve portals';
these bring 'beneficial dew of prosperity'; from
other portals, 'hurtful dew' emerges, accompanied
by locusts and the thunders of Thy Name. The
Rabb
binical writings state that 'in the sixth heaven
there are treasures of hurtful dews and of beneficial dews.3 A prayer is offered
between Pesah and Shabat that God may pre-
serve the people from the hurtful dew.
The two loaves of bread 'waved' on Shabat are a sym-
boic petition to the Ruler of heaven and earth
and the four winds, to withhold the impromptu winds
and dews. As for the dew of blessing, thus
fluctuating between the two elements and the moral,
it is said, that since the destruction of the Temple,
no dew of unmixed blessing falls apparently on account of the cessation of the tithes and the
hands-offering.7 Dew falls as a heavenly gift, and
by the merit of man proper.9 Yet on account of the
Israel does dew come as a blessing under the world
on account of Jacob or of Job.9 God promised
Abraham under an oath never to let dew cease to bless his descendants, and therefore the words of
Elijah could not apply to us.

The Dew of the Resurrection is a remarkable
collection of these ideas, originating chiefly
from a passage of Isaiah: 'Awake and sing, ye
women of Zion, for thy dew is as the dew of
herbs, and the earth shall cast forth the flowers.'
The passage, 'Thou, O God, didst send a plentiful
rain, thou didst confirm thine inheritance, when
it was weary,'12 was interpreted to refer to an
incident at the giving of the Law
When God appeared amidst the trouble of the earth
on Sinai, life fled from the people of Israel and from all the
living people in the land of Israel; and the angels said: 'And Thou
art desirous to give Thy Law unto the dead or unto the living?' Then
God dropped the dew of Resurrection upon all, and they
received.13 This Dew of the Resurrection is stored up in
Arabot, the highest heaven;14 and by it the dead
are revived.

In the modern Hebrew liturgies Geeshem, 'rain,' and
Tal, 'dew,' have an important place, though
the prayers for them are regarded rather as an
affirmation of the Divine control of the seasons.
On the first day of Passover, Tal is
substituted for Geeshem. On this and other occasions for
Tal, the reader of Musaf/Shabbat, white shroud and cap, as on the Day of Atonement.
The Talmudists decided that the actual prayer for rain—'Give dew and rain for a blessing
upon the face of the earth'—should be introduced only at the inception of the rainy season.
The melodies accompanying Geeshem and Tal are
various throughout Europe, and are distinguished by
a quaint charm.

LITERATURE.—K. Kohler, L. N. Dembitz, F. L. Cohen, in JE, s.v. 'Dew,' 'Geeshem'; T. K. Cheyne, art. 'Dew,' in EJ; E. Neel, Palestine Explorations, 1882; E. H. Hull, art. 'Dew,' in JEB; J. G. Frazer, OIP, 1893, Passovers and Easter; L. de Peller, Die Griechischen Mythologien, 1872-75; Roscher, s.v. 'Tal.'

DHAMMAPALA—This epic poet of the Hindu
Dhammapala (Dhammapallama) is included among the thera ('elders') contemporary with the Buddha, to
whom are ascribed the poems preserved in the
Theragatha; and several others are mentioned as
the authors of minor works of later date. The
only one which seems important is the life of
the history of the religion is distinguished from
the other by the special title of Achariya, 'the
Teacher.'

In the colophons to those of his works that have
so far been edited we find two elements: (1) that
he claimed to have followed the traditional
interpretation of his texts as handed down in the
Great Minister at Anuradhapura in Ceylon; and (2) that
his life was spent at the Badara Thittha-Vihara.
And from the Suan,7 yet others have learned
that this place was in the Tamil country, not far
from Ceylon. It would seem, therefore, that Dhampapala was educated at the same university
as Buddhaghosa, that he was a Tamil by birth and
lived and wrote in South India.

The first of these conclusions is confirmed by the
published works of the two writers. They have
very similar views, they appeal to the same
authorities, they use the same method of exegesis,
they have reached the same result in philological
and etymological science (a stage far beyond that
reached at that time in Europe), they have
the same lack of knowledge of the simplest rules of
the higher criticism. So far as we can at present
judge, they must have been trained in the same
school.

As to the second point—the birth and life of
Dhammapala in South India—we have a curious
confirmation from outside. Yuan Chhwang, visited
Kaichipura, the capital of the Tamil country, in
A.D. 640. The brethren there told him that
Dhammapala had been born there.

He was a boy of good natural parts which received
great development as he grew. When he came of
the king was assigned to him as wife. But on the right
before the ceremony of marriage was about to be performed, he
was greatly distressed in mind, he prayed earnestly for an immediate
in answer to his prayer a good bear came to him
from a mountain monastery some hundreds of it from the capital.
When the brethren there heard his story, they compiled it
and gave him this explanation. It is true that the English translators of Yuan Chhwang use the Sanskritized form of the name
(Dhammapala). This would not show that the Chinese pilgrim applied the story to a
person different from our Dhammapala; for both
he and his translators frequently used the Sanskritized form (which they imagine to be more
correct) for Pali names of persons and places.

But Yuan Chhwang adds the title Phusa (that is, Bodhisattva). This shows that he applied the story to the
teacher of his own teacher, a Dhammapala
who had been a famous dignitary of the university of Nalanda in India, and who
must have flourished at the end of the 6th century. To him
he would naturally and properly apply this title, which was used among the Mahayana Buddhists in a sense about equivalent to our honorary degree of D.D.

But it is much more probably that the Kaichipura
bhhaktha told the story of his own distinguished

1. Watts, Yuan Chh'ang, II. 235.
colleague, and that the pilgrim, who knew nothing of the life of Dharmapāla, even in the case of the two scholars are quite distinct. Their views differed as widely as those of a Calvinist and a Catholic; one wrote in Pāli, the other in Sanskrit; one was trained at Anuradhapura, the other at Nālandā; and one is a member of the 8th century old movement, the other than the Sanskrit one, the one having flourished in the last quarter of the 5th cent., the other in the last quarter of the 6th.

The Gāndha-vamsa, a very late historical compilation, enumerates (p. 60) 14 works ascribed to Dharmapāla. Even the bare names are full of interest. Whereas Buddhaghosa commented on the five principal prose works in the Canon, seven of Dharmapāla’s works are commentaries on the principal books of poetry preserved in the Canon, two others are sub-commentaries on Buddhaghosa’s works, and two more are sub-commentaries on commentaries not written by Buddhaghosa. This shows the importance attached, at that period in the history of the orthodox Buddhists, to the work of re-writing in Pāli the commentaries hitherto handed down in the local dialects, such as Sinhalese and Tamil.

In his own commentaries, Dharmapāla follows a regular scheme. First comes an Introduction to the whole collection of poems, giving the traditional account of how it came to be put together. Then each poem is taken separately. After explaining how, when, and by whom it was composed, each clause in the poem is quoted and explained philologically and exegetically. These explanations are indispensable for a right understanding of the difficult texts with which he deals. The remaining three works are two commentaries on the Neigh, the oldest Pāli work not included in the Canon, and a psychological treatise.

Of these 14 works by Dharmapāla, three (the commentaries on the Therigāthi and on the Petu- and Vīmāna-sutta) have been published in full by the Pāli Text Society; and an edition of a fourth, his comment on the Therigāthi, is being prepared. Hardy and Windisch, in their editions of the texts, have also given extracts from his comments on the Netti and the Hiśmitā.

It is evident, from Yīn Chwang’s account of his stay in the Tamil country, that in Dhammapāla’s time it was preponderatingly Buddhist, and that of the non-Buddhists the majority were Jains. It is not very extensively Hindu. We have only the vaguest hints as to when and how this remarkably change was brought about.

DHRAMA.—Sacred law and duty, justice, religious merit. This is one of the most comprehensible and important terms in the whole range of Sanskrit literature. Indian commentators have explained it denoting an act which produces an virtuous quality of the soul called apiśra, the cause of heavenly bliss and of final liberation. In ordinary usage, however, it has a far wider meaning than this, and may denote established practice or custom of the caste or community. One of the six systems of philosophy, the Pāramāṇaśāstra, expressly professes to teach dharma. The special manuals of the sacred law, of which the Code of Manu is the most familiar example, are called dhrarmashastra, treatises on dharma.1 The Buddhist one of tradition, Dharma personified is the god of justice and judge of the dead. Adharma, the god of injustice, is his adversary. The ordeal of Dharma and Adharma consists in drawing lots from an earthen vessel.

One lot contains a white figure of Dharma, and the other a black figure of Adharma. In Buddhism, Dharma is one of the three members of the trinity (tribhūta, ‘the three jewels’): Buddha, the law, and the priesthood. The worship of Dharma, which is largely prevalent in Western Bengal at the present day in the form of the dharma-kutālas, shows how strongly it has affected the life of the piligrims who flock to the holy place.

DHĪYĀNA (Pāli dhāya).—1. Meditation, or dhīyāna, in Sanskrit.—This is a religious practice which presupposes a life of retirement, and concentration of mind upon a single thought. In the Rigvedic period we find penance (tapas) or bodily mortification, but in the Upaniṣad or post-Upaniṣad religious schools the idea was transferred from body to mind, until it took the form of dhīyāna, which began with a meditation on the sacred syllable Om. The object, method, and other details of meditation vary in different schools, but we may safely say that it has been and is the universal characteristic of the religious culture of all Indian religious schools. The use of the word dhīyāna, too, is not very definite even in the Upaniṣad itself. Sometimes it is different from yoga (concentration), which is a general term for such practices, or anam dyāna, or, at some times it is a part of the yoga practice. See art. YOGA. We shall here limit ourselves to the idea of dhīyāna in Buddhism.

2. Dhīyāna and samādhi.—In Buddhism dhīyāna forms an important factor in religious practice. First of all, we must clearly distinguish dhīyāna (meditation) from samādhi (absorption), for a confusion of the two terms often leads to hopeless misunderstanding. Generally speaking, meditation on an object becomes absorption when subject and object, the meditator and the meditated, are so completely blended into one that the consciousness of the separate subject altogether disappears. To attain Arhatship is to reach the tranquil state of samādhi, without being affected at all by outward environment and inward sinful thought. An Arhat is accordingly called the Samādihā (‘tranquil’). Samādhi forms the fourth factor of the Five Forces (bha), and the Fifth Faculty (vissenas-viśvaksena), and the first of the Seven Constituents of Bodhi (bhāva-bhāva), and the eighth of the Noble Eightfold Path (yāma).2 To attain samādhi is therefore the sole object of Buddhists, and dhīyāna is one of the most important means to lead one to that end. The common classification of dhīyāna into three degrees (see below) probably prevailed already in the pre-Buddhistic period. At any rate the mention of the fourfold dhīyāna in the Mahābhārata (xii. ex. 1), the counting among heretics of

those who regard each of the four dhyanas as the state of Nirvāṇa in the Brahma-jāla-sutta, and the reference in the Ric, senior to the Buddha, practicing the eight senses (nine Dhyanas and four ārūpyas) in the Jātaka, seem to point to the fact that the practice of the four dhyanas was common to both Brahmans and Buddhists. It was the Buddha who added some further steps to the four dhyanas.

3. Religious practices preliminary to dhyāna.—
Dhyāna, as stated above, is divided into four degrees in Buddhism. Even the first and lowest of the four dhyanas corresponds in its quality to a state higher than the sixth of the eight constituents of yoga (yoga-aṅga). To reach the first dhyanā several preliminary practices are needed. These correspond to the first five constituents of yoga. One has to keep precepts and rules (āśīla) laid down by the Buddha (yama-yama) ; secondly, to keep one's body and mind pure and serene, living in solitary retirement away from the people, in a forest or a cave (vihāra), and sitting cross-legged, always thinking on a religious subject (cetasā). There are several methods of preparatory meditation, according to the ability of the meditator. We shall give a few examples. A quiet-minded novice should practice mental meditation, and find his love (mata-karaṇa-bhāvanā). Another novice whose mind is stupid should practice self-control by meditating on the Twelve Chains of Causation. In this way a Buddhist should give himself what is called a preliminary kind of meditation at the outset. Ten kosiṇas, four or six anusati-thānās, in fact, the processes of the so-called kamma-thānās (analytic meditation), are preparatory to the practice of the right dhyāna.

4. Details of the four meditations.—When one gets accustomed to a concentration of mind amounting to a suppressing of the senses, one gradually arrives at the state of ecstasy, which is often compared with the feelings of a debt thus paid off or of a prisoner being released (e.g. Sāmañña-sutta). Roughly speaking, this state of ecstasy is dhyāna, yaññā, in it we have still four successive states. (a) The first dhyāna is a state of joy and gladness born of seclusion, full of reflexion and investigation, the meditator having separated himself from all sensuality and sin. (b) The second dhyāna is a state of joy and gladness born of deep tranquility, without reflexion and investigation, these being suppressed; it is the tranquilizing of thought, the predominance of intuition. (c) In the third dhyāna the meditator is patient through gladness and the destruction of passion, joyful and conscious, aware in his body of that delight which he then announce, patient, recollecting, glad. (d) The fourth dhyāna is purity of equanimity and recollection, without sorrow and without joy, by the destruction of previous gladness.

5. The effect of meditation.—The aim of meditation is the attainment of Arhat-ship, perfect enlightenment, which possesses the following merits. (a) Extinction of desire (taṇhā). The fickle thought and indulgence of physical power produce sin and illusion, which are the chief obstacles to the acquisition of Arhat-ship. The complete annihilation of sinful thought, i.e. the state of the fourth meditation, will lead to perfect enlightenment, the highest aim of the Buddha. The first three dhyānas therefore belong to sakkha (the first seven grades of the Holy Path), while the fourth belongs only to an asīka, i.e. an Arhat.

(b) Consolidation of knowledge (nāma-dassana). The practice of dhyāna will naturally lead to the easy confection of the mental faculties on a certain thought, and strengthen special functions proper to the consciousness. The right understanding of the Four Noble Truths (ariya-saccas), the cultivation of the four appamāṇās, etc., can thus be accomplished.

1. Buddhists, e.g. it is a mystical meditation in which one reaches the universe to any of the ten predominant ideas, viz. earth, water, fire, air, space, color, sound, taste, touch, and form

2. Buddhists, e.g. it is a remembrance of Brahma, etc. etc.

3. It embraces recollections of Buddha, cakkha, dhāraṇa, precepts, gifts, and gods.

4. The Buddha (Pali) and his disciples (Dharmas) are divided into seven grades:—

5. The Buddha (Pali) and his disciples (Dharmas) are divided into seven grades:
be attained only by the practice of dhāyana. Especially the all-important appamāṇā, which is common to Buddhism and the yoga philosophy, can be exercised only by the medium of dhāyana. In short, the attainment of knowledge cannot be perfected by meditation without the discipline of practice. 

(c) Acquisition of supernormal faculties (iddhā). There are six supernatural powers (abhijñāna), viz. various magical powers (abhijñāna), divine ear (iddhi), eye (iddhakaksha), knowledge of the thought of others (paramekkhā), knowledge of the former existences (pubbennādasamutti- nāna), and knowledge which causes the destruction of human passion (āsavakkhayakara-ñāna). These may be perfected by meditation. The Yogs, too, expect vihāra (superhuman faculties) by means of meditation.

(d) Enjoyment of the peace of dhāyana. Meditation gives the tranquility of rest. The dying Buddha is said to have sunk in meditation and passed all its steps forward and backward, till at last he repose at the fourth meditation, and then went into the Great Decease (Parinibbāna). Dhāyana is practised by one with the purpose of cultivating it as a habit, but it is not the aim of reposing oneself in peace, utilizing the result of it. Therefore it is sometimes called the practice of great enjoyment (cf. Bhramanahāra).

6. Development of the idea of meditation.—Dhyāna is the primitive conception of a means of attaining samādhi. In the Mahāyāna school its scope has been very much widened. The dhāya- paramātma, the fifth of the six paramātma (perfections) is only the way for the Bodhisattvas or Mahāyānists, but not for an Arhat or Hinayānist. One of Nāgārjuna's works enumerates sixteen kinds of dhāyana confined to Bodhisattvas. Asanga's Yogāchārābhidhāma mentions nine dhāyanas, and again subdivides them into thirty-nine. Further, in the Lākitāvādaya śāstra (ch. 2), dhāyana is divided into four: (1) balapicārāka, 'practised by ordinary persons'; (2) artha-pravīka, 'contemplating of objects'; (3) tathākalpavāna, 'meditating on Truth'; (4) tathāgatā, 'meditation of Buddha.' The four dhāyanas of primitive Buddhism as well as those of the Yogas are all included in the first category, the remaining three being a development in the Mahāyāna schools.

The ideal of early Buddhism is the equilibrium of meditation (dhāyana), and knowledge (prajñā); but in later Buddhism the discipline was not supposed to be an important feature for a Buddhist, and meditation came to have more weight than the other two factors, until in China and Japan there arose a sect, the Zen (Japanese dhāyana), in which it is the most essential part of the entire teaching. This sect has been gaining ground more and more, especially among the upper classes. See art. Zen.

LITERATURE.—The literature has been indicated throughout the article. M. ANESAKI and J. TAKAKUSI.

DIGAMBARAS.—The Digambaras, also called Digambara, form one of the two branches of the Jains. The name, lit. = 'clothed in the quarters of the sky,' designates them as naked monks, in contradistinction to the monks of the other branch of the Jains, the Svetāmbaras, who wear white clothes. There is very little difference between these two branches, and indeed, one of the most authoritative books of the Digambaras, the Tattvārthadīkāpāna Sūtra by Umasvati, is also one of the standard books of the Svetāmbaras, and its author most probably was a Svetāmbara.

The peculiar tenets of the Digambaras are the following. (1) Perfect saints (śrīcalas), such as the Tirthakaras, live without food. (2) The embryo of Mahāvīra, the last Tirthakara, was not removed from the womb of Devananda to that of Trisalā, as the Svetāmbaras contend. (3) A monk who owns a slave, e.g., a cow, will go to Nīrūna. (4) No woman can reach Nīrūna. Though, therefore, the difference in matters of belief between the two sects is, from our point of view, rather trivial, still the division between them is very marked. The following points deserve to be specially noticed. The Digambaras disown the canonical books of the Svetāmbaras, and contend that they have gradually been lost during the first centuries after the Nīrūna of Mahāvīra; accordingly they have a history of their own. In consequence of their having, in early times, separated from the other sect and developed independently of it, the Digambaras have an ecclesiastical as well as a literary history of their own, and have religious views peculiarly with regard to the laity, which differ from those of their rivals.

As regards the origin of the Digambara sect, it is ascribed to a period of time when the Buddha arose. The first historical commission was of the Līkā, and its reports have been lost. The Digambaras disown these ancient books, and have an independent history of their own. The Digambaras are the most numerous in Southern India, where they have the greatest influence, and a part of the Dravidian people the influence of Jainism is diluted by the specialists of Jainism in the last century. As regards the sect of the Digambaras, we have the following points. (1) The Digambaras are the most numerous in Southern India, where they have the greatest influence. (2) The Digambaras have an independent history of their own, with a religious view peculiarly with regard to the laity, which differ from those of their rivals.

DINKA. — 1. Geographical distribution and organization.—The Dinka are a congeries of independent tribes scattered over a country stretching from Renk in the north (several 300 miles south of Khartum) to within 100 miles of Gondo-koro, and reaching many miles to the west in the Bah el-Ghazal Province. All these tribes call themselves Diny or Derge, corrupted by the Arabic into Dinko; but no Dinka nation has arisen, for the tribes have never recognized a supreme chief, as do their neighbours the Shilluk, nor have they ever been united under a military despot, as the Zulus were united under Chaka. They differ in manners and customs and even in physique, and are often at war with one another. One of the most obvious distinctions in habits is between the relatively powerful cattle-owning Dinka and the small and comparatively poor tribes who have no cattle and scarcely cultivate the ground, but live in the marshes in the neighbourhood of the Sudd, and depend largely for their sustenance on fishing and hippopotamus-hunting. Their villages, generally dirty and evil-smelling, are built on ground which rises not little above the reed-covered surface of the country. The members of these poor tribes call themselves Moin Tain, i.e. 'Tain people,' tain meaning a piece of dry ground in the midst of the marshes; and although many distinct tribes live in the marshes and lead the life this habitat entails, their cattle-owning neighbours

DINKA

Most of the Dinka clans whose kwar is an animal derive their origin from a man born as one of twins, his fellow twin being an animal of the species which is the totem of the clan. The association is not quite so close, in which case the totem animal usually lays certain commands upon one of the members of the clan, offering in return certain privileges and benefits. Commands and privileges alike show the close relation between the animal and the man to whom he speaks, who is traditionally looked upon as the ancestor of the clan.

Although children take their father's totem, they respect the animal, and an animal may be avoided for a time due to certain conditions for this reason. Thus, a man whose paternal grandmother had the poisonous snake among her totems said that, if he saw any one kill a snake of this species, he would have his heart, because it was his father's totem. Further, it is customary for men and women to avoid eating their totem animal.

The following information concerning the origin of their totems was obtained from men of the Ngong Nyang tribe. It will be seen that the Dinka totems are not called by the name of their totem animal, but by that of their legendary human founder.

Gol & Mariak.—This clan has as totem the snake (gol). Long ago a snake came into the hut of a man named Mariak, and there gave birth to a child who spoke to Mariak, telling him not to hurt it or its children: "If you kill one of my children, I will give you the power of palm-leaf round your head." Another informant who belongs to this clan said that his snake would come into his hut at night and talk to him. He declared that the snake did not occur in a dream, but that the snake really entered his hut, and he expressed a wish to sacrifice a goat to the snake and make offerings of goats' milk.

Ngong Nyang man gave the following account of his conduct towards snakes of the same species. One day he was climbing a tree to get a fruit, and he saw one of the snakes that live in the forest. He was afraid, but the snake went into the throat of the tree, and said: "I do not desire any evil; do you give me this fruit, and I promise to keep you out of harm." Then Nyal took a bag and put it upon the snake's tongue, which so pleased it that it lay down in the bag for many days. Nyal fetched a toet (an unknown snake) and put it into the bag, but the snake went into the throat of the toet, and said: "I do not desire any evil; give me this fruit, and I promise to keep you out of harm." Nyal took the bag and put it upon the snake's tongue, which so pleased it that it lay down in the bag for many days.

Gol Aliko Chang Jirwarkat.—Aliko Chang Jirwarkat was the name of the boy born to one Nyamajo Akok as one of twins, his fellow twin being an elephant. The boy went to sleep in the village in the usual way, but the elephant was turned loose in the jungle.

Gol & Luel has the crocodile for totem. Long ago Luel found the eggs of a crocodile; he put them in his canoe, and, when he reached home, burned them under the floor of his hut. One night, as the eggs were on the point of hatching, the old crocodile came and scratched them up, and then led the young to the river. Before leaving the hut, the crocodile said to Luel: "Do not hurt us, and we will not hurt you. Wear mourning on your head and stomach for the crocodile; any one of you see another man kill one. A man of this clan will not be able to swim in the river even at night, for the crocodiles will not hurt him.

Gol & Tukver & Luhak & Lerkhavi has the hippopotamus as totem.

Gol & Tichol has the lion as totem, the founder of this clan having been the twin-brother of a lion. One Choi, who lived in a village near the town of Akok, had a huge lion which he could not kill. The lion killed people, and other animals, and brought terror to the village. One day the lion killed a man, and, when he reached home, burned him under the floor of his hut. One night, as the remains of the body were on the point of burning, the old lion crept out of the house, and touched the smoke with the tip of its tail, and then tore a splinter of bone or portion of gristle becoming wedged between its teeth, it would return, and the man would lay, until he came out and removed the source of its discomfort.

Similar beliefs occur among other Dinka tribes. The Ramba clan of the Niel tribe derives its name from that of an ancestor.
who was born as one of twins, his fellow being a snake called Gor. Gor was placed in a large pot of water, but he soon died; so a man was called who prepared the bird for burial by being smeared with dung and wrapped in the skin of the sacrifice. This was at Akoko, where there is still a shrine to Gor. The body of the bird was prepared in this way in order to represent the birds from injuring the crop. It is performed by one man only, who is head of the clan, and who would teach the procedure to his son. A Shish man, having as totem the poisonous snake among that, though this might bite him, the woman could give him little trouble, and he would certainly not die, as would men of other clans.

The Niel Dinka has a number of stories concerning animal ancestors, which refer to a time when animals and men who had long been associated together in groups began to separate. When each began to go its own way, it was thought well that men should know which animals had been their particular friends.

One of these stories relates that once, long ago, a woman lay sleeping, when a hyena ran up and leapt over her. Some of her people wanted to kill the animal, but others restrained them, saying that it was there for some wise purpose. When her child—a boy—was born, he limped like a hyena, so he was named Ben, which is one of the names of the hyena, and his descendants have the hyena as their totem animal.

According to the Niel, all Dinka recognize two kinds of lions, viz., man-eaters, which are not considered by men as the lion totem, and a cattle-eating variety, which the lion men believe to be of one blood with themselves. The lion people occasionally feed the cattle-killing lions. They kill a sheep and eat it into joints, which are then sold upon the town, and the next little distance from the village, and left there. The clansmen pray that the lions may come and eat; but, if the food has not been taken after a few hours, it is eaten by the men themselves. Man-eating lions, without opportunity of occurrence, oxes. Men feed their totem animal, throwing down fragments of meat on the outskirts of the village; and hyenas treat hyenas in the same way. It is said that formerly it was a common practice of the people of places of worship where the totem animals could find them, and that sacrifices were offered to them; these customs, however, seem to be observed no longer, though it is alleged that they might still be performed in times of great difficulty and danger.

The writer has no record of plant totems among the Tain Dinka, but there is a tree called ruul, bearing fruit supposed to resemble a woman's breast (the Sudanese Arabs call it Abu shuwar for this purpose). Among the Agar and Shish Dinka, this tree is considered an ancestor, and is treated with the respect shown to other totems. Two Agar men, whose mothers had ruul as their totem, would neither come into any contact with the tree, nor use it even as a ball, as other clans would do. If they disregarded this prohibition, their eyes would become inflamed. Among the Shish Dinka there is a clan, or perhaps a family, which claims descent from a girl who was twin to a gourd plant. Its members do not care to drink from a newly made gourd-vessel, and apparently do not grow gourds, or, if they grow them at all, do so sparingly.

The account given above, of the reciprocal favors conferred by men and by totem of the lion clan, raises the question whether all folk of this clan possess the powers exercised by Chol and enjoy the same privileges. The writer was not able to investigate this further. The Tain Dinka women gave the fullest details of how they would leave fishe in the jungle for their carnivorous totem animals, without receiving any corresponding favors from the latter. This suggests that Chol was regarded as possessing powers not shared by all his clansmen, an idea which is strengthened by information given by some Agar Dinka from the Bahr el-Ghazal, one of which said: "A man totem whom he called an ancestor was a small bird, anster, which damages the corn. No doubt anster is one of the small birds called short-birds in the Sudan, though this particular custom among them, where they do much damage. When these birds become dangerous to the unique crop, the informant's grandfather would take a head of dura, some grass from the skin of the black sheep, and black, the other white. The white sheep was killed and the neck cut, then eaten. From other clans the black sheep was thrown into the river with the porridge and the unique head of dura. Although the sheep was not tied up, it was said to sink immediately, for the 'river people' took it. The man who makes the porridge does not taste it, nor does he eat the flesh of the sheep, and the sheep and the dura were prepared in order to sacrifice. A Shish man, having as totem the poisonous snake among that, though this might bite him, the woman could give him little trouble, and he would certainly not die, as would men of other clans.

Among the Dinka living in the neighbourhood of the Khor Adar there are certain clans which do not trace their descent to an animal, but to a human being possessed of super-human or non-human qualities.

Long ago, men and women of the 'river people' would sometimes come out of the river, marry, and settle down in the neighboring towns. The description of the coming to land of one of the 'river people' is curiously like the birth of a child; the river being regarded as the womb of the human being whose umbilicus is joined by a cord to a flat object beneath the water. The cord is cut, and bullocks are killed and thrown on the river shore; the women take care of the sacrifices, to the village. Their descendants should sacrifice on the bank, throwing a live cow into the river, after giving it a pot of milk to drink, into which the old and important men of the clan have spitted. At the present day the 'river people' do not do more than throw the head and bowels of a bull into the river, cooking the meat and eating it themselves.

The Boweng clan of the Niel Dinka appear to have the river for their totem.

Long ago a woman coming to the river saw a beautiful girl called Ack borne up by the water and carried on to the bank. She accompanied them to the village, but, when they tried to punch her, she sprang liquid as water: she was a cow, the villagers escorted her back to the river, where they sprinkled her with the black skin, taken from the bull; at the end of the rains, the Boweng clan still take a cow and her calf and a bullock, and all the cattle from the river back, which they then throw alive into the river, which takes them away, so that they are never seen again.

There is an evidence that, when a clan is particularly strong in a given locality, its members tend to forget that their totem is but one among many, so that they may show annoyance if other folk do not treat it with respect.

The Shish in the neighbourhood of Seembe said that the first people to settle there were snake men, and that for some time they formed the majority. After a time these totem clan became powerful, and, because its members killed and ate snakes, the men of the newly weakened snake clan left the country and went to live among a group of Allah Dinka, where they were free from the terrible odour of cooked snake's flesh. More recently a Shish family, belonging to a clan that does not eat the fish, lost their own tribe and went to live at a place called Lot, among a group of Hor Dinka who also respect this fish.

Besides these clans with more or less typical animal ancestors (totems), certain groups of people, often larger than a clan, have various particular objects which they also speak of as totems. The stone called Madwich, which the Tain say fell from the sky within the past twenty years, is an example of this. The group that reveres Madwich is smaller than a clan, for its cult appears to be limited to members of a part of the Parlik clan (of one of the Tain tribes), whose totem is the snake (nied).

A youth of about twenty, who was named Madwich after the meteorite, said that his father sacrificed many oxen when the stone fell, though the rest of the village did not concern themselves so deeply, and that at the present time his family alone pay constant attention to Madwich. The stone, which is now at Parlik village, fell before his birth, but after that of his elder brother.

When it fell, 'every one, including his parents and even the dogs of his elder brother, became mad.' This word is applied to the possession of a totem by a spirit; perhaps it has a slightly different meaning in this instance; at any rate, the fact that it is not applied to some Niel clan only, as it is said to be due to the possession of a totem, and sacrifice were offered in this way. The coming of the meteorite, Madwich is said to have been prophesied by a totem called Jalaung, who was killed during an Arab raid; and a young man offered in sacrifice of an animal ancestor. Thus it might make men ill in order that a sacrifice might be offered, and it would constitute a great misfortune for a man to see a totem in the usual way; asking that a bullock should be killed.

Another meteorite, said to have been found near the Tain village of Agar, and two sheep, one black and the other white. The white sheep was killed and the neck cut, then eaten. From other clans the black sheep was thrown into the river with the porridge and the unique head of dura. Although the sheep was not tied up, it was said to sink immediately, for the 'river people' took it. The man who makes the porridge does not taste it, nor does he eat the flesh of the sheep, and the sheep and the dura were prepared in order to sacrifice. A Shish man, having as totem the poisonous snake among that, though this might bite him, the woman could give him little trouble, and he would certainly not die, as would men of other clans.
villages, the inhabitants of which together constitute the Chiro tribe. All the Chiro clan revere Bo, though their members have animal totems of the usual Dinka type.

Some of the Bor Dinka speak of Lerpin as their kwar; but this is an example which is very far from typical, for Lerpin is both a spear which fell from the sky with the meteorite and a spirit immanent in every rain-maker of the Bor tribe, and is one of the most powerful of their jok (see below, § 4). It is clear that Lerpin is not homologous with the ordinary Dinka totems; in his spear form he overtops the meteorite, and in his spirit form he is immanent in every rain-maker of the Bor tribe, and is one of the most powerful of their jok (see below, § 4).

Finally, there is evidence that, apart from meteories and other unusual kwar, some of the clans of the Tain Dinka have, or had, more than one totem.

The members of the Chiro, Njong Nyang, and Pariak tribes consider the fish reared as an ancestor, telling the usual story that their ancestor was born as a twin of the fish, the latter being taken to the river, where he instructed mankind that, in spite of the relationship existing between them, they might catch and eat his descendants. There can be no doubt that the relationship is still acknowledged as existing between the fish and the members of these tribes is that the shadow of the normal totemic relationship that formerly existed; nevertheless the rings that Apotet cast into the river (see Njere gau-e) indicate that, so far as the relationship is, it is not utterly ignored in practice.

It will be noted that all these examples of unusual kwar are said to have fallen from the skies. The absence of stone meteorites, and is not that the stone meteorites should be spoken of by the most holy term known, namely that applied to the revered animal totems of the tribe.

3. The worship of Dengdit. The Dinka are a deeply religious people. They worship a high god, Dengdit, lit. ‘Great Rain,’ sometimes called Nyaliich, and a host of ancestral spirits called jok. The name Nyaliich is the locative of a word meaning ‘above,’ and, literally translated, signifies ‘in the sky’ used in the singular. The name of the rain is except as a synonym for Dengdit, and the common beginning of the prayers of the ‘Tain and Bor Dinka is Nyaliich ko kwev, ‘God and our ancestors.’ This phrase indicates the two main elements of their religious faith. In the first place, it is but natural that the marvellous objects should be spoken of by the most holy term known, namely that applied to the revered animal totems of the tribe.

It is he who created the world, and established the order of things, and it is he who sends the rain from the ‘rain-place’ above, which is especially his home. Nevertheless, in the ordinary affairs of life the jok are appealed to far more than Dengdit, and in some cases in which the appeal is nominally made to Dengdit, its form seems to imply that he has been confused with the jok. Among the Tain tribes there is a word ran or aram which is called out to the new moon, and seems to be an expression of greeting or praise, or perhaps is used to deprecate anger.

It is evident to consider the worship of Dengdit and the cult of the jok separately, though it must be realized that they constantly touch, and even overlap, each other. The Southern Dinka (to whom the following specially refers) do not appear to use set forms of prayer, but seems to ask in ordinary simple sentences that the immediate want may be granted. They also have a number of hymns which are sung when an ox is slaughtered to avert drought or sickness; but, as Mr. Shaw informed the writer, men sing them when doing light work, and

lately during a severe thunderstorm every one joined in lustily to appease the elements. They also burst into one of these songs when bidding farewell to the Sirdar who visited them recently. The following songs collected and the path indicated that Mr. Shaw were composed by the Tiet Walt of Bang village, who asserts that his spirit is Dengdit (see below, § 4). It must be noted that in Dinka hymns Dengdit habitually speaks of men as ants (aikh).
DINKA

Offerings are made to Dengdit at certain shrines—perhaps they might be called temples—which seem to be scattered all over the Dinka territory. Most Dinka tribes have one shrine in their territory, and it is this shrine that is commonly called the Shish. Probably these differ little in appearance from the shrine of Lerpin served by Biyordit (see below, § 5). It is true that neither Shish nor Agar is a shrine of the usual kind near the shrine, but perhaps too much stress should not be laid on this negative evidence, and a photograph of the great shrine at Luang Deng shows that this consists of three ordinary looking tanks. Agar informations, one big place in Luang Ajok near Rumbek is in charge of a hut bigger than an ordinary tank which is surrounded by a fence. This is called buak (not to be confused with a cattle buak); it is not a tomb, nor has any one been buried near it. The door is always shut, and may not be opened even by theRAIN (the high priest of the shrine and the rain-maker of the tribe) unless a sacrifice is made and milk is split in front of the door. In the shrine at Luang Ajok there are several tanks. There are fat in a big house, special sticks of rhinoceros horn, and a number of clay pots. All these things belong to Dengdit, who long ago came to earth bringing them with him. One morning the people found the buak built, and the next morning it was taken down. It was decided then that Dengdit alone could have done this, and that it was his place. Dengdit still lives in this shrine. The Shish say that there is a hut called buak sacred to Dengdit at Luang, within which are certain sacred shrines. It is red, and is built on the roof; Dengdit is always there. The great ancestral rain-making ceremony of each tribe takes place at one of these shrines, as does the harvest ceremony held after the cutting of the dura; here, too, is where the cattle are to be installed, and the new buak is built.

The shrine at Luang Deng is of the holiest existing among the Dinka, who visit it in large numbers. One of the three tanks is the house of Dengdit. The door is always shut, its guardians being certain men (and women?) who are regarded as being especially the servants of Dengdit. Only they may enter the shrine, but a man desirous of offering may take cattle and offer them to Dengdit, asking that the desire of his heart may be granted. The door of the shrine is opened when one of the animals brought for Dengdit is slaughtered, and, looking in through the doorway, the worshipper sees the shrine shrouded in the shifting shapes of men and animals and even of abstract qualities—happiness, hunger, satisfaction, cattle-sickness—and among these figures are eyes and ambiguous lines. None sacrifice is made until Dengdit has sent a dream to the keeper of the shrine, and then it is accepted. Of the meaning of the sacrifices there are nearly always kept waiting for a few days. It is very rare for a sacrifice to be refused; but, if a man be dismissed without being allowed to put his animal, he will soon suffer disease will attack his people. As the worshipper approaches, he is accompanied by two servants of the shrine, one on either side. A spear specially kept for the purpose is used for killing the victim, and the spirit of the animal goes to join the other spirits in the shrine. Before the worshipper leaves the shrine, one of the servants of Dengdit takes dust from the holy precincts, and, mixing it with oil, rubs it over the body of the worshipper. Sometimes a material object such as a spear may be given to the man as a sign of favour and a guarantee that he will obtain his wish. Offerings such as pieces of tobacco may be thrown upon a low mound of ashes which has arisen in front of the shrine from the cooking of many sacrifices. The contents of the large intestine of the victim are scattered about and over this mound, and near it the worshippers thrust the branch of a tree called around it. It did not appear that any attention was paid to the fate of this branch, though it was said that it might take root and grow.

Among the Shish, certain men who lived long ago were esteemed as the ‘sons’ of Dengdit, though this expression must not be considered to imply any physical relationship; it seems that the Shish considered these ‘sons’ as spirits who came from above to possess certain men who became known by their names—Walkeri, Majush, Mabor, and Mok. Each of these as the ancestor of one of the Shish clans has become a powerful jok of the usual type (for worship at their graves, see § 4).

4. The worship of the dead.—Every human being has within him two souls, the atiep, which leaves the body in sleep and whose wanderings are the common source of dreams, resembles, or perhaps may take the form of, the shadow. The second ‘soul’ is by no means so well defined as the atiep; it is sometimes called ged, and sometimes, we. The writer could not learn anything definite about the ged during life; it may be connected with the vegetative functions of the body, but after death it remains with the body in the grave. In this article it is the atiep that is meant when we use the word ‘spirit’ is used to refer to the spirit of a dead man. The atiep of a father, mother, or ancestor may at any time ask for food in a dream. A man will then take dura flour and mix it with water and put it in a little pot, and serve it to his atiep. An atiep which has been recently dead is spoken of as jok, and the spirit of the animal ancestor is a jok. The spirit of the atiep of a dead man was summed up by a Tain man as follows: 'The atiep of my animal [ancestor] is a jok, the atiep of my mother is a human spirit (atiep); [the spirit of] my mother is also a jok, but [the spirit of] my animal [ancestor] is a jorudi (a very great jok), and would be angry if food for it and my mother's jok were put together.' Although the jok may send sickness, death, and misfortune, when another jok is weaker, they are the guardian spirits of the house. The clan, that is, all the atiep, assert themselves in the doings of their descendants, and being ever ready to help them. From this point of view there is a certain amount of confusion between the atiep and the recent ancestor, and the general influence of the family whom they, the powerful ancestors. It seems that, although the former are not specially invoked for aid in difficulties, they are considered to take an active interest in their descendants, and probably all that is said concerning the lovingkindness and power wherever they are applied is in a lesser degree to the atiep.

The jok know when a child is born, and protect it from the very beginning, though a man does not tell child about the jok until it is well grown, perhaps not till about the age of ten. The jok of both sides of the family protect the child, coming to its assistance in any sudden danger. In adult life, when invoking the jok at a time of stress, a man calls upon the jok of his ancestors, regardless whether they are the real to the jok or children of his mother's clan. Thus, when harpooning a hippopotamus, the word usually spoken is jangwaw, 'O jok of my ancestors!' The jok hear the invocation and come to their descendant's assistance, entering his body and giving strength to his arms, and leaving him only when the spear has been flung and danger is over, for a man's jok are ever near him in enterprise or peril. Sometimes the appeal is made specially to the jok in animal form. Thus, Fei, a man of the Mariak clan of the Ngong Nyang
tribe, when about to cast his harpoon at a hippopotamus, would say: *Ayub tid agong e pok Mirandok jok;* or, *Sirieo, O spirit of my clan, my spirit the snake!* 

Men and women who are able to see and to communicate with the spirits (*attep* and *jok*) are called *tiet*. Their power is attributed to a spirit, always, we may consider spiritual immanence for the *tiet*; and, as the spirit on the death of the *tiet* will generally take up its residence in the body of a near relative, the office tends to become hereditary. Often a *tiet* will explain to a relative that, after his death, he will communicate with him, and a change of manner, trembling fits, and periods of unconsciousness are regarded as signs that the spirit has taken up its new abode. The powers of the *tiet* are most commonly directed to discovering what *jok* is responsible for the illness, and what must be done in order that the patient may get well; but he also gives advice concerning lost cattle and other accidents of daily life. The cause for the influence exerted by the *tiet* varies enormously.

The *tiet* of a Malek village was an old woman of whom it was openly said that she was little good. On the other hand, Wal, an old Dinka living in a village of the *ewat* tribe, was renowned for his influence not limited to his fellow-travellers; for, although his spirit *Deng* was in 1908 in Wal's body, he is as alive come to consult and pay the strictest attention to his commands. Wal is a man of about fifty, differing in no obvious external character from his fellows. Despite his febrile deference shown him in this, however dense the crowd round him, he is never jostled. Wal says that his spirit *Deng*, which appears in one aspect at least to be identical with Dengdit, and at the present time he is certainly the most important factor in the spiritual life of the *ewat* and neighbouring tribes. Some men of the Chiro tribe said that, if another stone like Madwich (see above, § 2) were to fall from the sky, it would be called Deng, because the spirit *Deng* has come to the *tiet* Wal in the village of Kempt. Wal is never anxious to make clear his adherence to the Government, and even when that his spirit is *jok* (as Europeans) and came from Khartum, all the black tribes regard as the house of the white man. He is certainly opposed to bloodshed, and has lately condemned the participants in a quite insignificant brawl, in which little blood flowed, to an elaborate ceremony of atonement. It is said that two goats are killed, the flesh of one being eaten, while the other is cast into the bush. Wal asserts that this is not a revival of an old custom, but a new form of sacrifice dictated by his spirit; and this was certainly the opinion of those with whom the writer discussed the subject.

Although Mentioner (Die Dinka-Sprache in Central-Africa, Brixen, 1886) accepts the view adopted by the early missionaries, that the word *jok* can be adequately rendered by 'Satun' or 'der Teufel' (op. cit. esp. p. 57), this is incorrect, and the relation of the sickness to the grave after death is in outline somewhat as follows. The spirits of the old and mighty dead (*jok*) and of the recent dead (*attep*) exist in and around the villages in which their descendants live. *Jok* are more powerful and energetic than *attep*, and they able to control them. They are also thought to have their habitat in the earth in the immediate neighbourhood of these shrines. *Attep* are at their strongest immediately after death, and, although funeral meals are held, the sickness children are held; or the *attep* are called, and in such cases the children are sent sickness; in fact, the routine treatment of all sickness is to make offerings to the *jok*

(or Dengdit, when he and the *jok* are confused) in the hope that they will remove the sickness for which they are held responsible. If illness runs a fatal course, it is the *jok* who are considered responsible for the death. The following account given by the Shish shows how the sacrifice to the *jok* is conducted.

When a male or female is sick, or one or more sheep or goats are killed as a sacrifice to the *jok*. The animal or animals should be provided by a near relative, and should be killed by a married man with children, preferably the father of a large family. Some of the meat is left over night in the house of the sick man, for the *jok*. In the morning it is brought out and eaten by the clan, but the fat is collected in a pot, and again placed in the house, for one night, for the *jok*. Next day this is cooked by the male and female women, who, with the old *jok*, go to the place where the sacrifice is left to dry on the ground, and is afterwards buried in front of the house near the place where the animal was killed.

Even childlessness may be attributed to the displeasure of the spiritual immanence. A husband does not attribute this to his own importance. The *tiet* may be consulted. The *tiet* often says: 'Give more cows to your father-in-law,' on the idea that this will appease the *jok* of the wife's family, who, as *tiet* can prescribe an offering to the *jok* to be made by the other side of the family, for the *jok* of the husband's family may be angry if the woman's brothers have no children; so that the husband has to bring them to have children. Incest with the *jok* and thus causes barrenness; and a girl guilty of this offence will have no children, even should she marry, until she has owned her sin, when her lover will be forced to provide a bullock to be sacrificed in atonement. The youth's father kills the bullock, and the girl's father takes some of the contents of the large intestine and swears it on his daughter's abdomen and that of her partner, thus removing the taint of sin and taking into capable of bearing children.

Shrines raised to ancestral spirits fall into two classes: (1) grave shrines, and (2) shrines erected by order of a spirit (*jok* or *attep*), or on account of the appearance of a spirit in a dream, or built to provide a new resting place for the spirit. Grave shrines do not appear to be common, though the writer has records of the graves of the founders of four of the Shish clans that have become shrines. These are the graves of the so-called 'sons of Dengdit' already referred to. These four men are to some extent regarded in the same degree as heroes, for they taught men how to grow *dura* and to fish. It is said that formerly huts were built over their graves; these have decayed, but even now a ceremony is held at each grave in July. In each grave is put the food of the people descended from the founder take part in this, though their wives, who of necessity belong to other clans, accompany them. There is no resident guardian at any of the shrines, but at the yearly sacrifice one man, in whose ancestral spirit the immanence, kills a sheep or a bullock, and smears its blood and the contents of the large intestine upon the grave, before the assembled descendants of the hero. The flesh is boiled, all eat thereof, and great care is taken to break the bones, which are thrown into the river. Shrines of the second class appear to be found in all Dinka villages. The worship at one of them in the Shilluk village of Tonga near the Shilluk-Dinka boundary is especially interesting, because it clearly indicates the hereditary nature of the priesthood that these shrines call into existence, and also because it shows that the *jok* on the maternal side are regarded with the same awe and affection as those of a man's own clan. The shrine is of a temporary character in the ordinary Shilluk homestead. It consists of a few long, roughly trimmed sticks thrust into the ground, from which are hung a number of beads, small gourds, small boxes, and fragments of sheep bones. In the ground is placed a flat stone. The stones at which sacrifices have been made, and frag-
ments of the skulls of sheep killed at the shrine. By the side of the ashes there is a laggot of sticks placed upright, supporting a gourd in which food had once been placed.

The shrine is served by one Agwer, whose grandmother, a Dinka, was made ill by an ancestral spirit, Deng,1 in order that she might be taken to the village. As the illnesses accumulated, a shrine came into existence; in fact, a tiet seems to have associated his descendant to make repeated sacrifices to him at Tonga. At the present day offerings are made frequently by sick folk, descendants of Deng, and a ceremony is said to be held at the beginning of every rainy season.

Another shrine, existing at the Chiro village of Masul, consists of a tall tree thrust into the ground; the main branches have been broken off short, and part of the vertical column and horns of a goat have been attached to them. There are also several pieces of rope, of the kind attached to hippopotamus harpoons, and several small gourds, while a number of fragments of hippopotamus bones lie at the foot of the post. The origin of this shrine is as follows.

About three years ago the children of Apout, the born of the village, sickness, but it was not until they had been ill for about four months that the Jok of Batit, the ancestor who sent them their skins, and that tiet in a instance and demanded that a goat should be given him. The tiet told Apout to raise up a post and to kill a fat he-goat. The post was prepared, a fat goat's head thrust was wound the blood and contents of the gut were collected and buried in the hole. Then the post was thrust into the centre of the hole, and earth was thrown round it. Meats were cut into pieces and boiled, and eaten. The bones were not broken, but were placed around the post. Half a month after, all were thrown into the river, except the skull and backbone, which were put upon the post. The tiet was given the skin. At the time the skin was given to Apout the fort of four small pieces of meat in four directions, apparently towards the four points of the compass, on the ground round the stick, saying: 'O my grandfather, I have made a sacrifice for you, do not let my children be sick any more.' Apout was pleased, and the tiet came to him, and at the same time threw into the water a small iron bracelet which he took from the arm of one of the sick children. These things were cast into the river because Jan, the father of Batit, was twin with the fish rheem, for whom the things were intended. The hippopotamus bones at the foot of the post were placed there by a brother of Apout, after he had spared one of these animals. He did this in order that the spirit of his ancestor might help him to kill other hippopotami. The ground round and under this post is in a special sense the habitation of the Jok, and, even if the sickness had not occurred, it would still have been necessary to prepare a habitation for the Jok, where men might come to invoke their assistance before going fishing or hunting. The Jok was traced on a journey. In the last event the traveller puts his right hand flat on the ground near the posts, and says: 'Grandfather, I am going away, take care of me. I go not let me go without me.' If the Jok, hippopotamus-hunting, a man takes his harpoons to the wife of the tiet, and says: 'My son, I have prepared a bone of the hippopotamus, I have cut the fat, and poured some of the oil on the ground at the foot of the post.'

A another form of shrine, called bitor, is found in the Tain villages near Bor. The construction of the bitor is very simple. No chamber is made; a hole about a foot deep is dug and filled up with mud, in which the horns are fixed, for only the horns, and not the skull, are used.

One of these shrines was raised by Der in his new village of Ark for the atlep of his father Anet, to live in 'just as a house,' for the spirit knows of the wanderings of its people and moves with them. This was done at the instance of a tiet, who said that, if this were neglected, Der and his children would suffer. The shrine itself consists of a mound of mud, at one end of which are fixed the horns of a bullock, which is covered with leaves. Here is one of the peckets to which cattle are commonly tethered.2 The bullock, providing the horns were sacrificed by Der, who explained aloud that he was making a sacrifice on behalf of the family. The bullock was killed by having a spear plunged into its heart, and small pieces of all the organs and parts of the animal were scattered on the ground for the spirit of the dead.3 At each ceremony connected, a few drops of new milk, and a little butter, are placed upon the shrine at anointed; the shrine is regarded, however necessary, without sacrifice or any ceremony. Bitor are found in all the Tain and in some, at least, of the Dinka villages, but usually they do not resemble the back of a bullock, the mud being built into a more or less circular mound flattened above. A stick or young sapling, 6 or 8 ft. tall, is thrust into the ground near the base of the bitor. The rope is hung up. Among the Tain Dinks the sons of a dead man will procure a bullock and build a bitor whenever possible, the widow making the mud mound, in which the sons plant the horns of the bullock. This is done not as a means of the spirit of the dead, but as a resting-place for his spirit (atlep). There is often the greatest confusion as to whether these bitor are built for Dengdit or for the jok; in fact, the two are often spoken of and treated as if they were identical. As an example of this confusion, reference may be made to a bitor at Ark village meant to secure the help of the jok in fishing and in harpooning hippopotami. When a fishing or hunting party is about to start, they take some harpoons and a bullock, place them in a hole, roast them, and, when cold, scatter them upon and around the bitor. In spite of this, the bitor is often said to belong to Dengdit, and the usual explanation is given of the cattle rope, namely, that Dengdit will kill the hunter, and that he knows that an animal has been sacrificed.

Besides the numerous offerings to the jok already mentioned, certain annual sacrifices are made to them, of which the following are examples. The Bor Dinka make a sacrifice at the beginning of each wet season, in order that the jok may not injure the cattle in the bush, the horns and legs with the dried skin adhering to them being hung up within the entrance to the tsuk. The Shish make an annual sacrifice to the jok and in addition to the 'milk offering,' a pot of water, which is considered as a special form of jok. This sacrifice is made by every householder, for, if any omitted to perform it, his dura crop would be poor, and his cattle would sicken or die. Each householder kills a sheep and allows the blood to soak into the ground; the flesh, which is buried in front of the house, is eaten, care being taken not to break the bones, which are collected and thrown into the river. As he kills the animal, the householder says: 'Jok! this is your right.' Pieces from different parts of the sacrifice are boiled in a pot and left outside the hut during the night; in the morning the contents are scattered round the house, where the dogs and birds soon dispose of them.

The sacrifice of the 'river people' takes place after the rains, when the people leave their inland settlements to come down to their dry-season abodes on the river bank, and before they build any houses. If, before going fishing or hippopotamus-hunting, a man takes his harpoons to the wife of the jok, and says: 'My son, I am preparing a bone of the hippopotamus, I have cut the fat, and poured some of the oil on the ground at the foot of the post.'

Belief in the guiding and protecting influence of the jok is perhaps the only part of their eschatology which is common to all Dinks, and is so well defined that it can be definitely formulated; the examples already given of the action of the jok and the sacrifices offered to them make their action and power reasonably plain as far as they relate to human beings. In other words, the idea of the atlep to the living is tolerably well known, the very opposite is the case in regard to the rol or wrv, for its condition excites none of the interest which is felt in the atlep. The generally accepted view is that the death of a bullock (jok) has been indicated already. The atlep of the recently dead are usually thought to frequent the villages and houses of their descendants, taking an interest in their doings and moving about with them. Considering the jok, the ritual, and the provision for the welfare of the dead, are modified in the case of old influential men, increasingly lavish funeral feasts being provided for important men such as bain, the avowed purpose of all funeral ceremonies being to propitiate the spirit of the dead (jok) so that he should send sickness and misfortune on the
living. Apart from the funeral and mourning feasts, atiep are not given sacrifices unless they appear to their descendants or to the tid in dreams and ask for them.

Side by side with this doctrine of the atiep and its corollaries that the spirits of the dead everywhere surround and mix with the living, there is another, which, if it were accepted and applied logically, would be incompatible with the first. According to this belief, the atiep leaves the neighborhood of the body at the time of its burial, and passes above to the place of Dengdit. The spirits that reach Dengdit do not lose their power of returning to the earth, for it is a common belief that jok may pass to and from this earth to Dengdit, while one of the commonest Dinka beliefs is that the jok came to the dying to take their atiep. Among the Niel Dinka the jok come in the (spiritual) form of the animal ancestors (totem animals) of each man at his death and take his spirit to Kow the land of sea and sky, whence comes the rain. The men who gave this information were perfectly convinced that every Dinka had some animal relative which was sent to him at death, and they stated that some men have none of them as their living.

It is possible to obtain a hint of another phase of Dinka eschatology by considering their habit of pouring a little water or merissa (native beer) on the grave each day. It seems that Nok Dinka who did this after a long and thirsty march, the water poured out was for the dead. The Shish denied that merissa, purposely split on the ground, was for the benefit of the dead, but said that when a man died, he would find in his grave all the merissa he had poured out and the food he had thrown on the ground. It is, however, possible that this belief may be due to Arab influence.

According to the Shish, the ‘river-people’ are also jok, and they can be seen by tief, for ‘land and river jok have the same origin,’ and ‘some jok are in the river, some on land.’ It must, however, be admitted that many Dinka seem to look upon the ‘river-people’ as distinctly mysterious beings, whom they do not regard as jok in the ordinary sense of the word.

5. Rain-makers and rain-making.—The rain-makers of the Dinka tribe are called bain, but it seems very likely that the term is a corruption or misapplication of a word used among some other tribes of the same greater family. The bain, though, in theory at least, all are potential rain-makers. The men commonly spoken of as the ‘chiefs’ or ‘shaikhs’ of the Dinka tribes are actual or potential bain, but there does not appear to be any tendency among villages for the attempt to emulate the rain-maker, or for quack practitioners to appear, for the successful rain-maker has within him the spirit of the great rain-makers of the past, and all recognize the futility of competing with him. Further, the existence of a powerful and successful rain-maker naturally leads those who live within his sphere of influence to leave all such matters to him. Thus a successful rain-maker attains to very great power, and would be consulted about all important affairs. At length he should drink merissa, lest he get away and quarrel with the men of his village. Although the authority of a bain is great, it is not absolute, for one bain foretold the defeat of his people at the hands of the Government, and entreated them not to fight; yet his people fought and were defeated.

The Shish believe that the spirit immanent in their rain-maker (who lived at Lau) was Mabor. This, as has been stated in § 3, is the name of one of the four ‘sons of Dengdit.’ It was obvious that to the Shish of Shambé (some miles from Lau) the personality of the rain-maker was entirely submerged in that of the spirit immanent in him, so that, when they spoke of Mabor, the dominant idea in their mind was that of the ancestral spirit who passed through the body of the man in whom it was immanent.

The Shish do not specially protect their rain-maker from a violent death, and he may even take part in warfare; for no doubt is felt that, if he be killed, the ancestral spirit will pass to a suitable successor. But an important rain-maker is not allowed to die of old age or as the result of chronic lingering illness; for, if this occurred, sickness would attack the tribe; there would be famine, and the herdsmen would not yield their increase. When a rain-maker feels that he is getting old and infirm, he tells his children that he wishes to die.

Among the Agar Dinka a large grave is dug, and an angareb is placed in it, upon which the rain-maker lies on his right side, with a skin under his head. He is surrounded by his friends and relatives, including his younger children, but his elder children are not allowed, at any rate towards the end, lest in their despair they should injure themselves. The bain lies upon the angareb without food or drink for many hours, generally for more than a day. From time to time, when very hungry, he indulge to himself some water from the graveyard. When he is satisfied, if it be the last time, he is removed, and when he is just waking, his friends and relatives34 come and recite the passage of the burial-song, the hearing of which is said to contribute to the strength of the spirit, and assist the bain to return to the living.

The Agar Dinka, like the Shish, believe that an important rain-maker is very difficult to replace. Since the death of their last bain, they have been in frequent want of rain. The Agar Dinka have no central religious authority, and no common form of prayer. They have no matrons, and their sacred songs are connected only with local events and entertainments.

The Agar Dinka, like the Dinka, hold that a man is not made a rain-maker, but becomes one, from the circumstances of his birth and life. It is said that the rain-maker of the Agar Dinka was the son of a rain-maker of the Dinka; and that the property of the bain was said to pass from father to son, in a manner similar to that of the title of lands and objects of hereditary wealth in the same tribe. The Dinka hold that the great rain-makers, the bain, were always the sons of the bain; and the Agar Dinka, while they hold that the bain were sons, believe that they were sons of the same bain, and that the title of bain descended in a direct line from father to son, as in some other communities of the same family, while in the case of the Shish and the Agar Dinka, the title passed from father to son, and was again transmitted to the son of the son, as in the case of the Shish.

The Agar Dinka believe that a rain-maker must be specially trained for his office, and that he must have a certain amount of the spirit immanent in him; and that the bain, when he chose a successor, chose a young man who had been trained in the art of rain-making, but who had not yet attained to the title of bain. It is said that the title was not given to any man who had not attained to the age of forty, but that the title was passed from father to son, as in the case of the Shish. The Agar Dinka believe that the bain, when he chose a successor, chose a young man who had been trained in the art of rain-making, but who had not yet attained to the title of bain. It is said that the title was not given to any man who had not attained to the age of forty, but that the title was passed from father to son, as in the case of the Shish.
approach without the least ceremony. The akol bush is clearly the representative of the shrine, yet reverence is essential for the job leaves the hut to come to the akol during the great rain-making ceremony, and the slight sanctity of the akol and the sacredness of the rain-making ceremony are explained by the working of the job.

The rain ceremony consists of a sacrifice to Lerpin, to induce him to bring rain. An akol is held in the sun from about April, when the new moon is a few days old. In the morning two bullocks are led twice around the shrine, and are tied to the rit by Birvid: that is, the people beat drums; and men and women, boys and girls, all dance round the shrine. Later, they throw the bullocks into the village, when one man who can get near the beasts rubs his body with the urine. After this all except the old people go away. Presently the bullocks are killed by Birvid, who spears them and cuts their throats. While the sacrifice is being prepared, the people chant: *Lerpin, our ancestor, we have brought you a sacrifice to ask the rain to fall. The blood is collected in a gourd, transfused to a pot, put on the fire, and eaten by the chief and inspector of the elders. Some of the flesh of one bullock is put into two pots and cooked with much fat; this is left near the akol for many months, yet it is said at not to smell unpleasantly, and is ultimately eaten by people who have no cattle of their own. The food in the pots near the akol is to be for the job, but the meat from the other bullock is eaten on the same day. The bones of the sacrifice are thrown away, but the horns are added to those already attached to the rit.*

Besides the great rain-making ceremony performed at a central shrine, some tribes offer a sacrifice for rain in each settlement. Among the Shish this takes place before, or at the beginning of, the rainy season.

The old men of the settlement (but) kill a sheep, thanking and praising Dengdit; the animal is bisected longitudinally, but is not separated into the legs. The blood is drawn into the gourds and cast into the air as an offering to Dengdit. As they fill the gourds, so they are left, for the people are soon eaten by dogs and birds. The blood of the sacrifice is allowed to soak into the ground, but the reminder of the meat is boiled and eaten, which must need is hanging in a skin for seven days, and afterwards thrown into the river. Some people believe that this is thrown into the air and lying upon the ground in the same way as the flesh of the sacrifice was left.

6. Sacred spears.— Mention has already been made of the sacred spears kept in the shrines of Dengdit. One of the spears in the Shish shrine at Laiu is of the form named bit by the Dinka, and is called bit yat. Another spear with the usual leaf-shaped blade is called ton yat, and the iron rod is named ton yata. The head of the iron rod is described as playing an important part in the great rain-making ceremony held in the loup at Laiu, and when the time comes to replace them an elaborate ceremony is performed. Long ago Dengdit made two spears, the one of which is kept by the man, his wife, and the girl's brothers and sisters and paternal aunts all spit, and her father sprinkles the water over the girl's body. Nothing further is done for eight days, but on the ninth day a male goat or sheep is tied up; when it urinates, the girl's breasts and back are anointed with the urine, while the relatives who spit into the bowl pray that she may be cured. Her brothers take the goat, throw it on the ground, eat its throat, and leave the meat to the boy to eat. Any one can *overlook* (Tain kewa) another who is not a very close blood relation, at any time when his victim is not looking him straight in the face. To *kewa* any one is always a voluntary action, and implies that the person who is well-conditioned or rich man, this is not necessarily due to covetousness. A great man can make people ill without seeing them, by desiring it in his heart, and for sickness produced in this way there is no cure.

7. Oaths.— In small matters the Shish affirm 'by Nyali.' To swear a binding oath a man goes to the blacksmith and licks his hammer; then, putting it on the ground, he says: *If I have not sworn the oath, let my spear be my grave.* This refers to the Agar custom of putting a man's spear, bracelets, and shield upon his grave for seven days. The most terrible oath of all is to go to the shrine (loup) of Dengdit and swear by it.

The Dinka firmly believe in the efficacy of both blessings and curses, and that people and cattle can be 'overlooked.' The following information was obtained from Tain Dinka living south of the Sudd, but it probably holds good over a much wider area. The blessings and curses of strangers are of little effect (it must be assumed that this does not apply to great and powerful men), but the words of kinsfolk are powerful for good or evil. There is a special word *low meaning to speak bad words about a man's body*; and a father, by saying his son shall be ill, can cause him to sicken. So, too, a man's relatives may curse him if he does not give them the bullock which is their due when he brings a cull of water, into which the other man's relatives pour. A parent's blessing is held to be so efficacious that it may cure illness, the power for good being the will (atip) of the loving father or mother.

When a boy is to be blessed, he stands on the ground; his father, standing away from the boy, first his right thigh and then his left over his son's head. Then he spits on his scalp and blows into his ears and nose; next he spits on his own hands and rubs them over the boy's scalp, and, again spitting on his right hand, passes it over the boy's head and the nape of his neck. Finally, he picks up dust, and rubs some on the boy's chest and back, throwing away the remainder into the air. When a man is about to bless an ailing daughter, her mother brings a cull of water, into which the boy, his wife, and the girl's brothers and sisters and paternal aunts all spit, and her father sprinkles the water over the girl's body. Nothing further is done for eight days, but on the ninth day a male goat or sheep is tied up; when it urinates, the girl's breasts and back are anointed with the urine, while the relatives who spit into the bowl pray that she may be cured. Her brothers take the goat, throw it on the ground, eat its throat, and leave the meat to the boy to eat. Any one can *overlook* (Tain kewa) another who is not a very close blood relation, at any time when his victim is not looking him straight in the face. To *kewa* any one is always a voluntary action, and implies that the person who is well-conditioned or rich man, this is not necessarily due to covetousness. A great man can make people ill without seeing them, by desiring it in his heart, and for sickness produced in this way there is no cure.

8. Magic.—Magic appears to play a comparatively small part in the spiritual life of the Dinka; probably this is to be attributed to the dominating influence of the cult of the *job*, which constitutes the working of the great rain-making ceremony, and auxiliary magical processes may be used in order to increase the efficacy of a sacrifice. Thus, it is not uncommon for a goat to be killed as a direct appeal to the *job* before hippopotamus-hunting. The Tain Dinka of Malek village select a 'red' goat or sheep because the hippopotamus is 'red,' and take it to the Sudd in a canoe, where they cut its throat with a spear, because the animal they are hunting can be killed only with a spear. (The usual method of killing it is by a blow on the head.) Its blood is allowed to run into the river, while some is smeared on the blades of the harpoons. As soon as it is dead, it is thrust under the Sudd where the hippopotami are, its month being tied up so that it
DIogenes.—See Cynics.

Disciples of Christ.—A religious body located chiefly in the central and western portions of the United States. The originator of the movement was Thomas Campbell, a minister of the Seceder Presbyterian Church in the north of Ireland, who came to America in 1807, and was assigned to ministerial work in the Presbyterian Charters, in Western Pennsylvania. Keenly sensitive to the evil results of sectarian divisions, he used his efforts to unite the scattered groups of Presbyterians in such common work and worship as should allay in some measure the strife of rival factions. But so little were the churches of the period prepared for the practice of comity that he was censured by the Presbytery for his conduct, and, although upon appeal the Synod declined to affirm the judgment of the Presbytery, he found it desirable to sever his connexion with the Church of his fathers. But his earnest labours in behalf of unity led to the formation of a group called the 'Christian Association of Washington' (Pa.), and, soon after, the publication of the Declaration and Address, in which he pleaded with his brethren of all Christian bodies to abandon whatever religious doctrines and practices were unscriptural and divisive, and to seek the peace of the Church by the realization of the Lord's prayer (Jn 17:21,22) for the oneness of His people. He was afterwards joined by his son Alexander, who had been trained for the ministry in Ireland and at Glasgow.

In studying the problem of Christian unity these men determined that they would propose to their religious neighbours the elimination of human additions to the primitive and simple gospel. This seemed to them a sufficient platform for a united Christian Church, but it was the condition of the early Christian society as the means of realizing Christian oneness. They included in their programme all the essential elements of the Apostolic faith, spirit, and service. They held strongly to the simple beliefs of the Church or the Apostolic Church, and sought to make the teachings of the NT authoritative in their procedure. In compliance with this ideal they decided that the practice of infant baptism and of infusio must be abandoned. The movement grew, and soon the first congregation was established at Brush Run, Pa. (4th May 1811).

The Reformers, as they called themselves, were active in the dissemination of information to all parts of the country, by means of tract and sermon, by correspondence, and by means of the press. Their leaders were the Campbells, Barton W. Stone, and Walter Scott. Their efforts were effective advocates of the new message. The adoption of immersion in baptism, as they believed, of Christian unity became the centre of all their activities. The Baptists, and in 1825 Alexander Campbell began the publication of a monthly called The Christian Baptist. For a time it seemed probable that the union of the two bodies would be effected. The Reformers were actually received into the fellowship of the Redstone Baptist Association, and later into that of the Mahoning Association, official organizations of the Baptists in Western Pennsylvania and Ohio. But the union was never completed. Each of the groups suspected the other and

at times made counter-charges of unsoundness of views. Separation took place, and gradually the Reformers, or Disciples, as they usually called themselves, went their way as a separate body.

At Bethany, Va., in 1840 Campbell founded Bethany College, the first of many schools organized by the Disciples. The movement grew rapidly in the States of West Virginia, Ohio, Pennsylvania, and Kentucky. Campbell travelled widely, preaching and holding debates on such themes as related to the Primitive Church and the necessity of its restoration. The formative influences of his early training, the Lockian philosophy, the Covenant theology of Holland, the reformatory principles of the Haldaines in Scotland and Ireland, and the profound sense of the scandal and disaster of divisions in the Church, were evident in all his utterances. His power was widely felt, both among his own brethren and among those out-side the Church. As a result, a large company of vigorous and aggressive preachers and teachers became identified with the enterprise, and its progress was rapid.

With the growth of churches the first interest in the idea of Christian unity gave way somewhat to the seemingly more definite and practical effort towards the restoration of early Christian usages. The weekly and monthly observances of the immersion of adults as the only method of baptism, the organization of churches after the congregational order, with elders or bishops, and deacons, the rejection of all speculative discussion of the work of the Holy Spirit, and the emphasis upon the importance of the Scriptures in conversion were outstanding features of the new message. Close communion was never practised, but it was understood that only the initiated should be admitted to the churches.

In the development of so vigorous a body it was inevitable that controversy should have a pronounced part. Both with their religious neighbours and among themselves the Disciples have held earnest and prolonged controversies, and differences to literalism and legalism have not been wanting, but they have yielded slowly to the spirit of inquiry and progress. The creation of new educational foundations, the maintenance of an aggressive journalism, the organization of missionary and philanthropic agencies, and the encouragement of an effective evangelism in the churches, have increased the numbers, intelligence, and consecration of the Disciples, until at the present time they are fifth largest of the most important evangelical bodies of America; have an considerable constituency in England and Australia; have important missionary interests in China, Japan, Africa, the Philippines, Mexico, and the West Indies, and maintain efficient State and District organizations in nearly all sections of the United States and Canada.

The Disciples have desired from the first to be known only by NT names. They speak of their churches as 'Christian Churches,' or 'Churches of Christ.' These names they hold in common with all believers, and claim no exclusive title to them. Their worship has always been marked by simplicity, though there is an increasing effort to impart dignity to the services.

On the themes of advancing Christian thought,—the value and results of the historical method of Bible study, the contributions of modern scientific and philosophical labours to the religious life, the awakening of a sense of the urgency of the extension of missionary effort, and the adoption of higher educational standards—the Disciples have passed through the usual throes and differences of opinion incident to the development of most sections of the modern Church. But the progress has been
DISCIPLINE (Buddhist)

DISCIPLINE (Buddhist).—This subject may best be discussed under four different heads: (1) discipline of the laity by the clergy; (2) discipline of the novices by members of the Order; (3) discipline as carried out by the Order, in Chapter assembled, against individual members of it; and (4) self-discipline.

1. Discipline of the laity.—The Buddhist doctrine did not recognize either a deity who can punish or a soul to be punished, and denied to the members of the Order (the bhikkhus) any priestly powers by which penalties in the next life could be mitigated or increased. Any disciplinary proceedings against the laity, therefore, were necessarily of a simple character. There are words in Pali for 'instruction,' 'discussion,' ‘training,’ and ‘self-restraint’; but there is no word covering the same ground as ‘discipline.’ The ideas of confession or confession (of the words, of the body, or of the church-membership) are wanting. The word ‘Buddhist’ was not invented till many centuries after the rise of what we call Buddhism. By approving wholly or in part the doctrines of the new movement (or of its adherents) the early Buddhists could not be considered as having recognized the necessity of a simple character. There are words in Pali for ‘instruction,’ ‘discussion,’ ‘training,’ and ‘self-restraint’; but there is no word covering the same ground as ‘discipline.’ The ideas of confession or confession (of the words, of the body, or of the church-membership) are wanting. The word ‘Buddhist’ was not invented till many centuries after the rise of what we call Buddhism. By approving wholly or in part the doctrines of the new movement (or of its adherents) the early Buddhists could not be considered as having recognized the necessity of a simple character. By approving wholly or in part the doctrines of the new movement (or of its adherents) the early Buddhists could not be considered as having recognized the necessity of a simple character. There are words in Pali for ‘instruction,’ ‘discussion,’ ‘training,’ and ‘self-restraint’; but there is no word covering the same ground as ‘discipline.’

2. Discipline of novices.—One of the main objects of the founders of the various Orders that existed in the Theravada school of Buddhism was to provide, by the establishment of the Order, for the preservation and propagation of the founder's teaching. There were then no books and no pub-

3. Discipline in the Order.—The Buddhist Order was a democratic society in which there was no vogue of obedience and no hierarchy. The administration of the business of the Order was carried out locally by a Chapter on which each member of the Order (each bhikkhu) resident in the locality had a seat. The senior member presiding was termed the presiding officer, and his decisions were made by vote of the majority of those present. Should any member of the Order have committed, in the opinion of any other member, any breach of one of the regulations, the latter could bring forward, at the next meeting of the Chapter, a resolution on the subject. If the resolution was carried, the offending member remained for a fixed period under suspension. The suspension could be removed by a similar resolution, if the offender had acknowledged his offence. In four cases of grave moral delinquency—murder, theft, impurity, and a false claim to extraordinary spiritual pre-eminence—the penalty was expulsion from the Order. These and other cases which throw light on the question whether some particular act does or does not amount to a breach of any one of the 227 main rules of the Order, or of any one of the explanatory by-laws subsidiary to those rules, there is no evidence as to how frequently recourse was actually had, in the early years of the movement, to such disciplinary proceedings by a Chapter. Meetings of the Chapter are still held in Siam, Burma, and Ceylon for business purposes, for the recitation of the Rules.
for admission of new members, etc. Whether disciplinary proceedings are still used, and, if so, how frequently, is not known. In other countries the ancient rules have fallen altogether out of use, and we have no information as to any disciplinary proceedings which may have been substituted for the formal acts of the Chapter or further, art. CRIMES AND PUNISHMENTS [Buddhist].

4. Self-discipline.—There were three codes of ethics in early Buddhism—one for the lay adherent, another for a member of the Order, and a third for those, whether laymen or mendicants, who had entered upon the Path to arahatship. People joined the Order for a variety of reasons—to earn a livelihood, for a life of literary peace, to escape the troubles of the world, from dislike of authority, or even (as Nagasena says to King Milinda) out of fear of kings.1 Some were converted men before they joined the Order; the majority were not. They were expected, in addition to their literary studies, to devote themselves to an elaborate system of self-discipline in ethics and psychology leading up to what were regarded as the highest truths—those constituting the samādhi, the insight of the higher stages of the Path.2 The existence of such a system is the most characteristic feature of Buddhist discipline (see art. HINAYANA). LITERATURE.—The Vinaya Pitakam, ed. H. Oldenberg (5 vols., London, 1869-1875); Oldenberg and Rhys Davids, Vinayapitaka (Oxford, 1851-1855, being tr. of vol. 4 of the last-named work); Būdha Vijaya, ed. Rhyds Davids and J. E. Cooper (London, 1880); Buddhist Literature of the Early Path (Oxford, 1859-1860), ed. Questions of King Milinda (London, 1890-1894); Khuddaka-Nikāya and Mūla-Sāsana, ed. E. Müller (JTS, 1883).

DISCIPLINE (Christian).—1. Definition and aim. Church discipline is that body of measures which the history of the Christian Church has organized the discipline of the Church to secure its own purity and the moral welfare of its member by the punishment of offenders against its constitution and teachings. The authority for such procedure is based (1) upon the very nature of the Church as a select body with a code of its own; (2) upon express commands of Christ; (3) upon Apostolic precepts and examples afforded in the history of the Apostolic Church. The Church, as an institution endowed with the infallibility of holiness and consecrated with the deposit of revealed truth, is bound to keep itself free from corrupting elements which might taint its purity and thwart its activity in training its members and in bearing witness to the world. An ancient Canon (Canon 6, 2nd century) is intended (1) to reclaim him from error of doctrine or impurity of life, so that, if possible, his soul may be saved; or (2) to cut him off, as a withered branch, from the body of Christ and all participation in its benefits. In the development of the Canon Law, such punishments were termed either medicinal (pena medicinae) or strictly penal (pena vindicativa). The former are corrective and reformatory; the latter, while, according to canonists, they do not wholly exclude, yet they are intended (1) to vindicate the majesty of the law and the removal of all danger to the Church from contumacy; or (2) to set an example: Apostolic age and from the close of the 2nd cent., Church discipline took expression in the uniformated system of Penance. To this were added, from the 4th cent., the Canons of Councils, local and ecumenical; from the 5th the Penitentials Books; and later the collections of Canon Law culminating in the Decretals of Gratian (about 1150). Beginning with Constantine's reign, severe civil penalties were executed upon dissenters from the Church's formulated standard of doctrine. The Arians, who refused obedience to the Nicene

1 Milinda, 1, 59.
2 Rhys Davids, Dialogues of the Buddha, i, 189-192.

statement, were banished, and their books burnt. Although such penalties were inflicted by the civil rulers, they rendered the approach of the Church. The legislation concerning the discipline and punishment of dissenters reached its culmination, so far as the Church was concerned, in the tribunals of the Papal and Spanish Inquisitions (1215, 1478). This body of legislation was extended to include witchcraft and all kinds of malfeasant, especially after the bull of Innocent VIII., Summis desiderantes (1484).

The Reformers continued to insist upon ecclesiastical discipline, and, in their hands, it found its most strenuous application in the codes of Geneva and the disciplinary books of the Elizabethan Puritans of Scotland and the Westminster Assembly. As to the seat of authority for the exercise of Church discipline, the theory has been, and is, that the Church exercises discipline over her own members and within her own sphere. To use the expression current in the Middle Ages, she wields the spiritual sword (gladium spirituale), or, to quote a Protestant symbol (First Book of Discipline, ch. ix.), she 'draws the sword which of God she hath received.' But, in fact, not only has the distinction between the Church and the State, agents to punish ecclesiastical offences (dolici) not always been kept, but the Church has not restricted herself to her sphere, and, indeed, has expected the State to aid her in the maintenance of her discipline. From 325 onwards the Universal Church gradually came to approve civil penalties for ecclesiastical offences. The Latin Church, through the Inquisition, the culminating procedure in her disciplinary activity, not only pronounced suspects guilty of heresy, but imprisoned them, ordered them to be burnt and their goods confiscated, and turned them over to the civil authorities, knowing that their punishment would be death. In the Protestant Churches of Zürich and Geneva, among the Protestants of England and the United States, and, during the Colonial period in the United States, the same confusion prevailed, although in its application the legislation was much less destructive than during the Middle Ages. It has remained for more recent times to make the ecclesiastical and civil realms more distinct than even to the complete separation of Church and State, in some Protestant lands.

2. Discipline in the Apostolic Church. —Pure as is the operation of the Holy Spirit, discipline was less as is the ideal Church. The bride of Christ, it was predicted by Christ that offences would arise (Mt 18). Such offences were manifested in the earliest days of the Church's history. The Apostles themselves remained conscious of weaknesses and infirmities. Peter denied Christ (Mt 26), and was condemned by Paul at Antioch (Gal 2). Paul says, 'buffet my body' (1 Co 9), calls upon the Christians to follow him who wrote 'to mortify their members' (Col 3), and in Ro 7 indicates that a consent was first given to the sin under the Old Testament in the covenants of the flesh and the will of the Spirit. 'In a great house there are not only vessels of gold and of silver, but also of wood and of earth; and some unto honour, and some unto dishonour. Here the Apostle has in mind persons 'reprobate concerning the faith,' whom he compares to Jannes and Jambres (3). The Church's right to exercise discipline was definitely conferred when Christ empowered His Apostles to bind and loose (Mt 16). He also indicated the measures to be resorted to when an offence became known. If a brother was found guilty of a fault, he was to be privately admonished by a single person; then, if necessary, by several in company; and finally, if reproach was still
in effectual, the offender was to be publicly rebuked before the congregation. In case he was still dissolute, he was to be treated 'as the Gentile and the publican' (v.16-17).

After the Resurrection, the Apostles exercised the power of discipline, and warranted it by precepts. The duty of feeding the flock and ruling in the Church (Acts 20), He 13:3) implied this function. Special rules of practice were issued by the council of Jerusalem (Acts 15). The offences denounced were both errors of doctrine and faults of conduct against the pure laws of Christian living.

The first cases of discipline—the appalling deaths of Ananias and Sapphira—are mentioned in that no one but the most extreme advocates of Church prægotiva would find in them a precedent for the Church to follow, although they are referred to as examples of just punishment, not only in the Middle Ages, but by Calvin. It is true that, in the case of Sapphira, Peter announced her death; but the punishments must be looked upon as the usual act of God, as a lasting impression upon the Church. To another category belong the cases which occur in the writings of Paul and John. 

John (2:19) took the position that here was a sufficient ground for refusing companionship with the offenders. Paul commanded that some which were called upon the Thesalonian Christians to withdraw themselves from every brother that was corrupting them, and not after some new tradition which they received of us (2 Thes 3:16). Hereupon he pronounced a curse (2 Ti 3:5,6; cf. 2 Ti 3:5), and he admonished the Corinthians to exclude a companion who was an adulterer, fornicator, liar, drunkard, and covetous (1 Cor 5:1-5). He exhorted the members of the Corinthian congregation who had been excluded to wash their hands with water (1 Co 5, 10,2). And delivered unto Satan (Alexander and Hyrkan) also involved in anathema against 'any man that loveth not the Lord,' and against the Judaism teachers who might preach another gospel than that he preached (Gal 1). In the case of the Corinthian offender, Paul states that his purpose was that his 'spirit may be cleansed from the Lord Jesus in the Lord Jesus; in the case of Alexander and Hyrkanus, that 'they might be taught not to blaspheme.'

It is evident that it is possible, from the state

ments of the NT, for a Church hierarchy, if it so desire, to justify the resort to the most rigorous methods of disciplinary constraint, and to reduce Church government to a mere contrivance to exact implicit mechanical obedience to a system of ecclesiastical enfranchisement, forgetting that the Church is a training school to exercise discipline in the spirit of love and for the education and correction of the weak and offending.

3. The anti-Nicene practice (A.D. 100-313, the time of Constantine's edict of toleration).—In the period a strict system of discipline was practised, but the punishments were prescribed and executed by the spiritual authorities, and had nothing to do with civil constraints. There was no precise code, and the procedure differed in different parts of the Church, for example, as between N. Africa and Rome. The two marked features are the development of the system of penance and the issue of discipline canons by councils. The distinction which came to be made between mortal and mortal sins also had an important bearing upon the exercise of discipline.

In the &lt;code&gt;church&lt;/code&gt; of the 4th century, seven mortal offences for which, if committed after baptism, there can be no restoration in this world or in the next, that is, to come—as murder, adultery, theft, apostasy, blasphemy, fornication, adultery. For one sinned against the Church will not act as plenarius (or &lt;code&gt;executor non erit Christus&lt;/code&gt;). Those who must not, cease to be members of the Body of God. For one who confessed, certain penances or punishments were prescribed, such as fasting, prayer, and almsgiving, or penitential works, p. 252. It notes that only those who manifest sins (pecos, evidentia) were offenders cast out from the Church—giving as the reason, lest the wheat be mixed up with the tares. Towards the end of the period, the penitential system came to recognize four classes of penitents—weepers, harlots, penitents, and devout persons (starentes, greguiam, conditores). These were within the pale of the Church (extra ecclesiam), as opposed to the excommunicate. They were forbidden certain privileges, such as the bare possession of divine, religious, or ecclesiastical intercourse, etc., and they were especially required to do penance, fasting, almsgiving, etc. The usual duration of this period of penance was three or four years, though it might be abbreviated at the will of the Church authorities.

The schisms which broke out in the Church, such as those of Novatian, Miltiades, and the Donatists, were a revolt against a tendency to relax the rigours of discipline, and arose for the most part over the question of the restoration of the lapsed. The N. African Church, led by Tertullian, set the same ground to those who had denied the faith in times of persecution; Cyprian at Carthage held the same ground, and he was from it in view of the great number who had given way in the Declan-Valentinian persecution, and granted to the fallen the communion in the hour of death. The Roman Church was left with this class of offenders.

The Synods which were held at the close of this period—Elvira, Arles, and Arcens—passed severe disciplinary canons, to which the Spanish Synod of Elvira (see A. W. W. Dale, The Syn. of Elvira, London 1881) was opposed, with anathematization of the denial of the communion, and lesser penalties. Murder, idolatry, and especially usury—which have a large place devoted to these. The advantages of the Synod of Elvira before precedent pronouncement given by the husband, is denied communion even in the hour of death. Those guilty of extravagance in dress may after three years be restored to the communion, and gamblers after one year. The worship of idols by bishops was a capital crime, and the offender is excluded permanently from the communion.

4. From 313 to 1215 (from Constantine's edict of toleration to the establishment of the Inquisition).—With the alliance of the Church with the State, a new practice was developed in regard to the treatment of ecclesiastical offences. The State itself passed disciplinary regulations for certain of them, and executed punishments. Worthy penalties, which are often called &lt;code&gt;ecclesiastical&lt;/code&gt; and &lt;code&gt;civil&lt;/code&gt; punishments, were intended to deal with the person, the estate, the future, and the name of the Church, and to promote the well-being of the Church and the public. To the ideas which the office of Pontifex Maximus implied, Constantine claimed authority, as &lt;code&gt;universal&lt;/code&gt; bishop, over the external affairs of the Church. He and his imperial successors exercised the right of judgment only of processes of condemnation, but, as in the case of Theodosius, of designating who they were. The &lt;code&gt;Theodosian code&lt;/code&gt; counted as a public crime every offence against religion, on the ground that such offences brought injury to all (in omnibus et ferot injuriis [quoted by Friedberg, 309]). The following are the chief steps in the history of Church discipline in this period of 1000 years:

1. As worldliness crept into the Church after Constantine's identification with it, offences of moral conduct were given less prominence, and offences were emphasized which were committed against the Church as a corporation and against its doctrinal code as formulated by the Councils, and held by the common opinion of the faithful.

2. Constantine punished departures from the Nicene statement by burning the books of the Arians and banishing Arius himself. His sons at one time punished Athanasius and his followers, at another Athanasius was granted a general amnesty upon those refusing its precise definition of the doctrine of the Trinity, and excluded them from the possibility of salvation.

3. While the Emperors, from Gratian and Theodosius to Justinian, were proscribing paganism by penalties increasing to the penalty of death, the imperial rescripts were placing Christian heretics under the civil ban. Theodosius the Great, at the close of the 4th century, pronounced those who held to the Nicene statement Catholic Christians, and all other schisms as heretics. In those documents he deprived the latter of all right to the exercise of religious usages, excluded them from civil office, and threatened them with fines, banishment, confiscation of goods, and—as in the case of the Manichæans, Arians, and Quaderodermata—with death.

4. The code of Justinian not only regulated all
kinds of ecclesiastical affairs, but in certain cases gave ecclesiastical orders, that of Philip the Fair (1822), and in 1271, the death penalty was inflicted on a layman. For the whole execution in Thessalonica (389) Synesius excommunicated the governor of Pentapolis for his merciless oppressions (409).

(8) The most important influence on the discipline of clerics was not exerted by the Church, as that of Augustine. At first inclined to restrict discipline to spiritual measures, he changed front during the controversy with the Donatists. Quoting cite\(\text{\textit{Lord's words in the parable, 'C\text{\textit{ompel them to enter in,'} to the effect that the Church excluded from the communion of the Schoolmen, including Thomas Aquinas, in favour of the former could not be defended.}

(9) During the 7th and 8th centuries, penitential codes came into use, prescribing penalties for all sorts of offences against religion and the Church, beginning with those of Columban († 615) and Theodore of Tarsus († 690). A forerunner of these writers was John Scholastici († 755), whose Syntagma with its 65 canons was confirmed by the Trullan Synod of 692. An idea of the penalties prescribed by Theodore of Tarsus may be formed from one example: A priest who drank to excess and vomiting had to do penance for 30 days, a layman for 15 days. False canonical codes were referred to by the Paris Synod (829), the Clarendon Brief (1164), and the Lateran Councils of 1179 and 1215, the latter which included the condemnation of the doctrine of the excommunicated Emperor Frederick II.

(11) Special legislation was enacted for clerical offences. Among the more notable acts was the so-called Canonical Rule (see Hatch, Growth of Ch. Institutions, London, 1857, ch. ix.). The ministry had become not only a profession, but a lucrative profession. The clergy hawked and hunted, were extravagant in their retinues, drank, and accumulated other excesses. The bishop's capitularies (892) called upon the clergy to live: 'according to the canon.' Later a semi-cloistered mode of life was introduced among them, one reason given being that the clergy thereby 'might avoid the company of women,' as at the Roman Council of 853.

(12) The Canon Law was definitely incorporated in the collections of Regino († 1145), Burchard of Worms († 1025), Anselm of Lucca († 1086), Cardinal Duns Scotus (c. 1287), and of Chartres († 1116). The imperfect works gave way to the monumental production of the Camaldulensian monk, Gratian, who taught canon law in the convent of St. Felix, Bologna, in the 13th century. The work whose original title was Concordantes canonum disciplinae, became the manual in its department, as the Sentences of Peter the Lombard became the manual in the department of theology. It was greatly enlarged and up-to-date, and others, including a noble patron of Bordeaux, were put to death. All the bishops present except Theognostes approved the sentence. Ambrose and Martin of Tours disapproved of it, the former, however, being opposed to the death sentence altogether. Leo I. (440-461) definitely advocated the death penalty for heretics. Henceforth the only parties to oppose it were the dissenting sects, such as the Donatists.

(13) Notable cases of discipline are not wanting in the administration of high ecclesiastics. Chrysostom was deposed for rebuking the extravagance and vices of the Imperial court of Constantiopolis (404). Ambrose excluded Theodessius from the church of Milan till he had made expiation for the wholesale execution in Thessalonica (390). Synesius excommunicated the governor of Pentapolis for his merciless oppressions (409).

(14) The greatest punishments which came into general use in the Church were the anathema and the interdict, to which is to be added suspension from the priesthood. Two forms of anathema, the minor and the major, are distinguished by Wetzer (in his Geschichte der Weltgeschichte, 2d ed., 1871), the minor anathema is not to be cited in the degrees of solemnity with which they are pronounced. The anathema excludes from the communion and all public services of the Church except preaching, and from all public offices of the Church, and the Church is forbidden to offer them any intercessions. If the sentence still rests upon the offender at death, it excludes from burial in consecrated ground. Martin v. in his Ad evertanda (1418) made a distinction between excommunicanda (tolleranda) and excommunicanda (extendenda). From the latter all religious intercourse whatever is to be withheld, and, as far as feasible, all commercial dealing (see Hergenröther, 588 f.). Perhaps no excommunications surpass in execution that pronounced by Clement vii. (1440) against Louis the Bavarian: 'Let him be damned in his going out and his coming in! The Lord strike him with madness and blindness and mental insanity! May the heavens open upon him their thunderbolts, and the wrath of the Omnipotent burn itself into him in the present and the future world! May the universe fight against him, and the earth open to swallow him alive!' (Mürit, Quellen d. Papstthum, Tögingen, 1901, p. 153).

The interdict was extended to a community of persons or territory. There are different degrees of punishment involved in it. In general it involves the denial of the sacraments of the Eucharist, Ordination, and Extreme Unction, public services of the Church, and the rite of burial in sacred ground. Among the notable cases were the interdicts culminated over Scotland (1180), England (1208), the sacred cities of Rome by Adrian iv. (1155), and Jerusalem (1299) on the occasion of the crusade of the excommunicated Emperor, Frederick II.

s. From 1215 (the Fourth Lateran Council) to the Council of Trent—There are three important points which stand out in the further history of discipline before the Reformation. (1) The doctrine of Penance underwent a radical change (see K. Müller, Der Ursprung der Buße u. der Bußreform, 2d ed., Breslau und Leipzig d. 2ten Jahrh., Freib. 1892; Schaff, Ch. Hist., vol. v. pt. i. p. 729 f.). Concession to the priest and satisfaction by doing the penances prescribed by him were made necessary for absolution. The acts of satisfaction are penal acts which serve like medicines for spiritual wounds, and also as a compensation to God for offences. So Alexander of Hales and Thomas Aquinas taught. The priest is the judge of what the act of satisfaction shall be. A recent decision of public penance were those of Henry ii. after Becket's death, and Raymund of Toulouse. This
system of discipline under the direction of the priest became obligatory for every Christian in the world. The crusades offered a vast opportunity for the exercise of Church discipline and vengeance.

(2) The tribunal of the Inquisition, established by Innocent III. at the 12th Ecumenical Council (1215), was intended to meet the peril of heresy and to extirpate it. With Gregory the Great (604) heresy existed to be known in Western Europe for four centuries. At the end of the 11th cent. slight traces of it appear at Goslar, Mainz, Cologne, Strassburg, and other places. They quickly disappeared, but suddenly in the 12th cent. they reappeared in different parts of Europe from Milan to Antwerp, and from the Pyrenees to Bremen. In his Laws of 1238, Frederick II. gives a list of 19 different heretical sects. The chief of these were the Cathari and the Waldenses. In 1163 a Synod of Toulouse compared heretics to serpents concealing themselves in the grass. Innocent III.'s predecessor, Lucius III., at the Council of Verona (1184) joined with Frederick Barbarossa in a public demonstration in the Cathedral, that they would make their episcopal consecration depend upon their having parted with their convictions. In the extirpation of heretics was offered the indulgence extended to the Crusaders in the Holy Land. All who in any way supported heretics were to be excommunicated and excluded from receiving their natural inheritance. This pontifical organization was further perfected at the Council of Toulouse (1229), and by Innocent IV. in his Bull Ad exsiripanda (1232), which prescribed torture as a means of extorting confession of crime. No heretic was to be punished till convicted by the ecclesiastical tribunal, but, once convicted, the secular arm was under obligation to punish the offender by destroying his domicile and refuge, even though it were underground, by burning his goods, and by burning him to death. Innocent III. declared that, as treason was punished, so much more should punishments be meted out to those who committed the greater crime of blasphemy against God and His Son. Secular princes were to draw the sword against them (see quotation in Schaff, Ch. Hist., vol. v. pt. ii. p. 518, together with Hurter's exposition of Innocent's views). Innocent summoned Christendom to a crusade against the heretics in Southern France, promising 'those who fought for the sword and for God' the same rewards as he promised to those who ventured their lives to rescue the Holy Sepulchre.

In vain is the plea made that the Church did not execute heretics or immediately put them to death by burning. It immuned them for life, and it threatened with exclusion from the sacraments and from heaven princes and magistrates who refused to put to death within an opportune season. The Catholic apologist, Vacandard, is compelled to say that at times the actual execution was purposely delayed. It is strange in view of the words of Popes and councils, that Catholic writers, like Ph. Herogenrother (Kathol. Kirchenrecht, 341), should not have been aware that it is not enough that the Church put in the prescribed sentence of death. It is strange that they did not realize that it is not enough that the Church put in the prescribed sentence of death, but that it cannot call upon the State to execute it. An inquirer like Bernard only represented the temper of his time when he said in his famous Manual that heresy could be extirpated only as heretics were exterminated.

To this extreme form of Church discipline the Schoolmen gave full theological justification. Thomas Aquinas, resting upon the authority of Augustine, assumed that 'heretics were not only to be separated from the Church by excommunication, but from the world by death' (Summa, n. pt. 2. 11 (ed. Migne, iii. 160)). 'As false-hood of coin are to be put to death, much more should the one put to death who commits the wicked act of corrupting the faith. The heretics the Church delivers over to the secular tribunal to be put out of the world.'

The Spanish Inquisition, formally sanctioned by Sixtus IV. (1478) and accepted by his successors in its essential features, is more even noted in history for its ingenuos devices and severity in disciplining heretics than the papal tribunals established in 1215. Pasqual-Funk both agree, as against Hefele, that it was primarily not a State institution, but the creation of the Pope (Schaff, Ch. Hist., vol. v. pt. ii. p. 539 ff.).

(3) The most important chapter in the history of Church discipline in this period was the famous assertion of Boniface VIII., in the bull Unam sanctam (1302), that both swords are in the hands of the Pope, and that it is altogether necessary to submission to be obedient to the Roman pontiff. This assertion, confirmed by Leo X. on the very eve of the Protestant Reformation, sufficiently justifies the Church in the use of any means whatsoever that it may select to carry on its work and to maintain its spiritual authority. In the 14th cent. it was the theory that the Church's jurisdiction stops with those who are baptized by its ritual. But papal pamphleteers, after the death of Boniface VIII., like Augustinus Triumphans (1323), and Defensor pacis (1328), contended that it was the duty of the Church to execute heretics. A voice as if proclaiming a new era, Marsilius of Padua, in his Defensor pacis (1321), argued that the disciplinary prerogative of the Church was only auxiliary, not absolutely necessary. But the Church did not listen to him, and Consalvi and Bellarmine re-affirmed the doctrine that heretics should be burnt (‘puniendi usque ad ignem’), and carried out the affirmation in the sentences against Hus and Jerome of Prague and the bones of Wyclif. The papal crusades against the Cathari were repeated against the Hussites, and Savonarola was burnt with the approbation of Pope Alexander VI. One of the charges made by Leo X. against Luther was that he asserted that it was against the will of the Holy Spirit that heretics should be burnt.

The Council of Trent nowhere mentions the penalty of death for heretics, but neither it nor any Pope since has expressly rejected the severe disciplinary policy exercised by the Church for centuries. The disciplinary element in penance was re-affirmed by the Council of Trent, even to the use of indulgences.

6. The Reformers and the Protestant Churches.

—Three things, made prominent by the Reformers, were adapted to reduce the value of Church discipline and to limit the application of a disciplinary code: (1) the principle emphasizing the immediate responsibility of the Christian to God; (2) the authority of Scripture as the supreme rule of life; (3) the insistence upon preaching as the chief element in the power of the keys—a view which passed into the Augsburg (Schaff, Creeds, iii. 59) and other Protestant Confessions. Instruction and persuasion through the sermon were destined, to a considerable extent, to take the place of punitive discipline. Another consideration adapted to limit the application of discipline was the abolition of the confessional, and the substitution of repentance of heart for the system of outward satisfactions imposed by the priest. There was a wide divergence between the Lutheran and the Calvinistic Reformations, and the prominence given to discipline, growing out of the attitude of Luther and Calvin respectively. Calvin felt the genius for administration, and felt little confidence in discipline. Calvin was a born administrator, and in theory advanced discipline to almost as high a place as it had held in the
medieval Church, but with a wide difference in practice.

(1) The Lutheran Church.—Luther was inclined to be satisfied with preaching, Christian instruction, and the dispensation of the two sacraments as the largest work of the Church and extending her influence. He had little to say about discipline as a system, and never set forth a clear theory of the relation of Church and State. He was violent enough in his judgments against the Anabaptists, Minzer, and the Protestant anarchists, and against the Swiss, but he never worked out a system of discipline. The Augsburg Confession (pt. ii. art. vii.) condemns the 'violent excommunications' of pontiffs, and andіstated that, if anything, was as far against the Church as was the recent scourging of the body of Christ.' The separation between the Church and the State was recognized by the Reformation. The Church had no right to interfere with civil government except in the matter of religious profession. The Schmalkald Articles (iii. 9) reject the major excommunication, but retain the minor, which is to be used against manifest sinners, excluding them from communion. This was the law of the Medicean table as the law of the Land. It gave proof of amendment. This power of excommunication is in the body of the Church. Later in the 16th cent. it was left to the Lutheran consistory, the parish having only the power to anathematize those not communicants. Spener also wrote of discipline as a possible means of reviving piety. These suggestions came to nothing. At the present time the State exercises so large an authority in the Church that discipline is almost a lost art in the German Lutheran Churches.

(2) The Reformed Churches.—(a) Zwingli and Oecolampadius left the right of excommunication to the State. In Zürich the separation was carried out by the magistrates; and heretics and Anabaptists were executed. Zwingli, so far as we know, did not protest against this punishment. The First Helvetic Confession provides for excommunication in the case of repentance; but, without making a clear distinction between the two reafmes, puts the authority to pass sentence in the hands of those 'who are appointed thereto by the servants of the Word and the Christian magistrate.'† The State is to take positive measures to root out blasphemy and punish blasphemers, and to promote the spread of the principles preached in the pulpit. The Second Helvetic Confession (xxx. [Schaff, Ortsd, ii. 396 f.] makes it the duty of the civil magistrate 'to defend the Church of God and the preaching of the truth, to cut out all impiety, superstition, and idolatry, to draw the sword against all maladies and blasphemers, and to coerce all heretics who are heretics indeed.'

(b) The practice of the large body of the Reformed Churches was determined by Calvin's treatment in his Institutes (bk. iv. ch. 12) and by the Genevan code, the Ecclesiastical Ordinances, which were largely the work of Calvin's hand. It must not be overlooked that in minor particulars the execution of the Genevan legislation differs from Calvin's theory as laid down in his Institutes. Calvin's carefully arranged form of Church government involves a rigid discipline. He proceeded on the principle that 'no house can be preserved in proper condition without discipline.' Otherwise Christians would live like rats in the straw.

Discipline is the only remedy against a dreadful desolation in the Church. Its purpose is threefold—to keep the Church in a sound condition, to protect its members against taint, and to bring the offender, if possible, to repentance. Following closely on the purity of the Church and extending her influence. He had little to say about discipline as a system, and never set forth a clear theory of the relation of Church and State. He was violent enough in his judgments against the Anabaptists, Minzer, and the Protestant anarchists, and against the Swiss, but he never worked out a system of discipline. The Augsburg Confession (pt. ii. art. vii.) condemns the 'violent excommunications' of pontiffs, and stated that, if anything, was as far against the Church as was the recent scourging of the body of Christ.' The separation between the Church and the State was recognized by the Reformation. The Church had no right to interfere with civil government except in the matter of religious profession. The Schmalkald Articles (iii. 9) reject the major excommunication, but retain the minor, which is to be used against manifest sinners, excluding them from communion. This was the law of the Medicean table as the law of the Land. It gave proof of amendment. This power of excommunication is in the body of the Church. Later in the 16th cent. it was left to the Lutheran consistory, the parish having only the power to anathematize those not communicants. Spener also wrote of discipline as a possible means of reviving piety. These suggestions came to nothing. At the present time the State exercises so large an authority in the Church that discipline is almost a lost art in the German Lutheran Churches.

(2) The Reformed Churches.—(a) Zwingli and Oecolampadius left the right of excommunication to the State. In Zürich the separation was carried out by the magistrates; and heretics and Anabaptists were executed. Zwingli, so far as we know, did not protest against this punishment. The First Helvetic Confession provides for excommunication in the case of repentance; but, without making a clear distinction between the two reafmes, puts the authority to pass sentence in the hands of those 'who are appointed thereto by the servants of the Word and the Christian magistrate.'† The State is to take positive measures to root out blasphemy and punish blasphemers, and to promote the spread of the principles preached in the pulpit. The Second Helvetic Confession (xxx. [Schaff, Ortsd, ii. 396 f.] makes it the duty of the civil magistrate 'to defend the Church of God and the preaching of the truth, to cut out all impiety, superstition, and idolatry, to draw the sword against all maladies and blasphemers, and to coerce all heretics who are heretics indeed.'

(b) The practice of the large body of the Reformed Churches was determined by Calvin's treatment in his Institutes (bk. iv. ch. 12) and by the Genevan code, the Ecclesiastical Ordinances, which were largely the work of Calvin's hand. It must not be overlooked that in minor particulars the execution of the Genevan legislation differs from Calvin's theory as laid down in his Institutes. Calvin's carefully arranged form of Church government involves a rigid discipline. He proceeded on the principle that 'no house can be preserved in proper condition without discipline.' Otherwise Christians would live like rats in the straw.
the rigorous discipline of Geneva found its most

genial soil, so that Puritanism and Presbyterian

ism are synonymous in the popular mind not only

with severity of Christian living, but with severity of

the laity in the church's ethical practice from the accepted standard.

The Scottish symbols, and the Westminster standards

which they enunciate, the close relation between Church and State

whence the State punishes a certain class of

religious offences, and also lay great stress upon

strict supervision over the lives of Church mem-

bers and a rigorous system of censure. The Book

of Common Order and the First Book of Discipline,

and the Westminster Directory of Worship of the Westminster Assembly, state

at length the rules of judicature and of trial. To

these is to be added the Order of Excommunication

and of Public Repentance, commanded to be

printed by the Scottish Assembly in 1560 (see

Dunlop, ii. 701-745). Knox, the faithful disciple of

Calvin, laid down in the Scottish Confession of

1560 the principle of the relation of Church and State, when he declared that to civil rulers

'certain principal and important matters are

appointed, which they are to watch over and

purgation of religion appertain,' and that they

are appointed for the maintenance of the

true religion and for suppressing idolatry. This

principle was fully embodied in the Westminster

Confession itself, which it is to be the

duty of the civil magistrate to 'take order that

unity and peace be preserved in the Church.' He

hath power to call synods and to provide that

whatsoever is transacted in them be according to

the laws of God. This principle was carried forward in the relation which the Assembly sustained to

Parliament. One of the main complaints of the

Millenary Petition in 1603 concerned Church disci-

pline. The petitioners begged 'that men be not

excommunicated for trifles and other contami-

nating and infective sores, with tender children or

such as were sound, so it is no less cruelty to suffer

amongst the flock of Christ such obstinate rebels

. . . . for a little leaven corrupteth the whole mass.'

Disciplines coming before the Church court for

censure are enumerated in the Scottish Book of

Discipline (ch. ix.), and include 'accursed papi-

strie,' which exposed those who were infected with it

to excommunication. This is reasserted in the

Order of Excommunication (Dunlop, 709). The

Kirk-session, consisting of the minister and elders,

meeting once a week, had as one of its functions to

determine and judge causes and administer

admonition to licentious lives, for 'by the gravity of

the law of God all licentiousness must be corrected and brimmed' (First Bk. of Disc. x.).

The sentence of excommunication was to be announced by the minister in the public

audience of the people in the words:

"In the Name of the Lord, who granted to the Church, that is, to excommunicate from

society of Christ Jesus, from his body the Church, from partaking of sacraments and prayer with the same, the said N.'

(f) In America, during the Colonial period, the discipline within the Churches of Puritan and

Presbyterian lineage was strict, and throughout the colonies, even in New Amsterdam under Peter

Stuyvesant, there was a vigilant oversight over strictly ecclesiastical affairs. The notable

exception was Rhode Island, founded by Roger Williams, who before his banishment denied

the right of the civil authority to punish offences against the first table, and who in his exile gave

the memorable expression to the principle of religious

liberty. In the New England colonies, especially Massachusetts, the close alliance of Church and

State involved not only such acts as the calling of synods by the civil magistrate, but the collection of taxes for the support of the Established Church, but acts of Church discipline culminating in the

banishments of Anne Hutchinson (1638) and Roger

Williams (1636), the public execution of four

Quakers (1659-64) in Boston, and the execution of nineteen persons accused of witchcraft in 1692.

With the adoption of the American Constitution, the

Churches, including the American Presbyterian Assembly (1789), adopted modifications of their

constitutions, conservative in principle, and conform to the principle of the complete separation of Church and State. The Assembly of that year altered in a fundamental way ch. xxx. of the Westminster Confession. For similar modifications by British

Presbyterian Churches, see art. CONFESSIONS, in vol. iii. p. 878.

In recent times the tendency among Churches

using the English tongue is to forego as far as possible the right of discipline, preferring to trust

almost solely what is said at the Lord's table, and to accept the view of the Church before the

people of the truth from the pulpit and to the conscience of the church-member. There is also a tendency to

avoid the exercise of discipline upon ministers of the gospel in the matter of doctrinal belief.

The recent trials of Professor William Robertson

Smith in Scotland (1877-81) and Professor Charles

Briggs and Henry Preserved Smith in the United

States (1892-94), and their exclusion for supposed

heretical views, awakened wide-spread attention, and have raised the serious question how far

liberty of opinion should be tolerated in a minister

when it is accompanied by devotion to Christ and the

interests of his Church.

from the synagogue. Disobedience to a ḥīmnā might also be visited with imprisonment (the Jews often had their own prisons in the Middle Ages). An offender might be denied the burial rite, or his body consigned to a special section of the cemetery set apart for notorious evil-doers. Sentence of death was also passed upon flagrant transgressors, more particularly upon informers. The execution of the sentence involved cases necessarily requiring the consent of the Government, by whose officials it was carried into effect. Another disciplinary expedient was public denunciation in the synagogue, according to a formula prescribed as a test of the consent of the Government, by whose officials it was carried into effect. Another disciplinary expedient was public denunciation in the synagogue, according to a formula prescribed as a test of the consent of the Government, by whose officials it was carried into effect.

The ban of the Synagogue falls under three categories, known respectively as ḥezīfāt, nīḥātāt, and ḥerēm. The first lasted seven, the second thirty days. In Babylonia the periods were one day and seven days. In Jerusalem, the seven days were divided by a forty-nine years. The second and third ban was for the Sawri and the entrance to the ban was a matter of disciplinary rigour. Ezra's action, however, seems to be a connecting link between the Pentateuchal procedure and the system of excommunication of the Talmudic régime. Under that system the term ḥerēm came to mean, and was usually signified, the ban, not the thing banned. It is the technical term for excommunication, the most formidable weapon of the Jewish Church.

Excommunication, however, though the chief, was not the only disciplinary measure in use among the Jews. The voluntary asceticism of the Nazirite had its counterparts in post-Biblical times. Thus a man would take a vow, even registering it in a deed, to abstain, for a term or for life, from certain forms of self-indulgence. Gambling was a favorite subject of such a vow. The penalty for violation of the vow was often severe, extending even to bodily mutilation. Another self-imposed penalty was fasting. And God ordered him to fast on certain days of the week either for a definite period or for life. Further, the mediaval community or congregation would make enactments (yāhānā) against various offences, disobedience to which was punished by fines, exclusion from synagogal office, or refusal of the privilege of reading from the scroll of the Pentateuch during service, or of participation in some other religious rite. The imposition of a fine on the elder D'Israel by the Spanish and Portuguese congregation in London was the immediate cause of his withdrawal.

discipline (Jewish)
the neglect by a slaughterer of cattle (ṣibḥēt) to show his knife to his Rabbi so that it may be declared fit for its purpose on ritual and humanitarian grounds; business partnership between a divorced couple; selling a wife, a gentle hand implied, in the property of another Jew without indemnifying the latter for consequent injury.

Probably owing to the example of the Church, excommunication among the Jews became more drastic and more far-reaching in the Middle Ages. The catalogue of offences visited with the penalty was enlarged, the disabilities it imposed increased in number, and the right of pronouncing it extended from the local synagogues to the congress of the community (kidōh). Synods met at various times to formulate new ecclesiastical rules, all of which were enforced by the threat of excommunication. Thus the famous Synod of Worms, convoked in the 11th cent. by R. Gershon of Mayence, declared polygamy forbidden, and placed under the ban those who dis obeyed this decision. On the other hand, the offences denounced by the congregation were often trivial, and resort to excommunication in their case was only possible. The congregation became a terrible engine of oppression in the hands of ill-instructed men, who were free to give effect to their own ideas of right and wrong, un restrained by the moderating influence of trained and educated minds. In pronouncing excommunication the congregation operated within the entire district over which it exercised jurisdiction, and, until formally repealed, through all generations. They followed the offenders even after they had severed all ties from the congregation and had removed to another district.

In some of its features the Jewish ritual of excommunication in the medieval period bore a close likeness to that adopted by the Church. The excommunicated person, if his case was a bad one, was literally banned 'with bell, book, and candle.' Led into the synagogue, he was placed beside the reader, who stood at the ark, the most sacred part of the building, with a scroll of the Pentateuch in his hands. Inflated bladders were placed on a bier, candles were lighted, and sackcloth and ashes strewn at the offender's feet. Then the horn (šibḥōr) was sounded, the candles were extinguished, and the bladders burst—all to strike terror into the sinner's heart. It usually caused the pronouncement of the excommunication: 'In the name of God, of the tribunal of Heaven and of earth, we solemnly ban and excommunicate the sinner N.N. May all the curses of the Law rest upon his head, and this excommunication cling to the 248 members of his body.' Whereupon all present, including the culprit, answered 'Amen.'

The history of excommunication in the Jewish Church is chiefly a catalogue of more or less distinguished persons banned for heresy, or some cognate offence against authority. Breaches of the religious law were frequently visited with the penalty; but we hear less of them in this connexion than of the continuance and unorthodox teaching. That excommunication was employed to fight Christianity at its inception is to be gathered from I K 6:2 and 9:1, and from passages in the New Testament. The first undoubted instance of the imposition of the ban given in the Talmud, though we need not of possibly earlier threats of it, is that of the sages Akabaya ben Mahalada (a contemporary of Jesus [5]), whose sin consisted in persisting in a view of the ritual law opposed to that of the majority of the Sanhedrin. At this period the President of the Sanhedrin was invested with the power of excommunication, and a famous President at the beginning of the 2nd cent. was Gamaliel II., a man of sterling but imperious character. A notable victim of his overbearing temper was his own brother-in-law Eliezer ben Hyrcanus, a Rabbi of great learning and influence, upon whom Gamaliel imposed lifelong excommunication for an offence similar to that of Akabaya. Gamaliel calls Heaven to witness that his manner of dealing with his adversary was not a lust of power, but zeal for the Divine glory; and there is no question that his protest is sincere. But it is of such stuff that Torquemadas are made, and we may suspect that the evils they produce are wrought. Certainly this truth did not escape the attention of the Talmudic doctors; and when, in the same century, Judah the Holy threatened to place R. Meir under the ban, a resolute spirit of acquiescence on the part of the Sanhedrin, strenuously protested. It would seem, indeed, that excommunication became increasingly rare in Palestine from this time forward, flagellum being substituted for it in the case of insubordinate Rabbis. In Babylonia, however, to which the centre of gravity of Jewish life was now being shifted, the old disciplinary system was maintained, at least in principle. How often it was put into practice it is impossible to say. Only three cases of excommunication from a century of time are on record; one of these is even recorded that a Rabbi would first put himself under the ban before imposing it upon others, so that he might remember to release them when he set himself free. But this considerate temper was by no means general, and cases of a less moral character were sometimes grotesque. Two Rabbis would excommunicate each other, and the difficulty was to know which of the two sentences was the valid one. The absurdity of such proceedings and the evil consequences generally of excommunication moved Maimonides (12th cent.) to utter a warning note.

'The Rabbi,' he said, 'has the undoubted right to punish insubordination by excommunication; but it does not consort with his dignity to exercise this right frequently, better that he should let the insults of coarse men go unnoticed than as the wise Solomon has said, 'Take not heed unto all words that are spoken; lest thou hear thy servant curse thee'" (op. cit. end).

Maimonides himself was the innocent cause of increased resort to the ban. Opposition to his theological teachings broke out into active violence after his death, and the anathema was pronounced against a great sinner who should be a denouncer, or the Introduction to his Yad. The Rabbis of the opposing school followed suit, and excommunicated those who denounced the Master. The quarrel not only grew fiercer as time went on, but widened in scope. The ban was now directed against preachers who interpreted the Scriptures allegorically, and against all persons under 25 who engaged in the study of Greek philosophy, or of any natural science except medicine.

In Amsterdam, in the 17th cent., Uriel Acosta, having made his submission to the Synagogue after excommunication for heresy, was put under the ban and his offence. Again recanting, he was again absolved; but his conflict with the authorities had unhinged his mind, and after an attempt upon the life of his denouncer, he died by his own hand. A more illustrious heretic, Spinoza, paid with excommunication for his philosophical speculations in the same century and in the same city. He made no submission or renunciation; the decree which drove him out from the Jewish community was one of excommunication imposed on pain of banishment and alienation. Cf. art. ACOSTA, SPIZNOZ.

Nor was philosophy the only heresy. The mystical doctrine of the Kabbalah, which represented the other point of view among the Jews, was attacked by Shabbathai Sebi, the pseudo-Messiah, also of the 17th cent., was put under the ban as much for his Kabbalistic teachings as for his Messianic pretensions. His followers long outlawed him.
they still survive in Turkey; and the sentence pronounced against their founder was renewed for their punishment at intervals for a century and a half. Dabbling in the Kabbala brought not merely ignominy, but damnation. Indeed, the more eminent the Rabbi, the more surely does he seem to have been marked out as a fit subject for excommunication; and, on the other hand, the more obscure the Rabbi, the more ready is the community to excommunicate. 'The wicked and_shifted in ignorance decrete'—thus a Jewish writer characterized the ban. Even to show brotherly feeling for the Karaites was an offence visited with disciplinary measures, as the famous Nachman Krochmal of Lemberg was to learn, less than a century ago. Naturally, the sect of the Karaitim, who exalted mysticism above conformity with the Rabbinc Law, were banned as heretics. Heresy, moreover, meant anything that was new, however in harmony with the Church's creed. It was a glaring self-contradiction, a contradiction in terms. Thus the Synagogue, or rather its representatives in certain places, declared some of its best friends anathema—a Dr. Frankl, for example, who in a year or two desired to found in Jerusalem an asylum for children on modern lines, and, a little later, even Sir Moses Montefiore, who advocated the teaching of European languages in the schools of the Holy City. Nor has such disciplinary procedure been quite unknown in England in recent times.

A species of excommunication was launched by the orthodox Rabbinate in 1843 against the West London Synagogue, which had just been established on principles antagonistic to the Talmudic doctrine of the divinity of the Oral Law. The faithful were warned against using the Prayer Book of the new congregation, and against communion with them in 'any religious rite or sacred act. Members of the congregation were denied Jewish burial. After protracted negotiations, the ban was removed seven years later.

At the present time excommunication is virtually confined, among Jews, to civilised countries. More than a century ago the famous Paris Sanhedrin, convoked by Napoleon I., anticipated matters by virtually declaring the rite of excommunication obsolete. It is significant that a note to the chapter on the Law of the Chicago edition of the Shulhan Aruk—the authoritative text-book of orthodox Judaism—declares that the prescriptions set forth in that chapter have no longer any validity (Torah Desk, sect. 354). Even the most devoted adherents of Rabbinc Law is prompted to admit that these severe disciplinary measures are at once superfluous and contrary to the spirit of the age. Self-preservation is obtainable by milder and more rational means in these days of emancipation and equality. Moreover, when the modern spirit recognizes, as fully as does his Gentile brother, that severity, when exercised by a religious body, defeats its own purpose by hardening the offender in his offence and confirming him in his heresy. It gives a glaring self-contradiction, a contradiction in terms, seeing that a Church, which necessarily claims to be the Divine representative, should have, as its first characteristic, the Divine qualities of mildness and leniency. Thus the ban has again and again served the cause of irreligion, instead of mitigating against it. Thus Mendelssohn (18th cent.), the protagonist of the modern Jewish temper, has well expressed this view:

'Excommunication and proscription,' he says to the introductory pages of his Jerusalem, 'are directly contrary to the spirit of religion. What?—shut out a brother who would share in my excommunication and lift his heart with mine to God! If Religion permits itself no arbitrary punting and excommunication of all it can use this spiritual weapon which, also, only they can feel who are truly religious. Every society, it is said, has the right to exclude; why not a religious society? My answer is that this is just where a religious society forces an exception. Subject to a higher rule, it cannot and it should not be contrary to its fundamental aims. To excommunicate a dissenter, to expel him from the Church, is like forbidding a sick man the dispensary. It is to repulse the patient whose need of medicine is all the greater because he is not conscious of his need, but himself ignorant of the cause.

In fairness, however, to the Synagogue, a distinction must be drawn between the needs of modern times and those of the past. There were occasions when the duty of safeguarding the existence of the community, and even of the religion, seemed to justify resort to excommunication. It possessed terrors which every other disciplinary expedient lacked. It seemed to be the only means of enforcing an act for authority and obedience to its injunctions. It supplied an expedient for preserving morality, personal and public, and it often averted ill-will and persecution at the hands of the general population, by preventing its internal disputes from reaching the publicity of the secular courts. Under these three great considerations, Jewish litigants would bring their quarrels for adjustment to the Beth Din (the Ecclesiastical Court) or to the Rabh (the Congregation), instead of taking them for settlement to the magistrates. But these considerations do not excuse the action of certain Rabbis, of the medieval period more particularly, who resorted to excommunication as an easy means of crushing their personal opponents. Nor, in the case of heresy, do they avoid against the objection raised by I. H. Weiss (Der Dorr, v.), that excommunication, even when actuated by the purest motives, did more harm than good by rending Jewry in twain at a time when concord and union were the greatest need. It not only adds, instead of extinguishing the evils at which it aimed, it often rooted them deeper. The heretic, who might have been won back by lenity and forbearance, was strengthened in his heresy, and still further estranged by severe methods. To the contrary, the Jew imbued with this modern spirit recognizes, as fully as does his Gentile brother, that severity, when exercised by a religious body, defeats its own purpose by hardening the offender in his offence and confirming him in his heresy. It gives a glaring self-contradiction, a contradiction in terms, seeing that a Church, which necessarily claims to

DISEASE AND MEDICINE (Introductory and Primitive)

liefs have the same meaning and have been reached by the same lines of development. Take as an example certain conceptions of the cause of toothache.

In a recent report (The Helmanian Lecture, October 30, 1901, p. 163), there was a young woman of my acquaintance-who 'had a reputation for power of healing toothache by a charm which had been taught her by her relative deceased. She would lay a certain leaf, rolled up with certain muttered words, upon the part inflamed; and, when in course of time the pain subsided, she would take out and unfold the leaf, and show within it the little white maggot that was the cause of the trouble. Thus was 'the evil spirit driven out.' For toothache a nail is heated to white heat and held on the affected tooth for a few seconds. This is said to kill the insects which are supposed to be of the origin of these maggots. 'The Ait's Medicine, and their Folklore, London, 1901, p. 293.') Lastly, in ancient Assyria, it was supposed that the modern Arabs of Mesopotamia, toothache is attributed to a worm.

It would be tempting to suppose that the notion of worms or insects being the cause of toothache has had the same origin in Melanesia, Japan, and Asia Minor, but all modern anthropological research points to the danger of drawing such a conclusion from a single thread of evidence. We can hope to arrive at the relationship between individual beliefs only by carefully comparing the entire culture more or less advanced, by which we mean, or can hope to arrive at the ultimate meaning and origin of a belief only by observing and 'directly' questioning the peoples among whom it is found, and especially by comparing and more primitive peoples who may reasonably be considered primitive, by race or by environment, with them. On the other hand, it is difficult, if not impossible, to obtain, by the 'direct' (or questioning) method, the beliefs of a people in relation to such a subject as disease. For the Japanese, for example, the explanation would be inconsistent, a sick tooth is caused by a food considered bad, which by accident or in a state of flux; old practices often persist, but receive a changing explanation in course of time. The beliefs of the community develop; even old beliefs may be preserved and unreflectingly sustained, despite the fact that they are logically impossible, by race or by environment, with them.

In the face of these difficulties, we shall confine ourselves in this article mainly to the study of disease among definite primitive peoples. We shall examine specific instances instead of working with uncertain generalities. Such a study will show how the same illness has been attributed first to personal (human or demonic) factors, and later to Divine intervention, as the ideas of human magic, of interference by evil spirits, and of godhead have gradually developed. Comparing primitive and more advanced peoples with one another, we shall see how treatment becomes more complex as different diseases are allotted to different evil spirits, demons, or gods. Different medicine-men are invoked; definite remedies become attached to definitely recognized diseases. Many practices employed by the most primitive peoples, are continued, but are regarded in quite another light as civilization advances. They are found to have a good effect, although the original cause for their application is no longer believed in. Thus massage, counter-irritation, and open steam are employed by many primitive peoples with the object of driving out the evil matter or spirit or the demon of the disease from the patient's body. The evil is knuckled, stamped, or pouted out of the body; or it is rubbed in a definite direction—usually from the part affected towards the feet, where it escapes; or cuts are made in the skin, causing some flow of blood. Again, the conviction felt by the patient that the medicine-man is able to control the evil spirits of disease is responsible, more than any other factor, for the success of primitive therapeutics. So, too, among the most advanced communities, despite their changed beliefs, massage, hydrotherapy, and, at all events until recently, venesection persist as useful practices. As regards suggestion, it is open to question how far the most modern treatment, or the most specific, is based on a belief in its efficacy, unless he has been induced to believe in its efficacy. Among primitive peoples, knowing the name of the evil spirit, using archaic language, summoning medicine-men from another tribe, are frequently important factors in effecting a cure. Among ourselves, a physician is held of slight account who cannot give a name to his patient's illness; he still writes his remedies in a dead language; and his reputation is apt to be greater abroad than at home. Although the modern medical aspect of medicine has come more and more to the front, in no part of the world can the magical aspect be said to have altogether disappeared.

1. Australia.—Turning now to various primitive peoples in order to study their practices (and, so far as is possible, their beliefs) in regard to the causation and treatment of disease, let us first examine the native Australians, who have been studied with considerable care by Spencer and Gillen (The Problem of Primitive Culture, London, 1899, The Northern Tribes of Central Australia, do. 1904), by W. E. Roth (North Queensland Ethnography, Bulletin 5, Brisbane, 1909), and by Howitt (The Native Tribes of the East Coast of Australia, 1904). Among these peoples disease is attributed to some evil magic prepared by one man who wishes to harm another. A widely spread method of causing disease is for the sorcerer to take an irna, a stick, and using it at least once, he fiddles around the patient, and it is said that the evil magic will have a direct result. For example, a man who had a particular reason to wish another ill, 'May your head and throat be split open!' Then he goes back to his camp, returning later to fetch the irna, which he hides somewhere near his camp. He hides it his time until he can get near enough one night to distinguish his victim without being himself observed.

² He then stoops down, and turning his back towards the camp takes the irna in both hands and jerks it repeatedly over his shoulder, imitating some curse again (8-G-635).

This pointing of the irna causes disease, and even death, unless the evil magic which has pointed harbouring some such curse can be reversed or neutralized. 'May your heart be rent asunder!'

³ He then stirs up, and points the other end at the victim, who is supposed to have been affected by the irna, and this the sorcerer often burns in the fire to ensure the death of his victim. There is general agreement, among European residents in primitive communities, that natives are extraordinarily open to suggestion, so far at least as the transmission of disease is concerned. A man who believes that magic has been exercised upon him 'simply dies down, refuses food, and pines away' (8-G-537). The writer was assured, during his stay in the Torres Straits, that it was sufficient if a man recognized as having magic power made a slight movement towards another who was aware that the former opposed him in any way. The victim would then go home, refuse food, and become seriously ill.

This pointing with the bone extends, with variations, throughout Australia. In some cases a spear is used with a human bone attached to it (8-M-1391). In others a human fibula is used (H. 338), often along with human fat (ib. 361), which the medicine-men are believed to be able to abstract from other victims and to use as a powerful aid (ib. 367). In place of the bone, stones may be employed—8-G-467; H. 379; 8-A-638; 8-G-467, especially in the crystalline form, are believed to be capable of projecting magic towards the victim.
DISEASE AND MEDICINE (Introductory and Primitive) 725

(H. 357, 363; R. § 114). Certain stones may, from their mythical history, be exceedingly powerful (S.-G. 472, 499). A dead man's hair made into a girdle or worn in a necklace, lengths of opossum string (R. § 131), a dead man's head-band (S.-G. 538), a knout made of strands of vegetable fibre (ib. 469), a woman's head-band (ib. 466), are also passed from generation to generation as evil curing. The aborigines are similarly employed; a curse is muttered into an ant-hill, which is then secretly brought back to the camp, pounded, and scattered over the ground in the camp to which the victim belongs (ib. 496). They more generally, however, as is the case with most of the Australian tribes in the causation of disease; any man can magically affect another. It is more particularly in the treatment of disease that special 'medicine-men' play a part (S.-G. 379, 479). They may, for example, be compelled to submit to certain regulations in diet and training (ib. 485). The medicine-man may suck or knead the affected part (H. 380, 384). He may merely lay on his hands (ib. 382), or make passes (S.-G. 484), or he may suck at or bind round the patient strings of human hair or opossum fur (R. §§ 155, 156). His object is commonly to produce from the patient's body the bone or the stone which is believed to be the seat of the malady against which he acts (S.-G. 489; H. 379, 384); he sometimes produces a bit of quartz or charcoal, or a marble, and often spits out blood somehow obtained from his own mouth after prolonged sucking. In some cases the patient is bled (H. 383), or is treated with herbs, etc. (ib. 384). Or it may be enough for him to place a woman's head-band upon his stomach, whereupon the evil magic passes into the band, which is thrown away into the bush (S.-G. 474).

There are various ceremonies described by observers of the Australians; but the above may be considered to be typical of this people generally, and will suffice to show broadly their attitude towards disease. It is clear that disease is commonly laid to the agency of evil spells by one man to another, which is transmitted through the magic influence of pointing some such object as a bone, a stone, or a piece of quartz. It enters the body in that form, and in the same form the evil must be withdrawn from the body. And such is the belief in disease as the sequel to robbery or some similar crime, and in the value of certain stones or marks as an indication and assurance that disease would follow if the objects protected by such signs of talisman were disturbed.

3. Torres Straits.—Now let us turn to the Torres Straits, between Queensland and New Guinea. Here, too, the belief in the power possessed by individuals in causing disease is accepted. It is required that he should have the notion that he cannot cause disease in another; nevertheless, he is always in terror lest some enemy may have the power of causing it in himself. In Murray Island, certain families were credited with influence over the growth of bananas, coconuts, or yams; others were supposed to direct the movements of sharks; many erected stone images in their gardens to protect their food. There arose a belief in disease as the sequel to robbery or some similar crime, and in the value of certain stones or marks as an indication and assurance that disease would follow if the objects protected by such signs of talisman were disturbed. Included in these beliefs, however, is the writer's description of a species of sorcery, called mai'd, which was formerly inflicted by any of the older men, in cases of hatred (mai'd urke'drum) or adultery (mai'd kos-kesarum). Finding its victim alone, the avenger takes up a chance stone, and, pronouncing over it some magic words (zogo mer) in a half-whisper, spits once or twice on it, and hurls it with great force to strike the back of his enemy. The latter falls to the ground, breathing heavily, and loses consciousness. The assailant and certain relatives who have accompanied him now close in on the prostrate body of the victim, and belabour it with their clubs. They then rub the body with a mixture of herbs and coconut oil, and give the victim coconuts to drink. The assailant, while rubbing him, tells him to go up a coconut tree and to fall down from it, breaking his leg; or he orders him to be bitten by a centipede (cat), which will produce fatal blood-poisoning; or he may tell him to go to a certain island, kill the islander, and return home and die. The avenging party now withdraw to a short distance, leaving the man's knife and some bananas and coconuts beside him. When he awakes and begins to wonder what has happened to him, the next morning he comes upon a stone and hits a tree near the terrified man. This makes him start, forget his bruises, and rush home, where he lies thirsty and comatose for some days. Then (according to the order of his assailant) he no go up himself. Medicine [i.e. the magic ceremony] make him go up. A third fragment in the Murray Islander's attitude towards disease consists in his treatment of it. A special group of men, the lukup zogo le, are concerned in curing disease. The sick man is placed, both in the house and the gardens, not far from the sea, accompanied by the sick man. Some few hours after bailing, the lukup zogo le visits the patient in his hut and rubs him down with a decoction of herbs, sea-weed, and coconut oil. This message is repeated, day by day, until the patient recovers (Gamb. Exp. Torres Straits, v. 320-323, vi. 222-240).

Melanesia.—These three characteristics—the belief that sickness is a result of disregarding a talisman, the use of medicines and rituals derived from memory in causing injury or disease, and the more elaborate ceremonials in treatment of sickness—indicate a more advanced state of culture than exists throughout Australia generally. We may trace this state of things in the New Hebrides, where we have a language that is the first stage of the language of the New Guinea, in the Bismarck Archipelago, in the Solomon Islands, in the Banks Islands, and in the New Hebrides; it is a Papuan-Melanesian attitude towards disease. Thus, according to Seligmann (The May to Inis, op. cit. New Guinea, 1910), "one or more . . . men who were sorcerers would follow their intended victim to his garden, . . . There he would be speared or clubbed, and, when dead (i.e. unconscious), put out pieces. One end of a length of rope is then looped round the dead man's hand or knee, while the opposite end is steeped in certain "medicine" (gorto). The medicine passes along the rope and revives the victim. . . . He recovers and revives the victim, . . . not know where he is or what has happened to him. He is told that he will die shortly, but he at once loses memory of this. He manages to crawl back to his village, his friends realize what has occurred by his silly, foolish condition, although the victim can give no account of what has befallen him (op. cit. 176). At Savo, Guadalcanal, Malanta, and at Florida, in the Solomon Islands, the victim is met in solitude by his assailant, who 'seizes him, bites his neck, stabs (certain) magic leaves down his throat and knocks him on the head with an axe, but not so as to kill him.'
DISEASE AND MEDICINE

(Introductory and Primitive)

charmed leaves make the victim forget the name of his assailant. He goes home, and dies two days later (Codrington, 286). In Lopers Island, New Hebrides, the assailant, after having overcome his victim, shoots a little charmed material at his head by means of a bow and arrow, whereupon he can remember nothing of the scene, but goes home to fall ill. His friends, seeing the wound, know what has happened to him (ib. 297).

In the central part of New Britain (New Pom- merrn), Bismarck Archipelago, property is protected by tabua signs which, if disregarded, will cause headache, madness, etc.; on this account the sorcerer or the thief usually causes disease. If grasses are charmed and laid on the tree stumps, madness will ensue. A human bone placed on the spot whence an object was stolen will cause the thief to waste (R. Parkinson, Dressing J ohn and Madan, p. 211). The "saying" is most respectfully projected from the body to the bone. The human bone and after her death may pass to her daughter, or with her spirit or shade (arwa) pass to the other world. At Gelaia, in the same region of New Guinea, the "saying" is called labuni. Labuni exist within women. They are said to wear petticoats, which, however, are shorter than those worn by the women of the district. They produce disease by means of a sliver of bone, or fragment of stone or coral, called gida na, which they insert into their victim's body. A fragment of human bone or a man's tooth is a specially potent gida na (Seligmann, 640 f.). The gida na is thrown by the labuni at about sixty yards' distance; only the 'spiritual' part is said to enter the victim's body. The process of removing the spell can be performed only after the woman who sent the labuni has been appeased by presents. The treatment is usually undertaken by a man, and consists in rubbing the body until the gida na is extracted in the form of a material lump, which is sucked out through the closed hands of the massuer.

This notion of the discharge of an independent emanation or spirit from a living person, which itself lives as a petticoated individual, probably led to the development of certain beliefs which are attributed to the influence of an evil spirit. Amongst the Korop-speaking peoples of New Guinea, there is an ill-defined but real belief in demon-producing spiritual agencies controlled by a sorcerer (Seligmann, 291). In the Gazzelle Pen- insula, New Britain, the most powerful of evil spirits is called Kate; it dwells in high trees, dark caves, and other inaccessible places which are held sacred. Any one profaning one of these sacred places due to sin or malice or death. Kate manifests itself in the form of a snake (P. A. Klentitschen, Die Kustenbewohner d. Gazellehals- nes, Münster, 1906, p. 357). So, too, in the New Hebrides, infants are found with the characteristic effects of veneration objects which a sick man always attributes his illness to a spirit which he has offended by trespassing on some spot or profaning some object belonging to it, or which some enemy has invoked to bring illness (Codrington, 415 f.).

In the Banks Islands, on the other hand, sickness is generally attributed to the resentment, not of evil spirits, but of ghosts of the dead. Also in Florida (Solomon Islands) it is a tidlado, i.e. a ghost of the dead.

This belief is shared in the Banks Islands. It suggests that if a person has reason to think, or fancies, that he has offended his dead father, uncle, or brother. In this case no special intercessor is required; the patient himself or one of the family will sacrifice, and beg the tidlado to return and take care of the patient. But, if by is uncertain of the ghost, if, for instance, his child is sick, he will summon a doctor, a mame kiu, to decide. The doctor called in will chew ginger and betel, etc., and after some part of the skull which is soft in infants, will call on the name of the tidlado, and beg him to remove the sickness. This is correlatable to some interference on the part of the dead. Probably this belief, traces of which appear even in Queensland (K. § 114), is correlated with the growth of the cult of the dead, which is so complex in certain parts of Melanesia (ib. 349). The Eastern Papo-Melanesians show no fear of the visitation of the deceased, and no fear of supernatural beings. They attribute disease, as we have already seen, to the discharge of a spirit from a living person, but closely according with the general Polynesian view.

The other line of development in Oceania consists in the attributing of disease to an offended spirit, which has to be propitiated by sacrifice. This conception finds a far higher development in Polynesia than in Samoan, for example. Disease was considered due to 'the wrath of some particular deity.' The high priest of the village ascertained the cause, and ordered some sacrifice on the part of the patient, e.g., a canoes, at the piece of land. In Polynesia generally, disease was supposed to be a visitation from the gods.

When a person was taken ill, the priest or physician was sent for; as soon as he arrived, a young plantain-tree, procured by some neighbour, was offered to him, as an offering to the god; a present of cloth was also furnished, as his own fee. He began by calling upon the name of the god to shake his anger towards the sufferer, to say what would propitiate him, or what applications would afford relief (ib. ii. 37). Indeed, the medicine administered (e.g. powder or infusion of vegetable matter, hot baths, etc.) was considered more as a vehicle or medium by which the god would act than as possessing any power itself to arrest the progress of the disease (ib. 47).

In Hawaii the medicinal herbs employed were believed to have been obtained many generations ago, by a man named Konamoku, direct from the gods, who also taught him the use of them (ib. iv. 333).

Thus, starting from the rude Australian belief that disease was sent by one individual against his enemy, we have reached the high Polynesian conception of illness as the result of sin against the gods. Instead of employing a medicine-man to remove the stone or bone which had become the victim, the latter relies for his recovery mainly on prayers and sacrifices offered to the offended god. Throughout Oceania the various practices we have described are combined with therapeutic measures, the most important of which, alike in the causation and in the treatment of disease, unquestionably is suggestion. Massage, with or without the external application of herbs, is a very common treatment
DISEASE AND MEDICINE

Prescribed. Bleeding is occasionally resorted to. Trephining was practised in the Polynesian Islands, and is met with in certain more western islands, e.g. Loyalty Island, Duke of York Island, New Mecklenburg (New Ireland), and in the Gazelle Peninsular tribes. If a patient is suffering from headache and epilepsy. Hot baths are often employed in Polynesia and in other islands, e.g. the Solomon Islands, the patient being wrapped in a cloth and seated over a pile of heated stones, which are covered with leaves and lime. The patient is expected to drive away the pain or the disease. Especially in Melanesia, into which the areca has been introduced from the Malay Archipelago where it is similarly valued, betel nut, betel leaves, and lime are employed in a similar fashion. The patient is expected to drive away the pain or the disease. In some tribes, they believe that the gods, nevertheless believe that a sorcerer may be employed by a man to bring disease or death to his enemy. Consequently presents are made to the god, not only to appease his anger, but also to turn the disease back to the person who sent it. The man who sent it (Ellis, op. cit. iv. 293). So the Samoan, despite his belief that disease is due to the wrath of a deity, protects his property by various tabus. For example, he may suspend a stick horizontally from the roof. Being applied to the taking of the victim, is expected to drive away the pain or the disease.

We have attempted to trace in vague outline various stages in the attitude of different Oceanic people towards disease. We are not concerned here to discuss what have already pointed out (p. 724*), a people, when passing to a higher plane, does not discard the beliefs of the lower, but carries them with him, perhaps adapting them to suit its further development. Thus the belief in the reality of disease to the south sea gods, neverthe less believe that a sorcerer may be employed by a man to bring disease or death to his enemy. Consequently presents are made to the god, not only to appease his anger, but also to turn the disease back to the person who sent it. The man who sent it (Ellis, op. cit. iv. 293). So the Samoan, despite his belief that disease is due to the wrath of a deity, protects his property by various tabus. For example, he may suspend a stick horizontally from the roof. Being applied to the taking of the victim, is expected to drive away the pain or the disease.

We have already drawn attention to the Australian belief in the potency of human bones as a cause of disease. It is also met with in various parts of Melanesia and New Guinea. In the Banks Islands, where, as we have seen, illness is attributed to the ghosts of the deceased, a piece of human bone, belonging to the corpse of the ghost whose services are required, is applied to a fragment of food stolen from the corpse. In many cases, the bone is_consecrated, and allowed to decompose or to burn. In the same islands and in Florida (Solomon Islands) a piece of bamboo is stuffed with leaves, a dead man's bone, and other magical substances. The aggressor covers up the open end of the bamboo until he meets his foe, when he opens it and let fly the magic influence against him (Cordrington, op. cit. 204). So, too, among the Roro-speaking peoples of New Guinea (Seligmann, op. cit. 210) a piece of human bone, and other magical substances. The aggressor covers up the open end of the bamboo until he meets his foe, when he opens it and let fly the magic influence against him (Cordrington, op. cit. 204).

The most potent of evil spirits in the Gazelle Peninsula of New Britain preferably manifests itself in the form of a snake. The man who wishes to injure another cuts up sea snakes and mixes them with leaves, roots, lime, and other magical substances. One of the victims of a very dead bodies are of value in the preparation of charms, and amongst the Eastern Papu-Melanesians about Milne Bay (ib. 551) sorcerers are supposed to open graves of the dead and to eat their bodies.

From the powers over disease attributed to the human dead we may pass to those attributed to living animals, chief among which is that of the

snake. The most potent of evil spirits in the Gazelle Peninsula of New Britain preferably manifests itself in the form of a snake. The man who wishes to injure another cuts up sea snakes and mixes them with leaves, roots, lime, and other magical substances. One of the victims of a very dead bodies are of value in the preparation of charms, and amongst the Eastern Papu-Melanesians about Milne Bay (ib. 551) sorcerers are supposed to open graves of the dead and to eat their bodies.
Islands of the Malay Archipelago, there is considerable diversity in their beliefs; but, generally speaking, their spiritual world may be described as inhabited by the souls of animals (e.g. hawks, owls, pigs, etc.), by spirits of the river, home, etc., and by the gods of thunder, harvest, life, death, etc., one of whom may be supreme over the rest. Consistent with this, the natives have attributed this region to disease, evil spirits are one; and the treatment consists in effecting the departure of the evil spirit either by the persuasions of prayers and sacrifices or by the more cогент means of medicaments. (Bali, David Sumatra). The ceremony is often attended with much noise of gong- and drum-beating. Commonly, e.g. in Borneo, Cerau, Timor Laut, Buro (cf. Frazer, GB, 1900, iii. 97 L), the evil spirit or the disease—for it is difficult to separate cause from effect—is induced to enter a well-provisioned model boat, which is made to sail down the river, carrying its noisy burden out to sea. This custom of sending away the disease down river extends throughout the Malay Peninsula to Buru, Suma, Annam, and even to Ceylon. Among the Micrones of Sarawak the ceremony is performed in the following way:

The medicine-man (orang bayoh), having decided which spirit (anak) is the cause of the disease, returns home and prepares a log of sage palm out in the image of that anak. This image, or model boat, is placed in the model house or a box. The patient's room is decorated with colored cloths, flowers of the arica palm, and leaves fantastically plastered to represent objects, etc. A swing of round leaves is erected, a plaited leaves connect it with the receptacle containing the dead anak. After having been summoned by the orang bayoh to the swing. Several people may successively mount the swing, swaying their bodies in every possible attitude, to the sound of drums played in the background. Himself swaying on the swing, the orang bayoh recites "almost in a monotone an incantation in the language of the patient's disease, and in a language and a manner as if he is begging him to decide and take the sickness out of the patient's body" (Lawrence and Hewitt, AJ 1900, 699). The whole incantation is a succession of appeals... to the spirits, who come gradually nearer and nearer until the chant addresses them as if they were just outside the house, and finally as they are inside it, and then (p. 498).

At length the medicine-man falls from the swing apparently insensible; and after recovery he crosses to the patient, uttering incantations, sprinkling yellow rice, and waving over him an arica flower. Whenever the swing is unoccupied, an arica flower is hung across it. Finally, the patient himself is transferred to the swing, and now, when the long-besought spirit is declared to be present, the patient and the orang bayoh proceed to the boat or to the incantation without speaking, each by a certain incantation. Next day the dakau, provided with padi and yellow rice and adorned with arica flowers, is taken in procession to a stream, where it is placed in the water. During which time, the receptacle takes the form of a boat. In that case, the boat is decorated with padi leaves, and adorned with common and sacred wood, and it is made to float down the river or towed out to sea. No Milan, save the orang bayoh, will dare to touch the dakau after the performance of this ceremony. Generally there is a sound, logical connection between the sickness and dakau used, the spirits of the water being responsible for dysentery, those of the air for headache and fever, those of the jungle for malaria, swellings of the legs, and other diseases attendant on jungle life (ib. 393).

This account is interesting as showing the complexity of the ritual which may be attained in endeavoring to drive the evil spirit out of the boat, which is then floated out to sea. The ceremony in one form or another is spread, perhaps also in the Solomon Islands, which is found most vividly with the aid of the areae or betel-nut from Melanesia. The above account is also interesting in that it introduces a new feature in the use of the swing in driving out the disease, the transference of the disease (or evil spirit) to an image, the swooning of the medicine-man, and the attribution of different diseases to different spirits or causes.

In some cases a more simple and less public form of treatment is observed. The dakau, after having been incarnated by the spirit (anak), is taken by the medicine-man into the jungle, or hung on a tree, etc. In the air, or placed in the river, accord-

The swooning of the medicine-man brings us to another important feature in the cure of disease among primitive peoples. So far as we have considered the mental state of the individual at all, it has been stated that there has been brought to him by a local doctor. It is true that in certain parts of New Guinea and Melanesia the medicine-man finds that his magic is more efficacious if he enters upon it in a fasting state or in other ways maltreats himself. So it is well to imagine that mental instability which is to be found among the Malayan races, leading, under provocation, to loss of consciousness, auto-hypnosis, or other forms of change in 'personality,' such as are exemplified in running amok and in latah. The altered mental state of the medicine-man during his treatment of disease is well exemplified in the second of the two main ideas in regard to disease which prevail in the Malay Archipelago. One of these ideas we have already considered which we have already noticed, as exemplified by an evil spirit the other. The same idea is also widespread throughout this region, extending to Burma, the Andaman Islands, Tibet, and Northern Asia (Tyler, Primitive Culture, 1875, L. 657), that diseases are due to a wandering spirit. Just as in death the soul has finally left the body, so in sickness it is temporarily absent; therefore it has to be pursued and caught by the medicine-man. The writer happened to see this ceremony of catching the wandering spirit among the wild tribes of Borneo at the mouth of the river. As the wandering spirit fluctuates, he plays its role to take a message to the supreme god to remove all sickness and to preserve the people from harm. Then, waving the bird over each patient and murmuring some archaic formula, he kills it and sprinkles its blood over the patients. With a second bird in his hand, he describes the wanderings of his own spirit, how he has to cross a great river, where finally he meets with the soul of one of his sick patients. He lays his fingers on the head of one of the patients to catch the wandering spirits with the bird and re-enter his body. At the same time he ties a piece of rattan cord round the patient's arm, giving him incantations. The same performance is repeated in the case of the other patients, and then the medicine-man, after further chanting, takes the bird and fowl, and is bound to the patient, the end of the string round his own wrist. The second bird is now killed, and the blood is sprinkled on the patient, and it is tied to the end of the string near the mouth. The chanting continues, until suddenly the medicine-man gives a slight stagger and recovers consciousness. During the ceremony he had been deadless of his surroundings; and, from experiments which the writer knows to have been made at other times on such medicine-men, the claim is probably correct.

The use of strings in the cure of disease (from which perhaps the unthinking use of ligatures was derived) extends over other parts of Oceania (e.g. Queensland) which have already been noted. In the Gazelle Peninsula of New Britain, threads are prepared and are charmed in order to cure and to prevent disease. For the former purpose, they are worn round the affected part; for the latter, round the neck (Parkinson, op. cit. 204). The use of archaic incantations is also common in these parts. Frequently, words which are archaic and fossil are also used. We have already stated that a man may...
DISEASE AND MEDICINE (Introductory and Primitive) 789

recognize his inability to cause disease, yet may fear the existence of that power in others. So, frequently a tribe may consider another tribe specially versed in the causation or treatment of disease as and its language or summon members of it to its aid.

In the Malay Archipelago, bits of wood, stones, or rags are sometimes drawn out of the patient’s body, as demonstrating the cure of the disease. The medicine-men who perform these will often contain curiously twisted roots, knotty sticks, pebbles, coloured marbles, pieces of quartz, etc., many of which, he claims, are revealed to him as medicines by benevolent spirits in his dreams. It is said that by means of these externally intended for the cure of the disease, see the soul, and catch it in its wanderings (Ling Roth, Natives of Sarawak and British N. Borneo, London, 1896, i. 273). Possibly this is another example of the susceptibility of the body, not, their claims, are many of which, he claims, are revealed to him as medicines by benevolent spirits in his dreams. It is said that by means of these externally intended for the cure of the disease, see the soul, and catch it in its wanderings (Ling Roth, ib. i. 270, 282). At the present day many cures in that country are undertaken by women, and most of the spirits invoked by the medicine-men receive the prefix ini, ‘grandmother’—perhaps in accordance with the former importance of womanhood in the treatment of disease. In the Malay Archipelago, betel-nut and pepper are the common outward remedies for almost any disease. Turmeric, honey, spices, and onions are taken internally. Cholera is treated by rubbing with kazey pulih oil, and by water from certain sacred jars. Bleeding is practised; cupping is common—usually by means of a bamboo cane, the air within which is exhausted either by suction or by lighting a fire at the upper end. A wound may be cauterized by burning with a red-hot wire. A patient may be exposed to the smoke of a fire lighted below a bamboo grating on which he sits.

5. Malay Peninsula.—Coming now to the Malay Peninsula, we find that the people there were more distinctly personified as demons. Each disease is not, is caused by a different demon; the demons all arise from the thunder-god, who sends them by the winds, because of the sins of the people. There are certain demons dependent for their existence on the jungle- and river-demons, any one of which may cause disease. Certain new features, possibly of Indian or Chinese origin, begin to make their appearance here. Amulets now become important. Women obtain protection from disease by wearing combs, with inscribed patterns on them, and the patterns cause the disease-bearing wind to fall to the ground until the wearer has passed. A Semang woman may possess twenty or thirty such combs, which are apparently dependent for their efficacy on the particular pattern that they bear. The men’s ‘talismans are . . . incised on the quivers and charm-holders’ (Skeat and Blagden, Pagan Races of the Malay Peninsula, London, 1896, i. 423). There is supposed to be some connexion between these patterns and the flowers which the good god, Ple, at one time allotted as remedies for the various diseases. The diseases were also thought to be laid by the winds on the parasitic plants of trees, between death and the victory. Now, so runs the legend (which, however, must be accepted with caution), as new diseases have arisen since Ple dwelt on earth, and since the vegetable kingdom then appointed by him to different
diseases is exhausted, such illnesses as small-pox and cholera have no rest, but, as soon as they have killed one man, fall straightway upon another even before the soul of the first has left the body (ib. ii. 132). Among the Blandas (of Malaya) also numerous demons are much in use: they are made of pieces of turmeric or other substance, strung on a shred of bark, and worn round the neck, wrists, or waist. The Sakai have bamboos decorated with magical patterns, which are kept from the public gaze (ib. ii. 252).

Incense is used in the Malay Peninsula. The Blandas of Selangor exorcise the evil demon by burning benzoin and invoking the spirits (bandas) of the various gods to destroy the medicine-man’s body. The patient lies on his back within a shelter of nihong palm leaves. As soon as the spirit enters the medicine-man, he brushes the patient seven times from head to foot with certain leaves which evidently is intended to expel the demon from the body. Among the Sakai the invalid is similarly heated with leaves, after a censer of burning benzoin has been swung over his couch. The object here is to prevent the evil spirit from entering the patient, which is suspended over the head of the patient (ib. ii. 257).

Trees also assume more importance. Disease may be cured by the touch of a certain tree, which are suspected to be the home of the demon, and by casting saplings into the jungle so that evil spirits may accompany them.

Among all the peoples of Eastern Asia sticks are of great value for the treatment of and protection from disease. Thus among the Anisus the demons of disease are propitiated by making them what is called ina. An ina is a whistled wand: groups of ina are collectively called misa. They are sometimes worshipped as messengers to the gods; sometimes they are regarded as offerings to the gods; or they may be regarded as mere charms.

So, when a person falls sick, the elders often meet together and make ina of this [willow] tree. After they have been worshipped they are taken out to the sacred place and stuck up among the misa’ (J. Batchelor, op. cit. 88). Sticks of elder about four feet high are set up in a village for protection from a prevailing epidemic (seeart. ANUS). So, too, on the Andaman Islands the demons are more distinctly personified as demons. Each disease is not, is caused by a different demon; the demons all arise from the thunder-god, who sends them by the winds, because of the sins of the people. There are certain demons dependent for their existence on the jungle- and river-demons, any one of which may cause disease.

In Africa.—In Africa illness is commonly attributed either to the machinations of an enemy or more usually perhaps—to resentment on the part of the ghost of a dead man owing to the disrespect with which he has been treated. In West Africa, apparently, it may even be one of the sick man’s own spirits which thus vents its annoyance on the body (Tylor, ii. 130). Almost universally, before treatment is begun, the name of the ghost must be discovered. Among the Nandi, this takes place by divination. Some near relative is sent for, who takes four (for a woman, three) stalks of the castor-
oil plant or of millet, and tries to stand each upright in a fragment of pot containing water, which is placed near the patient’s bed. As he takes each stalk, he calls on one of the deceased members of his family. When one of the stalks stands erect, he exclaims, ‘I have got thee, O medicine-man,’ and the patient solemnly kicks it over with his big toe. The stalks are distributed in various places in or around the house; a little sand or sand mixed with the water is smeared on the forehead and throat of the invalid; ‘the rest, together with some elephant’s grain, beer, and milk, is sprinkled between the bed and the door and also thrown outside the house.’ The patient is visited by the medicine-man and the ghost to depart, in return for the food which is being offered it (A. C. Hollis, The Nandi, London, 1909, p. 63). Among the A-Kikuy, (W. Scoresby Routledge, With a Prehistoric People, the Abikuyu of British East Africa, London, 1910, p. 263) such divination is practised by arranging a number of counters in equal heaps and observing the remaining unit. Among the Baganda small pieces of buffalo-or cow-hide are cast (J. Roscoe, JAI xxxii. [1902] 40). Among the Bembes on the Upper Nile, or medicine-man, addresses questions to the patient to discover what particular hoe, or spirit, is causing the disease. He beats his drum, talks excitedly, and chants various incomprehensible phrases. The patient is visited several times by the medicine-man together with the rhythm of the drum make the patient sway to and fro and have a hypnotic effect on him.” His body jerks and twitches, as he is now piled with questions by the kanga. In this way the cause of the illness is found out (J. B. Weeks, JAI xi. [1910] 425). In the Sudan the writer received a description of a similar divination by means of music; the rite, which is known as zar, is said to be employed even in Cairo, among women. The patient is visited several times by the practitioner, who wears a different coloured dress and sings a different incantation at each visit. Ultimately one dress or incantation is discovered which presumably by its action on the demon causes the patient to swoon. This knowledge having been obtained, the patient is seated astride a live sheep, and the same dress and incantation are employed again. After the patient’s second swoon the sheep is killed, the blood is spilt over his person, and the meat is partly sacrificed to him, partly given to her.

The use of animals in the cure of disease is a characteristic feature throughout Africa. Thus among the Hottentots, the hand of a sick patient is introduced within the leg of an ox, which is then killed and eaten by married people who have children. A child recently recovered from a severe illness is dragged through an arch over which an ox is made to stand. The ox is killed, and eaten only by married people, and the meat is partly sacrificed to the patient (Frazer, op. cit. iii. 414). A Guinean negro will tie a live chicken round his neck to cure disease (ib.). In such cases the animal or bird is generally driven away or killed. In the Upper Congo, the mite (spirits), ‘when they arrive at the sick-man, he put stalks into the ground, and, by tying a mat round them, made an enclosure, in which he sat speaking to the various mite, answering ‘himself in assumed voices, pretending he was holding a conversation with them’ (ib. 190). In this way he got draws out from the rents of his clients’ house to one of the stalks in his mat enclosure, and the end of the string dropped inside. From this string there dangled dried plantain leaves, twigs, etc. (ib.). When he was tired he shook the leaves—a signal for the lads sitting outside the enclosure to start beating their drums, and for the folk to sing their chorus. Thus he would spend several days in trying to find out which of the mite was troubling the family. Finally, he drove away the mite as far as possible, and for the family drove off the mite. So in Uganda, the evil spirit, which is supposed to dwell at the top of the centre hut-pole, is caught by raising high on the back of the buffalo or by digging up the horns, and sometimes by cutting off the horns. If the mite-a terrible noise inside the mat, as though he were fighting for his life. Shouts, screams, derisive laughter, whoops, thuds, and screams, sent out from the interior while the kanga rushes out, panting and sweating profusely, holding in his hand a bleeding head (really the head of a rat or lizard, but believed to be that of a wild animal) is thrown out. It is dug up from within the mat, and declaring that he has killed the animal from which he was possessed by the spirit that was troubling the family (ib. 334).

In addition, of course, to the determination of the particular spirit causing the disease, and to the transference of it to an animal, other therapeutic measures, some of considerable complexity, are prescribed by the medicine-man. Among the Bongi, dieting is common; certain objects of food are tabooed. Among the Bagasha (Roscoe, JAI xxxiv. [1909] 187), green torn pieces of bark are placed on a sick man and buried in the path. It is believed that the first person who steps over the herbs will contract the disease. . . . In the Upper Congo, cupping is often practised, usually by sucking a horn placed over the skin. Massage is a common treatment, often terminated by the pretended extraction of a small object—a palm-nut, stone, or piece of iron—from the patient’s body. Enemas and fomentations are also used. Rheumatic pains in the limbs are relieved by tying certain medicines to a brass rod, which is then worn by the patient. Knotted strings are tied round the sufferer’s wrists and feet. Among the people of British Central Africa (Stannus, JAI xi. [1910] 265), many children’s illnesses are treated by boiling certain leaves in water and holding the child over the medicated vapour-bath. Bleeding is arrested by the powdered bark of an astringent tree. Internal remedies are used in very few cases. The treatment of snake-bite is by ligature.

Among the A-Kamba (British East Africa) the medicine-man’s gourd commonly contains pebbles, hard seeds, nuts, and such objects as the bone of a lion’s paw, a cock’s spur, pieces of porcupine quills, etc. He also uses various powders, e.g. a grey powder made from certain trees, and believed to be an antidote to magic and poison; a white powder called ipe (also used by the A-Kikuy), and called by
Similarly, in Paraguay the witch-doctor is supposed to have the power to climb a thorny cactus, which is placed in the abdomen of a woman in labour; and a medicine which, when mixed with water, is given internally for diarrhoea (C. W. Hobley, 1910). This is known as A-Kiyitu medicine, used by the Kikuyu. (R. Hobley, JAI xxxi. [1901] 291.)

DISEASE AND MEDICINE (American) — As certain aspects of primitive medicine will be treated in art. MEDICINE-MEN, the present discussion will be limited to the consideration of disease itself from the various points of view of the American aborigines' ideas, customs, ceremonies, etc., connected with its prevention, relief, and cure. Among a race as widely scattered as the American Indians, and occupying, for long periods of time, all kinds of environments—from the Arctic north to the tropical south, from the high plateaus and mountainous areas of the continent, island regions like the Caribbean, and plains like those of the southwestern United States and parts of south-western South America, the thick forest regions of the interiors and the islands in some other directions, the valleys of the great rivers and the basins of great lakes—the prevalence of diseases, the susceptibility to them, the methods of treatment, and the psychological reaction to the general situation were naturally subject to considerable variation.

1. American Indians a comparatively healthy race. — At the time of the Columbian discovery, the Indians were, on the whole, a healthy people, and, in spite of the effects of intertribal wars and their attendant evils, were holding their own in point of numbers, or, as some authorities believe, were even increasing in population, especially in some parts of the continent. Our knowledge of diseases among the American Indians, before the coming of the whites, is not very satisfactory even for the semi-civilized peoples of Mexico, Central America, and Peru; for many of the uncivilized tribes of both North and South America the data at hand are very scanty indeed. All the reports of early explorers, missionaries, pioneers, and colonists are lacking, certain inferences can be made from the mention of diseases in myths and legends and cognate folk-lore material. Dr. Hrdlička, our best and most recent authority on the matter, says (Bull. 30 BE, pt. i. [1907] p. 540):

'The condition of the skeletal remains, the testimony of early observers, and the present state of some of the tribes in this regard, warrant the conclusion that on the whole the Indian race was a comparatively healthy one. It was probably spared at least some of the epidemics and diseases of the Old World, such as small-pox and rickets, while other scourges, such as tuberculosis, syphilis (treponematosus), typhus, cholera, scarlet fever, cancer, etc., were rare, if occurring at all. Taking into consideration the warlike nature of many of the tribes and the evidence preserved by their bones (particularly their teeth), injuries, etc., particularly those received by offensive weapons, must have been common, although fractures are less frequent than among whites. Treatment of disease in general, and in particular, was paid to the hygienic conditions of the Indians, an increase comparable with that in whites may be
expected in many sections.' The writer of the present article has pointed out several cases of such increase in his art, 'Indians, North American' in Elle, iv, 432. Mixed bloods are said to suffer, moreover, when struck by any disorder, and diseases known to the whites, but the evidence in this matter is by no means convincing.

2. Epidemics, etc.—As has already been noted, epidemics of disease appear to have been rare in pre-Columbian America. According to Dr. H. U. Williams (p. 342), the New World, up to the period of its discovery and occupation by the whites, offered a marked contrast to the Old in the fact that the American race, during its sojourn of centuries before the advent of the white man, remained untarnished, and, from the rest of mankind, developed a surprisingly small number of infections peculiar to it. Concerning certain epidemics and wide-spread outbreaks of disease contemporaneous with the settlement of various parts of the continent by Europeans, it is still somewhat doubtful whether the infection in question came from Europe (by way of white people, or, possibly, through Indians who had been taken to Europe) or was of native origin. An interesting example of this epidemic sickness is that of small-pox, which could hardly have been small-pox, as some have thought; this disease raged among the Indians later on (e.g. in 1633). The idea that it may have been carried to the Indians by certain shipwrecked French sailors held captive among them is also to be considered. The European settlers of the period were prone to regard such calamities as visitations of God, just as many Indian tribes looked upon them as the work of evil spirits, etc. The idea also prevailed among the Indians that epidemics of diseases unknown before the advent of the whites were in some way let loose among the natives by the English and other white peoples. Interesting on this point is the following extract from Winslow's Good News from New England (1624), cited by Dr. Williams (p. 345):

'Here let me not omit one notable, though wicked, practice of the English here, which might possibly have had some of his countrymen with the greater fear of us, and so consequently of himself, told them we had the plague buried in our store-house; which, at our pleasure, we could send forth to what place or people we would and destroy them therewith, though we stirred not from home. Being, upon the aforesaid brabbes, sent for by the governor to this place, where Hobbanook (so Indian) was and some other of us, the ground being broke in the midst of the house, whereby certain bars of powder were buried, though unknown to him, Hobbanook asked him what it meant. To whom he readily answered: That was the place, wherein the plague was buried, where he formerly told him and others. After this Hobbanook asked one of our planters, whether they had no such thing, and what we had such command of it. Who answered No; but the god of the English had it there and could send it, at his pleasure, to this destruction of his and our enemies. This was, as I take it, about the end of May 1632.'

Ethically, at least, some of the English and some of the Indians were not far removed from each other.

There has been much discussion of the question whether syphilis is of pre-Columbian origin in America, or has been introduced from Europe since the discovery. Dr. A. S. Ashmead (Amer. Journ. Dis. exot. N. S., x, 1138, 1908) notes that Dr. F. Grana convinced him of its pre-Columbian origin, and Dr. F. Grana identifies it with the Peruvian *kwant'; Dr. Ivan Bloch (Intern. Amerik.-Kongr. xiv. [1904] 57-79), from historical and osteological evidence—he has recently also published a volume on the subject—is another believer in the pre-Columbian theory, which is also shared by E. G. Bourne, the American historian, who considers the legend of the culture-hero Guahagiona, who was buried, as evidence that syphilis has existed in the West Indies long before the coming of the Spaniards' (Proc. Amer. Antiq. Soc., N. S., xvii. [1906]).

Dr. Tello and Palma of Peru, who have studied the question, seem also to share the opinion that syphilis is pre-Hispanic in Peru, citing in evidence certain representations of the effects of the disease in anthropomorphic pottery, etc.; so also R. D. Wagner and Dr. Capitan, the French anthropologist (Journ. Soc. Antiq. Peru, xvi. [1906]).

Dr. Lehmann (Globus, xviii. [1910] 12-13) is of opinion that the evidence in Tello and Palma does not settle the matter satisfactorily, and Dr. Hrdlicka is by no means convinced of the prevalence of syphilis in pre-Columbian America. The exact character of the Peruvian *uta*, the Columbian and Paraguayan *buba*, and some other diseases, all of which may possibly on some occasions be mistaken for syphilis, is not yet clearly decided. The idea of Dr. Lehmann that *uta* may be a name for a disease of the Cordilleran type—e.g., beriberi—is also quite possible.

Among other interesting S. American diseases that call for further investigation, such, e.g., as the Ecuadorian *huicho*, which seems to have some analogies with the African 'sleeping sickness,' there are general dances and like ceremonies carried out for the purpose of avoiding or driving away epidemics and outbreaks of disease. Some of the Indians of the south-western United States tried to 'capture' the spirit of small-pox during an epidemic of that disease, and similar procedures are reported from elsewhere.

3. Conceptions of the nature, source, etc., of disease.—Under this head could be cited illustrations of all manner of ideas, from the most natural and simple to the most far-fetched and complicated, or even metaphysical. On this point Dr. Hrdlicka remarks (Bull. 30 Be, pt. i. [1907] p. 80):

'The causation and the nature of disease being to the Indian in large part mysteries, he assigned them to supernatural agencies. In general, disease is connected with a visible influence was regarded as the effect of an introduction into the body, by malpractice or offended supernatural beings or through sorcery practised by an enemy, of noxious objects capable of producing and continuing pain or other symptoms, or of absorbing the patient's vitality. These beliefs, and the more rational ones concerning many minor indispositions and injuries, led to the development of separate terms of treatment, and varieties of healers.'

Among the American aborigines one finds examples of the attribution of disease and illness in man to his own misdeeds and sinfulness, to his neglect of his ancestors, to violations of innumerable kinds of tabus and prohibitions, to the malvolence or malevolence against of the dead, to the touch of ghosts, to the actions of the wind and the moon, to the machination of enemies through magic and witchcraft, etc., to the desire for revenge of the animal world ill-treated by man, to temporary loss of the soul, to the introduction of foreign objects into the body, to the shadows of certain other people (e.g. mourning widows and widowers), to women (particularly when menstruating), etc. For certain special diseases and pathological conditions very curious reasons are sometimes given. Some of the names of diseases and terms relating to or describing their symptoms are interesting psychologically. In Tsinshian the
DISEASE AND MEDICINE (American) 733

The curative ceremonies of such people as the Navaho, when employed for the benefit of individuals, are both prolonged and costly, being exceedingly elaborate both in ritual and in paraphernalia. According to Dr. G. A. Dorsey ([ib. p. 229]):

"Among the non-Pueblo tribes of the S.W., especially among the Navaho and Apache, the extended ceremonies are almost uniformly the peak of the ritual, without regard to their so-called medicine-dances. Many of these are of an elaborate and complicated nature, but are all designed for the restoration of the sick. In these ceremonies masks are used, but these elaborate and complicated dry-pictures are made; both these features probably having been borrowed from the Pueblo tribes.

Some of these great 'medicine' ceremonies center about two things: the gathering around them practically all the ritual lore and legend of the tribe, and serve as a general outlet for the observable and dramatic sense of all the people. The great "medicine," or "grand medicine society," of the Algonquin and related tribes is described in detail by Hoffman (7 REBEW [1891] 143-300); the medicine-men of the Athapaskan Apache by J. G. Bourke (9 REBEW [1892] 443-666); the esoteric fraternities of the Zuni by Mrs. Stevenson (23 REBEW [1904]); the medicine-men and their sacred formulas by Mooney (7 REBEW 301-397); the secret societies of the Kwakiutl by Boas (B. U. S. Nat. Mus., 1895); the organizations of the Algonquin Advenue by Dorsey (An. Publ. Field Coll., Mus., 1902), the 'mountain chant' of the Navaho (5 REBEW 379-467), and the great 'night chant' of the same people, by Mathews (Amer. Anthropol., 18, vol. vi. [1902]).

To other N. American tribes much valuable information will be found in the various monographs of Boas ( Eskimo and peoples of North Pacific coast), Dixon and Kroebler (California tribes), Kroebler, Wissler, Lowie (tribes of the Great Plains), or otherwise. For general information concerning the American Indian shamans, and the article of Dr. R. B. Dixon (JAFL xx1. [1908] 1-12) is of importance. From some points of view, the ceremonial of the Navaho are the most remarkable of American healing-rituals. For S. America, we have not much accurate and detailed material of a reliable character concerning the rites and ceremonies of the secret societies having to do with medicine. The best is to be found in the recent works of Koch, Noack, Earle, Hawtrey, Guevara, Latcham, etc. Some data are also contained in the writings of certain of the early missionaries, explorers, and historians, such as Charlesval, and others. Concerning the great 'night chant' of the Navaho, a ceremonial lasting nine days, Dr. Matthews says (Amer. Anthropol. ix. [1896] 50):

"The principal purpose of this great ceremony is to heal the ailing man or woman, who destroys all the expenses of the ceremony; but the occasion is used, also, to implore the gods for various temporal blessings, not only for the sick man, but for all who participate in the work, with their friends and relations. Thus the ceremony, like nearly all ceremonies, ancient and modern, is connected with a myth or legend (several myths, indeed, in this case), and many of the acts in the ceremony are illustrative of the mythic event.

He also observes further:

"In them we find a nocturnal vigil analogous to that of the medieval knight over his armour; we find a vigil in which men and gods, or the gods that represent men, take part; we find evidence of the belief in a community of feeling and interest between gods and men, and we have an instance of the primal feast in common or love-feast closely resembling certain ceremonial acts performed among ourselves to-day."

5. Games and gaming implements as preventative and as remedies for disease.—That games among savage and barbarous peoples have certain preventive and curative roles with regard to disease as well as other afflictions and calamities of mankind is not at all surprising, especially if one takes into view their view of the world. Diseases or their symptoms are represented by Stewart Culm in his monograph, 'American 

Digitized by Microsoft®
game of ring and pole was played about the house, because 'people believe there is a spirit of sickness, which is tricked about from one lodge to another, and this game is encouraged in order to keep it away.' The employment among the Kwakiutl Indians of Vancouver Island of a sort of 'beam-shooter' (Dr. Newcombe calls it the figure 4 due-shooter) to moderate in the directions to which the arrows of the sick, and this game is described (Culin, p. 435, quoting Newcombe): 'Among the Kwakiutl of the Ninikshsh tribe, this is called Heulculin. In use, a small stick is placed across the top of the platform, the sharp end of which is shot to the irregularly shaped trigger-piece, which is horizontal to the figure 4. The trigger-piece of the body is moved forward, and the short end of the trigger downwards, and the perpendicular stem of the 4 horizontally. It is frequently used even when children are sick; it is moved to different portions and to a distance away from the head supposed to be causing the sickness. It was used as late as two years ago at Alert Bay. Sets of four of this instrument are employed by grown-up people—relatives of the sick. The sticks are left lying about after the performance, but the hams are burned when done with. This goes on for four nights in succession. The noise of the two flexible sides coming together when the stick is erected is supposed to aid the good work. At night the four shooters are left loaded near the sick child, to scare the ghost or spirit. They are also used as a game by children.'

This is an interesting example of the employment of the same implement or instrument in a children's game and in a 'medical' procedure. Rings or hoops, similar to those used in the hoop and pole game, are used in certain 'medicine' ceremonies by the groups of the Coast and Island regions (Culin, p. 435) for the purpose of aiding in the cure of the sick. On the first day of the healing rite of the Navaho, known as Yebatchi, similar gaming rings are made. These rings were used to touch the sick as if it were the patient's hand, and were afterwards rolled out of the lodge. Of the 12 rings used in this ceremony, as described by Col. J. Stevenson (8 RBEW [1891] 259), 'three were afterwards taken to the east, three to the west, three to the north, and deposited at the base of pineous trees.' We are further informed: 'The rings were placed over the invalid's mouth to give him strength, cause him to talk with one tongue, and to have a good mind and heart. The other portions of the body were touched with them for physical benefit.'

Culin (p. 437) reports having seen 'actual practical game rings' used in ceremonies. Naturally, where the beginnings of the priest and the doctor are found in the primitive American, the implements and objects in ceremonial use must often be the same or very similar. And the lines between 'games' and other more or less ceremonial performances are not always very marked; indeed, the line between the one is made a part of religious or quasi-religious observances—and this is not at all peculiar to the aborigines of the New World.

6. Medical operations, surgery, etc.—Some of the performances of the American 'medicine-men' belong rather to the field of jugglery and legerdemain than to that of operative therapeutics. Others have, doubtless, more of a religious or mystical than of a medical significance. There are, however, a number that may justly be classed as relating to the beginnings of medical operations and surgery as we understand them. The range of these among even quite primitive tribes may be seen from Father Morice's article (see Lit.) on the subject. Among the Ainu, an inhabitant people of British Columbia, where items relating to bleeding, burning, blistering, treatment of broken limbs, deformities, uterine troubles, child-birth, cartaret, etc., are briefly considered, some new and interesting facts are recorded. Various manipulative procedures in vogue are as follows: Blood-sucking is in use both as a general practice and as a special procedure for wounds, cuts, bites, and stings of animals and insects, particularly those of a poisonous nature, in wounds due to arrows and other weapons that have been tipped with deadly substances, snake-bites, etc. Blood-letting by means of flint-knives, arrow-heads, etc., was practiced by the Euxionians of the Quichua tribe, and reported from a number of uncivilized tribes, such as the Central Californian Indians, the Kwakiutl of the Yukon (Alaska), certain tribes of the island region, the Itunian region, the Brazilian Caraya, etc. The place of venesection differs according to the trouble, and varies with divers peoples. Bloods (p. 290) notes that it was placed on the forehead; the ancient Peruvians cut into the veins of the root of the nose, the Indians of Honduras the veins on the arm, on the shoulder; for troubles in the upper part of the body, certain Californian tribes practised venesection on the right arm, and on the left arm or forearm by pressing the vein in the region of the shoulder. These people, and the Itunian region are said to have practised venesection by sucking small drops of blood from various parts of the patient's body until a vein was opened.

Sacrification and kindred procedures are widely spread over primitive America, ancient and modern, the implements used being knives, sharp pieces of stone, bits of shell, pieces of flint or obsidian, horns, fish-skins, teeth of animals; some tribes used the heads of animals. The development for the purpose, as, e.g., the Caray of Brazil.

Castration with cedar bark is practised by several tribes of the North Pacific coast (e.g., Bilina, Tswana) for rheumatism and other diseases of a like order; by some Southern Californian tribes with a horrible skill; by some Central American peoples with hot ashes and heated leaves for wounds, etc.; by the Chontale and certain Nahuatl tribes. Many North American Indian peoples practise castration for obstinate sores, etc.

Bone-setting is accomplished quite cleverly by a number of tribes all over the continent, particularly the Sianan Wincebagos, the Creeks of the south-eastern United States, some of the peoples of the North Pacific coast, and certain tribes of the Brazilian tribes; splints and bandaging are employed especially by the Bilina and others. The operation was of common occurrence, and is still practised by the Navaho, who reached its highest development among American tribes. Trephining was practised by the Aztecs, the Tarahumara of Chihuahua, but has never been found north of Mexico.

For the purpose of stopping bleeding of a dangerous sort, many American tribes used dried-up roots, and the use of certain plant substances (Yukate, Winnebago), hot ashes (for nose bleeding); and the Brazilian Caraya (Barbells, p. 250) are credited with the use of bindings for the limbs. With the whites the use of gunpowder for stopping bleeding has come into practice with many tribes all over the continent. According to Hrdlicka (loc. cit., p. 857), 'antiseptics are unknown, but some of the cleansing agents or healing powders employed serve as such, though undesignedly on the part of the Indians.'

7. Materia medica, etc.—In both the procedures of individual shamans and the more elaborated and extensive ceremonials, such as those carried out by the Navaho, etc., a large number of 'fetishes,' charms, amulets, and the like are employed, and the principles of similia similibus and sympathetic magic are appealed to in innumerable ways, some-times with very special developments and cunning. Dr. Hrdlicka (loc. cit., p. 836) says: 'The fetishes used are peculiarly shaped stones or wooden objects, lighting-rick woods, feathers, claws, hairs, figures of mythic animals, representations of the sun, of lightning, etc., and are supposed to embody a mysterious power capable of preventing disease or of counteracting it in human beings.'

Of real materia medica, animal and mineral substances are comparatively rarely employed. Dr. Hrdlicka (p. 837) says: 'Animal and mineral substances are also occasionally used as remedies. Among South-western tribes the bite of a snake is often treated by applying to the wound a portion of the ventral surface of the body of the same snake. The Papago use crickets as medicine; the Tarahumare, lizards; the Apache, spiders' eggs. Among the Navaho and others red ochre combined with fat is used extensively to prevent sickness. A man's head, cut from beneath a camp-fire is used by White Mountain Apache women to induce sterility; the Hopi use water, rattlesnake, turtle, etc., of other products or substances, on an inflated surface to counteract the supposed fire which causes the ailment.'

The oil, grease, etc., of certain animals are used for external and internal application, often as antiseptics—especially among certain tribes of Mexico, scorpion-oil for scorpion-bites; among
the Caribs, snake-oil for snake-bites. Among the Yamanandi and neighbouring tribes of Brazil (Bartels, p. 120) we meet with the curious custom of plastering the affected portion of the patient's body all over with feathers. Some of the Southern Californian Indians smoked pills of wild tobacco, used as a remedy for goitre; powdered charred bones are in use by the Kutenai for sore eyes. The great mass of primitive remedies, however, come from the plant-world—roots (most commonly), Briggs, leaves, bark, flowers and seeds (rarely)—and are most frequently employed in the form of a decoction, made from either the fresh or the dry plant (sometimes from its powder). The 'doctrine of signatures' and similar ideas controlled a good deal of the botanical medicine of the aborigines of America, which reached its height with such peoples as the ancient Mexicans, as may be seen from Father Gerst's monograph on the subject, where the data in the old historians, are carefully brought together. In the warmer and tropical regions of America numerous vegetable gums and balsams, the use of many of which has passed over now to the white population as well, were employed for medical purposes—lotions, poultices, fomentations, dressings, etc. The number of plant-remedies in use even among the uncivilized tribes is often quite large. Among the Californian Karok, 13 species of medicinal plants were reported; among the Hohomok, 15 species; among the Pomo, 16; among the Yurok, 17; among the Suquamish, 160; among the Ojibwa 89; of the plants known to the Moqui or Hopi, according to Gerst, 75. It is of course only for medical purposes—there being probably not over 100 indigenous species in the environment. As Bartels (p. 209) notes, the Indians possess quite a large number of plant-remedies for diseases and troubles of the eyes. Abundant emetics and astringents are also provided. Plant-remedies are in vogue for the treatment of cuts, burns, bruises, wounds, bites, stings, and stomach-ache and kindred ills, diseases of the respiratory tract, and nasal troubles, in the form of poultices and plasters (often of hot leaves), decoctions, lotions, and inhalations. With the Cheroke Indians the plants furnished all the remedies as against the animal world, which inflicted diseases upon mankind. The formulae of the medicine-men of this tribe have been recorded by Mooney, and they form a body of great importance for the study of primitive medicine in its incantational and therapeutic aspects. When the gathering of medical plants there are sometimes connected certain rites and ceremonies, as, e.g., is the case with the 'medicine tobacco' of the Crow Indians of the Siouan stock. Interesting also is the sacred 'tule pollen' in use among the Apache, known as hodentin, and 'given or applied because of its supposed supernatural beneficial effect.' Many plants are employed as remedies simply for traditional reasons, without any formulated opinion as to their therapeutic benefits. 

8. Drugs, narcotics, etc.—In connexion with puberty-rites, 'man-making' ceremonies, and performances of a kindred nature, certain narcotic and stupefying substances were employed among tribes regarded as being beyond the civilised. In the Jewish ceremonies carried out on boys at the age of puberty among the Virginian Indians, the subjects were stupefied by a decoction of *Datura* ('jimson weed'). A variety of *Datura* was used by the shamans of the Californian Yotoks to induce religious frenzy. This was done also, in all probability, by those of the Indian tribes of the south-western United States (Navaho, Hopi, etc.) who are acquainted with the properties of the *Datura*. Various tribes of the Gulf States employed in their ceremonial purifications the 'medicine' known as the 'black drink,' a decoction made from the leaves of the *Hieracium*. This 'medicine' figures in the great *Bauh', the Aztec national thanksgiving feast, among the Indians of the Creeks. According to Hall (Rep. U.S. Nat. Mus., 1885), the Creeks were in the habit of preparing and drinking it before council-meetings, because they believed that 'it invigorated and invigorated their bodies for thought and debate.' In various regions of North, Central, and South America several kinds of tobacco furnished medicine for divers diseases. Pipe-smoking for asthma troubles is reported from the Dakotas, Wisconsin, Creeks, and other tribes; in several parts of Mexico, tobacco was used for similar purposes, and likewise against rheumatism. Among the *Iparras* Indians of Brazil, incurable sick people are completely narcotized by tobacco and thrown into the river. In South America, tobacco was chiefly used in the form of snuff, and, according to McGuire (*Bull. 30 BE*, pt. ii. [1910] p. 768), 'there is some evidence that the plant was chewed in Central America.' McGuire (p. 768) says:

'Tobacco was chewed by the Indians of the Yucatan, and was usually smoked by them only among the Iroquois and some of the Pueblos trade tobacco was not smoked in solemn ceremonies. At the ceremony of the priests and the entrance of the compadres that were strongly narcotic, those using them becoming ecstatic and seeing visions. To the Indian the tobacco-plant had a sacred character; it was supposed to be used on solemn occasions, accompanied by suitable invocations to their gods and deities. It was also much used to aid in disease or distress, to ward off danger, to bring good fortune, to generally assist one in need, and to allay fear.'

The general use of tobacco all over America was much further employed by many of the European colonists devoted themselves to the planting and sale of this plant. Tobacco was at first the first of its kind introduced into the Old World. Among some Indian tribes the planting, cultivating, and harvesting of tobacco had many religious or semi-religious rites and ceremonies attached to them. According to Simms (*Amer. Anthrop.*, N.S., vi. [1901], cited by McGuire (p. 768), 'the planting of medicine tobacco is one of the oldest ceremonies of the Crow, consisting among other observances, of a solemn march, a foot race among the young men, the planting seed, the building of a house of green smoke, the seed, a visit to the sweat-house, followed by a bath and a solemn smoke, all ending with a feast; when ripe, the plant was stored away, and the seed was put in a deerskin pouch and kept for another planting.'

In S. America a number of plant-juices were employed for the purpose of making more or less intoxicating decoctions, and for curing (or at least allaying) ceremonial occasions, etc.; and 'getting drunk' was not infrequently a common and regular occurrence, on festival occasions, with certain Brazilian and Paraguayan tribes. In N. America, according to Dr. Hvidtcrka (p. 387), 'among the tribes who prepare *tewin* or *tessum*, particularly the Apache, parts of a number of bitter, aromatic, and even poisonous plants, especially a species of *Datura*, are added to the liquid to make it "stronger." These are* tegestac*; the Californian tribes made drinks from *monzenta* berries, and the Pima and other tribes of the Arizona region manufactured an intoxicating liquor from the fruit of the cactus. Among many tribes of ancient and modern Mexico and Guatemala, *cacti* of the species of *peyotl* (*Acanthocereus tetrahit*), a small variety of cactus, had, and still has, a very extensive use; so also in the region of the United States north of Mexico. According to Mooney (*Bull. 30 BE*, pt. ii. p. 297), it was 'formerly and [still] much used for ceremonial and medicinal purposes by all the tribes between the Rocky Mountains and the Gulf of Mexico, from Arkansas river southward, almost to
the city of Mexico.' The Nahatlut peejot corre-
sponds to the Kiowa seeii, Comanche wokori, 
Tarahumara kihiti, etc. Under the incorrect 
title of nesel it is well known to the whites, and 
have been even used for psychological and medical 
experimentation.

The 'eating of nesel buttons' takes place during ceremonies of 
considerable length among the Kiowa (where they have been 
studied by Means), Comanche, and other tribes. With these 
peoples, 'it is rather a ceremony of prayer and quiet con-
templation than an intervention for the recovery of some 
person; it is held in a tipi specially erected for the purpose, and begins usually at night, continuing 
until the sun appears in the morning. Then, as a rule, 
the patient does not take part in the ceremony properly, but 'occupy themselves with the preparation of the sacred food and of the feast in 
which thecereulean button, their symbol of health, they give to 
at some point during the ceremony the sick person is usually brought in to be 
prayed for, and is allowed to eat one or more specially 
consecrated peejot.' Mooney says further: 'The number of 
"buttons" eaten by one individual during the night varies 
from 10 to 40, and even more, the drug producing a sort of 
spiritual excitement differing entirely from that produced by any 
conventional drug, and apparently without any reaction. 

The effect is heightened by the weird hillayi of the songs, the 
constant sound of the drum and rattle, and the fitful glare of the fire.

The Tarahumara and some other Mexican tribes have a peepo-
dance. The effects of 'nesel buttons' have been studied experi-
mentally by Havelock Ellis (Pop. Sci. Mo., Int. [1902] 87-
74.) Ellis notes (p. 267) that these thus far unexplored diseases indicate that it possesses varied and valuable medical properties, 
towards the idea of the species of the Indians who regard it almost 
as a panacea.' Father Gerbe (pp. 63-65) records its use, not 
only as a sort of panacea for fatigue, etc., but also as a means 
of obtaining hallucinations, which hallucinations, which were taken for messages 
from the gods, and prophecies of the future. The Chicimecas, 
according to Schimizu, consumed large quantities of peejot, and 
they believed: 'If they have consumed it, they shall be able to 
during battle, rendered them insensible to hunger, thirst, etc., and 
protected them from all dangers.'

The 'nesel button' or 'nesel' here described is not to be 
confounded with the nesel (food and intoxicating drink, the 
tabebuia tree) produced in district from the age of 

9. Inventions for use in 'medicine.'—Besides the 
very large number of amulets, charms, and talismans, 
of which some account is given in art. CHARMS 
AND AMULETS, a few 'inventions' of a medical or 
quasi-medical character, found among the American Indian peoples, deserve mention here. 
Such are, e.g., a sort of respirator of fine woven 
grass used by the Kwikpagnit Eskimo of Alaska 
(Bartels, p. 222) to prevent the smoke from getting 
into the lungs of the people in the 'sweat-house'; the 
scarification implements of fish-teeth made 
by the Carajas of Brazil (p. 267), which are of 
peculiar interest; the bone and horn tubes used by 
several North American tribes (Navaho, Ojibwa, 
Creek, Siouan, etc.) in the preparation of 
blood-sucking, and similar procedures. Note may be 
taken here also of the litters for the sick and 
wheeling among a number of tribes (e.g. Dakotas) 
and the various ornaments used by the 

10. Hygiene, sanitation, etc.—The idea that 
'cleanness is next to godliness' was wide-spread 
among many American Indian peoples, as their 
frequent bathing, and other cleansing procedures, 
the very common use of the 'sweat-house' (accompa-
nied often by elaborate ceremonies), the washing 
of the sexual parts, and the attention to the body 
during menstruation, after evautis, etc., abundantly 
indicate. Some of the tribes lowest in intelligence, 
apparently very careful and thorough—process beginning with the 
new-born infant, which, even in the cold north, is 
immediately plunged into the water; the mother 
also cleansing herself as soon as possible. This 
treatment of body and mother is length in the works of Ploss and others who have 
written in particular of menstruation and of child-
birth among primitive peoples. Fastimg, bathing, 
and sprinkling ceremonies are found accompanying 
the religious performances of the people, and 
also smaller, and they are also to be met with in 
connexion with preparation for and participation in 
games, which have often a more or less religious 
character. Of the Tsimshian Indians of British 
Columbia, who are sun-worshippers, Boas says 
(5th Rep. on N. W., Tribes of Canada, 1889, p. 50): 
'men make themselves agreeable to the deity by cleanliness. 
Therefore they bathe and wash before praying. For the same reason they take a vomitive when they 
wish to please the deity well. They fast and abstain from 
touching their wives, if they desire their prayers to be successful.'

It is evident that many tabus, among the 
American Indians, no less than among primitive 
peoples in other parts of the globe, are of this hygienic, 
or quasi-hygienic nature. Sometimes, as 
among the Tsimshian (Boas, p. 50), when a special 
object is to be attained, 'to make the ceremony very 
successful, their wives must join them; if 
the wish should be true to the husband, the 
effect of the fasting is destroyed.' Bathing and 
cleansing appear also frequently, and sometimes 
elaborately, in connexion with mourning rites 
and ceremonies connected with the handling and 
disposal of the dead. The use of water reaches its 
maximum, perhaps, with the ancient Mexicans, 
who 'washed the soul.' The 'purification' of the 
soul as a means of curing the body of disease was 
in vogue among a number of the peoples of ancient 
Mexico, as is well known, which was regarded as a remedy par excellence, because 
it cured the body by washing the stains of the soul.

The use of the bath (with some tribes daily) as 
a hygienic or medical procedure, often complicated 
with religious or mystical ceremonies, was wide-
spread in all parts of primitive America, the water 
used having added to it sometimes (e.g. among 
the Dakotas) certain decoctions of plants—occas-
ionally from plants from the agency of 

Some Indian tribes, like the Hopi or Moqui, and the 
Pueblos, avoided cold baths altogether; others, 
like the Pimas and some tribes of Lower 
California, preferred them. With quite a 
number of tribes (Dakotas, Creeks, Ojibwa, Klamath), 
especially in the Rocky Mountain region, hot 
baths were followed immediately by cold, 
the individual rushing at once from the 'sweat-house' 
and plunging into the nearest stream. Cold baths 
for fever were in vogue among many tribes, and the 
Huastecos of Mexico even submitted smallpox 
patients to this procedure, thereby greatly increasing 
the mortality from that disease. The Moqui, 
when suffering from fever (Bartels, p. 134), 'used 
to lie down, performed a invocation, bled, 
sucked, and preserved them from all dangers.'

—373—
practice for the cure of disease; (3) often as purely social and hygienic—"a number of individuals entered the sweat-house together, apparently actuated only by social instinct and appreciation of the luxury of a steam bath" (p. 662). As a religious ceremony it was used by warriors before going forth, by hunters previous to departing for the chase, by boys and girls at puberty, and by all sorts of male and female persons under-taking special exploits, etc. Moreover, 'among the Plains tribes all priests who perform ceremonies have usually to pass through the sweat-house to be purified, and the sweating is accompanied by special methods. One of the objects of the sweat-house with some tribes are elaborate and complicated, especially where there is a village or a general temezoldi or estufa. Nelson informs us that, among the Alaskan Eskimo, the koshkin used for the sweat-bath was 'the centre of social and religious life in every village.' With most tribes also the construction of the sweat-house 'was attended with many rules and observances.'

Massages were practised in various ways by numerous North American tribes. The object is frequently the pressure with hands or feet, etc.). Purifications of various sorts, including fasting, bathing, taking various 'medicines,' were in vogue among many tribes, previous to participation in games and other more or less formal performances. The word "disease," here referred to such 'medicines' in connexion with the foot-races of the Tarahumara, the ball-games of Zuni, Cherokee, Ojibwa, Choctaw, Mohawks, etc. Care regarding the satisfaction of natural necessities is reported in the accounts of several American Indian peoples. According to Joest (Int. Arch. f. Ethn. vol. v. Suppl., 1893), the Caribs and Arawaks, who live near rivers, etc., go thither for such purposes. Others, some distance from the village, scratch a hole in the sand, and carefully cover up their excrement, cleansing themselves with sand. Concerning the Carayá Indians of Brazil, Ehrenreich (Bartels, p. 261) remarks on:

'\( \text{the feeling of decency of these savages exhibited in their manner of defecating, which is of cultural-historical interest. It is done as far away as possible from the village. A hole is made in the sand. The individual sits over it with outspread legs, hiding the upper part of his body behind a mat. The excrement is carefully covered.} \)'

Certain North American Indians also are very careful in the matter of relieving themselves, always doing so out of the public way, and not in view of any one.

Some of the food-tables of American Indian peoples have at least a prionia fascie hygienic value. Careful regard for the purity of water is evident both in the Pueblo region of the south-western United States and from the early accounts of the semi-civilized peoples of ancient Mexico.

Ehrenreich reports the Carayá Indians of Brazil (cited by Bartels, p. 238) as inquiring of every stranger, 'Have you eaten?' and permitting him to enter their cabin only after assuring themselves that there is no danger from tuberculosis—a disease upon the increase among them, and of whose infectious character they are fully aware. But this is post-European. Among the Indians of northern California, the Klallam, however, disease from contagious or infectious diseases are abandoned by their fellows, who, however, place water and wild fruits within easy reach before leaving (Bartels, p. 242). The ancient Aztecs, according to Gerste (p. 18), had the same fashion of treating severe cases of disease, where death might be expected.

The family of the patient carried him to the highest point of some near-by mountain, placed beside him food and a vessel of water, and left him to die out of reach, or cut off the nail on either foot after forbidding all persons to go near him. The segregation of the patient in order to keep away evil spirits, etc., was in vogue among many tribes. Some, like the Winnipigo Indians of Wisconsin and the Mosquitoes of Honduras, went farther and surround the bed of the sick with poles on which were hung various animals, or to hedge him in with painted sticks, allowing no one but the 'medicine-man' to approach the spot (Bartels, p. 244). Hygienic motives may also enter here in part, as also in the case of the abandonment of persons suffering from contagious or infectious diseases. Here perhaps ought also to be mentioned the fact reported by Dr. Farabee of the very primitive Medicine-men of the Alaskan Eskimo, who 'are more afraid of the disease from which he died than of the dead man.'

11. Personification and forms of disease.—The disease or sickness is often given some special form and recognized as having the power of pressure, like those of mantis, lice, etc., which are represented as having the power of persecution. Certain medicines, as "estufa," mean "steam chamber," and the medicine-man, is followed by relief or cure, temporary or permanent. Such procedures are known all over America, from Alaska to Patagonia, and from Greenland to Brazil. The representation of the disease as a person, carrying on the actions of the disease, is also the conception of it as a piece of stone or some similar object. The claws of such animals as the bear, the spines of the porcupine, etc., likewise figure in the same way. Living creatures, corporally or spiritually, may be the cause with many American tribes, having in some way or other, of themselves, or through the machinations of shamans or other evil-disposed individuals, been introduced into the body of the patient. The Sioux Indians, like some of the tribes of Central Mexico, personify disease as a worm; the Klamath and certain of the Sioux as some sort of insect; some Indians of Central Mexico as a louse; the Klallam, Karok, and other Californian tribes of the north as a frog; and the Dakotas as a tortoise. Another common personification is a snake. The Twa, Chinkaun, and Klallam Indians of the State of Washington believe that the disease is caused by a wood-pecker pecking at the heart of the person affected. Even quite large animals are believed by some Indian tribes to make their way into the human body and cause disease and sometimes death. Among the Twa, the Chinkaun, and Klallam it is believed that evil-minded shamans or sorcerers can send into the body of a man a bear, which eats at his heart and so causes him to become sick (Vellis, Ann. Rep. Ethn. Ins. 1892, p. 1), and the Sunka Indians of Vancouver Island, according to Boas (11th Rep. N. W. Tribes, 1890, p. 41),

'the cause of sickness is either what is called miqaltı, i.e. sickness flying about in the air. It enters the body without any enemy being the cause of it; or the sick person has been struck by sickness thrown by a hostile shaman, which is called miqalt. Their ordinary method of removing disease is by sucking and singing over the patient.'

12. Prognostics, etc.—Devices for the prognostication and prophesying of the issues of diseases of various sorts are reported from many Indian American tribes. Among the Kutenai Indians of south-eastern British Columbia, according to Boas (5th Rep. 46), 'if the hands of a dead man (before the body is buried) are not opened, it is very truly that they cannot be opened, it indicates that the
tribe will be healthy and strong and free from disease. The Indians of Michoacan (Bartels, p. 168), in Central Mexico, believe that, if the leaf of a certain plant, when placed on the sore place of a patient, stays in position when it is removed, he will recover; if it drops off, his death is certain. The Mayas of Yucatan and some of the Indians of the Yucatan, in Mexico, believe that a sick person, who is afflicted with some other creature, animal or human, is met with in various regions of primitive America. Some of the Nahua or Aztec peoples of ancient Mexico (Gerste, p. 47) had the custom, in cases of violent disease, to fabricate a little dog of maize-flour, which was then placed on a magnety-plant in the public way; it was believed that the first passer-by would carry off the disease, and thus enable the patient to recover. In like manner, certain coastal tribes were so frightened at the carelessness of man and the invasions of their rights on the part of mankind that they held a council and determined to obtain revenge by each of them inflicting some disease upon their human oppressors. This they did, the smallest as well as the greatest providing his share. This is why the incantations and rites of the Cherokee medicine-men are so full of references to animals, and why each method is represented as being caused by some one of them (the interesting details will be found in Mooney's monograph upon this subject). As a result of the action of the animals, the legend goes on to state, all the plant held a council and resolved to provide for all the diseases inflicted upon him by the former. Thus it happens, also, that for every disease brought about by the animals, there is a remedy to be found in the plant world. The idea of the origin of the animal world is obtained among many other American tribes as well, and the doctrine sometimes suggests comparison with the modern scientific theories as to the microbe origin of many human diseases. Among the Klamath Indians of Oregon, birds such as the wood-pecker, the lark, the crane, and various sorts of ducks are believed to be the causes of disease. With them also the otter is made responsible for smallpox.

15. Natural phenomena as causes of disease. When several Indian tribes, the shadow of another person is often harmful. Among the Shuswap Indians of British Columbia (Boas, 6th Rep., p. 92) widows and widowers, while observing mourning regulations, must avoid letting their shadows fall upon a person, as the latter would fall sick; otherwise, similar beliefs prevail among the Bilgula (7th Rep., 1891, p. 13). Lightning, the moon's light, etc., are sometimes supposed to cause illness. The Klamath Indians seem to have believed that the wind had something to do with the causation of disease. In some of the incantations of these Indians the west wind, in particular, is represented as 'blowing disease' out of its mouth; the rainstorm also 'calls up' disease.

16. Human beings as causes of disease. Besides enchantment, witchcraft, sorcery, and other active procedures of medicine-men and medicine-women, by means of which sickness or disease is thought to be caused in the patient, there are other ways in which men and women may infect one another or bring about a condition of ill-health. As may be seen from the abundant data in Boss's 'Das Web,' the menstruating woman is often regarded as a disease-bringer or a disease-causer, and her segregation is justified for that reason. Among the Songish Indians of Vancouver Island, according to Boas (6th Rep., p. 22), a menstruating woman may not come near sick persons, that is, not even to the extent of seeing them. The maximum theory of woman's responsibility for disease is met with among the Chiquitos of Bolivia, concerning whose 'medical code' Charlevoix states (Gerste, p. 45) that 'it consists of two prescriptions: first, to suck the part of the body of the patient affected, and, second, to kill some woman, since women are responsible for all the misfortunes of mankind.' Among the Shuswap Indians of British Columbia, according to Boas (6th Rep., p. 90), it is forbidden to expose to the public road the clothes of the sick man, in the belief that any passer-by who touched them would take the disease upon himself and so relieve the patient. This is also the idea prevalent among the Kwakkwati (Boas, 6th Rep., p. 54), twins, who are taught to be transformed salmon, have the power of curing diseases, and use for this purpose a rattle called 'Rodungan,' which has the shape of a flat box about three feet long by two feet wide; among the Nakquotjigilna (6th Rep., p. 55) twins, if of the same sex, can be brought together by a woman who is born. . . . The father dances for four days after the children have been born, with a large square rattle. The children, by swinging this rattle, can cure disease and procure favourable winds and weather.

17. Soul and disease. In primitive America a great variety of ideas as to the relationship of the soul to disease and kindred phenomena of the human body prevailed. Indeed, we meet with all grades—from the simple belief of the Arawakan Machuyucas of eastern Peru, who, according to Dr. W. C. Farabee (Proc. Amer. Antiqu. Soc., N.S., xx), think that the soul 'has nothing to do with life, sleep, disease, or death,' to the elaborate and quite metaphysical doctrines of some of the tribes occupying higher cultural stages, where, for instance, the soul may have the power to repair the loss of one of its souls, constituting sometimes a hierarchical series. Among the Indians of the North Pacific coast regions there are some (for example, certain tribes of the Fraser River, in British Columbia) who believe in the existence of several souls, the loss of one of which causes partial loss of life, i.e., sickness, while the loss of all, or of the principal one, entails death; but, according to Boas ('Bull. 30 Be,' pt. ii, p. 617), the idea that the 'life' is associated with the vital organs (blood, breath, etc.), the loss of which causes death, 'is not strongly developed among the American aborigines.' The Hidatsa Indians of the Sionan stock,
DISEASE AND NAGA (American) 739

like the Fraser River tribes, believe in a plurality of souls, as do a number of other American peoples. The doctrine of souls and of disease among the Coast Salish is discussed by Boas (J. A. F., 1893, pp. 39-43). Here there are said to be two souls, a larger and a smaller; when a man is sick, it is because the latter has left his body, and he recovers when the shaman or medicine-man has caught the soul and returned it to him. In various parts of America the diseases for 'soul-catching' are sometimes detailed, with extensive ceremonial, ritual, etc. Among the Tlinkit, Haids, and Tsimshian Indians, according to Boas (6th Rep. p. 58),

their art consists in extracting the sickness or in finding and restoring the soul of the sick person. In trying to find it, three or four shamans sing and rattle over the sick person until they declare they have found the whereabouts of his soul, which is supposed to be in the possession of the salmon or eel (Cats'-fish), or in that of one of the crested eagles. The latter is found 'by following the track of eagles, and sometimes by following their calling.' 

The soul of an individual can be removed from his body through the 'magic' of his enemies, their more powerful orendo, to use the term of Hewitt, and can be retrieved only by the exercise of the same practices of a higher order or a greater cunning. Among the Songish Indians the lower sort of shamans, or Si'oua, who are generally women, are able to cure such diseases as are not due to any absence from the body. The higher class of shamans, or Sn'ouna, are able to see the soul and to catch it when it has left the body and its owner is sick. A man becomes a soul-sn'ouna by intercourse with supernatural powers in the woods, and he acquires a supernatural power, called the Uw'uyin, corresponding to what is known as the tamunowus in the Chinook jargon, and 'medicine' east of the Rocky Mountains. 

The method of procedure of the Sn'ouna in disease-curing and soul catching is thus described by Boas (6th Rep. 30):

When he returns from the woods, the shaman is able to cure diseases, to see and to catch souls. The best time of the day for curing a disease is at nightfall. A number of guests are invited to attend the ceremony. The patient is deposited not far from the place near him. Then they begin singing and dancing with sticks. The shaman (who uses no rattle) has a cup of water standing next to him. He takes a mouthful, blows it into the cup, and pours it over the sick person. Then he applies his mouth to the place where the disease has left in order to suck and seek there. As he is finished sucking, he produces a piece of deer-skin or the like (as though he had extracted it from the body, and which is supposed to have absorbed the sickness), and throws it. If the soul of the sick person is supposed to be absent from the body, the shaman sends his Uw'uyin (not his soul) in search. The Uw'uyin brings it, and then the shaman takes it and puts it on the vertex of the patient, whence it returns into his body. These performances are accompanied by a dance of the shaman. Before the dance the Sioua must give a name to the earth, which else would swallow the shaman. When acting as conjurer for sick persons, he must keep away from his wife, as else his power might be interfered with. He never treats members of his own family, and, if he is sure his service is not needed, it is believed that he cannot cure his own relatives. Rich persons sometimes engage a shaman to look after their welfare.

The following is reported by Boas (6th Rep. p. 61) from the Kwakinti:

'The sight of a ghost is deadly. A few years ago, a woman, who was waiting for her mother, suddenly fell into a swoon. The people first believed her to be dead, and carried the corpse into the woods. There they discovered that she continued to breathe. They watched her for two days, when she recovered. She told them that she had seen two people enter the house. One of them had said: 'Don't cry; I am your mother's ghost. We are well off where we live.' She had replied: 'No; I was not aware because you have left me alone.' Then she had fallen into a deep swoon.'

This explanation of swooning, fainting, and similar states is common all over primitive America. Among the Shuswap (5th Rep., p. 59), 'when a person faints, it is a sign that a ghost pursues him.'

19. The hereafter of those dying from sickness and disease.—Among the American Indians, one frequently meets the idea that those dying by violent death, or who have died in childbirth, and people whose death is due to sickness go to a certain place beyond the hereafter. Thus the Tlinkit, according to Boas (5th Rep. 47), 'believe that the soul, after death, lives in a country similar to ours. Those who have died a violent death go to heaven, the country ruled by Tahit; those who die by sickness (who women dying in childbirth) go to a country beyond the borders of the

DISEASE AND NAGA (American) 739

like the Fraser River tribes, believe in a plurality of souls, as do a number of other American peoples. The doctrine of souls and of disease among the Coast Salish is discussed by Boas (J. A. He never treats members of his own family, and, if he is sure his service is not needed, it is believed that he cannot cure his own relatives. Rich persons sometimes engage a shaman to look after their welfare.

The following is reported by Boas (6th Rep. p. 61) from the Kwakinti:

'The sight of a ghost is deadly. A few years ago, a woman, who was waiting for her mother, suddenly fell into a swoon. The people first believed her to be dead, and carried the corpse into the woods. There they discovered that she continued to breathe. They watched her for two days, when she recovered. She told them that she had seen two people enter the house. One of them had said: 'Don't cry; I am your mother's ghost. We are well off where we live.' She had replied: 'No; I was not aware because you have left me alone.' Then she had fallen into a deep swoon.'

This explanation of swooning, fainting, and similar states is common all over primitive America. Among the Shuswap (5th Rep., p. 59), 'when a person faints, it is a sign that a ghost pursues him.'

19. The hereafter of those dying from sickness and disease.—Among the American Indians, one frequently meets the idea that those dying by violent death, or who have died in childbirth, and people whose death is due to sickness go to a certain place beyond the hereafter. Thus the Tlinkit, according to Boas (5th Rep. 47), 'believe that the soul, after death, lives in a country similar to ours. Those who have died a violent death go to heaven, the country ruled by Tahit; those who die by sickness (who women dying in childbirth) go to a country beyond the borders of the
DISEASE AND MEDICINE (American)

earth, but on the same level. It is said that the dead from both countries join during the daytime. I believe that this idea, whether of the Holy or Patauak, must be ascribed to Eskimo influence.

A special heaven for women dying in childbirth is noted with elsewhere among uncivilized tribes; also in ancient Mexico.

20. Disease and the gods and demons.—The conception of disease as the work of deity or of demons has not yet vanished altogether from the minds of the civilized Christian peoples of the globe, and it is strongly entertained by many tribes of American Indians representing practically all grades of culture in the primitive New World. The Iroquois, or Mohawks, believe that evil demons known as 'séwe' cause various diseases and misfortune among men and women, but, when appealed to by dances and other ceremonies and by offerings of food, tobacco, and the like, they become friendly and protect them from sickness and disease, as well as from witchcraft. In the dances and kindred ceremonies of the Iroquois 'medicine-societies,' women masked, representing these disease-demons with distorted human faces, dance. The women of medicine-societies of the pagan Senseca have recently been studied by A. C. Parker, himself of Iroquoian descent. These societies serve for the healing of disease and the furtherance of well-being in the broadest sense. In a Tzapotlan myth (Joseph & Reh, vol. 10), 'the master of the moon,' the pestilence (Huitlacoche), appears as a powerful deity—something ascribable to the influence of the neighbouring Kwakiutl. The Foxes and Foxes believe that the spirit of sickness hovers about, seeking entrance into the lodges of the Indians. Among the Nuecé Indians there is a general ceremony, lasting from 3 to 7 days, carried on by all the men of the community who are between 18 and 40 years of age, with the object of conjuring out the spirit of fatigue (Bartels, p. 255); and the Indians believe firmly that by means of it they ensure themselves great strength and capacity for resistance to fatigue.

Water-demons are sometimes credited with keeping the souls of men, and thus causing various diseases and sicknesses. Examples of this are the Takan of the Mexican Cora, described by Preuss, and the Pujio of the Indians of the Bolivian-Argentine borderland, of which an account is given by Boman (Antrop. de la rbg. and., vol. 1 [1908]). In the case of the Pujio, a rather complicated offering is made, after which the soul is called back. The soul is also called back when one is 'frightened to death' among the Mixe, a tribe of Indians of Brazil, persons whose recovery from illness or disease is not expected, and upon whom all the arts of the shaman have been exercised in vain, are devoted to Inkiia, 'the great watersnake,' a prominent figure in their mythology. Ehrenreich thus describes their actions in this matter (cited in Bartels, p. 218):

'If there are any sick people who are beyond anything but the help of the Snake, one of the shamans proceeds to the river to call the Water-Spirit. After all accompanying him have disappeared, the spirit comes forth, and asks first after what gifts he has been brought. If he is satisfied with these, he declares himself ready for the reception of the sick man. The latter is smeared with fat, and then thrown into the river, on the back of which he falls with a dull thud, and wakes up. The Water-Spirit takes him into his house and restores him. The method of cure is not clearly given, but the recovered patient remains for ever in the realm of the Water-Snake, and lives there happily and forever, having no desire to return to earth. The accidentally drowned find the same reception, and those already dead on earth are rejected. Moribund people are often hurried into the next world by doctors and midwives, who believe in the great Ojibwa myth of the transference to man by the culture-hero, Manabozho, of the 'grand medicine.' Dawson has also published the Zuni account of the teaching of 'medicine' to the first

Many myths relate that the 'medicine' was received directly or indirectly from the gods themselves or their representatives, the Twins, who figure so conspicuously in the mythologies of the south-western United States, etc.; the 'transformers' of the North Pacific coast; or such animal-deities as the coyote in the Rocky Mountain region and among the Plains tribes. Dawson has recorded the great Ojibwa myth of the transference to man by the culture-hero, Manabozho, of the 'grand medicine.' Dawson has also published the Zuni account of the teaching of 'medicine' to the first...
DISEASE AND MEDICINE (Assyro-Babylonian)

23. Human sacrifice as a cure for disease. — The sacred cow, as a more or less religious ceremonial in connexion with the ritual of medicine, is known from various regions of the globe, where the process of getting well in body is carried out on lines similar to getting well in mind, and may vary by being much beyond and above him. In this way human sacrificiae sometimes occurs. Some of the Indian tribes of ancient Mexico, according to Orozco y Berra, cited by Father Gerste (p. 19), murdered a very small boy or the mother, to kill the youngest child as an expiatory sacrifice.

DISEASE AND MEDICINE (Assyro-Babylonian). — The chief difficulty in treating of the subject of diseases in Babylonia is to separate the ideas of medicine properly from the natural methods of healing. The Assyrian physician never shook himself entirely free from the more supernatural side of his profession, and, apart from the magical incantations for the sick, even the more scientific medical texts depend largely on white magic. The latter consist, for the most part, of short material recipes on which much of our knowledge of the Assyrian pharmacopoeia rests, but they also prescribe spells to be used simultaneously with the use of drugs. It is therefore clear that, although many of the recipes in use were efficacious from a purely medical standpoint, they were frequently combined with a series of chanted abracadabra of more value to the anthropologist than to the student of medicine.

The present inhabitants of the plains of Mesopotamia and the hills of the neighbourhood are probably liable to the same diseases as their ancestors were some thousands of years ago, and we may therefore start with the Assyrian, which probably dates from the time of King Sargon. Such diseases, which are described in the affected persons, are expected to relieve them from the obscure tabus which he might have incurred, unless there was some unusual physical condition demanding it.

1. For these, see art. Charms and Amulets (Assy.-Bab.).

DISEASE AND MEDICINE (Assyro-Babylonian)

Just as we may pronounce the 'unwitting' tabu (in whatever way the word may be translated) of the OT to have manifested themselves in some physical way, so must we suppose that an Assyrian would not have recourse to a priest-physician unless absolutely driven by pain or fear. Sickness is due to the Devil or Divine influence, and it is well known that a savage fear to incur a breach of tabu from some ill-defined sense of danger from god or devil; it is clear, therefore, that the Assyrians had the same terror in their minds when they edited the curage-series for the benefit of sick men. The sorcerer must discover—or trick the powers into believing that he has discovered—the tabu which the patient has transgressed, and he can then proceed to cleanse the man from his breach, and lift the ban from him.

The principal god connected with healing is Ea, but it is his son Marduk who is appealed to by the physician as intermediary with the higher power. Marduk, when called on for help, is supposed to reply to his father to ask him what the sick man must do to be healed. This episode is constantly repeated in cuneiform incantations for the sick; indeed, to such an extent was it recognized as the usual procedure that it is frequently inserted in the text, together with one or more containing abbreviations of the three principal sentences, thus: 'Marduk hath seen'; 'What I'; 'Go, my son.' The full formula is as follows:

Marduk hath seen him (the sick man), and hath entered the house of his father Ea, and hath said, 'Father, headache against the sick man must be healed.' This episode is repeated in the case of a woman as follows: 'Marduk hath seen her'; 'What I'; 'Go, your daughter.'

Then follows the actual prescription for the patient. This method of bringing in a Divine episode is nothing more than a development of the principle of the Word of Power, which tradition demands shall be one of the sorcerer's most potent aids in spell-working. A scene is represented on certain of the magical plaques which is apparently intended to portray the sick man and the forces arrayed against him: the celestial powers, demons, potencies and spirits, protective circles, sick man on his bed, etc., form an interesting picture (see Frank, LSSt ii. 3).

Now, this Word of Power, so generally recognized in all magic, consists in its simplest form of the name of the god invoked against some thing invoked against the power of evil which the physician is expelling. Hence many of the Assyrian incantations end with the line, 'By Heaven be ye exorcized! By Earth be ye exorcized!' and numerous gods are invoked in the same way.

Two other concomitants of the exorcisms are necessary to the exorcist: first, the knowledge of the name or description of the devil which is being expelled; and second, some material with either medicinal or magical properties, some thing invoked against the power of evil which the physician is expelling. Hence many of the Assyrian incantations end with the line, 'By Heaven be ye exorcized! By Earth be ye exorcized!' and numerous gods are invoked in the same way.

1 This is the only variation in the formula, being the first line of the tablet.

2 Tablet XI of the Marduk-series (Thompson, Devil i. 35). This is probably the meaning conveyed by amulet motto (vilaparasite) not as the present translation, which makes the text sound elliptical. See also Thompson, Semitic Magic, p. viii.

of the cuneiform priestcraft, and it occurs in various forms in the examples given in this article.

The name of the physician proper was not, and, as the treatment was frequently of a magical nature rather than purely medical, it was often the akkipriest or a doctor who was called in to heal a sick man. The akkipriest is the one who can release the patient from the taboo under which he lies; the same word occurs in Hebrew under the form esh'el; and in Assyrian for the Incantation Tablet of the gods (from the same root). 1 He claims in his exorcism that he has been implored by the power of Ea, Damkina, and Marduk:

"The man of Ea am 1, the man of Damkina am 1, the messenger of Marduk am 1. The great lord, Marduk, to revive the . . . sick man; he hath added his pure spell to him, he hath added his pure spirit to him, he hath added his pure prayer to him; the destroyer[1] of the limbs, which are in the body of the sick man, hath the power to destroy the limbs—by the magic of the word of Ea may these evil ones be put to flight."

Similarly, when the priest comes into the house of the sick man, he declares that he is aided by several gods:

"When [I] enter the house, Samas is before me, Sin is behind me, Nergal is at my right hand, Nisik is at my left hand; when I draw near to the sick man, my right hand on the head of the sick man, may a kindly spirit, may a kindly guardian angel stand at my side. Whether thou art an evil spirit or an evil demon, or an evil goddess, or an evil god, or an evil friend, or sickness, or death, or phantom of night, or wraith, or sad soul, may they be removed from before me, out of the house go forth! (For) I am the sorcerer proper of Ea, it is I who [re]cite the incantation for the sick man."

He completes the spell of the Third Tablet of the same series with the words:

"O Ea, King of the gods, I [ask thee! to see; I, the magician, am thy slave. Month thou on my right hand, help on my left; add thy pure spell to mine, add thy pure voice to mine, vouchsafe (to me) pure words, let the words of the priestly incantation which is, which is, be heard by me."

Armed with these heavenly powers, the priest might exorcise any of the demons which assail mankind, and one of the commonest methods of treatment among the priests was an astone ment. The word used is kappar (the noun is takpiratu), the same as the Heb. ṣe, as was pointed out by Zimmermann ("Rituftaftem," p. 92). As the idea in the Assyrian method is that the demon causing the sickness is to be offered a sacrifice as his victim, and hence a young pig or kid is slaughtered, and placed near the patient. The devil goes forth at the physician's exorcism and takes up its abode in the carcass of the substitute, which can then be made away with, and the baneful influence destroyed. This is fully laid down in one of the magical texts against the akkubu (provisionally translated 'fever'), where it is told how Ea, the lord of the incantation, in showing a method of treating the sick man, lays a kid before Marduk, saying:

"The kid is the substitute for mankind, he giveth the kid his life, he giveth the head of the kid for the head of the man, he giveth the neck of the kid for the neck of the man, he giveth the breadth of the kid for the breadth of the man."

Instead of the kid, the substitute might be a sucking-pig, and the directions are to put it at the head of the sick man, 3 take out its heart and put it above the patient's heart, and sprinkle its blood on the sides of the bed: the clay branch of wrath.

1. From Sozomen: 2 From Julian: 3 From Sozomen:

1 From Julian: 2 From Sozomen: 3 From Sozomen:
must be divided over the man, and apparently spread upon him. The ritual continues with a purification by pure water and fumigation by a censer (as in the story of Tobit), and ends:

'Put twice seven loaves cooked in the ashes against the shut door, and give the pig in his stead, and he shall be as his flesh, and the blood as his blood, and let him hold it.'

Let the heart (which thou hast placed on his heart) be as his heart,

And let him say, etc. . . .

The migration of demonic influence to the pig is closely paralleled in the story of the Gadarene swine (Mark 5). The Indian Muslims of the present day who come to Abdulgulzar, the largest mosque in Baghdad, tend to a pig image and offer sacrifices, 'vow that if a man is ill begins to recover he shall go to the shrine.'

'He is stripped to the waist. Then two men lift a lamb or a kid above his head, and bathe his face, shoulders, and the upper part of his body with the blood. While the butcher tells the annual the sheik repeats the first sura of the Koran. They also write him in the skin of the animal.'

The 'twice seven loaves' is paralleled in the Seventh Tablet of the Surpu-series: when a man has incurred a certain taboo, seven loaves of pure dough must be broken, and he must perform ceremonies. The magician makes an 'atonement' for the patient, and puts his spittle on the 'atonement' as symbolic of the removal of the tabu from the man to the substitute. The loaves are then to be carried into the desert to a clean place in the Levitical, and left under one of the thorn bushes growing there. At the present day in the Hejaz, if a child is very ill, its mother will take seven flat loaves of bread and put them under its pillow, giving them in the morning to the dogs. Another exorcism gives directions more fully: Manluk is advised by E a to take a white kid of Tammmūz:

'Lay it down facing the sick man, take out his heart, and Place it in the hand of that man; Perform the Incantation of Elrūš. (The kid whose heart thou hast taken out Is unclear! I mean therewithon shalt make an atonement for this man, Bring to him a censor (and a torch, Scatter it (the kid) in the street.)'

But the Assyrians did not confine the 'atonement,' ceremo- nies of the career of the seven avatars towards ridding a sick man of his devil, not only that of inducing the incubus to leave the human body to enter a little figure fashioned in the likeness of the patient. The magician took vials and filled them with the kindred spirit of the sick man with them, and made 'atonement' for him; he then modelled a dough image of his patient, poured out his magic water on him, and remituated him with incense. Then, just as the water trickled away from his body, the pestilence in his body was supposed to trickle off, the water being caught in some receptacle beneath, and poured forth abroad so that the sickness might be dissipated.

Sympathetic magic was likewise called in as an aid in other cases. A sickness-tabu might be removed by the use of charms made of black and white hair, just as they are among modern savage tribes. These examples from different peoples will be mentioned to show how close the Babylonian methods resemble those of other nations.

1. Tablet N, col. ii. 14 ff. (Thompson, Devirs, ii. 17; Semitica Magic, 160). The fifth and seventh in the translation with Forbes. (Recueil de Textes, new series, x. 129), 'qūli (by manvare demons) en espimant.'

2. On the customs of sacrificing barking pigs among the Greeks, see AJPh, 1900, p. 256.

6. Tablet T. 1. 39 ff. (Thompson, Devirs, ii. 107; Semitica Magic, 159, 161; i.e. Skeat, Malay Magic, Lond. 1900, p. 347.

In India the 'fairy-women' take three different coloured threads and knot them twenty-one or twenty-two times, and when the work is finished it is Fastered upon the neck or upper arm of the patient. Among the Malays it is customary to make little images of dough of Beasts, etc., and to place them on a tray with betel-nuts, cigarettes, and towels. If the patient is set on a silver dollar, with the end of a particoloured thread inserted between the dollar and the foot of the taper, this thread the patient holds during the repetition of the charm. The disease-devil is supposed to enter the images, and as soon as this has happened the magician looses the knot and throws them away. Among the modern Persians, O'Donovan saw a similar method for removing fever: a man spun some cotton's hair to a stout thread, and folding it three times on itself spun it again. He tied seven knots therein, blowing on each one, and then threw to be worn on the neck, a knot being united each day. When the last knot was loosed, the thread was to be thrown in a fall into the river.

The prescription, as given in Assyrian, in the Sixth Tablet of the Surpu-series runs as follows:

'He hath turned his [steps] to a temple-woman (?), sitar hath sent her temple-woman (?), hath seated the wise-woman on the seventh floor. A knot is placed on a hag. woman, and a woman is given him. And the son of Manluk:

'Take the hair of a virgin kid, let a wise woman spin (it) on the right side, and double it on the left, bind knots seven times, and purify the incantation. And sprinkle the head of the sick man, and bind the neck of the sick man, and bind the soul of the sick man, and bind up his hands.'

Without going further afield into details of comparative magic, it is worth mentioning here that the same superstition is still believed in at Moshal, close to the mound of Nineveh. A recipe for fever was given the present writer by a boy employed on the excavations, in which the physician, in this case a shikhash, in his hand, and the hand of his child, the white flowing hair, and his unshorn hands cut them off, that the hair, its cord, may go forth to the desert to a clean place.'

Or again, in the case of headache, the method is recommended, as follows: to the son of Manluk:

'Take the hair of a virgin kid, let a wise woman spin (it) on the right side, and double it on the left, bind knots seven times, and purify the incantation. And sprinkle the head of the sick man, and bind the neck of the sick man, and bind the soul of the sick man, and bind up his hands.'

drink; at the approach of the star in the morning let the patient drink them without eating, and he will recover."

Not only this, but the use of the enema also was well known, the directions being quite explicit:  

1 An enema (bus) of oil thou shalt make, and introduce per anum, 2

For stomachic troubles there were many remedies. Pains were treated with a mixture of 'salt of the mountain' and annaim-salt pounded together and put in fermented liquor, which was to be drunk on an empty stomach, used also as an enema, and sprinkled upon the patient; 3 or a mixture of the nachuret-plant and several corns of wheat, similarly to be used as a draught and an enema. 4 As a simpler method, the patient was to sit on his haunches and let cold water flow on his head; 5 or the physician was to lay his head lower than his feet, and knead or stroke the back gently, repeating the formula:

'it shall be good.' 6 If the patient have colic and his stomach will not retain its food, and there is flatulence, the prescription is to bray up together 1/4 lbs of cassia juice with oil and wine, three shekels of purslane, two shekels of honey, and ten shekels of the annaim-plant. The patient is to drink this before the rising of the Enam-star in the morning, without eating; and then be made to be followed by his draught and an enema of 1/4 of St-GA, with which he is also to be sprinkled. 7 If there are internal pains—the Assyrian being in this case, 'when a man's inside eats him—he is to be given halattupannu-plant and salt water drunk and dissolved in water or fermented drink, or simply halattupan, or tipata, or St-St. in fermented drink. 8 When the patient's internal organs burn and he is constipated, let him drink a medicine of garlic and cummin, 9 or the potion d and green d (a plant) mixed with swine-fat. 10 Remedies are prescribed when 'garlic, leeks, beef, pork, and beer are unrestrained by a man,' and 'in his belching the gall is withheld.' 11 For what the Assyrian doctor describes as the food being returned to the mouth 'the head and breast were to be bound and certain drugs eaten in honey, nutton fat, or butter, while the patient was to be kept off certain food for three days, and was not allowed to wash.' 12 For liver complaints, garlic was prescribed, 13 or it was drunk in beer or large draughts of beer or 'wine-water.' 14 In the case of jaundice, of which the symptoms are given fully, the physicians were not so hopeful of recovery; but some prescriptions seem to have been potent:

1 When a man's body is yellow, his face is yellow and black, the root of his tongue black, abhaz (seizer) in his name; then I say: the drink, which he shall drink it in fermented drink. Then will the abhaz, which is in him shall be routed.

In constipation, the patient drank a mixture of green garlic and kuhur-rind in fermented drink, followed by dates in swine-fat or oil; or another prescription is cypress-cones pounded up and mixed with fermented drink. If, in addition to constipation, his inside is much inflamed, the prescription is a decoction of halattupannu-plant, sweet reed ballaktu-plant, and cypress administered as an enema. An enema is also prescribed when a man is constipated after heavy eating and drinking; and his insides are angry. 15 In the case of drunkenness, the following remedy is given for the morning after:

1 When a man has drunk fermented drink and his head aches and he forgets his speech, and in speaking is incoherent, and his understanding is lost, and his eyes are fixed (eleven plants) together and let him drink them in oil and fermented drink before the approach of Gula in the morning before dawn, before any one sees him.' 16

Venerable diseases are prescribed for in various tablets; 17 the colour of the urine was also observed in diagnosis. 18 It is curious to see how persistently the old beliefs survive among the Arabs of Mesopotamia of to-day. Toothache is still attributed to a worm, and the writer heard this story on good local authority. A man with toothache had only to innoculate his aching teeth with the smoke from dried withered apricots (salvarex), and the worm would drop out of his mouth. This is a belief not confined to the Arabs alone, but does among other peoples, 19 and it certainly dates back to several centuries B.C., and we find a Babylonian tablet describing the genesis of this tooth-worm:

'After Amu [had created the heavens], 20 the heavens created the earth, the earth created the rivers, the rivers created the canals, the canals created the marshes, the marshes created the Worm. The Worm came and went before the Sun-god, Before Ea came her plane: 21 'What wilt thou give me to eat, What wilt thou give me to drink?' 'I will give thee ripe figs, And sweet-scented wood.' 22 'What are thy ripe figs to me, Or thy sweet-scented — . . . wood? Let me have the worm, and let me eat the worm. And let me rest amid the guns, 23 of the teeth will I suck the blood, and destroy the strength (of his guns)? So shall I hold the bolt of the door.'

May Enki smite thee with the might of his fist.'"

The intimation prescribed for the toothache is:

'Then shalt do this: Mix beer, sakibup-plant, and oil together. Repeat the intimation three times thereon, and put in on the tooth.'

Just in the same way as the tooth has a semi-magical, semi-medicinal intimation prescribed for it, so do we have similar texts for the heart and eyes. For some form of 'heart' medicine the following intimation is given:

'The heart-plant sprang up in Makkan, and the Moon-god rooted it out and (Planted it in the mountains); the Sun-god brought it down from the mountains, (and) (Planted it in the earth); its root fillets the earth, its horns stretch out to heaven.

[It seized on the heart of the Sun-god when he . . .] it seized on the heart of the Moon-god in the clouds, it seized on the heart of the ox in the stall, it seized on the heart of the goat in the fold, it seized on the heart of the ass in the stable, it seized on the heart of the sheep in the meadow, it seized on the heart of the pig in the sty, it seized on the heart of the man in his pleasure, it seized on the heart of the maid in her long-chamber, it seized on the heart of N. son of N. . . .

Magan or Makan is supposed to be the Sinaitic Peninsula, and it is there that the Hygrogyrus muticus grows. The Arabs call it the sakirin ('drunken'), from its intoxicating effect; it has long spikes very much like the fox-glove, only purple in colour, which may be compared with the 'horns' mentioned in the intimation. It seems quite possible that the Assyrians may have had a knowledge of its existence and properties; at any rate, the name 'heart-plant,' coupled with its provenance, Sinai, another description given of it, is suggestive.

In certain cases of ophthalmia, the prescription is carefully led up to by a description of the cause of the blindness:

'The eye of the man is sick, the eye of the woman is sick. The eye of man or woman is sick—who can heal (him)? Then shall send them to bring pure ST.S of the date-palm (chew (te-keba) it in their mouth, twist (te-peta) it in their hand; and shall find it on the temples of the man or woman, and the man or woman shall recover . . .'

DISEASE AND MEDICINE (Assyro-Babylonian)

"The wind blows in heaven and brings blindness (in its列车) to the eye of the man: from the distant heavens he brings blindness. The eye of the man therein: blindness. The eye of the man therein: he is sick (in its列车) to the eye of the man: and there is no man who could treat the eye of the man therein: blindness. The eye of the man therein: he is sick (in its列车) to the eye of the man: and there is no man who could treat the eye of the man therein: blindness. The eye of the man therein: he is sick (in its列车) to the eye of the man: and there is no man who could treat the eye of the man therein: blindness. The eye of the man therein: he is sick (in its列车) to the eye of the man: and there is no man who could treat the eye of the man therein: blindness."

Similarly, the sting of a scorpion is treated with an incantation against the poisonous creature, to be recited while anointing the hurt:

"He is stung out like those of a holy bull. Her tail curls like that of a mighty lion. Bel hath made a house—when he maketh fast the hair. When he breaketh the wall of lapis-lazuli, May the little finger of Bel carry it off.Water carry off the water... (as affected by the inflammation)"[1]

It is a little uncertain what the text actually means, but it seems as if the patient puts the scorpion in the model of a house, which Bel is supposed to have made, and, after fastening the door, he takes it out with his little finger by a hole in the wall.

Another prescription for scorpion-sting is to mix in oil of cedar various substances that have been brayed up, and anoint the wound. For snake-bite the wounded man was to peel willow root and eat it, or drink a potion of St-Si plant in fermented liquid.[2]

The 'Baghdad oil,' or 'Mosul button,' was apparently as troublesome in ancient times as it is to-day. A tablet exists in the British Museum, giving the omens for what follows from the bite of the 'mosul button' on certain parts of the body. A case of the oil appears to be referred to in an astrological report to the king of Assyria:

"Concerning this evil of the skin, the king, my lord, hath not spoken to me in ten years. The sickness is a year: people are sick all over."

The oil is popularly supposed to last for a year.

Incantations are found for diseases of all parts of the body: the tongue and lips[3] (K. 9435), the nails and fingers (K. 10464), the hands and feet (K. 9160), or the neck (K. 5615); if it is a sore "sick" (inurgum) (K. 9509); if a man's breast and MAS-As-hurt him (K. 10720); when a man has palpitation (Tar-hat) of the heart and his heart... (holds) fire (K. 8769). If a man's left side hurts him (Garumma), then water, oil and heavy earth—incantation, repeat seven times and rub (tumma), Aram. אֶזְכַּר (ezkar) his left side, and repeat the following incantation over his side and he will recover (K. 9431)."[4] (K. 9432) G. A. 318. 17. 31. 32.)

When "a man's brain holds fire," in which the various symptoms are compared with fire, such as neuralgia of the temples, bloodshot and weeping eyes, etc. (see the present tr.'s tr. in ASSU, Oct. 1907). The following are specimens (Tablet ii. K. 2911, col. i. 2: Ex. Texts from Bab. Fields, 1909, vol. xxiii. p. 43): When a man's right thumb hurts him and his right eye is swollen and weeps tears, it is the hand of a ghost or the hatred of a goddess against (or for) his life; mix anu (tene), argunu (tene), bartrate (tene), one shkel of "river-fum," glibhat plant, giber (inar) or ground meal, steep it in beer (and) bind on as a poultice. Similarly, when the left thumb and eye are affected (col. iii. i. 2), the physician must bear together dates from Dilmun, thyme, and cedar-sap in oil of gir, and apply them before the patient breaks his fast. If the patient, in addition, was sick, his nose is infested, it is the hand of a ghost, and the remedy is to exorcise human hours and bring them, and then rub them on the place of oil with cedarsap. These instances might be multiplied, even from the texts[5]

[2] The translation of the first line preceding this is uncertain.

[3] The translation of the incantation has been omitted here (according to the copy in Beek's Catalogue of the Kuyunjik Collection).

[4] See the present tr.'s tr. in ASSU, Oct. 1907.

[5] Some equivalent to miscellaneous paraphrase appears to be mentioned in the incantation on price for a man (K. 10720).

[9] "Something equivalent to miscellaneous paraphrase appears to be mentioned in the incantation on price for a man (K. 10720)."

[11] When a man's left thumb is infected and he himself is not aware." Kuppul is perhaps to be referred to the Hebrew root "t'22, to double."
DISEASE AND MEDICINE (Celtic).—The classic authority is the statement of Caesar in his Gallic War that "the art and science of healing, came within the sphere of religion among the Celts. The nation was religious: 'Natio est omnis Gallorum admodum dehitis religio], all matters connected with religion were submitted to the judgment of the Druids. They were the 'medicine-men' as well as the teachers and the priests of the Celts: 'acute ob cam causam, qui sunt affecti gravioribus morbibus . . . aut pro victimis homines immolant, aut se immolant in the administratio ad ea sacrificia Druidibus utuntur.' The principle of life for life was recognized (cf. art. BLOOD-FEUD [Celtic], vol. ii. p. 725): 'quod, pro vita hominis nisi hominem vita redditur, non posset altero immortali eam numer placari arbitratur' (de Bell. Gall. vi. 16).

1. Gods of medicine.—The God of healing is identified by Caesar with Apollo, who held the place of honour next to Mercury: 'post hunc, Apollinem Liburnetum et Deum Medicorum.' In his canon fre, quam relique gentes, habent opinionem: 'Apollo nec morbos repellere ...' (ib. vi. 17). The Druidic doctrine of immortality emphasized the value of life and health, and gave Apollo at this period a higher position than Mora, 'regit idem spiritus artus

Orbe alio; longae (canitis si cognita) vitae
Mors media est' (Incan. Phars. i. 456 ff.).

Several Celtic deities of healing have been identified with Apollo. One appears as a presiding deity of healing springs and health resorts. The name occurs sometimes on inscriptions as Boreo: 'Deo Apollo Borvoni et Damone' (at Bourbonnes-les-Bains in the Haute-Marne). Other forms are Boro, in central France, Bruni, in Provence, Boromis in Spain. This deity is associated sometimes with Damone, as at Bourbonnes-les-Bains and Bourbon-Lancy in Saône-et-Loire; sometimes with Dionysus, worshipped in the Drôme. The word is akin to the Welsh beuri, 'boil,' and has reference to the hot springs (Rhyd, Celtic Heptadon, p. 254 f.; Anwy, Welsh Religion, p. 40).

Another deity was Granos. In an inscription at Horberg in the Haut-Rhin, he is called 'Apollo Granos Mogounos.' The name Granos has been connected with the Skr. word ghar, 'glow,' 'burn,' 'shine.' It is considered equivalent to the 'Phosphorus' of the Dacian inscription: 'Dena Bonus Puer Phosphorus Apollo Pythius.' Apollo, the dispenser of light and warmth, was regarded as the replicer of disease. The name is associated with several hot springs. The name of Aix-la-Chapelle, or Freibergen, or Gneus Mogounus. Inscriptions to him have been found at Graux in the Vosges and at Granheim near Mengen in Württemberg. The stream which receives the hot waters of Plombières in the Vosges is called Entz Gransone. Granos was identified with Asklepios and Serapis by Caracalla ( Dio Cassius, Lxxv. 15). The other name Mogounos in the Horberg inscription appears in the old name of Mainz, Moguntiacum. The word Mogounos points to the brother of the Dacian inscription (Rhyd, op. cit. p. 22).

The name Mapo no occurs in inscriptions in the

north of England. The Arthwithe inscription reads: 'Deo Apollo' (Mot. Hist. Brit. i. sec. 121). It is the old Welsh maphon, now mabon, 'boy' or 'male child.' The name is therefore identical in meaning with the bonus puer of the Dacian inscription from Carlaburg in Transylvania. The witness of the record is ample proof that healing arts were carried across Europe along the line of the Celtic advance (Rhyd, p. 21). The memory of Granos is still preserved in the Auvergne at the Festival of the Brands on the first Sunday in Lent. Fires are lighted in every village. The ceremony of the Grammasias takes place after a dance round the fire. A torch of straw called granno-mis is lighted at the fire, and carried round the orchards. The old Gaulish deity, in his aspect as the sun-god, is invoked with song:

'Granno, mo nio!  
Granno, mon pôvre!  
Granno, mo monère!'

('Granno, my friend . . . my father . . . my mother!).'

A bas-relief of an Etruscan represents Apollo Grannos associated with Sirona. Sirona is connected with the Irish sir, 'long.' The two deities represent the ever young sun-god and the old goddess, and may be compared with Apollo and his mother Leto in Greece. The hero Mabon of the Welsh Morion of the story of Kullikw and Olwen is probably the same deity, Mapo no, and Mabon and Morion are suspected of being the exact equivalents of Grannos and Sirona (Rhyd, p. 29). An inscription from Weisbaden reads: 'Apolloi Tontorici.' The name Tontorix means 'king of the people,' and expresses the same thought as the title apophydris given to Apollo as 'leader,' in Greek mythology. He was considered by Homer to be a survival of solar worship, and the rite illustrates Rhyd's derivation of the name (Antiquary, xxviii. 1902-3 50).

An altar found near Ancey is dedicated to a deity Viruta or Viruto: 'Apollini Virutoi.' Rhyd tentatively suggests that the word may be compounded of a Gaulish equivalent for vir and tutore, and may mean 'man-healing' or 'man-protecting' (op. cit. p. 21).

A law-relief of an Etruscan represents Apollo Grannos associated with Distich of Bern born more to Tontorix than to the historical Theodor the Ostrogoth (Rhyd, p. 39).

The Brigit of the Welsh poems of the Christian era is a Celtic deity. The story of the Christian religion in mythology holds a place of honour among the Celtic gods of medicine. The Irish god, the Dagda, had three daughters—Brigit, the poetess and seer, worshipped by the poets of ancient Erin; Brigit, the patroness of healing; and Brigit, the patroness of smiths. This points to a Gaelic goddess, Brigit, who corresponded to the Minerva of whom Cesar says, 'Minervam operam atque artificiorum initia tradere' (op. cit. vi. 17). She has also been identified with the Brigantia of the inscriptions from whom the Brigantes took their name (Rhyd, p. 74). Brigit has also the attributes of the ancient goddess of fire (Whitley Stokes, Mart. of Orac., p. 1). The hymns in honour of St. Brigid and the legends attaching to her name suggest that she has stepped into the place occupied by the Brigit of Irish mythology. In the hymn Brigit be ithin miath, she is addressed as 'flame golden, sparkling' (line 2), and asked to guard against disease; 'May she win for us battles over every disease!' (Irish Liber Hymnarum, ii. Bradshaw Soc., 1897, ii. 39). In the story of the visit of the three disciples of Brigid to Biasantia (Piacenza), they are preserved from the effects of a drink of poisoned ale by reciting this hymn (ib. ii. 37). The story illustrates not only the healing cult of Brigid but the memory of her ancient fame among the Celts of Italy. It is perhaps due to the same tradition of
Celtic heathenism that as late as the middle of the 18th cent. human blood was considered in Italy to be a cure for apoplexy (Antiquary, xxxvii. 205).

The 'cauldron of renovation' is represented as a talisman of healing in the Welsh story of Branwen, the sister of Llyr; in Ireland it is the Cauldron of the Dagda in Irish legend, one of the treasures of the Tuatha Dé Danann. It was called the 'modrug' cauldron, for it was never empty (Rhys, p. 256 l.). It was brought from the mythical Muiras, some place beneath the sea. The fire beneath the cauldron was fed by nine maidens (ib. p. 379). In the Talhassin verses of the Mabinogion it is represented as the cauldron of sciences, from which Gwion received three drops. It is with this cauldron that Caradog was associated (Mabinog. pp. 256, 307).

In the early tales underlying the Quest of the Holy Grail (Grail) the Cauldron rather than its gift of fertility may have been emphasized (A. Nutt, Studies in the Legend of the Holy Grail, London, 1888, p. 57).

2. Diseases and their cure. — Among the diseases which have been a last resort in the treatment of diseases on Celtic tradition is the *buidechar*, 'yellow plague.' It is probable that it was the occasion of the composition of the Lorica of Gildas:

> 'at non secum tradat me mortalitas
> in his neque munii vanitas.'

The first outbreak of this disease was in 547 (Irish Lib. Hymn. i. 206, ii. 243). Ireland was especially subject to it in the 7th cent. The hymn *Dé* of Colman was written against it. 'Colman mac Ut Clussaig, a scholar from Cork, made this hymn to save himself from the Yellow Plague' (ib. ii. 12). Gilles (Gaelic Names of Diseases, pp. 10, 23) states that he is unable to identify it. It could scarcely be yellow fever; it probably did not return, or perhaps typhus under its known aspect of bilious fever.

Much of the folklore of disease may be traced back to the magic and medicine of Celtic heathendom. The healing powers of the ash-tree, whether the Boar Tree or the mountain ash to be attributed to its association with ancient Celtic and Norse deities. In a Leicestershire wart-charm it is addressed:

> 'bain-tree, Ashen tree
> Pray buy these warts of me.'

The 'shrew-ash' in Richmond Park recalls an old cure for lameness and cramp in cattle by boring a hole and enclosing a live shrew-mouse in the tree. In this there is an echo of the ancient magic of exchange or transference of disease. In the case of the wart-charm, a pin is stuck in the tree, then in the wart, finally in the tree again (Antiquary, xii. [1906] 429). A curious example of the practice of exchange of diseases occurs in the Martyrology of *Bonnan:

> 'Furs once happened to visit Magman of Kilnamnian, and they make their union and exchange their troubles in token of their union to the, the headpiece or pile of which Furs suffered to be on Magman, and the reptile that was in Magman to enter Furs' (Marti. Oen., ed. Whitley Stokes, p. 45).

The first of August was dedicated to Lug, the Sun god of the heathen, by the Welsh as *Gwyl Arod*, was transferred in Brecknockshire to the first Sunday in August. Early in the morning a visit was paid to the Little Van Lake in the Beacons, to greet the expected appearance of the lake and the reed regarded as a goddess of the dawn, who returned at times to converse with her children. The eldest of them was named Rhiiwallon, and had been instructed by her in the virtues of herbs. He was the founder of a family of physicians in South Wales. The physicians of Myddfai, as they were called, were not attached to their own kind: they were of a mystical character, and may be identified in the Triads with Rhiiwallon of the broom (yellow) hair. He was thus invested with a solar character (Rhys, p. 423). Folk-medicine consists partly in charms, partly in superstition, partly in a real knowledge of herbs. It rests ultimately on the religious ideas of Celtic heathenism. Witchcraft and medicine were different aspects of Celtic priestcraft in its better sense. The priests, if they were the sorcerers and wizards of their people, were their healers also.

Among the plants and herbs associated with Celtic medicine, the mistletoe takes the first rank. It was the sacred bough of the Druids, the gift of the Divine oak-tree, the gift of the Celtic Zeus himself. The Celtic Zeus was 'the Blazer of the mountain-top,' and the great stone-circles mark the sites sacred to him. A story of the Irish hero Diarmaid makes mention of the tree, the well, the side of the earth, where the stone-circle consecrated to the Celtic Zeus.

> 'He saw, right before him, a great tree laden with fruit. . . .
> It was surrounded at a little distance by a circle of pillar-stones; and in the centre, taller than its other centre near the tree. Beside this pillar-stone was a spring-Well, with a large round pool as clear as the sea.'

These sanctuaries in ancient days were places of healing, as well as places of worship. In the Tripartite Life of St. Patrick the idol of Cenn Cruach, covered with gold and silver, was surrounded by a circle of twelve other idols, covered with brass. Lorkan in the 7th cent. states it had disappeared. They represent the primitive pagan sanctuary of the Druids. The name *Cenn Cruach*, 'Head or Chief of the Mound,' when transmuted from Goddelic to Brythonic, re-appears in the old place-name *Pannasuccion* on the Wallowing Street. The site is at Strontian, not far from its modern representative Penkridge in Staffordshire (Rhys, p. 203; North Staff. Field Club Transactions, vol. xii. pp. 116–118).

The mistletoe, the gift of the Celtic Zeus, was the all-healer (oliach: omnis sanans) (Pliny, HN xvi. 95). It was cut at a New Year Festival with peculiar ceremony—a priest in white, a golden sickle, two white oxen. The oxen were sacrificed, the sacred meal followed. The mistletoe has great life-giving powers. It healed unfruitfulness in man and beast, and was a protection against poison' (Grup, Kultur der alt. Kelten u. Germanen, p. 149).

Another plant mentioned by Pliny is the *Selago*, which has been identified with the Savin-tree, a species of juniper, and with the club-moss. It had to be plucked stealthily. Bread and wine were offered, and the priest with bare feet and white robe drew with his hand, putting his right hand through the left fold of his tunic, gathered it without using a knife. Like the mistletoe, it was then placed on a white cloth. For healing purposes the plant was burnt, and the fumes were regarded as beneficial for the eye (Grup, op. cit. p. 150).

A similar ceremony was followed at the gathering of the *samolus*, whether the brook-weed (*Samolus volcaranii*) or the watercress. It was gathered fasting, with the left hand, and with a white cup, not a silver one. The watercress was used as a cure (Grup, p. 151). The St. John's Wort and other plants were burnt or hung over the door to keep off disease. The St. John's wort (*Hypericum perforatum*) is known as *chasse-diable*.

Inscriptions and poems have preserved the traditions of the gods of healing and the healing craft among the Celts.
DISEASE AND MEDICINE (Egyptian).—I.

From the diagnosticks of the Egyptian papyri we can distinguish—even identify, in many cases—about 250 different kinds of diseases, and the Ebers-Papyrus alone describes 170 varieties. Many of them are the common ills of all humanity, and we cannot of course say that the Egyptians learned more of the ancient cult of the local gods of medicine.

The folk-lore of Ireland is rich in its memories of old-time medicine. Diancacht, a member of the Tuatha de Danann, may almost be regarded as the Irish god of medicine (cf. CELTS, ii. 299). A magic cauldron of renovation was ascribed to him. The methods of the Irish witch-doctors still form part of the home medicine in country districts today. Snails pounded in salt were prescribed as a dressing in an Irish MS of 1450. They were still used for that purpose in Staffordshire at the close of the 19th century.

Urine was in common use for eye-disease and jaundice; dungh was prescribed by Wesley in his Primitive Physic. In Ireland, as in England, these remedies were administered, to the recitation of certain charms (Wood-Martin, Elder Faiths, London, 1892, ii. 166–205). The rag-offerings tied to trees and bushes in the immediate vicinity of unhealthy wells and met with in many parts of Ireland, especially in the west. They are thought by some to have a reference to the transference of disease to the tree-spirit (ib. ii. 84). Salvia was also in use as a salve. A part of the young plant of euphorbia at 1450 was the bursing of a young cock alive (ib. 188).

A more normal system of healing is traceable in the Irish sweat-houses, which were in use as a hot-air cure until the 19th century. These sweathouses were usually of a circular type, covered with clay, with a low entrance. They were heated with turfs, like a brick-oven, and the patient was shut in for a given time. The bath was followed by a plunge in a pool or stream near by. This was the usual cure for rheumatism.

A custom clearly connected with medicine among the Irish was the cowade. On the birth of a child, the father was obliged to take to his bed and submit to a vicarious process of nursing at the hands of the doctor and nurse. The custom was widely spread throughout the world in primitive times, especially among races where kinship was reckoned through the mother. At the same time it is a custom which witnesses to the responsibility and care for the welfare of the child which is exacted the principle of motherhood (Wood-Martin, op. cit. ii. 40). See article BIRTH (Introduction), vol. ii. p. 653.

In the legendary history of the invasion of Ulster by the Fir Bolg, the adult males were en cowade and unable to defend the kingdom of Conchobar against the enemy. The defence was made in heroic manner by Cuchulain and his father only. Rhys (p. 622) refers to this incident as the "distress of the gods and the sun-hero's aid." Cf. article CUCULANN CYCLE.

The Ultonian cowade lasted five nights and four days, in accordance with the use of the number nine in the reckoning of time among the Celts. It was called en cowade na Bru, the Ulsterman's sickness of indisposition or lippitude (ib. p. 363). There is a significant correspondence between the Ultonian cowade and the notion of the sabbath as the holy day of the gods. The Ultonians would place the origin of Aruan within the Arctic circle. He sees in the labours of Cuchulain the sun-hero a mythical witness to the period during which the sun is in the south, and the ancient home of the Aruan remained above the horizon (ib. p. 623). Would not the cowade, or "distress of the gods," be a more normal state during which the sun remained below the horizon, the period supposedly preceding its re-birth and entrance on the world of the dead? The Ultonian cowade cannot, however, explain the origin of the custom, but only the application of a primitive usage to the explanation of the annual birth of the sun-god Persephone in the Arctic circle.

THOMAS BARNES.
DISEASE AND MEDICINE (Egyptian)

The disease called fever or malaria is mentioned in the Ebers Papyrus and other ancient Egyptian medical texts. The gods Horus and Tefnut were associated with the sun and its protective forces, and their worship was believed to prevent disease.

The ancient Egyptians believed that the gods were involved in human affairs, and that by invoking their names and performing rituals, one could prevent or cure illness. They believed that diseases were caused by a variety of factors, including the anger of the gods, the workings of evil spirits, and the presence of harmful substances. Remedies included the use of herbal medicines, incantations, and the placement of talismans or amulets.

In the Ebers Papyrus, there is evidence of a systematic approach to treating diseases, with specific remedies for various conditions. The texts also suggest the use of a variety of plant and animal extracts, as well as the application of heat and cold treatments.

The ancient Egyptians believed that the body was a temple of the gods, and that the soul could be protected through proper care and the use of magical practices. This belief is reflected in the use of magical incantations and rituals to prevent disease and promote health.

It is clear that the ancient Egyptians had a deep understanding of the human body and the natural world, and that they were able to develop effective treatments for a variety of illnesses. Their beliefs and practices provide valuable insights into the history of medicine and the role of religion in healing.

1. On the dangers and harm resulting from conjunction with women in the various religions, magical, etc., acts of Egyptian life, see ar. Maus (Pap. 1).

2. The danger and harm resulting from conjunction with women in the various religions, magical, etc., acts of Egyptian life, see ar. Maus (Pap. 1).
Disease and Medicine (Egyptian)

spite of all the gradual attenuation of magic in favour of pharmacology and actually experimental science, therapeutics remained closely bound to Divine influences, both in its staff of officials and in the composition of its didactic treatises. The remedy proper never entirely supplanted the ritualistic and conjuratory part of the process.

The pharmaceopia also suffered this general influence. A great proportion of the substances owed their supposed virtues to the magical powers of the books or objects from which they sprang, or to their supposed mythological connexion with a certain god or spirit. The pharmaceopia of curative and harmful plants is related, in origin at least, and often to the very end, to the beings or objects protecting against disease; and the Egyptian ideas on this point are found faithfully represented in the list of thirty-six magical plants of Papyrhus (De Simplificium Medicin. Facultations). Finally, it is traditional compositions and collections of objects against disease had been perpetuated, in Egypt as elsewhere and for the same reasons, the use of amulets (cf. Charms and Amelets [Egypt. ]).

3. For the understanding of Egyptian ideas on diseases on the grounds of its own, the writers on medicine, were not always in agreement, as the following examples illustrate. The laws which regulated the distribution of certain drugs were held by the gods or seized from their secret powers. The original fetish-doctors, then, had as their inevitable successors priest-doctors; and the growth of knowledge was, above all, a mechanical growth, by the union into collective classes, of the 'arts and mysteries' at first scattered over as many sanctuaries as there were originally independent gods. The primitive connection between the emanations of god and protection against disease was likewise the cause of the particular manner in which the books relating to diseases and their cure were composed, and of their double character, in the historic period, of the medicine books. The methods of curing which the Egyptians were stating an absolutely historical truth when they attributed the additions of these great works on diseases to the god Memphus, or to that of the Thebans. As leading priest in his kingdom, the king was naturally versed in the magical-medicinal art of healing, and this was formally said of the most ancient kings, says one Manetho (upon Africanus) of Athens. Such an attribution to the Pharaohs of a character, if not to the books, of their subjects agreed in every point with their nature as sons of gods, and with their function, which was, above everything, to continue and maintain the union between the gods and the man. The books, the codices, being originally the possession of the priests, containing the knowledge of the ancient physicians, came to be the possession of the monks, under the title of Manetho's Book of Wisdom.

Being logically devoted to everything that was very ancient and so brought him a little nearer to the Divine origin of all that is good on earth, the Egyptian made scarcely any change in the basis or the form of the knowledge thus obtained; he was always content to the new reception of one of these ancient books of knowledge beneficial to man was attached to the origins of national history. And, indeed, criticism has proved that the books of this period, as manuscripts, copy directly from the proto-Theban and the proto-Thoth from still earlier times. The books that had grown too old materially were piously copied. In the actual body of texts relating to a certain disease, like the Pharoah's, generations resided in inserting glosses, in slightly retouching the efficacy of a certain formula by extolling in the margin its proved excellence (Ebers papyrus, lxxix. 17, xxxv. 18; and Reisner papyrus, passim), or by telling how it had once cured such and such a mighty personage, prince or king (Ebers papyrus, lxxiv. 4, lxxvi. 15). The re-copying or re-modelling of several ancient versions in circulation led the scribe to note the variants in the texts used in composing the new edition, or to insert—rather unskilfully and such as they were—the scholia of his predecessors (cf. the excellent, and unfortunately still unique, work on the Ebers papyrus considered from this point of view, by Schäfer, Commentationes, pt. 1, p. 304, Leipzig, 1892). The most serious material changes, then, were not in the idea held of disease, or in the manner of defining or conjuring it, but in the increasing of the means combined for this last purpose. This is the object of the lists of disease symptoms forming the annexes of the sacred calendar in Egypt, its tales of beasts (see Feesvaye [Egypt.], its Books of the Dead, and its 'Books of the king'), the different cures obtained in the hippocratic sanctuaries gathered together small local collections, and later on made exchanges with each other of their cures that thus obtained. They usually proceeded by simple juxtaposition. To the body of information relating to a certain disease the generations gradually added that of different provincial 'wisdom,' and grouped around a book on eye-diseases, internal complaints, and divers the cures and diagnostic methods contrariwise, latterly obtained by these combinations. The part of the body or the disease stated in the title of the work, having served as the basis for the work of compilation, did duty also as a 'rallying sign' for all works on any analogous subject, without distinction of date or origin. This is the explanation of the common pronoun, in papyruses, parts common to the Leipziger Papyri and those of London and Boston, or to the latter and the Reisner Papyri of California, and so on. These common parts show the common origin of our papyri, and their character of compilation from much older writings. The manner in which the very scanty remains of the Xth dynasty treatises were composed shows that these processes of compilation, so evident in the XIX dynasty, had been employed long before. And this fact, in conjunction with a study of grammatical language, of the magical traditions, of the magical-medicinal art of healing, and this was formally said of the most ancient kings, says one Manetho (upon Africanus) of Athens. Such an attribution to the Pharaohs of a character, if not to the books, of their subjects agreed in every point with their nature as sons of gods, and with their function, which was, above everything, to continue and maintain the union between the gods and the man. The books, the codices, containing the knowledge of the ancient physicians, came to be the possession of the priests, under the title of Manetho's Book of Wisdom.

The sacred library of the proto-historic Egyptian temple became the depository of the lists of diseases and their cures, and the evidence of historical times in this regard is fully in accord with the reality of the facts, when it speaks of the library that was at Heliopolis, 'the hall of rolls,' and the compositions thence of the temple of Ptah at Memphis (cf. Wilkinson, Memnon and Custom, 1878, ii. 353, 358), or when the inscriptions of the 'library' of the temple of Edfu mention the preserved books of books, for turning aside the cause of disease (cf. Maliet, Kast el Agoua, Cairo, 1890, p. 21).

The gradual formation of medical treatises properly so called came about in the same way that the sacred calendar itself, by the appointment of a fixed days of consultation forming the annexes of the sacred calendar in Egypt, its tales of beasts (see Feesvaye [Egypt.], its Books of the Dead, and its 'Books of the king'), the different cures obtained in the hippocratic sanctuaries gathered together small local collections, and later on made exchanges with each other of their cures. Such a process that thus obtained. They usually proceeded by simple juxtaposition. To the body of information relating to a certain disease the generations gradually added that of different provincial 'wisdom,' and grouped around a book on eye-diseases, internal complaints, and divers the cures and diagnostic methods contrariwise, latterly obtained by these combinations. The part of the body or the disease stated in the title of the work, having served as the basis for the work of compilation, did duty also as a 'rallying sign' for all works on any analogous subject, without distinction of date or origin. This is the explanation of the common pronoun, in papyruses, parts common to the Leipziger Papyri and those of London and Boston, or to the latter and the Reisner Papyri of California, and so on. These common parts show the common origin of our papyri, and their character of compilation from much older writings. The manner in which the very scanty remains of the Xth dynasty treatises were composed shows that these processes of compilation, so evident in the XIX dynasty, had been employed long before. And this fact, in conjunction with a study of grammatical language, of the magical traditions, of the magical-medicinal art of healing, and this was formally said of the most ancient kings, says one Manetho (upon Africanus) of Athens. Such an attribution to the Pharaohs of a character, if not to the books, of their subjects agreed in very point with their nature as sons of gods, and with their function, which was, above everything, to continue and maintain the union between the gods and the man. The books, the codices, containing the knowledge of the ancient physicians, came to be the possession of the priests, under the title of Manetho's Book of Wisdom.
everything that could be found in the various temples of the nature of formula relating to abscesses. Thus it happened that there were several different methods of diagnosing one disease, and sometimes contradictory methods—e.g. there occurred side by side, in the same compilation, an explanation of diseases based on an anatomy in which the human body possesses twelve great blood-vessels, and another founded on the assumption that it has forty. It was not, then, that the number of remedies actually increased in Egypt throughout the ages; there was rather the diffusion among a greater number of Egyptians of one and the same remedy, which was more or less a matter of embodying in a multitude of petty provincial theories. A general invocation at the end to the god of the place of compilation was enough, in the compiler's opinion, to guarantee a sort of unity to the work composed in this way.

The whole result was, as we may see, far from equal to a treatise of synthetic—not to mention philosophic—character on disease or diseases. It would nevertheless be inaccurate and unfair to see in such works (as do many modern writers) a complete embryology of medicine. Their systematic and methodical arrangement, the character of which has remained almost intact throughout the whole existence of Egypt. The science of disease was marked, to the very end of Egyptian history, by its original character: it was logically independent of the world of the gods, and with their ministers; it was rational and formalistic.

Thus the rule not to use remedies that the minister had not taught is to be explained not so much by the will of the legislator, looking to the social interest, as by the belief in the connexion between the virtues of the remedies and the magic teaching of the gods; and the same explanation helps us to understand the non-responsibility of the doctor in a case of death, if he had observed the rules of canonical therapeutics (Diod. i. 82). The assertion that physicians were paid from the public treasury is simply a misunderstanding in the classics, but a misunderstanding which is exactly based on the absence of an account of compensation, with historical truth. Born originally in the 'fetish-hunt,' the science of healing fixed its abode in the temple. The masters remained the ministers and interpreters of the gods, and the series of meditations, hypocrisies, steps, and statues show that, from the Memphite Empire to the Ptolemies, the great doctors—those of Pharaoh, e.g., the Scnaw oury (=chief physicians)—were at the same time high ecclesiastical dignitaries.

Just as the teaching remained religious, the art of healing in its three great branches (symptomology, therapeutics, and pharmacopoeia) remained equally impregnated with animistic and magical concepts; thus the classical doctor continued to prepare his own medicines, like the sorcerer of primitive times, and it was held as a fact that in complicated drugs each element acted on a special part of the organism, or, rather, on the evil specially infecting that part; numerous ingredients were considered curative specially for reasons of sym pathetic or contagious magic (chieflly animal substances, skin, oils, and the horrible 'coprotherapy'). And yet, there are terms in Egyptian medicine, and the very real perfection of its equipment, diagnosis, metrology, and healing processes are, on the other hand, as certainly incontestable facts (see for example the popular account in Erman, Life in Anc. Egypt, tr. Tirard, London, 1894). The distinction of a nation of superior endowment, like Egypt, is precisely the ability to substitute, gradually and without sudden breaks, the abstract methods of treating one disease, for the unexplained magical effect; and, as science and magic-religion both proceed, essentially, from experimentation, it happens in many cases that only the interpretation of the mechanism of the energies, and not their manipulation, is under the control of the ancient medicine.

Such as it is, with its original flaws, its lack of theoretical views, its crying errors, its childish complication, and its naïve formalism, the Egyptian science of healing nevertheless constituted from the very beginning a very real system, one thousand years in advance of the rest of human society. It retained this pre-eminence as long as Egypt existed. The testimony of Homer (II. iv. 229), the admiration of the Persians (Herod. iii. 1 and 182), the fame and reputation of Egyptian medicine under the Saites and the Ptolemies, and the reputation in Rome of the Alexandrian school can only be mentioned at present. Such enduring fame is an explanation of the fact that the medicine of Greeks and Romans, of Egyptians, of Africans, successors of the Copts, has given a great deal of the ancient Egyptian medicine to our school of Salerno, e.g., or to any other of our ancient seats of medical knowledge in the Middle Ages and down to the time of the Renaissance.

5. The development of Egyptian science succeeded in giving a more distant and lofty character to the priest-doctor's sources of information. And it never completely suppressed the primitive notion of direct Divine intervention in cases of illness. We find gods of healing in Egypt as everywhere else; and, similarly, the great scourges—plagues or other great epidemics, i.e., are recognized as sent by the gods. Egypt, however, strikes an original note, in regard to this last point, in the very restricted part played by the idea that great calamities come from the gods, though this idea was almost certainly known (at least we have less familiar, however, than in the classic East, on account of the proverbial healthliness of the climate). We first mention in Manetho (Muller, Führ. ii. 530) of the plague which devastated the country in the reign of Semenopic, and a connexion is assumed in the text between this scourge and the great sins committed by men. But such statements are very rare in the Egyptian texts. The point is worth noticing in contrast with other organised religions, for the understanding of the conception by the Egyptians of the general role of his gods. In the case of individual sicknesses, on the other hand, history shows that the gods were removed from the 'non-civilized' stage to establish any connexion between such and a bodily complaint and the violation of a taboo; that, in short, the idea that the incubus of disease sent as a punishment by the gods, who either cause it themselves directly or leave the sinner defenceless against the spirits of disease, hypocrisies, stephies, and confessions of later date, like the hermetic books, in which mention is made of these 'divine stances which send us disease or heal our pains according to our decrees' (Manetho, Hermes Trismegistus, 1885, p. 140), seem to be somewhat mingled with Greek or Asiatic conceptions. Here we find, however, as in Egypt, the popular cult—be the direct punishment for a personal offence against a deity, but this is of course quite different from the conception of an infraction of an eternal rule (see Ernus (Eycy.), and, for offences against the 'goddess of the Summit,' see Maspero, "Nav. ii. (1883) 318-352."

Several, if not all, of the gods who had composed the first means of battling with disease continued to grant or reveal directly to men the means of healing; and the majority of the sanctuaries, to which numerous worshippers journeyed, for their oracles (see DIVINATION (ancient)), retained the privilege of miraculous cures. The temples of Isis at Coptos, of Min at Panopolis, and, in general, all those temples in which the medical books locate the marvelous inventions of Isis, the revelation of healing remedies (Hermopolis, Lycocephal, etc.) were the places where the gods were themselves able to rout, with a single blow, the inmost parts of the human body. We must add to this list a great number of smaller provincial sanctuaries, the local
Finally—the primitiveness of the practice of exorcism by statute being a fact—we may hold that, at the end of a long period of evolution, the views of the Egyptian upper classes on disease often came near to really lofty conceptions. Though, as everywhere, sorcery, the bastard child of medicine, the toints of Muselman shaihks which have succeeded to the veneration of ancient days for these places.

Toward the latter days of history, political events tended to group the most important of these cases of medical prolongation in the capitals of Upper and Lower Egypt, and the infiltration of Persian and Hellenistic ideas added new elements to the rôle of the gods against disease.

6. The means used by the gods in such cases to instil higher knowledge were well known in general. Several texts say that, under the influence of Greek ideas, the custom spread in Egypt of going to sleep inside the precincts of the temples of the gods of healing, or near the supposed tombs of the gods, or, in important cases (personages whose legend gradually confused with mythical kings and the gods of healing (see Divination [Egypt]). This is the case for Inhoteep (cf. P-herenpet stela). His nails were injured, and it often occurred in dreams, as proved by a certain number of allusions in the epigraphical monuments, by the accounts in popular tales, and by the witness of Dial. i. 23. Direct cure, following upon a prayer, and without direct revelation, is not formally entertained except in Herod. ii. 63, according to whom suns of money equal in weight to a half or a third of the sick child's hair (!) were vowed to the gods in case of recovery, or a promise was made to buy a beast for the temple herd.

The sudden inspiration of the doctor enlightened by Divine grace and working διὰ τῆς ἴδιας δυνατίας is not a very Egyptian trait, and may be due to foreign influences (cf. Berthelot, Archi- manisches Pros., p. 230). It is not a naturally native form of miraculous cure by the intercession of the god appears to have been worked chiefly by the direct application of the healing fluid, either by the priest who carried the Divine relics, the sibyls, or, in important cases (personages whose possession, epilepsy, and the like), the god himself. The famous Stela of Bakhtan is a familiar example of this type of curing by exercise worked by a Divine statue. The adjuration of the demon of disease, and his operation for the body of the princess, are merely instances of a practice current in all the religions or 'semi-religions' in which there is a 'dispelling of demons.' It is more interesting to note the manner in which the statue of a god was supposed by the Egyptians to be capable of possessing the necessary power. The Egyptian text proves that this power was possible only to a 'secondary' statue of the god—one of those animated, for a special series of activities, by an 'energy-seed' of distinctive name. It derived its chief power from the 'essential' statue of Khonsu, the statue which contained the magic soul of the god and made his will known by movements of its head (see Divination [Egypt]).

This famous statue never left Thebes; it kept the best of the Divine substance there, and consented to detach and lend its healing forces only to such and such a one of its doubles, 'by bestowing upon it (by the most mysterious rite) its protective films at tour intérêts' (which is a very valuable indication of the antiquity of the magical conception).

Apparently, then, the power against disease did not belong to all the 'doubles' of a god. It was the privilege of the one image in which dwelt the 'true name,' and this assumes that power against demons was a part of the ultimate reserve of the personality of a being.

GEORGE FOUCART

DISEASE AND MEDICINE (Greek and Roman).—Disease and its treatment in ancient medical means belong to the domain of scientific medicine. The help of the gods was sought in illness and accidents by purely religious means—by prayer, sacrifice, and, above all, the institution of incubation. The gods granted their assistance either directly, by a miracle of healing, or indirectly, through the medium of an oracle of healing. The subject will be fully treated in the art.

HEALTH AND GODS OF HEALING, INCUBATION.

DISEASE AND MEDICINE (Hindu).—1. Disease.—The earliest view of disease in India was that of the most logical and abnormal states of body and mind for which no special name was assignable were due to the action of demons. In the medical charms of the Atharvaveda, the earliest medical book of India, the diseases are constantly addressed as demoniacal beings. Thus Fever, a demon in the form of a man who makes those attacked by him, like fire, is implored to leave the body, and is threatened with annihilation if he should not choose to do so. 'O Fever,' says another charm, 'thy missiles are terrible: from these surely exempt me.' Ich jañārī na rati tāpasyatī. The malevolent spirits of disease were regarded as specially dangerous to children. Thus infants were liable to be attacked by Naigamesa, a demon.
DISEASE AND MEDICINE (Hindu)

with a goat's head, who is mentioned in early Sanskrit literature, and represented in an old sculpture found at Mathurā. Jambha, another Vedic godling of disease, was supposed to cause the trismus of infants. A ‘dog-demon’ attacking boys is said to make epilepsy or perhaps a whooping-cough. Another ancient superstition attributed the origin of dropsy to Varuna, the god of the waters, who binds the guilty, e.g. liars and false witnesses, with his terrible snake-bonds, or dropsy. Elves and nightmares, called *apara* and *vanacharav*, were believed to pay nocturnal visits to men and women. Disorders of the mind were also very generally ascribed to possession by a demon (*bhuta*), even in some cases such as the name words of Charaka and Susruta. When the belief in transmigration took hold of the Hindu mind, it furnished a new explanation of the origin of disease. Diseases and infirmities were traced to sins and offences committed in a previous birth. According to this doctrine of the ‘ripening of deeds’ (*karmavipaka*), a mortal sinner will have leprosy in a future birth; a Brāhma-killer, pulmonary consumption; a drunker of spirits, black fever; a perjured one, a bad sore; a maligning one, stinking breath; a thief of food, dyspepsia; a thief of horses, lameness; a poisoner, a hammering tongue; a seer, epilepsy; an incurable one will be born a madman; one who kills a child is born with a long face, etc. (Vaiśṇavārtha, ch. xlv.). Most of these punishments in a future life are symbolical. As a consequence of these beliefs, religious penances were performed, for instance, by lepers in order to atone for the leprosy contracted in a former existence to which their illness was attributed. A more rational theory of disease was found in the idea that worms gave rise to morbid conditions—a universal belief which may perhaps be viewed as the first germ of the modern bacillus theory. Headache and ear and eye diseases, as well as intestinal diseases, were attributed to worms; worms in children and in cattle also find special mention in the hymns of the *Atharvaveda*. The ancient physician Jivaka (see below) is alleged in the Buddhist scriptures to have cured a patient by making an incision in his head and pulling two worms out of the wound. The medical Sanskrit works derive the origin of internal diseases principally from a wrong mixture of the four humours (*rūpāntara*):—wind, bile, and phlegm; and thus distinguish between wind, bile, and phlegm diseases.

Of particular diseases, *fever* is perhaps the most important. It is called in the medical works the ‘king of diseases,’ and appears to have been already the most dreaded ailment at the time of the composition of the *Atharva-veda*, the symptoms mentioned suggesting true malarial fever. This corresponds with modern statistics, according to which nearly two-thirds of the surviving cases of the disease are due to fever. *Lepra*: is said to consist of eighteen varieties, seven heavy, and the remaining ones light. It is evident, however, that true leprosy became confused with various skin diseases of the skin, *pox* (māññikā) is first mentioned in medieval medical works. The *plague* is not mentioned in Sanskrit medical works, and seems to be of recent importation in India.

Folk-medicine in India is closely connected with sorcery. ‘The most primitive witchcraft looks very like medicine in an embryonic state’ (Sir Alfred Lyali, *Asiatic Studies*, 1st ser., 1907, p. 118). The earliest collection of charms found in the *Atharva-veda*, which is reckoned as one of the four Vedas, though it never attained the same degree of sanctity as the other three, probably because it contains incantations for destroying an enemy, the idea of injuring another, be he even an enemy, being opposed to the spirit of Hinduism. In the medical charms of the *Atharva-veda* and of the *Kusakara*uta, the diseases, and frequently the curing agencies as well, are addressed as supernatural beings (see above). The remedies are most often those based, in many cases upon a rude kind of homoeopathic or allopathic principle. Thus the yellow colour of a patient affected with jaundice is sent where it naturally belongs—to the yellow snake, and yellow birds—the patient being seated on a couch beneath which yellow birds are tied. The hot fever is sent to the cool frog, who may be supposed to find it enjoyable. Dropsy, the disease sent by Varuna, the god of the waters, is cured by sprinkling water over the patient’s head by means of twenty-one (three times seven) tafts of sacred grass, the water sprinkled on the body being supposed to cure the water in the body. A coral spear-vihaud is used to counteract pains that seem as if from a spear—either rheumatism or colic. White leprosy is cured by applying black plants. Red, the colour of life and blood, is the natural colour of many amulets employed to secure long life and health. Amulets, mostly derived from the names of the gods, are worn by the sick, the idea being that the supposed curative substance has to be brought into contact with the body. The sores, tumours, and pustules apparent in scrofulous diseases are conjured to fall off, or fly away, because they were not born in the body; they were brought on the afflicted person. The cure of wounds and fractures is effected by incantations which have been compared by A. Kuhn with the Mersburg charm of German antiquity. Flow of blood is mentioned as a charm to cause it to stop; incantations to indicate the use of a bandage or compress filled with sand. There are many charms for the cure of the poisonous bites of snakes, also charms directed against poison not derived from serpents. Water and fire are viewed as excellent remedies for many diseases; thus a Vedic charm declares: ‘The waters verily are healing, the waters enure all diseases.’ Fire is especially invoked in charms against mania, and sacrifices to the god of fire, burning of fragrant substances, and libations are amongst the principal rites against possession by demons. Some of the herbs used in medicine seem to owe their employment as remedies to their names only, not to any real curative properties possessed by them. The charms are supposed to have been derived from the sacred formulae of the Cherokees, and other spells current among the Indians of North America. On the other hand, they must be acknowledged to contain a fairly searching diagnosis of some diseases, as, e.g., of malignant fever, with its accompanying symptoms, such as jaundice, headache, cough, and itch.

The second period of Indian medicine is the Buddhist period, ushered in by Jivaka Komatra-blanchener, who in the *Chronicles of the Buddhist* (see above), was discovered by Mingai MS, written in the 5th cent. A.D., and called after an English traveller who discovered it at Mingai in Central Asia in 1890, contains three medical treatises, one of them being the *Mingai MS* of the Buddha himself, when a young pupil of his had been bitten on the foot by a cobra. Buddhist kings founded hospitals for men and beasts, and appointed regular physicians. The famous Bud-
DISEASE AND MEDICINE (Jewish).—I.

DISEASE.—I. Biblical.—Three initial stages may be traced in the DISEASES in the Bible; the punishment was dealt to the Defendant, is sent from the Deity; it is therefore a punishment for sins committed: that is, every one who suffers from disease has previously done some wrong for which he is being punished by his bodily afflictions. It is obvious that this case is completely covered by the same and more general question of evil, as dealt with, for example, in Job. Yet, although the Book of Job might be said finally to solve the problem as far as contemporary thought was concerned, inquiry reasserts itself as a new subject (Job, xxi. 27).

In the investigation of Biblical examples of sickness consequent on sin, care must be taken to exclude those cases where the punishment takes the form of a violent or unnatural death. These are included in the later category of the case of Korah (Nu 16.31) and that of the disobedient prophet (1 K 18.17) do not apply, but the death of Bathsheba’s first son (2 S 12.4) or the smiting of the Egyptian firstborn (Ex 11.6) might certainly be cited. It was also important to differentiate cases where the sinner himself is smitten from those where the punishment falls vicariously on others who may be innocent, but whom the sinner loves more than himself. To the former category belong the punishment of leprosy meted out to Miriam (Nu 12.10) and Gehazi (2 K 5.27); to the latter, the death of Ahijah, son of Jeroboam (1 K 14.25), for the death of the child meant the destruction of Jeroboam’s fondest hope—the foundation of a dynasty. But, as a corollary to the latter class may be mentioned those cases in which the community suffers from disease because of (a) general and (b) individual trespasses. The community would seem to be punished because it participates actively or even passively by not rejecting the criminal, for in the absence of duly appointed officials it is every one’s duty to take the law into his own hands. It is also suggested that the knowledge that the commission of a certain action may involve others besides the sinners and pain may act upon the evil-doer as a deterrent.

An enumeration of all the cases in the Bible
where disease is a punishment is unnecessary. It may suffice to mention a few examples where it is inflicted as a retribution for sin. In some cases leprosy is the means of chastisement: thus Miriam (Nu 12: 10), Gehazi (2 K 5: 27), and, were it not for the attitude with which this disease for slander, avarice, and presumption respectively. Shameful diseases are the result of foul crimes or irreverence (e.g. Er and Onan, Gn 38 etc.; the Philistines, 1 S 5: 27); Pharaoh (Gn 12: 23) and his household were afflicted with plagues on account of the abduction of Sarah; Abimelech and all his house (Gn 20: 17) were smitten with barrenness for the same cause; the Solomonites were struck with blindness (Gn 19: 24) for their sins, and, finally, Job's sickness was ascribed by his friends to his sinfulness. Gluttony was punished by gastric plague and death at Kibroth-hattavaah (Nu 11: 14), and in the Topheth, or Reuben chapters (Lv 26: 14 etc., Dt 28: 8 etc.), various diseases are enumerated which will inevitably follow disobedience to God's word.

Turning to the NT, we trace the same tendency. Thus (1 Co 11: 30) those who receive communion in an unworthy manner suffer disease and death. Further, there is the opposite case of apparently undeserved blindness (Jn 9: 1), as an explanation of which the possibility of sin in utero used to be suggested; and, finally, there are the instances where disease is said to be due to Satan's agents or demonic possession (Lk 13: 16, Mk 9: 24, Lk 11: 14).

That diseases follow sin may also be inferred negatively from such passages as Ex 15: 26 ("If thou wilt surely hearken to the voice of the Lord . . . then I will put out my hand and smite them, so that thou mayest have possession of the land") put on thee," cf. Dt 28: 20); or the Fifth Commandment, where longevity is the reward for obedience to parents; or, in a more general way, Lv 18: 3 ("Ye shall keep my statutes and my judgments by doing which a man shall live").

Although these and similar instances are capable of being classified under various different heads and of being arranged in other ways, yet it is by no means clear that alterations would produce any re-adjustment of ideas with reference to the theory of disease. It is not safe to dogmatize or to differentiate between the attitude of the Pentateuch and the Prophets; it is unwise to establish distinctions of time or place, because in no subject is there a change which put the Egyptians I will let them go, but put on thee," cf. Dt 28: 20); or the Fifth Commandment, where longevity is the reward for obedience to parents; or, in a more general way, Lv 18: 3 ("Ye shall keep my statutes and my judgments by doing which a man shall live").

The 'golden mean' may offer a workable compromise, but it will not often bear philosophic investigation. The Senecites, as has often been shown, identified cause and effect. Pendakah means both reward and the deed which merits the reward. Hotatth means both sin and sin-offering. The children who mocked the prophet were devoured by bears (2 K 2: 24), and the irresistible conclusion to be drawn was post hoc ergo propter hoc. The writer of the Books of Kings and Chronicles has history purely from the standpoint of morals; happiness and misfortune, health and disease, are the result of previous conduct; and insistence on this theory was the key-note for the study of history. The adoption of this attitude was responsible for a belated in free will, since man thus had the power and choice of avoiding disease, while the opposite theory, which made disease fortuitous, led to predestination. To such an extent did the theory that conduct alone is responsible for disease prevail that Ams (2 Ch 16: 9) is blamed because 'in his disease he sought not the Lord but the physicians.'

The Deity, then, is the source of evil as well as of all good. Divinity and humanity are blended; in early times it was felt to be impious to ascribe misfortune and disease directly to the Godhead. Hence all manner of expedients were adopted to avoid such a position. In the Books of Samuel (cf. 1 S 28: 15) the spirit of a dead prophet was called to deliver happiness, while sickly and ill were wont by 'a spirit from the Lord.' This was largely developed in the Targums (cf. Memra, Logos, etc.). There is no escape from attacking Divine omnipotence, if disease is independent of the Godhead. Still disincarnation to ascribe disease to God grew and gained strength from the earliest times. The example of Korah's sons is a case in point. All the guilty parties gather together, the innocent are warned to withdraw from their company, and finally (Nu 26: 11) it is stated: 'notwithstanding, the sons of Korah died not.' Still stronger instances occur which afford negative proof. The wicked cannot involve the righteous in disease and death, but the righteous may benefit the wicked. Ten good men can save Sodom (Gn 18: 20); punishment extends to the third and fourth generation 'of them that hate me,' while loving-kindness prevails to the thousands and hundred thousands of generations (Ex 34: 7).

2. Rabbinical.—In considering Rabbinical literature it will be found that the same tendencies may be traced and the same stages observed. We are brought back to earlier views such as may be found in the Pentateuch and Former Prophets, and, seemingly, the teaching of Job and Ezekiel established the idea of individual responsibility, and the doctrine that suffering and disease are not necessarily the consequence of wrongdoing.

1 There was korith (engraving) on the tablets of stone (Ex 32: 19). Read not freedom but korith (freedom). Freedom from what . . . from chastisements . . . R. Simon b. Yohai says, at the hour when we stood at Sinai and the Lord said, 'I will make you a nation and can we doubt that he said it?

2. Ezekiel: 'Entirely fair art thou, O my companion, neither is there blemish in thee.' When they signed, not many days passed when there were found among them those with uncleavable lepers and lepers. About that hour it is said (Nu 5: 4), 'And they dismissed from the camp every leper, etc.' Henceforward Israel was liable to issues and leprosy. R. Huna . . . leprosy came for slander . . . to teach thee that plagues come only in the form of slander . . . [The whole passage should be studied.]

In the Mekhilta on Ex 23 4 (ed. I. H. Weiss, Vienna, 1863, p. 1064), top acceptance of bribes is said, on the basis of the Scriptural verse, to lead to blindness:

3 Every one who accepts money to pervert justice (or even to execute justice) will not leave the world until he be bereft of his sight. According to R. Nahman, on the other hand, he will fail him: he will lose his knowledge of the Torah, so that he will not have to discard one eye or the other. R. Judah ben Ilia would have him or he will lose his eyesight.

4 A similar thought is expressed in the parallel passage in Siphre to De 16: 2 (ed. M. Friedmann, Vienna, 1864, §144), towards the end of the section. The Mekhilta on Ex 15: 26 (fol. 106a fol.) in this passage be regarded.

1 See Maimon ben Israel's Commentary (ed. E. R. Lindo, London, 1843), question 89, p. 128, question 134, p. 246; also pp. 20, 114, and question 120, p. 528.
The death of women at childbirth is due to three causes:

1. Because they have been negligent in regard to their periods of separation, in respect to the consecration of the first cake of the dough and in the lighting of the Sabbath lamp (Mishnah, Shabb. ii. 5 (Singer’s Prayer Book, p. 125)).

2. The effect of sin (mazker ha-aretz) on man and on the creation generally is to cause great disfiguration, and if many wounds are due to sin, a passage from Bereshith Rabba and elsewhere dealing with this point may be studied in F. R. Tennant’s Sources of . . . Original Sin, ch. vii. II.

3. Finally, R. Ami says: ‘There is no death without sin, and there is no chastisement without crime’ (Rab. Shabb., 55a foot). This passage should be carefully studied.

Outside the immediate range of the Talmud and Midrashim the idea may be traced frequently; e.g. Sir 31:2 (p. 24, ed. Stracke, Leipzig, 1903): ‘In all thy actions be modest, that no misfortune befalleth thee’; or Judah hal-Levi’s Kitab al-Khawari, pt. ii. 558: ‘It was one of the wonderful attributes of God that His displeasure for minor transgressions was shown on the face of the house and in the clothes, while for more grievous sins the bodies were more or less severely stricken’ (p. 119, ed. Hirschfeld, 1906; see the whole paragraph).

II. MEDICINE.—Connected with the question of disease is the question of care. The function of the priest as physician is clearly laid down in the Pentateuch, and the rabbis, more especially the Sages, cited in the Midrashim and Talmud, have added much to our knowledge of medical science. The Rabbis declared that it was a positive commandment (772 773) for a man to seek himself cure, on the basis of Ex 21:19 (see also Rashi, in loc.). Healing as a result of special prayer occurs repeatedly in the Bible. According to the Rabbis, all healing is a miracle, and repentance will effect a cure. Thus Bab. Ned. 41a declares: ‘No sick man can recover from his disease until his sins are forgiven . . . for the miracle is performed to a sick man by his restorer to health that which was not in him, and his body is not under the influence of the disease, and the patient recovers from the disease, and his body is healthy and free from sin’ (see also further).

So, the Palestinian Rabbis denied that demons could cause or cure disease (see DEMONS AND SPIRITS (DEMONISM)), for disease came from God without reference to their agency (see also S. Schechter, Fragment of a Zadokite Work, Cambridge, 1910, p. 1, ch. xiv. p. 12, line 3). On the other hand, a man must not avoid sin on that account alone.

‘A man must not say, “I will abstain from forbidden foods in order to strengthen my body and avoid disease, but in order to do it I will follow the commandments of God.”’

The technical nature of cures recommended by the Rabbis does not fall within the scope of the present article. Cures by prayer were frequent. See Mishin, Berakhoth, iii. 19 (p. 10, ed. Staerke, Litzmann’s series, Bonn, 1910).

E. H. H. B.
DISEASE AND MEDICINE (Persian)

gods), which are variously estimated, however, as 90,000 in the Gujarati translation, or as 10,000 (Bund. ix. 4), or even as low as 4335 (Dinkert, ed. Peshotan, vol. iv. cap. 157. 41, 43). A considerable number of the names of diseases are preserved amongst various parts of the Avesta, and have been care-fully collected and discussed, especially by Geiger in his Ostirn. Kultur; but most of the names are decidedly obscure, and little improvement has been made in this Geiger's study; even Bartholomew's great lexicon throws no further light upon the terms used.

It is fairly certain, however, that we may find in their fevers (ktara, donta, and diseases of the heart, khrutta, atuze). His skin diseases were still and are a special scourge of the Iranian countries, we naturally expect to find mention of leprosy, and as a matter of fact this dread disease apparently (in spite of de Harlez's striking argument to the contrary) is indicated by the term putes vamada whana (Vend. ii. 85; iii. 77 v. 92), probably 'leprosy which segregates the body' (cf. Pahlavi, piskh, Paxed piskh, Mod. Pers. pes, Khorish paez). In passages (I. ix. 48) we may see other leprosy, according to the general interpretation, or itch (9, E. Dahbah), which is probably also indicated by sarosas. Among other terms, more or less obscure, the identifi-cation of which is largely conjectural, vascehita (I. xii. 131) probably indicates a venereal disease; tafus . . . tannuva sarosas (I. xii. 75; xxii. 13) purulent fever; shakita (I. x. 160) may indicate a rapture; anbogita (I. vii. 145) and sanomazati (ob. xx. 9, 11) most probably signify rickets and eczema of the skin (ob. xx. 14, 20) almost certainly callous karunha (ob.) seems to be the Modern Persian kurni, carbuncle (Hormus Smith, Zoro. 25, p. 546). In the Avesta we seem to have the name of some eruptive disease, like small-pox or measles. Among a number of hitherto quite unidentified terms, the expression with ask in all probability refer to diseases caused by snake-bite.

The origin of the art of medicine as recorded in the Avesta, is supernatural, and is associated with the name of the hero Thrata, who, according to the Vendidad, was the first physician, 'the first of those heroic, active, benevolent men, with magic power, brilliant, powerful, before the giving of the Law, who made the various diseases cease, who besought Ahura Mazda for a remedy against poisons (vish-citrem, or perhaps 'eine of Gift-.,pflanzen stammende Arznei' [Geiger]), and a metal knife (for surgical operations). Ahura Mazda narrates that he gave him thousands and millions of medical plants, among them the mysterious gokhrena, the later gokh tree, the source of all medicines (Vend. xx. 1-17). The Yashts appear to confound this Thrata with Thraetaona, whose name is said to be a patronymic derived from the former—for his frangash is invoked against diseases. Darmesteter quotes Hamza as stating that Faridun (i.e. Thraetaona) was the inventor of medicine, and adds that the Modern Persian annables are derived from the name of Faridun (see Chandez, AMULETS [Iran.], vol. iii. p. 449). Moreover, the genius Aryanman (apparently the personification of prayer) is also intimately connected with the medical art. Ahura Mazda calls him to come and expel disease and death (Vend. xxii. 9, 23). Later on, in the Pahlavi Dinkert he becomes the tutelary genius of physicians, to whom he gives miraculous help to cure men's bodies. As we shall see, prayer was always regarded as the most efficacious of remedies.

The commonest term to indicate differently 'medicine,' 'healing,' 'medicaments,' et. "physician," in beshakha, correspond- ing to Beshah, Mahzah. In the Avesta we find this word, as beshah, but more commonly under the curiously inverted term, which is used in Modern Persian, and in the Armen, words bakhsh, 'physician,' and bakhshet, 'heal.'

The Avesta attributes great importance to the threefold division of medicine according to the metaphor used: keraeto, the knife; urana, herbs; mantiha, formula—as we would say, surgery, medicine, and prayer. This is also the well-known division of the Greeks: Pinard, speaking of Asklepios, says (Pyth. iii. 91-95):

1. t'cote ou phisekh
2. $\alpha$\varepsilon\iota\omicron\omicron\omicron\iota\varepsilon\omicron\omicron
3. t'cote ou phisekh, ti
4. t'cote ou phisekh, $\gamma$\omicron\iota\omicron\omicron\omicron\omicron
5. t'cote ou phisekh, $\gamma$\omicron\iota\omicron\omicron\omicron\omicron

As Findar gives the first place to eza system, so the Avesta esteems the cure by prayer or conjuration the best of all; so that the prayer-physician (waithnu-bashtana) is called 'the physician of physicians.' In fact, the Manitha Spenta, or conjuror, is a similar personage. The Avesta, however, is not a conjuratory formula, as employed so often among Eastern peoples. Homer, too, shows it as employed together with surgical treatment:

The there is an excellent specimen of these conjuratory formulae in Vend. xx. 7: 'I conjure thee, disease! I conjure thee, devil! I conjure thee, smallpox!' There is a striking analogy between these conjurations and those employed by the Akkadians (Lenormant, Chaldée. 176). Among the peoples of Greece, the genus of metals, Khshathra Vairya, is said to have given the first physician, Thrata, a knife with a golden point for surgical operations (cf. Vend. xx. 3). Careful instructions are given for the training and examination of surgeons and physicians, based on the principle of experimenta in corpore vili. The candidate is to practise, not on a Mazdaean, but on a devo-worshipper, that is, the follower of any other religion. Should he operate upon one such with fatal result, a second and a third time, he is declared incapable for ever of practising either medicine or surgery. Should he persevere and injure a Mazdean, he is held guilty of a crime equivalent to homicide. After three successful experimentations on a fully qualified medical man (Vend. vii. 95-104). A serious view was taken of a physician's duties: he must make all speed to visit his patients; if the disease attack one at nightfall, he must hasten to arrive by daybreak; he must arrive by daybreak; he must arrive by nightfall, he must labour during the day; and he must be in the village, a clan, or a province, are respectively an ass, a horse, a camel, and a yoke of four horses; whilst, for the wives, female animals corresponding are required. It would appear that later on these fees were changed into monetary payments: the Pahlavi commentator estimates the prayers paid by the priest at 3000 stirs (Gr. sthpy), whilst the yoke of four horses is valued at 70 stirs. It may be remarked that the Avestan physician was also a veterinary surgeon, for a scale of charges is also fixed for the treatment of cattle, great and small (Vend. vii. 105-117), and it is distinctly said that the same means must be employed for the cure of a mind dog as for one of the faithful (ib. xxii. 97-99).

Turning now to the later Pahlavi literature, we find the whole subject of the art of medicine most fully and systematically treated in an interesting treatise incorporated in that encyclopaedic work, the Kultur, and first printed, in vol. iv. of Peshotan's edition (Bombay, 11 vols., 1874-1910). It is by far the most con-siderable chapter of the whole work. It falls into

1 An amusing remark by a more recent Parsi commentator quoted by Darmesteter (note to Vend. i. 130) is thus naively expressed: 'He may not cure, but he will do no harm!'
DISEASE AND MEDICINE

four distinct parts: (1) medicine, (2) the medical man, (3) diseases, (4) remedies.

It is well known that Hindu medical science also distinguished the 'four feet' (pātha) of medicine, which, however, were reckoned as the physician, disease, or medicine, the

number of the limbs having a threefold division: 7 7 7 of

tinsky, or của, or 49, or the (de Nobis. Vf. i. 1).

The author begins by stating that (this is, the necessity of medicine, which is, of course, owing to the action of the Evil Spirit. He next distinguishes between spiritual and material medicine, and again between general

and individual medicine. In the treatment of the latter, he makes a thorough division: the body; and the various oppositions between the powers of the former and certain vices co-existent and yet hostile are detailed at length. In the whole passage we have a well-sustained distinction between the Avesta (distinguished from the Hindu by the use of

words which the present writer propounded in the Academy, xxviii. 1881) 39. A further distinction is then made between the elements of the body and the hostile forces, cold and dryness, produced by the Evil Spirit—a veritable bellum intestinum between the four elementary qualities as described by Galen and other early medical writers. Curiously enough, however, with the Iranians the position of dryness and moisture is reversed, dryness and cold being together reckoned among evil qualities—an inversion, no doubt, to be explained by the prevalent veneration of the sun and the hot climate in ancient Iran. The action of the blood, of food, and of moderation are next explained, as well as the necessary interdependence of spiritual and corporal medicine.

An interesting distinction is that of the relations between Iranian medicine and that of India and Greece. The researches of Hauss (ZDMG xxx., xxxi.) and Müller (ib. xxxiv.) have conclusively shown the great influence exerted by Greek medicine upon Persia, and a question of the latter writer deserves our attention here: 'A fact which concerns not Indianists, but rather students of Middle-Persian and Arabic literature, is this—it may be derived from the Aryan from a Persian source, and an assistant; should be amiable, without jealousy, gentle in word, free from haughtiness; an enemy to disease, but

friend of the sick; respecting modesty, free from crime, from

injury, from violence; expedient; the right hand of the

widow; noble in action; protecting good reputation; not

acting for gain, but for a spiritual reward; ready to listen;

having become a physician by favour of Aryans, possessed

of authority and philanthropy; skilled to prepare health-giving

plants medicinally, in order to deliver the body from disease, to expel corruption and contamination; to further peace and multiply

the delights of life' (§ 19).

The regulations for the probation of the medical candidate are the same as those we have quoted from the Avesta; whilst, as for the treatment

simply refers to the sacred text. In the third part,

we meet the statement that there are two fundamental maladies, denominated faragvad and avibhid, which seem to indicate rather some forms of moral, evil, but their explanation is extremely obscure, although the words occur in several treatises. The

Evil Spirit (Gnàk Mdw) is the cause of all evils, both of soul and body—for the former, of every kind of vice and evil passion; for the latter, of cold, dryness, evil odour, corruption, hunger, thirst, pain, 'and all other causes of malady and death.' The number of diseases is given as 4533; they are simply those of the Avesta in a slightly altered form. One interesting division of maladies is that which divides diseases of voluntary into voluntary (such as venereal disease) and involuntary (such as fevers); whilst the diseases of the vital principle (joma) are distinguished as vice tending forward (e.g. passion and anger) and vice tending backward (e.g. idleness).

The fourth and last part of the treatise may be styled therapeutic. The number of remedies derived from the vegetable kingdom is said to be seventy, and they are divided again into those which are by nature beneficent, and those which of their nature are poisonous, but may be so treated as
to become medicinal. As an example of the former kind, the treatise gives of the murraya of Calcutta (Murraya koenigii), which is mencioned. The miraculous (amulet) trees, the Gòkòrt and the white Hôm—here clearly distinguished from one another—are referred to as sources of healing. Health is next divided into two kinds—healthy in body and body; and the various oppositions between the powers of the former and certain vices co-existent and yet hostile are detailed at length. In the whole passage we have a well-sustained distinction between the Avesta (distinguished from the Hindu by the use of words which the present writer propounded in the Academy, xxviii. 1881) 39. A further distinction is then made between the elements of the body and the hostile forces, cold and dryness, produced by the Evil Spirit—a veritable bellum intestinum between the four elementary qualities as described by Galen and other early medical writers. DISEASE AND MEDICINE (Teutonic)

struggle, or whether it befall with startling suddenness in the heyday of life—in either case the terror-stricken mind was forced to face the questions as to the cause and origin of the dread occurrence.

Death from loss of blood and death by strangulation were of course more or less familiar incidents of the chase and of war. But what mysterious power was it that suddenly opened the veins within the body, and brought a comrade's life to an end by hemorrhage? or, again, obstructed the air passages from within, and thus caused the hale and hearty youth to perish by suffocation, convulsive clutching at his throat? The inmates of the smoky turf-habitations did in fact perform this malign power at work, as it squatted—crushing and squeezing—on breast and throat, and had waked with screams of terror and bathed in perspiration: it was the dreaded 

The burning-demons, as Schelmenbeine (A.S. scolmene, O.N. scoltun, Danish et sværd), striking the skin (A.S. on sell sværd), the flesh (on fæste sværd), the blood (on blod sværd), or the limbs and joints (on hånd sværd); or as the less injurious elf-breath, which, when merely blown (O.N. elfblæst, Swe. elfvakt, O.Fr. elf-est, Swed. elfvika) upon human beings, caused a swelling of the limbs; or even as a voracious sucking (A.S. elf-sogob) of blood or narrow or bone; or as some other vagrant affliction, 'elf-roll,' 'elf-walk,' which falls upon a person in its flight. When a man fell a victim to such an 'onfall' (A.S. on-fæll), his neighbours said 'the elves are upon him.'

Besides these, however, there were numerous other noxious spirits ill-afflicted to mankind, as may be inferred from the personal cast of many of the ancient names applied to particular diseases, as, e.g., Nessia, Nigedo, Stechedo, Troppho, Caunhptho. Touching-demons caused dysentery, lymphangitis, and anthrax; and choking-demons (cf. 'moon-struck'), face paralysis and mental derangement; burning-demons, blisters and gangrene; biting, pinching, scratching, and bruising-demons, skin-affliction like cancer, extravasation of blood, itching, and varicose ulcers; all of which, so they injure, but they could also affect the body internally, and give rise to ulcers in the stomach (O.H.G. magobizado). Astearing-demons they produced gnawing pains in nerves and muscles; as striking-demons they afflicted, no one else had perceived: the fell work, surely, of gruesome creatures, invisible, but to feeling all too real, which hemmed them in, prowled after them, fell upon them like stealthy foes—the spirits and demons of disease—had crept stealthily in, with their unconsciously creative tendency and its power of stimulating the imagination, depicted in endlessly varied forms, corresponding to the observed phenomena accompanying the affliction. A special object of misgiving was the unseen, though living and potent, entity which dwelt in friend and foe alike, which passed from the body at death and left it behind, i.e. the soul, as primitive man was always obsessed by the suspicion that he himself had caused it, or even by his instincts of fear and hostility, in the shadowy host of disease-spirits.

Among the Teutons the souls of the dead were believed to join the great demonic host which, comprising elves, 'elves'; Tiridens, Schrak, and trolls, swept along in the train of Woden and Holla: winged creatures who appeared everywhere, and had their home in the savage forest. On occasion these demones assumed bodily shape, showing themselves in every variety of form, and appearing in the disease itself as worm-like threads that creep under the skin, or as actual worms living in wounds and sores, or being discharged therefrom. The idea of the wriggling worm as the embodiment of the disease-demon was widely current among the Teutons. The demon was supposed to emerge from the worm in the form of some winged being, or of an ugly, crawling, slimy toad.

In importance to the incubi, or spirits of the dead, who afflicted the survivors with horrible nightmares, or consortled with them lasciviously in dreams, and who, in the form of some animal, often forced their way to the fireside through holes and cracks [earl. A.S. ef-cynn], 'the torment of the mare,' mark, triul, also cauchec-mor [scywe, from Lat. calcar, 'to tread'], 'the walk of the mare,' it was the horde of elves—creatures fabricated from the imagination from the nightmare—"the Elben," the race of elves (A.S. elf-cynn), who, as noxious demons practised their wicked magic (A.S. elf-cen) upon mankind, especially in attacks of fever. They were the personal causes of the so-called elf-sweat, which injures such As (A.S. elf-svedst), or "shot" (A.S. elf-svedst, O.N. elfakud, Danish et sværd), striking the skin (A.S. on fell sværd), the flesh (on fæste sværd), the blood (on blod sværd), or the limbs and joints (on hånd sværd); or as the less injurious elf-breath, which, when merely blown (O.N. elfblæst, Swe. elfvakt, O.Fr. elf-est, Swed. elfvika) upon human beings, caused a swelling of the limbs; or even as a voracious sucking (A.S. elf-sogob) of blood or narrow or bone; or as some other vagrant affliction, 'elf-roll,' 'elf-walk,' which falls upon a person in its flight. When a man fell a victim to such an 'onfall' (A.S. on-fæll), his neighbours said 'the elves are upon him.'

Besides these, however, there were numerous other noxious spirits ill-afflicted to mankind, as may be inferred from the personal cast of many of the ancient names applied to particular diseases, as, e.g., Nessia, Nigedo, Stechedo, Troppho, Caunhptho. Touching-demons caused dysentery, lymphangitis, and anthrax; and choking-demons (cf. The idea of the wriggling worm as the embodiment of the disease-demon was widely current among the Teutons. The demon was supposed to emerge from the worm in the form of some winged being, or of an ugly, crawling, slimy toad.

In importance to the incubi, or spirits of the dead, who afflicted the survivors with horrible nightmares, or consortled with them lasciviously in dreams, and who, in the form of some animal, often forced their way to the fireside through holes and cracks [earl. A.S. ef-cynn], 'the torment of the mare,' mark, triul, also cauchec-mor [scywe, from Lat. calcar, 'to tread'], 'the walk of the mare,' it was the horde of elves—creatures fabricated from the imagination from the nightmare—"the Elben," the race of elves (A.S. elf-cynn), who, as noxious demons practised their wicked magic (A.S. elf-svedst) upon mankind, especially in attacks of fever. They were the personal causes of the so-called elf-sweat, which injures such
what more advanced conception of disease, which must have coexisted from the outset with the demonic view, the latter applying more particularly to the great brood of them, and was the whole brood of 'nervous' disorders. The demonic view of disease has a direct link of connexion with the NT conception of demons in the Gothic word dæmonizance, and at length culminates in the medieval theory of possession by devils (A.S. dæfela and dæffælæn).  

2. Medicine.—In the practice of healing, likewise, a simple empiricism no doubt prevailed among the ancient Teutons from the first, though naturally the evidence of the facts is to some extent concealed. But this experimental therapeutics became almost inseparably combined with demonistic conceptions and modes of thought.  

A wound was first of all cleansed and bound up with vulnerary herbs; then a soot was mixed with the wound's dust, the sord was sprinkled with the dust of dried plants, and the bandage was tightened. But, as this did not always prove effective, recourse was had to the 'more potent' remedies—of which we shall speak presently to what extent and in what manner of treatment was presently applied in all cases and 'for all cases'; i.e., it became customary to use such remedies at the very beginning of the treatment, as unexpected and apparently causeless complications of burning—complications as mysterious as they were dangerous, such as inflammation, erysipelas, diphtheria, hospital gangrene, and lock-jaw; in short, all those concomitants of bodily injuries which were personified. These actual and phantom manifestations were regarded as 'gruesome companions,' the personified influences of malicious demons of the world of spirits and demons, though they might also be due to the machinations of evil-disposed human beings who were able to move the demonic realm and make it subservient to their will. Moreover, there was always the possibility that the invalid had in some respect neglected the claims of religion. He might have failed in the discharge of his duties towards the friendly deities of his people, so that they had sent the injury as a punishment, or had given to the wicked elves, whom they generally held in check, this extraordinary permission to work evil against him. And the ongoings of events so fiercely availed themselves. For all such possibilities timely and rapid measures had to be taken. Horror lowered upon primitive man from all sides, and it was the part of wise counsellors both men and women who, in all that related to disease, more especially women—to soothe the terror-haunted soul.  

Diseases of supernatural origin, and, in fact, all painful things that could not be traced forthwith to sensible causes, might be Divine punishments, from which the sufferer could be absolved only by expiation—by the bloody or unbloody sacrifice. The sacrificing priest secured his people against the demons of plague, Odin himself, however, is the master-magician, the 'magic-father' (O.N. goldr-father); as the sun-god he scatters the nocturnal swarm of the 'night-goers' (nithypngr); he is the mighty elf-dispeller, the scourge of the adps (grottî alfa). Nevertheless, it was also the custom to write spells or incantation on the bodies of such—such as were often well-affected towards men, and had some knowledge of the plants that must be dug on moonless nights. The cult of Eir, the special goddess of healing, is of relatively late origin; she was the personification of the gentle hand of woman in nursing the sick (O.N. eira, 'to care for,' 'nurse'). But Odin still held his place as the supreme god of healing, and the healing 'touch' of 'Wodan's finger' was long the prerogative of English and Frankish kings—descendants of Odin—as a cure for sensula and struma ('king's evil'). At an earlier date the power of curing disease was ascribed to the god Thor, the great god of thunder, and as such he was the protector of the family, home, and hearth, of home and family, of life and death, the destroyer of evil spirits. But Odin the Wise knew all the secrets of the magic which counteracts the work of demons; 'succouring spells' and protective runes (Spindrif cultivation, and at length culminates in the medieval theory of possession by devils (A.S. dæfela and dæffælæn).

Horror lowered upon primitive man from all sides, and it was the part of wise counsellors both men and women who, in all that related to disease, more especially women—to soothe the terror-haunted soul.  

Diseases of supernatural origin, and, in fact, all painful things that could not be traced forthwith to sensible causes, might be Divine punishments, from which the sufferer could be absolved only by expiation—by the bloody or unbloody sacrifice. The sacrificing priest secured his people against the demons of plague, Odin himself, however, is the master-magician, the 'magic-father' (O.N. goldr-father); as the sun-god he scatters the nocturnal swarm of the 'night-goers' (nithypngr); he is the mighty elf-dispeller, the scourge of the adps (grottî alfa). Nevertheless, it was also the custom to write spells or incantation on the bodies of such—such as were often well-affected towards men, and had some knowledge of the plants that must be dug on moonless nights. The cult of Eir, the special goddess of healing, is of relatively late origin; she was the personification of the gentle hand of woman in nursing the sick (O.N. eira, 'to care for,' 'nurse'). But Odin still held his place as the supreme god of healing, and the healing 'touch' of 'Wodan's finger' was long the prerogative of English and Frankish kings—descendants of Odin—as a cure for sensula and struma ('king's evil'). At an earlier date the power of curing disease was ascribed to the god Thor, the great god of thunder, and as such he was the protector of the family, home, and hearth, of home and family, of life and death, the destroyer of evil spirits. But Odin the Wise knew all the secrets of the magic which counteracts the work of demons; 'succouring spells' and protective runes (Spindrif cultivation, and at length culminates in the medieval theory of possession by devils (A.S. dæfela and dæffælæn).
DISEASE AND MEDICINE (Vedic).—Limitation of the subject.—The distinction between charms for securing prolonged life (ayurveda, cf. MAGIC [Vedic]) on the one hand, and the charms of exorcism (cf. WITCHCRAFT [Vedic]) on the other hand, is clearly indicated in the AitareyaBRhadaranyakaUpanisad, 4.2.10, where it is said that only one type of charm is frequent—charms for easy childbirth, for abortion, and for the promotion or destruction of virility might properly be classed among them, but are in fact classed regularly among the rites pertaining to women (sīrī-karmaṇa, cf. MAGIC [Vedic]). Instead of attempting any theoretic distinction, it seems best to follow the Hindu classification, and treat in this article only charms of the type contained in the bhāgavata-purāṇa-chapters (xxv.—xxxii.) of the Kauśikī Sūtra, reserving the related charms for the articles cited above.

I. Sources.—The chief source for our knowledge of the beliefs relating to disease in Vedic times and of the practices based upon them is the Atharvaveda. Of hymns or parts of hymns intended to secure the cure of more or less sharply defined diseases, the Atharvan Suṁhitā contains something over a hundred. The practices by which these were at one time accompanied are given in the bhāgavata-purāṇas of the Kauśikī Sūtra.

It cannot, of course, be always confidently asserted that the practices there described are identical with those employed when the hymns were composed. But the emergence of the ritual are, in the main, based upon a good understanding of the hymns shown by the flood of light that the study of the ritual has thrown upon the interpretation of the hymns (cf. the history of their interpretation which is given in the Commentary to pages 1-48 of Bloedel’s, The Atharva-veda, 3RD, vol. viii.). That the treatment of the hymn in the ritual is secondary is sometimes too hastily assumed. Thus vi. 44 is clearly a charm against šūsras (diarrhoea) and sūthira (production of wind in the intestines), but Kauśikī xxxi. 6 is supposed to indicate it in a remedial rite against slander. The position of the rite in the Kauśikī shows that it is intended for the cure of some disease, and that, if the commentator is right (as he most probably is) in saying that it is to be employed in case of slander, this means only that the origin of the disease sūthira is ascribed to the evil speech of an enemy (cf. below, for discussion regarding from certain semi-medicinal—a naive, but not improbable, conception. On the other hand, both the matter medica of the Kauśikī and its therapeutic practices—all these are seem more advanced than those of the Suṁhitā itself. In some cases also the connexion between the rite and the hymn is so superficial that there can be no doubt of the secondary mechanical adaptation of the one to the other. In such cases it is usual to assume that the rite has been made to fit the charm. In view of this conservativeness that in general controls such practices, and the probable probability origin of certain ideographic inscriptions (cf. Bloedel, The Atharva-veda, v. i., and the literature there cited), the opposite possibility deserves more consideration. In the present state of Vedic studies, at all events, we can only hope to do better than understand an Atharvan hymn as the Kauśikī understood it.

Taken together, the two sources furnish a better
picture of primitive medicine than has been preserved in any literature of so early a period. Further interest is added to the subject by the fact that these medical charms are the germ from which the various medical sects were evolved. The standard of its development represented in the medical Sutras implies several centuries of evolution from the standpoint of the Kaushikas, and is now known (through the discovery of the Bower MS.) to have been attained previous to the 5th cent. of our era. The relation of the later medicine to the Atharva is recognized by the Hindus themselves, who regard the Yajurveda as an ‘after-Veda’ (apaveda) of the Atharva. Hindu medicine in turn has, through the Arabs, left its effect upon European medicine.

Other Vedic texts, owing to the purpose of their composition, do not have occasion to handle the phenomena of disease in the same concrete fashion and to the same extent. The addition of details of a similar nature, their chief contribution consists in a picture of the general attitude of their authors and users towards disease. Into this picture as a background the details of the Atharva fit perfectly. The difference between the hieratic texts (the Rigveda in particular) and the Atharva is neither a difference in time, nor a difference in enlightenment between the adherents of these Vedas. It is a difference in attitude of the priest and the physician (each liberal enough to employ on occasion the resources of the other) when brought face to face with disease.

2. The Atharvan practice of medicine.—(1) Knowledge of anatomy.—The Atharva evinces a very thorough knowledge of what may be called the inner anatomy of the human body, naming its various external subdivisions, and many of its internal organs. Thus ii. 32 tells the Atharva how to move the parts of the body from which the disease is to be torn; similar lists occur also in ix. 8, x. 2, and xi. 8. Beyond this knowledge, which was to a great extent a pre-historic acquisition (cf. O. Schrader, Beilage. d. indogerm. Altertumsk. 1901, s.v. ‘Körperhüllen’), the Atharva can hardly be said to go. The apparent distinction between veins and arteries in i. 17, 3 is offset by the occurrence of the same words in vii. 35, 2, with the more general sense of ‘internal parts’. By showing how vague were the ideas held with regard to such subjects. The isolated statement of ix. 8, 10, ‘what is diseased shall become urine’, may be mentioned as an accidental approximation to a physiological conception. To be held, however, is the fact that the Hindu theory of the constitution of the body of three elements—bile, phlegm, and wind—does not appear in the early Atharvan texts. Vatikāyānām of vi. 44, 5 cannot be urged as proof to the contrary, as it means, not ‘destructive of diseases’ produced by the wind in the body (vāyukāyānām), but ‘destructive of that which has been made into wind’. Evidently, from its association with diarrhoea, it refers to wind in the intestines. The later theory, which appears first in the Saṃpūrṇa-gīyā, Atharv. Par. 68, is, of course, familiar to the commentators, who endeavour to foist it upon the Kaushikas.

(2) Theory of the origin of disease.—The popular method is to read at sight in disease the manifestation of the will of a supernatural power. To the Atharvan this was generally one of the hosts of demons by which he believed himself surrounded. How slight was the distinction made between disease and possession is shown by the hymn like Atharv. ii. 4, which is directed against disease and demon alike. Compare also v. 23, 2, where Indra is invoked to destroy the worms in a child, and it is immediately declared that all the aviti (certain female demons) are slain. It is also clearly implied by the fact that the Kaushika contains, among its remedial practices, ceremonious acts in on behalf of the deva of the disease (cf. xxvii. 36, xxxi. 3–4); in providing the patient with an amulet to resist their attacks (xxvi. 26 f., xxvii. 5 f., xxviii. 7); or in spells to dispel and remove the harm they have done (xxvi. 29–32, xxviii. 9–11).

These demons of disease are generally vague in outline and indefinite in number, and are known by the names pīkha, rakṣa, atīra, and kopa. Of their various miscellaneous activities, it may be noted that the pīkha devor the flesh of their victims (Atharv. iv. 36, 3, v. 29, 5); the etymology of atīren points in the same direction, while the kopa prey especially upon the embryo (ii. 25, 3). Other unnamed demons (ib.) are suckers of blood and takes away of fatness, while in xii. 36, 6 figure the dog-like she-demons that recall the dog-demon of epilepsy (Aṣṭamangāya Gṛhya Sūtra, xvii. 1) and the dog-like gandharvas of Atharv. iv. 36, 11. Another class of beings to whose influences diseases are ascribed are the gandharvas and their consorts—the mind-bewildering apsarases (cf. Atharv. ii. 2, 5, iv. 37, xiii. 36, 6). Insanity in particular is ascribed to their influence (cf. vi. 111, 4, also Rigveda x. 11. 2). The difference in attitude of the priest and the physician (each liberal enough to employ on occasion the resources of the other) when brought face to face with disease.

As the Atharva makes but slight distinction between demon and human sorcerer, it is not surprising to find the latter causing disease (Atharv. i. 25, iv. 28, xix. 39, 1) or diseases attributed to magic (iii. 7, 6; for methods of this producing disease, cf. art. WITCHCRAFT [Vedic]), curses, or the evil eye (ii. 7, v. 15 and 16, vi. 96, 2, xix. 33, 3, and Kaūr. xxvi. 53, xxix. 15–17).

Theoretically the diseases themselves are demons, and in some cases—e.g. vaisākhaṇḍa and vaisākhaṇḍaka—is it impossible to decide whether the word should be considered the name of a demon or of a disease. But the personality of disease-demons is rarely strongly marked, and none of them is exactly comparable to that of the demons described by Sītalā. The closest approach is to be found in takman (fever), the Atharvan name for the disease known to the later medicine as jīvra (cf. esp. the hymn v. 22, in which he is adjured to go elsewhere; and i. 25, vi. 29, and vii. 116, in which he is offered homage). Certain scrofulous sores called ṛaplakīt are supposed to move of their own volition, as they fly through the air and settle upon their victim. So much is this the case, that neither interpreters understand the word as the name of a noxious insect. As in other popular systems of medicine (cf. A. Kuhn, in Kuhn’s Zeitschrift, xiii. 49 ff. and 113 ff.), a number of diseases are ascribed to the presence of demons (cf. above) located in various parts of the body, and most fantastically described (cf. Atharv. ii. 31 and 32, v. 23, with numerous parallels in other texts to be cited below).

Less frequently the Atharva ascribes a disease to one of the greater gods, and then often as a punishment for sin. Varuna sends dropsy to punish crime, especially falsehood (cf. Atharv. i. 10–14, ii. 10, 1, iv. 16. 7, vii. 53, 1–4, xii. 44, 5; once also, i. 25, 3. the takman is said to be his son
DISEASE AND MEDICINE (Vedic)

[i.e. sent by him], and in vi. 96. 2 (a charm employed by Kauńska to heal the dropsy, but probably originally of a wider scope) the prayer is to be 'the sacrifice of the feet — the feet of Rāma [Death], and every sin against the gods'). Certain sharp pains are ascribed to the spear of Rudra (Kau. xxxi. 7); the arrow of the same god causes tumours (Atharv. vi. 57); the tokman and the kāsika (cough) are his weapons (xi. 2, 229), and in xi. 2. 26 he is said to send the tokman. A ceremony to his children, the Maruts (Kau. xxvi. 24), serves as a cure for leprosy. Diarrhoea is connected in i. 2 with the arrows of Parjanya (the rain-god), and lightening for the sake of its heat, and productive of fever, headache, and cough. Takšaka, a serpent-god, is worshipped in Kauś. xxviii. 1, xxix. 1, xx. 20 (charms to cure the bites of poisonous reptiles).

The name īṣṭre is supposed to have some evil influence on the hair (cf. Atharv. vi. 20. 1). At present it is supposed to have some evil influence on the hair (cf. Atharv. vi. 20. 1).

(3) The diseases treated.—The identification of the diseases treated in the Atharva is difficult in the extreme. In the first place, there is nothing that can be called diagnosis in our sense of the term. The names of the symptoms are not really with the troublesome symptom; of the cause of the symptom, the disease itself, he knows nothing. Sometimes the symptom, e.g. jāluvra (‘water-belly’), is definite enough to enable us to identify the disease; but frequently the terms apahītī (‘sores’) and akṣata (‘tumours’) must have covered a great variety of afflictions from the most harmless to the most malignant. In the next place, the Kauńska, as a rule, does not state the disease for which the charm intended. This important item is left to be inferred from the hymn rubbed. Unfortunately the hymns often combine the most varied diseases; extreme instances may be found in ii. 33; ix. 8.

The commentators (of much later date) endeavour to supply this deficiency. Their statements, however, are not only frequently contradictory, but are also evidently affected by their knowledge of the later Hindu medicine. As an example of the way they work may be taken Kesava’s statement that Kau. xxv. 10, 11 is devoted to the treatment of jaundice, for the ritual and the hymn rubbed (vi. 24) are plainly concerned primarily with dropsy; this disease is frequently complicated with heart-disease, which is therefore, mentioned in the hymn. But in i. 22 (a cure for jaundice) heart-disease is also incidentally mentioned. Kesava seems to have reason to believe that the cure for jaundice (i. 22) cured heart-disease, therefore another cure for heart-disease (vi. 24) must also cure jaundice! Finally, there are many obscure terms both in the Sāmkhya and in the Sāutra.

The most dreaded disease was the ‘fever’ especially predominant in the autumn (visvāyāvada). Its later name īṣṭre does not occur in the Atharva, where it is known as tokman, a name which conversely is confined to this Veda. To its especially devoted i. 23, v. 22, vi. 20, vii. 116; and to its specific, the kāsika-plant (Uracus speciosus), v. 4 and 8. The mention of jaundice in the Atharva of Tokman is found in i. 12; 2, 4; v. 8, 9, 8, 6, 6, 34, 10, 29, 1 and 10. The Gāṇḍāla, Atharv. Par. 32, gives a long list (cf. KauŚ. xxvi. 1 n.) of hymns that encompass its destruction. This list, tokmanasasvatān, contains, according to five hymns cited above, and adding to them the hymns against kṣetriya (iii. 8 and 10, iii. 7), against yaksina (iii. 11, vi. 85 and 127), various panacea-hymns (ii. 9, ii. 28, v. 9, vi. 30 and 91, ii. 8), and a hymn (vi. 42) originally intended to cure disease. The symptoms described are alternation between heat and cold, delirium, return of the fever either (at the same hour) every day, or every third day, or omitting every third day. Associated with it are jaundice, certain red eruptions (v. 22, 3), headache, cough, spasm, and itch (polma), the last being its brother’s son (v. 22. 12).

Yaksina (yaksina rājāyakṣa, ajāyāyakṣa, to which Taitt. Sin. ii. 3. 1—3, 5. 4—5 add pāpa-yaksina) seems to have in the Atharva (cf. ii. 33, iii. 11, vi. 29, xiii. 127. 3, ix. 8, xiii. 36 and 41) no narrower signification than disease. With this accords the statement of Vai. Sin. xvi. 22 that there are a hundred varieties of yaksina. The employment of its hymns in the tokmanasasvatān implies either a disease of marked febrile symptoms or (preferably) such an indefinite meaning. So also is included in i. 1, 22 employed yaksmanapāghata as a synonymous name for this gāva, while other texts give the form yaksāna, congenerically adapted to tokman. Zimmer (Altindisches Leben, 1879, p. 97 ff.), in accord with the latter medicine, sees in it a pulmonary disease. But a variety of yaksina, called jānyan (Taitt. Sin. i.), is probably identical with the Atharvan jāyapya; for jāyapya is associated with yaksina in Atharv. xix. 44. 2, and called rājyapya by Kesava, xxi. 127.

To correct if yaksina means simply ‘disease’, and still in harmony both with Dārila’s statement (loc. cit.), that jāyapya is some species of tumour (akṣata), and the fact that both etymology and the ritual point to the latter as the probable correct meaning is, evidently an attempt to harmonize the ritual with the meaning of yaksina in the later medicine. Here may be added the mention of ‘abscesses’ (eudranta, vi. 127, ix. 8); ‘scrofulous swellings’ (kildsa); ‘dropsy’ (kildsa); ‘fearful’ (kildsa), and the similar. Venereal disease (grāma) is treated in Kauś. xxvii. 32 ff., while the hymn there rubricated deals with ajāyāyakṣa and rājyapya. Sāvāna’s statement, that consumption produced by sexual excesses is malignant, is evidently an attempt to harmonize the ritual with the meaning of yaksina in the later medicine. Here may be added the mention of ‘abscesses’ (eudranta, vi. 127, ix. 8); ‘scrofulous swellings’ (kildsa); ‘dropsy’ (kildsa); ‘fearful’ (kildsa), and the similar.

Leprosy (kīśan) is the object of two hymns (i. 23 and 24). Kesava also assigns to its cure the practice (Kauś. xxviii. 15) with the kṣatriya-plant, which Dārila, supported by the Gāṇḍāla, declares to be a cure for fever. Kesava’s statement has probably no deeper basis than the fact that kṣatriya in the later language means leprosy.

Endri is another term of uncertain meaning. The Atharvavedins regularly explain it as ‘inherited disease’, though ‘chronic disease’ has recently been suggested by Jolly. No description of its symptoms is given. As in the case of yaksina, the statement of its effects and the similar, suggests either a disease of marked febrile character or a general term for disease. Even if, as is most probable, the word means ‘hereditary’, there is no reason to believe that the designation was accurate.

Easily identified, on the other hand, is dropsy (jāluvra). To its cure i. 10, vi. 22—24 and 96, and vii. 33 are devoted. In vi. 24 it is associated with heart disease—vāda. In the Atharva the mention in the same hymn of pain in the eyes, heels, and front part of the foot refers to the characteristic pulling of these parts. Heart-disease (hṛdaya, hṛdayāyakṣa) is mentioned only incidentally (i. 32; v. 20, 12. 30, 9; vi. 14. 1, 24, 1. 127. 3), and probably referred to any pain in the region of the heart. Paralysis (pādikāta, lit. hemiplegia) is mentioned in the KauŚa itself (xxxi. 18), but the hymn rubbed is extremely obscure, and was probably not intended for this purpose.

Excessive discharges (āṣārata), and in particular diarrhoea (āṣāra of the later medicine), have for their cure i. 2, ii. 3, and probably also vi. 44 (cf. above). There is perhaps an allusion to it in
connection with fever in v. 22, 4. The opposite troubles, retention of urine and constipation, are the subject of cure (cf. accord. to Kauś. xxvii. 10). The practice of bleeding the hymn itself seems, however, to be entirely concerned with the first of these diseases.

Cough (kōśa, kōsa) is mentioned in connexion with fever (i. 12, 3, v. 22, 10-12), and is also the other main symptom of which fevers are composed (vii. 107) are rubricated. Balaśa is variously interpreted as ‘consumption’ and as ‘internal sores’; the assonance both with kōśa and with balaśa is noteworthy, and strengthens both interpretations. The hymn in which 3 figures most prominently is vi. 14, rubricated by Kauś. xxix. 30 in a ceremony which Keśava terms a ‘phlegm-cure.’ This term cannot, however, be taken to indicate necessarily some throat disease, as it means any disease ascribed to an abnormal condition of the ‘phlegm’ in the technical sense of the later medicine (for Keśava’s use of such terms cf. xxvi. 1 and 28).

Balaśa is also mentioned in iv. 9, v. 8, 22, 11-12, vi. 127, 1-2, ix. 8, 16, xiv. 34, 10. In connexion with it (v. 22, 11) appears udvyoga, perhaps ‘spasm.’

Headache (śiśoṛkita, śiśirgana) is mentioned in i. 12, 3 and v. 4, 10, both times in connexion with fever, and also in iv. 8—an effort to enumerate all diseases cured of by Dārā. To this the rubrication of Dārā may be added in a broader fashion. Neonaila (vīnāyat) is mentioned in vi. 127, ix. 8, v. 42; pain in the ribs (paśīdayayana, inter-costal neuralgia) in vi. 10; rheumatic troubles are perhaps meant by viśvakanda, and śānśāṅkunda (i. 16, 3, ii. 4, iii. 9, 6, iv. 9, 5, xiv. 35, 33, 1); with these may be associated śīkara (ii. 4, 2), ākṛikita, and śākṛikita (v. 34, 10). Some sharp internal pain is ascribed in vi. 90 to the vessel Pānas. Its exact nature is indeterminable, but the later medicine applies the same term to colic. A ‘limb-splitting’ disease (niyakāda) also occurs in xiv. 4, 2, while in ii. 35, ix. 8) aim at eradicating pain and disease from all parts of the body. Pains in the eyes (cf. also v. 4, 10, 23, 3, vi. 24, 127, 3) and ears may be especially mentioned. A separate charm for diseases of the eyes (alāji occurs also in ix. 8, 29 as the name of some form of eye disease) is found in vi. 16 according to the asariyumāga, a charm for bad visions, and Kauś. xxx. 1-6. The parallelism of the hymn with v. 23 suggests that the pains in the eyes are ascribed to the presence of worms. For diseases of the ear see above.

Of more external evils a ‘flow of blood’ (loḥita, vi. 127, vičikata, ix. 8, xii. 4, 4) means, perhaps, bleeding at the nose (cf. the association with diseases of the head in ix. 8, 1). A special charm against bleeding is i. 17 (rubricated at Kauś. xxvi. 10), to stop, according to Keśava, either an external or internal hemorrhage, or excessive menstruation. Against the last of these troubles is directed the practice of Kauś. xxviii. 15, rubricating v. 6. The cure of wounds and fractures is the object of iv. 12 and v. 5 (rubricated at Kauś. xxvii. 5-6 and 14). Wounds or sores of unknown origin (ajñātāras) are healed with vi. 83, 4. In a snake-infested country like India cures for poison were sure to be in demand. For the poisonous bite of snakes the Athavāra contains three charms (v. 13, vi. 12, x. 4), besides one (vii. 56) against the bites of scorpions and other poisonous reptiles, and another (iv. 6 and 7) against the poison of arrows. Internal poisoning of diseases does not seem to have been treated separately.

In certain forms of disease, e.g. mania, epilepsy, the distinction from possession is very slight. In case of possession, iv. 29 and 37, vi. 2, 2, or 32, or 111 (this last hymn speaking unmistakably of madness), or the chatuṣmārga (list of hymns for expulsion of demons) may be employed. In a rite against madness, Kauś. xxvii. 12, Athavār. v. 7 of 3 is rubricated, and to it is ascribed, like xxv. 10, the cure of one of the diseases for which i. 22 is employed at Kauś. xxvi. 14-21. Gṛhiḥ, ‘fit,’ ‘seizure,’ is practically a shāne demon (cf. ii. 9, 1, 10, 6, iii. 11, 1, vi. 112, vii. 12, xii. 3, 18). Another demon name is jayam—apparently a designation of convulsions or lock-jaw (cf. ii. 4, 2; Kauś. xxxii. 1-2).

The Kauśika, in accordance with its method of treating symptoms, has also cures for ‘thirst’ (xxvii. 9-12) and ‘brightness’ (xxvii. 28 ff.), which we should hardly class as diseases. The latter may be what we call nervousness, but V. Henry has no warrant for interpreting the former as dyspepsia. Inauspicious marks (cf. art. PROPHETIES [Vedic] on the body (pāpalakṣaṇa, xxxi. 1), orīṇa, xxvii. 15) are also treated as diseases. Keśava thinks that the ceremony to remove wrinkles (Kauś. xxv. 4 f.), has reference only to wrinkles in a young man, in whom they are portentous. The ceremony to stop the loss of hair (Kauś. xxxii. 28), employing two hymns, vi. 136 f., evidently composed for this very purpose, is to be ascribed to the same motive rather than to vanity. A person whose hair has come into contact with a hemp-tree is called in. It, 15 is supposed to be in danger of suffering some injury to his hair. For his benefit is the ceremony of Kauś. xxxi. 1, and the hymn rubricated seems to have had the same case in view.

Finally, at least four diseases are designated as panacea (cf. Kauś. xxv. 4-5, 20, 21, 22-36, xxvi. 1, 34, xxvii. 5-6, 27, 34, xxviii. 8, 17-20, xxx. 17-18, xxxi. 5, xxxii. 3-4, 18-19, 26-27), though in some cases a more narrow interpretation seems possible.

(4) The materia medica of the Athavāra.—That the waters should be considered healing is most natural in virtue of both their cleansing and their cooling properties. So it is stated in Athavār. ii. 29, 6 that they are medicinal ones. Waters serve as messengers (cf. xxviii. 8), and as remedies. To the waters are especially devoted the hymns, Athavār. i. 4-6, employed as a panacea at Kauś. xxv. 20, and vi. 22, 24, employed as cures for dropsy at Kauś. xxx. 11-13. Of particularly great efficacy, however, is the use of ant-hill waters (cf. Athavār. ii. 3, vi. 100, and Bloomfield, Am. Jour. Phil. vii. 482 ff.). Hence earth from an anti-hill serves as an annull, a drink, or an external application for the cure of diarrhoea, etc. (Kauś. xxv. 7), and of kṣetra (xxvii. 45), and as an antidote for poison (xxxii. 35, xxxii. 6). There is the possibility of the patient’s receiving sufficient formic acid (cf. art. CHARMS AND AMULETS [Vedic] for method of investiture) to act as a cathartic. In all these cases the patient is associated with it a lump of ordinary earth. The separate use of the latter as an enetic in Kauś. xxvii. 3 (so Dārā) is doubtfully, as Keśava and a few others understand the fruit of the madhunja-tree. Noteworthy is the fact that both the elod of earth and the anti-hill seem to be looked upon as growths (cf. their inclusion in the list of auspicious plants, Kauś. vii. 16). Similar remedies are earth from a mole-hill, to cure constipation (Kauś. xxvii. 11), this material being selected because the ant-hill makes its way through dark passages, and also because one of its names, aḍukarasa, is compounded with a word for ‘excrement’ (cf. Satyavāla Brāhmaṇa, ii. 1. 1. 8) and earth from a beel-live (xxix. 10), as an antidote to poison.
Plants are to the Vedic mind the offspring and the essence of the waters, the embodiment of their curative properties. Hence, they too, are implored to bestow remedies (cf. Atharv. vi. 96, and esp. the long hymn vii. 7 addressed to all plants, and used as a panacea at Kauñ. xxvi. 40; cf. also the soudhi-stuti of the Rigveda cited below). The list of plants employed as remedies in the Kauña is long, and comprises the following: in a number of passages (xxv. 29, xxvi. 40, xxvii. 5, 20, 33, xxix. 30, xxx. 8, 11, xxxi. 8) the prescription calls simply for a 'auspicious tree,' thus it is the tree enumerated below. Of this tree in this list are specifically prescribed: pathás = Butaca frondos (xxv. 30, xxxi. 34), a tree of pre-eminent holiness because of its mythical associations (cf. art. CHARI S AND AMULETS [Vedic]); kāhpālī = Crousion aorad. (xxvii. 13; etc.); jānapā = Terminalia arjuna (xxvi. 43); vēta = Gnamus cinereus (xxvii. 10). Other remedies figure in the list of auspicious plants (Kauñ. vii. 16): śrīrā = Prospis açcitor (xxviii. 13, xxxi. 1); samākā = Cinnamomum aromatica (xxv. 1); durba = Grass=Poa cynosuroides (xxv. 37, xxvi. 30, xxviii. 23, vii. 2 [Com.]); also, after its use as sacrificial straw, barnī (xxvi. 31); dārīya = grass = millet (xxvi. 13); bimba = Acacia celebica (xxvii. 1); also, the grass=Gramin (cf. also the grass below); acey = barley, yaw (xxvii. 17, 27, xxvi. 2, 3, 43, xxxii. 20, 19, xxv. 17), efficacious because fancifully connected with āvayaati, 'he separates.' Another plant not in this list, but evidently employed because of its holiness is the same=plant (xxvi. 22).

Other plants owe their efficacy as remedies to their anti-demonic qualities (for these qualities cf. art. CHARI S AND AMULETS [Vedic]): igadvit=oil (xxv. 39); tāla, tattvam = and the oil made from it (xxvi. 1, 13, 43, xxvii. 33, xxx. 8); red (xxvii. 27); víra = and uśā = Andropogon muricatus (xxv. 39, xxvi. 26, xxviii. 24-26, xxvii. 13); hemp (xxviii. 25, xxvi. 33); kālīra = Acacia celebica (xxvii. 29); gandhar = gymnaster (xxvi. 18, xxvii. 27, 13, 23); the Anerikapala, Atharv. Par. 35); tōpol = colocyn (xxv. 23; also mentioned by Keśava at xxvi. 22, where it seems to be used principally for its colouring property). The use of wood of trees in their different parts is connected to their efficacy.

A number of other plants owe their employment to more or less fanciful etymologies: mūla = grass = Saccharum munja (xxvvi. 6, xxvii. 2, 33, xxxi. 3), associated with mānchichi, 'he boozes.' Leaves of the plant=asava (= anax) employed at xxv. 14 to cause sores to open, and wood of the kṛsand tree=at xxvii. 2 to cure wounds inflicted by poisoned arrows, because kārkūka means 'bough.' Growth of the hair is promoted (xxvi. 28) by the nākatā plant, 'she that takes root,' with which are associated the jīvi (root jīv, 'to live') and the alakā plants. The bākā of xxvii. 5 seems to be a synonym for arnabhā of the hymn iv. 12, felt to contain arūsa, 'wound,' and the root arūsi, 'to set,' and hence employed to cure fractures and wounds. Branches of grass=stamba are employed (xxiv. 4) to confuse (root stambh) the effects of poison; they are also added (xxx. 3, 14) to water with which a patient is washed or sprinkled.

In addition are employed: lotus roots (bīsa, combined with ala and ala, xxv. 18); hāriśtri = Kurrona longa, as a cure for jaundice (xxvi. 18) [because of its yellow colour], as an antidote to poison (xxvii. 4, xxvii. 7 [Com.], or as a panacea (xxvi. 40)]. It is also prescribed, according to the commentators, in the cure for leprosy of xxvi. 22. As the cure consists merely in painting out the spot, Keliu pastra or indigo may be used instead. There is mention also of prīnaparā = Hemiscissus cordifolius root (xxvi. 30); pipalī, pepper (xxvii. 38); black bean (xxvii. 14); sudanī, "DISEASE AND MEDICINE (Vedic)"
sometimes be made from cornelian instead of a spoon (xxvi. 30), or the medicine must be administered from a vessel filled with a particular sort of cow's horn (xxxi. 6), or a red copper vessel (xxix. 19), or through a yoke (xxv. 1), or with a pestle (xxix. 22); or must be prepared in a vessel of red and stirred with a reed (xxvii. 10), or stirred with fire (xxviii. 31); or the fire used must be a forest fire (xxix. 19), or made of birds' nests (xxv. 27); or built on a mat of reeds floating in water (xxix. 30). The place of the ceremony is not always a matter of indifference; one ceremony (xxvii. 4) must be attempted at the confluence of two streams, other cases at the cross-roads (xxv. 30, xxxv. 18), or in a ditch (xxvii. 4). The position of the patient (xxvii. 10, 25), the clothing and food of the celebrant (xxxi. 28), are also efficacious. So, too, is the time of the ceremony; thus that of xxvi. 21–25 must be repeated at sunrise, noon, and sunset. The time most frequently prescribed is amavasayat (xxvii. 29, xxviii. 5, xxx. 9) [Darila], xxxi. 28, 'at the time when the stars fade away'. The purpose is clearly expressed in Atharv. iii. 7. 7: 'when the constellations fade away and when the dawn fades away, (then) shall he shine away from us every evil and the kaśtriya.' In one case (xxxi. 28), where the duration of the ceremony is specified by the word 'kaśtriya', the time is further defined as 'before the cows come.'

(5) The Atharvaveda methods of treating diseases.—Of practices of a real therapeutic value the Kaṇśika contains but little. The most delicate is the probing of a wound (xxv. 15–16) for the relief of one suffering from retention of urine. It is instructive to observe that the discovery of this operation may be due to an attempt to carry out practically the statements of the hymn itself. 1 From the time when the patient is stopped, the fire is extinguished, and the liquid is collected, to the time when the patient is permitted to take solid food, the whole operation is repeated until the urine appears in profusion. This is a clear illustration of the ancient custom of restricting food and drink until the evil is expelled by a fluid or exudation. Another practice is the application of leaves or kernels of the herba dudh in a localised wound or boil. The leaves of the plant are first rubbed together; the mother of the liquid is then trickled over the diseased part, and the preparation is left on for a few minutes. The purpose of the exercise is to heal the wound or boil. A similar method is prescribed for the cure of dropsy (xxv. 28–29) by the application of the leaves of the plant. A patient suffering from dropsy is first made to eat a quantity of the leaves of the plant, and then the leaves are spread upon the patient, and the patient is placed in bed. The leaves of the plant are rubbed on the body of the patient, and the patient is then placed in a bed, and the leaves are spread upon the patient. The patient is then allowed to sleep in this manner, and the leaves are removed from the body of the patient.

...
DISEASE AND MEDICINE (Vedico)

while in the latter case it is merely blessed with the hymn, unless, as in xxv. 28, xxviii. 8, xxix. 30, the patient is specially directed in this act. In the former case, the patient is blessed in the usual way, but the repetition of the leavings. In either case the patient is wiped down (vii. 17) from head to foot, and given (vii. 26) some of the water to drink. The water may, of course, contain other substances also, and the position of the patient and the manner in which it is to be poured are also in some cases specified. Instances of the apsanas are xxvi. 41, xviii. 4, 7, 34, xxviii. 19, xxix. 26, xxxii. 3, 14; of the auraschans, xv. 17, 57, xxv. 25, 31, xxvii. 1, 8, 28, 29, 32, and to the above apsanas, xxxi. 8, 10, 15, xxxii. 2, 28, xxiii. 4, 10, 15, 17. The two are sometimes combined (xxvi. 41, xvii. 1, 4, and 7-8, xxxii. 3-4 and 14-15). In the last case hot water is used for the one cold water for the other. Other methods of washing, chiefly of a more local nature, are xxv. 34, xviii. 1, xxx. 11, xxi. 1, 11, 13. The leavings of the offerings are also put directly upon the patient's head (xxvi. 30, xxix. 19), or blessed substances are inserted in his nostrils (xxvi. 8, xxxii. 21). Frequently also the magic substance is given to the patient to drink (xxv. 7, 11, 18, xxvi. 1, 12-13, 14, 17, xxvii. 12, 29, xxviii. 1-4, 6, 14, 16, xxvi. 2, 8, 10, 11, 13, 18, 30, xxxi. 5, 6, 23-25, 26, xxvii. 2, 7) or to eat (xxvi. 17, xviii. 31, xxviii. 19, 12, 15, 26, 27). This hot water or climbing (jīlīta), prepared by plunging a burning or heated substance in water, are employed (xxvii. 29, 33, xxvii. 2, xxvii. 8, xxix. 10).

The medicine may also be applied as an amulet. In this case the patient will have to drink a solution in which the amulet has been steeped for three days, so that it may be benefited more than would at first sight appear (cf. art. CHARMs and Amulets [Vedica]; and the instances of the xxvii. 33. The potsherd from a ruin [2] to stop the flow of blood; xxvii. 21, hairs from the breast of a red steer, glued together and wrapped with gold wire, to cure jaundice; xxvii. 36-27, four stalks of white-blooming Andropogon marcisutus [gāvīsu], or four pieces of red reed, each burnt in three places, to cure 'fright'; xxviii. 7, sūdānūngśa-plant = Celutropis gigantea, in case of possession; xxxi. 1, mustard for diseases of the eye; xxxi. 26, piece of an ant-hill, in case of bladder stones, and the second administered in liquid form, according to the commentaries. The transfer of a disease to another person is a wish most vigorously expressed in Athavā, v. 22, 48, and the ritual emphasizes this in xxvii. 9-13, in the interest of a person suffering from 'thirst.' More frequently the transfer is to an animal; fever to a frog (xxvii. 17), jaundice to yellow birds (xxvi. 18), madness to birds (xxvii. 35). The selection of the cross-roads for some ceremonies is doubtless to be connected with this idea, as is also the direction (xxxi. 10) for the rubbing of sores against the door-post (cf. also Athavā, xii. 2, 19, 20). In these and other general practices there are a number of symbolical acts adapted to the special situation, sometimes with a great deal of ingenuity, sometimes in the most haphazard fashion. As it is impossible to describe all these in detail, it seems best to present some typical examples of the whole process of an Atharvan cure.

Athavā, 1:8 is a prayer to lightning conceived as the cause of pain and fever. A person suffering from a disease is given to eat, honey, ghee, and sesame oil that have been blessed with this hymn. The head of the patient is then covered with a leaf or a piece of meat. This is not only connected by its name with the idea of soothing, but it is also a mythical healing of lightning (Agni), from which the patient is supposed to derive its effect. The leaf is then placed in the left hand (this is miraculous) a serve containing parched grain (a symbol of the effect of the fever), and walks along, eating the grain while he recites the hymn. He continues to advance, carrying in his kit hand the sieve and the turban, in his right hand a bow-string and an axe. He is followed by the celebrant, and preceded by the latter's assistant—a measure of precaution. When some manifestation of the disease occurs (so that the presence of the demon (rajas) cannot be regarded as a cause of the disease), and the procession returns. On the way home he lays down the bowstring to stop permanently the demon who has entered the man is blessed with the hymn and put up the patient's nose. Finally the priest mutes the hymn, while touching the patient's head with a bamboo staff that has four joints (and seems to serve as a conductor of the magic potency).

In a case of plague, the practitioner desires to banish the yellow colour to yellow objects, and to obtain for the patient a healthy redness, or, as the hymn puts it, "to envelop him in a red veiling and to have the yellow of the red core." Hence he puts the hair of a red bull into water, blesses it with Athavā, ii. 22, and gives it to the patient to drink (xxv. 8, 9, 20, 21; xxvi. 25, 26) and gives that to the patient to sip. An amulet, prepared from the part of a hide pierced by a peg, is tied on the patient while he is sitting down, the hide, the red bull, and he is also given milk to drink. Next the patient is fed with a porridge mixed with yellow turmeric, and he is doused with the rest of this porridge and with another porridge from which he has not eaten. He thus acquires a yellow coating that can easily be to mean (cf. i. 114, 7, S, Rs. 23.1, 4-6, 11, 14, 15, iv. 3, 6, vi. 28. 7, x. 169. 1). These are but general statements of the association of Rudra with disease which the Atharva (vi. 90, and passages cited above) expresses in concrete form. Of the particular kind, xxvii. 13 is the one most qualified to cure it, and hence he is styled (ii. 33. 4) 'the most eminent of physicians.' His healing powers are mentioned with great frequency, as are also the choice and numerous remedies he holds in his hand which are to ameliorate the disease and make all sound, both man and beast. His distinctive remedy, the jīlīta, is shown by the Atharvan ritual to be cow-urine, the medicinal use of which goes back to Indo-Iranian times, when gāo- maneṣa is prescribed in Avesta (cf. Bloomfield, Am. Jour. Phil. xii. 425-429). For these aspects of Rudra, cf. i. 43. 4, 114. 5, ii. 33. 2, 7, 12, 13, 41, 53. 14, iv. 47. 3, vii. 33. 6, 46. 2. 3; Athavā, ii. 27. 6.

The Aīvins are also divine physicians, but, unlike Rudra, they are invariably invoked. Aīvins, i. 34. 6, 8. 9, 157, 6, vii. 71. 2, viii. 9. 15, 18. 8, 22. 10, x. 30; Athavā, vii. 53. 1). What is most characteristic of them is that, in addition to general invocations of their healing aid, stories are frequently told of their cures of particular individuals, which are not to be explained as merely myths relating to natural phenomena. They restored Chyavāya to youth and its powers (i. 10. 10, 11. 3, 18. 6, vi. 74. 5, 75. 5, vii. 68. 6, 11). An asthma of the throat and did this for him (cf. ii. 12. 15, x. 39. 8) and also the gift of a husband to Ghoṣa (i. 117. 7, x. 39. 3, 6. 40. 5) was preceded by a similar rejuvenescence. To Ṛṣiva they restored his sight (i. 116. 10, 117. 17-18); for Vīṣṇu they provided an iron leg (i. 116. 13, 14) to
The number of medical charms in the Rigveda is extremely limited. They are, however, of the same general name as the Atharvan charms, and most of them recur also in the latter collection.

Rigv. i. 50. 11-13 is a prayer to Surya to destroy disease and dry up, upon which Atharv. i. 22 has drawn. Rigx. x. 137 says that in Atharv. iv. 13 is a form of prayer for a hundred cures, viz., the gods form to make alive again the man that has sinned; one wind shall blow him a remedy, another shall blow away his disease; the one practitioner who has performed this kind of miracle should have its special efficiency (cf. above, including all cases of amulets).

In still another way Varuna is brought into connexion with disease. Disease is the punish-ment of sin, and Varuna is the moral governor too (cf. 112, 8) both of blindness and of lameness. For the story of their cure, in connexion with Saranvati, of Indra, cf. below. The methods of their cure are not indicated, but rather have the air of the miraculous. It may be noted, however, that honey is most closely connected with these gods (cf. Macdonell, Ved. Mythol., 1897, p. 49), and also possesses medical efficiency (cf. above, including all cases of amulets).

Furthermore, for unseen, the they hold, twenty-one (ii. 162. 16), and the connexion is particularly clear in i. 24, 9: ‘Thy remedies, O King, are a hundred, a thousand. Let thy good will be broad and deep. Drive into the distance Nritti. Free us from the sin committed’ (cf. also vi. 74 and x. 97). It may be the assistance of any and every god; but, apart from these, the explicit mention of healing in connexion with other deities than those mentioned is very sporadic, though doubtless it is conceived as included in a general fashion in their powers of giving long life and prosperity and of the thing in connexion with Varuna’s relation to disease is the fact that he, as the lord of the waters, sends dropy in punishment for sin, and especially falsehood. This idea, unmistakable in other texts, is probable for Varuna, who in i. 298. 6 is ‘speaker away of the heart-piercing demon’ and Hillebrandt, Varuna und Mitra, 1877, p. 63 E.), though it is not so clear as to be beyond the possibility of denial (cf. Bergaigne, Religion rédigue, 1878, p. 95).

The healing power of the waters is also mentioned quite frequently. Rigv. i. 23, 16-24 is devoted to their praise; they are said to contain immortality and all remedies, and are besought to bestow their restorative power on sin (cf. x. 153, 7, and note the frequency with which the waters appear in prayers for long life). In Rigv. vi. 50, 7 they are healing, and in x. 137, 6 they are healing and dispellers of disease.

It would, however, be a mistake to infer from such passages that the concept of the cause of disease is radically different in the Rigveda from what it is in the Atharvāra. The association with the Rakshas is clear in i. 15, i. 7, 1, 6, 8, 35, 7, viii. 35, 16-18, ix. 55, 1, 97, 6, 86, 12, 192, 1; furthermore, in x. 85, 31—a prayer to Indra to send the rain, mention is made of a censurer—‘is to be recognized the sacriseption of disease to the influence of the spirits of the dead. It is for this reason that the sun-gods (i. 153. 3, and Agni 153. 9) and the Rakshas (i. 18, 2, 98, 3) are dispellers of disease—they being the spirits of the dead, and the power of no disease (an arispati, ii. 33, 2. 14, 7. 9) may also be men- tioned here as based on the idea of the disease—demon entering a niswar—‘godness Ayva, a sick man, an embodiment of deflection from fear’ invoked in x. 143. 12, may be classed as a disease—demon (cf. Atharv. ii. 2, 5, 1, ix. 9).

Medical charms are, of course, likely to call in the assistance of any and every god; but, apart from these, the explicit mention of healing in connexion with other deities than those mentioned is very sporadic, though doubtless it is conceived as included in a general fashion in their powers of giving long life and prosperity and of the thing in connexion with Varuna’s relation to disease.

The Adityas drive away disease (viii. 18. 10); Indra cures Aupalā of skin disease and her father of baldness (viii. 80; for the treatment of this legend in the Brahmans, cf. Oerter, J. E. E. iv. 290); the Maruts, as children of Rudra, have pure, salutary, and benedictory remedies (ii. 13. 13), which they are asked to bring from various places (vii. 20. 234, cf. also v. 53. 14); Vata gives remedies (i. 59. 4, x. 150. 1); for Soma, cf. i. 91, 12, iii. 61, 14, viii. 32. 17, 20. 2, ix. 97. 43, x. 25. 11; for Soma-Rudra, vi. 74; for Vāsātpati, vii. 54. 1, 55. 1; for the Dawns, x. 35. 6; for the All-Gods, x. 63. 12; for Yama, x. 14. 11; and for the more general prayers for health among the other blessings, iii. 16. 5, 59. 3, x. 18. 7, 57. 7.

VOL. IV.—49
DISEASE AND MEDICINE (Vedico)

auka, , kāna, mithādy; defects of hearing (ba-
dhīra, abadhīra); lameness (arṣcana, ṣrova); loss of
virility (vaḍhī). It is neither possible nor desirable to treat at this
length the whole of Vedico literature; but, as the occurences of
disease are no less important than the treat-
ments, it seems best to limit the treatment to certain texts as representative of the Yajurveda,
the Brāhmaṇas, and the Upaniṣads. For the Yajur
texts the Vājasaneyi Sānkhīta has been chosen.
One of the objects of sacrifice is an attempt to
induce the gods to bestow prosperity, in which
health is an important element. It is, however,
noteworthy that health is by no means so
conspicuous an object of prayer as is wealth.
Even when it is sought (cf. xxv. 14-25—Rig, i. 89),
it is in general terms, thus resembling the charms
for long life (āgyayini) rather than the medical
(āgyayā) charms.
For such incidental prayers compare, in addition to prayers
for strength, lustre, vigour, life of a hundred years, that occur
pānita, such formulae as: ii. 15, 'O Agni, thou art protector
of body and soul of the bodhisat (my God)'; and the art-giver of my
life, o Agni, giv me life. O Agni, thou art giver of splendour, give me
splendour. O Agni, when sitting in my body, that do thou call me out for
me my life, my sight, my hearing, my speech; quicken my mind, protect my
being.
For words of the same general type, cf. vi. 27, xv.
7, xvii. 15, xviii. 6, xxvi. 23, xxvii. 12, xxxi. 1, 3.
O Agni, direct my prayer. For this prayer see also as i. 20. 'The
my sight (I take)'; and ii. 16, 'Thou art protector of sight, O
Agni, protect my sight.' Numerous parallels from other texts
are found there.' The body is consdered as one 'where weakness is not
found,' and in xvi. 105 the speaker quite 'weakness, lack of
strength, fail.'

The incidental statements of the relation of the
gods to disease are on the plane of the Rigveda,
and are frequently repetitions of that text. Varuna
in xviii. 33 is styled a healing seer (cf. xvii. 23—
Rig, i. 24, 8, and xvii. 29, v. 9, i. 11, 24). For
the healing power of the waters, cf. iv. 12.
ix. 6, xv. 33, xxxvi. 12; for Bṛhaspati, iii. 29—
Rig, i. 18, 2; for Savitar, xxxiv. 25—Rig, i.
35, 9; for Agni, ii. 29, xxv. 8; for Aśvin,
xxxv. 19, xv. 7, 49; for Varuna, xvi. 7, 8; for
the divine artifice, is more directly connected with the
repair of the body than in the Rigveda (cf. ii. 24—
viii. 14—Atharv, vi. 53, 3 and Vāj. Śū. xxviii. 9).
Of more interest are the collections of mantras
for the treatment of diseases directly connected
with the subject. At the sākenchana, the third parvan
of the cāutorsoga-sacrifice, occurs a pitṛjātaka after
which are employed four verses (iii. 53-56) of one
of the Subandhu-hymns (Rigv. x. 37, 3-6), to
keep the spirits of those engaged in the sacrifice
from following the pitṛa on their return to the
world of Yama. Another portion of the same
sacrifice is the Trayāṅgukobhak̄a to Rūdra.
The formulae are found in iii. 57-61; their purpose
is to ward off the evil genius and to ward off other
peoples without harming the sacrificers.
Of similar nature is the Satarudrīyatana at the
agnicyayana. The sixteenth book of the Vāj. Śū.
is composed of its mantras. The concept of
Rūdra is essentially the same as that of the
Rigveda, though worked out in fuller detail.
The Śaatrāmanci is a sacrifice originally in-
tended to expel the sin of excessive soma-
drinking, which leads to a drunken discharge of
the urine. The heaven-born, to the demons
this ceremony is the cure which the Āśvin and
Sarasvati wrought upon Indra when he had been
gueloged into surī-drunkemess by the demon
Nāmuci. For the details of this story, cf. Bloom-
field, p. 145-163. employed constitute books xix.-xxi. of Vāj. Śū.
Of particular interest are: xix. 10, containing
the name of the disease-god; xix. 80-95, the
detailed account of Indra's cure; xix. 12, 16,
xx. 3, 56ff., 75, 80, xxii. 13, 18, 29, references
to the healing power of his physicians and their
remedies; xix. 55, 62—Rigv. x. 15, 4, 6, prayers
to the gods for the health. (For the ritual, cf. A.
92-106, and A. Hillebrandt, Ritualliteratur,
1897, p. 159.)

Anatomically interesting are the lists of various
parts of the body affected (xxvii. 19-31, xxviii.
10, parts of the horse), xxxi. 10-13, xxxii. 8-10,
and the statements relative to conception and
birth (xix. 76). The theory of the vital breaths
now begins to become prominent; but the whole
of this question must be dismissed with a refer-
ence to A. H. Ewing, The Hindu Conception
of the Functions of Breath, J.A.O.S xxii. 249-308.

Of names of disease few occur: yākṣma is
disease in general (cf. the coupling of ṣuva kṣma
anuvayi, i. 1, iv. 12, xvii. 6, and the mention of
the hundred yākṣmas, xii. 97). This disease
is also mentioned in the esādhistati (xii. 75ff.—
Rigv. x. 97). Its last verse (xii. 97) is, however,
perticular to the version of Vāj. Śū., and mentions
the weakness, the weakness of the voice (vagam,
țīva, and pādārta of uncertain meaning).
Yātra occurs in xiv. 44=Rigv. x. 103, 12, while Vīṣṇukī,
(xix. 10) is an equally vivid name ('she that makes
go in all directions') for the demon to whom are
ascribed the nauseating and charming effects of
deanach. Heart-disease is mentioned in viii. 23—
Rigv. i. 24, 8; diseases of the eye, arm, in xxx.
11; skin-disease in xxx. 29; leprosy in xxx. 17,
21; various deformities in xxx. 10, 21, 22.
Physicians are recognized in the profession
(xxx. 10). An amulet is used by the Divine
physicians (xiv. 80) for the cure of Indra.
Finally, iv. 3 is a formula addressed to ointment
from Śī. Trīkāda: 'Thou art the eye of Viṭa'ra
(for my eye);—cf. Bloomfield, The Myth of the
Heavenly Eye-ball, Am. Jour. Phil. xvii. 399-408),
thou art the giver of sight, give me sight.'
In the Aṣṭārya Brāhmaṇa there is very little
material bearing on the subject. Incidental aluta-
sions to the subject of disease and remedy are
likely to be noted the distinction between the
senses of taste, sight, and smell, and their organs
(v. 22). The processes of procreation and birth
are also frequently alluded to in the effort to
produce a son endowed with disease-free earthly
limbs. Disease is likewise a great deal of talk about the 'vital
breaths'—the way in which they may be established,
in the sacrificer, or may be cut short.
The same is true of the various senses and the
power of virility; and there is the constantly
recurring effort to secure vigour, splendour, sharp-
ness of sense, and the full term of life.
All of this is too general to be of interest in
the present connexion. More concrete are i. 18,
where the physician to whom is to be the physicians
of the gods; v. 34, where the Brāhmaṇa priest is the
physician of the sacrifice. Freedom from disease
is expressly sought in viii. 10 and 11; the healing
power of herbs is recognized in general in lii. 40,
and in particular that of collyrium for the eye
in i. 3. That disease may be produced by a curse
is seen in v. 1 (deformity) and vi. 33 (leprous).
Madness is alluded to in vi. 33, and in v. 29 there
is mention of a girl possessed, den, by a demon.
Varuna's words, as productive of dropings in punish-
ment for a broken vow, figure in the story of
Sūñāṣeṣa (vii. 15 and 16). The origin of certain
deformities is explained mythically in i. 8. The
closest approach to a cure for disease is found
in iii. 19 in the formulae that equipped the knowledge
that will enable one to preserve his sight to old age.
In i. 25 is explained the way in which the Hotor
may cause the sacrificer to suffer from vyāpyāna, which here seems to mean some (serofolous) disease of the neck.

An examination of the Brhadārayana and Chhandāla Upaniṣads shows that the chief interest of these texts in this connexion lies in their anatomical statements. Besides more isolated instances that occur postāni may be noted the list of the parts of the body (Bṛh. i. 1. 1.); of the human body (Bṛh. 4. 11.); and the elaborate comparison of man with a tree (iii. 9. 28). There are also statements about the heart and its veins (Bṛh. ii. 1. 19, iv. 2. 3. 29); Chhānd. viii. 1 and 16; on the disposition of food in the body (Chhānd. vi. 5); the process of sleep and dreams (Bṛh. ii. 1. 16 ff., iv. 3. 7 ff.; Chhānd. iv. 3. 3); and the process of death (Bṛh. iii. 2. 11 ff.). All these statements are, however, connected with the theory of the ‘vital breaths,’ and appear to be entirely speculative.

With regard to the origin of disease may be noted the power of a curse to produce bodily ailments implied in the thread ‘thread shall burst’ (Bṛh. iii. 7. 1, 9. 26; Chhānd. i. 8. 8); the statement (Bṛh. iv. 3. 15) that the evil caused by waking a man while his spirit is abroad in dreams is hard to cure; and the mention (Bṛh. iii. 8. 4) of ‘punishment for sickness.’ Sickness is incidentally mentioned (Bṛh. iv. 3. 36, v. 11. 1; Chhānd. iv. 10. 3, vi. 15. 1, vii. 26. 2, viii. 4. 2, 6. 4). The itch (prānam) is the only disease specifically mentioned; and Rākṣaṇa’s surgical treatment (Bṛh. ii. 1. 8) is probably a method of cure to be associated with the cases of transference cited above.

The full term of life is often promised as a reward for certain knowledge (Bṛh. i. 2. 7, ii. 1. 11 ff.; Chhānd. ii. 11 f., iv. 11 ff.); an upaṇyāsī ceremony is also mentioned (Bṛh. iv. 4. 25). In Chhānd. iii. 16 are contained directions for the cure of any disease, by following which one may live 110 years.

A number of factors combine to prevent diseases and their treatment from figuring to a great extent in the Śrāvnta ritual. All connected with the sacrifice must be in good health: an animal viewed must not be infirm, and a thread ‘thread shall burst’ (Bṛh. iii. 7. 1, 9. 26; Chhānd. i. 8. 8); the statement (Bṛh. iv. 3. 15) that the evil caused by waking a man while his spirit is abroad in dreams is hard to cure; and the mention (Bṛh. iii. 8. 4) of ‘punishment for sickness.’ Sickness is incidentally mentioned (Bṛh. iv. 3. 36, v. 11. 1; Chhānd. iv. 10. 3, vi. 15. 1, vii. 26. 2, viii. 4. 2, 6. 4). The itch (prānam) is the only disease specifically mentioned; and Rākṣaṇa’s surgical treatment (Bṛh. ii. 1. 8) is probably a method of cure to be associated with the cases of transference cited above.

The full term of life is often promised as a reward for certain knowledge (Bṛh. i. 2. 7, ii. 1. 11 ff.; Chhānd. ii. 11 f., iv. 11 ff.); an upaṇyāsī ceremony is also mentioned (Bṛh. iv. 4. 25). In Chhānd. iii. 16 are contained directions for the cure of any disease, by following which one may live 110 years.

DISGUST

Disgust may be obtained from such lists as Kawatsuki Brahma
iv. containing twelve modifications of the New and Full Moon Sacrifice, of which none is intended for the cure of disease or the much
longer list of Tuscitii Satihiit ii. 1. 1. ii. 4. 14.
3. In this are included sacrifices for one long ill' (jyagama-sayvin) that will make him live even if his spirit is gone' (ii. 1. 1. 3. 2. 7. 9. 3) [release from
Varuna's fetter]; ii. 4. 2. 9. 2. 10. 3. ii. 1. cf. also
iii. 4. 3. 3. for being seized by Varuna' or for release
from Varuna's fetter (ii. 1. 2. 1. 2. 5. 1. 3. 12. 1. 13. 1; for one who wishes to live his
full term of life (ii. 2. 3. 2.); for one who fears death
(iii. 2. 3. 2.); for one wishing virility (iii. 2. 3. 2.);
or power of his senses (iii. 1. 6. 2. 5. 4. 3. 7. 2.); for one wishing sight (ii. 2. 4. 3. 0. 2. 3. 8. 1. even though blind he sees'); for one in fear of
impotence (ii. 3. 2. 2. 10. 2. 10. 2.); for one who womits
vometa (iii. 2. 6. 2.); for one whose mind is slain, who is an evil to himself' (ii. 2. 8. 3. for insanity,
cf. also iii. 4. 8. 4.); for one who has been suffering
long from an unknown disease [cf. ajahuta
yamata (ii. 6. 5. 5.); for one suffering from
Papagayatma (ii. 3. 5. containing the mythical
account of the origin of Papagayatma, rajayagyna
and rajyagyna; cf. ii. 5. 6. 4.]; the last statement that
for this purpose the sacrifice must be offered at the
new moon in order that the sacrificer may fall out
with it.

In the Ghyra-rites the phenomena of disease appear more frequently, though still treated in a general fashion, which contexts unfavourably with the details of the Atharva. Sickness is a
sufficient excuse for sleep at sunrise or sunset (Aghatapaya GS ii. 7. 1. 2.); and dispels hallucinations and
gyanama (ib. i. 23. 5. 2.); in case pain also stops the
recitation of the Veda. (Sukhayaatma GS iv. 7.
35. At the apyagya, Agni is invoked as the
physician and maker of remedies (Hryavyaklit GS i. 2. 18. cf. Atharv. v. 29. 1). At the Aghama
also prayers for long life are employed (cf. Caland,
p. 20 and 49), and, according to Hryavyaklit in
ii. 12. 9, the sacrificer, if over fifty, offers to the
pitr some of his hair, with the request that they
take nothing more. The reason is that he feels
now is on the down grade and desires to prolong
his life as much as possible (other interpretations in
Caland, p. 179). The prevention of disease and
sorcery may also be attained, according to Gobhita
GS iv. 6. 2. by the daily repetition of any formula.
The Agrayana also, especially in its presentation
in Sukhayaatma GS iii. 8., seems to be a rite to
render the new food fit for use by driving away
any demons that may be lurking in it (cf. the Agrayana
Kanyastei for an annadvakama in Kasyakki
Brahma v. 12). As yamata Sukhayaatma GS
v. 6. 1. 2 prescribes an oblation of rice-grains and
gourds grass (Coix borbea) with Rig. i. 114; similarly
Aghat GS iii. 6. 3-4 six oblations of boiled rice with Rig. x. 161 (cf. the directions for
protection of the embryo in Sukh. GS i. 21).
Another way of securing health (Aghat GS iv. 1. 1)
is for an aghati to leave the village when he is sick;
the sacred fires will desire to return, and will consequently grant him health. This
is clearly an adaptation of a psychosis practice.

Of special veneration is Pavesaka GS iii. 6 contains
an elaborate cure for headache by rubbing, while
reciting a verse parallel with Rig. x. 163. 1 =
Atharv. ii. 33. 1. This verse is also employed as
Aputambhi GS iii. 9. 10 for the rubbing of a sick
woman with lotus leaves and roots. When the pain
is confined to one side of the head, a different formula
is used, the wording of which suggests the ascrip-
tion of the pain to worms. An elaborate cure for
epilepsy, conceived as due to the attack of a
dog demon upon a child, is described (Hryavyaklit GS
ii. 2. 7. 1 = Pata GS vii. 18. 1; Pata GS i. 16. 24).

With it may be compared the exorcism of the
Vishayaka in Manavay GS ii. 14, giving mention of the
symptoms (including epilepsy) and the cure of
an attempt to secure a child from all diseases (khetutjagita, particularly mentioned) is found at the
Sukhayaatma (Hry. GS ii. 3. 10; Ap. GS vi. 15. 4).
The Gobhita GS iv. 9. 10, while the following sritor provide for their
treatment in cows; cf. Tuscitii Agraya
iv. 36. 1; Ap. SS xxv. 10. 3. (for cattle) are
Agraya, GS iv. 8. 40 (the cows are led through
the smoke of a fire in which an abomination has been
made; cf. Hry. GS ii. 3. 8. 10, and Ksy. GS v. 3. 13).

The Brahma deals frequently in cures for
diseases, but not in a way to call for special comment
(cf. i. 1. 2. 5. 17. 8; i. 17. 9. 13: 19; 18. 10; 19. 19;
20. 3. 23. 7. 24. 3. 25. 5; 27. 1. 28. 4. 29. 2;
30. 4. 31. 2. 30. 2. 23. 10. 11. 26. 3. 38.
30. 4. 31. 2. 30. 2. 23. 10. 11. 26. 3. 38.
30. 3. 34. 5; ii. 2. 3. 2. 7. 6. 11. 3. 1. 5. iv. 1. 1-3.
9. 4. 7. 16. 1. 19. 3. 5. 1)

The Sukhayaatma Brakhma has among its
Jnayoni a series of ceremonies of interest; when
the children of one's wife die young (ii. 2. 1)
the ceremony is described in art. CHA. and AMULETS (Vedici); when one is seized by a demon
(ii. 2. 2.); for any disease (ii. 2. 3); in case of pain of
the limbs (ii. 3. 1); for protection from snakes
(cf. i. 3. 3.

DISGUST is primarily a feeling in regard to
the physically reproducible, and is therefore
grounded on actual or reproduced organic sensations.
In 'moral' disgust, these sensations are suggested
by analogy. The emotion of repugnance for ugliness
appears in disgust, abhorrence, contamination, and
horror, as a particular feeling-attitude, or disporposition
of the self, towards an object which stands in a
special relation to the nature of the individual.
The object which arouses the emotion is not the
hostile as such, or the merely harmful; it is the
unnatural - that which involves a perversion of
nature. In other words, it is at variance with that
primary fitness of things which is based on the
essential nature of things. This is evident in the
case of the morally repugnant. The abnormal
prominence of the animal nature, desires which lead
to misuse of functions, desires of any kind raised to
an unnatural pitch, all arouse the emotion of
repugnance. The same principle is valid in regard to
merely physical objects are concerned. Objects of this
kind are 'natural' in their proper place, but they
may be misplaced. This is the rationale of
all physical repugnance. The characteristic
expression of this emotion in combats is to the
removal of all relations with the unpleasant object. It thus
serves to protect, not so much the life of the indi-
vidual, as his distinctive nature.

**DISTRIBUTION of wealth.**

**773.**

**DISTRIBUTION (of income).**—By the economic theory of distribution is meant the doctrine of the manner in which the products of industry are distributed among the factors producing them, viz. land, capital, labour, and enterprise.

2. The shares.—In dealing with the relative amounts that go to the four factors in production, one course is to treat rent, interest, and wages as prices, and to determine the consideration that, like all prices, they are determined by the demand for the supply available. But he expects that each has a marginal quantity and quality which it just pays the employer to buy. The margins are not independent of one another, since the employer may substitute machinery for labor, or buy land for a cheaper site requiring much capital for a dear one requiring less. And he expects a certain margin of profit for his own enterprise, short of which he would prefer to join the ranks of the employed. But, as data for an ethical judgment of the system, it is better to regard the shares more directly.

(a) The share to land or nature.—Economic rent comes out of the price of a commodity in respect of the surplus of the soil and sine cursum in its production. The growing demand for food and raw material, houses and factories, requires the use of inferior natural conditions; resort is had to inferior lands and sites, and more capital and labour are put into those already occupied, though the return per unit is less. Since it must pay to use the inferior conditions, it more than pays now to use the better. The surplus is rent.

(b) The share to the entrepreneur.—But it does not need a system of landlord and tenant to infer that the margin of profit is necessary to the enterprise. When a farm is cultivated by its owner, it earns the same economic rent as if he had let it, for its produce brings the same price.

In respect of the amount that goes as rent, it is best, and it is the practice, to begin by regarding a farm or a town-block as having a value estimated from its selling price, or from its earnings capitalized. Thus the earnings are all profit and interest on the selling price; rent is not something additional, it is contained in the profit and interest. To separate it out is to make a fresh analysis, tracing now the stock to its origin, and distinguishing the part that is not due to the owner's capital and labour. Besides the natural and indestructible powers of the soil' and the work of the world, and the national income is taken as produced, distributed, exchanged, and consumed every day. Into this the value stream comes the employer to direct its course and speed. His action is determined by the price that he expects, and it is distributed throughout time. It guarantees the other agents their shares, and takes the rest; he buys them out. If he is a contractor, he knows the price he will get, and what he can afford to pay the other agents. He may undertake the further risk of not knowing the price he

1 For Distribution of wealth, see art. Wealth.
thought that from about 25 to 40 per cent of their annual value is rent, the higher figure being the estimate for London. Of the annual value of agricultural land in England, probably 23 per cent is pure rent (R. J. Thompson, *Journ. Roy. Stat. Soc.*, 1907, p. 610).

(b) The share to capital.—This must not only make good the capital that is consumed in producing the commodity, but pay interest on it as well. And it is the same with interest as with rent; capital need not be lent in order to earn interest. If the owners of real capital use it themselves it earns quite enough all by itself. It is equally well, it earns much the same interest as when the capital is borrowed, for the price of its products get much the same price. A machine or other piece of real capital pays its costs out of its products; and, if it could produce them all at once, there would be no interest, for the price got for them in respect of the machine would just cover the cost of the machine. But to do its work the machine needs time. This involves other costs, e.g., repairs, insurance, and the risk of becoming obsolete; and these must be covered by the price of the products. But also the more time must be paid for, and, the more time that is needed, the more the product must pay. Interest, therefore, is a rate on the capital per unit of time; and it is paid because the credit is necessary to the power that works the machine, or the like need for repairs. One machine or process would be able to displace another equally economical in all other respects, if it made an economy merely in time. From this cause a machine and its working would no longer be regarded regarding the interest on all capital, commercial as well as industrial, that claims a share in the national dividend; for the bulk of loanable capital is employed in the purchase and working of real capital. Interest, then, is the share of the price of commodities that goes to capital on account of the time that the capital needs to get its products and have them sold. The interest on capital that is borrowed, not for production but for consumption (e.g., a dwelling-house or a war-loan), does not concern us; it is not an additional claim to a share in the distribution of the dividend, but merely the exchange of one person's present claim for another's in the future that suits him better. It may be managed and its working presupposed without saying that it follows the rate on productive capital, so far as it is pure interest, and not also a premium on the risk of loss, or an extortion from folly or distress.

It was a mistake to suppose that there must be a separate rate of interest on capital and from rent, and losses that are due to a rise or fall in the value of the capital itself. The distinction from the employer's share is already obvious, but to separate it from the other two we have to regard interest as a rate on what the capital may have cost originally, but on its selling value. Then we can say that all capital, so far as it is used as capital, earns interest, and that competition keeps interest at a normal rate for different kinds of stock. This rate is a measure of the margin which capital remains in the industry; rates are above and below the normal, and indicate the employer's profit and loss, when they tend to increase or diminish the supply of that kind of capital. When an owner or a validator finds the average interest in a stock to be over or under the normal, he writes the capital value up or down to a figure at which the capital earns the normal rate for that kind of stock. Similarly with government and other stocks; it is the interest that is regarded as constant, and the owner's capital that is written up or down. The more a stock is an investment stock, the more this is apparent, and it is really the same with stocks that are more speculative. The interest on first-class securities is taken as the minimum of the normal rate. The minimum varies with the demand for such securities and their supply, and for different lengths of credit. But the loans for three months on these securities is conveniently regarded as the rate of pure interest, because all factors are eliminated but time. From 1844 to 1900 the average rate of the Bank of England was 23, 12a, per cent, and the market rate about 10a. less (Palgrave, *Bank Rate and the Money Market*, London, 1903).

(c) The share to labour.—The rest of the product goes to the living factors. The relative amount of it cannot be estimated without an adequate census of production, and, in particular, because the estimation of interest has to be made on the earnings capacity of capital, and not on its cost. But the earnings capacity of the living factors may be taken to be above the average power that works the machine together (Nicholson, *Strikes and Social Problems*, Lond. 1896, v. and vi.). The struggle between labour and capital does not lie here, however; a less figure need not imply any loss to labour, for the substitution of labour by capital is an advantage to the employer, and the shares to the labour of all kinds that he hires.

The hired labour may be manual or mental, industrial or commercial, the labour of workmen, clerk, or manager. And it is not of theoretical importance whether the wages are paid weekly or as salaries; for whether the employer pays before selling the product is immaterial, the essential thing being that the share is made a fixed cost, independent of the demand and of such interest as follows the rate on productive capital, so far as it is pure interest, and not also a premium on the risk of loss, or an extortion from folly or distress. As in all buying and selling we see competition in the haggling between buyer and seller, but behind, and entirely off the stage of competition, is the more vital struggle of buyer with buyer and seller with seller, so it is in the labour market. This was wrongly expressed in the 'wages-fund' theory, which required a rise in the wages of one class of labour to be met by a fall in wages elsewhere. The theory was right in holding that the action both of the buyer and of the seller of labour is limited; but the limit is not capital but the price of the product. And it was also right in saying that the power of collective bargaining is strong in one class and weak in another, and it is to be hoped and expected that the lower grades will advance more rapidly than those requiring skill, intelligence, and managing ability; but progress and competition will continue to make the great difference. They will continue to determine the supply of labour at the price that is met by the margin which remains in the industry; rates are above and below the normal, and indicate the employer's profit and loss, when they tend to increase or diminish the supply of that kind of capital. When an owner or a validator finds the average interest in a stock to be over or
DIVINATION (Introductory and Primitive),

By ‘divination’ is meant the endeavour to obtain information about things future or otherwise removed from ordinary perception, by consulting informants other than human. While mostly directed to foretelling coming events, it is not confined to this, but may seek to find out, e.g., what is going on at home while the inquirer is abroad. Ancient as well as modern thinkers have repeatedly denounced it and exposed its fallacy; nevertheless it is still practised all over the world by the more backward races of mankind and by uneducated members of the civilized peoples. Even under the highest religions—Buddhism, Islam, Judaism, Christianity itself—diviners, like other magicians, have continued to flourish, although their arts form no part of the prevailing religions, and has been both by the leaders of religion. Like other pseudo-sciences, divination rests on very ancient and wide-spread convictions, inherited from lower levels of culture; and its great strength is in the utter inability of the undeveloped human mind to understand and appreciate a negative argument. No doubt wilful deceit on the part of diviners has done much to retain their hold on popular belief; but for the most part they have been dupes of their own fallacy. Many of them, and like their consultants, have remembered successful predictions and forgotten unsuccessful ones. Divination is a pseudo-science, and has a certain order and logicality in its structure, once its erroneous premises are granted; although it must be remembered that the logic of uncivilized and semi-civilized men—or, for that matter, of our own children—is much less stringent than ours, and less quick to detect fallacies. Indeed, the whole argument for divination may be said to be based on a glaring fallacy of ‘ambiguous middle.’ To explain this, it is necessary to consider what train of thought may be supposed to have given rise to the beliefs under discussion.

Perhaps the first idea which suggests itself is that divination grew out of false induction. A savage, we may imagine, noticed a bird, for instance, behaving in a peculiar way, and soon afterwards met with some mishap. He put the two happenings together, did the same in several other cases, and came to the conclusion that for such a movement on the part of a hawk or parrot meant that the observer was in danger of a bad fall, or would have no luck if he went fishing. That such a train of reasoning may often have taken place we do not deny; but we do object to such a process not being likely to lead to anything more than a miscellaneous series of omens, not a system such as divination is among quite uncivilized races. Also it would result in the most arbitrary relations between omen and subsequent event; whereas between the sign and the thing signified there very often exists, allowing for uncivilized ways of thought, a perfectly

The constant tendency away from agriculture and the textiles, where the average earnings of all employed, either through the low relative wages of the male (as in agriculture), or the large relative employment of lower-paid women and children, are low, towards the more highly-paid engineering, mining, and building trades, for example, among the average earnings of all employed in industrial occupations more rapidly than the earnings of occupations taken separately. The Standard of Comfort of the British wage-earner is now, on the average, not less than 50 per cent, and probably nearer 55 per cent, higher than that of his predecessor in 1850, and of this advance more than one-half has been obtained during the past quarter of a century.’ (O. H. Wood, Journ. Roy. Stat. Soc., 1900, pp. 95, 102.)

The share of enterprise.—Profit is what remains of the price of the product after the employer has paid the other shares. There are all grades of enterprise, from those requiring little capital and ability to those requiring much, and ordinarily there is competition at all grades with other employing individuals or companies. The individual profit is frequently little more than the salary of a hired manager at the same grade, and, considering the number of failures, the average is possibly less.

There is good reason to believe that the community gets its employing done for it more cheaply than it gets any other service, just because the speculation and the free life are very large elements in the real reformation.’ (Smart, The Distribution of Income, p. 163.)

The existence of the employer and his profit, which distinguishes the present system from its predecessors, has often been regarded as its defect; and Socialism (q. v.) is the view that this function should be undertaken by the State, and not by individuals or companies. The question is beyond the scope of this article; but it may be repeated, on behalf of the present system, that many of the current economic evils are wrongly charged against it. The system of distribution would not be an economic one, however, by any measures of taxation and expenditure that aimed at a better distribution of wealth; and the regulation of monopolies is an essential office of Government, which has given freedom from competition only because it has found a more effectual substitute in competition. The most serious defects lie in competition itself; but the defects are not all inevitable, and they prevent the very efficiency which the system is meant to bring out. Cf. art. COMPETITION.

LITERATURE.—All the textbooks in economics give a prominent place to distribution; several books are confined to the subject, the most distinctive being J. B. Clark, The Distribution of Wealth, London, 1900, and W. Stuart, The Distribution of Income, Glasgow, 1889. Wages, interest, and rent have each a large literature. The most recent works on monopolies and trusts may be regarded as the special authorities on profits. In comparative statistics regarding wages, special reference may be made to the work done by Rowley and Wood, and for current comparisons there are the Reports of the Board of Trade mentioned in the art. Conscientious treatment, to which has now to be added the corresponding Report on Wages and the Cost of Living in U.S.A. (1911).

W. MITCHELL.
DIVINATION (Introductory and Primitive)

rational connexion, sometimes amounting to causality. It seems, then, more likely that divination should be treated as a branch of sympathetic magic, and regarded as a deduction or series of deductions from a vaguely conceived principle of something like the uniformity of Nature. The reasoning may be thus paraphrased in our definite phraseology: like causes produce like effects; therefore this occurrence, which is like that other one, will produce a like result. The fallacy lies in the ambiguity of 'like,' and the reasoner's inability to differentiate between those things whose likeness to one another is real and essential and those which bear only an accidental or fanciful resemblance to one another. Thus, 'whistling for a wind' rests on the likeness between whistling and the rush of an actual breeze; while in the realm of omens, the Melanesian belief, that, if a non-domestic fowl, entering the house, makes any outcry, a death will ensue, seems to rest on the resemblance of the strange creature's cry to the wailing of mourners. How real the causal connexion of which to be clear from the innumerable cases in all grades of civilization of avoidance or neutralization of bad omens—taking away the cause, that is, to prevent the effect. Thus the Manipuris, if they meet with a mole on a journey—a bad omen—try to kill it (Hodson, p. 202).

But this simple process is not in itself sufficient to account for all the ramifications of the diviner's art. At least two main developments must be noted. The first is the connexion of the supernatural cause or causes of the event into a system, often very complex and intricate, of symbolism—a system in which, as Taylor notes, are apt to be filled by the inventories of new omens, curiously, or on the analogy of those already existing. The second comes with the advance of religious belief and the growing importance of deities of one sort or another. Men come to think of omens as sent by them. A good example of this is the Dayak idea that the hawk, their chief omen bird, while it sometimes comes of its own accord to foretell the future, is regularly the messenger of Balli Penuyalong, the Supreme Being. Finally, it must be noted that, although the chief source of divination is probably sympathetic magic, other ideas have contributed to the long list of omens.

Divination may be roughly divided into two kinds: (a) 'automatie' divination, in which an omen is sought for and interpreted, so to speak, in its own right, with no thought of appeal to any supernormal power, god, or spirit; and (b) divination proper, in the strict etymological sense of the word, which inquires of some sort of a deity, generally by means of signs conceived of as being sent by him. But of many cases it is hard to say which category they fall under. Take the well-known method of divining by the Bible and key; we doubt if the people who use this method could say definitely whether they suppose the answer to be sent by God or to come from some quasi-magical power inherent in the book itself. The same applies to many such survivals; one is in doubt whether to consider them purely magical or affected by the current religion. For the purposes of this article, we shall classify divination according to the means employed, noting roughly the distribution of each.

1. Dreams.—That a dream may be in some way prophetic is a view held by all races at all times, and still popular, to judge the modern dream-books. The simplest form is that the dreamer sees, as actually as if he were awake, what is being done or at least contemplated. A recent book gives an excellent account of the way the Lenguas of the Paraguay Chaco regard dreams. We quote a typical case:

A spirit appeared in the form of a horned beetle, and, flying round the sleeper several times, drew near to his head, then vanished in the vicinity of the sleeper's knee. The pain of his entrance was distinctly felt. The sleeper, awakening, noticed no mark or other sign of injury. The pain, however, was still distinctly felt. What explanation could there be, according to the Indian's way of thinking, except that an actual beetle had entered, possessed by a spirit?

The explanation usually given by savages is that the dreamer's soul, or one of his souls, goes away from his body and sees the things he dreams of. Hence the reluctance among many uncivilized peoples to awaken a sleeper—his soul may be shut out, or an evil spirit get in, etc.

Another idea is that the temporarily liberated spirit visits the spirit world and there secures information. This, we gather, is the Ewe belief, and it is frequently met with elsewhere. Or the revelation may be given by spirits visiting the dreamer. An excellent example of this is found in the skull-divination of the Torres Straits natives. A skull, preferably that of a missionary, is placed after sunrise on a benight ceremonial, beside the pillow of the consultant. In his sleep he hears it speaking to him, with a sound like teeth chattering. The modern method of putting bridescask under one's pillow would seem to base its survival on an even cruder kind of magic. Finally, a god, not a mere ancestral spirit, may choose this method of sending an oracle, and in that case the dream is generally sought for by sleeping in a holy place—the Greek ἔρωμα (see DIVINATION [Greek]). An example, sometimes gives omens to men awake. With the increasing complication of dream-interpreting, the services of a professional diviner become necessary. He may either dream himself, like the Melanesian tuhan gorenge, or interpret other people's dreams, like the Bengi aumenter.

Distribution: world-wide. Typical cases are: literal interpretation (Sea Dayaks); symbolic dreams (Malays).

2. Premonitions may perhaps be noticed here, although they hardly amount to actual divination. The Zulus, for instance, believe that a man looks

1. See Aristotle, De div. surn., for an eminently clear-headed discussion of this belief.

DIVINATION (Introductory and Primitive)

for a thing sometimes 'feels internally a pointing' which will guide him aright; but if it is 'dramatic' by suggestion... it generally misses the mark,' to quote a Zulu cited by Callaway.

Distribution: not specifically mentioned by most of our authorities, but may be presumed to be universal.

From these cases, in which a man may almost be said to prophesy to himself, we turn to the large class of—

3. Divination from bodily actions. Of the various involuntary movements and noises of which the human body is capable, perhaps sneezing is the one most universally regarded as ominous, and, in nearly all cases, as a bad omen. The reason is apparently that it is feared that the internal convulsions may disturb or drain out the soul. Hence the common custom of blessing the sneezer, prevalent alike in civilized Germany (Gesundheit!) and among the Nandi (Ko'-weit-in Asia, 'God be good to you!') We cannot recall any non-classical examples of the idea that a sneeze is a sign sent to denote Divine approval of words or actions (see DIVINATION [Greek]).

A curious form of divination is the Melanesian so do. In this, the hands are rubbed above the heart and a given (hupale) is asked by a magic song. A cracking of the joints, variously significant according to the particular joint which cracks, is taken to be the spirit's answer (Codrington, 211). Other ominous signs are hiccuping, the twitching of an eyelid, and so on; but these are mostly trivial and not much regarded either by savages or by civilized races. The sneeze, stumbling, 2 and so do are the only really important ones we know of. Some voluntary actions are considered unlucky, and therefore forbidden; 3 but this is hardly divination, nor is the idea that 'praise to the face is open disgrace'—very common among many peoples from Europeans downwards—properly germane to our subject.

Distribution: important cases given above; minor omens from bodily actions are world-wide. All the above forms of divination depend upon a more or less normal condition; we now proceed to consider those which depend upon an abnormal state, induced, or natural.

4. Divination by ordeal may be thus classed. Ordeals are of two kinds: either a suspected person (or the suspect and his accuser) is subjected to some process which would normally injure or endanger the person; or the process is a natural one with the power to hurt the guilty, but not the innocent. Examples of the first class are the ancient Egyptian 'Judgment of God' or 'wager by battle,' and the Gold Coast method of making, e.g., a wife suspected of infidelity plunge her hand into boiling oil. The innocent and wrongfully accused person is Divinely aided to win the combat, or protected against what would normally harm him or her. The punisher believes that this is the root-idea of judicial torture, at least among peoples; 4 it passes into general as the ancient Athenians. The idea probably was that an innocent man or a truthful witness would feel no pain. Of the second class the Nandi and the Fijians furnish very instructive examples. Among the former, 5 the accused lays a skull at the accuser's door, saying: 'If I have done this thing, may I not do it, may it eat thee, and one or the other dies accordingly. Among the latter, 6 the accused drinks blood, saying: 'If I have done this deed, may God kill me!' (Ten atua efeo efeo, na efeo eyu). And in the latter case, it is a genuine deity—a 'high god'; but in the corresponding ordeal of the neighbouring tribe, it is the inherent magical power of the skull (or the ghost), apparently, which 'eats' the false swearer. It is noteworthy that the Nandi diviners, who in other respects are exactly like their Massai confères, are said to worship, not Asista, their 'high god,' but the ancestral spirits. 8 But the root-idea is the same in any case: guilt weakens the wrong-doer, robs him of his mana or of Divine favour, and so renders him an easy prey to any injury, natural or magical. This weakness extends to his agents, as in the Malay ordeal by diving, described by Skeat (p. 542 f.). In this, boys, hired by the parties to a suit, plunge simultaneously, with the understanding that the representative of the party in the wrong has to come up again at once, while the other is not insufficient. Such a belief as this indicates a people not without some advancement in moral ideas. 9

Distribution: Africa, passim; in Asia, e.g., among the Nagas; also in Melanesia and among Malays; formerly in Europe; not in Australia; traces in North America.

5. Divination by possession ('shamanizing').—Not only do spirits visit sleepers, but they often possess a diviner or priest, robbing him to a prophetic frenzy. This belief, while adopted by some higher cults, as that of Apollo (see DIVINATION [Greek]), is most characteristic of those races in whose religion the spirits of the dead are prominent. Thus, the shamans of the Tunguses in Siberia are possessed, not by Tengri Kaira Khan, or Erlik (the leading good and bad deities respectively), or by that of their race, by the ancestral spirits—the objects, one may conjecture, of an older cult. We translate a part of Radloff's vivid account:

'The individual marked out by the might of the ancestors for shamanhood feels a sudden faintness and expansion, as if a heavy weight presses on his breast and suddenly wrings from his violent, inarticulate screams.' (After wild passions he sinks to the ground.) 'His limbs are wholly insensitive; he snatches whatever he can lay his hands on, and swallows simultaneously everything he gets hold of—not iron, knives, needles, ... afterwards casting up dry and unjudged what he has swallowed.' 10

Apparently this eccentric diet does him no harm. His only relief is to seize the shaman's drum and begin to 'shamanize': his chief danger is that he may resist the frenzy and die or go mad. Not till after this experience does he receive any instruction in his art from other shamans. He is able, by the help of the spirits, to foretell the future, besides exercising various priestly functions. There seems to be no doubt of the sincerity of some, at least of these men, who continue to ply their art despite Governmental prohibition. 'I must shamanize,' said one of them to a traveller, 'both for my own sake and that of my people.' 11 What their actual state in divining possession we leave to physiologists to determine. The shamans of...
DIVINATION (Introductory and Primitive)

Northern Asia use a drum in divining; but in some other cases the possessing spirits speak by the means of the wizard, among the Tartars, speaking peoples, whose priests are possessed, not by spirits, but by gods. Some similar cases will be considered in the next paragraph.

Distribution: Urals-Altaic races of N. Asia and Europe; N. America (see DIVINATION [America]); more or less modified forms common in Africa and elsewhere (e.g. Todas).

6. Necromancy.—Death increases rather than diminishes a man's magical powers, including his prophetic faculties. Hence we find the wide-spread practice (of which, indeed, shamming ought to be considered a variant) of consulting either the souls of the dead in general or the soul of a particular dead man, or his corpse. A very crude instance of the last comes from Central Australia. Tree burial is largely practised among these tribes, and it is the custom to observe the direction taken by the liquid matter exuding from the corpse and flowing along the ground. If the stream flows, say, north, the slayer lives to the northward. If it is short, he is close at hand; if long, he is far away. Skull-divination has already been noticed, and might be classed under necromancy. But we are chiefly concerned with necromancy proper, or the evoking and communing of ghosts. This, as distinct from seeing a ghost casually in a dream, or meeting or hearing one unsought, which might happen to any one, is the task of a professional diviner or a priest. Thus the Zulu witch-doctor is visited by the mane (mane or manes), the souls of the departed. These voices are heard giving answers. 'The voice,' says a native witness, quoted by Callaway, 'was like that of a very little child... it speaks above, among the wattles of the hut—a clear case of ventriloquism. Among the Melanesians it is called by the name kina. Its presence is detected by a mane kina, or diviner, and gives affirmative or negative signs in answer to the question, 'Shall we go to such-a-place?' The Fue diviners summon a tra in case of sickness, and from its answers—inamblible to profane ears—foretell the course of the disease, and so on. In most, if not all cases, the spirits thus consulted are given offerings of various kinds to win their favour and induce them not only to foretell, but to do good to those turning out to the inquirer wishes (see Spieth, l.c.).

One curious case might be called either necromancy or ordeal. It comes from the Gold Coast, and is used when a creditor makes a claim on a dead man, upon whom the debt is levied. The claimant drinks water in which the corpse has been washed, swearing to the accuracy of his statement; if he is lying, the power (sise) of the deceased will punish him. This is an illustration of the difficulty of applying any rigid classification to a large and miscellaneous body of savage beliefs.

Distribution: In one form or another, world-wide. Typical examples are given above.

From the living or dead, we pass to their surroundings, animate and inanimate. Beginning with the former, we find a large and interesting class.

7. Divination from animals.—(a) Augury.—The movements of birds or beasts are considered omens in some degree by nearly, if not quite, all races. In some cases the reason is quite obvious. Thus the Melanesians have a bird which they call wisi, from one of its movements: a bird sitting in the local dialect, and the creature is thus able to answer questions—its other cries being taken to mean 'Yes.' But this is 'not seriously thought of' (Coddington, p. 221), and in the vast majority of cases the omen is symbolical, frequently needing a professional diviner to interpret it. Thus the Kenyahs of Sarawak have a method of divination worthy of Etruria, by which high-born augurs, after due ceremonies, sit in a leaf-shelter and watch a particular part of the sky for hawks, until the favour of Bali Penyalong is shown by one bird flying right, another left, and a third circling. Why this should be a good omen is by no means clear; the symbolism of augury is a product of many generations, probably, even to the initiated. A more profitable question is, Why should animals give omens at all?—for, no doubt, the original idea is that the animals themselves gave answers, not that any god sent them. Leaving the Kenyahs for a minute, a good reason we find a case which throws great light on the origin of the belief. A certain young member of the Yinn tribe had the kangaroo for his personal totem, by inheritance. Whenever this man saw an 'old-man' kangaroo, a kangaroo-shaped case in a distinct form, he knew that he was being warned of danger. The Kenyahs are not totemic; but the Ibas (Sei Dayaks), who are of the same family, have a sort of personal totem, the ngurung, or 'spirit-helper,' who generally takes animal form, though in the case of the initiation he might be a human spirit-animal as well. It is not until not long ago, that the omen-animal or bird was originally some sort of a personal totem, or—since 'totem' is a word apt to be abused—a mantis, which gave warnings and advice, as friendly animals do in folk-tales of all countries. It is not until fairly recently that the spirit-animal would give omens: this would then be extended to all its species; and, finally, with the coming of more advanced religious views, they would be considered the messengers of the god, perhaps originally a theriomorphic one. We put forward this theory tentatively, however, recognizing its difficulties, such as the existence of augury among the Kenyahs, who apparently have not even the ngurung, and its non-existence in Torres Straits, where totemism is rare.

It should be mentioned that men may be counted among omen-animals. We have already dealt with the omens a man may draw from his own actions; but he may also do things significant for others, though not thus perceived by them. If twins are born, this, like almost all events a little out of the common, is held to be a good or a bad omen by various peoples; thus the Naga* hold that the birth of twins of opposite sex is unlucky. Again, the Masai* believe that if, on a journey, one meets a solitary wayfarer, the journey will be fruitless.

Finally, in augury, one cannot divide the ominous creatures simply into lucky and unlucky. The same bird or beast may give opposite omens according to the place where it is heard or seen. To take one example out of many, and again from the Masai,* the bird they call tile (Mesopicus spodiophaus), if heard on the right, is good; if on the left, bad. If heard both ways, on a journey, it means, 'You go on, you will be hospitably received.'

---

1 Ellis, p. 191. Note that in a few cases (as the Masai [Hollis, p. 234 f.]) a frenzy is induced by an intoxicant or other drug.  
2 Death from natural causes is a notion quite foreign to Australian blacks; all deaths are caused either by violence or by magic. Compare Marcell, Threshold of Religion, 1909, p. 50.  
3 Spieth, p. 506.  
4 Ellis, p. 191. Note the primitiveness of this rite among a people, who according to Ellis, 'implicitly believe in the super-human power of their gods,' and do not attempt to coerce them by any magic (1914 f.).

*Fb. p. 3221.
b) Haruspicy.—Not only living, but dead, animals can give omens, though the latter are for the most part intelligible only to professional diviners. Before passing to a consideration of these cases, it is well to notice that a dying animal is sometimes consulted. The Nágas, for instance, sometimes kill a fowl and watch its death-strokes for omens. The method is essentially religious, though less reliable, method, in which the fowl is laid upon the wings. Should the animal cross its right foot over the left, the omen is good; the opposite, bad.

Perhaps the simplest case of what might loosely be called haruspicy is that given by Gones. The Sea Dayaks, he tells us, consider it a very bad omen if they find a dead animal in their fields; the crops will poison the owner if he ventures to eat them, unless some one with strong name removes the tabu by ceremonially eating a little, and thus absorbing the evil influence into his own powerful person.

But in haruspicy proper we have to deal with a not very primitive type of religion. The slaughtered animal is regularly a sacrificial victim; the harus-pec is generally not merely a diviner, but a priest, where such a distinction exists; and the entrails therefore contain the cryptic message, to be read by an appointed eye right; a method of reading is a more or less complex symbolism; thus to find the internal organs in an unusual position—heart on the wrong side, or the like—means generally some disastrous upheaval.

Many races, in fact, use haruspicy both in Sarawak; augury alone in Malay Peninsula and Melanesia; haruspicy alone among Masai and Nandi; both found, singly or together, in more or less complicated forms, in nearly all parts of the world.

8. Divination by mechanical means.—Of mechanical means of divination there is no end. We may divide them, very roughly, into: (a) cosmic-mancy, or devices akin to the modern planchette, and probably worked by means of the unconscious action; (b) sortilegium, or devices involving some kind of a game of chance, generally of simple form.

(a) Skeat (p. 538 ff.) reports a simple case of cos-irmancy among the Malays, which he himself saw, in which X through a prayer and appropriate rites—charms and sacrifice—by thrusting a fish-shape through a lemon, and suspending it on a cord of seven different coloured strands. Questions are then put to it; it says 'Yes' by swinging, 'No' by being still. The same people use a divining rod, which vibrates in the presence of a thief; the Melanesians use a similar rod in cases of illness, to discover which of the recently dead is eating the patient. The stick vibrates at the right name.

To take another illustration from Skeat (p. 538 ff.)—a thief may be discovered, after appropriate rites, by two people holding a bowl of water between their fingers. The names of suspected persons are presented to it in writing, and at that of the guilty man it twists around and falls. In all these cases, as in planchette writing, if we exclude deliberate cheating, we are left with the supposition that the diviner unconsciously moves his divining-machine in a way corresponding to his unconscious expectation and even his conscious volition. But the usual, so far as we know, the universal, explanation given by the lower races is that the movements are caused by some spirit, which, to borrow the jargon of modern spiritualism, 'controls' the instrument. It may well be thought, however, considering the obvious antiquity of this

1 Dr. Brown, op. cit., p. 132.
2 Opp. cit., p. 166.
3 See Codington. p. 216 ff.
4 The writer has had personal experience of quite genuine performances of this sort on the part of a plancheett.
5 And kindred modes of divination, that, before any definitely animistic belief came to prevail, the implement, being by virtue of proper ceremonies made 'big medicine,' had in itself the power to answer.

(b) Whether or not Tylor is right in seeing in sortilegium the origin of all games of luck, it is so wide-spread and miscellaneous that we can do no more than mention the fact of which, provisionally accepting Tylor's hypothesis, we class under the main forms of games of chance. (1) Odd and even.—This is used among the Masai and Nandi, whose diviners shake pebbles out of a buffalo-horn, and observe whether an odd or an even number results. On the Gold Coast a similar method is used, with nuts for pebbles and without the horn. (2) The lecctom.—The coconut, being a natural lecctom, is much used in the Pacific, both in games of chance, pure and simple, and for divination. Tylor (loc. cit.) gives examples of both. (3) Dice and similar implements.—Dice, as we understand them, are but little used among savages; but the underlying principle—something which, if thrown, may fall in any one of several different ways—is common enough. The most rudimentary form is perhaps the mangrove-embryo used by women in the Torres Straits to determine the sex of an infant. The most usual method is to shake the legs, backwards, and no notice is taken of which side it falls on, but merely of whether it flies straight or crooked—the first presaging a boy, and the second a girl. The same people have a folk-rite, in which the heroine holds up a throwing-stick, and it falls in the direction of Dundal. "I will go there by-and-by; I think I will kill them all," he said. (4) A number of methods of mechanical divination have not, so far as we know, resulted in any actual games. The most interesting is the magic drum of the shaman, the surface of which, in Lapland, was painted with various figures. A ring or bunch of rings was placed on the skin of the drum, which was then beaten with a leather thong. The noisy result is that among the Nágas. At Mao and Maráman the issue of a hunting party is prognosticated by their success in kicking small pebbles on to the top of a monot fierceness. More curious, because harder to explain, is the following. A simple conjuring trick, is the Zain divination by sticks or bones. The sticks, after proper ceremonies, rise up and jump about by way of saying 'Yes,' he tells for 'No,' and, if asked 'Where is so-and-so's something?' the questioner on the corresponding part of his body. And so on. The list might be extended indefinitely, but the principle is always the same: chance is the working of some non-human power, which makes a die fall a particular way, or an odd and not an even number of pebbles jump out, or a particular man draw a particular lot, just as Athene makes the arrow of Pandaro miss its mark (II. iv. 127 ff.).

Distribution of divination is mostly local or another, universal.

9. Divination from Nature.—(a) Astrology.—With the elaborate pseudo-science which grew out of the belief that the position and influence of the heavenly bodies more or less mould human affairs, we have nothing to do here; it is a product of

DIVINATION (American)

comparatively advanced civilization, and involves real knowledge of pure and applied mathematics, far beyond the capacity of most savage races. The rudiments, however, of astrology, together with studies in the history of those sciences, are not unknown. Thus the Malays, along with quite a complicated foreign astrology, with calendars and lucky and unlucky days, etc., have preserved such simple bits of symbolism as that a star near the moon means an approaching marriage. Among the Maoris the moon represents a besiegèd pah, and the stars the attacking force—their relative position indicating the result of the campaign. 

(b) Other natural phenomena, such as earthquakes, lightning, etc., likewise held to portend something—usually misfortune. But it seldom goes beyond 'something.' Homer's remark on lightning, which indicates Zeus to be 'fashioning either great rain unspikeable or hail or snow, ... or, somewhere, the great mouth of bitter battle' (II. x. 5 fl.), is a good summing up of the vagueness of the beliefs usually connected with these phenomena. They are too rare, comparatively speaking, and also too noteworthy in themselves, for a system of divination to be built upon them. They frighten rather than forewarn. 

Distribution: traces everywhere; so far as we know, except for civilized peoples, nowhere very important or noteworthy.

Malayan divination. Finally, we may note one or two methods which cannot be classed under any of the above heads, but are interesting in themselves. (a) Chairrecognition. This is not the place to ask whether any such power really exists. It is enough for our purposes to note that, the Malays think it does, and some of them, according to Skene, practise it. (b) In the Torres Straits we get a good example of a not uncommon idea, that a small mishap of any kind is the forerunner of a greater one. Thus one of the natives, who was a skilled dugong fisher, returned empty-handed one day with his harpoon broken. Shortly after, three deaths occurred, to his great comfort, as it showed that his bad luck had been sent as an omen and was not fault of his own. (c) Blood is 'uncanny' and ominous. Thus a Sea Dayak, finding a drop of blood on the floor-mats, will consider that a spirit has shed it, and that it is a very bad omen. (d) In general, any occurrence at all unusual is considered divinatory, or, some skilled person, is usually consulted.

II. Survivals. The methods of which we have given examples belong to the lower stages of civilization. With political and religious advance one of two things happens: either some kinds of divination are taken into the State religion (Greece, Rome; see special articles) and the others become insignificant and even disregarded, like all magic; or, as in the case especially of Christianity, the dominant faith declares against all as either false or the work of evil spirits. The first beginnings of this we have already seen in a few instances. But the counter process, by which the higher religions degenerate into magic, must not be forgotten. Thus, the Hebrews are a great example of the Jewish and Christian forms of divination: 

In the name of ... has been found in magical papyri (see Kenyon, Brit. Mus. Pap., i. [1893] 651; Helmblücher, 'Im Namen Jesu,' 1903); a chapter of the Qur'an is read as a charm during the Malay ritual of divination; a bowl of water described above; Orphic and Mithraic rituals have been used for purely magical purposes; the Buddhist Ōm mani padme hum is often used as a charm and not a prayer. But, apart from this, popular belief dies hard; and, for example, in modern Europe we find all kinds of beliefs which are most probably relics of pre-Christian divination, little, if at all, affected by the official religion, except that they are often not used in quite so religious a manner. We give a few examples of both classes.

To the class of divination by mechanical means we must add, among peoples who possess sacred writings, or books for any reason esteemed to contain great wisdom (as was attributed to the works of Vergil in the Middle Ages), a form of sortilegium which consists in opening such a book at random and taking an omen from the first passage met with. The prestige of the system is added by the establishment of Christianity in Europe has resulted in the sortes Biblici, still used, we believe, among uncultivated people. Church festivals also have affected the popular beliefs in lucky and unlucky days, for how else can the bad reputation of Friday be explained? Astrollogically it should be lucky, being the day of Venus, especially for marriages and the like; yet comparatively few people even to-day would care to be married on a Friday.

As to survivals pure and simple of ancient ideas about omens, wholly uncultivated with Christian beliefs, their name is legion. The author gives a few personally known to him. A patient in a gunshop showed not infrequently a sympathetic magic and divination by refusing to fasten on her wedding-ring when her enumeration made that desirable, because, if you bind up a ring you bind up poverty with it; and the idea is common in the Old World. Even a faded, discoloured furniture heralds a death in many places in Yorkshire; a bird flying into the house brings ill-luck with it, in most parts of England; a stumble in going upstairs—this we cannot explain—presages a wedding. Among the Bushmen and Australian Aborigines divination is still flourished; Tylor mentions an instance of haruspicy in Brandenburg; palmistry, known among the Malays, is common at every fair. Augury has perhaps a survival in the habit of bowing to magpies. Shakespeare's mention of them has: 

'Augurs and understood relations have:
By magpie's feet
The secret's man of blood' (Macbeth, III. iv. 124-125). Compare the custom of turning over the money in one's pocket on hearing the first magpie. So hardly does the ancient belief yield to either science or common sense.

11. J. ROSE.

DIVINATION (American).—Throughout the two continents of America divination and prophetic utterance were and are generally practised by the priestly class (shamans) and the medicine-men, the various nations and tribes which have inhabited them. The methods of divination in use did not vary much so far as the different divisions of

1. Twenty; see (b) for details.
3. Oomes, op. cit. p. 158.
4. Buddhism is also hostile; among the Buddhist section of the Tagung people there is no standards according to Radnitz. The corrupt Buddhism of Tibet cannot be taken as typical.

Tennyson's Enoch Arden gives a well-known example.

2. Amongst the Malays, in two forms: (1) borrowed from the mediaval systems (Zosikle, etc.); (2) popular, as in the belief, held by nearly every one except those who know any knowledge of meteorology, that the weather depends on the moon.

3. Compare divining from a sheep's shoulder-blade, well known from the references in Drayton and other writers. See Tylor, passim.
American nationality were concerned, no did they display much dissimilarity from those in vogue among their more ignorant neighbors. The Colúmbian Mexican and Peru there was a college of augurs, corresponding in purpose to the augures of ancient Rome, the alumni of which occupied themselves with observing the flight and listening to the songs, from which they drew their conclusions, pretending to interpret the speech of all winged creatures. In Mexico the calumeces, or training-college of the priests, had a department where divination was taught in all its phases, and that the occupance to say that more sincere will appear later. Among the less advanced communities the services of the diviner or seer were much in request, and the forecasting of the future became, sooner or later, the chief concern of the higher classes of medicine-men.

The methods adopted by the priests or shamans in the practice of divination scarcely differed with locality, but many various expedients were made use of to attain the same end. In the Peru of the Incas, besides those augurs who were supposed to interpret the songs of the feathered race, there were other castes who specialized in the various kinds of divination. Thus, some practised oracular methods in much the same way as did the priesthood in ancient Egypt and Greece. The idols became the direct mediums by which Divine wishes were disclosed or the future made clear. Necromancy was also extensively practised, the priests pretending to raise the dead, whose in- stance was to say that they were sincere who had consulted them. In the Mexico of the Aztecs, also, necromancy was in vogue, and the raising of the spirit of the Princess Papatzint, sister of the ill-fated Montezuma, who foretold the downfall of her house, was a familiar theme to every reader of Prescott. To return to Peru still other classes predicted by means of leaves of tobacco, or the grains or juice of coca, the shapes of grains of maize, taken at random, the appearance of animal excrement, the forms assumed by the smoke rising from burning victims, the entrails and viscera of animals, the course taken by spiders, visions seen in dreams, the flight of birds, and the direction in which fruits might fall. These prophets were divided into three branches, that is, according to different ranks and titles, and their training was a long and arduous one, and undertaken in no mere spirit of flippance. If their clients were deceived, it was their duty to save them, for they were unconscious of deceit as is a modern physician who has wrongly diagnosed a case.

In considering the practice of divination and prophecy among the aboriginal peoples of America, it will be necessary to deal separately with each of the principal methods by means of which they are performed. These are (1) by observing the flight of birds; (2) by oracular and necromantic practices; (3) by means of hypnomeno; (4) through the interpretation of dreams and visions, and by conditions of ecstasy produced by drugs; (5) by means of astrological practice; and (6) by the appearance of various objects.

1. By observing the flight of birds. —It has always been the custom in Mexico and Peru, in the priesthoods, or that class of them devoted to augury, made a practice of observing the flight of various birds and of listening to their songs. This observation of birds for the purpose of augury was common to other American tribes. The bird, with its rapid motion and incomprehensible power of flight, appeared to the savage as a being of a higher order than himself, and its song—the only hint of music with which he was familiar—as something bordering upon the supernatural, the ability to understand which he had once possessed, but had lost through the potency of some evil and unknown spell. Some great sorcerer or medicine-man alone might break through this efficient art. Each of the tribe sought assiduously to achieve, by means of close attention to the habits of birds, their motions and flights, and especially to their song. The natives of Brazil regarded one bird in especial as a presage of bad fortune. Corell (Voyages aux Indes occidentales, p. 203). He does not state to what bird he alludes, but proceeds to say that its mournful chant is heard by night rather than by day. The savages say it is sent by their deceased friends to bring them news from the other world, and to encourage them against their enemies. Here, it would seem, we have an example of bird-augury combined with divination by necromancy. Corell probably alluded to the goat-sucker bird, which, with the screaming vulture, some South American tribes— the Guaycurus of Paraguay, for example—suppose to act as messengers from the dead to their priests, between whom and the deceased persons of the tribe there is thought to be frequent communication.

A typical example of augury by bird-habit has come down to us in the account of the manner in which the Nahua of Mexico fixed upon the spot for their capital. Halting after years of travel at the Lake of Texoco, they observed perched on the stem of a cactus a great eagle with wings outspread, and regarding its state as a sign of augury. Their augurs interpreted this as a good omen, as it had been previously announced by an oracle; the first piles upon which was afterwards built the city of Mexico-Tenochtitlán. The legend of its foundation is still commemorated in the arms of the Federal Republic of Mexico, and on its coins and postal stamps.

2. Oracular and necromantic methods. —We have already seen that the priesthood of Peru practised oracular methods of divination by "making" the idols speak. They did this by means of ventriloquial arts or by the more primitive means of concealing one of their number, we do not know. But we know that the piagis, or priests of the Uapes tribe of Brazil, practise oracular divination by means of a contrivance known to them as the pozinho. This is one of their most sacred symbols, and consists of a portion of a palm-tree about the height of a man, and some 10 cm. in diameter. By a device consisting of holes bored in the stem the leaves are made to tremble by the breath of the priestly ministrant, and the sound so caused is interpreted as a message from Juruparo, their principal deity. This is also practised extensively by the Uapes Indians, a class of piagis, being set apart for this purpose solely. Indeed, in most Indian tribes the shamans or medicine-men, or a portion of them, specialize in the art. A great similarity marks the methods of procedure of most American tribes, from the Eskimos to the Nahua. A circular lodge consisting of poles planted firmly in the ground is covered with skins or mats, a small hole only being left for the seer to make his entrance. After entering, he carefully closes the aperture, and proceeds to make his incantations. In a little while the entire lodge trembles and sways, the poles bend to breaking point, as if ten strong men were straining at them, and sounds, strange and unearthly, are heard from the depths of the earth, now from the air above, cause those who listen outside to tremble. At last the medicine-man cries out that the spirit he has invoked is present, and will reply to questions. Presents to the supernatural visitor are inserted beneath the skins, as a preliminary to consultation; and the spectators commence to interrogate the dread presence in fear and trembling. The replies received are, for sheer ambiguity, equal to the oracular answers of the pythianesses of ancient Greece. Converted Indians have repeatedly
DIVINATION (American)

averted that in performing this feat they were merely passive agents. But, as many of these barbarous seeds excite themselves into a condition of nervous excitement when under the influence of them, there is very little doubt that they are as much the victims of hallucination as are their hearers, although the taking of gifts and the occasional shrewd nature of their replies would seem to point to the possession of considerable powers of calculation.

3. Hypnotic divination.—Divination by hypnosis is no new art in America. Jonathan Carver, a British sea-captain who travelled among the Sioux in the latter end of the 18th century, gives a clear description of the manner in which they were supposed to have been indicated to certain persons in dreams, and their contents presented to those persons by supernatural beings whilst they were in the visionary state. The periods for the performance of their acts connected with them as well as other devotional observances, often depended on an intimation received in a dream. 'Visions' were also induced by winding the skin of a freshly-killed animal round the neck until the pressure on the veins and arteries resulted, possibly from an overflow of blood to the head. Some tribes believed that the vision came to the prophet or seer as a picture, or that acts were performed before him as in a play, whilst others held that the soul travelled through space, and was able to see from afar those places and events of which it desired to have knowledge.

Numerous instances of the truly marvellous manner in which events have been foretold by American medicine-men are so hard to believe that one cannot help to believe that they do not possess the gift of clairvoyance in some degree.

In his autobiography, Black Hawk, a celebrated Sau chief, relates that his grandfather had a supernatural belief in 'Dreams and Visions'. He was told by his father that in the 'Black Hawk Years' there 'he should see a white man, who would be to him as a father.' Supernaturally directed, as the Cheyennes were, towards the westward to a sacred spot, and there, he had been informed in dreams, met with a Frenchman, who concluded an alliance on behalf of his country with the Sau chief. The latter had certainly possible here, but it can hardly exist in the circumstances of the narrative of Jonathan Carver. While he was descending the shores of Lake Huron, the head wind was met by a famine, and on the arrival of certain traders, who brought them food in exchange for skins and other goods, their very existence depended. The diviners of the tribe were consequently consulted by the chief, and announced that the next day, at high noon exactly, there would be a canoe visible on the river and news of the anxiously looked-for expedition. The entire population came down to the beach in order to witness the arrival, accompanied by the incensed trader, and, to his intense surprise, at the very moment forecast by the shamans, a canoe rounded a distant headland, and, paddling speedily shorewards, brought the patient 'kilkiceees' news of the expedition they expected.

John Mason Brown has put on record an equaly singular instance of the prophetic gift in the part of an American medicine-man (see Atlantic Monthly, July 1860). He engaged several years previously in searching for a band of Indians in the neighbourhood of the Mackenzie and Coppermine rivers; but the difficulties of the season compelled him to return to the west, after having encountered the savages of the tribe of which he was in search. These men had been discovered by their manner of dressing in white, of whose horses, accoutrements, and general appearance the shaman had given them an exhaustive account ere they set out, and this his late departure would not have baffled. News of the approach of the rising, and the speed of the canoe, the shaman's companions. Brown very naturally inquired closely of the medicine-man how he had been able to forsnell their coming. But the latter, who appeared to be 'a frank and simple-minded man,' could only explain that 'he saw them coming, and heard them talk on the journey.'

Under the heading of 'dreams and visions' may also be noticed the practice, common in some parts of the American continent, of attempting to pry into the future through gazing fixedly at some polished object, until semi-insensibility is attained by self-hypnosis. The Indians of Central America employed for this purpose and still make use of small shining stones made of hard polished sand-stone, which they at times consult when ambitious to the future.

A case is on record where a Cherokee kept a divining crystal wrapped up in buckskin in a cave, occasionally 'feeding' it by rubbing over the blood of a deceased animal, which might be multiplied. At the village of Tepean, Guatemala, Stephens and Catherwood saw a remarkable stone which had been placed near the entrance of the cave; it had previously been used as a divining stone by the Indians of the country. Fearing to disturb the divination-ground, they say it: 'To the westward of the city there is a little mound that commands it, on which stands a round building about six feet in diameter, built outwards with stone, the middle part being a pedestal formed of a shining substance resembling glass, but the precise quality of which has not been ascertained. Seste
DIVINATION (Assyro-Babylonian). — The practice of divination entered very largely into the religious life of the Babylonians and Assyrians. Not only was it carried on by unofficial augurs and seers, whose skill was sought for a comparatively small fee by any one desirous of reading the future or of learning the interpretation of some portent which had been vouchsafed to him, but it also formed one of the most important departments of the national religion; and its rites were jealously guarded by a large and organized body of the priesthood. In fact, during the later periods of Assy. and Bab. history it had become a highly complicated science, the temple had in the course of time accumulated a store of recorded portents, with notes as to the events which had been observed to follow them. As a result of their classification and study by the priesthood, there had been evolved some literature comprising long series of tablets dealing with every class of augural phenomena. Thanks to the literary zeal of Ashurbanipal (668-626 B.C.), we possess a wealth of material for the detailed study of Bab. divination, and a considerable portion of the literary and religious texts of which he had copies made for his library at Nineveh were works on divination in its various forms. It is true that many of these have been reconstructed, and the inherited or preserved texts are very much smaller than the original tablets. But it is possible to trace some of the principal forms of Bab. divination back into the earlier period of Sumerian history. That the Semitic Babylonians expanded and developed the science was but natural; but there can be little doubt that they inherited many of their augural beliefs and practices from the earlier Sumerian inhabitants of Babylonia, whom they eventually conquered and absorbed. Thus already in the reign of Urakagina, king of Lagash (c. 2300 B.C.), we have evidence of the widespread practice of divination by oil. From augural texts of a later period (c. 2000 B.C.), we know that in this particular form of divination the procedure consisted in pouring out oil upon augural texts of a later period (c. 2000 B.C.), we know that in this particular form of divination the procedure consisted in pouring out oil upon the oil on striking the water indicating the course which events would take. 

was naturally required to carry out the accompanying ritual and to interpret correctly the message of the oil, and Urukagina records that among the reforms he inaugurated was the abolition of certain exactions and fees which had been demanded in connexion with the practice, not only by the diviner and his assistant, the gurud, but also by the patesi.\footnote{3} In the later Sumerian period we find that Gudea, when purifying Lagash before the erection of his temple, drove out the wizards and sorcerers, in addition to kindling a fire of aromatic woods. From this record it might perhaps be inferred that at this period divination was not officially recognized, were it not that Gudea himself expressly states that before starting upon his temple-building he consulted the omens and found them favourable.\footnote{2} Moreover, the elaborate version in which the gods revealed their wishes to him with regard to Ningirsu's temple, and the far earlier vision of Eannatum (c. 3000 B.C.), in which Ningirsu encouraged him for battle,\footnote{4} prove that the study of dreams and their interpretation had been elaborated by the Sumerians. It is, therefore, possible to regard the later augural texts as incorporating earlier practices; and deductions drawn from their study may legitimately be regarded as general application, and not as confined to a single late period.

In attempting to classify the great range of phenomena which formed the subject of Bab, divination, a convenient distinction may perhaps be made which has been drawn between voluntary and involuntary divination.\footnote{4} Under the former the diviner deliberately sought out some means of foretelling the future; under the latter he merely interpreted the meaning of portents, such as omens, phenomena which, without being sought out, forced themselves on his notice or on that of his clients.

The principal method of voluntary divination was _hepatoscopy_, or divination by the liver of a sacrificial sheep. The liver was exposed to the breeze, and the god of the oracle, in his capacity as "seer,"\footnote{5} after the due performance of the accompanying rites and the slaughter of the victim, exposed the animal's liver, and by an examination of its principal parts was enabled to predict the future. Chief parts of the liver which were examined in this way were the right and left lower lobes, the upper lobe and its two appendices (the _processus pyramidalis_ and the _processus papillaris_), the gall-bladder, the cystic duct, the hepatic duct, the hepatic vein, and the liver gall (porta heptae).\footnote{6} The system of interpretation was based mainly on an association of ideas. Thus a swollen gall-bladder was regarded as pointing to an increase of power; on the other hand, a depression in the liver gate pointed to a decrease in power; signs noted on the right side were favourable, on the left side unfavourable, etc. Moreover, the markings on the livers, due to the subsidiary veins and ducts, were carefully studied and interpreted in accordance with their resemblance to the weapons or symbols of the gods. In the tablets of liver-omens, the predictions, as is usual throughout the omen-literature, are vague enough, but these vague indications were sufficiently supplied to very definite circumstances by means of questions addressed to the god before the sacrifice. This we gather from an elaborate series of prayers, addressed to Shamash, the Sun-god, during the reigns of Esarhaddon and Ashurbanipal, which throw an interesting light on the method of procedure.\footnote{1} The prayers and vizier demand the answers to specific political matters. Definite questions were asked as to the course of future events within a specified time, and the priests answered the questions according to the omens presented by the sacrificial victim. The questions were framed with great ingenuity, so that all contingencies might be covered. The prayers also prove that scrupulous care was taken in the preparation of the victim and the recital of the accompanying formula, while it was also essential that no less than the victim, should be free from any ceremonial impurity. It is interesting to note that, in these prayers to the Sun-oracle, the signs found in the victim are noted but are not interpreted. The requests as false addressed to the Sun-god, written were actually used in the course of the ritual: they contain the appeal to the oracle and the oracle's answer as seen in the victim's liver. The question was first written out, and the tablet was placed before the god (cf. the god's answer at Delphi) ; the god's answer was afterwards added, in terms of the liver. For the diviner's interpretation of this answer to the king no doubt another tablet was employed.

Many of the oracle-tablets, especially those of Esarhaddon's time, contain appeals to Shamash to reveal the outcome of the military campaigns in which he was engaged. They also furnish evidence that the Assyrkn king, doubtless following Babylonian precedent, employed the oracle in other occasions of importance, such as the dispatch of an envoy, the giving of a daughter in marriage, the sickness of a royal relative, the appointment of a high official, etc. In the case of the oracle, the answers received by the king have disappeared, but it is probable that they resembled certain oracles of Ishtar of Arbela, where the goddess vouchsafed to Esarhaddon,\footnote{2} obviously in answer to such questions as those addressed to the Sun-god. Here the oracles are composed in the first person, the speaker representing the goddess; but in each case the name of the priest or priestess who pronounced the oracle on the goddess's behalf is given.\footnote{2} The answers themselves were collected and preserved and invariably encouraging, and promise success to the king in somewhat vague and general phraseology. They are clearly happy omens that have been fulfilled.

The reason why the god of the oracle should reveal the future through the liver of the victim is not at first sight obvious. But it is certain that the liver, not the heart, was regarded by peoples in a primitive state of culture as the seat of life; and there is much to be said for the theory that the sacrificial animal on being accepted by the deity, was regarded as assimilated to him.\footnote{4} The soul of the animal was thus put in accord with the soul of the god, and, by reading the one, the diviner reads the other. This theory also upholds the practice of hepatoscopy among the Etruscans, Greeks, and Romans (see _Grek_ and _Romon_).

DIVINATION (Assyro-Babylonian) 785

sections), who doubtless derived much of their augural lore from Babylonia.

No such theory underlay other forms of voluntary divination, such as obdivination, or divination by arrows, or the flight of birds, etc. In all such cases (including possibly the flight of birds) the oracle was deliberately invoked, but there was no question of the instrument being assimilated to the deity. Reality was merely a passive witness to the Divine will, which was made plain according to a traditional code having the sanction of the oracle.

The most important form of involuntary divination, as seen in the portents exhibited by the heavens. Ellipses, storms, and unusual atmospheric conditions would naturally be regarded from the earliest periods as manifestations of Divine anger, and their correct interpretation would be of the utmost importance to a race, however primitive. To go still farther, and trace a connexion between earthly occurrences and the movements of the heavenly bodies was a much later development, and we have here followed the identification of the planets and principal fixed stars with the chief gods of the pantheon. Winckler's assumption that there was thought to be a perfect correspondence between heaven and earth, and that the divinatory branch of divination was merely a reflection of heavenly phenomena (see Stairs [Assyr.-Bab.]), is quite untrue for the earlier historical epochs, and is true only in a restricted sense for the latest periods of Neo-Babylonian speculation. The earliest Assyrian astrological reports indicate what a careful watch was kept at that period by the royal astrologers for any indication of the Divine will, and the calendars of favourable and unfavourable days were but one result of the study which had been devoted to the astrological branch of divination. In most of the omens connected with both hepatoscopy and astrology the predictions refer to the general rather than to the individual welfare, in which we may see an indication of their official character, as opposed to the oracle.

Private and unofficial divination, to the continued existence of which the private letters of the later Assyrian period bear witness, bulk far more largely in the collections of augural tablets discovered among the ruins, as in the case of dreams, and of incidents in daily life. Monstrosities, human and animal, were naturally treated as significant, and future events were also predicted from minute variations in human life, the movements of animals, and the changes of general portents which were thought to foretell public disasters is well illustrated by an Assyrian copy of a list of forty-seven portents which preceded a conquest of Babylonia. The phenomena from which the portents were derived may be classified under two headings: (a) rare natural occurrences, and (b) events which appeared to break some law of Nature. Under the first heading we have the fall of beans in houses, the outbreak of fire in sacred places, the appearance of wild beasts and birds in Babylon, a great flood at Borsippa, when the waters of the Euphrates rose within the precincts of Nabih's temple Esida, and a flight of birds and falling stars. Under events which appeared to be contrary to some law of Nature may be set the story of a decapitated head crying out, the occurrence of human and animal monstrosities, cases of incest and unnatural mating of animals, fruitfulness of the male in the case of a dog and of a male date-palm, unnatural growths and appearances of date-palms, and the appearance of evil spirits in sacred places. Under the last heading may also be set the appearance of honey on the ground at Nippur and of salt at Babylon, though these were doubtless natural secretions of the soil. The importance attached to such portents, affecting general and not individual welfare, is attested by the fact that in the Neo-Babylonian period chronicles of such events were included on the same lines as the historical chronicles and were regarded as of equal value and significance.

The tablets of unofficial portents prove that almost every event of common life was capable of being interpreted as a favourable or unfortunate sign. But it should be noted that many of the events referred to on the tablets are to be taken as occurrences in dreams, though this may not be explicitly stated in the portion of the text reserved. It is also possible that there was one of the most important duties of the professional seer or diviner both in unofficial and in official life. Reference has already been made to the existence of this branch of divination in the earlier periods of the Assyrian civilization, and there are also inscriptions prove that the gods continued to adopt this method of sending encouragement to the king or of making known to him their wishes. The visible appearance of Ashurbanipal's army in Elam was explained as a vision in sleep, and she probably did not appear to the king himself, but to a professional seer, as is definitely stated on another occasion when she sent the king a message. Such phenomena, accompanied by direct messages, were naturally of very clear and certain interpretation; but the meaning of most dreams was quite uncertain to the dreamer, for significance attached to the most minute points in the vision, and in every case it was necessary to have recourse to a highly trained diviner.

One of the most interesting classes of unofficial omens was drawn from the appearance of the various parts of the body during sickness, for the events predicted generally concerned the chances of the sick man's recovery, and they may thus be regarded as having something in common with the scientific study of disease. Not only were the sick man's colour, pulse, and general air of health considered, but such physiological phenomena as convulsions, epileptic movements, shivering from fever, and palpitations were carefully studied and made the subject of prognostication. It may be noted that many of these phenomena were formerly regarded as connected with births are rather to be connected with this class of divination.

There is evidence that the practice of various forms of divination, like that of Bab. astrology, was adopted by the Greeks after Alexander's conquest, and so survived under modified forms into the medieval period. The mere fact that 'Chaldean' was used by the Greeks as a synonymous term for 'astrologer' indicates the spread of the Babylonian astrological system. Though there is evidence that other forms of divination were practised by native diviners who had wandered to the coasts of Asia Minor and the West, it is thus possible that more than one form of divination which has survived to the present day may be traced to a Babylonian origin.

Literature.—La Divination et la science des prêtres (Paris, 1875) F. Leenhardt published a very able summary of the annual festivals of the gods and the Divine image.
of the subject, considering the period at which he wrote. Much medical has been published and classified by A. Boissier in his Documents assyro-babylonienne A. Much nosological and scientific advances have been made since the time of Boissier, and much new material has been published and classified by other scholars.

DIVINATION (Buddhist).—The art of divination was widely practised in India, as in Ancient Europe, at the time of the Buddha's birth. The early accounts of the latter event relate that eight Buddha's birth was foretold in the science of astrology, but to the astonishment of his disciples, he was born in the month of Magha. The science of astrology was widely practised in India, and in the time of the Buddha, it was used for various purposes, such as the fixing of the time for the various religious ceremonies. The science of astrology was also used for the prediction of the future, and the prediction of future events was considered an important part of divination.

DIVINATION (Celtio).—According to Justin (XXIV. iv. 4), the Celts were skilled beyond other peoples in the sciences of augury, and Pausanias is mistaken when he asserts that X. xxi. 2 he has done away with the art of divination among them. The Celts practised all kinds of divination. It was by the flight of birds that the Gauls who invaded Illiria in 191 B.C. were guided (cf. Justin—Livy, v. xxxiv. 9). It was by a lot that the Herecynian forest was allocated to Sigovesus (Livy, v. xxxiv. 4). The coincidence of two names of countries was an omen that led the Gauls to found a town in Cisalpine Gaul (Livy, v. xxxiv. 9). The Gaulish Catuamudus made peace with the people of Marseilles because of a dream in which Minerva appeared to him (Justin, Xlil. v. 5). In 218 B.C. the Galatian allies, led by Attalus refused to go any further because they were frightened of the omens (Livv, v. xxxviii. 1). Before engaging in battle, the Gauls used to consult the entrails of victims; and once, when the entrails announced a great defeat for them, they massacred their women and children in order to gain the favour of the gods, (Livy, xxvi. ii. 2). According to Strabo (iv. iv. 5 [p. 193]), the sacrifices and augural practices of the Gauls were opposed to those of the Romans; the human victims, who were very often a criminal, was killed by a sword-stroke on the back, and the future was foretold from the way he fell, the nature of his convulsions, and the flow of blood, in accordance with an ancient and unbroken series of observations (cf. Dio, Sic. v. xxxv. 3). Artemidorus relates that in one harbour there were two rows of seagulls which had their right wings tinged with white; people who were in litigation used to lay cakes on a board, each arranging his own in such a way as to avoid all confusion. The birds swooped down on the cakes, ate the one person's and scattered the other's, and the disputant whose cakes were scattered won the case (see Strabo, iv. iv. 6 [p. 193]). Verrin was used by the Gauls for drawing lots and foretelling the future (Pliny, Xxv. iv. 78, 125, en 25). Philostratus (Philotemae of Cent. 1, etc. 198) mentions lots by pebbles and numbers among the Celts. The evil omens noticed by the Britons of the 1st cent. were of great variety: noises outside the curia; howlings in the theatre; the appearance of a buried city at
DIVINATION

DIVINATION (Christian).—1. Divination was regarded by early Christian writers as a branch of magic. It was a danger to religious life, it excited a morbid curiosity, it led to needless anxiety, it held the world in bondage by destroying the sense of responsibility. St. Augustine sums up its dangers:

'Quae tamen plena sunt omnia pestiferia curiositatis, cruci-antis sollicitudinis, mortiferis servitutibus' (De Doctr. Chr., ii. 24).

Christ is the door (Jn 10) 'neither knoweth any man the Father but the Son and he to whomsoever the Son will reveal him' (Mt 11:25).

'The gates of the Divine Reason are rational, and they are opened by the key of faith' (Clement Alex. ad Gent. 1).

And St. Clement adds the warning: 'You are not conscious of Divine truths' (ib. 2). Divination is a practice which rests on occult methods, methods which had their place in primitive religion, but gave way to the higher methods of Jewish and Christian sacramentalism. This is the guiding principle of method we have already mentioned in the Christian view of divination. The diviner sees; he has an insight into Divine things. The Christian 'walks by faith, not by sight' (2 Co 5) he has touch with God, but this touch is 'through the veil, that is, his flesh,' in the widest sense of the economy of the Incarnation (He 10).

Divination is impatient to draw the veil aside.

Christianity, therefore, as the religion of the Incarnation, has discouraged rites and practices which set aside the limitations of the flesh, and are easily able to get beyond control. The subjective type of divination, whether in the form of psychic exaltation or prophetic ecstasy, necessitates a suspension of the intellectual and a pathetic passivity suitable for the transmission of the Divine thought: it produces a weakening or destruction of individuality, by means of ecstatic enthusiasm, deep sleep, sickness, or the approach of death (Augustine, De Civ. Dei, iv. 19). Christianity, in its responsibility to strengthen human nature as a whole by keeping control over the different faculties by means of Divine grace, has kept divination and ecstasy in the background; as a danger to the mind and the will. This control is emphasized by St. Paul: 'The spirits of the prophets are subject to the prophets' (1 Co 14).

The history of Christian divination is the history of the suppression of divination to the control of authority. This principle is summed up by Gratian in reference to divination by lot, one of the practices which claimed for itself Apostolic authority (Ac 15):

'Sic et sorte nulli nulli non sensa monstrator, prohibetur tanum fidibus, ne super hac specie divinationis ad antiquos yodolatrias cultus rediret.'

'The history of Christian divination is the history of the suppression of divination to the control of authority. This principle is summed up by Gratian in reference to divination by lot, one of the practices which claimed for itself Apostolic authority (Ac 15):

DIVINATION (Christian) 789

For the same reason, it is related that L. Petillius publicly burnt certain Greek books as endangering the religion of Rome:

'Gentes, quos absque parte ad sollemnem religionem pertinere exstirpebatur, L. Petillius Practor Urbaneae ex autoritate senatus per victoriam igne facta, in conspectu populi creatae.' (De Rebus.[1])

And the reason assigned by Valerius Maximus applies equally to the history of Christian divination:

'Ille vero qui de paenis sacrificiis sortes legat, et si op- tandum est ut hoc faciat, quan ad daemonia consulenda concurrant; tamen jam isti mortuo displicet castitati' (ad quaestiones Januarii [Ep. iv. l. 20]).

In the words of Pliny (Iv. xxviii. 2), such spells were an insult to human wisdom: 'vir timet sapientissimi cujusque resipit fines.' The writings of the Fathers, the canons of the Church, and the experience of our times prove how great a hold such practices have gained even among those who profess Christianity. It is to them that St. Paul alludes in Gal 3: O foolish Galatians, who hath bewitched you? Liddell and Scott (s.v. faiakalvou), quoting Theocritus, write: 'The charm was broken by spitting three' (These, vi. 20). The tempestaer, storm-raisers or storm-callers, are constantly referred to in the canons, the capitularies, and pontifical letters of the Councils of the Bishops, (Ducange, Gloss, s. e. Tempestitarium). In Ireland such charms have been grafted into the religious customs of the people (Wood-Martin, Elder Faiths of Ireland, i. 104-108). A spell against whirlwinds in Macedonia is this: 'Alexander the Great liveth, aye he doth live and reign.' (Abbott ch. iv. 26) gives many examples of such spells and incantations.

The arioi were those who circled round the idol altars, uttering prayers, and making unwholesome offerings:

'ARIOLI vocati, propter quod circa aras idolorum nefariora procer emitunt, et funesta sacrificiala offerunt' (hid. viii. 9).

A law of 357 condemns the practice, and rebukes the pagans who, under the current with the cursing of the Devil, 'in summum omnium perpetuo divinandi curiosis' (Cod. Theol. lib. ix. tit. iv. 4). The object of the rites of the arioi was to receive some response. This practice of 'raising the devil' is referred to by Tertullian:

'qui arii habitantes sumpsit de sidore conquisitum, qui rectando carantur, qui animadventur profanae' (Apoc. 26).

There may be some survival of this rite in the devil's dance, or 'Holy round,' a circular dance round a rude stone monument or a well, and in the Tuaholl, or 'Unholy round,' which brings a curse. This cursing round was accompanied with incantations and the casting of a curse upon the object. (Wood-Martin, li. 51-57). The 'pecatum arionlant' is condemned with the 'sclau dulatra' in an Epistle of Stephen of Tournay (Ep. 120, ap. Ducange, Gloss).

The aruspices are referred to in the laws of Constantine in 319 (Cod. Theol. lib. ix. tit. xvi. 1-2). The aruspex divined by means of inspecting the entrails of a victim offered in sacrifice. The deencee does not destroy, but only regulates the sacrifice. The aruspex must not go into private houses. He must be consulted only in the temple: 'arac publicas adique delubra'; and in the open light: 'libera luce tractari.' Superstitionis enim nau seerave cupientes, potenter publice ritum possiderunt. (Cod. Theol. lib. x. cap. 30) Even as well as the Church recognized the importance of keeping the practice of divination under control.

This practice still survives. The use of the shoulder-blade in divination is an art in itself, known as ostraca. This divination, the spots of the 'wishing-bone,' which many of us remember as a solemn division of our childhood, as enjoyable almost as the feastings on the fowl, is also to be traced to the same source. This use of the 'merry-thought' is derived from the ancient use of the
DIVINATION (Christian)

I divination was of two kinds: 'ad oculos' and 'ad aures.' The divination was from the flight or from the song of birds. It was regulated by decrees of 357 and 358 (Cod. Theod. lib. iv. tit. xvi. 4, 6). There are many survivals of this kind of divination:

'If a whispering maid and a chattering hen are hateful alike to God and men.'

The crowing of a cock out of hours, the hooting of an owl, the cawing of a crow on the house-top, are all regarded as ominous. The pigeons which frequent the mosaics of Basileius in Constantinople and the Piazza of St. Mark's at Venice are looked on as birds of good omen. The geese in the cloister of the Cathedral of Barcelona may be a survival of the geese kept in old time in the Roman temple on the same site. The series of Dove-Bishops at Ravenna and the letting loose of pigeons at certain festivals, though now associated with the gift of the Holy Ghost, have doubtless a more ancient root in the rites of divination. A certain Hildissius delivered the people of Villejeu-Brione from a Bur-
gundian raid by the leading of a dove: 'ut sint.

The magpie in England is still greeted with the rhyme:

'One for sorrow, two for mirth,
Three for a wedding, and four for a birth.'

And the flight to right or left is a survival of the angry 'ad oculos.' The swan was sacred to the children of Lyra. The word divum, 'wren,' is in German explained as Dreh-ken, a Druid bird, a bird that makes a prediction. He was the 'magnus avum' in Irish hagiology. The stork, the starling, and the swallow also have their place in the folklore of divination. A dove from heavenvelated St. Moling at his birth.

A madman and a fox (lived with him), also a wren and a little fly that used to buzz to him when he came from matins, till the wren peeped at it and killed it; and this killing by the wren was displeasing to him, so he cursed the wren, and said:

'My fly... Howbeit, says Moling,' but that he marvelled for the wren's beak, good to be making music for me, let it dwell for ever in empty houses, with a wet drip therein continuing, and any children and young pernici be doing them.' Howbeit then, but the wren killed the fly. Then the fox killed the wren. The dog of the steading killed the fox. A monk, at the same time, the madman, named Beneke, son of Cohan (Whitley-Stokes, The Birth and Life of St. Moling, Paris, 1900; Wood-Martin, ib. 140-159; Abbott, pp. 106-115).

The story of a bird's learning associated with the sunken palace of Baile Lake (Celtic Folklore, Oxford, 1901, p. 409). The common saying, 'A little bird has whispered it in my ear,' shows the continuity of tradition as to the magpie. Wood-

martin (ii. 145) gives a picture of a bronze instru-
m ent with bird ornaments, found in a bog near Ballymone, Co. Antrim, which has been thought by some to be a divining-rod. It is not earlier than the 6th century.

'The astrologia, gnomotheci, and mathematici were all adepts in divination by means of the study of the stars. The term mathematici was a common one in the 4th cent.: 'quos vulgaris mathematicos vocat' (Jerome, Com. in Dom. c. ii. 2). So also in the 1st cent. (Didache, c. 5; St. Augustine has frequent references to them: 'Jam etiam mathematicorum fallacies divinationis, et impia delirantia rejecerant' (Conf. vii. 6). The title of the Theodosian Code, under which the practices of divination are regulated, is 'de Mathematicis et Mathematicis.' They are specially mentioned in edicts of 357, 358, 370, or 373. A decree of Honorius and Theodosius in 409 reads:

'Mathematicos, nisi parati sit, colebimos erroris proprii sub oculus Episcoporum incendo concernens, Catholicae Religionis"
DIVINATION (Christian)

Charles Simeon sought comfort in this way:

'It was not for direction I was looking, for I am no friend to such counsel, but only for suggestions of the Spirit.'

In Sortes, Definimus a iis.

After H. ere (ib. Quod xiii.).

... (Chambers's 'Quaerit'...)

Then he developed a theory of evidence that had been neglected by the church. He frowned on the use of omen and augury, which he believed to be a snare for the Christian.

The soror de pane refers to purgation by bread.

'It is a script of the Life of St. Moking:

'The cleric said to the Spectre: 'Then let me have a nose. .

The tomb found on the Specr's hand. Thereafter he kept his three steps of pilgrimage and his three leaps of folly. The first leap he kept; he kept to them, the other two.

'Then he kept the three-stone wall, and the second leap that he kept, they saw him not at all. .

... After that he looked at the church, and sat in his place at prayer. .

... Thus he was, with the blow of the anger and the fire on him, and the radiance of the Goodheath in his countenance' (Whiteleys, p. 82).

3. Primitive Christianity would seem to have been more tolerant of divination than the more developed Catholic Christianity of the West. The evidence of the books of the NT. points to this difference. It is in St. Matthew's Gospel alone that the Star is recorded, and that dreams are referred to as a means of revelation. The dreams of Joseph (12.21) are an echo of the early belief in the form of divination among the Jews.

Then, after the vision of the Divine lot is in the cradle of Christianity at Jerusalem, in the choice of St. Matthias (Ac 1). In the extension of Christianity the Gospel triumphs over divination. Simon the Sorcerer of Samaria (Acts 8) and the Sorcerer of Cyprus (13), the woman with the spirit of divination at Philippi (16), the sorcerers of Ephesus (19), stand condemned in the records of the early mission outside Judaea. Oecumenical gives way before Sacramentalism, although faint traces of the primitive faith are recognizable in the stories of the 'shadow of Peter' (Ac 5), the handkerchiefs from the body of Paul (19), and the traces of Peter (109) and Paul (227, 2 Co 12). Witchcraft under the form of phalaxia is condemned in Gal 3.5, Rev 20:12.

In the sub-Apostolic age there are a few references to the practice of divination. The Epitasis of Barnabas links together pax, unction, and ovium in one.

1. St. Ignatius in his Epistle to the Ephesians (xx. 1.) refers to ovium, and speaks of the one Bread of the Blessed Sacrament as the φαρμακον ἀθρασίας (xix. 2; xx. 2). Hermaus calls a mania a heathen practice (Mand. xii. 8). The Delphities forbid it: 23. αἱ καλαγολοί, οἱ φαρμακολογοί (c. 2); and again: οἱ μέν με, οἱ γιονοι οὐκοφορούσιν καὶ οἱ εὐθανασίοι μεθεψεμενοι (c. 3). If the 'Two Ways' is an early Jewish-Christian document, this straight teaching against augury, incanta-
DIVINATION (Egyptian).—From more than one point of view it seems impossible to bring Egyptian divination under the classifications in general use in the study of mantics; we cannot make either the ordinary definitions, or the purpose, or even—to a certain extent—the means employed fit exactly. In fact, in this study, as in so many others, the Egyptians made no attempt to formulate a theory, or even to lay down general principles. In Egypt we find nothing corresponding to the didactic teaching on mantics composed by the Chaldaeans and by the Hellenic world, nothing like the prodigious variety of means of divination of the Assyrians and Greeks, including the observation of almost every phenomenon of Nature, being, and things. The observation of the ordinary aspects of the sky is confined to the realm of astrology; its unusual aspects (meteors, shooting stars, comets, zodiacal light, eclipses) are explained in advance by mythology, and do not require an interpretation derived from actual divination. There is no mention of the mantics of rain, winds, clouds, or smoke, etc., in the Egyptian treatises, although there may have been as many kinds of divination by ‘palmyrism.’ In connexion with living creatures there is no ritual study of the movements or appearances of animals (ornithology, ichthyology, etc.); nor do we meet with harnsiery, divination by the production of phenomena for interpretation.

When we apply to Egypt the classifications in general use for the mantics of other peoples, we find a certain number of divinatory processes mentioned by the ancient Greek and Roman authors, about which, however, it is very important to observe: (1) that they are of rare occurrence, or are employed only in popular superstitions and not by official divination; and (2) that they were performed by the Egytian priests at a late date, under the influence of Asia or of the Hellenic world.

To the first class we may assign the indications drawn from the flight of birds and encounters with serpents, etc. The story of Alexander’s expedition to the Eastern Desert and Oasis. This form of divination possibly belongs to Egypt, and the inscription of Hamanamet (Emery, Z. E. xxi. 1891) describes the defence, in which a cobra shows the spot in the desert where the stone of the royal sarcophagus is to be set up. But the incident was not regarded rather as a matter of divination, for considering it a regular method of divination. The use of the divinatory vases seems equally unknown to the priestly and popular minds; the so-called magic consultation of Nectanebo is a legend of Greek origin. The divinatory vases certainly existed in Egypt in the last centuries of its history, and the democratic texts agree on this point with the Graeco-Roman evidences; but it is very probable that the popular use was imported from Persia, and in any case it was never employed by the court-priests, but only by magicians.

Apart from the reference in G. G. Chambers, A Sketch of Egypt (Egypt, which may be a non-Egyptian adaptation, we know from the classics (Pline. xxvi. 46; Plut. De Is. L. iv.; Hor. Sat. ii. 33, etc.) that the use of the divinatory names was performed through the medium of a child, on whom they were impressed by occultations and the laying on of hands. And thus, says Diodorus (vii.), ‘the soul foresees future events in the phantoms she herself creates’ (cf. Virey, Religion Egypt., Paris, 1899, p. 227, and Emont, Religion Egypt., do. 1911, p. 236). The use of the child, because of its innocence, is a common practice in all magic, and is connected with the universal belief in the inferiority of the child, who has committed no sexual conceptions, in the struggle against the spirits. Letters connects these methods of divination of the infant period with the divinatory practice of the Egyptians. The phantoms of Africa (Reune Africaine, 1895, p. 251, 221), and conjectures with great probability (Spalini, in [1651] 64) that the material processes correspond generally in the phantoms and images of Amulis and others, by means of hypnotism and looking at a shining object. W. W. F. Leadbeater,透视the Elder Posida of Egyptian Life, London, 1902.

T. BARNES.
played a very limited part. Consultations of the bull Apis are known in the classics. Pliny (xviii. 71) and Anna Marcellinus (xxxi. 5) relate that Osiris had observed that Apis accepted or refused the food offered by the worshipers, and that the sacred animal refused the offering of Germanicus. They also tell of prosperity or adversity being foretold for the country. Arguments fall to choose into one or the other of two stalls.

There is little doubt that these superstitions are completely Egyptian, and it is very doubtful whether, at the classical period, such manifestations were employed by the priests as means of divination; it is far more probable that they were only used for superstitious purposes, being throughout all Egypt wherever sacred animals were kept in the temples, and that the custom of leaving the choice of the Apis happened only when the choice was made by the case of the crocodiles of Oebos, and the reins of Elephantois or of Mendes. It may have been due to the influence of the Greeks, who were received in this in the same way, to this very type of mantic, that these customs became embodied in the priestly cult, or at least were given a greater importance as methods of divination. In fact, dreams, astrologist's, and, in particular, the direct consultation, in definite language, of living images of the gods, began. They supplied the official religion of Egypt with methods of consultation far more convenient, more explicit, and more acceptable than the various signs of good and evil; and it is in these classes that nearly all the known examples of Egyptian divination are found.

(6) Among the most characteristic processes in the consultation of statues is the designation of the Egyptian sovereigns by the statue of Amon-Ra at Napata. The ancient authors had been struck by this result of an account of Diodorus, III. 29, and a corrupted version in the satirical writings of Synesius [Works, French tr. by Druon, Paris, 1878, p. 241]. The famous stele of Jebel Barkal, on which the election of Apis is recorded, is, as the result of this practice accessible in the language of the English language. After a number of ceremonies, too long to describe here (see Maspero, Boulog, pp. 69, 336, and Guide Cairo Museum, ed. Dec. 1910, p. 215, Room 8, West Side, no. 692), the candidates for the throne were brought before the statue of the god, which had been adjoined to make its choice known. They fled past the idol, which remained motionless until it "seized" the candidate it chose. The statue thereupon declared in formal terms that this was the king. The newly-elected monarch then entered the sanctuary, and was crowned by the god himself.

Recent Egyptianological discoveries show that all the traits of this curious procedure were borrowed from the divinatory ritual of Egypt. On the tomb of Nefi省mf at Gourna, there is an account of the election of the high priest of Amon-Ra. The candidates were led before the statue of the god. They were all shown to it in turn, one after another. It made the choice as the inscription [see below for the actual gesture] except, said the king, when I pronounced your name. Then, Nefi省mf being chose, the statue conferred the power upon him by four magic passes. A second text, discovered later, proves that the custom was in existence even in the time of Amenophis I, and it is quite logical to suppose that it goes back to a much earlier period; it may perhaps be even as ancient as the worship of the god himself.

The right of consulting the god is reserved, of course, to his people, i.e. to the king or the chief prophet (a poor modern tr. of the word houm, which is, more exactly, a man belonging to something one). The consultation does not take place at any time, but only, according to traditional etiquette, on one of the days of the holy image being "going out" (khnum = assemblies, processions) in the loco thebes, in the temple Amun, etc., or his great festival of Apis. There is a recognized place where it is allowable to present the divinatory request to the god, and even to interrupt the "going out" of the god to question him. At Thebes it is the great silver pavilion. The priests then approach the shrine containing the statue and begins by an invocation (ebh) in court language. He then asks the statue if it is convenient for it to listen to such and such an affair. The terms used here also are traditional: "O Goodness, my Lord," is the beginning of the question. Then the case is stated: a theft has been committed; will the property be recovered, or will it be kept? A famous monument has been robbed; does the god desire the punishment of the spoilers? Sometimes even more complicated is used; Lord, may we lay before thee the serious case of the Great Oasis; see below). If the statue remains motionless, the request is refused, and the matter is dropped. If it consents to listen, it acquires (banu) "twice with decision.

The actual gesture of consent is difficult to determine. Nearly all authorities admit that the statue "shook its head." The word banu, always employed, without exception, in all the texts, for this method of divination, may be a very forceful shake of the head, according to the usual significance of the word in ordinary language. Amon-Ra of the Great Oasis, in the long series of examples known to us, Amon, "Pasholini of Memphis (cf. Pleyte. P.SB.x, [1892] 41, 55), Amon 'Tashonel (65). Khonsu 'Numhefem, etc., was refused in a similar manner. The sign of the Great Oasis; see below). If the statue remains motionless, the request is refused, and the matter is dropped. The actual gesture of consent is difficult to determine. Nearly all authorities admit that the statue "shook its head." The word banu, always employed, without exception, in all the texts, for this method of divination, may be a very forceful shake of the head, according to the usual significance of the word in ordinary language. Amon-Ra of the Great Oasis, in the long series of examples known to us, Amon, "Pasholini of Memphis (cf. Pleyte. P.SB.x, [1892] 41, 55), Amon 'Tashonel (65). Khonsu 'Numhefem, etc., was refused in a similar manner. The sign of the Great Oasis; see below). If the statue remains motionless, the request is refused, and the matter is dropped. If it consents to listen, it acquires (banu) "twice with decision.

The actual gesture of consent is difficult to determine. Nearly all authorities admit that the statue "shook its head." they are entirely concerned with the people and things ruled over or possessed by the god; in short, that they are cases not of interpretative divination or divination of the future, but of the divination, for the immediate present, of the god's formal decision. This remark helps us to understand how the process of the Divine response by *hau* tended to become a settled gesture, almost a piece of ritual phrasology, the terminological element of which in the end quite evaporated (see below).

The process of questioning is controlled by rigorous fixed rules. A series of definite questions are asked, each involving a different element in the *libri, the solution of the difficulty. To each question the statue has to reply by 'yes' (i.e. by performing *hau* 'twice with decision') or 'no' (i.e. by remaining unspoken). In certain cases, the final decision depends entirely upon the statue's gesture. Two pieces of writing are placed before it, the one saying that an accused person is guilty, the other that he is not guilty; and the statue is required to choose. To make quite sure, this test is repeated twice. The case of the steward Thothmes is an example of this kind, in which, twice over, 'the god refused to take the writing that declared him guilty, and took that declaring him innocent' (cf. a good tr. of this typical example, *Boulaq, iv. 325*).

This curious passage would lead one to suppose that, even although *hau* means a shaking of the head, the statue certainly moved or stretched out its arm to take the writing. This evidence should be laid alongside of the various texts that seem to show that at the coronation of the king the statue of Ammon 'put the crown on the new sovereign's head, as in Ethiopia (see below).

Taken in connexion with the indication of the Ethiopian kings and the Theban chief priests by the statue, these examples of judicial decisions throw light upon the philosophy of such proceeding; and prove—what that originally the gesture of the statue was actually divinatory, inasmuch as, though an indication was looked for from it that was the result, it is true, of solicitation, its exact answer or choice could not be foretold. In the earliest times the *hau* of the statue was as impossible to anticipate with certainty as were the miraculous movements recorded in other inscriptions — the statue making a gesture of welcome or salutation, during a procession, as if paying a court official (cf. Petrie, *Koptos, pl. xix. line 11 f.), or, more frequently, before the prince who was destined one day to mount 'the throne of Horus,' and of whose future position as king of Egypt no indication had ever been made by lot. The origin of the *hau* had a tendency gradually to become an operation in which the process of investigation, procedure, and inquiry was carried through more and more by human means, and the only uncertain element—i.e. the opinion, or the will, of the god—was reduced to the very restricted alternative of saying 'yes' or remaining motionless. Divination proper, thus reduced to the minimum of interpretative freedom, and confined to cases equally definite and real, became, by force of circumstances, rather a registration of the god's consent taken for granted in practice, and soon even simply a formality with practically no divinatory significance in it. This was almost certainly the nature of the Divine *hau* in the cases of the election of the Egyptian king and the nomination of the Theban chief priest; and similarly in the ratification of judicial sentences. This all serves to explain how, in the course of history, the Divine *hau* or election by a movement of the statue came to be the regular and necessary accessory of registration for all kinds of contracts, deeds of gift, marriages, wills, and even rescripts relating to funerary lots passed before the temple authorities, in which there was no kind of 'divination' to be seen—unless, indeed, we give that name to the desire (or would-be desire) to be quite certain, for the sake of propriety, that the spirit of the god was not opposed to them (cf. (1) the process in the Turin Papyrus 126; (2) Erman, Z.A xxxv. [1897] 12, for the registration of a will; (3) Maspero, *Boulaq,* p. 236, for the registration of a divine rescript). Breasted says in *Anc. Records, iv. 325,* about a special work on this series of legal documents. 1

(c) From the known examples, it appears that the consultation of statues usually consisted in obtaining a series of acquiescences saying *hau*.

We have seen, however, that movements of 'seizing' sometimes accompanied this manifestation of the god's will. There were also other movements of a more general kind; e.g., when the image of Khonsa consented to grant its magic power to one of the statues of Khonsu in order to drive off a demon, it is said that it 'made four passes of the magic fluid'—from which we may assume actual movement as an element, or a part of, the declaration of divinatory, of the arms or of an entire body. In some of the cases cited above, it is formally stated that the *hau* was accompanied by spoken words, sentences more or less brief, but practically forming a short declaration. The usual example is the election of the kings of Napatia. It is, indeed, certain, from a number of other texts, that the gods spoke—not, of course, to the common herd of mortals, but to their sons and their ministers (i.e. to the members of the 'library of the high priest'). The gist of the wishes they manifested thus was afterwards reduced to the form of a decree (mutH), and engraved on the walls of the temple as 'the words of the god himself'; or their wishes were embodied in one of the oracles or the prose accounts, lyrical in character, which have been rapidly enriching the *corpus* of Egyptian historical inscriptions in recent times.

These oracles, as of many varieties as the consultations of the statues examined above. Sometimes the god himself, of his own accord and unsolicited, suddenly manifested his will, making his voice heard, in the silence of the sanctuary, to the king or priest coming into his majestic presence; and he would order a mission to Lebanon for wood for his house, for stones for his temple, for perfumes and rare trees for his altars and sanctuaries (cf. Erman, Z.A xxxiv. [1894] 1; and Golenischeff, *Boulaq,* xxi. 121). Sometimes the manifestation was seen; it might be the complement of a previous warning in a dream, a formal explanation of which the god was graciously granting by *hau* (or, it might be the *hau* itself); or it might be the form of a question to the god, the reply being the god's acceptance of the request of the king. To the last category belongs the discourse received by Hatusu in the temple of Deir el-Bahari, when she was 'made motionless, after sitting and fasting, to ask the god for the sign of the Divine will, and was ordered to send an expedition to the country of Khonsu' (see Naville, *Deir el-Behari, London, 1889-1901,* ii. 84). This famous example is a good specimen of the manner of proceeding. The other examples of the same type show that in no single case was the divination accompanied by ecstasy, religious frenzy, or hypnosis of the subject, and that the god never used mysterious language, or broken mangled words that were afterwards submitted to the interpretation of professional scribes. The statements made by the god were in clear and coherent terms. They were practical replies as to a fact, a decision to be taken, or the issue of a concrete imminent event. All the Egyptian precision and love of clearness are seen in every one of these oracle statements. The words of the god may demand the god, and is shown a place where he must make a well in the desert, while the god demurred a sanctuary in exchange (cf. Breasted, *Anc. Records,* iii. 82); or orders, solicited or unsolicited, relating to the construction and repair of buildings (e.g. Mattei, *Karnak, ii.* Breasted, *Anc. Records, ii. no. 603*) appear to have held the chief place in these cases;—certainly, in each instance, the responses made by others were engraved on the walls of the buildings with which they were thus connected. Another kind of prediction, as we find of more ancient date, is the foretelling of a prince's coming to the throne. Thothmes III., was informed by the god long in advance that he would one day be king of Egypt (inscription at Wady-Halfa); and this prediction was confirmed later by the statue suddenly stopping in front of Thothmes, proclaiming

---

1 On the question of illusion or fraud in the above processes, see Pean, *La Vocation et le Devoir dans l'Egypte Ancienne* vol. i. ch. i. p. 37 ff.; Maspero, *Les Statues parlantes,* in *J.D.* 25th Dec. 1908.
DIVINATION (Egyptian)

One of the major activities of the Pharaohs was to ensure the well-being of the kingdom through the practice of divination. The main purpose of these practices was to divine the will of the gods and to ensure the prosperity and stability of the kingdom.

The earliest form of divination in Egypt was through the interpretation of dreams, as seen in the Book of the Dead. The Pharaohs believed that dreams were a way to communicate with the gods and to receive guidance on important matters.

Another common method of divination was through the use of oracles, which were sought by priests or other individuals who were believed to have divine knowledge. The Oracle of Heliopolis was one of the most famous and influential oracles in ancient Egypt, and it was believed to have answered questions related to the future of the kingdom.

The most significant form of divination in ancient Egypt was through the practice of Horus, who was considered the god of divination. The Horus Oracle was located in the city of Edfu, and it was believed to have the power to answer questions related to the future of the kingdom.

The practice of divination was a central part of Egyptian religion and was deeply ingrained in the daily lives of the people. It was believed that the gods were always present and could be communicated with through various forms of divination.

The importance of divination in ancient Egypt is evident in the many inscriptions and literary works that have survived to this day. These works provide insights into the practices and beliefs of the ancient Egyptians, and they continue to be studied and interpreted by scholars today.

In conclusion, the practice of divination was a crucial aspect of ancient Egyptian religion, and it played a significant role in shaping the history and culture of the kingdom. The various forms of divination, including dreams, oracles, and the Horus Oracle, were all important tools for the Pharaohs and other leaders, and they continue to be studied and appreciated by people of all ages.
intelligence, by an answer obtained from a book of magic, or by explanations sought from some other supposed, divined, and celebrated source of sagacity—this last word being understood in its narrowest sense of a high degree of skill in magical studies. This practice of private divination (which must be carefully kept distinct from official divination) seems to have been of wide occurrence in Egypt in all periods. It presents cases of an infinite variety of application, but these will be more appropriately discussed under MAGIC (Egyp.).

DIVINATION (Greek).—Of the beliefs with regard to divination held by the Hellenes at the time of their arrival in Greece we have no know-
dedge; what they practised was highly likely, and it is inconceivable that the inhabitants of Knossos, Tiryx, Mycenae, and the other centres of pre-historic culture had no belief in it; but definite information is entirely wanting. The most wealth that can be gathered oracles were of a possibly date from pre-Hellenic times. We begin therefore with the feudal period of Greek history (c. 1200 B.C.), of whose culture we know something from Homer.

Homer.—Here we find for the most part 'independent diviners' (divina libera, to adopt Bouche-Leclercq's convenient terminology). The oracular shrines, so famous in later ages, are scarcely mentioned at all. One instance occurs of a private consultation at Dodona,1 and Achille mentions the wealth of the shrine at Delphi;2 but no important oracles are mentioned as emanating from either. Agamemnon, for example, does not appear to have consulted any one but the seer Hektor, in regard to the famous portent of the serpent and the nest of swallows is interpreted by him, and Odysseus bids the discouraged army 'wait awhile and see whether Kalkhas prophesies right or not.'3 So far in historical times, in official and professional the individual seer (μάντις, οἰωνιστής) and not any sort of priestly corporation, that we have to deal with. The μάντις is not, as a rule, an inspired prophet, but rather a craftsman (δημοφιλής), charged with leeches and carpenters in a famous verse of pp. 69, 330; Études de Myth. et de Archéol. iii. (1901) 165, 239; Annaire de l'Ecole des Hautes Études, 1907). A short account is given in A. Erman, Θρημ. Religion, Berlin, 1905, p. 180. The rest of the important documents and articles on the subject have been mentioned in the article.

GOULFAC.

1 Od. xiv. 327; cf. xiv. 230. 2 H. 110. 598. 3 H. l. 72. Plato, following the recognized classification, divides divination into μάντικη εἰκών and υἱώδεις ψευτοργία, and ζητητική ψευτοργία, which are parallel in this respect, 241 B-D. In the Odyssey and Homer, practically, and has been sacrificed (wrongly, we think) to the influence of Dionysos, by Bouche-Leclercq and others.

of omen-birds (σταύρως),1 or sometimes of other animals, or by portents (τέρσας).

The former of these (δράκωναι, οἰωνιστής) was always more or less a commonplace in Greece, although it never attained the imposing dimensions of Etruscan augury. In Homer, the omen-bird is generally an eagle, and always sent by Zeus, Apollo, or Athena.2 Its actions are symbolical, and used in complicated augury for their interpretation. A characteristically transparent allegory is that given by the eagle in II. xii. 200 ff.:

For a bird appeared unto them as they strove to cross, even an eagle of high flights, upon the left, carying the folk; he bore a monstrous red serpent in his talons, alive still and breathing, that was not without portent of strife, for it struck at the string that held it upon the breast, by the neck, writhing back. And the eagle dropped it from him to the earth, galled by the pain, and flung it down into the midst of the throng, and himself flew with a scream on the breath of the wind. And the Trojans shudder to think of the portent a thing like this among the domain of Zeus, the eagle-bearer.

Here the eagle represents the Trojans, the snake the Greeks, and the discomfiture of the eagle indicates the result of the contest. That it is meant as an omen is shown by the species of bird—not all birds are omens3—and by the unusual nature of the occurrence—it is called a portent (τέρσας). It is seen on the left, i.e. the west, the quarter of the sun4 and more unlucky. A much simpler omen encourages Odysseus and Diomedes:5

Unto them Pallass Athene sent a heron, on the right, near their path; that it did not with the holy stone of the night, but they heard its cry. And Odysseus rejoiced at that sign (σταύρως), and made prayer to Athene.

In neither of these omens are oracles it is the diviner strictly a professional. Polydamas, who interprets the first omen, is renowned as an augur, but he is present at the battle simply as a warrior, and only incidentally is he concerned omens and advises Hector. Odysseus is a favourite of Athena,5 who has been the priest or wizard about him. The method of interpretation is of the simplest in these and all other cases in Homer; and Hector, who is by no means impious, is frankly contemptuous about the adverse sign.

Portents, strictly speaking,—i.e. ominous events of a miraculous nature—are not very common in Homer. One has already been mentioned in passing: the omen of the serpent, interpreted by Kalkhas,看出 the coming war.® The omen is of the serpent, but not of any of the stones; but no one seems to deduce anything from this. The word τέρσας, indeed, is used to mean any sign® from a god, whether miraculous or not, or any wonderful thing, like the agis, which apparently Eris begets.® The divination is necessarily is definitely from a god that the sign always comes; and this applies to the other forms of divination mentioned below. Of familiar spirits, animals when they gives the warning snake lying in the midst of them, a portent of Zeus, the eagle-bearer.

Besides augury and portents, the most important omens are dreams. These are almost always definitely sent by a god, and usually speak in plain language. Generally also they are true, an exception being the ‘bad dream’ sent by Zeus to deceive Agamemnon.® Usually the vision takes the form of a man or woman known to the sleeper

Strictly, σταύρως is a ‘bird, in general,’ σταύρως, a ‘omen-bird’; but the distinction in often neglected. In Homer also means an omen given by a bird, hence an omen in general; and σταύρως was used in this sense.

See Amel's note on Od. x. 274. For the association of these three deities, cf. the repeated line αὐτὴ τοῦ πάρθενου Ἀθηνᾶ, etc. of the Odyssey (III. v. 60, xiv. 319; vii. 256 ff.) for which nature of the golden apple is ‘most precious of all other and of these (Euripides, tragedy). In any case, the voice, etc. (see, e.g., Plato, Cratylus, 338 D), does not occur in Homer.

DIVINATION (Greek)

(in this case, Nestor). However, the eulog, non-
allegorical language is not invariable, and there exists a class of dream-interpreters (δεικνυόμενοι), but, we may safely assume, no masters of any complicated and wide-reaching science like that taught in later days by such men as Artemidorus. For their craft was not, if possible; it involved telling true dreams from false ones; so we gather from the apologle of the gates of horn and of Ivory, in the speech of Penelope to Odysseus (Od. xi. 569 sqq.). According to the geography of Od. xxvii. 647+ there is an omens and, to rumour Achilles introduce remains (see noticed as the simplest form of allegorical dream — a vision of an ominous happening. Incubation (see below) is unknown in Homer. One unusual example of a dream, or vision, not divinely sent, remains to be noted. As Achilles sleeps, the spirit of his dead and unburied friend appears to him (II. xxiii. 62 ff.) to beg for speedy release from his homeless condition. But everything about this scene seems including the whole, unoriginal, and even inconsistent with normal Homeric beliefs.

The occasional appearances of deities, who speak face to face with favoured heroes (Athene with Achilles and Odysseus, Hermes with Priam, etc.), and of their craft or any other omens in passing, the peculiar occurrence which later Greece called φημή, Homer ἄλκη or ἄνω — the rumour which, coming from no one knows where, spreads through a crowd. This the Greeks always recognized, and would have noticed it. We introduce a similar idea, found both in Homer and in later writers, namely, that the Divine will may be made known by means of the usual words of a mortal (κριτήρια). Of this we have a note-worthy example (Od. xx. 98 ff.). Odysseus, about to take vengeance on the wooers, prays for Divine encouragement; a thunder-clap answers him, and is followed by a few words from a tired maid-servant, who curses the wooers for keeping her up all night to grind corn for their feasts. Later ritual developed and systematized this method at the oracular shrine of Hermes Agoraioi in Pharai. The consultant whispered his question into the god's ear, then stopped his own ears, went out, and interpreted the Divine answer, that was to say, chance words from passers-by. These were construed into an answer. This form of divination (δεικνυόμενοι) remained popular at all periods.

It appears in various forms, such as the pens on names (Εὔβοια — Ὅμηρος, Παστορις, Ναυκλατος, in the Agenanmon, 686 f.), and seems to have had this great advantage, that one could either accept (δεικνυόμενοι) or disregard an omen of this kind.

Allied to divination is the omen from sneezing (Od. xvII. 541 ff.) — one of the large classes of omens from involuntary human actions (καλυμβον), elaborated in later times into a complicated system. In the Homeric instance, Telemachos' violent sneeze fulfills the form of a Penelope's words. This idea lingers on to-day in Greece. If a sneeze is heard after any one has spoken, the sneezer is not only given the customary "good health to you!", but the words καὶ δεικνυόμενα λέγε, and the presence of omens are added.

 Necromancy proper — the evoking of a ghost or ghosts — is not found in Homer. The nearest approach, besides the appearance of Patroklos' spirit, is in the visit of Odysseus to Hades (Od. i. 11). Here the ghosts are certainly approached with regular necromantic rites, blood-offerings and the like, and the whole passage suggests something other than the normal Homeric idea of the dead as 'strengthless.' It may well be that, while the Achian lords were not ghost-worshipers, their dead of their affairs were divined by means of the unbroken line percolated up from lower levels of society. But even here the ghosts are not raised from their graves or called into the upper world; nor have they any prophetic powers, except Teiresias, who, by special grace, received the same kind of ... thing like it. The only approach to the usual idea of a dead man's powers of divination is the foresight shown by some dying men, e.g. Hector. Such are the main forms of Homeric divination, to which Hesiod makes no addition, for his weather signs are simply crude meteorology, with nothing of magic about them.

2. Historic period. — We now pass to the historic period, which we may roughly divide into (1) the time of Greek development and political importance (8th to 4th cent. B.C.—First Olympiad to the death of Alexander); and (2) the decadence (from the 4th cent. onwards).

The period of Homeric importance. — In this period, besides the Homeric methods, several new forms of divination were introduced, which will be briefly discussed in their proper place; but the chief feature of it was the immense importance of the oracular system. We may notice the most important, that of Zeus at Dodona, of Apollo at Delphi, and, later, of Zeus Ammon. The first of these is undoubtedly of great antiquity. Homer mentions its priestly tribe or caste, the ζύλαι of unwatched feet, sleepers, who practised it. We may put it in the way in which the oracles were given — by the sounds made by the sacred oak — suggests an ancient tree-worship, older than the cult of Zeus as we know it, and very possibly practised before the god was heard of. It remained respectable, though overshadowed by Delphi, until quite late times.

But the greatest of all oracles was the Delphic or Pythian. From very early times an oracle of some sort appears to have existed in this lonely and exquisitely beautiful place, and, if we may trust the legends, it was held by Ge-Themis, possibly in conjunction with Poseidon. Inspiration was given by some sort of vapour rising from a cleft in the ground; this is so well established by ancient research, that we cannot doubt that although modern researches have shown that no large chasm existed — in fact, thanks to the French excavators, any one can now see that for himself. But, whatever it was, it was enough to serve as evidence of the presence of a chthonian power, and it was held to inspire prophecies — possibly by means of dream-visions, the characteristic form of earth oracles. To this old and well-established shrine there came, at some period of which we have no definite knowledge, a Northern tribe, who worshipped Apollo. Despite the non-chthonian character of this god, Delphi became Apollo's hencorward. Under the management of the "Holy Ones" (Cypriots) it became an important oracular shrine in Greece, and to some extent the official head-centre of Hellenic religion.

1 For a discussion of the whole question, see Rohde, Psyche, Tübingen, 1907, vol. i. ch. 1.
2 See Introduction (Introductory), § 6, 'Necromancy.'
4 II. xxv. 233 ff.
5 See Farrell, iv. 180 ff., for an excellent discussion; but in our opinion he underestimates the part played by the natural advantages of the spot. The Greeks were extraordinarily sensitive to beautiful scenery, though not given to sentimentalizing about it.
6 Cf. Plutarch, de Defect. Orae, 43.
7 Crete also had a traditional connexion with Delphi; see Hom. Hymn. Amph. 1; Paus. v. 7; Pind. Nem. ii. 22. A lion's head in Ktesias style has been found at Delphi.
DIVINATION (Greek)

Several methods of divination were employed at one time or another, such as the most ancient ψηφική, which appear to have resided the Zoth Divining-sticks; but the usual procedure was by possession (μαντικὴ ἔνθεως). The Pythia or prophetess, after a draught of water from the underground spring Kassotis, ascended herself upon the tripod in the inner cell, probably over the altar, became inspired, and prophesied. The official interpreters (προφητήτα) then reported her utterances, normally in hexameters. The opportunity this gave for very liberal freehand of the inspired and probably quite unintelligible words of the Pythia is obvious; still, all oracles were supposed to come through her direct, as is shown by the common phrase ἡ Πειθείς χάρ. The theory was briefly this: Zeus was omniscient, and Apollo was his favourite son and his confidant. Apollo, therefore, from time to time made known his father's will or fore-knowledge to such mortals as chose to consult him after due purification and sacrifice, employing as his medium the Pythia, who, possessed much as a shaman is possessed (πλημα δεο, in Vergil's phrase), spoke not her own words but those of the god. How much of all this the 'Holy Ones' believed, we cannot say; certainly the oracle had immense influence. The Pythia, even in matters wherein it was, on the whole, conservative, except for its advocacy of Dionysiac worship and of hero- cults. In political matters it usually avoided any decided position, though it was philo-Spartan in the Peloponnesian war, and, in other matters, vagueness and ambiguity in all fore-tellings of the future saved the god from the disagreeable position of a false prophet. In one respect, however, Apollo seems really to have acted as a useful Information Bureau of the oracle, regularly came to him for advice, and that advice was generally good. It may be, however, that here, as in the case of codes of laws supposed to emanate from Delphi (σέμα Πειθείστα), the god did not more than give his approval to a course already decided upon.

The influence of Delphi, and the lesser influence of other oracles of Apollo (Klaros, Branchidai, etc.), had its effect on legend, as is shown by the peripatetic tradition of taking of the Pythia was into making the latter sons or pupils of Apollo, and inspired prophets rather than augurs. The great bulk of the oracles, and their proverbial obscurity, called into existence a class of interpreters (μαντικοί) whose business it was to revealing the god's meaning to the less sharp-witted public. It was recognized that to be a good exegete one must be something of a diviner; and, later on, in the mongrel of Greek culture, the collection and interpretation of oracles in the light of a degenerate philosophy occupied such men as Porphyry. But even Apollo did not extinguish the race of divina libros. The craze for knowledge of the future which was very noticeable during the Peloponnesian war produced a demand for oracles which was literally met by the circulation of the prophecies (χρηστοὶ) of various ancient sages, such as Musas—in among them those of Bakis, of whom Aristophanes makes such delightful sport in the Knights and elsewhere. At Athens, especially, prophecies sprang up like mushrooms, and such ominous lines as the famous

1 See Farnell, ii. 188. The prophetic virtues of water from sacred springs were widely recognized.

2 The oracle could be consulted only at certain seasons (σεζόναρια). In a few cases even prose, were used later; see Plut. de Pythiae Oraculis.

3 The oracle was consulted only at certain seasons (σεζόναρια). In a few cases even prose, were used later; see Plut. de Pythiae Oraculis.

4 This was a regular Apolline method, e.g. at his ancient shrine at Epidauros.

5 The more so as some gods had either no oracles or none of any importance. Hence we find Apollo consulted, for example, on a question affecting the worship of Demeter at Eleusis.

6 Διωροτάκην πλήμα καὶ λόγων ἐν ἀνόητον, with its no less terrifying variant θάνατον were in every one’s mouth. Soothsayers of all kinds plied a lively trade. Nikias was especially dependent upon them, but no general crossed a river or entered the enemy’s country without consulting the μαντῶν attached to the army.

7 These are the divines criticized an art unknown to Homer, namely, harmospiey. Whereas the Homeric heroes simply sacrificed and had done with it, in later Greek rites the victim was required to stretch his hand when the libation was poured upon it) that the god accepted it, and the entrails were inspected for signs of Divine approval or disapproval, especially before a battle. Indeed, there is more than one instance (notably at Platea) of a general delaying action for a considerable time until at last a victim’s entrails gave a favourable omen. Empromancy was also practised, i.e. the observation of the fire consuming the sacrificia flesh. If it burned low or went out, it was a bad sign, and so on. This was not restricted to altar-blames. It was hardly too much to say that everything capable of being affected by a moderate-sized fire was scrutinized at signs at a period or another. Among most important was the divination, which was part of the countless other forms of divination, of which we have no room even to give a list, were relatively insignificant, formed no part of any State religion, and were only here and there adopted by oracles. Harmospiey was an official method, and in important matters an oracle was consulted. Dreams, however, deserve separate mention. The recognized medium of chthonian oracles; they were opposed by the Apolline cult, but found a footing in the myth of the genuine Apollo was called Asklepios. The cult of heroes, indeed, grew very important at this period, and Asklepios was particularly popular. His shrine at, or rather near, Epidaurus—today one of the most interesting remains in Greece—and many lesser shrines at Athens and elsewhere, healed the sick by means of incuba (ἐγγελματική, ἐγκλάσεις). The patient, after preliminary rites, slept in the temple, and in a dream was tended or advised—generally the latter—by Asklepios and the latter—by Asklepios and the priestesses. The priestesses of the priests (Ἀσκληπιάδαι) came into play. That it was considerable is clear, both from a number of votive offerings describing treatments which, even by modern standards, are quite scientific, and also in that it was to reveal the god's meaning to the less sharp-witted public.

8 The prophetic tradition of Delphi, several heroes, notably Triphonios of Lelandia, gave oracles by dreams or visions. Finally, as illustrating the extent to which divination at this time became a regular profession, despite the theoretical importance of individual inspiration, mention should be made of the great prophetesses—the laukhiph or Elis and the Melanipodidai of Akarnania being the most famous. Alongside of these families (or gilds) of professional diviners, we begin to hear of that very curious figure of later mythologv, the Sibyl.

and the consequent influence of foreign cults; secondly, the part played by philosophy in regard to the belief in divination; and, finally, the degeneration of the great national cults, and the consequent downfall of the official divination—oracular and other—which flourished among them.

Of the foreign ideas which came in with the backwash from Alexander's conquests, the most noteworthy was the Chaldeo-Egyptian belief in astrology.1 Somewhat modified by Greek ideas, it pervaded the whole of Western thought, and became the principal form of divination. This is not the place to go into details as to the methods employed, but a few salient points may be noted. Firstly, it was almost wholly novel. The idea of taking omens from the heavenly bodies or from such phenomena as lightning and shooting stars is old enough in Greece, but no elaborate system, and no idea of anything like planetary influences, had ever existed. This was the product of the sidereal cults of the East; it is a remarkable fact that the Greeks hardly worshipped the heavenly bodies at all.2 Astrology—this is another noticeable fact—aided the late tendency to syncretism. Thus, while joined with the popularity of the Eastern sun-gods it identified Apollo with Helios, Artemis was confounded with Selene; the rammed (and doubtfully Hellenic) Zeus Ammon with the sign Aries, and so on. Thirdly, astrology invaded all branches of divination to such an extent that diviners must have been using terms borrowed from it, and tracing the influence of the stars in the formation of beasts' entrails and the like.

Philosophers of the decadence and of the period immediately following it (that in which Plato and Aristotle lived and wrote) were, on the whole, favourable to divination. Plato, at heart a mystic, while outspokenly contemptuous of the disreputable vendors of indulgences and oracles, was by no means adverse to beliefs in the supernatural, and, in fact, seems to have held that divination was not only possible, but a reality;3 and his later followers, the Neo-Platonists, who constructed an elaborate system of theurgy on the lines of the Timaeus, found therein a full and satisfactory explanation of oracles. Epigenes, indeed, whose system denied Providence and Divine interest or interference in human affairs, was hostile to the pretensions of diviners; but the Stoics passionately charged them with prostituting as divination the study of Fate.4 The degenerate and mongrel system, which goes by the name of Neo-Pythagoreanism, was freely credulous of all marvels, divination included, and produced its own inspired prophet, Apollonius of Tyana (q.v.).

Under pressure of foreign cults, including finally Mithraism and Christianity, the ancient State religions of Greece became gradually weaker; and this inevitably entailed a decline in the importance of the oracles, and of official diviners. Individualism also was rampant, as is shown by the popularity of the post-Aristotelian philosophies; and this meant that divination became more and more private. Indeed, it was only in this way that the oracles ceased at the coming of Christ,5 it is a fact that by about 100 A.D. they were no longer of great importance;6 indeed, quite apart from other causes, the political insignificance of Greece meant, sooner or later, the insignificance of her great religious institutions. Finally, Christian opposition for the most part stampéd out pagan divination.

Fierce were, however, survivals. Astrology lingered on despite theological denunciation; political opposition it had already endured for centuries—and still survives. Oniromancy, which had grown into a most complicated science, still retained a considerable hold on popular belief. Finally, the prophecies of the Seer or Silvie, the number and names vary—one being in later times of Judeo-Christian origin, were hospitably received and ranked almost equal with the Hebrew prophets.

The old man is Silly-rod,' says Aristophanes, 'slave of his master Demos; and in the Middle Ages her name was still held in reverence; 'Teste Daudis sibi Sibylla.'

H. J. ROSE.

DIVINATION (Indian).—In India, divination has gone through two phases of development. Originally it seems to have been practised chiefly with the intention of obviating the evil consequences of omens and portents; in the later period, rather to ascertain the exact nature of the good or evil which the oracles denoted. Both phases presuppose the firm belief in omens and portents, which appears to be a common feature of primitive culture. In India this belief can be traced back to the Vedic Sanihitas; birds are invoked to be appeased, and certain birds, especially pigeons and owls, are said to be messengers of death (Nirrti, Yama).1 A great many details are furnished by later Vedic books, especially the Adbhuta Brahman, which forms the last chapter of the Saudhins Brahman of the Samaveda, and the 15th chapter of the Kausika Sutra of the Atharvaveda.2 The subjects treated in the 12 paragraphs of the Adbhuta Brahman are, according to Weber's enumeration: common incidents, diseases of men and cattle, agricultural calamities, loss of ornaments, earthquakes, phenomena in the air and the sky, miraculous happenings to altars and idols, electrical phenomena, monsters; in each case the god is named to whose province the particular incident belongs, and the mantra, or the incantation which they used in the case of an evil sign, is prescribed. The second treatise is similar to the first; but it differs from it in this, that in it the omens and portents are more specialized and more varied, and so the Brahman who is to prescribe the remedy for them must belong to the Atharvaveda. The last point need not surprise us, for that Veda was largely engaged with occasional and practical practices, with charms and spells; hence the house-priest (purokht) of the king, who had to ward off the evil influences which menaced king and country, was required to be deeply versed in the secret lore of the Atharvaveda. Therefore all that refers to magic and magic was naturally better fitted to be within the province of that Veda. The last contribution to it is the 72 Parishitas (appendices or paraparana),3 treaties on different subjects connected with the Atharvaveda. Some of them are of comparatively late age, since they are better and more Greek astronomy. About a third part of this

3 Both treaties have been edited, translated, and commented upon by A. Weber (Zwei sockeleiche Texte über Omen und Portente, Berlin, 1859, p. 318 f.).
4 Ind. Literaturgesch., Berlin, 1878, p. 76.
5 Die Parishita des Atharvaveda, Leipzig, 1889, Melville Bolling and Julius von Neugeböl.
work deals with prognostics, especially from phenomena in the atmosphere and the heavens. Here we find divination in its later development, i.e., with the object of predicting future events. But the expositionary ceremonials and monstros, so characteristic of the preceding period, continued to be looked upon as sacred, and their importance neither diminished, nor, indeed, was thus fully eschewed. The Parishita, called Adbhutasangi, is, on the whole, a metrical paraphrase of part of the Adbhuta Brahmana mentioned above.

The art of divination with which we have dealt as yet was part of the religion, especially of the Atharva priest, who was the orthodox soothsayer. There were probably already in early times soothsayers and fortune-tellers of no religious character (parvatikas, maunharikas, samsraddhis) who made single appearances and, as a matter of fact, the whole art of divination became independent of religion when Greek astronomy and astrology were introduced into India in the early centuries of our era. The astrologer possessed what was believed to be a really divine gift of predicting the future, the accuracy of which was uncontestably proved in one branch of his science—the astronomical—and was, therefore, readily believed in in the other—the astrological one. For Indian and astrology were in India, as indeed also in Europe till the recently, two branches of one science. And the Indian astrologer added to these two branches a third—the art of divination, hitherto practised by the Atharva priest. We shall call the latter natural astrology, in contradistinction to judicial astrology adopted from the Greeks. An accomplished astrologer or astronomer (jyotisa) had to know astronomy, judicial astrology (hord), and natural astrology. Natural astrology is subdivided into (1) nativity (jataka); (2) prognostics for journeys, especially marches of princes in war (yatra); and (3) horoscope for weddings (eivaka). Natural astrology is treated in works which are called Satsangas. The Kingston's Satsanga is the Bhayat Satsanga of Vara Mihira, written about the middle of the 6th cent. A.D., on which an extensive and very valuable commentary was composed by Bhattacharjala in the 9th century. The contents of the Bhayat Satsanga may serve as a summary of the original Indian art of divination—of course, in its last stage of development. We therefore transcribe Varaha Mihira's enumeration of them (ii. 5, tr. H. Kern, JRAS, 1869):

"... and the other eight planets, and, during it, their natural and unnatural symptoms, their size, colour, and brightness of the rays, their shape, risings and settings, their speed, their antigressions, retrogressions, the conjunctions of planets with asteroids, etc., as well as the respective consequences for the different parts of the globe; the course of Sun, the course of the seven Sery (Great Bear), the division of things as belonging to the domain of each planet, the same as appertaining to the domain of each asterism, the conjunction of the five planets in the figure of a triangle, etc., the planetary war, the conjunction of the five planets with the moon, the effects produced by the planets on the years passed over by them, the symptoms of pregnancy of the clouds, the conjunction of the moon with Rohini, with Swati, with Asvini; the foretelling of instant rains, the conclusions to be drawn from the growth of flowers and plants as to the produce of trees and crops, the moon's eye, the beautiful, the cloudy, the piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the cloud, the clearness of piercing the sun's disk at rising or setting, the wind of the woman—sky, the cloud, the clearness of piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the clearness of piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the cloud, the piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the cloud, the piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the cloud, the piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the cloud, the piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the cloud, the piercing the sun's disk at rising or setting, the wind, the meteor, the glory of the earth, the gloaming, the glorying of midnight, the sun's disk, the cloud.

The Jains also practised the art of divination. According to a passage in the Kalpasutra, it had eight branches (asthasangha, maunharika, etc.) which are specified in the commentary to the passage in question: diceya, utpal, antarika, bhavna, aiga, svarna, laksana, and vaqyana; in another enumeration the same branches are given, only that vaqyana is added, and diceya is omitted. As far as can be judged from this division, the Jain system of prognostics must, on the whole, have been similar to that of the Hindus in general."

1 The maunharika is the predecessor of the astrologer proper. Ch'ang-yun, who wrote about 300 B.C., makes the maunharikas (Rutulgran, Myare, 1899, p. 38), while Kamadhatu, a late authority, speaks of the matranga-tattvavattva (The Nitisara, by Kamadhatu, Calcutta, 1884, iv. 33). 2 H. Kern, Bhayat Satsanga, Calcutta, 1865, Preface, p. 20 ff. Edited, together with the text, in the Vaisraman series, 1835-47.
DIVINATION (Japanese).—T. Ayres, "The Japanese for 'divination' is *ura* or *ura-maki*.

If we find the word *ura* signifying 'the back or hind part of anything, inside, the reverse; hence the heart, the mind, divination; things unseen, soothsaying.' The primitive meaning is clearly seen in present-day phrases: *e. g. te no *ura means the palm of the hand; *nionno no *ura, the inside of a pot; *ura no iri, a back-house.

From this we see that the first of things unseen, soothsaying, the divination does not necessarily involve a prediction, but only the discovery of something hidden—present, past, or future. It may be employed not only to find out whether such and such an event will occur, to foretell the future, the various objects of divination, we have only to look through the ancient Shinto documents, beginning with the *Kojiki*. Even in the very first pages of the sacred story we find divination playing a part in the life of the people of the period, and the产物, the former part of the child is regrettably difficult to disentangle.

One of the earliest attempts in this lies in the marriage ceremony which the bride is supposed to have discovered the identity of the god who produced badly-formed children; the cause is discovered by divination, viz. that in the marriage ceremony the woman had spoken first (see *Kojiki*, tr. B. H. Chamberlain, p. 225). An eclipse of the sun in 1905, which of the gods on such and such a point, and even to discover why a certain event—generally an untoward one—has occurred in the past.

We find divination practised in innumerable other cases, especially in the *Nihongi*. It is employed to forecast the result of a military expedition (see *Nihongi*, tr. W. G. Aston, vol. i, pp. 121, 227, 267); to reveal the cause of plague, rebellion, and other public calamities (i. 152) or private misfortunes (i. 102); to discover what person is to be entrusted with the sacred vessels (i. 120), or whom should be made to the god (i. 175); whether the Emperor should make sacrifices in person or send a representative (i. 189, 190); why the Emperor's soup almost froze into ice one day (this was due to a case of incest in the court, i. 127); what place should be selected for building a tomb (i. 551) or a palace (ii. 95); what was signified by a mysterious omen (ii. 59, 396).

In addition, to these cases officially reported in the ancient chronicles, we find divination to some extent hinted in the life of individuals in more humble circumstances—from the maiden seeking to know when she will have a husband and what will be his name, to the person who is anxious to recover a lost possession or to find the track of a thief. In the poems of the *Mogoshimin*, which give us a very true and vivid picture of ancient Japanese civilization, divination is employed fairly often in the relations between lovers and married people (see these poems in Satow, *Ancient Japanese Rituals*, T.A.S.J., vol. vii. pt. 4, p. 496, *et al.*). In F. V. Tyrrell, *Primitive and Medieval Japanese Texts*, Oxf. 1906, Romanized texts, pp. 125, 142, *et al.* and Translations, pp. 204, 227, *et al.*

DIVINATION (Japanese).—I. Definition.—The Japanese for 'divination' is *ura* or *ura-maki*.

If we find the word *ura* signifying 'the back or hind part of anything, inside, the reverse; hence the heart, the mind, divination; things unseen, soothsaying.' The primitive meaning is clearly seen in present-day phrases: *e. g. te no *ura means the palm of the hand; *nionno no *ura, the inside of a pot; *ura no iri, a back-house.

From this we see that the first of things unseen, soothsaying, the divination does not necessarily involve a prediction, but only the discovery of something hidden—present, past, or future. It may be employed not only to find out whether such and such an event will occur, to foretell the future, the various objects of divination, we have only to look through the ancient Shinto documents, beginning with the *Kojiki*. Even in the very first pages of the sacred story we find divination playing a part in the life of the people of the period, and the produced badly-formed children; the cause is discovered by divination, viz. that in the marriage ceremony the woman had spoken first (see *Kojiki*, tr. B. H. Chamberlain, p. 225). An eclipse of the sun in 1905, which of the gods on such and such a point, and even to discover why a certain event—generally an untoward one—has occurred in the past.

We find divination practised in innumerable other cases, especially in the *Nihongi*. It is employed to forecast the result of a military expedition (see *Nihongi*, tr. W. G. Aston, vol. i, pp. 121, 227, 267); to reveal the cause of plague, rebellion, and other public calamities (i. 152) or private misfortunes (i. 102); to discover what person is to be entrusted with the sacred vessels (i. 120), or whom should be made to the god (i. 175); whether the Emperor should make sacrifices in person or send a representative (i. 189, 190); why the Emperor's soup almost froze into ice one day (this was due to a case of incest in the court, i. 127); what place should be selected for building a tomb (i. 551) or a palace (ii. 95); what was signified by a mysterious omen (ii. 59, 396).

In addition, to these cases officially reported in the ancient chronicles, we find divination to some extent hinted in the life of individuals in more humble circumstances—from the maiden seeking to know when she will have a husband and what will be his name, to the person who is anxious to recover a lost possession or to find the track of a thief. In the poems of the *Mogoshimin*, which give us a very true and vivid picture of ancient Japanese civilization, divination is employed fairly often in the relations between lovers and married people (see these poems in Satow, *Ancient Japanese Rituals*, T.A.S.J., vol. vii. pt. 4, p. 496, *et al.*). In F. V. Tyrrell, *Primitive and Medieval Japanese Texts*, Oxf. 1906, Romanized texts, pp. 125, 142, *et al.* and Translations, pp. 204, 227, *et al.*

DIVINATION is a regular process in certain essential points of Shinto worship; it was by
DIVINATION (Japanese)

neither the wisdom nor the power of their gods. Was it not strange, for example, that, on being consulted by the first couple, the greatest gods should show themselves unable to reply until they in their turn appealed to some sort of supernatural intelligence? Hirata, who is always ingenious, tries to solve the question by comparing them to a prince who has entrusted a particular function to each of his servants, and who, on being asked for information on any point whatsoever, begs the questioner to apply to the person who is best informed on the subject; but this ulterior excuse of an apologist cannot efface the impression left on us by the texts. In a word, since gods as well as men must have recourse to divination, it is very probable that, in ancient Shintō, divination was an affair of magic far more than of religion.

4. Various forms. — (a) Official divination. — Having made this important point clear, we shall now take up the various forms of divination. We must distinguish between the official procedure, i.e. the ‘Greater Divination,’ and other minor proceedings. The ‘Greater Divination’ consisted in omantiscopesco, a process which is met with once or twice among the Chinese and the Japanese of the North-East of Asia, but also among certain Western peoples, like the ancient Germans, the Greeks ancient and modern, and even, down to the latest recorded date, the Highlanders of Scotland (the custom of ‘reading the spleal’). In primitive Japan, omantiscopesco was practised by laying the shoulder-blade of a deer over a bright fire and watching the cracks produced upon it by the heat. This was the form of divination resorted to by the gods in the circumstances already mentioned, and we find that it was under the special care of the god Koyane, the legendary ancestor of the Nakatomi, or hereditary corporation of priests ruling the Emperor in his sacred functions (see esp. Kojiki, 64, and cf. a variant in Nihon g, i. 92 1), which claims to give the mythical origin of the custom by telling how the god Koyane, at the command of the great god Taka-
mōfu, was made to divine the future by means of the Greater Divination, and thus to do his service. Similarly, when we find the Emperor commanding a divination, which is then carried out by the Palace college of diviners, it is the ‘Greater Divination’ of the present day, though the text simply speaks of ‘divination’ without further epithet. This practice underwent modification very early by the substitution, in the place of the deer’s shoulder-blade, of the tortoise carapace employed by the Chinese. This innovation was undoubtedly fac-
tilated by the fact that the tortoise already held an important place in native Japanese mythology (Kojiki, i. 100; Nihon g, i. 113, 182, etc.).

The first reference to it is found in the Nihon g (L. 152); the Emperor Suinin, in the year 91 B.C., wishing to discover the cause of various calamities which had laid waste the country, decided ‘to commit the matter to the Sacred Tortoise;’ but this detail is certainly an anchormoth, as indeed in the whole context in which it appears, for we find the Emperor attributing national calamities to his personal faults, in accordance with Chinese theory. As a matter of fact, the substitution must have taken place about the year 555, when some Koreans, of high repute in the art of divination, were brought to the Japanese court. The Nihon g story shows us, at least, that the tortoise carapace was the usual means of divination at the time of its composition, i.e. in the 8th cent., and the Engishiki (10th cent.) mentions no other process in the circumstances of the occasion.

It was only in certain provinces that the deer’s shoulder-blade of the primitive mythology continued to be employed. Just as the tortoise carapace was always used, it is said, in the island of Tsushima, to examine the meaning of cracks in the bones or in large quadrupeds, but where the waters abounded in tortoises, the deer’s shoulder-blade remained in use, long after the introduction of the Chinese custom, in certain villages; this survival is men-
tioned in old writings even at the end of the 17th cent. (see Satow, loc. cit. 453). It can, moreover, be observed even to-day among the Ainu (see N. G. Munro, ‘Some Origins and Survivals,’ in TASF, vol. xix., pp. 455-458).

(b) Secondary forms. — Of secondary and non-
official forms of divination the principal was tsuji-
u, or ‘cross-roads divination.’ We find in the poems of the Manyoshū that it was employed chiefly by women and lovers. The persons having recourse to this form of divination went to the cross-roads at dusk (whence the other frequent name of yufu-ura, ‘evening divination’), planted a stick in the ground, and then took the results of the divination as a hint to whom they wanted to know. In this rite, the stick represents Funado, the staff which Izanagi drove into the sand when leaving Hades, in order to check the pursuit of the infernal deities (just as the American Indians use staffs to drive off the spirits of the dead), and which was afterwards transformed into a phallic god, a powerful preserver of life, granting protection from the diseases sent by the under-world deities, and at the same time filling the rôle of the signaller of the place where Shintōism (321). Still another method of tsuju-
ura was practised by women. They went to the nearest cross-roads, and there repeated the follow-
ing post, in three times:

Funadoshe, Of Funadoshe,
Yutake no kami ni Yutake no kami
Me no, the god of the evening oracle,
Michi yuku hito no When we meet any,
Ura masa ni se go Deliver the oracle truly!

(Else the first line is explained by the fact that the road gods, and especially Tsuji no kami, were regarded as Ishi no kami, ‘preventive gods,’ against disease and demons.)

While repeating these lines, the women drew a line of demarcation on the road and sprinkled rice; for rice, with the mysterious spirit it con-
tains (aga no mi-tama), was a powerful agent against evil spirits, as is also seen in the custom of sprinkling it in the hat of a pregnant woman (see Le Shintōisme, 134, 303). After this was done, each of the women, turning towards one of the roads, passed a finger along the teeth of a box-
wood comb that she held in her hand, and made it sound three times; this was a means of inviting the god to speak, the word tsuji meaning both ‘box-wood’ and ‘inform me.’ After this, they listened for the words of the wind, which came within the space marked off by the enchanted limits, and drew an answer therefrom. The tsuji-
ura, in these more or less complete forms, seems to have enjoyed popularity for a long time; and is mentioned in the Ohkagura, ‘the Great Mirror,’ a famous pseudo-historical work of the 12th cent. (see Satow, 448); and a passage in the dramatist Chikamatsu Monzaemon (Dickins, op. cit., Tr., p. 56) shows how much importance was attached, even so recently as 200 years ago, to the chance words spoken by people met on the street.

Connected with tsuji-ura we have hashi-ura, ‘bridge divination,’ in which the same processes were employed, but on a bridge instead of on an ordinary path. It is a common practice to exercise these talents at the Japanese court. The Nihon g story shows us, at least, that the tortoise carapace was the usual means of divination at the time of its composition, i.e. in the 8th cent., and the Englishki (10th cent.) mentions no other process in the circumstances of the occasion.

It was only in certain provinces that the deer’s shoulder-blade of the primitive mythology continued to be employed. Just as the tortoise carapace was always used, it is said, in the island of Tsushima, to examine the meaning of cracks in the branches of the other species of tortoise. In this rite, the deer’s shoulder-blade remained in use, long after the introduction of the Chinese custom, in certain villages; this survival is men-
which, if it is not a simple imaginary divination according to the inspiration of the moment, may well contain one of the most ancient applications of this process:

In the beginning, when the Emperor (Keiko, A.D. 71-99, according to traditional chronology) was about to attack the enemy (the Tsu-chi-gumo, 'earth-spiders,' i.e., earth-cave-dwellers), he made a station on the great moor of Kashiha-no.

On this moor there was a stone six feet in length, three feet in breadth, and one foot in thickness, on the top of which was a gridiron. The Emperor therefore prayed, saying: 'If we are to succeed in destroying the Tsu-chi-gumo, when we kick this stone, may we make it mount up like a kashiha leaf.' Accordingly he kicked it, upon which, like a kashiha leaf, it arose to the Great Void' (Nihongi, 1. 1. 10.)

Other secondary forms of divination presented a local character. In the temple of Kasuga, to which belongs one of the chief rituals of ancient Shinto (morto no 2), and in various other provincial temples, such as the others at the beginning, divination by gruel, was practised. The purpose of this divination was to find out what kinds of vegetables and cereals it would be best to sow for the year. It took place on the 15th of the 1st month, the festival of Setsubun no kuru (see above). A pot was placed before the gods, and in it were boiled some adzuki beans (Phascolus radiatus)—a little red bean whose colour served to suggest the idea of health, of victory over the demons of disease (people who visit Japanese shrines may see this used even to-day to colour sacred rice—the rice, c.g., offered on the domestic altar at the annual Feast of Ancestors). When this gruel was cooked, 54 tubes of reed or bamboo were plunged into it, each bearing the name of one of the vegetables it was proposed to cultivate; next, the priests withdrew the tubes with chopsticks, and derived prognostics as to the good or bad crops to be borne by each particular kind of grain from the manner in which the grains of offere were, mixed with the bean-gruel, went into the tubes. The peasants then sowed their seed according to these indications. An analogous, but less important, process consisted in arranging beans round the fire, and drawing omens from the manner in which they turned black or remained untouched (Satow, 418; Aston, 312). Koto-no-ura, or 'harp divination,' was another local form. It was employed at Ise to made an oracle of the purity of the fire, and to read the future. In the three great annual ceremonies, as also of the tables, vessels, and other objects employed to present offerings. The night before the ceremony, at midnight, a priest stood with a harp at one end of the purifying path, which was to lead to the temple. Approaching the temple, he prayed the Sun-goddess to give light on the point requiring elucidation. Then he struck the harp three times, each time uttering a loud 'Hush,' after which he asked all the gods to come down from the heavens to answer his question, pronouncing the following three-fold poetic formula:

Aharu ya!  
Asoh hiruto su to massasu;  
Akaru ni,  
Asa tasu koto bumi tasu kimi,  
Otsukinabi!  
(We do not merely amuse ourselves;  
On to your splendid seat,  
Divine !)

Aharu ya!  
Asoh hiruto su to massasu;  
Akaru ni,  
Nara Hadeboshi noo,  
Otsukinibi!  
(We do not merely amuse ourselves;  
On to your splendid seat,  
Descend!)

Aharu ya!  
Asoh hiruto su to massasu;  
Akaru ni,  
Uha tasu okeya shita tasu okeya,  
Macuriri tanaka!  
(We do not know who the two 'elder brothers' invoked in the second last line were.)

After this formula, the names of all the priests were called, and at each one the officiant asked: 'Is he clean or unclean?' He then struck the harp again, and a process which recalls certain rites of Polynesian sorcerers, tried to whistle by drawing in his breath; only if the whistle could be heard was the priest in question considered clean. The same rite was employed to decide the same question as to the priests who had prepared the offerings, the offerings themselves, and the material utensils. Finally, the priest sounded his harp again three times, with a solemn 'Hush!' and sent the gods back to their own abode by reciting a formula of opposite meaning from the preceding one.

This curious ceremony, in which magic plays the dominant part, is not described in detail except in one work of the 12th cent.; but an 8th cent. document makes allusion to it, and Satow is right in thinking (op. cit. 450) that it is a pure divination, and may be a survival of the Polynesian divination. The word for divination is kait-zone (see Le Shinritosiose, 166), the same may be the case with that of the kaituaka.

We have no precise information regarding this divination by divination by divination by divination. It is not clear in ancient Japan (Satow, 449)—we do not even know whether it resembled the Chinese system of bird-divination. On the other hand, there is no doubt as to the Chinese origin of such methods as astrolog or the like, see the Nihon (ii. 11. 26), 'a platform was for the first time erected from which to divine by means of the stars, and also geomancy (Nihon, ii. 76, 126), cheironomia, physiognomies, etc.

(c) Isolated Cases of Divination: After the regular processes of divination, it is advisable to mention the individual and accidental recourse to various means of divination invented on the spur of the moment. Occurrences of this nature are very often found in the most ancient annals. To show the process to the life, it will be of interest to quote a passage from the Nihon, relating to Jinnu Tenuo, the legendary founder of the Japanese Empire:

All the placenames supposed by the enemy (the indigeneous race who had to be conquered) were strong positions, and therefore the roads were cut off and obstructed, and the enemy, seeing that there was no room for passing and no place of concealment, at this, made prayer on that night in person, and then fell asleep. The Heavenly Deity appeared to him in a dream, and instructed him, saying: 'Take earth from within the shrine of the Heavenly Mount Raku (a mountain in Yamato), and of it make eighty Heavenly platters (for rice). Also make sacred jars (for
DIVINATION (Japanese)

The Emperor received with reverence the directions given in his dreams. Carried out, they led to the execution. He caused Shihatake-hiko (a fisherman whom he had with him as guide) to put on ragged garments and a grass raincoat and hail himself as an offering. He also caused Ukichi the Younger (a local chief who had joined his party) to cover himself with a winnowing tray, so as to assume the appearance of an old man, and then he addressed them, saying: "Do ye two proceed to the Heavenly Mount Kagu, and secretly take the name of this sacred council. By so doing, ye shall be the chosen of Heaven, and will be able to return the curse. By means of you I shall then divine whether or not I shall be successful in founding the Empire. Do ye unto, and be wise. Follow your own army by the road, and make all possible. Then Shihatake-hiko prayed, and said, "All is now possible for our Emperor to conquer the Nifu, let the road by which we must travel become open. But if not, let the brigands surely oppose our passage." Having thus spoken, they set forth, and went straight onwards. Over the housetop, the two men, laughed loudly, and said: "What an uncouth old man and old woman!" So with one accord they left the road, and allowed the two men to pass and proceed to the mountain, where they took the chunk and returned it. Henceforward the Emperor was greatly pleased, and with this clay he made eighty platters, eighty Heavenly small jars and sacred jars, with which he went up to the upper waters of the River Nifu and sacrificed to the gods of Heaven and Earth. Immediately, on the Assa plain by the river of the gods, were made the sacred jars and the eighty platters without using water. If the name of埕 is formed, then shall I assuredly without effort and without recourse to the might of arms resolve the difficulties of peace. I made the name, which for the first time came into existence. Again he made a vow, saying: "Let the precious jars and platters return in the River Nifu. If the fishes, whether great or small, become every one drunken and are carried down the stream, like as it were to flow along leaves, then shall I assuredly succeed in establishing this land. But if this be not so, there will I let the fishes carry the jars in the river. Their mouths turned downward, and after a while the fish all came to the surface, gasping and gasping as they floated down. Therefore, Shihatake-hiko, seeing this, reported it to the Emperor, who was greatly rejoiced, and, placing up a five-floored-branched natatsuki (Tavern) tree of the Nifu, he made a vow, and worshipped therein, and so came to all the gods. It was with this that the custom of setting up new guilds and constructing temples began." (Nihonshigi, ii. 119-113.)

In this one passage, and with a single point to elucidate, we have no fewer than four different processes of divination. The case of the famous Empress Jingō, the conqueror of Korea, is similar: Proceeding northwards, she arrived at the district of Matara in the province of Hizen, and partook of food on the banks of the River Wagaawa, in the village of Tanashima. Here the Empress read in a book formed of rice and made of rice. She took out a piece of rice used as bait. Pulling out the threads of her garment, she made of them a line. Then, mounting upon a stump of wood, she cast it into the River, raising the line, and prayed, saying: "We are proceeding westward, where we desire to gain possession of the Land of Treasure. If we are to succeed, let the winds of the river blow there." Accordingly the winds raised her fishing-rod, she caught a trout. And further on, at the town of Kasashi, and after returning to the town of Kamashima, and, looking at her hair, looked over the sea, saying: "If, having received the instructions of the Gods of Heaven and Earth, and trusting in the spirits of the imperial ancestors, floating across the deep blue sea, intend in person to chastise the West. Therefore do I now have my head in the water of the sea. If I am to be successful, let my hair part spontaneously in two." Accordingly she entered the sea and bathed, and her hair parted of its own accord. The Empress bound it up parted into bunches (i.e. in mainy fashion) (Nihongo, i. 272, 273; cf. also 229, 237, 251.)

The writer concludes.

In addition to these important but picturesque secondary meanings of divination, it remains to notice a method of very general character, but whose lack of originality renders it somewhat less interesting; this is divination by lots. We find it already mentioned in the Awaiki (ii. 257) which, in telling of a conspiracy formed in A.D. 658, says that the various conspiring princes 'divined the future of their treasonous conspiracy by drawing slips of paper.' Reconnoissance was also had to sticks on which numbers were inscribed. The nature of this method sometimes this method by prayers to the gods (Aston, 343) sometimes it constituted a purely magical process, as in the case of the above-mentioned conspiracy; and sometimes it was nothing more than a handly secular means of deciding something by chance, such as is constantly used by people to-day as far removed from religion as from magic; in Tokyo, e.g., at Jurinji (the temple of the gods of shipping) and a bundle of cords of different lengths all tied in a knot, and use it to decide, when a passenger appears, which of them is to have the privilege of conducting him. But this form of divination, vulgar as it is, assumes a quite outstanding importance when we consider that the drawing of lots plays a dominant part in the divination founded upon the complicated Chinese diagrams of the Yi-kung, the 'Book of Changes' (Eki in Japanese) of our diviner's manual. It is just because of its divinatory character, that was one of the first Chinese works to be introduced into Japan (in A.D. 553, according to the Nihongi, ii. 68; cf. 72, 306), and it became the basis of the system of divination in use at present. Takashima Kaemon, who was the most celebrated diviner in modern Japan, took this work as the foundation for his art; when he was only a student, he was put in prison for some youthful misdemeanour, and, having nothing but this ancient classic beside him, he discovered the secret of the meditations which brought success to his brilliant career. The present writer frequently had occasion to meet with him, from his own mouth an account of his manner of making use of the number of the Yi-kung, and he was always able to receive his lessons, and he can say that, if the principles of the system are doubtful, its individual results are often wonderful: the value of divination is in proportion to the skill of the diviner, and the writer has found that a very able promoter of so many new schemes, was always a prudent man who could see far ahead. As Chamberlain says (Things Japanese, Lond. 1898, p. 112), Takashima, after studying the Yi-kung, 'realized the futility of our own method of consulting them, and was able to see at once that they had a chance, but there are many Japanese, even in the highest grades of society, who also profited by his wide experience of men and things; one has only to read the Takashima Ekiden of Shigetake Sugurana (Tokyo, 1893) to get a good estimate, from numerous examples, of the penetration of his mind and the wisdom of his counsel. The Japanese, moreover, even the educated classes, still hold divination in high esteem, although it is not officially recognized by modern Japan, and have it, consequently, in all sorts of circumstances, from a wedding to a removal to another quarter of the town. At the University of Tokyo, 15 or 20 years ago, the present writer had as colleague an old professor of the ancient school, who still adhered religiously to the tuft of hair of the feudal period; the last survivor of a perished race of servants, he was greatly esteemed by his colleagues as the only man capable of expounding the Yi-kung. Among the people divination is correspondingly widespread; every quarter has its modest diviner working with his divining-rods and consulting his diagrams, and telling more or less skilfully how lost possessions may be found, and will give personal experiences in this connexion, but prefers to quote a little anecdote of Chamberlain's (loc. cit.), which shows both the popularity and the weak points of divination:

'A favourite saying of the present writer's was lost in November 1895, and all search, advertisement, and application to the police proved unavailing. Meanwhile, the servants and their friends prudently had recourse to no less than three diviners, two of whom were priests. One of these foretold the dog's return in a month and another divined that an ancient ode containing the words, "If I hear that thou art away, I will forthwith return," should be written on slips of paper and tossed uponUPPER, and directed that an ancient ode containing the words of these slips that drew our attention to the matter. The best of it is that the dog was found, and, that, too, in a month of April, namely in 1896, after having been missing for three years and five months!'
forms of Japanese divination, ancient and modern, we have still a special process of its application to investigate, viz. ordeals. This judicial divination is represented in ancient mythology by a well-known story giving a case of ordeal by fire.

The young child of Ninigi, having been sent by the other gods to earth to govern Japan, married Katsuya-hana-makuyume (the princess blossoming brilliantly like the flowers of the Tsubaki tree) by thraldom after a certain night, and the young husband was astonished; she then shot herself up in an underground hali (a shrine, where fire does duty for the abode of Heaven, where the Japanese women used to retire for delivery), and set fire to the hall with her own hands, who had thrown the child to her husband in delivery, in order to prove her innocence by the fire-test. "If the child," she said, "with which I am pregnant be the child of an earthly deity (i.e., of a god of the country), it will not lose its beauty, but if he be the arch-rival child of the Heavenly deity (i.e., the child and the descendant of the sun-goddess), it will be fortunate." And the princess came out of the test victorious, after having brought forth a very pretty girl, whom they named Awa-ya, the family (or the God of Heaven and Earth) by ordeal by burning water. Hereupon Takeki no Sukune and Umashi-no-Sukune went out together to the banks of the Shiki-river, and underwent the ordeal of boiling water. Takeki no Sukune was victorious. Taking his cross-sword, he cut the end of his branch of a kusu-plant (black mulberry) in such a way that it was long enough to say him, when the Emperor ordered him to let it go (Niiso-i, i. 267 f.).

A more important case was occasioned, in the beginning of the 5th cent., by the pretensions of high families who were attempting to increase their prestige by false genealogies. In the year 415, two Imperial decreees of Ingoyo ensured those powerful families who "purposely lay claim to high family," those bold functionaries who "describe themselves, some as descendants of Emperors, others attributing to their race a miraculous origin, and saying that their ancestors came down from Heaven, they have dashed another brick in the wall in order to justify the Emperor to receive the order to remedy it."

"Single Houses," he said, "have multiplied and have formed another ten thousand lineages of doubtful legitimacy. Therefore let the people of the various Houses and surname themselves and practise abstinence, and let them, each one calling the gods to witness, plunge their hands in boiling water." The cauldrons of the ordeal by boiling water were therefore placed on the Evil Door of Words" spur of the Amagashi Hill. Everybody was called to test his or her truth or false, and all those who were false were burned. Therefore no one who had falsified their titles were afraid, and, slipping away before the ordeal, they continued to come forward. From that time forward the Houses and surnames were spontaneously ordered. There was no longer any one who falsified them (Niiso-i, i. 365 f., and Kojiki, i. 267 f.).

A gloss on this passage of the Nihongi, probably as ancient as the text itself, tells us that this ordeal, known to-day under the name of yasugari, was then called kyogushichi, and adds valuable evidence to the processes of usage of this period:

"Sometimes mud was put into a cauldron and made to boil up; then the arms were bored, and the boiling mud stirred with them. Sometimes an axe was heated red-hot and placed on the hand of the person to be tried; this was called the test of death by plunging into the hot water!" (Nihongi, i. 227).

Still other forms of ordeal are noticed by a Chinese traveller, who visited Japan in the year 600, and, in enquiring both the means of torture and the tests employed to force the confession of criminals and the tests for the purpose of distinguishing the guilty from the innocent, gives the following exposition:

"In the trial of cases where a great wrong has been suffered, those who will not confess have their knees squeezed with a piece of wood, or have their necksawn with the very narrow edge of a very large knife. Or such other hand, even in water, and the disputants are ordered to take them. It is supposed that he who is in the wrong gets his hand scalded. Or, again, a snake is put in a jar, and they are made to take it out; it being supposed that he who is in the wrong will get his hands bitten. ("Tu-Tuan-Lin's Account of Japan," by E. H. Parker, in TAMS, vol. xxii. pt. 2, p. 421.)

This serpent ordeal, which is also found among other peoples, e.g., the blacks of Africa, was certainly in existence in Japan in the primitive period. We are indebted to this curious passage of the Nihongi, to which Susa-no-wo subjects his future son-in-law, Oho-kuni-nushi, who is made to sleep in the hut of serpents, and then in the hut of centipedes and wasps; he would never have escaped if he had not had the help of the magic scarfs of princess Susurin, and Susa-no-wo ended by showing him highest esteem, because, seeing him spit red earth mixed with nukusa-berries (Amphanthes aspera), he thought he was eating the centipedes themselves (Kojiki, 58 f.).

Later on, and down to the present period, the tests of plunging the hands in boiling water and walking bare-footed over a bed of burning coals, with, however, special precautions, were employed as a means of rousing the piety of believers; but this is no longer practiced. On the 17th cent., Kaempfer observed a curious ordeal for forcing confession of a crime, which consisted in making the accused swallow, in a little water, a small piece of paper with drawings of ravens or other black birds upon it (Koanefer, Hist. des Japon, Fr. ed., Paris, 1732, bk. iii. ch. 5, p. 51). Perhaps we may see here a faint recollection of the god of scare-crows, who appears in primitive mythology and is thought to know everything under the sun (see Le Shinto-Jmobile, 156).

6. Omens and dreams.—All that now remains to be treated is omens and dreams. These come under divination, even though in them we are not dealing in principle, with processes involving the active initiative of man, but only with spontaneous facts, outside of man, for which he seeks an interpretation after they have occurred. Omens are often mentioned in mythology and ancient annals. Without speaking of omens that are looked for by those interested, and therefore belong to the class of divinations devised on the spot (e.g., in Kojiki, 292, while two chiefs, on the eve of an expedition, "hunted for an omen," and one of them climbed a bamboo, when the other, tree being uprooted the tree and devoured the man), we could give numerous examples of omens properly so-called, i.e., independent of the human will. As a general rule, white or red animals, which were then striking in one or both of their peculiarities of usage of this period: harmonized with the favourite colours of a solar religion like Shinto, were regarded as of good omen (see, for white animals, Nihongi, i. 292, ii. 124, 174, 280, 257, 259, 252, 506, 325, 325, 394, 410, 416; and for red animals, 347, 351, 352, 557, 407, 409). But the Japanese also regarded as good omens, perhaps just when it suited them to interpret them as such, any parti-
circular occurrence whatever (e.g. an owl or a wren going into a lying-in hut [Nihongi, i. 277]). Earthquakes, storms, and floods were considered ill omens, foretelling war: they were the scourges calling on each other. Similarly, other extraordinary occurrences, such as the appearance of a comet (Nihongi, ii. 166, 167, 169, 333, 353, 364, 367), or a prolonged eclipse of the sun's light (ib. i. 238); strange incidents like a migration of rats from the capital (ib. ii. 220, 245), or the mysterious movements of a swarm of bees (ib. ii. 209); bad meetings, as with a blind man or a cripple, when starting on a journey (Kojiki, 238); disturbing incidents like a dog coming into a temple and laying down a dead hand (Nihongi, ii. 263); or, finally, unaccountable accidents like a leg-rest breaking with no apparent cause (ib. ii. 256), were all evil omens. It would be useless to attempt to study in detail all these and analogous cases, which are very numerous (see Nihongi, i. 227, 228, 320, ii. 59, 257, 297, 299, 356, 360, 397, 777, 963, 231, 359, etc.). Let us simply point out that this belief in omens is current to this day among the Japanese. Thus, at certain grave crises in her contemporary history, Japan has been seen more than once to turn among the gods the double axe, seeking for light on the future. At a critical point in the Revolution of 1867, the white horse of the temple of Ise escaped, and only returned after three days: from this it was concluded that the Imperial House would thus lose the victory. During the Chino-Japanese war, the sacred horse disappeared for ten days: this foreign war, therefore, was to last three times as long as the previous civil war (rumour registered in the Japan Mail of 17th August). In the same way, dreams were always regarded as affording foresight, by a more or less skilful interpretation, of future events, or indications as to the future behaviour of the person interested. Take, e.g., one of the oldest documents of Shinto, the Tatata no Kaze no Kami no Matsuri (ritual no. 4), which gives its proper legendary origin. For several years, some unknown gods had spoiled all the harvests, and the diviners had not been able to discover the culprits. Then the sovereign himself 'deigned to conjure them,' and they revealed themselves to him in a dream. They were 'Heaven's—august—Pillar's—augustness—Country—august—Pillar's—augustness,' the Wind—god—of—Silk—knots, and received the first certain offerings from him—the foundation of a temple at Tatsata, and a liturgy—in return for which they promised 'to bless and riper the things produced by the great august people of the region under Heaven, firstly the five sorts of grain, down to the last leaf of the herbs' (TASJ, vol. vii. pt. 4, p. 442 f.). We shall now take one of the most dramatic stories of the ancient chronicles:

The Emperor Suinin is betrayed by his wife, who, at the instigation of her accomplices, the princes of Sulu, attempts to assassinate him during his sleep. "So the Heavenly Sovereign, not knowing of this conspiracy, was augurously sleeping, with the Emperor's august knees as his pillow. Just as the Empress tried to cut his august thread with a stiletto; but, though she lifted it, she could not extract the threat of the invisible, irreproachable feeling of sadness, and she wept tears, which fell overwrought on to the Heavenly Sovereign's august face. Straightway the Heavenly Sovereign started up, and asked the Empress, saying: "What is this? I have had a strange dream: a violent shower came from the direction of my wife. I hurriedly wiped my face again, a small dark-coloured snake called itself round my neck. Of what may such a dream be the omen?"

And the Empress, seeing that it would be well to get rid of the guilt upon the innocent, sent word to the Emperor that she had been warned by this dream (Kojiki, 231 f.; cf. Nihongi, i. 171)."

It would be easy to multiply examples of this kind, in which the ancient divinities abound (see Kojiki, 165, 215, 237, 295; Nihongi, i. 115, 153, 155, 161, 165, 281, ii. 56). These divinations given by dreams were considered so natural that they were even attributed to animals, as the following story will show:

"There is a popular story that a long time ago there was a man who went to Toqa, and slept the night on the moor. In the morning there were two deer which he saw, but it was on the point of cock-crow, the male deer addressed the female, saying: "This night I had a dream, in which I saw a white mist rising from the earth, and men were to be seen flying. What may this portend?" The female deer answered and said: "It is not a good augury you will certainly be killed; and, so thy body will be smeared with white salt to correspond with the whiteness of the mist." Now the man who was sleeping the night before discovered the white mist, and then the male deer, as if not yet awake, came a hunter, who shot the male deer, and killed it. And the proverbial saying was: "The divination of that day:"

"Even the belling male deer follows the interpretation of a dream" (Nihongi, i. 290).

There is still one more form of divination, which plays an important part in ancient Shinto, namely, Inspiration (i.e.).

DIVINATION (Jewish).—I. Introductory.—In the present article the writer follows the same system as in the Sun-godess, in not attempting to fix chronological dates for the various forms of divination mentioned in ancient and medieval writings. Without discussing here the wider meaning of magic in general, there is no doubt that this is much older than any literary record, and that it has survived through ages, with comparatively few variations and modifications. The study of folklore has revealed the fact that to a surprising degree exact parallels with some of the most ancient forms of divination have been preserved to this very day, and a careful examination of the latest survivals throws light upon ancient practices which have hitherto remained in many cases obscure. It follows naturally that allusions in the Bible are the oldest literary references to practices of magic and divination. The words denoting magical practices belong, no doubt, to the pre-Biblical period, when their original meaning may have already undergone some sort of change, although this is not very likely, as nothing is preserved with greater tenacity than magical terms and formula. It is thus futile to attempt, on the basis of Hebrew etymology, to fix in every case the precise meaning of these root-words and formula. They remained, although the practices in question are here classed as 'Jewish,' by no means implies that they are of Jewish origin, but only that the knowledge of them has come to us through the medium of the Bible, and that they were doubtless employed by the Jews—in direct contradiction to the spirit and teaching of Judaism—especially during the older period of Jewish history.

Nothing could be more emphatic than Dt 23:2 ("The sacred things belong unto the Lord our God; but the things that are revealed belong unto us and to our children for ever, that we may do all the words of this law"); but scarcely less emphatic is the condemnation of the heathen practices of divination found throughout the Bible. As late as the 2nd cent. B.C. we find Ben Sira protesting against this dabbling in mysteries (Sir 33:1; cf. Bab. Hagg. 139a, and J.Q.R. iii. [1891] 600-8). It is a noteworthy fact that Genesis and the books grouped under the name of Wisdom have the largest number of references in which reference is made to the Jewish—Samuel, and partly Kings) are replete with practices of divination scarcely veiled; they represent a primitive state of mind and cult in which the heathen and the Jewish elements are strangely blended; in some, they can follow up as a transition from one to the other, but the people do not yet clearly distinguish between them. The see
and the prophet rank no higher at the beginning than the diviner and the soothsayer, and, from the information we are able to cull from the pages of the Bible, both seem to act in the same manner, once appealing to Baal, Dagon, and other gods, the other—the prophet and the seer—appealing to the God of Israel, whilst performing almost identical ceremonies and using similar practices. Samuel, Saul, Jonathan, David, Elijah, Elisha, and others are found using divination of various forms and degrees, and by a right interpretation of their practices much is explained. No real condemnation of these practices is found in the historical books of the Old Testament, or in the four books of the Law, and in the fiery denunciations of the 'Later Prophets.' The prophets are always conscious of the heathen origin of these practices, and in the Apocryphal literature they are traced back to the fallen angel Shemhammazai (see the legend in Euth. En. S 3 [Charles]; and cf. Gaster, Chron. of Jerahmeel, 1899, p. 52, eh. xxv.). But no denunciation, however strong and severe, could prevail against the desire of peering into the future and of obtaining information from whatever source, by whatever means man might learn that which is hidden from him.

2. Biblical and post-Biblical references to divination.—The chief passages in the Pentateuch in the process of divination are mentioned are Dt 18:9, Lv 19:31, and 20:27.

(1) It will serve our purpose best to start with the נָהָשָׁ (RV ‘enchanter’), from the root נָהָשׁ, which is of frequent occurrence in the Biblical and Talmudic literature. The word was used by Laban (Gn 30:27); it occurs twice (Nu 23:24; 24:3) in the history of Balaam; and in 1 K 20:9 the Aramean servants of Benhadad watch for a good omen (RV ‘observed diligently’). The history of Gideon and that of Jonathan furnish us with two more examples of this mode of divination from the first word ‘spoken by the enemy’ (Jg 7:13, 11 1:52), and also that of Ezekei at the well (Gn 21:2), which they took as telling them of their future success. We shall meet with a similar kind of divination later on. In the following passages the word נָהָשׁ can also mean only prognosticator from omens, and not ‘enchanter’ as RV: Lv 19:31, Dt 18:9, and 2 K 21:2 (2 Ch 33). It is evidence of W. C. Mitchell. It cannot be connected with נָהָשׁ, ‘serpent’ or ‘snake.’ In the opinion of the present writer, there is no trace of serpent-worship among the Jews, or any of the nations with whom they came in contact. The transformation of Moses into a serpent in the books of the Old Testament is an instance of the category of magic and not to divination or worship; the brazen serpent in the wilderness was merely symbolical and a kind of protective charm, not an object of worship.

(2) A specific form of divination—by means of the קְפָר—ispictured in the history of Joseph (Gn 4 18). To judge from later parallels, the practice must have consisted in filling a cup with water or wine, and gazing intently on the surface of the liquid, till the beholder saw all kinds of images. The method of divining by cups has not been entirely lost. Allusions to it are made indirectly in the Talmud, where the princes (demons) of cups (סֵדָר הָא-כָּפְר) and the princes of the thumb-nails (סֵדָר הָא-בָעֵן) are mentioned. This system of divination is alluded to in manuscripts in the writer’s possession (Cod. 443, etc.), where, in addition to these two, the princes (demons) of the cup-like palm of the hand (סֵדָר הָא-כָּפְר) and the princes of the thumb-nails (סֵדָר הָא-בָעֵן) are mentioned. The method of divining from the palm of the hand is also described in an anonymous compilation (Mifloth Elohim, Lemberg, 1865, no. 69), where it is used for finding the thief and the stolen article. All the formulae given for the above-mentioned modes of divination from egg cups, etc., are identical in all essentials with the latter.

Traces of divination by the cup and by finger-nails have been preserved, though no longer, gods, the other—the prophet and the seer—appealing to the God of Israel, whilst performing almost identical ceremonies and using similar practices. Samuel, Saul, Jonathan, David, Elijah, Elisha, and others are found using divination of various forms and degrees, and by a right interpretation of their practices much is explained. No real condemnation of these practices is found in the historical books of the Old Testament, or in the four books of the Law, and in the fiery denunciations of the ‘Later Prophets.’ The prophets are always conscious of the heathen origin of these practices, and in the Apocryphal literature they are traced back to the fallen angel Shemhammazai (see the legend in Euth. En. S 3 [Charles]; and cf. Gaster, Chron. of Jerahmeel, 1899, p. 52, eh. xxv.). But no denunciation, however strong and severe, could prevail against the desire of peering into the future and of obtaining information from whatever source, by whatever means man might learn that which is hidden from him.

2. Biblical and post-Biblical references to divination.—The chief passages in the Pentateuch in the process of divination are mentioned are Dt 18:9, Lv 19:31, and 20:27.

(1) It will serve our purpose best to start with the נָהָשָׁ (RV ‘enchanter’), from the root נָהָשׁ, which is of frequent occurrence in the Biblical and Talmudic literature. The word was used by Laban (Gn 30:27); it occurs twice (Nu 23:24; 24:3) in the history of Balaam; and in 1 K 20:9 the Aramean servants of Benhadad watch for a good omen (RV ‘observed diligently’). The history of Gideon and that of Jonathan furnish us with two more examples of this mode of divination from the first word ‘spoken by the enemy’ (Jg 7:13, 11 1:52), and also that of Ezekei at the well (Gn 21:2), which they took as telling them of their future success. We shall meet with a similar kind of divination later on. In the following passages the word נָהָשׁ can also mean only prognosticator from omens, and not ‘enchanter’ as RV: Lv 19:31, Dt 18:9, and 2 K 21:2 (2 Ch 33). It is evidence of W. C. Mitchell. It cannot be connected with נָהָשׁ, ‘serpent’ or ‘snake.’ In the opinion of the present writer, there is no trace of serpent-worship among the Jews, or any of the nations with whom they came in contact. The transformation of Moses into a serpent in the books of the Old Testament is an instance of the category of magic and not to divination or worship; the brazen serpent in the wilderness was merely symbolical and a kind of protective charm, not an object of worship.

(2) A specific form of divination—by means of the קְפָר—ispictured in the history of Joseph (Gn 4 18). To judge from later parallels, the practice must have consisted in filling a cup with water or wine, and gazing intently on the surface of the liquid, till the beholder saw all kinds of images. The method of divining by cups has not been entirely lost. Allusions to it are made indirectly in the Talmud, where the princes (demons) of cups (סֵדָר הָא-כָּפְר) and the princes of the thumb-nails (סֵדָר הָא-בָעֵן) are mentioned. This system of divination is alluded to in manuscripts in the writer’s possession (Cod. 443, etc.), where, in addition to these two, the princes (demons) of the cup-like palm of the hand (סֵדָר הָא-כָּפְר) and the princes of the thumb-nails (סֵדָר הָא-בָעֵן) are mentioned. The method of divining from the palm of the hand is also described in an anonymous compilation (Mifloth Elohim, Lemberg, 1865, no. 69), where it is used for finding the thief and the stolen article. All the formulae given for the above-mentioned modes of divination from egg cups, etc., are identical in all essentials with the latter.
of the ark on a kind of errand of divination (Gen 57) no doubt lent colour to the belief so widely spread in the significance of the mysterious movements of the raven. In Bab. Gitin 45a and the Pesikta 156b, Midr. Rabh, on Num. 19, 237b, and Midr. melakh, there is depicted from a given flight of birds the description of the way of Eastern sages. The raven by his croak warns Ish of the danger which awaits him; one who understands the language of birds explains it to him; he takes the warning to heart, and escapes. The references in Talmudic literature are, however, not numerous enough to give us full insight into divination from birds. In the Zohar and in the Tikkanon reference is often made to the twitting of birds as foreshadowing future events such as the death of man, etc. In Cod. Gaster 333 numerous medieaval texts have been collected, dealing with divination from the twitting of birds, and especially from the croaking of the raven. They belong mostly to the pseudo-epigraphical literature. Many of these may be translations from the Arabic, though the original source may lie far back in ancient times. In Hebrew legends King Solomon was credited with the knowledge of the language of birds. He overheard a conversation between a swallow and its female, in which it boasted of being able to destroy the Temple with a kick of its foot, and, questioned by Solomon, said: 'Should I not boast before my wife?' (Parables of Solomon, ed. Constaninides). In the Midr. on Gen. 15.6, the raven is rebuked and humbled by an ant (Moses Haim- molah). A Hebrew tale older than the 12th cent., tells of a boy who was taught the language of birds, and was thereby able to solve some riddles and to foretell events. In the 12th cent. these riddles, riddles from inedited Hebrew MSS., no. iv., 'Story of the Young Man and the Ravens,' in FL vii. (1896) 242 ff. The dove is also mentioned occasionally as a bird of good omen; it is identified with the nation. Through the peculiar movement of a dove Abishai learns of the danger of David, who has fallen into the hand of the giants of Nob, not to speak of the dove sent by Noah after the raven on a similar errand, of the dove as a symbol of the Holy Ghost in the baptism of Jesus (Gaster, ZDMG lxxi. [1908] 232 ff. and 528 ff.).

(2) Ezek 21:26 (26) 'he looked in the liver' refers to a kind of divination (hekpatoscopy) not otherwise known among the Jews. This is not the place to discuss what this looking into the liver or lungs means, and whether the future was prog nosticated from a special conformation of the liver or from the convulsions or spasmodic movements of the liver of the living being. The latter seems to be nearer the truth, for a peculiar kind of divination was still in existence which depended upon the twitching or convulsion of the separate portions of the human body. No doubt it is a direct outcome of the practice of looking into the liver or lungs of sacrificial victims for the purpose of divination, or a parallel to it. The convulsions or twitchings of the living took the place of those of the dying victim of old. A compilation similar to that of which the Book of Malachi is an example, of Hebrew literature under the title Sepher Eksjofeth. It is found already in a manuscript of the 12th century (Br. Mus. Or. 2053, fol. 62e); Judah Hasid, Eleazar of Worms, and others mention it, and Joseph de Vignolins, in his old MSS. (Mel, Tolpippit, Lemberg, 1875, fol. 66b; see also Chwolson, Schriften, St. Petersburg, 1856, ii. 266-272).

(3) Ancient tradition also identifies nāḥash with omens. In the Sifre to Lv 19.20 and in the Sifre to De. 18.10b it is stated that nāḥash means to see omens in such incidents as bread falling from one's mouth, or a staff from one's hand, or a snake crawling on the right side, or a fox on the left hand, or a fox's tail trailing across the road, or a raven crooking when a man starts on a journey. All these forebode evil to his enterprise; furthermore, those who listen to the twittering of birds or the squeaking of a weasel, and those who declare that the flight of birds is described as the wisdom of Eastern sages. The raven by his croak warns Ish of the danger which awaits him; one who understands the language of birds explains it to him; he takes the warning to heart, and escapes. The references in Talmudic literature are, however, not numerous enough to give us full insight into divination from birds. In the Zohar and in the Tikkanon reference is often made to the twitting of birds as foreshadowing future events such as the death of man, etc. In Cod. Gaster 333 numerous medieaval texts have been collected, dealing with divination from the twitting of birds, and especially from the croaking of the raven. They belong mostly to the pseudo-epigraphical literature. Many of these may be translations from the Arabic, though the original source may lie far back in ancient times. In Hebrew legends King Solomon was credited with the knowledge of the language of birds. He overheard a conversation between a swallow and its female, in which it boasted of being able to destroy the Temple with a kick of its foot, and, questioned by Solomon, said: 'Should I not boast before my wife?' (Parables of Solomon, ed. Constaninides). In the Midr. on Gen. 15.6, the raven is rebuked and humbled by an ant (Moses Haim-molah). A Hebrew tale older than the 12th cent., tells of a boy who was taught the language of birds, and was thereby able to solve some riddles and to foretell events. In the 12th cent. these riddles, riddles from inedited Hebrew MSS., no. iv., 'Story of the Young Man and the Ravens,' in FL vii. (1896) 242 ff. The dove is also mentioned occasionally as a bird of good omen; it is identified with the nation. Through the peculiar movement of a dove Abishai learns of the danger of David, who has fallen into the hand of the giants of Nob, not to speak of the dove sent by Noah after the raven on a similar errand, of the dove as a symbol of the Holy Ghost in the baptism of Jesus (Gaster, ZDMG lxxi. [1908] 232 ff. and 528 ff.).

(2) Ezek 21:26 (26) 'he looked in the liver' refers to a kind of divination (hekpatoscopy) not otherwise known among the Jews. This is not the place to discuss what this looking into the liver or lungs means, and whether the future was prog nosticated from a special conformation of the liver or from the convulsions or spasmodic movements of the liver of the living being. The latter seems to be nearer the truth, for a peculiar kind of divination was still in existence which depended upon the twitching or convulsion of the separate portions of the human body. No doubt it is a direct outcome of the practice of looking into the liver or lungs of sacrificial victims for the purpose of divination, or a parallel to it. The convulsions or twitchings of the living took the place of those of the dying victim of old. A compilation similar to that of which the Book of Malachi is an example, of Hebrew literature under the title Sepher Eksjofeth. It is found already in a manuscript of the 12th century (Br. Mus. Or. 2053, fol. 62e); Judah Hasid, Eleazar of Worms, and others mention it, and Joseph de Vignolins, in his old MSS. (Mel, Tolpippit, Lemberg, 1875, fol. 66b; see also Chwolson, Schriften, St. Petersburg, 1856, ii. 266-272).

(3) Ancient tradition also identifies nāḥash with omens. In the Sifre to Lv 19.20 and in the Sifre to De. 18.10b it is stated that nāḥash means to see omens in such incidents as bread falling from one's mouth, or a staff from one's hand, or a snake crawling on the right side, or a fox on the left
power of God in the sentence, 'I caused it to rain upon one city and not upon another' (Am 4). In the Talmud we find the story of Nahdim ben Geron and the twelve wells which are filled at his prayer by the appointed day, and the sun shining against Milcham 1971. It is mentioned expressly in the Talmud (Tosefta, fol. 196b-200b, Exempla nos. 85; Nissen, fol. 196b; Maurice Buber, no. 96), and the stories of Ḥoni ha-Me’agel, Raba, and others who force rain to come down (Gaster, Ḥattot, in Genetz, Zeitheh, Forshoheit und Wissenschaft, 1882 [and Bucharest, 1883, ch. xi. p. 79 ff]).

(b) Of more importance would be the man who could foretell the weather for the coming year. R. Abba b. R. Asher (171) explains Ḥeshen to be the man who can foretell from the weather on the eve of the Sabbath (seventh) Year [or rather on the eve of Shalmoth, Feast of Weeks] whether the year will be one of rain or drought, of plenty or scarcity. In the Talmud we find that from the form of the ascending cloud of smoke which rose from the altar in the Temple on the Day of New Year and subsequent few days the weather for the next year could be predicted, and that the weather of another few days before that day indicated the weather of the next year (see Gaster, 'Jew. Weather Lore,' in jubilee number of the Jewish Chronicle, 1919, where the whole literature is given). The cloud of smoke was called Aman as the cloud of mist and rain, and the 'man of the future events' (prophecy) in the same phrase (the next year). This prediction was attributed to Ezra (see Tschendorf, Apocryphes apoc., Leipzig, 1866, Prolomomena, pp. xiii-xiv).

The me’on is the master of thunders and rain. The annual name of Elijah. The latter, moreover, has experience of wind and earthquake before the appearance of God (1 K 19:11). Earthquake and lightning were further taken as premonitory signs of disaster. In Jewish literature, such brontologia and seismologia have been preserved under the title Siman ve-rakim ve-re’amim (Constantinople, n.d.). In Greek literature they were attributed to David (Fabricius, Cod. Pseudo, V, Hamburg, 1713-15, p. 1162, and NT, do. 1703-19, i. 311-353; Gaster, Lit. Pop.outh, 506).

(c) It is doubtful whether astrology and the observation of stars and planets come within the sphere of the me’on. It is well known that the knowledge of the man who is able to prophesy by constellations, and forecasting from the new moon is clear from 1s 47h, which exhibits a distinct difference between the me’on—the weather-prophet—and the real astrologer, whose observations were limited to the changes, conjunctions, and other motions assumed by the heavenly bodies. The phrase bôlêri šamayim, if it means 'dividers of heavens,' i.e. those who divide up the heavenly circle into a number of constellations and forecast the future from them, would correspond to the word man of the plague, and they advised a divination by means of cows walking in a definite direction.

(b) The oldest tradition in Sifre (i.e.) connects ḫesen also with rhodobante, i.e. divination by means of staff, rod, arrows, etc. In our opinion, the earliest example of this divination is Jacob's pecked rods (Gen 30:17), an incident which has remained very obscure in spite of all the commentary which has been written upon the vision of Jacob and the appearance of the angel. The peeling of the rods and putting them in the trough was an act of divination which was explained to him by the angel in his dream; for surely Jacob could not, even on the basis of physiological impressions, have had the result of producing so widely different marks as black sheep and goats, ring-straked, speckled, grisled, etc. —too complex a result to be expected from
DIVINATION (Jewish)

one and the same impression. R. Moses of Coney (1333) has preserved to us the description of an oracle or divination by means of peeled rods which were thrown into the air, and, according as the peeled or unpeeled side fell uppermost, success in marriage or the opposite was indicated (R. Joseph Karo, in his commentary to the Tefillah, l.c.).

With some hesitation, one might also mention here the rod-reading which appears to be perfectly natural (Ex 47), and which has been invested with miraculous powers by very numerous legends, and believed to have been a rod from Paradise (see Chron. Jorabmed). Another rod from Paradise, used as a beam in the temple, was an important role in the legend of the history of the Cross. The angel that appears to Gideon (Jg 623) also holds a staff in his hands, with which he touches the meat and the dried bread, and fire comes out from the rock. Elisha was to put it on the face of the dead child of Shunammite, so that it may revive (2 K 42) and he tells him: 'If thou meet any man, salute him not, and if any man salute thee, answer him not again.' The spell is not to be broken, until the act is to be completed by the staff or divining rod. Of course, it is here a miracle to be performed through the grace of God. It is not a form of divination.

A Rabbinical tradition demands that the keshet shall use, among other things, a staff or a rod (Tur, l.c.). Mention may be made also of divining rod of Aaron (Ex 42), the choice of which is to help him to be made manifest (Nu 172), to which numerous parallels exist. In most cases it is a withered rod or staff stuck in the earth, which unexpectedly buds and flourishes, and is thereby a sign to the pious that his sin is forgiven: e.g. the legions of the infernal waters were turned into the red, the mouthfuls of water brought from Jordan at the bidding of Abraham; and the flourishing rod proclaims forgiveness of sin (Fabricius, Cod. Pseuda. 174, 428-31; Gaster, Lit. Pop. Rom., 324-50). Medieval literature knows a similar legend about a sinner appealing to R. Judah Hai, with whom the rod flourished (Masseh Binyon, and Tendilation, Sagiyn, 1573, no. 62; cf. the legend of Tannahaim); and a similar selection of Joseph by the budding rod to take Mary as his ward is told in Protes. Jacob, ch. 5, Ed. Tischendorf, Evang. Apoc. Leipzig, 1853, pp. 15-19), and pseudo-Matth., (chs. iv.-viii., pp. 60-67), not to speak of the innumerable parables in the Legends of Simeon ben Yohai, and similar works.

Throwing sticks into the air and watching the way they fall is still one of the many forms of rhabdomancy. This kind of divination belongs the shooting of arrows, which is tantamount to shooting sticks by the air and watching the direction in which it falls. It is as such an act of divination that the shooting of arrows by Jonathan is best explained (1 S 2023.). The shooting of arrows for the purpose of keshet is found in the history of Jonah. The keshet or alighting of the ground seems to have been an accompanying ceremony. The use of the arrow in keshet appears also in Ezk 21111. The fall of arrows was to indicate the road the king of Babylon was to take, for the arrows must have been shot straight up into the air and allowed to fall by themselves. In the legends about the fall of the Temple (Bab. Gitten, 36a, Exempla no. 70), Nero is said to have shot arrows from the four corners, and, as they all fell to him, it indicated the impending fall of the town. It is still an element in Oriental, notably Gipsy, fairy-tales for the hero to shoot an arrow into the air and go in quest of it, and where the arrow falls things await him—good or evil.

(c) Akin to these forms of divination would be the tree oracle—the shaking of the boughs in one direction or another being taken as prognostication of some future event. This must have been the most primitive form of divination, the oak of Manna (2 S 57) the sound of marching. In Talmudic times we find a special art of divination mentioned under the name of shalsh d'galim, the language of trees. R. Yohanan ben Zakkai is mentioned as one who possessed this knowledge (see Bab. Sukkah, 28b). Abraham Gaon, who lived in the year 1140 of the Seleucid era (A.D. 829), could not understand the speech of palms (Aruch, s.v., Sh. ii.). Through Arabic influences, special books of divination by means of palm trees or palm leaves (ascribed to Abu Ithah of Saragossa) have been preserved in Hebrew literature, in which the origin of the palm is referred back to King Solomon (Cod. Gaster, 19, 3290, 532). Another species of divination mentioned in the Talmud and Midrash concerns the tree as a life token. At the birth of the child a tree is planted, and from its state the future of the child is indicated. The tree is the state of the man himself. By seeing the withering of Job's tree planted in their garden his three friends knew of his misfortune, and came to comfort him. Such trees were sometimes cut on the day of marriage, to give away the premature cutting of such a tree by a Roman general brought about, according to the Talmud, the war of Betar (Bab. Gitten, 574a).

(4) Haber (RV 'charmer')—much information is found in the Bible concerning the activity denoted by this name. The tradition in Sifre (l.c.) which explains the haber as one who could gather together (haber, 'companions') huge or small animals according to his skill—for what purpose is not stated—explains how this unexpected light was manifest from time to time in the Bible which have hitherto remained obscure, in which we recognize now the work of the haber, though not under that name. If a similar view is to be taken of him as of the mesech (weather-maker) he must have been a man who could bring or avert, foretell the coming or disappearance of obnoxious animals. His inclusion in the list in Deut. would thus be thoroughly justified; for he would bring evil animals into the land or to draw them away would be a curse or a blessing to the people. To this category would belong the priests who were asked for by the Cuthians from the king of Assyria, to be sent from Babylon to Samaria in order to drive away the besomesh of the infested land (2 K 1722). The priest sent was no doubt considered to be a powerful diviner or charmer, a haber. Similarly Elisha, upon whose curse two she-bears appeared and destroyed the children of the children of Ahab (2 K 234), the prophet (charmer) whose spell was broken through disobedience, although his power is still shown by the animal's standing quietly by the corpse next to the ass without hurting the latter. Going higher up the stream of biblical tradition, we find Samson (Jg 148) tearing to pieces a lion, in whose carcass bees afterwards swarm, contrary to the nature of bees, which never hive in dead bodies. Samson is able also single-handed to catch three hundred foxes and put firebrands between their tails (Jg 155). Here we have an exact portraiture of a haber (as interpreted by the present writer), one who is able to gather animals either for good or for evil purposes. According to later tradition, the presence of a pious man or reputed saint was sufficient to drive away obnoxious animals from a place. In the Temple area itself no fly was seen, nor did a wild animal ever hurt any visitor to Jerusalem (Virgil Aenoch). The samaria took the form of firebrands thrown among animals (see Gaster, 'Beitraege', ch. iv. p. 222f., in connexion with the legends of Virgil, St. Patrick, etc.).

How far Beelzebub would fall within this cate-
DIVINATION (Jewish)

It is a remarkable fact that all the acts of divination mentioned hitherto are found among the toto together with (a) invocations, charms, spells, etc. in Egypt at the bidding of the Lord, no doubt to bring home to the Egyptians, in the manner best understood by them, that all the acts of the enchanters, anings, charmers, weather-makers, could also be performed by the Hebrews, if they feared against whom their own diviners and charmers could not prevail. We have—with the addition of (a) the rods of Moses and Aaron turned into snakes—(1) blood, (2) frogs, (3) lice, (4) various animals, (5) plague, (6) boils, (7) hail storm, (8) locusts, (9) darkness, and (10) the death of the first-born. These correspond, with the exception of the last, to which reference will be made later on, to the arts of the menahesh (a), ne'mden (7, 9), kesem (1, 5, 6), and hiddim (8, 10, 11); these were strictly forbidden to be practised by the Hebrews, and were strongly denounced in Leviticus and Deuteronomy.

The process of elimination of drop-rooted practices and of transition to the worship of the spirit of Judah, runs on parallel lines with those of the spread of Christianity and modern methods. Ancient practices and heathen ceremonies were adapted with slight changes to the new order of things; heathen gods became local saints, heathen practices became Christian in the Church. Similarly, the forbidden practices of the menahesh, kesem, hiddim, etc., were adapted and adapted to the spirit of Judaism, and they are mentioned under leading names, priests, judges, etc.—in the name of the Lord God of Israel. And thus the people were slowly educated, until, with the establishment of the Temple in Jerusalem and the era of the great prophets, they broke finally with the past, and drove even the remnants of ancient superstition out of the Jewish worship and Jewish practice.

(5) 'Ob, yiddi'oni, dveesh el-hamunithim (RV 'familiar spirit,' 'wizard,' 'necromancer').—There still remains another kind of divination, which rests on the conception of Animism and the survival of the dead. No hint is given in the Bible whether it was a spirit of the dead or his material body which was sought after or inquired of. It is a fact that 'Ob and yiddi'oni always occur together except in the history of the prophet Samuel, who in the same chapter Saul is mentioned as having destroyed ['S 28'] familiar spirits and wizards) and 19, where the voice of the 'Ob is described as coming from the ground. We must, therefore, conclude that some class of office, with each other. 'Ob has the fem. pl., yiddo, whilst yiddi'oni has the masc. pl. yiddi'oni —probably an indication of differentiation of sexes, one the female and the other the male. In 19 they are described as they that chirp and that mutter (RV: better, 'conjurors who whistle and groan' [cf. Magical Papyri Paris, where the god or the conjurer whistles and groans]), and are by the prophet connected with the dead (v. 19). In 19 they are called the familiar spirits (to see), and in the alternative sheqoel ('to inquire') are used. We find then that the 'Ob and yiddi'oni were things made. In 2 21 and 2 2 Ch 33, the Heb. relating them (RV wrongly 'dealt with ') means 'the' and he made'; and 20 must not be taken at its face value, but should be understood as meaning that women have in their body a familiar spirit, but that they are the possessors of an 'Ob—evidently a material thing. The translation of 'Ob as 'familiar spirit' is contrary to indications in the Bible. The woman of En-dor was called a seer (see 1 24), 'the possession of an 'Ob, not one possessed by an 'Ob.' She must first perform a certain ceremony, she is to use enchantment (hesem) in order to get the 'Ob to work (1 S 28 'divine unto me'), and only after-wards she asks Saul whom he wishes to raise from the dead.

Now, it is a remarkable fact that the 'Ob does not occur in Genesis, in Joshua, in Judges, in 1 Sam., or in 1 Chronicles, and is only mentioned in the latter prophetic books except Isaiah. Another word, equally mysterious, is used, viz. t'raphtm [note that the word is plural, and 'Oboth and yiddi'oni occur also in the plural form]. The t'raphtm are mentioned in Gen 31:30, 31, but not in the other four books and the Pentateuch; they occur in Jg 17 15, 18, and in KJV 12, 2 K 23, 1 Ezk 21, 29, Hos 3, Zec 10; only in one case are they mentioned together with the 'Oboth and yiddi'oni—2 K 23, where they are said to have been put away by King Josiah. The t'raphtm also were 'made,' e.g., by Micaiah (Jg 17, where they are differentiated from 'a molten image and a graven image'), and they are also asked or inquired of ('sho't'), like 'Ob and yiddi'oni (Ezk 21, and stood it up in the walls, and Laban is the first to mention them, and calls them his gods (Gen 31); Rachel hides them (v. 30) in the saddle-bag (RV 'caneled furniture'). King Nebuchadnezzar consults them (Ezk 21, 29), etc. the Parthians woman named Shehi in Ezk 21, 19; and they were - very probably—we have here two different names for practically the same object of divination, connected more or less with the dead body, or, to put it more clearly, a mummified body worshipped and used for divination. The story of Michal in 1 S 19, leaves no room for doubt that the t'raphtm so closely resembled life-like human bodies (mummies, not wooden images) that the soldiers could believe that there was David was sleeping in the bed. A legend in Jer. Targ. to Gn 31 relates that the people to slay the first-born of a man and cut off his head, salted it, and embalmed it, and wrote inscriptions on a plate of gold, which they put under his tongue, and buried him, and when a necromancer inquired of him, he spoke with them; and unto such Laban bowed himself (see also Chapters of R. Elizer). Here we have the mummified head, which might be called t'raphtm among the Western Arameans, and 'Ob and yiddi'oni among the eastern, and the sex of the mummy used for necromancy. In Bab. Keritot, 3b, we find that the necromancer burnt incense to the demon, and then questioned him. Rabbinical tradition (Sifra, par. 3, ch. vil.) says of the mummy, that it is used for necromancy and it causes the dead to speak through some part of his body, sheh (see also Sanh. vii. 7), and, furthermore, that necromancy was performed by means of the skulls of dead men—no doubt because the process of mummification had died out, and mummies were not easily accessible. The same holds good for the necromancy as practised by other peoples, in which the skull of the dead plays a prominent part. In this connexion the death of the first-born of the Egyptians would appear in a new light.

The idea of a familiar spirit is of much later date; it was introduced at a time when belief in the existence of evil spirits became deeply rooted, and when it was supposed that it was in the power of man to conquer and subdue such spirits and force them to serve their master in any office to which he might choose to appoint them.

Solomon became a legendary master of the demons, or shedim. The Temple was built by shedim (660 b.c.) at his command; and through his temple on which the cedar was engraven, he could command the obedience of all the spirits. Here two sets of lights and beliefs appear mingled. Solomon's power was made to rest upon the knowledge and possession of the ineffable name of God with its tremendous
DIVINATION (Jewish)

efficiency. The Apocryphal Testament of Solomon and the Chaldean Solomon (Solomon's Key) touch how to obtain mastery over sh'dim. We find the history of a man having a sh'dim named Belshad, I Kings, 10, 22. Belshad could not be conjured up on Sabbath or holy days (Shedulat Shedulit, see Lev. 19, 3), but in conversation with the sh'dim, the man was considered a great sh'dim (Shukka, 29a, see Zanu, Gottesgabe 7, 1992, p. 170). In a manuscript copy of the Testament of Solomon, there is no other word for this than transliterated into the Bible—a fact of deep significance.

Apocryphal and apocalyptic literature is, however, full of such prophetic dreams. The dream of Jacob, Joseph's animal (Jg 20, 11-17) and his of Methuselah and Enoch (ch. xxviii. p. 48, intr. lxxvi); the dream of Pharaoh in foretelling the birth of a king (Ex 2, 24-25; Lk 1, 26-37); the dreams of Naphtali (xxviii. 3); the dream of Kenaz (vii. 39, 40); the dream of Moschei; Ahamasor's dream; and the dream of Ahasuerus (Est 4, 10, i.e. lxxviii.); the dreams of Naphtali (xxviii. 3); the dream of Kenaz (vii. 39, 40); the dream of Moses; and the dream of Alexander the Great (xxviii. 44 f.; found also in Samaritan literature (Abufasha). Mention may be made also of dreams in the Test. of the TTI Patriarchai (Chaldean) Testament. The visions of Enoch in the Book of Enoch (xxviii.-xx., pp. 220-239 (Charles)), and the visions of Ezra in 2 Esdras. Later Jewish literature abounds in prophetic dreams sent to the people to warn them of danger, such as that in the legend of Boznatam and the exarch (Seder Ohrn Zuta).

The interpretation of dreams became a recognized art. Many examples are found in the Talmud of men who received payment for this function. Twenty-four interpreters are said to have practised at the same time. Each was supposed to interpret the dreams of the dead or the living. Hadya is mentioned by name as one who shaped his interpretation according to the amount received.

Such interpretations are found in the Talmud (Ber. 50a f.; En Potokh, par. 110; Jer. Ma'aser themiv. iv. 6; the Exempla of Rabbin (nos. 215-216), and Maness Buch, Amst., no. 28, fol. 7b. These forms of interpretation are ascribed to Joseph, Daniel, Hai (ed. pr. Ferrara, 1550), Naza, etc., and published by Alami in his Pitron Halomoth (Hebräer Bibliothek, ed. pr. Litwin (i. 149); see Cod. Gaster, 93, 654, and 1067). Some of the sages assert that the answer should be given in the dream; others in their reply, like Rabba (Bab. Menahot, 65a) and R. Johanan (ib. 84b). He who sees an illomened dream must recite a special prayer whilst the kabbale pronounces the blessing, and wearing the service (Bab. Ber. 55b). The custom of ‘responses from Heaven’ exists in Jewish literature, dating probably from the 12th or 13th century.

(b) Urim and Thummim—another means of divining the future, explaining, the declaring guilt and innocence, deciding, and deciding the issues of war and peace. In accordance with the system pursued of concentrating every possible sacred or sacrificial action in the hands of very few, and thus of weaning the common people from such practices, the divination by means of the Urim and Thummim was reserved for the high priest. Only he, in his priestly robes and wearing the breast-plate called ‘the breastplate of judgment’ (decision) (Ex 28, 30), could use the Urim for the purpose of obtaining an answer from God to his question. We cannot here enter fully upon the discussion as to what the Urim and Thummim may have been. These words occur altogether seven times in the whole Bible; and in two of these, Ezra and Nehemiah, as a remembrance of old (Ezr 2, Neh 7). To the other five passages we must add two in which the practice is implicit in the prayer and the breastplate (Jg 17, 6, 9), and the children of Israel went up to Bethel to inquire of the Lord, i.e., through the priest, who only could obtain the answer by the Urim and Thummim).

The ephod consulted by David in Kᵉᵉˡᵃ’h (I S 23, 11-12) was worn by Saul (Nz 11, 27-29) and Saul was warned by God to consult the breastplate, or the tabernacle, of his son (Nz 12, 13). The breastplate of the Philistines is understood by Gideon as foretelling future success (Jg 7, 19). The Book of Daniel is full of dreams and prophetic visions of the future, which border on the higher sphere of prophecy, or the Urim and Thummim. The dream of the Philistine is understood by Gideon as foretelling future success (Jg 7,19). The Book of Daniel is full of dreams and prophetic visions of the future, which border on the higher sphere of prophecy, or the Urim and Thummim. The dream of the Philistine is understood by Gideon as foretelling future success (Jg 7, 19). The Book of Daniel is full of dreams and prophetic visions of the future, which border on the higher sphere of prophecy, or
and afterwards Jonathan alone. This reminds us of the identical process in the case of Achan (Jud. 7:21), who was stoned by the Urim and Thummim with the twelve stones of the breastplate, and explain these names as 'lighted up' and 'dark,' stating that the stones lit up or a light shone in them (according to some the letters and words) and that the prophet, or rather priest, made the turning-point in the whole history of Jewish worship and in the practice of divination.

Special mysterious powers were ascribed to the stones of the breastplate, and from Qophanim onwards the literature of Lapolaria, or 'stone books,' has grown continuously. Hebrew literature shows a variety of such Lapolaria (Koхот Глава). A number of unedited texts have been collected by the present writer in his Cod. 377, besides other MSS (Cod. Gaster, 357, 714; de Vidas, loc. cit. fol. 51a). After the disappearance of the Urim and Thummim another inspired oracle took its place—the Bible oracle (the oral recitation of Biblical verses). Infants were asked to tell a verse to a man who met them quite unexpectedly, and from the first verse that meets the eyes as a means of divination, or in putting in a pointer, and the passage through which the pointer rests is taken as full of significancy and prognostication. Samuel used to inquire through the 'book' (Bab. Kallah, 9b5; cf. the words Versibus). The Bible oracle is the liturgical part of the Shimmussa Rabba (or that of selected portions of the Bible) known in the 8th or 9th century. In the Shimmussa Thallin the Book of Psalms is used as a means of divination (Cod. Gaster, 1094c, and often printed with Book of Psalms; best ed. by W. Heidenheim).

At an indeterminate period in post-Biblical times a large number of magical ceremonies and practices of divination flowed into the stream of Jewish religious belief. It naturally happened that each of these elements to its proper source. All that was done was to copy and to borrow such material, and so change and mould it as to make it compatible with the special teaching of Judaism, though the line of demarcation between, e.g., Jews and Muhammadans in these practices is so faint as to be often indistinguishable. Nowhere does this borrowing show itself more clearly than in the books for telling future events, or fortune-telling books (Sifre Girdot [Amsterdam, 1790], Uriah Yeshuham [Dyrrenfirth, 1790], ascribed alternately to Hai-Saadya, Aben Ezra, Pockeah, Ibrin [Venice, 1657]; Cod. Gaster, 61, 213, 439; Aben Ezra, fol. 571, 751, 985, 986, 627, 679, 782, 1017, 1069, 1090). A thorough investigation of the origin and history of these books and their interdependence is still lacking (Steinschneider, Die hebräischen Übersetzungen der Mittelalter, § 593, pp. 928-71).

The hand and the face of man were also used for the purpose of divination. The Zohar (Exodus) already contained almost a complete treatise on physiognomics (bokmah ha-paruyf), and the Hebrew version of the Secretum ascribed to Aris-totle (ed. Gaster [contains in bk. xi, a treatise on physiognomy]) continued to spread and to fortify the belief in physiognomics among the Jews. Cheiroromancy (hochamm ha-geroil, last ed., Warsaw, 1892) is found in many manuscripts and prints, and also in translations in the Hebrew-German (Cod. Gaster, 443, fol. 90b f.).

(c) Rê'eh, or see.—The last form of divination to which Saul resorted was through the nabi', the seer. It is found in many manuscripts and prints, and also in translations in the Hebrew-German (Cod. Gaster, 443, fol. 90b f.). He was expected to answer not only important questions affecting the safety of the king or nation, but also trivial inquiries about lost property, and the Urimeh or seer was then acting as the Hebrew counterpart of the heathen jasém (like Balam, etc.), who also claimed to 'see' and to be a 'seer' (Nu 24:9). Samuel is consistently called the seer and not the prophet in 1 Ch 13:15 26:3 28:20; and other persons belonging to the period before the building of the Temple appear under the same names of rô'eh and hoshékh, which alternate with one another and are both distinguished from nabi'. The latter was, no doubt, considered as yet inferior to them; for we find the 'company of prophets' (1 S 10:16-11:1), Saul turned prophet (10:15), and 'the sons of the prophets' (1 K 2:8, 2 K 2:2 etc.) all playing an inferior rôle to the prophet. As such a prophet means a man of insight— a man who sees; i.e., takes in the essence of things, and therefore seems inferior to the nabi' of the time of the kings. He is more akin to a diviner. Abraham is called a nabi' (Gn 20:6), although he does not prophesy, but knows of Abimelech's dream. Aaron is appointed nabi' ('he who reads'), ascribed to the opening words of the enemy or interlocutor. This is the origin of the Bible oracle (stichomythus) by means of a written or later on a printed book. It consists in opening the book and looking at the first verse that meets the eyes as a means of divination, or in putting in a pointer, and the passage through which the pointer rests is taken as full of significancy and prognostication. Samuel used to inquire through the 'book' (Bab. Kallah, 9b5; cf. the words Versibus). The Bible oracle is the liturgical part of the Shimmussa Rabba (or that of selected portions of the Bible) known in the 8th or 9th century. In the Shimmussa Thallin the Book of Psalms is used as a means of divination (Cod. Gaster, 1094c, and often printed with Book of Psalms; best ed. by W. Heidenheim).

At an indeterminate period in post-Biblical times a large number of magical ceremonies and practices of divination flowed into the stream of Jewish religious belief. It naturally happened that each of these elements to its proper source. All that was done was to copy and to borrow such material, and so change and mould it as to make it compatible with the special teaching of Judaism, though the line of demarcation between, e.g., Jews and Muhammadans in these practices is so faint as to be often indistinguishable. Nowhere does this borrowing show itself more clearly than in the books for telling future events, or fortune-telling books (Sifre Girdot [Amsterdam, 1790], Uriah Yeshuham [Dyrrenfirth, 1790], ascribed alternately to Hai-Saadya, Aben Ezra, Pockeah, Ibrin [Venice, 1657]; Cod. Gaster, 61, 213, 439; Aben Ezra, fol. 571, 751, 985, 986, 627, 679, 782, 1017, 1069, 1090). A thorough investigation of the origin and history of these books and their interdependence is still lacking (Steinschneider, Die hebräischen Übersetzungen der Mittelalter, § 593, pp. 928-71).

The hand and the face of man were also used for the purpose of divination. The Zohar (Exodus) already contained almost a complete treatise on physiognomics (bokmah ha-paruyf), and the Hebrew version of the Secretum ascribed to Aris-totle (ed. Gaster [contains in bk. xi, a treatise on physiognomy]) continued to spread and to fortify the belief in physiognomics among the Jews. Cheiroromancy (hochamm ha-geroil, last ed., Warsaw, 1892) is found in many manuscripts and prints, and also in translations in the Hebrew-German (Cod. Gaster, 443, fol. 90b f.).
DIVINATION

therein have survived to the present day. Many a man in medieval times was credited with insight into the future through the knowledge of this

The last stage in the development of the art of divination was reached when the place held in ancient times by the baal 'ath, the female possessor of the 'bb (woman of Endor) and the medium, was finally taken by the baal shém, the possessor of the ineffable wonder-working name of God. He was the exact counterpart of the baal 'ath 'bb, the female possessor of the 'bb (woman of Endor) and the medium. He could see the dead, could call the future, and perform every possible miraculous deed. The legend of the baal shém told in Ma'ase Nissim (see Tendlau, Sogen 4, no. 52, p. 25 ff) makes him raise out of a cup Job b. Zeruiah (King David's
genealogy). Practically the last link in this chain is the famous baal shém (known as Besh [Baal Shem Toeb]), the founder of the sect of the Hasidim at the beginning of the 18th century, whose successors are the reputed wonder-working Rabbs of the Hasidim in Galicia and Eastern Europe.

But all these modes of divination have gradually disappeared. Only the Qabalistic formulae are from time to time resorted to and practised in addition to those borrowed from other nations; for instance, among Jews, and especially in Eastern

countries, the Jews follow the superstitions of the native population, and practise the same modes of divination for such lower purposes as to detect a thief, or to find out whether a woman will marry in the next year, whether her child will be a boy or girl, whether or not an undertaking will be successful. But there is nothing specifically Jewish about them.

LITERATURE. — As the writer of this article differs fundamentally in the interpretation of the Biblical terms on divination from his predecessors, he does not refer to any other articles on this subject, or to any of the special books hitherto written on divination in the Bible. In addition to the references given in the text of the article itself, the All-seeing Figure will give the purpose of directing students to a vast field of hitherto scarcely explored literature. One name stands out prominently, that of M. Steinschneider, and his great work, Die hebräischen Übersetzungen des Mittelalters, Berlin, 1894 (notably p. 539, p. 908 ff; p. 541, p. 906; p. 592, p. 840; p. 553, p. 967-71; p. 575, p. 963 ff; and p. 534, p. 571), contains the most reliable data on many of the subjects of the later period of Jewish literature and when it stands under the influence of Greek, Arabic, and medieval Latin literature. Still even he left room for additional investigation, if it so be desired. More books may be now and then collected here:

M. A. Delrio, Disquisitionum magicarum libri sex, ed. Cologne, 1720, ii. p. 14 no. 6, p. 475, 478-489; c. 9. 1596, b. iii. chs 4-29, fol. 101 f; M. Gu道德imm, Gesch. des Erzählungswechsels und der Cultur der Juden, Vienna, 1858, vol. i. p. 201, no. 21; M. Gaster, Literatur Populärna Rumania, Bucharest, 1885, pp. 524, 526 f, 517, 516, 520; K. Kann- 

Gaster, Gesch. der romanischen Literatur 5, Munich, 1837, pp. 627-631 and passim; H. Diels, Beiträge zur Zirkulations-

literatur, Berlin, 1906; Jacob Rakiv, Kosmizhe v Yakhile- 

Lehborn, 1850, fol. 244-250; M. GASTER.

DIVINATION (Litu Slavic). — A synopsis of the various means employed by the Prussians and Lithuanians to divine the future is given in the art. Aryan Religion, vol. ii. p. 54 f. As grounds of their predictions they had—or still have—

recourse to the flight and cries of birds; appearances in the sky and other natural phenomena; sacrifices, entrails, and blood; chance meetings, the rustling of the oak, fire and smoke, dreams; various happenings and utterances at weddings; wax, lead, glass, the foam of beer, amulets, seals, trunks, and such and other things. One of the most ancient and widely-used accessories of divination was blood, both of man and beast. When the Grand-duke Keist of Lithuania was overthrown and taken prisoner by King Ludwigo of Hungary in 1531, he made a treaty with the victor, pledging himself to embrace Christianity and desist from further troubling. This treaty was ratified by a rather curious Lithuanian oath, the preliminary to which was a blood-curse.

'Et facta est base promissio per regem cum tali inantamento: accepti enim bonem et in praevisus reis Ugurane et morum fuit donum dictis incidit in collocis contractorum et extet, bonum esse indicium futurorum; et largius fuit suffixus effusius. Tunc emolgens a benn bonum redactum: caput et corpus progenies suae, sic sibi contagi, si promissa non servaret' (Scriptores Rer. Prass. iii. 420).

But human blood likewise was not to be used for purposes of prophecy. Thus, in 1353-56, when the Grand-duke Gedimin sent twelve hundred horsemen to the assistance of King Lokietek in his struggle with the margrave of Brandenburg,

a proposition to know, kau'mi tempore quodam at tingm viniunt, caput infer auxra detergentes, dorum inuis gladiis suspendere, prophetiam sungamus attendere, de exitu bellorum per ipsam divinare conscribere' and it is also recorded that in the same campaign 'quilibet undatum pulsardentur et divinaciones suas exercerent' (cf. A. v. Mierlo, Der Eid des Keistus.' Sitzungsb. d. Altertumsgesellschaft Prass. no. 18, Königsberg, 1869, p. 104).

Such incidents show that as late as the 14th century of our era the Lithuanians, like the propheticst of the Cimri (cf. ERE ii. 544'), were in the habit of killing their prisoners of war in order to ascertain by an inspection of their blood whether the approaching battle would result in victory or defeat.

Leaving the Baltic peoples, we proceed to speak of the Slavs, and, more particularly, of the Russians. Here, in the 16th and 17th centuries—a period from which all verbal compilations have perished—we find an almost incredible development of the belief in omens (primatia) and the practice of fortune-telling (gudanie). It is scarcely too much to say that among the Russians of that age the individual's whole sense of life was entirely conditioned by premonitions. Books of magic and collections of warnings and predictions, though banned by the clergy, were passed from hand to hand. A creaking in the wall or a singing in the ears foretold a misfortune. An itching of the palm signified a gain of money. Itching eyes betokened weeping. The croaking of ravens or the crowing of cocks was an omen of misfortune. The cackling of ducks or geese, twichting of the eyelids, the crackling of the fire, the howling of a dog, the squeaking of mice or their nibbling of clothes, a cat appearing at the window with a captured mouse, a terrifying dream, meeting with a blind person—all these foreboded loss by fire. In a MS in the Rumianin monastery of 1597, the Russian diviners had written:

'When the shores beave, and the sea rages, when dry or moist winds blow, when rain, snow, or storm-clouds appear, when thunder rolls, the wolf howls, the eagle shows claws, the trees grate on one another, wolves howl, or squirrels leap—then will come plague, or war, or scarcity of water; in summer fruits will grow nowhere, or they will disappear.'

The people believed in dreams, and framed an elaborate system of reading their significance. They saw portents in the act of sneezing, in the crawling movements of insects, in every sort of object they came across. It was thought un lucky to meet with a monk, a horse with hair worn off, or a pig. As early as the 12th cent., we find St. Theodosius censuring those who allowed such occurrences to scare them homely superstitions and foreign superstitions were inextricably blended. The people had also complete written systems of prophecy, called refil—a term of Arabic origin ('lib- eilus astronomicus seu mathematicus Persarum' [Ducange]).

The german. 'geopolit' (cf. ERE ii. 465, note 1), § 23, warns against their use. Mention should also be made here of the so-called 'birth-magic' which the sorcerer, at the mother's request, performed over the newly-born child, and by means of which he ascertained or

1 Cf. for what immediately follows, Kostomarov, 'Sketch of the Domestic Life and Customs of the Great Russians in the 10th and 17th Centuries,' in Sermoncrat, vol. xiiii. (Russ.).
DIVINATION (Litu-Slavic) 815

determined its lot in life. It is, therefore, no exaggeration to say that the Russians of that day lived from the cradle to the grave in an atmosphere of constant dread and solicitude regarding the future; and the benevolent and emancipating results of culture and enlightenment are never muchascribed to the influence of the teachings of the Church, as the presence of omens and superstitions is considered to be a part of human existence thus harrowed by omens and superstitions which pervade the world of nature. The Devil, his visions and prophecies, are the oppressors of the people, and the Russian peasantry are filled with dread of the supernatural. The Russian peasant is the slave of superstition, and his every act is governed by the supposed will of the gods. The Russian peasant is the slave of superstition, and his every act is governed by the supposed will of the gods. He believes in the future, and his every act is governed by the supposed will of the gods.

Even at the present day, however, among the Russians, the belief in omens and predictions still prevails to an extent without parallel among any other European people. The manifold superstitions of an aged Russian peasant woman are thus set forth in Turgenev's romance, Fathers and Sons.

'She was plaus and impressionable to a degree; she believed in all kinds of omens, predictions, spells, dreams; she believed in hastes [see below]. In household spirits, forest spirits, no-luck forsythians, enchantments, popular remedies, Monday Thursday said [the] sun shone on Monday Thursday breed rain, as the end of the world was at hand, that the backwheat would not ripen if the rain fell on the Sunday, and that mushrooms cease growing when they have been seen by a human eye,' etc.

In the present article we do not propose to deal further with this mass of detail, but will restrict ourselves to a somewhat fuller consideration of two particular points: (1) Peasant weather-lore, which, amid a chaos of absurdity, nevertheless contains a certain measure of rationality, based upon experience and the observation of Nature; and (2) the interval between Christmas and Epiphany—a period during which, even in the Russia of to-day, all conceivable forms of augury and prophecy are still in full swing.

(1) The first of these topics, peasant weather-lore, has been dealt with by A. Ermolov in two volumes of his comprehensive work, Agricultural Folk-wisdom in Proverbs, Sayings, and Weather-sayings, etc. The latter of these, the Wirtschaftliche Volkskalender, Leipzig, 1905, and iv. Popular Weather-lore (Russ.), St. Petersburg, 1905. It is shown in these works that, while all European peoples have a vast store of weather-wisdom, sometimes exhibiting remarkable analogies and parallels, yet the inhabitants of Eastern Europe surpass all others in this regard. In that region there is no animal so diminutive, no herb so insignificant, but its doings or properties may supply omens of future events, of weather, or of fate; and it is believed that the weather will be more abundant or more plentiful, or more favourable to the husbandman; while, again, there is no natural phenomenon, occurring at some particular time, but may act as the harbinger of a good or a bad harvest. In Kasan, the Chuvashes (a Finnish, now Finno-Rusian, tribe) are said to be looked upon as oracles.

Strange as it may seem, they scarcely ever go astray in their predictions. By long-continued observation they have become sensitive to signs which enable them almost unerringly to forecast the weather. Their memories are stored with a mass of all but incredible omens inherited from time immemorial.

(2) The period between Christmas and the Feast of Epiphany is known in Russia as svatlé (from svata, 'holy'), or koljada (from Lat. calendae), the latter term being also applied to the practice of going about from house to house at Christmas and on New Year's morning. During the Christmas week the practice of prophesying, which is applied in the main to affairs of love and marriage, and partly also to forecasting the weather and the harshness of the winter's severity, is widespread among the Russian peasantry (cf. Russian Folk-poetry [Russ.], Glasnov ed., St. Petersburg, 1904, p. 85; Stepanov, Popular Festivals in Holy Russia [Russ.], St. Petersburg, 1899, p. 149). When young men or young women wish to know something of their partners' future, they have recourse to the horse-oracle. The young women, for example, take out a horse, and walk it over a beam; if it stumbles, the husband of the person consulting the oracle will be a good man; if it steps clear, he will be bad. Divining the future by means of a splinter of wood is also concerned with marriage. When the splinter has been partly dipped in water, it is set fire to at the dry end; then the young woman distressed with the thought that she will expire forecasts respectively a happy or unhappy marriage.

The period between Christmas and Epiphany was, as already indicated, a special time for weather-prophecy, as witness the following extract from Ermolov, op. cit. 1. 518:

'In Little Russia, before the supper on Christmas eve, the oldest of the house or brings a bundle of wheat-straw, spreads it upon the bench in the front corner, covers it with a clean tablecloth, and then places above this, and just beneath the bracket for the saint's image, an unparched sheaf of rye or wheat. During supper those present engage in reading the signs which indicate the character of the ensuing harvest. For this purpose they draw hasty lines under the tablecloth, and from the length of these form an estimate as to the growth of the corn. They likewise pull stalks of straw out of the sheaf under the iron, if the stalk bears a full ear, they may look forward to a good harvest; while, if the ear is shrivelled, the crop will be poor. A fresh snow on Christmas Eve or Christmas Day is a sign of a severe winter. If it comes to the harvest or to the autumn rain, the backwheat will turn out well; while, if white or red seeds predominate, severe weather will prevail, and we have to fear frosts of the following winter. At the killing of the pig before the Christmas festivities, the peasants in Little Russia inspect the pancake. If it is large, this is a sign of abundant harvest. If its length is equal to its breadth, the winter will be a long one, and there will be no severe frosts; but if the length be four times the breadth, the winter will be mild at the head end and thin at the other, or vice versa—winter will be cold at the beginning and warm towards the close, or vice versa. If the pancakes be thin about the middle, the peasants expect a thaw in mid-winter.'

This custom recalls the Roman Saturnalia and harvesting; and it is also said that the Russians have a parallel to the st regius, a prediction by means of divination by the eating and drinking of fowls (cf. the 'Romuni' section of this article). It may be said without misgiving, indeed, that analogies of the Roman auguries and their underlying superstitions are now found nowhere more abundantly than in the east of Europe. It should be observed, however, that the peasant are quite well aware that during the svaté they have still one foot in paganism, for, as they say, 'the beginning of the season' also works in the reverse. Therefore, the witches, who steal the moon and the stars from the sky, keep holiday, and disport with the demons.'

'Where, nowadays, as the foregoing bears out, the Russian people—men and women alike—are all highly proficient in priscity and gaudenia, these arts were formerly to a great extent in the hands of wizards and sorcerers, the various names applied to whom are enumerated and explained in the art. CHAMPS AND AMULETS (Slavic), vol. i. p. 405. Besides these adepts, however, there are other two classes of persons to whom is attributed a special measure of supernatural and prophetic power, viz. women and lunatics.

The belief in the faculty of seeing into the future belongs in an eminent degree to women can be traced everywhere in ancient, and, as existent among the Germans, finds its clearest expression among the Brandenburg. (feme se qui etiam sacrum aliquid et providum putant, no aut solum carmen supernaturum aut response negligunt; cf. also Huf, ib. 69, 427. See further aged Germanische of Ferdinand Stadenius, 1670-1680, v. 204.)

As regards the basis of fact which underlies the real or imaginary prophetic gift thus ascribed to women, and exalting them in the people's eyes to the degree of oracles among the Indo-German peoples, cf. ERE ii. 65.'

2 On this topic, cf. the present writer's remarks on the Indo-Germanic marriage in Die Indo-Germanen, Leipzig, 1911, p. 87 f.
the position of Halliwallius (Goth., [Jordanes, Get. xxiv.]), 'those who know the secrets of hell, or of the under world,' we shall hardly err in tracing this element to the nervous and hysterical nature of woman, which, in moments of excitement, seems to raspe above earthly conditions. It was in the state of ecstasy likewise that the Greek Pythian uttered her oracles. This was also the case in the remarkable outbreak of the Russian klikti (from klikti, 'to shriek'), the 'possessed' or 'epileptics' who greatly disturbed the country in the 16th cent., and had to be dealt with by the Church Council of Moscow (stolbovny sobor) in 1551. They were principally elderly unmarried women — and very tall, tall! — who talked loudly and with barefoot and unkempt; they shook, they fell, they whirled, they writhed, and amid such doings uttered their predictions of the future. Frequently — and sometimes as a result of brierly — they brought criminal charges against individuals, who were thus rendered liable to legal proceedings. The presence of these women in a city was a veritable plague, and the Church Council referred to petitioned the Czar to order the initiated either to be shut up in the lying prophets' midst (cf. Kostomarow, Vie, cit., p. 547). Of a somewhat similar character are the prophetic powers ascribed among the Slavs to lunatics. The insane fall under the same category as the Roman soothsayers by the Greek terms applied to them, viz., jurdlivy (from ural'j, 'prophetic,' 'madman'). They filled the soul of primitive man with amazement, and even with reverential awe. Like the hysterical women just spoken of, they professed forthwith oracular phrases, which seemed to come from another world, and to betoken a supernatural knowledge. Precisely the same process of thought manifests itself in the Greek series of words: aixiogov, 'I rave,' aixi, 'lunacy, dazavtis, 'soothsayer' — a development which seems to prove that at a very early period there must have existed in Greece the same sort of prophetic lunacies as are found in ancient and modern Russia. During the reign of Boris Godunov there lived in Moscow a lunatic of this type, who was revered as a saint. Naked and with hair dishevelled he went about the streets in the coldest weather, uttering his prophecies of coming woes. In awe-inspiring accents he arraigned Boris for the murder of his dethroned brother, and may be, of offending the people, or else convinced of the man's holiness of character — made no sign, and did not attempt to interfere with him to the least (cf. Giles Fletcher, Of the Russa Common Monarch, 1591). I had the privilege in 1856, p. 115 f.). Even at the present day the insane fill a somewhat similar rôle in Russian village life. In a sketch called 'Village Drama,' by J. Garin (who has a masterly knowledge of the village communities), a merchant makes inquiries regarding a certain lunatic whose favourite occupation is to pray for the dead upon their graves, and receives the following answer:

'Ve believe thus: he is a great servant of God. And he has taken upon his alde in the bathroom at my house. I do not know why he has chosen me, for I am more wicked than others, and wholly covered with sins, and cannot tell why it entered his mind to live with me. Still, he has fixed upon me, and now lives with me. We cannot account for his behaviour, we do not know, and we understand only by signs (primeti)—he is, in truth, a great servant of God.'

Such are the ideas which still prevail regarding the belief in insanity, in the Russian country.

LITERATURE.—This has been given in the course of the article.

O. SCHRAEDER.

DIVINATION (Muslim).—The methods of divination in use among the Muslims are numerous. The following are the more common: (a) 'Um al-Rumi, Ibn Khaldi (Prolegomena, tr. de Slane, 1862-68, i. 218): (a) gazing at polished surfaces or 'crystal-gazing';
DIVINATION (Muslim)

In Turkestan, 'the most common method of divining the course of events is to place on the shoulder blade of a sheep, which has been carefully cleaned of the flesh. This is gradually calcined, and the cracks, the colour, and the shape of the blade of which fall from it, depending on good or bad luck or the various accidents which may happen on an expedition. Another is very common in buds, or other means of dried sheep dung. The Kirghiz selects forty balls of dung, and divides them roughly into three heaps. He then takes four at a time from each heap, until only four or less remain in each. The remainder he also divides into three heaps, and again takes one from each four. Three more heaps are formed, and last there are four lots of their piles. What is left be divided by three, and sees whether the remainder be one, two, or three. The various numbers and positions of the balls of dung can be explained by an experienced noothayer to the intense satisfaction or to the disappointment of those who consult him' (Schuyler, Turkistan, New York, 1876, p. 31).

Similar omens are drawn in N. Africa from the excrement in the rectum of the victim, and the blood. Scapanology is practised by many of the Arabs and Turks. (J.A.H. 265) together with palmyra and another mode of augury which is far less familiar, viz. divination by the gnawing of mice. When the Khalif Mansur (A.D. 754-775) was in a village, it is said, one night a mouse bit him, and he sent it to be mended, but the workman suggested that it ought to be examined by a diviner first; the diviner foretold the Khalif a quiet and prosperous reign (Zoology, A.D. 1225, p. 93).

In such groups as the Greeks (A.D. 322, 444, etc.,) a mirror or magic mirror goes back to ancient times; according to Ibn Khalidun, who agrees in this respect with modern crystal-gazers, the image appears not on the mirror itself, but on a kind of vapour which floats above the mirror of the crystal-gazer's eyeglass. The Khalif Mansur had a mirror which told him whether a man was a friend or an enemy; according to Sir 123rd, the mirror rusted in the end of the enemy, and this was probably how the Arab of the current day, which tells him in one of friendship (line 380). The process varies very much in different places, different materials being employed, with great varieties of symbolism. In Egypt the practice called darb el-mundal is common, and performed with liquids, e.g. water or ink, or else with solid mirrors, such as sword-blades. Lane (Modern Egyptians, ed. 1871, i. 337-346) gives an account of some extraordinary performances of the kind which he witnessed in Cairo; the visions were seen on the mirror, and certain questions asked to gaze, in ink placed in the palm of the hand and surrounded by certain numerals; other features were a chafing-dish with live charcoal, in which it was written on a piece of paper by the diviner were burned together with frankincense and coriander-seed. In the mirror so arranged the boy saw among other persons Lord Nelson, of whom he had never heard. Lane's story provoked considerable discussion in Europe, but was defended by Sir R. Burton (Pilgrimage, ed. 1893, ch. xxviii.), Sir Gardner Wilkinson, and others persons familiar with the East. This process is used for discovering offenders; according to the account of those seen by the diviner, who was asked in the presence of Lane's but adds many details, the medium is supposed to command the services of ten of the jinn, who are first told to discharge certain domestic duties and then compelled by an oath to either his will, and gives his wishes to know. The function of medium is to serve a small class: boys under age, negroes, enceinte women, and people with a long line of fortune.

Possession, or inspiration by the jinn, appears to have been a principle of the pre-Islamic divination, and the archaologists profess to name some of the early diviners. Probably possession was not regarded as their usual state, and they hypnotized themselves by some process or other. The basis of the ancient utterance doubtless goes back to an early date in Semitic civilization; what is required is that the utterance should either be wholly unconnected with the matter on which it is made to bear, or that it should proceed from an invisible speaker. The author of al-Fakhri narrates cases in which information was conveyed by these mysterious channels.

The two last methods—geomancy and genamatria—are probably the most characteristically Muslim methods of divination, and the literature on both subjects is copious. In the former, some sand is casually taken up is arranged in fifteen columns of from 5 to 7 grains, bearing technical names; conventional values are assigned to the combinations of these, and these conventional values are dispensed answers to the questions addressed. A Bodeian MS contains a dictionary of those values; but it is not very lucid as to the mode whereby the column is obtained. Divination by the values attached to the letters of men's names is a highly complicated subject; Sabti (A man of Cuata) invented a divination-table for this purpose called Zarijah, consisting of concentric circles, accompanied by an exposition, by poem, based partly on letter-values, partly on astrology. Ibn Khalidun inserts it in his Progymenon; but his translator, de Sante, confesses his inability to follow the system. Some use, which is not very clear, is made by the name or a sign, 744, etc., which indicates, what is otherwise attested, that the 'number of the Beast' is something far more complicated than the letter-values of a man's name.

An obscure discipline, based on the numerical values of the Arabic alphabet, narrates which Ali is said to have composed two books bearing the names Jafir and Jami'ah, wherein, by calculations of this sort, doubtless connected with Qur'anic texts, he foretold the whole history of the world until the 'miracle of the month ofif.' These books are supposed to be in possession of the descendants of Ali, and, as was the case with the Sibyl's books, some of their contents are occasionally divulged; the author of the Dict. of Tech. Terms in the Muslim Science saw an extract which foretold the fate of the Egyptian sovereigns.

A classical manual of the black art is the 'Goal of the Sage' of Maslahah of Madrid (A.D. 938—A.D. 1007—8), which took him seven years to compose, containing twenty-three questions, casually asked of a man to know, then given to the reader. It appears that both the planets and the constellations divide between them the various objects to be found in the world, and the different avocations of mankind. Thus to Mars belong the powers of bone and corium, surgery, farriery, tooth-drawing, the Persian language, the right nostril, the gall, heat, hatred, the theology which denies the Divine attributes, silk, harekin and dogskin, iron-work, brigandage, bitter tastes, dryness, and red stones; to the Ram belong the face, pupil, and ear, yellow and red, bitterness, deserts and robbers' caves, fuel, animals with cloven hoofs. The week-days, besides their planetary assignation, bear to certain angels: Monday to Gabriel, being cold and wet; Thursday to Isra'il, being hot and wet; Saturday to Azrail, being cold and dry; Wednesday to Michael, as being a mixture of all four. The nature of the ink to be used in the procession, etc. is affected by the conjunction of the planets and constellations; and, according to the position of the moon, a charm when written should be disposed of in earth, air, fire, and water. Those who desire the services of the planets should bow down to them, and address to them complimentary speeches calling them by their Arabic, Indian, Greek, or Yunani names. The Greek names (called by this author Rami) are correctly given. One author, Jair of Basrah, whom this writer cites, invented a planetary division of the Qur'aan, by counting the mystic letters contained within.
these divisions, he discovered how long each dynasty was to last; for each was controlled by one of the planets.

Lane (i. 328) describes some of the consulting tables or books in use in Egypt. The table of Idris consists of 100 compartments, in each of which the name of the Arab alphabet is written. The questioner, after reciting a text bearing on the subject of the Divine omniscience, places his finger at random on a letter; he then makes a sentence by adding every fifth letter till he comes back to the first; the sentence thus formed tells him whether to proceed or desist; it is so constructed that the proportion of negative replies to positive is four to one. Some which the writer has seen consist of Qur'anic texts written in a mysterious alphabet; therefore only an expert can use them; the more cautious experts are ready to give general answers out of them, but decline to give replies in which any sort of exactitude is required. The use of sortes Koranici, or divining by the first text that meets the eye on opening the sacred volume, is said to go back to very early times; many copies of the Qur'an contain directions for this method of using the book. One method mentioned by Lane consists in counting the number of times the letters which commence the Arabic words for 'good' and 'bad' occur on the page, and in deciding for or against a course by the majority. Another substitutes the rosary for the Qur'an, and employs the three formulae, 'God's glory,' 'Praise to God,' and 'God is good.' In the latter, so good is God, that indiscriminate good is good enough; 'indifferent,' 'bad'; two beads are then selected at random, and the formulae recited in the above order, the beads being counted between the two selected; whichever formula goes to the last bead is considered as answering the question.

That the dream should be commonly employed for ascertaining the future is natural, and there is a considerable literature on the subject, or 'dream interpretation,' mainly founded on the work of Artemidorus. Lane mentions an Egyptian practice of praying for dreams which can be used in this way: the questioner requests to be shown something white or green, or water, if the course which he contemplates has not been approved; something black or red, if so; and in the case of the former, certain mystic words uttered before going to sleep will produce, it is thought, veridical visions. In some places the Qur'an serves as a sort of vocabulary for the language of dreams; a ship signifies safety, because the word 'saf' is used in connection with Noah's ark; to dream of a king entering an unusual abode is unlucky, because the visit of a king is said in the same book to be a prelude to disaster. Similar glosses can be got from traditions, current proverbs, or familiar usage of words, while, in other cases, the theory that dreams signify their contraries can be applied; e.g. the victor in a dream-duel will be the defeated in the real encounter. The author of the Majíd al-du'álin gives a brief glossary of the dream-language, in the main on these principles; a complete dictionary of it was composed by 'Abd al-Ghani al-Náhlí (printed at Cairo, 1307), including proper names; the number of dreams assigned to the symbols is sufficiently perplexing; thus, to dream of Adam may either signify a warning to repent, or presage promotion to high office, or indicate that the dreamer will be deceived by the words of an enemy, etc. There are places where verbal dreams are more likely to be obtained than elsewhere; these are sometimes caves, more often the graves of saints.

The attitude of Islamic theology towards all these practices is, in general, tolerant, and indeed the presence in the Qur'an of mystic letters strongly favours its magical employment, which is exceedingly natural in those countries in which Arabic is little understood, though used in both private and public worship. The belief in the jinn, who discharge some function in many of these operations, is also orthodox. The prophet himself appears to have attached considerable importance to omens, and, as might be expected, had prophetic dreams. The alphabet of the jinn is written in reverse, to confound the questioner, after reciting a text bearing on the subject of the Divine omniscience, places his finger at random on a letter; he then makes a sentence by adding every fifth letter till he comes back to the first; the sentence thus formed tells him whether to proceed or desist; it is so constructed that the proportion of negative replies to positive is four to one. Some which the writer has seen consist of Qur'anic texts written in a mysterious alphabet; therefore only an expert can use them; the more cautious experts are ready to give general answers out of them, but decline to give replies in which any sort of exactitude is required. The use of sortes Koranici, or divining by the first text that meets the eye on opening the sacred volume, is said to go back to very early times; many copies of the Qur'an contain directions for this method of using the book. One method mentioned by Lane consists in counting the number of times the letters which commence the Arabic words for 'good' and 'bad' occur on the page, and in deciding for or against a course by the majority. DIVINATION (Persian) 819

...tions' ([1.164]; a physician employs incantations to aid in childbirth ([1.277]); the use of a magic tamarisk arrow enables Rustan to slay Isfandiar ([1.285])); a grain of truth in the statement of Diogenes Laertius ([Proc. 6]), that the Magi 'did not know black magic' ([περὶ τῆς γραμματείας μαγείας οὐ κακοῦ], though they 'practised the magical art and prophecy' ([τοῦ μαγείας καὶ ἀρχετορείας τοῦ οἰκογενειακοῦ]).

Divination relies in great part upon omens (q.v.), which may depend upon the day when they are seen. Thus, on the 'Fox-day' festival in the month of Atarór a white ram was believed to be soothsaying; if it died of a natural cause, there was a year of prosperity.\footnote*{\textit{Bombay, Chicago, Oriental. Soc.}}

Although astrology is not mentioned in the Avesta, there is no reason to doubt that it existed in Iran from a very early date. The first mention in any Pahlavi text thus far accessible, however, seems to be in the romance Kārmadīn (dating from the middle of the 6th cent.), which relates that Ardavan (Artabanos V. [A.D. 215-224]) summoned before him the sages and astrologers and asked them:

'What do you observe regarding the seven planets and the twelve signs of the zodiac, the position and the motion of the stars, the condition of the contemporary sovereigns of different kingdoms, the condition of the people in the different countries in which you dwell, and regarding myself, children, and our family?' The answer from the two chief astrologers was: 'The Moon, the Sun, and the Sun's moon do not know anything below; the star Jupiter has returned to its culminating point and stands away from Mars and Venus, while Hapiōrrap (the Great Bear) has approached the earth, and should a white eagle appear over and give help to Jupiter; whereupon it seems clear that a new lord or king will appear, (who will) give my posterity victory, and bring the world again under the sway of one sovereign. . . . It is so manifest that any one of the seven rulers who flies away from his or her kingdom, and leaves his or her kingdom, (from to-day) will attain to greatness and kingship, obtain his wish, and be victorious over his king' (ed. and tr. Israfil Peshekan Sanjana, Bombay, 1899, p. 101 f.).

The richest source for examples of Iranian astrology is unquestionably the \textit{Sah-nāmah}, the enumeration of the principal instances in which is as follows:

Faridun casts the horoscope of his son Sāh (l. 104); the astrologers and ministers of this old king are noted (Persian) as having foretold (l. 184) that the astrologers declare to king Minōdhīr that his death is approaching (l. 299); they find that the children alleged to have been found in the ruins of a temple in the city of the king nor brought forth by his (l. 182); they foretell misfortune to a city built by Šīrāzn (l. 230). They cast a horoscope for the first day for the division of the army at Kāshin (Kainamak-i Turān (i. 9)); they prophesy the 'fortunes of battle to Tis (l. 54); they are among those sought to inquire into the king's dream (l. 196); they prophesy the 'ruins of a tower to Irsā (l. 3); the Alkanand Arvāzhad the astrologers to divine the future, and they foretell sorrow (l. 226); the horoscope of Bahram Gūr is cast by the astrologers (l. 296); Yazdāhr, the father of Bahram Gūr, seeks from them the day and manner of his death (l. 416); ill-forebodings are given to Bahram Gūr by the astrologers (l. 55); retreat is prophesied for Bahram Čōpān in his expedition against Savāv (vi. 474); Alī Golāsp seeks the future from an aged female astrologer, her evil predictions concerning her daughter bring her a vitalizing discoursing concerning his (l. 561 f.); it was prophesied to Chōrā Parviz that he would have a hand of a slave, be possessed of a mountain of gold and one of silver, under a heaven of gold and on an earth of iron (l. 266); the same king had brought the astrologers to despair (l. 299 f.); and an astrologer foretells evil for Yazdāhrī, the last of the Iranian kings (l. 295).

Peculiarly striking and interesting are astrologers by Ardīn (the \textit{Bombay, Chicago, Oriental. Soc.}) to the Chinese (l. 276, 465), the Arabs (l. 359), and the Greeks (l. 59); while in other instances are represented, as they have their own astronomical tables, also those of the Hindus (l. 276) and the Greeks (l. 396). At the court of Faridun there was a council of sages, scholars, priests, and astrologers (l. 121). It may also be noted that the \textit{Cahar Magalā of Nīpāmi} of Samarkan (ed. Browne, \textit{J.E.A.S.}, 1699, ed. Mirza Mahammad, London, 1849) has an entire chapter on astrologers and their art, and there are many other notices on the matter, as that the poet Anvari made a noticeably unsuccessful forecast of the weather (Browne, \textit{Lit. Hist. of Persia. London, 1822 ff.}, i. 367). On the other hand, there are no naturalistic elements in the Persian astrologers explained to Xerxes as foreboding the eclipse of the Greek power, whereas the reverse was actually the outcome (\textit{Dionysius of Halicarnassus}, l. 474).

The regular forms of divination among the Iranians were astrology (which may here include horoscopes [see, further, the 'Persian' section in art. STARS]) onemormancy, cylanomancy, and randomancy.

1. Astrology—Reserving for the art. STARS (Persian) a full discussion of that astronomical and astronomical knowledge to which the Persians were indebted, as no small part of their fame in the classical world, we may note here that the Pahlavi \textit{Dinkart} (9th cent.)—a work which, though late, may be regarded as authoritative in its field—has an interesting summary of the Iranian views regarding astrology (ed. and tr. Peshonit Belaram-je Sanjana, Bombay, 1874 ff., p. 500 f. [vol. ix.]):

'The star-readers understand the worth of the allotment (of destiny by the stars). How long are the chief astrologers (stars) to remain that way? How long are they to have the force? The laws relating to these and other (astrological) details the astrologers learn from writings on the earth (i.e. from astrology). Astrologers can foretell the good events of a man's life (from his horoscope).

Although astrology is not mentioned in the Avesta, there is no reason to doubt that it existed...
DIVINATION (Roman)

According to the late Zarvitát-nāmah (ed. and tr. Rosenberg, St. Petersburg, 1904, p. 25 f.), Zoroastrians had a prophetic dream, for the literal or psychological understanding of which the services of an 'interpreter of dreams' were necessary. But it is in the Sāh-nāmah that we find the richest material for a knowledge of the system of interpretation of dreams made use of in Persia.

The evil Dhājak (the Ab Dhāhak of the Avesta) sees in a dream his approaching downfall at the hands of Variás (l. c. 175 f.). Two visions which make him think of a restorer to favour his son Zad, whom he had exposed in infancy (l. c. 175 f.). The interpretation of the dream of Kāi Qubad is interpreted by the hero Rustam (l. c. 303 f.). The Turanian king Afrasîb has a dream of evil portent (l. c. 206 f.). Sāvāzāx is warned of the approach of his impending death (l. c. 311 f.), but he himself appears in a vision to Firan, the general of Afrasîb, to announce the birth of Kīr Choiš (l. c. 333). The archangel Schön tells Giindaz in a dream of the future great deeds of Kīr Choiš (l. c. 389 f.). Zarîah is told in a dream of the death of her son, Farâd (l. c. 666 f.). Sāvāzāx appears in a dream to Tías and foretells the successful outcome of the impending battle (l. c. 669). A vision of ill omen is seen byئ (l. c. 254 f.). The archangel Sîroî as follows in a dream warns Kīr Choiš of his approaching death (l. c. 182 f.). Nîrušun the Just has a vision which is interpreted by the famous sage Bazurunjar (l. c. 180 f.). Bahram Cypâd, on the eve of battle with Sâvâk, had a dream foretelling defeat; but this was a false vision, sent by a Türk, and it was Sâvâk who was defeated. Choros also records similar prophetic dreams by a Greek princess (l. c. 291 f.), and a Hindu king (l. c. 556 f.).

2. Cycloamancy.—Divination by cups is mentioned among the Persians both by Atheneus, on the authority of Hermippus (Deipnorhmos, 478 A: τὰ δὲ κύβῳ οὖν Παναγίαν τὸν ἅγιον ὢν δ' ἐξει, ὡς φονον Περσίων, ὥς οὖν θέει τὰ διάμνικα κατ' ἑκάστρον ἱεροσελήνην λαμπρὰ κατὰ σέλενα σταυροῦ), and by the Sāh-nāmah (l. c. 274 f., 281 f.). The latter work refers specifically to the magic cup possessed by Kīr Choiš, whose prophecies are described (l. c. 775 f.; ed. Vullers-Landauer, Leyden, 1877 f., p. 1100, lines 2-6):

'He took that cup in his hand and looked. In it he perceived the seven kürâz (regions of the world): of the activity and character of high heaven he made evident the what, the when, and the how much. Within the cup he perceived the reflection all at once from Places to Aries; what Saturn, what Mars, what Jupiter and Leo, the moon, and how the number, and how Venus and Mercury—the magician ruler of the world seen always in all that was to be.' By this method of divination, which is precisely that of crystal-gazing (g.v.), the king was enabled to discover the exact plight of the hero Bīzam and to take steps for his rescue from captivity. The magic cup was later said also to have been possessed by the eastern, legendary monarch Jamîd (the Yima of the Avesta, concerning whom see above, i. s.), among the Persians; and 'Umar Khaysîm could even allegorize the legend, when he wrote (Quaran, 355, ed. and tr. Whindell, London, 1838):

'To find great Jamshid's world-reflecting bowl
I throw in sea and land, and view the whole;
But, when I asked the wise sage, I learned
What my own body and my own soul.'

4. Rhodomancy.—The use of rods for divining is recorded by Dînân (Iraq 8 [FHG ii. 911] among the Medes, and by Herodotus (iv. 67) among the Iranian Scythians, whose 'ancestral mantle' (xârâx xōrzâx) was by means of willow rods, employed in the following ways:

'When they have brought great bundles of rods, they lay them on the ground and unite them; and, putting the rods one by one, they divide; and while saying this they collect the rods and again lay them together one by one. . . . They also practise divination by means of the dividers. When they have split the linden in three parts, he unseveres and separates it (λεκτικός . . . καὶ διαφαίνεται) in his fingers.'

As a trace of divinatory methods in Persia, according to Herodotus (iii. 84-87), after Darius and six other Persian nobles had slain the pseudo-Smerdis, they agreed that he should be king whose horse should first neigh after sunrise, when they had stuffed their steeds. Whether true, if we may believe Herodotus, that the choice of Darius in this manner was won by trickery, but the fact remains that the selection of a king by an animal is frequently mentioned in the East. A note was made by the compiler of the Persian record of Indian folk-tales whereby he who is chosen by an elephant (sometimes accompanied by a hawk) is made king (Knovales, Folk-Tales of Kashmiri, London, 1893, pp. 17, 139, 161 f., 399; Steel and Temple, Wide-awake Stories, Bombay, 1884, p. 140 f.; Day, Folk-Tales of Bengal, London, 1885, p. 100).

And, according to Agathias (ii. 25), the Persians sought to know the future by gazing into the sacred fire—a practice which they thought might be derived from the Chaldaeans of On.

In conclusion, mention may be made of an interesting form of minor divination practised by the sage Bazurunjar, as recorded in the Sāh-nāmah (vi. 371 f.; see also, T'.H'taibí, Hist. des rois des Perse, ed. and tr. Zotenberg, 1908, p. 536). He had been imprisoned by Nāsīrān the Just, to whom the Emperor of Byzantium sent a sealed casket, the contents of which were to be divined without opening it. All the nobles failed, and Bazurunjar, when set at liberty, requested to use his skill. As he passed along a road, the sage met three women—one having a husband and child, the second married but childless, and the third unmarried; and he accordingly was able to inform the king that the casket contained three pearls under more than three wrappers—one of the pearls being pierced, the second half-pierced, and the third unpierced.

LITERATURE.—The passages in the classics regarding Persian divination are indicated by Rapp. Zend xx. (1886) 181. The Iranian material appears to remain unrecorded and unconsidered.

LOUIS H. GRAY.

DIVINATION (Roman).—Among the inhabitants of ancient Italy we find abundant evidence of the desire to hold intercourse with the gods as a means of securing intimations of their will and dispositions regarding the future. In Italy, however, this desire assumes forms considerably different from those met with in Greece. Thus, the Italians were strangers to the idea that the Deity takes possession of the mental and spiritual faculties of a human being, making him ἀφολος, and using him as the medium for the transmission of his desiderations and intentions; and even if—as has recently been conjectured (W. F. Otto, ARW ii. [1909] 546 f.)—they had in the word superstitio a term signifying the state of trance, and thus corresponding to the Gr. θεραπεία, yet the former would apparently have carried from the outset a suggestion of something odd and sinister. In Italy there was no practice of inquiring into futurity by the trance or by immediate Divine enlightenment, and accordingly no trace of that specialism in divination which has its origin in the Greek ἄφολον καὶ ἅλλοτρον μαντείαν σέβοντας, in contradistinction to the skilled interpretations of casual appearances in the external world (Plut. de Vita et Poeni Horatii, ii. 212; cf. Cie. de Div. ii. 26 f.). Among the Italian was peopables, therefore, we find neither with predictions emanating from Divinely inspired prophets and prophetesses (the word rates being probably borrowed from the Celt), nor with dream oracles in which the gods vouchsafe their revelations through sleeping in temples. When Vergil (En. vii. 81 f., italized by Ovid, Fasti, iv. 649 f.) tells us that King Latinus performed the rite of incubation, and received a dream-oracle, in a sanctuary of the god Faunus, he shall hardly err in regarding the narrative as a product of the poet's fancy (cf. R. Heine, Vergils epische Technik, Leipzig, 1908, p. 174, note 2), for which the descriptions of famous Greek incubation temples, such as that of Trophonios in Lebaon, may have supplied the model. It is true that, when the Greek cult of the Epidaurian Asklepios migrated to Rome, it carried with it its associated practice of ἔγκυομαι (cf. M. Dessier, L'Été Thébain de Panticapée, Paris, 1902, p. 228 f.); yet it did not force its way into the ancient Roman or Italian cults; for, on the contrary, the language of
Plautus, *Curt. v. 266, 'lamque incertum satius to fucrat lov,' in no sense implies that incubation was practised in the Capitoline temple, as the poet is merely in jest contrasting Jupiter as the god of oaths with Asklepios; while his testimony of Schol. Pers. ii. 26, 'cum Romani pestilentia laborarent, Castor et Pollux in somnium populum monemunt quibus reddens urgeterunt,' is not sufficient to justify the hypothesis that incubation was practised in the Temple of the Dioscuri in the forum (L. Deubner, *de Incubatione*, Leipzig, 1900, p. 79; *Neue Jahrh. f. klass. Altert. ix.* (1902) 384 ff.). The inscriptions, no doubt, furnish a large number of dedications which were made 'in certa diebus, perversione, ex omnibus, aedificavit,' or v. 2472 (Ateste) : 'C. Titius C. I. Pelops a love ex visus iussus posuit,' refer, not to incubation at all, but to ordinary dreams, which merely attracted the attention of the public. L. Codius Antipater, the historian, who revelled in stories of dreams that came true (Cic. *de Div. i. 49, 55;*), and who was probably the object of Sisenna's solemn *somnus erudi non opere* (ib. i. 99), no doubt borrowed this article for enlivening historical narrative from his Greek models, but he could not have resorted to the expedient unless the Italians had shared the general belief in the significance of dreams. Our contention is, however, that neither the dream nor the oracle was an element in the religious practice of the Italic peoples.

Nor do we find the *gnomic oracle* on Italian soil. The reference of Ennius (Ann., frag. 214, Vahlen, Leipzig, 1903) to the *Curt. v. 280* should be vatesque canebant (cf. Varro, *de Ling. Lat., iii. 36*), and the ascription of *prologus crepult* to the goddess Carmenta (Plut. *Rom. 50*), are simply hypotheses designed to favour the etymology of the title. This may be seen from the curious way in which Livy (xxv. 12) renders them, they were simply Greek Sibylline sentences in a Latin redaction, and their supposed author, Cn. Marcus vates (Fest. p. 156), has as little right to be regarded as an ancient Italian soothsayer as the Publician vates mentioned only by Cicero (*de Div. i. 114, 113*).

In point of fact, the oracle as met with in Italy never signifies an utterance emanating from an individual possessed and inspired by a divinity; it involves no more than the listening for and interpretation of the mysterious voices and noises to be heard in the world of Nature. It is to such manifestations likewise that the fragment of the *Mysteries of Cotecia* with A. de Vos (Buerne, 1705) refers: 'prisca horrida silent oracula crepulsa in memoribus.' The belief in the prophetic powers of certain water-nymphs, such as Carmenta and the Camena, may be supposed to indicate a practice of drawing oracular revelations from the murmur of springs. In the soothsaying of the Galatians, heard the voice of the god Faunus, or his later representative Silvanus—the voice, *e.g.*, which on the stricken field at length announced the sternly contested and long doubtful victory (Dion. Hal. *Ant. v. 16. 21;* Livy, ii. 7. 2; cf. *Cic. de Div. i. 101, de Nat. Deor. ii. 6, iii. 15); while at Tiona Matine, a place in the old Sabine country, the woodpecker, the sacred bird of Mars, perched upon a wooden pillar, foretold a propitious change (Dion. Hal. *Ant. i. 14. 5;* the *pictus Feronius* mentioned in Fest. p. 197, has no doubt, a similar reference). There are numerous stories of natural-spiritual voices which, echoing forth from sacred woods and temples, were interpreted as portentous warnings or behests of the Divine powers (e.g. Livy, i. 31. 3, vi. 33. 5; *Cic. de Div. i. 101*; and the unknown divinity who in a communication of this kind had foretold the irruption of the Gauls was honoured as—Aius Locutius, or *ex omnibus, aedificavit,* etc., to various deities, or in which the dedicatory speaks of himself as *sonno monitum* (instances in Marquardt, *Rom. Staatsverwaltung*, Leipzig, 1885, iii. 106, note 7; A. De Marchi, *Il culto privato di Roma*. 1905) are exceptions in the mass.

The distinctive Italic method of divination was the future was carried out by means of *sortes*, small rods or plates bearing inscriptions and strung together (*acerre, whence sors*); one of these was selected at random, and its interpretation was explained in such a way as to provide an answer to the question put by the inquirer. The fact that in process of time the word *sors* came to mean 'general fate' in general, whichever elsewhere (cf. *sortilegi*), is a designation of Fortuna, the goddess of destiny and luck (thus, according to the inscription CIL x. 6308 [Terracina], a *Sortis signum memphiticum* is dedicated to Isis), clearly shows the importance of the device of *sortilegio* in Italic divination. Cicero (*de Div. i. 34*) draws a parallel between the oracle of *aequas sortibus ducentur* and those *quaes instincta divino adfla- tuque funduntur.* The procedure followed in drawing the lots is described most precisely in the accounts of the celebrated oracle at Praeneste which maintained its reputation till the later years of the Imperial period. According to Cicero's description (*de Div. ii. 85 f.*), the *sortes*—mysteriously discovered in some remote age—were inscribed upon tablets of oak, and in this form were preserved in a chest (area) made from the wood of a sacred olive tree; it was from this chest that Jupiter, who shared this particular sanctuary with Fortuna, selected a sortes. *Incubatione,* with Fortuna, a *incubatio,* is a *Arca* (*vas communis*); with Fortuna, *sortilegi* (CIL xiv. 2937, 2972; cf. 2862 = Buecheler, *Carn. epigr.*, Berlin, 1897, no. 249, 17); at the bidding of the goddess, a boy mixed the lots and then drew one out; the technical terms for this were *trahere, trahuntur,* and *incubatio,* etc. (CIL xiv. 6618); the *sortilegi* contains the words *sacris puerae sortes tertii sustulit*; cf. CIL v. 5801: 'sacro suscepto, sort(i)bus sublatis'; Juven. vi. 583: 'sortes ducet'.

Dennarii of M. Pictorius Cestianus from Cicero's time show on the reverse a figure of the boy, with a tablet below him bearing the word *SORIS* (E. Babelon, *Monnaies de la répub. rom.*, Paris, 1885, iii. 315, no. 10; also H. Dresel, *SILAV*, 1897, p. 371). To bring the gnomes thus drawn into connection with the lot and draw for an answer, there was the *sortilegio* of Fortuna at Praeneste (CIL xiv. 2869: *sortilegius Fortunae Primigeniae*), but also in connexion with other localities (CIL iv. Suppl. 5182, vii. 2274, viii. 6811). When a favourable prediction was fulfilled, it was customary for the inquirer to send some token of gratitude by a votive offering to the goddess, as is shown by the inscription CIL xiv. 2862: *Fortunae lovis puero Primigeniae d. d. ex sorte comos factus Nothus Ruticannae L. i. Flottillae.* The oracle was open for
DIVINATION (Roman)

consultation only on certain days—in particular on one of the two annual feast-days of the goddess (according to CIL I. 1. p. 339: [hoc biduo sacrificiis maximi, magni] Fortunae Prim[ii]gen[iae]; otro est nomen Divinarum] talium [sunt vulgat],') the Prenestine festivals fell on the 11th and 12th of April); but exceptions were no doubt permitted in the case of distinguished inquirers, as, e.g., the Emperor Domitian, who, on New Year's Day, 79 A.D., after two years in succession, obtained a session of happy omen, but received a forecast of disaster in the year of his overthrow (Suet. Domit. 15). The Emperor Tiberius, having become sceptical of the Prenestine oracle, resolved to destroy the station, and had the sacred seat and consulted by the will of the name. The only reference to sortes connected with the city of Rome is supplied by the inscription of a 'sortes legibus Venere Ercina ('CIL vi. 2274')—an item of evidence emanating from a legal code of the official representative of Rome. The lines of demarcation between native and foreign divination had been obliterated in private life, and when all kinds of Greek and Oriental soothsaying had found adherents in Rome, Tiberius, on which the tablets were set up, prohibited the consul Q. Latatius Cercio from consulting the Prenestine sortes (Val. Max. Epit. i. 3, 2), and the scornful question of Cicero (de Div. ii. 87): 'quis enim magistratibus sacris hostibusque in unam syllabam vertatur in unam?'—was explained by the fact that the State religion took a narrower view of the character and purpose of divination than which prevailed in Greece, or, indeed, among other Italian peoples. Thus, the definition of Cicero (ib. i. 105, 132, ii. 70) refers to 'Soranos augur' and 'Maranus augur.' From the Roman point of view, the operations of divination were concerned, not with those things 'qua fortuitae putantur', praedictio atque praensio ('ib. i. 9); but exclusively with the determination of the question whether an action just about to be performed had or had not the sanction of the gods. It is true that in Cicero's day there emerged within the Collegium Augurum, the official representatives of the State of divination—the 'interpretes lovis optimi maximi publici augures' ('de Leg. ii. 20)—a conflict of opinion as to the function of the augi, viz. whether they merely expounded a system of doctrine where the question of a lucky or unlucky number of tosses was determined, or whether they could actually furnish a 'praesenso aut scientia veritatis futurarum' ('de Div. i. 105). Cicero, who himself became an augur in 53 B.C., and to whom Agrippa Claudius Pulcher (Consul in 54 B.C.) recommended the use of the sortes ('ib. i. 105), had dedicated his work de Disciplina Augurali (Cic. Ep. ad Fam. iii. 4. 1), took up a mediating position, holding, on the one hand, that the augural science of his day was nothing more than an instrument put into the hands of statesmen for political ends, while maintaining, on the other, that it had originally been a 'divinatio rerum futurarum' ('de Div. ii. 75; 'de Leg. ii. 32 f.). Even on the latter hypothesis, however, the disciplina auguralis had never become a mere oracle, but was a certain practice based on the occurrence and course of future events ('de Div. ii. 70): 'non enim summis ii nos augures, qui avium reliquorum signorum observantia futurae decumans'), but had merely solicited indications of the Divine consent to intended actions, and endeavoured to recognize the warnings proceeding from the gods; and, accordingly, Cicero is quite correct in speaking of the 'rerum bene gerendarum auctoritates' as the subject-matter of the science ('de Har. Resp. 18).

Such is the sortes found in the ForumNovus near Parma, and now in the museum of that city, are of a somewhat different character (CIL xi. 1129); on each of their four sides they bear a gnomic saying, composed, so far as we can judge from the much mutilated text, in hexameter verse of very irregular type (cf. A. Swoboda, in Wiener Studien, xxxiv. [1902] 485 ff.).

While the practice of supplying oracles by means of sortes was adopted by many barbarous peoples as indigenous to Italy, and prevalent everywhere on Italian soil, yet the Roman State religion took up a curiously disparaging attitude towards it. None of the recognised divinities of the ancient Roman régime delivered oracles, and, whilst Paulus speaks of divinae vel sortes ('Cic. De Nt. 1. 16'), quae quid quaeren sedem sorte, dictae quod tenendi habitarem potestatem,' we cannot say whether he was thinking of Roman deities at all, or whether his statement has any better foundation than the sortes of the Temple of 'Tentac'. quae credebantur esse sortem deum, etc. [Quint. 2. 1. 6].
DIVINATION (Roman)

823

disapprove and foreboding—spontaneously vouchsafed by the gods (auguria oblativa [Serv. Æn. vi. 190, xii. 259]). Solicited omens—so far, at least, as concerned the magisterial consultation of the gods, yet not the priestly operations of the augurs—were usually taken up from the phenomenon of birds connected with, and thus the word auspicium (auspicium) became the general term for these intimations of the Divine which, approving or disapproving, guided human conduct, as also for the art of identifying and interpreting such intimations. Consultation of the auspicii was in ancient times an indispensable preliminary to all important actions both in public and in private life (Cic. de Div. i. 29 = Val. Max. ii. 1. 1); thus, we are told that the speeches of hawk calling occasion was held to be 'persperrimi auguri nuptialis negotios et pecuniae rei' (Pliny, HN x. 21). Latterly, however, the practice was discarded in private affairs, leaving as its sole vestige the designation 'municipal auspices,' which was applied to certain observances in marriage contracts (Varro, in Serv. Æn. iv. 45, etc.). In public affairs, on the other hand, the science of the auspicii was practically the highest authority, and the public functionary had to make sure of the Divine sanction for every action within his jurisdiction. Accordingly, the prerogative of taking the auspicii coincided with the official warrant for undertaking any public or private undertakings. In the Divine guaranty of success, was co-ordinate with the imperium, or secular authority, and the phrase 'auspicium impernumque' covered the entire range of official power (cf. the expression 'dictu auspicio imperioque divino captum,' in the epiphant of L. Mummius [CIL vi. 331]).

As regards the mode of procedure in taking the auspicii, we have numerous sources of information (e.g. Fest. p. 348; Serv. Æn. vi. 197; Cie. de Div. ii. 64; cf. Fest. p. 197; Serv. Æn. iv. 462). Many species, again, were propitious at one season of the year, and unpropitious at another (Pliny, HN x. 6142; cf. Fest. p. 349). Some birds are mentioned as to the circumstances in which, for any particular case, the omen was to be recognized as favourable or the reverse. With some kinds of birds the auspicio were determined by their flight, with others by their cries, and, accordingly, the augural birds were divided into the two classes of alites and aesores (Fest. p. 197; Serv. Æn. iv. 462). Many species, again, were propitious at one season of the year, and unpropitious at another (Pliny, HN x. 6142; cf. Fest. p. 349). 'Impepiatum inauguratius cornix puna cornix ab laeva, corvis parrà ab dextra consendant'; cf. Cie. de Div. i. 85). The auguries, in fact, were subject to an elaborate system of casuistry, certain details of which are given in the extract in Pliny, HN x. 6142 (cf. D. Detlefesen, in Hermes, xxxvi. [1901] 5 ff.). If during the period of observation one of the recognized favourable omens appeared (the technical phrase for this was 'advenient aves'; cf. Livy, i. 36, 3; 39, 3, xii. 16, 15; Fest. p. 241), the phenomenon was accepted as evidence of the Divine consent; but, if such favourable omen did not present itself, or if the proceedings were interrupted by the fall of some object ('cadua auspicia,' Paul. p. 64), or by a disturbing noise; e.g. the squeak of a marten (Pliny, HN viii. 223), or by a depredatory portent ('Paul. p. 64; 'clivia auspicia dishonest quae aliquid fieri prohibebat'), e.g. the appearance of obscurae aves (Serv. Æn. ii. 241; Ausg. xii. 14. 6), such as owls or owlets, the consultation was regarded as having miscarried, and the action for which Divine sanction was sought could not be undertaken without a repetitio auspiciarum; this, however, could not usually take place until the following day (Livy, iv. 38, 15, 39. 1).

Even when a consultation had resulted favourably, however, it was still possible that the divinity might in some way interfere with the provisionally sanctioned undertaking, which had not been asked for. The range of such auguria oblativa was very extensive. In the system of the augurs five varieties of signo were distinguished, viz. 'ex caelo,' 'ex avisbus,' 'ex tripulibus,' 'ex quadrupedibus,' 'ex piscibus.' Among this classification was by no means exhaustive. An official who was about to discharge some duty of State might find a propitious or deprecatory sign in any occurrence in Nature or in his immediate surroundings, which he was willing to bring into relation with his intended action. Here lay the vast province of omina—events which in many cases were of an altogether indefinite character, but in which the person concerned might read a significance favourable or adverse, as the latter merely confirmed the result of the antecedent solicited auspicii, while the former actually reversed the Divine consent already granted, and gave warning that the previously sanctioned course of action was to be abandoned, turned out or persisted in: 'etem dirae (i.e. all events of an abnormal and therefore alarming nature) sicut cetera auspicia, ut omen, ut signa, non causas aderunt car quid eventum, sed mutantes eventum, nisi proverbia' (Ib. ii. 35). Among such prohibitory omens, the phenomena of thunderstorms were regarded as of special importance. The lightning flash was a solicited portent of great significance, not indeed for the divination of the future, but for certain priestly ceremonies. The order of the augurs (auguria), in which the latter sought to make sure of the Divine consent to specific actions by auguria coelestia (Paul. p. 64): with their litus they divided that portion of the heavens lying within their field of vision into four regions ('antica,' 'postica,' 'dextra,' 'sinistra'), and then decided, by a special lupon dictio (Serv. Æn. iii. 59), the regions in which the celestial signs were to be regarded as having decided. The example of this procedure is the inauguration of priests which Livy (i. 18) describes in full detail, but Cicero (de Leg. ii. 20) refers to other auguria of a similar kind, regarding which strict secrecy was maintained (Kemnitz's case, i.e. that the actual character of many of them, such as the vernixia auguria (Paul. p. 379) and the augurium odarium (Pliny, HN xviii. 14; Fest. p. 285; Philarg. on Verg. Georg. iv. 425), is very obscure, while the frequently
mentioned augurium salutis (Cic. de Div. i. 105; Dio Cass. xxxvii, 24 f., li. 20, 4; Suet. Aug. 31; Tac. Ann. xii. 23) is expressly spoken of as auspiciæ terribilium (Dio Cass. xxxvii, 24. 1), in which the divination was asked whether it was permissible to pray for the salus publica. The latter ceremony is referred to in a cippus recently discovered in Rome, and bearing the inscription (Notiz. d. Sav. 1910, p. 153) : 'Auguria: mutua sem quae salus populi Romani conditior, quae actum est (here follow the names of the consuls in A.D. 3 and 7), qua acta sunt (consuls of the years 1, 2, 8, 12, and 17 A.D.).

In all these augural rites the lightning-flash, and especially its connexion with the lightning-god, was a highly favourable imperativum auspicium (Cic. de Div. ii. 74); such an augural ceremony is probably indicated also by the African inscription CIL viii. 774, bearing the representation of a lightning-flash, together with the words : 'Deo locii invocatus dignitatis tale, munisicipes Africae sese[dem]—a dedication which dates, at all events, from the time when the lightning was regarded as a solicited sign even in magisterial divination. As a spontaneously given sign, on the other hand, lightning was assumed to be wholly unfavourable. Thus, a marriage by the solemn rite of conferratione could not be proceeded with if a peal of thunder was heard (Serv. En. iv. 339), and the supreme deities and the bodies of the Roman people were subject to the principle, 'love tonante fulgurante comitia populi habere nefas' (Cic. de Div. ii. 43; cf. in Vatin. 29; Philipp. v. 7), so that thunder or lightning led to the adjournment of the comitia as inevitably as did an epigaster emerse (vomitorius comitidialis) (Fest. p. 234).

It is true that in these, as in all other cases of the unsolicited sign, it rested with the presiding official to decide whether he would apply it to the matter in hand and take necessary measures, for example in case of Cato the Elder, viz. 'quod ego non sensi, nullum nihil vitium fact' (Fest. p. 234)—a principle according to which the magistrates tried their best to avoid the possibility of even noticing unwelcome signs (Cic. de Div. ii. 77).

But, as such disregard of Divine warnings might result in serious mischief to the State, the legislature put an obstacle in the way of anything like extreme neglect of unfavourable omens. By prescribing that the magistrates must, without further investigation, take full account of all such auguria oblativa as were announced to them either by another magistrate ('obunctatio'), or by the augur who was officially in attendance ('obunctatio'). This injunction was put into practice by a decree of the comitia, and in the political conflicts of the day it became an effective instrument of obstruction, as a meeting which took a course unsatisfactory to any party could avoid the possibility of even noticing unwelcome signs (Cic. de Div. ii. 77).

This political perversion of a statute which was in its origin the expression of a religious sentiment is but a symptom of that general deterioration of the auspices which showed itself more and more during the later years of the Republic. The stringency of the ancient regulations was relaxed first of all in the army, and especially during war, as the conditions were then frequently most unfavourable for the ceremonious and protracted observation of the flight of birds. For a time, as would appear, the place of the traditional ceremony was taken up by a special event, which involved some sort of observation of spear-points ('ex acuminibus' [Cic. de Nat. Doct. ii. 9; Arnob. ii. 67]), but, when—during the Second Punic War—this device had at length been abandoned (Cic. de Div. ii. 77), every other expedient for divining the will of the gods was superseded by the observation of signa ex tripudia, i.e. the manner in which owls pecked the grain by which the augur would—on the point being, not simply that they ate, that they fed so greedily that part of what they picked up fell to the ground again (tripudium = terriposum, poviere enim ferre est [Paul. p. 244; Cic. de Div. ii. 72]). Such accidental dropping of food was formerly considered a favourable signum oblattivum, and might as such be mediated not only by birds of any kind, but also by quadrupeds (Cic. de Div. ii. 73; Pliny, H.N. viii. 83). These pullaria auguria (Serv. En. xii. 43) was a mere survival, for actually degenerated into a mere form, especially as the act of feeding could be so managed as greatly to influence the result of the signum (Cic. ii. 73); and a similar fate befell municipal divination, in which the observation of birds was at length abandoned in favour of observation of the sky (de ceelo servare); this, however, was performed, not by the official himself, but by his servant the pullarius ('tam de ceelo servare non ipsos censes solos, qui auspiciabantur, nec imperator, tabellarius, V. 25; Cic. de Div. ii. 73).

On account of the comparatively rare performance of the augural ceremonies, it had been possible to solicit a lightning-flash as an indication of Divine consent, but with the manifold other divinatory authorities that was still a rare act. The pullarius could be met only by way of a gross fiction, so that Cicero is perfectly justified in saying (ii. 71): 'haec certe, quibus utimur, sit tripudio sive de caelo, simulacra sunt auspiciorum, auspicia nullo modo.'

The performance of divination during war came to be still further circumscribed by the circumstance that in the imperium militium the duty was assigned—from Sulla's time regularly, and often earlier—now to the praetors, and later to the censors, i.e. consuls and pratores, but to the holders of prorogated authority, the preconsuls and propratores, who had no auspicia of their own (Cic. de Div. ii. 77); 'ubi ergo avium divinatio quae... servare... magisteri ad urbem, urbana res retenta videtur, a bellicis esse sublata.' But, as it still remained necessary to make sure of the Divine sanction before entering upon any decisive line of action, the divination itself might be sought in the field by exipsumium, i.e. the inspection of entrails ('omulto nostros, qui nihil in bello sine extis agunt, nihil sine auspiciis domi' [Cic. i. 95; cf. 28]), which, however, had been previously employed as a means of determining the time to be observed according to Livy, xxvii. 16. 15, before Fabius Maximus moved his camp from Tarentum to Meta- pontum, he first of all inquired by means of birds, and then, not having received the required indication of Divine consent, he caused the barbarians to inspect the entrails of a victim. But it should be clearly understood that the inspection of entrails as a means of ascertaining the future was a foreign, not a Roman, method of divination. It is true that the indigenous religious practice sanctioned the inspection of the extre of a sacrificial animal—not, however, for purposes of divination, but only as a part of the requisite test applied to the victim in order to determine whether it was acceptable to the deity and suitable for a sacrifice. In such instances the entrails of the victim were examined in connexion with the body as a whole ('adherentia extra inspicer' [Paul. p. 100]), and boiled in a pot (Varro, de Ling. Lat. 98), if any abnormal animal was regarded as unsuitable, and the sacrifice could not be validly performed—it did not become a litatio ('non pertilitat eum'). An abortive sacrifice of this sort might, of course, bear the character of a signum.
DIVINATION (Roman)

oblitrium, and thus be recognized as a Divine warning (as was the case, e.g., in the incident related by Livy, xii. 15), and it was therefore possible to speak of auspicia in connexion with certisipicis (e.g. Paul. p. 244: "pesicera auspicia esse dixit"). Or, were

vestigia, with its scrutiny and interpretation of entrails, was never resorted to for the purpose of acquiring information as to the course of coming events.

This function, however, was the distinctive feature of the Etruscan haruspex, which had found its way into Rome at the time of the Second Punic War, and in the hands of which certain acts of prophecy were called consultatio divina [Serv. . En. iv. 56; Macro. Sat. iii. 5, 11], to deduce information regarding the issue of the proposed action—information which was not confined merely to a prophecy of success or failure; but which was deep enough to detail, as e.g., an ambush of the enemy (Livy, xxvii. 15. 16), or a case of imminent death (Ammian, Marc. xxii. 1. 1). The interpretation was arrived at upon the basis of a highly complex system of doctrine, involving a most precise observation of the nature, and especially the abnormalities, of the victim's inner organs—more particularly the liver. The celebrated bronze liver of Phaeae is a direct survival from the practice of the haruspices, and, by means of its precise division of the organ, with its various convexities and indentations, and the inscribed names of the gods associated with the several parts, gives us some idea of the procedure of the priests. Moreover, the fact that models of the livers of animals, formed of terra cotta and covered with inscriptions, have been found also in Babylon,² points to a relationship between Etruscan and Chaldean haruspicy which awaits a more thorough investigation.

There was no divination of the future, which, as we have seen, went far beyond the limits of the Roman practice, makes its influence felt likewise in the official treatment of prodigies, i.e., unnatural and alarming occurrences, such as showers of stones, earthquakes, earthquakes, miracles, births, etc. PRODIGIES AND Portents [Rom.], regarded as signs of Divine resentment. To the Roman mind such phenomena were an evidence that the normal relations between the community and the higher powers were disturbed, as also an occasion to take the necessary steps towards retrieving the paz et venia dei, and those who in such emergencies wished to ascertain the measures requisite to an effective reconciliation had recourse either to the pontifices, as the custodians of the ancient Roman ritual, or to the representatives of foreign cults, such as the decumviri (later, the ve. viri) sacris faciundis, who were proficient in the Graeco ritus, and the Etruscan haruspices [Cic. De div. i.

97, 98). The haruspices, however, did not confine themselves to a simple specification of the means of reconciliation; on the contrary, they also undertook to deduce from the character and course of the prodigy an answer to the question "quid porteat prodigium?" i.e., to predict the future tendencies of such events as civil war and conspiracy (Cic. de Har. Resp. 18), foreboded by the prodigy. Cicero's oration de Haruspiciis Response gives us a clear conception of the matter and form of such a professional finding. The sacred books of the Etrusca disciplina supplied full directions for the interpretation of ostenta, and in particular they contained a doctrine regarding the interpretation of lightning which was, in an absolutely and far from arbitrary fashion, found in the closing centuries of the Republic the haruspex became permanently attached to the staff of the commander-in-chief. The Etruscan haruspicatio (CIL vi. 32285, i. 78) was performed prior to all important undertakings, such as the departure of the army for war, or the beginning of a battle; and its object was, from an inspection of the entrails of a victim slaughtered expressly for the purpose (animals from which ³ such acts of prophecy were called consultatio divina; haruspices, however, was of a very different character (for their system, cf. e.g. Pliny, HN ii. 138 f.; Seneca, Nat. Quest. ii. 39 f.). They first of all ascertained the region of the heavens whence the lightning-flash proceeded, and attempted to define the nature of the stroke, from which it came; further, they defined the several kinds (nomenium) of lightning-flash sent forth by particular gods, and determined the place, the time, the effect, etc.; then from all these data they elicited the requisite sacrifice, which was required, but also the import of the phenomenon. Nor did they rest satisfied with a simple announcement that the lightning signified the deity's consent to, or warning against, a given design ('consiliaria fulmina') (Seneca, Nat. Quest. ii. 20. 1), but they also gave quite definite predictions of future events, such as an extension of the frontier and a defeat of the enemy (Livy, xiii. 20. 1), or the approaching death and dedication of the Emperor (Suet. Aug. 97).

It is a fact worthy of note that this mode of divination was always regarded by the Romans as outlandish and unreliable, and this explains why the haruspices were never admitted into the official priestly body, and why they never found a place in the Roman disciplina auguralis; so that, when the Senate wished to have the opinion of the haruspices in any particular case, it summoned them from Etruria expressly for the purpose (the regular practice for this was 'haruspices acciusendi ex Etruria' [Cic. de Har. Resp. 25]). This proceeding, however, must be regarded in the same light as the action of the Roman State in sending ambassadors to lay certain questions before the Greek oracles, such as that at Delphi; the first deputation of this kind was sent just after the battle of Canne (Livy, xxii. 57. 5, xxiii. 11. 1). Livy's statements as to still earlier consultations of the Delphic oracle (i. 56. 9, v. 15 f.) are rightly regarded by H. Diels (Syllogeis Blätter, Berlin, 1891, p. 49, n. 3) as without foundation in fact. The truth is that, in times of severe national trial, the Roman people habitually resorted to the vaticination of foreign cults, but they did not thereby admit such practices into their own religion. The case was different with the so-called Sibyline Oracles (libri fatoles), which were authoritatively introduced into Rome as early as the period of the Tarquins, and had their official custodians and interpreters (see Sibyl., Sibyllins, and the phrase 'decemviri qui divindum scribant sacris faciundis'). The Sibyllines, however, were not oracles in the proper sense, but kalypsoi; i.e., the sentences specified the

---

DIVINATION (Roman)

particular measures—sacrifices, lectisternia, supplications, admission of new cults—by which impending dangers could be turned aside and the anger of the gods appeased; but actual predictions of future events lay outside their province, and were first deduced from them at a relatively late period, at the latest in the later 1st century B.C. (Liv. xlix. 45. 3).

We may thus venture to affirm that the aversion to an over-curious prying into the unborn future, as also to the practice of consulting the Deity with references to coming events, was a characteristic feature of ancient Roman life, and that the Romans manifested this reluctance in considerably greater measure than the other peoples of Italy.

For, as we have seen, they asked no more from their augurs than an assurance of Divine concurrence with their actions, and were unwilling to do anything in opposition to the Divine counsel, being for the rest content to abide the issue, and seeking no further revelation of the future. But when we bear in mind that in times of calamity even the supreme authorities succumbed to the temptation of resorting to the practitioners of foreign divination for the occult knowledge which their own religion failed to supply, the Roman private life of a manner of mantic devices of exotic origin acquired in process of time a great and growing influence.

Cato the Elder already found it necessary to insert among his directions for the conduct of an estate (gen. i. 3. 13) the statement that the augurs of Haricola Chaldaeum ne quem consulsissi velit (de Agri Cult. 5. 4); while Cicero gives quite a list of fortunate-tellers who, finding their clientele among the middle and lower classes, made a profitable trade of forecasting the future; hence the testator, non me sollicitos neque eos qui quaeast causae haricori, ne psychantomiam quidem... aegorese; non habeo denique nunci Maruorum augurum, non viciuos haruspicos, non de circos astrologos, non Isiacos conterctores, non interpretes somniorum (de Div. i. 132). These references are elucidated by evidence from the Imperial period, which shows that the people were in the habit of consulting foreign augurs regarding such things as sickness (Plin. Ep. ii. 20. 5), the outcome of every kind of venture (Juven. vi. 588 ff.), the whereabouts of runaway slaves, or the advisability of purchasing an estate (August. de Civ. Dei. x. 11). A further illustration is afforded by a collection of oracular sayings of very general application—and, as it would seem, from a Greek original—extracted from the Merobaudes palimpsest of St. Gall, and published by H. Wissowa (Sortes Sanguilentes, Bonn. 1887); from these sayings the inquirer probably selected his particular oracle by means of dice.

The most influential of these exponents of exotic divination were the Chaldei, or, as they were subsequently styled, mathematici (ib. xii. i. 8. 6), i.e. the professors of Babylonian astrology, who presaged the destiny of individuals by means of the horoscope (hence they were also called genethliaci [ib. xiv. i. 1]), and gave information regarding the influence of the movements of the heavenly bodies. These astrologers were banished from Rome and Italy for the first time in 139 B.C., in consequence of an edict of the Pretor peregrinus, Cn. Cornelius Halspasius (Val. Max. Epit. 1. 3. 3). In the Imperial period, by a long series of regulations passed by the Senate—by the edicts of the Senate, by the acts of the various Emperors—they were made liable not to expulsion only, but to the severest penalties (Tac. Ann. ii. 32. xlii. 52. Hist. ii. 62; Dio Cass. xvi. 9. 22. 4. Ulpian, Mem. de Rom. leg. coll. [1768] v. 15. 2). These measures, however, brought about no considerable diminution of their activity (Juven. vi. 553 ff.), as their clientele included people of the highest rank, and even the Emperors themselves made use of their art. Hence Tacitus (Hist. i. 22) could with perfect justice speak of the mathematici as "genius hominum potentijs inuidium, sperrantius fallax, quod in civitate nostrae et vetabitur semper et rotinentia inuestigatum..." (ib.). In later instances of the seeking and giving of information bearing upon the life of the Emperor and the succession to the throne—and, in the case of slaves, consultations regarding the duration of their master's life—that ranked as capital crimes (Paul. Ventic. 3-4; Mommsen, Rom. Storreffch, Leipzig, 1889, p. 861 ff.); and, indeed, Alexander Severus actually instituted public chairs of astrology in Rome, and endowed them from the national exchequer (Hist. Aug. Ael. vii. 35; cf. vii. 44). Then again, with soothsaying in vogue in his own day (6th cent. A.D.): "nullus ex vobis caragos vel divinos vel sortilegiis requir... nullus sibi praecantatores adhibeat... similiter et auguria observare nocte nee in inthea positii aliquis avicentantur... nemo nee ex illicitis auspiciis... oracles... divinationem... augu- niantvrae praesumite" (Migne, PL xxxix. 2369); to these must be added the 'sortes Sanctorum' mentioned later in the records of Councils (cf. E. Bouche-Leclercq, Les sortes de Sanctorum, Münch. Mittheil. 1909, p. 42 ff.), i.e. the practice of opening the Scriptures at random in order to find a sentence which might furnish the solution of a stubborn dilemma or give information regarding the future ("qui de paginis evangelicis sortes legant") (August. Ep. iv. 37, p. 212, 3. Goldbacher)—a device which Augustine himself had employed (Conf. viii. 12. 29), and which was at an earlier day applied in exactly the same way to the works of the ancientalogists, especially Virgil (ib. iv. 3. 5). Cf. art. DIVINATION (Christian).

DIVINATION (Teutonic).—Tacitus (Germ. x) states that the German tribes practised augury and divination by lot as much as any people. He proceeds to describe how, which, he says, was used in both public and private life, and which from of itself appears to have been a common custom. He says that it consisted in picking up and interpreting chips of wood that were inscribed with some kind of signs (which may possibly have been runic characters), and that had been scattered haphazard:

"If the twigs prove unfavorable, the matter is left over for that day; while, even if they are favorable, the confirmation of augury is still required. For they are also familiar with the practice of divination—ravens, and it is a characteristic of this people to seek warnings and omens from ravens. They are kept at the public expense, in the woods and groves, while horses, free from all taint of human labour, these, yoked to a consecrated chariot, are accompanied by the priest and king or chief person of the community, who observe their manner of eating andMorning. Nor is there greater reliance on augury, both as to the common people, or the nobility, and even the priests; for they regard themselves as the ministers of the gods, the horses as acquainted with their will."

We may compare a passage in the Flitvæjarbok (saga of Olaf Trygvason, 322), where we hear of horses sacred to Frey at a sanctuary in the Thrandhjem fiord. In the sagas we hear also of ravens being used in augury, but the majority of the instances are concerned with birds, usually the raven. This bird was evidently considered to possess wisdom and knowledge of events, and is specially connected with battle; should one be heard thrice screaming on the roof, it bodes death to warriors; but the appearance of the raven following a host or a single warrior will bring good luck in battle.

A striking instance of the significance of the raven occurs in the saga of Olaf Trygvason in the Hitlætingslag. Earl Halvdan, the last of the fiaks of Norway, on the death of his brother at Danewirk, made a great blood-sacrifice, and there came two ravens flying, which crouked loudly, and now, thought the earl, the blood-offering has been accepted by Odin, and he thought good luck would be his. On the next day he bade his people bring in his devoted followers (tr. Laing). Here the two birds were perhaps supposed to have been Odin’s own ravens, Hugin and Munin, from whom he learnt all that was going on in the world. In this connexion we may mention the raven as the companion of the Seeress, the Seer, and the Norn in Anglo-Saxon records; it was woken of plain white silk, but on it in war time there became visible a raven, which by its drooping or flapping wings portended defeat or victory.

Augury from the voices of birds is frequently found in the form of a belief that certain specially gifted persons could understand the language of birds. Procopius (de Bell. Goth. iv. 20) gives the story of Hildigisilus, king of the Varni, who interpreted the loud and incessant croaking of a bird as presaging his own death. In the sagas various birds act thus as seeresses—the raven, the crow, and the nut-hatch. Thus in the poem Hofsmelm, Sigurd, after tasting Fafnir’s blood, is able to interpret the certain speech hatches which warn him of the treachery prepared by Regin; and the Ynglinga Saga gives the legend of a certain king Dag who had a sparrow which he greatly valued, since, like Odin’s ravens, it flew to different countries and brought him much news.

Divination appears to have been largely practised by ‘wise women,’ both among the early Teutonic peoples of the Continent, and in later times in the North. Strabo (bk. vii. ch. ii. [p. 294]) states that the Cimbri were accompanied to war by grey-haired prophetesses, who presaged victory in battle from the blood and entrails of slain fugitives preceding the battle. Tacitus has several references to the prophetesses Veleda, who was held in much reverence by the Breuci, and who had predicted the successes of the Germans and the destruction of the legions; and Caesar and other writers also allude to the predictions of ‘wise women’ among the Teutonic armies.

In the sagas, too, we hear of the ‘wise woman,’ such as Thorbjorg, who, in the saga of Kirk Raudh, visits the house of Thorkel. She has a special dress, seat, and board, and further requires one of the women of the house to sing the ‘warlocks,’ or spell song. Then she predicts the end of the sickness and famine, and forecasts the future of many of the people.

In addition to these forms, we have vague references to some sort of inquiry of the gods, accompanied by sacrifices; as, for example, in the Eyrgygja Saga, where Thordolf of the Muirt makes a great sacrifice and consults Thor, ‘his well-beloved friend,’ as to whether he shall emigrate or make peace with the king; but the word showed ‘Thorolf to Iceland.’

We hear also of divination by dreams, and of the practice of single combat, as a kind of oracle by battle, like the Homeric disputes, (Iliad, iv. 120) states was also used to presage the result of a war.

DIVINATION (Vedic).—The Vedic system of divination, when contrasted with the Greek art, presents striking differences. Institutions comparable with the wide-reaching influence of the Greek oracles were never developed, and, while the gift of prophecy was held in other mystic powers, was acquired and increased by religious austerities (cf. Mahabharata, 3. 16. 870, Calk. ed.), still the power of seeing what is hidden, especially what is hidden in the future, depended in the main not on inspiration, but on the knowledge of how to interpret certain omen and portent. The chief reason for this fact must be sought in the great development of the other branches of magic (cf. Magic[Veda]). A man who is in possession of the magical means to acquire any desired blessing has little reason to inquire what the future has in store. Indeed, his only motive for inquiring about the future can be to learn when danger is impending, in order that he may avert it by the timely performance of the necessary rites. It was primarily to this need that the observance of omens and portents in India was due, though further development was sure to follow, as the attempt to define an evil portent leads of itself to the observation of favorable omens.

The omens and portents recognized in the Vedic system of divination may be classified as follows: (1) ominous appearances and actions of animals, especially birds—Śikānas; (2) phenomena at variance with the usual course of Nature—ādibhūtas; (3) physical marks—ādeśas; (4) omens of an astrological nature; (5) omens drawn from occurrences at the sacrifice; and (6) dreams.

With regard to the omens derived from the sacrifice, it may be noted that while they depend in part upon things not wholly subject to the regulation of the celebrant (e.g. the movements and colour of the fire), in part they depend upon things that are subject to the will (e.g. when it is stated that Purjama will give rain if both or one of the bulls that draw the cart is black (Satopatha...
DIVINATION (Vedic)

Breahmang, 3. 4. 11), and so pass over by almost imperceptible transitions from divinatory observances into directions about the sacrificial technique required to obtain a desired object. This subject will be dealt with in other contexts (cf. e.g., 34 DREAMS (Vedic)), and the present article will be devoted to the ceremonies the purpose of which is the attainment of knowledge (vijñāna), usually of future events, which is unattainable by natural means.

1. Sources.—As was to be expected, the chief source for such ceremonies is the Kaushika Sūtra, which is supplemented by an interesting chapter in the Śānnavidhāna Brähmānya, 3. 4. Spartan influences occur in other Vedic texts, sufficient to show that such practices were not confined to these two schools, and that the reason why they are not more frequently mentioned in other texts is to be sought in the nature of the literature.

2. The ceremonies.—The most widely attested vijñāna ceremony is the test of the bride, advised or enjoined by the Gṛhya Sūtras (Āsvalāyana, 1. 5. 4–5; Gobhila, 2. 1. 3–9; Apastambha, 3. 14–17; Manava, 1. 7. 9–10; Kāthaka, 14; Bharadvaja, 1. 11. 1–2; Āśvaghoṣa, 37. 6–10; cf. Winternitz, Das altind. Hochzeitsrituell, 1892, p. 37). It is based upon the principle of attraction similitūnum, and consists in offering from four to nine crows of earth, taken from different fields, to a bride, positing that the crows' list is typical, and comprises crows from a field that yields two crops a year, from the stable of a cow, from a vedī (altar), from an undrtying pool, from a gambling-place, from cross-roads, from a barren spot, and from a cemetery. This signifies respectively that the bride's offering will be rich in food, rich in cattle, rich in holy lustre, rich in everything, addicted to gambling, wandering in different directions (according to Kaushika, that she will be unfaithful), poor, and the cause of the death of her husband (according to Kaushika, that she will not live long). When there is a ninth crow (Gobhila and Kāthaka), it is mixed of all these substances. The ceremony is recommended when it is impossible to determine the bride's qualities from the marks on her body (lakṣaṇān), but Apastambha implies that her family have a right to object to this test. An alternative in Kaushika, 37. 11–12, is to require the bride to pour out a handful of pebbles in a certain way, and if this does this in an easterly direction it is a good omen.

With this may be compared the practices for the purpose of seeing whether the ground selected for a house is suitable (Apast, GS 2. 8. 1–8), though these may appear to us practical rather than magical, and the impression is strengthened by the absence of all religious elements from the ceremony. A pit is dug and refilled. If the earth more than refills the site is good; if it fails to fill it, the site is bad; if it fills it exactly, the site is indifferent. Or, after sunset, the pit is filled with water. If, in the morning, there is water still in it, the site is good; if the ground is dry, it is bad; and if it is neither, it is indifferent.

Another method of divination in the Kaushika, with parallels in the hiatic literature, is based upon the wide-spread belief that a man's reflexion or shadow is part of his personality. Hence, when one places the bride, who has spilt his water, his spilt reflection is expected to be a man who will die (cf. gātāmaṇi, ituk or gatamatana), and is in danger of death. The Kaushika, 15. 9–10, employs this idea as follows: Before a battle the king crowns his warriors to look, two by two, into a vessel of water over which Athar has recited; if any warrior does not see his reflexion he must not take part in the approaching battle. Similar applications of this idea are found in Tāṭṭiriya Saṁhitā, 6. 6. 7. 1; Maṭrāyani Saṁhitā, 4. 7. 2; Āsvalāyana Saṁta Sūtra, 5. 19. 5; Apastamba SS. 13. 14. 3. 4; Kātāyana Saṁhitā, 3. 3. 6 (cf. Oldenberg, p. 536, n. 4).

Another method of divination practised before a battle is as follows (cf. e.g., 34 DREAMS (Vedic)); strings, are laid upon heated coals, and Athar. Ved. 5. 6 is recited over them. The middle string represents death, the other strings the two armies. If the middle string passes over one of the other strings it forebodes the defeat of that army; if one of the outside strings passes over the middle string it signifies the victory of the army it represents. Further auguries as to the rank of the men who will fall are drawn from the portion of the string that curls—the top, middle, and bottom, of the strings denoting men of similar standing. Reed-stalks (iṣṭika) may be used instead of the ropes (cf. Kaushika, 15. 15–18). The Śānnavidhāna Brähmāna (3. 4. 10) attains the same purpose in the following manner; each contestant is represented by a pile of glowing smokeless coals; these are sprinkled at the same time with ghee. He will be victorious whose pile first blazes up with flames free from smoke and moving from left to right.

To learn whether a woman (vijñāna) has the same text (3. 4. 11) proceeds in a similar way, but in this case the ghee must be made from woman's milk and churned on the same day. The favourable omen in this case is for one's pile to burn longest. If, in the ceremony of the death of her husband (according to Kaushika, that she will not live long). When there is a ninth crow (Gobhila and Kāthaka), it is mixed of all these substances. The ceremony is recommended when it is impossible to determine the bride's qualities from the marks on her body (lakṣaṇān), but Apastambha implies that her family have a right to object to this test. An alternative in Kaushika, 37. 11–12, is to require the bride to pour out a handful of pebbles in a certain way, and if this does this in an easterly direction it is a good omen.

Another augury before the setting out on a war-like expedition is to produce an inauspicious smoke by sprinkling grass with śālī-oil, reciting certain hymns over it, and burning it with an unclean fire (for these details cf. art. WITCHCRAFT [Ved.]). The expedition will conquer the region towards which the smoke goes (cf. Kaushika, 14. 30–31).

The direction in which a lost object must be sought is discovered in the following ways: A water pitcher is covered with a new cloth and placed upon a bed which is not in its usual position, and the leavings of an offering made with recitation of Athar. Ved. 2. 1 are poured over it. The faces of two girls who have not yet menstruated are covered with a cloth so that they cannot see, and they are told to remove the pitcher. The lost object is in the place that has in which they carry the pitcher. Dice may be used instead of the pitcher and a plough instead of the bed (cf. Kaushika, 37. 4–6). Another method consists of throwing down and spreading out certain pebbles, twenty-one pebbles blessed with Athar. Ved. 7. 9, but how they indicate the direction is not specified (cf. Kaushika, 52. 12 ff.).

Whether a woman will get a husband is ascertained by tying calves to seven- or nine-fold ropes, covered with the leavings of an offering made with recitation of Athar. Ved. 2. 36, and bidding her lose them. If she does so in order from left to right she will marry (cf. Kaushika, 34. 17). The direction from which the wooer will come (p) is discovered by letting loose a steer, whose head is covered with a new cloth on which have been placed the leavings of an offering made with recitation of Athar. Ved. 2. 36 (cf. Kaushika, 34. 18–19). The same information is gained, at a battle, by observing the site from which the crows come (cf. Kaushika, 34. 21–24).

The sex of a child is foretold by placing four fruits of tree, the father's hand, blessing them with Athar. Ved. 1. 11, and pouring water over them. If they adhere to one another the child will, for obvious reasons, be a boy. Or the priest may whisper the same hymn over the son of a
DIVINATION (Vedio)

Brahman and order him to touch the mother. If the name of the limb touched is grammatically masculine, the child will be a boy (cf. Kaushika, 33. 17-29). The conclusions drawn from the appearance of the root of a plant dug for a charm become easy deliverable, and from the fact that the symboal drawing apart of the mula-grass is accomplished without tearing them, are to be considered as the observance of omens rather than charms of divination (Kaushika, 33. 12-3).

The first form of the weather was an especial object of divination, and apparently undertaken by means of the smoke of burning dung. The idea readily passed into the form that the weather prophet controlled the weather. Hence, Atharv Veda 8. 8. 16-19 the system of weather prediction was a science (he who predicts the weather from the smoke of dung) their, they bestowed good weather upon him. "This shall be his dominion," they said. The hymn is employed in Kaushika, 59. 15-16, for the explanation of Sākādhdakṣaya, and devoted to the weather (Atharva Veda, 8. 8. 16-19).

In addition to these, the Kaushika has a number of charms for obtaining the answer to any question. They are referred to briefly, with rubrication of the hymns required, in Kaushika 37. 1-3, but fuller description is in the commentary of Kesava. The first is as follows. The questioner thinks either to himself or aloud of the question he wishes answered. Then he recites a hymn over a milk-porridge; while it is cooking he thinks, 'This will be the answer.' This is the essence of the divination. If he has guessed correctly, the answer to the original question will be according to his wish. Similarly, the answer may be made to depend upon whether a substance laid upon heated coals will burn; on the growth of a bamboo (Kausika 59. 15-16).

In some cases the number of blades in a bunch of grass is odd or even; whether a flower will close on the day after a hymn has been recited over it; whether he can foretell the direction in which a rod or arrow shot straight upwards will fall; or the size towards which a yoke or kāmpila-branch (Cirium omyriifolius) balanced on his head will fall; whether the quantity of milk he takes will be sufficient to fill to overflowing a vessel partly filled with water; whether he can find the direction which his horse goes right or left; whether he can foretell that the throw of the dice will be twenty-one pellies divided into two heaps in such a way that the odd and even numbers will be in the hand that he expected.

On the same principle rest two charms of the Śamavādhiāna Brahmāna, 3. 4. 9 and 6. Two heaps of unhusked grains are designated respectively as 'to be' and 'not to be,' and the person who is consulting the oracle is told to take his choice. On the face of it, one of the celebrant orders two pupils (brahuvačārinā) to raise two bamboo poles; if they bend (as he expects them to do), it is a sign of success. In both of these cases the necessity of divination is imparted to the apparatus by the celebrant keeping it with him over night, and singing over it a certain sāman. At dawn this sāman is sung again, and the test takes place. In the same way, a mādhan who makes a rope-door, and charges the celebrant with the fact that the future in a mirror or spoonful of water (3. 4. 4. 5); a rod is made to forebode success by growing longer in the night (3. 4. 7); and the seeds that will thrive are distinguished by their increase of weight on the night of the full moon of the month of Āśvin (3. 4. 8).

As an example of such practices in a śrāvaṇa-text may be cited Gāndhārika Sāhita, 3. 3. 8. 4, where directions are given to cook a cake of a certain size on the ekāyātaka (the first or last night of the year), and in the morning to attempt to set fire with it to a plant that is thick and robust. If the thick burns, it will be a lucky year. The same text also (śrī. 509; Hiranyakeshin 88. 22. 13-14) employs a horse as a weather prophet. But the ceremony enjoined in Gāndhārika GS 4. 8. 14.11-—one goes out of the village in an easterly or northern direction, and erects an arrangement on a mountain a pile of dung of wild beasts, sets it on fire, sweeps the coals away, and makes an obligation of butter with his mouth; if the butter and animal fire, he will get twelve villages; if it smokes, there is less a means of disarming than a charm to effect the desired purpose, combined with an angry with the ceremony, comparable with such practices as those of Kaushika, 19. 21, 47, 29, and others.

In looking back upon these performances, certain common features may be observed: (1) A religious or quasi-religious ceremony is necessary to impart efficacy to the apparatus. (2) The general principle of all the operations which make up an association being established between two questions, the answer to the one will be the answer to the other, or that the person can answer both correctly who can answer one correctly. This is not a particular principle of Atharva Veda, but a particular principle of magic, that the part may be substituted for the whole, and that objects connected in any way, even though merely by an association of ideas, constitute a whole. (3) It is noteworthy that none of the sciences of the mind of the people (Schrader, Bezieh. der indo-german. Altertumskunde, s.v. 'Gottesurtheil'), it is surprising to find only two incidental allusions to the practice in Vedica literature. The first of these is Pāośaśva Brahmāna, 4. 1. 6, where the story is told of how the Rishi Medhatithi taunted the Rishi Vatsa with being not a Brahman, but the son of a Suta woman. The latter proposed that they should both pass through the fire to see which was the better Brahman. They did so, each singing the sāman they bears his name, and Vatsa emerged without losing a hair, for that was his wish, and the Vatsa sāman is a winner of wishes. The other passage is Chihāleogha (Upāna, 6. 16. 14). In the case of a thief, if a charm is invented by a form of the fire ordeal in which the instrument is a heated axe, is employed as a parable. Another passage, Kaushika, 52. 8, may bear upon the question. Among the practices assigned to the hymn, it is stated to be a lucky for preventing or helping the effects of fire, is the sātra, kāpamānāyā prarocchakhi. Śāyana, who is following Kesava, and who is followed in turn by Caland, explains that in place of the toptanā śrāvaṇa (cf. below), the celebrant must recite the hymn upon the fire or other substance employed before handing it to the person who is undergoing the ordeal. This interpretation cannot be correct, as such magical aids are especially forbidden in
the case of the \textit{vīra} ordeal; and, according to the \textit{prābhāṣā} (general rule), Kanśika, 7. 7, the \textit{sātra} must mean that the hymn is recited over a stirred drink and porridge which are given to the \textit{ṣūpana-mukta}. If it has anything to do with the ordeal, it must refer to a special preparation, which would have been forbidden had it been detected. In this sense the middle, not the passive participle, should have been employed, and it is best to give to the word the general sense of 'one who is suffering from a curse.' That in later times the ceremony may have been performed especially by those about to undergo with guilty consciences the \textit{tejprāṇī}\textit{qī} (sacrifice) is improbable, and Kēśāvā may be accepted as a witness to the fact; but there is no reason to believe that the ceremony was originally devised for such cases, or ever restricted to them.

The earliest lawsbooks, also, make but slight reference to the practice, most probably because it was not considered of great importance, and because they were consequently willing to leave the details to be decided by local customs. These have been gathered and systematized by the later treaties on law, which finally recognize nine forms of ordeal.

(1) By the scales (\textit{dhatu, tala}). The accused is placed in one scale of a balance and his weight in stones and sand in the other scale. He descends from the scale, and after certain ceremonies is again placed on the balance. If he is lighter, he is innocent; if heavier, guilty. Equality of weight is generally considered proof of guilt in a less degree, though the authorities differ upon this point and upon the significance of accedents to the apotheosis.

(2) By fire (\textit{agni}). The accused, whose hands are more or less protected by leaves and grains, is required to step in seven circles, while holding in his hands a piece of heated iron. If his hands are burned, then he is guilty.

(3) By water (\textit{salita}). To prove his innocence, the accused must remain under water until a swift runner can bring back an arrow shot at the time of submergence.

(4) By poison (\textit{vīra}). If no ill effects are observable within a certain time after the accused has taken the poison, he is declared innocent.

(5) By holy water (\textit{kōśa}). An image of a god recited or poisoned by the accused is kept in a vessel, which is then given to the accused to drink. If he does so without betraying his guilt, and no misfortune happens to him within a certain time, he is innocent.

(6) By rice grains (\textit{tarpāla}). Grains of unhusked rice are soaked in water in which an image of a god has been bathed, and are given to the accused to chew. He is then required to spit upon a leaf. If there is no blood evident, and his gums are unbruised, he is innocent.

(7) By a heated gold-piece (\textit{tejprāṇīqī}). The accused is required to take a gold-piece from a vessel of heated ghee and oil. Quivering and blisters are proofs of guilt.

(8) By a ploughshare (\textit{plāṭa}). The accused, to establish his innocence, must lick a heated ploughshare without burning his tongue.

(9) By lot (\textit{dharmaharmas}). Representations of innocence and guilt are placed in a vessel, and the accused is required to draw one from it.

The form of ordeal is determined by the nature of the crime, the position of the accused, and the season of the year. There is observable, as always in Hindu law, the tendency to favour the upper classes, but there is also a tendency to moderate the conditions of the ordeal in favour of the accused, and the accuser is generally required to undergo the penalty in case the accused is acquitted. This ordeal can be applied only in the absence of human evidence, and, as was to be expected, is accompanied by religious ceremonies (for further details cf. J. Jolly, \textit{Racht und Sitte}, 1896, p. 144 f., and esp. A. F. Stenzler, \textit{Die ind. Göttesurtheile}, \textit{ZIE} ix. 601-609).

The practices described must be much older than the texts in which they are contained. There is no warrant for declaring the essentials of any one form later than another; and the familiar nature of the Vedic allusions to the fire ordeal as something well known warrants the belief that similar, if not identical, practices were in vogue in Vedic times.

Allusions to ordeals are found in the classic literature in matters relating to punishment against an enemy for thwarting holy work, where Sītā proves her innocence by walking through fire; and in the Mṛchhbhatkātī, 9. 43, p. 156 f., where the ordeals by fire, water, poison, and the scales are referred to.

G. M. Bolling.

\textbf{DIVINE RIGHT.}—Divine right is a right conferred by God, sanctioned or inspired by Him, and based on His ordinance and appointment. The phrase is generally used to express the theory that kings hold their authority, not from the choice or consent of their subjects, but from God Himself alone. In English history it came into specific use in the 17th century, during the disputes between the Stuarts and their people. The claim of Divine right was pre-eminently made for that dynasty; the doctrine became the badge of Tories and High Churchmen; and at the Restoration in 1660 it was the accepted royalist creed. It was seriously maintained that the hereditary monarchs had a right to every other form of government, has the Divine approval; that no human power can justly deprive a legitimate king of his rights; that the authority of such a king is necessarily always divine; that constitutional liberties are not necessarily always dehiscic; that constitutional liberties are not necessarily always divine; that constitutional liberties are both God and the king and liable to be resumed at his pleasure; that treaties which he may make with his subjects merely inform us of his present intentions, and are not conditions of which the performance can be demanded.

The chief representative of the Divine right party was Sir Robert Filmer, who in his books and pamphlets laid down the doctrine that the government of the family is the original and model of all government, that all kings and governors derive their absolute authority from the patriarchs, and that to the end of the world the king will always have the natural right of a supreme father over his people. This fantastic theory was fully developed in his \textit{Patriarcha}, a posthumous work (1680), but his position was sufficiently indicated in works published during his lifetime, his 'Freeholder's Grand Inquest touching our Sovereign Lord the King and his Parliament.
DIVINE RIGHT

(1618), his ‘Anarchy of a Limited and Mixed Monarchy’ (1618), his ‘Observations upon Mr. Hobbes’ Leviathan, Mr. Milton against Salmusius, and the disputes concerning the Original of Government’ (1652). It amounted to a paternally despotism: the king alone is the maker of laws, the Lords only give counsel to the king, and the Commons merely perform and consent to the ordinances of the parliament. It was the principle that this power of government, doggedly adhered to by the Stuarts, that rent the fabric of the constitution in the reign of Charles I., and drove the long-suffering nation to the Revolution of 1688.

In the previous century, Richard Hooker (c. 1553–1600) had given a philosophical statement of the principles of government, making the consent of the people the prime requisite:

‘Without which consent there is no reason that one man should take upon him to be lord or judge over another; because, although there be according to the opinion of some very great and judicious men a kind of natural right in the noble, wise, and virtuous, to govern them which are of servile disposition; nevertheless for manifestation of this their right, and more truly to maintain the commonwealth, the ascendant of them are to be governed seemeth necessary.

‘The state that their private families were hath given a supreme power; for which cause we see throughout the world, even from the foundation thereof, all men have ever been taken by others and in that trust. Howewel out of whole grand multitude having no such dependency upon any one, and therefore not performing, being obedience; nor the society in this world doth, it is impossible to say that should have complete lawful power, but by consent of men, or immediate appointment of God; except the natural superiority of fathers, their power must needs be either usurped, and then unlawful; or, if lawful, then either granted or consented unto by them; that is, their descendant, or else, in extraradical way, from God, unto whom all the world is subject.’

To popularize the principles of the liberty of subjects, the fiery logic of Samuel Rutherford did more than the massive learning of Hooker. His Le Fond (1641) was intolerable to the Royalists. Not only was it burnt by the hangman in Edinburgh in 1661, and by the hands of Sharpe under the windows of its authors college in St. Andrews, but it would probably have cost him his life, as he was about to be tried for high treason when he ‘got another summons before a superior authority’. The king,' he contents, 'hath no musterly dominion over the people, but only fidelity’ (110). ‘That the power of the king is fiducial, that is, given to him by God in the foundation of the kingdom only to do good to his people, and to hold that the trust of the king by the people’ (124). ‘The people may be without the king, but not the king without the people’ (144). ‘That doth not immediately any action of the people make kings, this is a weak reason, to prove they cannot unmakem them’ (146). ‘I utterly deny any correction of the king and his creature as an absolute monarch’ (214). ‘Whatever the king doth as king, he doth that, he doth by law, for he holds the Estates, who made him king. He must then be nothing but an eminent servant of the State’ (250).

The democratic principle was argued for in another classical work on English constitutional law and polity—Locke’s Two Treatises on Government (1690). In the ‘First Treatise’ he subjects the writings of Finnis to a searching analysis, going over his arguments seriatim, and in the ‘Second Treatise’ he maintains that civil rulers hold the power not absolutely but conditionally, government being a moral trust which is forfeited if the conditions are not fulfilled by the trustees. Written for the immediate purpose of vindicating the Revolution, Locke’s work contains the essential principles which have regulated political progress for over two centuries, and gradually moulded the British constitution.

Carlyle, in his lecture on ‘The Hero as King’, remarks that much sorry stuff, written some hundred years ago or more, about the ‘Divine right of kings’ had better be left to rot silently in the Public Libraries. At the same time he does not wish to ‘let the immense rubbish go without leaving us some soul of behind.’

‘Find me the true Koning, King, or Abeel, and he has a divine right over me. That we knew in some tolerable measure how to find him, and that all men were ready to acknowledge his divine right when found; this is precisely the healing which this black world is every where, in these ages, seeking after’ (On Heroen, People’s ed. p. 1351). ‘He that models Nations according to his own image, he is a King, though his spire be a walking-stick: a man so purely otherwise (People’s ed., vol. i. p. 280). To this high sense Cranwell is a king by Divine right. He is not King of England, not as such, nor officially so, only naturally so; has his kingdom to seek—trajical it is . . . to see a Royal Man, or Born King, wading towards his throne, such an one as King of England, . . . so seldom can arrive there at all’ (ibid. vol. i. 1351).

The older doctrine had an ephemeral revival at the time of the Holy Alliance (1814), which, while to all appearances an attempt at the reconstruction of the religious idealism of the Czar Alexander I., to find in the ‘sacred precepts of the Gospel’ a common basis for a general league of European governments having for its object the preservation of peace (1815). The same high doctrine was dear to the first Emperor, who intensively believed himself to be the viceregent of the ‘God of battles’; and it is held as firmly by Mr. Gladstone, who habitually lays stress upon the Divine right by which alone the kings of Prussia rule, sincerely holding that they are appointed and inspired to shape their people’s destinies. Considering myself as the instrument of the Lord, and I have my own opinions of the day, I go my way’ (Königsberg speech, 1910). The principle is logically applied in Russia, where the Emperor places the crown (as the first Napoleon did) on his own head, deriving his kingly power from no man, and being answerable to no man.

The Old Testament has often been regarded as teaching the Divine right of kings. But it speaks with a somewhat uncertain voice. In general it is for the monarchy, which, arising out of natural beginnings, drew together all the vital energies of Israel in devotion to one God and one king, the prophets went to all lengths in proclaiming the king’s person a sacred anointing and his rule Divine. The earthly monarch was sent in the place of the heavenly; he was Jehovah’s anointed and His son, the mediator through whom help, salvation, and blessing came to the people. The Civil State was as a miracle, a just and holy kind of government. ‘God, the King of the future was inconceivable without a heaven-sent king. Time, however, brought disillusionment; a succession of weak and unrighteous kings were unfaithful to the pure religion; Hosea (13:9) wrote for his evil; and, according to a late stratum of the historical books, Samuel, from the very beginning foresaw a dangerous rivalry to the kingship of Jehovah, an autocracy substituted for a theocracy (1 Sam 8:20). It is certain that the prophets never denounced their Divine right of criticizing the policy and the character of their kings, and that long before the end came they remorselessly foretold the dissolution of the State and the abolition of the monarchy, and at least until the Messiah should come to restore all things.

In the New Testament, Christ Himself acknowledges the rights of Caesar (the reigning Emperor was Tiberius) within his own sphere (Mt 22:21), and St. Paul declares that the Powers that be (koumata brefqysomai) are ordained of God, so that resistance to the Power is resistance to the ordinance of God (Ro 13:1). The Divine-right party in the Jacobean and Caroline period regarded such usanances as strongly supporting their cause, and even Bishop Berkeley appears to have interpreted them as prescribing an unlimited obedience. ‘Loyalty is a moral virtue, and “Thou shalt not resist the Supreme Power” a rule or law of nature, the least breach whereof hath the inherent stain of moral
Doceticism was not so much a definite system as a tendency. There was not one organized Docetic sect; nor was the idea of a phantomal body of Christ adopted by the Christians for apparent reasons of philosophy, or on the ground of texts of Scripture, or other such arguments. It is rather the consequence to which other heresies led. It is found, moreover, in various forms, more or less perfect. One school had only few Docetic tendencies, another more; it was possible to hold Docetic views about our Lord's birth or conception, but not about His death, and vice versa. So we find it in many grades, ranging from a slight tendency to consider Christ's humanity as privileged, more spiritual than ours, less subject to humiliating conditions (in which form it might be held by orthodox Christians), to the extreme school which made all His life on earth a senseless mystification.

2. In the NT and the Apostolic Fathers.—Doceticism is the first known Christian heresy. 'The blood of Christ was still fresh in Judea,' says Jerome, 'when His body was said to be a phantom (νερέτας) (P. xi. 243, 244). Theologians have argued that there are passages in the NT against those who deny the reality of our Lord's body. Certain texts in St. Paul which insist on Christ's birth from a woman, or on His having flesh (Gal 4, 4), Rom 2:9; 1 Pet 1:19), are not in harmony with the Docetism of the schools. In any case, there is undeniably a polemic anti-Docetic meaning in the Epistles of St. John; 1 Jn 1:8, and 4:12 clearly have this sense, just as 2 Cor 5:13 rejects the Gnostic basis of Docetism. In 2 Jn 7 there is a direct attack against Docetism. The ideal State is that in which the Divine right of every personality is recognized, and the throne thus broad-based upon the people's will. In such a State each individual can say, in a much higher sense than was meant by the Grand Monarque, 'L'état c'est moi.' It is vain to imagine that there's such divinity does hedge a king. (Hobbes, IV, v. 123), when the king happens to be Hamlet's stepfather, lawless and murderous; but the words have a profound significance when the Divine protection of a good king is mediated by the fervent loyalty of a great nation.

DIVORCE.—See Marriage.

Doceticism (δοκετισμός) is the heresy which teaches that Christ had no real material body and human nature, but only an apparent body, a phantom of humanity (like the angel Raphael in Tob 139). This acceptance of the ordinary laws that govern our life, His eating, drinking, birth, and death, are so many illusions (δεικτή, in the sense of 'seeming' only).

The name δοκετις (docetes) appears first in a letter of Heraclea of Antioch (191-203) (reproduced by Eusebius, H. E. vi. 123), in which he forbids the reading of the apocryphal Gospel of Nicodemus which had been adopted by the church of the excommunicated one, ordained Martinus, whom we call Docetist. It appears again in Celsus, Strom. iii. 19 (P. v. 1192), iv. 17 (ib. 153). In Hippo, Phys. xi. 26, in Eusebius, H. E. vi. 13 (C. C. 435), and Photius, Epist. 82 (ib. xlvii, 1564): 'Marcion, Valentine, Manes, and the other theses, which have been set up before the time of these writers. There are traces of it in the NT, it recurs in the Apostolic Fathers, and became part of the Gnostic system, and is found in the Neoplatonists and Manicheans, lasting into the Middle Ages, and was adopted (in part) by Muhammad.
have a material body, but this was only what seemed to be.

Docetism in the first period is always the corollary of some Gnostic system. F. Chr. Baur (Die christliche Gnosis, p. 258) held that all Gnostics were Docetists. This is not correct. There were Gnostic schools, as that of Bolland, which solved the problem in another way, denying any essential union between Christ, the spiritual Saviour—Eon, and the man Jesus—thus foreshadowing Nestorianism. But more explicit advanced Docetic ideas appear in a Gnostic system. Although we cannot say that all Gnostics were Docetists, we may safely say that all early Docetists were Gnostics.

Docetism was always a consequence of that representation of Christ as evil which is the common element of Gnostic schools. It was a feature of Gnosticism specially hateful to the early Fathers, because it made the Gospel story—all the life that is to be our example (Jn 13:14)—a vain pretence.

'Standeth one hour, of the world,' says Tertullian to Marcion (de carne Christi, 5 [PL ii. 760]). Although this theory was not a separate heresy, but rather a consequence of the larger issue about dualism, it could be rebuffed separately. Tertullian is said to have questioned whether matter be an emanation from the evil principle, it was possible to defend the real humanity and so the material body of Christ; it was possible to show to any one who accepted the story of Christ as a real human, subject to the normal conditions of human life. Many Fathers accordingly discuss this question separately, and refute those who deny it, without dealing with the reason of their denial. So we have left us the concept of Docetism as a special heresy, and of Docetism as a particular class of persons.

The Epistle of Barnabas, v. 12 ('God says that the stroke of his flesh is from them [sc. the Jews'], is sometimes supposed to contain a Docetic idea ( 'naivē Doketismos') (Harnack, Dogmengesch. i. 215), but unjustly. The text goes on to declare the reality of the Passion and Crucifixion; the word of prophecy; the fulfillment of prophecy (Frank, Patres apost., Tübingen, 1901, i. 33, n. 12). Ignatius of Antioch, in the Greek version of his Letters, repeatedly and vehemently denounces those who say that Christ 'suffered apparently' (παραμιμούμενον [Trell. 10]), and insists on the reality of His flesh (Eph. 7, 18; Troll. 9-10). All the first part of Smyrn. (1-6) is devoted to anti-Docetic polemic. Polygamy quotes 1 Jn 4:8, adding that whoever does not worship According to the words of Jesus Christ, and whoever denies the Resurrection and the Judgment is the first-born of Satan. He describes these ideas as 'the folly of many people' (Phil. vii. 1-2). This is generally believed to be directed against Marcion and his followers. Irenaeus tells the story of Polycarp meeting Marcion and calling him the first-born of Satan (Harr. iii. iii. 4). Justin Martyr counts Marcionites among the other Gnostics who 'in no way worship Jesus, but only confess Him in the body, but not in the devil, and whoever denies the Resurrection and the Judgment is the first-born of Satan' (Harr. iii. iii. 4). Justin Martyr counts Marcionites among the other Gnostics who 'in no way worship Jesus, but only confess Him in the body, but not in the devil, and whoever denies the Resurrection and the Judgment is the first-born of Satan' (Harr. iii. iii. 4).

3. Docetism in apocryphal scriptures. There are traces of Docetism in several apocryphal books that circulated for a time among early Christians. We have seen that the Logion of Jesus forbade the reading of the Gospel of Peter because it had been corrupted by Docetism. The fragment lately discovered (in 1857 at Ahimim in Upper Egypt, published by V. E. Bouriant in 1892) confirms his judgment. Verse 10 says (of Christ on the cross):

4. The Gnostic Docetes. The apocryphal scriptures quoted were composed in Gnostic circles; the quotations have anticipated part of what follows. With regard to Docetism the Gnostic schools fall into three classes: (1) those which were not Docetist at all, but distinguished Christ the spiritual Saviour from the normal man Jesus; (2) the milder Docetists, who admitted a body of Christ, though it was a spiritualized entity, i.e. he only passed through His mother, was not formed of her; (3) the extreme Docetists, who denied all reality to the body of Christ; He was born in no sense at all, and all His human life was a mere phantom (Harnack, i. 380). In many cases the Docetism of these apocryphal scriptures is latent rather than manifest, or it shows itself only in one or two sentences. For the rest they speak of our Lord in much the same way as the Canonical books, and they could be read in orthodox circles often without suspicion. On the other hand, they were rejected by authority (cf. Euseb. iii. 25) because of their heretical tendency, shown chiefly in the form of Docetism.

(1) Basilides (q.v.) (in Alexandria at the time of Hadrian, A.D. 117-138 [Enseb. iv. 7]) was not a Docetist, but solved the Gnostic problem in the other way, by distinguishing the man Jesus from the Spirit, the one, who entered into Him at His baptism. Irenaeus says that Basilides' account of the Crucifixion was that Simon of Cyrene was crucified by mistake, and Jesus Himself took the form of Simon, and stood by and laughed at them (Harr. t. xxv., 4). If Basilides really taught this [it is disputed], it shows a trace of one idea, common to most Docetists, namely, the denial of the Crucifixion.

(2) The milder school is represented by Valentinius, Apelles, Bardesanes, and Marinas. Valentinus (c. 120-160) taught that Jesus had a 'psychic' body which could not decay, was not subject to the normal laws of matter (Letter to Agathopus in Clem. Alex. Strom. iii. 7 [ib. viii. 110]). He was an emanation from the thirty Eons, the visible appearance of the pre-existent Christ produced
through Mary by the lowest (female) Ἐως, Sophia, and the power of the Creator-demiurge (ib. I. xi. 2, 3). Later Valentinian schools developed and modified the founder's ideas in various directions. Some, keeping the idea of the non-natural body of Jesus, further distinguished Him from ordinary humans, as did the two persons (ib. iii. xiv. 1). Mark (Irenæus' contemporary of this school) distinguished two baptisms of Jesus, one the (psychic) baptism of the 'apparent Jesus' (ὁ ἀμφικτύνων 'Ιησοῦς) by John for the forgiveness of sins, the other a pneumatic baptism, to which Mk 1:9 etc., refers, in which He received Christ, or the Spirit, for His perfection (ib. i. xxi. 2). This represents exactly the combined milder Docetism and (as we should say) Nestorianism of this school. Marcion's disciple Ἄπελλος so far modified his master's teaching that he, too, must be classed among the milder Docetes. He admitted that Christ had a real body, formed from the stars and 'higher' substances of the world, not really born of Mary, like the body of an angel (τοῖς) (Tert. de carne Christi, 6 [PL ii. 763]; adv. Marc. iii. 11 [ib. 335]).

We hear nothing of Docetism in Bardesanes himself (in Syria, A.D. 154–223? [Euseb. iv. 36]). Eusebius, in his account, tares, only (har. 1 [Opp. Syr], Rome, 1740, ii. 437–439) says nothing of Christological errors, nor does Epiphanius (Her. lvi. [PG xii. 899–903]). But Marinos and others of Bardesanes' school taught the milder form—Christ had a 'heavenly body', not born of a woman, and suffered only apparently (Adamantius, Dialog. de recta in Deum fide, iii. [PG xi. 1793]).

(3) The chief defenders of extreme Docetism are Celsus, and Marcion. Celsus (Kidoun, a Syrian in Rome at the time of Hyginus, c. 136–140 [Iren. i. xxvii. 1; cf. iii. iv. 3]) is known chiefly as the teacher of Marcion. He is said to have denied absolutely the reality of Christ's body and of all His apparently human actions (birth, death) on earth (Epiph. xii. [PG xii. 692–693]; Hippol. Philosop. x. 19 [PG xvi. 3433–3434]). Irenæus (ib.) counts him a follower of Simon Magus, the supposed father of all Gnostic and Docetic theories. Saturanius (Saturinus, a Syrian [2nd cent.]), mentioned already by Justin (Dial. 35 [PG vi. 532]), was a consistent dualist in all his system, and carried his principles to their logical consequence in absolute Docetism. Our Lord was thought to be possessed of the body of God, and came to separate the sparks of life and spirit in men from matter. His own freedom from matter is emphasized strongly.

He said the Saviour was unborn, incorporeal, without figure (τοις ἔγενσιν), without real matter, apparently seeming a man: and he said the God of the Jews was one of the angels. . . . Christ had come to destroy the Jewish God and for the salvation of those who trusted him (Christ); these are they who have a spark of his life' (Iren. l. xxiv. 2; cf. Hippol. Philosop. vii. 38 [PG xvi. 3525]).

The most famous of all Docetes is Marcion. He was a sailor from Pontus (Tert. Praxe. 30 [PL li. 48 f.1]; Euseb. v. 13), who became a Christian at Rome at the time of Eleutherius (c. 177–190? [Praxe. ib.]). Then he was attracted by Gnostic circles, and evoked a Gnostic system of his own which obtained a considerable following. Marcionites occur among the heretics in all the anti-Gnostic fathers. Irenæus traces the line of Marcion's heresy. Verdo from Simon Magus (Her. l. xxvii. 1). His Docetic system, as regards the beginning of Christ's life, was complete. His followers read a corrupt version of St. Luke (Her. iii. xii. 7; adv. Marc. iv. 2 [PL ii. 364]), in which all the account of the birth and infancy was cancelled. Suddenly Christ appeared as a grown man: in the fifteenth year of the reign of Tiberius He descended into the city of Galilee Capernaum from the heaven of the Creator, into which He had already descended from His own' (adv. Marc. iv. 7 [PL li. 369]); cf. Lk 3:36 (adv. Marc. i. 19 [ib. 267]; Iren. Her. l. xxvii. 2). He was in no sense really a man, had no real body; any connection between the Divine Son and the man is impossible (Tert. de carne Christi, 3 [PL ii. 757]). Marcion accepted the idea of the sacrificial death of Christ. For this reason it is often said that he admitted a real passion and death. But there is reason to doubt this. It seems that, although he constantly spoke and wrote of the death of Christ as did orthodox Christians, he understood it in a merely Docetic sense. Nikephoros t. of Constantinople (806–815) quotes a sentence from a lost work of Marcion; 'Christ seemed to suffer and be buried' (Antirrhetika, 21, in Pitra, Spicilegium Solernense, Paris, 1852, i. 406). Tertullian devotes adv. Marc. iii. 8–11 (PL ii. 331–336) to proving, against the heretic, that Christ did not have a 'corpusphantastical'.

There remains Simon Magus, the reputed author of Docetism, as of all Gnostic theories (Iren. Her. l. xxii. 2; ii. Pref. iii. Pref.). His name appears repeatedly as the inventor of this idea; but it is very doubtful whether, as the present work shows, Eusebius (ib.) is the leader of the sect of Docetes and a disciple of Valentinus. But the passage tells us nothing about Julius' Docetic ideas; the fragments that Clement quotes of his works (ib. iii. 13 and 14 [PG viii. 1192–1196]) show only Enarration. Jerome (Com. in Gal. vi. 8 [PL xxxvi. 460]) repeats that Cassianus was a Docete. Otherwise nothing is known of him.

The Docetes, besides their principle that the Saviour could not be divinely by a material body, quoted certain texts of Scripture in favour of their view. Marcion made much of Mt 12, as showing that Christ had no mother (adv. Marc. iv. 19 [PL ii. 404]). He also quoted Ro 8:28 (εἰς ἀποκάλυψιν καιροῦ), and other texts. Polycarp quotes 1 Jn 4:6 (Phil. vii. 1); Ignatius uses Lk 24:33 (Smyrn. vii. 1). But the work of the nation, particularly in Galatia, is remarkable. The Tert. de carne Christi, 15 (PL li. 779 f.), is a good example of contemporary controversy against Gnostic Docetism. It may be noted, too, that the body of Christ in the Holy Eucharist is frequently used as an argument against Docetes. Already in the time of Ignatius, Docetes 'abstain from the Eucharist and prayer (παρακαταμενοι, prayer of obligation') because they do not confess that the Eucharist is the flesh of our Saviour Jesus Christ' (Smyrn. vii. 1). Irenæus (Her. iv. xvii. 6, v. ii. 2–3) and Tertullian (adv. Marc. iv. 40) use the Eucharist as a proof of the reality of Christ's body.

5. Docetism in the Fathers.—Certain Fathers have been accused of Docetic ideas. We have seen that Docetism admits of many degrees. It may be a question whether an otherwise orthodox Father conceived some mild form of it with regard to certain incidents of Christ's life. The Epistle of Barnabas seems to say that Christ's body was a 'Chaldee garment' (see p. 839), nor does there seem to be any foundation for the alleged Docetism of Origen (cf. Harnack, i. 688). The case of Clement of Alexandria is more serious. Photius accuses him of this heresy (Biblioth. [PG ciii. 384]). Yet he categorically rejects it (Strom. vii. 17 [PG ix. 533], iii. 17 (viii. 1925)); he says that our Lord was really a man.
DOCETISM (Buddhist)

835

There is so little resemblance between the ideas of Hippolytus and Manichaean Docetic heresies that they will be considered separately. (Prisc. Con. 17; ed. G. Schepers, Corp. Script. coll. Lat. xviii. 118, Vienna, 1886.)

The Cathari, Albigenses (q.v.; see especially vol. i. p. 263), and other medieval Manichaean sects which adopted Docetic views, notably the Albigenses and Albigenses, carried it so far that they taught that the Virgin Mary, St. Joseph, St. John, as well as our Lord Himself, were all angels in the appearance of men (see documents in Dillingler, Beiträge zur Kirchengesch. des Mittelalters, Munich, 1880, ii. 34, 58, 66f., etc.).

In the year 1017 a Synod at Orleans condemned a number of heretics who denied the reality of the body of Christ (Mansi, xix. 377; Dillingler, i. 65, gives the date as 1022).

Pope Leo I. accused the Manichæans (Ep. xxvi. [PL liv. 745] etc.).

There is something of this heresy in their system and in that of their predecessor Apollinaris, inasmuch as they taught that the body of Christ, absorbed in the Divinity, was 'a heavenly body' (x. 18 [ib.]), and thinks that Christ's soul was not naturally subject to pain (x. 23 [ib. 861]). This idea, not uncommon among the Fathers, occurs as a supposed consequence of the hypostatic union, and can hardly be considered Docetism of even the mildest kind (Harnack, ii. 316 f.).

6. The Docetists in Hippolytus. —Hippolytus twelfth Bishop of Rome, to whom he calls Docetes (Philosoph. viii. 8-11 [PG xvi. 3347-3358] and x. 16 [ib. 3434]). These people seem to have had nothing of what is generally called Docetism; their use of the name is difficult to explain. Hippolytus himself calls them Docetes (docetâ, ib. viii. 11); he names the idea (ironically) as derived from the becon (becon) in their eye (Mt 7). Their system ('a much-tangled and inconsistent heresy' [ib. 11]) is one of the forms of much-tangled and inconsistent heresies about the origin of the universe. God is like a grain of the fig-tree, very small in size, infinite in power of development. From the seed come forth three emanations—branches, leaves, fruit; from God three heavens, and all other things from them. Each heaven becomes perfect, that is, tenfold; so we have thirty heavens. They are male and female; they generate a middle heaven, who is the Saviour. So it goes on. One heaven, a fire-god, is the Creator of the universe.

In a long tangle of wild nonsense the only trace of what we call Docetism is the statement that our Lord (whose life was as in the Gospels [PG xvi. 3355]) received at His baptism another body, the body born of the Virgin. When His material body was crucified, His soul put on this other one, evidently a spiritual Docetic body. He lived 30 years, in each year manifesting the teaching of the Master. Harnack, however, think that many different heresies can appeal to His teaching! But only the Docetes, who are from the middle deced and the best outraged, can really understand Him. 1

7. Later Docetism. —The Manicheans, as a consequence of their dualism, took over the Docetic idea. Augustine represents Faustus as denying the birth of Christ (c. Faust. i. [PL xlii. 290]), as describing His body as not human but formed of celestial elements (x. 211 [ib. cf. xi. 1 [343]), as denying the reality of His passion and death (xiv. 2 [269]).

Mani's Docetism is further complicated by a curious distinction between the Iesus imputabilis, who is 'living spirit,' and the Iesus impetabilis, who has souled the world (2. Flugel, Mani, seine Lehre u. seine Schriften, Leipzig, 1862, pp. 35, 258, 337 f.).

Later developments of Manichæism continued the Docetic idea. The Priscillians in Spain, who were not Docetes, though they were Dualists,

1 There is so little resemblance between the ideas of Hippolytus and Manichaean Docetic heresies that they will be considered separately as representing different heresies (ib. 860-570).

ADRIAN FORTESSER

DOCETISM (Buddhist) —1. Origin and Nature. —Speaking generally, the Buddhist religion has a strong tendency towards docetic ideas as to the personality of its founder. The strictly orthodox Theravadins adhered to the practical moral teaching of the Master, and opposed the idea that the Buddha could have any real being in the sense in which we refer to a deity, and obedience to the rules and traditions of the community. This is the reason why they, and they alone, resisted strongly the docetic tendency of the heterodox Mahàsaṅghikas. On the other hand, the latter, not content with the mere formulæ of the doctrine, tried in various ways to amplify the teachings of the Buddha and to pursue them to their respective consequences. The more they delved the Master and developed the idealistic sides of his doctrine, the more they be to think of his historical personality. They were more broad-minded, so to speak, and were not afraid to fly above the clouds of mythical fancies or of metaphysical speculations. On the other hand, this tendency called themselves the Mahàyahànas, in contrast to the orthodox Hinayànas (see artt. MAHAYÀNA, HINAYÀNA), though the origin and date of the former are still involved in obscurity. In this way we may say that the Mahàyañikas were more or less docetists, as their mythic fancy or idealistic speculation laid less stress on the historical Buddha.

Though a sharp demarcation can hardly be drawn between these two forms of Buddhism (the Mahàsaṅghikas, for example,
DOCTRISM (Buddhist)

standing midway between them, one of the characteristic differences is that the Hinayanaists believe in a single Buddha, whereas many Buddhists are recognized by the Mahayanaists. The former believe that the historical Buddha, Shakyamuni, was the sole Tathagata who is to be adored in this world-period, while the latter see in him one of the Buddhas residing in various Buddha-lands and influence the latter human beings. The Ekottara-dgama, the counterpart of the Pali Agguta, tells of Magadhyāna's visit to the land of the Buddha Sīthi. This belief is extended to the ten directions, in each of which there is a Buddha-land, where a Buddha or many Buddhas reside in the state of bliss and attract and influence the respective believers in the faith. As the faith was in this way extended to mythical Buddhas, that the concentration of belief in the actual Buddha should become more and less necessary, that the historical personality of the present Buddha should become more and more ephemeral, the faith may be termed pantheistic. Thus mythologizing and mystifying the process of Bodhisattvical speculations went on parallel or con-jointly with the metaphysical identification of all the Buddhas in their essential reality. A Buddha appeared once in this world-period, and his history is established; but the important personality of other historical Buddhas, as of all the mythical and fictitious human beings, was in the history of the Buddha-land, the so-called Dharma-kāya (see below).

Thus, doceticism, or, to speak more generally, the docetic tendency in Buddhism, made its progress in two ways: one the way of mythical fancies about the Buddha's superhuman qualities, and the other that of metaphysical speculations on his personality as a Tathagata and on its relations with the truth (dharmā). Such belief, so long and so far as the faith of Buddhists in the Master amounted to the reverence paid towards a sage who, having practised all the three branches of the Buddhist training, attained Buddhahood and led his followers in the right way, the Buddha renounced the Tathagata, who, starting from the position of a human being, attained to his superhuman (Pali manis-suttaviveka) state.1 Whatever his merits and powers, his earthly life was believed to have been as real as that of any other human being, as the pious thoughts of believers began to place him side by side with a mythical Chakravartin or to make him far superior to the highest deity Brahma, whether in his lifetime or after his death, his personality became more and more mythical and less human. Progress along this line is seen in the myth of his pre-existence in the Tuṣita heaven and also in various Jātakas and Nālānas (such as that of the king Sudassana); and the tendency reached its acme in the mythologizing biographies, like that of the Mahāyāna or Mahāvīra. Of course, these mythologizers did not all go so far as to deny the reality of the Buddha's earthly life, yet their ideas diverged on docetic and laid a close kinship with the docetic tendencies, or, at least supplied the materials to docetists.

Though the development of these ideas and their mutual relations cannot now be traced historically, it seems nearly certain that the mythologizing began soon after the Master's death, and found many adherents outside of the pale of the strictly orthodox teaching, and the resistance of the orthodox Theravādins to this stream of thought is clearly seen in the Theses (Kathāsīkā), composed in the reign of Ashoka.2 The materials and composition of the Mahāvīra, above referred to, may be earlier than, or contemporary with, this orthodox defence of the historicity of the Buddha's life.

A more powerful impetus to docetic tendencies was supplied by the philosophical speculations contained even in Buddha's own teaching. The five skandhas, under which he classified the constituents of our bodily and mental life, had been declared to possess no final reality. He also emphasized the illusiveness of the six senses and of the desires arising from them.3 In short, the Buddhist ideal of an Arhat or of a Buddha consisted in transcending the passions and turbulence of physical life, and in finally overcoming life and death. Though the Buddha was not a nihilist, he was not without reason that his doctrines were charged with being "a nihilistic wisdom" (samīdgha-bhūtā paññā). Vacuity (paññā) was one of his most important tenets, and the ideal of the final goal, that can be attained only after the cessation of the bodily life, the aim of a Buddhist sage was to realize this ideal, among others, even in this life. Thus arose the question whether the Tathagata existed or not after his death, by which the Buddhists were finally answered in the negative (or in the affirmative), and though it did not raise the question of the reality of the Master's earthly life, the solution turned inevitably in the direction of docetism. The vacuity of the phenomenal world was still more emphasized in the later 'non-mark' (alokānta) philosophy of the Mahāyāna school, and it became a decidedly docetic theory, as applied to the personality of Buddha.

Another direction taken by Buddhist philosophy had its origin in the emphasis laid on the reality of the truths, the personality and his personal life are not ignored, but he is the Master and the Tathagata, because he taught men truths according to reality (yathā-bhūtan, tathāgata). These truths are set forth, in the first place, indirectly, as dharmas (dharmā), but they are universal in their nature as truths (dharmanā), and the capacity or dignity of a Buddha is due to the realization of them. So it is said that all the Buddhas have attained their Buddhahood by the practice of these truths, according to them. Moreover, they are stable (dhamma-āsādhi) and fixed (dhamma-niyamatā),2 whether the Tathagata arises or not in this world. Buddha's own attestation that he who sees the dharmas free from passion and vice, is the Tathagata, brings out clearly the identity of his personality with the truths, and this may further be noted as implying a distinction between his transitory life and his life as the Tathagata according to truth. Here we have the clue to, and the source of, the idea of the dharma-kāya, i.e. the Buddha's personality identified with dharma and opposed to his physical life. Though the followers of this school, sometimes called the Dharmakāṣṇas, do not deny the reality of the Buddha's earthly life, they are always inclined to emphasize the metaphysical or transcendential side of the Buddha's personality, and to regard his earthly life as a mere manifestation or a condescension for the sake of common mortals. The tendency is manifested in the Mahāvīra, and is represented chiefly by the Svāmaprapābhī and the Saṁdharma-prajñādīrīka. Those who developed from this thought a systemat-ic Trinitarian theory were Asaghaṇo (q.v.), and Vasubandhu (q.v.), whose followers in this respect are the majority of Buddhists in the Far East.

2. The Mahāsaṅghikas.—While the orthodox Theravādins adhered strictly to the reality of the personality of their Master, the heterodox progressivists, or Mahāsaṅghikas, boldly proceeded to idealize the Tathagata. This tendency had long been fostered, as we have seen, and the materials for it stood. The Buddha's pre-existences both in this world and in the Tuṣita heaven. The results of the idealization,

1. Preserved in a Chinese tr. (Janjol, Célat. Ocl. 1858, no. 345).
2. The writer cannot accept the view that the Mahāvīra, (tr. Kern (Manual, Strah- burg, 1896, p. 64) in explaining Agguta, iv, 36, in a docetic sense, is a docetist, or, more correctly, a docetic tendency, though it is submitted that this sense of the word dharma is not an error. In the fourth, fifth or sixth centuries, the word dhamma was not used in this sense, and is as said in Aṣṭ. fr. 36; Sadd. 22, 94, etc., in this point other passages might be adduced.

DOCBTISM (Buddhist)

3. The Prajñā school.—Though the name praṇājā meant originally intellectual training in general, it became gradually restricted to the exercise of contemplation transcending all discursive and rational knowledge. The content of this kind of meditation amounts to transcending self and all actual aspects of things, and ascending to the highest region of mystic union (yogṛ). In the history of Buddha's teachings there is a gradual transition from this exercise, and it is said that his profound doctrine consisted in the teaching of vacuity (śūnyatā, Skr. śāntatā). Among his discipled Subhūti is praised by the Master as the foremost among those who practiced this Prajñā school, by one doing the contemplation among forest trees, as the man of meditation abandoning every thought of visible forms. It is he to whom are ascribed the occasional conversations on the subject, and the various texts dealing with those conversations and the admirable discourses which he was the first to formulate. These Prajñā texts are those used by Buddhists to convince man of the non-reality of what is deemed by the common mind to be reality. Thus it is quite natural that the argument should be put forward by him. A decided doctrine is represented by this group of texts and its followers, whom we would now call the Prajñā, or Alākṣaṇa, school.

Seeing the non-entity of everything phenomenal, and attaining to the height of mystic contemplation, one could realize in himself the depth of the praṇājā wisdom. Buddhisthood is the position wherein this wisdom is fully manifested and the highest illumination is seen face to face. Even when denying the reality of the world (lōka), the proper Buddhist is in reality nothing but illusion, like all other phenomena of the visible world (lōka). As the five constituents (abuddhas) of the visible world are merely manifestations of consciousness, its illusions and its teachings, in reality not the real state of illumination. Not only are a hundred thousand words and phrases used to describe this condition, but it is regarded as the most real of realities and is called the mother of all the Buddhas, the source from which they derive their enlightenment. Thus the innermost qualities of Buddhisthood can be sought nowhere else than in the profound abyss of the praṇājā. The normal consequence of this thought is that if the earthly life is illusion, and that without the name of Buddha's teachings, the nature of that is realized. Therefore, the Buddha's teachings were grounded in the self and the world, but they do not take up the successive stages of embryonic development (kālalaṁ̄ka, arūda, pāta, and āhāra) in their own bodies. They would be born in the same way. In order to give the Mahāyāna their tongues, or human beings, as told in Jātakas; but this happens not by necessity, but owing to their own decision and for the purposes of accumulating merit and of leading other beings to salvation. They are the higher teaching of the Buddha, and not the enduring part of whatever which seem to be sometimes attached, sometimes unattached, to outward objects, and appear to be nourished by the bodies. Nevertheless, the Buddhist texts do not see forms and colours by eyes, or hear sounds by ears, or smell by noses, or taste as was done by the later Mahāyānis and Tantrists (see below). Further, they taught that the Buddha neither sleeps nor dreams. He is all the time in the state of complete unification with all truths, in a deep contemplation of the truths (in this form, in order to the Adibuddha) and therefore what he preaches is expressed by no notions or names. He is omniscient, comprehending all things at once, and all that can be applied to the Buddha is his thought. It is because in his mind is always present the mystic store of the praṇājā wisdom. In his thought are constantly present at the same time the wisdom of extinction (kāya-prapaṇājā, i.e. the consciousness that all pains are extinguished) and the wisdom of non-growth (avipada-prapaṇājā, i.e. in which is assured extinction in the future for ever). In these texts we see an idealizing identification of the Buddha's person with a universal Buddhisthood, despite lines and stanzas, and the tendency to make the Buddha himself his identification with the universe.

Quite naturally from these fundamental ideas is deduced the illusiveness of the corporeal life of a Buddha or of a Bodhisattva, i.e. of one who is preparing for a Buddhahood, 'All the Mahāyāna', says the Mahāsanghikas, 'enter the mother's womb, but they do not take up the successive stages of embryonic development (kālalaṁ̄ka, arūda, pāta, and āhāra) in their own bodies. They would be born in the same way. In order to give them tongues, or human beings, as told in Jātakas; but this happens not by necessity, but owing to their own decision and for the purposes of accumulating merit and of leading other beings to salvation. They are the higher teaching of the Buddha, and not the enduring part of whatever which seem to be sometimes attached, sometimes unattached, to outward objects, and appear to be nourished by the bodies. Nevertheless, the Buddhist texts do not see forms and colours by eyes, or hear sounds by ears, or smell by noses, or taste as was done by the later Mahāyānis and Tantrists (see below). Further, they taught that the Buddha neither sleeps nor dreams. He is all the time in the state of complete unification with all truths, in a deep contemplation of the truths (in this form, in order to the Adibuddha) and therefore what he preaches is expressed by no notions or names. He is omniscient, comprehending all things at once, and all that can be applied to the Buddha is his thought. It is because in his mind is always present the mystic store of the praṇājā wisdom. In his thought are constantly present at the same time the wisdom of extinction (kāya-prapaṇājā, i.e. the consciousness that all pains are extinguished) and the wisdom of non-growth (avipada-prapaṇājā, i.e. in which is assured extinction in the future for ever). In these texts we see an idealizing identification of the Buddha's person with a universal Buddhisthood, despite lines and stanzas, and the tendency to make the Buddha himself his identification with the universe.

Quite naturally from these fundamental ideas is deduced the illusiveness of the corporeal life of a Buddha or of a Bodhisattva, i.e. of one who is preparing for a Buddhahood, 'All the Mahāyāna', says the Mahāsanghikas, 'enter the mother’s womb, but they do not take up the successive stages of embryonic development (kālalaṁ̄ka, arūda, pāta, and āhāra) in their own bodies. They would be born in the same way. In order to give them tongues, or human beings, as told in Jātakas; but this happens not by necessity, but owing to their own decision and for the purposes of accumulating merit and of leading other beings to salvation. In his thought are constantly present at the same time the wisdom of extinction (kāya-prapaṇājā, i.e. the consciousness that all pains are extinguished) and the wisdom of non-growth (avipada-prapaṇājā, i.e. in which is assured extinction in the future for ever). In these texts we see an idealizing identification of the Buddha's person with a universal Buddhisthood, despite lines and stanzas, and the tendency to make the Buddha himself his identification with the universe.
sake of common men, in order to admonish (anumodana) them to similar attainments.

The final extinction (paramirajña) of his physical body was, of course, not the end of a mortal, but will be a reality of ultimate absorption into the depth of vacancy. This applies to all Buddhas, past as well as future, who are infinite in number and nothing but individualized manifestations of the mother Prajñā. The name Buddha means the one who has realized the oneness of the truth and identified himself with vacancy; and Tathāgata is a title applied to him on account of his revelation of this ultimate truth (tathātā) of vacancy. Common men see in him one who has attained this truth by the accom-
plishments of Buddhahood (i.e. tathā-gata), and who has appeared among men to reveal it to them (i.e. tathā-agata). But, just as every phenomenon leaves no trace (apada) either of when it comes or of whether it goes, so the Tathāgata in reality comes from nowhere (na āgama) and goes to nowhere (na gamana). In this respect he is like space, and his person has essentially nothing other than the ultimate quality of all things, vacancy. They who see special features attributed to him are in reality ‘non-marks’ (alaksana), and ‘non-
mrk’ is the characteristic of any Tathāgata. He teaches men and leads them to deliverance; still they are mere illusions, and the Tathāgata con-
vincing is pure reality. If this paradoxical argument be followed out, the conclusion runs as follows:

'They who saw me by form, and who they heard me by

They engaged in false endeavours, will not see me.
A Buddha is to be seen from the Law (dharma); for the Law is the body of the Buddha (dharmakaya);
And the nature of the Law cannot be understood, nor can it be made to be understood.'

4. Nāgarjuna.—We do not know where or when these Prajñā texts originated. But we have before us one of them translated into Chinese in the 2nd cent. A.D. (Nanjo, no. 5). A tradition says that the Aṣṭasahasrikā was first preserved in Southern India, and was then transmitted to the West and to the North of India.1 Whatever the authenticity of the tradition may be, we see in Nāgarjuna, who is believed to have lived in Southern India in the 2nd or 3rd cent., a conspicuous proponent of the doctrine. He was a great dialectician, and possesses a considerable dialectic acumen. Till he reached a complete denial of any definite thought about anything, especially in his Madhyamika-Sastra (Nanjo, no. 1179). In the 22nd chapter of this treatise he denies step by step every quality thinkable of the person of the Tathāgata. He has no physical body; yet, apart from physical body (which is in reality vacancy), there is no existence. He has no mind; yet, apart from mind, he is an inconceivable thing. Inconceivable and unthink-
able as he is, he is not a non-existence (asad) or non-being (asad) is never to be predicat-
ed of him, because both are illusions. He is neither a being nor a non-being, neither a non-being nor a non-non-being. In short, he has no substance (ātman-bhāva), just as every other being, both in his lifetime and after his death, has none. Any attribute, any thought of his substance, is to be denied, and thorough negations of relations could lead to the deep insight into it which is realized the contemplation of praṇājña.

Theravāda doctet as Nāgarjuna was, he did not deny the historicity of the Buddha's life, and thus was compelled to distinguish between the empirical and the transcendental standpoints in his discussion. This distinction is pointed out in his commentary2 on the Satasahasrikā, the

largest of the Prajñā texts. In this work he does not employ negative dialectics, but endeavours to state the common view, i.e. the so-called Hīnayānist standpoints, faithfully, according to its own tenets, and then to elevate it to, or explain it away from, his own transcendental Hīnayānist standpoint. Thus he admits therein the actuality of the occurrences and teachings in the Buddha's lifetime. In this respect his treatise is a kind of encyclopedia of Buddhist legends and doctrines, and the author reproduces faithfully the anti-doetic arguments, as found in the Kathavatthu (or elsewhere), enumerating the incidents of the Buddha's life and their respective scenes.

But Nāgarjuna does not deny the real existence of Buddha's body (jatokāya, i.e. 'born in flesh'), in contrast with his real substance (dharmakāya, also called atmahkāya and prajñākāya). The former view is admitted from the standpoint of the earthly principle (loka-artha), and the latter is the only true view according to the first principle (parama-

artha) of Prajñā. The thirty-two marks, etc., may be thus understood by him, till the final truth should amount to non-marks (alaksana). If the dharmakāya should be positively stated, it fills up the infinite space in all directions, being furnished with all the siddhis and other dignities. Its activities have no limit; it preaches ceaselessly, and leads all beings to enlightenment with every means and method beyond our imagina-
tions. The jatokāya may be of any number and of any kind, for the Buddha Sākyamuni belonged to them, and the most conspicuous to every eye in this world-period. Yet he was a mere manifesta-
tion of the true body, adapted to the needs of common men, who could be educated only by a phenomenal manifestation and by verbal teachings of the Tathāgata, appearing in a physical body like theirselves. The sunlight pervades everywhere in space, but it can be seen by physical eyes only when reflected from a material body.

Thus Nāgarjuna does not wholly reject the existence of an historical Buddha, but this is a concession made to the common view, just as the physical life of a Tathāgata is a condensation for the sake of ordinary men. Yet it is undeniable that Nāgarjuna regards the Prajñā texts as genuine, and he recognizes a distinct personality in Sākyamuni, as one of the innumerable Buddhas, and his descriptions of the Buddha's life and capacities are on the same lines as in the other forms of Buddhism. In short, Nāgarjuna's docetism was a necessary consequence of his philosophi-
cal standpoint; but his Buddhology is characterized by a sharp distinction between the jatokāya and the dharmakāya, in emphasizing the sole reality of the latter according to the fundamental prin-
ciple of the Prajñā doctrine, and in admitting the historicity of the Buddha's life as a concession to the common view, and also as a manifestation of the Buddha's mercy and potency for the sake of the beings to be led.

5. Eternal Buddhahood.—Just as in Christianity the dogmas of homonoia and the Trinity stood in opposition to Doectism, so we see, in Buddhist history, similar aspects of the Buddhological specu-
lations opposed to pronounced doctetism. But most Buddhist thinkers had hardly reached a clear under-
standing of the demarcation between doctism and anti-doctism, and even among those Mahāyānist who, unhesitatingly espoused the anti-doetic standpoint very few combated doetic tendencies so decidedly as the earlier Thagavaṇḍis. The truths (dharma) revealed by the Buddha con-

1 Vajracchedikā (SBE xlix. 140-141).
2 Aṣṭasahasrikā, pp. 224-245.
3 Nanjo, no. 1169.
In this way a derivation of the personal Buddha from the original undifferentiated Buddhahood by the Bodhisattvas is commonly taxed their ingenuity. Many thinkers tried to solve the problems in a way very similar to the Christian theories of the Logos and k logos, but with this difference, that their ideas generally regarded in the anti-docetic tendency in criticizing the Buddhahood a priori, thus sacrifying more or less the actuality of the Buddha’s life. Some of them laid special stress upon the eight (or four) important incidents in his life (śākya), but he never acknowledged them, and yet those signs were merged in the all-absorbing universality or monokey repeated in the career of each of the innumerable Buddhas. Even the anti-docetic Theravadins saw in Sakyamuni one of the Buddhas who appeared in the past and will appear in the future, and so his Buddhahood was made to consist in the realization of the one road (ekayana) common to all Buddhas. This capacity or dignity of a Buddha is expressed by means of the Tathāgata: in the Tantric philosophy, the question arises whether the various Buddhas, though individualized in personal distinctions, are one in substance, and whether the true personality of the present Buddha should be sought beyond his body by the Lord.

A solution of these questions was attempted in the Saṃva-rana-pu-bhā, which took the question of the duration of the Tathāgata’s life (Tathāgata-du-ta-pu-rāma) as its text. In order to escape from objection raised by anti-docetic tendenci, the Buddha manifests himself in heavenly brilliancy, surrounded by the Tathāgata’s weapons, body, Dharma, and Buddha-bhūva on four sides; the questioner utters verses in praise and admiration of the Buddha’s infinite life. Further, it is explained in the following passage that the Buddha is the all-seeing, all-hearing, all-knowing, and all-pervading one, who has the gift of omniscience.

This passage, as I have already pointed out, is contrary to the view of the common mortals (sattvinām pariprakāsha), in a way adapted to their capacities. Thus what is essential in a Tantric form of worship (purushottama) is the personification of the Tetramorph (the four characters of the Buddha, i.e. the four:泼仏, described as the sattva, bāha, dravya, and nāma), but the eternal and universal life, in full possession of the Truth, i.e. the dharmakāya (or dharmarātra), of which any particular Buddha partakes, and on account of which he becomes a Buddha. All the Buddhas are identical in their substance (anumāna) and in their centre, but the Buddha is the Buddha in the senses of all of them.

The Revered One is not a maker, nor the Tathāgata a born one. Thus the universal predominates over the particular, and a docetic tendency is manifest in this idealistic speculation in connexion with the mythologizing processes.

Another book, the ‘Lotus of the True Law’ (Saṃvatthu-pu-rāvanī), tries to answer the same question on similar lines, and on a grander scale, but in a less docetic fashion. We might call it the Fundamental Gospel of Buddhism, and the quintessence of the whole argument consists in identifying the actual Buddha with the Buddha who has just begun his career. His appearance in this world as Sakyamuni was ‘for the sole object, the sole aim, . . ., of exhibiting to all beings the sight of the Buddha and of the Tathāgata—appearance of the source of all Tathāgata knowledge.’ But for this purpose, for the sake of all beings, the Buddha adopted the expedient (opāsana-pratipattipada) of being born among the Sakyas on earth to manifest himself and to have attained Buddhahood under the Bodhi tree, near Gayḍ, and to have entered into nirvāṇa. But in reality he has neither beginning nor end. He existed from eternity, and is to live for ever. Thus the second chapter of the book, which explains the cause and purpose of the Buddha’s appearance, forms the centre of the introductory part; the fifteenth, which reveals the eternity of his essence, the centre of the middle, or main part; and the twentieth, the centre of the concluding part, shows the efficiency of the Buddha’s teaching and authority for ever in the future. Thus, instead of placing the actual appearance of the Buddha among men, as his father and the Lord of the world; then is revealed the original (ārya) essence and acting force (eternity chittāraṇa); in the conclusion we have the assurance of the endurance of his personal body (tathātā, i.e. the body of Paricarya, so to speak, who is to appear in the latter days of the world. In these statements, however mythical and fantastic they may be in many passages, the text never loses sight of the Buddha’s personality.

2. Sūtra-pu-bhā, pp. 6-8.
3. This translation of the word varna is given on the authority of the two Chinese translators.
5. Especially in this part, chapters ii,—vi, we can trace many passages to the Pali Sūtras of the Theravāda.
DOM

Vasubandhu, together with his brother Asanga.

His standpoint is essentially that of Asvaghosa, differing from the latter only in noneucalculature and subdivision.

Vasubandhu is a theologian, or a Gaotic, in his way of thinking and in his description of the various mystic attainments. Moreover, he almost loses sight of a definite incarnation, such as that of Buddha, and becomes preoccupied in innumerable conceptions of bodies (which he calls appellations, nimiata), appearing everywhere in any form, in the visions of the Bodhisattvas. These apparitions can meet and cross one another without any hindrance, and can come and go in their own right, without any educative purposes. Thus Vasubandhu, though an ardent believer in Maitreya, the future Buddha, opposes most decidedly the view that there appears only one Buddha in one world-period. The universe is filled with all possible apparitions of Buddha, from gross matter, plants, and animals, up to the highest manifestations in the states of bliss. Mysticism, Theosophy, Gaoticism, and Pantheism are combined in his doctic Buddhism, which accounts for nothing else than Cosmology and Psychology.

Lastly, a similar doctic Buddhism is represented by a chapter entitled the 'Trikaya' in the Sanskrit, which is found only in P-ta translation, and is probably a later interpolation from the pen of a follower of Vasubandhu. This is apparently intended to be a further interpretation of the second chapter. Nevertheless, the writer makes no mention of the actual Budal Buddhism. Sakyamuni, but emphasis is laid on the substantial identity of all the Buddhas, who are considered to be mere apparitions of the sole essence, the dharmaayaa. He thinks that, if one sees in the Buddha or Buddhas this identity of substance, as well as of intention and activities, according to truth (dharmatathaaayaa), there can be no talk about life or death, sleep or dream, thirst or hunger in the Tathaaatas, because his own mind is, in reality, always transported in profound contemplation (yoga).

Thus we see Trinitarianism finally reaching a decided docticism, though it started from a standpoint different from that of the Prajna school. Asvaghosa's psychological cosmology did not decidedly deny the reality of the cosmescence body.

Nevertheless, the idea of unity in the Trinity proceeded, in Vasubandhu and his followers, to that of identity (samatva), verging on the negation of differences, as we have found in Nagarjuna. This, however, did not go to the extreme of the latter's doctrine, but developed the Mahii-sangniks' Pantheism into their own Theosophy. This theosophy is again worked up in the mysticism of the Mantra system, another form of decided docticism, at which we shall now give a glance.

7. Mantra Buddhism.—Though we know very little about the origin and history of Mantra (Jap. Shingon) Buddhism, or Buddhist Tantrism, it is a very ancient and important branch of extremely idealistic and materialistic elements. Its origin is ascribed to Nagarjuna, and it has certainly its own-idealizing idealism at its basis, but none the less, mystic interpretations of the material as well as ideal worlds, as found in Vasubandhu, play a great part. Numerous texts and formulae were produced in India and were widely prevalent there in the last centuries of Buddhist history. We see them also used by the Lamas to-day side by side with their Prajna and in Japan. The most important text of this mysticism, the Mahii-vairochana-abhiisambodhi, was brought to China by an Indian, Subhakarasinha († 755), and its final systematization was carried out in Japan by Kukai († 835).

1 See esp. ch. xx. of his Vijiiatimitered (Nanjlo, no. 1215).

1

The Buddha, according to this philosophy, is nothing but the whole universe, the dharmakaya, including its constituents, the mental and the material. The former is called the Garbhakshata, the latter the Vajrakshata. In Hinduism, the individualized phenomena are, in this way, nothing but the Buddha's revelation to himself, and at the same time the methods of benediction (raasikshane) embracing all beings. The whole is called the Buddha Mahii-Vairochana. The numberless manifestations of his body, such as Buddhas, Bodhisattvas, Vajrapani, Padmapani, etc., make up the whole pantheon of the religion, which is represented symbolically in the two sets of cycles or assemblages (saadada), corresponding to the above divisions of the Dhatau. We shall not here enter into the details of this symbolism, for, as we might naturally expect, the historical Buddha dwindles almost to naught in this recondite system of mysticism. The name Sakyamuni is preserved in one corner of the Garbhakshata-saadada, but his actual personality and the mystic has nothing to say of his life or teaching. A disciple of Subhakarasinha tried, in his commentary on the text named above, to explain the eternal Buddha taught in the Lotus as identical with Maha-Vairochana, and identified some Japanese Mantrists identified Sakyamuni with their supreme Buddha. But all these attempts were carried on to neglect of the historical significance of Sakyamuni. In short, the person of the Buddha is, with them, dispersed and diffused over the whole universe, and he is ranked on the same level as any other superhuman beings.

He is elevated on one side to the all-embracing dharmaayaa, and on the other is degraded to mere dust. This was a consequence of Buddhist materialism and idealism. It is only natural that, with the disintegration of the personal Buddha, the Buddhist religion, in this form, reached dissolution and all kinds of abuses and superstitions were accepted and justified.

DOCTRINE AND DOGMA.—See Church, Confessions, Creeds.

DOG.—See Animals.

DOLMEN.—See Death (Europe, pre-historic).

DOM.—The menial tribe of Dravidian origin, widely spread under various names in most parts of continental India. The Census returns of 1901 (Census India, ii. 1903) show their numbers to be 977,026; and of the Dominant, Domar, or Dombar, 97,456. But there must be some error in the tabulation, as none are shown in Bengal, where the Maghiala Doms of Bihar are an important tribe. The Dombar may be identified with the Dravidian, and their social position of their branches is very different. They certainly belong to a large extent to one of the non-Aryan races; but in many places they may be the descendants of the mixed race of serfs or slaves of the early conquerors. As Bisley remarks:

...
The Dom of Northern India may be divided into three territorial groups, the ethnological connection of which can be only dimly seen. The eastern branch of the tribe found in the Plains districts to the east of the United Provinces and in Bihar; (2) the Doms of the Himalayas; (3) the Dom or Démirás of the Punjab.

In the Ganges Province.—These are divided into numerous sub-tribes, such as the Bänîspûr (q. c.), the Basor, and others. They differ in social position according to the business in which they are engaged, and in particular their rank depends upon whether they do or do not practise scavenging. The most interesting of these groups is that of the Maghaïyas Doms, who take their name from the ancient kingdom of Magadh or South Bihar. They are found in the western districts of Bengal and to the east of the United Provinces. In their original state they are vagrants pure and simple, who do not possess even mud shelters or tents to protect them in the cold and rainy season, but cover under trees, or lurk in cattle-sheds. Some of the women live by burglary, petty theft, and begging, and their women are prostitutes. In Gorakhpur they have two special divinities of their own—Gândak and Sâmâyâ. Gândak is said to have been hanged for theft, and long time afterwards he was duly promised to help the Maghaïyas in times of trouble. He is worshipped by the whole sub-tribe, and is invoked on all important occasions; but he is pre-eminentely the god of theft. A successful rägalways makes amends for theft and leaves Gândak as his protecteur. Sâmâyâ is a female deity, and apparently, as is usual among the Dravidians, she is recognized in a vague way to be the consort of Gândak. She is without special history or legend, and no sharp line of distinction is drawn between her functions and those of Gândak; but she seems to be especially invoked at childbirth and in illness. Both these deities are honoured with sacrifices of young pigs, with an offering of spirits mixed with honey. Also the Dom priests have an ancestor called Paranémavar, the great god, who punishes the guilty, and of a hell; but what it is and how sinners are punished they know not. As Risley, writing of Bihar, remarks (op. cit. 1. 241):

"The religion of the Doms varies greatly in different parts of the country, and may be described generally as a chaotic mixture of survivals from the elemental or animistic cults characteristic of the short-sighted races, and of observances borrowed in a haphazard fashion from whatever Hindu sect happens to be dominant in a particular locality. The composite and chaotic nature of their belief is due partly to the great ignorance of the caste, but mainly to the fact that, as a rule, they have no Brahmins, and are without any central authority, and standard, which would tend to mould their religious usages into conformity with a uniform standard."

The Maghaïyas, apparently as a survival of the matriarchate in some form, employ a sister’s son to act as funeral priest and to recite the spells (mantra) which are intended to lay the ghost of the dead.

"If a man dies of snake-bite, say the Maghaïyas, and the Doms of the Gya district, we worship the spirit of the deceased (vi-râg); for if you [standing] lest he come back and give us bad dreams; we also worship the snake that bit him, lest the ghost may scare us in like fashion. Any man, therefore, conspicuous enough by his doings in life or for the manner of his death to stand a chance of being remembered even after death is likely in course of time to rank as a god" (ib. 1. 247).

Hence arises the worship of Syâm Singh, the defiled ancestor of the Doms of Bihar, who may have been a successful robber, or of Gândak, to whom reference has already been made. The Bihar branch, again, worship Sâmârî Mâi, whom some identify with Kâl, but who is probably, as her name implies, the Earth Mother, known to most primitive religions.

No image, not even the usual lump of clay, is set up to represent the goddess: a circle one span and four fingers in diameter, is drawn on the ground; some representative of the great goddess, a Cow-dong. Squatting in front of this the worshipper gashes his left arm with the curved Dom knife, and daubs five streaks of blood with his finger in the centre of the circle, praying in a low voice that a dark night may aid his designs; that his booty may be ample; and that he and his gang may escape detection, with which Risley (op. cit. i. 247 f.) aptly compares the prayer to Laverna:—

Da mihi fallacere, da justo sanctoque videri,
Nectem pecostris et fraudibus oblige urbem." (Horace, Ep. i. 16. 61).

Similarly in the United Provinces, the Dom, whose business it is to slay ownerless dogs, has a female deity called Kukarmari, 'slayer of dogs,' to whom a sacrifice of a young pig and an offering of spirits are made as a propitiation for the death of the animals of which she is the guardian. The Dom executioner, on the same principle, as he lets the gallows fall, calls to the Emperor, the judge, and all who are concerned in the conviction and sentence of the criminal, to take the guilt of his prisoner's death upon his own and leave the accused free from responsibility. In a still lower grade of belief are the so-called fetishistic practices of worshippers the 'jenny' with which the Dom burglar makes entry into a house. They also when encamped near a village do not push back to the side of the path, or in the stage. This branch of the Doms feels the dread of evil spirits which is found among all races in a similar stage of culture. Mari Masân, the death spirit of the cremation ground, represents the impersonated dread which his disciples have the power to invoke, and it is considered necessary to appease the ghosts of the dead by an annual celebration, if they are not to appear in dreams and afflict the living.

2. The Himalayan Dom.—These are at a much higher grade than those of Bihar and the neighbouring districts. They carry on various trades which in the Plains are each allotted to a separate caste. Their beliefs are of the same animistic type as those of the Dom of Bihar. In the first place, they worship a number of defiled ghosts who are specially commemorated on account of the tragic circumstances of their death. Gangannâth was a prince murdered on account of a sexual intrigue, and he and his paramour are worshipped. When any one is supposedly bewitched by a wicked or powerful enemy, he goes for aid to Gangannâth, who invariably punishes the wrongdoer. He sometimes possesses one of his followers, and through him describes the sufferings which he has undergone. This is a practice which, when any such person attacks the iniciates, is represented as the impersonated horror of grave-yard or forest. Masân lives at a burning-ground, is black in colour and hideous in appearance. He comes from the ashes of a funeral pyre and walks pasters by at night, some of whom die of fright, whilst others go mad and linger for a
DOMESTICATION

while. He possesses the sick, causes disease, and can be expelled by exorcism. Khabish lives in remote, dark glens, sometimes imitating the bellow of a buffalo, the cry of a goose or swan, or the grunt of a calf. A bright-eyed young male, with bunches and bells, is the traveling seller. Beside malignant ghosts of this kind they also worship Khetpal, 'protector of the land,' the male consort of the Earth Mother, and Kadbish and Chandibhi whom they believe protect the herds and flocks. More terrible is Riniyā, who rides from village to village on immense boulders, the impersonation of the avalanche or of the rocks falling from the mountain side. He attacks only females, until they fix his attention; she invariably wastes away, haunted by her demon lover, and joins him in spirit land.

3. The Dom or Dīm Mirāsī.—Quite different in occupation, at least from the Mahāgliya or Hinduīya Doms, is the Dom or Dīm Mirāsī of the Panjāb, who has been well described by lIbbon (Pānījāb Ethnography, 289). He is a minstrel and ballad-singer, plays on the little drum, cymbals, and fiddle, and his women amuse ladies in zananas by appearing as jesters and singers. It would not be difficult to show that these arts may have developed among the more savage Doms. But the Panjāb Doms are now quite distinct from the Mahāgliya and the Doms of the Himalayas, and it seems as if they have been independently Muhammadans, though they still retain many of the animistic beliefs of the other branches of the tribe.

LITERATURE.—For Bengal, see Riste, Tribes and Castes of Bengal, Calcutta, 1901, i. 280 ff.; Wiser, Races, Castes, and Trades of Eastern Bengal, London, 1853, p. 355 ff.; Gaik, Census Report Bengal, 1901, i. App. vii. p. xix. For the United Provinces, Crooke, Tribes and Castes of the North and North-East Provs. and Oudh, Calcutta, 1896, ii. 312 ff.; Atkinson, Hima-

DOMESTICATION.—The term applied to the control by human beings of the conditions under which animals and plants live and propagate their species. The extent of this control varies from case to case, and, although, logically, German authorities who include oysters and silkworms among domesticated animals are justified by the definition, the term as a rule is limited to such animals and plants as are necessary for human existence or well-being of the human race—among animals, to the dog, the horse and the ass, the cow and other ruminants, the rabbit and similar rodents; the animal of great value for transport like the camel and the Indian elephant; among plants, to cereals, roots, and tubers which have an agricultural value, various species of trees, and plants like flax and hemp which contain fibres of great use to man. The most primitive men do not possess either domesticated animals or domesticated plants. So far as at present is ascertainable, paleolithic man in Europe possessed neither, though in a stratum intermediate between paleolithic and neolithic, at Mas d'Azil in the South of France, Edouard Piette found representations of heads of horses which in the woodcut look certainly as if they were fitted with halters (though this has been denied). Piette found also a little heap of what may be red deer bones but it is generally believed that the bones came into the shelter clothed with flesh intended for food. Even in the 'kitchen-middens' of the coast of Denmark, which belong to the neolithic age, the only animal which can be identified as domesticated is the dog, so that we may imagine the state of civilization of that period to resemble in the main that of the native Australians at the present day. These animals have no estates and proceedings which can be called in any sense domesticated is the dingo—the native dog. As even the dingo in the pairing season often deserts its master, it cannot be considered entirely domesticated. Other animals are obviously not likely to be kept long as pets among savages who lay up no stores and at certain times of the year find natural products so scarce that they are driven to devouring their own children. The primitive savage has, however, undoubtedly the ability to make friends with domesticated animals, and in South America, where the conditions of life are on the whole easier than in Australia, the huts of the natives are full of animals, mostly birds, which they have tamed. The native, however, turns them to no practical use, and when he has been presented with ordinary fowls he uses neither their eggs nor their flesh. When the American Indians were given cattle, they could not imagine any other method of treatment for them than as animals to hunt.

The domestication of animals has obviously been a process continued over a long period of time, and in the case of most animals repeated at many different places by different persons. The stages in the domestication of the domestic fowl are the most important animal to man in many ways is the cow. Its flesh and milk supply food; its skin provides clothing; its sinews, bones, and horns yield primitive implements. From very early times it has also been used as a manuring agent. As an early Persian writer says in the Bathror Yashīt of the Avesta, developing the texts of an earlier Yasna, 'in the ox is our strength, in the ox is our need, in the ox is our food, in the ox is our clothing; in the ox is tillage, that makes food grow for us' (SBE xxiii. 247). In other circumstances the goat is of hardly less importance, while the sheep has been much more modified by its contact with man than these; and its bones, in Northern Europe at any rate, are found later and more rarely than those of the ox and goat. The conditions in which the horse was domesticated are also obscure. But this animal became indispensable in countries where large herds of cattle could not be controlled only by the mounted cowboy, who on the great plains of both the Old and New World has been an important political factor. The geographical conditions which brought about the domestication of the camel and the elephant were much more limited in range. In the case of the pigeon it has been shown by Darwin that all varieties have arisen, under domestication, from the 'blue rock.' The goose was early domesticated; in the Odyssey (xv. 161-2) an eagle carries off one of Helen's geese as she feeds them in the courtyard at Sparta. The goose, duck, cock, and pigeon were domesticated with a view to their use as food, but the turtle-dove was often kept simply as a pet, while the game-cock (the 'Persian bird' of the Greek poets) was kept from a sporting interest. It is impossible, therefore, to decide very clearly which have become thus domesticated in different parts of the world in modern times, e.g. the turkey, the guinea-fowl, the pheasant, and the ostrich.

The causes which produce domestication in animals were treated nearly half a century ago by Francis Galton (Trans. of the Ethnol. Soc. of London, 1865, p. 129 ff.). To his analysis, though rarely quoted in recent times, later writers have added nothing of importance. He shows that animals which become domesticated must have an
inborn liking for man, be fond of comfort, be useful to savages, be hardy, free breeding, and gregarious. The cat, it may be argued, is not gregarious; but it is fond of comfort, and, except in rare instances, is more attached to a place than to a person. The pig, on the other hand, has many of the qualities in which the cat is lacking, but it has for various obvious reasons never been domesticated in the same way, and even the crofter of the Highlands or of Western Ireland, who shares his habitation with the cattle, as a rule excludes the pig. Some animals are kept by man in captivity without their being in the proper sense domesticated. Till lately the wild elephant had to be tamed, The elephant did not breed in captivity. But the speculations to which this fact has given rise are in the main ill-founded. The tame elephant in conditions approaching his wild state does breed (Darwin, Variation of Animals and Plants under Domestication, popular ed., 1905, ii, 165).

Besides the natural causes postulated by Galton, the existence of animals both domesticated and undomesticated was probably to some extent guaranteed by religious or quasi-religious sanctions. In Persia and in Germany white horses were specially sacred (Herod. l. 189; Tac. German. 9, 10). In India animal life generally is sacred, but in Persia the ox which drew the plough was not to be killed. What effect totemism had upon the maintenance of particular animals and plants will be clearer when experts have decided precisely what totemism is (see Frazer, Totemism and Taboo, 4 vols., London, 1910; and, for a different view, A. Lang, art. 'Totemism,' in E.B.), 191).

Hahn's contention (Die Haustiere, 1896) that the domestication of the kine began with animals kept in an enclosure by a temple for purposes of sacrifice, because religious evidence is in its support. The great enclosures belonging to the Persian kings, called in Avesta pari-darza, a word borrowed by Greek in the form paraparosos, had, it is true, many animals contained within them; but their religious character is not more obvious than that of an English gentleman's park. Most Greek temples stood in an enclosure (triurei), but the presence of cattle except at the time of sacrifice was not encouraged there, and in the Eoic inscription published by Reinach (see Reinach, d. oct., Arch. Inst. in Wien, v. 141) it is distinctly laid down that such animals are not to be fed in the precinct: 

\[\text{σάκος γεγονός δέ κατά κρέας καὶ μαζί φοιβούμενον εν τῇ ἢρῳ.}\]

That, however, there were several stages in the domestication of cattle, as Hahn contends, may be readily admitted. Some people, like the Chinese, who have domesticated cattle, look with disgust upon the use of their milk; others, who use both their flesh and their milk, have never employed them as draught animals. But Hahn probably exaggerates the length of time that it took to acclimatize the cow to yield her milk to a milkman or milkmaid instead of to her calf—a difficulty which is present to a modern farmer with a cow that has been once allowed to suckle her calf as it was in early times. Probably milking began in the case of cows which had lost their calves, and to which milking was a relief, if they were otherwise in the Latin phrase, mononecte, 'acustomed to handling.' The careful selection, through untold ages of animals which were 'good milkers' has no doubt increased the size of the cow's udder, but from the beginning the cow and the more dire in this respect that the foal accompanies its mother from the first, while the cow in her native state when she goes to pasture leaves her calf in a brake and often does not return to it for a long time. The domestication of plants is not exactly parallel with the domestication of animals. While savage herdsmen like the Bechuanaas object strongly to the women interfering with their animals, a woman is undoubtedly the first gardener and agriculturist. As Lamholtz says (Among Cannibals, 1889, p. 169), a savage woman 'must do all the hard work, go out with her basket and her stick to gather fruits, dig roots, or chop laren out of the tremendous earth. The stick which she only employs, is indispensable to her on her expeditions after food. It is made of hard tough wood four or five feet long, and has a sharp point at one end made by alternately burning it in the fire and rubbing it with a stone. Even at dances and festivals the savage women carry this stick as an emblem of dignity, as the provider of the family. This stick survives as an agricultural implement even among civilized peoples. The next step, and a long one, is to plant seeds the produce of which will be at hand when it is wanted. But for this several conditions are necessary which do not exist among the lowest savages even now: (1) the family must be either settled in a special place or wandering in a very circumscribed area; (2) the planter of the seeds must be able to keep them in some kind of sanction that they will not be injured by other persons; and (3) the planter herself must have more foresight than the lowest savages, so as to wait for the ripening of the fruit. At present there are harder data by which we can judge how this was accomplished, but we may guess that the dibbling of seeds began with persons who found movement from place to place difficult, e.g. through the encumbrance of infant children, or through unhealthiness or physical inferiority. The protection of the plants, as it seems, could be secured only by superstitious dread. A precinct must be made which it would not be safe for other persons to invade. In other words, a tabu protected them.

Here we are faced once more with the problem which arose in connection with the domestication of animals. Is this protective tabu totemism? F. B. Jevons (Intro. to History of Religion, London, 1904, pp. 114 ff., 156, 230 ff.), who is followed by S. Reinach (Cultes, myths et religions, l. (Paris, 1909) 367.), would attribute domestication of both animals and plants entirely to totemism; van Genmersch (Tabou et totemisme a Madagascar, Paris, 1904) (Bibliothèque de l'école des hautes études, sciences sociales, Paris, 1903, vol. vi., p. 267, for the existence of other cases (pp. 251 ff., 307 ff., and passim). From the gathering of grass seeds, as still practised, e.g. in Australia, among the Hottentots, and among the lowest nations of the Pacific there was doubt a gradual progress (which we cannot trace) to the planting of cereals. The Hindu writer who says that barley was the first of plants is from the point of view of food-grains probably right, but wheat in its many varieties speedily became of equal, if not greater, importance. It is on the different forms of grain that domestication has had more influence than anywhere else. Hence, for wheat, at any rate, the only species for which a wild type is likely to be found is the Triticum monococcum, of which the origin is said to be Triticum agiloides. This is found wild from Servia through Asia Minor to Mesopotamia and Antilibanus.
DONATISTS.—‘Donatists’ is the name given to the adherents of a schismatic Church which was formed in N. Africa at the beginning of the 4th cent., and continued, in spite of severe persecution, for more than a hundred years. Within the area which it affected, Donatism was for the greater part of the 5th cent. numerically the preponderating form of Christianity, but its influence was practically confined to the dioceses of Numidia and Mauretania. While in the origins it was largely due to personal and provincial rivalries, the schism came rapidly to involve serious problems concerning the nature and the functions of the Church, and it was crushed only by a combination of force applied to the State and the diocesal ability of Augustine.

The persecution under Diocletian had revived the question whether a priest or a bishop who had shown weakness or unfaithfulness could continue in his office. The matter had been answered with an unhesitating negative by Cyprian:

‘They who have brought grievous sin upon them, that is, who by fleeing to idols have offered sacrifices, cannot claim to themselves the priesthood of God, or offer any prayers in His sight for their brethren’ (Ep. Ixx. 2; cf. liv. ii. 2, 5).

When, on the death of Mensarius, bishop of Carthage (A.D. 311), the deacon Cecilian was elected as consecrated successor to Felix, bishop of Aptunga, objection was at once raised to the election, on the threefold ground that Cecilian himself was unworthy of the office; that he had been elected only by the bishops in the district of Carthage, and not by those of the whole province of Numidia; and that his consecration was invalid, having been conferred by one who was himself a traditor. The opposition was led and organized, in the first place, by Secundus, bishop of Tigitis and consecrated by Felix, bishop of Aptunga; objection was also raised to Felix, bishop of Carthage, attended by seventy other bishops, excommunicated Cecilian and those who adhered to him, and consecrated in his place Majorinus, a ‘reader’ who belonged to the opposite party. The Church of N. Africa were rent in twain. Each side excommunicated the other. Both appealed to the Emperor Constantine, ignoring thereby Tertullian’s principle, ‘Quid Imperatori cum ecclesia?’, and setting an evil precedent for the future. The Emperor, having heard the case of Hosius, bishop of Cordoba, had already shown favour to Cecilian, yielded to the request of Majorinus, and called on Miltiades, bishop of Rome, with the assistance of the bishops of Arles, Autun, and Constantine the Great, to arbitrate in the conflict. Whether Felix was indeed a traditor. Their decision cleared the reputation of Felix and confirmed the consecration of Cecilian, and also condemned Donatus of Casae Nigrae, a leader of the opposite party, on the ground that he had re-baptized Christians and re-ordained bishops who adhered to the schism. As the principles at issue were thus brought to the surface, the Donatists were only confirmed in their resolve to separate from the Church, and Constantine remitted the whole matter to a Synod which he convoked to meet at Arles (A.D. 314). This Synod, which, though described by Augustine as ‘plemarum universae ecclesiae concilium,’ cannot claim to be more than a General Synod of the Latin West, condemned the Donatists on all points of their contention.

The schism, nevertheless, continuing to spread, and Majorinus having been succeeded by Donatus Magnus, from whom the schismatic Church probably derived its name, Constance remodelled the whole system of ecclesiastical rules. Issuing a decretal threatening to deprive the schismatics of their churches and to banish their bishops (A.D. 316). The policy of forcible suppression was pursued with great severity by Ursacius, the Imperial commissioner, but with little success; and in 321 Constantine instructed both Ursacius and Cecilian to adopt a policy of moderation.

Under his successor, Constans, the history of the schism followed much the same course. Both the persecution and the resistance were more determined. It was a period of much social distress and disturbance in Africa. The Donatists, as ecclesiastical rebels, provided a rallying point for all the discontented and seditious elements in the population. There was a breakdown of social order. Bands of dispossessed peasants and escaped slaves infested the country, committing abominable outrages, and exposed to fanaticism. They sought to make common cause with the Donatists, and called themselves militis Christi agnostici, but are better known as circuncidati, ‘hut-hunters.’ The Donatists were discredited by these excesses, and suffered in their suppression. Many of them were put to death, many others were banished, and their churches were closed or confiscate. The accession of Julian brought a temporary relaxation to them, as to other schismatics and heretics, but under Gratian and Honorius the persecution was renewed. The schism continued, however, to flourish. Donatus Magnus, who died in exile, was succeeded by his unwanted successor, Majorinus. The situation which Augustine found at Hippo was probably characteristic of many districts: the Catholics were in a minority, and the Donatists refused to supply them with bread.

Towards the end of the 4th cent. the movement was seriously weakened by internal dissension. Tychonius, the celebrated grammarian, was condemned by a Donatist Synod in 390 for having acknowledged that there were saints in the Catholic Church. A Synod at Carthage passed sentences to the exclusion of the Eucharist. Moreover, the continued and vigorous polemic undertaken by Augustine began to tell. A conference between the two parties was arranged by him at Carthage in 411, and was attended by 286 Catholic and 279 Donatist bishops. It led to no satisfactory conclusion, but provided an excuse for again putting the civil law in motion. Augustine himself provided the first reasoned defence of the persecution of the Church by the State, and opposed the policy of thebones to the infliction of the death penalty. Fines, imprisonment, and confiscation followed, and in 415 the Donatists were prohibited from meeting for worship. Along with the Catholics they suffered grievances, and especially in the provinces, where were still traces of their existence as late as the 7th cent., when they are referred to by Gregory the Great.

Donatism was not a heresy; neither did it develop any heretical teaching. It was not a dispute as to the organization of the Church, or even one concerning discipline merely, which underlay the schism. Both parties held by the episcopal, as both held to the Creeds. Donatism represents an attempt—the final one for a thousand years—to resist the process of secularization by which the Church was gradually transformed from a community of holy persons into an institution of mixed character, offering to secure salvation for its members by means of grace over which it had sole control. It belongs, therefore, to the same series of movements as is represented by the Encratites (g.e.), Montanists (g.e.), followers of Hippolytus, and Novatians (g.e.). Insistence on a minimum of grace, Constatine’s measures, at least was ‘the last remnant of a much more earnest conception’ of the Church. It was met by the defenders of Catholocism with a new emphasis on the objective character of the sacraments, and upon
the holiness of the Church apart from the holiness or otherwise of its members and clergy. It was in the controversy with the Donatists, therefore, that the Catholic doctrine of the Church was completely developed. To the foundation principles of Donatism ('qui fideem perpero sumerit, non fideum per- cipiet sed restamt') Optatus of Mileve opposes an equally fundamental position, 'sacramenta per se esse sancta, non per homines.' It was not difficult for Augustine to show how his spiritual services were involved in the Donatist contention, chief among them the difficulty, amounting to impossibility, of knowing the true character of the officiating priest. But he went further, and, by asserting the indefinable character of its function, whereby an ordained priest retains the power to celebrate a valid sacrament, whatever he views or his conduct, and the mixed composition of the Church as it were making only 'vessels for honour' but 'vessels for dishonour,' stamped its final seal on the Catholic doctrine of the Catholic Church. It is true that in doing so he had to abandon the position taken by Cyprian, and assert the validity of all baptisms, performed by heretics, provided that it was in the presence of the Trine. It is true also that baptism in this way came to lose some of its significance and to represent only a 'marking' of the recipient, the beginning of a process already high in the church anywhere, could be consummated only within the Catholic Church and by the addition of 'charity' to faith. Moreover, in the theory of the Church thus developed in opposition to the Donatists, Augustine at last propounds the way in which the definition distinction between the Church visible and the Church invisible.

LITERATURE.—Optatus Milev., de Schismate Donatistarum [PL. 148]; Augustine, De civitate Dei, vols. I., II.; E. Völker, Ursprung des Donatismus, Freiburg, 1882; L. Duchesne, Histoire des Donatistes, Paris, 1890; A. Harnack, History of Dogma, 1895, esp. vol. v.; N. BOUWETSCH, De Donatismus, in FKB's, iv. 785-798. A. Scott, DOOM, DOOM MYTHS (Teutonic).—The belief in supernatural powers who preside over the destinies of mankind is met by among all the Teutonic peoples. These powers have more especially the end of life in their control, and they are accepted and obeyed and then identified with the spirit of death. They are believed to become incarnate in female form, now coalescing in a single being, now appearing as three sisters, or even in whole multitudes. According as they dispense good or evil fortune to men, they are distinguished as friendly or hostile. To the individual they frequently reveal his fate in dreams, and this explains why dreams hold so important a place, not only in the common life, but also in the literature, of the Teutonic race (cf. W. HENZEN, Über die Trumme in der altnord. Sogalliteratur, Leipzig, 1890).

The ancient Teutonic dialects possess several designations for the powers of destiny, and in not a few cases the terms have already acquired an abstract sense. All the tribes had the word meaning fate or events which appears in O.H.G. wéhr, A.S. wæra, wyr, and which sometimes signifies the spirit of death or destiny, and sometimes death or destiny itself. In the older forms of the Teutonic languages we find O.S. wætra, wætra, O.N. mjötéra, the power which 'mates out' or 'orders,' was in current use; while among the Southern Teutons we find O.H.G. geest, O.S. geyst, O.N. geisp, the spirit who creates ('shapes'), which is given in German-Latin glossaries as the equivalent ofparsed. In works of the 13th century, the geister sind es are still referred to as the power who best, life upon man and order its course (Völter, Bühne der Tugend, ii. 280).

The belief in the powers of destiny has assumed an altogether peculiar form in northern Scandinavia. Here they are known for the most part by the name norr. Norr is a word of obscure etymology, but appears to be connected with Swed. norm, nyrm, 'to tell secretly,' to warn,' and Mid. Eng. nurmen, 'to recite.' The fate of man is the work of the Norns (skop norræ), and none can evade their decree. Even the destiny of the gods appears in their control. Hence they may make their appearance at the birth of human beings, and support the mother in the pains of labour. People seek to win their favour by offerings. In the Faroe Islands it is still the custom for mothers to eat the 'Norn-grains' (nogar), and the prayers of men for success in their work. They are the Norns who determine the token of the predestined, and who, in battle, stand on either side of a man, wishing that he may receive wounds. The blows of fate are supposed to be the work of angry Norns, and defeats in war are also traced to their dictates. A person's death is likewise due to their decree. We thus see the hostile and beneficent aspects of the Norns, sometimes pronounced, and hence, as is stated in the Volsung (8 CE.), they were believed to have sprung originally from the race of giants, and the golden age of the gods when the Norns came into being. From their leading representative, Urðr, is taken the name of the only fountain in the under world, the Urðr fountain; here, according to Snorri, lay their abode, and from this retreat they exercised their sway over their inhabitants of the earth.

The Norns are often found in a group of three, or in three companies. It is possible that in this point the classical myths of the Parcae may have and there have had an influence upon the sagas of the Norns. The story of the gods' death and the prevention of their death. The three sisters were of the name of the gods' youngest daughter, and the youngest of the three, who became the wife of the giant Bragi, was called the youngest of the three, who became the wife of the giant Bragi, was called

DOOR.—Doors, whether of dwellings or of temples, play an important part in ritual and belief over a very wide area. Often the dwelling-place of a spirit or divinity, the door has almost invariably a sacred character. The latter is perhaps best sought in the conception of the door as separating between two worlds—the outside world, where are innumerable hostile influences and powers, and the region within the limits of the household, the influence of the powers of which are friendly. The door is at once the barrier against those hostile influences, and that which gives entrance to those who have a right to pass to the sacred region within. Hence those who pass through the door—the limits of the sacred region, and therefore itself sacred—must do so with care and often with certain ritual acts. Thus the sacredness of the door was probably at first independent of its connexion with a god or spirit. But that connexion, once established, could only add to its sacred character. Again, being the dividing line between hostile and friendly spheres, the doorway was supposed to be a place where evil influences clustered, or sometimes even dwelt. Hence certain powers dwelt near the door and protect it. These are generally connected with the hearth, it is not clear why they should also be associated with the door. But two reasons may be suggested. The door is the exterior line of the demarcation of the hearth or hearth-house, and would first be met with, and where they might reasonably be supposed to dwell. And when men dwelt in rock-shelters, caves, or half-open huts, the fire would be at or near the entrance, as it still is now before voyages and at sea. It was taken into the house, the connexion of ancestral ghosts with the hearth would be shared with the entrance, their former exclusive domain. In some cases burial takes place at the doorway.

Besides being sacred as a whole, the door has special sanctity in its more important parts—threshold, side-posts, and lintel—as will be seen in the course of this article. But it is impossible, with Trumbull, to regard the sacredness of the threshold as originating in its having been the primitive altar—first of the house, then of the temple. The many rites connected with threshold or door by no means bear out this theory, though, where sacrifice is performed at the door, the threshold becomes sacred—either with the threshold (see above) or the altar. But more probably the sacrifice is not slain on the threshold, just as the fire at the entrance would not have the threshold for a hearth, while the altar of primitive tribes is an extension of the threshold. The sacredness of the door as the passage to a different domain is seen in many folk-tales of the Forbidden, or Tabooed, Door, through which certain persons must not pass, and beyond which lie matters into which they must not penetrate. To do so is generally followed by fatal consequences (cf. SBE vi. 306 ff.). Similarly the stranger must not, without due preparation, pass the family door, nor may the profane cross the temple threshold.

1. Ritual acts at doors.—The sacredness of the door as a means of passage from one state to another appears in numerous rites connected with the threshold.

(a) The bride must step across the threshold of her husband's house with the right foot foremost, the bridegroom in the ancient Vedic ceremonial insteading the left (cf. H. Morier, Trades, pp. 192-193). This custom is also found in more modern times elsewhere. Or, again, an animal is sacrificed at the threshold, and the bride must step across the outpoured blood—a custom existing among the Socotrians, as Armin in Egypt (F.L. vi. [1888] 121; Trumbull, Threshold Covenant, 1896, p. 26; Garnett, Women of Turkey, 1890, p. 239; Lane, Modern Egyptians, 1846, iii. 324). Cf. ERE ii. 556 for instances among the Hereros.

(b) Or an offering is made, the materials being often presented to the bride, while she snears the door-posts with them, before crossing the threshold (see Trumbull, 29 f.). Even more widespread is the custom—probably the origin of the latter—is perhaps best sought in the conception of the door as separating between two worlds—the outside world, where are innumerable hostile influences and powers, and the region within the limits of the household, the influence of the powers of which are friendly. The door is at once the barrier against those hostile influences, and that which gives entrance to those who have a right to pass to the sacred region within. Hence those who pass through the door—the limits of the sacred region, and therefore itself sacred—must do so with care and often with certain ritual acts. Thus the sacredness of the door was probably at first independent of its connexion with a god or spirit. But that connexion, once established, could only add to its sacred character. Again, being the dividing line between hostile and friendly spheres, the doorway was supposed to be a place where evil influences clustered, or sometimes even dwelt. Hence certain powers dwelt near the door and protect it. These are generally connected with the hearth, it is not clear why they should also be associated with the door. But two reasons may be suggested. The door is the exterior line of the demarcation of the hearth or hearth-house, and would first be met with, and where they might reasonably be supposed to dwell. And when men dwelt in rock-shelters, caves, or half-open huts, the fire would be at or near the entrance, as it still is now before voyages and at sea. It was taken into the house, the connexion of ancestral ghosts with the hearth would be shared with the entrance, their former exclusive domain. In some cases burial takes place at the doorway.

Besides being sacred as a whole, the door has special sanctity in its more important parts—threshold, side-posts, and lintel—as will be seen in the course of this article. But it is impossible, with Trumbull, to regard the sacredness of the threshold as originating in its having been the primitive altar—first of the house, then of the temple. The many rites connected with threshold or door by no means bear out this theory, though, where sacrifice is performed at the door, the threshold becomes sacred—either with the threshold (see above) or the altar. But more probably the sacrifice is not slain on the threshold, just as the fire at the entrance would not have the threshold for a hearth, while the altar of primitive tribes is an extension of the threshold. The sacredness of the door as the passage to a different domain is seen in many folk-tales of the Forbidden, or Tabooed, Door, through which certain persons must not pass, and beyond which lie matters into which they must not penetrate. To do so is generally followed by fatal consequences (cf. SBE vi. 306 ff.). Similarly the stranger must not, without due preparation, pass the family door, nor may the profane cross the temple threshold.

1. Ritual acts at doors.—The sacredness of the door as a means of passage from one state to another appears in numerous rites connected with the threshold.

(a) The bride must step across the threshold of her husband's house with the right foot foremost, the bridegroom in the ancient Vedic ceremonial insteading the left (cf. H. Morier, Trades, pp. 192-193). This custom is also found in more modern times elsewhere. Or, again, an animal is sacrificed at the threshold, and the bride must step across the outpoured blood—a custom existing among the Socotrians, as Armin in Egypt (F.L. vi. [1888] 121; Trumbull, Threshold Covenant, 1896, p. 26; Garnett, Women of Turkey, 1890, p. 239; Lane, Modern Egyptians, 1846, iii. 324). Cf. ERE ii. 556 for instances among the Hereros.
for women to suckle their children there (Hindus, Slavs, Syrians, etc. [Crooke, _PI_ ii. 241; Trumbull, 11-12; _FL_ xvi. [1904] 208) negroes of Jamaica believe that 'duppies' will take those who sit at thresholds; _FL_ xviii. 39).

(c) Examples of the use of the door, and especially of the threshold, demands also that _acts of reverence be paid there_. The threshold is to be closed with the right foot first. Or a charm or prayer or sacred formula should be said ('Bismillah' ['Arabs]. Psalms 23, 31. 115; Trumbull, 11, 123; Morier, 254; _Fog. Phil. Grec_. i. 510; Ralston, _Songs of the Russian People_, 1872, p. 137; Layard, _Nineveh_, i. 69.)

1. The sacredness of the door makes it a place to deposit objects which are to be preserved in safety. In Icedand the caul, in which the child's guardian spirit or a part of its soul resides, was buried under the threshold, possibly with a view to re-born in the spirit of the child dying. The spirit would pass into the mother by way of the threshold (Green, _Tent. Myth_. 854). Among the Baganda, at the monthly ceremony connected with the king's plaque, to ensure his life and health, it is deemed requisite to feed the earth right and a day (Roscoe, _JAI_ xxxix. [1902] 63, 76). The door is a usual place at which to offer sacrifices, either to propitiate the household spirit or god, and so to unite the 'house' with him, or to propitiate evil influences, or to remove the contagion of uncleanness from all in the house.

In Zinder two human victims were sacrificed, one at the threshold, which was smeared with the blood, before a new king entered the royal hut (Bruce, _Travels_, i. 514). In W. Africa, 16 cases of smallpox or expected trouble, gateways are sprinkled with blood and honey, or a bundle of leaves is smeared with blood before the entrance (Ezekiel's, _Zimmer_, Beitrage z. Kénntnis der bab. Rel., Leipzig, 1901, p. 127; cf. Layard, i. 202). In Muslim houses it is usual to dip the hand in water to sprinkle the threshold of sacrifices offered on special occasions, and to mark the surface near the door in order to repel the jinn (Parker, _Rel._ of other Greco-Roman, Persianian, Hindus, see _E.R._ 569, iii. 445). The same rite of sprinkling the doorway with blood occurs as a survival in European folk-custom, e.g. in Greece at Easter, and in Ireland on St. Martin's eve, to keep out evil spirits during the year ( _FL_ i. 275; _Mason, Stat. Account_, 1814-9, iii. 75). It can hardly be doubted that the Hebrew Passover rite goes back to a sacrifice by which the household divinity dwelling at the doorway was propitiated and his protective power secured against the evil powers (the 'destroyer'). The blood was smeared on doorposts and lintel, and was perhaps first poured on the threshold ( _Ex_ 12:22).

1 The Collo-Iberian custom of dancing at the doors at the time of full moon may be noted (Strabo, iii. 4. 16),

guest (cf. Trumbull, 3 ii., where the importance of the covenant aspect is perhaps over-emphasized).

Other offerings occur at the door. In ancient Vedic law the householder had to place an offering on the threshold, at the same time reciting a _Puja_. The _Voynatsa_ ( _ST_ 107, 205) mentions an offering of cannabis on the N.W. India a cup-shaped cake of cow-dung filled with corn, and water poured over it, is placed on the threshold ( _F.L.R._ [1882] 34). The first bundle of corn is placed near the threshold, and between it and the threshold a line of _sacredness_ is formed, the offering of first-fruits to the household god (id.; Trumbull, 16). In the north of Scotland, part of the first load of sea-'wa'd used for manure was placed on New Year's day at each door of the farm to bring good fortune ( _F.L.R._ [1884] 331). In Babylonia, libations of oil, honey, and wine were poured over the thresholds of temples, and honey and wine over bolts (Jastrow, _ED._ _Bab._., 1889, p. 684 l.).

(f) The use of sacrifice at or near doors of temples is seen from the fact that in many temples _an altar stands beside the door or entrance_. Among the Hebrews the altar of burnt-offering stood at the entrance of the tabernacle or temple ( _Ex_ 9:18; 22), of the door of the tent of meeting and slain, and the blood sprinkled on the altar ( _Lv_ 5:1-5; 13:1-15, etc., cf. _17:32_). Similarly, in the temple the altar of burnt-offering stood at the entrance of the Holy Place, like the large altar of the outer court of Bab. temples. The greater Greek and Roman altars frequently stood before the entrance to the _rodes_ or _cella_. Trumbull notes other instances from Assyrina and Asia Minor, Polynesia, etc. (115, 121, 144, 150; cf. Ellis, _Pol. Researches_, 1832-6, iv. 89). In Dabomey little mounds of earth are often found at doorways, and on them offerings are laid (Schnieder, _Ed. of drak. Naturvorderk_, Münster, 1897). Other examples, in Bab., etc., often placed at gateways or doors. The sanctity of the door or threshold is also emphasized in the OT. At the door of the tent of meeting took place the consecration of Aaron and his sons ( _Ex_ 29:30). In Ezekiel's ideal temple the 'Prince' is to worship at the threshold of the gate of the inner court ( _46:25_). When Moses spoke to Jahweh, the pillar of cloud descended and stood over the door of entrance to the tent of meeting; and in Ezekiel's temple the glory of Jehovah is according to the door of entrance ( _Ex_ 33:7; _Dj_. 31:4, Ezk 9:9, 10), and stands over the threshold of the house ( _Ex_ 33:7). When the thresholds of the tent of meeting had their guardians (1 _Ch_ 25:2), and later those of the temple (2 _K_ 25:23, 23:25, 70:3; _Jer_ 33:5; _Ps_ 89:36), the office of doorkeeper ( _pyloros_ ) soon came into existence in the Christian Church (Cornelius, _ap. Eus._ _HE_ vi. 43; Bingham, _Antiq._, i. 259, iii. 257). The ancient custom of baptistery and font being outside the church ( _Eus._ _HE_ x. 4; _Or._ _Catech._, _Myst._ x. 2), preceded by the custom of baptizing in any place where there was water ( _Vert._ of _40_; _Just._, _Ap._ i. 61), is connected with the idea that the containing element water can also sanctify, and also with the ritual of purification before sacrificing, entering a temple, and so on. For which reason sacrifices were offered at the entrance—the _exvrepourph_ , or fonts, at the entrance from the Greek νυμφαῖς, the fountains at which the divinity lived and the lavers and bronzes seen in the temple of Solomon's temple ( _JASTR._ 653-3; _Sayce, Rel. of Anc. Egypt and Bab._., 1902, p. 458; 2 _Ch_ 3:9).

2. Guardian spirits and divinities of doors. The sacredness of the door was connected with its spirit or Divine guardianship. In many cases we find elaborate methods resorted to in order to secure a spirit guardian, in the first instance, of the door of a house, and later, of the gates of a city. One of these is to house burial, or to invite wide occurrence, and is probably primitive. It usually takes place under the floor, but there are occasional instances of its occurrence under the threshold
DOOR

(Ralston, 326 [Slav];) Jastrow, 599 [Bab.]; ERE iii. 34 [Burna]). Burial at gates is also found in Greece—Etolia was buried in a tomb in the gate leading to Olympia, and, from his grave over the Syrian gate at Troy, Laomedon was believed to guard the city. Neoptolemus was also buried under the threshold of the temple at Delphi (Pausanias, ed. Frazer, v. 4. 4 and notes). The ashes of Belinus, a British god, were said to have been preserved in the gate of the city on the Thames (= Billinge gate [Geoff. Mon. iii. 1])—a myth founded on gate-burial and Divine guardianship of the gate. In other cases, sacrifice was resorted to. That at the building of a hut or house a human victim is often placed under the roof-post, or near corners, a threshold, or the foundation, whatever that may be, or the walls; and the same is true of the building of a gate. There is no proof, however, that (as Trumbull supposes [op. cit. 21]) the threshold stone was originally the foundation stone. The victims may be intended to propitiate the earth-spirits whose domain is disturbed by the digging, but they are also expected to act as guardians of the house, door, or gate. In old Cannaite and in the domestic aspects of the divine being sacrifices were buried in the door, doors, or threshold—a custom later commented on buried to a lamp or bowls in these places (PEFSt. 1903, pp. 16 ff., 36 ff.). The passages in the Pali Canon (Av. 41) have turned the custom into this custom. In Phoenicia, men were buried beneath gates to make the town secure (Movers, Die Phönizier, Berlin, 1840, ii. 46). Instances of sacrifices at the building of a city gate are cited from the fourteenth to the sixteenth centuries (Atlas Theophrastae, 1571, p. 212 [Siam]; Tylor, Prin. Cult. 1903, i. 106; ERE iii. 274 [Tenasserim, Mandalay]), and in Senegambia it was formerly the custom to bury alive a boy and girl before the chief door of the enclosed house, or near thresholds (Wright, Anthrop., Leipzig, 1869, ii. 197). The coins placed under the door in China and Syria at the building of a house are probably surrogates for such sacrifices, like the Cannaite lamps. In Syria a cock is sacrificed, and its blood poured over the lintel and steps of a new house (Doolittle, Social Life of the Chinese, 1866, ii. 75; FL xviii. [1907] 59).

In all such cases it is evident that the spirit of the door is connected with the household spirit, and that both are ultimately ghosts of the dead. In the burial of the house or burial took place there because the door or threshold was an important part of the house. Souls were supposed to dwell under the threshold in ancient India (Oblenherg, Ast. des Vedas, Berlin, 1894, p. 553). Among the Slavs the domovoi, or house-spirit, associated with the hearth, is propitiated at certain times by offerings buried beneath the threshold (Trumbull, 19). Similarly the household penates of the Moravians receive offerings at the door, which is their (FL. i. 422 ff.). In Germany a spirt sits between door and doorstep; hence the door must not be banded, and other precautions must be taken lest he leave and take the luck with him (Grimm, 1820; FL xiii. [1902] 238 ff.). In Irish and Norwegian houses, the Leshans reside at the threshold (Crooke, PR i. 241). In Samoa the tutelary spirit is also associated with the doorway, and is angry when water is spilt on the threshold (Turner, Samoan, 1854, p. 57).

In many regions the door or gate is put under the protection of special divinities, or is called by the name of a god. The Ainu have a god of door-posts, and, to him, as to the gods of other parts of the hut, worship is paid at its construction, and offerings of inora are made at other times (FL. vi. 1888] 49; Batchelor, Ainu and their Folk-lore, 1901, p. 129). The Japanese have gods of doors and gates who guard against 'unfriendly things from below and above,' and are in some cases personifications of the gates, since these were conceived as living things exercising protective powers. Small prints of the Ni-o, guardians of holy places, are set on the doors for protection (Yevon, EHR ii. [1905] 589 f.; Aston, Siamto, 1893, pp. 108, 280). In China the gods of the thresholds are Shun-Shu and Ju-La, though other divinities or guardians occur. They guard the house and other buildings; and images of them, larger or smaller, or pictures of them, or simply offerings, are found at the door, with similar objects on the left hand (de Groot, Les Fetes annuellement celebrees a Eusou., tr. Chavannes, Paris, 1886, p. 597 ff.; Williams, The Middle Kingdom, New York, 1918, i. 731). In India, Vattam is the threshold god, dwelling there, to whom offerings are made when the door-way is set up. Or, as among the Mulers of Chotah Nagpur, Dwari Ganas is lord of the house door, and is propitiated with rites and offerings, in time of calamity, at the doorway. Images and pictures of gods are also placed round doors (Trumbull, 93; Crooke, PR i. 104). In Egypt each building had its protecting deity, as doorway inscriptions prove, while sphinxes guarded the entrances, and references to this custom run: 'I protect thy sepulchral chamber. I keep away the stranger, I overthrow the foes with their weapons.' In other cases a royal statue, wearing the magic headpiece of the god of the threshold, was set at the door (FRE 1880, p. 50; Wilkinson, i. 362 ff.; Maspero, Etudes de mythe., Paris, 1893, i. 79). The gates of Thebes were each dedicated to a planet, and connected with planetary worship (Nommos, Dionys. v. 64). In Babylonian Assyrian, Egyptian, etc., were often dedicated to gods or named after them, and each part of a house doorway was associated with the great divinities to whom appeal was made (Maspero, Life in Anc. Eg. assy. 1891, p. 233; Jastrow, 257). But, besides this, human-headed winged bulls, lions, and other monstrous forms stood at the entrances of temples and palaces to guard them against the approach of the demons, the brood of Tiamat, with their composite forms (Maspero, 257; Jastrow, 292). In Guatemala, Chahalka was the god of houses, and his protection was assured by sprinkling the doors with sacrificial blood. The great doorways of Central American temples were also guarded by human masks and images, and the demons were associated with them (FL, 98, 146). In Rome, Janus was the primitive numen of the doorway of the house and the city-gate, preventing the passage of all evil things into the house, and so one of the Penates. He was god of the janus, gates in the form of arches on the roads, etc., the most ancient of which was that of the Forum, originally a temple in the form of a gateway. But Janus, as god of doors and gates, was rather god of the entry and departure through the gate or threshold. This is seen by the fact that each part of the door had its numen—Limentinus, of the threshold; Forenhus, of the leaves of the door; Cardela, of the hinges (Wissowa, Rel. u. Kunst. der alt. Welten, Berlin, 1899, p. 175 ff.; Tert. de Corone, 13). In Greece, Apollo Agnus or Thyrax and the Antelii were concerned with entrances and doors. Images of Icicate stood at doors, to prevent the entrance of evil spirits and ghosts, and she was also invoked before the threshold for protection against them. At doors and gates stood also the epital, protecive images or symbols of Hermes (CGB ii. 509, 516; Brunck, Aulaxe, 1772-76, iii. 107; Tert. de Cor. 15). See ERE iii.
The belief in Divine guardians of the doorway among the Hebrews is suggested by the Ex 21:10, where the bondman who does not wish to leave his door or doorpost, whose ear is pierced with an awl (cf. EEE i. 445)

The presence of the household spirit or god makes the doorway sacred. In many instances, illustrations in which sacred persons confer sacredness on the door. In Polynesia, when the king or queen entered a temple, the door was shut up as being Thrice Holy. The same in India, one of smallpox. if possessing by the smallpox deity, makes the entrance to certain persons. or must only be crossed with a due ritual (Crooke, PR I.1: cf. EEE iii. 3129). In the South Sea Islands, the first to enter a temple may pass only if the door is shut, which he enters his father's house (Gill, Life in S. Isles, 1576, p. 46). Cf. also Ex 44:4 (the door by which Jehovah enters the temple is to be shut, and none but the 'Princes' can enter it).

The gates and doors of temples are always peculiarly sacred, since the temple is the abode of a god. The outer courts of Buddhist temples in China, as in Africa, are roofed gateways, mon, coloured a dull red, with figures on either side. In front are the 'heavenly doors,' and under the gateway in some instances is the figure of Buddha, and the £i-£, the two kings of the Mutilian, or the two figures guarding the gate. Other hideous forms of the thunder and wind gods are set on niches in the gates. Petitions are made to the £i-£, written on paper pellets, which are chewed and hung against them. Before the gate numerous other such gates must first be passed (Curzon, Problems of the Far East, 1894, p. 190; Bird, Unbeaten Tracks in Japan, 1893, pp. 211, 59).

Not only in the temple door sacred, and therefore highly decorated with carving or precious metals, but an isolated gateway or entrance arch is often found in front of it. This is a duplicate of the door, serving the same purpose, but acting as a preliminary protection to the sacred precincts and against evil influences. It may be derived originally from the barriers or porticoes hung with charms which are often stretched across roads and entrances to villages to prevent the invasion of all malevolent things, e.g. in Africa (Kingsley, 450-1; van Gennep, 22). Such isolated doorways are placed in front of other buildings than temples, or they occur in other isolated situations, for particular purposes, e.g. monumental buildings. This随处可见 is Japan, and in front of all Shinto and many Buddhist temples and shrines. It consists of two uprights and two or more cross-beams painted red, the upper projecting and curving upwards at both ends. Though now more generally used as other sacred objects are given to the gods, its original purpose is unmistakable (Aston, 231-2; Chamberlain, Things Japanese, 1899, p. 556; Bird, 148). In Korea the isolated gateway, hong-an-man, is a symbol of majesty and government, and is erected in front of palaces, government buildings, temples, and monasteries under royal patronage. The primitive purpose of the hong-an-man as a doorway is seen in the geo-man, an archway outside the western gate of the capital on the road to Peking, where the king goes to meet the Imperial envoys (Curzon, 142). In China these arches, pao'-oo, are of a commemorative nature. Similarly, the triumphal arch of the Romans suggests its principal theme. It through which the triumphal soldier returned from a hostile country into his own district. The propylon, or towered gateway, of Egyptian temples, with its flanking towers, obelisks, or statues, and tall masts, all led up to by a series of sphinxes forms another example of such gateways. In Babylonia, before the gateway of the great court of the temple, stood two detached pillars, like the Egyptian gate obelisks. They correspond to the pillars Jachin and Boaz in front of Solomon's temple (1 K 7:2), and were doubtless the originals of these. Such pillars were commonly placed before Semitic temples, e.g. at Paphos and Hierapolis (Lucian, de Dea Syria, 16; W. L. Smith, 457, 483).

Says the Bab. pillars as representing Nin-gis-zi (Lord of the uprightness, Elul, Eluhim) and Tannum, guardians of heaven, just as the flanking towers of the Egyptian gate were said to represent Isid and Sphynx. In his opinion, Yahwah is a translation of Nin-gis-zi, and Boaz perhaps a reminiscence of Tannum (Says, op. cit. 356, 459-60; Jastrow, 424). Amulets at doorways.—Images of divinities and monstrous figures at doors and gates are intended to repel evil influences and powers, and to guarantee the protection of the doorway gods. The process is largely a magical one. At the demonic figure keep off demons, so also the Medusa head, represented on door-knobs, has the same effect, or repels the evil eye. Such door-knobs or handles were used in ancient Italy, and are still common in modern Japan. The door-knobs, while the female face on English door-knockers is derivative from these (FL xiv. (1903) 217). The same purpose was served by the small images of protective divinities, often with invocations printed on them, and little figures and images of Assyrian houses, palaces, or temples, or placed at the doors to keep the house from the entrance and mischief of fiends or enemies (Jastrow, 269). But, since amulets of all kinds are placed on the roofs, gables, window-frames, and walls, the doors are warded off evil influences, they are naturally also fixed on doorways through which their entrance might so easily be effected. The custom is found from the lowest up to the highest levels of civilization. It is also very ancient. This is proved by the fact that, on the entrances of Neo-lithic cave-dwellings in Palestine, cup-markings which undoubtedly were religious symbols or served a magical purpose are found (see EEE iii. 178).

Africa, charms hung on the doors to prevent evil spirits from entering; and in civilized Greece, doors and gates of all kinds were similarly protected (King-Jey, 490; Mackay, Mackay of Uganda, 1896, p. 112; EEE iii. 438). The door-amulets used among all peoples of are of various kinds, and only the principal varieties need be alluded to here.

(a) Sacred plants, flowers, or branches are commonly used, especially on particular occasions when evil forces are most to be dreaded, e.g. at a birth.

In Iub. incantations against demons, various plants are mentioned as having been hung on the lintel and door (and Red Spirits and Evil Spirits of the high hills, 1953, 4.1, 137). In India, at a birth, leaves and flowers along with a sibble, edge outwards, are placed outside the door to bar the demons (Ballington, Women in India, 1906, p. 2). The Greek and Roman practice of crowning the door with sacred garlands on various occasions (see EEE ii. 190, 191, 400) had more than a festal purpose. In Attica, at the birth of a boy, an olive-branch was hung on the door (Herod., s. e. arbores sacrae). In Rome, doorpost and threshold were touched with an arbustus branch, and water was sprinkled at the entrance, at a birth, to keep off witches. Branches and wreaths were hung up at the Falata (Ovid, Fasti, iv. 712 ff., vi. 155). In modern Greece, a piece of wild onion is placed under the lintel to keep off the evil demons, who are hung up on Monday as the same day (FL xii. 1890, 1801). In 260, in India, at a birth, pummelo-leaves and slips of a fragrant thorn are suspended over the door to keep off evil spirits (FL x. (1887) 222). In Japan, on New Year's day and on other occasions, branches, etc., are fixed up as averters, or a type of rice straw with feathers, or the leaves of the peach are hung up (Aston, 191, 312'.) The Ameone place into doorways as charms against evil (Battcher, 91). In India, on May-eve, the threshold is strewn with march magic to keep out fairies and to bring luck (FL vul. (1904) 457). For similar practices in European folklore, see Prater, Q.6:47; Orison, 1200, 1200, 1211; and for additional instances, see EEE iii. 354:494: Lane, Mod. Egyptians, 1848, 47. 177. The threshold is blessed or holy to bring out ghosts (Campbell, Witchcraft and Second Sight, 1902, pp. 105, 173).

(b) Stil is sometimes strung on the threshold, on account of its supposed prophetic properties, as in Syria (FL xvii. (1907) 70). In Aberdeenshire it was placed
with fire on the threshold of a byre, before a cow after calving left the byre (FLJ ii. [1884] 330). Pebbles and grains are sprinkled on the doorstep to keep out ghosts, who must count them and cannot get beyond three (FL xvi. 214). Iron is also a powerful charm against evil spirits, as in other places, especially near the birth, when an iron weapon or utensil is placed at the door (India [Campbell, Spirit Basis of Belief and Custom, Bombay, 1885, p. 387], and very commonly in European folk-custom at birth, after a funeral to keep the ghost out (JAJ xv. 69), and on other occasions). Both because it is made of iron and also because of other reasons connected either with the former sacred nature of the horse or with its supposed resemblance to the form of the devil (as in India), horse-dooj is a very common door charm in most countries. Usually the charm is effective only when the ends are placed upwards. It keeps out fairies, witches, ghosts, and other evil powers, and keeps in or brings about the opposite effect (Loki, Thor and Fenris Wolf, 2, p. 292; Crooke, PR ii. 15 [India]; ERE ii. 451 [Japan]; FL xi. [1900] 108, FLxvi. [1881] 189 [England]; FL xiv. 102, FL xvi. [1905] 70 [Jamaica]; Campbell, 12, 13, 15 [Hebridies]; FLJ ii. 43 [Turkomen, the Book of the Magician, 1867, p. 367 ff.]). This charm is also very common on houses in the West Highlands.

(c) A hand with the fingers extended is represented on or above doors. Sometimes it is formed by slipping the hand in the blood of an animal slain at the door, and then making an impression of it on the door. Or the hand is painted—usually in vermilion—or carved. The custom is very common in the East among both Jews and Muhammadans (e.g., in Palestine, Trumbull, 70). This charm is supposed to repel or anathematize the evil eye, and it also directs and repels evil spirits (see Elworthy, Evil Eye, 1885, p. 233 ff.). Used to make an impression of blood, its purpose as the sign of a covenant between persons was in the case of Hebrews and Damascus (so Trumbull, 66 ff.), if it exists at all, is secondary, as, wherever the hand is used, it is believed to be apotropaic, like the blood sprinkled on the doorposts. It is then, in fact, a double charm, both hand and blood having repellent powers. Analogous to the use of blood in this way is the touching of the doorposts with menstrual blood or urine, to dissolve spells of witchcraft or to keep off fairies, ghosts, or the evil eye (Pliny, NH xxviii. 24; Campbell, Superstitions of the Highlands and islands of Scotland, Glasgow, 1900, p. 36, Witchcraft, 11, 137).

(d) Sacred symbols are affixed to doors as a powerful means of protection, like the Divine images at doors and gates. In Christian lands no symbol is more effective than the cross marked on the door or simply signed upon it or some particular part of it, or signed on oneself when entering or going out. It keeps off ghosts, witches, and all powers of evil (FL x. [1886] 178, 290, xxvi. [1905] 50, 70; Grimn. iv. 1781; Trumbull, 18; cf. Tert. de Cor. 3). The annwitu symbol is commonly marked on doors in the East for the same purpose (Hindus, Buddhists, etc. [Crooke, PR i. 12, 190; ERE iii. 47]). In India the figures of the doors of Solomon's temple served the same end (1 K 6:23), as well as figures of the Paschal lamb, and other symbols on ancient synagogue lintels in Palestine (Trumbull, 70). For a door charm composed of dust from Muhammad's tomb, see Lane, ii. 76. Over the doors of Egyptian temples was placed the winged disk of the sun, to drive off demons from the building (Erman, Life in Ancient Egypt, 11). Over the doors of Egyptian temples was placed the winged disk of the sun, to drive off demons from the building (Erman, Life in Ancient Egypt, 11). Sacred formula written on doors have also a powerful apotropaic virtue, and are of very great occurrence. In Babylonian tablets with sentences from the sacred texts were hung up to protect against demons (Jastrow, 299). In ancient Egypt, names and sentences of a lucky or favourable import were written over the doors or on the doorposts to secure a good dwelling (Wilkinson, I, 246, 301). In modern Egypt, and among all Muhammadans elsewhere, invocations to God, declarations of the might, or praises of the Lord were inscribed on doors (Lane, i. 76; 74; Porter, Travels, 1821-2, 210). The charm and sacred inscription is a blessing over their doorways. Similar usages are found in India and China (Crooke, PR i. 169; Williams, Middle Kingdom, I, 731), while the Iranian prayer poles and flags outside doors are analogous to door inscriptions. These usages show that the command to write the words of law on 'the doors of thy house, and upon thy gates' (Ex 20 11) was intended to take the place of some analogous heathen custom, though by the Hebrews was supposed must have been rendered powerless. If the household gods had been associated with doors, this dedication of the door to Jehovah showed that He was intended to keep the gates, and accordingly to guide the doorposts in the form of an amulet with sacred words and Name. This is so closely linked with a finger of the thumb hooked in the door as the door was going out, while a sacred formula is repeated. For the use of sacred writings or pictures affixed to doors among Christians see ERE i. 450, 451. Texts carried on door-frames are commonly found on old houses, and this custom is undoubtedly derived from the older practices.

The wide-spread use of these door charms shows that the attack of ghosts, evil spirits, witches, or fairies was chiefly dreaded at the door, through which they sought to enter and do harm to those in the house. Throughout the ancient world, houses were hung up efficacies of all in the household, hoping that the ghosts coming to the door would be satisfied with these and not enter to take the living. But a closed door is not sufficient to keep out ghosts and evil spirits, as the latter would take the house through bolts, doorposts, and sockets (Jastrow, 305); hence the value of charms to prevent this. But in some cases the evil powers actually dwell at the door or in its vicinity.

In Germany they were baulked of between the door and doorpost (Grimm, iv. 1815). In Jerusalem the powers of evil are supposed to attach itself to the threshold, doors, and entrances (FL xvii. [1867] 80). Among the Bisrors of Bengal the spirits lurk at the door (Crooke, PR ii. 50), and in Burma different evil spirits reside at doors and doorposts (ERE iii. 39). There is an ancient curse of Allatas to Uddhavn-namir, 'the threshold be thy dwelling,' suggesting that in Babylonia it was the abode of dangerous demons who would torment mankind.

But even against such door-dwelling spirits charms were efficacious, since they could keep them in check.

4. Magic uses at doors.—Many magical rites are performed at the door, either (1) to transfer evil to those who enter or pass out; or (2) to secure the assistance of the spirits, good or bad, dwelling or dwelling or lurking there; or (3) simply because the doorway is a sacred place.

For examples of (1), see FL xvi. [1904] 69; Crooke, PR i. 164; Lane, ii. 80; Grimn. 1895; i. (2); Jastrow, 258; of (3), Trumbull, 18, 50; of (4) Procopius, H. G. 61; FL x. 1905; Crooke, PR ii. 50; Coll. and Camp.

Witchcraft, 257.

Other magical rites take place at the door, to keep off and get rid of ghosts and evil spirits. Of this class was the Roman birth-rite, in which three men struck the thresholds with an axe and a pestle, and swept them with a broom. The iron axe and the pestle tipped with iron had apotropaic virtues; the action of the axe was to keep off all evil. It was held, though all three, being connected with vegetation and agricultural usages, may have had magical virtues, and are charms against spirits and witches. In this case they were supposed to keep out the god Silvan, the Roman counterpart of the three protecting spirits—Intercedona, Pilumnus, and Derverr (Aug. de Civ. Dei, vi. 9). Among the Latins, at the feast of souls, the ghosts were got
rid of by taking the staff which served as a poker, cutting it in two with an axe on the threshold, and bidding them go (Frazer, *Adonis*, 1907, p. 312). See also § 1.

5. Gate as seat of judgment.—On the account of the sacred gate, the sanctuary of the gods, the gate is a spirit or god, it is often a place of judgment, especially in the East. Kings, chiefs, and judges hear complaints, try causes, and decree judgments at the gates of the palace, house, or city. Examples of this are found in ancient Babylonia, Persopolis, Egypt, and among the Hebrews (Trumbull, 601; Dn 2, Ex 32, Dt 16, 21, Ru 4, 2 S 15, 19, Pr 24; cf. Am 5, Zee 8). Probably connected with this custom of administering justice at the gate is that of a person fasting at the door of another against whom he has a claim or provokes a request. In cases where this is refused the claimant starves to death at the door ([Celts] *Auc. Laws of Ireland*, Dublin, 1860-70; Joyce, *Soc. Hist. of Anc. Ireland*, 1905, i. 204; [India] Crooke, PR i. 191-2).

6. The door and death-rites.—In many regions it is not customary to carry a dead body, especially that of a suicide or criminal, through the door of a house, but the dead are exhumed and resorted to in order to avoid this. Thus the body is taken through the window of the house, or through a special entrance made in the roof or wall. This is a widespread custom, found, e.g., in W. and S. Africa, Siam, Indonesia, India, China, Tibet, among the Ostkann and Eskimo in Fiji, with the Maidu of California and the Comanches (Society of German Studies). See Liebrecht, *Zur Volkskunde, Heilbronn*, 1879, p. 573; Trowbridge, *Ans. of Jour. of Folk-Lore*, 1893, p. 262; Trowbridge, *AI* 537; Ramseyer and Kuhn, *Four Years in Ahschat*, 1875, p. 60; Duhoux, *Histoire Manners*, Oxford, 1840, ii. 27; Williams, *Fiji*, 1860, i. 397; Gregory, *Folklore of the S. E. of Scotland*, 1850, p. 206; Wutkier, *Ber. d. deut. Volkskundeb und*, Berlin, 1900, § 736; Lippe, *Die Siedelsucht*, Berlin, 1884, p. 119. Or the body is placed in a hole opening made under the threshold (Hylten-Cavallius, *Wuend och Wird*, Stockholm, 1853-4, i. 473 [Swedish Coefficients of Social Biology, 1803-4, § 211; [Swedish] Grimm, *Deutsche Rechtskunde*, Leipzig, 1869, p. 72 [German]). Raisko, *Etudes Folk-tales*, 1873, p. 318 [Slavo]).

The usual reason assigned for these customs is that they are used to confuse the ghost and hindern its finding its way back into the house (Liebrecht, 414; Frazer, *JAF* xv. [1886] 69 ff.). The special aperture is afterwards closed up, or the window is kept shut after the burial (it is often opened to allow entrance to the soul when a person is dying, and again closed to prevent the soul's return); or often both windows and doors are closed when a funeral is passing, lest the soul should enter the house (Liebrecht, 414; Frazer, *JAF* xi. 218, vi. 243; Wutkier, *Ber. d. deut. Volkskundeb und*, § 250). Or, again, when the body is taken through a hole in the roof, this may be an archaic survival of a time when entrance and egress were obtained through the roof of the hut, as among the Eskimos and Alants (Liebrecht, 423). Hence, in some cases, one supposed dead must not, when he returns, enter by the door, but by the roof (Philes. *Quart. Rom.*, no. 5; Brusich, *Aus dem Orient*, Berlin, 1884, ii. 116 [Persians]). Here the thought of death is enough to suggest its contagion, and entrance must not be first made by the sacred door. But, whatever be the origin of the customs referred to, they are certainly connected with the sacredness of the door, which is polluting by the passage of the dead body. If it were merely the return of the ghost that was feared, that could be prevented by door charms (§ 3), and it should be remembered that ghosts at the yealy feast enter the gate of the sacred body by the door and then pass out by it. That it is the pollution of death which is feared for the sacred doorway may be established by other rites of mourning and by analogous tabus.

The natives of England move the bough, and make a new entrance after a funeral, as the door has been polluted by the passage of the corpse (Crooke, *PR* ii. 56). Propitiatory rites are often performed on the door, whether a corpse has or has not been carried out by it (the threshold is sprinkled with salt [Japan: Grifis, *Mikado's Empire*, New York, 1876, pp. 467, 470, or with wine [Greece; *PLJ* i. 213]). Among the Kwaikuitl Indians, mourners must not use the door house, as they are unclean; a separate door is cut for them (Webster, *Germ.* ii. 357); and in China a messenger who brings news of a death must not pass through the door (Grosse, *Japan*, 1894, i. 144). In various regions a special door or gate in house or city wall is used for the passage of a corpse and for no other purpose (Bowman and Renn), *Turopolje*, 845; [Korea] Landor, *Cyclopedia*, 1880, p. 315; Italy, Holland, *Neue Zcitung*, 1809, p. 459; Trinity, 24, 253; the "sacred gate" at Athens, used for funerals ([Theophr. Ch. 14]).

Analogous cases are those in which women at puberty, or during menstruation and childbirth, must leave the house by the door, but by the usual door without special rites; or, again, the flesh of animals slain in hunting is carried in by a special opening ([Frei], *Philos.* ii. 648; [Webster], *Germ.* ii. 357; [Fiji], *Fiji*. The woman connected with the danger of female pollution is the superstition that a male, not a female, should be the last person to cross the threshold at New Year; but he must not come empty-handed ([PLJ* id. 262, v. 53; Campbell, *Witchcraft*, 220).

7. Doors and gates of the Other-world.—The eschatological beliefs of many peoples show that they consider heaven and the under world to be regions and abodes with doors or gates, bars and bolts, and guardians. The doors of heaven shut out those who have no right to enter there; the doors of the under world enclose those who would fain leave it. In Bab. writings, reference is made to gates of heaven, especially from the land of Anum and Gish-zida. In the account of creation, the great gates attached to both sides of the heavens by Marduk are mentioned. They are secured by bolts, and guarded by scorpion men. Through them the gods pass, and in seven divisions and as many fortified pylons with closed doors and sergeant guardians, or gates with other keepers. The gates opened at the repetition of magic formulae, and thus entry was fully obtained. Each gate had its own name. The heaven of Osiris was also entered by a gate in the mountain of the West, and this domain in the fields of Aalst had numerous gates, with porters, warders, and heralds. But all these open to those who knew the true formulae and names of gates and guardians (Maspero, *Études*, Paris, 1883, i. 371, 381, ii. 27 ff., 105 ff.; *Budge*, *Tomb of the Egyptian Pharaohs*, 1893, p. 70; [Egypt], *Mode de la D. div.*, ch. 147 ff.). The classical Hades and Tartarus had also their gates, those of Tartarus being of iron with a bronze threshold. Cerberus guarded the gate of Hades, a hydra with 50 gapping mouths that of Tartarus (Il. viii. 15; Virgil, *En* vi. 570). The Scandinnavian Valhalla had 640 gates, and Hel had also its portals (Grimm, *Text. Myth.* 818). In Mandean mythology, the seven lower worlds of the dark powers have doors which can be made secure by magic spells and talismans (Brandes, *Mand., Schriften*, Göttingen, 1893, p. 147 ff.). The Hebrew Shool had gates and bars (Job 17, 28, Ps 107, Is 38, Mt 16). It had divisions, and in later belief these (of hell) were 7 in number, guarded with as many bolts as doors, which were open by hundert der Heils, Stuttgart, 1888, ii. 45-6). The 'gate of heaven' is already spoken of in Gn 287 (cf. Ps 78, and the seven heavens of later Jewish theology had gates. Serpent-like guardians of the gates of hell, open by the breath of fire and bolted by the hand of God, and bolted by the hand of God (with bolts, keys, [Rev 118], and warders; but they are burst open by Christ as He descends there (Gospel of

DOOR 851
Nicoideus, § 5, and many other writers referring to the descent; cf. Rev 118). Paradise is often described as a city with walls and gates guarded by angels (e.g. Passio Perpetui, § 11). The analogy is that of the heavenly Jerusalem with its twelve gates and angelic guardians (Rev 21). In the documents which unfold the old idea of several heavens, each has its gate or door (Apoc. of Paul, § 19 if.; Test. of Abraham, § 11), while Ps 47 was frequently applied either to Christ's bursting the gates of Hades to defeat Satan. His ascension through the heavens, e.g. by Hippolytus, who speaks of Christ passing through the heavenly gates (Hippol. in Theod. Diad. 1: Comm. on Prov. [Mai, Bibl. nova Prov. 2, Rome, 1851, p. 72]), was opened in heaven. Those Gnostic groups which taught the existence of seven or more heavens-spheres ruled by the Demiurge and Archons, assigned to these heavens doors guarded carefully. This is found, e.g., among various Ophite groups and the followers of Bardesanes. The gates were themselves dangerous in some cases—a fiery gate-way—and the Archons or door-keepers would have kept them closed against souls ascending to the Pleiad, but the transmigration into a succession of mysteries and mysteries, possession of the names of the Archons and of the true magic formula, or of symbols and amulets, caused the doors to be opened (see Hippol. v. 8, 9, 28; Wright, Apoc. Acts, 1878, p. 146; Origen, c. Celsi, bk. i. § 20.1). These ideas of the magical opening of the gates are derived from Egyptian beliefs, and also, perhaps, from Mithraic teachings of the ascent of the soul through the planetary heavens with their gates (Orig., Origen, c. Celsi, bk. i. § 20.1). Mystico-magical cults having affinity to Mithraism knew also of the fiery gates of the upper spheres, which opened at the utterance of the names of the gods (Wessely, "Griech. Zauberpapyrus", Denk. d. Kais. Ak. d. Wiss., xxviii [1888], 56 ff.).

8. The door being regarded as a means of passage from one state to another, it was easy to apply the word in a metaphorical sense. Christ speaks of Himself as the 'door.' By me if any man enter in, he shall be saved (the 10, cph. Eph 288). This idea is repeated in Christian theology. Ignatius calls Christ 'the door of the Father by which Abraham, Isaac, and Jacob, and all the prophets enter in, as well as the apostles and the Church' (ad. Polycarp, 9), and the author of the Apocalypse of Baruch speaks of the heavenly Christ as the Son of God (Sim. ix. 12); and in the Clementine Recognitions (ii. 22) the gate through which men enter the city, the kingdom of the Father, is 'the true Prophet.' The same ideas were current in Gnosticism. The heavenly Christ is the true gate, through which the Gnostic ascends to the Plei-roma (Hippol. v. 8, 9). In the hymn used by the Priscillianists, but which was Gnostic in origin, Christ says: 'Janau sun tib, quieneque ne pulsas' (Ang. Ec. cxxxvii, 88). Among the Baha'is, the name Baha', assumed by the first preacher of this new religion in 1844, means 'gate,' and was formerly the title given to these intermediaries through whom, as through a gate, communication was made by the Imam to his followers (see art. Baha, Baha'is).

J. A. MACCULLOCH.

DOSÁD, DUSÁD.—A menial tribe in Northern India, of Dravidian origin, which at the Census of 1901 numbered 1,258,125, of whom the vast majority are found in Bengal and the United Provinces.

1. Religion in Bengal.—In Bengal they profess to be orthodox Hindus, and it is true that in some districts they employ in their religious rites Brahmins of a degraded class, while some belong to the Srimārāṇayi sect, or follow the doctrines (pānth) of Kāhār, Taḥū Dās, Goraknāth, or Nānāk (for which see BENGAL). These beliefs, however, seem to be of comparatively recent origin, and the basis of their religion is, possibly, Brahmanism. The Dosadh or Dusadh is, in order to avert disease and in fulfillment of vows, offer to him annual sacrifices and the fruits of the earth through a tribesman who is chiefly also Rev 41.1. In special occasions a stranger form of worship is resorted to, parallels to which may be found in the rustic cult of the Roman villagers and the votaries of the Phœnician deities. A ladkin, laden with sides of green bamboo and rungs of sword-blades, is raised in the midst of a pile of burning mango wood, through which the Bhakat walks barefooted and ascends the ladder without injury. Swine of all ages, a ram, wheat flour, and rice-milk are offered up; after which the worshippers partake of a feast and drink enormous quantities of ardent spirits (Risley, i. 265).

In another form of this rite, the man who has vowed to perform the sacrifice众所周知 finds, in the middle of the day, a thatched hut, in which the Bhakat or priest, himself a Dusadh, must spend the night, sleeping on the sacred kāhār grass with which the floor is strewn. In front of the hut a bamboo frame (sa gần) is raised. The trench is dug, which on the feast day is filled with mango wood soaked in butter, while two earthen vessels of milk are placed close to the platform. The Bhakat bathes and dons a new cloth dyed with the umbilical cord of a buffalo, garlands of mango leaves (muntra), and worships Rāhu on both sides of the trench. The fire is then kindled, and the Bhakat solemnly walks three times round it in the course of the sun, keeping his right hand always towards the east. The end of the third round brings him to the east end of the trench, where he takes by the hand a Brahman retained for this purpose with a fee of two new wrappers, and calls on him to lead the way through the fire. The Brahman walks along the trench from east to west followed by the Bhakat. Both are supposed to tread with their bare feet on the fire and to escape unharmed. Risley supposes that this is the result of optical illusion, because by the time they start the flames have sunk lower, and the active man may walk along it resting his feet on either edge, without touching the smouldering ashes at the bottom. Meanwhile the milk has been boiled, and it appears that in some cases the Bhakat pours the boiling liquid over his body, being, it is said, uninjured.

"By passing through the fire the Bhakat is believed to have been inspired with the spirit of Rāhu, who has become incarnated in him. Filled with the divine or demonic afflatus, and also, it may be surmised, excited by drink and gemon (hemp), he implores the bhoomi platform, chants mystic hymns, and distributes to the crowd tuzī (basil) leaves, which heal diseases otherwise incurable, and flowers which have the virtue of purifying him and cleaning his women to conceive. The proceedings end with a feast, and religious excitement soon passes into drunken revelry lasting long into the night" (Risley, i. 265).

The ritual is a good illustration of Dravidian shamanism. Accounts of fire-walking among the S. Indian Dravidians will be found in Thurston ('Ethnographic Notes in S. India, Madras, 1906, pp. 471 ff.). Frazier (Adonis, Aliss, Osiris, London, 1907, pp. 156 ff.) regards it as a resurrection of an original human sacrifice by means of fire.

(b) Worship of defiled robbers.—The Bengal Dosadh worship a host of defiled heroes, in honour of whom luks are erected in various parts of the country. Among many of these are the ghosts of great chiefs, such as Goraiy, Salesh, Chūhar, or Clear Mal, and others. In none of these shrines are there any idols, and the officiating priests are
always drawn from the Doshdah tribe, who minister to the Sadra or menial castes which frequent them. The offerings usually are appropriated by the priest or by the head of the Doshdah household performing the worship; but, where this worship has adopted some of the principles of Islam, the fowls sacrificed to the Saint Miran and the Paish Pîr (see PÂCHIRPâRA) are given to local Moslems.

2. Religion in the United Provinces.—Here also the cult of Râhu prevails, and it is carried out in a manner much resembling that of Bengal. In one form of the sacrifice the priest clings to the rings of sword-blades with his naked feet, and from some mud or earth on the ground in honour of Râhu, sacrifices a cock tied to the summit of the ladder, or, descending, slays a young pig with repeated blows of a spear. Some spirits are poured on the ground, and the meat and the remainder of the offerings are consumed then and there by the worshippers (Crooke, Pop. Ind., 1856, i. 18 ff., Tribes and Castes of the North-Western Provinces and Oudh, ii. 355, where one of the songs in honour of Râhu will be found).

They also worship Chlâth or Chlthin, the impersonated sixth day after birth, when, owing to lack of sanitary precautions at childbirth, the child is likely to be attacked by infantile lockjaw. On the day of its birth the young creature punishes itself to fast, and goes singing to the river side. Here they strip and walk into the water, remaining facing the east till the sun rises, when they stand with folded hands and bow in reverence. Their offerings include cakes and other kinds of food, which are consumed by the worshipper and his friends. Their other tribal deities are Gandi, a female, and Mannakh Deva, the deliet ghost of some tribal worthy, who is propitiated by the sacrifice of a pig and an oblation of spirits. Seven cups of milk and seven pairs of cakes are also offered round the earthen mound which is the common abiding place of the tribal gods. They observe most of the Hindu holidays, particularly those like the Holli or fire festival and the Kajari of the autumn season, which are the occasion of coarse orgies accompanied by drinking and sensuality.

W. CROOKE.

DOUBLES.—The beliefs to which the term 'doubles' may be traced back to two psychological sources. In the first place, they may result from elementary speculation on the category of duplication; in the second place, the phenomena on which the notion of the divisibility or duality of personality is based are such that a potentially duplicate existence was inevitably ascribed to every concrete object of thought. The two sources constantly mingle. The main characteristic of the former is that a double or counterpart arises by multiplication; of the latter, that it arises by division. In the first case the counterpart tends to be of a different substance, though of the same accidents—the so-called 'spiritual double.' Again, the connected categories of duality, substitution, representation, impersonation, and so forth, coincide with such results of the category of duplication as identity, original and copy, idea and reality, to elaborate the general conception of doubleness in pre-scientific speculation; and the whole combination binds together a number of categories, some of which are apparently widely dissimilar in origin, though all, psychologically speaking, are based on the mathematical ideas of multiplication and division.

We shall refer to these subsidiary forms of the notion only for the purpose of illustrating what sociologically the main connotation of the term, namely, the double in the sense of Doppelgänger, second self, visible or invisible counterpart, spiritual or material double.

1. Duplications in general.—It is not surprising that in early thought two became a sacred number, when we consider the mystery so often connected with duplication. Conversely, in the creation of certain abnormal mythical beings, the mind frequently unites a nature of duality, as in the case of the Cyclopes, and the combination of horse and rider in the Centaurs, and, most notably, in androgynous ancestors and deities. Duplicity in nature is still enough of an abnormality to warrant its inclusion in the list of magical or sacred centres of mystery.

Thus, in Samoa all double things were sacred. Among the native deities were two household gods, represented as 'Siamese Twins,' Taema and Fiti. They appear to have been regarded as a sort of gods of doubleness. Similar ideas were connected in Roman religion with the deity Janus, and in Greek with the Dioscuri. The images of many Mexican idols are faces, back and front, like the Roman Janus bifrons.

'The reason,' E. J. Payne observes, 'why the features were duplicated is obvious. The figure was carried in the midst of a large crowd; the double at the back was for the benefit of those who followed. Probably it was considered to be an evil omen if the idol turned its back away from its worshippers. Thus the double obviated. . . . This duplication of the features, a characteristic of the very oldest gods, appears to be indicated when the numeral one (1) is prefixed to the title of the deity. Thus the two ancestors and preservers of the race were called Omemuthli and Omemuchali (=two-chief, two-woman).'

A close connexion is constantly maintained between diet and conception or the nature of the offspring. A frequent belief is that if a woman eats double—double cherry or a double banana, for example—her child will be double.

Twins themselves are a striking example of the mystery attached to double objects. See, further, TWINS.

Various miscellaneous applications of the double idea may be grouped together here. The law of equivalence, as illustrated by the lex tolonium, is often superseded by the enforcement of a double penalty. Among the Baslaw the family of a man may marry the twin of the wife of another. In this case the feud continues. If they slay but one, it is ended.

The Hebrews condemned a thief taken flagrante delicto to restore double. Hence the moral principle of receiving double as a form of pardon.

'The Lord gave Job twice as much as he had before.' 'For thy sonne ye shall have double. . . . in their hand they shall possess double: everlasting joy shall be unto them.' 'She hath received of the Lord's hand double for all her sins.' 'Even today do I declare that I will render double unto thee.' Similarly in moral retribution: 'Render unto her even as she rendered unto thee, and double unto her the double according to her works: in the cup which she mingled, mingle unto her double.'

A double share may be either an honour or a security. 'Eliezer said, I pray thee, that thou wouldest show kindness unto me, and shew me a sign of thy kindness for my master, &c.'

The idea of corroboration and finality belongs to repetition.

'The dream of Pharaoh,' Joseph says, 'is one: what God is about to do he hath shewed unto Pharaoh. Seven years shall be seven years; and the dream is one. . . . For dream was doubled unto Pharaoh twice; it is the interpretation of things established by God, and God shall bring it to pass.'

1 G. Turner, Sanscrit, London, 1884, p. 56.
2 Hist. of America, Oxford, 1859-99, l. 244.
5 Ex 25:4-7.
A similar principle is reached from a different origin in such beliefs as that an echo is a con-
formation.

Many cases of mock kings may be resolved into duplication by way of disguise or impersonation.
In Siun and Cambodia the king’s temporary representative impersonates him in function, per-
foming a ceremony, and dressed in the king’s robes. The ‘king’ of the Babylonian festival Sasan was dressed in the king’s robes. In the evolution of the monarchy a frequent stage is the division of the office into temporal and sacred. But such duplication of the king may persist, the act being the movement of a piece of imitation magic. When the substitution is practised in sacrifice, the vicarious sufferer tends to become a spiritual double or unreal phantom. A case in point is the belief found in early Christian speculation that a phan-
tom of Jesus was substituted for him at his death. When no substitute is used, the drink and clothes are made. They eat and drink and wear the clothes ‘on behalf of the ghosts.’ A case which may be compared with the Kaffir and Abyssinian royal customs is from Fiji.

The art of the actor is essentially representation. He is a duplicate of the character, its ‘person.’ Similarly, his understudy or substitute is, both in English and French terminology, a ‘double.’

In Dutch East Indies it is commonly believed that male and female evil spirits, nias, can assume the form and personality of lovers and friends. A man or woman keeping an assignation in the forest is liable to be duped in this way. A person who has intercourse with a nia dies in a few days. The nia is supposed to take away the soul. In some islands an ancestral spirit, named Bobig, is the bogy of women working in the forest. He assumes the form and appearance of their husbands. The occurrence is proved later when the victim suffers from haemorrhage. The practice is followed even by human magic-workers. The Bahr Islanders believe that a male mawanggi is able to take the shape of a young woman’s husband and cause her to conceive.

When a double, either visible or invisible, does not impersonate, but attends as a helper or enemy, it is not clear whether this can be traced back to beliefs about the soul. Primitive psychology succeeded in dividing human personality into two more or less identical duplicates, and there are many cases where the derivation of the guardian angel from the separable soul is explicit. Of course, when developed, the two notions easily pass into one another, and the soul itself is con-

2 Fraser, G.E., 1867, ii. 356 ff.
3 E. W. Lane, Modern Egyptians, London, 1830, i. 322.
4 W. G. Harris, Highlands of Ethiopia, London, 1844, ii. 325.
stantly regarded as a protecting spirit. The illustration of this belongs to another inquiry, but a typical case may be cited, where the guardian is actually the "god". Alphonso lived in a house at which every child there is born a jinn companion, which acts as a guardian angel, but sometimes evilly entrants its possessor. It is termed korina, and is exactly like the person it attends. In this case the spirit, passing into another form leaves behind it, automatically, a double of itself. It is as if a man, when leaving a place, automatically left a duplicate in his stead. The example which follows comprises this naive instinct by having once take as well as eating it, together with other ideas. In Central Australia, 'when a spirit individual goes into a woman' (who thereby conceives), 'there still remains the Aranum-barung, which may be regarded as its double.' Spencer-Gillen also speak of the as the double of the person himself, and as his guardian spirit. A man may be regarded as a dual person because he is attended by an invisible protector. Such a conception is implicit in the European folk-belief about the guardian angel. This belief is extremely vague in its form, but it shows a tendency to regard the angel as a double of the person, his eternal counterpart, which after his death is likely to be a likeness of the individual who 'changeless and lives for ever.' The following example is a case of duplication by apposition, distinct in origin from other forms. The Japanese pilgrim to the Thirty-three Holy Places, or to the Eighty-eight Holy Places of Shikoku, wears a special hat with this inscription—'Two pilgrims travelling in company to such and such a shrine.' This reference to two persons is explained by the idea that the pilgrim is not alone, but is accompanied by the great saint Kobo Daishi, or the Goddess of Mercy, who 'travels with him along the stony path, supporting his footsteps, encouraging his religious fervour, guarding him from evil all along the way. Therefore not one only but two walk under that broad-brimmed hat on the road to Paradise.' Similar ideas of the invisible Divine helper are found in most of the organized religions; and, where it is part of the general teaching that the worshipper may become a sort of incarnation of the god by following in his footsteps, we have an interesting case of duplication in the form of the individual and god and the god as macrocosm, the latter being indefinitely multiple or indefinitely ubiquitous.

Thaumaturge persons are sometimes credited with a similar ubiquity or power of self-multiplication, which would be no implication that the duplicate in such cases is a spiritual replica, or an entity of different substance. It is simple multiplication, without any question of the method or the vehicle. The ordinary limitations of ordinary humanity are merely suspended. The legends of many Christian saints refer to this power of being in two places at once—bilocate. Thus, it is recorded of St. Alfonso di Liguori, that on the occasion of a sermon at the house at which Alphonso lived he found him there at the very time for beginning the sermon in the church. After he had finished his confession, he went straight to the church, and found Alphonso a good way advanced in his sermon.

2. The spiritual double.—The special meaning of this is that the so-called 'spiritual double,' is the 'wraith' or visible counterpart of the person, seen just before or just after, or at the moment of, his death. This belief is derived directly from the theory of the soul. Hallucination, persecution, or possession seems to be better attested than the subjective perception of a *phantasm of the living' in the circumstances mentioned. It is a remarkable agreement between psychological fact and primitive psychological theory, but it is also an instance of how much is quite sufficient reason for the genesis of the belief. The soul itself constantly tends to be a counterpart or duplicate, a spiritual-materi al double of the person. The reason for this tendency is to be found in the adaptation of the soul to the life of the body. This is the mental percept and the memory-image of an object, which is inevitably a replica of the sensational percept (though possibly not technically identical in its physiological causation), somewhat resembling it in form and function. It is set up most vividly in dreams, but also in waking memory. It may include roughly the whole personality, or be confined to one aspect of it; but its general foundation is visual. Some cases may be cited where the soul shows this tendency to be, or actually is, a double. It is to be premised that speculation frequently draws a distinction between this form of the soul and a later transcendental conception. The keolah or la of the Karens 'cannot be distinguished from the person himself, when, as sometimes happens, it appears after death. It is described as 'the individuality, or general idea, of a man; the product of his ideas and of the whole animated being. It, in fact, personates the varied phenomena of life.' It is distinct from the body, and 'its absence from the body is death,' yet it is not regarded as the soul proper, which is the thoh. The la is 'the double of the spirit and matter and spirit, yet materiality belongs to the la.' It is also described as a guardian spirit, walking by a man's side or 'wandering away in search of dreamy adventures. If it is absent too long, it must be called back with offerings. When the la is absent in our waking hours, we become weak or fearful or sick, and, if this influence be protracted, we may die of it, for it is matter of the deepest interest with a Karen to keep his la with him. He is ever and anon making offerings of food to it, beseeching a bamboo to gain its attention, calling it back, and tying his wrist with a bit of thread, which is supposed to have the power to return the la.'

Not only every living creature, but also every inanimate thing—axes and knives, for instance, as well as all trees and plants—has its la, which is 'liable to wander away from the individual.' When, thus wandering, it is 'interfered with by an enemy of any kind, death ensues to the individual' to whom it belongs. If a man drops his axe while up a tree, he looks down and calls out, 'la of the axe, come, come!'

'When the rice-keolah presents an unproportioning appearance, it is supposed that the rice-keolah is detained in some way from the house. In many rice-keolah cases, it accounts for the failure of a rice field. On account of that it languishes into a sort of an invocation—"O come, rice-keolah, come! Come to the field. Come to the rice. With seed of each gender, come. Come from the river Kio, come from the river Kow, from the place where they meet, come. Come from the West, come from the East; from the throat of the bird, from the nose of the ape, from the throat of the elephant. Come from the sources of rivers and their mouths. Come from the country of the Shan and Burman. From the distant kingdom come. From all granaries come. O rice-keolah, come to the rice.'"

As distinguished from the thoh, the la or keolah is not regarded as the responsible agent for human action. "... When we sin, it is the thoh, or "soul," which sins." 'By some the keolah is represented as the inner man, and with others the inner man is the thoh.' It may leave the body in sleep. Such an absent la may be caught by a spell as a wiz ard, and transferred to a dead man, who is thereby resurrected. In this case the friends of the robbed man procure another la from another sleeping man, and so on. The same Karens hold that the world is not the same as that inhabited by apparitions, than with man, and that the 'future world' is a counterpart of this. Lastly, every organ of the body has its la counterpart. Blindness is due to an evil spirit having devoured the la of the eye.
The *la* in all cases, though not immortal, ‘exists after man, and lives after him. It is neither gone nor dead, but merely gives life. In analogous cases this last detail is neglected, and it is precisely a mystic unrealized element that is supposed to produce the phenomena of life.

The *Lushai* term *thla* is possibly connected with this. It is a sort of double.

The Chinese hold that the soul may exist outside the body, ‘as a duplicate having the form of the body, as well as its solid consistency.’ De Groot describes it also as ‘the invisible duplicate’ of the soul and speaks of ‘conviction which calls up the body immediately before their eyes whenever they think of the soul.’

Some striking examples apply the principle so as to form a double creation. Thus, the Asabas of the Niger hold the following opinion:

*Every one is considered to be created in duplicate, and the representative, or, as it were, the reflection in the spirit world of the body and of its possessions, is the *ch*, and its possessions.*

A man’s *ch* carries the *ch* of the woman the man marries, and so on. In addition, the *ch* . . . acts as a guardian spirit . . . *Ch* . . . *ch*. *My ch has the same body,* it inhabits the man’s body.

The *Brahmans believe in a soul, *bun*, and a double, *doshi*. Only huts have *buses*; animals and fetishes have *doshis*, but not *buns*. The *doshi* appears in dreams. The *bun* of a dead man may be seen only at night; it is in human form, white and misty. The *doshi* appears in the European form, and is seen by those who have been in contact with decaying bodies.

The phenomena of dreams are thus explained. The Zapoteces regarded the soul as a ‘second self.’

The tribes living in the southern end of Lake Nyassa believe that the *mizimu*, or soul, has the form of the owner, but is intangible and unsubstantial, though it can talk and act as well as the real man. It is visible only in dreams, and the shadow is a ‘part of it.’

The Delawares used for ‘soul’ a word indicating repulsion, and equivalent to a double or counterpart. The Iroquois soul was ‘an exceedingly subtle and refined image,’ yet material, ‘possessing the form of the body, with a head, teeth, arms, legs, etc. The spectre or shadow was animated into the body.’

The Ahir soul was ‘a being of human shape and of human mode of acting.’

The Eskimo say that the soul ‘exhibits the same shape as the body it belongs to, but is more subtle and ethereal nature.’

Andamanese souls ‘partake of the form of the person to whom they belong,’ the Siuanak hold that the mirage is the soul of the reflected scene.

The soul is regarded by the East Indian asders as the person in every respect, with all his qualities and defects; it is a copy or abstract of him, but is always ‘material.’ In Java the term for soul is ‘refined body;’ in Celebes, ‘image;’ in Toumbulun, ‘companion;’ in Sangir, ‘duplicate.’
the size, sometimes as full size. After death it became the man's personality proper, being incorporated with the mummy. In the everlastingly passing it down through the centuries it was there. It might go in and out of the tomb and refresh itself with meat and drink, but it never failed to go back to the mummy, 'with the name of which it seems to have been closely connected. In hieroglyph it was 'represented by two upraised arms, the acting parts of the person,' with a depression in the centre of the horizontal bar which joins them, to suggest the head. 2

Before discussing the relation between the full-sized and the miniature double, it is as well to repeat the fact that early thought insists very strongly on the principle of duplication, and extends the application very widely. It serves as a theory of the soul and of a future existence. It also serves as a theory of the propagation and of physical evolution generally. Without going into the subject of pre-scientific psychology, it is necessary to note the connexion between the belief in the miniature double and certain widely spread notions about the soul. Corresponding with the percept is the fact that the soul is invisible when its owner is visible, unless, as we shall see, there are special limiting circumstances. The comparative permanence and generalized nature of the memory-image of individuals corresponds with the generalized idea of species, as an ideal of which individuals are copies. A belief which may almost be regarded as universal is that children are re-incarnations of the souls of parents or of ancestors. A common belief where contemporary and is tantamount to a germ-plasm theory of the soul. Parallel with this is the notion that reproduction can be effected, even in the human species, by fission or budding. All these various beliefs are causes of duplication. They include good reasons why the soul should be regarded as a miniature, whether as germ or embryo, or as a child. A full-grown man develops from a smaller copy of himself, and this from an infinitesimally minute replica which has proceeded from another individual. The theory is applied in early thought far more than in a scientific age which professes practically the same theory. Thus, an Australian, rebuking his son, will say to him 'There you stand in my body, and yet you won't do what I tell you.' 3

The minute size of the soul is explained by the Australians as depending upon the necessity that it must be small to enter a woman's body. But there is also the widely spread notion that there is a fact that it leaves the body, both in sleep and illness, and at death. The body remains. Two views are possible, and both are found. Firstly, the duplicate may be a child, easily reproducible and of the body; this would correspond to an outer soul, the soul of the outer man. Or, secondly, the duplicate may be an inset, and therefore an eject. Small enough to leave the body by the mouth, or even by the fontanel, it is often regarded as expansible, filling the body as an inner shape, the soul of the inner man, or the 'inner man' himself. Its flimsy and insubstantial nature, whether in dreams, memory, or hallucinations, agrees well with the latter view. 4

The link between the soul as shape and the soul as inner movement may be found here, even if we do not identify the soul as germ and the soul as inner man. Each of the latter applies to its own peculiar circumstances, and neither is inconsistent with the theory of fission. This last theory, in its passage into a theory of physical reproduction, has been elevated into a theory of vision and sensation generally. In the former application the flimsy duplicate of savage thought becomes the transcendental Form, or átós, which is impressed upon Matter, or òg. Similarly, the savage theory of species and individual was canonized in the Ideal Theory of Plato. The átorn or the Iroquois 5 is paralleled in many rude philosophies. It is a permanent ideal duplicate of each individual of the species. When it is regarded as a reality, the difficulty of bifurcation recurs, not to speak of the problem, which is the essence of the original or the copy? or, in other words, Which is the original? The Iroquois believed that the átorn, the type or model, was 'larger and more perfect' than any single member of the species. It was sometimes called 'the old one.' Thus, converting type into prototype, the Indian was perhaps more scientific than metaphysical.

The problem of personal identity (similar to that of original and copy in the case of duplicates) is raised in the case of young children and is solved by the duplication theory of reproduction. When the soul of a dead man is re-incarnated in a child, there is no practical embarrassment. But, according to Mann, the father is conceived in the body of his wife and is himself re-born as his child. 6 A man is thus his own father and his own son simultaneously. Some analogous notion, combined with a fear of personal insecurity or loss of power caused by this division of personality, seems a not impossible factor in the superstition of infanticide. 7 A Kafir will frequently kill one of his twin children, the belief being that otherwise 'he will lose his strength.' 8

In some psychologies each part of the person has its spiritual duplicate. The theory of homoeo-meria is foreshadowed so frequently in early speculation that we may fairly suppose it to be implicit in early atomic philosophy. When Chinese doctors speak as if the soul were breakable and divisible in its molecules, 9 and when we read of Malay tin-magie that 'each grain of ore appears to be considered as endowed with a separate entity or individuality,' and that it possesses the power of reproduction, it may well be that each atom is implicitly viewed as a minute replica of the whole.

Duplication by a process of fission or of budding (gemmation) is occasionally hinted at in early philosophy. The Central Australians tell how in the time of the ancestors a man would shake himself, and spirit-children would then drop from his muscles. An ancestor suddenly found a duplicate of himself appearing at his side, and exclaimed, 'Hello! that is me.' 10

The development of dual personality by a process of division may be illustrated from Hindu theology. 'The One Being was not happy, being alone.' He wished for a second. He caused his own nature to fall in twain, and thus became husband and wife. 11 This duality is rather that of mirror-images; this (second) was only a half

7 See, on the whole subject, Crawley, op. cit. p. 200 ff.
8 This duality is rather that of mirror-images; this (second) was only a half

1 Hewitt, loc. cit.
3 See Westermarck, MfL 461.
6 A. W. Howitt, in JAI xiv. (1885) 145.
7 See, on the whole subject, Crawley, op. cit. p. 200 ff.
8 This duality is rather that of mirror-images; this (second) was only a half
of himself, as the half of a split pea is. Combination produces completeness, as a split pea is (completed) by being joined with its other half.  

Modern psychology has studied many cases where the mind of one personality is subdivided. The so-called double personality of such cases adds one more apparent confirmation of the ancient theory of duplication by division of what may be described as a two-layered unity. In the ethereal sphere the ancient distinction of 'dual-mindness' implies more than a mere tendency to deceit and treachery. It implies the existence of two souls, or a double soul, in one person. Cf. 1 Ch 12:20 'that were not of double heart' (Lit. 'without a heart and a heart'); 1 Par. 12:22 'with a double heart' (Lit. with a heart and heart) do they speak.' Duplication involves not only duplicity but instability; 'a double-minded man, unstable in all his ways.' It is possible that one factor in the general desire for sincerity is the sensations notion of the danger of uncertainty. If a man professes non-unity, he may become non-real himself.  

There is,' says Westernmarck, 'something uncanny in the untrue word itself.' Cicero observed: 'Nothing that is false can be true.' Dr. Westernmarck remarks which to a stage might express a legal law. It is a curious fact that in civilization a sort of specific insincerity or double-mindedness is popularly ascribed to the artistic temperament, particularly in the case of an artist as a double, abstractly placed on the stage, so is he regarded in his own character. Cf. art. DOUBLE-MINDEDNESS.  

The analogy of the soul to the portrait, reflexion, shadow has led to certain curious examples of the piece of portrait. The method of making a double is by similars, and early thought seems to have noted identity far more than difference. This tendency is well exemplified in Chinese psychology, and has to be taken into account in estimating many cases of spiritual identification.  

When a Chinese sees a plant, for example, 'reminding him, by its shape, of a man or some animal, ... he is influenced immediately by an association between it and that being. This brings him to the soul of the plant, anthropomorphously, or shaped as a beast. ... Thus, association of images with beings actually becomes identification, both materially and psychically. An image, especially if pictorial or sculptured, and thus approaching close to the reality, is an alter ego of the living soul as precisely as the soul, nay, it is that reality itself. ... This kind of association is the backbone of Chinese religious faith.'  

The soul of the Yaos, we saw, bears to the body 'the relation which a picture has to the reality.' But the Chinese go much farther. For all practical purposes the life-sized picture of a dead man is a duplicate of the body. It enables the deceased to live among his descendants. There are stories of statues and portraits acting for the persons they represent, and even beggaring children. There once existed also an art, Khendi shuk, by which life could be infused into a statue or portrait. The living image was then made use of, as Frankenstein employed his monster.  

Animal-souls or fetish-souls, external souls generally, are frequently described by observers under the term alter ego. Tribes of the Ngeri believe that each person has an alter ego in the form of some animal, such as a crocodile or higgin.' It is believed that such a person's life is bound up with that of the animal to such an extent that whatever affects one produces a corresponding impression upon the other, and that if one of the other must specially do so too. It happened not very long ago that an Englishman shot a hippopotamus, who was a native animal friend of a woman who died the same night in the village demanded and eventually obtained five pounds as compensation for the murder of the woman.  

In the Euahlayi tribe of Australia the yunbeai, or individual totem, is an 'animal familiar,' a sort of alter ego. A man's spirit is in his yunbeai.

himself go past him, thrust open the church door, which he knew was locked, pass inside, and shut the door after him. He could not be allowed to escape. He must go on his knees and look him full in the face, and he knew himself as surely as when his glimmering, indistinct, and agitated features met the visualizing of mternal images) records his having seen 'an exact counterpart of himself coming towards him.' 12 Robert Percival, second son of the late Sir Percival, saw his own apparition, 'bloody and ghastly, whereat he was astonished the sight. He was afraid, but, recovering, he saw the spectre depart.' Soon afterwards he was found dead, under mysterious circumstances, in the Strand. 13 In 1868, Mrs. Milman, with Mrs. Howitt, and Miss dean, assistant clerk, to the House of Commons, declared that her room in the Speaker's Court was haunted, and that her body and her husband, by many years, for a spiritual double of herself, which had been seen by many people when she was elsewhere, though she herself had never seen it. 14 A well-known M.P. died suddenly when away from the House. It was stated that he was seen by several members in the lobby at the time he died. 15 In Alsace the belief is marked; eac soim- malists, and such families as can trace them in a line, or meet one's double, portends one's death. A Strasburg man returning home saw himself, and soon after died. It is noted that in Alsace the occurrence is rare compared with the appearance of a man to others. An interesting detail, recurring elsewhere, is that, after seeing his double, a man has no re- pose. 16 A question implying the same belief was put to Shelley by a Jesuit; and he had seen his double. Art and literature are full of examples which might well be founded on fact. D. G. Rossetti's How they met themselves, and Gotch's account of St. Peter's is only a specimen. Walter Scott observed that increasing civilization had 'blotted out the belief in apparitions.' This was to reckon without the phenomenon of view which they deplored as they grew in the power of the soul to be away from the body just before, or at, or after death, or even in illness, and also why it is then visible both to the owner and to others. The double which appears after death might be supposed to be a duplicate of the soul, as its marks of death upon him. And so it is sometimes in early belief. Thus, among the Fijians the ghost is decomposed; it is the corpse 'walking.' But, with natural inconsistency, it 'can eat fruit, drink coconut water, throw stones, speak the poetry, and dance.' 17 So difficult is it for the mind to get away from the complete idea of the man. In a case already cited, the double appearing after death had the marks of the owner's violent end impressed upon it. As a rule, the 'spiritual' double is the exact counterpart of the owner as he was when last seen. Thus, by the natives of Paraguay 18 the souls (aparangues) of the departed are supposed, in the Monks' belief, to appear in the other world in the exact charac- teristics with the bodies they have left. A tall man and a short man remain tall and short as spirits; but, in death, a body is deformed. A kindly-natured man continues so in shade-land. . . . The spirit of a child remains a child and does not develop, and for this reason is not feared. No punishment follows the murder of an infant, nor is its murder attended by the ordinary superstitions. The Polynesians were familiar with appearances of the dead. These appeared also in dreams, and their 'shape or form resembled that of the human body. 19 The natives of the Panjab believe that 'the little entire man or woman inside the body retains after death the tattoo marks of the person whom it has left.' 20 Among the Nagas the ghost is 'an exact image of the deceased as he was at the moment of death, with scars, tattoo marks, mutilations, and all—and as able to enjoy and to need food and other sustenance.' 21 In some cases, it is believed that 'soul' after death is distinguished from the dead man himself, who is believed to 'walk.' The Aus- tralians speak of the ghost returning to the grave to contemplate its mortal remains. 22 But there are cases where it is practically the man himself, re- vivified and as he was in life. The Ovaheere believe

7 Good health,' but wandered away when he was sick or dying. 1 This account is very apt to the point. It explains how the spiritual counterpart of a man is seen when he is swelling up. 2 It is stated as visible. It is invisible, in other words, when it is united with its owner. It may be visible, to himself or others, when it is no longer united. On this line of thought, combined with doubtless the combined expression of the soul when it has developed the notion that health and strength are the soul, or at least an outward show of it. The Minangkabau people of Sumatra regard the sumpruge as

1 Another cause of the impression a man makes on others: . . . it gives strength, splendour, and vitality to a man's appearance; it is expressed in his look and carriage. A man whose external appearance is weak or sickly, or who has little expression in his face, is said to have a feeble soul. 2

Similarly, the natives of the Conservancy identify health with the word moyo, and in 'cases of wasting sickness the moyo is supposed to have wandered away from the sufferer.' 3 The Malayans supply a complete case. The ambiorou or onemery, the apparition' of a man, is, when seen, an omen of his approaching death. 4 It has been applied to the soul of a man when there is no actual question of death; for instance, if a man is thin and does not thrive well on his food. 5

It is clear from the above instances that the soul should be away from the body just before, or at, or after death, or even in illness, and also why it is then visible both to the owner and to others.

The double which appears after death might be supposed to be a duplicate of the soul, as its marks of death upon him. And so it is sometimes in early belief. Thus, among the Fijians the ghost is decomposed; it is the corpse 'walking.' But, with natural inconsistency, it 'can eat fruit, drink coconut water, throw stones, speak the poetry, and dance.' 6 So difficult is it for the mind to get away from the complete idea of the man. In a case already cited, the double appearing after death had the marks of the owner's violent end impressed upon it. As a rule, the 'spiritual' double is the exact counterpart of the owner as he was when last seen. Thus, by the natives of Paraguay 7 the souls (aparangues) of the departed are supposed, in the Monks' belief, to appear in the other world in the exact charac- teristics with the bodies they have left. A tall man and a short man remain tall and short as spirits; but, in death, a body is deformed. A kindly-natured man continues so in shade-land. . . . The spirit of a child remains a child and does not develop, and for this reason is not feared. No punishment follows the murder of an infant, nor is its murder attended by the ordinary superstitions. The Polynesians were familiar with appearances of the dead. These appeared also in dreams, and their 'shape or form resembled that of the human body. 8 The natives of the Panjab believe that 'the little entire man or woman inside the body retains after death the tattoo marks of the person whom it has left.' 9 Among the Nagas the ghost is 'an exact image of the deceased as he was at the moment of death, with scars, tattoo marks, mutilations, and all—and as able to enjoy and to need food and other sustenance.' 10 In some cases, it is believed that 'soul' after death is distinguished from the dead man himself, who is believed to 'walk.' The Aus- tralians speak of the ghost returning to the grave to contemplate its mortal remains. 11 But there are cases where it is practically the man himself, re- vivified and as he was in life. The Ovaheere believe 12 A. G. Mericke, loc. cit.,

that the ghost speaks to people, drinks their milk, and takes their food; also that he is apt to seduce women and girls, and can even marry and live with a wife; without her being aware that her husband is a ghost.\footnote{1}

In the Gospel narratives of the appearances of the risen Jesus it is remarkable that various tests are employed to prove that the form was no ghost or phantasm, but the Lord himself (cf. Lk 24:44). A test frequently employed in cases of the double is to ascertain whether the form casts a shadow or reflection. For the 'spiritual' double, being itself a sort of reflection, a visible but 'immaterial' copy, obviously cannot produce a reflection itself. Hence stories are found, the point of which is either that a supposed real person is unreal, or that a real person, casting no shadow, has \textit{ipsa facta} lost his soul. We are thus led to the principle that the 'spiritual' duplicate, while supplying life to its owner, is 'real,' but in a different genus from the body or from the complete person. More precisely, the difference is a question of degree; the dead or sick body is negatively, the life-double is positively, real, and their union is that of double unity.

Most significant, perhaps, of the phenomena of doublehood is the fact that they are seen just before death, and by their owners in particular. A usual endowment of the medicine-man is that he can see a soul, and at any time. But this capacity is often limited by the accepted principles of the doctrine of the soul. Thus the shamans of the Thompson Indians are able to see the soul before and shortly after it leaves the body, but lose sight of it when the latter is awakened to the world of sounds. When a shaman sees a soul in the shape of a fog, it is a sign that the owner will die.\footnote{2}

The rescue and restoration of the straying duplicate is universally, in early culture, the business of the soul-doctor, as in civilization restoration of health is the business of the physician. The fact that, though ordinarily invisible, it is seen away from its place of location is the best proof that its owner is threatened with its permanent absence. This contingency receives the strongest confirmation when the apparition is seen by the threatened person himself. The inconsistency of the fact that he himself is still alive is one of those which cause no difficulty to the unscientific mind. The soul is separated from the body; that is enough for an absolute proof.

The persistence of the belief in the apparition of the double is evidently one of those cases which cannot be explained by any theory of survival or tradition. The belief is kept alive by hallucinations, and in uncultivated minds by the normal phenomena of visualization.

\textbf{Literature.—}This is fully given in the article.

\textbf{A. E. Crawley.}

\textbf{DOUBLE-MINDEDNESS.—}It is clear that many things in morality and religion which are censured as insincerity and hypocrisy are more accurately describable in terms of double-mindedness. The difference is that in double-mindedness a certain fraction of the entire complex personality—a special set of related states and processes—is so 'split off' from the rest of the self that it acts on its own and also affects its relation to the full round of diverse elements of the ego. In cases of hypocrisy, if such exist, during the inconsistent act or attitude which has momentarily taken possession of the field of consciousness there is a haunting sense that it is not in harmony with the deeper-lying currents of the selfhood of double personality, in which two fairly defined selves in turn struggle for the possession of the field of consciousness, or may exist side by side, each more or less ignorant of the other; multiple personality, with the condition just described, existing among more than two split-off parts illustrated in the work of a skillful hypnotist, who can call up in turn as many selves as he chooses; and alternating personality, in which the two or more selves, like Dr. Jekyl and Mr. Hyde, take turns at ruling the field of consciousness.

Among the remarkable cases that have been studied are: Lucie, Louise, and Leonie, described by Englez in \textit{Les apparitions psychologiques}, 1889; Félida, studied by Anan, Hypnotism, double conscience et alternations de la personnalité, 1897; Mary Reynolds and Ethel Bourne, cited by Ford in \textit{The Psychology of Phychic Life,} 2, 1905, 1. 383 ff.; the case of Sergeant F., described by Monnot and quoted by Binet, \textit{Alternations of Personality} (Eng. tr.), 1896; 'Miss Beauchamp' with her four personalities, the subject of Prince's exhaustive study, \textit{The Dissociation of a Personality,} 1906; the case of the Indian, in which the element of the sub-conscious consists in the sum of partially lapsed memories, plus the sum of dimly appreciated instinct feelings and organic experiences, past and present. The elements of the self are sometimes so closely knit together, and at best become organized in spots and sections, as determined, for example, by harmonious instinct reactions or a relatively consistent set of emotional experiences, personal habits, and intellectual interest.

The conscious self really consists in the drifting to the surface, out of the submerged selfhood, of certain fairly well organized cores or nuclei of related states and processes. The conscious self-consciousness is a potential bound up in in and all of the elements of the personality. The ego is not a fixed entity that stands apart and watches the life-processes go on. The self-feeling, on the contrary, is latent in every psychoses, and emerges when any group of processes is sufficiently organized and/or intensified as to form a warm spot in the usually somewhat diffuse group of experiences that cohere in the single organism. Whenever such a warm spot is formed, the self-feeling about it and about everything else is sharply severed from it and stands as object. There are in the normal personality certain deep-going lines of organization that are fairly constant, and give some stability to the selfhood. It is shown, however, by the use of hypnotic suggestion, that there is no part of the personality that may not in turn be made subject and object. The same subject may seem to himself to be in turn king and peasant, preacher and humorist, saint and sinner, and is entirely oblivious to the existence of other selves.

Now, the condition underlying double-mindedness is that two or more centres of related processes, or selves, may drift above the consciousness, in a rapid succession, while each is imperfectly cognizant of the other. Indeed, it is certain that one set of central processes can be 'thrown out of gear' with the rest, 'so that the processes in one system give rise to one consciou-
ness, and those of another system to another simul-
taneously existing consciousness (J. W. James, Prin.
of Psych., chs. ix. and x.; Bradley, Appearance and Reality, 2, 1857, ch. ix.). In any normal individual we have the alternative associa-
tions and re-combinations of the elements of the self in response to the situations that call them into activity. Each person is in turn, especi-
ally and for the moment, a bodily self, a social self, a social self of the B, a morose, an ambitious, an affectionate, a logical self, and so on through a long list. There are conditions which tend to fix these various selves and perpetuate them. In the first place, it is the fate of states of consciousness to be self-limited in proportion to their intensity. To see with rapt interest a bit of colour harmony in a landscape is for the moment to be blind to all else. To feel the thrill of a heroic encounter creates a soldier whose heart is closed to every other "calling." The faxes of habit get in their work, while vocational activities and the fixity of social customs assist in building the texture of the personality into a seemingly con-
tinuous and consistent type. The twists and strains of split personality now arise through

the irruption into the individual's life of some new stimulus or passion, such as love, ambition, tardy, revenge, or patriotic devotion (W. James, Var. of Rel. Exp., 1892, p. 150).

It may arise from the enforced change of occupation when the cross currents are aggravated by a psychopathic temperament. The condition existing in mild and severe terms is best seen in

A young woman, early abandoned to a life of shame, and later placed in a convent, would pass, as the result of nervous disorders, through two periods, believing herself to be alter-
nately prostitute and nun; and in each her tone, manner, dress, and speech were radically different and appropriate (Baldwin, D.T.P., p. 280).

One of the chief sources of split personality is the difficulty of a smooth readjustment, during the growth periods from childhood to maturity, to the new situations and to the new needs of the self which is most marked during the age of most rapid readjustment in the early teens. The old habitual self of child-
hood persists with great tenacity. The instinctive uprush of new life floods the youth with a feeling of new power, and a sense of awakening, though dimly appreciated, ideals. The struggle between the old self and the new is the crisis long

known as 'storm and stress.' The period is well characterized by W. James as that of the 'divided will,' that of the split personality, the partial self, either too callous or too sensitive, loses its connexion with, and setting in, the full round of life. Treacheries, for example, are the reverse side of little loyalties, just as are foolish loves and misguided philanthropies. It would appear, too, from the stress which moral codes and precepts place upon such virtues as integrity, sin-
cerity, consistency, temperance, and the like, that the normal evolution of character is a unity of the straightening out and unification of the inner self.

As a flyer makes straight his arrow, says the Eommann-
podis (32). 'Stability is the last acute-
tness, that touch of explosive intensity that enables them to burst their shell, and make irruptions horizontally into life and quell the lower tendencies for ever' (W. James, Rel. Exp., p. 170).

3. Double-mindedness and immorality.—It would seem that most blemishes of character and nearly all misdeeds and crimes might be traced to split personality. A passionate, hypochondriacal, or partial self, either too callous or too sensitive, loses its connexion with, and setting in, the full round of life. Treacheries, for example, are the reverse side of little loyalties, just as are foolish loves and misguided philanthropies. It would appear, too, from the stress which moral codes and precepts place upon such virtues as integrity, sincer-
city, consistency, temperance, and the like, that the normal evolution of character is a unity of the straightening out and unification of the inner self.

religion. To heal up its ruptures and knit the excised parts together, has been the
heroic task. Two extreme methods of unification have been advocated, with many gradations of the intermingle of both. At one extreme is the Stoical method of renunciation of everything which can be disturbed, and clear assent to the self, so that the soul stands undisturbed in the midst of a changing universe, superior to all things in life or death. The opposite method is to extend the self until it is at one with all things in heaven and earth. Since the whole universe is all-real, there is nothing that can mar its serenity. One can distinguish at least four types of this latter method of unification: the mystical or baptismal or psychopathic, which would bathe in a limitless ocean of 'blessedness'; the rational or Socratic, which would rise to higher definition and sink to profounder insight until the deeper wisdom catches up all virtue into itself; the aesthetic, as illustrated, for example, in Jesus, which is guided by a warm, refined sense of eternal values; and the practical or 'tough-minded,' represented by those who gird up their loins and preach and practise a doctrine of utmost consistency in thought and deed.

The value to morality of double-mindedness. — It is an inductive fact that the biography of so many moral and religious geniuses betrays a struggle between the cross currents of the self in the direction of good and evil. Like St. Paul and St. John the Baptist, they argue and, when the impulses lead towards the higher life, there is a stubborn inner resistance that is hardly overcome. It is probable that, just as an act of clear thought is bought of necessity at the price of moral renunciation, so of clean-cut moral values can exist only in the midst of conflicting inner impulses. It is 'when the struggle begins within himself' that 'man's worth something. It is only then that 'the soul awakes and grows' (Browning, _Furlo at the Feet_).

'Of necessity every distinctly moral choice involves the previous presence of a certain tendency to choose the wrong. Yes, moral choice is essentially a combination of the neglected motive, as well as an approval of the accepted motive. Otherwise it could be no moral choice. Being possessed of but one motive could have no conscience. ... You might as well try to define a king without his subjects as to define a moral conscience unless the presence of the agent of some evil motive' (Royce, in _JES_ fr. [1890-1957]).

If, now, in the midst of the struggle the agent conquers the lesser motive, he may issue forth into a complex of the two, or into the conflict and corresponding moral values, and so come to live victoriously in a 'two-storey universe' instead of floating along in a misty stream of indefinite experiences into whose gloom the light of a bedimmed conscience can scarcely shed its radiance. The value of the conflicts, too, in the social order has long been recognized by students of ethics.

'The means which Nature uses to bring about the development of all the capacities she has given man,' says Kant, 'are a kind of amonization in society in so far as this antagonism becomes in the end a cause of social order. ... Men have a great propensity to isolate themselves, for they find in themselves at the same time this unsocial characteristic, and each wishes to do something so as to please according to his own notion, and expects resistance just as he knows that he is inclined to resist others. It is just this resistance which awakens all man's powers' (quoted in Dewey-Tute, _Ethics, 1908_, p. 87). It is the universal, and from this it follows that, the greater the number of antagonisms and oppositions that play against each other, the more is the personality enriched, if only they can be so nearly balanced against each other as not to waste the energies, and if the central stream of life is so directed that the habit of conquering becomes the habit of growth. Luther, e.g., is an instructive instance of a person containing what Riihle ([122-125] ff.) designates 'successively' and 'even simultaneously contradictory characters.' He was jocose and serious, jovious and melancholy, submissive and independent, active and meditative, stoical and sentimental, self-centered and hard-headed organizer, scholar and poet, and many things besides. The intimate relation between the presence, in such minds, of various cross existents and their moral strength is probably not an accidental one.

EDWIN D. STARBUCK.

DOUBT.—1. Definition and scope. — Doubt is the negation of belief, the condition of not having reached a positive conclusion for or against any proposition. In this negative nature doubt differs from disbelief, which is a positive conviction of falsity. Disbelief is a form of belief, as a belief in some proposition which involves the failure of another, with reference to which the attitude of mind is called ‘disbelief.’ We disbelieve the Ptolemaic theory because we believe the Copernican. Doubt is, on the other hand, implication of such contrary belief. It implies suspension of judgment rather than a positive judgment to the contrary. It is the state of being unconvinced. In this sense an agnosticism should be the attitude of doubt, lacking knowledge (see art. AGNOSTICISM). Whether there is ever an absolute suspense of judgment may be questioned, but in the doubting attitude there is at least the absence of a categorical or of a settled judgment with reference to the idea in question. There may be the dispassionate Warrant of McCoub, and Coriat, _Relig. and Med._, N.Y. 1908; H. Munsterberg, _Psychotherapy_, N.Y. 1909, pt. iii.

As to the objects of doubt it is customary to distinguish between theoretical doubt and doubt as to values. The former may concern either (1) the complex evidence supporting any of the moral values, and (2) the latter may be doubt as to the validity of our (3) aesthetic or (4) moral judgments. Since religion, as commonly understood, involves judgment as to both facts and values, religious doubt may be either of the two main kinds. The distinction sometimes drawn between _universal_ and _particular_ doubt is a verbal rather than a real one, the former being incompatible with sanity in things theoretical, and with life in things practical. The conscious life is essentially a narrative, assertive process by which objects are either assimilated, or neglected for those capable of assimilation. This limitation of doubt in the field of knowledge was shown by Descartes, and in the sphere of practice by Hume (see art. DOUBT).

The temporal relation of doubt to belief depends upon the conception of the nature of belief. If belief be taken as identical with the instinctive or immediate reality sense, doubt is a subsequent state arising only when things have suggested that, especially as involving the disappointment of expectation and the checking of motor impulse. If belief be conceived as a reflective result dependent upon evidence, it is subsequent to doubt, and its legitimate outcome. The condition of doubt lasts as long as the idea in question fails to ind its
faith is demanded within the range of the firm foundation of the system, while doubt may in all other matters prevail. There are many also, among Catholics, Protestants, and non-Christian devotees, who accept the finality of both reason and authority and insist upon their oneness. An instructive instance in point is the case of Cardinal Newman. He says (Gram. of Assent, pp. 214, 146):

‘Now truth cannot change; what is once truth is always true; and the human mind is made for truth. . . . once certitude, always certitude. If certitude in any matter be the termination of all doubt or fear about its truth, it carries with it an inward sentiment of finality. Itself shall not, in the nature of things, be removed by the dogma of the Church’s infallibility. The “One Holy Catholic and Apostolic Church” is an article of the Creed. It stands in the present history of all abstruse problem, the one mind, for to believe in her word is virtually to believe in them all. Even what he cannot understand he can believe to be true; and he believes it to be true because he believes in the Church.’

(2) Types of idealism with a dynamic or developmental conception of reality. — This philosophical position, somewhat older than Aristotelianism, has arisen with new life during the last century and a half. It has been steadily undermining dogmatism and certitude, and not only accepting doubt as a wholesome mental regimen, but interpreting it as a necessary and unavoidable part of the process of life. Its representatives may be separated into two groups: (a) rationalists, who, like Hegel, abandon the law of identity and contradiction and posit a rational world-consciousness in a process of becoming or evolution, and (b) pragmatists, voluntarists, and affectionists, whom reality seems to be of a plastic, non-rational sort, which the thought-processes, since they are its products, can only symbolize, not reveal.

(a) Hegelian rationalism. Hegel is the representative of the idealists who hold a dynamic and teleological conception of reality, and insist that the cosmic spirit unfolds in a strict and vigorous logic, whose consumption is thought or thought. (Chushman, Hist. of Phil., 1911, ii. 251.) This absolute reason proceeds everywhere and always according to a law of negativity—passes over into its other or opposite only to return to itself enriched by the contradiction. There is always the thirdfold set, whether in the personal life or in history—affirmation, contradiction, and return-to-itself (the thesis, antithesis, and synthesis of Fichte and Schelling). The law of contradiction which formal logic and static rationalism respect is not the truth, only reduces the stage, in an endless process, to coming. The unfolding of the Absolute must of necessity, and by its very nature, have contradictions within it, as the condition of passing on to a higher synthesis, more intimate, individual, therefore, and scepticism in history (see, e.g., Hegel’s discussion of the Sceptics, in his Hist. of Philos., 1892-96) are not simply justifiable on account of their stimulating and intensifying power, but are wholly essential parts of the evolution of spirit and

(b) Non-rational idealism. Hegel’s philosophical justification of negation was but the formulating of a world-attitude towards the value of doubt that had been developing during the Renaissance and has been gaining momentum to the present time. No reference is here made to its value in the way of mental clarification and as a means of arriving at certainty as in the Yes and No procedure of Abaelard and Aquinas, or to the method by which Descartes and its latter class of Cartesianism endeavored in order to arrive at clear and distinct ideas and therefore dogmatic certainty; what we have in view is rather a growing conception that reality is of a non-rational kind which cannot be truly represented by the cognitive processes. The thought-life is one (among others) of the ways in which the world of being manifests itself. It is epiphenomenal. Its reports are suggestive and
symbolical, not final. Dogmatism is, from this point of view, no longer possible, and the _tentative_ reliance upon a 'truth' so far forth apprehended, of which doubt is the wholesome sign, is fundamentally justifiable. Following upon the acute scepticism and criticism which culminated in Hume and Kant respectively, confidence in the power of pure reason to transcend itself and report objective reality must have vanished, and the belief went displaced that the universe was constructed on logical principles. The conviction grew insistent that reality is plastic or dynamic, and is of the nature of feeling or will. Being so, its meaning is not to be read out in terms of feeling or symbolizing through ideation. Illustrative of the affectiveness may be mentioned: Kant's faculty of taste and aesthetic judgment as the synthesizing principle behind reason and judgment; Schelling's notion that ideas have not _legitim point, but are God's _intuitions of Himself, and that esthetics and religion contain the deeper wisdoms which will resolve all contradictions; Schleiermacher's doctrine that religious ideas are forms of the manifestation of reality feeling and Schelinger's conception of the 'Beautiful Soul' revealed through 'disinterested contemplation.' The volitionists are equally numerous and commanding. Illustrations of them are the 'God-will' of Kant, the 'Deed-act' of Fichte and the 'World-will' of Schopenhauer, with his teaching that Reason and Idea are indeed distorted expressions of this fundamental world-will. The doctrine of biological evolution is a concrete form of the prevailing passion (which was possessed theodolit half a century before it was formulated by Darwin) for a developmental account of reality, and in turn has given vast impetus to the conception. Some of the modern forms into which it has become crystallized are empiricism, natural empiricism, vitalism, and voluntarism. All these give up the possibility of the dogmatic certainty of a unified system of beliefs. As summarized by A. J. Balfour:

'No philosophy or theory of knowledge can be satisfactory which does not find room within it for the quite obvious but not sufficiently considered fact that, so far as empirical science can tell us anything about the matter, most of the proximate causes of belief and all its ultimate causes are non-rational in the sense of being non-rational in their origin.'

The attitude of all these towards doubt and certainty may be typified by the following from W. James:

'The sane thing is surely to recognize that all the insights of creative imagination are provisional, that a wisest critic is an altering being, subject to the better insight of the morrow, and right at any moment, only "up to date" and "on the whole." . . . Heartily know, when half-gods go, the gods arrive. . . . I do indeed disbelieve that we or any other mortal men can attain on a given day to absolutely incorrigible and unprovable truth about such matters of fact as those with which religious deal' (Varieties of Religious Experience, 1902, p. 331.)

3. Doubt for its own sake.—Most writers make a distinction between doubt as an end and its use in the growth of knowledge. Even those who justify it most unqualifiedly within its proper limits condemn it just as cordially as a chronic obsession.

James goes so far as to observe: "It is often practically impossible to distinguish the doubt from the mere negation. . . Skepticism in moral matters is an ally of immorality. Who is not for against. . . in theory as in practice, dodec, or dodge, or talk as we like about a wise skepticism, we are really doing volunteer service for one side or the other" (The Will to Believe, 1899, p. 109.)

Sir William Hamilton, who believes that "doubt is the first step in philosophy, steps of Doubt, an important state of mind, would be, in fact, little better than an intellectual suicide, and still worse,—it lives in the affirmation of itself, and of God; a doubt upon any of those would be a diminution of its life—a doubt upon the three, were it possible, would be tantamount to a mental annihilation (Lect. on Met. I. 91.) The danger of doubting is not only that it may become a fixed habit, but that interest may centre in the process itself as severed from the complex of normal mental activities and healthy enthusiasms and become a mania (doubting-madness; folie du doute; Grubstrudel). Pathologists have accepted this as a special type of insanity (see, for example, B. Ball's art. "Doubt, Insanity of," in Tuke's Dict. of Psychol. Medicine, 1892.) Its symptoms are a state of persistent intellectual unrest, a devouring mental and physical anxiety, a morbid anxiety for mental satisfaction, accompanied not infrequently by a Hamlet-like paralysis of the will.

4. Doubt as the condition of knowledge and of its growth.—The dictum of Hamilton, 'we doubt in order that we may believe' is confirmed by the result of modern psychological analysis of the nature of the thought-processes, settling into a truism. According to James, 'belief and disbelief are but two aspects of one psychological state . . . we never doubt anything except for the reason that we believe something else which contradicts the first thing' (Prize of Psych., 1890, ii. 294.) Such a conception becomes self-evident through an analysis of the mental conditions involved in certitude. This is shown even by certain processes of the mind.

No act of perception would be possible without selective attention, a narrowing of the field of consciousness, and a more or less sharp discrimination of the object perceived from related objects. Such an act often is not, generally, a simple act cutting away of the object from its setting, as hand from arm, leaf from branch, child from adult, day from night, and the like. Further perceptual processes almost invariably make cross-cutttings of these cuttungs for more than half a century before it was formulated by Darwin)

for a developmental account of reality, and in turn has given vast impetus to the conception. Some of the modern forms into which it has become crystallized are empiricism, natural empiricism, vitalism, and voluntarism. All these give up the possibility of the dogmatic certainty of a unified system of beliefs. As summarized by A. J. Balfour:

'No philosophy or theory of knowledge can be satisfactory which does not find room within it for the quite obvious but not sufficiently considered fact that, so far as empirical science can tell us anything about the matter, most of the proximate causes of belief and all its ultimate causes are non-rational in the sense of being non-rational in their origin.'

The attitude of all these towards doubt and certainty may be typified by the following from W. James:

'The sane thing is surely to recognize that all the insights of creative imagination are provisional, that a wisest critic is an altering being, subject to the better insight of the morrow, and right at any moment, only "up to date" and "on the whole." . . . Heartily know, when half-gods go, the gods arrive. . . . I do indeed disbelieve that we or any other mortal men can attain on a given day to absolutely incorrigible and unprovable truth about such matters of fact as those with which religious deal' (Varieties of Religious Experience, 1902, p. 331.)

3. Doubt for its own sake.—Most writers make a distinction between doubt as an end and its use in the growth of knowledge. Even those who justify it most unqualifiedly within its proper limits condemn it just as cordially as a chronic obsession.

James goes so far as to observe: "It is often practically impossible to distinguish the doubt from the mere negation. . . Skepticism in moral matters is an ally of immorality. Who is not for against. . . in theory as in practice, dodec, or dodge, or talk as we like about a wise skepticism, we are really doing volunteer service for one side or the other" (The Will to Believe, 1899, p. 109.)

Sir William Hamilton, who believes that "doubt is the first step in philosophy, steps of Doubt, an important state of mind, would be, in fact, little better than an intellectual suicide, and still worse,—it lives in the affirmation of itself, and of God; a doubt upon any of those would be a diminution of its life—a doubt upon the three, were it possible, would be tantamount to a mental annihilation (Lect. on Met. I. 91.) The danger of doubting is not only that it may become a fixed habit, but that interest may centre
such a consideration it is evident that doubt is bound up necessarily with any act of faith. As expressed by Ladd:

'Skepticism and agnosticism remain legitimate and valuable even among the cultivated classes. . . . But doubt and inquiry, to refuse to affirm, and to deny, whether applied in the interests of science or religion, is an essential to the process of conception as are faith and affirmation of the most positive and undisturbed kind' (Phil. of Knowledge, p. 569).

The necessity of doubt to knowledge arises also from the retarding effect of a native inertia which causes ideas to be passed over without thought or action; and this condition is aggravated by the deadening effect of habit and custom, which must constantly be transcended and replaced by a habit of growth, or, in other words, the habit of justifiability. Foster has compared doubt to the molting of a bird by which it accommodates itself to the rotation of the seasons, and to the process of elimination in digestion. Doubt is therefore the 'purgative, eliminative, excretive side of religious experient to faith as faith is the normative side of duties, if we are saved by doubt as well as by faith' (The Funct. of Relig. in Man's Struggle for Existence, p. 1581.)

5. The development of doubt in the personal life. — A valuable suggestion as to the place of doubt in the constructive life of morality and religion is found in the fact that it is the rule rather than the exception, in the growth from childhood credulity, innate trust in external authority, into a personal grasp of spiritual verities, that men and women pass through, usually in the late teens, a stage of mental perturbation, and of inquiry into the groundwork of faith. The youth 'turns logician and Graves everything and accepts that only which seems to possess a reason.' A study of biographies and autobiographies seems to show that 'the higher life purposes develop and intensify simultaneously with the higher growth of doubt; . . . Doubt is a process of mental clarification; it is a step in the process of self-mastery; it is an indication that all the latent powers are beginning to be realized' (Starbuck, Psychology of Religion, p. 121).

6. The cultivation of the science and art of doubting judiciously and constructively. — The number of recent sympathetic discussions by psychologists and theologians of the meaning of doubt would indicate that leaders of thought have come rather generally to accept a constructive interpretation of it when kept within certain limits. The art of judicious doubting was first formulated by Hume in the he golden mean between the scepticism of the Sophists and the dogmatism of the popular mind: 'It will contribute towards one's object, who wishes to acquire the basis of existing doubt judiciously, for a subsequent acquisition in the way of knowledge is the solution of previous doubts. . . . They who carry on an investigation without doubting first are similar to persons ignorant where they ought to walk. . . . There is a necessity that a person should be better qualified for forming a judgment who has heard all the reasons, as it were, of adversaries and opposing disputants' (Met. ii. 1).

It has been an advance over even that great thinker in the necessary application of doubt to the acts of knowledge and belief, and so to find the element of faith which lies embedded in 'honest doubt', provided one 'clings ever to its sunnier side.' In this view doubt is an index of the direction in which life's deeper problems lie. This has been tersely formulated by Royce:

'In these matters the truly philosophic doubt is no external opacity to the perception of the essence of thought. . . . The doubt is inherent in the subject-matter. This doubt is to be accepted as it comes and then to be developed, modified, and in all its intensities. For the intensity of the matter is concealed in that doubt, as the fire is concealed in the coal. . . . We can no more doubt the object and keep the innermost truth than you can toss about the coal and hope to retain the fire. This doubt is the insight partially attained' (Religion in the Making, p. 294.)

VOL. IV.—55

DOUKHOBORS, [pronunciation the k is scarcely heard, and the accent is on the last syllable; there are other forms of the name, but this is the form now usually employed].—The name Doukhobors was first used at least as early as the year 1755, and means 'spirit-wrestlers,' as the Doukhobors claim to fight not with carnal weapons, but armed with the Spirit of Truth. They regard as the founder of their sect a retired Prussian soldier, of the name of Starbuck, who was taught in a village of the Kharkof Government about the year 1749, and who, it is thought, was a Quaker. There is every reason to believe this anonymous leader to have been a man of high character, and devoted to the service of his fellow men. Towards the close of the 18th century, the Doukhobors were scattered from the Volga southward and westward over Southern Russia, with adherents in various other parts of the Empire. The Czar Paul I, on his accession adopted a policy of toleration towards them, but changed his mind when, in 1799, some Doukhobors openly preached that rulers were not needed. Alexander I allowed many of the Doukhobors to come together from various parts of Russia and to form a settlement of their own at the 'Milky Waters,' near the sea of Azof (1801-1824). This was a turning-point in their history. From being a religious sect held together by unity of beliefs, anxious to propagate their views, they become adherents of the Russian Government, and in 1830, the Doukhobors became a community, and ceased to be propagandists. During the same period, moreover, their leader, Savely Kapoustin, gained such power over his followers that he could demand of himself to be an incarnation of Christ, and could claim for himself and his successors Divine honors; while, on the other hand, his adherents were forbidden to acknowledge that they recognized any earthly leader, so that, even to the present, they endeavour to confound any outsider who may wish to study their beliefs. It would also appear that the successors of Kapoustin, all of whom gained control of great wealth by the introduction of communism among the Doukhobors, were the assassins of those who opposed them. At all events, the Russian Government made a thorough investigation of these charges, and in 1841 the Doukhobors were banished from the Milky Waters in all its forms, and all Doukhobors, with the exception of a few scattered tribes who were later removed to the Caucasus, came the last crisis in their history. Not even the power of the whole Russian Empire

EDWIN D. STARBUCK.

DOUKHOBORS
could induce them to join the army once they were persuaded that it was wrong for men to kill one another. Even when they endured it, the Doukhobors had regarded military service as a tyrannical and selfish luxury. Meanwhile Tolstoi and his friends, intentionally kept in ignorance of the theocratic claims of the Doukhobor leader, and believing the sect to be merely harmless Anarchists of the Tolstoi type, became interested on their behalf. In 1893, in protest permission was given them to leave Russia. Far removed and destitute, they suffered much until rescued by the united efforts of Russian, English, and American philanthropists, who came to their assistance in defraying expenses. The sect was aided by the Canadian Government, 7,365 Doukhobors were in 1899 established in Canada, leaving in the Caucasus about 12,000 who did not wish to emigrate. At present their number in Canada exceeds 9,000. The welcome given to them in Canada was overwhelming, and its power in its cordiality. A salute of artillery greeted them at the port, and the railway journey was a triumphal procession. They were in Canada three years before their leader, Piotr Verigin, was liberated by the Russian Government after sixteen years of exile. The Doukhobor settlements are situated in N.E. Assiniboia, about a day's drive from Yorkton; they stretch still farther to the N. Seakestrovia on the north, and thence slightly on Manitoba in the east.

The first known leader of the sect was Sylvan Kolesnikof (1750-1775). He was succeeded by Iliarion Pobirohin (1775-1785), and he by Savely Kaponstn (1790-1817), the founder of a Doukhobor dynasty, and the most remarkable of all the leaders. By him communism was also introduced among the Doukhobors. He was succeeded by his son Vassily Kalmikoff (1817-1832), and he by Iliarion Kalmikoff (1832-1841) and Peter Kalmikoff (1833-1864). Peter Kalmikoff was succeeded by his wife Lunjeriya, who proved an exceptionally able leader. She died in 1886, and was succeeded by Piotr Verigin, the present (1911) leader. But his accession was preceded such hostility on the part of an important minority that the Government was forced to intervene and to send him into banishment. From his exile he issued mandates, influenced by Tolstoi's teachings, which seemed to the Doukhobors both that and a new path. In consequence this body of the Doukhobors scattered throughout Russia, the ex-tant accounts of whom are so fragmentary that it is difficult to present a consecutive history of them.

Their history shows that, unfortunately, theirills were not always such that they did not always hold their faith with the same amount of zeal, and it is a history of constant backsliding and revivals. That these revivals were due to the advent of some worthy leader of men seems clearly demonstrated. Recognizing the Doukhobors as a morally a race of giants, we must in speaking about them acknowledge the clearness of their perception of certain fundamental formal principles and the heroic tenacity with which they have upheld them. The sect has erred and split in pieces in the past, but the validity of certain principles to which they have testified will remain. The Doukhobor statement of truth is sometimes calm, moderate, persuasive, imparting a philosophic truth to conventional ideas, and at all times defensive and as refuge in mysticism. At times, on the other hand, it is clear, resolute, radical, and contemptuous of all authority.

The tenets of these men, who will not acknowledge an earthly rulership, may be stated as far as possible to the following effect. There is one God. Their leader Pobirohin in the 18th cent. is said to have explicitly taught that God does not exist by Himself, but is inseparable from man. It is for the righteous in a way to give Him life—a curious doctrine, perhaps, but one which seems to be the mainspring of their innate character. They explain away rather than assert the doctrine of the Trinity. Jesus Christ is the spirit of piety, purity, etc., incarnate. He is born, preaches, suffers, dies, and rises again spiritually in the heart of each believer. He is the Son of God; but for the same reason we also are sons of God. The inward word reveals Him in the depths of our souls. It existed in all ages, and enlightens all who are ready to receive it, whether they are nominally Christians or belong to some other religious community. Our souls existed and fell before the creation of the material universe. The Church is a society selected by God Himself. It is invisible and scattered over the whole world; it is not externally marked by any common creed. Not Christians only, but Jews, Muhammadans, and others may be members of it, if only they hearken to the inward word. The Scriptures must be understood figuratively to represent things that are inward and spiritual; and the Bible has less authority than Jacob's ladder in the east. It implies either an 'Inner Light' or the oral teachings of the head of the Doukhobors. The Christ within is the only true Hierarch and Priest. Therefore no external priest is necessary. The sons of God should not be governed by the laws of a state. The external sacraments have no efficacy. To baptize a child with water is unbecoming; but an adult baptizes himself with the word of truth by the true priest, Christ, with spirit and with fire. Confession is the only sacrifice to the spirit; the external sacraments are offensive to God, for Christ desires not signs but realities. The forms of worship of all Churches in the world are in themselves but dead signs, mere figures. To pray in temples made with hands is contrary to the injunction of the Saviour. Yet a son of God need not fear to enter a temple of any religious community. Icons are regarded as idols; the saints should not be prayed to; fasting should consist in abstaining from a considerable portion of food. There are many who do not receive military service, which was the cause of their persecution in Russia and the reason of their emigration to Canada. Taxation, law courts, and all police regulations are condemned. Commerce is despised, and agriculture should be the great source of livelihood. All men are equal, and all rank and power is unnatural and mere usurpation. They believe that men gifted with reason should not use violence against others, but should influence one another by the appeal of mind to mind. Less violence, crime, vice, poverty (apart from the effects of persecution), superstition, luxury, or wickedness is to be found among the Doukhobors than among their neighbours. They are sober, laborious, and frugal; chaste, and at all dangerous points taking refuge in mysticism. At times, on the other hand, it is clear, resolute, radical, and contemptuous of all authority.

Under their present leader, Piotr Verigin, the
commune in Canada appears to be a financial success. He arrived there immediately upon his release from the Siberian mines, and has proved himself to be an eminently practical man. The Doukhobors adopted improved agricultural machinery, and established various mills, such as flour mills, oatmeal mills, saw mills, flax mills, etc. They also acquired a brick- and tile-making plant. The communism of their villages in Canada is centralized so that the communal funds of both the Doukhobor North and South Colonies are now all under control of the Doukhobor Council of Three. A large warehouse for the distribution of goods among the villages is situated in a convenient position on the Canadian Pacific Railway. The Doukhobor community is the largest experiment in pure co-operative life that has ever been attempted. The Doukhobors of the Prince Albert Colony are more individualistic; they do not hold their land in common, and only to a small extent co-operate with the North and South Colonies.

In Canada, there was much confusion among the Doukhobors, who were too ignorant, under new conditions, to arrange their plans; and even after he had come there was some friction between Verigin and the Doukhobor reluctance to recognize any allegiance except to Verigin. It is about this question, indeed, that all the trouble of the Canadian Government with the sect has centred, and in consequence more than a thousand Doukhobors, forming the Prince Albert Colony, have formed a sub-sect, marked chiefly by their refusal to render to Verigin the honours to which he lays claim.

DRAMA (Introductory).—1. Definition and affinities.—In the most primitive sense of the term, the word 'drama' denotes simply 'deed,' 'action,' as in Jn. 4:15, 5:21, etc.; but before the application of this word was thought of, the signification which it had then received was: 'to represent by persons (less frequently by puppets and the like), usually suitably disguised by dress, masks, etc., of acts believed to have been performed, or supposed to be performed, by other beings, the effect often enhanced by appropriate scenery, etc.' That this is true was perceived centuries ago by the most rigidly analytic of all thinkers, Aristotle, in whose Poetics tragedy and comedy are among the forms 'which are all in their general conception modes of imitation' (παρα τεχνηνων οινον μιμησιν τα συνολα [i. 2]); hence, some say, the name of "drama." is given to such poems, as representing action (θεωρ και δραματα καλεδωτα τοις αυτα φασιν, ου ιδεωσι τα δεικνυται [iii. 2]); for the Aristotelian meaning of 'imitation' ('an idealized representation of human life—of character, emotion, action—and under forms manifest to the sense'), see Butler's discussion in his Aristotle's Theory of Poetry and Fine Art, London, 1902, ch. ii.

Whether the idealization implied by Aristotle may fairly be sought in primitive drama, or in comedy as a whole at any period, or in certain specimens of modern tragedy, is not beyond question; but there still remains the fact that 'imitation'—and imitation only—accounts for the rise of drama and for the attraction which it holds to-day, as in the remote past when it originated. To-day, too, its primitive force is not lost: drama is designed to reproduce events which already have happened or which are supposed to be happening; and, since such reproduction normally requires the spoken word, it is obvious, as Aristotle already saw, that the drama is closely connected with the epic and the lyric, the difference being that the epic and the lyric require only the spoken word, while the drama always requires action and, except in rare instances, words as well. These exceptions are formed chiefly by the puppet plays, or marionettes (on which see Pischel, Heimat der Puppenspiels, Halle, 1900 [Eng. tr., London, 1902]; Magnin, Hist, des marionettes, Paris, 1862; Maindrun, Marionettes et guignols, Paris, 1890; Rehm, Buch der Marionetten, Berlin, 1905), which, doubtless originating in India, have spread thence throughout Europe (finally degenerating into the 'Punch-and-Judy show') and also far into the East (cf. the interesting varieties discussed below in the 'Javanese and further Indian' section). Another exception might possibly be considered to be formed by the modern 'moving pictures,' but these have no right to come under the dramatic category at all.

Drama is also linked to yet another art, the pictorial; but the imitation by means of pictorial art, besides lacking the spoken word, is static, whereas dramatic art is continuous throughout the time which the production may consume. For otherwise is the case with two more of the fine arts—music (whether instrumental or vocal, or both together) and the dance (using this term in its widest connotation). Indeed, so closely connected with the drama is the dance that the Skr. term for 'drama' is nataras, which literally means 'dancing'; and even on the modern stage an entire drama may be performed by pantomimic dance, without the utterance of a single word.

2. Origin.—By the Aristotelian definition of drama, which is neatly epitomized by Suidas and the Etymologicon Magnus as 'a doing, an action . . . and also those things mimetically performed by actors, as in a role' (περαμα, περαμα, δραμα, δραμα, περαμα, περαμα, δραμα, δραμα, περαμα, περαμα, δραμα, δραμα, περαμα, περαμα, δραμα, δραμα, περαμα, περαμα, δραμα, δραμα, περαμα, περαμα, δρα−

---

Dr. John L. Hay, Princeton, New Jersey
a drama may be represented by the Icarus or by the Ulysses of Stephen Phillips. Or we may have an acted imitation of a purely fanciful series of events, as in the case of the greater number of Ibsen's plays. Yet it may well be questioned whether such a drama is not merely any merely imaginary themes. This is, of course, a subject upon which it is extremely dangerous to dogmatize, and our knowledge of the mental processes of primitive man is by no means sufficient to warrant hasty and false conclusions.

The problem with regard to the origin of the drama is here precisely that which confronts us with regard to the folk-tales. It is perfectly true that at a relatively early period many folk-tales may be told as entertainment, which they afford, and in like manner a primitive drama, because it chances to give pleasure to its spectators, may come to be regarded as pleasure-giving, and may conceivably be produced once and for all the purpose of pleasure. In spite of all this, it seems to the writer highly problematical whether any notion of pleasure, either to actors or to spectators, was intended by drama at its inception. The acting process at an early stage seems to show that for primitive man life was by no means simple delight or poetic outlook upon the beauties of Nature, but rather a matter of deadly earnest, a struggle for existence, and a terror of mishap with which the rhythm by which modern drama can adequately conception. If such was the case, there can have been scant opportunity for amusement for amusement's sake. We have no right even to assume that the few writings of primitive European marathons which have been preserved were made by him for his own delight; for aught we know they may have been magical in purpose—the figure of a reinder, for example, being drawn to gain power over reinder; or they may have been historical—a picture of a reinder that the particular artist had either tamed or killed (cf., for example, the American Indian 'winter counts'). This is a conjecture, but it is one that must be reckoned with. Again, in the popular stories told as fairy tales to children to-day there is unquestionably present an element—and that element the essential one—which was once believed to be no mere tale to amuse an idle moment, but a fact of grim and terrible reality. The story of Bluebeard, though it may be common among peoples where the most simple child knows was never really and truly so; but there was undoubtedly a period when it was regarded as an historic and awful instance of the peril of broken talk (see CF, ch. xi.). Throughout their history the drama and the folk-tales have been interlinked; and in India this was also true (cf. Gray, 'The Sanskrit Novel and the Sanskrit Drama,' in WZKM xviii. [1904] pp. 48-54). Perhaps the 'dramatized novel' really reproduces at least a portion of the process by which the primitive drama passed. The same principle receives another exemplification from children's games. Without citing the mass of American Indian games to which Culín (23 EBEW [1907]) attributes a purely religious origin, it may here be sufficient simply to allude to the basal idea of the English and American game of 'London Bridge' (see EBEW II. 802).

If stories, games, and the like were thus profoundly serious in their origin, may not the drama be? It must not, of course, be forgotten that early man, like all his succeeding generations, was an imitative creature, and that within the sphere of everyday life he may have seen and known to his fellows things which awed or con-
Lyric poetry, on the other hand, is produced under stress of some sort of emotion. The outworking of this dramatic use of epic and lyric may be seen at its best in the Greek tragedians; but in the Sanskrit drama, on the other hand, although the Hindus were well acquainted with the epic, and made use of the primitive epic type as the Gruppe, and Tibull, for; for Leipzig, and of the Buddhist jātakas, in which the essential teachings of the tales are in verse, the prose being a mere expansion of them; and the same holds true of the gathas in the northern Buddhist Lālita-viṣṇua-tara. There is, therefore, much to be said for the theory of Oldenberg (ZDMG xxxvii. [1889] 78–82; cf. von Schröder, p. 4 ff., and Gehner, GRIP ii. 29 f.) that certain hymns of the Rigveda and the Iranian gāthas originally contained a framework of prose, although some parts as well as the most essential portion, has survived.

We have seen that drama is an imitation of the acts of worshipful beings; and this implies that, to the actor, these life-time beings, the deity whom he represents. It is for this reason that only those deities can be represented with whom the actor believes that he can become identified. In the most primitive stage of belief probably we may well included, but later, with the development of religion some Divine beings assume a character which no human being can hope to possess. It is universally recognized that the Greek drama was closely connected with the cult of Dionysus, and Miss Harrison is doubtless correct when she writes (Proleg. to the Study of Gr. Rel., Cambridge, 1908, p. 568):

"Surely it is at least possible that the real impulse to the development was wholly in "goat-songs" and "circular dancing places," but also in the cardinal, essentially dramatic conviction of the religion of Dionysos, that the worshipper can not only worship, but become, can, be, his god. Athene and Zeus and Poseidon have no dramas, because no one, in his wildest moments, believed he could become and be Athene or Zeus or Poseidon. It is indeed only in the orgiastic religions that these splendid moments of conviction could come, and, for Greece at least, only in an orgiastic religion did the drama take its rise."

The drama falls into two main types, which we conventionally term comedy and tragedy. In the very beginning there was probably no such division, for the acts of Divine beings are in themselves now comic or tragic according to events, either desirable or undesirable, and consequently to be deprecated or sought; just as in life itself grave alternates with gay—all blended in one whole. Yet certain events, being more important than others, naturally receive emphasis, and certain seasons when the primitive dramas were presented lent their colour to the mimick action. It was particularly in the spring and at the harvest that the more joyous element was predominant. Many Sanskrit plays playly study that they were produced at the spring festival, and we know that the harvest feast was the time in ancient Italy when the Pescinni and other rude folk-dramas were enacted. (Von Georg. iii. 265 f.; Hor. Ep. ii. 1. 139 f.; Tibull. iii. 35 f.; Aristot. Rhet. v. 1351 a. 32, 33.) Of which connexion it is noteworthy that the Pescinni were also sung at weddings (Catull. xxi. 122 f.; for further refs. see Tenniel-Schwabe, Gesch. der rom. Lit., Leipzig, 1886, p. 581; Th. Farnell, Greece, 1898, p. 71.) The Greek word κατάρα, which signifies a song, but indicates simply a revel song (Meyer, Handbuch der griech. Etymol., Leipzig, 1901-2, ii. 345), and Aristotle was, therefore, right when he said that comedy originated from the leaders of parties in Athens. (v. 125.) Every trait of echoes points to the conclusion that it was a manifestation of happiness at the re-creation and rebirth of Nature, and an expression of joy that Nature had given birth to the crops; but, by the wanton and even indelent spirit which has often excited, it was doubtless believed that, through the principle of sympathetic magic, a genealcny energy would be inspired in the Divine wellspring of heaven and earth, that similar, and even richer, fertility might be expected. The matter, however, was so well understood that we must confess that in the primitive Greek tragedy, the salacity which had at first been a mere incident, and designed (from the point of view of primitive man) for a good and desirable end, came to be the dominating element. The comedy that accounts for many of the protests which, from the days of Tertullian to the present time, have been levelled with only too much justice against the entire drama.

Far different, in all probability, was the origin of the second great type of the drama—tragedy. It is true that this, as well as comedy, has been derived by more than one classical scholar from the same source, the worship of Dionysus (Harrison, p. 568 f.; Gruppe, Gr. Mythologie und Religionsgesch., Munich, 1906, p. 1456; Farnell, "CGS v. 229 f."); but this theory rests on slender evidence. It is far more probable to suppose, with Crusius (Preuss. Jahrbucher, lxiv. [1893] 294), Hirt (Joh. germen. Kunstw. Strassburg, 1905-7, pp. 477 f., 727), and Ridgeway (address before the Hellenic Society, 3rd May 1904 [cf. Athen. novum, no. 3995, p. 660], and especially in his Origin of Tragedy, Cambridge, 1910) that the ultimate source of tragedy was in the funeral songs and funeral games celebrated in honour of deceased heroes, the whole being performed to honour and appease the dead. A noteworthy instance here was the case of Adrastos, a hero-king of Sikyon, where his son was killed in the market-place. Regarding him, Horodotus (v. 67) writes that:

"The Sikyonians were wont especially to honour Adrastos... Both in other respects the Sikyonians honoured Adrastos, and in addition they celebrated his misfortunes by tragic choruses (τα μῆνες αὐτὸς οἰδούς ὀξυρίζων υπαργύρους εὐμετάκτους), not honouring Dionysus as Adrastos. But the Choruses gave the Kobol, which he had been in the choruses to Dionysus, and the rest of the sacrifice to Melanippus."

This theory finds a support in the hypothesis of Hazen, to be cited below (p. 896), that the Javanese wayang was originally a form of ancestor-worship; and Forster (Reise um die Welt, ed. Leipzig, 1845, i. 359 f.) saw primitive dramas produced at funeral feasts on the Society Islands.

Here, at a funeral, two young girls danced to the music of three drums, and between them danced three masked actors in pantomimic drama on stone stele. A further confirmation of the theory here advanced appears to lie in the essentially epic movement of the action of the Greek tragedy, and there may be more meaning than is commonly supposed in Plato's characterization of Homer (Thetet. 152 E) as the foremost poet of tragedy. In fact, there seems to the writer to be scant reason for connecting the rise of Greek tragedy with the worship of Dionysus; for the Greek word κατάρα, instead of being properly a revel god, can, with any other specific Greek deity. Primarily the son of Semele, an ancient Thracian goddess of Mother Earth, Dionysus was, it is true, later identified with Attis, Adonis, and Osiris, and in an oblique sense of the word became a Thracian deity and as releasing from the under world (see the full discussions in Harrison, ch. viii.; Gruppe, pp. 1407-1440; "CGS v. e. v."); but
Drama (Introductory)

all this seems scarcely sufficient to account for the rise of tragedy from this cult, whereas, on the principles set forth above, his connexion with comedy is readily explicable. At most his association with tragedy rests on the slender footing that, since comedy was, in his view, a nature-likeness (through) connected with his cult as a nature-deity, and since tragedy, like comedy, was a division of drama, therefore tragedy also must be associated with him. Cf. and ct. the 'Greek' art. below.

In this connexion it may not be out of place to consider the original meaning of the word 'tragedy,' which the writer hopes to discuss in fuller detail in the more appropriate pages of a technical philological journal, giving such arguments as he can summarise by way of conclusions here. The conventional derivation of ἡγεμόν from ἥγεμος in the sense of 'leader,' while it is a mere guess, does happen to be satisfactory on any of the theories (1) that a goat was the prize for the best performance; (2) that a goat was sacred at or during the performance of the play; or (3) that the actors were dressed in goat-skins. It has accordingly been suggested by Miss Harrison (most recently in Proeoff, p. 420 l.) that tragedy really means 'spleen-song' (from ἤγεμος in its meaning of 'leader,' cf. τραγούδα), and this, in the earlier part of the play, where the mood of the occasion is distinctly a sort of transcendental anger, does appear to be an answer, possibly added by Miss Harrison's own hand, to what has been set down as the natural derivation. The 'lesser tragedy,' ἡγεμόν, is, however, but a variant of the 'greater;' and the shorter form would have been a mere 'lesser' of the song, 'less' in meaning, duly, 'spleen-song.'

The original functions of the drama, as here outlined, were soon obscured among all those peoples, as the Greeks and Hindus, with whom it became a distinct form of literature and amusement. The two features which now became prevalent, and which have remained the most important ever since, were the light vein of comedy and the heavy vein of tragedy, while the religious foundation survived only in isolated and obscure fragments. The two types of performance, comedy and tragedy, meant satire, whether of the 'suffragettes' of his day (as in the Ecclesiasticus) or of the radicalism of Euripides, whom he lashed, and with very good reason. With the rise of the New Comedy, partly represented in the fragments of Menander and, most fully, by Plautus and Terence, we have a comedy of manners which finds its analogues in many of the better-class comedies of the present day. India is conspicuous for having no tragedy, though there are scenes, as in Nāgānanda and the Malatimadhava, which closely approach the tragic, just as in our melodrama.

3. Divisions.—It seems scarcely necessary to elucidate the discussion of the possible subdivisions of the drama, whether of Polonius's tragedy, comedy, history, pastoral, pastoral-comical, historical-pastoral, tragic-historical, tragical-comical-historical-pastoral, of the minute Skr. forms, namely the ten 'sub-forms' (svarapātas; see Lévi, Théâtre indien, Paris, 1890, i. 140 f.), or of the more technical division into classic and romantic tragedy, romantic drama, melodrama, emotional drama, spectacle—without this classification, the modern classifications, classical, romantic comedy, comedy of manners, farce, burlesque, barletta, comedietta, and vaudeville (Hennequin, Art of Playwriting, New York, 1890, chs. vii.-ix.); nor is it needful to consider the problems of the unities, climaxses, catastrophes, scenery, 'business,' and the like. It is, however, worth while to note two forms of drama—a opera, and the morality. The opera, which is a drama accompanied by instrumental music and ballet, is a survival of the very primitive type in which the dialogue was regularly associated with instrumental and vocal music and with dancing; and the writer has elsewhere ventured to suggest that the whole Sanskrit drama is to be considered with an opera rather than with a play (J.A.O.S. xxvii. [1906] 5). The other type of play, the morality, is, of particular value for the student of religion, for in it there is a deliberate effort to present, under as nearly as possible religious teaching. This form of play, to which more special attention will be given in art. Miracle Plays, is found not only in Europe, but also in India, as is evinced by the Skr. Prabhaikasana-introd, Rajastra (Rise of the Moral Drama) (T. J. Taylor, Bombay, 1812, 4th ed. 1853); and that the morality has not ceased to charm in our own day is shown by the welcome accorded, both in Britain and America, to the charming production of Everyman. Finally, it may be noted that, as Brander Matthews say in a lecture, the most primitive form of drama to be found at the present day is that in the lowest type of music hall, with its rough jests and horseplay, its dances (all often of a somewhat questionable character), and its scantly plot.

4. Actors.—The position of the actor in the primitive drama is, of course, a most honourable one; for, where the play was enacting the roles of the gods themselves, he cannot be other than a most highly respected person; the esteem accorded him is precisely what is accorded, e.g., to the actors in the Passion Play of Oberammergau. But this position of honour does not last distant and in China, Japan, India (cf. the Skr. proverbs given by Böhtlingk in his Ind. Sprachke, St. Petersburg, 1870-73, nos. 1503, 2255, 2278, 3165, 5315, 6284), and Rome the actor was regarded as an outcast, this, doubtless, being due to the writer's fear of his rival and his own personality. For example, when the rôles which he was to play robbed him of respect in the eyes of the spectators. In consequence, the actors suffered certain civic disabilities, as when they were debarred from being witnesses in courts of law, or from marrying, or that their descendants were forbidden to compete in public examinations for three generations (cf. also Post, Afrikan. Jurisprudenz, Oldenburg, 1887, i. 171 f.). Equal contempt was manifested towards actresses, so that in India they were classed among courtesans and bawds (Schmidt, Beitr. zur ind. Erotik, Leipzig, 1902, pp. 283, 778 f.) and, as in India and China, many peoples have forbidden women to appear upon the stage, their rôles being enlivened by boys. The same reasons, as the writer has elsewhere touched on, militate against the use of the ordinary actor, too; the only reason for disfavour. To the peculiar temptations of stage life, increased greatly by the wanderings to which the actor is normally doomed, only allusion is necessary. Yet it must not be forgotten that the actor's position is one of extreme difficulty and an unhappy incident; only the faults are generally known, and the brighter and nobler side of the actor's life is too little recognized. Accurate statistics of the moral and intellectual standard of the
acting profession would, doubtless, compare favourably with similar standards of many other professions.

5. The ethical aspect of the drama.—Outside the Christian world this problem seems to have received slight consideration. The Buddhist "Ten Public Nonyms" form the basis of the "Art of Life," but it is rather with the sight of dancing, singing, music, and shows (naccagata-sadavivaha-sana) that we are concerned (Kukko-kojyaha, 3; cf. the citations in Lévi, i. 643); but the history of Buddhism proves that this interdict was ill obeyed (Lévi, i. 319-23).

The ethical position of Jainism against the theatre was the same (Ayiragangattu, xii. xi. 14), with the same disregard of it in actual life; and we have not only the fine Buddhist drama Nagamanda, but also such Jain plays as the Räjämatrakotta (Lévi, i. 323 f., ii. 57).

The chief objection to the drama from the ethical standpoint has arisen from Christianity. In the case of the pagan dramas this can readily be understood. They were pagan, and countenanced idolatry (Tertullian’s first objection to them in his de Spectaculis): they were frankly immoral; and the ascetic tendency of Christianity was against all and against the Roman drama (see below). With the decay of paganism and the creation of a purer sentiment the first two objections disappeared, while the value of the stage as an educational factor led the Church to encourage the theatre. Indeed, in the belief that the theatre was a powerful agent in bringing the less educated to a knowledge of Bible history and in enforcing the Church’s moral teachings (see MIRACLE PLAYS), the whole tradition of the Catholic Church, whether Protestant or Roman, of the elevation of Lutheranism in Protestantism, distinctly favourable to a pure and lofty drama. Far different was the position of Reformed Protestantism. The most fervent admirers of Calvin, Zwingli, Knox, and their followers would be the most reluctant to deny that these men, one and all, set their faces against everything that they deemed folly; nor can the warmest advocate of the theatre deny that much had come into the drama to arouse antagonisms even from men of more compromising type. But, unfortunately, they, as the German proverb has it, “shook out the child with the bath,” and condemned the theatre utterly. In England, attacks on the stage have come almost entirely from Anglicans, as the editor of the Directory for the Reformed Church (1579) wrote, “in Dicing, Daunting, voine Plays or Enter- tuds . . . are reproved (1577-79, ed. Collier, for the Shakespeare Society, 1843), Gosson’s School of Abuse (1579, ed. Collier, 1843), Stubbs’s Anatomie of Abuses (1658, ed. Furnivall, New Shakespeare Soc., ser. vi., 1876-82), and especially Pyne’s Histrio-Mastriz (1832; on all these see Ward, Hist. of Eng. Dramatic Lit., London, 1899, i. 450-461, iii. 230-235). But suppression of the theatre was hopeless, and has ever since remained hopeless. The Reformed Church has, nevertheless, maintained its position; and in this it has been followed by the Wesleyans and, on the whole, by the Baptists as well as by many of the smaller sects of the United States, though here, too, practice lags far behind precept. On the other hand, the Anglican Church, by its Actors’ Alliance, has set an example which other communions might do well to follow.

But is the suppression of the theatre desirable? The writer is inclined to doubt it. That there is much represented on the stage which is utterly vile is only too apparent; and that should be crushed (cf. also art. Censorship). On the other hand, there is an abundance that is of the highest ethical value, and this becomes the more important when it is remembered that the theatre is largely patronized by the non-attending classes. Without entering into a technical discussion of Ibsen, it would seem that his dramas are full of moral lessons of a Puritanical sternness; the fearful consequences of the sins of the fathers in Ghosts, the need of absolute confidence between husband and wife in A Doll’s House, Leopold’s dawning condemnation of hypocrisy in The Pillars of Society. And Ibsen is but one of a host of dramatists who for centuries have conveyed through the stage lesson and sentiment which might otherwise never have received them. There are, moreover, in humanity a real need for the stage; it had not been so, the long-waged war on the theatre would have been crowned with success. From this point of view the question of whether the theatre merges into that of amusements (q.v.), the theatre has perhaps yet another raison d’être, often overlooked. In a famous passage (Post, vi. 2) Aristotle defines tragedy as “an imitation of an action that is serious, complete, and of a certain magnitude . . . through pity and fear effecting the proper purgation of these emotions” (μίας πρῶτος ἱμμένας καὶ τεῖχει, μέγα ἔχοντος . . . δὲ ἔκνευος καὶ φόβου περιέροιν τὴν τῶν τιμίων παθημάτων ἀπέλευσον) and argues that the “appearance of the action is not given by Butler (op. cit. ch. vi) as meaning that the witnessing of a tragedy rouses in the spectator emotions of fear and pity which expel those same emotions that are lying latent within himself, while in the real life the theatre is going on, the passion is spent, an emotional cure has been wrought.” On this principle, the attendance on any good drama would, in like manner, effect a pleasurable and healthy excitement, and a discharge of emotion, like that of the pain so seldom aroused as to be in danger of atrophy.

LITERATURE.—The bibliography of the drama is enormous, though much is irrelevant in the present connexion, and more special branches will be given in the literature of the following special sections. This section has been intentionally restricted to problems of the origin, primitive purpose, and general ethics of the drama; and the history—hers omitted—will be more appropriately discussed in the following sections. There is so complete history of the drama, the most important works on which are Klein, Gesch. des Drama’s (14 vols., Leipzig, 1865-80); Pröss, Gesch. des neueren Dramas (Leipzig, 1883-92); Petit de Julleville, Histoire du théâtre en France (Paris, 1900ff.); Berendt, Schiller—Wagner (Berlin, 1901); Ward, Hist. of Eng. Dramatic Lit. to the Death of Queen Anne (3 vols. London 1890); Seeley, History of the American Theatre (Philadelphia, 1883-91). For interesting studies of some of the great moderns, English Dramatists of To-Day (London, 1882); Huneke, Intimate Actors (New York, 1895); Hale, Dramatists of To-Day (New York, 1904), special attention is drawn to the latter. For a critical commentary on the Poetics of Aristotle by Butler (Aristotle’s Theory of Poetics, London, 1904); Fine Art, London, 1906); Johnstone, The Tragedy of Tragedy, with Special Reference to the Greek Tragedians (Cambridge, 1910). The technical side is conveniently treated by Freytag, Technique of the Drama (tr. MacKean, 2 vols., Chicago, 1900); Woodbridge, The Drama, its Law and Technique (Boston, 1899); Price, Technique of the Drama (New York, 1892); Heinsohn, Art of Playwriting (New York, 1890). For an interesting form of primitive drama among the Maoris of N.W. Siberia, see Gendaz, Travaux de Paganisme among the Aborigines of N.W. Siberia (Russ. Moscow, 1858; epitomized by Schmidt, in Cultur der Germanen, i. part 7; see orientalische Lit., Leipzig, 1891, p. 214).

LOUIS H. GRAY.

DRAMA (American).—In America, particularly in Mexico and Peru, the drama reached a relatively high degree of development. Even at an earlier stage, North American Indian pantomime dances, usually named after the animals imitated, show an approximating form. Thus, among the Dakotas, a youth on admission to full tribal rights was clothed in a bear skin and pantomimically hunted by the members of the tribe—a scene which reminds one of the Greek Thesmophoria. Among the Puebloan Tusayans and Hopis an elementary form of drama is found in the kotinicus, which are primarily spirits of the ancients of the
Hopi, and personations of them are to bear the symbols which are supposed to have characterized these ancestors (Fawkes, 'Hopi Katcinas,' p. 16).

In a secondary meaning katcina also connotes a dance in which these heroes are impersonated; and such dances with the personified gods, are performed in the open air, and occupy, for the honor of the arrival or departure of the heroes or gods. Other katcinas, while equally religious in origin and spirit, are given only occasionally. Some like the annual festivals, the phallic dances, are performed partly in the open air, and occupy, for days; but others are given in the kivas, or assembly-houses, and approximate more closely to the drama proper. One of the latter class, the little known, the phallic dances, is now represented by the Fezews (op. cit., pl. i.-xxii.).

In Yucatan a form of drama was known, in which 'buffoons' (bolum) represented ancient legends, interspersed with jests at the expense of local dignitaries. Such plays have not to have anything to do with religion (Fancourt, History of Yucatan, London, 1854, p. 123). Both in ancient Mexico and in Peru mimetic dances were known (Klein, Gesch. des Dramas, Leipzig, xi. [1874] 97.), the former being the result of festivals and accompanied with phallic gestures. The Aztecs also had, however, a more developed drama, of which an example has survived in the Rabinal-Achi, a sort of ballet with dialogue. This play is concerned with the tragic fate of Prince Cacau Quiche Achi, who is captured after a long struggle by the hero, Rabinal-Achi. As a dramatic production the Rabinal-Achi is of little value, excepting as an interesting example of a play produced by a people devoid of contact with other nations possessing a developed drama.

The Inca amantus, according to Garellaso de la Vega, ii. 20 (tr. by Markham, Hakluyt Society, London, 1899, xli. 194), composed both comedies and tragedies which were presented at important festivals before the king and high nobles, while the actors, who received rich presents for their services, were themselves men of rank. The tragedies 'always related to military deeds, triumphs, and victories, or to the achievements of former kings and of other heroic men. The arguments of the comedies were on agriculture and familiar household subjects. . . . They did not allow improper or vile fancies; but all the plays were on enormous and important subjects, the sentences being such as befit the occasion.'

The only Inca drama which has survived in its entirety, however, is the play of Ollantay, which seems to date from the reign of the Inca Huayna Capac, in the first decade of the 16th century. The scene is laid in the reign of the Inca Yupanki, in the early part of the 15th cent., and the theme is one of love. Ollanta, raised from a humble station to the dignity of a chief by the Inca Pachacutec, falls in love with Cushi Coeyllur, the daughter of Pachacutec, but his suit is denied by the Inca. Ollanta then declares war upon his sovereign, and, though at first successful, is at last betrayed to his enemy. Meanwhile the princess had been induced to love him, and in her turns the daughter, who, however, was allowed her freedom. The captive Ollanta, condemned to death by Yupanki, who had succeeded Pachacutec in the course of the ten years' war, is later spared, and even declared the heir-apparent to the throne. At this juncture, Ollanta's daughter, learning that her mother is a captive, implores the Inca to release her, whereupon he accomplishes this by his return, and in the happy denouement Cushi Coeyllur is re-united with Ollanta. The drama may well have a historic basis, and it is noteworthy that it contains songs which strikingly correspond to the Greek choral song.

Another Inca drama has been preserved, the Ucca Pancor, treating of the love of its hero for the beautiful Cecori-tica; but it has been so changed by later interpolations that it is of relatively little value. Ollanta is the hero, and the Inca—the former a mass of repetition, the latter a work of art, which is most closely paralleled in its supreme devotion to the theme of love, as Klein has well pointed out, with the drama of ancient India. In the Indian—"The Inca—the former a mass of repetition, the latter a work of art, which is most closely paralleled in its supreme devotion to the theme of love, as Klein has well pointed out, with the drama of ancient India. The Indian—"

**LITERATURE.**—Gerland, Antwurfel der Naturwiss., ii. 219 (Leipzig, 1898).—Horovitz, Spuren grec., Miinen im Orient (Berlin, 1905), pp. 18-21; Suchau, Am Epiphagen und Tapir (Leipzig, 1898), p. 66. 2. Dramatic movement in ancient Persia is still an important part in the Arabian farce, the shadow-play, and the puppet-show.

1. Richard F. Burton, in the terminal essay of his new of *The Thousand Nights and a Night* (Bonnars, l883), vol. x. p. 166, says: "Turkey is the only Moslem country which has dared to produce a regular drama."

3. Dramatic elements are still an important part in the Arabian farce, the shadow-play, and the puppet-show.

4. Ahmad says: "Even before birth the daughter who, however, was allowed her freedom. The captive Ollanta, condemned to death by Yupanki, who had succeeded Pachacutec in the course of the ten years' war, is later spared, and even declared the heir-apparent to the throne. At this juncture, Ollanta's daughter, learning that her mother is a captive, implores the Inca to release her, whereupon he accomplishes this by his return, and in the happy denouement Cushi Coeyllur is re-united with Ollanta. The drama may well have a historic basis, and it is noteworthy that it contains songs which strikingly correspond to the Greek choral song.

5. Another Inca drama has been preserved, the Ucca Pancor, treating of the love of its hero for the beautiful Cecori-tica; but it has been so changed by later interpolations that it is of relatively little value. Ollanta is the hero, and the Inca—the former a mass of repetition, the latter a work of art, which is most closely paralleled in its supreme devotion to the theme of love, as Klein has well pointed out, with the drama of ancient India. The Indian—"The Inca—the former a mass of repetition, the latter a work of art, which is most closely paralleled in its supreme devotion to the theme of love, as Klein has well pointed out, with the drama of ancient India. The Indian—"
performances. A similar figure in the streets of Cairo is the well-known, but nowadays rarely seen, funambulist with an occasional show, at midîlîs (birth festivals), and at the fair held every week on the open square below the Citadel. He is the prototype of the coarser, half-idiotic, clownish peasant who, to the music of two flutes and a darâbuka (earthenware drum), performs ape-like, obscene dances and makes absurd jokes. He goes barefoot, and wears a bent tail of stifled cotton; in one hand he holds a long peasant’s stick (nabîbî), and in the other a so-called jargûlî, a kind of long, thick, noisy, but harmless, whip of twisted cotton, with which he constantly lashes his musicians, and even his audience.

The recitations of the story-tellers (râcûf), who were formerly to be found throughout the Arabi Orient, and who related in public places tales from the Arabian Nights, had without doubt, as the manner of the stories themselves proves, a dramatic character; and this is certainly so in the case of the recitations of the modern epigones of the râcûf—their possessors to be found in groups at coffee-houses, recite in coffee-houses the stories of Antar, Abû Zaid, Zahir Bihârî, and other national heroes.

Worthy of note is the fact that Dozy, quoting Poels, has noticed the word détefîr in the meaning ‘acteur, qui joue un rôle (représentateur de comédies, de tragédias).’ Female reciters are also occasionally, though not often, seen at fairs in Cairo.

Of this kind of folk-literature the classical and highest expression was reached by the poems of the Muqâmât, by Hâmidârî (967–1007), Harîrî (1054–1122), and many others. The muqâmât, called by Cheney *a kind of dramatic anecdote,* relates the story of the poet’s successes for the word détefîr (from the meaning ‘acteur, qui joue un rôle’). Female reciters are also occasionally, though not often, seen at fairs in Cairo.

In spite, however, of all these preparatory minnie and dramatic elements in their literature, the Arabs, as has already been stated, have never found their way to the actual drama. At all events, there seems to be no positive proof of the existence of a dramatic art. Occasionally, we meet with the word hijât or hijâh, which means, in all probability, nothing more than the already mentioned tezqâtîl, the mimicry of comic personal characteristics, or the presentation of single or joint mirth-producing events for an audience of two or three as an isolated theatrical piece. The complete lack of all dramatic texts, the absence even of the description of any dramatic

representation, would be, when one considers the numerous chronicles of medieval Arabic amuse-
ments, an absolute indication that this art must be regarded as possible, had there been a stage. The earliest description of an Arabic drama known to the present writer is that given by the famous Danish traveller, Carsten Niebuhr, who visited Cairo a hundred years ago. He describes this performance, which bears a close resemblance to the scenes of Almudân-Al-Far, seems to correspond in form only, not in substance, to our conception of the drama.

The reasons for this curious failure of the Arabic mind to produce anything really dramatic have been discussed upon at length by Jacoby; and he quotes a history of the study of the Arabic drama, showing that out the Muslimah view of life, with its anticlassic idea of God and fate, has absolutely no comprehension of individual conflict, of rebellion against the ‘eternal nover,’ the Muhammad or of any combat between will and duty, and has therefore no comprehension of the dramatic. Joy in tragi-comedy, that most individualistic of dramatic art, never got past the passive feeling and thinking of Arabic a very great absurdity. The artistic pleasure which we feel in the beauty of the awe-inspiring, in magnificent decline, in the grandeur of the desperate battle of life, without hope and without success, is entirely foreign to the Arabic mind. He idealizes, he reconciles, he absolutely conquered, and no Arab poet would venture to represent him in actual conflict. He does not know how to

If never occurs to the Arab to try to determine the main lines of his own life, for there is no strength or power in the Great East, the eye is turned, not to the nearest, to the detail, that which is decorative only; all Arabic art is nothing but detail work, merely putting on the finishing touches; it is not original creation; it has no grand lines, and its figures and forms of art have always come to the people of Muhammad from other hands. Their style is evil, and opposed to all rapid development. For them accumulation, repetition of the same mot, is not tiring or an evidence of bad taste: on the contrary, they consider it a most effective artistic principle. Quick action in the progress of a story, that which is really dramatic, is therefore absolutely unpleasing to the Arabic mind. He really everything with epic breadth, never referring to an already related incident without repeating the whole story to the point of tediousness. Tension in the plot is unknown to him; when he has found a theme that pleases him, he makes variations upon it until the subject is completely exhausted. This is well illustrated by Arabic music. A European listener, after half an hour of such music, with its constant reiteration of the same series of tunes, its indistinguishable variations of the same melody consisting of scarcely a dozen notes, sinks into a state of despair, whereas the Oriental never has enough of it.

The only form of dramatic art which, though probably not originated by the Arabs, has nevertheless been developed to a certain degree by them, is the shadow-play, the hijât eddallî. The history of the Arabic shadow-play, thanks to the thorough investigations of Jacoby and Mendes Liittmann, Kern, Prüfer, Wetzstein-Jahn, and, lately, those of Kahle, is now, in its essential points, very well known. There is undoubtedly no question that the shadow-play was brought to the Muhummadan Orient by Al-Far East. Which of those peoples was the first to cultivate this curious kind of theatrical art, it is

2 Jacob, op. cit., p. 93 f.
3 In using the Arabic, name for the shadow-play, we have chosen its Egyptian dialect pronunciation (classic hijât eddallî).

difficult to say, but there is no great probability that the credit belongs to the Arabs. The earliest mention of the shadow-theatre in Arabic literature is found in the verses of Waghi ad-Din Djihâd, a'Abd al-Karim el-Manawi (13th cent.), quoted by Ghuzaili and translated by Jacob. It is obvious, however, that shadow plays have long been known in Egypt before that time, because Ibn Hjige speaks of a shadow-player who performed before the Sultan Salâh ad-Din (1169-1193) in Cairo. From this time onwards there is evidence of an Arabic shadow-stage, especially in Egypt, which, though Jacob of Andalucia seems always to have been the land where the hajal ed-dill has flourished the most, has been proved by several passages in Oriental and Occidental literature. If Kahle, influenced by statements made by a modern shadow-player of Cairo, and by the self-glorying poetry of the father of the same player, thinks that the hajal ed-dill was unknown in Egypt from the beginning of the 19th cent. until about 1880, the present writer fears that his opinion is not wholly tenable. There is evidence that the shadow-play existed during this period of time in Egypt. Lane, for instance, of whom Kahle asserts that he does not mention the shadow-play in a simlar work of shadow-play, although the hajal ed-dill (sic) which he mentions was given in the Turkish language. It is not clear from the statement of Didier, who saw a lanterne magique (karâ-guârêz) in Cairo, in the 17th cent., whether it was a Turkish or an Arabic performance, but at all events it was a shadow-play at which he was present. The probable truth of the matter is that the play did in fact become for a time almost obsolete in Egypt, and that the Qasas, the son of Kahle, the informant, the self-styled re-inventor of the play in this country, came into possession, in some manner, of the old manuscripts, and may thus very likely have acquired an influence on the development of the play. Certain it is that the Egyptian shadow-performers of to-day regard El-Qasas and his son Derwîs as their masters. Some of the manuscripts are now in Kahle's hands.

Kahle's texts and three pieces written by the Egyptian physician, Muhammad Ibn Daniâyîl in the 12th cent. A.D., are up to the present time the only two known shadow-play manuscripts. The poetic form that is common to both has given place, in the modern productions, to a prose dialogue, which is occasionally interwoven by songs and passages in rhymed prose. In the Syrian pieces, published by Littmann, the poetic lines seem to be entirely lacking. The pieces of Ibn Daniâyîl have disappeared from the present shadow-stage, while Kahle's plays, although in essentially different form, are still given in Cairo. The repertoire of the Cairo shadow-players is not very large; only the lîb eddrâ, consisting of many acts (faist), and the much shorter lîb 'elmânîbî, undoubtably influenced by the Turkish Karagoz-play, Karahqojan, are still frequently known. The pieces mentioned by Prüfer and Kern are very seldom given, and then only by special request. The above-mentioned Syrian plays are, in material and dramatis personae, much nearer to the Turkish Karagoz than are the Egyptian pieces.

The shadow-theatre, as a folk-entertainment, can hardly be said to fill an important rôle in the Arabic Orient. In fact, most of that which is indigenous, including native art-ideas, is slowly disappearing behind a thin veneering of European culture. The Europeanized efendi snobbishly prefers the Frankish theatre, even though it bore him, to his own native stage; and the sch and small bourgeois do not dare to risk their reputations by letting themselves be seen in the obsure dens in which the shadow-play has been obliged to take refuge from European innovation. Thus there now remains only the lowest class to form an audience for a pantomime, of which an unknown Arab poet has written:

1 A meaning deep is in the shadow-play
For him who sits on window's highest throne.
Figure and forms pass by and away;
Then all is gone, the ruler stays alone.

The scenic apparatus (ubâd of the hajal ed-dill is the simplest imaginable. The musician (llazz) sets up his khiâl, a movable wooden booth, wherever he wishes it; there he sits behind a tightly stretched muslin curtain (bâb), which is lighted from behind by a primitive oil lamp (liâla), and presses the transparent veils to other figures against the curtain by means of wooden sticks fastened to the figures at the back, and serving at the same time to move their limbs. The player is supported by his trumpe (gûg), who help him with the manipulation of the figures and register the different roles.

The only shadow-stage where continual performances were given, the little theatre in the ill-famed Cairo Fish Market, has been closed by order of the police, since the beginning of the summer of 1909; so that, for the time being, at any rate, the play can be seen only on the occasion of folk-duties or, sometimes, at weddings and other family merry-gores in the outskirts of the city.

As Kahle tells us, figures older than forty years are not to be found in the hands of the Egyptian shadow-player of to-day, and one can hardly judge from the present figures, which are old ones were like. Derwîs shows, with pride, pictures and fashion-plates of the early seventies, and says that they were the models for the modern figures.

Besides the hajal ed-dill, there exists in Egypt a marionette show, whose hero bears the same name as the protagonist of the Turkish shadow-play—Karagöz, pronounced in the Cairo vernacular, Aragöz. Under this name the puppet-show is mentioned in the Description de l'Égypte. C. C. Nielsen also describes at length the Cairo marionettes. The picture, however, which he...
shows on plate xxvi, does not give a correct idea of the modern marionette stage, and very likely not of the old one. Didier's speaks of 'poleleinlike arabs'.

The only Aragoz-play known to the writer at the present time [191] is the "Alfi Alimi" of Hulaj, who has been in the Turgutshin quarter. His little theatre is even simpler than that of the shadow stage; it consists of a folding booth of cloth, not much higher than a man's head, the other side is somewhat lower than the other sides, and the player sits inside this booth, moving on his fingers, just above the edge of the front side, the roughly made wooden figures, which are dressed in bits of coloured cloth, the puppets being visible to their hips.

More than two figures cannot appear at the same time. The répertoire is very limited, and, just as in the Turkish shadow-play, but in contrast to the Egyptian hojal eddil, some types of the dramatis personae reappear in every play (if these loosely-strung scenes and dialogue can be called plays): e.g. Aragöz, the cruel, stupid, yet sly clown, similar to the characters Punch, Kasperle, and Pulcinello, and the dialect types, such as the loud-mouthed soldier, the unclean 'Habibi', and the Italian or Greek priest; then the saucy beggar, and the different female figures from the lively Egyptian quarter. A characteristic feature of Aragöz is the high, nasal voice, produced by the player at the back of the booth in a little whistle which he holds in his teeth. Aragöz wears the türāf, or pointed foot-cap. The player has an assistant who joins the audience and carries on the conversation with Aragöz when the latter is alone on the stage. This addresses the ladies.

Considered aesthetically and as an element in the development of Arabic culture, the Aragöz-play stands on a much lower plane than the hojal eddil. Written texts apparently do not exist, and the tradition has therefore not much stability. Improvised jokes and the mood of the player change the wording of the piece without let or hindrance. The show is occasionally to be seen at fairs and at weddings of the lowest order. A feature is, one faces or marionette play, dictated to the writer directly by Ahmad el-Hulajri:

Aragöz: es-salam alaikum khalil ibn arwārah salmā, allāhumā aśghar tawāfīna, bism allāh al-aṣma' un ash-hadat. (Benjamin)

Aragöz: it-ka minus walla malakat. (Benjamin)

Gindi: ana ba'din asmut wi-

pean style, called it Ellahābī (‘The Miser’), and soon afterwards produced it in his own house before an invited audience, amongst whom were all the foreign consuls and the governor of the Lebanon Province. The actors were young friends of his, selected for their good looks, and this attempt to establish the theatre was followed by success only in 1830, Abu ‘l-Hasan al-Muhyūfī, a dramatic version of the well-known story of Harūn ar-Rasid and Abu ‘l Hasan from the Arabian Nights; and then, encouraged by the success of this, a second, by the other Nasqās, Muhammed, with the permission of the Sultan, founded in Beirūt a permanent stage, where he brought out his Rihāyāt el-hasī (‘The Jealous Man’). The plays of his brother Niqūla, Elīsh el-bahdī (written 1844), and Elīsh al-Qirānī (written 1852) also made their first appearance in this theatre.

In 1855, while on a business trip, Mārūn died of fever in Taršās, and two years later his body was transferred by his family to Beirūt and there buried with great ceremony.

After Mārūn’s death the theatrical art suffered a decline, and it was not until 1860 that Niqūla Naqqās resuscitated the Rihāyāt on his brother’s old stage. In the same year Niqūla published, in one book, Mārūn’s three plays, which are a kind of light opera, comedies with musical accompaniment and interspersed with numerous songs and dances.

We give, as an example, the contents of the first piece. The episode occurs with the marriage of two peasants. An old peasant, advanced years, has made an agreement with the greedy old Tarshāli to marry the latter’s daughter Hind, a young widow. He comes for the wedding to the house of the Tarshāli, but Hind loves young Iskandar, the friend of her brother, Ghāli. These three, and the old servant Umm Bāhiya, slyly plot together to make Qarāid give up his plans of marriage, and at the same time to part with some of his beloved money. Hind makes such extravagant demands of Qarāid that he finally wishes nothing more ardently than to rid her of Hind. Hind, however, now declares that she will not release him; in the meantime, Ghāli appears, disguised as a Turkish agha, with his secretary Iskandar and several soldiers. By means of threats and thrashings they force Qarāid to pay Iskandar a large sum of money as a compensation to Hind, who thereupon marry’s Iskandar. Finally, the supposed Turks confess their deception to Qarāid, who is by this time very much ashamed of himself, and freely forgives them.

The language of the play is affected and heavy, the piece itself, with its five weak acts, extremely tiresome. When the author makes a joke, the publisher thinks it necessary to call the reader’s attention to the fact in a footnote. Here again we have, as the comic elements, the dialect types—Umm Bāhiya the peasant woman from Lebanon, Ghāli the Turc, and Iskandar the Egyptian secretary.

And in the influence of the brothers Naqqās, several theatrical companies were formed in Syria; but, as there were no trained actors to be had, the authors or translators saw themselves obliged, if they wished to have their plays produced, to form acting companies of translators. Famous as author, director, and régisseur all in one person, were especially Sch Abū Hāli el-Qubānī in Beirūt, and Iskandar Farah in Damascus. The latter, more organizer and actor than author, was born in Damascus in 1855, the year of the death of Mārūn Naqqās. He attended the Jesuit school in that city and there became acquainted, through amateur school dramatics, with European drama. Encouraged by Mīhad Fashā, who lived at the time in Damascus, in the family garden, his first play, a translation from the French, he then moved to Beirūt, where he joined with Sch Abū Hāli in forming a theatrical enterprise; but owing to intrigues his licence was taken from him, so that he was compelled to settle permanently with Abū Hali in Cairo (1882), where he and his partner had already made successful tours. From this time dated the existence of a theatre in European style in Egypt. In the Göz el-Nayr (‘The Free Spirit’), from the Stakes of Saad el-Qaddār (Aziz in Cairo) 1

1 See Arzat Lūbān, p. 4: ‘... The play Ellahābī, which was the first play given in our Arabic tongue ....’

2 Arzat Lūbān (Beirūt, 1869)

a great many pieces—mostly translations and only a few original works—have appeared above the footlights.

This theatre has not proved to be a success of late, owing partly to the success of the theatre of Iskandār Farah, which gained especially because of the attitude of one of the actors, Sch Salām al-Hiyyūnī, whom Farah himself had fought. Salām separated from the master and continued his work in the Dar rittānī al-arab, and induced a number of Farah’s actors to accompany him. In contrast to the Christian Syrian and Iskandār Farah, Salām was a Muslim and an Egyptian, and that was enough to secure him the affections of the Cairo public. Then, too, he had a better actor than the master and more performance than his old master had done, and the Egyptians love nothing so much as singing and the noise of their national orchestra. In 1890, Sch Salām had an attack of stroke which partially paralyzed him, so that his acting days are probably over.

A number of small wandering theatrical troupes have branched off from the theatre of Iskandār Farah. One often stumbles upon them in Syria and Egypt, and as far as is known in Egypt are the companies of Awawd Farah, Aḥmad Ḥiyyūnī, Farid al-Ahmād, and Sch Abū al-Samī. The last named was to be seen in the winter of 1908 in Luxor in Rome and Juliet. The late Naqīb el-Haddād, one of the best of the first type, performed European plays, also experimented with a troupe of his own. In Syria, ‘Azīz ‘Id and Rabīnī Bībīs are the chief followers of Iskandār Farah’s school; the only one of Farah’s pupils who went to the Maghībir—Solīmān el-Qūdāh—died in the summer of 1909 in Tunis.

Amateur theatrical clubs have been started in several places in Egypt. The most important of these is the Gāniyyet el-Mulāri (in Cairo); it was founded by Sch ‘Azīz al-Mulāri, and is still under his direction. There was a similar club by the name of Gāniyyet tarqāqī tittānīl dā'wīl in Mas‘ūdā. It is utterly impossible to give an approximately complete résumé of the number of operás and dramas of the literature of to-day, as there is an unusually great productivity along this line at the present time. Most of the works are translations, of which the only really valuable ones are the excellent renderings, in the vernacular, of some of the writings of Racine and Molière by the late Mūhammad Bā‘ Othman Ga‘al. Unfortunately these pieces, in which the highly talented translator has shown his ability to render the tone of the originals in the idiomatic phrases of his country, have never been recognized by the stage. The stiff, ridiculous Shakespeare translations do not show the least trace of the spirit of the great British master, and still less worthy of mention are the childish and extremely coarse, probably Foreign, productions of this period. A little better are the different dramatizations of the stories from the Arabian Nights and others.

1 We are indebted to Mr. Tābīb Farah, the brother and manager of Iskandār Farah, for the greater part of these statements.

3 For examples see Romeo and Juliet, by Shalde and ‘Ataih, and Othello.

4 Hermanni, Marie Tudor, by Victor Hugo; Katherine Howard, by A. Dumas; Frondeuse, by Sardou; Savoie Torri, by Omet; L’Ambitieuse, by Ch. de Rémusat; a translation from Elīsh el-masīhī (Turks) by Ahmād ‘Arīf, etc. The last mentioned are all translations of works by the already mentioned Naqīb Bā‘dād, and ‘Abdul ‘Abdūl, Hubāl ‘Azmūr, Farīb ‘Atajī, ‘Abdul Rūsān, ‘Abdul ‘Azīz, etc.

5 From the Arabian Nights have been dramatized, among others, the acts of Habīb al-Rahmān al-Naqqās, by Ahmād Wāṣ, and ‘Imām al-Galīs, by Abū Hāli el-Qubānī.
from the Arabian history and hero-legends. The only other class that is somewhat worthy of notice is the so-called with a political purpose. Here genuine feeling has succeeded in instilling a little life into the lifeless, stilted, Arabic literary style.

Whether a well-developed branch will ever grow from the scion of Western drama that has been grafted upon the Arabic literature seems to the present writer to be somewhat doubtful, and it is not only the lack of dramatic feeling, natural to the Arab through race and religious peculiarities, that prevents them from playing the drama in that art; it is also the character of his language. The Arabic literary language is petrified—an artificially preserved corpse, which pleases only its preservers, the literary gild and the leam. The people hardly understand this language, and do not recognize themselves or their feelings when so presented to themselves. The living idiom, on the other hand, that in which the Arab thinks and speaks, is scorned and regarded as vulgar by priests and pseudo-learned men, who see the end of their own glory in the decay of that idolized, thousand-year-old mummy, the fetish of the holiness of God's language. Before anything great can be created, either in the province of the drama or in Arabic literature, the intellectual and moral forces must center to work with forms, words, and metaphors of the language of nomadic desert tribes of fifteen hundred years ago.

LITERATURE.—The literature has been given fully in the footnotes.

CURT PFEIFFER

DRAMA (Chinese).—Music and dancing are frequently mentioned in the Chinese classics. For instance, in the days of Confucius we read of the services held in the ancestral temples of princes and great nobles, when there were men arranged in rows, who moved in time with the music, and brandished feathers, flags, or other articles. Moreover, in those times, and even later, dancing of a slow and dignified character formed part of civil as well as of religious ceremonies. Thus public feasts there were performances representing the joys of harvest, the fatigue of war, the pleasures of peace, and suchlike subjects. According to one theory, the regular drama was gradually evolved from these displays; but there are persons who maintain that it was purely exotic, having been introduced into China from the West. One writer says, perhaps with some boldness:

"The whole idea of the Chinese play is Greek. The mask, the music, the dance, the song, and the scene are Greek. "The Chinese took the idea, and adapted it to the play from their own history and their own social life." "The Chinese constructed, and, as they used to say, treated the mask and language as Chinese."

(Qu. Dyer Ball, Things Chinese, p. 707.)

The highest literary authorities among the Chinese agree in dividing the history of their drama into three distinct periods. The first of these is the latter part of the T'ang dynasty (A.D. 720-900); the second, the Sung dynasty (A.D. 960-1126); the third, the Chin and Yuan dynasties (A.D. 1126-1357). One very great writer of the 13th cent., Ma Shih-chin, gives a name of 720 plays of the earliest date; but it is generally agreed that his view was based on a misconception.

No specimens of the T'ang dynasty plays have been preserved; but it is said that they were historical; and also that plays were played of which the prologue was recited by an actor called the 'introducer of the play.'

In the time of the Sung dynasty, it was customary

1. e.g. Rivoitout Shab addin, by Naghi el-Hbib, Alexandria, 1906.

2. The most prominent are Rivoitout et-Arhow (Cairo, 1900), and Rivoitout Brahméni (Cairo, 1907), by Hussen Mar. The latter is reviewed in the Revue d'Etudes du Monde Musulman, vol. xii, Dec.-Nov., nos. 11-12, Paris, 1907, pp. 591-599. The reproduction of both pieces is forbidden by the Egyptian Government.

1 to sing the greater portion of the play. The plot was very simple, and everything was sacrificed to the lyric parts. Further, the action was hindered by a complication limiting the number of the actors in the play to five.

The third, or Yuan, period is the golden age of the Chinese drama. The plays written at that time, or shortly afterwards, not only surpassed their predecessors, but have never been equalled by later writers. Moreover, the alterations and novelties then introduced have since remained unchanged. Indeed, it may be said that the drama of the Yuan times *is to all intents and purposes the drama of to-day* (H. A. Giles, Chinese Literature, p. 258).

The list of the Yuan dramatic authors comprises 65 persons, of whom four were women ('actresses,' as the name by which they are described should probably be translated). There are extant 564 plays, of which 105 are by anonymous writers. Practically all kinds of subjects are represented among them. There are mythological, historic, religious, and domestic plays; comedies of character, and comedies of intrigue. There is no formal division into tragedy and comedy; but a play belongs to one class rather than to the other, according to the subject and the way in which it is treated. Every prank in life is represented, from the Emperor to the humble girl. Even animals appear and speak. It is nominally illegal to put on the stage Emperors, Empresses, and great men of old; but the law is entirely disregarded. The dialogue is in the ordinary spoken language, varying in some respects according to the position of the character speaking. In the historical plays it is further removed than in the others from the language of common conversation. There is no offensive, but the actors constantly break out into song. The songs express the most passionate parts, and therefore they are given only to the leading characters.

A play consists usually of five acts, or rather of four acts and an introductory part, called 'the opening,' in which the principal characters come on, describe themselves, and give any information that may be necessary as to former doings. If there is no 'opening,' the descriptions and information are given in the first of the four acts, and the unfolding of the story is left to the acts. As there is no curtain to fall, and no stopping at the end of the acts, the distinction between them is hardly noticeable on the stage. Entries and exits are marked by means in the books, and so are the intervals, for which the gods then fall into song. A famous play called The pa-ki consists of 21 scenes, or, according to another arrangement, 42 scenes.

In theory every Chinese play should have a moral object, and the serious drama is supposed to place on the stage scenes which will lead the spectator to the practice of virtue. Actually, their tendency is on the side of justice and morality; and, as regards decency, they are, at any rate in their written form, entirely free from objection.

In addition to the serious pieces, which form the bulk of the plays acted, there are also farces, which are generally brought in at the conclusion of the bill, and are highly appreciated by the audience. They depend for their attractiveness upon the droll gesticulations, impromptu allusions to passing occurrences, and excellent pantomimic action of the performers (S. W. Williams, Middle Kingdom, 716). In these farces there is much 'gagging,' and the actors often lapse into coarseness.

To return to the serious drama. It is true that Chinese plays do not, as a rule, possess much intricacy of plot; but we think that their merits, in many respects, will not be denied by any one who
can keep in mind that both Chinese ideals and Chinese modes of expression often differ considerably from our own. They are certainly remarkable in both distinctness and consistency of characterization. As regards other qualities, a very high authority has recently said of the famous 'Story of the Peacock' (both Ebr 21, viii 486) that 'the pathetic in the conception and the main situations of its action, but includes scenes of singular grace and delicacy of treatment' (A. W. Ward, in Ebr 21, viii 486). Of another great play, 'The Sorrows of Han', its composer John Davis, wrote that 'the grandeur and gravity of the subject, the rank and dignity of the personages, the tragic catastrophe, and the strict award of poetical justice, might satisfy the most rigid admirer of Greek rules' (Chin, p. 92).

In order to give the reader some idea of what the Chinese historical drama is like, we insert here a short sketch of this play. The events described in it are partially founded upon facts. The scene is laid in the 1st c. E., at a time when China was weak and the Tartars were strong.

The play opens in Tartary. The Tatar Khan appears, and announces to his kinsmen with an authoritative right, he has sent to demand of the Emperor of China the hand of a princess. The second scene is in China, and shows the Emperor's minister in conversation with the task of selecting beauties for his harem. The minister discovers a maiden of surpassing beauty, and the parents a large sum of money as a bribe, but they are too poor to give it to him. He therefore contrives that, though the maiden is admitted, it is not known to whom the charms shall descend. The lady is sent to the Emperor. A chance causes them to be discovered, and she becomes the Imperial favorite. The Chinese minister is sentence to death; but he escapes, and takes refuge at the court of the Khan. To revenge himself, he shows the Khan the lady's portrait, and he would have come in response to the Khan's demand, but the Emperor would not permit her; he (the minister) had remonstrated with his master for thus embroiling China, that he had been forced to die for his life, if the Khan demand the princess, and she must be given to him. The beauty is sent to the Khan, and the Khan's envoy asks for a large sum of money as a bribe, but the princess refuses it and makes her way to the Emperor. Next, the lady, now a princess, is adorning herself in the palace; the Empress comes in, and shows her a portrait, and asks for admission. The chief minister enters and reports the arrival of the envoy with the Khan's demand. The envoy is received. After the audience the Emperor takes counsel with his ministers. He wishes to appeal to arms; but the case is adjudged hopeless.

The princess declares her willingness to sacrifice herself for her country's sake, in spite of her love for the Emperor. The Emperor at last consents, and the sad parting takes place. The Khan sees about a thousand of his troops crossing away the pass of the army. The army is on the march. It arrives at the bank of a river, and the Princess asks the Chinese emperor, 'Shall I dress the Khan? Great King, I take a cup of wine and pour a libation towards the south, my last farewell to the Emperor.' Sheds a tear, and with the offering she says, 'Emperor of China, this is my last offering; I await thee in the next.' She throws herself into the river and is drowned. The Khanhtmlante, orders her burial, and declares that she shall remain in peace with her father.

In China. The Emperor is wandering in the palace at night, still mourning the loss of his beloved. He sees the princess, escaped from her captors, appearing to him in a vision. A Tatar soldier comes in and carries her off again. The Emperor awakens to fresh grief. The arrival is announced of a Tatar envoy. He is come to tell the sad story and bring back the faithful minister. The traitor is led away to execution.

We think the reader will acknowledge that this story is well fitted for dramatic representation.

The scenery of a Chinese theatre is very simple. It consists of a few mats, perhaps rudely painted, arranged at the back and sides of the stage, and some backcloths, of various purposes, and are brought in from the rolling rooms as required. The imperfections of the scenery are made good by simple devices: a courier, on being despatched, seizes a whip, and lifts his leg as though he were mounting a horse; passing over a bridge is indicated by stepping up and then down, crossing a river by imitating the rolling motion of a boat. The actors are dressed in costumes appropriate to their parts, and of antique style. The red scarlet, magenta, and saffron silks and satins and really magnificent embroideries, which have cost large sums of money; but in the humbler theatres they are much tarnished and worn.

Only in Peking and the great towns of the North are there permanent play-houses. The simplicity, however, of Chinese theatrical arrangements enables performances to be given without difficulty all over the country, even in small towns and villages. Subscriptions are collected on the occasion of a festival, and not only to provide a reward to the performers and their neighbours a treat. A travelling company of players is engaged; and, in a couple of days, sheds, which serve their purpose sufficiently well, are erected, at little cost, with rough planks, poles, and mats. Curiously John Davis, wrote that 'the grandeur and gravity of the subject, the rank and dignity of the personages, the tragic catastrophe, and the strict award of poetical justice, might satisfy the most rigid admirer of Greek rules' (Chin, p. 92).

In the acting editions they are usually short, but a very large number are produced on such occasions.

As was the case not long ago in France, the profession of an actor is, at least nominally, considered disreputable. Members of it are classed with barbers and domestic servants, and, with their sons and grandsons, they are not allowed to compete in the public literary examinations.

Translation of French of several Chinese plays will be found in the published works of A. Bazin and Stanislas Julien.

T. L. BULLOCK.

DRAMA (Greek).—I. Origin of the drama.

From the time of its origin down to the days of its latest representatives, Greek drama was closely associated with religion. A Greek tragedy or comedy was a religious service rendered by the State to one of its gods. Plays were performed only at the festivals of Dionysus—at the Lenaia, the festival of the wine-press in January; at the city Dionysia held in the villages in December; and at the city Dionysia in March (this the most important and brilliant). There was no long season, and plays were given all day long during the festivals, the spectators paying no admission fee except what the State provided, and often bringing their own lunch and cushions. Not until the 3rd c. B.C. did the drama, as was natural, become a secularized performance arranged by the hand of the troupe and often financed by private liberality.

The development is paralleled in medieval times by the mystery and miracle plays, the religious pageants, and the mystery pageant, which serve many purposes, and are brought in from the roving rooms as required. The imperfections of the scenery are made good by simple devices: a courier, on being despatched, seizes a whip, and lifts his leg as though he were mounting a horse; passing over a bridge is indicated by stepping up and then down, crossing a river by imitating the rolling motion of a boat. The actors are dressed in costumes appropriate to their parts, and of antique style. The red scarlet, magenta, and saffron silks and satins and really magnificent embroideries, which have cost large sums of money; but in the humbler theatres they are much tarnished and worn.

that his tragedies were but crumbs from Homer’s table. But historically the drama, though latent in the epic and drawing upon it for subject-matter and plot, reached its own form, that of the tragedy, especially in the messenger’s speeches, developed out of the lyric—not the personal passionate lyric of Archilochus, Sappho, and Alcman, but the choral lyric of a disciplined chorus chanting in unison to the metre of the dance. This choral lyric of Alcman and Steichorchos, which later reached its zenith in Simonides, Bacchylides, Pindar, and the choruses of the Greek drama, flourished chiefly among the Dorians of early Sparta, Sicily, and Mycenae in Greece. There were many forms, such as hymns to the gods, marching songs, dancing songs for boys and girls.

We have preserved to us, on a papyrus discovered by Mariette in Egypt, a partheneion, or highly dramatic virginal song, by Alcman, which consisted of 140 verses in ten strophes of which the first two and part of the third are missing. This song gives a pretty picture of a dance of Spartan maidens in honour of Artemis, by the banks of the Euripus, as we see on a beautiful Attic red-figured crater in the Museo di Villa Papa Giulio at Rome (cf. Furtwängler-Reichhold, Griech. Vasenmalerer, Munich, 1904, pls. 17-18). The chorus addresses the poet, and the poet speaks to the whole body of dancers or to an individual.

This kind of choral lyric combined with its praise the epic recital of a local or national or religious legend.

The specific and immediate origin of the Greek drama, however, is in one form of this choral lyric—the dithyramb or hymn, usually to Dionysus, though not confined to his ritual. The word ‘dithyramb’ first occurs in Archilochus (fl. c. 670 B.C.), where it is to be used to any great extent, that dithyrambic triad and tetrameter, the two chief metres in Greek tragedy. We do not know its derivation. Many etymologies might be given, each more absurd than another. Originally it may have been an epithet of Dionysus, the name not of the hymn but of the god to whom the hymn is sung, commemorating possibly his double birth from Semele and from the loins of Zeus—the scene on Greek vases which perhaps was the prototype of the first representations of Eve springing out of Adam’s side (cf. Eurip. Bacch. 319 f.). More probably ‘dithyramb’ is connected with the thríamboi, nuncing ‘mad song.’ It appears from Archilochus that the dithyramb was either a banquet song or more probably a popular rude rustic hymn in honour of Dionysus, who introduced from Thrace the wild orgiastic ceremonies so foreign to Greek sobriety. Out of these rustic dithyrambs— not always licentious, but often solemn hymns—after they had received a systematic form under the Dithyrambic Chorus, tragedized by Aristophanes (cf. Aristoph. Poet. iv.). The dithyramb, pathetic as well as comic, flourished throughout Greece long before Arion of Lesbos (600 B.C.) gave it a distinct artistic and recognized form, fixing the number of the chorus at fifty and dressing them in the likeness of satyrs, half-animal, half-human, with the legs, ears, and snub-nose of a goat; although, according to Herodotus (i. 23), who tells the famous dolphin story about him, Arion was the best lyrist of his time and the first to compose, name, and teach the dithyramb at Corinth. His chorus had fifty satyrs or goat-men, the same number as we find in the earliest play of Æschylus, the Supplices, noted for its depth of religious feeling. The chorus of satyrs (dithyrambic) sang (singers of goat-skinned and danced and sang about a circular orchestra, and so were called a cyclic chorus (from κύκλος, the orchestra) or tragic chorus (from τραγῳς, a goat or satyr; cf. Æsch. fr. 297). Of course, this chorus of satyrs in later plays by a chorus appropriate to the plot, except in the Satyr-drama, which retained the satyr chorus; but tragedy originally meant a goat-song rather than a spelt-song, as Miss Harrison (loc. cit. infra) argues. This is also more likely than that the goat was the prize, because other prizes were given, and the bull was equally associated with Dionysus. Dionysus was a bull-god as well as a goat-god, and often appears in Greek art with bull’s horns. He had no monopoly of the goat-skin, which was the primitive costume in ancient times, and is worn by peasants in Greece to-day and at modern Dionysiac plays in Thrace (cf. JHS, 1907, p. 191 ff.) and at the performances of the Thesmophoria. The bull of rude dramatic times is difficult, then, to agree with Farnell that the origin of Greek tragedy is an ancient European mummary which was a winter-drama of the seasons, in which the Black Personage, Dionysus Mæđææo or Mæđææ, killed Xanthis, the Fair One, the actors wearing the black goat-skin of their god.

The word ‘tragie’ did not mean at first dramatic or pathetic, and Aristotle (loc. cit.) says that the grotesque diction of earlier times was not discarded till late for the tragedian’s art. The dithyramb soon became associated with the pathetic, because the habitual theme of the dithyramb was the adventures and sorrows of Dionysus, the new religion which had to struggle to win its way. The limitation of Dionysus was thus a service to tragedy.

Many elements, therefore, combined to make the Greek drama, but the main one was the worship of Dionysus, the god of wine, vegetation, and moisture. Dionysus, the youngest of the Greek gods, a mystic Phrygian divinity who came into Greece from Thrace and Caria and became the chief genius of Muses and the Dionysiac Mysteries in which Dionysus or Ἰάσων was associated with Persephone, the fates and burthenesses, as at the later sanctuary of the mystic chthonic Cabiri near Thebes, who became closely connected with Dionysus, and the rude choral songs and mimetic dances contributed much, but they were all swallowed up by the coming of Dionysiac whose cult spread over the whole Greek world and was easily grafted on the native worship. Cf. and cf. DRAMA (Introductory).

Ridgeway makes large use of this to support his theory that the origin of Greek tragedy was in the worship of the dead. There is, to be sure, much of this in our extant dramas, since they naturally deal with death for the most part, and undoubtedly the worship of the dead, the Orphic and Eleusinian Mysteries in which Dionysus or Ἰάσων was associated with Persephone, the fates and burthenesses, as at the later sanctuary of the mystic chthonic Cabiri near Thebes, who became closely connected with Dionysus, and the rude choral songs and mimetic dances contributed much, but they were all swallowed up by the coming of Dionysiac whose cult spread over the whole Greek world and was easily grafted on the native worship. Cf. and cf. DRAMA (Introductory).

The opposition to his worship in Thrace is embodied in the story of his harsh treatment by Lycurgus (II. vi. 132; in Bocca in the legent of Pentheus, the subject of lost plays by Thespis and Ἀσκλῆ, and of the most famous of the Dionysiac plays of Euripides, the Bacchae, written at the court of Archelaus at the very birthplace of Dionysiac performances. The village of Eleutherai claimed to have been founded by Dionysus and to have been his birth-place, whence the archaic wooden image, or ἔμαρτος, of the god was brought to Athens by Pegasus to the precinct beside the Dionysiac theatre on the southern slope of the Aeropagus, where in the front row is still to be seen the seat of the chief priest, ἱερὲς Ἐκευόμοιος, no named for the Eleutherai. At the first othon, the founder of Greek tragedy, was born, there was a story, of which there are many illustrations in art, that Dionysus came and was hospitably received by the farmer Iearus. Dionysus gave
him wine, which the people thought was poison, and they slew Icarus. Erinone, his daughter, danced herself, and Dionysus sent a plague, which was appeased by instituting the festival of the swing.

The Americans excavated Icaria in 1885 and found many inscriptions illustrating the origin of the Greek drama and many traces of the veneration of Dionysus (cf. Dionysus in Greece, 1891, pp. 104-117; Frazer, Pausanias, i. 401 f.; Papers of Athens, vol. ii. 1893 i. 4 f.; Nomos, Dionysiaci, bk. xliii.).

The story was a favourite subject in the Greek drama. Phrynichus, Phileocrates, Cleophon, and others treated the theme, although it was avoided by the Sophocles. The theme was not treated where the story of the waking of Ariadne is laid, Crete, Corinth, Athens, and other places are also intimately associated with the beginnings of the Greek drama and Dionysus. Dionysus was the god of life, entwined between the lips and hearts, rightly called Dionysus Eleutherus. His orgiastic and religious influence was connected with the resurrection of life and immortality (cf. Wheeler, Dionysus and Immortality, 1899). Legends told how the god slept in winter and awoke in summer, or was bound in winter and released in spring. Flogging also filled an important rôle in the rites of Dionysus, as in the Dionysia of Athens. The Dionysiac rites were flogged in being initiated into the Dionysiac rites (cf. Paus. viii. 23. 1, and the recently discovered Pompeian painting, Notizie degli Scavi, 1910, 4, pl. xxvii.). At Delphi, the centre of Greek religion, where a ceremony described by Plutarch represented the god's resurrection and the waking of the new-born child after his winter sleep, he was important enough to have his coffin beside the image of Apollo and to share with him the podia-mus. So the god of sorrow and pathos, acquainted with grief. What more natural than that tragedy and comedy should arise in the worship of a deity the thought of whom covered the whole field of human emotion, whether grief or guilt, a complete and sacred representation of the whole of life? Even before the coming of Dionysus there were the crude beginnings of the drama. If we seek the ultimate and final source, perhaps we can find it mainly, but not entirely, in the cult of the dead. The main real historical source was the poetical and literary inspiration of the wine-god, especially as exhibited in the dithyramb. Aristotle rather than anthropology should guide us in this question.

Aristotle said in his Poetics that Arion was the first to compose a satyr-drama. During the performance of one of his plays in competition with Eschylus (499 B.C.), the temporary wooden seats collapsed, leading to the erection of a regular theatre at Athens. He composed the great satyr-drama. The Dionysiacs are composed of the lyres and the chorus, which is used in the Dionysiac festival. The Bacchylides, the first to compose a satyr-drama, were Eschylus, Sophocles, and Euripides, whose plays are full of religious and ritual ideas (discussed in the articles on them in this Encyclopaedia). Eschylus added a second actor, thus introducing true dramatic action, and diminished
the songs of the chorns. Of about seventy dramas by Æschylus we still have seven, among them the only Greek tragedy preserved, the Orestea, the masterpiece of Greek drama, produced in 458 B.C. Æschylus, born at Eleusis, in Attica, was the first of strong religious feeling, the atmosphere of the Mysteries, extended the bounds of tragedy to deal with the great moral and religious problems of life and the relation of man to man and to God. He developed the plot, made tragedy a dispassionate instructor in ethics and religion, and laid down the principles followed by all succeeding Greek tragedians with few changes. One of the great features of Æschylean theology is the predominance of Zeus, to whom even Destiny is consigned. This is perhaps best seen in the Suppliants, which has been pronounced 'one of the most truly religious poems in ancient literature' (Adam, Rel. Teachers, p. 142). Æschylus verges almost on monothesism, or rather pantheism (fr. 70: 'Zeus is set, and earths are, Zeus is heaven; Zeus in truth is all things and more than all'). Sin is ἐφαρ, or insolence, and must be expiated by suffering; and punishment is for the most part retributary. He protests against the doctrine of the envy of the gods (Apollod. ii. 20. 7) and affirms that the world is governed by Justice. As is well expressed in Abbott's Hellenica (1880, p. 66), 'the undertone of Divine vengeance running through the dramas of Æschylus seems in Sophocles to have been taken away, and set down as a theme of Human compassion and love, and we move from the gloom of sin and sorrow towards the dawning of a brighter day in which strength is made perfect in weakness.

Sophocles, who added a third actor and raised the number of the chorns from twelve to fifteen and employed scene-painting, in contrast to Æschylus, is the poet of reconciliation and not of strife between right and wrong. He was the most religious of the Greek poets, and piety is the keynote of his religion. In Euripides, the gnostic poet of everyday life and realism, there is much polemic against popular religion, much scepticism and cynicism. He robbed tragedy of its idealism, but brought in romance and earthliness and melodrama, which made him very popular in his own and later times. Euripides still further diminished the importance of the chorus as an organic part of the drama, made the prologue serve to tell who the persons were and what the action was, employed a chorus which is not a close his dramas, of which we still have nineteen, including the doubtful Rheus. After Euripides, new tragedies continued to be written, down to the 3rd cent. A.D., and old tragedies of the 5th cent. were still produced along with the new. But there was little growth or innovation except in better stage-machinery and improved scene-painting. Professional actors took the stage in the 4th cent. B.C., and troupes were sent out to the villages by the guilds of the Dionysian artists. Almost every town after the 4th cent. B.C. had its theatre and its performances. For Delos, Samos, Delphi, and other places we still have some of the choric inscriptions.

2. Comedy.—As in the case of tragedy, the origin of Greek comedy is connected with the worship of Dionysus, and especially with the Dorian. Comic arose in the phallic song of Bacche dancers and revellers, a comus-song (from κομεῖν, 'to revel,' not κομίσαν, 'to be right'), as Aristotle says. One sees such a phallic procession in honour of Dionysus in Aristophanes' Acharn., 237 f., and on many Greek vases. The primitive rude impromptu performance was developed by Susarion of Magna, who was the first professional comic poet of his own, and introduced into these indecent performances the abuse of individuals. Susarion brought these comic performances from Megara first to Icaria, where, as we have seen, tragedy also was born.

Till Epicharmus, comedy was only a series of unconnected episodes and burlesques; but Epicharmus, the Sicilian father of Greek comedy, introduced unity of subject and plot, though he seems not to have had the chorus, which developed out of the comus. He was the first to bring forward the character of the parasite. His comedies were of two kinds—mythological travesties, and comedies with scenes from daily life, which developed into the pictures of life in the Comedy. The comedy of Epicharmus was combined with the episode-comedy of Epicharmus and Sicily to form Attic comedy, though, of course, the agon, or contest, also played an important part, as Zelinski has shown. But the agon theory is probably best seen in the Suppliant, of which we have the chorus, from γεσθαινομεν, or the jibing at one another at the bridge passed over by the initiates on their procession to Eleusis (cf. Gildersleeve, in AJPh x. (1889) 985, xviii. (1897) 249), which would make comedy belong to Dionysus. For according to the chorus we have still preserved, we would be identified with Dionysus. Whichever theory is right, Attic comedy in its origin certainly was clearly separated from tragedy and the satyr-dramas, which were regarded as regular rituals by the State. In the comedy of Attic, out of many hidden and unidentified gods, and the for religious respect, though it was given unoffocially at festivals of Dionysus. The State did not take it up until comedy was developed on the lines of tragedy as a legitimate form of drama. Probably about 458 B.C. (cf. Abbott, Alk. 457 f.), when the theatre was begun, and not so late as 457, when Wilamowitz argues,—comedy was officially recognized at the city Dionysia. Chionides and Magnes are the first great names, and from their time onwards comedy developed after the pattern of tragedy. Three comedies were given at the Dionysia and Lenaea by five separate poets. From 425 to 405 B.C. the number was only three. The number of actors who could take part in the discussion at any time was three, as in tragedy (though, as Rosen has shown, this does not mean that only three actors were employed to give a tragedy or comedy). The number of the chorus was twenty-four—double the number in tragedy before Sophocles. Comedy, like tragtry had its prologue, parodos, eoxdos, and choruses; but two features, the agon and parabasis, are peculiar to comedy alone. The agon is a debate between two antagonists and the chorus, and often seems to be the essence of the Attic comedy, as Aristophanes' the agon is the contention of the Just and Unjust Arguments for the Athenian boy. The parabasis is the part where the chorus faces the spectators and addresses them in the name of the poet.

Three periods of comedy are distinguished—the Old (down to, say, 390 B.C.), the Middle (from 390 to, say, 324—the date of Menander's first play), and the New (from 324 onwards). The Old Comedy, of which Cratinus, Eupolis, and Aristophanes are the three great poets, ridiculed with gross abuse and obscenity an individual or any subject, whether from mythology, literature, Utopias, daily or public life. Imitations of animal life were common, and there were choruses of snakes, wasps, fisher, or birds, as in the Birds of Aristophanes, the prototype of Rostand's Chantier. Such choruses existed even before Aristophanes, since a vase in the British Museum of the 6th cent. B.C. shows them dressed as birds dancing to the sound of the flute. Great licence was allowed in ridiciling statesmen and politicians, but for a while it became necessary to curb the satire and forbid the comedians to satirize individuals by name. The plays of the Old Comedy had a greater political as the earlier ones, and the Pluteus belongs to Middle Comedy. Aristophanes was the greatest representative of the Old Comedy, and of his fifty-four plays we have eleven preserved entire—the
only extant examples of a complete Greek comedy, The Middle Comedy, best represented by Alexis and Antiphanes, in which political and personal satire hardly appears at all. It is a period of transition, to the more refined and less personal New Comedy, which developed the comedy of manners with its stock characters and with the every-day interests of eating, drinking, and intrigue. The greatest poets of the New Comedy were Plautus (who, in life of ninety-nine years produced about ninety plays), Menander, Diphilus, Apollodoros, and Posidippus. Recently considerable fragments of the plays of Menander have been recovered in Egypt, and it is possible that this author may yet be brought to light, even though we cannot yet read his comedies. The comedy of Menander is reminiscent of the old comedy of the Greek New Comedy from the Roman comic poets Terence and Plautus, who took their plots from the Greek, and led the way to the comedy of Molière and modern Europe.

4. The structure of the theatre. — It is impossible to touch on all the subjects connected with the Greek drama in this article, but something should here be introduced. A skene was erected, which to-day is the most conspicuous ruin throughout Greek lands. The best preserved auditorium is that of the beautiful and harmonious theatre of Epidaurus; the best preserved stage-building is the theatre of the altar hill at the middle of the 4th cent. B.C. The first stone theatre in Athens dates from the time of Lycourgos. — After the days of Eschylus, Sophocles, and Euripides, — and would seat about 15,000 people. With the semi-circular arrangement, in tier after tier, seats divided into scuplers, or wedges, by aisles, the theatre of Lycourgos probably reproduces the plan of the temporary structure in which Eschylus acted his own dramas. The performance was always public, and admission to it was free, and the seats were set on the slope of the hill, which was made into the form of a semi-circle with the ends extended. Generally even in later times the side of a hill was used for the auditorium of stone, but at Eretria an artificial embankment was built. The chorus and actors performed in a circular orchestra at the foot of the semi-circular auditorium. Here was an altar of Dionysus, at which every performance was begun with sacrifice; and, as the Greek drama was essentially a religious service, it was not far away there was often a temple, generally of Dionysus, in whose precinct was the theatre. Part of the 6th cent. temple of Dionysus remains even to-day, to the south of the stone theatre of Dionysus in Athens, although the lapidary of the temple is better preserved. However, we must remember that, while Dionysus was the usual deity associated with the theatre, we sometimes find others. So the stage-building of the theatre at Oropos, which seems to have had no seats, with the exception of a few stone ones for the priests and dignitaries, bears an inscription to Amphairos. At first there was no scenic background, but, when painted scenes had been introduced in the theatre, there was a skene, placed behind the orchestra containing dressing rooms, and was later adorned with a prosenium of half columns, originally wood, but later stone, between which were slabs, or pinakes, on which the scenery was painted. The scene was later extended, and was removed when the actors came out into the orchestra. Even when there was a stone skene and proscenium, most scholars now agree that the actors performed in the orchestra, where even a violin could be heard by the topmost row, as the writer can bear witness from experiments at Epidaurus. The gods, of course, appeared on top of the proscenium, or theodolicon. Ghosts, like that of Darius in the Persae, would appear by 'Chiron's stairs,' which descended in the middle of the orchestra and connected with an underground passage to the skene, as at Eretria and Sicyon. The actors were distinguished from the chorus by their costume, often piled, and by their wigs and masks. It used to be thought that the skene was used for a 'coleothaurus' or footlights on the front, and the onchos on the head. But it is likely that the coleothaurus was unknown till late times. Doubt has also been thrown on the use of the eucalyceum, or machine to roll out the footlights, as it could not be seen in the view of the spectators. But there seems to be evidence for its use. Men played the part of women. There was no curtain, as in the Roman theatre, so that there was rarely a change of scene; but the theatre was a temple, and action were often violated, and not consciously formulated by the Greeks.

LITERATURE.—Cf. the different histories of Greek Literature, esp. Croiset, Hist. de la litt. grecque, iii. (1901), tr. in abridged form by Hedgeshower (1903); Christ, Gesch. der griech. Literature", 1905; Fowler, Hist. of Ancient Gr. Literature, 1902; Capps, From Homer to Theocritus, 1909, pp. 183-200, 414-440 [one of the best accounts of the subject]; Wright, Short Hist. of Gr. Literature, 1907; Verrall, Students' Manual of Gr. Drama, 1903; Bell, A History of Ancient Greek Drama, a very excellent little book, with a good account of the origin and early history of the drama, cf. Haigh, The Drama of Greece, 1906, The Attic Theatre, 1903 (3rd ed. by Pickard-Cambridge, 1907); Monhoux, Anciencl Classieal Drama, 1896; Weil, Studeee de l'art dramatique, 1897; Campbell, Readings in Greek Literature, 1891; Ridgeway, The Origin of Tragedy, 1910 [the most recent and important treatise]; Farwell, 'The Megalos Dionysia,' Saturday Review, 1903, and 'The Origin of the Greek Drama,' American Journ. of Numismatics, 1910, also Culta of the Greek States, v. (1910), s.v. 'Dionysus'; E. S. MacGillivray, Hellenistic Drama, 1907; Reisz, 'Zar Vostovsk, der attisch-rhein. Theaterwesen,' Z. f. d. Alter. Philol., 1907, p. 495 f. For the religious side, cf. esp. Auführungen in Athen, 1866, and the art. by Capps cited there, esp. the 'Introduction of Comedy into the City Dionysia' (Chicago Historical Publica). Other important works are the editions of Aristotle's Poetics by Butler (1836) and Bywater (1900); O'Connor, Chapters in the History of Actors and Acting in Ancient Greece (1904); Deyere, in Greece, 1908; Smith, 'The Use of the Buskin in Greek Tragedy' (Hermes, xvii. (1909); Halin, 'Gr. Plays in America' (Classical Journal, vi. (1906) 24f.). Other books on the Greek drama are being prepared by Capps, Harris, Harry, Fickinger, and others.

DAVID M. ROBINSON.

DRAMA (Indian).—I. The classical Indian drama.—The extant masterpieces of the Indian drama belong to the most flourishing period of classical Sanskrit literature, and it would be improper to begin with the establishment of the Gupta Empire in A.D. 319 and to extend to about the year 800, though the literature of the next three or four centuries, which may be regarded as the silver age, includes a number of dramas of considerable interest and importance; and this species of composition has continued to be cultivated in India even down to the present day. But these later productions are destitute of originality. They are either imitations of the Greek drama, or exercises constructed in accordance with the rules of the rhetoricians and the writers on the dramatic art. Recent discoveries have, however, shown that the antiquity of the classical drama is much greater than has been supposed. Fragments of Indian palm-leaf MSS found in Central Asia show that a dramatic literature possessing substantially the same chief characteristics (§ 2) was flourishing several centuries earlier in the Kusanas, and that it was in all probability contemporaneous with the drama of their dramanis personae, and their plots are
those which had been already fixed by grammarians and theorists. Dependent as they are for their interest, not so much on originality of plot or a life-like portrayal of character, as on their power to excite emotion, refinement of language, and some form of speciality or novelty, they can hardly be appealed only to cultivated audiences. We thus find the drama, at its first appearance in literature, to be a perfected work of art, the form of which, already definitely settled, does not subsequently undergo any important modification.

This drama must have had a history; but such earlier forms as might have enabled us to trace its origin and growth directly were either not committed to writing or have disappeared in the course of time. In that condition the only literature preserved indeed, that a drama of some kind flourished in India at least as early as the 4th cent. B.C. (see § 8); but there is nothing actually extant in Indian literature which stands to the classical drama in the same relation as the early epics, the Mahābhārata and the Rāmāyana—the oldest portions of which probably go back to c. 500 B.C.—stand to the later epics of the classical period. All that can be now known of the history and the development of Indian drama must be inferred: (1) from the plays themselves, (2) from works dealing with the arts of dramatic composition and dramatic representation, (3) from references in other literature, and (4) from a consideration of the popular theatre which continues still to flourish in India.

2. Chief features.—Some of the most important characteristics which are common to all Sanskrit plays are the following:

(1) The benediction.—Every play begins with a solemn prayer in verse, addressed to some deity—usually Siva or Visṇu or some Divine personage connected with them. In the case of one drama, the Nāpiṇḍa, Buddha is invoked.1 This prayer, called the nāndī, was portrayed by the manager of the theatre (śatradhāra), who was also usually the principal actor. It formed part originally of an introductory religious ceremony called the pūrvarāga, and remained prefixed to the drama as a sign of its religious origin.

(2) The prologue.—At the conclusion of the nāndī, the manager calls to his side one of the actors or actresses; and the dialogue which follows is adroitly used to bespeak the good-will of the audience, and also to introduce the piece to be performed, and to lead up to the action of the opening scene by calling attention to the character or characters who now appear on the stage. This introduction (anuvakā or pravāsaśī) differs from the Prologue in the Latin, though, or English, comedy, in so far that it is not definitely separated from the play itself, and is intended to set the plot in motion.

(3) The acts.—The play thus begun divides itself naturally into acts (ākāra), each forming, as it were, a chapter in the story. The hero appears in each act; and an act comes to an end when all the characters have gone off the stage. The unity of time is preserved only within each act and not throughout the whole play; and even within the act the rule is literally interpreted by a proviso that the events described must not be supposed to have lasted more than twenty-four hours. The time supposed to elapse between one act and another is, in theory, limited to a year; but in practice a longer interval is sometimes permitted.2 The audience is made acquainted with events which have taken place between acts by means of interludes (viśaktambhakā or pravesākā), which take the form of monologues or duologues. The unity of place is not observed. Journeys from one spot to another, or from the earth to the sky, for instance, may be represented dramatically within the act.

(4) Expression of emotion.—The aim of the dramatic art is to produce emotion in the mind of the spectator; and to this end everything else is subordinated. In the course of a play all the emotions (rasa), enumerated as eight,3 may be excited; but those of love and heroism should preponderate. Death and fighting must not be represented on the stage; and every play must have a happy ending. Tragedy, therefore, in the ordinary sense of the word, finds no place in the classical Hindu theatre. The contradictions and limitations produce in Sanskrit plays a sentimental and conventional atmosphere which distinguishes them in a very marked manner from the tragedies and comedies of ancient Greece and Rome.

(5) Verse and prose mixed.—A no less striking contrast is presented by their form. Sanskrit plays are written partly in verse and partly in prose. The verse portions consist of short lyrical poems descriptive of the beauties of Nature, the charms of love, and the yearnings of the characters, and are possibly a survival of some religious or popular form. The scenes are represented by monologues or duologues, which are expressed in a great variety of metres, and adorned with all the devices of rhetoric, are highly polished specimens of the poetic art such as could have been appreciated, or even understood, only by a cultured audience.

This diversity of tongues would seem to indicate that the drama assumed its formal shape at a period when the educated classes were in the habit of using Sanskrit as an ordinary means of communication, while the uneducated classes still continued to employ their own dialects. But, though the classical drama may thus show conventionalized a state of things which must at one time have had its basis in actual fact, its Prakrits are no longer the genuine language of the people. They, too, have become conventional; that is to say, they are merely Sanskrit changed into the various Prakrits in accordance with what were supposed to be the phonetic peculiarities of each. In much the same way as the Scotch and Irish characters on the English stage are often made to speak a jargon which is nothing more than perverted English—the work of a dramatist who has no knowledge of the living language—the Hindi Prakrits are further, assigned to different classes of characters, and applied to different uses in the plays, in a manner which is also purely conventional. The Prakrits thus represented most commonly are three in number—Sauraseni, Mahā-

1 See § 3; cf. also the fragments of plays discovered in Central Asia (ib.). These are definitely Buddhist in character.

2 From a study of the rasa, see Beulé, Rhythmes sanskrits, Paris, 1884, pp. 257-364.

3 For an account of the rasa, see Heine, Rhythmes sanskrits, Paris, 1884, pp. 257-364.
DRAMA (Indian)  

885

raṣṭri and Magadh; but a number of others are found occasionally. Sauraseni, the dialect of the region of the Mathura (Muttra), is used in prose by the queen and her attendants and by the higher subordinates generally. In verse the same characters use Mahārāṣṭra and the language of the Mahārāṣṭra country. The lower subordinate characters speak either Magadhi, the dialect of Magadha (Bihar), the country around the Patanliputra (Patna), or some peculiar patois of their own. A fourth Prakrit, Pāšāchāṭi, spoken in certain districts of N.W. India, is said by the grammarians to have been used in the dramas, but is known at present only from their quotations, and has not been found in any extant play.  

The characters in the plays of Sauraseni, the dialect of the country of Mathura, the holy land of Kṛṣṇaism, lends some support to the theory, which is not improbable otherwise, that the drama had its origin in religious performances celebrating the life of Kṛṣṇa or his avatāras.  

(7) The characters, etc.—The characters in a play may be either semi-Divine or human; and, as according to Hindu ideas there is no very definite line of demarcation to be drawn between these two classes, they are not always sharply distinguished. For instance, when a king falls in love with an apārasa, one of Indra's nymphs, the scene is predominately, though by no means exclusively, those of court-life; and the persons most frequently represented are kings and queens and their entourage. There can be no doubt that the classical drama was developed mainly under the influence of royal patronage, and that the dramatists were usually also court poets. The dependents of the court, too, supplied certain types which are especially characteristic of the Indian stage. The most noteworthy of these are the vidālaka (who appears in nearly all the plays except those of Bhiṣavatī), the cula, and the sākhāra (who are known chiefly from the Mṛcchhakatā [see § 3] and the text-books).  

The vidālaka, who has often been compared with Shakespeare's clown, is the king's confidant and go-between. His manners, his slyness, and his foibles make him the comic character of the piece. Although a Brahman, he speaks Prakrit, like the uneducated characters. This fact probably denotes that the type has been borrowed by the literary drama from the popular stage.  

The vīci, another associate of the king, is a person of wit and refinement, who combines the graces and the sobriety of the courtier.  

The sākhāra is the brother of one of the inferior wives of the king, and is represented as an insolent, overbearing upstart. The name, according to the grammarians, denotes a person of Saka descent (Patañjali, Mahābhāṣya, ad. Pāṇini, i. 1.30). As stated above, it is used in most plays; but it is pointed out, this etymology is historically important, as showing that the character in question first found a place in the Indian drama at a period when Saka princes were ruling in India, and matrimonial alliances between royal houses of Hindu and Saka nationality were possible. The peculiar language spoken by this character is also said to be that of the Sakas (Śīhṭyāparāspa, 81, 85).  

Historically interesting also on account of their name are the varavīni, who attend the king as armour-bearers. These must have been originally Yavana ('Greek') women, although, like the other Greek words usura, the term may at a later date have been used to denote any attendant of a particular kind.  

(8) Buildings and stage properties.—From the prologues to the plays we learn that they were generally performed in the open air, and that most frequently the Spring Festival (see § 10). The simple arrangements of the Indian stage required no building fitted with special contrivances like our own theatres or the Greek Thèatra. The plays were, as a rule, given in the hall of a royal palace which was used for exhibitions of singing and dancing (ṣamita-kāla).  

No doubt the hall was sometimes specially intended for dramatic representations, and was, therefore, known as a 'play-house.' Such buildings are described in the Nātyapāṭhastra (see § 4). Various indications make it probable that it was intended to be used as a theatre (see Bloch, ZDMG viii. [1904] 450; An. Rep. of the Archaeol. Society of India, It.).  

The stage was open to the audience in front, while the background was formed by a curtain divided in the centre. The tiring-room (nepathya) was immediately behind the curtain. The other characters came on the stage in a dignified manner, the two halves of the curtain were drawn aside by attendants; but, when haste was to be made, the actor entered 'with a toss of the curtain' (epori-kūpya). One of the names for this curtain, paracalaka, was supported by Weber (ZDMG xiv. [1899] 289, Ind. Stud., Leipzig, 1898, xii. 493) to mean 'the curtain used by him to support his theory of Greek influence in the Indian drama. The word, however, more probably denotes some fabric manufactured by the Yavanas. If so, it is, like sakhāra and varavīni, interesting as evidence of the period in which the drama assumed its form.  

Stage-properties of the most obvious description only, such as thrones and chariots, were used; and there was no scenery in the ordinary sense of the word. Its lack was supplied by lyrics describing the legendary scenes around the stage. The stage was furnished with mimic action, and by an elaborate system of gesture to which a conventional significance well understood by the audience was attached, somewhat in the style of the modern ballet.  

3. The most important plays.  

The earliest specimen of the Sanskrit drama was formerly supposed to be the Mṛcchhakatā, which was referred to the 4th cent.; but, since the appearance of Sylvain Lévi's Le Théâtre indien, it is now generally believed to belong to a later period (see below, iii. 'Śūdraka'). The earliest complete plays which have been published would seem to be those of Kalidasa, who probably lived in the reign of the Gupta monarch Chandra Gupta II, Vikramaditya (A.D. 401-410). But, in the prologue to what is usually regarded as Kalidasa's earliest drama, the Medhakāyamañjūra, he records the names of some 'far-famed' predecessors—Bhāsi, Bāṇi, Sāmasila, and Kauṭūpya. Until recently only fragments of plays by these dramatists were preserved, not only because of the want of stage-properties, but because of the lack of preserved drama, from which the plot of the Mṛcchhakatā was borrowed. Editions of these plays may be expected to appear shortly in the Trivandrum Sanskrit Series (see Sylvain Lévi, J.A. xvi. [1920] 385).  

Fragments of Indian (Pāṭhik) dramas of a much earlier date have been discovered in Central Asia. These belong to the early Gupta period, when Central Asia formed part of the Indian Empire, and one of the routes of commerce was by way of Bactria, the court poet of Kaniṣka. The chronology of the Gupta period is still not in a stage to allow of absolute dates being assigned to these fragments. The text of these plays will be variously estimated according to the different views which scholars hold as to the epoch of Kaniṣka.
That is to say, while some will suppose them to belong to the 1st cent. B.C., others will assign them to the 4th or to the 5th cent. A.D. These dramas are of the conventional form (see § 4), and do not differ essentially in language, form, or style from the usual specimens of the classical period. Their evidence is extremely important, as showing that the structure of the drama was already settled at a period which was found, and the details of the characters of and to Kālidāsa (see § 6). (See König Frederick's Frauen-Aus- gaben, I. 126, (1) Bruchstücke der Meditations-Dramen herausgegeben von Heinrich Lüders, Berlin, 1911; (2) Das Sāriputra-prakrātaka, ein Drama des Akṣara- śrī, tr. by Strehly, Berlin, 1912; (3) König Frederick, Abhandl. d. Wissenschaft, Phil.-Hist. Classe, p. 385.)

The number of extant plays recorded in Schuyler’s Bibliography of the Sanskrit Drama exceeds five hundred, but a great number of these are late and merely printative productions of little interest or literary value. The following list contains the titles, with short descriptions, of the most important:

1. Kālidāsa.—(1) Māhābhārata-chintāmaṇi: the story of King Agnimitra and the Princess Māhāvīrī (reputedly translated by Tawney); London, 1893. The play is historical in the sense that some of the characters are known to history. Agnimitra was the second member of the Māhāvīrī family, which succeeded the Māuryas in the kingdom of Vindūka (K. Mālwa), c. 175 B.C. Incidents referred to in the play, such as the war between Vindūka and Kānauj, and the defeat of the Kānaujians, are all of the period, or perhaps historical. (2) Sāvatsottalo the most popular of Sāk. plays: first tr. by J. M. Wilson, 1867. (3) A story of King Dushyanta. The Kings of the nyāya (Nyāya), taken from bk. 11, the Mahābhārata. (4) Vīrama-vanḍita (reputedly translated, e.g. by W. D. Reade), a story of King Parīñit and the Nyāya of Urvasi, which goes back to Vedic times. A dialogue between the two leading characters is found in the Rigveda (xi. 2).

2. R. Haase (revised A.D. 600—7. 468) and Ratanavali (Eng. tr. by Wilson) and Pāṇḍita-viṣaya (Eng. tr. by Strehly, Paris, 1855; Eng. tr. by V. V. Bache, 1870), named after their heroes. The plots are taken from the cycle of stories about the adventures of King Udyan of Vāsas. (3) Nāgāra; founded on the same period as the story of the Sāvatsottala from the Mahābhārata. (4) Vīrama-vanḍita (Eng. tr. by Boyd, London, 1872). In the opening benediction of the play, the gods are invoked.

3. Pāṇini-vana (ed. by Mychchakati, ‘The Clay Cart’; a comedy of middle-class contemporary life. The plot draws around the love of a young girl of Vāsasana; the poor but born Chhitrata (Eng. tr. by Wilson, and especially Ryder, Cambridge, Mass., 1893). This, the most human and amusing of Sanskrit plays, is now known as an adaptation of Bhasa’s Darśa-vana-dvāravatī, Poor Charudatta:”

4. Ravaṇadana (translated and annotated at the court of Yavtama of Kanauj, c. a.d. 600.—(1) Māhāvīrārtha (tr. Picford, London, 1871) and Uttararājanahitā (several translations, e.g. by Wilson); founded on the life of Rāma. (2) Māhāvīrārtha: a comedy of contemporary life named after the two chief characters Māhāvīrā and Māhāvīrī (Eng. tr. by Francis (Jimutāpa) (half the 9th cent).—(3) Vīrama-vanḍita (Eng. tr. by Tagore, Calcutta, 1865): the plot is taken from the Sāvatsottala, the Mahābhārata.

5. Viṣṇudatta or Viṣṇudattā (about the same date as the last).—Nāgakhetā: a political drama with no principal female characters and much love interest tr. by Wilson; first tr. by Tagore. The plot is historical. It turns upon the fall of the Nāgas and the rise of the hero Mustaka. (4) The Mahābhārata: the story of the Mahābhārata, the Mahābhārata, the Mahābhārata-vamśa (or Mahābhārata-vīrama-vanḍita, ‘The Rising of the Moon of Wisdom’): an allegorical play in which the characters are abstract ideas, virtues, or vices.  Its object.

6. Although these three plays bear the name of King Harva- vardha Sālāsita of Thanasa and each contains a verse asserting the royal authorship, it is probable that they were written by a court poet, perhaps Rāga, to whom also a play entitled Parīñita-parīñata, ‘Parīñit’s Wedding’ (tr. Glaser, 1893), and a drama, Parīñita-parīñita, ‘Parīñita and the Vāsasana, the first of these in, in some respects, an imitation of the Ratanavali; the second is noteworthy as being the only exact extant example of a play written altogether in Prakrit; the third and fourth are founded respectively on the stories of the Rāmacchana and the Mahābhārata, the plays of the third and fourth are Prakrit in language, and the same drama, the Sāvatsottala, is re-introduced, as in the first three. The same authorship is assumed in this case.

7. King Sudraka, to whom this comedy is attributed, is the central figure of a group of legends, from which no exact inferences about his life or death can be drawn. As in other similar cases, it is probable that the actual author was some court poet. The Māhābhārata perhaps may belong to the 6th or 7th cent. A.D.

8. Allegorical characters are also found in one of the Buddhist plays of which fragments have been discovered in Central Asia.

is to glorify the Veddanta philosophy and to inculcate the worship of Viṣṇu (Eng. tr. by Glaser, 1893). For dramas inscribed on stone, see Keilhöfer, ‘Bruchstücker indischen Schauspiele in Inschriften zu Ajmere’ (SGN, 1901); and Ruíz, ‘Epigrafía indiana en las Inscripciones de los Olmíces’ (1882).

4. Works on the theatre.—Of the Sanskrit treatises which deal with dramatic composition and theatrical representation the following are the most important:

The Nātya-sāstra is an encyclopaedia dealing with the theatre and all the arts associated with it. It is regarded as the highest authority, and is supposed to be of Divine authorship. It is said to have been revealed as a fifth Veda by the god Vrāmū to the sage Bharata, who is often mentioned in the plays as the stage-manager of the gods. It is at least as old as the earliest extant dramas, and may be much older. The list of foreign invaders of India mentioned in it—Sakas, Yavanas, Pāhavas, Bālūkās—seems to indicate the same period as the dramas themselves (see Sylvain Lévi, op. cit., Appendix, p. 3).

The Dāsaka (ed. and tr. by New York, 1911) of Dhamanāya, who lived in the reign of Muniya or Vākpati, king of Malwa (last quarter of the 10th cent.), deals only with the dramatic art, which it analyzes under four headings: (1) the plot, (2) the hero and the other characters, (3) the structure of the play, and (4) the poetry and the sentiments to be expressed.

The Sāhitya-darpana (ed. and tr. Ballantyne and Mitra, Calcutta, 1875) of Visvanatha, of uncertain date, treats only of the drama but also of the whole art of poetry.

These works show a subtle power of analysis which is characteristically Indian; but the analysis is rather of the form than of the spirit, and as alien as possible from what has since the days of Aristotle, been regarded as dramatic criticism in the West. Thus, the principles in accordance with which plays are classified are founded on what we should consider accidents rather than essentials. For example, the very same type of hero, the rank of the hero, the number of the acts, the kind of language (whether partly in Sanskrit and partly in Prakrit, or altogether in Prakrit, etc.). According to such principles, all dramas are divided into two main classes—a higher and a lower, by which was determined the rank of the hero, and the number of acts; and a lower (uparājyakas), of which there are 18 varieties. Of the rājyakas, the first variety is the nāṭyaka, which must consist of not fewer than 5 and not more than 10 acts, and in which the hero and heroine must be a god or a prince, e.g. Sāvatsottala. The next variety is the prakrātan, a love-story of real life, in which hero and heroine must be of good family, e.g. Mychchakati. Of the uparājyaka the chief variety is the nāṭyaka, which has the same type of hero as the nāṭyaka, but is confined to 4 acts, e.g. Ratanavali. Another variety, the fourth in the enumeration, is the nāṭyaka (according to the Sāhitya-darpana) is like the nāṭyaka, except that it is written entirely in Prakrit, e.g. Kaśāi-dvārakā.

In addition to the rājyakas and uparājyakas just noted, the following types described by the Indian dramatists are also accessible, though the majority of them is inedible:

1. Ratnākara.—(1) The Bhaskara, or monologue, descriptive of the passing trauma or of a nacola’s exploits (e.g. Vārūṇātita of Vardhacharya, ed. Vidyaseva, Calcutta, 1872; Eng. tr. in course of preparation by L. H. Gray). (2) Prakrātan, a farce (e.g. Jyotirikā’s Dāvati-manamakā, tr. Manzani, Teatro volto (Milan, 1867—71, ii. 189—238). (3) Dina, or presentation of terrible events, the effect of the bards, etc., often being enhanced by corroboration of events, and eclipses, and storms, etc. (e.g. Bhasa’s Mārmrathatmanathaka, ed. R. Schmitt, ZDMG v. (1899) 400—437, 629—634). (4) Vajapeya, or military spectacle, from the triumph of Siltapan at the battle of the gods. (5) Vara-sārjan, a play of the goddess Sūryā (i. 7). (6) Śuddhakā, in which the name of the goddess Sūryā (Fortune) is frequently mentioned, or the divinity is imitated by the heroine (e.g. Ma-
In the same spirit the theorists delight in arranging into divisions and sub-divisions, according to rank, character, and circumstances—all the conceivable types of hero and heroine, and all the possible varieties of plot. Artificial and metrical as is the theory of drama thus presented, it is substantially observed in all the extant, and it acquires a more binding power as time goes on, so that the later productions are no longer works of art, but exercises written to illustrate rules.

5. Prakrit nomenclature a sign of popular origin.—The whole nomenclature of the drama, however, as employed and expounded by the theorists, supplies indisputable evidence of its popular origin. The terms denoting acting and actors, the different kinds of plays, theatrical appliances, etc., are predominantly Prakrit and not Sanskrit, as they must have been if the drama had been literary from the first. The very root net, 'to act,' is the Prakrit equivalent of the Sanskrit art, 'skill.' The dominant form of evidence is to express by mimetic action. It occurs in Panini's grammar (IV. iii. 110, 129; 4th cent. B.C.), and both Panini himself and, still more explicitly, his commentator Patañjali (2nd cent. B.C.) show that, at their respective dates, the educated classes spoke Sanskrit, while the common people still continued to use their native dialects. The drama, then, had its origin among the common people; and, at the later period when it assumed a literary form, its nomenclature was so firmly established as not to suffer change through the influence of its new surroundings.

6. Influence of the puppet-play. Further evidence of a popular origin has been seen in the titles sattradhāra and sthāpakhā applied to the manager and to his principal assistant. The word sattradhāra means literally 'the holder of the strings,' and sthāpakhā 'the place.' These terms are supposed to have been borrowed from the puppet-play, which was undoubtedly a very ancient form of dramatic representation in India, and is alluded to by Nilakaṃṭha in his commentary on Mahābhārata, xii. ecxv. 5 (Shankara Pandit, in notes to Vīrakaumudī, p. 4, Bomanji, 1879; Fischel, Home of the Puppet-play, and Das altind. Schattenspiel, 3. B. xxii. 1906). 482-502; Gray, introduction to his tr. of the Dōtāgalāka, in JAOS xxii. (1915).

The sthāpakhā, who is well-known from the text-books, has almost vanished from the stage. He probably, however, appears in the Kāparṇakathā, although the Khaśi are not in agreement on this point (see Kouwen and Lounanm, Kāparñakathā, p. 196, Harvard Oriental Series, vol. 1910).

7. Popular plays (yātra).—The classical drama is, therefore, a popular product which has received a literary development. This development took place, as is, indeed, true of classical Sanskrit literature generally, under royal patronage. The plays, as we learn from the prologues, were most frequently performed at palaces on the occasion of the Spring Festival; the characters represented are mostly common kings and queens and the personnel of the court; the dramatists are usually court poets; and the authorship of a number of plays is attributed to the kings themselves.

The popular drama, however, continued not cease to exist, and it assumed a more polished form at courts. While the works of a Kalidāsa or a Bhavādhvatī were being performed before a courtly audience in the hall of the palace, the popular plays were appealing to humble folk in the open air. They still survive in India under the name of yātrā, a name which declares their religious origin; for yātra means a festival in honour of some deity. The plots, too, of these popular plays are still religious in character. They are still taken from the legends of the gods and heroes of the Mahābhārata and Rāmāyana. The striking similarity between the yātrā and the 'poetry of medieval Europe has been pointed out by Nisikánta Chattopādhyāya (The Yātrā, or the Popular Dramas of Bengal, London, 1882, p. 3; Ind. Essays, Zurich, 1883, p. 3), and there can be no doubt that the theatre in India, as in Europe, had its origin in popular religion.

8. References to drama in early literature.—The earliest certain mention of a dramatic literature appears to occur in Panini's grammar (c. 500 B.C.), IV. iii. 110-111, where he gives rules for the formation of the names of the dramas on the following of two text-books on the drama—those of Sīlānī and Kṛśāvī. These treatises are lost; it is probable that they and all other works of the same nature were superseded by the classical dramas of Panini's commentator, Patañjali (c. 140 B.C.), often refers in his Mahābhāṣya to actors, and mentions two plays by the name—Kanava, the 'Shaping of Kansa,' and Bālīrāma, the 'Binding of Bālīrāma,' by which the name of Panini is meant, thereby the adherents of Kansa and Vasudeva respectively redounded and blackened their faces (Weber, Ind. Studien, xiii. 487; cf. also Keith, ZDMG lxiv. (1910) 534-536). As both of the earliest recorded plays celebrated the exploits of heroes in v. form, it has been suggested that the drama may have taken its origin from religious performances in his honour. There are also other indications that this view may possibly be correct (see § 6).

9. Dramatic character of some early literature.—The earliest literature of India, extending back to a period c. 1200 or 1500 B.C., includes certain compositions which are to some extent dramatic in character, and which may well have supplied the germ of a regular drama. In the Rigveda there are fifteen hymns written in the form of dialogues, which, if recited with appropriate action and with the parts assigned to separate actors, would make diminutive plays. The ancient epic poems, the Mahābhārata and Rāmāyana, contain many scenes which might well be acted. The step from the epic to the drama, if such a development had taken place in India, would have been a short one, since the epic was linked with the drama by the adherents of Kansa and Vasudeva respectively redounded and blackened their faces (Weber, Ind. Studien, xiii. 487; cf. also Keith, ZDMG lxiv. (1910) 534-536). As both of the earliest recorded plays celebrated the exploits of heroes in v. form, it has been suggested that the drama may have taken its origin from religious performances in his honour. There are also other indications that this view may possibly be correct (see § 6).

On solemn occasions, such as that of the sacrifice of a horse, it was the custom in Ved times to recite old histories and by the performers, the priest of the horse and the Yajur-veda, and the prayer of the sacrifice (Hiltebrand, Rituellvorh. 4618, 1887, p. 150). On the day of Mahārāja an Anya and Sudra appeared, who disputed about a skin (Hiltebrand, Rituallen, in ZDMG, v. (1890) 327). The ceremony of the 'purchase of soma' a buyer and seller were introduced, who held an animated conversation about the price. If the soma-dealer proved refractory, the purchaser was bound to tear the soma from him, and also to take away the cow which he had given for the soma; if the dealer resisted, the buyer had to beat him with a leather strap or with billets.

1 For these 'anyāpāya' hymns, see Oldenberg, ZDMG xxvii. (1885) 54, and xxviii. (1886) 57; Sylvain Lévi, op. cit. 301; von Schroeder, Mysterien, v. (1888) 507; Winterbottom, 3. B. x (1909) 102; Horstel, 'Ursprüng des ind. Dramas und Epos,' ib. xvii. (1894) 58-59, 137-139; Keith, in JRS, 1914, p. 979.
10. Origin of the drama.—The foregoing paragraphs contain a summary of such evidence as bears on the question of the origin of the drama. From a consideration of the evidence thus summarized, the following four points would seem to be established:

(1) The drama was of popular, not of learned, origin (see § 5). It is, therefore, difficult to suppose any connexion between it and the sarungahwa hymns of the Rgveda (see § 9).

(2) The drama is of lyric, not of epic, origin. The actual plays are essentially lyrical. Their frame-work consists of a number of little poems about the beauties of Nature, or personal feelings, somewhat after the manner of Heine's Lieder. The prose dialogue which connects these is of minor importance, and originally was probably left to improvisation (see § 2 (5)). It is probable, then, that the drama arose from songs associated with gestures, i.e. 'dancing,' in the Indian sense. Its form could not be explained if it were supposed to be of epic origin (see § 9).1

(3) Its origin was religious. This is inferred from the existence of the nāndi (see § 2 (1)), from the analogy of the yotrās (§ 7), and from the titles of the earliest recorded plays (§ 8). The fact that dramas were regularly performed at the Festival of Spring would seem to indicate that the rites from which they derived their origin may have been originally associated with some primitive form of Nature-worship, like those which are found incorporated in Brahman ritual (§ 9). It is quite possible that, in certain parts of India, the worship of Viṣṇu-Kṛṣṇa, with which the drama would at least be especially associated (§§ 2 (6), 8), may have been at a later date superimposed on some popular festival of the kind.

(4) A drama of some kind certainly existed as early as 550 B.C. (see § 8), and, at some period between this date and the date of the fragments found in Central Asia (see § 3), the form of the classical drama was stereotyped. The peoples of foreign nationality who have left their traces in the drama, and who are mentioned in the dramatic text-books, are those who occur in the other literature—epics, grammatical works, law-books, etc.—and in the inscriptions which fall within this period (Rapson, B. M. Cut., "Andhra Dynasty," etc., 1908, p. xcvi).

11. The question of Greek influence.—The view, formerly widely accepted, and most fully expounded by Windisch ("Der griech. Einfluss im ind. Drama," Verh. d. 5 Internat. Oriental. Cong., Berlin, 1882, II.), that the Indian drama had been influenced by the newer Attic Comedy of Menander and Philemon (340-260 B.C.), probably finds few supporters at the present day. The arguments of Windisch are carefully considered one by one by Sylvain Lévi (op. cit.), who finds none of them convincing; and, as has been pointed out (§ 2, 10), there are so many fundamental differences between the Indian and the Greek drama that, prima facie, they have all the appearance of being independent developments.

LITERATURE.—The standard work on the Sanskrit drama is Sylvain Lévi, Le Théâtre indien, Paris, 1890; the best collection of English translations is that of H. H. Wilson, Select Specimens of the Hindi Dramas, xi. and viii. of Works of H. H. Wilson, London, 1871; the best Bibliography of the Sanskrit drama is that of Montgomery Schuyler, vol. iii. of the Columbia University Indo-Iranian Series, New York, 1906.
dances, and eventually developed into the 'nō' excellence.

The word nō presents certain difficulties. Used as a verb it means 'to be able,' 'to have the power'; as a noun it signifies 'power,' 'ability,' 'talent.' It is much used in Buddhist philosophy, though this fact does not throw much light on its employment as a designation for lyrical dramas. Perhaps, therefore, the character nō in its literal sense suggests an act of decision, a choice, and the character is a contraction for wa, a term frequently used to denote 'actions,' 'activities,' 'dances.' The nō have kinn-ezutsu, liturgies; mitz-ezutsu, dances; also-ezutsu, minzō-ezutsu, and Fujikawa Akihara (1023-1065) even speaks of sarumizumō-nōzutsu. There is much to be said for this theory, but it still leaves untouched the problem as to how the pronunciation wa came to be changed to nō. Can it be that there lurks in nō some other word nō (nōnō)*? The nō came into vogue in Japan at a time when Japan had close intercourse with China, when Chinese theatrical literature was greatly influenced by India and China, and now there is much in the nō which reminds one of the nō. Motoori's theory, that nōzutsu is strengthened by the fact that there was a principal actor in a nō drama as called shite (lit. nōyari).

2. The 'nō.'—Apart from the philological difficulty involved in the name, the nō is a lyrical drama composed mainly of two factors—singing and posturing, with some instrumental music. We have seen that the Japanese assign the origin of the nō, as of the temple-dance itself, to that original kagura dance which was performed at the cave of the sun-goddess, and which is still performed in the present form of dances at the shrine and temples. The tutai, or mask, was also a main dance, probably not unlike the country dances which still survive in remote country districts, wherever the polity breaks into, in connexion with the Feast of Obon. These dances are almost invariably accompanied by some rude musical instruments, and it is almost inevitable that singing should ensue when the bodies of a company of men and women are stirred and made to move by the sound of some simple instrument. The country dances of all peoples are accompanied with song. The dialogues connecting the various songs and dances came later, but so subsidiary is the place assigned to what in Europe would be considered the most important portion of the drama, that they are frequently omitted altogether from the tutai, or printed copies of the nō dramas. The place where the dialogue should come is indicated by the simple addition at the end of the song of the words shita-jira, and so forth, or serifu ari, 'there are words spoken' (PERI, op. cit. 263).

When the nō appeared in its perfected condition during the Ashikaga and Muromachi periods (1392-1556), it had a libretto, or book of words, many of which have come down to us. Over a thousand nō dramas are known to have existed: they were divided into two classes—nōki, the inner circle, the plays most commonly represented; and nōta, the outer ring of less familiar, because less popular, plays. Common parable speaks of waiwai (=nōki soto) ni kyoku san, 'the 200 pieces inner and outer,' but the number extant is a little in excess of that. There are about 250 which are now actually current (for their names see PERI). A new nō play occasionally finds its way to the stage even now, but rarely with great success.

The nō classified according to its subjects, as follows: (1) Kanai nō, dramas which concern the gods or things divine, i.e. mythological pieces or pieces relating to the legends connected with some particular god or goddess. The word unō mono may suggest that the reason for this term is not quite clear. (2) Shūnen nō, or 'dramas of good wishes,' written for the purpose of celebrating heroes, famous men, emperors, etc. Some dramas evidently are capable of being treated as either kana nō or shūnen nō. This class includes nearly all the so-called okoto mono, or shūra mono—pieces relating to warriors, whom Buddhism relegated to the path of the

Shura (or Asuras) as a punishment for the bloodshed connected with their lives. (3) Yari nō and serifu nō, dramas connected with apparitions, ghosts, spirits—the former class referring to the spirits of warriors or women; the latter, to the manifestations of the spirits of animals, plants, flowers, etc. (4) Nōh or nōgen mono the principal actor, or shite, is always a woman, the name kutsura mono being also given to them from the kutsura head-dress worn by the female character. Many of the plays classified as koma nō or genza mono may be put down as okoto mono as well. (4) Genza nō. Whilst all the dramas hitherto considered have dealt with problems of the old world, the gods great and small, the spirits and souls of the righteous and unrighteous, the fourth class deals with what is not of the present time, but of the present world. It represents the human side of the lyrical drama, seems more or less historical, illustrations of manners and customs, etc.

A second classification, dating apparently from the Tokugawa period (1603-1868), gives a fixed division—jina, dan, jo, kyō, ki, and men, wan, yori, mono, drama—these being historically corresponding to the genza nō of the classification just given.

3. The 'kyōgen.'—The writers of the nō dramas were all either Buddhist monks or persons impressed with the principles of the Buddhist faith. The present world is to Buddhism nothing but 'folly,' and it is easy to see how the plays of the genza nō came to be classed as kyō, 'folly.' But the present world has a certain charm, and even in the most monastic of minds, and not only do we find the kyō, or genzai mono, occupying their own position among the legitimate dramas of the nō, but we find evolving out of them a new species of theatrical entertainment, the kyōgen, or satirical farce, which came to form a pendant to the lyrical drama, just as a satiric drama was appended to the conclusion of a Greek trilogy.

Nō and kyōgen are acted on the same stage, but never by the same actors. In the nō the actors wear masks, in the kyōgen they wear none; the dances are the same, but the manner of execution is different. In the nō everything is solemn, stately, impressive; in the kyōgen there is a sound of laughter, mixed with an undertone of sadness. In the nō we have the Buddhist clergy preaching their highest doctrines of life, and setting up an ideal which shall influence society; in the kyōgen there is the sense of the ridiculous and the sense of sadness which may be all alike due to the consciousness of failure to attain an ideal. If the nō gives us the high ideals of life as dreamt of by the recluse priesthood of the period, the kyōgen gives us a true picture of the degenerate national life of the Ashikaga (or Muromachi) age. It would be possible to re-construct a picture of the social conditions of the age from the texts of the kyōgen. Following the analysis given by Florence, we should see, in the sketches made by these anonymous satirists, a nobility and clergy exalted, a nation and worldly, and meriting the disdain of the fighting classes whose hand was uppermost in the affairs of the distracted empire, a low state of social morality, much poverty and distress, no efficient system of police, and, above all, a general callousness and indifferency to suffering which acquiesced in the ridiculing of the blind, the maimed, and the suffering. Read in connexion with works like the Tawara, the gusu and the voluminous correspondence of monks like Rennyo, Rennyo, and others, now being gradually made accessible to Western readers, the kyōgen texts are invaluable for all students of Japanese life and society during the Middle Ages.

4. The 'kabuki.'—The nō and kyōgen were never popular performances. They were composed for the amusement of certain privileged
classes in the capital and elsewhere; they were patronized by Shōguns and courtiers; and, when the kyōgen had lost their sting by reason of the popularity of the kabuki (Nembutsu-shibai) of the Aina, in 1605, it almost every daimyo of any importance or wealth kept his own troupe of actors at his little court. But for the common people, the merchant, the farmer, and the artisan, the lyrical dramas were never intended.

About the year 1560 there appeared in Kyoto a woman named Izumo no O Kuni, whose genius produced a remarkable revolution in the dramatic world of her country. O Kuni was the daughter of a reformed beggar, and, in her proposed appearance, was early engaged as a mikō, or kagari-dancer, at a temple in the village of Kitsuki. The temple was destroyed by fire, and O Kuni started on a quest for money to rebuild it. It is probable that she went first to Sado, where gold had recently been discovered, and where money was readily spent. Soon afterwards, in 1569, she made her appearance at Kyoto, where she set up a booth (or shibai) in the dry bed of the Kamogawa, and began giving performances which speedily became very popular. She was dressed in the black robe of a priest of the Shิน sect of Buddhists, and her dancing was of the style known as gyo-odori, or nembutsu-odori, and brought with it a mysticism which, as far as has been seen, Kuya Shōnin and others used in their itinerating preachings through the country. She accompanied her dancing by rude songs on the impermanency of this transient world. Her performances were sometimes addressed to a few companions, and her quest for the temple was soon accomplished. In the meantime she had discovered her vocation. To this she was helped by a certain Nagoya Sanzaburo, the son of a samurai in Owari, who had become a monk and was a devotee of the temple. He introduced her to theทาiko Hideyoshi. Nagoya was a handsome and brave man, with a reputation as a lady-killer. It was said that the fair Yelogini was one of his conquests, and that Hideyoshi's reputed son, Hideyorii, was in reality his. Gamo died in 1595, and Nagoya, now a rōnin, or masterless knight, came presently to Kyoto, where he became attached to O Kuni, who was, as then was the custom, under his influence. Under his influence, she changed her methods. She discarded her priest's robe for the dress of a two-sworded samurai, sang popular ditties instead of nembutsu hymns, and began to act on themes of a popular nature to the inanity increasing still more. Nobunaga, Hideyoshi, and Hideyasuy, her son, Hideyasuy, invited her to act in their presence, and there is an old print in the Museum at Uyeno, which represents her performing before a crowded house in which several Europeans are to be seen. This touch of the West in contact with the East is not without its significance. Every resident in Japan knows how marvelously quick the Japanese are to adopt the latest ideas from foreign countries, and it is quite possible that the modernized drama which was thus instituted by O Kuni and Nagoya contained elements derived from the European drama. Shakespeare was in the zenith of his power when O Kuni was acting, and there were but few Englishmen in Japan who could have told the Japanese of him. Corneille was not yet born; but the Spanish drama had been at its topmost point of fame for many years, and there were many Spaniards, clerical and other, in the Imperial City. It is possible that the Europeans represented in the old print in the Tokyo Museum are Spaniards.

The popular name for these representations was shibai, a name still in universal use to denote a theatre, the secular drama, or a secular play. The name chosen for it by its founders was kabuki, a word originally signifying comedy and licence, but in later times translated to denote 'the art of singing and dancing.' Tokyo still hosts of a kabuki-cho, or street devoted to this sort of drama, and of a kabuki-za, theatre, which has hitherto attracted to itself some of the greatest names of the Japanese theatrical world.

The year 1604 marks the height of O Kuni's personal popularity. About that year, Nagoya, who had returned to his samurai life, was killed in a brawl, and O Kuni, who was getting on in years, retired to a place of worship, where she died in obscurity, nine years later.

5. The 'onna-kabuki.'—Imitation is always one of the greatest tests of popularity. Before O Kuni retired from the histrionic life, her theatres had already found imitators in various cities, notably at Osaka and Yedo, and the movement showed signs of permanent vigour. But the onna-kabuki, as it was called, fell into disrepute with the Shogunate, and its prominent feature was prohibited by the police of Ieyasu in 1620. One of the chief novelties of O Kuni's representations had been her bold assumption of male attire. But when she fell in with Nagoya she was no longer a young woman, and it does not seem that there were other women actresses of the kabuki who, directly associated with the theatre, and probably harmless in her ease became a precedent of doubtful character in the hands of others. Women of uncertain reputation were brought on the stage in the rival kabuki theatres; with them were associated the same kind of low life, and the result seemed very dangerous to the public morals. The employment of women in kabuki plays was therefore prohibited by the Shōguns' police. No woman was employed as an actress in a theatre from the year 1620 till the year 1868, when, be it heard, the so-called shiki-shibai, of Sada Yakko, at the end of the 19th century.

6. The 'ningyō-shibai.'—The prohibition of women actors was, for the time being, an almost crashing blow to the kabuki. The place of the women, banished by the decree of 1629, was taken by young boys, who played the women's parts; but the moral consequences of the so-called wa-kabuki-shibai were worse than those of the onna-shibai. The mask, which had been taken off, was not yet trained, and some time had perforce to elapse before the kabuki could regain its former popularity. In the meantime a new species of dramatic performance got an innings, which its promoters used to great fortune to the injury of the theatre, which will still sometimes meet with a travelling mendicant, carrying on his back a portable shrine containing some religious image or symbol which is the pilgrim's object of devotion. It is probable that in these mendicant vagrants we have a relic of the ancient odori-nembutsu, and that the itinerant preachers with them are an idol, before which they performed their simple religious dances, and which they used as a visible emblem of the faith they preached. O Kuni had discarded the emblems, whilst retaining for a while the religious dance and song; but there were (and still are) travelling priests who retained them. The founders of the ningyō-shibai, or 'dolls' theatre,' made these dolls or images the central feature of their art. The itineration ceased, and the idol, settled in a permanent abode, developed into a marionette, or set of movable dolls. The marionettes of the ningyō-shibai were extremely popular during the whole period, but the performances of this sort are still to be met with, especially in Osaka. Strange to say, the marionettes had a considerable influence on the subsequent developments of the kabuki.
"Among the things," says Balet, in a lecture delivered before the Academy of Yedo (Tokyo), Feb. 4, 1868, "which strike and shock us most in the popular theatre must be placed the singular gesticulation of the actors. Still, and moving by bruised start, their gestures completely lack the ease and naturalness of real life; one would say they were marionettes, and not human beings; for the actors of the kabuki, the marionettes of the booths in the fairs as their models. By an incomprehensible alternation, the Japanese have imitated these gestures, have elaborated them, and have fixed them permanently in the drama—except in comedy,—thus keeping aloof from the truth of life, falsifying expression, even the simplest sentiments, to the point of making them a pure pantomime. From the theatre, these gestures passed insensibly into life. It is not difficult to find traces of them in the current expression of certain emotions: anger, scorn, especially defiance, are often expressed among the Japanese by gestures of the same kind as in the kabuki. Apart from this influence of gestures, the other—that of the manners and morals preached up ad nauseam in bloodthirsty tragedies—has not been the least effective in the formation of the Japanese mentality.† It is not necessary to follow Balet in all his judgements, but it is certain that these gestures, which flourished in the kabuki, were effect of the marionette theatres on the gestures of the kabuki actors.

7. The ‘joruri.’—Japan, like every Oriental country, has always had its story-tellers and was a country founded on oral tradition. Theatre included stories and legends of gods, heroes, and personages famous in national history, such as Benkei, the fighting monk. One of the most popular of these stories was the history of Joruri, the famous inn-keeper, who was a sort of composite figure from all the stories of the same cycle of episodes as Benkei (see Saitō Musashibo Benkei, by de Benneville, Yokohama, 1910). The story of the love of this celebrated woman was so popular that it overshadowed all the rest and gave rise to the whole class of narrative, of which the Joruri seemed to have been the first person to commit a joruri to writing. A few years later, about A.D. 1600, a Joruri singer, Memikoya Chichaburo, conceived the idea of a partnership with the master of a marionette show near Osaka, and the result was a form of Nō-joruri, which soon gained the popular favour. In 1653, a certain Takemoto Gidayū opened a marionette theatre, bearing his own name, in Osaka, and the Joruri came to be equally well known under the new name of gidayū.

8. The Genroku theatre.—The influence of the marionette show on the legitimate drama is seen in the fact that some of the greatest dramatists of Japan under the Tokugawas, notably Chikamatsu and Takoda (middle of 18th cent.), were also writers of gidayū. From the marionette theatre they had learned the value of the literary side of the drama. They appreciated the fact that it was something more than a mere collection of lyric songs, ballads and romances, that it comprised the division of the passing hour by realistic, but modified, imitations of scenes of real life. Chikamatsu Monzaemon (1653-1724) stands a very long way behind Shakespeare, but he understood, as Shakespeare and all the greatest dramatists have done, the function of the dramatic poet. He aimed at, and to a certain extent succeeded in, putting the dramatic poet into his proper place as the creator of a drama with ideals, representing life, and forming manners. The medieval nō had been the sole property of the ruling military and cultured classes; O Kuni's work had been an appeal to the vulgar; Chikamatsu and his school, without excluding the educated or despising the ignorant classes, made their appeal to the general common people, which forms the majority of every nation. That their appeal was not made in vain, may be seen in the immense influence exercised by Takeda's Chashin-gata in keeping alive in the people's heart the spirit of loyalty to the rule and dominion of Japan.

9. Difficulties besetting the ‘kabuki.’—One of the great difficulties in the way of realizing the highest dramatic ideals lay, and still lies, in the despised position of the actors. The kabuki has never quite effaced the barishment of his status. Its founders, O Kuni and Nagaya, were deemed none too respectable; the onna-kabuki were performed mostly by prostitutes; the lads who acted in the sokusha-kabuki were connected with vices which flourished in the kabuki theatres. There was reason in abundance for the Tokugawa government to take alarm: there was not merely the love of pleasure and the increase of luxury among the people to be feared, but also the danger to the social order included. The history of the kabuki has been celebrated in anil stories, of which many were killed by the government. The Shogunal government did not weaken in the carrying out of what it conceived to be its duty. In 1609, Ieyasu prohibited all theatres in Shizuka, which was at that time his residence; in 1610 certain intrigues to the effect that the mountain, used for going to a theatre, the manager of the theatre being executed. In 1629 every performance in which women appeared was forbidden. In 1641 a manager who had allowed his young men to appear as women on the stage was severely punished. A few years later, under strict regulations, a few actors were allowed to appear in female characters, but they were forbidden to wear silk or brocades, and had to shave the front of their head. Theatres, like brothels, were relegated to certain quarters, samurai were forbidden to attend them, and the actors were not allowed to associate with the ordinary citizens. They were classed apart, like the KS, and the latter were used for them classed them with animals rather than with men, as though one should say, ‘so many head of cattle,’ ‘so many head of actors.’ The term kawara-mono refers to the origin of the kabuki, among the Tokugawa clan. It was in the dry river-beds of the Kamogawa. Under such circumstances it was extremely difficult for the kabuki drama to struggle into respectability.

10. Earliest written ‘kabuki.’—We have already seen that the writing of Joruri influenced the production of regular dramas. It is worthy of notice that, in 1653, a theatre in Yedo produced a scenic play of several acts, entitled Saga no Jōban Kuri, which required 15 actors. Another play, in 1666, also produced in Tokyo, was written by Kawara Jonouke and was entitled Saga no Kyogen. One may see from the titles of these plays how strong was the appeal made to the national imagination, on by the theatre of the Middle Ages, which have furnished Japan with a genuine, it informal, epic poem.

11. Actor families.—One of the results of the Tokugawa legislation, which compelled the actors to live by themselves, apart from their fellow-citizens, was the formation of an actor class. This was quite in accordance with ancient Japanese tradition. Japan. Japan has, from the earliest times, had castes of doctors, wrestlers, sword-makers, painters, etc., and the result of the system may be seen in the specialized skill of production combined with a marvellous lack of creative power, which marks almost all Japanese work, especially in the various departments of art. In the Japanese drama, we observe the rise of great actor families, e.g. that of Ichikawa Danjirō, which has, as it were, stereo-
typed the dramatic art along certain definite lines, and thereby produced an article perfect in its own way, but which has stiff originality and well-nigh lost sight of the play. Judged by its own standards, the Japanese kabuki, with all its posturings and intimations reminiscent of the recitative of the nō and the jōruri, its stilted language, and its simple dignity, is a thing as perfect as an art influenced by very imperfect ideals can make it. But what playwright could do his best, if he were 'bossed' from the beginning to the end of his composition by a clique of hereditary actors, who said that things had always been just so in their family?

12. The Meiji theatre.—Like everything else in Japan, the drama stagnated from about the end of the second decade of the 18th cent. to the end of the seventh decade of the 19th. The actors were a class of social outcasts, but they had the supreme sway in their own little kingdom, where things went leisurely along the old grooves. The Meiji Restoration swept away all class distinctions, and the actors emerged from their isolation. In 1876, at the opening of the Shintomiza theatre in Tokyo, the Foreign Ministers and members of the corps diplomatique accepted invitations to be present at the opening performance. It was a great shock to Japanese conservatism, but it proved to be a whole-some example. In 1877, one of them ventured to give a performance at his own residence, at which Ichikawa Danjūrō acted, in the presence of the Emperor himself. The visits of distinguished personages, e.g. Prince Arthur of Connaught, gave other opportunities, and the Kabuki, once despised as a profession, was recognized as a legitimate art. In 1903, Prince Itō delivered a funeral oration in honour of the popular Danjūrō. The old ostracism has not yet quite gone; a statue of Danjūrō, erected a few years ago in front of the Kabuki theatre, has not been removed; but it is abundantly evident that the actors are winning for themselves a recognized position in the Japanese world.

13. The 'sōshi-shibai.'—One of the most hopeful signs connected with the modern Japanese stage is that the monopoly of the great actor families has been broken. The sōshi-shibai, born some 25 years ago, presents many points of resemblance to the earlier enterprise of O Kuni and Nagoya, coming into the field when there was little demand, at a time when 'a fever of reform and innovation' was raging throughout Japan. Kawakami Otojirō, the flighty son of a toy-dealer, had an un distinguished course at school at Fukukoku, and then flung himself into practical life. But in the early days of Meiji, he had many fellow-travellers along the paths of stump-ornatory; the Japanese of the day invented a word to denote these political adventurers. They were known as sōshi; they were oftener than not impecunious. Kawakami and a few brother-sōshi formed themselves into a sort of amateur dramatic company, and their plays were called sōshi-shibai. They gave representations of actual life, and gained many hearers. Their first object was to make money, but success gave them higher ambitions. They dedicated war against the kabuki school, and announced a programme of theatrical reform. In this they have not succeeded. Kawakami has been ably seconded by his wife, Madame Sada Yako, and the Kawakami troupe has been well received in Europe and America. They draw their material from many quarters: from Dumas and Maeterlinck, from Shakespeare and Ibsen. But they have espoused an idea, and the plays are strongly impregnated with a Western flavour, to an audience that can only relish the sauces of Japan, and they have not yet succeeded in capturing the popular taste. The dramatist is lacking who can draw, as did Shakespeare, on all the wealth of accessible literature, and yet present it to his audience in a thoroughly native form. The lack of a dramatist has been acknowledged in many quarters. Writers like Fukuchi, Danbouchi, Iliara, and Masuda have tried to supply the vacuum. They are undoubtedly on the right track; but a Shakespeare is born, not made, and Japan may perhaps still be said to be waiting for the 'mother of Shakespeare.' Efforts have also recently been made to conform the architecture of Japanese theatres to European ideas and requirements. This is notably the case in Tokyo, where the Yurakuza (built 1909) and the Teikokukan (opened 27th Feb. 1911). It is impossible as yet to say what effect these buildings are likely to have on Japanese dramatic developments. A recently established training school for young actors and actresses will, if successful, be a step in the right direction, as eliminating the hereditary principle which has done so much in the way of fossilization. It also provides a way by which a young woman of respectable family can adopt the stage as a profession in an honourable manner without the loss of caste.

14. Actors in the 'nō.'—The nō is essentially a piece to be acted by two players, and this fundamental idea is maintained, however great may be the multiplicity of the number. It is ventured that the performance of any particular piece. The principal personage is the shi-te, the rōkyō, or actor. His duty is both to dance and to sing, and his rôle is the pivot on which the whole piece turns. We may call him by a term of the Kabuki, the waki ('side'), who may be compared with the duet-agonist of the Greek classical stage. As the name implies, his rôle is secondary to that of the shi-te; but he is nevertheless a necessary adjunct, because it is his presence that gives the requisite stimulus to the activities of the shi-te. Some plays require the presence of only two actors; and we may with justice consider them as types of the primitive dramas. When more actors are required, they are considered as assistants or companions to the shi-te or waki. They are designated as tsuyo, companions, but more frequently as tsure, and appear as shi-te-dzure or waki-dzure, according to the part they represent. But they may be divided into three classes: (1) those who represent the main characters; (2) those who repre sent an emperor or nobleman; and in a few places we find indefinitely designated personages, otoke and onna, 'man' and 'woman.' Again, in one or two plays we have companies of people representing, e.g., pleasure-seekers, or attendants. These are known as tachi-shi. The clown's part is assigned to a personage known as kyōgen or okashi. He is sometimes entrusted with comic parts during the play itself, but more frequently with the comic interlude, ni, which separates the first act of a nō drama from the second. This ni no kyōgen is not to be confounded with the independent kyōgen which comes between two distinct nō dramas. He had his part in these also.

15. The chorus.—The chorus, ji or ji-uta, consists of from 8 to 10 musicians, under the command of a ji-gashira. The musicians wear the ordinary clothes of the citizen, and have no functions beyond those of music and singing. The chorus sometimes takes part in the principal drama as an accessory to the shi-te in the rendering of some song, and sometimes it will take part, in a sort of impersonal way, in the dialogue. It has some of the functions of a Greek chorus, but it never represents
a definite group of persons, such as, e.g., the Phoenician women. In addition to the actors and chorus, there are two groups whose functions are of the greatest importance in the performance of the no—the kōgen, and it is from them, and from the clothes, in which they carry out the parts of their assistants: it is common in combination with the tenka of later Japanese literature. To take an example: in the no, the waki and his friends will describe their work and how they have taken in the kōgen, which at the same time reach the scene of action. The sushi and kuri are two minor forms: the former a simple recitative, which is not used by the kumi-yokari schools, the latter a lively song, serving as an introduction to the kusa. No is a small and independent form out of which the no has developed. It is accompanied by a dance, and is a remnant of the ancient kusa dances which have been so popular in Japan since the 16th century. It is the kase which brings us the appearance of a dancer per se, or the 'lion dance.' The general name for the musicians is hayashi-kata, each individual being designated by his instrument—fue-kata, tsuwa-kata, etc. It is extremely probable that a considerable number of instruments, and instruments in use in ancient China, India, etc., might throw much light on the origin of the no drama.

17. Schools of 'no' actors.—We have seen that the no actors are divided into three classes—shite, waki, and kōgen. These are further subdivided into various schools, or ryō. The most important are the schools of the shite—kawazume, hōshō, kōparu, kōparu, and kōte—which between them furnish most of the shite and shite-dzure, also the fomo, kōnuta, ji, kōken, and mono-kise. These five 'schools' are by far the most important. The waki are also subdivided into five schools—kawarai, hayashi, and kōte—which between them furnish a majority of the no drama, and kōkai, and kawarai. There is a further distinction made in these two classes, which is of some importance. They are divided into kumi-yokari and shino-yokari, according as they base their acting on traditions derived from Kyoto (kawara) or Nara (shinoa). We shall see the importance of this distinction if we remember that the Kyoto Buddhism, namely that of the Tendai sect, with its offshoots, is of Chinese origin, whilst the Nara Buddhism was of Sino-Japanese origin. The kumi-yokari are subdivided into three classes, each named after its founder—Sagi, Izumi, Okura—as indeed are also the various classes of the shite and waki. All these families of no actors were originally connected with the kagura dances of the Shinto and Ryūban-Shinto rites, and it is in the kagura that the origin of the no drama as found in Japan must be sought.

18. The 'no-kōyen' stage. The no was originally intended, like the kagura, for outdoor performance, and this fundamental theory is still preserved in the arrangement of the stage. It is a perfectly simple platform about six yards square, with three of its sides open. The fourth side is a wall of plain wood panel, with a painting of an old pine-tree to suggest an open-air performance. The actors have their exits and entrances on the right hand of the stage, the chorus on the left. One of the pillars supporting the roof is called the kōken banbara, and it is from behind this pillar that the kōken keeps a watchful eye on the performance. The green room or vestry is behind the wood-panelled wall.

No forms.—The no drama is a metrical composition, the measure adopted being known as a kusha, or 'chain,' for the structure of which the reader is referred to Pérí's solid treatise already quoted. Terms especially noticeable are, e.g., the shidai, very often used as an introduction, and containing a statement of the general purpose and 'circumstances' (shidai) of the piece. The kasa is very similar to it, only more definite, the shidai giving: as it were, only a general statement, while the kasa gives the complete particular point. The nta, or 'song,' is the prerogative of the principal assistant. It has nothing in common with the tenka of later Japanese literature. To take an example: in the nta, the waki and his friends will describe the work and how they have taken in the kōgen, which at the same time reach the scene of action. The sushi and kuri are two minor forms: the former a simple recitative, which is not used by the kumi-yokari schools, the latter a lively song, serving as an introduction to the kusa. No is a small and independent form out of which the no has developed. It is accompanied by a dance, and is a remnant of the ancient kusa dances which have been so popular in Japan since the 16th century. It is the kase which brings us the appearance of a dancer per se, or the 'lion dance.' The general name for the musicians is hayashi-kata, each individual being designated by his instrument—fue-kata, tsuwa-kata, etc. It is extremely probable that a considerable number of instruments, and instruments in use in ancient China, India, etc., might throw much light on the origin of the no drama.

**DRAMA (Japanese)**

*ōgi*, represents the world of the Asuras, the Buddhist world of bloodshed and slaughter. Significantly enough, there are two forms of *shūrā-ōgi*, the *gensi-šūrā* and the *hōke-šūrā*, which thus perpetuate the memory of Japan's most famous battle, the maternal side of that sad time may be found in the *kyō-ōgi* and *kyō-ironashi-ōgi* (respectively, the 'insane woman's fan,' and the 'insane woman's colourless fan'), the latter with its sad pictures of the hero and his wife, and its last leisurely crane sitting on a withered tree. It would be beyond our scope to describe all these varieties. The *shimai-ōgi* does not present so many varieties. The simplest form, the *matsuko-no-ōgi*, 'water-sprinkler's fan,' is used by the lowest-grade of actors, whose humble performances are fitly symbolized by the unobtrusive but necessary work of the 'water-sprinkler' — an important functionary in hot dusty countries. When the actor-student has been promoted to a higher grade, and is allowed to dance for the first time, he uses a *nitateki* fan, *i.e.* the fan of the 'water-drawer'; while the next promotion, to the rank which permits him to perform the *mochiteki* dance, is marked by the use of a fan, known as *chidori*. Buddhist influence, chiefly of the Hosso and Kegon schools, may be seen in the clouds — five, seven, or nine, according to circumstances — which distinguish other fans of a higher or lower grade. These words, dramas, and dances is very clearly due to Chinese thought.

It would take us too long, for the purposes of this article, to trace the connecting points between the Japanese lyric drama and the drama of the Hindus. But there certainly are such points of connection, traceable through fans, masks, musical instruments, dresses, and dress-materials, not only with India, but with China, also. Thus, for instance, there are two names for dress-materials much used in the *nō*—*donen* and *shusu*, translated by Brinkerly as 'damask' and 'satin' — which are also used in Japan, though, perhaps not with much probability, to point to a Persian and Syrian origin for these materials. But these are as yet the only points on which the writer is disposed to dwell.

### 23. Peculiarities of construction of the 'kabuki' theatre.

The word *shibai* means 'a lawn,' or 'on the lawn.' There is an old tradition, connected with the Nan-yen-dō temple at Nar, which says that, at a very great period, the earth opened, with a yawning cavity right in front of the temple, with much exhalation of poisonous gases and smoke. It being evidently advisable to propitiate the incensed deities who had brought about this case, the Emperor ordered that the *okina* and *sanbasa* dances should be performed in front of the chasm. This was done on the smooth grass before the temple, and with the desired effect. This incident is still commemorated by the *Shō* or *Nō* at Nar, performed 'on the lawn.' It is possible, therefore, that O Kuni, in inaugurating the *shibai* or *kabuki* drama, meant it to be a resurrection, as far as possible under altered circumstances, of the primitive dances of prehistoric times.

The first theatre in Kyoto was erected in 1632; in Osaka, in 1633; in Yedo, in 1624; and the construction of these places of amusement was speedily followed by others. The first theatrical building in Yedo was the Saruwakaza, which was the outcome of the philanthropic efforts of a certain Saruwaka Kanzaburo. The Genna period (A.D. 1615-1643), whilst enjoying the firm hand of the Tokugawa Shogunate, was still one of considerable confusion and unrest. The cessation of the long-continued civil wars and the subsequent dissolution of many of the opposition clans had filled the country with unemployed men-at-arms (*ronin*), who flocked to the larger cities in search of employment. Of these, many were called *sōri*, or 'sentinels,' the chief function of which was to maintain order and keep the peace. As such, they might be seen in their hundreds, concealing their faces beneath large straw hats, and waiting for any chance opportunity of congenial occupation. When they could do nothing else, they best drums and sang ballads, and thus gained a few *rin* from the good-natured citizens. Saruwaka saw that these unemployed men would be a good class of workmen for the theatre, and set to work to find safe outlets for their superfluous energies. He built himself a large villa, the construction of which gave employment to many hands; he lived luxuriously and ostentatiously, and kept large retinues of servants; at last, the idea occurred to him of founding a theatre as an institution by which many of these unemployed warriors might gain a living, and all might find recreation and amusement. The idea was very well received, the *ronin* organized themselves *con amore*; the Government gave its consent to the undertaking, and a dream in which Saruwaka saw a crane flying towards him, with the leaf of an *ichō* (*Ficus religiosa*) on a plate in its bill, was interpreted as a sign of the best sort of appearance of the theatre. The first permanent *kabuki* building in Japan, and gave a model which all subsequent *kabuki* theatres have followed. The *nō* dramas in the Middle Ages were performed in the most illusory of temporary theatres.

The construction of the old *kabuki* theatres may be understood by the consideration of certain theatrical words which are still in use, but which cannot be translated by the ordinary words, dramas, and dances is very clearly due to Chinese thought.

While certain of the minor structural features of the early *kabuki* have disappeared, certain others remain. Thus the modern Japanese stage is distinguished by: (a) the *hanamiichi*, or 'flower-way' — a raised platform or corridor by which the actors have access to the stage from the other end of the theatre, passing right through the spectators in the pit. The *hanamiichi* was at one time bordered with flowers, hence its name. It is always on the left hand of the spectators; on their right there is sometimes another passage of the same sort, called the *karibonamiichi*, or 'temporary flower-bridge.'

(b) Between the *hanamiichi* and the stage is a space called *hashi-gakori*, 'bridge-space,' sometimes also known by a term derived from the usages of the camp — *musha boshihri*, 'warriors running.' It is through this space that the warriors reach the stage. Near it is the *akoyō-yuguchi*, 'coward's hole,' the significance of which is obvious. (c) The *butai-bon*, or 'doorway sentinels,' are the chief playmates of the *ronin*, as they played the parts of *sōri*, and an event, again betraying a quasi-military origin.

(d) The central part of the stage is made to revolve (nawari-butai) — an arrangement which calls to
mind the ἐκστάσεις of the Greek stage; the machine which works this is situated in the naraku, 'hell,' below the stage, where is also to be found the σκηνή, or scenery, by which actors are 'pushed up' through the flooring of the stage. There are two or three trap-doors (hirai-do, 'sky-door'), on the stage itself, and a similar one (sugiyon) on the honamichi. Only the larger theatres were allowed to have mawari-banai—possibly only they could afford the luxury. (c) The kōken calls to mind primitive conditions that the theatre story of the European drama. He is the attendant (supposed to be invisible) of the principal actors, wears black clothes, removes articles that are not required, adjusts the actors' robes, and holds a candle for them. (f) The ōtōcki, who represents the proprietor and is charged with the business of the theatre, sits, during the performance, near the main entrance of the house. When there is nothing on, his office is in the shiki-ya, or accountant's room. The tōdori-ya is in the back part of the building, as are also the hayashi-ya, or room for the musicians, the gētsūya, or 'green room,' for the actors, and the sōgō-ya, or 'actors' room.' It is last entered for a few words. The Japanese have scarcely any dramatic writers, and none of great note. Very few of the nō dramas can be assigned to any particular writer, and the same remark holds good of the kabuki drama. The actors themselves, sitting in committee, compose the play as a joint-effort, and it is this, perhaps, more than anything else that has helped to keep the Japanese stage so stagnant and unprogressive. Recent efforts at reform, such as Kawakami's shiki-shibori and the construction of the new Imperial Theatre, must be looked upon as so many efforts to overthrow the tyranny of the player-actors. The student of the stage will see here the point of analogy with the pre-Shakespearean dramatists of the Elizabethan age.

24. Influence of the drama on the development of 'Bushiō.'—The nō drama had its first glory in the Middle Ages, when the military and chivalrous spirit of Japanese knighthood was at its prime. We may seek for its origin in the oldest religious sentiment of the people, in the Buddhism of the Nara age, in Chinese and Indian influences. But the Japanese dramatists that the drama never took its root until the spirit of the nation was moved by the incidents of that great national epic (for it was nothing less) which gathers round Yoshitsune, Benkei, Yoritomo, and the great warriors of the Genji and Heike. Then it was that the heart of Japan went forth in sympathetic response to the great ideals set before it during that period of national distress. It was then that the imagination was quickened, and the image formed of the ideal hero, braving, loyal, patient, quick in honour's quarrel—and yet a religious mystic, whose poetic insight enabled him to see, dimly perhaps, but with faith, the underlying verities of existence. This is the ideal set before us in the nō, and the idealization was much assisted by the quietistic teachings of the Zen school of Buddhism.

The ideals were, however, indirect, and the principles underlying Bushiō, or the 'Way of the Leaf' of three trees, were not understood. It was reserved for a later age to elaborate the philosophy of life with which Bushiō presents us, and Yamaga Sokō (born 1622), the disciple of Hayashi Razan, and the instructor of Oishi Kuranosuke, who headed the nō movement, has been often singled out as the first formal exponent of Bushiō. According to Yamaga (the present writer is here following the Rev. J. T. Imai, who in his turn follows Prof.

Inouye Tetsujiro), Bushiō may be summarized somewhat as follows:

To know one's proper work or duty, to have the will to do it, and to carry out one's good intentions with diligence and zeal. True manliness is shown by not being deterred by a lack of wealth, or power. In order to reach that ideal, there should be acquired large strength (kiri-ana) in courage, and to the end of the world to be respectful, with courtesy, and filial piety, and, as a man of the world, to perform one's office, duty, and life. These are the virtues and the way in which they are to be practiced.

It has been said that the old-fashioned Bushiō of the medieval knights gave its last expiring flicker in the deaths of Oishi Kuranosuke and his band of rōnin in 1703. Certainly the play Takumainawa which lay on Japan from the middle of the 17th to the middle of the 19th century was not of the most suitable form for the production of so delicate a flower. But Yamaga Sokō and his Confucianist successors in the 18th century were less prostrate, and the foundation of a new Bushiō, and in this they were ably aided and abetted by the dramatists, both of the kabuki and of the minyō-šibai (marionettes).

It was at this period they say Inouye Tetsujiro's dramatists began to be produced by Chikamatsu, Takeda, Inouye, and later writers. They were exponents of Bushiō to the mind of the people. The women and women's stories such as Sokō and others were to the learned. It was through these historical plays... that Bushiō influences acted and re-acted on the Japanese people.

We can scarcely over-estimate the influence that the stage has had and still has in forming popular ideals of religion and morality in Japan. We must remember that the words 'honor,' 'loyalty,' 'duty,' 'honesty,' and 'truth,' which these plays directly and indirectly illustrate, are not quite the equivalents of the same words when found in the Christian writings. They must be interpreted according to the standards of morality which were generally accepted in 18th cent. Japan.

LITERATURE.—Students desiring to pursue their studies beyond the limits traced by this article are recommended to consult, for European and American authorities, the very complete bibliographies published by von Wockern, in 1884 and 1904; and, for Japanese writers, the list given by Péri in Bulletin de l'Ecole Francaise d'Extreme Orient, vol. iv. pp. 251-272. The writers own obligations are to the works of W. G. Aston, esp. History of Japanese Literature, London, 1898; K. Ploetz, Geschichte der japanischen Literatur, Leipzig, 1904; M. Revon, Manuel de la litterature japonaise, Paris, 1910; Péri, articles in Bulletin de l'Ecole Francaise d'Extreme Orient, 1904-5; B. H. Chamberlain, articles in Japanese Studies, Yokohama, Nov.-Dec. 1919; and B. H. Chamberlain, Japanese", London, 1908; also to various articles which have appeared from time to time in the TAJ.

A. LLOYD.

DRAMA (Javanese and Further Indian).—The Javanese drama is one of the most interesting of the entire Oriental drama; for it is the development of the 'shadow-play.' Seven distinct forms of drama in Java are enumerated by Juyonbō (AE xiii. 4-5): (1) wayang purwa, which are played with puppets of buffalo leather, which cast their shadows on a curtain, and draw their themes from the Mahābhārata, the Rāmāyun, or the Javanese Manik Mayu; (2) wayang gong, the same as the preceding, except that the subjects are drawn from the native Javanese Panji-cycle; (3) wayang kulit, or krinyut, that are played with flat uncolored wooden puppets, and draw their themes from the cycle of Damar Wulan: (4) wayang golo, which are played with round clothed puppets, and draw their themes from the Damar Wulan and the Muhammadan Amir Amsyah cycles; (5) wayang topeng, with a répertoire identical with that of the first three classes, but played with masked actors; (6) wayang wong, the same as the second, but the actors are unmasked; and (7) wayang lebar, with the same répertoire as the preceding, but represented by a pictured scroll which is unrolled and explained by the dalang. The usual mode of presentation of a
**wayang** is as follows:—A white sheet (kéler) is stretched on a wooden frame (penggung). At the top of this frame a lamp (blicaan) is placed so as to cast its light upon the screen, and on the same side of the lamp the ‘director’ (dalang) squatting, has, as it were, a choir of tiny puppets (wayang or ringgit). On the side of this chest are a few small plates of metal, which are struck by the dalang to imitate warlike sounds. Near him, moreover, is a bowl of incense, and also a bowl containing the other ingredients (wayang or ringgit) for the spirits. The men in the audience are seated on the same side of the curtain as the dalang, while the women are placed on the opposite side, so that they do not see the puppets, but only their shadows. All the lines are recited by the dalang, who varies his voice or gives other indications of the change of character. This holds good, at least in some cases, even in the **wayang wong**, or plays with unmasked human actors. In the **wayang topeng**, played with masked actors, on the other hand, the players themselves speak the lines. Both women and men may act, as in the ancient Sanskrit drama.

The **dalang** of the Javanese drama corresponds closely to theWayangweta of India (cf. Pischel, *Heimat des Puppenspiels*, Halle, 1900, pp. 8-10), both being primarily ‘thread-pullers’ (of the puppets), although the word **dalang** itself seems to connote originally much the same as the English ‘sensation’.

The Javanese **wayang** was undoubtedly religious in origin, as has been elaborately shown by Hazen (op. cit. pp. 39-59), who calls attention to the offerings (agen) to the spirits, to the incense offered before the performance, to the fact that the plays are given at night, when the spirits are abroad, and to the circumstance that the presentation is a meritorious act on the part of the patron who hires the troupe, and that a **wayang** should be given by all means at certain important periods in the life of the individual, such as the festivals at the seventh month of pregnancy and the cutting of the nail-string. According to him, moreover, the entire shadow-play sprang from a desire to represent the ghosts of departed ancestors by what resembled them most closely, that is, by shadows, while the **dalang**, who causes the puppets to cast their shadows on the screen and recites lines for them, is primarily a priest performing a sort of dramatic exorcism. The religious character of the Javanese **wayang** is also confirmed, perhaps, by the phallic character of many of the puppets, since nudity is not only a well-known fertility-charm (cf. Serrurier, *De Wijs van het Puppenspel*), and is possibly also a potent means of frightening away demons (Hazen, op. cit. p. 43; cf. Crooke, *PF*, 1896, i. 68-72). At a later period this phallicism may, of course, degenerate into mere obscenity, as in the **Wayang Barong**.

The age of the drama in Java is uncertain, but it is at least clear from allusions to it in the literature that it was popular by the beginning of the 11th cent. A.D. Its origin is still more problematical, the leading authorities holding views diametrically opposed. Serrurier, Hageman, Poensgen, and others believe that the Javanese drama was profoundly influenced by the Hindu; while Crawford, Niemann, Brandes, and especially Hazen, deny that Hindu ideas form an essential model of the **wayang**. An absolute decision of the matter is not easy, but in the present state of knowledge it would seem that the Javanese drama is indeed an original product, India, it is true, numbers among its dramatic categories the subject of the subject matter, but the form of the model of the **wayang**. A complete and elaborately discussed by Pischel in his *Das altindische Schattenspiel* (SBAW, 1906, pp. 482-502; cf. his *Heimat des Puppenspiels*), with the conclusion that the shadow-play in the technical sense of the term was known in India. Nor is there any inherent impossibility that the **Dalangdasa** of Subhata (produced in Feb.-Mar. 1243; tr. Gray, *Mitt. d. Gesellsch. f. Erforschung in A.E. xi., 4-17, 97-119, also *Das javanische Maskenspiel*, ib. xiv. 41-79, 81-112); *Das Indische**; *Die Kunst der **dalang** is not so far edited—was produced somewhat like the Javanese **wayang**; nevertheless, the difference in spirit between this and other plays of the Rama cycle in India (cf. Lesti, *Theatre indien*, Paris, 1894, pp. 287-292), as compared with the Rama-plays of Java (Juyunboll, ‘Indonesische en achter-Indische tooneelvoorstellingen uit het Ramâyana,’ in Blijvertogen tot de Toa, Leiden, en Volkenkunde van Nederlandse Indië, 6th series, vol. x. pp. 501-565), must be taken into serious consideration.

The profound influence of the literature of India upon Java is too well known to require emphasis (cf. Lassen, *Ind. Alterthumskunde*, Leipzig, 1861, iv. 504-531), and it is obvious, moreover, that both Hinduism and Mahamadhanism have given themes to the Javanese drama. If a conclusion may be hazarded, one may say that the Javanese **wayang** is indigenous, and that foreign influence is manifested only, or at least chiefly, in the subjects of many of the Indian and Cambodian). From Java the drama seems to have spread to Burma, Siam, and Cambodia (cf. Serrurier, op. cit. pp. 170-186; Hazen, op. cit. pp. 25-37). In all these countries the Rama cycle forms the favourite theme, although Buddhist plays and religious dramas in Sanskrit are not unknown in Burma. The Burmese drama is divided into zeit-pits, in which men and boys (but never women) act, and yok-thays, or puppet-plays. Here again the drama is partly religious, not only in subject, but also to the fact that the plays are given at night, when the spirits are abroad, and the dramatis personae are usually said to be in the possession of certain spirits. The Burmese plays also contain a large number of spiritual beings, who, in the classification of those in Java, are known as *len kon* (plays by masked actors), *len kun* (puppet-plays), and *len mong* (rolls of oak). The burmese drama is merely a combination of the Rama cycle with the religious drama, and is in a sense a religious play. Among the moderns, the **Ranüka** is likewise an important theme, and the drama shows the influence not only of Siam and India, but also of China. Here the religious elements in the invocation (lory pënyaëggit), which is performed by a *pawang* (‘magician’) to the accompaniment of various musical instruments, and in the propitiation of spirits (bisang keangkaun). The **Ranüka** is to the Javanese what the **Shiva** is to the Indian; the stage is purely partial, moreover, to shadow-plays, where, as in Java, the showman repeats all the lines, while in Siam this monologue becomes a real dialogue between two persons. Throughout Java and Further India, then, the drama is characteristically either a shadow-play or a mask. There seems, therefore, to be little association with the mimetic dance-drama of the Polynesians; while, on the other hand, masks are undoubtedly one of the most primitive forms of all dramas, as is clear from the analogies of the American Indian and of Greek tragedy, to say nothing of the early Roman *fabula Atellana*. So far as evidence now accessible goes, it would seem that the dramatic art of Java and Further India is an indigenous product, despite later undoubted influence from India.

Drama (Jewish).—Dramatic literature among the Hebrews, as among all Semitic peoples, was scanty. Attempts have indeed been made to interpret the little known songs of Moses (De 32:22-41) and the song of Miriam (Ex 15:20-21), and, above all, the Song of Songs (cf. HDB, s.v.), as dramatic; but these endeavours have been unsuccessful. Nor is the Book of Job a drama in any true sense of the term. Whatever the Jewish drama was, and is, due to imitations from the Indo-Germanic races with whom they have come in contact. The earliest Jewish play dates from the 2nd cent. B.C., when Ezekiel of Alexandria attempted to dramatize the events of the Neo-Hebrew Theatres. Fragments of his play have been preserved by Clem. Alex. (Strom. i. 23, 155) and Ensebulis (Proop. Evangel. i. 29); and Schürer (GJV* iii. 373) states that it was performed in the theatre of Alexandria, in the stage, although it is difficult to imagine its production. In Ezekiel’s work the influence of the spirit of Euripides is evident, and his object seems to have been not only to instruct the Alexandrian audience but, also to wean them away from Gentile plays.

The general attitude of the Jews, however, towards the drama was extremely hostile, in conformity with their policy of self-imposed isolation, and partly, no doubt, by their hatred of the Romans and their suspicion of the Greeks. It was not until the middle of the 17th cent. that the increased scope allowed to Jews gave rise to a Neo-Hebrew drama, modelled, of course, upon the theatre of the Christians by whom the drama was surrounded. The first of these plays was the Yezdith ‘Olam, by Moses Zacuto, a Marano, or renegade crypto-Jew, of Amsterdam, and its theme is the Talmudic legend of Abraham’s destruction of his father’s idol. The plots of the Neo-Hebrew drama are either religious or ethical, as in the Aser ha-Tichod of Joseph ben Isaac Penzo (Amsterdam, 1673) and the La-Veysharim Tchiloth of Moses Heyyim Luzzato (Amsterdam, 1743), the former being the very first play in the field of modern Jewish Understanding, Providence, and an angel to lead back to the path of rectitude a king distracted, against his will, by his impulsive wife, and Satan; while the latter drama is an allegory designed to show the victory of truth over falsehood. No fewer than forty-six Neo-Hebrew plays are enumerated by Seligsohn, the majority of them based on Biblical or ethical themes.

Many foreign plays have also been translated into Hebrew, including, for instance, the General ‘Atkaloth of David Franco-Mendes—an adaptation from Racine and Metastasio (Amsterdam, 1779)—and versions of Racine’s Esther, Schiller’s Bride of Aves, Voltaire’s Nitiara, and Dryden’s Judin, and Shakespeare’s Othello, Romeo and Juliet, and Macbeth. The Yiddish dramatists are active, and many great cities support one or more Yiddish theatres which cater to the Jewish populations. These are, however, for the most part translations or adaptations of dramas by non-Jewish authors. The Jewish drama must, therefore, be regarded merely as a literary parasite; even its apparently original productions are really copied from Indo-Germanic sources.

LOUIS II. GRAY.

Drama (Persian).—The drama of Persia is both scanty and late, due in part, at least, to Muhammadan rule, which has never been favourable to the development of this art, reflecting therein the dramatic poverty of the entire Semitic race. There are, however, two coruscating Persian plays, exclusive of the marionettes or shadow-plays (karragoz), which are of Turkish origin. The native Persian drama, then, may be divided into comedies (tashbizi) and mysteries (tez’izi, lit. ‘consultation, condensation’). The comedies are, for the most part, improvised by lotus, or itinerant buffoons, and offer little of interest. It is very different, however, with the tez’izi, which is the most striking mystery-play of the entire Orient, and possesses a sway over the Shi’ite Persians comparable with that of the Passion-Play of Oberammergau over Christians. The individual tez’izi are comparatively short, and are concerned entirely with mortal subjects, and mainly involved in the martyrdom of Hasan and Husain, the sons of ‘Ali, who was the first cousin of Muhammad and the husband of the Prophet’s youngest daughter Fatima. ‘Ali, the rightful successor of Muhammad, was rejected by his favour of the sect. The Persians, however, have very wisely adopted Hasan and Husain as martyrs of the faith, and commemorate their death annually during the first ten days of the month of al-Muharram. In each house that can afford it a place is constructed for the representation of the mystery, and on the side towards Mecca is set the model of the tombs of the martyred Hasan and Husain. The actors of the drama are not specially trained for the purpose, but their deep religious feeling, and their regard for their performance as for a sacred duty, lend a power to the presentation which works the audience into a frenzy and renders it necessary to provide for the safety of the hated Sunnis whom they may meet as they go in procession through the streets. The play occupies the fifth, seventh, and tenth days of al-Muharram, the most important being the two last, symbolizing respectively the marriage of Kasim with Fatima and the death of Husain. The concluding day is often marked by bloody conflicts between the Shi’ites and Sunnites.

Dramatically the mystery-play of Hasan and Husain, which is essentially a series of tez’izi, is rude but effective, gaining strength from its very popularity and vulgarism of its style. Its length is prodigious, and the unities of time, place, and event action are set at defiance. The author of the play as a whole or of its parts is unknown, and it is double, triple, and at the end altered and according to need by those who act it, rather than a definite dramatic work. The number of tez’izi composing it varies, but it would seem that the play is of comparatively recent development, possibly not more than the second half of the 19th century. As an independently developed Passion-Play, untouched, apparently, by non-Persian influence, the drama of Hasan and Husain is one of the most remarkable dramaturgic creations in the history of the religious stage. 110.

LITERATURE.—Ehms, Margins violently. Studien (Leipzig, 1870), pp. 374-194, also in G.J. ii. (1900) 35-161; Chodzko, Theatre person (Paris, 1878); Pelly, The Miracle Play of Hasan and
the dra- they, that the Romans were often eccentric in character and analogous to the early Roman fabulae Atticae, particularly in Kallatea (Cook, Voyage towards the South Pole and round the World, London, 1777, 1. 173-176), they were evidently derived ultimately from religious sources. This is distinctly affirmed by Mooren an (Voyages aux iles du Grand Océan, Paris, 1837, 1. 133-134), who states that the dramas were presented under the auspices of the Aretis, while the plays themselves were devoted to the description of the two principles, Taara and the matter with which he unites, the creation of the universe, the gods, elements, spirits, plait, and other productions of the earth; then the life of the demi-gods or heroes, their journeys, combats, and the like; then love-themes, dialogues between lovers (lamentations, quarrels, true comedy-scenes); and the presentations invariably ended in dances. It is also noteworthy that, according to the same traveller, the "musicians," singers, and declaimers at the plays had the orchestra slightly elevated above the rest, while the "actors or dancers" occupied a special place before or in a house. It would therefore seem that the function of the Polynesian actor was primarily that of the dramatic dancer, the words being supplied by separate reciters, a proceeding for which parallels may be found elsewhere, as among the Javanese. The religious basis of the Polynesian drama receives an additional confirmation in the fact that all plays were also presented in connexion with funerals.

LOUIS H. GRAY.

DRAMA (Roman).—1. Native Italic drama.—The Roman critics were deeply interested in the Italic beginnings of their drama, and investigations of the subject seem to have begun as early as the time of Accius (c. 100 B.C.). Two generations later the subject was taken up and examined anew by Varro, notably in his lost Origines Scenae. His views, so far as they survive, are found in the treatises of Dionysius of Halicarnassus and Dionysius of Comedies. The intermediary was probably Suetonius. Apart from scattered references in various authors, we also have Horace (Epist. ii. 1. 181), and Livy (vii. 2). It is quite clear, however, that the Roman critics had discovered nothing very definite. 1 This is shown by their lack of agreement on any given point, by their inconsistencies and inordinate combinations; above all, by their frequent appeals to etymology, that last resort of the desperate investigator. It is impossible, for example, to reconcile Livy's famous account with facts, probabilities, or even possibilities. Jahn saw that it was the result of etymology and of mere philological "combinations; 2 Leo pointed out that there was a much more suspicious parallelism with Aristotle's peri wapóx

1 The De Dramatis Satyrarum et Curtiss, s Cr. ex. 1. 181, par. 9.
2 The Drama of Dionysus and the Old Comedy at Rome,"AJPh xv. (1894) 1-30. For Jahn, see Herm. ii. (1867) 286; and for Leo, ib. xxxi. (1868) 67.

shows, was inclined to distrust the earlier (Aecian) account, and appears to have concluded that the Italic origins were a terra incognita.

Such were the views of the greatest Roman scholar; and yet, while we must agree, we are inclined to agree with them. Neither for him, however, nor for us do they preclude the existence of a native Italic drama in the wider sense. The Romans, like the Greeks, were gifted with a keen dramatic instinct and a large medium of the mimetic faculty.

The liturgies of the Sali and of the Arval Brothers, the carmina triunphalia, the versus Fescennini, the songs of beggars and of shepherds, all indicate that there was enough life in the drama which is responsible for the modern Commedia dell' Arte is the same as that which greets us at the very dawn of history on the Italian Peninsula. Irrespective of the character and credibility of the testimony afforded by the Roman critics, we may safely agree with Mommesen—and so far as the present discussion is concerned this is quite sufficient—that the simplest elements of the mimetic art were in Latium and Hellas altogether the same. The dance (tamburo, pipe, dithyramb), the use of masks or their equivalent, the accompaniment of the pipe, the rude songs ceremonially abusive and obscene (to avert the evil eye, as the carmina triumphant, and the versus Fescennini of the weddings), the way in which the drama was for the same purpose—all in honour of the gods and associated from the first with rustic festivals—this protoplasm of the drama, to which Horace gives the indefinite name of Fescennina locuta, may be assumed for Italy no less than as much as for Greece. In fact, if Fescennium in this connexion (fescennium versus) is to be derived from fescinum, Fescennium literally is φαλλός, and the parallelism is complete between Fescennia locuta and ἡ φαλλοθρία, the phallic verses characterizing Aristotle's first division of the Comedy. The derivation from Fescennium (another antique theory) might have been suggested, though this is more than doubtful, by a trustworthy tradition that this old Latin town, so long under the influence of Etruria, was a centre of the worship referred to.

It is neither possible here nor necessary to discuss the vexed and vexing question of the dramatic satura, the name given by Livy to a play with a more or less horrid plot, a dialogue assumed by his authority as the second stage in the development of dramatic art on Latin soil. It is not unlikely per se that a play of the type described did develop in Latium as it did in Greece, but, if satura is the traditional name of such a play instead of being (as Hendrickson suggests) merely a later invention, we should agree that the word was a corrupted form of ἄραφος, and look to Southern Italy for its ultimate origin.

However that may be, it is fairly certain that the Romans were affected at an early period by the Dorian comedy of their neighbours to the South. This is shown by Bethe's investigations, 3 and is in harmony with Livy's statement (vii. 2), under the year 677 B.C., that histrion is an Etruscan word, and that the artistic beginning of the drama came from Etruria. This means ultimately Mamma Grecia, for in such matters Etruscan influence was Greek influence at second hand. Etruria was not creative in the sphere of art, it was not even a first class imitator; but it was a good purveyor.

2 The 'Palliate.'—Let us turn, however, from the crude beginnings of mimetic art, Italic or otherwise, to a brief consideration of the Roman drama, as it is in the light of the modern view of the Roman critics, especially after Varro, agreed that the first definite event in the history

3 Proleg. zur Gesch. des Theaters im Alterthum, Leipzig, 1856.
of the department was associated with the year 240 B.C. The long war with Carthage had just been brought to a successful termination, and it is a matter of record that, in order to indicate its especial gratitude for Divine protection, the Government, among other things, commissioned the Greek freedman Livius Andronicus to enlarge the usual scope of the Ludi Romani by the presentation of two plays, a comedy and a tragedy, translated, or, more properly speaking, adapted from the Greek, for a Roman audience. For the one he resorted to the New Comedy, which, being both contemporary and cosmopolitan, was best fitted to reach the hearts of another nationality; for the other he had a large body of old favourites from which to choose. Thus, the very nature of a composition eminently successful, and it is characteristic of Roman conservatism, especially in connexion with any religious rite, that the types thus established were in certain respects rigidly adhered to. The (as inherited, the Palliata, or stage-clown) is always the adaptation of a play from the sphere of the New or occasionally (as perhaps in the case of the Amphitrion) of the Middle Comedy; the scene, the characters, and, as the name indicates, the action, are of a more popular type, and are not always consistently preserved, especially in Plautus; but even here, though the man lived and wrote during and immediately after the blazing excitement of the Second Punic War, deviations from the normal type are noticeable. Comparison, however, with fragments of the Greek originals, wherever available, shows that the poet treated his exemplar with great freedom, both in content and in form, changing what was suitable, and leaving out what was not. The measure is at times a part of the original, at times an adaptation. It is often difficult to speak of a particular play as a whole. Frequently, too, the action of his play by constructing an underplot from a certain number of scenes supplied by a second Greek exemplar. This process was technically known as contaminatio. On the whole, however, the Palliata is a faithful representation of the New Comedy of Greece. Indeed, owing to the loss of all complete originals, it is our only representative. The characteristics of this comedy of manners, or, as Ben Jonson would say, of humour, are to be found in the Palliata written by them must have been no less than four hundred. We now have the six plays of Terence and twenty plays, more or less complete, of Plautus. Of the remainder, we have the names of about one hundred and forty plays, and fragments amounting in the aggregate to about eight hundred lines. Apart from Plautus and Terence, the great names of the department were Naevius and Cæcilius Statius. In the famous canon of Vossian times, are all Greek. To the still greater merit of Cæcilius, Naevius, Livius, Licinius, Atilius, Terence, Turpilius, Trabea, Lascinius Lanuvinus, Ennius. Apparently the latest of the group was Naevius Statius, in 159 B.C. He had already outlived the popularity of his department by nearly a generation.

The Palliata was carefully studied in the two great eras of Roman scholarship—the age of Varro and the age of Suetonius. Many plays of this type were doubtless composed, especially by persons of quality; in the time of Domitian, when it was the fashion to write books. But, after the first great period of its existence, the stage tradition of the Palliata, so far as we are now able to trace it, is largely the stage tradition of Plautus and Terence. Indeed, the only Roman comedy to survive, apart from these two authors, is a re-working of the Aulularia, belonging probably to the second half of the 4th cent. A.D., and known as the Querola.3

3. The 'Togata.'—This was the successor of the Palliata in public favour. Its floruit belongs to the two generations between the death of Plautus and the time of Sulla, and the great names of the department are Titinius, L. Afranius, and T. Quintius Ata. Little is known of these men personally, except that Ata died in 77 B.C., and that Afranius, by the fragments. The scene was taken from titles and about four or five hundred fragments, mostly lexical, are all that remain of this type. According to the ordinary Roman definition (e.g. esp. Horace, Ars Poët., 288), which we have already mentioned, the Palliata was a Greek comedy of manners representing Greek life. The scene was Roman and the costumes were Roman; hence, the name. In the case of Afranius, however, we learn that this is not a definition of the Fabula Togata as a whole (which ought to mean any play distinctively Roman), but of its most important sub-variety, the Tabernaria. The distinction is valuable to speak of the Togata as a separate and important sub-variety, with a more significant and descriptive than is Togata. Moreover, Dionycus adds that 'tabernaria decurur et humiliter personæram et argumentum similitudine comedios parcæ, in quibus magistrati seque sed humilio, humilioque private, indecens quasi quidem non quot tabulis tegentur, quam committere tabernae vocabantur.' This statement is amply supported by the titles and, so far as they go, by the fragments. The scene was generally (perhaps always) outside of Rome, and for the most part in the small towns of Southern Latium. Indeed, Mommsen claimed that the scene had to be laid in a town of the Latin league, because the poet was not allowed to represent either Rome or a Roman citizen on the stage. Hence Mommsen would connect the death of the Togata in Sulla's time with the extension of citizenship to the Latin towns at that date. If so, why was it that the Togata or the great masters were popular on the stage until late in the Empire?

The fifteen titles of Titinius represent what was originally about twenty thousand lines of text. About one hundred and eighty fragmentary verses survive. So far as form is concerned, the model was the Palliata. In his metrical art, Titinius followed the greater regularity of Terence, but in language and temperament he seems to have had more in common with Plautus. His plays were all family pieces, and it is clear that the life depicted was that of the lower classes and of the country folk. The prominence of women, noticeable not only in Titinius but in the other authors of this type, is itself characteristic of Italian life. There is no sign of the kidnappers, and very little indeed of the slave which Festus tells us were standard characters in these plays. The only type suggesting the Palliata is the parva, the 'smaller comedies' are more Italian, and remind us rather of the Aedidana and the mime of than of the Palliata. By far the greatest, the most prolific, and the best known of the trio was Afranius. Indeed, like Molière and Ben Jonson, Afranius seems to have been a true Querolus sive Aulularia, ed. by R. Peper, Leipz., 1875, etc.

F. Marx, in Pauly-Wissowa, I. 787. For the Togata as a department, see esp. Edmond Courlaud, de Comedie Togata, Paris, 1890.
been an excellent illustration of Gildersleeve's statement that "in literature as in life the greatest borrowers are often the richest men." Cicero (Brut. 167) says that he was influenced by Titius the orator, and even in the disjointed fragments now surviving we hear echoes of Paeucius, possibly even of Cato, but above all of Manander. In fact, enough is left of his prologue to the **Compendium** to show that he followed him closely, and that he was criticized for it. His reply was that 'he borrowed not alone from Manander, but from any other writer, Greek or Latin, whenever he found something suitable to his purpose.' Why not? Is it not certain that Manander, but the language of the plays of England and France is one of the most important chapters in the formative history of the modern drama. Their connexion, if they have any, with the tragedy of the Republican period cannot be stated definitely. Forence *Pallade*, in her _History of English Dramatic Literature_, says that these plays go back to the school of Horace, and the plays throughout were deeply affected by contemporary rhetoric.

5. The *Pretexta._—The **Pretexta**, the Roman parallel to the _Tragedia_ of Livius and his followers, as the _Toga_ was the Roman parallel to the _Palladi_ and _Toga_. The invention of Navius, the greatest constructive genius, perhaps, of Roman poetry. But, owing in part, no doubt, to the comparative poverty of Greek legends, the idea was not especially fruitful. One example, however, survives. This is the _Octavia_, a play by some unknown author, probably of the Flavian period, in which possibly a dialogue in some dialogue between the house of the Nerva, inasmuch as it has come down to us in the corpus of Nerva's tragedies.

So much for a brief survey of the Roman drama as a purely literary production from beginning to end (Palladi and **Toga**, _Tragedia_ and **Pretexta_). It remains to consider those types of the drama which had a popular as well as a literary history. The most important of these, and the only ones with which we need to be concerned in the present inquiry, are the mime and the _Fabula Attica_. Strictly speaking, the _Attica_ should be considered a variety of the mime. Here, however, we take it up first, not only because in literary form it is the immediate successor of the _Toga_ in public favour, but also because to lose the literature of Rome as it now survives is largely the literature of a great capital—in other words, that portion of the written word which was contained in a classic in the age of Hadrian and the Antonines. After that we hear little of it. In all the great library of antique realism, now gone beyond recall, there is probably no department, at least so far as Rome is concerned, which we could so ill afford to lose. The literature of Rome as it now survives is largely the literature of a great capital—in other words, that portion of the written word which was contained in a classic in the age of Hadrian and the Antonines. After that we hear little of it. In all the great library of antique realism, now gone beyond recall, there is probably no department, at least so far as Rome is concerned, which we could so ill afford to lose.

6. The *Attica._—*The Fabula Attica* is the "play from Atella," a little town in Campania. The plays in this form are called _Fabulae_; the first time the play was known as 'Oscan,' and the characters as 'Oscene personae.' (Dionysius, _i_. 490, *i.e.* Varro). Generally speaking, of course, these plays were acted in Latin, but Strabo (v. 233; cf. Sueton. _Jul_. 28) tells us that in his time (the Augustan Age) they were still acted in Oscan _kara tuva aywma patroos_ during the national festival." This statement, so far from being incredible, as many have thought, is merely an excellent illustration of the well-known tendency of liturgy to linguistic conservatism (compare the use of Sumero-Akkadian by the Babylonians; of Greek in the Roman worship of Ceres, as attested by Polybius, _xx_. 14, and Cic. _Bab_. 55; of Greek in the Russian, and of Latin in the Roman Church). Beyond a doubt not only that the play was Oscan, but that the Romans took it over in the first place in consequence of some vow or in connexion with some special occasion, and acted it at the national festival. It is, therefore, reasonable to suppose that the small and obscure town of Campania recorded in the title _Attela_ was either the centre of the worship commemorated or in some way associated with its adoption. The date, though not uncertain, is at least anterior to the time of Livius Andronicus, and probably by a considerable period. This is shown in two ways. The first is...
derived from the special and peculiar privileges of the actors. The first actors hired by Livius Andronicus were either slaves or freedmen. Hence the irrevocable rule of later days that no Roman citizen could go on the stage without 

\textit{ipso facto}\n
incurring \textit{infamia}, i.e. the loss of certain important civic rights (as exemplified, for instance, by the famous case of the mimeograph Laberius in Cæsar's \textit{Bell. Civ.} xxv. 3). The extreme case was the \textit{Atellana}. Here and here only the actor was not obliged to remove his mask, and a citizen could take part without incurring any legal disability. This can only mean that the Atellana was introduced at a time when the Romans had no professional actors, and probably no festival at which theatrical performances were regularly given. The \textit{Atellana} had been acted by Campanian citizens. The Romans, contrary, it reflects the type and practice of the religious rite.

\textit{The second argument for the high antiquity of the Atellana among the Romans is derived from the well-known principle that, unless the ground is already occupied, the play always brings its theatre with it. Now, Bethe (\textit{Proleg. zur Gesch. des Theaters}) in Arhythm. 1903) has shown, we think conclusively, that the peculiar shape of the Roman stage, about which so much has been written, is not due to the fact that it was a modification of the Hellenistic type. On the contrary, it reflects the type and practice of the religious rite.}

\textit{The strangest characters of the Atellana among the Romans is derived from the well-known principle that, unless the ground is already occupied, the play always brings its theatre with it. Aristophanic than anything else in Roman literature. Equally Aristophanic was the habit of personal criticism, of which we hear during the Empire from Tiberius to Trajan (Tac. Ann. iv. 14; Suet. Tib. 45, Col. 27, Nero, 39, Galb. 13, etc.).

While it is true that the Atellana to a literary form, we have to deal with a confused and confusing tangle of testimonia regarding the Atellana, the Exodion, the Rhinthonic, and the Greek Satyr-drama.

The conclusion seems to be (cf. schol. Juv. iii. 176, vi. 71; Suet. Tib. 45; Cic. Fam. vi. 1. 10) that the literary Atellana was used as an exodium, and the first mention of the word in Lucullus (103-103 B.C.) coincides with its development in this sphere.2 At the same time it is necessary to admit that, even if only a few actors (Ascon. on Cc. Verr. 15), it seemed hardly worth while, so to speak, to put it on the stage by itself. Apparently, therefore, it was the analogy of the Satyr-drama that suggested the use of the literary Atellana as an exodium, an after-piece. By later critics it was evidently identified with the Satyr-drama (schol. Juv. vi. 71; Porphyry on Hor. Ars Poet. 221, etc.). But it is hard to see how the two could coalesce. They could be a mimic drama and a Satyr-drama, or the other way round. Probably not. The Tiberius explanation seems to be that Pompontius and Novius wrote all three and used them for exodai.

The Atellana was evidently popular under the Empire; the old folk-drama was never forgotten, but as a living department of literature it seems to have been largely the creation of these two men, and as early as 55 B.C. (cf. Cic. Fam. vii. 1. 3 [written in 46]) the literary Atellana is an exodium. At the same time, so far as is known, the first mention of Decimus Laberius and Publilianus, the only two men of note who raised the mime to a literary form in the Latin language. If this were all, or if this chapter could be dealt with independently, the mime might be dismissed with the few paragraphs that precede it. But we have learned from Reich, however, that this cannot be done, and with his general conclusions we must agree in the main. The literary productions of Laberius and Syrus-like the Atellana in which they preceded—are a mere branch of the parent stock.

7. The mime. In its larger sense the mime is the most important phenomenon in the history of dramatic art; it appears in a dozen different forms, it has a dozen different titles. It is the history of the growth of realism, of the rise of the democracy; it has popular periods and literary periods, a Greek history, a Roman history, a Greco-Roman history, a modern history. Indeed, after reaching its peak in the fifth century and the whole story of the antique drama with the simple phrase, 'Mime thou went, to mime didst thou return.' For the complete and detailed discussion of this long and interesting development, the reader is referred to Moritz Theodor Seidler's book. It is manifestly impossible to give anything more than some of the important facts in outline.

The earliest appearance of the word 'mime' is as a title for the famous compositions of Sophron (5th cent. B.C.). These dramatic presentations of single incidents or situations, according to Suidas, were in prose and written in the Doric dialect. The substitution of the scotio for prose gives the form and the atmosphere of the mimebibi of Herondas, the Tiberius. On the one hand, the metre, on the other hand, starts us, by way of Sophron's imitator Theocritus, on the long history of boccal poetry. A convenient generic term for this type is Reich's mimologia, i.e. the mime as a recitation.

There were also purely lyric mimes, which were sung. To these Reich gives the generic title of mimodia. Particular species of it are magodeli, Simodia, hiraldia, Lysidia. Between the two we have koinodia and Ionikodia, all in verse, but partly recited, partly sung. In the Alexandrian period, comes the fully developed mimetic drama, which was a combination of mimologa and mimodia, and retained the characteristics of both. With a fully developed plot, it had prose parts and iambic parts, like the mimolouga and the lyric parts—caedea—like the mimodia. With the conquests of Alexander this new invention began to spread in the Greek East, and soon took entire possession of it. Indeed, the time came when it ruled the stage, even to the exclusion of its ancient rival, the comedies of Menander.

Toward the end of the 2nd cent. B.C., after the Romans conquered the East, and especially after Sulla's time, they brought the dramatic mime to Rome. From Rome it spread over the West, and thenceforth held possession of the entire Graeco-Roman theatre until the fall of the Empire. The irruption of the Barbarians upon the West made an end of the theatre. Only the mimai survived, and they died out with the original function of baimastos and chlamydos. Such were those tumblers, jugglers, etc., of later times who went on with the ancient art of the mimas.

It was thus that the mime of antiquity was enabled to survive the Middle Ages and reach modern days alive. In the Greek East the mime was not subjected to the same strain. For centuries the Byzantines clung to the classic dramatic mimes of Phyllis. They also produced a large number of mime types and figures were added to the old stock inherited from classical times. Here, as in the West, the regular classical drama had long since disappeared from the stage. When Byzaunia fell, the remnants of Greek culture took refuge in Italy, to reappear there at the Renaissance. Only the mime remained, and in a debased form survives to-day in the Turkish popular drama known as the koragij. Two distinguishing features of the mime from beginning to end and to all periods accordingly. It is the history of the mime; to give the substance of Dionysus' definition (i. 491 K), it was realism unmitigated and undiluted. We get an idea of the relentless realism of the mime when we see how much of it is still left in the refined literary representatives of it furnished by Thesoretus and Herondas.

Without the restraint of higher genius and literary form, it was easy for the realism of the mime to sink to mere obscurity and its wit to mere dullness.

The realism of the mime is so seen in its characters. Many of them, perhaps all, were creations of the ancient folk-mime, and had long been familiar to all classes from this source. As early perhaps as the 6th or 7th cent. B.C. we have the first development of this species of folk-composition by quasi-professionals, those baimastroi, jugglers, rope-dancers, ventriloquists, and other homeless nomads who had been wandering about through Greece and elsewhere from time immemorial. The mime was a member of the mimidian dance, and of the mime itself, whether spoken or sung, for getting together an audience.

In this way, thinks Reich, sprang up a new profession, that of the wandering mimai.

Among all the varieties of dramatic composition
the mine was the lowest, as it were, in the social scale. The same was true of the actors. Even the players of the *Kithara* and flute were admitted to the Dionysian gild, but never the *minos*; he was always looked down upon by his more distinguished colleagues. This discrimination was not worked from the first by the fact that the actors were not masked, and that women's parts were taken by women. Doubtless, this was inherited from their early days as jugglers, but the 'regulars' even in their own later ages, evil though they would never join the *minos* on account of the women.

A convenient division of the *minos* as a whole is afforded by the words *μινον* and *μινεια*. The *μινον* *ειρήνη* is the developed mimie drama, the regular mimic genre, of which he invented below it, i.e. *hilarodia*, *magodia*, etc., mentioned above, *kinadologie, Ionikadologie, ϕωνακεια*, even the works of Sophron, etc., none of which were regular dramas. Frequently the *μινον* is what we should call music-drama or operetta in both Greece and Rome; and there were many varieties, such as educated animals (Vopiscus, *Carinias*, 19; Plutarch, *de Sollett. Anim.* 19, etc.), and special feats of imitation. Imitation of pigs seemed to have been particularly popular (Phœdrus, *De Sect. 7*); Menander, in his *Diogenes* (1891, pp. 64, 68, 69, and 263 (note)). These varieties of *μινον* are eternally popular.

The most important figure in the history of the department is Phillusion, who lived and wrote in Rome during the 1st cent. B.C. He is the *classic* of the mimie *ειρηνη*, the regular mimic genre; hence the comparison of him with Menander, the *classico* of the New Comedy. *The statement of Cassiodorus (vit. Min. 9) that he invented the mimic genre, is doubtful* due to the fact that he was the first to write it all out, i.e. the dialogue as well as the songs. Evidently he was the culmination of the mimic genre among the Greeks, but the beginnings of its imitation in the historic and proto-historic times. The mine of Sicily and Italy came from the Peloponnese with the early Dorian settlers. It was extremely popular in Sicilian Megara and Syracuse. Tarentum was especially fond of the Italian mine, the *minos* of these cities were founded near the beginning of the 8th cent. B.C.

The original kernel of the mine, the source from which it sprang, was the mimic mine, the beginnings of which belonged to the Stone Age, and may be seen to-day among all peoples who still belong to that stage of civilization. The ancients never forgot the connexion between the two. The mimic mine survived in all types, and the *minos* himself was always a trained dancer. The *kinadologie* for instance, were originally dancers who thus accompanied their *θρυπτοι* (cf. Petron. 23). Hesychius describes the *magodia* itself as *δραμα ἱππα*, the Romans designated the action of the *ειρηνη* by *satire*, and the actresses were known as *σαλτρατρια* in the same connexion indicates the kind of dance.

The development of troupes of regular professional *minos* from the old wandering *γελοηταιροι* of primitive times seems to have taken place about the 3rd cent. B.C. These primitive ancestors of the modern *joongleurs* have gradually taken up all the types and themes of the old rustic mine. They travelled everywhere, they were great favourites at the court of Philip, and horses of them followed Alexander into Asia Minor. Here the Dorian mine met the Ionian mine, and the result was the *ειρήνη*, the regular dramatic mine. The Dorian mine was originally prose (hence Sophron), although great artists like Epicharmus put it into metre. The dramatic mine (ειρηνη), however, was noted for its dialogue, and the Ionian mine *magodia* and Ionian song *mamodia* is what ensured the lasting success of the dramatic mine. Great emphasis was laid upon *magodia*, and this brings the dramatic mine near to the modern opera and oratoria. Thus we may get a substitute for the missing chorus of the *Palliate*. Plato took over *magodia*, and the result is the mimic *centum* of his comedies. Pompionus and Novius seem to have done the same thing for their *diatime*.

Now, the Ionian *minos* itself, like the *ειρήνη*, throughout its entire history, falls into a mythological and a *biological* type (cf. Aristox. *ap. Athen. xiv. 621 D), the one, *hilarodia* (and *Lysidia*), dealing with mythology and the gods (partragic and burlesque), the other, *magodia*, with real life. Both were entirely melic, and in both singing was accompanied and supported by mimie dance and gesture; but the accompaniment of *hilarodia* was sometimes accompanied by a stringed lyre, and by *drum* (Ath. 620 D-621 D), and the choice of instruments itself indicates that the dancing of the latter was much freer and more lascivious.

*Hilarodia* and *magodia* were widespread and very popular among the Romans, and were especially noted in the *meirainia* and *Lysidia* (magodia). Through famous poets and a regular class of actors, these two types of Ionian *magodia* survived into Roman times. Sulla's friend Metrobius was an actor of the *Lysidia*. *Kinadologie, or Ionikadologie*, was another type of the Ionian. This was not really sung, although accompanied by the mimic (hence it was more *minoda* than *minos*). This also was very popular in Ionia, and was cultivated by such famous poets as Sostrades, Alexander Astolus, Pigna, etc.

It will thus be seen that we have an unbroken connexion between the mimie-dramatic dances of the primitive Greeks, the ancient folk-mimes of the Doriens, the Ionic *mines*, and the dramatic mine of Ionia, through a slow and acquired literary form —*hilarodia* through *Simos* of Magnesia, *magodia* through Lysias. Hence these new literary types were called after their founders *Simonia* (*hilarodia*) and *Lysiadia* (magodia). Through famous poets and a regular class of actors. These two types of Ionian *magodia* survived into Roman times. Sulla's friend Metrobius was an actor of the *Lysiadia*. *Kinadologie, or Ionikadologie*, was another type of the Ionian. This was not really sung, although accompanied by the mimie (hence it was more *minoda* than *minos*). This also was very popular in Ionia, and was cultivated by such famous poets as Sostrades, Alexander Astolus, Pignes, etc.

The relation of Rome to Greece in the matter of the mine now becomes more definite. *Adiakos* (Antipater Sidon. *A nth. Pol.* ix. 567), the actress of *Lysiadia*, came to Rome in the 2nd cent. B.C.; Metrobius, as we have seen, in the 1st cent. B.C. In 211 B.C. an old *minos* (Pestus, 326) danced to the flute in the Roman theatre. His dance was an intermezzo, but his mere presence shows that the *mini* had already reached Rome. The *mini* who satirized Lucilius and Accius (150 B.C.) from the stage were following an old-established custom of the dramatic mine (*ειρήνη*). The fact that they took such liberties shows that even then they must have been in Rome for a long time. The satire in question must have taken place at the *Floralia* (April, 28-May, 3), which was then a special institution at which mimia were given. The *Floralia* were first celebrated in 288 B.C., and every year after 173. It is quite possible that the mine was connected with this feast from the first. In that case, the dramatic mine, which was established in the Greek East by the 3rd cent. B.C. was already settled in Rome in connexion with the *Floralia* by the end of the same century. Thus we see how the mimic portion of the dramatic mine was the suggestion
of the *cantica* of Plautus and Cecilius Statius. The introduction of the mime and of *mimi* at that time was not a simple matter. The *mimi* in 293 B.C. and by the fact that in 190 at Sipilo Aristides returned from Antioch, one of a centre of the dramatic mime, just as long afterwards Verlos (Capitol. viii. 7) came back from his Parthian campaign with shiploads of *mimi*. The earliest specimen of early Greek, and the *aena Graeca* remained in Rome until theodoric. 1 One is reminded of such modern parallels as the *Théâtre italien* in Paris, etc. The Latin mime was a copy of the Greek (technical terms, run, canto etc.). 1

Having traced the history of the department as a whole, let us pause a moment upon the fully developed dramatic mime of the best period. We have already seen that it inherited dialogue in prose and familiar verse, also lyric portions (cantica), accompanied by music and the traditional mimic dance. The same principle also justified the introduction of *tayia* such as trained animals, imitations, etc. In plot, too, and in length it was fully equal to the old classical drama; in compass and variety it was superior.

A good example of the type is an old favourite, well known to Ovid *Fasti* iv. 602, and Chorikios. The name of the piece has not survived; we might, however, for convenience call it *Dionysos*, as it is an early exploitation of the line of thought about the dangers that beset young men and their jealous wife and the jealous husband. Then the lover, the *cultus adulter* 298, who and the play is a further development of Thymere's faithful adbliss, the *castus*, gains an interview with his mistress in the absence of Corinthus. In the following scenes the husband is subjected to all sorts of tricks and mystifications, *artes mimicae*. Finally, the lover has to hide from him in a harem (the *ludus Latinus*). He is discovered. The husband, breathing fire, tells the lover to fetch him a knife, large and very sharp, as he proposes to render the *cultus adulter* harmless. Then he changes his mind and decides tont the wrongs in court. Then comes the court scene, and the piece is brought to an end in some farcical fashion.

The first example of *Dionysos* requires not only the three principal characters and the judge to be on the stage at the same time but also three slaves, slave judges, court officials, superintendents, etc. Other plays show even more clearly that in the mime, as in the modern drama, with which, in fact, it has much in common, the latter played but one part and the number was unrestricted. It is also clear that the 'unities' were disregarded.

Variety in form was accompanied by variety in character. True to its composite origin, the mime is hospitable to all, from thieves and prostitutes to emperors and gods. 3 The same was true of costume, for it was as *tayia*, or clown (a typical character inherited from the slave) wore the regular clown's costume, the *contunclu* (cf. the medieval 'motley'), a shaved head, an *agape*, a mimic club (like Maccens and Bajazzo), and always the phallus. The old women, too, wore a baroque costume. Others wore, Lacinius, who is famous in the *Fasti* for his *mimesis* and his adbliss was according to the character and the situations.

So, too, the whole gamut of human emotions was played upon: comic and tragic, humour and sentiment, go hand in hand, as in the Roman comedy of the Elizabethan Age. The titles of *Labeorns* suggest realistic plots for the most part. It is doubtful, however, whether such mimes as his *Silla* and *Laceius*. *Aequan* were altogether realistic. In fact, even while the mime dealt with contemporary life and was purely realistic, great emphasis was laid on the unusual, strange, and astonishing. Nothing indicates more clearly the really popular comic of the mime, 4 A favourite character was the beggar who suddenly becomes rich (Cic. Phil. ii. 27); another, the rich man who becomes a beggar (Sen. Epist. 113. 6). Shippur was a favourite *motus* (Sen. Deod. iv. 2. 5; Petron. 114 and 116). The larger the role, the more the mime of Domitian's time, gave the romantic adventure of a robber chieftain, and ended with his execution. Especially characteristic of the mime is the comic crime, something unusual and horrible, like larceny or incest or murder. Trials for perjury or poisoning are frequent, and generally serve for the *denouement*. An interesting example, which will also illustrate the part occasionally taken by animals (cf. such titles of *Labeorns* as *Cattalia* and *Neptorius and Plautus, De Sollect. Anim. ix. 7*).

This was a mime with a large number of characters and a complicated plot, which he saw in the theatre of Marcellus. Vespasian himself was present. The intrigue centred in what was purported to be a poison, but was in reality a sleeping potion. As in the case of the preceding, it took it apparently down at a time revived. One of the star actors was a trained dog, and the most important incident of the mime, because it doubtless led to the *denouement*, was trying the effect of the supposed poison upon him. As soon as he had eaten the piece of bread upon which the poison had been placed, he began to tremble and stagger, his head grew heavy, and he finally died, as if dead, and allowed himself to be carried about in that state. When it was time to return again, *motus* and *motus* of returning consciousness, and, while the actors indicated their astonishment at the fact that the supposed victim of a deadly poison had come to himself again, the actor who had played the protagonist and joyously fawned upon him.

The connexion of the plot with the *motus* is not stated, but we may believe with Reich that there was a connexion, and that the probable nature of it is illustrated by the (mime from which this was derived) the *motus* 

The old grandee took for a second wife a young and very beautiful woman. She told vividly in love with her stepson, but was rejected by him, and thereby the point is made that this *motus* has been a popular favourite ever since the days of Joseph and Balthasar. It appears constantly in folk tradition, in the mime, in that echo of the mime, the rhetorical *contriverter* and *memorium* in the Italian *noctes* etc.) A slave is accused of stabbing and deadly poison but the essay Kingkong, it is the judge, that he had eaten of wine, and the pair leave it the young man will take it without asking questions. Presently, however, her son returns from school, and, being thirsty—as small boys always are—drinks the wine and falls dead on the spot. (Here is the unexpected turn of the piece which is the most faithful interpreter of the popular mind, so dearly loved.)

It is, of course, dear to all that the child has died of poison. The woman accuses her stepson of the deed, and alleges as a cause that he had attempted incest with herself. The young man is arrested, there is a great trial scene in court, and, after much oratory on both sides, he is condemned to death. At this point, however, we have another unexpected turn. An old judge, who is also a priest and physician, has heard the whole story, and he decides to put off the trial all this time. At this point he rises to his feet and informs the court that be himself had sold the drug to the slave, and that it is not a sin to go now to the tomb, said he, 'the child will soon be waking up.' Thus the whole court was discomfited and was almost true to the mime, she was merely turned adrift, not executed.

Another plot eminently characteristic of the mime is *Phaedrus*, Ep., xiv. 'The two beggars, Marcellus, the French *fable* known as 'Le vrai Palefor,' 'The grey Horse.'

This is Roman comedy. So, too, the mime takes us into the world of phantasy. Witwits, warlocks, madmen, prophets, are among the favourite characters. In the old Dorian mime popular demons were presented, and the metamorphosis of men into animals, which is well attested for the mime of all periods, takes us straight into the fantastic land of ancient Greece. The Roman *motus* of 'Beauty and the Beast,' of 'the Golden Crab,' of 'the Three Citrons,' and the like. In this function the mime is a curiously complete prototype of Carlo Gozzi's famous experiment with the fairy tales of Italy. To the Roman *motus* of the mythological mimes, *Priasus*, *Anna Perenna*, *Anubis Mochus*, *Kinyras* and *Myrrha* (Jos. Ant.) the survival of the *Sententias* of *Seneca*. These were extracted from his mimes at a later date, and was also a notable *motus* for the use of students and professors, from which might be drawn those sententious observations so dearly loved by the rhetoric of the sierra, which, in the *Oedipus* and the *Elektra*, plots, scenes, and *motus* most characteristic of the mime, the practice dechonizations of the rhetorical schools probably afford the richest field for study.

1 Scrib, Fam. vii. 1; Sueton, *Jul*. 26, etc.
2 See Reich, op. cit. p. 561 f., for details.
3 See *Fasti*, p. 540 f. 2; *Oxyyst. ii. 138; Chorikios (Reich, p. 204 f.)*.
4 In Juvena's time the wife was acted by Thymere, the husband by Corinthus, the lover by Latinus. The number is five, but *Oedipus* and *Elektra*, *Motus* are very well might be called the Mrs. Iacagelride of the Flavian period.
5 See *Fasti*. 6. Many titles of *Labeorns* and *Syra* speak for themselves in this respect.
6 The Latin mimes were carefully studied in the rhetorical schools during and after the Augustan Age. To this fact is due
Drama (Roman)

It will be seen that in form and type the mime was identical with the rest of the classical drama most familiar to us. It may be added that the same was true of many details of its presentation. First and most important, the actors, as we have already seen, never (Cicero excepted) wore masks. It is not necessary as explained elsewhere what this means for dramatic art. The mime was his own face only; indeed, one of the principal characters of the mime was known in Latin as Simulio (Cic. de Orat. ii. 61), i.e. 'the mimicking face'—a speciality of the mime. So, too, as we have seen, only in the mime were women's parts always taken by women. And, as there was no restriction of type, the characters included women of all ages and kinds. It is characteristic of the mime that fancy, in any case, old women should be a speciality. This enabled a talented actress to keep on indefinitely (Pliny, H.N vii. 48).

The original stage of the mime, as we see from old representations, was a platform on props about three feet from the ground, and with steps in front by which the actor mounted. Change to the regular stage was very slow. With the beginning of the theatres the mime was acted on a smaller platform in the upper part of the regular stage. It was thus given as an embolariuma (Diomed. 490) or intermezzo. The next step was to the regular stage, upon which in Cicero's time the mime took the place of the Deeds, and in the time of the Floridus, however, it had always been acted independently, and it gradually drew away from its function as an exodrom (Diomed. 491 f.), until in the early Empire it took to the regular stage, which it has been with the pantomime, finally run alone. One distinction, however, survived. The mime was acted in front of the siriparium, and it was through this that the actors made their exits and entrances. The stage was dressed as in Shakespeare's time, but, as also in Shakespeare's time, there was no scene-shifting. Claudian (Epig. Grece. 6) shows that there was, as we might assume, a regular corps de ballet. But here it fulfilled the same place and did much the same thing in our times.

In view of what has been said, it is not difficult to understand why the fully developed dramatic mime, in spite of its faults, finally ruled alone. If the dramatic mime from the highest function is to represent their life and their point of view, then the dramatic mime has a greater right to be called the national drama of the Greek-Roman world than has the classical drama of Greece or of the, Shakespeare, and aways, or more or less exotique representative in Rome. It is likely that Quintilian's verdict of 'in commedia, maxime claudianum' might have been applied with equal justice to the Roman tragedy. Cicero was a notorious lover of the mime, a man of judgment and taste in such matters, if there ever was one. It is true, of course, that the mime was the drama of the age, and that the age was an age of realism. For that reason alone the average man of the time would be expected to have been in favour of the mime. But, after all, the realism of Cicero's time, however relentless, was not the realism of our time. The mimographe of those days, realist though he was, still possessed the vivid imagination, the nimble fancy, and, therefore, the sentiment of his race and time—those qualities without which the bubbling well—spring of humour and invention must soon dry up. Moreover, his audience was endowed with the same qualities. It still believed in ghosts and magic, it still had a folk-lore, it still possessed, incomparably rich mythology. Hence the real world of antiquity finds its parallel in the age of Elizabeth rather than in our own. It was only partially real after all. And so the mime, like the Elizabethan 'tragi-comedy', was now wildly humorous, now fantastically horrible. The romantism and the real, humour and pathos, comic and tragic, fact and fancy—all these and more were called upon to picture a life which, real as it once was, is no longer ours and will never be one again.

The dramatic mime, however, seems never to have taken its position as a great literary department. In the long run the habit of leaving the dialogue to the actors proved to be inevitable, and this dry, one-sided, however, that most serious menace to the mime was its own splendid inheritance of versatility. The dialogue and plot, music, singing, dancing, an occasional weakness for a 'specialties—the combination is unstable, and. actors are—actors. Between the three the mime of the 4th cent. A.D. received its final form and criticism was bestowed upon it by Donatus and Cassiodorus. But, whatever its faults and virtues, the vitality of the mime was amazing. Time and change, national ruin, ecclesiastical fulmination and metaphysics—nothing could destroy the mime. We cannot ignore a dramatic type which finally ousted both Euripides and Menander from the stage, and ruled alone for over half a millennium.

8. State control of the theatre. The Roman theatre, like the Roman play, and, for the most part, the details of its presentation, were a continuation and development of the Greek prototypes as they existed in the Alexandrian period. All derive separately from the Roman play, like its predecessor, was clearly and distinctly an act of worship to the gods. It was, therefore, given at festivals, more especially at those festivals which the State religion, hence the State itself, had set apart for purposes of public worship. The plays were merely one item of the ritual observed. Other items were the races, gladiatorial combats, etc., which gave the general name of ludi to these occasions. In the time of Augustus, the regular ludi held at the Capitol, if the plays were given, were the Megalenses (April 4—10), the Ceriales (April 12—19), the Florales (April 28—May 3), the Apollinares (July 6—13), the Romani (Sept. 4—19), the Pitei (Nov. 4—17). Other ludi of the Augustan Age, during which plays were or could be given, were generally sporadic and meant to commemorate some special occasion, such as a great victory or the death of some distinguished man. Later in the Empire the tendency to increase the regularity of ludi ludi became very marked, and serious attempts to reduce the number were made by several of the Emperors, notably Nerva, Septimus Severus, and Maximi. Nevertheless, according to the calendar of 364, not less than 175 days in the year were given to ludi, and 101 of this number to plays.

The play was managed by the State. It is true that ludi were given by persons more or less in private life, but they were still an act of worship, the consent of the State had first to be secured, and, lastly, they were supposed to be under the control of the State. The best authority for Rome here is L. Friedlander in Marquart-Mommsen's Handbuch der röm. Altertümer, vi. [1860] 482 f. See also G. Oehmichen, 'Das Bühnenwesen der Griechen und Römer,' in Müller's Handbuch der klass. Altertumswissenschaft, Munich, 1858, v. 3, pp. 181—304. For colours in theatrical tradition, see especially Kostianeczka, de Comedia.
general supervision of State officials. At no time apparently was the antique theatre a purely private affair. In fact, it was partly a public one. One or two exceptions under the Empire are mentioned by Tacitus, but with such disapprobation that they illustrate rather than invalidate the rule. Until the time of Augustus five of the six great annual ludi mentioned above were in charge of the various ediles. The sixth, the Apollinares, which occurred in July, was managed by the praetor urbanus. The officer in charge had everything to do. Indeed, in earlier times, as we learned from Plautus, he even attended to the matter of costumes. He also built the theatre, and afterwards had to clear it away and put the place in order. Oddly enough, Rome never seems to have had but two permanent theatres—the theatre of Pompey, built in 55, and the theatre of Marcellus, which belongs to the Augustan Age. The edile also had charge of the audience during the performance. In this he was assisted by his corps of designatores, or ushers. The designator, however, was a vastly more important person than is the modern usher. He was a regular deputy of the civil magistrate in charge, and as such the majesty of the law was with him. He had lictors, and he was expected to see to it that people were ever necessary. In the 2nd cent., as we learn from the jurist Ulpian, this office was in the gift of the Emperor, and was of great value. The edile had a regular sum allowed him from the State treasury to meet the bills incurred. But this lucrum, as it was called, had been fixed as early as the Second Punic War, and was far from keeping pace with the growing expenses of the function for which it was designed. Nevertheless, the office of edile, as such, had made one so prominent and popular that it was much sought after by the aristocracy as a means to further advancement, and they spent fabulous sums in giving the shows devolving upon them. But at the accession of Augustus the emperors could be found who were willing to accept the office. He, therefore, transferred the management of theatrical matters to the praetors, and this remained the law under the Empire.

The place of the edile in the case of a play was determined by one's position in the State, and that it was regulated by law. The theatre was a religious institution, in charge of the Government. Such being the case, a seat at the theatre, like a seat in the Senate, would be a very great privilege, and would be invested with the right to citizenship, and therefore to be assigned according to that principle. For that reason, in the earlier days of the Republic, slaves could not attend the theatre; and the same must have been true of strangers unless they were guests of the State. But in the time of Augustus these restrictions had ceased to be in force. The law on the subject of seating as it existed under the Empire rested for the most part upon enactments of Augustus, and the State treasury to meet the bills incurred. But, in the time of Augustus these restrictions had ceased to be in force. The law on the subject of seating as it existed under the Empire rested for the most part upon enactments of Augustus, and the State treasury had largely been reserved for those knights who had served as military tribunes or land-commissioners. The younger knights also had a separate section, which under the Empire was known as the Conventus Germanici. Knights, who had served in the foreign armies, were obliged to sit in a group by themselves.

Previous enactments were extended and strengthened by the Lex Julia Theatralis of Augustus. This law, which was much affected by Greek theather ordinances, prescribed the place of every one in all parts of the house. The general public sat according to tribus, or wards. But even here distinctions were made—for instance, in favour of husbands and fathers as against bachelors and spinsters. The women, and with them the young children, had to sit by themselves on the back rows. The one most notable exception was the Vestals, who had seats of honour near the front. So the various colleges of priests and other officials had seats of their own, often of a special form, with lanks, arms, etc. Sometimes a certain seat was given a man in perpetuum, usually in return for distinguished services rendered to the State. Such a seat was also used by his family and could not be inherited.

The usual time for a play to begin was early in the morning. A play of Plautus, including the music, would take about three hours. Whether two or more should be given in succession, as was sometimes the case, was left to the official in charge. Plays were never given at night except for ceremonial reasons. This was always the case when mimes were acted at the Flora. Other details, so far as they bear upon the present discussion, have already been dealt with elsewhere.

9. The Roman drama not purely national.—In view of what has been said in the previous pages, we might perhaps conclude that as a literary production the life in the Roman drama was surprisingly brief, its great authors comparatively few, its genuine popularity problematical. We cannot agree, however, that the reasons for it were that the Pallinata died of too much Greek, that the mime sorrow is well covered by the tragedy, and that we have audience steeped in the bloody realities of the arena, that idealism does not and cannot reach a generation of realists. These are all true, but they are symptoms, not causes. There were plenty of men in the Age of Pericles who preferred cock-fighting to comedy, and athletics to Eshylus. Nevertheless, the drama really did reach the hearts of the people. This was because it was theirs, because it was truly national. The Roman drama, on the contrary, both as an institution and as a department of literature, was profoundly affected by the intrusion upon it at an early date of the fully developed Hellenic tradition and the long-established Hellenic masterpieces. The contrast between the Greek and the Roman drama we know it, and as the Romans themselves knew it during the historical period, was not really national, and had no deep roots in the national life. The atmosphere of the Pallinata was foreign, the material of the tragedy was not only foreign but comparatively remote; even the worship of Dionysus—god of the drama—was an exotic, and the feeling of mistrust entertained by the genuine old Roman is clearly indicated by the famous Senate, which people in the 2nd cent. B.C. Among other things it provided that the property qualification of a Roman knight should be raised to 400,000 sesterces, and that the first fourteen rows behind the orchestra should be set apart for the exclusive use of this order. The law also provided that even within these rows careful distinctions should be made among the knights themselves, the praetor for a purely financial one. One or two exceptions under the Empire are mentioned by Tacitus, but with such disapproval that they illustrate rather than invalidate the rule.
muck harder nut to crack. The Christian Fathers were especially fond of designing her as a μιμή (Chrys. vii. 665 f. etc.).

It is only just that the mimnes was not really to be blamed for his parodies. Throughout paganism he had ridiculed the ancient gods. This was characteristic of Hellenism, and no one thought anything of it. In their case, however, the Christians objected to his having had come in from the East. And, when Christianly won the upper hand, the mimne returned again to the old gods of paganism.

11. Christian opposition.—Attacks on the theatre begin with the Christianipes (written by Felix, Tatian, Arnobius, Augustine, Lactantius, Gregory Naz., etc.). Special works aimed at the theatre alone were written by Tertullian and Cyprian; and Chrysostom rarely forgets this his special vessel of wrath. In the course of time all this bitter polemic was systematized, supported, and connected by the dialectic of the law and of the Church.

All the old gods are devils (Tert. Spect. 19): Dionysus the old god is the lord of the theatre. But laughter and gaiety come from imitations of the devil, the devil. He built himself, and says expressly that it belongs to him to do this. The idea of the comic and the dramatic arts come from the devil (pseudo-Cyp. Spect. 4; Tatian, Orat. ad Graec. 32). This is a favourite topic for Chrysostom: through the medium of the mimnes Christian can expose the mouth of the mimne the devil speaks (vii. 675 B). The songs of the mimne and Sarissus are a thing for the devil alone and not otherwise (vii. 77 B, viii. 422). In the same way, etc., the whole show and all that is said and done by and during the same is inspired of hell, a demon's hymn, a devil's sacrament (vii. 6 C. ix. 332 B). All who go to the mimne become the devil's own (vii. 114 C). Therefore the Christian who goes to it is a sorcerer, for who has not seen the mimic and the mimne in the place of the God—ἀοιος αὐτοὺς—but from the devil (x. 590, vii. 97). The long and fiery passages ascribed to the various actors, above all to the mimnes. They curl their hair, they paint their cheeks, they roll their eyes, they glitter in jewels and gold— and who are these mimnes? The daughters of butchers, of shoemakers, even of slaves! Most seductive is all the beautiful voice with which they know how to sing their χορεύειν, their ἄνεμοι στασίαν, their ἑλκυσθήματα, their 'devil's own ditties.' Then, too, the language is common, vulgar, trivulial, full of oaths, not even intelligible, caking out its meaning with shouting and squealing! Yet the Christians are forever talking about the actresses, what they say, how they look, what they do. Chrysostom asks: Can the Christian convert them and then by the Divine power of the rite they were parading, had confessed their faith from the stage, and had suffered martyrdom soon after. The most famous was Genesis in Diocletian's time. His specialty had been to imitate the 'working of the spirit' with a pretended fit, after which he proceeded to baptism. A church was erected to him, and to this day Saint Genesis still remains a specialist on epilepsy.2 Even martyrdom was depicted in the most realistic fashion. But this was nothing new. In the old mimne of Laocoon, the robber chiefsten was (apparently) nailed to the cross, and, as Josephus tells us (Ant. xix. 13), the realism was heightened for the occasion. In fact, Domitian once put the last touch to this delectable specialty by substituting the genuine crucifixion of a condemned criminal. That such an entertainment could still remain a butt of ridicule, even to the Christians, the writer observes, that the sufferer was the clown. It is expressly stated that Saint Gelasinos was the ποτάμος λέξεως, i.e. the μίμης or χορεύειν. Occasionally the mimne was converted. The famous case was that of Pelagia by Bishop Nomos.3 As a rule, however, the mimne was a

Now Complete, IN FIVE VOLUMES

'In its five volumes we possess a splendid—nay, an unsurpassed—thesaurus of biblical learning.'—Record.

Dictionary of the Bible

DEALING WITH
ITS LANGUAGE, LITERATURE, AND CONTENTS,
Including the Biblical Theology.

WITH MAPS AND ILLUSTRATIONS.

Edited by
JAMES HASTINGS, M.A., D.D.,
WITH THE ASSISTANCE OF
JOHN A. SELBIE, M.A., D.D.

This great work has taken its place, as 'The Times' says, as the 'standard authority for biblical students of the present generation.' In this country and America, in the Colonies, and even among people of other languages and of various creeds, it is in constant and increasing demand.

The Guardian says: 'We have no hesitation in recommending Hastings' Dictionary to students of the Bible as the best work of its kind which exists in English.'

The Methodist Recorder says: 'It is far away in advance of any other Bible Dictionary that has ever been published, in real usefulness for preachers, Bible students, and teachers.'

The Bookman says: 'This Dictionary sprang into fame with its first volume, and its reputation has been growing ever since. For scholarship, temper, and judgment combined, we have nothing else equal to it in English.'

INDISPENSABLE FOR THE STUDY

OF THE NEW TESTAMENT.

'There is no other English book on the subject so comprehensive, and the reader, whether critic or student, will be impressed with the author's learning, lucid style, methodical arrangement, and reverent attitude.'—Atheneum.

'It must be for long the only manual for English students, and the basis for all their work on the subject.'—Prof. James Denney, D.D.

'Dr. Gregory has every qualification for the laborious task that he set before himself in planning this remarkable work, and it may be said at once that his labour of love has been crowned with complete success.'—Contemporary Review.

No other grammar takes adequate account of those wonderful discoveries of Greek papyri, which within the last few years have altered the entire basis of the study of New Testament Greek.

'Prin. Marcus Does in the British Weekly.—'Considering the mass of detail which Dr. Moulton has handled, his accuracy is amazing. Of course his book is indispensable, really a first requisite to the understanding of New Testament Greek. We do not see how it could have been better done, and it will unquestionably take its place as the standard grammar of New Testament Greek.'

"* It will be generally allowed that a new Concordance to the Greek Testament is much needed in the interests of sacred scholarship. This work adopts a new principle, and aims at providing a full and complete Concordance to the text of the Greek Testament as it is set forth in the editions of Westcott and Hort, Tischendorf, and the English Revisers. The first-named has throughout been taken as the standard, and the marginal readings have been included. Thus the student with any one of these three editions in his hands will find himself in possession of a complete Concordance to the actual text on which he is engaged. While the method employed, it may fairly be claimed, precludes the omission of any word or phrase which, by even a remote probability, might be regarded as forming part of the true text of the New Testament, on the other hand, passages disappear as to the spuriousness of which there is practical unanimity among scholars.

Professor W. SANDAY, D.D., LL.D., Oxford, writes: 'There can be no question as to the value of the new "Concordance." It is the only scientific Concordance to the Greek Testament, and the only one that can be safely used for scientific purposes.'

'It would be difficult to overpraise this invaluable edition to biblical study. . . . For all English students of the Greek Testament this great work is indispensable.'—British Weekly.

Prospectus, with Specimen Page, free on application.

'This work has been eagerly looked for. . . . The result is an excellent book which I do not doubt will be the best in the field for many years to come.'—Professor W. Sanday, D.D., in the Academy.

'It gives with care and thoroughness a complete history, as far as it goes, of each word and phrase that it deals with. . . . Dr. Cremer's explanations are most lucidly set out.'—Guardian.

BOOKS OF RECOGNISED IMPORTANCE
FOR THE STUDY OF THE GOSPELS.

DICTIONARY OF CHRIST AND THE GOSPELS.
Edited by Dr. JAMES HASTINGS.

'The present volume worthily completes a unique work. The articles are rich in instruction and helpfulness to teachers and preachers. Even those who have the "Bible Dictionary" proper will not find this one superfluous, and to those who do not need the larger one, the present one will prove an excellent substitute."—London Quarterly Review.

In Two Volumes. Price per Volume in cloth binding, 21s. net; and in half-morocco, 26s. net.

'The most unconventional and illuminating of all extant works of the kind. . . . The best modern work on the life of our Lord.'—Methodist Times.

'The most satisfactory treatment of the subject in English. It is an unusually full book, an excellent specimen of well-informed, thoughtful, and moderate English criticism.'—British Weekly.

The Words of Jesus; Considered in the Light of Post-Biblical Jewish Writings and the Aramaic Language. By Professor G. DALMAN. Authorized English Translation by Prof. D. M. KAY, St. Andrews. Post 8vo, 7s. 6d. net.

'The most critical and scientific examination of the leading conceptions of the Gospels that has yet appeared.'—Prof. W. SANDAY, LL.D.

'In this work Dr. Clarke is at his best. It is a sympathetic, genial and appreciative study.'—British Weekly.

'This book has now won for itself the position of a standard work on a subject which recent critical and theological investigations have rendered of the first importance.'—Examiner.

'A permanent addition to theological science, competent in its knowledge, thorough in its reasoning, lucid in its style, and everywhere inspired by the highest and most spiritual ideals.'—Rev. John Watson, D.D.

'The most elaborate and thoroughgoing treatment of the whole theology of the Fourth Gospel that has yet appeared in English. He has put the theological world under a debt of gratitude to him for supplying the best solution of the problems of the Fourth Gospel.'—Glasgow Herald.

The Kingdom and the Messiah. By Prof. Ernest F. SCOTT, D.D. Post 8vo, 6s. net.

'His new volume is one of conspicuous ability . . . We desire to speak in the warmest terms of the excellent work contained in Dr. Scott's volume. It merits the earnest attention of Biblical scholars.'—Methodist Times.

The Self-Revelation of our Lord. By Rev. J. C. V. DURELL, B.D. Crown 8vo, 5s. net.

'There is no book which we have seen which sets forth the New Testament doctrine more candidly or more convincingly than this book.'—Expository Times.

'Dr. Innes gives what, to most of his readers, will be wholly new light and fresh thoughts. . . . This volume is a striking example of the value of the critical examination of historical problems by an accomplished lawyer.'—Times.

'One of the very best of the handbooks for Bible classes—and that is saying a great deal. There is evidence on almost every page of exact and ample scholarship. Yet Dr. Muirhead is never dry; his chapters are always luminous and readable. This is certain to prove a most useful textbook.'—Sunday School Chronicle.

EDINBURGH: T. & T. CLARK, 38 GEORGE STREET.
BOOKS OF RECOGNISED IMPORTANCE

FOR THE STUDY OF THE GOSPELS.

‘Of the Commentaries on the New Testament that have been issued in this Series, it may be safely said that none surpasses in ability, interest, and importance, Mr. Allen’s “St. Matthew.”’
—Expository Times.

St. Mark’s Gospel. By Prof. Ezra P. Gould, D.D. In the ‘INTERNATIONAL CRITICAL COMMENTARY.’ Post Svo, 10s. 6d.

‘This commentary is written with ability and judgment; it contains much valuable material, and it carries the reader satisfactorily through the Gospel. Great care has been spent upon the text.’—Expositor.

‘We feel heartily that the book will bring credit to English scholarship, and that in its carefulness, its sobriety of tone, its thoughtfulness, its reverence, it will contribute to a stronger faith in the essential trustworthiness of the gospel record.’—Guardian.

In a leading article headed ‘A GREAT BOOK,’ in the British Weekly, Principal Marcus Dods writes: ‘It may be questioned whether in recent years there has appeared, at home or abroad, any theological work more deserving of careful study. He who intelligently reads it once will inevitably read it again and again.’

‘We desire to speak with admiration of the good work done in this book. It is worthy to stand beside his former treatise. Taking both together, they form a magnificent contribution to the theological literature of the age.’—Principal Iversach in the Expository Times.

‘Mr. Walker makes here a further valuable, if unpretentious, contribution to New Testament study. The work altogether should form an excellent handbook on its subject for teachers and preachers.’—Christian World.

‘Dr. Wendt’s work is of the utmost importance for the study of the Gospels, both with regard to the origin of them and to their doctrinal contents. . . . So greater contribution to the study of Biblical theology has been made in our time. A brilliant and satisfactory exposition of the teaching of Christ.’—Principal J. Iversach, D.D., in the Expositor.

The Life of our Lord upon the Earth; Considered in its Historical, Chronological, and Geographical Relations. By Samuel J. Andrews. New and Revised Edition (the only Authorised Edition in this Country). Svo, 9s.

‘As a teachers’ apparatus, I would recommend Andrews’ “Life of our Lord,” as unpretentious but excellent book, in which the apologetic difficulties in the details of the life are treated with much courtesy and success.’—Professor J. Stalker, D.D.

The Life of Jesus Christ. By Professor J. Stalker, D.D. Cr. Svo, 1s. 6d. ; Large Type Edition, 3s. 6d.

‘Even with all our modern works on the exhaustless theme, from Neander to Farrar and Geikie, there is none which occupies the ground of Dr. Stalker’s. . . . We question whether any one popular work so impressively presents Jesus to the mind.’—Christian.

The Training of the Twelve; or, Exposition of Passages in the Gospels exhibiting the Twelve Disciples of Jesus under Discipline for the Apostleship. By Prof. A. B. Bruce, D.D. Demy Svo, 10s. 6d.

‘A volume which can never lose its charm either for the preacher or for the ordinary Christian reader.’—London Quarterly Review.

The humiliation of Christ, in its Physical, Ethical, and Official Aspects. By Prof. A. B. Bruce, D.D. Demy Svo, 10s. 6d.

‘We have not for a long time met with a work so fresh and suggestive as this of Professor Bruce. . . . We do not know where to look at our English Universities for a treatise so calm, logical, and scholarly.’—English Independent.

The Kingdom of God; or, Christ’s Teaching according to the Synoptical Gospels. By Prof. A. B. Bruce, D.D. Post Svo, 7s. 6d.

‘To Dr. Bruce belongs the honour of giving to English-speaking Christians the first really scientific treatment of this transcendent theme. . . . his book is the best monograph on the subject in existence.’—Prof. James Stalker, D.D., in the British Weekly.

EDINBURGH: T. & T. CLARK, 38 GEORGE STREET.
